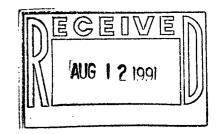

Exhibit 7 (pages 377 through 1887)

Texaco Refining and Marketing Inc 10 Universal City Plaza Universal City CA 91608

August 8, 1991

Mr. Chris Burger Environmental Health Services Dept. 2700 M Street, Ste. 300 Bakersfield, CA 93301

RE: SITE ASSESSMENT REPORT - AUGUST 6, 1991

9069 GRAPEVINE / I-5

Dear Mr. Burger:

Enclosed is the subject report, this assessment was conducted in anticipation of a planned project to raze and rebuild the existing service station. The existing underground tanks will be left in place.

The assessment and the general risk appraisal shows that there is no threat to the public health or environment. Texaco and Groundwater Technology Inc. Believe that no remedial action is required. After you have had time to review this report, Texaco and it's representatives would be pleased to meet with you at your office.

If you have any questions or comments, please contact me at (818)505-2139.

Sincerely,

Texaco Environmental Services

Mr. Ray Johnston Environmental Supervisor Texaco Refining and Marketing, Inc. 10 Universal City Plaza Universal City, CA 91608 7812

RE:

Second Quarter Status Report, Grapevine Texaco, Lebec, California

Dear Mr. Johnston:

A description of activities completed at the site described above follows:

Overview: Groundwater Technology has completed two phases of assessment at the facility. The purpose of the assessment is to determine if hydrocarbons are present in soil prior to starting major reconstruction activities in September.

Investigation Results: Eleven soil borings were completed during the first phase of assessment in May (see Draft Assessment Report, June 17, 1991). Sampling indicated the presence of hydrocarbons under the north ends of both dispenser islands (up to 560 mg/kg). An additional eight soil borings were completed in July to further define the extent of hydrocarbons in soil near the dispenser islands. This second phase of assessment indicated hydrocarbons are limited mostly to the immediate vicinity of the western dispenser island. TPH concentrations from samples collected during this second phase of assessment ranged from below detection levels to 580 mg/kg.

Correspondence: A draft Site Assessment Report was submitted to your office for review on June 17. After receiving your approval a Site Characterization Work Plan which described additional assessment plans was submitted to the County on June 27. A draft report covering the second phase of assessment is being prepared and will be forwarded by July 26.

Waste Disposal: Waste disposal for the first phase of assessment was completed by Laidlaw Environmental Services under direct contract to Texaco Refining and Marketing Inc. Drill cuttings generated during the second phase of assessment are stored in three 55-gallon drums at the site. A waste profile sample has been collected from the drums and shipped to Laidlaw Environmental Services.

Future Work: Completion of final assessment reports pending Texaco Refining and Marketing's approval.

Should you have any questions regarding this status report please contact me at (805) 589-8601.

Sincerely,

GROUNDWATER TECHNOLOGY, INC.

Jonathan D. Parker, R.G.

INSTRUCTIONS

EMERGE NC

Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road. Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY

To avoid duplicate notification pursuant to Beach and Safety code Section 25180.5, a government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety only that notification procedures have been followed if required.

REPORTED BY

Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

SPONSIBLE PARTY

cnter name, telephone number, contact person, and address of the party
responsible for the leak. The responsible party would normally be the tank
owner.

SITE LOCATION.

Enter information regarding the tank facility. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES

Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED

Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE

Indicate source(s) of leak. Check box(es) indicating cause of leak.

SE TYPE

indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS

Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options follow:

No Action Taken - No action has been taken by responsible party beyond initial report of leak.

<u>Leak Being Confirmed</u> - Leak suspected at site, but has not been confirmed.

<u>Preliminary Site Assessment Workplan Submitted</u> - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been, or will be, impacted as a result of the release.

<u>Preliminary Site Assessment Underway</u> - implementation of workplan.

<u>Pollution Characterization</u> - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water.

Remediation Plan - remediation plan submitted evaluating long term remediation options. Proposal and implementation schedule for appropriate remediation options also submitted.

Cleanup Underway - implementation of remediation plan.

<u>Post Cleanup Monitoring in Progress</u> - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities.

<u>Case Closed</u> - regional board and local agency in concurrence that no further work is necessary at the site.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION

Indicate which action have been used to cleanup or remediate the leak. Descriptions of options follow:

<u>Cap Site</u> - install horizontal impermeable layer to reduce rainfall infiltration.

<u>Containment Barrier</u> - install vertical dike to block horizontal movement of contaminant.

Excavate and Dispose - remove contaminated soil and dispose in approved site.

Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).

Remove Free Product - remove floating product from water table.

Pump and Treat Groundwater - generally employed to remove dissolved contaminants.

Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.

Replace Supply - provide alternative water supply to affected parties.

Treatment at Hookup - install water treatment devices at each dwelling or other place of use.

<u>Vacuum Extract</u> - use pumps or blowers to draw air through soil.

<u>Vent Soil</u> 7 bore holes in soil to allow volatilization of contaminants.

<u>No Action Required</u> - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.

SIGNATURE - Sign the form in the space provided.

DISTRIBUTION

If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.

- 1. Original Local Tank Permitting Agency
- State Water Resources Control Board, Division of Clean Water Programs, Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-2120
- 3. Regional Water Quality Control Board
- 4. Local Health Officer and County Board of Supervisors or their designee to receive Proposition 65 notifications.
- Owner/responsible party.

Site Assessment Report Grapevine Texaco August 6, 1991

INTRODUCTION

Texaco Refining & Marketing, Inc. retained Groundwater Technology, Inc. to complete an additional site assessment of soil conditions at their retail facility located at 9069 Grapevine Road in Lebec, California (Figure 1). The assessment included the completion of 8 soil borings, soil sample analyses, and evaluation of the data collected. This report documents the findings of the investigation.

BACKGROUND

The facility was first constructed in 1961 and dispensed fuel from four 4,000-gallon steel tanks. The steel tanks were replaced with larger double-walled fiberglass tanks in 1985 (Figure 2). The dispenser islands were also relocated and enlarged at that time. No data is presently available regarding soil sampling conducted during tank replacement.

In May, 1991 Groundwater Technology completed 11 soil borings (B1 through B11) at the locations shown in Figure 2 as part of an initial assessment. The purpose of this assessment was to determine if hydrocarbons are present in soil at the site prior to major reconstruction activity. Gasoline hydrocarbons were detected in three of the borings drilled at that time. Two of these borings were slant drilled under the northern ends of the islands (B4 and B9) and one was drilled at the location of the original steel tanks (B8).> Concentrations of all analytes in samples submitted from the remaining borings were below detection limits. Analytical results for soil samples collected during the initial investigation are presented in Table 1. Copies of the laboratory reports can be found in the workplan for this assessment, dated June 26, 1991. Lithologic logs of borings B1 through B11 are presented in Appendix A.

SITE CHARACTERISTICS

GEOGRAPHY

The site is located at the base of the San Emigdio Range at the southern end of the San Joaquin Valley. Topography in the region slopes gently to the north away from the steep slopes of the San Emigdios. A tributary of Grapevine Creek, which flows intermittently, is present 300 feet southeast of the site. The California Aqueduct is present approximately 2 miles north of the property.

HYDROGEOLOGY

The site overlies alluvial-fan sediments deposited from small intermittent creeks which originate in the San Emigdio Range. Sediments underlying the region consist of fluvial deposits including silt, sand and gravel. Sediments encountered during drilling activities at the site consist primarily of fine- to coarse-grained silty sand.

^{*} The chromatogram suggests the presence of a heavier hydrocarbon than gasoline.

Data from groundwater wells present approximately 2 miles north of the site indicate the presence of an unconfined aquifer at a depth of approximately 1,000 feet (Figure 3, Kern County Water Agency, 1990). No data regarding this aquifer is available in the immediate vicinity of the site. A cathodic-protection well was installed by Southern California Gas Company approximately 1/2 mile west of the site in 1977. No water was reported to a depth of 600 feet (personal communication, Kern County Water Agency).

PROCEDURES

On July 1 and 2, 1991 Groundwater Technology completed 8 soil borings (B12 through B19) at the locations shown in Figure 2. Three of the borings (B12, B14 and B15) were slant drilled under the western-most dispenser island and two borings (B17 and B18) were slant drilled under the eastern-most dispenser island. Soil samples were collected at 5-foot depth intervals with a split-spoon sampler lined with brass sample rings. The material from one sample ring was described on the lithologic log of the boring and field screened with a photoionization detector (PID) for volatile organic content. The lithologic logs are presented in Appendix A. A second ring was sealed with teflon sheets, plastic caps, and polyethylene tape. The samples were then stored in waterproof bags and placed on ice pending delivery to an analytical laboratory. Between each sampling attempt, the sampler and rings were washed with non-phosphate detergent and rinsed successively in tap and distilled water.

All samples were transported to state-certified GTEL Environmental Laboratories in Torrance, California (Cert. #723) following standard chain-of-custody procedures. Several soil samples from the borings were selected for laboratory analysis. The remainder of the samples were held by the laboratory. All selected samples were analyzed for concentrations of benzene, toluene, ethylbenzene, total xylenes (BTEX) and total petroleum hydrocarbons as gasoline (TPHG) using EPA methods 8020 and 8015, respectively. Additionally, one sample was screened for hydrocarbons using EPA method 8015.

ANALYTICAL RESULTS

Analytical results for soil samples collected during this investigation are presented in Table 2 and in Figure 5. TPHG was detected in five of the samples at concentrations up to 580 mg/kg. The sample exhibiting the highest TPHG concentration (sample no. B13-10) was also screened for the presence of other hydrocarbons (EPA method 8015). The analysis, which was inadvertently performed approximately one week beyond the standard holding time, indicated no detectable concentrations of TPH.

Various BTEX compounds are present in all of the samples analyzed except for B15-20 and B19-15. The highest benzene concentration detected, 0.059 mg/kg, was in sample B14-5. Laboratory reports and chain-of-custody documents are presented in Appendix B.

An analysis of the laboratory data for leaching potential and a general risk appraisal were completed following guidelines in the State Leaking Underground Fuel Tank (LUFT) Field Manual. Conservative site specific data, including a depth to groundwater of 100 feet and annual precipitation of 10 inches, were utilized. In addition, the highest concentrations of BTEX at any given depth, irrespective of boring location, were used in the general risk appraisal. The concentrations measured during this assessment are below

the maximum recommended levels for both analyses. The data sheets for both analyses are presented in Appendix C.

WASTE DISPOSITION

Approximately 1 yd³ of soil was generated during this assessment. This material is temporarily stored in 55-gallon drums at the site. The soil will be handled by Texaco in an appropriate and timely manner.

SUMMARY

In July, 1991 Groundwater Technology completed 8 soil borings at the Texaco facility located at 9069 Grapevine Road in Lebec. Soil samples were collected and analyzed for BTEX and TPHG. The information presented in this report can be summarized as follows:

- sediments at the site consist of fine- to coarse-grained silty sand;
- groundwater is estimated to be at a depth in excess of 600 feet beneath the site;
- ◆ TPHG is present in five of the samples submitted for laboratory analysis. The maximum TPHG concentration is 580 mg/kg;
- ♦ Various BTEX compounds were detected in nearly all of the samples submitted for analysis. The highest benzene concentration detected was 0.059 mg/kg.
- ♦ The maximum allowable levels of BTEX and TPH, as recommended by the leaching potential analysis and general risk appraisal in the State LUFT manual, are not exceeded at the site.

Because hydrocarbon concentrations in soil at the site are below levels allowed in the State LUFT manual, remedial action alternatives are not presented. It is recommended that no further action be required at this site.

Site Assessment Report Grapevine Texaco August 6, 1991

APPENDIX B LABORATORY REPORTS

Southwest Region 20000 / 300 Mariner Drive

Torrance, CA 90503 (213) 371-1044 (800) 727-GTEL Fax (213) 371-8720

August 6, 1991

Mr. Jon Parker Groundwater Technology, Inc. 4101 Alken Street, Suite B-1 Bakersfield, CA 93308

Dear Mr. Parker,

Enclosed please find the analytical results report prepared by GTEL for samples received on 7/3/91, under chain of custody number 76-1574.

GTEL is certified by the California State Department of Health Services to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

A formal quality control/quality assurance program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project was performed in strict adherence to our QA/QC program to ensure sample integrity and to meet quality control criteria.

All procedures and quality control have been met unless otherwise noted on the report. If you have any question concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,

GTEL Environmental Laboratories, Inc.

leberent suchou / Ms

Rebecca Hsu-Chou, Ph.D.

Laboratory Director

^{\1 -} If depth is greater than 5 ft. but less than 25 ft., score 0 points. If depth is 5 ft. or less, this table should not be used.

^{12 - 1}f depth is over 40 inches, score 0 points.

^{\3 -} Levels for BTX&E are not applicable to TPH concentration of 100 ppm.

^{* -} Table from page 28, Table 2-1, LUFT Manual, 1988

Checklist for applicability of general risk appraisal:

CONTAMINATED SOIL RISK APPRAISAL FOR PROTECTION OF GROUND WATER

Answer the following questions "yes", "no" or "unknown" (Y/N/U).

| 1. | Is the site in a mountainous area? (shaded moist areas and/or areas with rocky subsurface conditions) | N |
|----|------------------------------------------------------------------------------------------------------------------------|---|
| 2. | Is the site in an area that could collect surface runoff or intercept water from a source other than precipitation? | N |
| 3. | Does the areal extent of soil contamination exceed 100 m^2? | N |
| 4. | Do any soil sample concentrations exceed 100ppm for benzene 80ppm for toluene, or 40ppm for xylene or ethylbenzene? | |
| 5. | Are there records or evidence of subsurface objects which could provide a conduit for vertical migration of leachate? | |
| 6. | Do borings or excavations show fractures, joints or faults that could be a conduit for vertical migration of leachate? | N |
| 7. | no any horing logs show that contaminated soil could be | N |
| 8. | Do any borings reveal a layer of material, 5 ft. thick or more, which is more than 75% sand and/or gravel? | N |
| | | |

Characterization Work Plan Grapevine Texaco June 26, 1991

INTRODUCTION

Groundwater Technology, Inc. has been contracted by Texaco Environmental Services to provide environmental consulting for an assessment of subsurface conditions at their retail facility in Grapevine. The purpose of the investigation is to determine the lateral and vertical extent of hydrocarbons in soil beneath the facility prior to undertaking major reconstruction activities. This workplan outlines site background, proposed assessment procedures and sampling protocol, and worker safety considerations.

SITE BACKGROUND

The facility was first constructed in 1961 and dispensed fuel from four 4,000-gallon steel tanks. The steel tanks were replaced with larger double-walled fiberglass tanks in 1985 (Figure 2). The dispenser islands were also relocated and enlarged at that time. No data is presently available regarding soil sampling conducted during tank replacement.

In May, 1991 Groundwater Technology completed 11 soil borings at the locations shown in Figure 2 as part of an initial assessment. Soil samples were collected at 5-foot depth intervals with a split-spoon sampler lined with brass sample rings. Select soil samples from some of the borings were submitted for laboratory analysis. All submitted samples were analyzed for concentrations of benzene, toluene, ethylbenzene, total xylenes (BTEX) and total petroleum hydrocarbons as gasoline (TPHG) using EPA methods 8020/8015. A soil sample collected adjacent to the existing used-oil tank was also analyzed for total petroleum hydrocarbons using EPA method 418.1.

Analytical results for soil samples collected during this investigation are presented in Table 1. Gasoline hydrocarbons were detected in three of the borings drilled at the site. Two of these borings were slant drilled under the eastern ends of the islands (B4 and B9) and one was drilled at the location of the original steel tanks (B8). Concentrations of all analytes in all other samples submitted from the remaining borings were below detection limits. Analytical results from this investigation are summarized in Figure 2. Laboratory reports and chain-of-custody documents are presented in Appendix A.

SITE CHARACTERISTICS

GEOGRAPHY

The site is located at the base of the San Emigdio Range at the southern end of the San Joaquin Valley. Topography in the region slopes gently to the north away from the steep slopes of the San Emigdios. A tributary of Grapevine Creek, which only flows intermittently, is present 300 feet southeast of the site. The California Aqueduct is present approximately 2 miles north of the property.

| B10-5 | < 0.005 | <0.005 | < 0.005 | < 0.015 | [′] <10 |
| B11-5 | < 0.005 | < 0.005 | < 0.005 | < 0.015 | <10 |

^{*} The chromatogram suggests the presence of a heavier hydrocarbon than gasoline.

HYDROGEOLOGY

The site overlies alluvial-fan sediments deposited from intermittent creeks which originate in the San Emigdio Range. Sediments underlying the region consist of fluvial deposits including silt, sand and gravel. Sediments encountered during drilling activities at the site consist primarily of medium- to coarse-grained sand.

Data from groundwater wells present approximately 2 miles north of the site indicate the presence of an unconfined aquifer at a depth of approximately 1,000 feet (Kern Water Agency, 1990). No data regarding this aquifer is available in the immediate vicinity of the site.

PROPOSED SITE ASSESSMENT

BORINGS

Groundwater Technology will drill seven borings at the locations shown in Figure 4. The borings will be drilled to an approximate depth of 15 feet near the existing dispensers to define the vertical and horizontal extent of possible impaction. If hydrocarbons persist below 15 feet and if drilling conditions permit, borings will be deepened until 10 feet of uncontaminated soil is penetrated. No drilling fluids will be used during boring completion. The borings will be back-filled with sand-cement grout upon completion of work.

SAMPLING

The borings will be sampled every 5 feet with a split-spoon sampler. The sampler will be fitted with brass sample rings. The material from one sample ring will be described and field screened with a photoionization detector (PID) for volatile organic content. A second ring will be sealed at each end with a teflon sheet and plastic cap. The cap will be secured with polyethylene tape and the sample will be preserved on ice. As requested by Texaco, select samples will be analyzed by a state-certified laboratory as described in the next section.

Between sampling events, equipment will be cleaned using a three-bucket wash system. In this system, the rings and samplers are scrubbed with a brush in a bucket of detergent, rinsed in a second bucket of tap water and given a final rinse in a bucket of distilled water.

LABORATORY ANALYSIS -

The soil samples selected for analysis will be shipped via overnight courier to GTEL Environmental Laboratories in Torrance, California (Cert. #723). The samples will be analyzed for TPHG and BTEX using EPA method 8015/8020. Detection limits for these analyses will be 10 mg/kg for TPHG, 0.005 mg/kg for BTE, and 0.015 mg/kg for total xylenes. Standard chain-of-custody procedures will be followed.

WASTE MANAGEMENT

The drill cuttings from the borings will be stored on site in appropriately labelled drums pending the results of the analysis of cuttings samples. If contamination is encountered, drilling augers will be steam-cleaned upon completion of drilling activities. The rinsate from cleaning will be collected in appropriately labelled 55-gallon drums and disposed of by Texaco. Dependent on the concentrations of hydrocarbons in the drill

GROUNDWATER TECHNOLOGY

cuttings, and with County approval, Texaco will either passively aerate the cuttings on site until clean or dispose of them in an appropriate landfill.

WORK SCHEDULE

Immediately following approval of the proposed plan by Texaco a licensed drilling company will be scheduled to perform the necessary drilling. The drilling is anticipated to require 2 days. Kern County Environmental Health Services and Underground Service Alert will be notified at least 48 hours prior to commencement of work. Laboratory analyses will require approximately 15 days following submission of the samples to the laboratory.

Mr. Jon Parker

Groundwater Technology, Inc.

4101 Alken Street, Suite B-1

Bakersfield, Ca. 93308

Dear Mr. Parker,

This report replaces the original report issued on June 6, 1991 due to a typographical error.

Enclosed please find the analytical results report prepared by GTEL for samples received on 05/23/91, under chain of custody number 76-10745,10746,10747 & 10749.

GTEL is certified by the California State Department of Health Services to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

A formal quality control/quality assurance program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project was performed in strict adherence to our QA/QC program to ensure sample integrity and to meet quality control criteria.

If you have any question concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,

GTEL Environmental Laboratories, Inc.

Referent Gen Chan 1841

Rebecca Hsu-Chou, Ph.D.

Laboratory Director

GROUNDWATER TECHNOLOGY, INC. EXCAVATION AND TRENCHING POLICY - CALIFORNIA SAFE CODE OF PRACTICES

Although many of the rules and regulations pertaining to excavation and trenching operations in the State of California closely parallel Federal Standards, this policy specifically pertains to California operations.

It shall be the policy of Groundwater Technology, Inc. to ensure that all Groundwater Technology employees and subcontractors comply with the provisions within the California Code of Regulations, Title 8, Chapter 4, Subchapter 4 - Construction Safety Orders.

It is inevitable that remediation procedures for which Groundwater Technology is retained will involve some aspect within the jurisdiction of the Construction Safety Orders. Such operations may include: trenching, vault construction, tank removal, and excavation of contaminated soils.

DEFINITIONS - EXCAVATION, TRENCHES, EARTHWORK

Bank - a mass of soil rising above a digging level.

<u>Bell Hole</u> - an additional excavation made into the sides or bottom of a trench to provide additional work space.

<u>Belled Excavation</u> - a part of a shaft or footing excavation, usually near the bottom and bell-shaped, that makes the cross-sectional area at that point larger than that above.

<u>Benching</u> - a method of excavation whereby the faces of an excavation or trench are widened progressively outward with respect to the bottom of a specific series of horizontal and vertical cuts to provide protection against the hazard of moving ground.

<u>Braces for Excavation</u> - the horizontal members of the shoring system, the ends of which bear against the uprights or stringers.

Earthwork - the process of excavating, moving, storing, placing, and working any type of earth materials.

<u>Excavation</u> - a man-made cavity or depression in the earth's surface, including its sides, walls, or faces formed by the removal of materials, and producing unsupported earth conditions by reason of such removal. If installed forms or similar structures reduce the depth-to-width relationship, the excavation may become a trench.

Exploration Shaft - a shaft created and used for the purpose of obtaining subsurface data.

Geotechnical Specialist (GTS) - a person registered by the State as a Certified Engineering Geologist, or a Registered Civil Engineer trained in soil mechanics, or an engineering geologist or civil engineer with a minimum of 3 years applicable experience working under the direct supervision of either a Certified Engineering Geologist or Registered Civil Engineer.

Hard Compact - all earth material not classified as running soil.

<u>Hydraulic Shoring</u> - a shoring system using hydraulic cylinders, planks, rails, plywood, or steel beams to support the excavated wall of trenches.

GROUNDWATER TECHNOLOGY, INC.

Lagging - boards which are joined, side-by-side, lining an excavation.

Running Soil - earth material where the angle of repose is approximately zero, as in the case of soil in a nearly liquid state, or dry, unpacked sand which flows freely under slight pressure. Running material also includes loose or disturbed earth that can be only contained with solid sheeting.

<u>Shaft</u> - an excavation under the earth's surface in which the depth, is much greater than its cross-sectional dimensions (such as those formed to serve as wells, cesspools, certain foundation footings, and under streets, railroads, buildings, etc.).

Shore - a supporting member that resists a compressive force imposed by a load.

<u>Shoring System</u> - a temporary structure for the support of earth surfaces formed as a result of excavation work.

Sides, Walls, and Faces - the vertical or inclined earth surfaces formed as a result of excavation work.

<u>Sloping</u> - a method of excavation whereby the faces of an excavation of trench are laid back to provide protection from moving ground.

Spoil - the earth material that is removed in the formation of an excavation.

<u>Stringers</u> - the horizontal members of the shoring system whose sides bear against the uprights. Stringers are sometimes called whalers.

Strut - a structural member designed to resist forces, either tensional or compressional.

<u>Trench</u> - an excavation made below the surface of the ground. In general, the depth is greater than the width at the bottom, but the width of a trench at the bottom is not greater than 15 feet.

<u>Trench Shield</u> - a protective device which shields workers from the effect of ground movement and which can be moved along as work progresses.

<u>Uprights</u> - the vertical members of the shoring system.

<u>Whaler</u> - a structural member in a horizontal or nearly horizontal position used for stiffening or securing other components of concrete forms, excavation sheeting, or similar temporary structures.

EXCAVATION PROCEDURES(also trenches, shafts, and other earthwork)

- 1. Prior to beginning an excavation, the location of all underground utilities and other underground hazards shall be determined.
- 2. A hazard assessment shall be conducted by a qualified person to evaluate the potential exposure to employees who may work in or around the excavation.
- 3. The excavation shall also be inspected by a qualified person after each rain or other hazard-increasing event to evaluate the potential hazards from slides or cave-ins.
- 4. Anytime an employee enters an excavation 5 feet or greater in depth, that employee must be protected by a system of shoring, sloping, benching, or alternative means addressed in No. 15 below.

- 5. The conditions in No. 4 above, will also require Groundwater Technology to obtain the necessary excavation permit and/or notification procedures with Cal-OSHA.
- 6. Excavated materials shall be prevented from falling back into the excavation. Spoils should be placed no closer than 2 feet from the edge of the excavation.
- 7. Work which is conducted within the excavation should be under the direct supervision of a qualified person who is capable of modifying the shoring or sloping system.
- 8. A convenient and safe means of egress shall be provided for employees working within an excavation 4-feet deep or greater. This may consist of a stairway, ladder, or ramp located within 25 feet of lateral travel.
- 9. Any employee working in the vicinity of an excavator shall not be in a position where that employee might fall into contact with the moving parts of that excavator. Employees shall also be wearing a reflective vest.
- 10. An adequate means of water drainage shall be implemented to reduce the likelihood of run-off entering the excavation. This shall hold true during the rainy season. If the accumulation of water could pose a hazard to employees, the situation should be controlled prior to resumption of operations.
- 1.1. All shoring systems shall incorporate the soil specifications and conditions for that particular site. The installation of shoring systems shall be conducted in such a way that the employee is properly protected from the potential of cave-ins. Additionally, the removal of the system shall follow the same requirement.
- 12. If the excavation exceeds 20 feet, or if an alternative shoring, sloping, or benching system is utilized, a civil engineer currently registered in California shall prepare detailed plans showing the materials and methods to be utilized (Appendix A).
- 13. The detailed plans in No. 12 above, shall be available for inspection at the site.
- 14. Shoring shall be installed in accordance with Table 1-6 located within Appendix B, or as detailed in plans and specifications prepared by a State of California Registered Civil Engineer in accordance with engineering criteria within Appendix A.
- 15. If protective shields, (i.e., trench shields) are to be utilized for the protection of employees within an excavation, a civil engineer registered in California must prepare the necessary calculations and designs prior to the use of such equipment.
- 16. When sloping or benching are utilized in lieu of a shoring system, the slope shall be at least three-quarter horizontal to one vertical for excavations up to 8 feet, unless the instability of the soil requires a slope flatter than 3/4:1. For excavations greater than 8 feet but less than 12 feet, a slope of 1:1 shall be utilized (Appendix C).

On the following pages are specific requirements as set by California Code of Regulation, Title 8, Chapter 4, Subchapter 4-Construction Safety Outline. The pages are facsimiles of pages from this document.

APPENDIX I

(OSHA Inspection Steps)

APPENDIX I

Immediate OSHA Inspection Steps

- Identify the Inspector.
 - (a) Ask to see credentials.
 - (b) Write down the relevant information, including the inspector's name, agency affiliation, address, telephone number and the statutory authority under which the inspection is being conducted.
 - (c) If any doubts, call OSHA office to verify the visit.
 - (d) If inspection occurs at a project site, ask for written certification of medical monitoring (including respiratory evaluation) and for 40 hour hazardous waste training certification. NO ONE may venture out of the clean zone without it. DOUBLE CHECK it with his/her office if in doubt.
- 2. Notify the Health & Safety Manager and Project Manager immediately.
 - (a) The Project Manager should notify the District Manager.
 - (b) The Health & Safety Manager should notify Corporate Health and Safety (ELD).
- 3. Take notes on:
 - (a) What is said
 - (b) What is seen
 - (c) Who spoke to whom
 - (d) Any sample or copies taken
 - (e) Any corrective actions done in the inspector's presence
 - (f) Any activity, including where, when, who, and what
 - (g) Any other occurrence, even if seemingly minor
- ♦ When in doubt on any question, DO NOT BLUFF AN ANSWER. Ask the inspector to put the question in writing, addressed to company counsel. Never lie, even by omission; jail can be the penalty.
- If inspection occurs on site, carefully review the Site Safety Plans with the Inspector if asked to do so.
 - If inspection occurs at an office, have accident reports, OSHA 200 logs ready at all times for inspection. Always make sure OSHA poster is visible.
- Determine the scope of the inspection: Ask the OSHA inspector what areas of the company activity are of interest and the reason for the inspection. Discover what has triggered the inspection. If complaints initiated the inspection, find out specifically what they were.

APPENDIX I: OSHA Inspection Steps

1.0 SITE EMERGENCY PLAN

Survey the situation. Do not endanger your own life.

Your site address:

Grapevine Rd. & D Street

Lebec, CA 93243

1.1 Emergency Telephone Numbers

Telephone located at:

On site.

Ambulance:

(911)

Fire:

(911)

Police:

(911)

Poison Control:

800-346-5922

Nearest Hospital:

Mercy Hospital

Street Address:

2215 Truxtun Ave., Bakersfield, CA

Telephone:

(805) 327-3371

Directions to:

North on Hwy. 99 approx. 29 miles to California Avenue. Exit east

to Oak Street. North on Oak Street to Truxtun Avenue. East on Truxtun Avenue approx. 4 blocks, hospital on right side of street.

1.2 First Aid:

Ingestion:

Give water if patient is conscious. Call Poison Control - follow instructions. Administer CPR, if

necessary. Seek medical attention.

Inhalation:

Remove person from contaminated evironment. Administer CPR, if necessary. Seek medical

attention.

Skin Contact: Brush off dry material, remove contaminated clothing. Wash skin with soap and water. Seek medical

attention if irritation develops.

Eye Contact: Flush eyes and surrounding tissue with water for 15 minutes. Seek medical attention.

* Exposure Symptoms: Headache, dizziness, nausea, drowsiness, irritation of eyes, nose, throat, breathing

difficulties.

Report incident to Project Manager and Regional Health and Safety Manager after emergency procedures have been

implemented.

1.4 Encountering Hazardous Situations (requiring evacuation)

In the event of an emergency, i.e. fires, explosions or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil or surface water at the facility, the team member that observes this condition shall give an emergency alarm. The emergency alarm signal will be 3 horn blasts on the horn located in the site vehicle.

Actions to be taken will be dictated by the emergency. All appropriate local emergency response agencies shall be notified immediately. The police, fire department, emergency response teams and ambulance may be reached via telephone by dialing 911.

The nearest hospital and additional emergency contacts are listed on the previous page (Section 1.0).

Personnel encountering a hazardous situation shall instruct others on site to evacuate the vicinity immediately and call the (I) Site Safety Officer, (2) the Project Manager, and (3) the Health & Safety Manager for instructions.

The site must not be re-entered until back-up help, monitoring equipment, and personal protective equipment is on hand.

2.0 INFORMATIONAL SUMMARY

2.1 Health and Safety Summary

Chemicals of Concern: Gasoline, Benzene, Toluene, Ethylbenzene, & Xylene

Hazard Determination: Serious __ Moderate __ Low X

Minimum Level of Protection:

Modified Level D is the minimum acceptable level for this site.

Action Level for Upgrading Personal Protection: Upgrade from Level D to Level C at 100 ppm measured within the breathing zone. This should be determined by a photoionization detector (PID) with a 10.2 lamp or a flame ionization detector (FID).

Air Monitoring Requirements:

| PID | <u>X</u> |
|---------------------|----------|
| OVA | _ |
| FID | |
| O ₂ /LEL | _ |
| DETECTOR TUBES | _ |
| OTHER | |

TABLE I

ACTION LEVELS

NOTE: The information in this chart applies to gasoline and its chemical constituents.

GASOLINE PEL* = 300 PPM

GTI ACTION LEVEL = 100 PPM

ACTION LEVELS FOR PPE

| AIR MONITORING INSTRUMENT | LEVEL D | LEVEL C | LEVEL B |
|---------------------------|------------|---------------|----------|
| LEL | <1% | 1% - 5% | >5% |
| PID/FID | <100 ppm | 100 - 750 ppm | >750 ppm |
| O ₂ | 19.5 - 23% | 19.5 - 23% | <19.5% |

Explanatory Information:

LEL Gasoline = 1.4 % or 14,000 ppm

1% LEL = 140 ppm (Wear Level C)

5% LEL = 700 ppm (Wear Level C)

>5% LEL = Level B (>700 ppm)

NOTE: Withdraw from site and contact the project manager if:

LEL > 20%, and/or O₂ > 23%

* PEL = Permissible Exposure Limit (OSHA 1989)

3.0 INTRODUCTION

3.1 Background

Texaco Refining & Marketing, Inc. has retained Groundwater Technology, Inc. (GTI) to perform a site assessment/investigation at their facility located at Grapevine Rd. and D Street, Lebec, California.

3.2 Purpose

The purpose of the site safety plan is to provide Groundwater Technology field personnel and subcontractors with an understanding of the potential chemical and physical hazards that exist or may arise while the tasks of this project are being performed.

This SSP describes the procedures to be followed in order to reduce employee exposure to potential health hazards which may be present at the project site. The emergency response procedures necessary to respond to such hazards are also described within this SSP.

3.3 Objective

The primary objective is to ensure the well-being of all field personnel and the community surrounding this site. In order to accomplish this, project staff and approved subcontractors shall acknowledge and adhere to the policies and procedures established herein. Accordingly, all personnel assigned to this project shall read this site safety plan and sign the Agreement and Acknowledgement Statement (Appendix A) to certify that they have read, understood and agreed to abide by its provisions.

GTI personnel have the authority to stop work performed by our sub- contractors at this site if any work is not performed in accordance with the requirements of this Site Safety Plan.

3.4 Amendments

Any changes in the scope of work of this project and/or site conditions must be amended in writing on the Site Safety Plan Amendment Sheet (Appendix B) and approved by Health & Safety Manager.

4.0 HAZARD EVALUATION

4.1 Site Conditions

General Site conditions at the Texaco Lebec site include no known contaminants.

4.2 Site Tasks

The field tasks at this site may include:

- ♦ Soil boring samples
- ♦ Monitoring well installation
- ♦ Monitoring well survey
- ♦ Monitoring well gauging
- ♦ Monitoring well development
- ♦ Product bailing
- Groundwater and soil sampling
- ♦ Excavation/trenching
- ♦ Equipment installation
- ♦ Operation and maintenance

4.3 Spill and Disposal Procedures

Contain spills with an absorbent material (sand, sawdust, dirt, clay). Report spills to client and follow their recommended procedures. If spills occur in transit, report them to the appropriate authorities.

4.4 Job Task Hazards

4.4.1 All Field Tasks: The following hazards may be encountered.

♦ Slippery Surfaces:

All employees must wear ANSI approved work boots with steel toe protection. Skid proof soles are highly recommended.

Organic Vapors:

The inhalation of volatile organic vapors during all operations can pose a potential health hazard. Hazard reduction procedures include monitoring the ambient air with a PID and/or FID and use of Personal Protective Equipment indicated on Table II. Workers should stand upwind of the source of contamination whenever possible. If ambient air levels in the breathing zone exceed 100 ppm, full face respirators equipped with organic vapor cartridges must be worn.

♦ Flammable Vapors:

Presence of flammable vapors can pose a potential fire hazard and health hazard. Hazard reduction procedures include monitoring the ambient air with an O_2 /LEL meter. If the LEL reading exceeds 20%, leave the site immediately and contact the fire department.

Oxygen:

Atmospheres that contain a level of oxygen greater than 23% pose an extreme fire hazard (the usual ambient oxygen level is approximately 20.5%). All personnel encountering atmospheres that contain a level of Oxygen greater than 23% must evacuate the site immediately and must notify the Fire Department.

If Oxygen Level is less than 19.5%, do not enter the space.

♦ Noise:

GTI and ANSI approved hearing protection must be worn during noisy operations such as drilling.

♦ Surface and Equipment Contamination:

Contact with contaminated surfaces, or surfaces suspected of being contaminated should be avoided. This includes walking through, kneeling or placing equipment in puddles, mud, discolored surfaces, or on drums and other containers. Eating, smoking, drinking and/or the application of cosmetics is prohibited on this site in the immediate work area. This reduces the likelihood of contamination by ingestion.

Exposure - Heat Stress:

Since climatic changes cannot be avoided work schedules will be adjusted to provide time intervals for intake of juices, juice products and water in an area free from contamination and in quantity appropriate for fluid replacement.

Heat stress may occur even in moderate temperature areas and may present any or all of the following:

- A. Heat Rash: result of continuous exposure to heat, humid air, and chafing clothes. Heat rash is uncomfortable and decreases the ability to tolerate heat.
- B. Heat Cramps: result of the inadequate replacement of body electrolytes lost through perspiration. Signs include severe spasms and pain in the extremities and abdomen.
- C. Heat Exhaustion: result of increase stress on the vital organs of the body in the effort to meet the body's cooling demands. Signs include shallow breathing; pale, cool, moist skin; profuse sweating; dizziness.
- D. Heat Stroke: result of overworked cooling system. Heat stroke is the most serious form of heat stress. Body surfaces must be cooled and medical help must be obtained immediately to prevent severe injury and/or death. Signs include red, hot, dry skin; absence of perspiration; nausea; dizziness and confusion; strong, rapid pulse. Can lead to coma and death.

Heat Stress Prevention

- A. Replace body fluids (water and electrolytes) lost through perspiration. Solutions may include a 0.1% salt and water solution or commercial mixes such as Gatorade and Squench.
- B. Cooling devices to aid the natural body ventilation. Cooling occurs through evaporation of perspiration and limited body contact with heat-absorbing protective clothing. Utilize fans and air conditioners to assist in evaporation. Long, cotton underwear is suggested to absorb perspiration and limit any contact with heat-absorbing protective clothing (i.e., coated Tyvek suits).
- C. Provide hose-down mobile shower facilities to cool protective clothing and reduce body temperature.
- D. Conduct non-emergency response activities in the early morning or evening during very hot weather.

 GROUNDWATER

TECHNOLOGY, INC.

- E. Provide shelter against heat and direct sunlight to protect personnel.
- F. Rotate workers wearing protective clothing during hot weather.

♦ Exposure - Cold Stress:

Work schedules will be adjusted to provide sufficient rest periods in a heated area for warming up during operations conducted in cold weather. Also thermal protective clothing such as wind and/or moisture resistant outerwear is recommended to be worn.

If work is performed continuously in the cold at or below -7°C (20°F), including wind chill temperature, heated warming shelters (tents, cabins, company vehicles, rest rooms, etc.) shall be made available nearby and the worker should be encouraged to use these shelters at regular intervals the frequency depending on the severity of the environmental exposure. The onset of heavy shivering, frostnip, the feeling of excessive fatigue, drowsiness, irritability, or euphoria, are indications for immediate return to the shelter. When entering the heated shelter the outer layer of clothing shall be removed and the remainder of the clothing loosened to permit sweat evaporation. A change of dry work clothing shall be provided as necessary to prevent worker from returning to their work with wet clothing. Dehydration, or the loss of body fluids, occurs in the cold environment and may increase the susceptibility of the worker to cold injury due to a significant change in blood flow to the extremities. Warm sweet drinks and soups should be provided at the work site to provide caloric intake and fluid volume. The intake of coffee should be limited. (Adapted from TLV's and Biological Exposure Indices 1988-1989; ACGIH).

♦ Falling Objects:

Hard hats must be worn by all personnel whenever construction-type activity is taking place. (ie., drilling, excavation, trenching).

Vehicular traffic:

All employees will be required to wear a fluorescent safety vest at all times while on site. In addition, the following safety equipment procedures must be adhered to.

| TASK | TRAFFIC SAFETY EQUIPMENT |
|-------------------|--------------------------|
| Drilling | A |
| Subsurface Entry | . A |
| Well Installation | A |
| Well Maintenance | • B |
| Well Gauging | В |
| Sampling | В |
| Pump Test | В |
| | |

SAFETY EQUIPMENT KEY:

A = Cones and barricades required - tapes and flags are recommended but optional.

B = Cones are required - flags are recommended but are optional.

4.4.2 Well Installation; Well Development; Well Gauging; Well Bailing; Soil & Groundwater Sampling:

Skin and eye contact with contaminated groundwater and/or soil may occur during these tasks. Nitrile butyl rubber or neoprene gloves and approved safety goggles should be worn when contact with contaminated substance and/or splash is possible.

4.4.3 Sample Preservation:

When hydrochloric acid is used, skin and eye contact can occur. This hazard can be reduced with the use of Nitrile butyl rubber or neoprene gloves and the use of safety goggles.

4.4.4 Cleaning Equipment:

Skin and eye contact with methanol, Alconox, or other cleaning substances can occur while cleaning equipment. This hazard can be reduced with the use of Nitrile butyl rubber or neoprene gloves and the use of safety goggles.

4.4.5 Confined Space:

Manholes, subsurface vaults and sheds are examples of confined spaces that may lack adequate ventilation. Organic and/or combustible vapors may be trapped resulting in a lack of oxygen (anoxia) and/or overexposure to vapors. When site work takes place in a confined space the air must be monitored for (a) oxygen level, (b) flammable vapors, and (c) toxic vapors. The following air monitoring procedures must be followed before entering a confined space.

a. Oxygen Level: Monitor for % Oxygen with an O₂ /LEL meter to ensure a minimum oxygen level of 19.5%. Oxygen level monitoring will be done at the top, middle and bottom of the enclosed space to determine if there is a minimum acceptable oxygen level of 19.5% PRIOR to entry.

If oxygen is less than 19.5%, do not enter the space.

b. Explosive Vapors: Monitor for % of Lower Explosive Limit (LEL) with a 0₂/LEL meter to determine whether vapor concentrations within the confined space are within the flammable range.

If LEL readings exceed 20%, personnel MUST leave the site immediately, and contact the project manager.

c. <u>Toxic Vapors</u>: Monitor for toxic vapors with a PID and/or an FID (e.g., HNU or OVA) to determine whether toxic vapors within the confined space exceed the action levels.

If the PID and/or the FID readings exceed 100 ppm, a full face respirator must be worn.

All monitoring equipment must be calibrated and maintained in accordance with manufacturer's recommendations. If an HNU is used, the 10.2 eV lamp is required for accurate readings.

- d. Summary: Do not enter the confined space unless:
 - the oxygen concentration is between 19.5 and 23%;
 - the LEL is less than 20%;
 - PID and/or FID readings are less than 750 ppm (a full face respirator must be worn if the readings exceed 100 ppm)
- e. <u>Buddy System</u>: The buddy system must be used when the work in the confined space: (1) requires the person's head to be below ground level; or (2) the person must work in a manhole or other space in which an exit may not be easily accessible.

TABLE II

HAZARD SUMMARY

| | | AIR MONITORING - BREATHING ZONE | | |
|-------------------------------|-----------|---------------------------------|----------------------------------------------|--|
| JOB TASK | PPE LEVEL | INSTRUMENT | FREQUENCY* | |
| Soil Boring Samples | D | PID or FID | At start of work and 15 min. to continuously | |
| Monitoring Well Installation | D | PID or FID | At start of work and 15 min. to continuously | |
| Monitoring Well Survey | D | PID or FID | Start-up of work at each well location | |
| Monitoring Well Development | D | PID or FID | Start-up of work at each well location | |
| Groundwater and Soil Sampling | D | PID or FID | Start-up of work at each well location. | |

^{*} All air monitoring data must be recorded on the Vapor Monitoring Sheet, Appendix G.

5.0 PERSONAL PROTECTIVE EQUIPMENT

Modified Level D is the minimum acceptable level for this site.

Modified Level D includes:

- coveralls/work uniform
- ♦ steel toe and shank boots
- Nitrile butyl rubber or neoprene gloves (optional)
- ♦ splash goggles/safety glasses if potential for splash
- ♦ hard hat
- ♦ fluorescent vest
- ♦ Tyvek suit (optional)
- hearing protection (as appropriate)

Level C includes:

- full face respirator NIOSH approved with organic vapor cartridges
- ♦ Tyvek suits (if splash hazard is possible, a coated suit must be worn)
- ♦ Nitrile butyl rubber or neoprene gloves
- ♦ steel toe and shank boots
- outer boots chemical resistant
- inner disposable gloves (2 pairs recommended)
- hard hat
- fluorescent vest
- hearing protection (as appropriate)

Level B includes:

- ♦ air supplied respirator
- ♦ coated Tyvek suit, such as Saranex
- ♦ Nitrile butyl rubber or neoprene gloves
- inner latex or vinyl gloves
- ♦ steel toe and shank boots
- outer boots chemical resistant
- hard hat
- ♦ fluorescent vest
- hearing protection (as appropriate)

6.0 DECONTAMINATION PROCEDURES

All operations conducted at this site have the potential to contaminate monitoring equipment and personal protective equipment (PPE). To prevent the transfer of contamination to vehicles, administrative areas and personnel, the following procedures must be followed:

Equipment Decontamination

 Whenever possible, monitoring equipment should be decontaminated with a solution of Alconox and thoroughly rinsed with water prior to leaving the site. This must be done outside a 5-foot radius of any work area.

Personal Decontamination

LEVEL D ♦ segregated equipment drop

- wash/rinse outer boot (as appropriate)
- ♦ wash/rinse chemical resistant outer glove, then remove (as appropriate)
- ♦ remove hard hat, goggles/safety glasses/faceshield
- remove and throw out inner disposable gloves in designated lined receptacles (as appropriate)

LEVEL C ♦ segregated equipment drop

- ♦ wash/rinse outer boots
- ♦ wash/rinse chemical resistant outer gloves, then remove
- ♦ remove outer boots and place to dry (if reusable)
- remove chemical resistant suit (remove by rolling down the suit)
- ♦ remove first pair(s) of disposable gloves
- remove respirator/hard hat/faceshield dispose of cartridges and wash respirator
- ♦ remove last pair of disposable gloves

LEVEL B ♦ segregated equipment drop

- ♦ wash/rinse outer boots
- ♦ wash/rinse chemical resistant outer gloves, then remove
- cross hotline (into clean area) and change air tanks, then redress or
- ♦ cross hotline (into clean area)
- remove boots and gloves
- ♦ remove SCBA, if worn over chemical resistant suit
- ♦ if SCBA is worn under the suit, remove the chemical resistant suit, then the SCBA
- remove hard hat

7.0 CHEMICALS OF CONCERN

7.1 Health Effects

Potential health effects from a chemical exposure are dependant on several exposure factors such as: toxicity of substances, duration of exposure, concentration during exposure and the overall health of the person exposed.

The chemicals commonly at this site are: Gasoline, Benzene, Toluene, Ethylbenzene, and Xylene. The following is a health analysis of these chemicals.

Additional information on these chemicals can be found in the Material Safety Data Sheet located in Appendix E.

Gasoline constituents can be divided into five major groups: alkanes, alkenes, cycloalkanes, aromatics and additives. The aromatics are the constituents generally regarded to be of greatest toxic concern. The major aromatics in gasoline are benzene, toluene, ethyl benzene and xylene. Of these, benzene is considered to be the most toxic. One characteristic effect of gasoline and its aromatic constituents is their ability to irritate the skin when repeated or prolonged exposure occurs.

Benzene

Benzene can enter the body through inhalation, ingestion and skin contact. Studies have noted that chronic exposure to benzene vapor can produce neurotoxic and hematopoietic (blood system) effects. Other effects can include headache, dizziness, nausea, convulsions, coma and possible death if exposure is not reversed. One significant effect from chronic benzene exposure is bone marrow toxicity. There is also an association between chronic exposures to benzene and the development of certain types of leukemia.

Toluene

Inhalation exposure to toluene vapor can produce effects such as central nervous system depression. Depending on exposure factors signs and symptoms can include headache, dizziness, fatigue, muscular weakness, incoordination, drowsiness, collapse and possible coma. Toluene can be a skin and mucous membrane irritant and studies have shown that high levels of toluene exposure can cause liver and kidney damage.

Ethylbenzene

Exposure to ethyl benzene at high vapor concentrations may produce irritation to the skin, eyes and upper respiratory tract. Overexposure to ethyl benzene vapors can produce central nervous system depression with symptoms of headache, nausea, dizziness, shortness of breath and unsteadiness. Prolonged skin exposure to ethyl benzene may result in drying and cracking of the skin (dermatitis). Solvent resistant gloves should be worn during sampling to prevent exposure to the skin.

Xylenes

Depending on exposure factors, inhalation exposure to xylene vapor may produce central nervous system excitation followed by depression. Exposure to xylene vapor can produce dizziness, staggering, drowsiness and unconsciousness. At very high concentrations, xylene vapor may produce lung irritation, nausea, vomiting and abdominal pain. Xylene is not known to possess the chronic bone marrow toxicity of benzene, but liver enlargement and nerve-cell damage have been noted from chronic overexposure.

8.0 GAS/VAPOR MONITORING PROCEDURES

The greatest potential hazards to safety and health at this site are:

- 1. Exposure to chemical vapors through inhalation
- 2. Exposure to chemical contamination through skin contact and ingestion.

Ongoing air monitoring during project tasks will provide data to ensure that vapor concentrations are within acceptable ranges and will provide adequate selection criteria for respiratory and dermal protection.

- 8.0.1 If PID readings exceed 100 ppm, a NIOSH approved air-purifying respirator with organic vapor cartridges must be worn by all site workers within any area where monitoring results exceed 100 ppm.
- 8.0.2 If PID readings exceed 750 ppm, level B protection will be required. Personnel must leave site immediately and contact site safety officer or Health & Safety Manager for further instructions.
- 8.0.3 Respirator cartridges will be changed once per day as a minimum. This can be accomplished at the end of the work day during respirator decontamination. If odor breakthrough is detected while wearing the respirator or breathing becomes difficult, change cartridges immediately.

8.1 Tasks Performed Within a Confined Space

When site work takes place in a confined space the air must be monitored for (a) oxygen level; (b) explosive vapors; and (c) toxic vapors. The following air monitoring procedures must be followed before entering a confined space.

- a. Oxygen Level: Monitor for % Oxygen with a O₂/LEL Meter to ensure a minimum oxygen level of 19.5%. Oxygen level monitoring will be done at the top, middle and bottom of the enclosed space to determine if there is a minimum acceptable oxygen level of 19.5% prior to entry. If oxygen is less than 19.5%, do not enter the space.
- b. Explosive Vapors: Monitor for % of Lower Explosive Limit (LEL) with a 0₂/LEL Meter to determine whether vapor concentrations within the confined space exceed 20% of the LEL. If readings exceed 20% LEL, personnel shall shut off accessible equipment, leave the site immediately, and contact the fire department.
- c. <u>Toxic Vapors</u>: Monitor the air within the confined space for organic vapors with a PID or FID following guidelines stated in Section 8.0 (above) to decide on the respiratory protection needed. Enter the space only if the oxygen level is at or above 19.5%, the %LEL is below 20%, the toxic vapor concentration is determined, and the proper respiratory protection is worn.

PID or FID readings will be taken at the top, middle and bottom of a vault, shed, or other confined space to ensure that vapors do not exceed acceptable levels.

All monitoring equipment must be calibrated and maintained in accordance with manufacturer's recommendations.

9.0 HEALTH AND SAFETY REQUIREMENTS

9.1 Medical Monitoring Program

All Groundwater Technology, Inc. field personnel are required to have annual medical evaluations in accordance with the company's Health and Safety Program policy. Additional re-evaluation will be considered in the event of chemical over-exposure while working on this site.

The petrochemicals typical of these facilities can affect specific organ systems producing characteristic health effects. The medical evaluation will, therefore, focus on the liver, kidney, nervous system, blood systems, and skin and lung function. Laboratory testing will include complete blood count, and applicable kidney and liver-function tests. Other tests include skin examination.

9.2 Training

All personnel working at this site should have received a minimum of 40 hours of initial hazardous waste activity instruction, and a minimum of three days of field experience under the direct supervision of a trained, experienced person. Personnel assigned to the site will also receive eight hours refresher training per year. On-site managers and supervisors directly responsible for employees engaged in hazardous waste operations have received an additional eight hours of supervisory training. These training requirements comply with the OSHA Hazardous Waste Operations and Emergency Response regulation, 29 CFR 1910.120.

The initial 40-hour training and the 8-hour annual refresher training includes specific details on the following:

- ♦ Regulatory Requirements
- ♦ First Aid/CPR
- ♦ Confined Space Entry
- ♦ Respiratory Protection
- ♦ Air Monitoring
- ♦ Decontamination Procedures
- ♦ Hazard Communication
- ♦ Toxicology

These specifications are then complimented with actual hands-on experience with the use of personal protective equipment and air monitoring equipment.

9.3 Work Zones Access

Access within a 5-foot radius of any on-site operation is prohibited to all but Groundwater Technology, Inc. field personnel and subcontractors.

9.4 Emergency Equipment

Vehicles used for site work will be equipped with a first aid kit and safety equipment including:

- ♦ fluorescent vests,
- ♦ cones,
- ♦ flags (as needed)
- ♦ barricades (as needed)
- fire extinguisher-dry chemical ABC-type extinguisher,
- ♦ flashlight,
- water, suitable for drinking,
- portable eye wash,
- appropriate emergency bandage material.

9.5 Carbon Treatment

If this site involves the use of a Carbon Treatment System, then the following information will apply.

The Carbon Treatment System is equipped with an emergency shut-off. The system will shut off automatically when the non-methane TPH vapor concentrations in the intermediate line reach 5% of the Lower Explosive Limit (LEL) for gasoline as recorded by the system monitors.

The suggested equipment for decontamination and spill response procedures includes:

- ♦ wash tubs (3)
- ♦ plastic sheets
- trash bags
- scrub brushes
- ♦ detergent
- ♦ sorbent booms (as applicable)

The carbon system is a closed system where no chemicals are used. The potential for a spill is minimal and thus spill containment is not addressed in this Site Safety Plan.

GROUNDWATER

TECHNOLOGY, INC.

9.6 **Drilling Procedures**

A Dig-Alert authorization number must be obtained prior to drilling.

During the drilling operation, two persons (one designated as "driller" and the other as "helper") must be present at all times. The helper (whether Groundwater Technology, Inc. personnel or subcontractors) must be instructed as to the location of the emergency shut-off switch. Every attempt must be made to keep unauthorized personnel from entering the work area. If this is not possible, the operation should be shut down until the area is cleared. The area where the operation is taking place shall be cordoned off with a barricade. The Site Safety Officer or the Field Team Leader has the authority and the responsibility to shut down the drilling operations whenever a hazardous situation is deemed present.

The mast of the drilling rig must maintain a minimum clearance of 20 feet from any overhead electrical cables. All drilling operations will cease immediately during hazardous weather conditions such as high winds, heavy rain, lightening and snow.

Hart hats shall be worn at all times. Hearing protection shall be worn during noisy operations.

If product is encountered during the drilling operation, all work must stop in order for employees to upgrade personal protective equipment to Level C. A full-face respirator should be worn in order to prevent the inhalation of vapors and to provide face and eye protection from splashes. Coated tyvek suits, gloves, and overboots should be worn to prevent skin contact with the soil.

Air monitoring must be performed in the work area to document breathing-zone concentrations. If air monitoring results indicate concentrations greater than 700 ppm, then Level B respiratory protection will be implemented.

Respirator cartridges must be changed at the end of a work period or if "breakthrough" occurs. If employees experience continuous cartridge "breakthrough", then the employees' work procedures and the level of respiratory protection must be re-evaluated by the Site Safety Officer and the Health and Safety Manager in order to determine the necessity of upgrading to Level B respiratory protection.

9.7 Electrical Equipment and Ground-Fault Circuit Interrupters

All electrical equipment and power cables in and around wells or structures suspected of containing chemical contamination must be intrinsically safe and equipped with a three-wire ground lead, rated explosion-proof for hazardous atmospheres. In accordance with OSHA 29 CFR 1926.404, approved ground fault circuit interrupters (GFCI) must be used for all 120 volt, single phase, 15 and 20 ampere receptacle outlets on the site which are in use by employees. Receptacles on the ends of extension cords are not part of the permanent wiring and therefore, must be protected by GFCI's whether or not the extension cord is plugged into permanent wiring.

The GFCI is a fast-acting circuit breaker which senses small imbalances in the circuit caused by current leakage to ground, and in a fraction of a second shuts off the electricity. However, the GFCI will not protect the employee from line-to-line contact hazards (such as a person holding two "hot" wires or a hot and neutral wire in each hand). The GFCI does provide protection against the most common form of electrical shock hazard - the ground fault. It also provides protection against fires, overheating, and destruction of insulation on wiring.

GFCIs can be used successfully to reduce electrical hazards on construction sites. Tripping of GFCIs - interruption of current flow -is sometimes caused by wet connectors and tools. It is good practice to limit exposure of connectors and tools to excessive moisture by using watertight or sealable connectors. Providing more GFCIs or shorter circuits can prevent tripping caused by the cumulative leakage from several tools or by leakages from extremely long circuits. (Adapted from OSHA 3007; Ground-Fault Protection on Construction sites, 1987.)

TECHNOLOGY, INC.

9.8 Fire Prevention

During equipment operation, periodic vapor concentration measurements should be taken with an explosimeter or combustimeter. If at any time the vapor concentrations exceed 20% of LEL, then the Site Safety Officer or designated field worker should immediately shut down all operations.

Only Factory Mutual (FM) approved fire safety cans will be used to transport and store flammable liquids. All gasoline and diesel-driven engines requiring refueling must be shut down and allowed to cool before filling. Smoking is not allowed during any operations within the work area in which petroleum products or solvents in free-floating, dissolved or vapor forms, or other flammable liquids may be present.

No open flame or spark is allowed in any area containing petroleum products, or other flammable liquids.

9.9 General Health

Medicine and alcohol can increase the effects of exposure to toxic chemicals. Unless specifically approved by a qualified physician, prescription drugs should not be taken by personnel assigned to operations where the potential for absorption, inhalation, or ingestion of toxic substances exists.

Drinking alcoholic beverages is prohibited. Drinking alcoholic beverages and driving is prohibited at any time. Driving at excessive speeds is always prohibited.

Skin abrasions must be thoroughly protected to prevent chemicals from penetrating the abrasion. It is recommended that Contact Lenses not be worn by persons working on the site.

9.10 MSDS Information

Material Safety Data Sheets (MSDS) on chemical substances encountered at the site shall be made available to all persons (including subcontractors) working at the site. These MSDSs shall be enclosed within this site safety plan in Appendix E. For emergency situations not specifically addressed by this site safety plan, refer to MSDS recommendations for action information.

10.0 PROJECT PERSONNEL

Groundwater Technology, Inc. will oversee and act accordingly during all phases of the project. The following management structure will be instituted for the purpose of successfully and safely completing this project.

10.1 Project Manager:

Jonathan Parker

The Project Manager will be responsible for implementing the project and obtaining any necessary personnel or resources for the completion of the project. Specific duties will include:

- ♦ coordinating the activities of all subcontractors, to include informing them of the required personal protective equipment and insuring their signature acknowledging this Site Safety Plan (see Appendix A),
- selecting a Site Safety Officer and field personnel for the work to be undertaken on site,
- ensuring that the tasks assigned are being completed as planned and on schedule,

- providing authority and resources to ensure that the Site Safety Officer is able to implement and manage safety procedures,
- preparing reports and recommendations about the project to clients and affected Groundwater Technology, Inc. personnel,
- ensuring that persons allowed to enter the site (i.e., EPA, contractors, state officials, visitors) are made aware of the potential hazards associated with the substances known or suspected to be on site, and are knowledgeable as to the on-site copy of the specific site safety plan.
- ensuring that the Site Safety Officer is aware of all of the provisions of this site safety plan and is instructing all personnel on site about the safety practices and emergency procedures defined in the plan, and
- ensuring that the Site Safety Officer is making an effort to monitor site safety, and has designated a Field Team Leader to assist with the responsibility when necessary.

10.2 Health & Safety Manager

Maureen Grant

The Health & Safety Manager shall be responsible for the overall coordination and oversight of the site safety plan. Specific duties will include:

- approving the selection of the types of personal protective equipment (PPE) to be used on site for specific tasks,
- monitoring the compliance activities and the documentation processes undertaken by the Site Safety Officer.
- evaluating weather and chemical hazard information and making recommendations to the Project Manager about any modifications to work plans or personal protection levels in order to maintain personnel safety,
- coordinate upgrading or downgrading PPE with Site Safety Officer, as necessary, due to changes in exposure levels, monitoring results, weather, other site conditions,
- ♦ approving all field personnel working on site, taking into consideration their level of safety training, their physical capacity, and their eligibility to wear the protective equipment necessary for their assigned tasks (i.e.: Respirator Fit Testing Results), and,
- overseeing the air monitoring procedures as they are carried out by site personnel for compliance with all company health and safety policies.

10.3 Site Safety Officer

Jonathan Parker

The Site Safety Officer shall be responsible for the implementation of the site safety plan on site. Specific duties will include:

- monitoring the compliance of field personnel for the routine and proper use of the PPE that has been designated for each task,
- routinely inspecting PPE and clothing to ensure that it is in good condition and is being stored and maintained properly,
- stopping work on the site or changing work assignments or procedures if any operation threatens the health and safety of workers or the public,
- monitoring personnel who enter and exit the site and all controlled access points,
- ♦ reporting any signs of fatigue, work-related stress, or chemical exposures to the Project Manager and/or Health & Safety Manager,
- ♦ dismissing field personnel from the site if their actions or negligence endangers themselves, co-workers, or the public, and reporting the same to the Project Manager and/or Health & Safety Manager,
- reporting any accidents or violations of the site safety plan to the Project Manager and/or Health & Safety Manager, and documenting the same for the project in the project records,
- knowing emergency procedures, evacuation routes and the telephone numbers of the ambulance, local hospital, poison control center, fire and police departments,
- ensuring that all project-related personnel have signed the personnel agreement and acknowledgments form contained in this site safety plan,
- ♦ coordinate upgrading and downgrading PPE with the Health & Safety Manager, as necessary, due to changes in exposure levels, monitoring results, weather, and other site conditions, and
- ♦ perform air monitoring with approved instruments in accordance with requirements stated in this Site Safety Plan (see monitoring procedures on page 20 for specific information).

10.4 Field Team Leader

Jonathan Parker

In the event that the Project Manager and the Site Safety Officer are not on site, the Field Team Leader will assume all responsibility of the Site Safety Officer.

10.5 Other Field Personnel

Scott Doolittle

Technician staff is responsible for system maintenance, calibration and system operation. Records of site visits documenting system conditions are maintained by the technicians. All field personnel shall be responsible for acting in compliance with all safety procedures outlined in the site safety plan. Any hazardous work situations or procedures should be reported to the Site Safety Officer so that corrective steps can be taken.

10.6 Medical/Technical Advisors

Frank H. Lawrence, M.D. ENVIROLOGIC DATA, Portland, Maine......(207) 773-3020

Marilyn E. Grant, R.N., B.S., C.O.H.N ENVIROLOGIC DATA, Portland, Maine....(207) 773-3020

Lori St.Pierre, I.H.I.T. ENVIROLOGIC DATA, Portland, Maine.....(207) 773-3020

The specific duties of the Medical/Technical Advisors include:

- providing technical input into the design of the site safety plan,
- ♦ advising worker exposure potential along with appropriate hazard reduction methods, and
- recommending a suitable medical monitoring program for the site workers.

APPENDIX C

(Definition of Hazard Evaluation Guidelines)

APPENDIX C

Definition of Hazard Evaluation Guidelines

Hazard: Airborne Contaminants

Guideline

Threshold Limit Value Time-Weighted Average (TLV-TWA)

Permissible Exposure Limit (PEL)

Immediately Dangerous to Life and Health (IDLH)

Hazard: Explosion

Guideline

Lower Explosive Limit

Upper Explosive Limit (UEL)

Hazard: Fire

Guideline

Flash Point (flash p)

Explanation

The time-weighted average concentration for a normal 8-hour work day and a 40-hour work week, to which nearly all workers may be repeatedly exposed without adverse effect.

Time-weighted average concentrations similar to (and in many cases derived from) the Threshold Limit Values.

"IDLH" or "Immediately dangerous to life or health" means any atmospheric condition that poses an immediate threat to life, or which is likely to result in acute or immediate severe health effects. This includes oxygen deficiency conditions.

Explanation

The minimum concentration of (LEL) vapor in air below which propagation of a flame will not occur in the presence of an ignition source.

The maximum concentration of vapor in air above which propagation of a flame will not occur in the presence of an ignition source.

Explanation

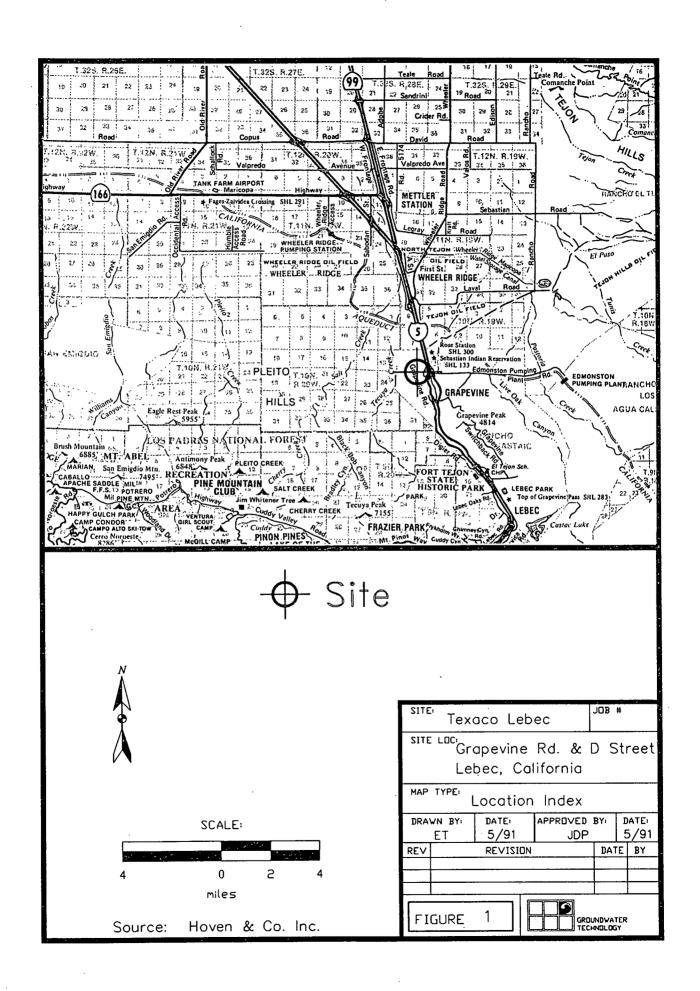

The lowest temperature at which the vapor of a combustible liquid can be made to ignite momentarily in air.

No. 316

BENZENE (Revision D)

İssued: November 1978 Revised: April 1988

SECTION 1. MATERIAL IDENTIFICATION

25

Material Name: BENZENE

Description (Origin/Uses): Used in the manufacture of medicinal chemicals, dyes, linoleum, airplane dopes,

varnishes, and lacquers; and as a solvent for waxes, resins, and oils.

Other Designations: Benzol; Phene; Phenylhydride; C,H,; NIOSH RTECS No. CY1400000; CAS No. 0071-43-2

Manufacturer: Contact your supplier or distributor. Consult the latest edition of the Chemicalweek

Buyers' Guide (Genium ref. 73) for a list of suppliers.

H 2 F 3 · R 1 R 0 I 4

HMIS

PPG* S 2
*See sect. 8 K 4

SECTION 2. INGREDIENTS AND HAZARDS %
Benzene, CAS No. 0071-43-2 Ca 100

*See NIOSH, RTECS, for additional data with references to irritative, mutagenic, tumorigenic, and reproductive effects.

EXPOSURE LIMITS
OSHA PEL

8-Hr TWA: 1 ppm 15-Min Ceiling: 5 ppm Action Level: 0.5 ppm

ACGIH TLV, 1987-88 TLV-TWA: 10 ppm, 30 mg/m³

Toxicity Data*
Human, Inhalation, LC.: 2000 ppm/5 Min
Human, Oral, TD.: 130 mg/kg

Human, Oral, TD,: 130 mg/kg Human, Inhalation, TC,: 210 ppm

SECTION 3. PHYSICAL DATA

Boiling Point: 176°F (80°C) Melting Point: 42°F (5.5°C)

Vapor Pressure: 75 Torrs at 68°F (20°C)

Vapor Density (Air = 1): >1

Water Solubility (%): Slight
% Volatile by Volume: 100
Molecular Weight: 78 Grams/Mole

Specific Gravity (H.O = 1): 0.87865 at 68°F (20°C)

Appearance and Odor: A colorless liquid; characteristic atomatic odor.

| SECTION 4. FIRE AND EXPLOSION DATA | | | LOWER | UPPER |
|------------------------------------|--------------------------|----------------------------|-------|-------|
| Flash Point and Method | Autoignition Temperature | Flammability Limits in Air | | |
| 12'F (-11.1'C) CC | 928°F (493°C) | % by Volume | 1.3% | 7.1% |

Extinguishing Medla: Use dry chemical, foam, or carbon dioxide to put out benzene fires. Water may be ineffective as an extinguishing agent because it can scatter and spread the fire. Use water to cool fire-exposed containers, flush spills away from exposures, disperse benzene vapor, and protect personnel attempting to stop an unignited benzene leak.

Unusual Fire or Explosion Hazards: Benzene vapor is heavier than air and can collect in low-lying areas such as sumps or wells. Eliminate all sources of ignition there to prevent a dangerous flashback to the original liquid benzene. Danger: Explosive and flammable benzene vapor-air mixtures can easily form at room temperature; always use this material in a way that minimizes dispersion of its vapor into general work areas.

Special Fire-fighting Procedures: Wear a self-contained breathing apparatus (SCBA) with a full facepiece operated in the pressure-demand or positive-pressure mode.

SECTION 5. REACTIVITY DATA

Benzene is stable in closed containers during routine operations. It does not undergo hazardous polymerization.

Chemical Incompatibilities: Hazardous chemical reactions involving benzene and the following materials are reported in Genium reference 84: bromine pentafluoride, chlorine, chlorine trifluoride, chromic anhydride, nitryl perchlorate, oxygen, ozone, perchlorates, perchloryl fluoride and aluminum chloride, permanganates and sulfuric acid, potassium peroxide, silver perchlorate, and sodium peroxide.

Conditions to Avoid: Avoid all exposure to sources of ignition and to incompatible chemicals.

Hazardous Products of Decomposition: Toxic gases like carbon monoxide (CO) may be produced during benzene fires.

SECTION 6. HEALTH HAZARD INFORMATION

Benzene is listed as a suspected human carcinogen by the ACGIH.

Summary of Risks: Prolonged skin contact with benzene or excessive inhalation of its vapor may cause headache, weakness, loss of appetite, and lassitude. Continued exposure can cause collapse, bronchitis, and pneumonia. The most important health hazards are cancer (leukemia), bone marrow effects, and injuries to the blood-forming tissue from chronic low-level exposure.

Medical Conditions Aggravated by Long-Term Exposure: Ailments of the heart, lungs, liver, kidneys, blood, and central nervous system (CNS) may be worsened by exposure. Administer preplacement and periodic medical exams emphasizing these organs' functions and reassign workers who test positive. Target Organs: Blood, CNS, bone marrow, eyes, and upper respiratory tract (URT). Primary Entry: Skin contact, inhalation. Acute Effects: Dizziness, mental duliness, nausea, headache, fatigue, and Chronic Effects: Possible cancer (leukemia). FIRST AID

Eyes: Immediately flush eyes, including under the eyelids, gently but thoroughly with plenty of running water for at least 15 minutes. Skin: immediately wash the affected area with soap and water.

Inhalation: Remove the exposed person to fresh air; restore and/or support his or her breathing as needed.

Ingestion: Never give anything by mouth to someone who is unconscious or convulsing. Do not induce vomiting because of the

GET MEDICAL HELP (IN PLANT, PARAMEDIC, COMMUNITY) FOR ALL EXPOSURES. Seek prompt medical assistance for further treatment, observation, and support after first aid.

SECTION 7. SPILL, LEAK, AND DISPOSAL PROCEDURES

Spill/Leak: Noufy safety personnel, provide ventilation, and eliminate all sources of ignition immediately. Cleanup personnel need protection against contact with and inhalation of vapor (see sect. 8). Contain large spills and collect waste or absorb it with an inert material such as sand, earth, or vermiculite. Use nonsparking tools to place waste liquid or absorbent into closable containers for disposal. Keep waste out of sewers, watersheds, and waterways.

Waste Disposal: Contact your supplier or a licensed contractor for detailed recommendations for disposal. Follow Federal, state, and local regulations.

OSHA Designations

Air Contaminant (29 CFR 1910.1000 Subpart Z)

EPA Designations (40 CFR 302.4) RCRA Hazardous Waste, No. U019

CERCLA Hazardous Substance, Reportable Quantity: 1000 lbs (454 kg)

SECTION 8. SPECIAL PROTECTION INFORMATION

Goggles: Always wear protective eyeglasses or chemical safety goggles. Where splashing is possible, wear a full face shield. Follow the eye- and face-protection guidelines in 29 CFR 1910.133. Respirator: Wear a NIOSH-approved respirator per the NIOSH Pocket Guide to Chemical Hazards for the maximum-use concentrations and/or the exposure limits cited in section 2. Follow the respirator guidelines in 29 CFR 1910.134. For emergency or conroutine use (e.g., cleming reactor vessels or storage tanks), wear an SCBA with a full facepiece operated in the pressure-demand or positive-pressure mode. Warning: Air-purifying respirators will not protect workers in oxygendeficient atmospheres. Other: Wear impervious gloves, boots, aprons, gauntlets, etc., to prevent any possibility of skin contact with this suspected human carcinogen. Ventilation: Install and operate general and local ventilation systems powerful enough to maintain airborne levels of benzene below the OSHA FEL standard cited in section 2.

Safety Stations: Make eyewash stations, washing facilities, and safety showers available in use and handling areas. Contaminated Equipment: Contact lenses pose a special hazard; soft lenses may absorb irritants and all lenses concentrate them. Do not wear contact lenses in any work area. Remove contaminated clothing and launder it before wearing it again; clean this material from shoes and equipment. Comments: Practice good personal hygiene; always wash thoroughly after using this material. Keep it off of your clothing and equipment. Avoid transferring it from your hands to your mouth while eating, drinking, or smoking. Do not eat, drink, or smoke in any work area. Do not inhale benzene vapor!

SECTION 9. SPECIAL PRECAUTIONS AND COMMENTS

Storage/Segregation: Store benzene in a cool, dry, well-ventilated area away from sources of ignition and incompatible chemicals. Special Handling/Storage: Protect containers from physical damage. Electrically ground and bond all metal containers used in shipping or transferring operations. Follow all parts of 29 CFR 1910.1028.

Engineering Controls: All engineering systems (production, transportation, etc.) must be of maximum explosion-proof design (nonsparking, electrically grounded and bonded, etc.)

Comments: If possible, substitute less toxic solvents for benzene; use this material with extreme caution and only if it is absolutely essential.

Transportation Data (49 CFR 172.101-2)

DOT Shipping Name: Beuzene DOT Class: Flammable Liquid

DOT Label: Flammable Liquid DOT ID No. UNIII4

IMO Label: Flammable Liquid

المركار في المعرب الجوارفي

Appearance and odor. Clear, colorless liquid with a characteristic aromatic odor. The odor is detectable to most individuals in the range of 10 to 15 ppm. Because olfactory fatigue occurs rapidly upon exposure to toluene, odor is not a good warning property.

| SECTION 4. FIRE A | ND EXPLOSION DATA | <u> </u> | LOWER | UPPER |
|------------------------|--------------------|----------------------------|-------|-------|
| Flash Point and Method | Autoignition Temp. | Flammability Limits In Air | | |
| 40.E (7.C) CC | 80%.E (430.C) | % by Volume | 1.27 | 7.1 |

EXTINGUISHING MEDIA: Carbon dioxide, dry chemical, alcohol foam. Do not use a solid stream of water because the stream will scatter and spread the fire. Use water spray to cool tanks/containers that are exposed to fire and to disperse vapors.

UNUSUAL FIRE/EXPLOSION HAZARDS: This OSHA class IB flammable liquid is a dangerous fire hazard. It is a moderate fire hazard when exposed to oxidizers, heat, sparks, or open flame. Vapors are heavier than air and may travel a considerable distance to an ignition source and flash back.

SPECIAL FIRE-FIGHTING PROCEDURES: Fire fighters should wear self-contained breathing apparatus with full facepiece operated in a positive-pressure mode when fighting fires involving toluence.

SECTION 5. REACTIVITY DATA

CHEMICAL INCOMPATIBILITIES: Toluene is stable in closed containers at room temperature under normal storage and handling conditions. It does not undergo hazardous polymerization. This material is incompatible with strong oxidizing agents, dinitrogen tetraoxide, silver perchlorate, tetraniromethane, and uranium hexasiuoride. Contact with these materials may cause fire or explosion. Nitric acid and toluene, especially in the presence of sulfuric acid, will produce nitrated compounds that are dangerously explosive.

CONDITIONS TO AVOID: Avoid exposure to sparks, open flame, but surfaces, and all sources of heat and ignition. Tolurne will attack some forms of plastics, rubber, and coatings. Thermal decomposition or burning produces carbon dioxide and/or carbon monoxide.

SECTION 6. HEALTH HAZARD INFORMATION TILV

Toluene is not considered a carcinogen by the NTP, IARC, or OSHA. SUMMARY OF RISKS: Vapors of toluene may cause irritation of the eyes, nose, upper respiratory tract, and thin. Exposure to 200 ppm for 8 hours causes mild fatigue, weakness, confusion, lacrimation (tearing) and paresthesia (a sensation of prickling, tingling, or creeping on the skin that has no objective cause). Exposure to higher concentrations may cause headache, nausea, dizziness, dilated pupils, and euphoria, and, in severe cases, may cause unconsciousness and death. The liquid is irritating to the eyes and skim. Contact with the eyes may cause transient comeal damage, conjunctival initiation, and burns if not promptly removed. Repeated and/or prolonged contact with the skin may cause drying and cracking. It may be absorbed through the skin in toxic amounts. Ingestion causes irritation of the gastrointestinal trac; and may cause effects resembling those from inhalation of the vapor. Chionic overexposure to toluene may cause reversible kidney and liver injury. FIRST AID: EYE CONTACT: Immediately flush eyes, including under eyelids, with rurning water for at least 15 minutes. Get medical attention if irritation persists.* SKIN CONTACT: Immediately flush skin (for at least 15 minutes) while removing contaminated shoes and clothing. Wash exposed area with soap and water. Get medical attention if irritation persists or if a large area has been exposed.* <u>PNHALATION</u>: Remove victim to fresh air. Resizre and/or support breathing as required. Keep victim warm and quiet. Get medical help. NGESTION: Give victim 1 to 2 glasses of water or milk. Contact a poison control center. Do not induce vomiting unless directed to do so. Transport victim to a medical facility. Never give anything by mouth to a person who is unconscious or convulsing. • GET MEDICAL ASSISTANCE = In plant, paramedic, community. Get medical help for further treatment, observation, and support after first aid, if indicated.

SECTION 7. SPILL, LEAK, AND DISPOSAL PROCEDURES

SPILL/I FAX: Notify safety personnel of large spills or leaks. Remove all sources of heat and ignition. Provide maximum explosion-proof ventilation. Limit access to spill area to necessary personnel only. Remove leaking containers to safe place if feasible. Cleanup personnel need protection against contact with liquid and inhalation of vapor (see sect. 8).

WASTE DISPOSAL: Absorb small spills with paper towel or vermiculite. Contain large spills and collect if feasible, or absorb with vermiculite or sand. Place waste solvent or absorbed; into closed containers for disposal using nonsparking tools. Liquid can be flushed with water to an open holding and for handling. Do not flush to sewer, watershed, or waterway.

COMMENTS: Place in suitable container for disposal by a licensed contractor or burn in an approved incinerator. Consider reclaiming by distillation. Contaminated absorbed can be buried in a smittry landfill. Follow all Federal, state, and local regulations. Then 96: 100-10 ppm. Tolume is designated as a hazardous waster by the EPA. The EPA (RCRA) HW No. is U220 (40 CFR 251). The reportable quentity (RQ) is 100-1 is 100-1 is 100-1.

SECTION 8. SPECIAL PROTECTION INFORMATION

Provide general and local enhance ventilation to meet TLV requirements. Ventilation fams and other electrical service must be thousparking and have an explosion-proof design. Exhaust hoods should have a face velocity of at least 100 lfm (linear fact per minute) and be designed to capture heavy veper. For emergency or nonnountine exposures where the TLV may be extended, use an organic chemical countridge respiration if concentration is less than 200 ppm and an approved canister gas mark or self-contained bresiding apparatus with full facepiece if concentration is greater than 200 ppm.

Safety glasses or splash goggles should be worn in all work areas. Neeptere gloves, aprox, face shield, boots, and other appropriate protective clothing and equipment should be available and worn as necessary to prevent skin and eye contact. Remove contaminated clothing immediately and do not wear it until it has been properly laundered.

Eyewash stations and safety showers should be readily available in use and handling areas.

Contact leases pose a special hazard; soft leases may absorb influent and all leases concentrate them.

SECTION 9. SPECIAL PRECAUTIONS AND COMMENTS

STORAGE SEGREGATION: Store in a cool, dry, well-ventilated area away from oxidizing agents, heat, sparks, or open flame. Storage areas must meet OSHA requirements for class IB flammable liquids. Use metal safety cans for handling small amounts. Protect containers from physical damage. Use only with adequate ventilation. Avoid contact with eyes, skin, or clothing. Do not inhale or ingest. Use caution when handling this compound because it can be absorbed through intact skin in toxic amounts. SPECIAL HANDLING/STORAGE: Ground and board metal containers and equipment to prevent static sparks when making transfers. Do not smoke in use or storage areas. Use compariting tools. ENGINEERING CONTROLS: Proplement and periodic medical exams emphasizing the liver, kidneys, removes system, lungs, heart, and blood should be provided. Workers exposed to concentrations greater than the action level (50 ppm) should be examined at least once a year. Use of alcohol can aggravate the toxic effects of toluene.

COMMENTS: Emptied containers contain product residues. Handle accordingly!

Tolucce is designated as a hazardove subnerce by the EPA (40 CFR 116). DOT Classification: Flammable liquid. UN1294.

Data Source(s) Code: 1-9, 12, 16, 20, 21, 24, 26, 34, 81, 82. CR

Judgaments as to the salishility of information borein for purchaser's purposes are occasively purchaser's responsibility. Therefore, although mesonable care has been taken in the preparation of such information. Centure Publishing Corp. estimate no variation, makes no representations and sesumes no responsibility at the discovering or substitution of such information for application to purchaser's introduced purposes or for consequences of its use.

No. 318

XYLENE (Mixed Isomers) (Revision D)

Issued: November 1980 Revised: August 1988

SECTION 1. MATERIAL IDENTIFICATION

Material Name: XYLENE (Mixed Isomers)

Description (Origin/Uses): Used as a raw material for the production of benzoic acid, phthalic anhydride, isophthalic and terephthalic acids and their dimethyl esters in the manufacture of polyester fibers; in sterilizing catgut; with

Canadian balsam as oil-immersion in microscopy; and as a cleaning agent in microscopic techniques.

Other Designations: Dimethylbenzene; Xylol; C₄H₁₀; CAS No. 1330-20-7

Manufacturer: Contact your supplier or distributor. Consult the latest edition of the Chemicalweek

Buyers' Guide (Genium ref. 73) for a list of suppliers.

Comments: Although there are three different isomers of xylene (ortho, meta, and para), the health and physical hazards of all three isomers are very similar. This MSDS is written for a xylene mixture of all three isomers,

which is usually commercial xylene.

| Flash Point and Method | Autoignition Temperature | Flammability Limits in Air | | |
| 81°F to 90°F (27°C to 32°C) | 867°F (464°C) | % by Volume | 1% | 7% |

Extinguishing Media: Use foam, dry chemical, or carbon dioxide. Use water sprays to reduce the rate of burning and to cool containers.

Unusual Fire or Explosion Hazards: Xylene vapor is heavier than air and may travel a considerable distance to a low-lying source of ignition and flash back.

Special Fire-fighting Procedures: Wear a self-contained breathing apparatus (SCBA) with a full facepiece operated in the pressure-demand or positive-pressure mode.

SECTION 5. REACTIVITY DATA

Xylene is stable in closed containers during routine operations. It does not undergo hazardous polymerization.

Chemical Incompatibilities: This material may react dangerously with strong oxidizers.

Conditions to Avoid: Avoid any exposure to sources of ignition and to strong oxidizers.

Hazardous Products of Decomposition: Carbon monoxide (CO) may be evolved during xylene fires.

SECTION 6. HEALTH HAZARD INFORMATION

Xylene is not listed as a carcinogen by the IARC, NTP, or OSHA.

Summary of Risks: Liquid xylene is a skin irritant and causes erythema, dryness, and defatting; prolonged contact may cause blistering. Inhaling xylene can depress the central nervous system (CNS), and ingesting it can result in gastrointestinal disturbance; and possibly hematemesis (vomiting blood). Effects on the eyes, kidneys, liver, lungs, and the CNS are also reported. Medical Conditions Aggravated by Long-Term Exposure: Problems with eyes, skin, central nervous system, kidneys, and liver may be worsened by exposure to xylene. Target Organs: CNS, eyes, gastrointestinal tract, blood, liver, kidneys, skin. Primary Entry: Inhalation, skin contact/absorption. Acute Effects: Dizziness; excitement; drowsiness; incoordination; staggering gait; irritation of eyes, nose, and throat; comeal vacuolization; anorexia; nausea; vomiting; abdominal pain; and dermatitis. Chronic Effects: Reversible eye damage, headache, loss of appetite, nervousness, pale skin, and skin rash.

FIRST AID: Eyes. Immediately flush eyes, including under the eyelids, gently but thoroughly with plenty of running water for at least 15 minutes. Skin. Immediately wash the affected area with soap and water. Inhalation. Remove the exposed person to fresh air; restore and/or support his or her breathing as needed. Have a trained person administer oxygen. Ingestion. Never give anything by mouth to someone who is unconscious or convulsing. Vomiting may occur spontaneously, but do not induce it. If vomiting should occur, keep exposed person's head below his or her hips to prevent aspiration (breathing the liquid xylene into the lungs). Severe hemorrhagic pneumonitis with grave, possibly fatal, pulmonary injury can occur from aspiring very small quantities of xylene.

GET MEDICAL HELP (IN PLANT, PARAMEDIC, COMMUNITY) FOR ALL EXPOSURES. Seek prompt medical assistance for further treatment, observation, and support after first aid. If exposure is severe, hospitilization for at least 72 hours with careful monitoring for delayed onset of pulmonary edema is recommended.

SECTION 7. SPILL, LEAK, AND DISPOSAL PROCEDURES

Spill/Leak: Notify safety personnel, provide ventilation, and eliminate all sources of ignition immediately. Cleanup personnel need protection against contact with and inhalation of xylene vapor (see sect. 8). Contain large spills and collect waste or absorb it with an inert material such as sand, earth, or vermiculite. Use nonsparking tools to place waste liquid or absorbent into closable containers for disposal. Keep waste out of sewers, watersheds, and waterways.

Waste Disposal: Contact your supplier or a licensed contractor for detailed recommendations. Follow Federal, state, and local regulations.

OSHA Designations

Air Contaminant (29 CFR 1910.1000 Subpart Z)

EPA Designations (40 CFR 302.4)

RCRA Hazardous Waste, No. U239

CERCLA Hazardous Substance, Reportable Quantity: 1000 lbs (454 kg), per the Clean Water Act (CWA), section 311 (b) (9)

SECTION S. SPECIAL PROTECTION INFORMATION

Goggles: Always wear protective eyeglasses or chemical safety goggles. Where splashing is possible, wear a full face shield as a supplementary protective measure. Follow OSHA eye- and face-protection regulations (29 CFR 1910.133). Respirator: Use a NIOSHapproved respirator per the NIOSH Pocket Guide to Chemical Hazards for the maximum-use concentrations and/or the exposure limits approved respirator per the NIOSH Pocket Guide to Cremica: Hazaras for the maximum-use concentrations and/or the exposite limits cited in section 2. Follow OSHA respirator regulations (29 CFR 1910.134). For emergency or nonroutine use (leaks or cleaning reactor vessels and storage tanks), wear an SCBA with a full facepiece operated in the pressure-demand or positive-pressure mode. Warning: Airpurifying respirators will not protect workers in oxygen-deficient atmospheres. Other: Wear impervious gloves, boots, aprons, gauntlets, etc., as required by the specifics of the work operation provent prolonged or repeated skin contact with xylene. Ventilation: Install and operate general and local maximum, explosion-proof ventilation systems powerful enough to maintain airborne levels of xylene below the OSHA PEL standard cited in section 2. Local exhaust ventilation is preferred because it prevents dispersion of xylene into general work areas by eliminating it at its source. Consult the latest edition of Genium reference 103 for detailed recommendations. Safety Stations: Make eyewash stations, safety/quick-dreach showers, and washing facilities available in areas of use and handling. Contaminated Equipment: Contact lenses pose a special hazard; soft lenses may absorb irritants and all lenses concentrate them. Do not wear contact lenses in any work area. Remove contaminated clothing and launder it before wearing it again; clean xylene from shoes and equipment. Comments: Practice good personal hygiene; always wash thoroughly after using this material. Keep it off of your clothing and equipment. Avoid transferring it from your hands to your mouth while eating, drinking, or smoking. Do not eat, drink, or smoke in any work area. Do not inhale xylene vapor.

SECTION 9. SPECIAL PRECAUTIONS AND COMMENTS

Storage/Segregation: Store xylene in a cool, dry, well-ventilated area away from sources of ignition and strong oxidizers. Protect containers from physical damage.

Special Handling/Storage: Make sure all engineering systems (production, transportation) are of maximum explosion-proof design. Ground and bond all containers, pipelines, etc., used in shipping, transferring, reacting, producing, and sampling operations.

AUTOMOTIVE GASOLINE, LEAD-FREE

Date October 1981

SECTION I. MATERIAL IDENTIFICATION

MATERIAL NAME: AUTOMOTIVE GASOLINE, LEAD-FREE

DESCRIPTION: A volatile blend of hydrocarbons for automotive fuel

OTHER DESIGNATIONS: Petrol, CAS #008 006 619, ASTM D439

MANUFACTURER: Available from several suppliers.

| SECTION II. INGREDIENTS AND HAZARDS | x | HAZARD DATA |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--------------------------------------------------------------------------------------------------------------------------|
| Gasoline A hydrocarbon blend that can include normal and branched chain alkanes, cycloalkanes, alkenes, aromatics and other additives.** (Lead max 0.013 g/L, phosphorus max 0.0013 g/L, sulfur max 0.10 wt%. May contain benzene, <5%; see ASTM D3606). *ACGIH 1981 TLV (Intended Changes List). See also Am. Ind. Hyg. A. 39 110-117 (1978) **The composition of fuel is varied with altitude and seasonal requirements for a locality. The blend must meet antiknock requirements. (Antiknock Index min 85, | | 8-hr TWA 300 ppm or 900 mg/m ³ * Man Eye: 500 ppm/lH Moderate irritation Inhalation: TCLo 900 ppm/lH TFX:CNS |
| ASTM D439.) | | |

SECTION III. PHYSICAL DATA

Distillation at 1 atm, Initial, deg C >39 Specific Specif

Specific gravity, 60/60 F - 0.72-0.76

Melting point, deg C ----- -90.5-95.4

Evaporation rate ----- N/A

Vapor density (Air=1) ----- 3.0-4.0

Solubility in water ----- Insoluble

Appearance and Odor: A clear, mobile liquid with a characteristic odor which can be recognized at about 10 ppm in air. (Gasoline may be colored with dye.)

| SECTION IV. FIRE AND | EXPLOSION DATA | | LOWER | UPPER |
|------------------------|--------------------|----------------------------|-------|-------|
| Flash Point and Method | Autoignition Temp. | Flammability Limits In Air | 1 4 | 7.6 |
| -45 F | 536-853 F | % by volume | | |

Extinguishing Media: Dry chemical, carbon dioxide, alcohol foam. Use of water may be ineffective to extinguish fire, but use water spray for cooling fire-exposed drums and tanks to prevent pressure rupture. It is a dangerous fire and explosion hazard when exposed to heat and flames. Vapors can flow along surfaces, reach distant ignition sources and flash back. Can react violently with oxidizing agents.

Firefighters should wear self-contained breathing apparatus and full protective clothing.

SECTION V. REACTIVITY DATA

This is a stable material in closed containers at room temperature under normal storage and handling conditions. It does not undergo hazardous polymerization.

This is an OSHA Class IA flammable liquid. A mixture of gasoline vapors and air can be explosive. It is incompatible with exidizing agents.

Thermal-oxidative degradation can yield carbon monoxide and partially oxidized hydrocarbons.

SECTION VI. HEALTH HAZARD INFORMATION

TLV 300 ppm (See Sect. II)

Inhalation causes intense burning of the mucous membranes, throat and respiratory tract; overexposure to vapors can lead to bronchopneumonia. Inhalation of high conc. can cause fatal pulmonary edema. Repeated or prolonged skin exposure causes dermatitis. Can cause blistering of skin due to its defatting properties. Exposure to eyes can cause hyperemia of the conjunctiva.

Ingestion or excessive vapors can cause inebriation, drowsiness, blurred vision, vertigo confusion, vomiting and cyanosis (2000 ppm produces mild anesthesia in 30 min, higher conc. are intoxicating in less time.) Aspiration after ingestion causes bronchitis, pneumonia, or edema which can be fatal.

FIRST AID:

Eye Contact: Flush thoroughly with running water for 15 min. including under eyelids.

Skin Contact: Remove contaminated clothing. Wash affected area with soap and water.

Inhalation: Remove to fresh air. Restore breathing and administer oxygen if needed.

Ingestion: Do not induce vomiting. Aspiration hazard. Contact physician.

Seek prompt medical assistance for further treatment, observation and support.

SECTION VII. SPILL, LEAK, AND DISPOSAL PROCEDURES

Notify safety personnel of leaks or spills. Remove sources of heat or ignition. Provide adequate ventilation. Clean-up personnel require protection against liquid contact and vapor inhalation. If a leak or spill has not ignited, use water spray to disperse vapors and to protect men attempting to stop the leakage. Contain spill. Do not allow to enter sewer or surface water. Add absorbent solid to small spills or residues and pick up for disposal.

DISPOSAL: Burn scrap material in an approved incinerator. Burn contaminated liquid by spraying into an incinerator. Follow Federal, State, and Local regulations.

SECTION VIII. SPECIAL PROTECTION INFORMATION

Use general and local exhaust ventilation (explosion-proof) to keep vapors below the TLV requirements in the workplace. Respirators should be available for nonroutine or emergency use above the TLV.

Avoid eye contact by use of chemical safety goggles and/or full faceshield where splashing is possible. Wear protective clothing appropriate for the work situation to
minimize skin contact such as rubber gloves and boots. Clothing to be changed daily
and laundered.

Eyewash fountains, showers and washing facilities should be readily accessible Provide suitable training to those handling and working with this material.

SECTION IX. SPECIAL PRECAUTIONS AND COMMENTS

Store in closed containers in a cool, dry, well-ventilated area away from sources of heat, ignition and strong oxidizing agents. Protect containers from physical damage. Avoid direct sunlight. Storage must meet requirements of OSHA Class IA liquid. Outdoor or detached storage preferred. No smoking in areas of use. Prevent static electric sparks and use explosion-proof electrical services. (Must meet code.) Avoid skin and eye contact. Avoid inhulation of vapors. Wear clean work clothing daily. Indoor use of this material requires exhaust ventilation to remove vapors. ICC Flammable Liquid, Red Label. IABEL: Flammable Liquid DOT I.D. No. UN 1203.

DOT Classification: FLAMMABLE LIQUID DATA SOURCE(S) CODE: 2.4-9.31.37

Re:

People v. Bahnam Shiralian

KCSC Case No. S-1500-CV-262335 NFT

Dear Mr. Kharazi:

I am writing in response to your letter dated February 15, 2008. Although I am certainly willing to continue to discuss this case with you and/or Mr. Shiralian, I am concerned with several aspects of your letter and would like to take this opportunity to briefly clarify a few issues.

First, you state in the second paragraph of your letter that you "understand" Mr. Shiralian sent me several documents regarding the facts of this case. That is incorrect. I have not received anything from Mr. Shiralian other than documentation regarding the corporate status of Chase Inc. The only substantive documents I received were those attached to your letter, which have very minimal relevance to this case.

Second, you state in the fifth paragraph of your letter that Mr. Shiralian usually received notices when his facilities were out of compliance and that in this case he received "none from Kern County." That statement is shocking and disturbing in view of the fact that on January 23, 2008, Mr. Shiralian was present while a representative from the Kern County Department of Environmental Health and I showed him letter after letter that documented the violations at his facilities and informed him of the serious consequences of failing to respond to the letters. Significantly, many of the letters were sent by certified mail and were accompanied by a signature acknowledging receipt! Therefore, I suggest to you that Mr. Shiralian would have an extremely difficult time trying to convince a Judge that he was not given notice of the violations.

Third, you state in the second-to-last paragraph that "all of the requirements have been met" and then you refer to the letter attached as Exhibit A. All of the requirements have not been

met. Even the letter you attached as Exhibit A clearly states that "I'm still waiting for results of soil samples . . . I'll fax those to you once I have them." As I told you during our phone conversation, Mr. Shiralian is close to compliance, but to say he has met "all" of them is inaccurate. Furthermore, during our in-person meeting in January, we spent considerable time reviewing all of the outstanding requirements in great detail. He and his staff know very well what it is we still needed at that time. Therefore, there is no purpose to re-review that list in this letter.

Finally, I was disappointed to learn that your letter contained no counteroffer, nor have I received one from Mr. Shiralian. I have made it clear that I am willing to give Mr. Shiralian credit for his efforts in coming into full compliance (assuming he does so in the immediate future) and for the money spent coming into compliance to date. Please be advised that I am willing to further extend the deadline for a responsive pleading to the Complaint, on the condition that I receive a meaningful counteroffer.

You and/or Mr. Shiralian are welcome to contact me if you would like to discuss the contents of this letter in greater detail.

Sincerely yours,

EDWARD R. JAGELS District Attorney

Billing and Mailing Address for Underground Storage Tank (UST) Permits

Dear Ms. Funk:

Please update your records and change the billing and mailing address for the attached list of stations so the permits and future invoices are mailed to my attention at the Shell Carson Office. I will forward the permits to the station. Please let me know if there are any forms I need to fill out to make the mailing address change, also if any permit changes have been missed. If there are any outstanding fees due for permits at any of the stations on the attached list please fax me the invoice right away and I will process it for payment.

Please mail invoices and permits to:

Shell Oil Products US Attn: Michelle Ponce – Permit Analyst 20945 S. Wilmington, Avenue Carson, CA 90810

Please contact me at (310) 816-2207 if you have any questions regarding this matter. Please fax any outstanding permit invoices to (310) 816-2028.

Sincerely yours, Shell Oil Products US

Underground Storage Tank, Designated Operator Requirement

All Underground Storage Tank (UST) facilities were required to notify this Department of the person who will serve as their Designated Operator. The notification was required to be submitted by January 1, 2005. Your facility is currently in violation of the California Code of Regulations, Title 23, Chapter 16, Section 2715.

Included with this notice is the form to notify this Department of each facility's Designated Operator. This form is to be completed and returned by May 13, 2005. Failure to comply may result in the assessment of administrative or civil penalties.

Thank you for your cooperation in this matter. If you have any questions, please contact this Department at (661) 862-8700.

Underground Storage Tank Requirements

The State of California has established new regulations for Underground Storage Tanks (UST). UST facilities must meet the following requirements to maintain compliance with current regulations.

- Designated Operator: All UST facilities must notify this Department of the person who will serve as their Designated Operator. This notification is required by January 1, 2005. Enclosed is a flyer explaining these requirements. The State is offering several UST Owner/Operator Outreach Sessions to provide information and answer questions about this new requirement. Also included is a notice about those sessions.
- Double Walled Pressurized Piping Leak Detection: The State is requiring 2. line leak detectors that detect a 3.0 gallon per hour release from the primary containment be installed by November 9, 2004. A mechanical or electronic line leak detector may be used to fulfill this requirement. This requirement is in addition to the continuous monitors (sensors) in the piping sumps and under dispenser containments. This requirement is only for double walled pressurized piping. A flow chart is included to further explain these requirements.

Thank you for your cooperation in this matter. If you have any questions, please contact this Department at (661) 862-8700.

Dear Sir or Madam,

This Department has determined that the above mentioned facility is subject to the Secondary Containment Testing Requirements. The deadline for completing the testing was January 1, 2003. As of this date, the results for the waste oil tank have not been submitted to this Department.

This facility is currently out of compliance with the UST regulations. Failure to respond within the required time frame may result in enforcement actions by this Department.

Please respond to this department in writing as to the status of the site testing by May 31, 2003. The system must be tested within 60 days of your response. If you wish to discuss these options, please contact Laurel Funk at (661) 862-8763. Thank you for your cooperation in this matter.

Updated Underground Storage Tank (UST) Monitoring and Response Plans

Facility:

GRAPEVINE TEXACO. FA0002317

9069 W GRAPEVINE RD

LEBEC

Dear Sir or Madam:

The Kern County Environmental Health Services Department has recently reviewed the underground storage tank (UST) files. Many facilities do not have current and/or approved monitoring plans, response plans, and plot plans on file with this Department. These plans are to be submitted to and approved by this Department for each facility. Copies of the plans are to be kept at each facility site with the Unified Hazardous Materials/Waste Facility Permit.

If you feel that you have already submitted these plans, please contact this Department to have your file reviewed. The submitted plans will be reviewed for completeness and you will be notified if updated plans are required.

To assist you in completing these plans, the following forms have been enclosed:

- Monitoring Plan Cover Sheet*: This form is to be completed for each facility and attached to the monitoring plan developed for the facility.
- Monitoring Requirement Options*: This is a list of various options that facilities can use to monitor most UST systems. You may develop your monitoring plan(s) by picking and choosing the options that apply to the site. Specific site information is necessary to complete the monitoring plan.
- Samples of Log Forms: Most monitoring plans require the logging of inspections and test results. These forms may be used for that purpose.
- Emergency Response Plan Form*: This form is to be completed for each facility.

In addition to the above information, a plot plan for the facility is to be submitted which shows the location of the tanks, monitoring sensors, buildings, alarm panels, and rectifiers. The plot plan is to be on an $8\ 1/2\ x\ 11$ sheet of paper.

The forms noted with a * are available in Word and Word Perfect format. If you would like to receive the forms electronically, please e-mail your request to laurelf@co.kern.ca.us and the forms will be sent to you.

Copies of the Monitoring, Response, and Plot Plans are to be submitted to this Department within 30 days of the date of this letter. If the facility owner is not contacted within 30 days of submittal, the plans are considered approved by this Department. The permit holder must notify this Department within 30 days of any changes to the monitoring, response, and plot plans.

Thank you for your cooperation in this matter. If you have any questions, please contact the Hazardous Materials staff at (661) 862-8700

Subject:

Underground Storage Tank (UST) Requirements and Deadlines

Facility: GRAPEVINE TEXACO, FA0002317

9069 W GRAPEVINE RD

LEBEC

The State of California has established new regulations for underground storage tanks. All UST files have been reviewed by this Department for compliance with both existing and these new regulations. The facility listed above must meet the following requirements to maintain compliance with current regulations.

Secondary Containment Testing

The following systems have at least one component which is secondarily contained (i.e., tank, piping, sump, or dispenser containment). Any tank using hydrostatic or vacuum monitoring is not required to be tested, however; piping, sumps, and dispenser containment still require testing. The secondary containment system is to be tested by the date listed below and every 36 months thereafter. If the date has already passed, the test must be completed within 60 days of this letter. If the system is untestable by an approved method, the system shall be tested by Enhanced Leak Detection (ELD). The facility shall have an ELD program reviewed and approved by this Department by July 1, 2002; implemented by December 31, 2002; and the secondary containment system replaced by July 1, 2005. The testing and ELD requirements are enclosed.

| Tank # | Tank Size | Product Stored | Test Due Date |
|--------|-----------|----------------|---------------|
| 1 | 12,000 | UNLEADED | 01/01/2003 |
| 2 | 10,000 | UNLEADED | 01/01/2003 |
| 3 | 8,000 | PREMIUM | 01/01/2003 |
| 4 | 10,000 | DIESEL | 01/01/2003 |
| 5 | 550 | WASTE OIL | 01/01/2003 |
| 6 | 12,000 | UNLEADED PLUS | 01/01/2003 |

In addition to the above-mentioned requirements, all monitoring equipment shall be calibrated, operated and maintained in accordance with the manufacturers' instructions. The equipment shall also be certified for proper operating condition and calibration every 12 months.

All testing is to be completed by a licensed or approved tester. Permits may be required for some of the tests. This Department shall be notified at least 48 hours prior to conducting any tests or inspections. The results of the test are to be submitted to this Department within 30 days of completion.

EQUILON ENTERPRISES LLC GRAPEVINE TEXACO, FA0002317 November 30, 2001 Page #: 2

If for some reason the owner or operator of this facility believes that the above information is incorrect, please contact this Department. An inspection and file review can be completed to clarify and/or correct the information.

California Air Resources Board (CARB) has implemented additional requirements for Enhanced Vapor Recovery. While the CARB requirements are separate from the UST requirements, modifications to comply with these requirements may activate the CARB requirements. Please contact the local Air District for assistance prior to making any modifications to this facility.

Please contact the Hazardous Materials staff at (661) 862-8700 if you need any assistance.

Sincerely,

Steve McCalley, Director

IRCE MANAGEMENT AGENCY

September 18, 1998

CONGRATULATIONS. According to the records maintained by this Department, you have at least one facility which stores motor vehicle fuel underground which meets the 1998 upgrade compliance requirements. After January 1, 1999, anyone who delivers motor vehicle fuel to your facility must verify that the tanks receiving the fuel meet the upgrade requirements. The delivery person will be looking for: a State decal, and fill pipe riser straps and tags.

This Department has prepared a package for each facility noted on the enclosed list. The package contains the decal, fill pipe riser straps and tags for each tank, and a compliance certificate for the facility verifying it is currently in compliance with the 1998 upgrade standard. The package can be picked up Monday through Friday 8:00 a.m. to 5:00 p.m. at the address noted above until Monday, November 2, 1998. (PLEASE NOTE: the person picking up package must bring the enclosed list with them.)

If you cannot come into the office and would prefer to have the package sent to you, please complete the form below, return it along with the enclosed list before November 2, 1998.

If you have any questions or wish to make other arrangements, please contact the Hazardous Materials Unified Program staff at (805) 862-8700.

Sincerely,

Steve McCalley, Director

RETURN ONLY IF YOU WANT PACKAGE MAILED

Indicate below the address you would like the package mailed to. Also mark which facilities this request pertains to on the enclosed list. Return this letter and the list to the address noted above.

HAZARDOUS MATERIALS / WASTE FACILITY PERMIT

SUMMARY OF CONDITIONS

CONDITIONS:

- 1. The facility owner and operator must comply with all conditions specified by this permit and must meet any additional requirements imposed by the permitting authority.
- 2. The facility owner and operator shall ensure that the facility has adequate financial responsibility insurance coverage, as mandated for all underground storage tanks containing petroleum, and supply proof of such coverage to the permitting authority.
- 3. The facility will be considered in violation and operating without a permit if annual fees are not received within 30 days of the invoice date.
- 4. The monitoring/operational requirements shall be implemented within 30 days of the permit issue date.
- 5. Any inactive underground storage tank which is not being monitored, as approved by the permitting authority, is considered improperly closed. Proper closure is required and must be completed under a permit issued by the permitting authority.
- 6. The facility owner/operator must obtain a modification permit before:
 - a. Uncovering any underground storage tank after failure of a tank integrity test.
 - b. Replacement of piping.
 - c. Lining the interior of the underground storage tank.
- 7 The facility owner must advise the Environmental Health Services Department within 30 days of transfer of ownership.
- 8. The owner and/or operator shall keep a copy of all tank monitoring records at the facility for a minimum of three years, or as specified by the permitting authority. They may be kept off site if they can be obtained within 24 hours of a request made by the local authority.
- 9. The owner/operator must report any significant unauthorized release from permitted tanks within 24 hours of discovery.
- 10. The owner and operator must meet all applicable requirements of Chapters 6.5, 6.67, 6.7, 6.75, and 6.95 of the Health and Safety Code and applicable sections of the California Code of Regulations and the Kern County Ordinance Code.

- 11. A hazardous materials inventory plan must be prepared and kept current by the owner or the operator of this facility.
- 12. An annual report shall be submitted to the Kern County Environmental Health Services Department each year after the monitoring has been initiated. The owner or operator shall use the form provided along with the permit or another approved by the Kern County Environmental Health Services Department.
- 13. All underground storage tanks shall be equipped with a continuous monitoring device within the interstitial space which must be connected to an audible and visual alarm system. All piping sumps shall be monitored manually or by utilizing an electronic monitoring device.
- 14. All pressurized piping systems shall be equipped with pressurized piping leak detectors. The piping systems shall be tested annually unless the facility has installed a continuous monitoring/automatic shutoff system within the secondary containment.
- 15. All equipment installed for leak detection shall be operated and maintained in accordance with manufacturer's instructions, including routine maintenance and service checks (at least once per year) for operability or running condition.
- 16. An underground storage tank monitoring response plan shall be developed, if not currently on file, and submitted to the Department for review and approval within 30 days of the issuance date of this permit.

TEXACO REFINING & MARKETING, INC. P. O. BOX 7812 - 4TH FLOOR UNIVERSAL CITY, CA 91608

SUBJECT:

GRAPEVINE & I-5, LEBEC, CA

PERMIT #: 330035C

Dear Sir/Madam:

The permit issued to the facility cited above provided one page of conditions/prohibitions for operation of the underground storage tank system. One of the conditions provided on that page specified that "the owner and operator ensure that the facility have adequate financial responsibility coverage, as mandated for all underground storage tanks containing petroleum, and supply proof of such coverage when requested by the permitting agency." Federal regulations which went into effect in December 1988 required that all underground storage tank facilities obtain financial responsibility coverage, using an approved mechanism to pay for the costs of cleanup and any third party liability, in case of a leak from the tank system, and provide evidence of that coverage to the local implementing agency by deadlines established in law. The amount of coverage required and the mechanisms which could be utilized were also specified in law.

In an attempt to assist underground storage tank facilities comply with the financial responsibility requirements, the state developed a clean up fund, which was approved by the Federal EPA as a mechanism for meeting a portion of the Federal financial responsibility requirements. The state has prepared a summary of the clean up fund, how you pay into the fund, and the financial responsibility requirements. That summary has been enclosed with this letter.

The <u>Certificate of Financial Responsibility</u> enclosed is the proof that this Department needs for the underground storage facility cited above. As shown by the example provided, you can utilize one statement for all underground storage tanks that you own or operate.

Please review all information provided, complete the <u>Certificate of Financial Responsibility</u> enclosed, and return it by March 31, 1994. If you have any questions, feel free to call the Underground Storage Tank Program at (805) 861-3636.

Sincerely,

Steve McCalley, Director

HAZARDOUS UNDERGROUND STORAGE FACILITY PERMIT SUMMARY OF CONDITIONS/PROHIBITIONS

CONDITIONS/PROHIBITIONS:

- 1. The facility owner and operator must be familiar with all conditions specified within this permit and must meet any additional requirements to monitor, upgrade, or close the tanks and associated piping imposed by the permitting authority.
- 2. If the operator of the underground storage tank is not the owner, then the owner shall enter into a written contract with the operator, requiring the operator to monitor the underground storage tank; maintain appropriate records; and implement reporting procedures as required by the Department.
- 3. The facility owner and operator shall ensure that the facility has adequate financial responsibility insurance coverage, as mandated for all underground storage tanks containing petroleum, and supply proof of such coverage when requested by the permitting authority.
- 4. The facility owner must ensure that the annual permit fee is paid within 30 days of the invoice date.
- 5. The facility will be considered in violation and operating without a permit if annual permit fees are not received within 60 days of the invoice date.
- 6. The facility owner and/or operator shall review the leak detection requirements provided within this permit. The monitoring alternative shall be implemented within 60 days of the permit issue date.
- 7. The facility underground storage tanks must be monitored, utilizing the option approved by the permitting authority, until the tank is closed under a valid, unexpired permit for closure.
- 8. Any inactive underground storage tank which is not being monitored, as approved by the permitting authority, is considered improperly closed. Proper closure is required and must be completed under a permit issued by the permitting authority.
- 9. The facility owner/operator must obtain a modification permit before:
 - a. Uncovering any underground storage tank after failure of a tank integrity test.
 - b. Replacement of piping.
 - c. Lining the interior of the underground storage tank.
- 10. The tank owner must advise the Environmental Health Services Department within 10 days of transfer of ownership.
- 11. Any change in state law or local ordinance may necessitate a change in permit conditions. The owner/operator will be required to meet new conditions within 60 days of notification.
- 12. The owner and/or operator shall keep a copy of all monitoring records at the facility for a minimum of three years, or as specified by the permitting authority. They may be kept off site if they can be obtained within 24 hours of a request made by the local authority.
- 13. The owner/operator must report any unauthorized release which escapes from the secondary containment, or from the primary containment if no secondary containment exists, which increases the hazard of fire or explosion or causes any deterioration of the secondary containment within 24 hours of discovery.

MONITORING REQUIREMENTS: (MVF6 AND WO6gr/pr)

- 1. All underground storage tanks designated as MVF 6 and WO6 within the first page of this permit shall be monitored utilizing the following method:
 - a. Each tank shall be equipped with a **continuous monitoring device within the interstitial space,** which must be connected to an audible and visual alarm system within 60 days of the issue date on page 1 of this permit.
 - b. All piping sumps shall be monitored manually or by utilizing an electronic monitoring device.
 - c. All pressurized piping systems shall install pressurized piping leak detection systems and ensure that they are capable of functioning as specified by the manufacturer. The mechanical leak detection systems must be capable of alerting the owner/operator of a leak by restricting or shutting off the flow of hazardous substances through the piping, or by triggering an audible or visual alarm, detecting three gallons or more per hour per square inch line pressure within one hour.
 - d. All pressurized piping systems shall be tested annually unless the facility has installed the following:
 - (1) A continuous monitoring system within secondary containment.
 - (2) The continuous monitor is connected to an audible and visual alarm system and the pumping system.
 - (3) The continuous monitor shuts down the pump and activates the alarm system when a release is detected.
 - (4) The pumping system shuts down automatically if the continuous monitor fails or is disconnected.

The first test shall be completed before December 31, 1992, and subsequent tests completed each calendar year thereafter.

- 2. All equipment installed for leak detection shall be operated and maintained in accordance with manufacturer's instructions, including routine maintenance and service checks (at least once per year) for operability or running condition.
- 3. A monitoring response plan shall be developed and submitted to the department for review and approval within 90 days of the issuance date of this permit.
- 4. An annual report shall be submitted to the Kern County Environmental Health Services Department each year after the monitoring has been initiated. The owner or operator shall use the form provided along with the permit, unless another has been received prior approval.

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2011, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

EXAMINATION RESULT: PASS

Congratulations! You have passed the California UST System Operator examination. Your wallet card and certificate will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at 888-422-7233 ext. 33815 with changes to your name and address. There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

MONITORING PLAN LEBEC SHELL

TANKS

DOUBLE WALLED (JACKETED) TANKS

| The double walled (jacketed) tanks have a continuous leak monitoring system in the annul space. The system is a <u>Veeder Root</u> (make and model) and is located to an audible and visualarm. | ed |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| The alarm panel is inspected daily for power and alarm status and is documented on a daily losheet. |)g |
| For hydrostatic annular monitoring systems, if monitoring indicates a possible unauthorize release, the presence or absence of hazardous substance in the interstitial space will be determined by Contractor (method used | у |
| PIPING | |
| DOUBLE WALLED PIPING | |
| The double walled piping has a continuous leak monitoring system in the turbine sump. The system is a <u>veeder Root The 350</u> (make and model) and is located to an audible and visual alarm. | ed |
| The alarm panel is inspected daily for power and alarm status and is documented on a daily losheet. | g |
| - AND - | |

Positive Shut Down Options for Pressurized Piping

The monitoring system shuts down the turbine when a release is detected and if the continuous monitoring system fails or is disconnected.

DISPENSER PANS

| 1 | The dispenser pairs are monitored using a continuous leak monitoring system. The system is a |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Veed | for ROOT 716 350 (make and model) and is connected to an audible and visual alarm. The |
| system | der Root The 350 (make and model) and is connected to an audible and visual alarm. The is located Behind Counter (panel location). |
| sheet. | The alarm panel is inspected daily for power and alarm status and is documented on a daily log |
| SHOOT. | The dispenser pans are monitored using a continuous leak monitoring system. The system is a (make and model) and stops the flow of product at the dispenser when a |
| leak in | detected. |

- AND -

The monitoring system shuts down the turbine when a release is detected and if the continuous monitoring system fails or is disconnected.

OVERFILL AND SPILL PREVENTION

Each tank fill opening is equipped with an approved spill prevention container of minimum five gallon capacity. The container is equipped with a drain valve to permit spilled hazardous material to be drained into the tank primary containment.

AND -

Each tank fill opening is equipped with an approved overfill prevention device which cannot allow manual override and alerts the transfer operator when the tank is 90% full by restricting the flow into the tank or by triggering an audible and visual alarm. **OR**

Each tank fill opening is equipped with an approved overfill prevention device which cannot allow manual override and restricts the flow to the tank at least 30 minutes prior to tank overfill, the restriction occurs at no more than 95% of the tank capacity and triggers an audible and visual alarm at least five minutes prior to tank overfill. **OR**

Each tank fill opening is equipped with an approved overfill prevention device which cannot allow manual override and provides positive shut-off (100%) of flow to the tank when the tank is no more than 95 % full.

MONITORING EQUIPMENT MAINTENANCE (All facilities)

Equipment and devices used to monitor the UST system will be calibrated, operated, and maintained in accordance with the manufacturer's instructions, including routine maintenance and service checks at least once per calendar year for operability or running condition. The Kern County Environmental Health Services Department will be notified at least two working days prior to the annual certification and the results submitted within 30 days.

SECONDARY CONTAINMENT TESTING

The secondary containment systems (i.e. tanks, piping, turbine (piping) sumps, fill sumps, and dispenser pans) will be tested every 36 months with the first test completed before January 1, 2003.

RECORD RETENTION

Written monitoring records will be maintained on site or at Behind Counter (an approved location)

Three years for monitoring and maintenance records

Five years for written performance claims pertaining to release detection systems and calibration/maintenance records for such systems.

INSTRUCTIONS

CERTIFICATION OF FINANCIAL RESPONSIBILITY

Please type or print information clearly. All UST sites owned or operated may be listed on one form, therefore, a separate certification is not required for each site.

DOCUMENT INFORMATION (by sections)

Check the appropriate boxes. A. Coverage Required

B. Name of Tank Owner or Operator

Full name of either the tank owner or the operator.

C. Mechanism Type

Indicate which approved mechanism(s) are being used to show financial responsibility either as contained in the federal regulations, 40 CFR Part 280 Subpart H, Sections 280.93 through 280.107, or Section 2808.1 Chapter 18, Div. 3, Title 23, CCR (see the Financial Responsibility Guide for more information at: http://www.waterboards.ca.gov/cwphome/ustcf/financialresponsibility.htm).

If using the State Cleanup Fund to demonstrate financial responsibility, you must meet all applicable eligibility requirements contained in California Health and Safety Code, Chapter 6.75, Division 20 and Title 23 of the California Code of Regulations, Division 3, Chapter 18. The payment of UST storage fees imposed pursuant to Article 5 of Chapter 6.75 of Division 20 of the Health and Safety Code does not guarantee funding - persons using the State Cleanup Fund must satisfy all applicable eligibility requirements.

| | Name of Issuer | List all names and addresses of companies and/or individuals issuing coverage. |
|----|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Mechanism Number | List identifying number for each mechanism used. Example: insurance policy number, Letter of Credit number, etc. If using the State UST Cleanup Fund, leave blank. |
| | Coverage Amount | Indicate amount of coverage for each listed mechanism. If more than one mechanism is indicated, Total must equal 100% of financial responsibility for each site. |
| | Coverage Period | Indicate the effective date(s) of all mechanisms. State Cleanup Fund coverage is continuous as long as you maintain compliance and remain eligible to participate in the Fund. |
| | Corrective Action | Indicate yes or no. Does the specified financial assurance mechanism provide coverage for corrective action? It is a required coverage. If using the State Cleanup Fund, indicate "Yes". |
| | Third Party Compensation | Indicate yes or no. Does the specified financial assurance mechanism provide coverage for corrective action? It is a required coverage. If using the State Cleanup Fund, indicate "Yes". |
| D. | Facility Information | Provide all facility and/or site names and addresses. |
| E. | Signature Block | Provide signature and date signed by tank owner or operator; printed or typed name and title of tank owner or operator; signature of witness or notary and date signed; and printed or typed name |

Where to Mail Certification:

Please send the original to your local agency(ies) [agency(ies) that issues the UST permits]. Keep a copy of the certification at each listed site. For information for your local agency(ies), refer to http://www.calcupa.net/cupacontactlist.xls.

of witness or notary. (If a notary signs, please attach documentation.)

Questions:

If you have questions about financial responsibility requirements or about the Certification of Financial Responsibility form, please contact the State Water Resources Control Board, Underground Storage Tank Cleanup Fund at 1-800-813-FUND (3863) or refer to http://www.waterboards.ca.gov/cwphome/ustcf/howtocontactus.htm.

Penalties for Failure to Comply with Financial Responsibility Requirements: Note:

Failure to comply may result in: 1) Jeopardizing claimant eligibility for the State Cleanup Fund, and 2) Liability for civil penalties of up to \$10,000 per day, per underground storage tank, for each of day of violation as stated in Article 7, Section 25299.76(a) of the California Health and Safety Code.

NOTE: Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least \$5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least \$10,000. (Chap. 6.75 H&SC, Sect. 25299.32)

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

NOTE: 1) SUBMIT THIS COMPLETED FORM TO THE LOCAL AGENCY (NOT THE STATE WATER RESOURCES CONTROL BOARD) BY JANUARY 1, 2005. THE LOCAL AGENCY LIST IS AVAILABLE AT: www.waterboards.ca.gov/ust/contacts/cupa_agys.html.

2) NOTIFY THE LOCAL AGENCY OF ANY CHANGES TO THIS INFORMATION WITHIN 30 DAYS OF THE CHANGE.

California UST System Operator

Promissor ID: XX4141030948

Name: JERRY HAGERTY Date: 01/20/2007

Address: 1598 N BLYTHE Birth Date: 05/12/1943

SSN: 573568725

FRESNO CA 93722

EXAMINATION RESULT: PASS

Congratulations! You have passed the California UST System Operator examination. Your wallet card and certificate will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

It is extremely important that you notify Promissor and ICC of any changes in name and/or address to avoid the possibility of your certificate not being received. Please contact Promissor at 800-275-8301 and ICC at 888-422-7233 ext. 33815 with changes to your name and address. There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

Subject:

Certification of Financial Responsibility

Shell/Equilon/Texaco Claims

Dear Ms. Nash:

On behalf of Deborah Pryor of Shell Oil Products US, we are submitting the Certification of Financial Responsibility Form and the Shell Oil Products US, Underground Storage Tank Liability Endorsement paperwork. Also, enclosed is a list of sites covered by these documents.

Please do not hesitate to contact either Deborah Pryor at (323) 291-9595 or Nancy Johnson at (310) 257-0555 should you have any questions.

Sincerely

Shaw Environment, Inc.

Nancy Johnson

| : I | 1-800-38 | 82-2150 | | |
| | | | | |

Insert the policy Number. The remainder of the information is to be completed only when this endorsement is issued subsequent to the preparation of the policy.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY

CERTIFICATION ENDORSEMENT FOR SCHEDULED TANKS

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering the following Underground Storage Tanks:

Schedule of Tanks attached

for taking corrective action, and/or compensating third parties for "bodily injury" and "property damage" caused by either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; arising from operating the underground storage tank(s) identified above.

The limits of liability are:

Each Occurrence

\$1,000,000

Annual Aggregate

\$2,000,000

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under GLO9307950-02. The effective date of said policy is January 1, 2005.

- 2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby amended to conform with subsections (a) through (e);
 - a. Bankruptcy or insolvency of the insured shall not relieve Zurich American Insurance Company of its obligations under the policy to which this endorsement is attached.
 - Zurich American Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a

damaged third-party, with a right of reimbursement by the insured for any such payment made by Zurich American Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

- c. Whenever requested by a Director of an implementing agency, Zurich American Insurance Company agrees to furnish a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by the Zurich American Insurance Company, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to the Zurich American Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording 40 CFR 280.97(b)(1) and that the Zurich American Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

TANKS

All Underground Fuel Storage and Used Oil tanks are Double Wall Fiberglass construction.

FUEL LINES

All Fuel Line construction is Double Wall Fiberglass.

VEEDER ROOT - TLS 350 MODEL / SIMPLICITY TANK & LINE MONITOR

The design of this unit and the Simplicity Service Offering is to provide 24 hour remote tank and line compliance monitoring through Veeder-Root (V-R) in Simsbury Connecticut, which would receive audible and visual alarms and provide corrective actions and tracking, in the event of leak detection. This system is interfaced to the manufacturers computer system via satellite dish or phone line. The communication status is checked monthly by V-R. The expected V-R alarm response time is 15 minutes from the time the facility goes into alarm and Simsbury starts the corrective actions. The monitor retains 12 months of alarm history. The facility receives audible and visual alarms at the TLS 350 console, which reflect (1) lost communication, "Autodial Failure" and/or (2) gross line failure "Line Leak Shutdown." The facility personnel would call V-R for these events. Autodial Failure will cause the TLS 350 to come out of the remote monitoring mode and all alarms/warnings will occur on-site and will be responded to by on-site personnel. If power is removed from the V-R monitoring panel, the facility will not be able to pump fuel. The authorized installation service contractor (Service Station Systems 1-800-628-5510) would provide the training necessary to operate the tank and line monitoring system per the manufacturer guidelines. The facility operator is responsible for daily inspection of the monitoring panel (Alarm Panel Test Log - pending Agency requirements) and corrective actions indicated above and maintaining monthly and annual tests/reports on-site. For additional compliance items/reports, contact Shell's HS&E Compliance Coordinator. Optional facility audible and visual alarms can also be programmed, but this would take the system out of the remote monitoring mode, which leaves the facility operator responsible for calling V-R for all alarm conditions and logging all events and corrective actions manually (not reliable, not recommended). All component parts are LG-113 approved.

TANK AND LINE TESTING

The Veeder Root (V-R) system provides electronic Continuous Statistical Leak Detection (CSLD) monitoring of the fuel tanks, Pressurized Line Leak Detection (PLLD) of the fuel lines and continuous annular interstice monitoring at double walled facilities containment. In the event that a leak is detected, the system provides automatic notification through the phone line or satellite dish to V-R. Hard copies of monthly tank and line test results are to be mailed to the facility within the first two weeks of the following month by V-R. The operating facility is responsible to maintain these compliance reports on site. The TLS 350 is annually inspected, repaired and certified operational by an authorized service contractor. The certification is sent to the local regulatory agency.

<u>Tanks (Fuel)</u>: Continuous electronic monitoring of the wet or dry annular/interstice and CSLD, continuous electronic testing at 0.2 gallon per hour (gph). A malfunctioning tank will result with an alarm automatically transmitted to V-R, which would in turn contact their service contractor for investigation and repair. There would be no fuel leak to ground in the event that the primary tank failed unless the secondary, were to also fail. Clean up of the secondary containment would be performed per Local and State requirements.

<u>Used Oil Tank</u>: Continuous electronic monitoring of the wet or dry annular/interstice. A malfunctioning tank will result with an alarm automatically transmitted to V-R, which would in turn contact their service contractor for investigation and repair. There would be no fuel leak to ground in the event that the primary tank failed unless the secondary, were to also fail. Clean up of the secondary containment would be performed per Local and State guidance.

Pressurized Fuel Lines: Continuous electronic monitoring of the dry secondary containment within the turbine sump, positive shutdown if a leak is detected. Also PLLD continuous electronic testing 3.0 gph (positive shutdown), 0.2 gph (monthly/alarm) and 0.1 gph (annually/alarm), in combination with a turbine sump liquid sensor. If a gross leak alarm occurred here, the result would be fuel line shut down with no leak to ground {(Dry) annular/interstice]. A malfunctioning fuel line will result with an alarm automatically transmitted to V-R, which would in turn contact their service contractor for investigation and repair. Clean up of the secondary containment would be performed per Local and State requirements. If equipped, remote fill lines at the tank inlet are contained and continuously monitored (alarm).

<u>Used Oil Tank Piping:</u> Remote fill lines should be removed during 1998 UST construction upgrades. If required an electronic high level sensor (alarm), is used to warn of potential overfills. The facility operator is responsible for safe filling practices, weekly tank gauging and used oil removal.

<u>Under Dispenser Containment</u>: Continuous electronic Beaudreau 500 liquid sensor, designed to shut off the dispenser in the event of leak detection.

<u>Turbine Sump Containment</u>: Continuous electronic VR 409 liquid sensors, designed to shut the turbine down in the event of leak detection.

Tank Overfill Protection: Flapper valve with flow shut-off at 95%. marubashi 3/29/01 dwdwdwwo

Veeder-Root in Connecticut vides the remote monitoring service. The cility operator responds to TLS-350 messages, Auto-Dial Failure and Gross Line Leak (also VR Connecticut). Service Station Systems is the maintenance contractor. Names, Titles and phone numbers, refer to those mentioned in the Hazardous Materials Management Plans.

If required, Site Plans with locations of tanks, piping, vents, dispensers, monitoring panel, probes (w/model #'s), buildings and streets should be part of the annual tank & line monitoring system certification report.

Secondary Containment Testing: Performed upon a new start-up facility and then 6 months after. Otherwise the testing schedule will be performed starting in 2002 and at 3-year intervals. Testing procedures are per manufacturer's standards, industry standards or by CA licensed PE procedures. Hydrostatic testing equipment & procedures are third party certified by CA Petroleum Engineer. Ken Wilcox Associates, Inc. SB989, LG 160. Hydrostatic tests of the tank wet interstice, dispenser, sumps and tank overfill containment areas will be for a period of 12 minutes with a passing result, if the decrease in liquid level is less than 0.002 inches with a probability of 95% or greater, which meets the requirement to detect a change of 0.250 inches in the 24 hour test period. Double walled tank systems with dry annular spaces will be vacuum tested per manufacturer's specifications. Secondary piping will be pressure tested at approximately 5 PSI for 60 minutes or per manufacturer's specifications, hard pipe verses flex pipe. Test results are to be submitted to the local implementing agency and a copy is sent to the facility to be kept on site. The local agency will be notified at a minimum of 48 hours of a scheduled test date.

UNAUTHORIZED RELEASE RESPONSE PLAN

Non-contained unauthorized releases will be reported to the local agency and Shell's HS&E Compliance Coordinator within 24 hours. Spills to ground will be cleaned up immediately with further mitigation as determined by the Local Agency and Shell's Science and Engineering Department. The hazardous material shall be removed by applying absorbent material (maintained at the facility) and/or Shell's approved contractor would collect the Fuel material and dispose of in accordance with all Local, State and Federal laws and regulations. Dependant on circumstance, direct removal, drumming or laid upon non-absorbent material. Shell's approved contractors are responsible for maintaining their environmental equipment and materials per Local, State and Federal regulations.

See the facility's Safety, Health and Environmental "Blue Book" for more detail; Hazardous Materials Management Plan (tab HMMP); emergency response plan; procedures and Shell Leak Response Plan. Emergency response is 4 hours maximum. The service contractor will notify the appropriate Equilon Personnel in the event of an actual tank/line failure. Alarms, which are or are not the result of an actual tank or line failure, will be repaired in accordance with the manufacturer's recommendation and all Local and State requirements.

Preventive maintenance schedule:

When the system alarms Veeder Root calls the facility to verify any problems and notifies their Authorized Service Organization to respond and make necessary repairs as needed. The system is tested, repaired as needed and certified operational annually with submittal of the results to the appropriate Local Agency and Facility.

Miscellaneous

The Facility Operator is responsible for maintaining daily and monthly inventory reconciliation records. 12 (twelve) months on site and the previous 3 (three) years, optional on site. The Facility Operator is responsible for reporting inventory reconciliation exceeding State and Shell's allowable limits and unauthorized spills to ground to Shell's regional Health, Safety and Environmental Coordinator for review and corrective actions as needed. The facility operator is responsible to adhere to all conditions of the facility permits and licenses, document accessibility, annual employee hazardous materials, leak response and other OSHA training and documentation, tank and piping VR Monthly Compliance Reports and Annual System Certifications, nozzle repair/replacement logs and facility contractor repair logs and frequently inspect and clean the tank fill and vapor overspill buckets and dispenser containment pans (maintain free of liquid and debris).

I hereby certify that this monitoring plan described in this document will be followed in its entirety.

Release Recording & Forting: Article 5 of the California elerground Storage Tank Regulations.

Recordable Releases that must be documented on a UST monitoring report, include the following:

Any release from a primary containment which is cleaned up within 8 hours after the release was detected, which does not escape the secondary containment and does not increase the hazard of fire or explosion and does not cause deterioration of the secondary containment. Note: the monitoring report shall include information required by section 2651 of the California UST regulations.

Reportable Releases that must be reported to the local agency within 24 hours after the release has been detected or should have been detected include the following:

Any unauthorized release from the primary containment which is not cleaned up within 8 hours after the release was detected, which does not escape the secondary containment and does not increase the hazard of fire or explosion and does not cause deterioration of the secondary containment.

Any unauthorized release, which escapes from the secondary containment or from the primary containment, if no secondary containment exists.

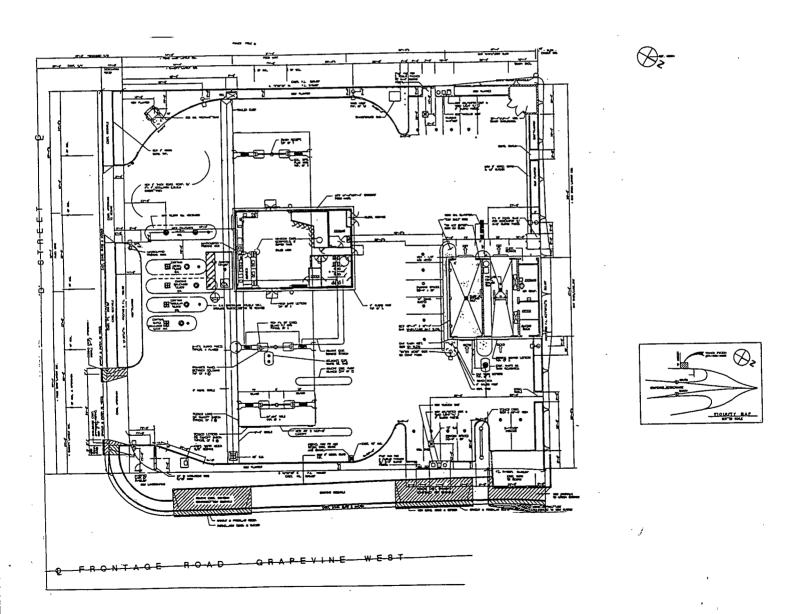

Discovery of release product at the site of the UST or surrounding area including the presence of free product, vapors in soil, basements, sewer or utility lines, and nearby surface or drinking waters.

Monitoring results from a release detection method that indicate a release may have occurred unless the monitoring device is immediately repaired, re-calibrated or replaced, or additional monitoring does not confirm the initial results.

Any unauthorized release, spill or overfill that occurs while the fuel is being placed in the underground tank. The spill is due to the use of improper equipment, operator error, operator inattention or overfilling.

- B. Facility Diagram. Please provide in the space below, or on a separate sheet, a facility diagram including the following:
 - 1. All buildings and property lines (include location of alarm panel)
 - 2. All underground storage tanks (including those without leak detection probes)
 - 3. Location of all annular space, piping sump, and vadose zone product probes with labels corresponding to alarm panel designations
 - 4. North arrow

BUSINESS PLANS

AS A SERVICE TO YOU, THIS BUSINESS PLAN WAS PREPARED BY WEST COAST COMPLIANCE SERVICES, INC. IN ORDER TO COMPLY WITH THE CALIFORNIA HEALTH AND SAFETY CODE (CHAPTER 6.95, ARTICLE I, SECTION 25503.5). BY ACCEPTING THIS PLAN, YOU ARE ACKNOWLEDGING THAT THERE ARE NO REPRESENTATIONS OR WARRANTIES THAT THE INFORMATION CONTAINED IN THIS BUSINESS PLAN WILL PRODUCE ANY PARTICULAR RESULT WITH REGARD TO THE SUBJECT MATTER.

OWNER/OPERATOR AGREEMENT

OPERATOR:

As operator of the underground storage tanks, I hereby certify that I understand the monitoring and reporting requirements contained in Title 23, of the California Code of Regulations and I have received a copy of Section 25299, chapter 6.7, California Health and Safety Code.

\$2,000,000

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under GLO9307950-01. The effective date of said policy is January 1, 2004.

- 2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby amended to conform with subsections (a) through (e);
 - Bankruptcy or insolvency of the insured shall not relieve Zurich American
 Insurance Company of its obligations under the policy to which this endorsement
 is attached.
 - b. Zurich American Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a

damaged third-party, with a right of reimbursement by the insured for any such payment made by Zurich American Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

- c. Whenever requested by a Director of an implementing agency, Zurich American Insurance Company agrees to furnish a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by the Zurich American Insurance Company, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- The insurance covers claims for any occurrence that commenced during the term e. of the policy that is discovered and reported to the Zurich American Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording 40 CFR 280.97(b)(1) and that the Zurich American Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

Steve McCalley County of Kern – Enviro Health Services 2700 "M" Street, Suite 300 Bakersfield, CA 93301-2370

Subject: UST Form A & B's; Monitor & Emergency Response plan.

Texaco, 9069 Grapevine Rd, Lebec

Please find enclosed subject. This material was also mailed to the facility for insertion to their S,H&E Blue Book, tab HMMP.

Please call me at 925-766-3498, fax 209-577-5964 or e-mail (btmarubashi@shellopus.com), if you have any questions regarding the documents enclosed. Please note that Equilon Enterprises LLC, transferred the Kern County Texaco and Shell branded franchise facilities to the Northwest Region in early 2002 from the Pacific South Region. Unfortunately facility files are missing numerous documents. In the interim, if there are any issues related to renewals or payments of annual fees, permits, annual testing or hmmps etc, you candirect them to me or Tim Woodson, Equilon's facility Compliance Coordinator (925-766-3494).

Sincerely,

Bruce T. Marubashi

CUPA Forms (former State Forms A&B) - Corrections

Dear Laurel:

Thank you for calling our oversight to my attention. Somehow we failed to note from our data base that there are in fact 2 unleaded gasoline tanks (1-12, 1-10).

Enclosed is a Facility form (page 8) corrected to show 6 tanks; an additional Tank Page 1 (page 10) to list the 10,000 RUL plus Tank Page 2 (page 12) with piping information; and, lastly, a corrected Tank Page 1 (page 10) to correct an error on the tank capacity for used oil which should have read 550 gallons.

We apologize for any inconvenience.

Please don't hesitate to call me if I can be of any further assistance.

Sincerely,

Feryal Sarrafian SH&E Compliance Coordinator

Shell/Texaco Stations

UST Forms (Formerly State Forms A&B)

Updates to New Forms

Gentlemen:

Recent upgrading of equipment and other information at some of our locations in your jurisdiction has prompted a review of our files. Where necessary, we have updated UST information on the new forms.

Please replace the old State Forms A&B now in your files with those attached.

Should you have any questions regarding the enclosed material, please contact me at (818) 736-5078.

Thank you.

Sincerely,

Feryal Sarrafian

Ser. # 65705

Grapevine Texaco

Grapevine Road Lebec, CA

Removal/installation contractor: K.E. Curtis

Permit # 330035

07-22-98 Received the package from fire.

07-29-98 Began plan checking.

O8-06-98 Reviewed the application and phone calls with the architect regarding their plans to retrofit the product piping. I was told that if the liner is in good shatpe they plan to keep the liner and the existing piping. If it needs to be replaced then the contractor will replace it with double-walled piping. I explained that if contamination is detected then they will be required to collect soil samples as though it was a typical pipe abandonment.

Issued permit. Called A&S Architects and spoke with Ahmed. I told him that the permit is ready to be signed for and to be picked up.

.....

3-12-85

Conf. - phone

B.S., Lary Suyder

He told me that he has all of the documentation

except the letter from Texacolisting U.L. #'s for tanks.

A also reminded him about the picture of the

tanks in hole that Bob Camou took, Will send all

the lethers once he receives U.L. #'S Photo will come

when Bob develops the soll.

3-14-85

Correspondence - B.S. G. Anyder.

Received the Tank U.L. #5, the booth backfill receipts, and letter of assurance from M.C. that Hytrel was installed properly.

Oll were as requested. Only the photograph of the tanks in the hole was missing.

3-19-85

Conf- phone B.S., Debbie ___ of Custis Constr. Co. Auformed we that the picture of the tanks in the hole will be developed soon and in the mail in a few days.

· • •

3-6-85

B. Scheide Bob Cannon

Keviewed his construction so far, coursed as much of the plan check as possible. Requested Bob to document: 1) Tank invoices

2) Bockfill invoice

3) Hytrel installer

4) Picture of tanks in hole. Will go to site tomorrow + inspect what already in. Drew up an inspection und for Bob, and he took with him. Permit will be drawn up liter, after all issues are resolved + a site inspection done. also need to see how they started construction without Blog or Fire dept. notifying us.

3-7-85

B.S., Bruce Barker Ansp.

Auspected site with construction nearing completione. Oil tank in and capped. Placed as shown on original drawing. approx 8-9 from garage. Piping trenches laid + copped. Could see Highel pans covering up under dispensers.

Supperings, line look detectors. asked them to wrap metal elbows connecting to leak detectors.

Told Bruce Alat we needed the documentation from above, and one more inspection when the tate's capped off.

3/14/88

Discussed the requirements of further

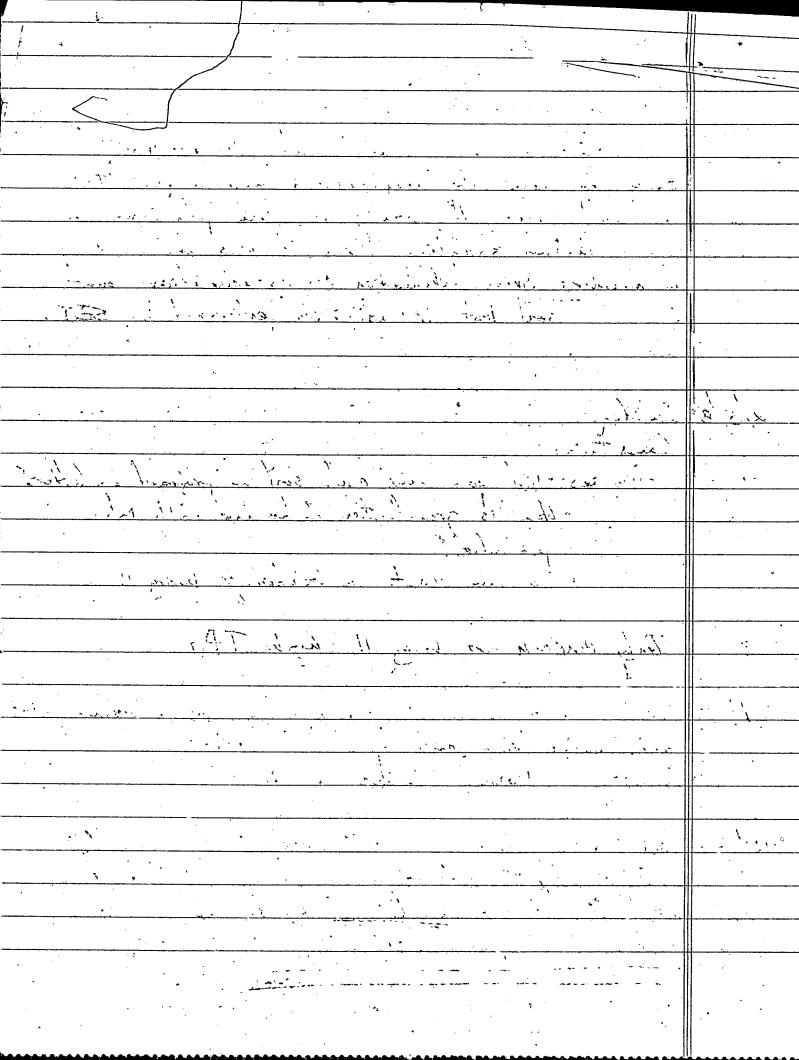

sampling near the dispenser islands as per UT-30

w/ Bit Davies He said they are planning on doing hinther sampling since it was indicated as needing more delineation of contamination found in the soil test investigation performed by SEI 2/5/89 Suday Oustins Davies: Did you mix cont soil as proposed in letter?

How is groundwater determined with Infor

provided?

To new const on location of boxing II Day concern is borns I high TPH ce/14/89 Discussed results of boring logo to determine first groundwater level and concluded that is threat exists. Closure letter required 10/90 After review of past records, I has been letermined that 6 tanks currently exist at this facility. A waste oil tank was removed during the repiping activities.

|-------------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Version In | |
| Copyple | te the follow | ving checklist: |
| 1 Yes | □ No* | Is the audible alarm operational? |
| Zyes | □ No* | Is the visual alarm operational? |
| 2 yes | □ No* | |
| Yes | □ No* | Were all sensors visually inspected, functionally tested, and confirmed operational? Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| Yes | No* | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational? |
| Yes | □ No* □ N/A | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) Sump/Trench Sensors; Dispenser Containment Sensors. |
| 1 Yes | | Did you confirm positive shut-down due to leaks and sensor failure/disconnection? |
| | □ No* | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? % |
| ☐ Yes* | ☑ No | was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E. below. |
| ☐ Yes* | No No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; Water. If yes, describe causes in Section F, below. |
| Yes | □ No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| Yes | □ No* | Is all monitoring equipment operational per manufacturer's specifications? |
| * In Sect | ion E belov | v, describe how and when these deficiencies were or will be corrected. |

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information confutned in this report is true, accurate, and in full compliance with legal requirements.

Date: 3413

State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

| | owners operator. The owners operator must bushing a copy of dissioning | to the local agency regulating COT systems within 30 days of test date. |

2

Ves No* Is all monitoring equipment operational per manufacturer's specifications?

In Section E below, describe how and when these deficiencies were or will be corrected.

PAGE. 4/ 5

| Ξ. | In-Tank Gauging / SIR Equipment: | 0 | Check | this | box | if |
|----|----------------------------------|---|-------|------|-----|----|
| | | | | | | |

Check this box if tank gauging is used only for inventory control.
 Check this box if no tank gauging or SIR equipment is installed.

559 225 5789

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

| | <u> </u> | IDIOO GII | O TORIOWING C | TOURING. |
|---|----------|-----------|---------------|------------------------------------------------------------------------------------------------------------|
| I | P | Yes | □ No* | Has all input wiring been inspected for proper entry and termination, including testing for ground faults? |
| Γ | Ф | Yes | □ No* | Were all tank gauging probes visually inspected for damage and residue buildup? |
| | Ī | Yes | □ No* | Was accuracy of system product level readings tested? |
| Г | Þ | Yes | □ No* | Was accuracy of system water level readings tested? |
| Γ | 4 | Yes | □ No* | Were all probes reinstalled property? |
| Γ | đ | Yes | □ No° | Were all items on the equipment manufacturer's maintenance checklist completed? |

^{*} In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

D Check this box if LLDs are not installed.

Complete the following checklist:

H.

| Á | Yes | □ No* □ N/A | For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 10 g.p.h.; 0 0.1 g.p.h.; 0 0.2 g.p.h. |
|----|-----|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8 | Yes | □ No* | Were all LLDs confirmed operational and accurate within regulatory requirements? |
| ٧D | Yes | □ No* | Was the testing apparatus properly calibrated? |
| Ď | Yes | D No° | For mechanical LLDs, does the LLD restrict product flow if it detects a leak? |
| Ď | Yes | □ No* | For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak? |
| P | Yes | □ No* □ N/A | For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected? |
| P | Yes | □ No° | For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system mailfunctions or fails a test? |
| P | Yes | □ No* | For electronic LLDs, have all accessible wiring connections been visually inspected? |
| Ø | Yes | □ No* | Were all items on the equipment manufacturer's maintenance checklist completed? |

Ronnie Humphries

RJ Environmental

3462 E. Brown Ave

To Marty, Kern County Environmental Health

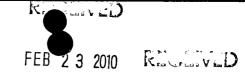

List of work performed by contractor at Lebec Shell

- Installed stand alone sensors in all udc's.
- Cleaned out all water out of sumps and dispensers.
- Installed Ild's in turbines that did not have any installed.
- Installed overfill alarm & programmed to Tank Monitor.
- Retested full monitor cert, to make sure everything is working.
- Changed out Diesel spill bucket that was leaking.

List of work performed by contractor at Tejon Mobil

- Fixed diesel leak in dispenser.
- Sealed off exposed wires in turbin sumps.
- Pumped out all gas and water out of udc's.

Thanks Ronnie
RJ Environmental

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

|--------------|-----------|------------|

| Complete | the followi | ing checklist: |
|---------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y Yes | □ No* | Is the audible alarm operational? |
| Yes | □ No* | Is the visual alarm operational? |
| Yes Yes | □ No* | Were all sensors visually inspected, functionally tested, and confirmed operational? |
| БРу≈ | □ No* | Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| □ Yes | □ No* A\N © | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modern) operational? |
| GD Yes | □ No* | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) \$\frac{1}{2}\$Sumpi/Trench Sensors; \$\frac{1}{2}\$ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? \$\frac{1}{2}\$Yes; \$\frac{1}{2}\$ No. |
| □ Yes | □ No* 180 N/A | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? |
| □ Yes* | 10 No | Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below. |
| 20 Yes | □ No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Defoduct, Describe Causes in Section E, below. |
| D Yes | □ No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| □ Yes | □ No* | Is all monitoring equipment operational per manufacturer's specifications? |

^{*} In Section E below, describe how and when these deficiencies were or will be corrected.

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.swrcb.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Complete the following checklist:

E.

| 2 | Yes | | No* | Is the audible alarm operational? |
|------------|---------|------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ≯ ≥ | Yes | | No* | Is the visual alarm operational? |
| Ø | Yes | | No* | Were all sensors visually inspected, functionally tested, and confirmed operational? |
| 8 | Yes | | No* | Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| 0 | Yes | □ 2 80 | No* N/A | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational? |
| 0 | Yes | □ > | No* N/A | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) □ Sump/Trench Sensors; □ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? □ Yes; □ No. |
| X | Yes | 0 | No [*] N/A | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? |
| | Yes* | 2¥ | No | Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below. |
| | Yes* | À | No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; Water. If yes, describe causes in Section E, below. |
| 8 | Yes | | No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| Þ | Yes | | No* | Is all monitoring equipment operational per manufacturer's specifications? |
| * In : | Section | n E I | alow | describe how and when these deficiencies were equilibre and the |

^{*} In Section E below, describe how and when these deficiencies were or will be corrected.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

| D. Results of Testing/Servicing | |
|-----------------------------------|--|
| Software Version Installed: | |
| Complete the following checklist: | |

| Complete | the follow | ing checklist; |
|----------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Yes | □ No* | Is the audible siarm operational? |
| 2 Yes | □ No* | Is the visual alarm operational? |
| A Yes | □ No* | Were all sensors visually inspected, functionally tested, and confirmed constraints |
| Yes Yes | □ No* | Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| Yes | □ No* | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modern) operational? |
| ØF Yes | □ N ₀ * □ N/A | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes; which sensors initiate positive shut-down? (Check all that apply) 22 Sump/Trench Sensors; 23 Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? 23 Yes; D No. |
| ⊠ Yes | □ No* | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating property? If so, at what represents of trail overfill warning alarm visible and audible at the tank |
| Q Yes* | | and list the manufacturer name and model for all replacement parts in Section E. below. |
| | Æ No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Deroduct: Water, If yes, describe causes in Section R. below. |
| CX Yes | □ No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| 2 Yes | □ Np* | is an momentage equipment operational per manufacturer's specifications? |
| | ion E belov | v, describe how and when these deficiencies were or will be corrected. |
| | | · |

MONITORING SYSTEM CERTIFICATION

Authority Cited Chapter 67, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepare for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cite& Chapter 67, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepare for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

UST Monitoring Site Plan

Site Address: 9069 GKAPE VINE RD, LEBEC, CA

Date map was drawn: 10/31/06

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

RICH ENVIRONMENTAL

5643 BROOKS CT BAKERSFIELD, CA.93308 OFFICE(661)392-8687 & FAX (661)392-0621 MECHANICAL LEAR DETECTOR TEST

WORK SHEET

| W/O#: | |
|---------------------------------------------------------|---|
| | |
| Facility Name: SHELL STATEON CHASE) | , |
| Facility Address: 9069 GRAPEUTNERD, LEBEC, CA | |
| Product Line Type (Pressure, Suction, Gravity) PRESSURE | |
| | |

| PRODUCT | LEAK DETECTOR TYPE SERIAL NUMBER | TEST BELOW 3 GPH | TRIP | PASS OR FAIL |
|---------|---------------------------------------------|------------------------|------|--------------------|
| 87 | I/D TYPE VEEDER POOT SERIAL # UNREADABLE | NO NO | | FAIL |
| 91 | L/D TYPE VEEDER ROOT SERIAL # UNREADABLE | YES | | PAIL |
| DIESEL | L/D TYPE VECOER ROOT SERIAL #UNREADARLS | NO | | PASE) FAIL |
| · | L/D TYPE SERIAL # | YES No | | PASS FAIL |

I pertify the above tests were conducted on this date according to Red Jacket Pumps field test apparatus testing procedure an limitations. The Mechanical Leak Detector Test pass / fail is determined by using a low flow threshold trip rate of 3 gallon per hour or less at 10 PSI. I acknowledge that all data collected is true and correct to the best of my knowledge.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

RE: SB989 Secondary Containment Testing

Kern County Environmental Health 2700 M. Street Suite 300

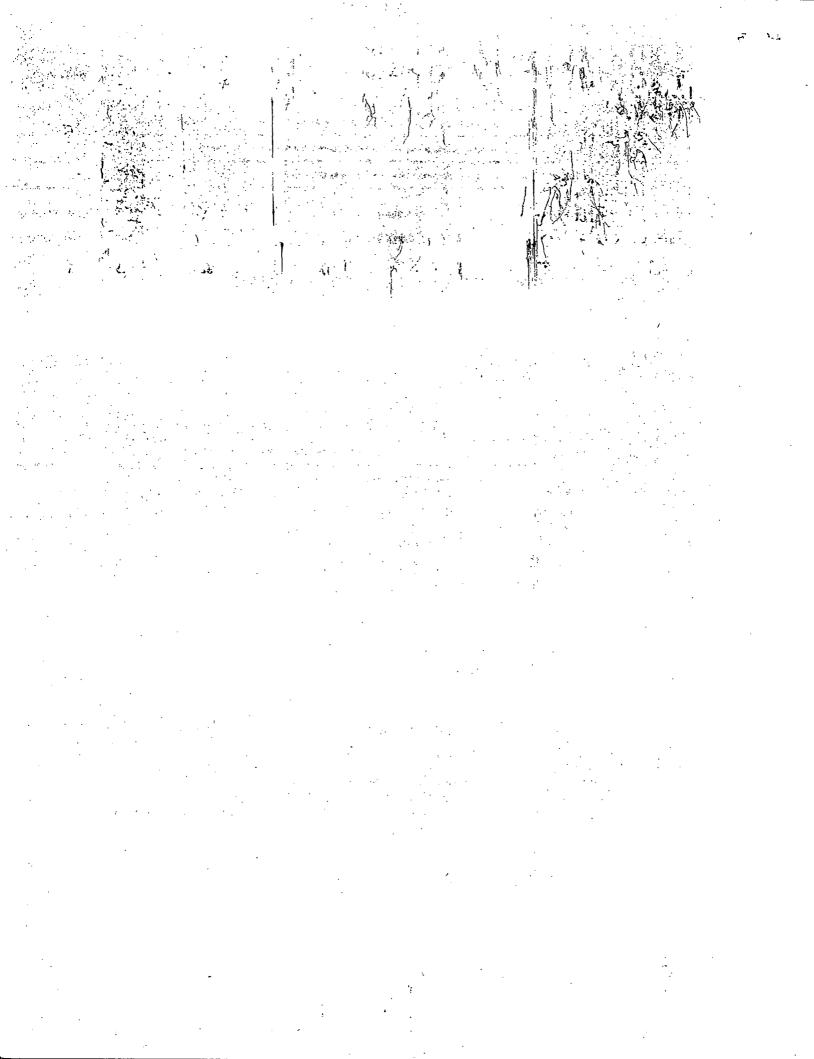

Bakersfield, CA. 93301

Dear: UST Inspector,

On behalf of Able Maintenance enclosed please find the Secondary Containment Testing results for:

Shell #121190 located 9069 Grapevine Rd., Lebec, CA 93243.

| Components Tested | Manufacturer | Date Tested | Test Performed | Pass / Fail |
|--------------------------|----------------------|----------------|----------------|----------------|
| Tank Fill Sump-87#1 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Sump-87#2 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Sump-89 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Sump-91 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Sump-Diesel | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Sump-Waste Oil | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank STP Sump-87#1 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank STP Sump-87#2 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank STP Sump-89 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank STP Sump-91 | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank STP Sump-Diesel | American Containment | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-87#1 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-87#2 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-89 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-91 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-Diesel | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Fill Bucket-Waste | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Oil | , | | Ţ | |
| Tank Vapor Bucket-87#1 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Vapor Bucket-87#2 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Vapor Bucket-89 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |
| Tank Vapor Bucket-91 | CNI 5Gal | 10/11/05 | Hydrostatic | Pass |

| Tanks Annular –87#1 & 87#2, 89 & 91 and DSL | Owens Corning | 10/11/05 | Vac (in. of Hg) | Pass |

NUMBER OF PAGES INCLUDING COVER SHEET: 8

MESSAGE:

As discussed previously, following is a copy of the corrected version of the Monitor certification, along with the Spill bucket test for the location at:

Grapevine Shell - 9069 Grapevine, Lebec

* Please disregard if this is a duplicate submittal

Please contact me at 408-938-7113 with any questions you may have and please let me know immediately if there are any discrepancies.

Thank you, Debbie Watts

Monitoring System Equipment Conformation For Use By All Jurisdictions Within The State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST system within 30 days of test date.

Instructions

On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

|---------------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Complete | e the follow | ving checklist: |
| Yes | □ No* | Is the audible alarm operational? |
| D Yes | □ No* | Is the visual alarm operational? |
| 1 Yes | □ No* | Were all sensors visually inspected, functionally tested, and confirmed operational? |
| □ -Yes | □ No* | Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| Q Yes | □ No* □ N/A | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational? |
| Yes | □ No* | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? Sensors No. |
| ☐ Yes | □ No* □-N/A | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? % |
| ☐ Yes* | □ No | Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below. |
| ☐ Yes* | Ø No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; Water. If yes, describe causes in Section E, below. |
| ☐ Yes | ☑ No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| □ Yes | □ No* | Is all monitoring equipment operational per manufacturer's specifications? |
| In occu | on E belo | y, describe how and when these deficiencies were or will be corrected. |

F. In-Tank Gauging / SIR Equipment: Check this box if tank gauging is used only for inventory control. ☐ Check this box if no tank gauging or SIR equipment is installed. This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring. Complete the following checklist: Has all input wiring been inspected for proper entry and termination, including testing for ground faults? ☑ Yes □ No* Yes □ No* Were all tank gauging probes visually inspected for damage and residue buildup? Was accuracy of system product level readings tested? Q-Yes □ No* Was accuracy of system water level readings tested? □-Yes □ No* Q Yes □ No* Were all probes reinstalled properly? ☐ Yes □ No* Were all items on the equipment manufacturer's maintenance checklist completed? * In the Section H, below, describe how and when these deficiencies were or will be corrected. G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed. Complete the following checklist: **Yes** □ No* For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 27 g.p.h.; 20.1 g.p.h; 30.2 g.p.h. □ N/A 1 Yes □ No* Were all LLDs confirmed operational and accurate within regulatory requirements? Yes □ No* Was the testing apparatus properly calibrated? ☐ Yes ☐ No* For mechanical LLDs, does the LLD restrict product flow if it detects a leak? 19-17/A Yes □ No* For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak? □ N/A 1 Yes □ No* For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled □ N/A or disconnected? Yes ☐ No* For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions □ N/A or fails a test? 1 Yes ☐ No* For electronic LLDs, have all accessible wiring connections been visually inspected? □ N/A **□** Yes ☐ No* Were all items on the equipment manufacturer's maintenance checklist completed? * In the Section H, below, describe how and when these deficiencies were or will be corrected.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

WAYNE PERRY, INC. Environmental Remediation, Construction and Consulting

May 30, 2003

Certified Unified Program Agency Ms. Laurel Funk 2700 M Street, Suite 300 Bakersfield, CA 93301

SUBJECT: SB 989 COMPLIANCE TESTING AT Shell, 9069 Grapevine Road West, Lebec, CA 93243

Dear Laurel:

Below please find the secondary containment testing results for the above-referenced site. These results are being sent to you per the requirement of SB 989.

If any of the secondary containment components failed or were not tested at this facility, repairs will be made within 30 to 120 days. If, for some reason, the repairs will take more than 120 days, your Agency will be immediately notified.

CONTRACTOR: Wayne Perry, Inc.; License No: 300345

WAYNE PERRY, INC. Environmental Remediation, Construction and Consulting

December 31, 2002

Certified Unified Program Agency Ms. Laurel Funk 2700 M Street, Suite 300 Bakersfield, CA 93301

SUBJECT: SB 989 COMPLIANCE TESTING AT Shell, 9069 Grapevine Road West, Lebec, CA 93243

Dear Laurel:

Below please find the secondary containment testing results for the above-referenced site. These results are being sent to you per the requirement of SB 989.

If any of the secondary containment components failed or were not tested at this facility, repairs will be made within 30 to 120 days. If, for some reason, the repairs will take more than 120 days, your Agency will be immediately notified.

CONTRACTOR: Wayne Perry, Inc.; License No: 300345

TECHNICIAN: Scott Happ

Secondary Containment Testing Report Form - FINAL DRAFT

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

¹ If the testing method does not test the entire depth of the sump, specify how much of the sump was tested. Methods not testing the entire sump should only be used if the monitoring system provides fail-safe turbine shutdown. (See SWRCB LG-160)

² With the submersible pump running, place the sensor in product (discriminating sensors should also be placed in water). The time between placing the sensor in product and the turbine shutting down is the response time. This should be done if the secondary containment testing method used does not test the entire volume of the sump.

^{*} This information is not needed if the entire sump is tested.

| Comments – (include information | on repairs made prior to | o testing, and recommer | nded follow-up for failed | d tests) | | |

If the testing method does not test the entire depth of the sump, specify how much of the sump was tested. Methods not testing the

entire sump should only be used if the monitoring system provides fail-safe turbine shutdown. (See SWRCB LG-160)

With the submersible pump running, place the sensor in product (discriminating sensors should also be placed in water). The time between placing the sensor in product and the turbine shutting down is the response time. This should be done if the secondary containment testing method used does not test the entire volume of the sump.

^{*} This information is not needed if the entire sump is tested.

SUBJECT:

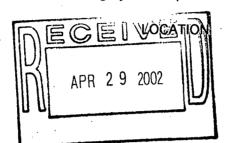

Annual Electronic Leak Monitoring System Inspection and Certification

DATE:

4/8/02

S/S.#:

Texaco 121190

9069 Grapevine Lebec, CA

To Whom It May Concern:

Enclosed are the reports for the annual inspection of the existing Monitoring System that was performed at the above referenced facility. The method used to test the electronic and mechanical monitoring systems is approved by and exceeds the specifications according to the manufacturer.

R. J. Myers & Co., Inc. has been contracted by Shell Oil Products US to insure that their facilities comply with all the rules and regulations that govern the operation of underground storage tanks and product lines. If you have any questions, please call.

Sincerely,

R. J. MYERS & CO., INC.

Butch Karn President

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Monitoring System Certification

| D. Resi | ults of Te | esting/Servicing |
|----------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Software | Version Ins | stalled:122.00 |
| Complete | the follow | ing checklist: |
| Yes Yes | ☐ No* | Is the audible alarm operational? |
| Yes Yes | ☐ No* | Is the visual alarm operational? |
| ⊠ Yes | ☐ No* | Were all sensors visually inspected, functionally tested, and confirmed operational? |
| ⊠ Yes | □ No* | Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation? |
| ⊠ Yes | ☐ No* | If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational? |
| ⊠ Yes | □ No* □ N/A | For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? Yes; No. |
| Yes | □ No* ⊠ N/A | For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger?% |
| ☐ Yes* | ⊠ No | Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below. |
| ☐ Yes* | ⊠ No | Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; Water. If yes, describe causes in Section E, below. |
| ⊠ Yes | ☐ No* | Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable |
| ⊠ Yes | ☐ No* | Is all monitoring equipment operational per manufacturer's specifications? |
| | | , describe how and when these deficiencies were or will be corrected. |

| This see | ction mus | st be completed if in-tank gauging equipment is used to perform leak detection monitoring. |
|----------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Complet | e the follow | wing checklist: |
| ⊠ Yes | ☐ No* | Has all input wiring been inspected for proper entry and termination, including testing for ground faults? |
| ⊠ Yes | □ No* | Were all tank gauging probes visually inspected for damage and residue buildup? |
| ⊠ Yes | ☐ No* | Was accuracy of system product level readings tested? |
| ⊠ Yes | ☐ No* | Was accuracy of system water level readings tested? |
| ⊠ Yes | ☐ No* | Were all probes reinstalled properly? |
| ⊠ Yes | ☐ No* | Were all items on the equipment manufacturer's maintenance checklist completed? |
| * In the | Section H, | below, describe how and when these deficiencies were or will be corrected. |
| | | etectors (LLD): |
| | | ving checklist: |
| ⊠ Yes | ☐ No* | For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 2 3 g.p.h.; 0.1 g.p.h; 0.2 g.p.h. |
| ⊠ Yes | ☐ No* | Were all LLDs confirmed operational and accurate within regulatory requirements? |
| ⊠ Yes | ☐ No* | Was the testing apparatus properly calibrated? |
| Yes | ☐ No* ⊠ N/A | For mechanical LLDs, does the LLD restrict product flow if it detects a leak? |
| ⊠ Yes | ☐ No* | For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak? |
| ⊠ Yes | □ No* | For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected? |
| ⊠ Yes | □ No* □ N/A | For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test? |
| ⊠ Yes | ☐ No* | For electronic LLDs, have all accessible wiring connections been visually inspected? |
| ⊠ Yes | □ No* | Were all items on the equipment manufacturer's maintenance checklist completed? |
| * In the | Section H, | below, describe how and when these deficiencies were or will be corrected. |

☐ Check this box if tank gauging is used only for inventory control.☐ Check this box if no tank gauging or SIR equipment is installed.

F. In-Tank Gauging / SIR Equipment:

Page 4 of 4

UST Monitoring Site Plan

Site Address: 9069 Grapevine, Lebec

Date map was drawn: 04/08/02

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Lebec, CA 93243

Dear Sir,

This is to certify that the annual inspection of the existing Monitoring System was performed at the above referenced facility. The method used to test the electronic and mechanical monitoring systems is approved by and exceeds the specifications according to the manufacturer.

R. J. Myers & Sons, Inc. has been contracted by TEXACO R & M to insure that their facilities comply with all the rules and regulations that govern the operation of underground storage tanks and product lines. If you have any questions, please call.

Sincerely,

R. J. MYERS & SONS, INC.

ANNUAL ELECTRONIC/MECHANICAL MONITORING SYSTEM

INSPECTION AND METER CALIBRATION

DATE:

8/23/94

LOCATION: 61058000050

I-5/GRAPEVINE LEBEC, CA

Dear Sir,

This is to certify that the annual inspection of the existing Monitoring System was performed at the above referenced facility. The method used to test the electronic and mechanical monitoring systems is approved by and exceeds the specifications according to the manufacturer.

R. J. Myers & Sons, Inc. has been contracted by TEXACO R & M Inc. to insure that their facilities comply with all the rules and regulations that govern the operation of underground storage tanks and product lines. If you have any questions, please call.

Sincerely,

R.J. MYERS & SQNS, INC.

Ronald J. Myers II

Vice President

SUBJECT:

ANNUAL ELECTRONIC/MECHANICAL MONITORING SYSTEM

INSPECTION AND METER CALIBRATION

DATE: 5/13/93

STATION # 61058000050

ADDRESS: I-5/GRAPEVINE, LEBEC, CA 93243

ATTENTION: FRED LONG

THIS IS TO CERTIFY THAT THE ANNUAL INSPECTION OF THE EXISTING MONITORING SYSTEM WAS PERFORMED AT THE ABOVE REFERENCED FACILITY. THE METHOD USED TO TEST THE ELECTRONIC AND MECHANICAL MONITORING SYSTEMS IS APPROVED BY AND EXCEEDS THE SPECIFICATIONS ACCORDING TO THE MANUFACTURER.

R.J.MYERS & SONS, INC. HAS BEEN CONTRACTED BY TEXACO R & M TO INSURE THAT THEIR FACILITIES COMPLY WITH ALL OF THE RULES AND REGULATIONS THAT GOVERN THE OPERATIONS OF UNDERGROUND STORAGE TANKS AND PRODUCT LINES.

IF YOU HAVE ANY QUESTIONS, PLEASE CALL.

SINCERELY,

R.J.MYERS & SONS. INC.

RONALD J. MYERS

VICE PRESIDENT

RJM/SS

TIGHTNESS TESTING PORTS EVALUATION FORM

| Specialist reviewing the tightness test report: Chris Finher q |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Date tightness test reports were submitted: 16/26/92 |
| Date tightness tests were completed: 10/13/92 |
| Facility Permit Number: 330035 (No testing permit re old) |
| Number of Tanks Tested at the site: 6 (list the tanks by their tan |
| numbers if provided) pennts regud. |
| Was the method a test of the entire tank system, piping alone, or just the facility tanks (describe) |
| piping only - 4 LINES |
| Did the facility pass all tests: Yes No (if no, provide the leak rate and a description of the tank(s) that failed the test) (failure is |
| > 0.1 gal per hour) |
| |
| |
| |
| The facility will do the following to investigate the failed test: |
| |
| |
| |
| The test method certification that is submitted to the state specifies that each test method be completed in a certain manner. Is there anything within the results which would suggest that the tank test was improperly completed? Yes No |
| (describe) |
| |
| |
| Information has been reviewed and placed within the database:YESNO |
| Date entered within the database: \(\text{QU} \) \(\text{116/92} \) |

TIGHTNESS TESTING REPORTS EVALUATION FORM

| Specialist reviewing the tightness test report: (hris Finberg |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Date tightness test reports were submitted: 12/20/91 |
| Date tightness tests were completed: $\frac{12}{7}\frac{91}{91}$ |
| Facility Permit Number: 33008 5 7057 |
| Number of Tanks Tested at the site: 5 + Ants told (list the tanks by their tank numbers if provided) 1-8 × 90 × 2-10 × 01 3-12 × 01 × 05 × 5/24 |
| Was the method a test of the entire tank system, piping alone, or just the facility tanks? (describe) |
| Entire System |
| Did the facility pass all tests: Yes No (if no, provide the leak rate and a description of the tank(s) that failed the test) (failure is |
| > 0.1 gal per hour) |
| No test performed on W.O. tank. |
| No test perferned on W.O. tank. Permt for 4 tanks only (the Fifth tank is new install no permt need |
| The facility will do the following to investigate the failed test: |
| |
| |
| The test method certification that is submitted to the state specifies that each test method be completed in a certain manner. Is there anything within the results which would suggest that the tank test was improperly completed? Yes No (describe) |
| |
| |
| Information has been reviewed and placed within the database:YESNO |
| Date entered within the database: 1/14/90 |

| | ! | ! ! | | 1 | · · · · · · · · · · · · · · · · · · · | ! |

Divide the volume differential by the test time (15 minutes) and multiply by 0.0158311, which will convert the volume differential from milliliters per minute to gallons per hour.

The conversion constant is found by :

(60 min/hr)/(3790 ml/gal) = 0.0158311 (min/hr) (gal/ml)

The conversion constant causes the milliliters and minutes to cancel out.

Ex. If the level dropped 3ml in 15 minutes then:

 $3/15 \text{ ml./min.} \times 0.0158311 \text{ (min/hr)} \text{ (gal/ml)} = 0.003 \text{ gal/hr.}$

STATE-LICENSED TESTER'S #91-1049

PERMIT FOR THE PERFORMANCE

PERMIT EXPIRES March 11, 1992

OF A TANK INTEGRITY TEST ON

APPROVAL DATE December 11

4 TANK SYSTEM(S)

APPROVED BY

AT THE ABOVE LOCATION

HAZARDOUS MATERIALS SPECIALIST

Chris Finberg

CONDITIONS AS FOLLOWS:

- 1. It is the responsibility of the Permittee to obtain permits which may be required by other regulatory agencies prior to beginning work (i.e., City Fire and Building Departments).
- 2. Permittee must <u>notify</u> the Hazardous Materials Management Program at (805) 861-3636 twenty-four hours <u>prior</u> to tank integrity test to allow the Hazardous Material Specialist the option of performing a spot check inspection.
- 3. Tank integrity test must be per Kern County Environmental Health- and Fire Department-approved methods as described in Handbook UT-20.
- 4. It is the state-licensed tester's responsibility to know and adhere to all applicable laws regarding the handling of hazardous materials.
- 5. The tank integrity testing company must have the state-licensed tester listed on the permit on site performing the test.

2700 "M" STREET, SUITE 300

BAKERSFIELD, CALIFORNIA 93301

(805) 861-3636 FAX: (805) 861-3429

PERMIT FOR THE PERFORMANCE OF A TANK INTEGRITY TEST ON UNDERGROUND STORAGE TANKS LOCATED AT THE LISTED FACILITY

PERMIT NUMBER T0057 ADDENDUM

- 6. If any tester other than the one listed on the permit and permit application is to be utilized, prior approval must be granted by the <u>specialist</u> listed on the permit. Deviation from the submitted application is not allowed.
- 7. A modification permit must be obtained from the department prior to exposing the tank to retest or investigating a release or failed integrity test.
- 8. The following timetable lists pre- and post-tank integrity test requirements:

<u>ACTIVITY</u> <u>DEADLINE</u>

Complete permit application submitted to

At least one week prior to tank integrity test

Notification to the specialist listed on permit 24 hours of date and time of the tank integrity test

Send written results of a test to the specialist listed on the permit is completed

No later than 30 days after testing is completed

Notification to the specialist listed on the permit of the results of a failed/inconclusive test completion of analysis

RECOMMENDATIONS/GUIDELINES FOR THE PERFORMANCE OF A TANK INTEGRITY TEST ON UNDER-GROUND STORAGE TANKS

This department is responsible for enforcing the state laws pertaining to underground storage tanks. Representatives from this department perform spot check inspections to ensure that the job performance is consistent with permit requirements, applicable laws, and safety standards. The following guidelines are offered to clarify the interests and expectations of this department.

- 1. Job site safety is one of our primary concerns. Tank integrity tests are inherently dangerous. It is the tester's responsibility to know and abide by CAL-OSHA regulations. The state-licensed tester is responsible for any other testing company employees on the job site. Tools and equipment are to be used only for their designed function.
- 2. Properly state-licensed testers are assumed to understand the requirements of the permit issued. The tester is responsible for knowing and abiding by the conditions of the permit. Deviation from the permit conditions may result in a stop-work order.
- 3. The testing company will be held responsible for the post-test paperwork. Analyses documentation is necessary for each site in order to close a case file or move it into mitigation. When testers do not follow through on necessary paperwork, an unmanageable backlog of incomplete cases results. If this continues, processing time for completing new tank integrity tests will increase.

* LEVEL - INCHES FROM TANK BOTTOM TO TEST LEVEL

ALR - ABSOLUTE LEAK RATE (MEASURED LEAK RATE - TEMPERATURE COMPENSATION) IN GALLONS PER HOUR CONCLUSION - NFPA 329 CRITERION OF \pm 0.05 GPH IS USED TO CERTIFY TIGHTNESS

CERTIFICATION

This is to certify that the above described tank systems were tested, using the HUNTER ENVIRONMENTAL SERVICES, INC. LEAK LOKATOR according to all standard operating procedures. Those indicated as tight at full system meet the criterion established by the National Fire Protection Association Pamphlet 329 for Precision Testing.

Dear Mr. Boust:

This letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Further, it does not relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, please contact Flora Darling at (805) 861-3636, Extension 549.

Sincerely,

Steve McCalley, Director

RE: Report of Additional Subsurface Soil Investigation, Unocal Service Station No. 4734, 9068 Grapevine Road, Lebec, California, GeoResearch Project No. 937060500

Dear Ms. Darling:

On behalf of Unocal Corporate Environmental and Remediation Technology, GeoResearch is pleased to present this report of Additional Subsurface Soil Investigation at the above-referenced site. You will note that the report concludes that site closure is appropriate. Unocal would like a written letter of closure for the site.

If you have specific questions regarding the report, please call me at (209) 264-0444. Otherwise you may contact Mr. Robert Boust of Unocal at (510) 277-2334.

Sincerely,

Steve Curra

STATEMENT OF LIMITATIONS AND PROFESSIONAL CERTIFICATION

Information provided in this report for GeoResearch Project Number 937060500 is intended exclusively for Unocal C.E.R.T. for the evaluation of petroleum hydrocarbon occurrence as it pertains to the subject site at the time the data were collected. professional services have been performed in accordance with geologists, practices generally accepted by professional hydrologists, engineers, and environmental specialists. warranty, expressed or implied, is made. As with all subsurface investigations, there is no guarantee that the work conducted will identify any or all sources or locations of contamination. report is issued with the understanding that Unocal C.E.R.T. is responsible for ensuring that the information contained in this report is brought to the attention of the appropriate regulatory The enclosed report has been reviewed by a California Certified Engineering Geologist (C.E.G.) whose signature and certification number appear below.

Min L. Clatter

Kevin L. Clutter Senior Staff Geologist Warren W. Gross, C.E.G. No. 1528 Associate Geologist

1.0 INTRODUCTION

GeoResearch has completed drilling and soil sampling beneath the former location of the westernmost dispenser island at Unocal Station No. 4734. Selected soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-G) and benzene, toluene, ethylbenzene, and total xylenes (BTEX). The site is located at 9068 Grapevine Road, Lebec, California (Figure 1). The investigation was completed in accordance with our work plan dated January 21, 1993, which was submitted to and approved by Mr. Robert Boust of Unocal and Ms. Flora Darling of the Kern County Environmental Health Department (KCEHD).

The purpose of the investigation was to determine the vertical extent of petroleum hydrocarbon migration beneath the location of the former westernmost dispenser island and develop an opinion of the suitability of the site for closure.

Drilling services were supplied by Valley Well Drilling, Inc. of Ventura, California. Analytical services were performed by GEOTEST of Long Beach, California. GEOTEST is a California EPA certified analytical laboratory. Ms. Flora Darling of the Kern County Environmental Health Department (KCEHD) was on site during drilling activities.

One boring (B1) was completed to 65 feet below ground surface (bgs). Seven soil samples were collected from boring B1 and were submitted to GEOTEST. Four soil samples were analyzed for TPH-G and BTEX.

2.0 BACKGROUND INFORMATION

During the station demolition in October 1992, soil containing elevated concentrations of total petroleum hydrocarbons as gasoline (TPH-G) was identified beneath the westernmost dispenser island. GeoResearch attempted to excavate the TPH-G containing soil. However, confirmation samples collected at 35 feet bgs, the practical limit of excavation, indicated that TPH-G concentrations as high as 3,500 milligrams per kilogram (mg/kg) still remained. The scope and findings of the completed investigation/remediation are reported in the GeoResearch Tank Closure Report dated January 25, 1993.

3.0 SOIL BORING OBSERVATIONS

Soil boring B1 was completed to 65 feet bgs on February 4, 1993 (Figure 2). The boring was completed with a B-90 hollow-stem auger drill rig supplied by Valley Well Drillers, Inc. of Ventura, California. Soils were monitored for the presence of volatile organic compounds with a Model 580B Organic Vapor Meter (OVM).

UNO4734.DRL2 022693F

Soils observed were sand and gravel fill material to approximately 35 feet bgs. Soils below 35 feet bgs consisted of sand, gravel, and cobbles. No soil with field evidence of petroleum hydrocarbons was observed during drilling activities. The boring was terminated at 65 feet bgs due to the lack of field evidence of petroleum hydrocarbon containing soil (Figure 3). None of the soil screened with the OVM contained detectable concentrations of petroleum hydrocarbons.

4.0 SCIL SAMPLING AND ANALYSIS

Seven soil samples, B1-35 through B1-65, were collected at five foot intervals beginning at 35 feet bgs (below the base of fill soils). Undisturbed soil samples were collected using a modified California split spoon sampler lined with brass sleeves in accordance with standard GeoResearch soil sampling procedures (Appendix B).

The soil samples were transported to GEOTEST for analysis. Four of the soil samples were analyzed for TPH-G in accordance with California Department of Health Services (CAL/DHS) methods and benzene, toluene, ethylbenzene, and total xylenes (BTEX) in accordance with EPA method 8020. None of the samples analyzed (B1-35, B1-45, B1-55, and B1-65) contained detectable concentrations of TPH-G or BTEX (Table 1). Chain-of-custody records and analytical reports are included in Appendix D.

5.0 SUMMARY AND CONCLUSIONS

One soil boring was completed to 65 feet bgs beneath the former dispenser island from which a gasoline release was previously identified. No field or laboratory evidence of remaining petroleum hydrocarbons was found. Based on these findings, GeoResearch concludes that no further investigation or remediation is warranted in association with the former service station. The site appears suitable for closure by the KCEHD.

GEORESEARCH PROCEDURES FOR SOIL SAMPLING DURING DRILLING

The following outline describes the procedures utilized by GeoResearch for soil sampling during drilling, using hollow-stem, continuous-flight augers.

- i. Soil samples are collected using a 2.0 to 2.5-inch inside diameter, modified California split-spoon sampler. The sampler is lined with two to three, 6-inch long, 2.0 to 2.5-inch diameter brass rings for containment of the soil samples.
- ii. To avoid cross-contamination of samples, the sampler and rings are washed prior to each use with non-phosphate detergent and double rinsed with distilled water.
- iii. At the prescribed sampling interval of 5 feet, the sampler is attached to the drive rod and driven 18 inches into undisturbed soil below the lead auger with a 140-pound hammer that is repeatedly dropped from a 30-inch height. The number of drops is recorded during each 6-inch increment and used as a qualitative determination of soil consistency and density.
- iv. The lead, or deepest, brass ring is recovered from the sampler, sealed by taping aluminum foil and plastic caps onto both ends, labeled, placed in a Zip-loc bag, and stored on blue ice while awaiting delivery to the laboratory for analysis.
- v. The sample is recorded on a Chain-of-Custody form to ensure traceability of the sample.
- vi. The sampled interval is classified using the remaining rings and described on a log of soil boring form, following the Unified Soil Classification System.

SOIL DESCRIPTIONS USED IN THIS REPORT ARE IN GENERAL ACCORDANCE WITH THE UNIFIED SOIL CLASSIFICATION SYSTEM.

SUMMARIES OF LABORATORY ANALYTICAL METHODS: SOIL SAMPLES

The following briefly describes laboratory analyses performed on soil samples in accordance with the specified EPA or California Department of Health Services methods.

EPA Method 8020: Volatile Aromatic Organics

Volatile aromatics are determined by purge and trap followed by gas chromatography/photoionization detector (GC/PID). Normally only Benzene, Toluene, Ethylbenzene and total Xylenes are analyzed with this method. A small amount of sample (about 1 gram) is placed in a purge vessel and 5 ml water added. The sample is purged for a specific time and the volatiles absorbed on a trap. After purging the trap is heated and the volatiles swept into the GC. The analytes are separated using a capillary column and detected using a photoionization detector.

<u>Total Petroleum Hydrocarbons - Gasoline</u>

The volatile components of gasoline are determined by purge and trap followed by gas chromatography/flame ionization detector (GC/FID). A small amount of sample (about 1 gram) is placed in a purge vessel and 5 ml water added. The sample is purged for a specific time and the volatiles absorbed on a trap. After purging the trap is heated and the volatiles swept into the GC. The analytes are separated using a capillary column and detected using an FID. The total petroleum hydrocarbon as gasoline (TPH-G) is determined as the total amount of volatiles detected.

Ms. Flora Darling Kern County Environmental Health Services Department 2700 'M' Street, Suite 300 Bakersfield, California 93301

RE: Work Plan for Additional Drilling and Collection of Confirmation Soil Samples, Unocal Service Station No. 4734, 9068 Grapevine Road, Lebec, California, GeoResearch Project No. 92075.

Dear Ms. Darling:

On behalf of Unocal, GeoResearch is pleased to submit this work plan for additional drilling and soil sampling at the above-referenced site (Attachment 1).

The Unocal station occupied the site from 1961 until its demolition in October, 1992. It operated as a retail outlet for the dispensing of motor fuels and as an automotive repair facility, although repairs had not been performed at the station for some time prior to its demolition. The station had two 10,000-gallon diesel USTs and one 280-gallon waste-oil UST located on site. According to the Unocal station dealer, Mr. Rose, the USTs were replaced after he acquired the dealership in 1977. A Phase I Environmental Site Assessment report prepared by PHR (1991) for the subject property states that a leak in a super (92 octane) product dispenser was discovered and repaired in June, 1981. The piping to the dispensers had been replaced the previous month. No information is available as to which dispenser was leaking, the amount of gasoline lost, or any remedial activities performed.

Soils beneath the site consist of Pleistocene age material of the Tulare formation which is derived from alluvium and bedrock off the Tehachapi Mountains approximately one-half mile to the south. Shallow soils consist predominantly of silts and silty sands. Coarse granitic gravels, cobbles, and boulders were encountered near surface to 45 feet below ground surface (bgs). According to Mr. Haselbacher of the Kern County Environmental Health Services Department (KCEHSD), ground water in the vicinity of the site is estimated to be 1,000 to 1,200 feet bgs.

4734ADDL.WP012193F4

Ms. Flora Darling Kern County EHSD January 26, 1993 Page 2

During the recent station demolition (October of 1992) soil containing elevated concentrations of total petroleum hydrocarbons (TPH-G) was identified beneath the westernmost gasoline dispenser island (Figure 1). With the approval of Mr. Chris Finberg (KCEHSD), an attempt was made to excavate the hydrocarbons; however, confirmation samples collected at 35-feet_below_ground surface (bgs) indicated that concentrations of TPH-G as high as 3,500 mg/kg still remained. Boulders of up to 3 feet in diameter accompanied by very coarse gravels were also encountered in the excavation. The scope and findings of the completed investigation/remediation are reported in the GeoResearch Tank Closure Report dated January 25, 1993.

The purpose of the proposed investigation is to demonstrate the limit of the vertical extent of remaining gasoline and determine the suitability of the site for closure by KCEHSD. In the event that substantial quantities of gasoline are found to remain in the soil, the data will be utilized to formulate a plan for further site remediation.

We propose drilling one soil boring near the center of the former dispenser island utilizing a Failing F10 drill rig (Figure 1). This boring will be completed by hollow stem auger methods, if possible. If soil conditions do not facilitate this method of drilling, a change-over to a mud rotary system will be made utilizing the same drilling rig. Undisturbed soil samples will be attempted every five feet after 35 feet bgs. The excavation completed in this area extended to a depth of approximately 35 feet Soil samples will be collected using GeoResearch procedures outlined in Attachment 2. Soil samples will be screened with a portable organic vapor analyzer (OVA) for preliminary estimation of hydrocarbon content. An attempt will be made to collect a minimum of two consecutive samples with no detectable concentrations of TPH-G or BTEX. Selected soil samples will be analyzed for TPH-G/BTEX by a state-certified analytical laboratory. Laboratory analysis analytical methods and QA/AC procedures are outlined in Attachment 3.

On the basis of the findings of our initial investigation (as contained in the above-referenced report), we anticipate that the vertical extent of gasoline in soils may not exceed 50 to 60 feet and that relatively little lateral spreading has occurred. In the event that the depth of gasoline in soils is found to substantially exceed the estimated extent or findings suggest the likelihood of substantial lateral spread, Unocal may elect to complete additional borings to determine the lateral extent of gasoline in site soils.

Ms. Flora Darling Kern County EHSD January 26, 1993 Page 3

Equipment and procedures utilized would be the same as those used for the first boring. Details of the proposed scope of work, in compliance with KCEHSD requirements for this type of work, as we understand them, are included in the attached proposed scope of work. A Health and Safety Plan for the project is enclosed with this letter for your review.

Unocal is prepared to authorize the completion of this work as soon as work plan approval is given by your department. We appreciate consideration of this matter at your earliest convenience. If you have any questions, please contact the undersigned at (209) 264-0444.

Sincerely,

Blair Redfearn

Boring Location Map

enclosures

ATTACHMENT 1

PROPOSED SCOPE OF WORK

- 1) Obtain required drilling permits.
- 2) A site health and safety plan has previously been prepared for this site. All field work will be performed in accordance with this plan.
- 3) Contact Underground Service Alert and notify of boring location.
- 4) Drill one vertical boring near the center of the former westernmost dispenser island. Undisturbed Samples will be obtained every 5 feet after 35 feet bgs utilizing hollow stem auger methods (if possible). If hollow stem auger methods are not feasible, a mud rotary system will be employed.
- 5) Soil boring soil samples will be screened with a portable organic vapor analyzer (OVA) to help select samples for analysis. Samples will be submitted to GEOTEST, a state of California-certified laboratory in Long Beach. In an effort to define the vertical extent of petroleum constituents in the boring, an attempt will be made to obtain two consecutive five foot soil samples that contain no detectable contaminants of concern.
- 6) Selected samples will be analyzed for Total Petroleum Hydrocarbons as Gasoline (TPH-G) by CAL/DOHS methods and benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA method 8020.
- 7) Backfill boring with neat cement or cement/sand slurry.
- 8) Drill cuttings will be placed on and covered with plastic in one location on the subject property. Cuttings with field evidence of petroleum hydrocarbon concentrations will be stockpiled separately.
- 9) All drilling, logging, and soil sampling will be conducted in accordance with standard GeoResearch procedures under the direction of a Certified Engineering Geologist. Drilling of soil borings will be conducted only by a contractor who maintains a valid C-57 license and proof of workmen's compensation.

- 10) Based on results from the first boring, additional borings may be drilled to define the vertical and horizontal extent of the gasoline in site soils. Equipment and procedures utilized will be the same as those used for the initial boring.
- 11) A written report of our findings and recommendations will be prepared. Upon approval by Unocal, the report will be submitted to KCEHSD.

ATTACHMENT 2

GEORESEARCH PROCEDURES FOR SOIL SAMPLING DURING DRILLING

The following outline describes the procedures utilized by GeoResearch for soil sampling during drilling, using hollow-stem, continuous-flight augers or convensional mud rotary methods.

- i. Soil samples are collected using a 2.0 to 2.5-inch inside diameter, modified California split-spoon sampler. The sampler is lined with two to three, 6-inch long, 2.0 to 2.5-inch diameter brass rings for containment of the soil samples.
- ii. To avoid cross-contamination of samples, the sampler and rings are washed prior to each use with non-phosphate detergent and double rinsed with distilled water.
- iii. At the prescribed sampling interval of 5 feet, the sampler is attached to the drive rod and driven 18 inches into undisturbed soil below the lead auger, or drill bit, with a 140-pound hammer that is repeatedly dropped from a 30-inch height. The number of drops is recorded during each 6-inch increment and used as a qualitative determination of soil consistency and density.
- iv. The lead, or deepest, brass ring is recovered from the sampler, sealed by taping aluminum foil and plastic caps onto both ends, labeled, placed in a Zip-loc bag, and stored on blue ice while awaiting delivery to the laboratory for chemical analysis.
- v. The sample is recorded onto a Chain-of-Custody form to ensure trackability of the sample.
- vi. The sampled interval is classified using the remaining rings and described on a log of soil boring form, following the Unified Soil Classification System.
- vii. Every 10th sample collected will be used as a duplicate sample to determine analytical precision and accuracy. In addition, a field blank will be collected from a newly opened bag of gravel pack material and analyzed to test for cross contamination of soil samples.

Dear Mr. Boust:

The intent of this letter is to inform you of the necessary deadlines for work required at the property described above. As a responsible party for a leaking underground storage tank, you have previously received a letter from this Department notifying you of the required work necessary to identify the extent of the contamination. We are now requesting that this work, outlined in UT-35, be done in a timely manner.

In accordance with California Health and Safety Code, Chapter 6.7, and Kern County Ordinance Code, Chapter 8.48, the Kern County Environmental Health Services Department requires a determination of the threat to the environment. Accordingly, you must select an environmental contractor and submit a site characterization workplan proposal to this office by February 8, 1993. The workplan must be approved by this Department before any work is started.

If you should have any questions regarding this matter, please contact me immediately at (805) 861-3636, Ext. 549.

Sincerely,

Steve McCalley, Director

INSTRUCTIONS

Indicate whether emergency response personnel and equipment were involved . at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

To avoid duplicate notification pursuant to Health and Safety code Section 25180.5, a government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY

Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY

Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION

**1211:44.1

ç, s Enter information regarding the tank facility. At a minimum, you must provide the facility name ≥ and full address.

IMPLEMENTING AGENCIES

Enter names of the local agency and Regional Water Quality Control Board involved.

Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT /.

Provide information regarding the discovery and abatement of the leak. .

Indicate source(s) of leak. Check box(es) indicating cause of leak.

Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells/have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS

Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options (follow:

ー ω No Action Taken - No action has been taken by responsible party beyond initial report of leak.

Leak Being Confirmed - Leak suspected at site, but has not been confirmed. Preliminary Site Assessment Workplan Submitted - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been, or will be, impacted as a result of the release. Preliminary Site Assessment Underway - implementation of workplan. Pollution Characterization - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water. Remediation Plan - remediation plan submitted evaluating long term 1. 21 remediation options. Proposal and implementation schedule for appropriate remediation options also submitted. Cleanup Underway - implementation of remediation plan. Post Cleanup Monitoring in Progress - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities. Case Closed - regional board and local agency in concurrence that no f further work is necessary at the site. IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL! STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION

Indicate which action have been used to cleanup or remediate the leak-Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfal? C E infiltration. जू के हैं Containment Barrier - install vertical dike to block horizontal movement of contaminant. Excavate and Dispose - remove contaminated soil and dispose in approved Excavate and Treat - remove contaminated soil and treat (includes spreading MAIT or land farming). Remove Free Product - remove floating product from water table. . . Pump and Treat Groundwater - generally employed to remove dissolved O contaminants. Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of Kontaminants. Replace Supply - provide alternative water supply to affected parties.

Treatment at Hookup - install water treatment devices at each dwelling or other place of use, Vacuum Extract - use pumps or blowers to draw air through soil. Vent Soil - bore holes in soil to allow volatilization of contaminants.

No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident \overline{C}

SIGNATURE - Sign the form in the space provided.

If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.

1. Original - Local Tank Permitting Agency

- 2. State Water Resources Control Board, Division of Clean Water Programs, Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-2120 (-::
- 3. Regional Water Quality Control Board
- Local Health Officer and County Board of Supervisors or their designee to receive Proposition 65 notifications.
- Owner/responsible party.

Mr. Chris Finberg
Hazardous Materials Specialist
Resource Management Agency
Environmental Health Services Department
2700 "M" Street, Suite 300
Bakersfield, California 93301

RE: Laboratory results for the required soil samples collected at Unocal Service Station No. 4734, 9068 West Grapevine Road, Lebec, California.

Dear Mr. Finberg:

Enclosed are the hard copies of laboratory reports for the KCEHD required soil samples at the above-referenced location, per your request. Please note that additional soil samples not reported here have been analyzed and a full report of our investigations at the site will be prepared for submittal to Unocal. Your department will be copied upon Unocal's approval.

We understand that we may proceed with the backfilling of the excavations on the site utilizing soil originating from the excavations. We further understand that the stockpiled soil onsite which is not suitable to be used as backfill material cannot be disposed without prior approval from the KCEHD.

If you have questions or need additional information please contact me at (209) 264-0444.

Sincerely,

Blair Redfearn

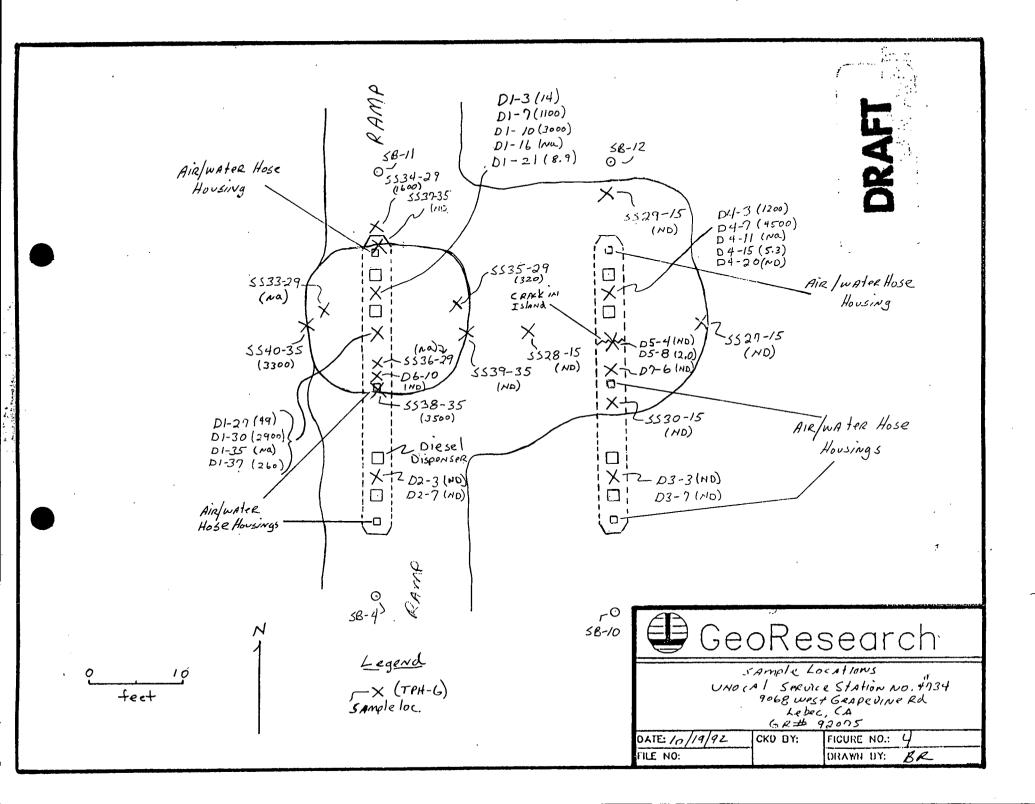

Senior Staff Geologist

UNOCAL

October 1, 1992

Steve McCally Director, County of Kern Environmental Health. Services Department 2700 "M" Street, Suite 300 Bakersfield, California 93301

Re: <u>Unocal Service Station</u> # 4734 Hwy. 99 & Grapevine Lebec, CA

Dear Mr. McCally:

This letter is in reference to the Underground Storage Tanks Permit to Operate fee invoice # 330097C-93, related to the above referenced service station.

According to that invoice, payment due date for permit renewal was August 9, 1992. A check in the amount of \$400.00 dated August 7, 1992, was mailed on the same day. Due to some reason this check was not received in your office on or before that due date.

Unfortunately, the mailing envelope post marked for August 7, 1992, is not available to prove that the payment was mailed prior to that due date.

A penalty statement of \$200.00 was received in this office as a result of this late payment. Since this payment was mailed prior to the due date, please issue your instruction to waive this penalty.

In order to correct this problem in the future, an effective permit tracking system has been established by Unocal. This tracking system will enable Unocal to renew and pay all Underground Tanks Permit to Operate fees within their due dates.

Thank you for your cooperation in this matter.

If you have any questions please call me at (213) 977-6311.

Sincerely yours,

Shirely 7. Shea

Compliance Analyst

PERMIT FOR CLOSURE OF

PERMIT EXPIRES October 29, 1992

4 TANK(S) AT ABOVE

APPROVAL DATE July 29, 1

LOCATION

APPROVED BY

Chris Finberg Hazardous Materials Specialist

POST ON PREMISES.....

CONDITIONS AS FOLLOWS:

- It is the responsibility of the Permittee to obtain permits which may be required by other regulatory agencies prior to beginning work (i.e., City Fire and Building 1. Departments).
- Permittee must notify the Hazardous Materials Management Program at (805) 861-3636 two working days prior to tank removal or abandonment in place to arrange for required inspections(s).
- Tank closure activities must be per Kern County Environmental Health and Fire Department approved methods as described in Handbook UT-30. 3.
- It is the contractor's responsibility to know and adhere to all applicable laws regarding the handling, transportation or treatment of hazardous materials.
- The tank removal contractor must have a qualified company employee on site supervising the tank removal. The employee must have tank removal experience prior to working unsupervised.
- If any contractors other than those listed on permit and permit application are to be utilized, prior approval must be granted by the specialist listed on the permit. Deviation from the submitted application is not allowed.

Soil Sampling:

- Tank size less than or equal to 1,000 gallons a minimum of two samples must be retrieved from beneath the center of the tank at depths of a. approximately two feet and six feet.
- Tank size greater than 1,000 to 10,000 gallons a minimum of four samples must be retrieved one-third of the way in from the ends of each tank b. at depths of approximately two feet and six feet.
- Tank size greater than 10,000 gallons a minimum of six samples must be retrieved one-fourth of the way in from the ends of each tank and beneath the center of each tank at depths of approximately two feet and six feet.

8. Soil Sampling (piping area):

A minimum of two samples must be retrieved at depths of approximately two feet and six feet for every 15 linear feet of pipe run and under the dispenser area.

PERMIT NUMBER A 1702-33 ADDENDUM

PERMIT FOR PERMANENT CLOSURE OF UNDERGROUND HAZARDOUS SUBSTANCES STORAGE FACILITY

- Soil Sample analysis:
 - a. All soil samples retrieved from beneath gasoline (leaded/unleaded) tanks and appurtenances must be analyzed for benzene, toluene, xylene, and total petroleum hydrocarbons (for gasoline).
 - b. All soil samples retrieved from beneath diesel tanks and appurtenances must be analyzed for total petroleum hydrocarbons (for diesel) and benzene.
 - c. All soil samples retrieved from beneath waste oil tanks and appurtenances must be analyzed for total organic halides, lead, oil and grease.
 - d. All soil samples retrieved from beneath crude oil tanks and appurtenances must be analyzed for oil and grease.
 - e. All soil samples retrieved from beneath tanks and appurtenances that contain unknown substances must be analyzed for a full range of substances that may have been stored within the tank.
- 10. The following timetable lists pre- and post-tank removal requirements:

ACTIVITY

Complete permit application submitted to Hazardous Materials Management Program

At least two weeks prior to closure

Notification to inspector listed on permit of date and time of closure and soil sampling

Two working days

Transportation and tracking forms sent to Hazardous Materials Management Program. All hazardous waste manifests must be signed by the receiver of the hazardous waste

No later than 5 working days for transportation and 14 working days for the tracking form after tank removal

Sample analysis to Hazardous Materials Management Program

No later than 3 working days after completion of analysis

DEADLINE

- 11. Purging/Inerting Conditions:
 - a. Liquid shall be pumped from tank prior to purging such that less than 8 gallons of liquid remain in tank. (CSH&SC 41700)
 - b. Tank shall be purged through vent pipe discharging at least 10 feet above ground level. (CSH&SC 41700)
 - c. No emission shall result in odors detectable at or beyond property line. (Rule 419)
 - d. No emission shall endanger the health, safety, comfort or repose of any person. (CSH&SC 41700)
 - e. Vent lines shall remain attached to tank until the inspector arrives to authorize removal.

RECOMMENDATIONS/GUIDELINES FOR REMOVAL OF UNDERGROUND STORAGE TANKS

This department is responsible for enforcing the Kern County Ordinance Code, Division 8 and state regulations pertaining to underground storage tanks. Representatives from this department respond to job sites during tank removals to ensure that the tanks are safe to remove/close and that the overall job performance is consistent with permit requirements, applicable laws and safety standards. The following guidelines are offered to clarify the interests and expectations for this department.

- Job site safety is one of our primary concerns. Excavations are inherently dangerous. It is the contractor's responsibility to know and abide by CAL-OSHA regulations. The job foreman is responsible for the crew and any subcontractors on the job. As a general rule, workers are not permitted in improperly sloped excavations or when unsafe conditions exist in the hole. Tools and equipment are to be used only for their designed function. For example, backhoe buckets are never substituted for ladders.
- Properly licensed contractors are assumed to understand the requirements of the permit issued. The job foreman is responsible for knowing and abiding by
 the conditions of the permit. Deviation from the permit conditions may result in a stop-work order.
- 3. Individual contractors will be held responsible for their post-removal paperwork. Tracking forms, hazardous waste manifests and analyses documentation are necessary for each site in order to close a case file or move it into mitigation. When contractors do not follow through on necessary paperwork, an unmanageable backlog of incomplete cases results. If this continues, processing time for completing new closures will increase.

Mr. Chris Finberg Kern County Environmental Health Department 2700 "M" Street, Suite 300 Bakersfield, CA 93301

> RE: Unocal Service Station No. 4734, 9068 W. Grapevine Road, Lebec, California. GeoResearch Project No. 92075.

Dear Mr. Finberg:

The Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report for the above-referenced site, submitted on behalf of Unocal Corporation, is enclosed. This is in response to the findings of our site assessment early this year. The assessment report was forwarded to the County (Terry Gray) a couple of months ago. It was only recently noted that this report had not been filed and we are doing so now in accordance with Unocal policy. Please note that any required soil remediation will be accomplished following station demolition later this summer. If you have any questions please contact me at (209) 264-0444.

Sincerely,

Warren W. Gross

Associate Geologist

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

- One FORM "A" shall be completed for all NEW PERMITS, PERMIT CHANGES or any FACILITY/SITE INFORMATION CHANGES.
- 2. SUBMIT ONLY ONE (1) FORM "A" for a Pacility/Site, regardless of the number of tanks located at the site.
- 3. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
- 4. Please type or print clearly all requested information.
- 5. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE FIEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.

L PACILITY/SITE INFORMATION & ADDRESS (MUST-BE COMPLETED)

Record name and address (physical location) of the underground tank(s).
 NOTE: Address MUST have a valid physical location including city, state, and zip code.
 P.O. BOX NUMBER ARE NOT ACCEPTABLE.

Include nearest cross street and name of the operator.

Phone number must have an area code. If the night number is the same, write "SAMH" in proper location.

3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.)

4. Check the appropriate box for TYPE OF BUSINESS.

5. If Facility/Site is located on land within an indian reservation or other indian trust lands, check the box marked "YES".

6. Indicate the NUMBER of TANKS at this SITE.

7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION 1; if the same, write "SAME AS SITE" across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Complete all items in this section, unless all items are the same as SECTION 1; If the same, write "SAME AS SITE" across this section. Be sure to check TANK OWNERSHIP TYPE box.

IV BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the \$0.006 (6 mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will code persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916-739-2582 or write to the BOE at the following address: Board of Equalization, Environmental Fees Unit, P.O. Box 942879, Sacramento, CA 94279-0001.

V. LEGAL NOTHICATION AND BILLING ADDRESS

1. Check ONE BOX for the address that will be used for BOTH LEGAL AND BILLING NOTIFICATIONS.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFOPMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

- One FORM "B" shall be completed for a th tank for all NEW I RMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
- This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
- Please type or print clearly all requested information.
- Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE FIEM"

- Mark an (X) in the box next to the item that best describes the reason the form is being completed.
- Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

- Indicate owners tank ID # If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
- Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
- C. Indicate the year the tank was installed (ex. 1987).
 D. Indicate the tank capacity in gallons (ex. 25.000 or 10,000 etc.).

II. TANK CONTENTS

- A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
 - 2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
- Check the appropriate box.
- Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
- D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE TIEM ONLY IN BOX A, B, C & D

- Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
- If OTHER, print in the space provided.

IV. PIPING INFORMATION

- Circle A if above ground; circle U if underground; and circle both if applicable.
- If UNKNOWN, circle; or if OTHER, print in space provided.
- Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

- ESTIMATED DATE LAST USED MONTH/YEAR (January, 1988 or 01/88).
- ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
- WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

- One FORM "B" shall be completed for a the tank for all NEW FURMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
- This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
- Please type or print clearly all requested information. 3.
- 4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

- Mark an (X) in the box next to the item that best describes the reason the form is being completed.
- Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

- Indicate owners tank ID # If there is a rank number that is used by the owner to identify the tank (ex. AB70789). Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
- Indicate the year the tank was installed (ex. 1987).
- D. Indicate the tank capacity in gallons (ex. 25.000 or 10,000 etc.).

II. TANK CONIENIS

- A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
 - 2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
- Check the appropriate box. R
- Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
- Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE FIEM ONLY IN BOX A, B, C & D

- Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
- 2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

- Circle A if above ground; circle U if underground; and circle both if applicable.
- If UNKNOWN, circle; or if OTHER, print in space provided.
- Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

- ESTIMATED DATE LAST USED MONTH/YEAR (January, 1988 or 01/88).
- ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
- WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained, by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

- 1. One FORM "B" shall be completed for the tank for all NEW FORMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
- This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
- 3. Please type or print clearly all requested information.
- 4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

- 1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
- 2. Indicate the DBA or Facility name where the tank is installed.

1. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

- A. Indicate owners tank ID # If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
- B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
- C. Indicate the year the tank was installed (ex. 1987).
- D. Indicate the tank capacity in gallons (ex. 25.000 or 10,000 etc.).

II. TANK CONIENIS

- A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
 - 2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
- 3. Check the appropriate box.
- C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
- D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

- 1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
- 2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

- 1. Circle A if above ground; circle U if underground; and circle both if applicable.
- 2. If UNKNOWN, circle; or if OTHER, print in space provided.
- 3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

- 1. ESTIMATED DATE LAST USED MONTH/YEAR (January, 1988 or 01/88).
- 2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
- 3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

- One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
- This form should be completed by either the PERMTT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK
- Please type or print clearly all requested information.
- Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

- Mark an (X) in the box next to the item that best describes the reason the form is being completed.
- Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL FIEMS - IF UNKNOWN - SO SPECIFY

- Indicate owners tank ID # If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
- Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
- Indicate the year the tank was installed (ex. 1987).
- D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENIS

- A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
 - 2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
- Check the appropriate box.
- Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
- Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

- Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
- If OTHER, print in the space provided.

IV. PIPING INFORMATION

- Circle A if above ground; circle U if underground; and circle both if applicable.
- If UNKNOWN, circle; or if OTHER, print in space provided.

 Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENILY CLOSED IN PLACE

- ESTIMATED DATE LAST USED MONTH/YEAR (January, 1988 or 01/88).
- ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
- WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

Dear Ms. Greene:

UNDERGROUND STORAGE TANK SURVEY AND MONITORING RE: **PLANS**

As per your recent conversation with George Hynek, Robert H. Lee & Associates, Inc., I would like clarify the following information:

- 1. On behalf of Unocal Corporation, Robert H. Lee & Associates, Inc. will submit Underground Storage Tank Monitoring & Response Plans for the attached list of Unocal locations.
- 2. These submissions will be due by February 28, 1992.
- 3. Unocal Corporation will submit the annual pipeline pressure tests, for those stations which require such tests, by February 28, 1992.

Please address any future correspondence or invoices for the attached list of stations to: Mr. Jim Scott, Unocal Corporation, 911 Wilshire Blvd., Suite 1010, Los Angeles, CA 90017.

Please sign and return the Acknowledgement of Receipt below. If you have any questions, please do not hesitate to contact me.

Sincerely,

ACKNOWLEDGEMENT

ROBERT H. LEE & ASSOCIATES, INC

Bakersfield, CA 93301

RE: Laboratory results for soil collected at the Unocal Service Station located at 9068 West Grapevine Road, Lebec, California. GeoResearch Project No. 92075

Dear Mr. Finberg,

Per your request of January 8, 1992, enclosed are the laboratory results for soil collected at the above-referenced address. As you will recall, a product line was severed while cutting through the concrete. The soil sample was collected 6 feet below ground surface immediately adjacent to the cut product line.

If you have any questions or we can be of further assistance, please contact me at (209) 264-0444.

Sincerely,

Blair Redfearn Staff Geologist

INSTRUCTIONS

EMERGENCY

Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road. Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

To avoid duplicate notification pursuant to Health and Safety code Section 25180.5, a government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY

Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY

Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

Enter information regarding the tank facility. At a minimum, you must provide the facility name and full address.

The state of the state of the state of IMPLEMENTING AGENCIES

Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES- INVOLVED

Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the leak.

Indicate source(s) of leak. Check box(es) indicating cause of leak.

CASE TYPE

Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS

Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options follow:

No Action Taken - No action has been taken by responsible party beyond initial report of leak?

Leak Being Confirmed - Leak suspected at site, but has not been confirmed. Proliminary Site Assessment Workplan Submitted - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been or will be, impacted as a result of the release. Preliminary Site Assessment Underway - implementation of workplan. Pollution Characterization - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water.

Remediation Plan - remediation plan submitted evaluating long term remediation options. Proposal and implementation schedule for appropriate remediation options also submitted.

Cleanup Underway - implementation of remediation plan.

Post Cleanup Monitoring in Progress - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities.

Case Closed - regional board and local agency in concurrence that no further work is necessary at the site.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION

Indicate which action have been used to cleanup or remediate the leak. Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfall

Containment Barrier - install vertical dike to block horizontal movement of contaminant.

Excavate and Dispose - remove contaminated soil and dispose in approved

Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).

Remove Free Product - remove floating product from water table. Pump and Treat Groundwater - generally employed to remove dissolved contaminants.

Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.

Replace Supply - provide alternative water supply to affected parties. Treatment at Hookup - install water treatment devices at each dwelling or other place of use.

Vacuum Extract - use pumps or blowers to draw air through soil. Vent Soil - bore holes in soil to allow volatilization of contaminants. No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.

SIGNATURE - Sign the form in the space provided.

If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.

1. Original - Local Tank Permitting Agency

- 2. State Water Resources Control Board, Division of Clean Water Programs. Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-
- 3. Regional Water Quality Control Board
- Local Health Officer and County Board of Supervisors or their designee to receive Proposition 65 notifications.
- Owner/responsible party.

. POST ON PREMISES.

CONDITIONS AS FOLLOW:

Standard Instructions

- 1. This permit applies only to the modification of an existing facility involving the removal of approximately 2 feet of damaged piping associated with the unleaded fuel tank and the replacement of that section with new piping.
- 2. All construction to be as per facility plans approved by this department and verified by inspection by Permitting Authority.
- All equipment and materials in this construction must be installed in accordance with all manufacturers' specifications. 3.
- 4. Permittee must contact Permitting Authority for on-site inspection(s) with 48-hour advance notice.
- 5. Backfill material for piping and tanks to be as per manufacturers' specifications.
- Construction inspection record card is included with permit given to Permittee. This card must be posted at job site prior to initial inspection. Permittee must contact Permitting Authority and arrange for each group of required inspections numbered as per instructions on card. Generally, inspections will be made of:
 - Sanded ends of fiberglass piping before joining with new pipe section
 - b. Sample retrieval
 - c. Testing of the repaired pipe run
 - Any other inspection deemed necessary by Permitting Authority.
- 7. The new piping shall be joined to existing pipe utilizing manufacturer-approved techniques, and the resulting repair shall be encased in cement in the same manner as existing pipe.

2700 "M" STREET, SUITE 300

BAKERSFIELD, CALIFORNIA 93301

(805) 861-3636

FAX: (805) 861-3429

8. Primary and secondary containment of both tank(s) and underground piping must not be subject to physical or chemical deterioration due to the substance(s) stored in them. Documentation from tank, piping, and seal manufacturers of compatibility with these substance(s) must be submitted to Permitting Authority prior to construction.

9. Purging/Inerting Conditions:

- a. Liquid shall be pumped from tank prior to purging such that less than 8 gallons of liquid remain in tank (CSH&SC 41700).
- b. Tank shall be purged through vent pipe discharging at least 10 feet above ground level (CSH&SC 41700).

c. No emissions shall result in odors detectable at or beyond property line (Rule 419).

d. Vent lines shall remain attached to tank until the inspector arrives to authorize removal.

- 10. Samples are to be retrieved 6 feet beneath the damaged pipe run, while a representative from the Kern County Environmental Health Services is on site to witness sample retrieval.
- 11. Samples must be analyzed for Benzene, Toluene, Xylene and TPH (gasoline) and results must be submitted to the Kern County Environmental Health Services Department within 14 days of analysis completion.

12. After repair, the pipe run must be tested utilizing a petrotite integrity test before it can be utilized to dispense fuel.

PERMIT CHECKLIST

Facility:

330097C UNION OIL SS# 4734 HWY. 99 & GRAPEVINE LEBEC, CA

This checklist is provided to ensure that all necessary packet enclosures were received and that the permittee has obtained all necessary equipment to implement monitoring requirements described within the permit to operate.

Please complete this form and return to the Kern County Environmental Health Services Department, in the self-addressed envelope provided, within 60 days of the permit issue date.

CHECK:

| YES | NO | | |
|----------------|----------|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| _X | | Α. | The packet received contained the following items: 1. A cover letter, a Permit to Operate the Underground Herordone Storage Facility and a return appellant the |
| | <u> </u> | | Hazardous Storage Facility, and a return envelope. No 2. (if ordered) Handbook UT-10, 12 recording, reconciliation and trend analysis forms, and an action |
| | <u> </u> | | chart (for standard inventory control monitoring). 3. (if ordered) Handbook UT-15, 12 recording forms, along with an action chart (for modified inventory |
| * | · . | | control monitoring). 4. an order/request form for UT monitoring manuals - if the manuals were not ordered when the monitoring alternatives fact sheets were returned. |
| | | B. | I have reviewed the information provided within the Permit and find the owner's name and address, facility name and address, operator's name and address, substance codes, and number of tanks to be accurately listed. (If "no" is checked, note appropriate corrections on the back side of this sheet.) |
| _X _X _X | | C. | I have the following required equipment (as described on page 5 of UT-15, or page 6 of UT-10). 1. Acceptable gauging instrument 2. "Striker Plate(s)" in tanks 3. Water-finding paste |
| | | | |

REUEST/ORDER FORMS FOUT MONITORING MANUALS

The Kern County Environmental Health Services Department will need to provide some underground storage facilities updated manuals which describe the methods which must be utilized to monitor underground storage tanks. Regrettably, we must pass on the cost of duplicating and postage of these manuals to you, the cost of which will be \$5.00 per manual. We have in addition placed these manuals at Kinko's Copyhouses and Hoven and Company. You may contact them directly and arrange to have a copy of the manual made for you. Whatever method you choose, please indicate below and return the bottom portion of this form, along with your check if you select items 1 or 2.

| NOTE: | | E TO CHANGES IN STATE LAW, THE MANUALS AND SOME OF |

Mr. Joe Comstock Unocal Corporation 76 Broadway Street Sacramento, CA 95818

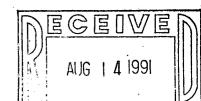

Dear Mr. Comstock:

During a recent complaint inspection by a representative of this department, it was discovered that Unocal Corporation is the owner of an unpermitted underground waste oil tank located at the Unocal Station #4734, Highway 99 and Grapevine in Lebec. Enclosed you will find a map showing the location of the tank for your reference. Also enclosed, you will find an application for permit to operate, and an application for permit for permanent closure to be submitted in lieu of the application for the permit to operate. Completed forms must be returned within 14 days.

Failure to submit an enclosed application may result in legal action. If you have any questions, feel free to call me at (805)861-3636.

Sincerely,

JANE WARREN, HAZARDOUS MATERIALS INSPECTOR

Associated Environmental Systems, Inc.

TO APPROPRIATE COUNTY REGULATORY AGENCY:

Environmental Health 2000 M Street Suite 300 Bakersfield, Ca 93301

IN THE ENCLOSED PACKAGE YOU WILL FIND THE RESULTS FROM THE UNDERGROUND TANK TEST FOR TANKS LOCATED AT:

Muscal | # 4734 Huy 99 Grapavine Libect, Ca

THE ORIGINAL OF ALL DOCUMENTS HAVE BEEN FORWARDED TO THE TANK OWNER. IF YOU HAVE ANY QUESTIONS, PLEASE CALL US AT 805-393-2212 AND ASK FOR THE OPERATIONS DEPARTMENT.

ASSOCIATED ENVIRONMENTAL SYSTEMS, INC. HAS ADVISED OUR CUSTOMER THAT PRECISION TEST RESULTS WERE SENT TO YOU FOR THIS LOCATION.

Associated Environmental Systems, Inc.

Dear Customer:

In the enclosed package you will find your Billing Order (invoice), Precision Tank & Line Test Results Sheet, site plan and test graphs. Copies of this entire package, except the Billing Order, have been submitted by A.E.S. to the governing agency in the specified county.

Each county in California, as well as some cities, have their own tank testing program. Regulations vary from county to county. If you have any questions, please call us. We are always glad to help our customers in any way we can.

Thank you for letting us serve your tank testing needs. Please keep in mind A.E.S. offers other services in the Environmental field.

Thanks again,

Employess of A.E.S.

| | | | l . l | l : | | |

Divide the volume differential by the test time (15 minutes) and multiply by 0.0158311, which will convert the volume differential from milliliters per minute to gallons per hour.

The conversion constant is found by :

(60 min/hr)/(3790 ml/gal) = 0.0158311 (min/hr) (gal/ml)

The conversion constant causes the milliliters and minutes to cancel out.

Ex. If the level dropped 3ml in 15 minutes then:

3/15-ml-/min-X_0.0158311-(min/hr)-(gal/ml)-=-0.003-gal/hr.

RESULTS OF THIS WORK SHEET TO BE COMPILED ON RESULTS SHEET.

CERTIFIED

CONCLUSION - NFPA 329 criterion of +/- 0.05 GPA is used to certify tightness

CERTIFICATION

established by the Mational Five Protection Association Pamphlet 329 for Precision Testing. LOKATOR according to all standard operating procedures. Those indicated as tight at full system meet the criterion This is to certify that the above tank systems were tested, using the HUNTER ENVIRONMENTAL SERVICES, INC. LEAK

Tests Conducted and Certified By: Test Van No. 19

CONDITIONS AS FOLLOWS:

Standard Instructions

1. This permit applies only to the modification of an existing facility involving <u>installation of overfill containers</u>, extractors. Nake any repairs vapor and or vent lines.

.POST ON PREMISES......

2. All construction to be as per facility plans approved by this department and verified by inspection by Permitting Authority.

- 3. All equipment and materials in this construction must be installed in accordance with all manufacturers' specifications.
- 4. Permittee must contact Permitting Authority for on-site inspection(s) with 48-hour advance notice.
- 5. Construction inspection record card is included with permit given to Permittee. This card must be posted at jobsite prior to initial inspection. Permittee must contact Permitting Authority and arrange for each group of required inspections numbered as per instruction on card. Generally, inspections will be made of:
 - a. Tank and backfill
 - b. Overfill protection and leak detection/monitoring
 - c. Electrical conduits associated with the tank.
 - d. Any other inspection deemed necessary by Permitting Authority.
- 6. All underground metal connections (e.g. piping, fitting, fill pipes) to tank(s) must be electrically isolated, and wrapped to a minimum 20 mil thickness with corrosion-preventive, gasoline-resistant tape or otherwise protected from corrosion.

Laurel Funk Kern County Environmental Health 2700 "M" Street, Suite 300 Bakersfield, CA 93301

Re: Unocal #4734, Hwy. 99 & Grapevine, Lebec

Dear Laurel:

The manufacturer and model of overspill containment and extractor assemblies to be installed at the above-referenced location are as follows:

The Overspill Containers are OPW No. 1 The Extractors are OPW 233VM

If you have any further questions, please do not hesitate to contact me at (209)688-1980.

Respectfully Submitted,

Mark B. Yamamoto

ENVIRONMENTAL HEALTH

Re: Unocal #4734, Hwy 99 & Grapevine, Lebec, Ca.

Dear Mr. Yap

On July 20, 1989 a Petro Tite System Test was performed at the above-referenced location. The test was performed by George Yarbrough, LCI Technician. The NFPA Code 329.02 criteria for a tight system is a maximum loss of .05 gallons per hour. Because of the almost infinite variables involved, this is not intended to be a mathematical tolerance and is not the permission of actual leakage.

During the stand-pipe test procedure the internal liquid hydrostatic pressure applied to the underground tank system is generally two to three times greater than normal liquid storage pressures. This increase in hydrostatic pressure will amplify the indicated rate of leak accordingly.

SYSTEM TEST Tank No. 3 - North Size - 280 gallons Product - Waste Oil

The test showed a minus .009 gallons per hour. Based on the above criteria, we find the tank tested mathematically tight.

This concludes our test and findings. If you have any questions regarding the results, please contact me. For your convenience a copy of the test results has been sent to the County.

We have enjoyed working with you on this project. If you need any further information, please feel free to call.

Regards,

Johnny A. Ex

Tank Testing Coordinator

*LEVEL

- Inches from Tank Bottom to Test Level

AIR

- Absolute Leak Rate (Measured Leak Rate - Temperature Compensation) in

Gallons Per Hour. CONCLUSION - NFPA 329 criterion of +/- 0.05 GPA is used to certify tightness.

This is to certify that the above tank systems were tested, using the HUNTER ENVIRONMENTAL SERVICES, INC. LEAK LOKATOR according to all standard operating procedures. Those indicated as tight at full system meet the criterion established by the National Fire Protection Assn. Pamphlet 329 for Precision Testing.

Date Test Conducted: 5-29-89

Team Manager: ED GULLEY

Associate: DALE BOBER

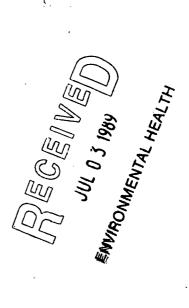

Test Certification By:

Pat Wheeler, Operations Manager Hunter Environmental 597 Center Avenue, Suite 350
