Project Description (Proposed actions, location, and/or consequences).

The Statewide Pest Prevention and Management Program EIR provides an up-to-date, transparent, and comprehensive evaluation of CDFA's activities. The PEIR serves as an overarching CEQA framework for efficient and proactive implementation of Statewide Program activities.

The purpose of this Addendum 3 is to make alternative treatments available to the Pierce's Disease Program, by including under scenarios covered in the PEIR the foliar application of Safari 20 SG and Marathon II Greenhouse & Nursery Insecticide to multiple nursery settings, and Merit 2F for foliar and soil application in urban and residential settings.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The alternative treatments covered in Addendum 3 are minor modifications to the PEIR within the CDFA's jurisdiction, will be subject to management practices and mitigation measures described in the PEIR, and will result in no additional significant environmental impacts beyond those already identified in the PEIR (CEQA Guidelines 15164, 15162, 15163). The Addendum includes an evaluation and explanation of the decision not to prepare a subsequent EIR supported by substantial evidence.
