Project Description: The Vista Grande Drainage Basin Improvement Project is a groundwater storage and recovery project is to address storm-related flooding in the Vista Grande Drainage Basin ("Basin") while providing the additional benefits of augmenting the water level of Lake Merced.
The project consists of these key elements:

- Improvements within the Vista Grande Basin storm drain system upstream of the Vista Grande Canal;
- The Project consists of a partial replacement of the existing Canal to incorporate a gross solid screening device, an approximately 2.6-acre constructed treatment wetland, and diversion and discharge structures to route some storm water (and authorized non-storm water) flows from the Canal to Lake Merced and to allow lake water to be used for summer treatment wetland maintenance.
- Modification of the existing effluent gravity pipeline so that it may be used year-round to convey treated effluent from the nearby Wastewater Treatment Plant owned and operated by the District to the existing outlet and diffuser by gravity, and abandoning the force main pipeline;
- Modification of the existing lake overflow structure to include an adjustable weir and siphon that allows water from the lake to flow into the Canal and Vista Grande Tunnel;
- Replacement of the existing Tunnel to expand its hydraulic capacity and extend its operating lifetime and replacement of the Lake Merced Portal to the Tunnel; and
- Replacement of the existing Ocean Outlet structure and a portion of the existing 33-inch submarine outfall pipeline that crosses the beach at Fort Funston.

This is to advise that the City of Daly City has approved the Environmental Assessment for the
