1.0 EXECUTIVE SUMMARY

Envirocom performed a Phase I Environmental Site Assessment (ESA) update for the property located at 150 North Autumn Street, San Jose, California (Site), to identify the potential for impact to the structure, soil, and/or groundwater of the Site from on-site or off-site sources of hazardous substances or petroleum hydrocarbon products. Envirocom has visited the Site on August 1, 2019.

The Site is approximately 1.695 acre of land with accessor parcel number (APN) 259-29-102. The Site was previously owned by Milligan property. The Site is bounded by Los Gatos Trail and Guadalupe River to the East, North Autumn Street to the west, residential properties to the north, and mixture of commercial and residential to the south. Currently, the Site is owned by City of San Jose (City). Envirocom understands that the City is planning to construct a paved ground surface parking lot at the Site in the near future.

Review of historical Sanborn maps from 1884 to 1956 indicated that the Site was used as residential property with stables. From as early as 1966, the Site was converted and utilized for commercial/light industrial purposes such as magazine distribution center as indicated in sanborn map dated 1966.

Reviews of historical aerial photographs indicate that from late 1930s to mid 1950s the Site was utilized for residential land use, and from early 1960s to the present time has been utilized for commercial/light industrial purposes.

Review of EDR City Directory from 1960 to 2010 listing provided for the Site show Milligan News Co. Inc. magazine distributors to be the occupant at the Site with Education Dept. listed as well in 1986 and 1991.

The Site was listed seven times in the databases searched by EDR. The listed databases included but were not limited to the Department of Toxic Substances Control (DTSC) database that records annual hazardous waste shipments (HAZNET), Leaking Underground Storage Tank (LUST), Statewide Environmental Evaluation and Planning System (SWEEPS), and Facility Index System (FINDS) among others. EDR search results showed the Site had generated and disposed of 0.05 tons of Oxygenated solvents and 0.3 Tons of waste oil in 2007. EDR search results also listed the Site in the State Water Quality Control Board (SWQCB) GeoTracker Database as a LUST Site related to the discovery of unauthorized release of gasoline constituents during subsurface monitoring at the Site in 1988. The property received case closure on January 24, 1997, after removal of two 10,000-gallon gasoline tanks with associated piping, excavation of contaminated soil, and remediation (pump & treat) of soil vapor and groundwater. Approximately 7 million gallons of groundwater and 8,800 pounds of hydrocarbon vapor were extracted and treated along with 285 cubic yards of contaminated soil, which was aerated and used for landscaping at the Site.

Few properties with historical soil and/or groundwater contamination were identified within 1-mile radius of the Site in the State GeoTracker and EnviroStor databases. With the exception of three properties, case closures have been issued to all the listed properties near the Site within 1/4-mile radius indicating that they have completed necessary investigation and cleanup works required by the oversight regulatory agencies (RWQCB and DTSC). The three properties that currently have an open case are Diridon station located approximately 1340' south of the Site, former FMC facility located approximately 559' northeast of the Site, and Platform 16 located approximately 808' northwest of the Site. All three properties have had or potential to have soil, soil gas, and groundwater contamination. However, historical groundwater flow direction for the general area had shown to be towards northeast. None of these three properties are located towards southwest of the Site (up gradient). Therefore, it is unlikely these properties have contributed additional contamination to the groundwater beneath the Site.

Current Site Conditions

Currently, SJ Sharks uses warehouses of the structures at the Site for storage, and the remaining available space including the office area of the structure remains vacant. These structures contain suspect asbestos containing material (ACM), lead in paint, and polychlorinated biphenyls (PCBs).

SUMMARY OF FINDINGS

| Item | Location/Issues | Description of Condition |
|------|---|--|
| 1 | Site REC ¹ | Review of historical documents show the Site to have residual gasoline constituents in groundwater, subsurface soil, soil vapor, and possibly the soil stockpile that had been aerated and used as landscaping. This is considered to be a recognized environmental concern (REC). |
| 2 | Site REC | Currently the Site has commercial structures that contain suspect ACM, lead in paint, and PCBs. This is considered to be a REC. |
| 3 | De Minimis ² and Other PEC ³ Issues | Review of historical operations at the Site documents waste generation and disposal of oxygenated solvents and waste oil from past printing operation and delivery vehicle repair activities at the Site. This may be a potential environmental condition |

1- REC - Recognized environmental conditions (REC) means the presence or likely presence of any hazardous substances or petroleum hydrocarbon products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum hydrocarbon products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or

petroleum products even under conditions in compliance with laws.

- 2- De minimis environmental conditions are considered to be minor in nature and are conditions that generally do not present a threat to human health or the environment and, generally, would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.
- 3- PEC Potential environmental condition means the potential presence of hazardous or petroleum products on or nearby property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property; however, the risk is low.

Envirocom understands the City is planning to construct an open air paved parking lot on the ground surface at the Site. Based on the above information and proposed plan for the Site, Envirocom recommends performing additional subsurface investigation, as well as, asbestos, lead in paint, and PCB inspection of the structures at the Site, before the demolition work.

2.0 OBJECTIVE

The objective of the ESA update is to identify existing or potential conditions that may pose an environmental liability on the owner or the operator of the Site.

2.1 Purpose and Scope of Work

The purpose of the ESA update is to identify the potential for impact to the structure, soil, or groundwater of the Site from on-site or off-site sources of hazardous substances or petroleum products.

The ESA update was performed in accordance with American Society for Testing and Materials (ASTM) guidelines for Phase I Environmental Site Assessments (ASTM E1527-13), and included the following activities:

- Interview the property owner/agent or have them to complete questionnaire to obtain general information and Site history.
- Site visit to observe current conditions, hazardous chemical usage, and storage practices.
- Site vicinity drive-by and reconnaissance of the neighborhood within a 1-mile radius of the Site, to identify any potential off-site sources of contamination based on the nature of activities in the area.

- Review historical aerial photographs of the Site and properties within its vicinity identifying land use practices of the Site and its adjacent properties to evaluate any potential for impact to the soil and groundwater at the Site.
- Review the appropriate federal and state lists of contaminated sites to determine if any property within a 1-mile radius of the Site is under federal or state investigation for soil or groundwater contamination that could impact or contribute to the environmental impairment of the Site.
- Review of available records in the State Geotracker, EnviroStor, and Santa Clara County Environmental Management (SCEM) electronic files.
- Summarize the findings in this report.

2.2 Limitations and Exceptions of Assessment

This report was prepared for the use of City of San Jose Public Works, its agents, and representatives. The content and conclusion provided by Envirocom in this report are based on the available information, procedures and practices that are generally accepted in the environmental consulting field in California and our professional judgment by reviewing the available data. Material and equipment were stored at the Site. Consequently, observations were limited to the exposed areas at the Site.

This assessment was based primarily on the information gathered from other individuals and entities such as the regulatory agencies, government databases, Site owner/agents, and various professionals related to ownership or activities of the Site. Regulatory agency files and lists may be incomplete, incorrect, or missing. Envirocom is not responsible for the accuracy of information provided by others that is in this report. No warranty, either expressed or implied, is made.

3.0 SITE OVERVIEW

3.1 Site Name

Site's name is Milligan News Co. Inc.

3.2 Site Address

The Site is located at 150 North Autumn Street, San Jose, CA 95110.

3.3 Legal Description of the Site

The Site is approximately 1.695 acres, and is identified with assessor parcel number 259-29-102. An assessor parcel map for the Site is provided in Appendix A.

3.4 Description of Existing On-Site Structures and Improvement

Envirocom visited the Site on August 1, 2018. At the time of its Site visit the weather was sunny and warm. The Site consisted of two attached commercial/industrial structures. A large canopy and asphalt and concrete paved driveways and parking lost plus overgrown vegetations were observed outside the buildings at the Site.

The buildings at the Site were constructed with poured concrete as well as concrete masonry units steel reinforced concrete slab. Front of the building was used for offices, and it had a mezzanine. Center and back of the buildings consisted of warehouses and used for storage of materials and equipment. Envirocom observed no visual evidence (i.e., stains, unnatural discoloration, stressed vegetation) of spills or releases of hazardous material/waste at the Site. Photographs of the Site area presented in Appendix B. A copy of Phase I ESA checklist is included in Appendix D.

4.0 SITE BACKGROUND/OPERATION HISTORY

4.1 Current Ownership

City of San Jose is identified as the current owner of the Site. They owned the Site since 2017.

4.2 Prior Ownership

According to a previous Phase I ESA report completed by City of San Jose Environmental Services Department (CSJESD) dated March 16, 2017, Milligan property was the previous Site owner.

4.3 Aerial Photograph Review

To better understand the land use practices at the Site and its vicinity, Envirocom reviewed available historical aerial photographs, which were purchased from EDR Photography Print Service on June 18, 2019. Envirocom reviewed fourteen available aerial photographs for the Site's vicinity belonging to 1939, 1948, 1950, 1956, 1963, 1968, 1974, 1982, 1993, 1998, 2006, 2009, 2012, and 2016.

1939-1956: The Site appears to have a residential structure with sparse trees & vegetation. The Surrounding area appears to be mixture of industrial and residential

properties. Two Large AST of different size appear to be located southwest of the Site on the corner of West Saint John and North Montgomery Street.

1963: The Site appeared to have 2 attached and 1 detached structure with parking space in-between the structures, and landscaping towards northeast and northwest corners of the Site. The Surrounding area appeared to be similar to the previous photographs. The 2 attached structures resembled the present buildings at the Site. The detached structure resembled the residential building depicted in the previous photographs.

1968-1982: The Site appears to have expanded with a large canopy upon it's 2 attached structures and it's parking space at the Site in these photographs. Surrounding properties appear to be primarily similar to the previous photograph. However, one of the smaller ASTs mentioned above appears to have been removed in these photographs.

1993: This photograph was similar to previous photograph. However, the large AST located southwest of the Site on the corner of West Saint John and North Montgomery Street has been removed, and in its place, SAP center (formerly HP pavilion) and associated surface parking lot appears to have been constructed.

1998: This photograph showed the detached structure at the Site to have been removed. Surrounding properties appear to be similar to the previous photographs.

2006-2016: These photographs were similar to previous photograph.

Reviews of historical aerial photographs indicated that the Site was utilized for residential land use from late 1930s to mid 1950s. It has been used for commercial/light industrial purposes from early 1960s to the present time. Adjacent and surrounding properties were utilized as mixture of industrial, commercial, and residential purposes.

Copies of the aerial photographs are presented in Appendix A.

4.4 Historical Fire Insurance Maps

Envirocom reviewed available Sanborn maps, which were purchased from EDR on June 18, 2019. Envirocom reviewed eight available maps for the Site and its vicinity belonging to 1884, 1891, 1915, 1950, 1956, 1966, 1969, and 1984. However, Sanborn maps for 1969 and 1984 were not visible. Therefore, they were not included in this review.

1884-1891: These Sanborn maps showed residential structures with sheds, stables and out house at the Site.

1915-1956: These Sanborn maps showed additional a large stable, a water tank, and

several sheds constructed at the Site, while some older structures have been removed.

1966: This Sanborn map showed the Site to have newly constructed buildings labeled as magazine storage, truck loading shed, and magazine warehouse.

Review of historical Sanborn maps from 1884 to 1956 indicated that the Site was used for residential purposes with stables. From at as early as 1966, the Site was converted and utilized for commercial/light industrial purposes as magazine distribution center according to the Sanborn map dated 1966.

Copies of the Sanborn maps are presented in Appendix A.

4.5 The EDR-City Directory Abstract

Envirocom requested EDR to evaluate the potential liability on a target property resulting from past activities. This report (EDR-City Directory Abstract) contains information regarding tenants who occupied the Site from 1922 to 2014.

Review of EDR City Directory from 1960 to 2010 listing provided for the Site show Milligan News Co Inc magazine distributors to be the occupant at the Site with Education Dept. listed as well in 1986 and 1991.

A Copy of the EDR-City Directory Report is also presented in Appendix C.

4.6 Topographic Maps

Envirocom obtained photographic maps dated 1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2012 from EDR. The maps confirmed that the general area near the Site was urbanized as early as 1889, and had a progressive expansion of the downtown since then. No specific land use information could be observed in the maps for the Site.

Copies of the EDR topographic maps are also presented in Appendix C.

5.0 ENVIRONMENTAL SETTING

5.1 Surface Water Characteristics

Guadalupe River runs along approximately 168 feet east of the Site.

5.2 Subsurface Geological and Soil Characteristics

Envirocom reviewed historical boring logs prepared by Wahler Associates dated 3/14/1990 for the Site. The information obtained from boring logs indicate that the soil in

the general area comprises of primarily silty clay from surface ground to 18' below ground surface (bgs), sand from 18' to 24' bgs, silty clay from 24' to 34' bgs, sandy clay from 34' to 48' bgs, sand from 48' to 56' bgs, and sandy clay from 56' to 60' bgs.

5.3 Groundwater Characteristics

The site lies within the Santa Clara Groundwater Sub-basin made up of two aquifers. It is approximately 82 feet above mean sea level. According to the Case Closure Summary dated January 7, 1997, prepared for the Site by Santa Clara Valley Water District (SCVWD), highest shallow groundwater level was recorded at 13' bgs, and the second water-bearing zone was recorded at 50' bgs. Groundwater flow direction was recorded to be towards northeast.

5.4 Drinking Water Quality

San Jose Water Company supplies drinking water to the Site.

6.0 SITE INSPECTION

6.1 Site Observations and Inquiries

A copy of Site's questionnaire completed by Site's owner/agent is presented in Appendix D. A copy of the Phase I ESA checklist is also included in Appendix D.

6.2 AST/UST System and Pipelines

Envirocom observed no above ground storage tank (AST) or UST at the Site.

6.3 Transformers and PCB Equipment

In California polychlorinated biphenyls (PCBs) are regulated by both State and Federal rules including but not limited to the Resource Conservation and Recovery Act (RCRA), California Environmental Protection Agency (Cal/EPA) department of Toxic Substances Control Act (TSCA), and Bay Area Stormwater Management Agencies Association (BASMAA). TSCA prohibited further manufacture of PCBs in the United States because they are classified by EPA as persistent, bio accumulative, and toxic compounds. PCB sites may also be subject to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) if there is a known release to soil or groundwater or a potential threat for a release of PCBs to the environment.

Effective July 1, 2019, BASMAA requires Sites to follow protocols for managing PCBs-containing building materials during demolition. An assessment protocol was developed for identifying building materials in structures constructed or remodeled between the

years 1950 and 1980 that may contain a significant mass of PCBs. Once identified as containing PCBs at concentrations exceeding 50 ppm, these materials shall be properly managed prior to building demolition, to ensure PCBs are not discharged to the municipal storm drain system.

A small dry floor-mounted transformer was observed in the office area at the Site. Materials suspected of containing PCBs include but not limited to transformers, fluorescent light ballasts, caulking, thermal/fiberglass insulation, and adhesive/mastic.

Envricom understands the structures at the Site will be demolished in the near future. Therefore, Envirocom recommends testing for PCBs of suspect materials before demolition activities.

6.4 On-Site Regulated Substance Identification/Inventory

Currently, SJ Sharks uses the warehouses at the Site for storage of materials and equipments. Envirocom did not observe regulated substances being stored at the Site. The Site's photographs are presented in Appendix B.

6.5 Area Reconnaissance

Envirocom's representative performed a walk through the vicinity, and a drive-by within a 1-mile radius of the Site. The Site is situated in an area developed with residential, commercial, industrial, and SAP arena. Figure 1, Site Location Map in Appendix A depicts Site's neighboring properties.

6.6 Site Plan Drawing(s)

Site Location Map in Appendix A shows the Site and its neighboring properties.

6.7 Asbestos Containing Material

The Department of Toxic Substances Control (DTSC) has classified friable, finely divided, and powdered wastes containing greater than one percent (1.0%) asbestos as hazardous waste. Asbestos includes all mineralogical forms of chrysotile, amosite, crocidolite, tremolite, antophyllite, and actinolite. A friable material is one, which can be reduced to powder or dust under hand pressure when dry.

The federal government has banned production of friable asbestos-containing materials (ACMs) since 1979. Asbestos generally becomes a health hazard when the individual fibers become airborne and inhaled by the public. ACMs, therefore, are not considered health hazard if they are properly maintained, and not disturbed. No regulation requires property owners to remove ACMs as long as they are maintained properly. ACMs must be removed prior to demolition or renovations where its disturbance becomes imminent.

Section 25915, Division 20 of the California Health and Safety Code dated 1988 indicated that owners of public and commercial buildings constructed prior to 1979 must disclose the presence of asbestos to their tenants and workers doing business or work in areas where they could be exposed to asbestos. Additionally, section 25915 also requires that knowledge of ACMs be disclosed during real estate transactions.

Envirocom understands that the structures at the Site will be demolished in the near future. Therefore, Envirocom recommends performing asbestos inspection of the buildings at the Site.

6.8 Lead-Based Paint

Lead-based paint (LBP) or other surface coatings are considered material that contain an amount of lead equal to, or in excess of, one milligram per square centimeter (1.0 mg/cm²), more than 5,000 parts per million (ppm), or more than half of one percent (0.5%) by weight. Engineering controls and air monitoring shall be implemented during disturbance of chipping or deteriorated LBP or paints containing any detectable lead to eliminate the risk of public and worker's exposure.

Abatement and demolition projects producing hazardous lead waste must meet land disposal restrictions under Resource Conservation and Recovery Act (RCRA).

Cal-OSHA requires that worker's safety protection shall be implemented to prevent lead exposure above Permissible Exposure Level (PEL) during construction activities. PEL for lead is $50 \,\mu\text{g/m}^3$.

Review of historical documents for the Site show structures that are suspect of containing LBP. Envirocom recommends performing a lead-in-paint inspection of the structures at the Site, prior to the demolition work.

6.9 Radon Issues

Radon is a colorless, odorless, radioactive gas. It is generated from the natural decay of uranium that is found in almost all soils. It typically moves through the ground to the air above and into buildings through cracks and openings in the foundation.

The United States Environmental Protection Agency (EPA) considers 4 picocuries per liter (pCi/L) Radon as the threshold of concern. A document, EPA's Map of Radon Zones for California dated September 1993, identified Santa Clara County as Zone 2. Zone 2 areas are predicted to have an average indoor radon screening potential of 2 and 4 pCi/L. Table 1 of the same document shows 1.4 pCi/l as a mean radon level surveyed in Santa Clara County during 1989 to 1990.

Radon does not appear to be an issue at the Site.

6.10 Vapor Migration

Vapor migration screening was conducted in accordance with ASTM E1527-13. The scope of this screening was limited to visual field observations, review of EDR report, and other available information. It did not include the collection and laboratory analysis of air samples to confirm the presence of airborne contaminants by vapor intrusion, as it was not in the scope of this Phase I.

According to the Case Closure Summary dated January 7, 1997 prepared by SCVWD for the Site, residual gasoline constituents still remain in groundwater and possibly the soil. Additionally, available information suggests that oxygenated VOCs have been used/stored at the Site. Therefore, Vapor migration at the Site is considered REC. Envirocom recommends performing Phase II for the Site.

7.0 ENVIRONMENTAL REGULATORY AGENCY INQUIRIES

Envirocom reviewed the federal and state lists of properties known for soil or groundwater contamination within a mile radius of the Site, through an automated database search. This information is presented in a report by EDR (Appendix C). Several maps produced by EDR (EDR maps) in Appendix C show the identified properties in relation to the Site.

The Site was listed seven times in the databases searched by EDR. The listed databases included but were not limited to the Department of Toxic Substances Control (DTSC) database that records annual hazardous waste shipments (HAZNET), Leaking Underground Storage Tank (LUST), Statewide Environmental Evaluation and Planning System (SWEEPS), and Facility Index System (FINDS) among others. EDR search results showed the Site had generated and disposed of 0.05 tons of Oxygenated solvents and 0.3 Tons of waste oil in 2007. EDR search results also listed the Site in the State Water Quality Control Board (SWQCB) GeoTracker Database as a LUST Site related to the discovery of unauthorized release of gasoline constituents during subsurface monitoring at the Site in 1988. The property received case closure on January 24, 1997 after removal of 2 10,000-gallon gasoline tanks with associated piping, excavation of contaminated soil, and remediation (pump & treat) of soil vapor and groundwater. Approximately 7 million gallons of groundwater and 8,800 pounds of hydrocarbon vapor were extracted and treated along with 285 cubic yards of contaminated soil, which was aerated and used for landscaping at the Site.

Few properties with historical soil and/or groundwater contamination were identified within 1-mile radius of the Site in the State GeoTracker and EnviroStor databases. With the exception of three properties, case closures have been issued to all the listed properties near the Site within 1/4-mile radius indicating that they have completed necessary investigation and cleanup works required by the oversight regulatory agencies (RWQCB and DTSC). The three properties that currently have an open case

are Diridon station located approximately 1340' south of the Site, former FMC facility located approximately 559' northeast of the Site, and Platform 16 located approximately 808' northwest of the Site. All three properties have had or potential to have soil, soil gas, and groundwater contamination. However, historical groundwater flow direction for the general area had shown to be towards northeast. None of these three properties are located southwest of the Site (up gradient). Therefore, it is unlikely these properties have contributed additional contamination to the groundwater beneath the Site.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusion

Review of historical Sanborn maps from 1884 to 1956 indicated that the Site was used for residential with stables. From as early as 1966, the Site was converted and utilized for commercial/light industrial purposes as magazine distribution center according to Sanborn map dated 1966.

Reviews of historical aerial photographs indicate that from late 1930s to mid 1950s the Site was utilized for residential, and from early 1960s to present has been utilized for commercial/light industrial purposes. Adjacent and surrounding properties were utilized as mixture of industrial, commercial, and residential purposes.

Review of EDR City Directory from 1960 to 2010 listing provided for the Site show Milligan News Co Inc magazine distributors to be the occupant at the Site with Education Dept. listed as well in 1986 and 1991.

The Site was listed seven times in the databases searched by EDR. The listed databases included but were not limited to the Department of Toxic Substances Control (DTSC) database that records annual hazardous waste shipments (HAZNET), Leaking Underground Storage Tank (LUST), Statewide Environmental Evaluation and Planning System (SWEEPS), and Facility Index System (FINDS) among others. EDR search results showed the Site had generated and disposed of 0.05 tons of Oxygenated solvents and 0.3 Tons of waste oil in 2007. EDR search results also listed the Site in the State Water Quality Control Board (SWQCB) GeoTracker Database as a LUST Site related to the discovery of unauthorized release of gasoline constituents during subsurface monitoring at the Site in 1988. The property received case closure on January 24, 1997 after removal of 2 10,000-gallon gasoline tanks with associated piping, excavation of contaminated soil, and remediation (pump & treat) of soil vapor and groundwater. Approximately 7 million gallons of groundwater and 8,800 pounds of hydrocarbon vapor were extracted and treated along with 285 cubic yards of contaminated soil, which was aerated and used for landscaping at the Site.

Few properties with historical soil and/or groundwater contamination were identified within 1-mile radius of the Site in the State GeoTracker and EnviroStor databases. With

the exception of three properties, case closures have been issued to all the listed properties near the Site within 1/4-mile radius indicating that they have completed necessary investigation and cleanup works required by the oversight regulatory agencies (RWQCB and DTSC). The three properties that currently have an open case are Diridon station located approximately 1340' south of the Site, former FMC facility located approximately 559' northeast of the Site, and Platform 16 located approximately 808' northwest of the Site. All three properties have had or potential to have soil, soil gas, and groundwater contamination. However, historical groundwater flow direction for the general area had shown to be towards northeast. These properties are situated at hydraulic down gradient of the Site. Therefore, it is unlikely these properties have contributed additional contamination to the groundwater beneath the Site.

Currently, SJ Sharks uses part of the building at the Site for storage, and the remaining available space including the office area of the structure remains vacant. The buildings at the Site may contain suspect ACM, lead in paint, and PCBs.

8.2 Recommendations

Envirocom understands the City is planning to construct an open air paved parking lot on the ground surface at the Site. Based on the above information and proposed plan for the Site, Envirocom recommends performing additional subsurface investigation, as well as, asbestos, lead in paint, and PCBs inspection of building structures at the Site, before the demolition work.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

| <u>Year</u> | <u>Scale</u> | <u>Details</u> | Source |
|-------------|--------------|---------------------------------|---|
| 2016 | 1"=500' | Flight Year: 2016 | USDA/NAIP |
| 2012 | 1"=500' | Flight Year: 2012 | USDA/NAIP |
| 2009 | 1"=500' | Flight Year: 2009 | USDA/NAIP |
| 2006 | 1"=500' | Flight Year: 2006 | USDA/NAIP |
| 1998 | 1"=500' | Flight Date: August 27, 1998 | USDA |
| 1993 | 1"=500' | Acquisition Date: June 14, 1993 | USGS/DOQQ |
| 1982 | 1"=500' | Flight Date: July 05, 1982 | USDA |
| 1974 | 1"=500' | Flight Date: June 06, 1974 | USGS |
| 1968 | 1"=500' | Flight Date: June 14, 1968 | USGS |
| 1963 | 1"=500' | Flight Date: June 23, 1963 | EDR Proprietary Aerial Viewpoint |
| 1956 | 1"=500' | Flight Date: June 09, 1956 | USDA |
| 1950 | 1"=500' | Flight Date: April 01, 1950 | USDA |
| 1948 | 1"=500' | Flight Date: September 26, 1948 | USDA |
| 1939 | 1"=500' | Flight Date: July 31, 1939 | USDA |

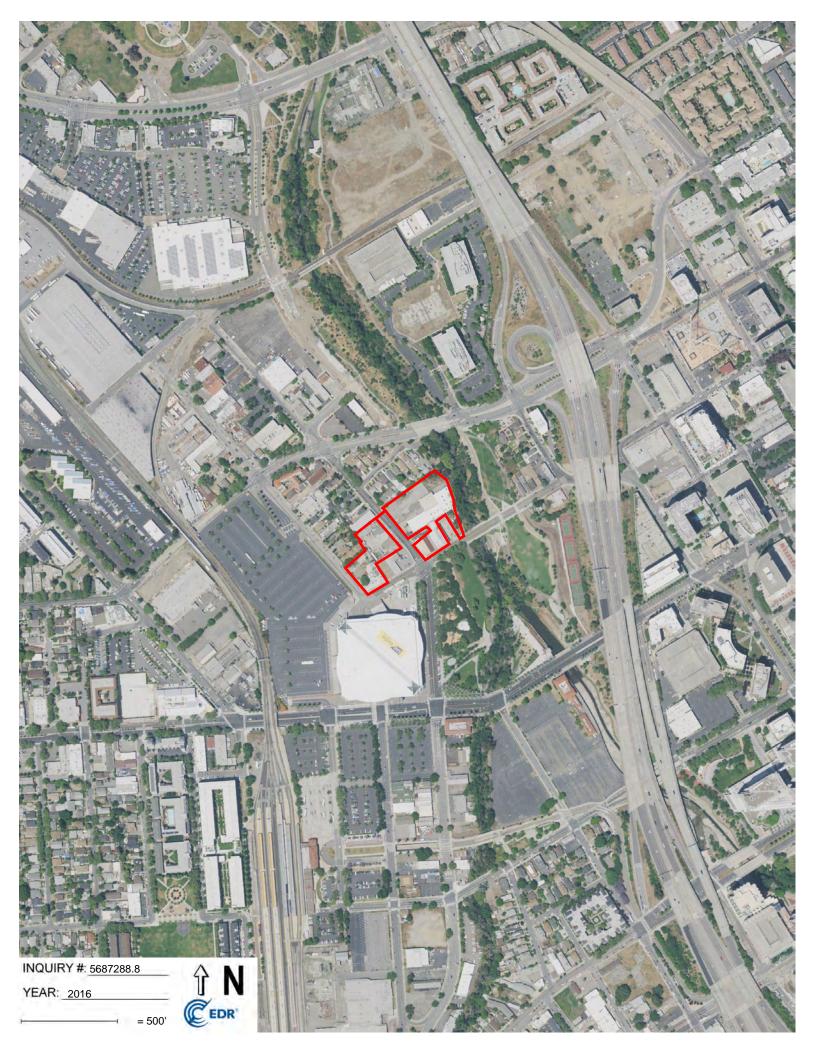

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |

| EPA Id: CAD981676430 | | | | |

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 15 ENVIROSTOR sites within approximately 1 mile of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 32 CPS-SLIC sites within approximately $\,$ 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 54 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

File Num: 602437

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within

approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

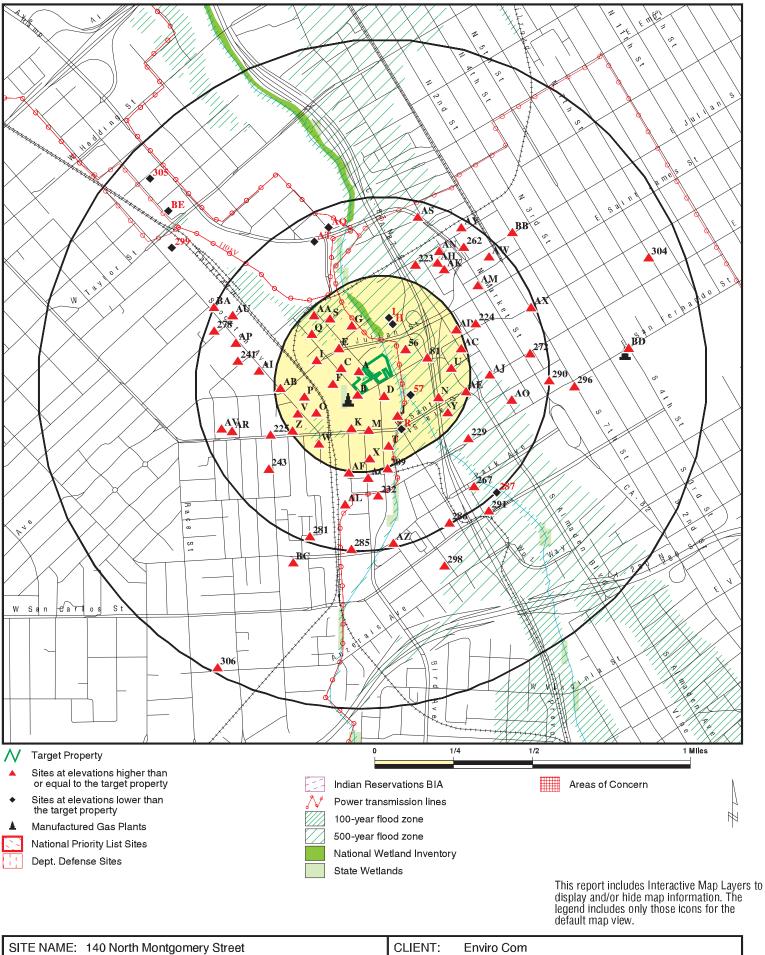

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Local Case Number: 07S1E07Q01f

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History:

The site is located in a commercial and industrial area of San Jose on the northern corner of North Montgomery and West Saint John Streets. The property (APN 259-29-001), presently vacant, was occupied by the San Jose Foundry until 2008. A combined warehouse and office building is located along the eastern, southern, and western property boundaries. The central and northern areas of the site are paved. Prior to this phase of work, a network of three groundwater monitoring wells were installed at the site (Figure 3, Table 1). The San Jose Arena is located south and west of the site, and commercial parcels are located north and east of the site. The confluence of the Guadalupe River and the Los Gatos Creek is approximately 750 feet east of the site. Evidence of gasoline leakage into soils at the site was discovered when an underground gasoline storage tank (UST) was excavated in March 1987. The former UST location is illustrated in Figure 3. Analytical results for soil samples collected during a 1987 phase of investigation indicated that soils in the immediate vicinity of the former UST contained up to 2,200 parts per million (ppm) of total petroleum hydrocarbons as gasoline (TPHg). Four exploratory soil borings, SB-1 through SB-4 were drilled in the vicinity of the former UST in 1987 (Figure 3). The results for the analysis of two soil samples from Boring SB-4 located approximately 24 feet east of the tank excavation area ranged from 50 to 110 ppm of TPHq (Table 2). Two groundwater monitoring Wells, LF-1 and LF-2 were installed at the site in 1991. A third groundwater monitoring well, LF-3, was installed in 1992. A soil sample collected at a depth of 14 feet from the boring for well LF-1 contained 3,500 ppm of TPHg. Concentrations of gasoline compounds in groundwater samples collected from Well LF-1 have remained at levels above regulatory concern since the well was installed in 1991. Groundwater testing data collected from Wells LF-2 and LF-3 have not indicated any significant gasoline-impact above laboratory reporting levels for TPHg, BTEX, and MTBE during the six sampling events for these wells. The historic groundwater flow direction has been toward the northeast. Cores recovered during previous drilling operations revealed that the upper 10 to 13 feet of sediments beneath the site are composed generally of silty and clayey sediments. Thin sandy units interbedded with silts and clavs have been logged in sediments beneath 13 feet bgs to the total depths

EDR ID Number

explored (28 feet bgs). Soil samples collected from the boring from well LF-1, drilled near the former UST, indicate that the vertical extent of the petroleum hydrocarbon release attenuates with depth. In various phases WELLTEST has advanced a total of 11 direct-push exploratory borings and collected continuous soil-core and grab-groundwater samples from these borings. Groundwater was firstencountered approximately 16 feet bgs in the borings. Based upon the historical groundwater monitoring data and the results of the grab groundwater samples collected, the plume appears to be migrating toward the northeast. The lateral extent of the plume has been defined to the north, east and west, and has been define to moderate concentrations to the south.

Completed Date: 06/20/1991

Comments: Report of Completion of Interim Remedial Measure/Removal Action

(IRM/RA). Polynuclear aromatic hydrocarbons (PAHs) contaminated soil

(23,000 cubic yards(CY)) resulting from a former PG&E gas

manufacturing site was excavated and encapsulated into the nearby parking lots. Gasoline contaminated soil (17,000 CY) was also excavated and stockpiled nearby for vapor extraction treatment. The

excavated area was backfilled with clean fill.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 06/28/1991

Comments: Completion of Phase I Construction Documentation Report. Required a

deed restriction to be filed. PNA contaminated soil from a former PG&E site was excavated and encapsulated into a nearby parking lot. Gasoline contaminated soil was also excavated and stockpiled on a nearby lot for vapor extraction treatment. The excavated areas were backfilled with clean soil. The volume of excavation for PNA

contaminated soil was approximately 23,000 cubic yards. The volume of excavation for gasoline contaminated soil was approximately 17,000 cubic yards. Groundwater treatment was performed under San Francisco RWQCB's requirements. Current files at the RWQCB list the site closed

on 06/20/97.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 04/28/2015

Comments: The City of San Jose notified DTSC in an email of its plans to repair

asphalt at the site, which is currently the location of the San Jose Arena (SAP Center). An attachment was included with the email shown

the locations where the asphalt repairs would be done.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Land Use Restriction - Site Inspection/Visit

Completed Date: 05/30/2012

Comments: DTSC conducted its annual site visit to check the condition of the

cap over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. During the inspection, numerous cracks were observed in the Hewlett Packard Pavilion parking lot. The cap consists of two feet of fill and clay and is overlaid with asphalt for use as a parking lot. The observed cracks appeared to only be in the asphalt, and the cap appears to remain protective of human health. There was no evidence of any

activities prohibited by the Land Use Covenant.

Alternate Address: 525 WEST SANTA CLARA STREET

Alternate City, St, Zip: SAN JOSE, CA 95110

Background Info: The current address on the building is 525 West Santa Clara

Street. The site is bounded by Autumn Street to the east; West Santa Clara Street to the south; Julian Street, Montgomery Street, and St. John Street to the north; and the Southern Pacific Railroad tracks to the west. In May 1987, a site screening identified contaminants in the soil as polycyclic aromatic hydrocarbons (PAH's) from a former Pacific Gas & Electric (PG&E) site with concentrations ranging from non-detect to above 3,000 ppm in localized areas. EPA completed screening site inspection in 1989. The City of San Jose Redevelopment Agency (SJRA) acquired 22 parcels in a former industrial area in downtown San Jose that had a former Pacific Gas & Electric (PG&E) coal gasification plant, various automobile repair and service businesses, underground storage tanks, oil/water

clarifers, and drums.

Comments Date: 05041987

Comments: Site Screening Done: Contaminants - PNA's (2-180 ppm),

Comments Date: 05041987

Comments: PB (160-1400 ppm), AS (14-29 ppm), HG (less than 0.10-2.5 ppm)

Comments Date: 05041987

Comments: & CN (less than 1.0 ppm).

FINDS:

Registry ID: 110002641972

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

110002665866 Registry ID:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Media Affected: Aquifer used for drinking water supply, Sediments, Soil, Soil Vapor,

Surface water

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons,

Trichloroethylene (TCE), Vinyl chloride, Other Petroleum

Site History: The area of the Site is approximately 13 acres, centered on Old West

Julian Street, bounded on the west by the Guadalupe River, on the east by the Guadalupe Parkway (Route 87), on the north by the Union Pacific Railroad, and on the south by West Julian Street. The Site is under development by Sobrato Development Companies (SDC), the current

owner. Two buildings and a parking structure have been completed. Construction on a third building was iscontinued prior to completion due to economic reasons. FMC and predecessor companies occupied the Site from the early 1900s through 1986. Manufacturing operations,

including production of agricultural machinery, food-processing

S106235203

equipment, and military tracked vehicles, occurred at the Site beginning in the early 1900s. Manufacturing operations at the Site ceased in 1986 and the facility was leased for warehousing and other storage purposes. In June 1998, FMC sold the property to SDC.FMC initiated environmental investigations at the Site in 1986. Soil sampling in former manufacturing and product storage areas revealed the presence of petroleum hydrocarbons, volatile organic compounds (VOCs), and metals. Further investigations included the installation of groundwater monitoring wells that detected VOC constituents in two shallow water-bearing zones beneath the Site. Quarterly groundwater monitoring was conducted from the third quarter of 1989 through the first quarter of 2001. Semi-annual groundwater monitoring and reporting began in April 2001. On June 21, 1989, the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) adopted Order Number 89-107, Site Cleanup Requirements for FMC Corporation-Ground Systems Division, 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 1989). On August 15, 1990, Order Number 90-122 (RWQCB, 1990) was adopted by the RWQCB, amending Order Number 89-107 with respect to the adoption of final Site cleanup levels. On January 21, 1998, Order Number 98-006 was adopted (RWQCB, 1998) for the Site, amending Orders 89-107 and 90-122 with respect to revising soil cleanup standards and adding additional tasks to protect groundwater and address risks associated with exposure to residual soil contamination. On March 21, 2001, Order No. 01-031, Final Site Cleanup Requirements and Rescission of Orders Nos. 89-107, 90-122, and 98-006 for FMC Corporation, for the property located at 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 2001) was adopted by the RWQCB. This annual compliance report is being submitted to the RWQCB as required by Order No. 01-031, Provision D.5. FMC implemented VOC source removal using a Soil Vapor Extraction system in the southwest portion of the Site from 1991 through March 1994. In addition, a groundwater extraction and treatment system for the A-level aguifer operated at the Site from March 1992 through January 1997, when it was discontinued due to changed groundwater flow directions, limited mass removal over time, and completion of effective source removal. Authorization to discontinue operation of the groundwater extraction and treatment systemwas given by the RWQCB in their letter to FMC, dated January 2, 1997 (RWQCB, 1997). The RWQCB documented the achievement of meeting the Site soil cleanup goals forchlorinated solvents in prior Order No. 98-006. FMC performed a natural attenuation evaluation in 2000 (HSI GeoTrans, 2000) to consider methods of remediating the residual VOCs present in Site groundwater. The evaluation concluded that VOC degradation could be accelerated through the introduction of an electron donor that would enhance the biodegradation. Cheese whey was selected as the electron donor material, and, in accordance with Task C.2. of Order Number 01-031 and the Work Plan for In-Situ Bioremediation Using Cheese Whey Injection (Work Plan) dated May 30, 2001 (GeoTrans, 2001), cheese whey injection was conducted at ten Site monitoring wells and piezometers in July2001 to enhance biodegradation of VOCs in groundwater. Additional cheese whey was injected at nine monitoring wells and piezometers in May 2003 to increase the in-situ reactive zone and further promote an environment for biodegradation. Groundwater sampling was conducted to evaluate the effectiveness of enhanced biodegradation on a monthly basis from September through December 2001, and on a semi-annual basis from March 2002 to March 2005. Discharger was urged to evaluate the site for case closure

Case Type: Cleanup Program Site

Case Worker: AC

SANTA CLARA COUNTY LOP Local Agency:

RB Case Number: Not reported

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Media Affected:

Potential Contaminants of Concern: Copper, Lead, Nickel

Site History:

The Site is bound by Stockton Avenue to the southwest, an office building/warehouse to the northwest, Caltrain railroad tracks to the northeast and an automotive shop to the southeast. Development plans

are to construct a seven-story mixed use of commercial and residential structure at-grade. Shallow soils are contaminated with hazardous levels of the heavy metals copper, lead, and nickel at select areas of the site. These soils will be excavated to a maximum depth of 9 feet below current grade, and stockpiled on-site while rough grading activities are completed. The contaminated soils will then be placed in a consolidated layer between 6 and 9 feet below grade and capped by the concrete foundation of the new building.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110010462436

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations Found: No

Eval Type: Other, not routine, done by local agency

On-site to conduct a permit investigation at DLT Collision & Service **Eval Notes:**

Center with Manager Justin Phan. This facility is an auto body shop that provides welding services. I observed the following Hazardous Materials at or above HMBP quantities: - 2 x 55 gal Used Oil - 2 x 150 cubic ft Acetylene - 2 x 150 cubic ft + 251 cubic ft Oxygen New Oil was also observed but it is stored at quantities under the HMBP thresholds (1 x 55 gal). Based on my permit investigation, the permit should be adjusted to BP01. NOTES: - Contact name: Justin Phan -Contact number: (408) 288-8856 - Contact e-mail: dltauto888@yahoo.com

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: This facility is an unmanned pump station owned and operated by the

City of San Jose with an emergency generator on site. Conducted Hazardous Material Business Plant (HMBP) Inspection walk through with Ana Bu on 8/28/2018 and issued report on today's date. No CERS ID issued. The business entity is the owner of the property. Notes: -Hazardous material was unable to be verified due to an issue with a door lock malfunction. John Del Ponte indicated that the generator has a belly tank capacity of 150 gallons. No additional tanks were visible from the outside. -This is a new facility as of January 3rd, 2018.

Ensure that upon your HMBP submittal on CERS, the facility address is verified.

Eval General Type: Compliance Evaluation Inspection

Eval Date: 06-13-2018

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Inspection was conducted with Ken Choi and Tiffany Shon of Cerulean

Global Services. Ruben Williams, Senior Hazardous Materials Specialist, HMCD was also present. Facility is a communications and server co-location operation. Observed diesel, Uniterruptible Power Supply (UPS) batteries, and FM-200 fire suppression material in HMBP quantities. The FM-200 is disconnected from the fire suppression system and is therefore in storage. Facility stated they will attempt to remove the FM-200 as soon as practicable. CERS submittal on 11/2/2017 was generally complete and accurate except as noted in the

violations above. Observed one 55 gallon drum labeled as

"Non-Hazardous Waste". Determine the contents and properly manage it if it is determined to be a hazardous material. Please contact HMCD to

gain access to CERS or FrontCounter.

Chapter 15, Section(s) 66265.195(a)

Violation Description: Failure of the owner or operator to conduct inspections and maintain

inspection records at the facility of the following tank equipment: 1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order; 2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste; 3) Data gathered from

monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system

is being operated according to its design; 4) The construction materials and the area immediately surrounding the externally

accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and 5) For uncovered tanks, the level of waste in the tank, to ensure compliance

with section 66265.194(b)(3).

Violation Notes: Returned to compliance on 10/10/2014.

Facility observes the tank multiple times daily but is not logging the inspections. Update your inspection records to include the items noted

below and log the inspection details at least once daily.

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 09-05-2014 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Facility treats waste water from automobile engine steam cleaning.

Facility stated that their operations have changed from more heavy-duty equipment to light-duty passenger vehicles. Facility also stated that the POTW may not require a permit in the future due to the low levels and infrequent high readings. It is recommended that a representative sample of the waste generated be collected and sent for testing (CAM-17 hazardous waste metals). Collect the sample of waste

prior to it reaching the first sump. Contact the inspector with any

to detect corrosion or releases of waste; 3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design; 4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and 5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Violation Notes: Returned to compliance on 10/10/2014.

Facility observes the tank multiple times daily but is not logging the inspections. Update your inspection records to include the items noted

below and log the inspection details at least once daily.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Compliance Evaluation Inspection

08-29-2018 Eval Date: Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Site generates small quantities of used oil and lube from the service

> of CNC style machining tools. Oil is placed in 5 gallon buckets upon generation. Buckets were labeled during the inspection. (G020C) Information regarding disposal as a CESQG was provided. Scrap turnings, cuttings, etc are managed as scrap metal: picked up by Sims Metal. --Did not observe any metal scrap which was wet with oil or other fluids. Site works mostly aluminum and stainless steel.

Absorbent on floor around machines. Discussed disposal.

Potential Contaminants of Concern: Gasoline

Site History: 1993 - June: Three UST's discovered under the sidewalk during the

planting of palm trees were removed. The highest level of 840 ppm
TPHg was recorded in samples. No BTEX was detected. 1997 - San Jose
Redevelopment Agency (SJRA) named responsible party by SCVWD. 1998 SJRA notified to submit tests for fuel oxygenates and additives. 1998
- 2010 Numerous correspondence sent to SJRA and City of San Jose for

the submittal of a Workplan to Perform a Soil and Groundwater Investigation of the release. 2011 March - Site visit conducted with the City of San Jose and their Consultant. May - Workplan for SWI submitted and approved. Due date for report in August 2011. July SWI submitted. Stop work pending closure review letter issued.

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 12-05-2016

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: On site to conduct a routine hazardous materials business plan

inspection. CERS ID: 10351912 Facility's last HMBP submittal was 9/2/16 via FrontCounter Facility has 1 reportable chemical on site: 100 gallons diesel fuel Facility is correctly permitted at BP01

Documented annual employee training was reviewed on site The following violations were corrected during inspection: Site map was missing the utility shut off locations. Site map was updated and uploaded to

FrontCounter with the utility shutoff locations.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Cleanup Program Site

Case Worker: UUU
Local Agency: Not reported
RB Case Number: 43S0528
File Location: Regional Board

Potential Media Affected: Soil Potential Contaminants of Concern: Gasoline

Site History: This proposed site closure is based on the July 1992 Report of

Findings - Excavation of Contaminated Soils (Report) Environmental Solutions. The Report documented the excavation of contaminated petroleum hydrocarbons around the oil-water separator pit and the associated sump. Based on available information, the excavation removed total petroleum hydrocarbons as diesel, gasoline and benzene/toluene/ethylbenzene/xylenes to non-detectable levels.

permit inspection. Lin Leung, Environmental Field Specialist, was on site to provide facility access and records review. The 4/8/2014 Notice of Inspection (NOI) Return to Compliance (RTC) was received for the record. Facility inspection; The 350 gallon generator has a spill/accumulation of oily debris below it that shall be cleaned from the concrete pad below the generator tank. The system shall be confirmed to be product tight. If this unit is to be closed, then identify the time line for fuel removal and closure and the current remaining fuel in the system. A 5 gallon orange "Homer" bucket was observed containing a small oil filled vessel. This was from a service truck as is to be managed properly. Any usable parts are to be identified, removed, prior to discarding as waste. All hazardous waste containers observed were closed, labeled, and in good order. Records review; I reviewed [Truncated]

Eval Notes: I was on site, 308 Stockton, for the 2016 Hazardous Waste Generator

permit inspection. Lin Leung, Environmental Field Specialist, was on site to provide facility access and records review. The 4/8/2014 Notice of Inspection (NOI) Return to Compliance (RTC) was received for the record. Facility inspection; The 350 gallon generator has a spill/accumulation of oily debris below it that shall be cleaned from the concrete pad below the generator tank. The system shall be confirmed to be product tight. If this unit is to be closed, then identify the time line for fuel removal and closure and the current remaining fuel in the system. A 5 gallon orange "Homer" bucket was observed containing a small oil filled vessel. This was from a service truck as is to be managed properly. Any usable parts are to be identified, removed, prior to discarding as waste. All hazardous waste

containers observed were closed, labeled, and in good order. Records

Eval Type: Routine done by local agency

Eval Notes: Onsite today for routine aboveground petroleum storage act inspection,

noted the following: -CUPA/Santa Clara County contact number and information updated in plan under Additional Numbers today by Lin. -The SPCC is stored onsite. -The SPCC is certified by a PE. -The SPCC has management approval, it occurred on 5-10-16. -Inspections are being performed monthly and annually and records are maintained; records were reviewed today, including any electronic monitoring equipment certification documents. -Tank and container areas are free of leaks and provided with adequate secondary containment. No

violations were noted today, thank you. Santa Clara County Environmental Health

Eval Type: Routine done by local agency

Eval Notes: I was on site, 308 Stockton, for the 2016 Hazardous Waste Generator

permit inspection. Lin Leung, Environmental Field Specialist, was on site to provide facility access and records review. The 4/8/2014 Notice of Inspection (NOI) Return to Compliance (RTC) was received for the record. Facility inspection; The 350 gallon generator has a spill/accumulation of oily debris below it that shall be cleaned from

the concrete pad below the generator tank. The system shall be confirmed to be product tight. If this unit is to be closed, then

A transfomer was in the process of being moved when it fell from a truck causing the product to spill onto asphalt and approximately 5-10 gallons went into a storm drain. A clean up crew is on scene and in the process of vacuming it out of the drain. A sample will be obtained for lab

purposes.

EDR ID Number

Local Agency: Not reported RB Case Number: 43S1111 File Location: Regional Board

Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating, Diesel

Site History:

The Peninsula Corridor Joint Powers Board, owner and operator of the Caltrain commuter rail system, plans to make improvements to the existing Diridon Station located at 65 Cahill Street in San Jose. The site is currently used for commercial purposes and is located within a commercial/industrial area of San Jose. The site use will remain the Diridon Station. The project includes demolition of the maintenance facilities and constructing two new platforms at the station immediately to the west and outside of the historic platforms, along with new tracks, platform canopies, and station amenities. The site is currently a passenger train depot and maintenance yard. There are currently seven tracks used for storage and maintenance activities. According to site personnel and historical reviews, railroad operations at the site have remained generally constant since approximately the 1880's. However, the onsite maintenance facilities, including the inspection pits, the train shed, and the water collection and treatment systems were not constructed until the mid 1990's. Soil analytical results indicate TPH diesel-range detections above the ESL of 100 mg/kg in five of 36 samples analyzed at concentrations ranging from 850 to 14,000 mg/kg and TPH motor oil-range detections above the ESL of 500 mg/kg in 12 samples of 36 analyzed at concentrations ranging from 950 to 12,000 mg/kg. Arsenic was detected at levels above the ESL of 0.38 mg/kg in 22 samples ranging from 1.3 to 48 mg/kg; however, 21 of the 22 detections were at concentrations between 1.3 to 7.9 mg/kg, which are similar to documented regional arsenic background concentrations and below the arsenic action level of 8 mg/kg established in the SMP. Ground water analytical results indicate TPH diesel-range detections in 2 samples above the ESL of 100 a%g/L ranging from 18,000 to 170,000 a%g/L and one TPH motor oil-range detection of 17,000 a%g/L above the ESL of 100 a%g/L. MTBE was detected at 6.9 a%g/L in one sample, above the ESL of 2.3 a%g/L. The Phase I ESA identified a number of leaking underground storage tank sites potentially upgradient of the Diridon Station and the MTBE detection is most likely related to one of these adjacent sites. Dissolved lead was detected at a concentration of 21 a%g/L in one sample which is above the MCL of 2.5 a%g/L. The site is located approximately 0.15 mile west of Los Gatos Creek and 0.3 mile west of Guadalupe River. The site is not within the 100-year flood plain and wetlands are not present on the site.

Lead Agency Case Number: Not reported 37.3389995038696 Latitude: Longitude: -121.897766876335 Cleanup Program Site Case Type:

Case Worker: **MBR** Local Agency: Not reported RB Case Number: 43S1105 File Location: Regional Board Potential Media Affected: Under Investigation Potential Contaminants of Concern: * Metals. Diesel

The approximately 0.65-acre Site is located at 235 West Julian Street Site History:

near the intersection of Terraine Street and West Julian Street in San Jos, California in a commercial/light industrial area. The Site was occupied by Ropers Fruit Packing Depot in 1891; Bean Spray and Pump Company (with on-Site spray mixing, spray storage and machine shop activities) in 1915; a U.S. Government Warehouse in 1950; and foundry and lithograph businesses in 1969. A 2005 SECOR environmental investigation (Phase I and II) revealed elevated metal concentrations (arsenic, chromium, copper, lead, nickel and zinc in the upper 2 feet of soil. Diesel ranged petroleum hydrocarbons also were at depths ranging from 15 to 20 feet. Secor also reported elevated diesel ranged petroleum hydrocarbons in ground water (SB-8 @ 12,000 ppm).

The results of the human health risk assessment indicated that potential on-Site construction workers and potential future residents will not incur significant carcinogenic or noncarcinogenic health effects via indoor and outdoor inhalation of the Chemicals of Concern

in soil, soil vapor and ground water. The Site is zoned for commercial/industrial use but will be rezoned to high density residential use. The proposed Site use is for a 10 to 16 story residential tower. Construction is planned to commence in 2014 but could be as early as 2011. The discharger is proposing capping the Site with the development effectively limiting exposure to future

residents.

Potential Media Affect: Aguifer used for drinking water supply, Soil

Potential Contaminants of Concern: Site History:

Benzene, Toluene, Trichloroethylene (TCE), Xylene, Gasoline, Waste Oil / Motor / Hydraulic / Lubrica In 1997 a Phase I Environmental Site Assessment (ESA) was performed and a potential UST was noted near the northern site boundary. In

CERS

January 1998, a Phase II ESA was performed and discovered the presence of petroleum hydrocarbons and related constituents in soil and groundwater beneath the site. In May 1998 two USTs were removed from the site. On May 10, 1998 a UST (Tank 1) with an estimated volume of 8,000 gallons was removed and was suspected to have contained leaded gasoline. On May 19, 1998 a second UST (Tank 2) with an estimated volume of was removed and was suspected to have also contained leaded gasoline. The UST removal included overexcavation of the impacted soils. However, excavation of visibly impacted soils to the north was stopped due to concerns regarding the integrity of Carlysle Street. The maximum level of TPH-g detected below the tank were was 3,300 ppm. At that time 460 tons of soil was removed to Kirby Canyon landfill in Morgan Hill. In September 1999 additional soil sampling was performed. The maximum level of contamination in soil was 280 ppm TPH-g, 2 ppm benzene, 9 ppm toluene, 8.5 ppm ethylbenzene and 38 ppm xylenes. Groundwater contamination was up to 2,400 ppb TPH-g, 11 ppb benzene, 44 ppb toluene, 28 ppb ethylbenzene and 170 ppb xylenes. MTBE was not detected. On December 9, 1999 additional soil was excavated from the area around the former USTs. Approximately 344 tons of soil was removed and disposed of at the Forward Landfill in Manteca on December 17, 1999. Eight soil samples were collected in and around the excavated area. The maximum detected

soil concentrations were 14 ppm lead, 19 ppm TPG-g and 0.22 ppm benzene. On December 29, 1999 approximately 93 tons of soil was

Direction Distance Elevation

ion Site Database(s) EPA ID Number

SAN JOSE MERCURY NEWS (Continued)

S103473094

EDR ID Number

excavated from the area near the former USTs (between shoring columns 10 and 14) and eventually disposed of at the Forward Landfill in Manteca. Confirmation soil samples detected TPH-g and benzene up to 250 and 1.6 ppm, respectively in sample location E-1-19'). On December 30, 1999 302 tons of soil was excavated and transported to Forward Landfill. Confirmation soil samples collected from sample location E-13 identified an area of concern. Consequently, on December 31, 1999 further excavation was performed between columns 17 and 19 and confirmation samples E-14 through E-16 were collected for chemical analyses. It was determined that the area of concern had been removed. Approximately 302 tons of soil was removed to the Forward Landfill. On February 10, 2000 approximately 20 tons of soil was excavated and disposed at Forward Landfill. Confirmation soil samples taken from the excavation indicated that all constituents were below the affected zone criteria. Prior to March 13, 2000 13 soil samples were collected from the base of the northern portion of the site excavation area. A sample collected between columns 13 and 14 at a depth of 23.5 feet contained 0.83 ppm benzene. Approximately 5 cubic yards (7 tons) of soil was excavated at this location and disposed of off-site. Two additional soil samples collected at this location on January 10, and February 18, 2000. The soils samples were below the affected zone criteria. Groundwater extraction was used to dewater the site to allow for construction activities beginning on October 11, 1999. Extraction rates varied between 5 and 30 gallons per minute (gpm) from the eleven extraction wells. The permit to discharge water was terminated on March 9, 2000. Approximately 7,176,000 gallons of impacted water was discharged to the sanitary sewer during site development activities.

FINDS:

Registry ID: 110002889679

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

File Location: All Files are on GeoTracker or in the Local Agency Database Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil,

Soil Vapor

Potential Contaminants of Concern: Not reported

Site History:

August 2018 Block BF LLC is planning to construct a 5-story

podium-style apartment building with one full level of ventilated, subterranean parking. Prior commercial operations at the site date back to 1884 and have included underground storage tanks, oil water separators, associated piping, a railroad spur(s), and manufacturing of specialty bicycle parts. The Regional Water Board has issued several no further action letters for parcels within the site when the site was zoned for commercial use. Block BF LLC has submitted a vapor intrusion mitigation system (VIMS) VIMS Design Report that includes the following elements: Excavation of soil at the entire site to approximately10 feet below ground surface (bgs) to allow for the subterranean parking Excavation of soil at the elevator pit locations to approximately 15 feet bgs Vapor barrier under the entire building footprint Vapor collection system installed beneath the vapor barrier with 50 spacing Ventilation risers to the roof fitted with active fans on the rooftop Implementation of a construction quality assurance plan under the oversight of VIMS design engineer Subslab sampling layer and four subslab sampling points Two rounds of

indoor air and subslab sampling at four locations Submittal of a VIMS

completion report and O&M plan

Local Case Number: 07S1E08N03f

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Diesel

Site History: The site is currently an AT&T property occupying an entire city

block. The surrounding area is primarily commercial properties. Currently a nine story office building which originally dates back to approximately 1950 when AT&T purchased land from the Greyhound bus lines company. In 1992, five 10,000 gallon underground storage tanks (USTs) containing diesel fuel and all associated piping were removed from the southwest corner of the site. Soil samples collected during the UST removal contained elevated concentrations of petroleum hydrocarbons. Three new 20,000 gallon USTs were subsequently installed approximately 90 feet to the north of the original UST pit. In 1995 six monitoring wells were installed on-site to monitor groundwater contamination. In 1996 free product was observed in monitoring wells MW-1 and MW-6 and both passive and active free product removal activities were initiated. Groundwater monitoring and free product recovery continued through 2001 when a corrective action

plan (CAP) was approved. The CAP approved injection of oxygen-releasing compound (ORC) into the subsurface to promote biodegredation. In 2002 passive free product recovery skimmers were installed in wells MW-1 and MW-6 and currently remain in these wells. In 2008 another CAP was submitted recommending the removal of

remaining contamination through excavation. In 2012 the

pre-excavation design investigation was performed during which two direct push soil borings and nineteen CPT UVOST borings were drilled

to determine the extent of soil contamination in order to help finalize and excavation design. Groundwater monitoring is currently being performed on a semi-annual basis in the first and third

quarters.

All Files are on GeoTracker or in the Local Agency Database File Location:

Local Case Number: 07S1E07N05f

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: 2006 In July, 5 underground storage tanks (2-4,000 gallon gasoline,

1-1,000 gallon waste oil, and 2-1,000 gallon gasoline) were removed from the site. Pitting and holes were noted in at least one of the

USTs. Soil samples collected beneath the gasoline USTs were analyzed for Total Petroleum Hydrocarbons as Gasoline, Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), fuel oxygenates and Ethylene Dibromide (EDB). None of these constituents were reported to be present above the laboratory reporting limits. 2 soil samples (T5-North-9 and T5-South-10) were collected from beneath the waste oil UST. These samples were analyzed for the same constituents as above, plus TPH as Diesel (TPHd), semi-volatile organic compounds by EPA Method No. 8270, and Polycholorinated Biphenyls (PCBs). The only constituent

Database(s)

reported present above the laboratory reporting limit was Tetrachloroethene (PCE) at 0.0065 parts per million (ppm). During removal, a 6th tank was encountered and was 1,000-gallons in capacity and is believed to have held gasoline. 2 soil samples were collected from beneath the UST and were reported to have up to 0.45 ppm TPHg, 0.013 Benzene, 0.079 ppm Toluene, 0.014 ppm Ethylbenzene, and 0.063 ppm Xylenes. Fuel oxygenates were not reported to be present above the laboratory reporting limits. During tank removal, the eastern end of the tank was breached causing the release of approximately 5 gallons of fuel-water mixture into the excavation. Approximately 30 cubic yards of soil were removed from the eastern portion of the excavation. Additional soil samples were collected from 9.5 and 12 feet below the ground surface (ft bgs) in the excavated area. The sample collected at 12 ft bgs was reported to have 150 ppm TPHg and 1.9 ppm Xylenes. All other constituents were not reported to be present above the laboratory reporting limits. In November, 3 Geoprobe borings (GP-1 through GP-3) were drilled onsite to a depth of 30 ft bgs. Soil samples collected from boring GP-3 were not reported to have detectable concentrations of constituents of concern. Soil samples collected from boring GP-1 were only reported to have very low concentrations of TPHg present above the laboratory reporting limits. The highest concentrations were reported for the sample collected from 20 ft bas in boring GP-2 located adjacent to the 6th UST, with 10,000 ppm TPHg and 30 ppm Ethylbenzene. Grab groundwater samples were collected from the 3 borings and were reported to have a maximum concentration of 5,100 parts per billion TPHq, 6.6 ppb Benzene, 5.1 ppb Toluene, 200 ppb Ethylbenzene, 240 ppb Xylenes, and 6.5 ppb 1,2-Dichloroethane (DCA). The sample collected from GP-2 was also reported to have 3,200 ppb hydrocarbons in the C8-C18 range with no diesel pattern present. 2007 In August, 4 monitoring wells (MW1 through MW4) were installed on and off-site to approximately 29 ft bgs and one geoprobe boring (GP4) was advanced onsite to approximately 24 ft bgs. 15 soil samples were collected and reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). A grab groundwater sample was collected from GP4 and was reported to contain 62 ppb TPHg, 1.9 ppb Benzene, and 0.64 ppb Xylenes. In October, well MW5 was installed onsite to approximately 30 ft bgs to the south of UST T1. 4 soil samples were collected and reported to contain maximum concentrations of 390 ppm TPHg at 16 ft bgs and 0.018 ppm cis-1,2,-dichloroethene (cis-1,2-DCE) at 12 ft bgs. All other constituents were not reported to be present above the laboratory reporting limits. Following installation, all the monitoring wells were sampled and reported to contain maximum concentrations of 180 ppb TPHg, 280 ppb cis-1,2-DCE, 3.8 ppb 1,2-Dichloroethane (1,2-DCA), 19 ppb PCE, 8.2 ppb Trichloroethylene (TCE), 3.3 ppb trans-1,2-Dichloroethene, and 1.1 ppb Vinyl Chloride (VC). 2011 In December, the final groundwater monitoring event was conducted. It is reported that there is a groundwater mound in the vicinity of well MW2, which is located near the sanitary sewer system along North Morrison Street. It is reported that the groundwater elevations suggest that leakage from the sanitary sewer system may have created the groundwater mound. The groundwater mound was not present in each monitoring event. During this sampling event, maximum concentrations were reported of 290 ppb TPHg, 5.4 ppb Benzene, 0.54 ppb Ethylbenzene, 2.5 ppb 1,2-DCA, 200 ppb cis-1.2-DCE, 140 ppb PCE, 74 ppb TCE, 3.9 ppb trans-1,2-Dichloroethene, and 1.8 ppb VC. A higher TPHg concentration

EDR ID Number Elevation Site Database(s) **EPA ID Number**

CAMPISI TRUST (Continued)

S108240972

(320 ppb) was reported for well MW1, but the laboratory reported the TPHg was entirely due to the presence of chlorinated solvents (discrete peaks) and does not represent actual petroleum hydrocarbons.

File Location: Regional Board

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil

Potential Contaminants of Concern: Diesel, * Petroleum, Lead

Site History: Site includes two properties: - Former Lenzen Yard: 13 acres with PHC

plume within the property boundary. - College Park Yard - Parcel 2: 8 acres with no groundwater impact. Contaminated soil from use as an old railyard now being redeveloped for a variety of uses including residential and a Caltrain (JPB) maintenance center. Extraction-well maintenance of an open excavation removed thousands of gallons of groundwater heavily contaminated with petroleum hydrocarbons (PHCs). GAC treatment of the PHC-contaminated water removed hundreds of

pounds of PHCs from the subsurface.

CERS Description: Chemical Storage Facilities

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 04-17-2015 Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: Facility walkthrough conducted with inspector Matt Burge and

facility's general manager, Ray Naidu. Facility stores various automotive maintenance materials in small quantities for vehicle maintenance as well as a 1,150 gallon propane tank for refilling 5 gallon cylinders for retail. The last HMBP submittal on CERS was from 02/20/2015 and verified during this inspection. Note: As of January 1, 2015, HMBP training is required to be documented and retained for three years. Attached with this report is a copy of our training log template which you may use for the required documentation.

U-HAUL MOVING & STORAGE AT THE ALAMEDA (Continued)

S102439368

EDR ID Number

Eval Date: 06-01-2018

Violations Found: No

Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazard

al Notes:

On-site to conduct a routine hazardous materials business plan (HMBP) inspection. Facility handles Propane (1 x 1165 gallon aboveground tank) at HMBP-reporting thresholds. No violations were observed.

NOTES: -A HMBP was submitted to CERS on 12/29/17 and was reviewed as

complete. -Training documentation is retained electronically. -Small quantities of hazardous materials are used on-site but according to personnel only to perform hitch installations or wiring repairs (it appears small quantities of motor oil and coolant may be handled on-site for "topping off" rental vehicles). As a reminder, ensure any hazardous materials containers are used until completely empty (no liquid contents will pour out of them) before disposing of them into the trash. -A hard-copy HMBP is provided to the facility by U-haul

corporate.

Eval Division: Santa Clara County Environmental Health

Eval Program: HMRRP Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection

Eval Date: 07-21-2016

Violations Found: No.

Eval Type: Routine done by local agency

Eval Notes: A HAZARDOUS MATERIALS BUSINESS PLAN WAS CONDUCTED WITH MR. RAHUL

NAIDU- U-HAUL GENERAL MANAGER ON JULY 20, 2016 AND THE NOTICE OF INSPECTION REPORT WAS ISSUED ON JULY 21, 2016. A FACILITY WALK THROUGH WAS CONDUCTED TO VERIFY CHEMICAL QUANTITIES AND MAP STORAGE LOCATIONS. ALL CHEMICAL QUANTITIES AND MAP STORAGE LOCATIONS WERE CURRENT. THE FACILITY HAD A CURRENT HAZARDOUS MATERIAL BUSINESS PLAN PERMIT. ALL INFORMATIONS ENTERED ELECTRONICALLY IN THE CALIFORNIA ENVIRONMENTAL

REPORTING SYSTEM. (CERS) SUBMITTED IN 2016 WAS CURRENT. NO VIOLATIONS WERE NOTED DURING THE FACILITY WALK THROUGH.

S100274371

Violation Description:

Haz Waste Generator Program - Operations/Maintenance - General

Violation Notes: Returned to compliance on 11/03/2015.

Funnels

were in use but there was still oil spilled on the top of the drums.

There was also absorbent in the secondary containment and some outside secondary containment. Store used/contaminated absorbent in a container with a lid and if determined to be hazardous waste, properly label the container. Respond to spills as they happen. Clean up the

hazardous waste area and maintain it in a way to minimize the

potential for releases to the environment.

6.5, Section(s) Multiple Sections

Violation Description: Haz Waste Generator Program - Operations/Maintenance - General

Violation Notes: Returned to compliance on 11/03/2015.

Funnels

were in use but there was still oil spilled on the top of the drums.

There was also absorbent in the secondary containment and some outside secondary containment. Store used/contaminated absorbent in a container with a lid and if determined to be hazardous waste, properly label the container. Respond to spills as they happen. Clean up the hazardous waste area and maintain it in a way to minimize the

potential for releases to the environment.

S118757327

Completed Date: 01/20/2017

Comments: DTSC reviewed several Phase I Environmental Site Assessment reports

as well as Limited Soil Sampling and Analysis Reports prepared for the site. Organochlorine pesticides and metals were detected at relatively low concentrations in soil samples collected from the site in June 2016. Lead was detected in 8 soil samples at concentrations greater than DTSC's screening level for residential land use. The lead screening exceedances were localized and limited in extent, with most of the exceedances at 1.5 feet below ground surface (bgs), with one exceedance at 3 feet bgs. The lead-impacted soil was removed when excavation for the construction of an underground parking garage occurred. The lead- and arsenic-impacted soil was disposed at Republic Services Newby Island Landfill in Milpitas, California. DTSC concluded that no further action is required at the Site and that the

planned residential development is acceptable.

Completed Date: 12/27/1991

Comments: Completed Site Screening. In January 1989, additional sampling was

conducted at the site. Soil boring results detected total oil and grease (TOG) and total petroleum hydrocarbons as diesel (TPHd) in excess of 1000 ppm. Lead was detected at 938 ppm. In May 1989, two groundwater monitoring wells (MW-1 and MW-2) were installed at the property. Lead was detected in groundwater at a concentration of 0.181 ppm. In May 1989, contaminated soil was removed from the previous sampled area. Final soil sample results indicated only one sample contained TOG at 780 ppm and lead at 191 ppm. The sample that contained the TOG and lead was collected beneath the foundation of the building. The excavations were backfilled with clean, imported

fill

Violation Date: 11-08-2016

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter

15, Section(s) 66265.16

Violation Description: Failure to provide employees with hazardous waste training within the

first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the

facility.

Violation Notes: Per Mr. Athans, hazardous waste management training is provided at the

time of hire and refreshed at least annually and observations are consistent with this statement, but employee training is not documented in accordance with the requirements below.

Eval Type: Routine done by local agency

Eval Notes: Facility is recycling treated rinsewaters for reuse as rinse water.

Recyclable materials report is required to be filed by July 1 of each even numbered year. Believe that facility qualifies for recycling under HSC 25143.2(d) "reuse in place of commercial product".

Eval General Type: Compliance Evaluation Inspection

Eval Date: 11-08-2016

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility

is an aluminum parts anodizer that conducts Type II, passivation, chemical film processes. The facility generates between 11-12,000 gallons of hazardous waste per month from corrosive rinsewaters and wet floor aqueous wastes. All hazardous waste is "immediately" treated in an on-site hazardous waste treatment system and is excluded from RCRA waste counting per 40 CFR 261.5(c)(2), but is counted when determining California ("non-RCRA") generator status. Therefore, the facility is a non-RCRA large quantity generator. The following hazardous wastes are accumulating at the time of inspection: -2 x 55 gallon drums of wastewater treatment sludge (Accumulation Dates: 8/13/2016, 10/8/2016) - 1 x approximately 8 gallon container accumulating filter press sludge (Empty Daily) - 1 x 600 gallon

wastewater treatment tank (elementary neutralization) NOTES: - Sludge

waste generated from on-site treatment [Truncated]

Violation Division: Santa Clara County Environmental Health

Violation Program: PBR
Violation Source: CERS

Site ID: 112809

Site Name: Du-All Anodizing Corporation

Violation Date: 11-08-2016

Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter

15, Section(s) 66265.52

Violation Description: Failure to include one or more elements in the Contingency Plan

including but not limited to the following: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators

including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities,?evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management

provisions.)

Violation Notes: The facility's contingency plan is on-site, but does not include the

following required information: - Actions to be taken in response to fires, explosions, and unplanned releases of hazardous waste - Arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services or if they have been deemed not necessary - The location and a physical description of each item on the list, and a brief outline of its capabilities - An evacuation plan for facility personnel where there is a possibility that evacuation could be necessary, including signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the

primary routes could be blocked by releases of hazardous waste or

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 06-08-2015 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Facility is anodizer, providing surface finishing to aluminum parts.

Does Type II , passivation, and chem film processes along with small pallette of dyes. Generate waste from onsite waste water treatment system. Three steps- pH adjust, floc/polymer and press dry. --Water from system is routed to a "final to city" tank which is valved to allow reuse of water in shop for static "fresh water" rinses or discharge to sanitary sewer. -- Have permit to discharge with city of San Jose, maintain quarterly discharge sample results, tested for pH, metals, organics, CN. Shop is operated as a wet floor operation. Per

 $\mbox{Mr.}$ Athans, floor is drained daily through lift station pump in

processing area, pumped to treatment system. STRONGLY RECOMMEND

FOLLOWING THE DTSC WET FLOOR GUIDANCE DOCUMENT. -do have procedures

calling for inspection of floors, but no documentation of doing such.

Eval General Type: Compliance Evaluation Inspection

Eval Date: 11-08-2016 Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility

is an aluminum parts anodizer that conducts Type II, passivation, chemical film processes. The facility generates between 11-12,000 gallons of hazardous waste per month from corrosive rinsewaters and wet floor aqueous wastes. All hazardous waste is "immediately" treated in an on-site hazardous waste treatment system and is excluded from RCRA waste counting per 40 CFR 261.5(c)(2), but is counted when determining California ("non-RCRA") generator status. Therefore, the facility is a non-RCRA large quantity generator. The following

hazardous wastes are accumulating at the time of inspection: - 2 x 55 gallon drums of wastewater treatment sludge (Accumulation Dates: 8/13/2016, 10/8/2016) - 1 x approximately 8 gallon container accumulating filter press sludge (Empty Daily) - 1 x 600 gallon

wastewater treatment tank (elementary neutralization) NOTES: - Sludge

waste generated from on-site treatment [Truncated]

Potential Media Affected:

Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons,

Tetrachloroethylene (PCE), Trichloroethylene (TCE)

Site History: The Williams Manufacturing Facility encompasses 560 - 595 Emory

Street and 790 Chestnut Street parcels. The site is a former metal stamping facility family owned and operated since 1942. The facility ceased operations in 2003. The site comprises several buildings on

either side of Emory Street and is rented to different

commercial/industrial users. Soil, soil vapor, and GW sampling

results show elevated concentrations of TPG and VOCs (PCE & TCE) are present in all media. 790 Chestnut Street property- a former UST at this location; that case (43-3139) was closed in December 2008. Partial closure by RWQCB for the 760 Emory Street parcel - NFA letter 6/30/2014 (APN 259-09-020). One groundwater monitoring well MW-1 and 16 soil vapor extraction wells were decommissioned in October 2014. The NW corner of Chestnut and Emory St. remains open for solvent release; additional site characterization and recommendations for corrective action are required. Phase II Environmental Site

Assessment for the property located at 561- 595 Emory Street (1-ac) was conducted in 2015; elevated concentrations of TCE up to 1,200

ug/L in the GW sample (B-1).

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 82 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5640416 SAN JOSE WEST, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

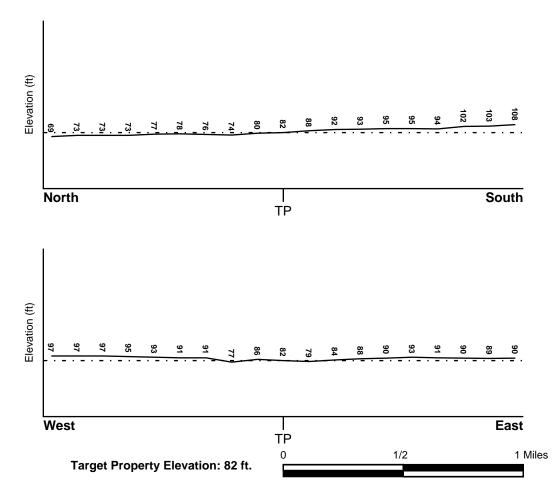

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

SAN JOSE WEST YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Location Relative to TP: 1/8 - 1/4 Mile NW

Site Name: Fmc Corp San Jose Ordnance Plt

Site EPA ID Number: CAD009146952

Surficial Aquifer Flow Dir.: NE. THIS FLOW APPLIES TO THE "A" AQUIFER THAT IS PRESENT AT 15 FEET TO

30 FEET DEEP.

Measured Depth to Water: 15 feet.

Hydraulic Connection: A silty and clay aquitard separates the "A" and "B" aquifers. A

separate aquitard underlies the "B" aquifer.

Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information based on site-specific subsurface investigations is

documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA
Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|---|---|------------------------------|------------------------|
| | Boundary | | | Classification | | | |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | Permeability Rate (in/hr) | Soil Reaction (pH) |
| 1 | 0 inches | 9 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 0.60 Min: 0.20 | Max: 7.30 Min: 5.60 |
| 2 | 9 inches | 41 inches | silty clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 0.60 Min: 0.20 | Max: 7.80 Min: 5.60 |
| 3 | 41 inches | 76 inches | sandy clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. | Max: 0.60 Min: 0.20 | Max: 7.80 Min: 5.60 |

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558 Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Enviro Com were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
