When inhaled at high concentrations, CO combines with hemoglobin in the blood and reduces the oxygen-carrying capacity of the blood. This results in reduced oxygen reaching the brain, heart, and other body tissues. This condition is especially critical for people with cardiovascular diseases, chronic lung disease, or anemia. At very high levels, which are possible indoors or in other enclosed environments, CO can cause dizziness, confusion, unconsciousness and death.[21] Very high levels of CO are not likely to occur outdoors; however, when CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease since these people already have a reduced ability for getting oxygenated blood to their hearts and are especially vulnerable to the effects of CO when exercising or under increased stress.[22] In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart

22 Ibid.

accompanied by chest pain also known as angina.[23] According to CARB, the most common effects of CO exposure are fatigue, headaches, confusion, and dizziness due to inadequate oxygen delivery to the brain.[24] For people with cardiovascular disease, short-term CO exposure can further reduce their body's already compromised ability to respond to the increased oxygen demands of exercise, exertion, or stress. Inadequate oxygen delivery to the heart muscle leads to chest pain and decreased exercise tolerance.[25] Unborn babies, infants, elderly people, and people with anemia or with a history of heart or respiratory disease are most likely to experience health effects with exposure to elevated levels of CO.[26]

Particulate Matter

PM_{10} and $PM_{2.5}$ can be inhaled into air passages and the lungs and can cause adverse health effects. Particulate matter in the atmosphere results from many kinds of dust- and fume-producing industrial and agricultural operations, fuel combustion, and atmospheric photochemical reactions. Some sources of particulate matter, such as demolition and construction activities, are more local in nature, while others, such as vehicular traffic, have a more regional effect. Very small particles of certain substances (e.g., sulfates and nitrates) can cause lung damage directly, or can contain adsorbed gases (e.g., chlorides or ammonium) that may be injurious to health.

As long ago as 1999, BAAQMD CEQA Guidelines reported that studies showed that elevated particulate levels contribute to the death of approximately 200 to 500 people per year in the Bay Area. Compelling evidence suggests that $PM_{2.5}$ is by far the most harmful air pollutant in the Bay Area air in terms of the associated impact on public health. A large body of scientific evidence indicates that both long-term and short-term exposure to $PM_{2.5}$ can cause a wide range of health effects (e.g., aggravating asthma and bronchitis, causing visits to the hospital for respiratory and cardiovascular symptoms, and contributing to heart attacks and deaths) (BAAQMD, 2017a).[27] According to CARB, both PM_{10} and $PM_{2.5}$ can be inhaled, with some depositing throughout the airways.[28] PM_{10} is more likely to deposit on the surfaces of the larger airways of the upper region of the lung while $PM_{2.5}$ is more likely to travel into and deposit on the surface of the deeper parts of the lung, which can induce tissue damage, and lung inflammation.[29] Short-term (up to 24 hours duration) exposure to PM_{10} has been associated primarily with worsening of respiratory diseases, including asthma and chronic obstructive pulmonary disease, leading to hospitalization and emergency department visits. The effects of long-term (months or years) exposure to PM_{10} are less clear, although studies suggest a link between long-term PM_{10} exposure and respiratory mortality and the International Agency for Research on Cancer published a review in 2015 that

29 Ibid.

concluded that particulate matter in outdoor air pollution causes lung cancer.[30] Short-term exposure to $PM_{2.5}$ has been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days and long-term exposure to $PM_{2.5}$ has been linked to premature death, particularly in people who have chronic heart or lung diseases, and reduced lung function growth in children.[31] According to CARB, populations most likely to experience adverse health effects with exposure to PM_{10} and $PM_{2.5}$ include older adults with chronic heart or lung disease, children, and asthmatics.[32] Children and infants are susceptible to harm from inhaling pollutants such as PM_{10} and $PM_{2.5}$ compared to healthy adults because they inhale more air per pound of body weight than do adults, spend more time outdoors, and have developing immune systems.[33]

Other Criteria Pollutants

Sulfur dioxide (SO_2) is a combustion product of sulfur or sulfur-containing fuels such as coal. SO_2 is also a precursor to the formation of atmospheric sulfate and particulate matter (both PM_{10} and $PM_{2.5}$) and contributes to potential atmospheric sulfuric acid formation that could precipitate downwind as acid rain. In the Bay Area, high concentrations of SO_2 are only a concern in areas close to refinery operations. According to the USEPA, short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult.[34] According to CARB, health effects at levels near the State one-hour standard are those of asthma exacerbation, including bronchoconstriction accompanied by symptoms of respiratory irritation such as wheezing, shortness of breath and chest tightness, especially during exercise or physical activity.[35] Exposure at elevated levels of SO_2 (above 1 ppm) results in increased incidence of pulmonary symptoms and disease, decreased pulmonary function, and increased risk of mortality.[36] Children, the elderly, and those with asthma, cardiovascular disease, or chronic lung disease (such as bronchitis or emphysema) are most likely to experience the adverse effects of SO_2.[37, 38]

Lead has a range of adverse neurotoxic health effects, and was formerly released into the atmosphere primarily via the combustion of leaded gasoline. The phase-out of leaded gasoline in California resulted in decreasing levels of atmospheric lead. In the Bay Area, high concentrations of lead are only a concern in areas close to general aviation airports. Lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems and

the cardiovascular system, and affects the oxygen carrying capacity of blood.[39] The lead effects most commonly encountered in current populations are neurological effects in children, such as behavioral problems and reduced intelligence, anemia, and liver or kidney damage.[40] Excessive lead exposure in adults can cause reproductive problems in men and women, high blood pressure, kidney disease, digestive problems, nerve disorders, memory and concentration problems, and muscle and joint pain.[41]

CHAPTER 2
Modeling Methods and Assumptions

Construction Modeling

Project construction-related emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ exhaust (e.g., off-road equipment exhaust and on-road vehicle exhaust) were estimated primarily using the California Emissions Estimator Model (CalEEMod) version 2016.3.2. Additional calculations (i.e., emissions from vendor truck and haul truck idling) were prepared outside of CalEEMod to supplement the analysis. Detailed emission calculations are provided in Appendix A of this memo. Sections below present the primary assumptions used to model construction emissions. **Table 1**, **Project Characteristics**, shows the project's proposed land uses.

The following modeling methods and assumptions were used to estimate construction emissions.

1. Construction Schedule and Off-road Equipment

    a. Schedule

        i. **Table 2**, **Estimated Project Construction Schedule***,* shows the construction phasing schedule that is consistent with the HRA. The schedule is based on project-specific construction-phasing schedule provided by the City (including information provided by Costco) for Phase 1A and the total duration of Phase 1B and Phase 2.

    b. Off-road construction equipment

        i. **Table 3, Construction Equipment Fleet,** shows the off-road equipment fleet used in this analysis. The equipment list was estimated based on what the City (including information provided by Costco) provided for Phase 1A and the CalEEMod default fleet for various land uses for Phase 1B and Phase 2. Equipment horsepower and load factors are CalEEMod default values.

        ii. To calculate mitigated off-road construction emissions, all equipment greater than 50 horsepower was modeled as Tier 3 engines in the CalEEMod Construction mitigation tab.

2. On-road Sources

    a. Vendor and haul truck travel

        i. Daily vendor trips delivering materials and supplies to the project site would occur during all phases of construction. Consistent with the HRA, this analysis assumed a

total of 1,360 truck trips for soil import, 2,040 concrete truck trips, 3,330 vendor truck trips, and 39 paving truck trips over the entire construction duration for both Phase 1 and Phase 2. Phase 1A construction would require approximately 400 soil import truck trips, 600 concrete truck trips, 1,050 vendor truck trips, and 7 paving truck trips; Phase 1B construction would require approximately 340 soil import truck trips, 510 concrete truck trips, 970 vendor truck trips, and 11 paving truck trips; and Phase 2 construction would require 620 soil import truck trips, 930 concrete trucks, 1,310 vendor truck trips, and 21 paving truck trips (all numbers above refer to round-trips). The number of vendor trips is based on project-specific information provided by the applicant. Vendor trip lengths are the CalEEMod default of 7.3 miles.

b. Vendor truck and haul truck idling

   i. Idling activities would total 15 minutes per trip, representing three separate 5-minute idling occurrences: check-in to the site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the site or queuing at the site boundary upon departure.

   ii. Idling emission rates for the heavy-heavy duty truck (HHDT) category were generated using the California Air Resources Board's (CARB) 2017 EMission FACtor (EMFAC2017) model.

c. Worker trips

   i. Daily worker trips traveling to the project site would occur during all phases of construction. The number of workers for each phase were estimated in CalEEMod based on the equipment quantities in each phase of construction.

   ii. Worker trip lengths are the CalEEMod default of 10.8 miles.

3. Architectural Coatings

   i. The analysis estimated emissions of reactive organic gases (ROG) from applications of architectural coatings (i.e., paint) using CalEEMod and the CalEEMod default emission factors.

Operational Modeling

This analysis used CalEEMod version 2016.3.2 to estimate operational emissions associated with project trips (light-duty vehicles), energy consumption, and miscellaneous area sources including natural gas combustion and consumer products. Additional operational emission calculations were prepared outside of CalEEMod, including those for the gas station, emergency generators, delivery trucks, and transportation refrigeration units (TRU). Detailed calculations are presented in Appendix A. The primary assumptions used to model operational emissions are presented below.

1. Mobile Sources – non-delivery vehicles

    a. Mobile source emissions were calculated using CalEEMod and Project-specific trip rates. Compared to the land uses in the traffic study, the square footage of some land uses have changed slightly, therefore, the trip rates in the Project's traffic study were prorated based on square footage for each land use.[42]

    b. The CalEEMod default fleet mix was modified to include all vehicle types except heavy-heavy-duty (HHD) trucks because emissions for HHD trucks are calculated separately as described below.

2. Energy and Area Sources

    a. Emissions from natural gas combustion in heaters and boilers and miscellaneous area sources, including landscaping equipment, consumer products, paint and other architectural coatings, were generated using CalEEMod. Emissions were based on the square footage of the proposed land uses. Default CalEEMod energy usage rates were used in the modeling. Since most of the project's land uses are commercial and would not be associated with extensive consumer product use (such as hairsprays and aerosols), this analysis assumed consumer product emissions would only be attributed to the hotel land use.

3. Gas Station

    a. Stationary emission sources

        i. This analysis assumes the gas station will comply with the best achievable control technology (BACT) and use enhanced Phase I and Phase II vapor recovery systems (EVR). Emissions from stationary sources at the gas station were calculated based on the annual gasoline throughput of approximately 26,640,000 gallons, as provided by the City, and the CARB recommended total organic gases (TOG) emission factors for EVR systems.[43]

[42] Johnson Drive Economic Development Zone Transportation Impact Analysis, Fehr & Peers, 2015.

[43] Revised Emissions Factors for Gasoline Marketing Operations at California Gasoline Dispensing Facilities. December 23, 2013 (CARB, 2013)., Fehr & Peers, 2015.

b. Mobile emission sources

   i. In addition to emissions associated with fuel delivery trucks and customer trips as discussed above for operational mobile sources, this analysis also included tailpipe ROG emissions from customer vehicle queuing/idling and startup. It was assumed each customer vehicle will idle at the gas station for a total of 10 minutes. This is a conservative assumption which is likely to overestimate the average customer idling time and idling-related emissions. The idling emission factors for customer vehicles at gas station were derived from EMFAC2017 emission factor for gasoline-fueled light-duty vehicles at 5 miles per hour (mph).

4. Emergency Generators

   a. The analysis assumed the Costco and hotel would each have a diesel emergency generator. The generators would be located at ground level. Each generator would have a rating of 1,300 horsepower (1,000 kilowatts). Diesel-powered emergency generator emissions were estimated outside of CalEEMod using emissions limits established for new stationary emergency standby diesel-fueled internal combustion engines in CARB's Airborne Toxic Control Measure for Stationary Compression Ignition Engines final regulation for model year 2008 and newer engines of HP > 750.[44] Emissions were estimated based on a maximum annual non-emergency operation schedule of 50 hours each, consistent with emergency standby engine testing limits established in BAAQMD Regulation 9-8-330.3.

5. Delivery Truck Travel and Idling

   a. This study conservatively assumed the delivery truck trips were additional to the project traffic estimated in the traffic study, i.e., all trips in the traffic study were assumed to be non-HHD vehicle trips and have already been accounted for in the non-delivery vehicles mobile source category above.

   b. Daily delivery truck vehicle trip emissions were estimated outside of CalEEMod using emission factors from EMFAC2017 for the HHDT vehicle category. It was assumed that all trucks were diesel-powered. The Costco delivery truck fleet has an average model year of 2016 based on information provided by the City; therefore, emission factors for model year 2016 were applied to Costco delivery trucks. Non-Costco delivery trucks utilized emission factors based on an aggregate model year from EMFAC2017.

   c. The number of daily delivery trucks for Phase 1A were provided by the City. Delivery trucks for Phase 1B and Phase 2 were estimated based on the Project's traffic study and the CalEEMod default fleet percentage for the HHDT vehicle category. Number of truck trips were estimated by multiplying the traffic study's daily trip rate by the HHDT portion of the CalEEMod fleet mix.[45] The number of trucks operating per day (i.e. round trips) are shown below in **Table 4**, **Daily Truck Deliveries**.

   d. Travel emissions for Costco delivery trucks, including warehouse and gasoline fuel trucks, were based on travel distances to their respective distribution facilities which were

[44] California Air Resources Board. 2011. Final Regulation Order: *Airborne Toxic Control Measure For Diesel Particulate Matter From Portable Engines Rated At 50 Horsepower And Greater*. February 11. Available at https://www.arb.ca.gov/portable/perp/perpatcm.pdf. Accessed January 2019.

[45] Johnson Drive Economic Development Zone Transportation Impact Analysis, Fehr & Peers, 2015.

provided by the City. Costco warehouse trucks delivering goods to Costco have an estimated trip length of 24.5 miles based on the distance to the Tracy depot facility. Costco trucks delivering fuel to the gas station have an estimated trip length of 30 miles based on the distance to the nearest fuel delivery location in Benicia. Travel emissions for non-Costco delivery trucks were estimated assuming 7.3 miles per trip, which is the CalEEMod default trip length for "commercial-nonwork" trip types. Commercial-nonwork trips represent trips associated with commercial land uses other than customers or workers, such as delivery vehicles of goods.[46]

e. Idling emissions were estimated assuming 15 minutes of idling per trip, representing three separate 5-minute idling occurrences: check-in to the site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the site or queuing at the site boundary upon departure.

f. Starting emissions were estimated based on the total number of trips for delivery trucks.

6. Transportation Refrigeration Units (TRUs)

a. Delivery trucks would generate exhaust emissions from the use of truck-mounted diesel-powered TRUs. Consistent with the HRA, it was assumed that 75 percent of Costco trucks, 25 percent of all other project trucks (including hotel and retail delivery trucks) operate a TRU for two hours per trip on any given day. TRU emissions were based on emission factors from CARB's ATCM and Tier 4 Final standards for diesel engines.

TABLE 4
DAILY TRUCK DELIVERIES [a]

Source	Trucks per Day (round trips) [b]
Phase 1	
Costco Store	10
Costco Gas Station	6
Hotel/Retail	29
Phase 2	
Retail	83

NOTES:

[a] Daily trucks for the Costco store, and the Costco gas station were based on information from the City (including information provided by Costco). Daily trucks for the hotel and retail land uses were based on the daily trips generated by these land uses, as supplied by the SEIR's Traffic Study, and multiplied by the HHDT default fleet mix percentage from CalEEMod.

[b] The total number of trucks per day represents the number of daily round-trip truck trips assumed in the modeling.

CHAPTER 3
Results

This section summarizes the results of the construction and operations analysis for the Project. Detailed calculations and modeling files are attached in Appendix A.

Construction Emissions

Table 5, Average Daily Unmitigated Construction Emissions by Source, presents the average daily unmitigated construction emissions by source (e.g., off-road equipment). Threshold exceedances are shown in bold text (the BAAQMD thresholds are 54 pounds per day of ROG, NO_X, and $PM_{2.5}$ exhaust and 82 pounds per day of PM_{10} exhaust). As shown, except for the unmitigated NO_X emissions during Phase 1, construction emissions are below the applicable BAAQMD significance thresholds. The average daily NO_X emissions for Phase 1 are 55.7 lbs/day, exceeding the BAAQMD threshold of 54 lbs/day. Therefore, mitigation is required to reduce Phase 1 construction emissions. Compared to the conclusion of less than significant for all criteria pollutants in Draft SEIR regarding construction emissions, the changed conclusion in this updated analysis can be attributed to the updated project details including square footage of some proposed land uses, construction phasing, off-road construction equipment fleets, and truck trips.

[b] Categories defined as follows:
Off-Road Equipment = operating emissions from heavy-duty equipment, such as bulldozers, cranes, and excavators. Refer to Tables 3 for equipment activity assumptions. Emissions were modeled using CalEEMod.
Paving = Fugitive ROG emissions from asphalt paving. Emissions were modeled using CalEEMod.
Architectural Coatings = Fugitive ROG emissions from the application of architectural coatings. Emissions were modeled using CalEEMod.
Vendor/Hauling - travel = Travel emissions from heavy-duty on-road vendor/haul trucks. Emissions were modeled using CalEEMod.
Vendor/Haul Truck idling = Operating emissions from heavy-duty on-road vendor trucks. The analysis assumed that each haul truck would idle 15 minutes while unloading soil or material on the project site. Emissions were modeled outside CalEEMod using EMFAC2017 emission factors.
Worker Trips = Operating emission from employee vehicles. Emissions were modeled using CalEEMod.

ABBREVIATIONS:
ROG = reactive organic gases
NO_X = oxides of nitrogen
PM_{10} = particulate matter less than or equal to 10 microns in diameter
$PM_{2.5}$ = particulate matter less than or equal to 2.5 microns in diameter
CalEEMod = CALifornia Emissions Estimator MODel

SOURCE: ESA, 2019

As shown in Table 5 above, the average daily unmitigated construction emissions of NOx for Phase 1 would exceed the BAAQMD threshold of 54 lbs/day and mitigation measures are required. Consequently, implementation of **Mitigation Measure M-AQ-1** would require all construction equipment greater than 50 horsepower to meet USEPA Tier 3 engine emissions standards. With implementation of Mitigation Measure AQ-1, Phase 1 construction emissions of NO_X would be reduced to 41.9 lbs/day, below the BAAQMD threshold, as shown below in **Table 6, Average Daily Mitigated Construction Emissions by Source**. Therefore, Phase 1 construction impacts would be reduced to a less-than-significant level with mitigation. Construction-period emissions of other criteria pollutants would be below BAAQMD thresholds during Phase 1.

As also shown in Table 5, average daily unmitigated construction emissions for Phase 2 would not exceed the BAAQMD thresholds for any of the criteria pollutants, and therefore no mitigation would be required for Phase 2 construction.

[b] Categories defined as follows:
Off-Road Equipment = operating emissions from heavy-duty equipment, such as bulldozers, cranes, and excavators. Refer to Tables 3 for equipment activity assumptions. Emissions were modeled using CalEEMod.
Paving = Fugitive ROG emissions from asphalt paving. Emissions were modeled using CalEEMod.
Architectural Coatings = Fugitive ROG emissions from the application of architectural coatings. Emissions were modeled using CalEEMod.
Vendor/Hauling - travel = Travel emissions from heavy-duty on-road vendor/haul trucks. Emissions were modeled using CalEEMod.
Vendor/Haul Truck idling = Operating emissions from heavy-duty on-road vendor trucks. The analysis assumed that each haul truck would idle 15 minutes while unloading soil or material on the project site. Emissions were modeled outside CalEEMod using EMFAC2017 emission factors.
Worker Trips = Operating emission from employee vehicles. Emissions were modeled using CalEEMod.

ABBREVIATIONS:
ROG = reactive organic gases
NO_X = oxides of nitrogen
PM_{10} = particulate matter less than or equal to 10 microns in diameter
$PM_{2.5}$ = particulate matter less than or equal to 2.5 microns in diameter
CalEEMod = CALifornia Emissions Estimator MODel

SOURCE: ESA, 2019

Fugitive Dust

Project-related demolition, excavation, grading, and other construction activities could cause wind-blown dust that would contribute particulate matter into the local atmosphere. Dust can be an irritant causing watering eyes or irritation to the lungs, nose, and throat. Depending on exposure, adverse health effects can occur due to particulate matter in general and also due to specific contaminants such as lead or asbestos that may be constituents of soil or the demolished buildings. Additional potential health effects related to exposure to particulate matter are discussed in Chapter 1.

Rather than quantifying fugitive dust emissions to evaluate impacts, BAAQMD emphasizes the implementation of appropriate mitigation measures for dust control during all construction activities. The BAAQMD Guidelines provide feasible control measures for construction emission of PM_{10} and implementation of these measures would ensure that construction impacts from fugitive dust would be less than significant. The BAAQMD recommended dust control measures are listed in DSEIR **Mitigation Measure 4.B-1**. With the implementation of this Mitigation Measure, the Project's fugitive dust impacts would be mitigated to less than significant.

Mitigation of Construction-Related Air Quality Impacts

To address NO_X emissions that would exceed significance thresholds during construction of the proposed project, **Mitigation Measure M-AQ-1, Construction Emissions Minimization** has been identified and would apply during all construction phases.

> **Mitigation Measure M-AQ-1: Construction Emissions Minimization.** The project sponsor or the project sponsor's contractor shall comply with the following:
>
> 1. All off-road equipment (including water construction equipment used onboard barges) greater than 50 horsepower shall have engines that meet Tier 3 off-road emission standards.
> 2. Diesel engines, whether for off-road or on-road equipment, shall not be left idling for more than two minutes, at any location, except as provided in exceptions to the applicable state regulations regarding idling for off-road and on-road equipment (e.g., traffic conditions, safe operating conditions). The contractor shall post legible and visible signs in English, Spanish, and Chinese, in designated queuing areas and at the construction site to remind operators of the two-minute idling limit.
> 3. The contractor shall instruct construction workers and equipment operators on the maintenance and tuning of construction equipment, and require that such workers and operators properly maintain and tune equipment in accordance with manufacturer specifications.

Operational Emissions

Due to the phasing of Project construction, there are three potential operational emissions scenarios: (1) operation upon Phase 1 buildout in 2021 (Phase 1 Operation); (2) Phase 1 operation plus Phase 2 construction in 2030 (Phase 1 Operation + Phase 2 Construction); and (3) operation of full Project buildout in 2031 of Phase 1 and Phase 2 (Full Operation). The Draft SEIR only evaluated emissions for full-buildout of the Project, which was originally anticipated to occur by 2020. Because the Project is now anticipated to be constructed in two phases, emissions for each phase are presented below.

Overall, the Draft SEIR's estimation of full buildout operational criteria pollutants emissions concluded that buildout would result in significant and unavoidable impacts for NOx and PM_{10}, whereas this updated analysis indicates less than significant impacts for all operational scenarios including the full buildout operations. There are a number of reasons for this difference, including

the use of an updated version of CalEEMod, updated vehicle trips, revised vehicle fleet for project-generated traffic, additional emissions for light-duty vehicle idling at the gas station, new calculations for heavy-duty delivery vehicle traveling and idling using the EMFAC2017 model, revised buildout year (2031 vs. 2025), additional emissions for TRUs and fugitive ROG emissions at the gas station, incorporation of the 2019 Title 24 energy standards, and revised consumer product emissions. These differences are further discussed below.

Phase 1 Operation

Phase 1 operation would start in year 2021 and no new project activity is assumed to be added until year 2030 when Phase 2 construction starts. Given the general trend of more stringent environmental regulations and the advancement of cleaner technologies for future years, year 2021 is likely the highest emissions year for Phase 1 operation. **Table 7, Phase 1 (2021) Average Daily Unmitigated Operational Emissions by Source**, and **Table 8, Phase 1 (2021) Total Annual Unmitigated Operational Emissions by Source,** present the average daily and total annual uncontrolled operational emissions by source for the 2021 Phase 1 Operation scenario, respectively. As shown in Table 7, total ROG emissions would exceed the BAAQMD significance threshold of 54 pounds per day. Therefore, mitigation is required to reduce ROG emissions. All other pollutants would be below the applicable BAAQMD significance thresholds.

As shown in Table 7 above, the average daily unmitigated operational emissions of ROG for Phase 1 would exceed the BAAQMD threshold of 54 lbs/day and mitigation measures would be required. Consequently, implementation of **Mitigation Measure M-AQ-2** will require that all future tenants and building owners for Phase 1 land uses use low-VOC paints during maintenance activities. The VOC content of paints shall not exceed 10 grams of VOCs per liter. With implementation of Mitigation Measure M-AQ-2, Phase 1 ROG emissions would be 53.85 lbs/day which is below the BAAQMD threshold of 54 lbs/day, as presented in **Table 9, Phase 1 (2021) Average Daily Mitigated Operational Emissions by Source.** Therefore, with mitigation, Phase 1 operational impacts would be reduced to a less-than-significant level. As noted above, Operational emissions of other criteria pollutants would be below applicable BAAQMD thresholds during Phase 1.

Mitigation of Phase 1 Operational-Related Air Quality Impacts

To address ROG emissions that would exceed significance thresholds during operation of Phase 1, **Mitigation Measure M-AQ-2, Low-VOC Architectural Coatings** has been identified and would apply during operation of Phase 1.

> **Mitigation Measure M-AQ-2: Low-VOC Architectural Coatings.** The project sponsor shall require that all future tenants at the Project site use low- and super-compliant VOC architectural coatings during any maintenance or repainting activities. "Low-VOC" refers to paints that meet the more stringent regulatory limits in South Coast Air Quality Management District rule 1113; however, many manufacturers have reformulated to levels well below these limits. These are referred to as "Super-Compliant" architectural coatings.

Phase 1 Operation plus Phase 2 Construction (2030-2031)

Table 10, Average Daily Unmitigated Construction Plus Operational Emissions, and **Table 11, Total Annual Unmitigated Construction Plus Operational Emissions**, present the average daily and total annual uncontrolled emissions by source (e.g., area) for the Phase 1 Operation plus Phase 2 Construction scenario, respectively. Upon Phase 2 construction commencing in 2030, all existing land uses would be removed along with their associated operational emissions. Therefore, the analysis takes into account daily and annual emissions from approximately 224,688 square feet of existing uses within the EDZ area. Emissions associated with existing land uses were subtracted from total project emissions at full buildout to determine the *net* emissions

associated with the Project.[47] The resulting net emissions are compared to the BAAQMD significance thresholds.

As shown in Tables 10 and 11, all criteria pollutant emissions are below the below the applicable BAAQMD significance thresholds and no mitigation is required.

TABLE 10
AVERAGE DAILY UNMITIGATED CONSTRUCTION PLUS OPERATIONAL EMISSIONS

	Average Daily Emissions (pounds/day)			
Source	**ROG**	**NO_X**	**PM_{10} [a]**	**$PM_{2.5}$ [a]**
Phase 2 Construction	10.58	13.22	0.28	0.28
Phase 1 Operation	48.97	36.98	54.78	15.12
Construction + Operation Subtotal	59.54	50.20	55.06	15.40
Existing Operational Emissions [b]	13.00	27.00	10.00	3.00
Net Project Emissions [c]	*46.54*	*23.20*	*45.06*	*12.40*
BAAQMD Thresholds	54	54	82	54
Thresholds Exceeded?	No	No	No	No

NOTES:

[a] Construction emissions of PM_{10} and $PM_{2.5}$ are exhaust emissions only; operational emissions of PM_{10} and $PM_{2.5}$ are exhaust and fugitive dust.

[b] Existing emissions obtained from the Air Quality section of the Draft SEIR.

[c] Net Project Emissions = construction + operation subtotal for the Project minus existing operational emissions.

ABBREVIATIONS:
ROG = reactive organic gases
NO_X = oxides of nitrogen
PM_{10} = particulate matter less than or equal to 10 microns in diameter
$PM_{2.5}$ = particulate matter less than or equal to 2.5 microns in diameter

SOURCE: ESA, 2019

TABLE 11
TOTAL ANNUAL UNMITIGATED CONSTRUCTION PLUS OPERATIONAL EMISSIONS

	Total Annual Emissions (tons/year)			
Source	**ROG**	**NO_X**	**PM_{10} [a]**	**$PM_{2.5}$ [a]**
Phase 2 Construction	1.39	1.73	0.04	0.04
Phase 1 Operation	8.94	6.75	10.00	2.76
Construction + Operation Subtotal	10.32	8.48	10.03	2.80
Existing Operational Emissions [b]	2.00	4.00	2.00	1.00

Full Buildout Operation (2031)

Table 12, Full Buildout (2031) Average Daily Unmitigated Operational Emissions by Source and **Table 13, Full Buildout (2031) Total Annual Unmitigated Operational Emissions by Source**, below present average daily and total annual uncontrolled operational emissions by source (e.g., area) for the Full Buildout Operation (2031) scenario, respectively. As part of the Project's development, existing land uses would be removed, along with their associated operational emissions. Therefore, the analysis compares the Project's net emissions (Project minus Existing) to the thresholds. As shown, emissions during full buildout operations are below the applicable BAAQMD significance thresholds, potential impact would therefore be less than significant and mitigation measures are not needed.

Overall, the Draft SEIR's estimation of full buildout operational criteria pollutants emissions concluded that buildout would result in significant and unavoidable impacts for NO_X and PM_{10}, whereas this updated analysis indicates less than significant impacts for all operational scenarios including the full buildout operations. A comparison of emissions from the Draft SEIR and the updated analysis is presented in **Table 14, Comparison of Full Buildout Total Annual Unmitigated Operational Emissions by Source for the Updated Analysis (2031) with the Draft SEIR (2025)**, below. Compared to the Draft SEIR, the updated criteria pollutant emissions analysis includes the following major modeling revisions (additional detail on these methods is provided in Chapter 2 above):

1. Updated vehicle trips were included in the modeling, based on the DEIR traffic study and revised land use values for retail and hotel. This results in slightly fewer overall vehicle trips and slightly lower mobile source emissions compared to the Draft SEIR.

2. Mobile source emissions from project-related vehicle traffic was calculated in CalEEMod for all vehicle types except heavy-heavy-duty (HHD) delivery vehicles. Heavy-duty truck trips were separately modeled outside of CalEEMod using the EMFAC2017 model and added to the trips estimated in the Project's traffic study. The EMFAC2017 emission factors for heavy-duty trucks for ROG and NO_X are lower than the EMFAC2014 emission factors as used in the Draft SEIR, resulting in a decrease in mobile source ROG and NO_X emissions for the Project as compared to the Draft SEIR.

3. Mobile source tailpipe ROG emissions from customer vehicle queuing/idling and startup at the proposed gas station were included in this updated analysis, consistent with the HRA. The Draft SEIR did not include these emissions. This results in an increase in ROG emissions for mobile sources as compared to the Draft SEIR.

4. Emissions from heavy-duty delivery vehicles (including both traveling and idling emissions) were calculated separately from the Project's traffic study trip rates based on truck trip figures for Phase 1 developed in consultation with the Project sponsor (see Chapter 2 for additional discussion) and for Phase 2 using the Project's traffic study trip rates and default CalEEMod heavy-duty vehicle fleet mix. This is consistent with the HRA. This approach differs from the 2014 DEIR which used the default CalEEMod fleet mix for all Project trips as provided in the traffic study, including heavy-duty vehicles and buses. The updated modeling approach reflects a more accurate method of estimating emissions from heavy-duty delivery vehicles than was conducted in the Draft SEIR. This results in an overall decrease in emissions for mobile sources as compared to the Draft SEIR.

5. The Draft SEIR assumed a full buildout year of 2025 for the Project. The revised analysis assumes a 2031 full buildout year. The later buildout year reflects lower vehicle emission rates, as vehicles are cleaner and more efficient in 2031 vs. 2025. This difference is a direct product of the EMFAC2014 model as used in CalEEMod, and is a consequence of continuing improvements in vehicle efficiency, and a concomitant decrease in emissions, over time. This change results in reduced mobile source criteria pollutant emissions as compared to the Draft SEIR.

6. The Draft SEIR used CalEEMod version 2013.2.2, while the updated criteria pollutant emissions analysis uses CalEEMod version 2016.3.2. There are inherent differences in the two models, including some bug fixes, resulting in different emissions for many sources. For example, CalEEMod version 2016.3.2 incorporates EMFAC2014, while version 2013.2.2 incorporates EMFAC2011; therefore, version 2016.3.2 utilizes updated and more current and more accurate emission factors for vehicles and more accurate fleet mix values based on updated DMV registration data. The change in emissions as compared to the Draft SEIR depends on the emissions source.

7. CalEEMod version 2013.2.2 (as used in the Draft SEIR) incorporates 2008 Title 24 Energy Efficiency Standards, whereas CalEEMod version 2016.3.2 incorporates 2016 Title 24 Energy Efficiency Standards.[48] Furthermore, the revised analysis updated the energy intensity values in CalEEMod to reflect 2019 Title 24 Energy Efficiency Standards, resulting in a 30% reduction in nonresidential energy use as compared to the 2016 Title 24 Energy Efficiency Standards.[49] This change results in reductions in natural

gas consumption for building heating and associated criteria pollutant emissions as compared to the Draft SEIR.

8. Emissions were calculated for two emergency diesel generators; one at the Costco warehouse and one in the hotel. The Draft SEIR did not include emissions from emergency diesel generators as none were specifically identified at the time the Draft SEIR was prepared. This results in an increase in criteria pollutant emissions for stationary sources as compared to the Draft SEIR.

9. Emissions were also calculated for truck-mounted diesel-powered TRUs on delivery trucks. The Draft SEIR did not separately include emissions from TRUs. This results in an increase in criteria pollutant emissions for stationary sources as compared to the Draft SEIR.

10. The consumer product usage rate was adjusted to account for the fact that most of the project's land uses are commercial and would not be associated with extensive consumer product use (such as hairsprays and aerosols). This analysis assumed consumer product emissions would only be attributed to the hotel land use. This change results in a substantial decrease in area source ROG emissions for the project as compared to the Draft SEIR.

11. Stationary source evaporative (fugitive) ROG emissions from the proposed gas station were estimated in this updated analysis. This includes customer fueling, fuel spillage, and venting from an underground storage tank. The Draft SEIR did not explicitly include fugitive ROG emissions from the gas station. This results in an increase in ROG emissions for stationary sources as compared to the Draft SEIR.

NOTES:

[a] Categories defined as follows:
Area = Emissions from landscaping equipment, consumer products, and architectural coatings. Refer to Table 1 for the land use type and sizes assumed in the modeling. Emissions were modeled using CalEEMod. Consumer product emissions are only attributed to the hotel land use.
Energy = Emissions from natural gas combustion for space heating and cooking. Refer to Table 1 for the land use type and sizes assumed in the modeling. Emissions were modeled using CalEEMod.
Non-Delivery vehicles (running) = Operating emissions from daily commercial non-delivery vehicle trips. Emission from these trips were estimated using CalEEMod.
Light-duty vehicles (idling at gas station)-Idling emissions from autos queueing in line at gas station. Emissions estimated using EMFAC2017 emissions factors and an idling time of 10 minutes.
Delivery Vehicles (Running + Starting) = Operating emissions from daily commercial delivery vehicle trips. Refer to Table 4 for the daily vehicle trips for each land use type. Emissions were estimated using emission factors from EMFAC2017.
Delivery Vehicles (Idling) = Operating emissions from daily commercial delivery vehicles idling. Emissions were estimated using emission factors from EMFAC2017 and an idling duration of 15 minutes.
Transportation Refrigeration Units (TRUs) = Operating emissions from daily TRU usage at commercial land uses. Emissions were estimated outside of CalEEMod using emission factors from ARB's ATCM and Tier 4 Final emission standards for diesel engines.
Gas Station (Evaporative) = Operating daily evaporative ROG emissions from the gas station, which includes underground storage tank loading and breathing, as well as refueling and fuel spillage.
Costco and Hotel Generators = Operating emissions from diesel-powered emergency generators.

[b] Existing emissions obtained from Air Quality section of Draft SEIR.

[c] Net Emissions = full buildout operational emissions for the Project minus existing operational emissions.

SOURCE: ESA, 2019

Table 14 presents total annual unmitigated operational emissions by source (e.g., area) for the Full Buildout Operation (2031) scenario and compares these emissions to those reported in the Draft SEIR by source for the original buildout year of 2025. Similar to the tables above, emissions from existing land uses would be removed and are subtracted from the Project's operational emissions to determine the net Project's emissions. This table illustrates the differences in emissions between the two analyses.

TABLE 14
COMPARISON OF FULL BUILDOUT TOTAL ANNUAL UNMITIGATED OPERATIONAL EMISSIONS BY SOURCE FOR THE UPDATED ANALYSIS (2031) WITH THE DRAFT SEIR (2025)

	Total Annual Emissions (tons/year)							
	Updated Analysis (2031)				Draft SEIR (2025)			
Source [a]	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**

Full Buildout Operational Emissions	10.06	13.86	16.11	4.45	*9.98*	*19.91*	*17.80*	*5.07*
Existing Emissions [f]	2.00	4.00	2.00	1.00	2.00	4.00	2.00	1.00
Net Emissions [g]	*8.06*	*9.86*	*14.11*	*3.45*	*7.98*	*15.91*	*15.80*	*4.07*

NOTES:

[a] Categories defined as follows:
Area = Emissions from landscaping equipment, consumer products, and architectural coatings. Refer to Table 1 for the land use type and sizes assumed in the modeling. Emissions were modeled using CalEEMod. Consumer product emissions are only attributed to the hotel land use.
Energy = Emissions from natural gas combustion for space heating and cooking. Refer to Table 1 for the land use type and sizes assumed in the modeling. Emissions were modeled using CalEEMod.
Non-Delivery vehicles (running) = Operating emissions from annual commercial non-delivery vehicle trips. Emission from these trips were estimated using CalEEMod.
Light-duty vehicles (idling at gas station)-Idling emissions from autos queueing in line at gas station. Emissions estimated using EMFAC2017 emissions factors and an idling time of 10 minutes.
Delivery Vehicles (Running + Starting) = Operating emissions from annual commercial delivery vehicle trips. Refer to Table 4 for the daily vehicle trips for each land use type. Emissions were estimated using emission factors from EMFAC2017.
Delivery Vehicles (Idling) = Operating emissions from annual commercial delivery vehicles idling. Emissions were estimated using emission factors from EMFAC2017 and an idling duration of 15 minutes.
Transportation Refrigeration Units (TRUs) = Operating emissions from annual TRU usage at commercial land uses. Emissions were estimated outside of CalEEMod using emission factors from ARB's ATCM and Tier 4 Final emission standards for diesel engines.
Gas Station (Evaporative)= Operating annual evaporative ROG emissions from the gas station, which includes underground storage tank loading and breathing, as well as refueling and fuel spillage.
Costco and Hotel Generators = Operating emissions from diesel-powered emergency generators.

[b] Area source emissions differ because the land use values (i.e. square footage and hotel rooms) differ slightly from those in the Draft SEIR and because the consumer product emission rate was revised so that emissions would only be attributed to the hotel land use.

[c] Energy emissions differ because the land use values (i.e. square footage and hotel rooms) differ slightly from those in the Draft SEIR, and because the energy intensity values represent 2019 Title 24 Energy Efficiency Standards vs. 2008 Title 24 Energy Efficiency Standards.

[d] Non-Delivery vehicle emissions differ for the following reasons: a more recent version of CalEEMod was used to estimate emissions, trip rates were revised, the fleet mix for project-generated traffic was updated to represent all vehicle types except heavy-duty delivery vehicle trips, and the updated emissions represent vehicle emission rates for calendar year 2031 instead of 2025. In addition, the Draft SEIR did not separate mobile source emissions into running and idling emissions for vehicles; the totals presented here represent total mobile source emissions from all vehicle types from all processes.

[e] The Draft SEIR did not separately estimate emissions for these operational sources.

[f] Existing emissions obtained from Air Quality section of Draft SEIR.

[g] Net Emissions = full buildout operational emissions for the Project minus existing operational emissions.

Carbon Monoxide (CO) Emissions

Due to differences in the Draft SEIR's and the updated analysis' proposed land use sizes, daily trips and peak hour trips would change. When comparing the Draft SEIR's daily trips to the updated analysis' daily trips, the updated analysis would have no greater than one percent increase for Phase 1 project trips, and less than 19 percent increase for full buildout project trips. Overall, if the trip rates were prorated based on the land use square footage, the project's peak hour total trip rates would be less than 1,761 trips per hour, which is very small compared to the

BAAQMD's screening threshold of 44,000 vehicles per hour at an affected intersection. Therefore, same as the Draft SEIR's conclusion, CO impacts would remain less than significant.

Project Contribution to Cumulative Health Effects

No single project by itself would be sufficient in size to result in regional nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulative adverse air quality impacts, and while its emissions may be individually limited, it could be cumulatively considerable when taken in combination with past, present, and future development projects.[50]

The project-level thresholds for criteria air pollutants are based on levels at which new sources are not anticipated to contribute to an air quality violation or result in a considerable net increase in criteria air pollutants. Therefore, if a project leads to a significant impact individually, the project would also be considered to contribute significantly to the cumulative impact.

A CEQA air quality analysis of criteria air pollutants is based on significance thresholds that were set at emission levels tied to the region's attainment status.[51] The CEQA significance thresholds are emission levels above which stationary air pollutant sources permitted by the BAAQMD (typically, industrial facilities, refineries, and the like) must offset their emissions through purchase of emissions "offsets" from other facilities that have reduced emissions, either through installation of emissions controls or removal of an emissions source. Such offset levels allow for regional development while keeping the cumulative effects of new sources at a level that will not impede attainment of the NAAQS. Therefore, a CEQA air quality analysis of criteria air pollutants is essentially an analysis of regional, cumulative air quality impacts and a given project's contribution to those impacts.

As described in Chapter 1, Health Effects of Criteria Pollutants, compliance with the ambient air quality standards indicates that regional air quality can be considered protective of public health. However, as also explained in Chapter 1, the ambient air quality standards are expressed in terms of the concentrations of individual pollutants within the air. And, with certain exceptions, it is not readily feasible, given current air quality modeling tools, to calculate an individual project's effect on ambient pollutant concentrations. Exceptions include carbon monoxide, which is directly emitted from tailpipes and the concentration of which can be calculated proximate to locations such as high-volume intersections, where CO concentrations are typically highest. However, according to the BAAQMD, CO emissions and concentrations have decreased dramatically in the nearly 45 years since introduction of the catalytic converter, and no exceedance of either state or national standards for CO has been recorded in the Bay Area since

1991.[52] Accordingly, modeling of CO concentrations is seldom required. Another exception is fine particulate matter. Concentrations of $PM_{2.5}$ are frequently used as a proxy for diesel particulate matter in health risk assessment, which is a separate type of air quality analysis from that for criteria pollutants discussed herein.[53]

Ozone, however, is a regional pollutant for which project-specific concentration modeling is not reliable given current modeling limitations. Because of the complexity of ozone formation and the non-linear relationship of ozone concentration with its precursor gases, and given the state of environmental science modeling in use at this time, it is infeasible to convert specific mass emissions levels (i.e., weight) of NO_X or ROGs emitted in a particular area (or by a particular project) to a particular concentration of ozone in that area.[54] Meteorology, the presence of sunlight, seasonal impacts, and other complex chemical factors all combine to determine the ultimate concentration and location of ozone.[55, 56] Furthermore, available models are designed to determine regional, population-wide health impacts, and cannot accurately quantify ozone-related health impacts caused by NO_X or ROG emissions from the local level, and in particular not at the level of an individual project.

As a result, project-level mass (weight) emission thresholds have been established for ozone precursors (NO_X and ROG) and other criteria pollutants precisely because it is not possible to readily convert mass emissions at the project-level to pollutant concentrations. As explained by the BAAQMD in its 2009 report justifying its CEQA significance thresholds, the thresholds for the ozone precursors ROG and NOx were tied to the BAAQMD's offset requirements for ozone precursors based on the fact that the Bay Area is not in attainment with the federal ozone standard and therefore such an approach is appropriate "to prevent further deterioration of ambient air quality and thus has nexus and proportionality to prevention of a regionally cumulative significant impact (e.g. worsened status of non-attainment)."[57] As explained above, attainment can be considered protective of public health, thus providing a strong link between a mass emission threshold and avoidance of health effects. For PM_{10} and $PM_{2.5}$, the BAAQMD established CEQA significance thresholds based on the federal New Source Review program for new stationary sources of pollution, which contains stricter thresholds than does BAAQMD's

57 BAAQMD, "Revised Draft Options and Justification Report: California Environmental Quality Act Thresholds of Significance," October 2009, http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/revised-draft-ceqa-thresholds-justification-report-oct-2009.pdf?la=en. Reviewed February 11, 2019.

offset program for these pollutants. “These thresholds represent the emission levels above which a project’s individual emissions would result in a considerable adverse contribution to the [San Francisco Bay Area Air Basin]’s existing air quality conditions.”[58] As with ROG and NO_X discussed above, these thresholds likewise provide a connection between a mass emission threshold and avoidance of health effects.

As discussed above, the project would not exceed project-level significance thresholds for construction or operational criteria pollutant emissions, with the implementation of mitigation (Tier 3 engines) to reduce construction emissions of NO_X to less than significant. Therefore, the contribution of the project to the cumulative, regional air quality impacts related to criteria pollutants would not be considerable, and the project’s contribution to any cumulative air quality impacts would be less than significant. And because, as explained above, the significance thresholds are linked to the avoidance of health effects, the project would not result in a significant adverse health effect with respect to emissions of criteria air pollutants.

Note:
The City estimated project total truck for the grading/excavation and foundations/concrete pour for all phases, and building construction for Phase 1A, the truck trips of building construction of other phases were scaled based on landuse squarefeet as compared to Phase 1a. Paving phase is assumed to have one truck per day.

Phase	ROG Idling Exhaust Emissions (tons)	NOX Idling Exhaust Emissions (tons)	PM10 Idling Exhaust Emissions (tons)	PM2.5 Idling Exhaust Emissions (tons)

CalEEMod Output – Phase 1 (2021)

Johnson Drive- Phase 1 Operations-2021 - Bay Area AQMD Air District, Annual

Johnson Drive- Phase 1 Operations-2021

Bay Area AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Non-Asphalt Surfaces	3.40	Acre	3.40	148,104.00	0
Other Non-Asphalt Surfaces	1.22	Acre	1.22	53,143.20	0
Parking Lot	10.30	Acre	10.30	448,668.00	0
Parking Lot	3.16	Acre	3.16	137,649.60	0
Hotel	231.00	Room	0.77	132,000.00	0
Discount Club	148.00	1000sqft	3.40	148,000.00	0
Gasoline/Service Station	20.00	Pump	0.06	2,823.50	0
Strip Mall	5.00	1000sqft	0.11	5,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2021
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	293.67	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - PG&E's 2016 CO2 emission factor based on The Climate Registry's 2018 Emissions Factor Report

Land Use - Project Specific Information

Consumer Products - Consumer product emissions only associated with hotel land use

Area Coating - Coating only applied to parking lot asphalt surfaces

Energy Use - CalEEmod default 2016 T24 energy rates adjusted to represent 2019 T24 energy rates.

Area Mitigation - Low VOC-Paints, 10g VOC/liter

Fleet Mix - Light duty vehicle categories consistent with HRA

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	276.0374172	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 emission factor modified to reflect PG&E's 2030 RPS

Land Use - Project Specific Information

Consumer Products - Consumer product emissions only associated with hotel land use

Area Coating - Coating only applied to parking lot asphalt surfaces

Energy Use - CalEEmod default 2016 T24 energy rates adjusted to represent 2019 T24 energy rates.

Fleet Mix - Light duty vehicle categories consistent with HRA

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2031
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	276.04	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 emission factor modified to reflect PG&E's 2030 RPS

Land Use - Project Specific Information

Consumer Products - Consumer product emissions only associated with hotel land use

Area Coating - Coating only applied to parking lot asphalt surfaces

Energy Use - CalEEmod default 2016 T24 energy rates adjusted to represent 2019 T24 energy rates.

Fleet Mix - Light duty vehicle categories consistent with HRA

OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations.

Chapter 1
Introduction and Background

Environmental Science Associates (ESA) has prepared this Greenhouse Gas (GHG) Technical Analysis in support of environmental clearance under the California Environmental Quality Act (CEQA) for the Johnson Drive Economic Development Zone (EDZ) project (Project) located in the City of Pleasanton (City).

The EDZ would result in the establishment of an economic development zone along Johnson Drive in the City of Pleasanton, presently identified in the City's General Plan as an area within the Commerce Circle/Johnson Drive Sub-Area, the approval of an associated General Plan amendment, and the rezoning of 12 parcels within the area to a commercial Planned Unit Development zone, for the purpose of facilitating the development of uses that would add value to the properties, and promote long-term economic sustainability for the City as a whole.

1.1 Existing Conditions

The EDZ area comprises approximately 40 acres, located southeast of the intersection of I-680 and I-580, a major regional transportation node. Currently there is 224,688 square feet of occupied building space at the site, containing a mix of light industrial, office, retail, and institutional land uses.

1.2 Project Description

The Project site would be developed with approximately 148,000 square feet (sf) of club retail (Costco store) with a 20-pump (dispensers) gas station on parcel 6. Parking for up to 800 vehicles and landscaping and site improvements, including bio-retention areas to manage on-site stormwater runoff and trees planted throughout the parcel to provide shading and visual screening around the perimeter, could also be developed on this parcel. A 231-room hotel consisting of approximately 132,000 sf and 5,000 sf of retail would be developed on parcels 9 and 10, and the remaining parcels would be developed with approximately 184,000 sf of retail space.

1.3 Environmental Setting

Greenhouse Gases and Climate Change

Global climate change refers to changes in average climatic conditions on Earth as a whole, including changes in temperature, wind patterns, precipitation and storms. Historical records indicate that global climate changes have occurred in the past due to natural phenomena; however, current data increasingly indicate that the current global conditions differ from past climate changes in rate and magnitude. Global climate change attributable to anthropogenic (human) GHG emissions is currently one of the most important and widely debated scientific, economic and political issues in the United States and the world. The extent to which increased concentrations of GHGs have caused or will cause climate change and the appropriate actions to limit and/or respond to climate change are the subject of significant and rapidly evolving regulatory efforts at the federal and state levels of government.

GHGs are compounds in the Earth's atmosphere which play a critical role in determining temperature near the Earth's surface. More specifically, these gases allow high-frequency shortwave solar radiation to enter the Earth's atmosphere, but retain some of the low frequency infrared energy which is radiated back from the Earth towards space, resulting in a warming of the atmosphere. Not all GHGs possess the same ability to induce climate change; as a result, GHG contributions are commonly quantified in the units of equivalent mass of carbon dioxide (CO_2e). Mass emissions are calculated by converting pollutant specific emissions to CO_2e emissions by applying the proper global warming potential (GWP) value.[1] GWP is the measure of the amount of energy one ton of a gas will absorb over a given period of time, relative to the emissions of one ton of carbon dioxide (CO_2). The larger the GWP, the more that a given gas warms the Earth compared to CO_2 over that time period. These GWP ratios are provided by the Intergovernmental Panel on Climate Change (IPCC) in its Fourth Assessment Report (AR4).[2] By applying the GWP ratios, project-related CO_2e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO_2 over a 100-year period is used as a reference point for GHG emissions. The CO_2e values are calculated for construction years as well as existing and project build-out conditions in order to generate a net change in GHG emissions for construction and operation. Compounds that are regulated as GHGs are discussed below.

- **Carbon Dioxide (CO_2):** CO_2 is the most abundant anthropogenic GHG in the atmosphere and is primarily generated from fossil fuel combustion from stationary and mobile sources. CO_2 is the reference gas (GWP of 1) for determining the GWPs of other GHGs.
- **Methane (CH_4):** CH_4 is emitted from biogenic sources (i.e., resulting from the activity of living organisms), incomplete combustion in forest fires, anaerobic decomposition of organic matter in landfills, manure management, and leaks in natural gas pipelines. The GWP of CH_4 is 21 in the IPCC SAR and 25 in the IPCC AR4.

[1] GWPs and associated CO_2e values were developed by the Intergovernmental Panel on Climate Change (IPCC), and published in its Second Assessment Report (SAR) in, 1996. Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's SAR. The IPCC updated the GWP values based on the latest science in its Fourth Assessment Report (AR4). The California Air Resources Board (CARB) has begun reporting GHG emission inventories for California using the GWP values from the IPCC AR4.

[2] Intergovernmental Panel on Climate Change (IPCC), 2007. Fourth Assessment Report, The Physical Science Basis, Table 2.14. Available at https://www.ipcc.ch/report/ar4/wg1/. Accessed March 2019.

- **Nitrous Oxide (N_2O):** N_2O produced by human-related sources including agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuel, adipic acid production, and nitric acid production. The GWP of N_2O is 310 in the IPCC SAR and 298 in the IPCC AR4.
- **Hydrofluorocarbons (HFCs):** HFCs are fluorinated compounds consisting of hydrogen, carbon, and fluorine. They are typically used as refrigerants in both stationary refrigeration and mobile air conditioning systems. The GWPs of HFCs range from 140 for HFC-152a to 11,700 for HFC-23 in the IPCC SAR and 124 for HFC-152a to 14,800 for HFC-23 in the IPCC AR4.
- **Perfluorocarbons (PFCs):** PFCs are fluorinated compounds consisting of carbon and fluorine. They are primarily created as a byproduct of aluminum production and semiconductor manufacturing. The GWPs of PFCs range from 6,500 to 9,200 in the IPCC SAR and 7,390 to 17,700 in the IPCC AR4.
- **Sulfur Hexafluoride (SF_6):** SF_6 is a fluorinated compound consisting of sulfur and fluoride. It is a colorless, odorless, nontoxic, nonflammable gas. It is most commonly used as an electrical insulator in high voltage equipment that transmits and distributes electricity. SF_6 has a GWP of 23,900 in the IPCC SAR and 22,800 in the IPCC AR4.

Existing Conditions

State of California Greenhouse Gas Emissions Inventory

The California Air Resources Board (CARB) compiles GHG inventories for the State of California. Based on the 2016 GHG inventory data (i.e., the latest year for which data are available from CARB) prepared by CARB in 2018, California emitted 429.4 million metric tons of CO_2e ($MMTCO_2e$) including emissions resulting from imported electrical power.[3] Between 1990 and 2016, the population of California grew by approximately 9.4 million (from 29.8 to 39.2 million).[4] This represents an increase of approximately 32 percent from 1990 population levels. In addition, the California economy, measured as gross state product, grew from $773 billion in 1990 to $2.62 trillion in 2016 representing an increase of approximately 239 percent (just over three times the 1990 gross state product).[5] Despite the population and economic growth, CARB's 2016 Statewide inventory indicated that California's net GHG emissions in 2016 were just below 1990 levels, which is the 2020 GHG reduction target codified in California Health and Safety Code (HSC), Division 25.5, also known as The Global Warming Solutions Act of 2006 (AB 32). **Table 1**, *State of California GHG Emissions,* identifies and quantifies statewide anthropogenic GHG emissions and sinks (e.g., carbon sequestration due to forest growth) in 1990 and 2016. As shown in the table, the transportation sector is the largest contributor to statewide GHG emissions at approximately 39 percent in 2016.

Effects of Global Climate Change

The scientific community's understanding of the fundamental processes responsible for global climate change has improved over the past decade, and its predictive capabilities are advancing. However, there remain significant scientific uncertainties in, for example, predictions of local effects of climate change, occurrence, frequency, and magnitude of extreme weather events, effects of aerosols, changes in clouds, shifts in the intensity and distribution of precipitation, and changes in oceanic circulation. Due to the complexity of the Earth's climate system and inability to accurately model it, the uncertainty surrounding climate change may never be completely eliminated. Nonetheless, the IPCC's *Fifth Assessment Report (AR5)* states that is *extremely likely* that the dominant cause of the observed warming since the mid-20th century is the anthropogenic increase in greenhouse gas concentrations.[6] A report from the National Academy of Sciences concluded that 97 to 98 percent of the climate researchers most actively publishing in the field

6 Intergovernmental Panel on Climate Change, 2014. Synthesis Report. Contribution of Working Groups I, II and III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change. Available at www.ipcc.ch/report/ar5/syrhttps:/. Accessed March 10, 2019.

support the tenets of the IPCC in that climate change is very likely caused by human (i.e., anthropogenic) activity.[7]

The Fourth California Climate Change Assessment (Fourth Assessment), published in 2018, finds that the potential impacts in California due to global climate change include: loss in snow pack; sea level rise; more extreme heat days per year; more high ozone days; more extreme forest fires; more severe droughts punctuated by extreme precipitation events; increased erosion of California's coastlines and sea water intrusion into the Sacramento and San Joaquin Deltas and associated levee systems; and increased pest infestation (OPR et al, 2018).[8] The Fourth Assessment's findings are consistent with climate change studies published by the California Natural Resources Agency (CNRA) since 2009, starting with the California Climate Adaptation Strategy[9] as a response to the Governor's Executive Order S-13-2008. In 2014, the CNRA rebranded the first update of the 2009 adaptation strategy as the Safeguarding California Plan.[10] The 2018 update to Safeguarding California identifies hundreds of ongoing actions and next steps state agencies are taking to safeguard Californians from climate impacts within a framework of 81 policy principles and recommendations.[11] In 2016, the CNRA released Safeguarding California: Implementation Action Plans in accordance with Executive Order B-30-15, identifying a lead agency to lead adaptation efforts in each sector. In accordance with the 2009 California Climate Adaptation Strategy, the CEC was directed to develop a website on climate change scenarios and impacts that would be beneficial for local decision makers. The website, known as Cal-Adapt, became operational in 2011.[12] The information provided on the Cal-Adapt website represents a projection of potential future climate scenarios comprised of local average values for temperature, sea level rise, snowpack and other data representative of a variety of models and scenarios, including potential social and economic factors. According to the Cal-Adapt website, the portion of the state in which the Project site is located could result in an average increase in temperature of approximately 4.2° to 6.9°F by 2070-2090, compared to the baseline 1961-1990 period. Below is a summary of some of the potential effects that could be experienced in California as a result of global warming and climate change.

Air Quality

Higher temperatures, conducive to air pollution formation, could worsen air quality in California. Climate change may increase the concentration of ground-level ozone, but the magnitude of the effect, and therefore, its indirect effects, are uncertain. If higher temperatures are accompanied by drier conditions, the potential for large wildfires could increase, which, in turn, would exacerbate

air quality. Additionally, severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the state.[13] However, if higher temperatures are accompanied by wetter, rather than drier conditions, the rains would temporarily clear the air of particulate pollution and reduce the incidence of large wildfires, thus ameliorating the pollution associated with wildfires.

Water Supply

There is a high degree of uncertainty with respect to the overall impact of global climate change on future water supplies in California. Studies indicate considerable variability in predicting precise impacts of climate change on California hydrology and water resources. Increasing uncertainty in the timing and intensity of precipitation will challenge the operational flexibility of California's water management systems. Warmer, wetter winters would increase the amount of runoff available for groundwater recharge; however, this additional runoff would occur at a time when some basins are either being recharged at their maximum capacity or are already full. Conversely, reductions in spring runoff and higher evapotranspiration because of higher temperatures could reduce the amount of water available for recharge.[14]

Hydrology and Sea Level Rise

As discussed above, climate changes could potentially affect: the amount of snowfall, rainfall and snow pack; the intensity and frequency of storms; flood hydrographs (flash floods, rain or snow events, coincidental high tide and high runoff events); sea level rise and coastal flooding; coastal erosion; and the potential for salt water intrusion. Sea level rise can be a product of global warming through two main processes: expansion of seawater as the oceans warm, and melting of ice over land. A rise in sea levels could result in coastal flooding and erosion and could jeopardize California's water supply. Increased storm intensity and frequency could affect the ability of flood-control facilities, including levees, to handle storm events.[15]

Agriculture

California has a massive agricultural industry that represents 11.3 percent of total U.S. agricultural revenue. Higher CO_2 levels can stimulate plant production and increase plant water-use efficiency. However, a changing climate presents significant risks to agriculture due to "potential changes to water quality and availability; changing precipitations patterns; extreme weather events including drought, severe storms, and floods; heat stress; decreased chill hours; shifts in pollinator lifecycles; increased risks from weeds, pest and disease; and disruptions to the transportation and energy infrastructure supporting agricultural production."[16]

16 *Ibid.*

Ecosystems and Wildlife

Increases in global temperatures and the potential resulting changes in weather patterns could have ecological effects on a global and local scale. Increasing concentrations of GHGs are likely to accelerate the rate of climate change. Scientists expect that the average global surface temperature could rise by 2-11.5°F (1.1-6.4°C) by 2100, with significant regional variation.[17] Soil moisture is likely to decline in many regions, and intense rainstorms are likely to become more frequent. Sea level could rise as much as two feet along most of the United States coastline. With climate change, ecosystems and wildlife will be challenged by the spread of invasive species, barriers to species migration or movement in response to changing climatic conditions, direct impacts to species health, and mismatches in timing between seasonal life-cycle events such as species migration and food availability.[18]

Chapter 2
Applicable Regulations

2.1 Federal

U.S. Environmental Protection Agency "Endangerment" and "Cause or Contribute" Findings

The U.S. Supreme Court held that the United States Environmental Protection Agency (U.S. EPA) must consider regulation of motor vehicle GHG emissions. In *Massachusetts v. Environmental Protection Agency* et al., twelve states and cities, including California, together with several environmental organizations sued to require the U.S. EPA to regulate GHGs as pollutants under the CAA (127 S. Ct. 1438 (2007)). The Supreme Court ruled that GHGs fit within the CAA's definition of a pollutant and the U.S. EPA had the authority to regulate GHGs.

On December 7, 2009, the U.S. EPA Administrator signed two distinct findings regarding GHGs under Section 202(a) of the CAA:

- ***Endangerment Finding:*** The current and projected concentrations of the six key GHGs—CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6—in the atmosphere threaten the public health and welfare of current and future generations.

- ***Cause or Contribute Finding:*** The combined emissions of these GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution that threatens public health and welfare.

These findings did not, by themselves, impose any requirements on industry or other entities. However, these actions were a prerequisite for implementing GHG emissions standards for vehicles.

Mandatory Greenhouse Gas Reporting Rule

On September 22, 2009, the U.S. EPA released its final Greenhouse Gas Reporting Rule (Reporting Rule). The Reporting Rule is a response to the fiscal year (FY) 2008 Consolidated Appropriations Act (H.R. 2764; Public Law 110-161), that required the U.S. EPA to develop "…mandatory reporting of GHGs above appropriate thresholds in all sectors of the economy…." The Reporting Rule will apply to most entities that emit 25,000 metric tons of CO_2e or more per year. Starting in 2010, facility owners are required to submit an annual GHG emissions report with detailed calculations of facility GHG emissions. The Reporting Rule also mandates recordkeeping and administrative requirements in order for the U.S. EPA to verify annual GHG emissions reports.

Vehicle Emissions Standards

On May 19, 2009, the President announced a national policy for fuel efficiency and emissions standards in the United States auto industry. The adopted federal standard applies to passenger cars and light-duty trucks for model years 2012 through 2016. The rule surpasses the prior Corporate Average Fuel Economy standards and requires an average fuel economy standard of 35.5 miles per gallon (mpg) and 250 grams of CO_2 per mile by model year 2016, based on USEPA calculation methods. These standards were formally adopted on April 1, 2010.

In August 2012, standards were adopted for model year 2017 through 2025 for passenger cars and light-duty trucks. By 2025, vehicles are required to achieve 54.5 mpg (if GHG reductions are achieved exclusively through fuel economy improvements) and 163 grams of CO_2 per mile. According to the U.S. EPA, a model year 2025 vehicle would emit one-half of the GHG emissions from a model year 2010 vehicle.[19] Notably, the State of California harmonized its vehicle efficiency standards through 2025 with the federal standards at this time (see Advanced Clean Car initiative below).

In August 2018, the U.S. EPA and the National Highway Traffic Safety Administration (NHTSA) proposed maintaining the 2020 CAFE and CO_2 standards for model years 2021 through 2026. The estimated CAFE and CO_2 standards for model year 2020 are 43.7 mpg and 204 grams of CO_2 per mile for passenger cars and 31.3 mpg and 284 grams of CO_2 per mile for light trucks, projecting an overall industry average of 37 mpg, as compared to 46.7 mpg under the standards issued in 2012. A final rule is expected in 2019.

2.2 State of California

California has promulgated a series of executive orders, laws, and regulations aimed at reducing both the level of GHGs in the atmosphere and emissions of GHGs from commercial and private activities within the State. The major components of California's climate protection initiative are reviewed below.

California Environmental Quality Act and Senate Bill 97

Under CEQA lead agencies are required to disclose the reasonably foreseeable adverse environmental effects of projects they are considering for approval. GHG emissions have the potential to adversely affect the environment because they contribute to global climate change. In turn, global climate change has the potential to raise sea levels, alter rainfall and snowfall, and affect habitat.

Senate Bill (SB) 97, signed in August 2007, acknowledges that climate change is a prominent environmental issue requiring analysis under CEQA. This bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Natural Resources Agency guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions,

[19] US EPA, 2012. 2017 and Later Model Year Light-Duty Vehicle Greenhouse Gas Emissions and Corporate Average Fuel Economy Standards. Available at: https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-model-year-2017-and-later-light-duty-vehicle . Accessed: March 11, 2019.

as required by CEQA, no later than July 1, 2009. The California Natural Resources Agency was required to certify or adopt those guidelines by January 1, 2010. On December 30, 2009, the Natural Resources Agency adopted amendments to the State CEQA Guidelines, as required by SB 97.[20] These State CEQA Guidelines amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in draft CEQA documents. The amendments became effective March 18, 2010.

State CEQA Guidelines

The State CEQA Guidelines are embodied in the California Code of Regulations (CCR), Public Resources Code, Division 13, starting with Section 21000. State CEQA Guidelines section 15064.4 specifically addresses the significance of GHG emissions, requiring a lead agency to make a "good-faith effort" to "describe, calculate or estimate" GHG emissions in CEQA environmental documents. Section 15064.4 further states that the analysis of GHG impacts should include consideration of (1) the extent to which the project may increase or reduce GHG emissions, (2) whether the project emissions would exceed a locally applicable threshold of significance, and (3) the extent to which the project would comply with "regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions." The CEQA Guidelines also state that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program (including plans or regulations for the reduction of greenhouse gas emissions) that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located (State CEQA Guidelines section 15064(h)(3)).

The CEQA Guidelines do not require or recommend a specific analytical methodology or provide quantitative criteria for determining the significance of GHG emissions, nor do they set a numerical threshold of significance for GHG emissions. The 2009 amendments also include a new Subdivision 15064.7(c) which clarifies that in developing thresholds of significance, a lead agency may appropriately review thresholds developed by other public agencies, or recommended by other experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence.

The California Natural Resources Agency has also clarified that the amended CEQA Guidelines focus on the effects of GHG emissions as cumulative impacts, and that they should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see Section 15064(h)(3)).[21]

CEQA Guidelines section 15126.4(c) includes the following direction on measures to mitigate GHG emissions, when such emissions are found to be significant:

> *Consistent with Section 15126.4(a), lead agencies shall consider feasible means, supported by substantial evidence and subject to monitoring or reporting, of*

[20] CNRA, 2009. CEQA Guidelines Amendments, sections 15064.4, 15183.5, 15364.5. Available: http://resources.ca.gov/ceqa/guidelines/documents_uploaded_during_the_rulemaking_process_for_sb_97.html. Accessed: May 7, 2019.

[21] CNRA, 2009. Final Statement of Reasons for Regulatory Action, December 2009, page 20-26. Available: http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf. Accessed: March 15, 2019.

mitigating the significant effects of greenhouse gas emissions. Measures to mitigate the significant effects of greenhouse gas emissions may include, among others:

(1) Measures in an existing plan or mitigation program for the reduction of emissions that are required as part of the lead agency's decision;

(2) Reductions in emissions resulting from a project through implementation of project features, project design, or other measures;

(3) Off-site measures, including offsets that are not otherwise required, to mitigate a project's emissions;

(4) Measures that sequester greenhouse gases; and

(5) In the case of the adoption of a plan, such as a general plan, long range development plan, or plans for the reduction of greenhouse gas emissions, mitigation may include the identification of specific measures that may be implemented on a project-by project basis. Mitigation may also include the incorporation of specific measures or policies found in an adopted ordinance or regulation that reduces the cumulative effect of emissions.

California Greenhouse Gas Reduction Targets

Executive Order S-3-05

The Governor announced on June 1, 2005, through Executive Order S-3-05,[22] the following GHG emission reduction targets:

- By 2010, California shall reduce GHG emissions to 2000 levels;
- By 2020, California shall reduce GHG emissions to 1990 levels; and
- By 2050, California shall reduce GHG emissions to 80 percent below 1990 levels.

Executive Order B-30-15

On April 29, 2015, Governor Brown issued Executive Order B-30-15. Therein, the Governor directed the following:

- Established a new interim statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030.
- Ordered all state agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets.
- Directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of carbon dioxide equivalent.

[22] California Office of the Governor, 2005. Executive Order S-3-05. Available at: https://www.climatechange.ca.gov/state/executive_orders.html. Accessed March 4, 2019.

California Health and Safety Code, Division 25.5 – California Global Warming Solutions Act of 2006 (AB 32)

In 2006, the California State Legislature adopted Assembly Bill (AB) 32 (codified in the California Health and Safety Code [HSC], Division 25.5 – California Global Warming Solutions Act of 2006), which focuses on reducing GHG emissions in California to 1990 levels by 2020. HSC Division 25.5 defines GHGs as CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6 and represents the first enforceable statewide program to limit emissions of these GHGs from all major industries with penalties for noncompliance. The law further requires that reduction measures be technologically feasible and cost effective. Under HSC Division 25.5, CARB has the primary responsibility for reducing GHG emissions. CARB is required to adopt rules and regulations directing state actions that would achieve GHG emissions reductions equivalent to 1990 statewide levels by 2020.

A specific requirement of AB 32 was to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020. CARB developed and approved the initial Scoping Plan in 2008, outlining the regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs that would be needed to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the State's long-range climate objectives.[23]

The First Update to the Scoping Plan was approved by CARB in May 2014 and built upon the initial Scoping Plan with new strategies and recommendations. In 2014, CARB revised the target using the GWP values from the IPCC AR4 and determined that the 1990 GHG emissions inventory and 2020 GHG emissions limit is 431 MMTCO2e. CARB also updated the State's BAU 2020 emissions estimate to account for the effect of the 2007–2009 economic recession, new estimates for future fuel and energy demand, and the reductions required by regulation that were adopted for motor vehicles and renewable energy.[24]

Senate Bill 32

In 2016, Senate Bill (SB) 32 and its companion bill AB 197, amended HSC Division 25.5 and established a new climate pollution reduction target of 40 percent below 1990 levels by 2030, while including provisions to ensure the benefits of state climate policies reach into disadvantaged communities.

2017 Climate Change Scoping Plan Update

In response to SB 32 and the 2030 GHG reduction target, CARB approved the 2017 Climate Change Scoping Plan Update (2017 Scoping Plan Update) in December 2017.[25] The 2017 Scoping Plan Update outlines the proposed framework of action for achieving the 2030 GHG target of 40 percent reduction in GHG emissions relative to 1990 levels (CARB, 2017). The 2017 Scoping Plan

23 CARB, 2008. *Climate Change Scoping Plan*. Available: https://www.arb.ca.gov/cc/scopingplan/document/scopingplandocument.htm. Accessed March 4, 2019.

24 CARB, 2014. *First Update to the Climate Change Scoping Plan*. Available: https://www.arb.ca.gov/cc/scopingplan/document/updatedscopingplan2013.htm. Accessed: March 4, 2019.

25 CARB, 2017. *California's 2017 Climate Change Scoping Plan.* Available at: https://www.arb.ca.gov/cc/scopingplan/scopingplan.htm. Accessed March 4, 2019.

Update identifies key sectors of the State's implementation strategy, which includes improvements in low carbon energy, industry, transportation sustainability, natural and working lands, waste management, and water. Through a combination of data synthesis and modeling, CARB determined that the target Statewide 2030 emissions limit is 260 MMTCO2e, and that further commitments will need to be made to achieve an additional reduction of 50 MMTCO2e beyond current policies and programs. The cornerstone of the 2017 Scoping Plan Update is an expansion of the Cap-and-Trade program to meet the aggressive 2030 GHG emissions goal and ensure achievement of the 2030 limit set forth by E.O. B-30-15.

The 2017 Scoping Plan Update's strategy for meeting the State's 2030 GHG target incorporates the full range of legislative actions and state-developed plans that have relevance to the year 2030. These include:

- Extending the low carbon fuel standard (LCFS) beyond 2020 and increasing the carbon intensity reduction requirement to 18 percent by 2030;
- SB 350, which increase renewables portfolio standard (RPS) to 50 percent and requires a doubling of energy efficiency for existing buildings by 2030;
- The 2016 Mobile Source Strategy is estimated to reduce emissions from mobile sources including an 80 percent reduction in smog-forming emissions and a 45 percent reduction in diesel particulate matter from 2016 level in the South Coast Air Basin, a 45 percent reduction in GHG emissions, and a 50 percent reduction in the consumption of petroleum-based fuels;
- The Sustainable Freight Action Plan to improve freight efficiency and transition to zero emission freight handling technologies (described in more detail below);
- SB 1383, which requires a 50 percent reduction in anthropogenic black carbon and a 40 percent reduction in hydrofluorocarbon and methane emissions below 2013 levels by 2030; and
- Assembly Bill 398, which extends the state Cap-and-Trade Program through 2030.

In the 2017 Scoping Plan Update, CARB recommends statewide targets of no more than six metric tons CO2e per capita by 2030 and no more than two metric tons CO2e per capita by 2050. CARB acknowledges that since the statewide per capita targets are based on the statewide GHG emissions inventory that includes all emissions sectors in the State, it is appropriate for local jurisdictions to derive evidence-based local per-capita goals based on local emissions sectors and growth projections. To demonstrate how a local jurisdiction can achieve their long-term GHG goals at the community plan level, CARB recommends developing a geographically-specific GHG reduction plan (i.e., climate action plan) consistent with the requirements of CEQA Section 15183.5(b). A so-called "CEQA-qualified" GHG reduction plan, once adopted, can provide local governments with a streamlining tool for project-level environmental review of GHG emissions, provided there are adequate performance metrics for determining project consistency with the plan. [26]

[26] CARB, 2017. *California's 2017 Climate Change Scoping Plan*. Available: www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed March 9, 2019. At page 101.

Cap-and-Trade Program

Initially, authorized by the California Global Warming Solutions Act of 2006 (AB 32), and extended through the year 2030 with the passage of Assembly Bill 398 (2017), the California Cap-and-Trade Program is a core strategy that the state is using to meet its GHG reduction targets for 2020 and 2030, and ultimately achieve an 80 percent reduction from 1990 levels by 2050. CARB has designed and adopted a California Cap-and-Trade Program to reduce GHG emissions from major sources (deemed "covered entities") by setting a firm cap on statewide GHG emissions and employing market mechanisms to achieve reductions.[27] Under the Cap-and-Trade program, an overall limit is established for GHG emissions from capped sectors (e.g., electricity generation, petroleum refining, cement production, and large industrial facilities that emit more than 25,000 metric tons CO_2e per year) and declines over time, and facilities subject to the cap can trade permits to emit GHGs. The statewide cap for GHG emissions from the capped sectors commenced in 2013 and declines over time, achieving GHG emission reductions throughout the Program's duration.[28]

If California's direct regulatory measures reduce GHG emissions more than expected, then the Cap-and-Trade Program will be responsible for relatively fewer emissions reductions. If California's direct regulatory measures reduce GHG emissions less than expected, then the Cap-and-Trade Program will be responsible for relatively more emissions reductions. In other words, the Cap-and-Trade Program functions similarly to an insurance policy for meeting California's 2020 and 2030 GHG emissions reduction mandates.

Transportation Sector

Assembly Bill 1493

In 2002, then-Governor Gray Davis signed Assembly Bill (AB) 1493, which required the CARB to develop and adopt, by January 1, 2005, regulations that achieve "the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty trucks and other vehicles determined by the CARB to be vehicles whose primary use is noncommercial personal transportation in the state."

To meet the requirements of AB 1493, the CARB approved amendments to the California Code of Regulations (CCR) in 2004, requiring automobile manufacturers to meet fleet-average GHG emissions limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes (i.e., any medium-duty vehicle with a gross vehicle weight [GVW] rating of less than 10,000 pounds and that is designed primarily for the transportation of persons), beginning with model year 2009. For passenger cars and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 pounds or less, the GHG emission limits for model year 2016 are approximately 37 percent lower than the limits for the first year of the regulations, model year 2009. For light-duty trucks with an LVW of 3,751 pounds to a GVW of 8,500 pounds, as well as for medium-duty passenger vehicles, GHG emissions will be reduced approximately 24 percent between 2009 and 2016.

[27] 17 CCR §§ 95800 to 96023.
[28] See generally 17 CCR §§ 95811, 95812.

Because the Pavley standards (named for the bill's author, state Senator Fran Pavley) would impose stricter standards than those under the CAA, California applied to the U.S. EPA for a waiver under the CAA; this waiver was initially denied in 2008. In 2009, however, the U.S. EPA granted the waiver.

As discussed previously, the federal government adopted standards for model year 2012 through 2016 light-duty vehicles. In addition, the USEPA and USDOT have adopted GHG emission standards for model year 2017 through 2025 vehicles. These standards are slightly different from the State's standards (described in the Advanced Clean Car Program), but the State of California has agreed not to contest them, in part due to the fact that while the national standard would achieve slightly less reductions in California, it would achieve greater reductions nationally and is stringent enough to meet state GHG emission reduction goals.

Advanced Clean Car Program

In 2012, CARB approved the Pavley II (LEV III) Advanced Clean Cars program, an emissions-control scheme for model years 2015 through 2025 that allows manufacturers to comply with the 2017 through 2025 national standards while meeting meet state law. The program includes components to reduce smog-forming pollution, reduce GHG emissions, promote clean cars, and provide the fuels for clean cars. The zero emissions vehicle (ZEV) program will act as the focused technology of the Advanced Clean Cars program by requiring manufacturers to produce increasing numbers of ZEVs and plug-in hybrid electric vehicles (PHEV) in the 2018 to 2025 model years.[29]

Mobile Source Strategy

In May 2016, CARB released the updated Mobile Source Strategy that demonstrates how the State can simultaneously meet air quality standards, achieve GHG emission reduction targets, decrease health risk from transportation emissions, and reduce petroleum consumption over the next fifteen years. The strategy promotes a transition to zero-emission and low-emission vehicles, cleaner transit systems and reduction of VMTs. The Mobile Source Strategy calls for 1.5 million ZEVs (including plug-in hybrid electric, battery-electric, and hydrogen fuel cell vehicles) by 2025 and 4.2 million ZEVs by 2030. It also calls for more stringent GHG requirements for light-duty vehicles beyond 2025 as well as GHG reductions from medium-duty and heavy-duty vehicles and increased deployment of zero-emission trucks primarily for class 3 – 7 "last mile" delivery trucks in California. Statewide, the Mobile Source Strategy would result in a 45 percent reduction in GHG emissions, and a 50 percent reduction in the consumption of petroleum-based fuels.[30]

Tractor-Trailer Greenhouse Gas Regulation

CARB approved the Tractor-Trailer Greenhouse Gas regulation to reduce GHG emissions produced by certain heavy-duty tractor-trailers. The tractors and trailers subject to this regulation

[29] CARB, 2017. *California's 2017 Climate Change Scoping Plan*. Available: www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed March 10, 2019.

[30] CARB, 2016. *Mobile Source Strategy*. Available: https://www.arb.ca.gov/planning/sip/2016sip/2016mobsrc.htm. Accessed March 10, 2019.

must either use U.S. EPA "SmartWay" certified tractors and trailers, or be retrofitted with SmartWay verified technologies.

The reduction in GHG emissions will be achieved by requiring the use of aerodynamic tractors and trailers that are also equipped with low rolling resistance tires. The regulation applies primarily to owners of 53-foot or longer box-type trailers, including both dry-van and refrigerated-van trailers, and owners of the heavy-duty tractors that pull them on California highways. These owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. All owners, regardless of where their vehicles are registered, must comply with the regulation when they operate their affected vehicles on California highways. Drayage tractors and trailers that operate within a 100-mile radius of a port or intermodal rail yard are exempt.

California Sustainable Freight Action Plan (2016)

California Sustainable Freight Action Plan includes strategies to improve freight efficiency and transition to zero emission freight handling technologies. It includes goals to achieve 25 percent improvement of freight system efficiency by 2030, and to deploy over 100,000 freight vehicles and equipment capable of zero emission operation, and maximize near-zero emission freight vehicles and equipment powered by renewable energy by 2030.[31]

CARB Advanced Clean Local Truck Rule

The goal with the Advanced Clean Local Truck Rule is to accelerate the early market adoption of zero emission trucks that are usually centrally fueled, have duty cycles with low average speed and stop-and-go operation. The rule focuses on urban, mostly vocational trucks, but includes class 7-8 urban goods movement trucks as well. The proposed regulatory schedule begins with the 2023 vehicle model year with early action credits given for pre- 2023 vehicle models. The regulation is scheduled for CARB board consideration in November 2018.

Low Carbon Fuel Standard (LCFS)

In January 2007, Governor Brown enacted Executive Order S-01-07, which mandates the following: (1) establish a statewide goal to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020; and (2) adopt a Low Carbon Fuel Standard (LCFS) for transportation fuels in California. The overall goal of the low carbon fuel standard is to lower the carbon intensity of California transportation fuel. With adoption of the 2017 Scoping Plan Update, the standard has been changed to a reduction in fuel carbon intensity of at least 18 percent by 2030.

Land Use Transportation Planning

SB 375 (Chapter 728, Statutes of 2008), which establishes mechanisms for the development of regional targets for reducing passenger vehicle greenhouse gas emissions, was adopted by the State on September 30, 2008. Under SB 375, CARB is required, in consultation with the state's

[31] CalTrans, 2016. *Sustainable Freight Action Plan*. Available: http://dot.ca.gov/hq/tpp/offices/ogm/cs_freight_action_plan/theplan.html. Accessed: March 10, 2019.

Metropolitan Planning Organizations (MPOs), to set regional GHG reduction targets for the passenger vehicle and light-duty truck sector for 2020 and 2035.[32]

Under SB 375, the regional reduction target must be incorporated within that region's Regional Transportation Plan (RTP), which is used for long-term transportation planning, in a Sustainable Communities Strategy (SCS). Certain transportation planning and programming activities need to be consistent with the SCS; however, SB 375 expressly provides that the SCS does not regulate the use of land, and further provides that local land use plans and policies (e.g., general plan) are not required to be consistent with either the RTP or SCS.

In February 2011, CARB adopted the final GHG emissions reduction targets for the Metropolitan Transportation Commission/Association of Bay Area Governments (MTC/ABAG), which is the MPO for the region in which the City is located. In March 2018, the CARB updated the SB 375 targets for ABAG to require an 10 percent reduction by 2020 and a 19 percent reduction by 2035 in per capita passenger vehicle GHG emissions (CARB, 2018).[33]

Energy Sector

SB 97, enacted in 2007, directed OPR to develop California Environmental Quality Act (CEQA) Guidelines (*CEQA Guidelines*) "for the mitigation of GHG emissions or the effects of GHG emissions." In December 2009, OPR adopted amendments to the *CEQA Guidelines*, Appendix G Environmental Checklist, which created a new resource section for GHG emissions and indicated criteria that may be used to establish significance of GHG emissions. Appendix F of the *CEQA Guidelines* states that, in order to ensure that energy implications are considered in project decisions, the potential energy implications of a project shall be considered in an EIR, to the extent relevant and applicable to the project. Appendix F of the *CEQA Guidelines* further states that a project's energy consumption and proposed conservation measures may be addressed, as relevant and applicable, in the Project Description, Environmental Setting, and Impact Analysis portions of technical sections, as well as through mitigation measures and alternatives. In accordance with Appendix F of the CEQA Guidelines, relevant information that addresses the energy implications of the Project is provided in *Section 3.5 Energy Demand and Conservation*.

Title 24 Building Energy Efficiency Standards

Part 11 of the Title 24 Building Energy Efficiency Standards is referred to as the California Green Building Standards (CALGreen) Code. CALGreen is intended to encourage more sustainable and environmentally friendly building practices, require low-pollution emitting substances that cause less harm to the environment, conserve natural resources, and promote the use of energy-efficient materials and equipment. Since 2011, the CALGreen Code is mandatory for all new residential and non-residential buildings constructed in the state. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design and overall environmental quality. The CALGreen Code was most recently updated in 2016 to include new

[32] CARB, Sustainable Communities. Available: https://www.arb.ca.gov/cc/sb375/sb375-rd.htm. Accessed March 10, 2019.

[33] California Air Resources Board, 2019. *2017 Scoping Plan-Identified VMT Reductions and Relationship To State Climate Goals*, Available at https://ww2.arb.ca.gov/sites/default/files/2019-01/2017_sp_vmt_reductions_jan19.pdf. Accessed May 8, 2019.

mandatory measures for residential and nonresidential uses; the new measures took effect on January 1, 2017.[34]

The CEC first adopted Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the state. Although not originally intended to reduce GHG emissions, increased energy efficiency and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically (typically every three years) to allow for the consideration and inclusion of new energy efficiency technologies and methods.[35]

The current Title 24, Part 6 standards (2016) were made effective on January 1, 2017. The next update to the Title 24 energy efficiency standards (2019 standards) go into effect on January 1st, 2020.

Renewables Portfolio Standard

SB 1078 established the Renewables Portfolio Standard (RPS) in 2002, which requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from eligible renewable sources by 2017. SB 107 changed the target date to 2010. In November 2008, Executive Order S-14-08 expanded the state's RPS goal to 33 percent renewable power by 2020. In September 2009, Executive Order S-21-09 directed CARB (under its AB 32 authority) to enact regulations to help the state meet the 2020 goal of 33 percent renewable energy. The 33 percent by 2020 RPS goal was codified in April 2011 with Senate Bill X1-2. This new RPS applies to all electricity retailers in the state, including publicly owned utilities (POUs), investor-owned utilities, electricity service providers, and community choice aggregators. Senate Bill 350 was signed in October 2015, which requires retail sellers and publicly owned utilities to procure 50 percent of their electricity from eligible renewable energy resources by 2030. Most recently, Senate Bill 100, signed by Governor Brown on September 10, 2018, increases the RPS requirement to 60 percent eligible renewables by 2030 and 100 percent by 2045.

2.3 Regional

Bay Area Air Quality Management District

BAAQMD is the regional government agency that regulates sources of air pollution within the nine San Francisco Bay Area counties. The BAAQMD regulates GHG emissions through the following plans, programs, and guidelines.

[34] California Building Standards Commission (CBSC), 2016. 2016 California Green Building Standards Code (Part 11 of Title 24). Available at https://www.dgs.ca.gov/BSC/Resources/Page-Content/Building-Standards-Commission-Resources-List-Folder/CALGreen. Accessed March 11, 2019.

[35] California Energy Commission (CEC), 2016. California's 2016 Building Energy Efficiency Standards for Residential and Nonresidential Buildings. Available at http://www.energy.ca.gov/2015publications/CEC-400-2015-037/CEC-400-2015-037-CMF.pdf. Accessed March 5, 2019.

Clean Air Plan

BAAQMD and other air districts prepare clean air plans in accordance with the State and federal Clean Air Acts. On April 19, 2017, the BAAQMD Board of Directors adopted the 2017 Clean Air Plan *Spare the Air, Cool the Climate,* an update to the 2010 Clean Air Plan. The Clean Air Plan is a comprehensive plan that focuses on the closely-related goals of protecting public health and protecting the climate. Consistent with the state's GHG reduction targets, the plan lays the groundwork for a long-term effort to reduce Bay area GHG emissions 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050.

BAAQMD Climate Protection Program

BAAQMD established a climate protection program to reduce pollutants that contribute to global climate change and affect air quality in the San Francisco Bay Area Air Basin. The climate protection program includes measures that promote energy efficiency, reduce vehicle miles traveled, and develop alternative sources of energy, all of which assist in reducing emissions of GHG and in reducing air pollutants that affect the health of residents. BAAQMD also seeks to support current climate protection programs in the region and to stimulate additional efforts through public education and outreach, technical assistance to local governments and other interested parties, and promotion of collaborative efforts among stakeholders.

BAAQMD CEQA Air Quality Guidelines

BAAQMD CEQA Air Quality Guidelines were prepared to assist in the evaluation of air quality impacts of projects and plans proposed within the Bay Area. The guidelines provide recommended procedures for evaluating potential air impacts during the environmental review process, consistent with CEQA requirements, and include recommended thresholds of significance, mitigation measures, and background air quality information. The guidelines also include recommended assessment methodologies for air toxics, odors, and greenhouse gas emissions. In June 2010, the BAAQMD's Board of Directors adopted CEQA thresholds of significance and an update of the CEQA Guidelines, which included significance threshold for GHG emissions based on the emission reduction goals for 2020 articulated by the State Legislature in AB 32. The first threshold, 1,100 MT CO2e per year, is a numeric emissions level below which a project's contribution to global climate change would be less than cumulatively considerable. For larger and mixed-use projects, the Guidelines state that emissions would be less than cumulatively significant if the project as a whole would result in an efficiency of 4.6 MT CO2e per service population or better.[36]

On March 5, 2012, the Alameda County Superior Court issued a judgment finding that the BAAQMD had failed to comply with CEQA when it adopted the thresholds of significance in the BAAQMD CEQA Air Quality Guidelines. That decision was appealed to the Court of Appeal and one of the issues in the case has been decided by the California Supreme Court. The Supreme Court found that CEQA does not require an analysis of how existing environmental conditions will impact future residents or users of a proposed project, and remanded the case down for the lower court to decide remaining issues. Following the Superior Court order, the BAAQMD released revised

[36] Bay Area Air Quality Management District, 2010. *CEQA Air Quality Guidelines*. Available: http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/draft_baaqmd_ceqa_guidelines_may_2010_final.pdf?la=en. Accessed: May 7, 2019.

CEQA Air Quality Guidelines in May of 2012 that include guidance on calculating air pollution emissions, obtaining information regarding the health impacts of air pollutants, and identifying potential mitigation measures, and which set aside the significance thresholds. There was no challenge to BAAQMD's 2010 greenhouse gas thresholds or the substantial evidence supporting those thresholds.[37] In May 2017, the Air District published a new version of the Guidelines, which included no changes to the greenhouse gas thresholds.[38]

Under BAAQMD's Air Quality Guidelines, a local government may prepare a qualified GHG Reduction Strategy that is consistent with AB 32 goals. If a project is consistent with an adopted qualified GHG Reduction Strategy and General Plan that addresses the project's GHG emissions, it can be presumed that the project will not have significant GHG emissions under CEQA. The City of Pleasanton's CAP is considered a qualified GHG Reduction Strategy for achieving the AB 32 target of 1990 emissions by the year 2020.

Metropolitan Transportation Commission/Association of Bay Area Governments Sustainable Communities Strategy.

MTC is the federally recognized metropolitan planning organization (MPO) for the nine county Bay Area, which includes Alameda County and the City of Oakland. On July 18, 2013, the Plan Bay Area was jointly approved by ABAG's Executive Board and by MTC. The Plan includes the region's Sustainable Communities Strategy, as required under SB 375, and the 2040 Regional Transportation Plan. The Sustainable Communities Strategy lays out how the region will meet GHG reduction targets set by CARB.[39] CARB's current targets call for the region to reduce per capita vehicular GHG emissions 10 percent by 2020 and 19 percent by 2035 from a 2005 baseline.[40] A central greenhouse gas reduction strategy of Plan Bay Area is the concentration of future growth within Priority Development Areas (PDAs) and Transit Priority Areas (TPAs). To be eligible for PDA designation, an area must be within an existing community, near existing or planned fixed transit or served by comparable bus service, and planned for more housing. SB 375 defines TPA-eligible areas as places within one-half mile of a major transit stop or a high-quality transit corridor. The Project site is not located within a PDA. By virtue of its proximity to the West Dublin/Pleasanton BART station, the northwestern portion of the Project site is located within a TPA. However, the Project site is not within an area covered by a specific plan and therefore does not quality for CEQA streamlining for projects under SB 743.

On July 26, 2017, MTC adopted Plan Bay Area 2040, a focused update that builds upon the growth pattern and strategies developed in the original Plan Bay Area but with updated planning

[37] Bay Area Air Quality Management District (BAAQMD), 2012. *BAAQMD CEQA Air Quality Guidelines Final*, May 2012. Available: http://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines. Accessed March 6, 2019.

[38] Bay Area Air Quality Management District (BAAQMD), 2017. Clean Air Plan. Adopted April 19, 2017. Available: http://www.baaqmd.gov/plans-and-climate/air-quality-plans/current-plans. Accessed March 6, 2019.

[39] Association of Bay Area Governments and Metropolitan Transportation Commission, 2013. Plan Bay Area 2040. Adopted July 18, 2013. Available: http://files.mtc.ca.gov/pdf/Plan_Bay_Area_FINAL/Plan_Bay_Area.pdf. Accessed March 14, 2019.

[40] California Air Resources Board, 2018. SB 375 Regional Greenhouse Gas Emissions Reduction Targets. Available: https://www.arb.ca.gov/cc/sb375/finaltargets2018.pdf. Accessed March 11, 2019.

assumptions that incorporate key economic, demographic and financial trends since the original plan was adopted.[41]

2.4 City of Pleasanton

City of Pleasanton General Plan

The City of Pleasanton General Plan includes the policies related to improving air quality and climate change impacts in its Air Quality and Climate Change Element. The same policies listed in the Section 3.2.3 of the Air Quality Section would also be relevant to reducing GHG emissions.

City of Pleasanton Climate Action Plan

The Pleasanton Climate Action Plan (CAP) includes a citywide GHG emissions inventory. This citywide GHG emissions inventory reflects all the energy used and waste produced within the Pleasanton city limits. As shown in **Table 2**, energy consumers in Pleasanton emitted approximately 770,844 million metric tons of CO_2e in 2005 from all major sources, more than half of which were from transportation sources.

TABLE 2
PLEASANTON COMMUNITY-WIDE GHG EMISSIONS BY SECTOR (MT CO2E) 2005

GHG Emissions Source	Metric Tons of Carbon Dioxide Equivalent (CO2e)	Percent of Total
Transportation (on-road)	401,550	52.1%
Transportation (off-road)	25,410	3.3%
Commercial/Industrial Electricity	105,107	13.6%
Commercial/Industrial Natural Gas	46,753	6.1%
Residential Natural Gas	66,684	8.7%
Residential Electricity	46,881	6.1%
Solid Waste Disposal	38,826	5.0%
Water and Wastewater Systems	34,264	4.4%
Municipal Operations	5,370	0.7%
Total	**770,844**	**100%**

SOURCE: City of Pleasanton, 2012

As described in the CAP, the City has a target to reduce emissions levels 15 percent below the 2005 baseline by the year 2020, which equates to 655,218 MT CO_2e per year for community emissions. This value represents 115,626 MT CO_2e below the baseline, and 306,331 MT CO_2e below the projected 2020 business-as-usual emissions scenario (a reduction of approximately 32 percent).

Several high-impact state-wide measures included in the State's AB 32 Scoping Plan are expected to provide significant emissions reduction benefits for the City of Pleasanton, including the Low Carbon Fuel Standard (LCFS), the Pavley Bill for reducing passenger vehicle emissions (Assembly Bill 1493), and the Renewable Portfolio Standard. Two additional state-wide measures in the AB

[41] Association of Bay Area Governments and Metropolitan Transportation Commission, 2017. Plan Bay Area 2040. Adopted July 26, 2017. Available: https://www.planbayarea.org/. Accessed March 6, 2019.

32 Scoping Plan are expected to reduce emissions from passenger vehicles and heavy/medium-duty trucks because of efficiencies gains realized by manufacturers.

After crediting emissions reductions of 194,017 MT CO_2e from the expected impact of state-wide measures included in the AB 32 Scoping Plan, and the projected impact of rising fuel prices on driving behavior, as described in the CAP, Pleasanton's projected city-wide GHG emissions would be 93,585 MT CO_2e per year above the AB 32 target by 2020. As summarized in **Table 3** below, implementation of the measures set forth in the CAP are expected to reduce city-wide emissions by 101,649 MT CO_2e per year by 2020. This would reduce city-wide emissions approximately 8,064 MT CO_2e below the AB 32 target.

TABLE 3
PROJECTED EMISSIONS REDUCTIONS FROM PLEASANTON CLIMATE ACTION PLAN STRATEGIES

	Strategy	Annual GHG Reduction Potential (MT CO_2e)
SW2	Increase recycling, organics diversion, and waste reduction associated with the entire community	29,605
EC2	Leverage outside programs to increase energy efficiency	17,394
EC4	Develop programs to increase energy efficiency	9,342
EC3	Establish and promote financing and financial incentive programs to support energy efficiency	7,416
LU1	Support infill and higher density development	6,898
TDM2	Promote alternatives to work and school commutes	6,558
LU2	Support mixed-use infill and new development near local-serving commercial areas	5,845
EC1	Use city codes, ordinances, and permitting to enhance green building and energy efficiency	3,773
TDM1	Use parking pricing/policy to discourage SOV travel	3,174
ER1	Implement local ordinances and permitting processes to support renewable energy	2,389
TR1	Improve transit system and ridership	2,377
LU3	Improve transportation efficiency through design improvements	2,202
ER2	Develop programs to promote on-site renewable energy to the community	1,519
NM1	Create and maintain a safe, convenient, and effective system for pedestrians and bicyclists	1,280
EG1	Promote green building and energy efficient development for government operations and city infrastructure	1,194
VE2	Develop a city fleet replacement program	312
WA1	Conserve community water through building and landscape design and improvements	272
WA3	Increase or establish use of reclaimed/grey water systems	98
WA2	Conserve municipal operations water	1
	Total	**101,649**

NOTE: This table is from the Table 3-2 of the CAP. See Chapter 3 of the CAP for a full and detailed description of each of these strategies, and Appendix E for detailed information on methods and assumptions used to quantify emissions reductions. See Appendix F for Baseline and Future Year VMT Estimates, and VMT reduction associated with CAP implementation.

Thus, as the result of implementing the CAP, the City would achieve consistency with the provisions of AB 32 as interpreted by the BAAQMD by meeting the community-wide emissions

reduction target of 15 percent below the City's 2005 baseline by the year 2020. The CAP relies on reductions from sectors such as energy conservation, and reductions associated with changes in personal behavior. The City will monitor progress toward achieving the 2020 emissions reduction target with regular updates of the community-wide inventory, and review of programs described in the CAP.

Chapter 3
GHG Quantification Methodology

The evaluation of potential impacts to GHG emissions that may result from the construction and long-term operations of the Project is conducted as follows. Detailed modeling calculations and supporting files are provided in **Appendix A** of this Technical Report.

3.1 Greenhouse Gas Emissions Estimates

This section relies on calculation guidance from state and regional agencies with scientific expertise in quantifying GHG emissions, such as CARB and the BAAQMD. GHG emissions from the projects construction and operation are estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2, which is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions from a variety of land use projects. CalEEMod was developed in collaboration with the air districts of California. Regional data (e.g., emission factors, trip lengths, meteorology, source inventory, etc.) have been provided by the various California air districts to account for local requirements and conditions. The model is considered to be an accurate and comprehensive tool for quantifying air quality and GHG impacts from land use projects throughout California.[42]

Construction Emissions

Construction of the proposed Project has the potential to generate GHG emissions through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project site. Construction emissions can vary from day to day, depending on the level of activity, the specific type of operation, and the prevailing weather conditions. The number and types of construction equipment, vendor trips (e.g., transport of building materials), and worker trips were based on the same assumptions used in the Air Quality Analysis and Health Risk Assessment (HRA) analyses prepared for the Project.

Operational Emissions

This analysis used CalEEMod version 2016.3.2 to estimate operational GHG emissions associated with project trips (light-duty vehicles), energy consumption (electricity and natural gas), solid waste, water and wastewater, and landscaping equipment. Additional operational GHG emission calculations were prepared outside of CalEEMod, including those for emergency generators, heavy duty delivery trucks, and transportation refrigeration units (TRU). Detailed calculations are

[42] See: http://www.aqmd.gov/caleemod/.

presented in Appendix A. The primary assumptions used to model operational GHG emissions are presented below.

Area Sources

Area sources of GHG emissions resulting from the operation of Project include equipment used to maintain landscaping. The combustion of fossil fuels to operate these equipment results in GHG emissions of CO_2 and smaller amounts of CH_4 and N_2O.

The emissions of GHGs associated with operational area sources under the Project are calculated using CalEEMod. The emissions for landscaping equipment are based on the size of the commercial land uses, the GHG emission factors for fuel combustion, and the GWP values for the GHGs emitted.

Energy Use

With regard to energy usage, the consumption of fossil fuels to generate electricity and to provide heating and hot water generates GHG emissions. Future fuel consumption rates are estimated based on specific square footage of the commercial land uses, as well as predicted water supply needs of the Project. Energy usage (off-site electricity generation and on-site natural gas consumption) for the Project is calculated within CalEEMod using the CEC's *California Commercial End Use Survey* (CEUS) data set, which provides energy demand by building type and climate zone.[43] This data set provides energy intensities of different land uses throughout the state and different climate zones. Default CalEEMod energy usage rates were adjusted to reflect the 2019 Title 24 Building Energy Efficiency Standards.

Electricity

The generation of electricity in California is achieved through the combustion of fossil fuels, primarily natural gas, using steam boilers, internal combustion engines, and combustion turbines. A portion of the electricity in California is imported from outside the state and is derived from the combustion of coal and other non-gaseous fossil fuels. The combustion of fossil fuels to produce electricity results in GHG emissions of CO_2 and smaller amounts of CH_4 and N_2O. The electricity generation occurs off-site; therefore, electricity use results in GHG emissions that are considered to be indirect.

Emissions of GHGs associated with operation of the Project's proposed uses are based on the size of the commercial land uses, the electrical demand factors for the land uses, the GHG emission factors for the electricity utility provider, and the GWP values for the GHGs emitted. Based on information provided by the City, the Costco store would consume approximately four million kilowatt-hours annually, therefore, the Costco's GHG emissions were based on this value.

Pacific Gas and Electric Company (PG&E) provides electric service to the Project site. Emission factors for CO_2 due to electrical generation to serve the electrical demands of the Project were obtained from The Climate Registry. The PG&E CO_2 emission factor for 2016 is provided below.

43 California Energy Commission, 2007. California Commercial End-Use Survey, http://capabilities.itron.com/CeusWeb/Chart.aspx. Accessed January 2018.

The rates for CH_4 and N_2O are CalEEMod default values. he factors listed below were applied in estimating project emissions for the Project's Phase 1 operations in 2021.

- CO_2: 294 lbs/MWh[44]
- CH_4: 0.029 lbs/MWh
- N_2O: 0.006 lbs/MWh

PG&E currently provides 33 percent of electricity via renewable sources[45] but would provide an increasing percentage from renewable sources in compliance with the RPS with 50 percent by 2025, 60 percent by 2030, and 100 percent by 2045. As a result, it is likely that the future year electricity GHG emissions would decline. Although PG&E would be required to provided 60 percent of electricity via renewable sources by 2030, there is uncertainty in the power mix distribution of the remaining 40 percent of energy sources such as natural gas, large hydroelectric, and unspecified sources. Using PG&E's power mix data from years 2012 to 2017, a 2030 CO_2 emissions factor was derived to be 276 lbs/MWh (for calculation details see Appendix A). This CO_2 factor was used in the analysis for operational GHG emissions from Full Buildout of the Project in 2031. CH_4 and N_2O emission factors for the Project's Full Buildout would remain based on CalEEMod default values. Electricity GHG emission factors for Full Buildout of the Project are provided below.

- CO_2: 276 lbs/MWh[46]
- CH_4: 0.029 lbs/MWh
- N_2O: 0.006 lbs/MWh

Natural Gas

Natural gas-related emissions of GHGs associated with operation of the Project are based on the size of the Project's proposed uses, the natural gas demand factors for the land uses, the default GHG emission factors for the natural gas combustion in CalEEMod, and the GWP values for the GHGs emitted.

Mobile Sources

Non-Delivery Vehicles

Mobile source emissions were calculated using CalEEMod and Project-specific trip rates. Compared to the land uses in the traffic study, the square footage of some land uses have changed slightly, therefore, the trip rates in the Project's traffic study were prorated based on square footage for each land use. The CalEEMod default fleet mix was modified to include all vehicle types except

44 The Climate Registry, 2018. Default Emission Factors for Reporting in 2018, https://www.theclimateregistry.org/wp-content/uploads/2018/06/The-Climate-Registry-2018-Default-Emission-Factor-Document.pdf. Accessed March 2019.

45 PG&E, 2018 Corporate Responsibility and Sustainability Report, p.47, http://www.pgecorp.com/corp_responsibility/reports/2018/assets/PGE_CRSR_2018.pdf. Accessed March 2019.

46 The Climate Registry, 2018. Default Emission Factors for Reporting in 2018, https://www.theclimateregistry.org/wp-content/uploads/2018/06/The-Climate-Registry-2018-Default-Emission-Factor-Document.pdf. Accessed March 2019.

heavy-heavy-duty (HHD) trucks because emissions for HHD trucks are calculated separately as described below.

Gas Station Idling

This analysis included tailpipe GHG emissions from customer vehicle queuing/idling. It was assumed each customer vehicle will idle at the gas station for a total of 10 minutes. This is a conservative assumption which is likely to overestimate the average customer idling time and idling-related emissions. The idling emission factors for customer vehicles at the gas station were derived from EMFAC2017 for gasoline-fueled light-duty vehicles at 5 miles per hour (mph), because EMFAC2017 does not generate idling emission factors for light-duty vehicles.

Delivery Truck Travel and Idling

This study conservatively assumed the delivery truck trips were additional to the project traffic estimated in the traffic study, i.e., all trips in the traffic study were assumed to be non-HHD vehicle trips and have already been accounted for in the non-delivery vehicles mobile source category above. Daily delivery truck vehicle trip GHG emissions were estimated outside of CalEEMod using emission factors from EMFAC2017 for the HHDT vehicle category. It was assumed that all trucks were diesel-powered. The Costco delivery truck fleet had an average model year of 2016 based on information provided by the City, therefore, emission factors for model year 2016 were applied to Costco delivery trucks. Non-Costco delivery trucks utilized emission factors based on an aggregate model year.

The number of daily delivery trucks for Phase 1A were provided by the City. Delivery trucks for Phase 1B and Phase 2 were estimated based on the Project's traffic study and the CalEEMod default fleet percentage for the HHDT vehicle category. The number of truck trips were estimated by multiplying the traffic study's daily trip rate by the HHDT portion of the CalEEMod fleet mix.[47] The number of trucks operating per day (i.e. round trips) are shown below in **Table 4**, **Daily Truck Deliveries**.

TABLE 4
DAILY TRUCK DELIVERIES

Source	Trucks per Day (round trips) [a, b]
Phase 1	
Costco Store	10
Costco Gas Station	6
Hotel/Retail	29
Phase 2	
Retail	165

[47] Johnson Drive Economic Development Zone Transportation Impact Analysis, Fehr & Peers, 2015.

NOTES:

[a] Daily trucks for the Costco store, and the Costco gas station were based on information from the City (including information provided by Costco). Daily trucks for the hotel and retail land uses were based on the daily trips generated by these land uses, as supplied by the SEIR's Traffic Study, and multiplied by the HHDT default fleet mix percentage from CalEEMod.

[b] The total number of trucks per day represents the number of daily round-trip truck trips assumed in the modeling.

Source: ESA 2019

Travel emissions for Costco delivery trucks, warehouse and gasoline fuel trucks, were based on travel distances to their respective distribution facilities which were provided by the City. Costco warehouse trucks delivering goods to Costco have an estimated trip length of 24.5 miles based on the distance to the Tracy depot. Costco trucks delivering fuel to the gas station have an estimated trip length of 30 miles based on the nearest fuel delivery location in Benicia. Travel emissions for non-Costco delivery trucks, such as for hotel and retail uses, were estimated assuming 7.3 miles per trip, which is the CalEEMod default trip length for "commercial-nonwork" trip types. Commercial-nonwork trips represent trips associated with commercial land uses other than customers or workers, such as delivery vehicles of goods.[48] For the Costco store and gas station trucks, emission factors for model year 2016 trucks were used to estimate emissions. According to the project applicant, the average model year for all Costco delivery trucks is 2016.

Idling emissions were estimated assuming 15 minutes of idling per trip, representing three separate 5-minute idling occurrences: check-in to the site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the site or queuing at the site boundary upon departure.

TRUs

Delivery trucks would generate exhaust emissions from the use of truck-mounted diesel-powered TRUs. Consistent with the HRA, it was assumed that 75 percent of Costco trucks, 25 percent of all other project trucks (including hotel and retail delivery trucks) operate a TRU for two hours per trip on any given day. TRU GHG emissions were based on emission factors from the National Renewable Energy Laboratory.[49]

Electric Vehicle Charging Stations

As discussed in section 3.2 *Project Design Features*, the Costco warehouse will install 10 electric vehicle (EV) charging stations to be operational at the opening of the store in 2020. These stations will support the future use of electric and hybrid-electric vehicles by employees and visitors traveling to and from the site, and would reduce the Project's consumption of gasoline and diesel vehicle fuel. Use of the EV charging stations will result in indirect emissions from increased electricity use, but will result in emission reductions from conventional fossil-fueled vehicles.

48 CalEEMod User's Guide, Appendix A, p.21, http://caleemod.com/. Accessed January 2019.

49 National Renewable Energy Laboratory, 2010. Emissions of Transport Refrigeration Units with CARB Diesel, Gas-to-Liquid Diesel, and Emissions Control Devices, p. 5. https://www.nrel.gov/docs/fy10osti/46598.pdf. Accessed March 2019.

GHG emissions from the use of the EV charging stations were calculated using the following main assumptions: each charger would be a Level 2 charging station; the charge rate of each charging station is 25 miles per hour of charging;[50] the chargers would be used 10 hours/day on average over 358 days of store operation per year; each charger would consume 6.25 kW of electricity per hour of use;[51] the EV fuel economy is 0.25 kWh per mile of travel;[52,53] and the average emission factor for light-duty gasoline and diesel vehicles replaced by EVs is approximately 287 grams of CO_2e per mile for Phase 1 buildout in 2021 and approximately 203 grams of CO_2e per mile for full Project buildout in 2031 based on passenger vehicle emission factors from CalEEMod.

Water and Wastewater

Water and wastewater generated from the land uses under the Project would require energy to supply, distribute and treat. The combustion of fossil fuels to produce electricity results in GHG emissions of CO_2 and smaller amounts of CH_4 and N_2O. The electricity generation occurs off-site; therefore, the electricity use from water and wastewater results in GHG emissions that are considered to be indirect. Wastewater also results in emissions of GHGs from wastewater treatment systems (e.g., septic, aerobic, or lagoons) as well as from solids that are digested either through an anaerobic digester or with co-generation from combustion of digester gas.

The emissions of GHGs associated with wastewater treatment process emissions are calculated using CalEEMod. The emissions are based on the type of treatment (e.g., aerobic, facultative lagoons, septic systems). The emissions are calculated using the default settings in CalEEMod for the type of wastewater treatment and default water usage rates for all Project land uses with the exception of the Costco. Based on information provided by the City, the Costco store would consume approximately four million gallons of water annually, therefore, the Costco's GHG emissions from water consumption were based on this.

The CEC's estimate for energy intensity of the water use cycle in Northern California, as provided in the 2006 CEC report *Refining Estimates of Water-Related Energy Use in California*, is used to calculate the energy usage related to water supply, treatment, and distribution and wastewater treatment.[54] The same electricity GHG emissions factors discussed above are used for water and wastewater energy usage.

Solid Waste

The Project would generate solid waste from day-to-day operational activities, which generally consists of product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, plastic, and other items routinely disposed of in trash bins. A portion of the waste is diverted to waste recycling and reclamation facilities. Waste that is not diverted is usually sent to local landfills

50 County of Santa Clara Office of Sustainability, 2018. *Driving to Net Zero*, Table 1. March 9. Available at https://www.sccgov.org/sites/dnz/Documents/Task-5A-Santa-Clara-County-2017-Transportation-Survey-Report.pdf. Accessed April 2019.

for disposal. Waste that is disposed in landfills results in GHG emissions of CO_2 and CH_4 from the decomposition of the waste that occurs over the span of many years.

Emissions of GHGs associated with solid waste disposal under the Project are calculated using CalEEMod. The emissions are based on the size of the commercial land uses, the waste disposal rate for the land uses, the waste diversion rate, the GHG emission factors for solid waste decomposition, and the GWP values for the GHGs emitted.

CalEEMod allows the input of several variables to quantify solid waste emissions. The model requires the amount of waste disposed, which is the product of the waste disposal rate times the land use units. The GHG emission factors, particularly for CH_4, depend on characteristics of the landfill, such as the presence of a landfill gas capture system and subsequent flaring or energy recovery. The default values, as provided in CalEEMod, for landfill gas capture (e.g., no capture, flaring, energy recovery) are statewide averages and are used in this assessment.

Stationary Sources

Emergency Generators

The analysis assumed the Costco store and hotel would each have a diesel emergency generator. The generators would be located at ground level. Each generator would have a rating of 1,300 horsepower (1,000 kilowatts). Diesel-powered emergency generator emissions were estimated outside of CalEEMod. Emissions were estimated based on a maximum annual non-emergency operation schedule of 50 hours each, consistent with emergency standby engine testing limits established in BAAQMD Regulation 9-8-330.3. Emissions factors for CO_2, CH_4, and N_2O from diesel fuel combustion were obtained from The Climate Registry.

3.2 Project Design Features

The Project would be designed to incorporate green building techniques as required by the Title 24 Building Energy standards. In addition, the Costco facility would include the following sustainability features.

Solar Energy on the Costco Warehouse

Costco shall install a rooftop solar photovoltaic (PV) system of at least 500 kilowatts (KW) of AC power within two years of the warehouse opening. Costco estimates that the rooftop system would consist of more than 2,000 modules with a total rating of 540,000 watts, and produce approximately 1,128,400 kWh of clean electricity annually. This system would generate 1,128 MWh of clean energy annually, reducing GHG emissions by approximately 150 MT CO_2e per year in 2021 and 141 MT CO_2e per year in 2031.[55]

Solar Energy on Other Buildings

The project sponsor shall install a rooftop solar photovoltaic system on the Phase 1 hotel(s) and retail space and on the Phase 2 retail space (or other Phase 2 development as may be approved). The systems shall be designed to maximize electricity production pending the final design of each

[55] This quantification uses the same electricity emission factors used in the analysis of Project emissions.

building type and shall cover a minimum of 50 percent of the available rooftop space not otherwise occupied by either occupiable space or equipment necessary to the function of the building, unless the project applicant provides a justification, to the satisfaction of the Community Development Director, as to why such solar panel installation is technically and/or financially infeasible. Should the Community Development Director so determine, the project applicant shall either install the maximum feasible number of solar panels or undertake comparable renewable energy production to the satisfaction of the Community Development Director. The final design of the PV systems is pending specific building and roof characteristics and the feasibility of PV installations during the time of construction and development. Since the areal extent of the rooftops for these buildings is not currently known, the solar generating capacity and resulting reduction in GHG emissions is not quantified at this time.

Energy Efficiency

All Costco stores have an Energy Management System. Costco's warehouse designs are consistent with the requirements of Leadership in Energy and Environmental Design (LEED) for green building design and construction. Buildings are designed with high efficiency HVAC systems and reflective roofs that lessen the heat gain on the roof. Mechanical heat from refrigeration systems is captured to preheat hot water tanks. All indoor and outdoor lighting in new construction utilizes high-efficiency LED technology.[56]

Recycled Materials

The Costco warehouse will be constructed of prefabricated structural steel containing approximately 80 percent recycled content. The building insulation will utilize ECOSE® Technology, which contains an average of 76.98 percent recycled content.

Support for Electric Vehicles

The Project would include the installation of electric vehicle supply equipment (EVSE) pursuant to Section 5.106.5.3, Electric Vehicle Charging of the CALGreen Code. To comply with requirements of Section 5.106.5.3, six percent of the parking spaces for the Costco store and the Project's other commercial land uses would be prewired during construction to accommodate EVSE. In addition, the City is requiring as a condition of approval that Costco install 10 EV charging stations to be operational at the opening of the store in 2020. These stations will support the future use of electric and hybrid-electric vehicles by employees and visitors traveling to and from the site, and would reduce the Project's consumption of gasoline and diesel. Use of EVs will increase overall demand for electricity from the utility (i.e., PG&E), but as the carbon content of the utility's electricity is reduced over time to meet the State's Renewables Portfolio Standard, the GHG emissions associated with EV travel will be reduced accordingly.

[56] Costco Wholesale Corporation, 2019. Sustainability – Buildings. Available: https://www.costco.com/sustainability-buildings.html. Accessed: April 2019.

Waste Recycling and Organics Diversion

Worldwide, Costco is committed to local recycling programs that divert waste materials produced by their business operations from landfills. Costco's 2018 Global Sustainability Waste Report[57] indicates that across all U.S. operations, 73 percent of solid waste was diverted from landfill in 2018, including their waste-to-energy stream. Costco is committed to expanding these programs through partnerships, efficiencies and technologies.

Costco locations worldwide donate edible food products to food banks and to other nonprofits in their local communities. Donation programs vary by location and by country, including the current Feeding America in the U.S., which works with local food banks to provide meals to the hungry. In fiscal year 2018, Costco donated more than 34.7 million pounds of edible food products in all states where it operates, which represents approximately 29 million meals to people in need.

Much of Costco's organic waste (inedible food waste) is recycled into usable products, such as organic fertilizer, compost, animal feed, biofuels and electricity. In the U.S. for fiscal year 2018, Costco diverted over 80.5 million pounds of material from landfills, including:

- 8.7 million pounds of organic waste was converted into animal feed for cattle and hogs;
- 7.3 million pounds of chicken grease produced from rotisserie chickens was recycled, the majority of which was converted into biofuel;
- 853,119 pounds of organic waste was converted into certified organic liquid fertilizer, and in turn was purchased by some of Costco's produce suppliers for use on the products they sell to Costco; and
- additional organic waste from operations was also converted into certified organic liquid fertilizer in the form of a produce that is now sold at Costco locations.

Each store operator uses a combination of the four methods described above depending on local availability and vendor participation.[58]

Water Management

Costco is committed to comprehensive water management at all of its U.S. stores that include water metering systems that detect leaks and benchmark performance, and systems that detect in real-time mechanical failures that can be resolved quickly, and can track operational water waste to allow more efficient water use and/or reduced water usage.[59] Outdoors, native and drought-resistant landscaping materials, along with drip irrigation systems, are used to minimize irrigation. As of the

58 Email correspondence, March 29, 2019, between City of Pleasanton and Jenifer Murillo, Director of Real Estate Development, Costco Wholesale.

59 Email correspondence, March 29, 2019, between City of Pleasanton and Jenifer Murillo, Director of Real Estate Development, Costco Wholesale.

end of fiscal year 2018, the rollout in North America was 95 percent complete and Costco reports a 10 percent water savings since July 2017.

Shipping Efficiencies

Costco continually evaluates its processes and implements ways to improve shipping efficiencies.[60] These measures include packaging design changes and pallet configuration – resulting in more products on a pallet and fewer delivery trucks on the road. The Costco transportation team looks for ways to reduce empty miles involving trucks returning to the depots (distribution centers) from the warehouses, including picking up truckloads of merchandise that are destined for a Costco depot for distribution to a regional group of warehouses, and loading trailers with returned goods that are headed to salvagers or need to be returned to the supplier, and consolidating those shipments into truckloads. These streamlined "reverse logistics processes" help reduce truck miles traveled and the costs associated with merchandise handling and store operation.

[60] Email correspondence, March 29, 2019, between City of Pleasanton and Jenifer Murillo, Director of Real Estate Development, Costco Wholesale.

Chapter 4
Significance Criteria

4.1 CEQA Guidelines

As described in *Section 3.7.3 Regulatory Setting*, in 2009 and 2018, the California Natural Resources Agency adopted amendments to the State CEQA Guidelines addressing the analysis and mitigation of GHG emissions. As a result of the amendments, the Appendix G of the *CEQA Guidelines* provides screening questions to assist lead agencies when assessing a project's potential impacts with regard to GHG emissions as follows:

Would the Project:

a. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?; or

b. Conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

Amendments to Section 15064.4 of the State CEQA Guidelines were adopted to assist lead agencies in determining the significance of the impacts of GHG emissions. Consistent with existing CEQA practice, Section 15064.4 gives lead agencies the discretion to determine whether to assess those emissions quantitatively or qualitatively. If a qualitative analysis is used, in addition to quantification, this section recommends certain qualitative factors that may be used in the determination of significance (i.e., extent to which the project may increase or reduce GHG emissions compared to the existing setting; whether the project emissions exceed an applicable significance threshold; and extent to which the project complies with regulations or requirements adopted to implement a reduction or mitigation of GHGs). The CEQA Guidelines, as amended, do not establish a threshold of significance; rather, lead agencies are granted discretion to establish significance thresholds for their respective jurisdictions, including looking to thresholds developed by other public agencies, or suggested by other experts, such as CAPCOA or a local air quality district, so long as any threshold chosen is supported by substantial evidence (see Section 15064.7(c)). Consistent with CEQA Guidelines Section 15064.7(c) (use of another agency's significance threshold that is supported by substantial evidence), Appendix G of the CEQA Guidelines states that, where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make a significance determination.

The California Natural Resources Agency has also clarified that the State CEQA Guidelines focus on the effects of GHG emissions as cumulative impacts, and that they should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see Section 15064(h)(3)).[61]

Per State CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area of the project.[62] To qualify, such a plan or program must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.[63] Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plan, [and] plans or regulations for the reduction of greenhouse gas emissions."[64]

4.2 Relevant Court Cases

Center for Biological Diversity v. California Department of Fish and Wildlife

The California Supreme Court considered the CEQA issue of determining the significance of GHG emissions in its *Center for Biological Diversity v. California Department of Fish and Wildlife* decision (62 Cal.4th 204), commonly referred to as the "Newhall Ranch" ruling, based on the project reviewed in the EIR in question. The Court questioned a then-common CEQA approach to GHG analyses for development projects that compares project emissions to the reductions from "business as usual" (BAU) that would be needed statewide to reduce emissions to 1990 levels by 2020, as required by AB 32. The court upheld the BAU method as valid in theory, but concluded that the BAU method was improperly applied in the case of the Newhall project because the target for the project was incorrectly deemed consistent with the statewide emission target of 29 percent below BAU for the year 2020 without explanation as to how that statewide target applied to the project being analyzed. In other words, the court said that the percentage below BAU target developed by the AB 32 Scoping Plan is intended as a measure of the GHG reduction effort required by the State as a whole, and it cannot necessarily be applied to the impacts of a specific project in a specific location. The Court provided some guidance to evaluating the cumulative significance of a proposed land use project's GHG emissions, but noted that none of the approaches could be guaranteed to satisfy CEQA for a particular project. The Court's suggested "pathways to compliance" include:

1. Use a geographically specific GHG emission reduction plan (e.g., a local climate action plan) that outlines how the jurisdiction will reduce emissions consistent with State reduction

61 See generally California Natural Resources Agency, Final Statement of Reasons for Regulatory Action, December 2009, pages 11-13, 14, 16. Available at: http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf . Accessed: March 18, 2019.
62 California Code of Regulations (CCR), Title 14, Section 15064(h)(3).
63 *Ibid*.
64 *Ibid*.

targets, to provide the basis for streamlining project-level CEQA analysis, as described in CEQA § 15183.5.

2. Utilize the Scoping Plan's business-as-usual (no-action-taken) reduction goal, but provide substantial evidence to bridge the gap between the statewide goal and the project's emissions reductions.
3. Assess consistency with AB 32's goal in whole or part by looking to compliance with regulatory programs designed to reduce GHG emissions from particular activities; as an example, the Court points out that projects consistent with an SB 375 Sustainable Communities Strategy (SCS) may need to re-evaluate GHG emissions from cars and light trucks.
4. Rely on existing numerical thresholds of significance for GHG emissions, such as those developed by an air district.

Number four is the most straightforward approach to analysis, since it relies on a "bright-line" project threshold typically based on total annual GHG emissions, or an efficiency metric threshold typically based on total annual GHG emissions per service population. The BAAQMD has developed Project significance thresholds for GHG emissions; however, as described in the next section, the BAQQMD's numerical thresholds have not been updated to align with the SB 32 target for 2030 .

The Court did not list the above pathways in order of importance or intentional sequence, nor require that they be relied upon in an analysis. However, this report considers the potential GHG emissions associated with the Project within the context of the Court's suggested pathways to compliance.

Golden Door v. County of San Diego

In *Golden Door Properties v County of San Diego* (2018). California's Fourth District Court of Appeal affirmed a trial court judgement that invalidated a document adopted by the County of San Diego that was intended as guidance for CEQA review of GHG impacts. The County's GHG guidance document included recommended guidelines for determining significance based on an efficiency metric of 4.9 metric tons of carbon dioxide equivalent per service population. The guidance stated that the efficiency metric represented the county's "fair share" of statewide emissions mandates.

The Court found that the threshold of significance provided by the efficiency metric was not supported by substantial evidence, because it was based on statewide standards with no explanation why those standards were sufficient for use in the county. Specifically, the court held that the county needed to support the efficiency metric with substantial evidence establishing a relationship between the statewide data used to establish the metric and the county-specific reduction targets. Additionally, the Court found that the county's guidance did not sufficiently explain how the efficiency metric would be appropriate across all project types.

The Court also found that the metric violated CEQA because the county failed to formally adopt the GHG guidelines by ordinance, rule, resolution or regulation through a public review process.

Cleveland National Forest v. San Diego Association of Governments

As discussed previously in the Regulatory Setting section, in the Supreme Court ruling in *Cleveland National Forest v. San Diego Association of Governments* (2017) the Court ruled that SANDAG was not required to use the Executive Order's 2050 goal as a significance threshold for GHG impacts because: (1) it is not an "adopted" target within the meaning of CEQA Guidelines section 15064.4(b)(2); (2) the Executive Order does not specify any plan or implementation measures to achieve its goal; and (3) there is no regulatory guidance on how the Executive Order's goal.

4.3 Existing BAAQMD Significance Thresholds

As described in Chapter 2 *Applicable Regulations*, the BAAQMD's CEQA Air Quality Guidelines establish three potential thresholds for analyzing the GHG emissions associated with land use development projects:

- Compliance with a qualified Climate Action Plan, with a goal consistent with AB 32,
- A mass emissions threshold of 1,100 MT of CO_2e per year, or
- A GHG efficiency threshold of 4.6 MT of CO_2e per service population (project jobs + project residents).

The Project would not be built out until 2031. AB 32 has a GHG reduction target of achieving 1990 levels by the year 2020, while SB 32 extends the statewide target to a reduction of 40 percent below 1990 levels by 2030, which is one year prior to Project buildout. For this reason, the SB 32 reduction target applies to the Project. The Association of Environmental Professionals (AEP) Climate Change Committee recommended in a 2015 white paper that CEQA analyses for multiple-phase projects with post-2020 development not only "consider consistency with the 2020/AB 32-based framework but also analyze the consequences of post-2020 GHG emissions in terms of their impacts on the reduction trajectory from 2020 toward 2050."[65] AEP further recommends that the "significance determination should be based on consistency with substantial progress along a post-2020 trajectory." The AEP white paper is advisory only and is not binding guidance or an adopted set of CEQA thresholds. Given that year 2031 is the horizon year for the full buildout of the Project, a post-2020 analysis is warranted.

As noted above in Section 2.4, the Pleasanton CAP is considered qualified through the year 2020. Because full Project buildout would not occur until 2031, the first BAAQMD threshold noted above—compliance with a qualified Climate Action Plan—should only be applied using a CAP that is qualified to be consistent with SB 32's target for 2030. Accordingly, compliance or consistency with the City of Pleasanton CAP in its current state does not represent a sufficient, stand-alone threshold for analyzing the GHG impacts of the Project because it is not qualified out to 2030.

[65] Association of Environmental Professionals, 2015. Beyond 2020: The Challenge of Greenhouse Gas Reduction Planning by Local Governments in California. March 16. Draft whitepaper. Prepared by Climate Change Committee. Available at https://www.califaep.org/images/climatechange/AEP_White_Paper_Beyond_2020.pdf. Accessed March 2019.

The BAAQMD mass emissions threshold of 1,100 MT of CO_2e per year was designed for the District to meet the AB 32 goal of reducing GHG emissions to 1990 levels by 2020 by accounting for the Bay Area's share of GHG emissions reduction beyond that achievable at the state level. It is based on the AB 32 GHG reduction goals and a "gap analysis" that attributes an appropriate share of GHG emissions reductions to new land use development projects in BAAQMD's jurisdiction. However, the District has not yet developed a corresponding mass emissions threshold that is aligned with the SB 32 target for 2030. Accordingly, BAAQMD's existing mass emissions threshold is not appropriate for analyzing the GHG impacts of the Project.

Similarly, the BAAQMD efficiency threshold (4.6 MT of CO_2e per service population) was calculated by dividing the AB 32 GHG reduction target for land use development emissions in California by the estimated 2020 population and employment level. The BAAQMD efficiency threshold is tied directly to AB 32 and statewide emissions reduction goals for 2020. It is generally appropriate to use for larger projects that have a sizable number of residential and/or employees that is representative of the service population generating emissions. However, similar to the City's CAP, this threshold does not address the statewide emissions target mandated by SB 32 for 2030. Furthermore, its service population basis as defined by BAAQMD penalizes retail projects, like the Johnson Drive Economic Development Zone, which are located in close proximity to existing residential development, but do not include those residents in the service population metric. Customers of retail projects generate trips (and related emissions) that must be included in a project's emissions inventory, but the customers themselves are not counted in the service population denominator. In addition, it should be noted that pursuant to *Golden Door Properties v County of San Diego* (2018), use of the efficiency threshold would require BAAQMD to provide substantial evidence establishing a relationship between the statewide data used to derive the 4.6 MT per person threshold and the threshold's applicability to the San Francisco Bay Area and to various types of projects.

For these reasons, BAAQMD's existing efficiency threshold is not appropriate for analyzing the GHG impacts of the Project.

4.4 Project Significance Criteria

Although GHG emissions can be quantified as discussed under the Methodology section above, CARB, BAAQMD, and the City have not adopted quantitative project-level significance thresholds for GHG emissions that would be applicable to the Project. Given that there is no applicable or available quantitative threshold, and given the absence of a qualified GHG reduction plan, the significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b) by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. CARB's 2017 Scoping Plan Update is intended to reduce GHG emissions to meet the statewide targets set forth in SB 32. ABAG/MTC's Plan Bay Area 2040 is designed to achieve regional GHG reductions from the land use and transportation sectors as required by SB 375 and the state's long-term climate goals. The City of Pleasanton Climate Action Plan is designed to reduce local GHG emissions to support the statewide target for 2020 set forth in AB 32, and to put the City on an emissions trajectory that is consistent with the State's

longer term targets. Thus, the City as Lead Agency has determined that the Project would not have a significant effect on the environment if the Project is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions, including the emissions reduction measures discussed within the 2017 Climate Change Scoping Plan Update, Plan Bay Area 2040, and the City's Climate Action Plan.

Chapter 5
Project Impacts

5.1 GHG Emissions Impact

Threshold a: Would the Project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.

Threshold b: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.

Project Emissions

The California Natural Resources Agency's Final Statement of Reasons for Regulatory Action for the Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 ("Final Statement of Reasons") provides that project-level quantification of emissions should be conducted where it would assist in determining the significance of emissions, even where no numeric threshold applies. In such cases, the Final Statement of Reasons provides that qualitative thresholds can be utilized to determine the ultimate significance of project-level impacts based on a project's consistency with plans, which can include applicable regional transportation plans. Even when using a qualitative threshold, quantification can inform "the qualitative factors" and indicate "whether emissions reductions are possible, and, if so, from which sources."[66] Therefore, the Project's GHG emissions for construction and operation are presented below.

Construction Emissions

GHG emissions associated with construction of the Project were calculated for each year of construction activity using CalEEMod. Results of the GHG emissions calculations are presented on **Table 5**, *Estimated Construction Greenhouse Gas Emissions*. It should be noted that the GHG emissions shown in Table 8 are based on construction equipment operating continuously throughout each workday. In reality, construction equipment tends to operate periodically or cyclically throughout each workday. Therefore, the GHG emissions shown reflect a conservative estimate.

Although GHGs are generated during construction and are accordingly considered 1-time emissions, it is important to include them when assessing all of the long-term GHG emissions associated with a project. Construction-related GHG emissions are amortized over the project's 30-year lifetime in order to include these emissions as part of a project's annualized lifetime total

66 California Natural Resources Agency, 2009. Final Statement of Reasons for Regulatory Action for the Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (December 2009). pp. 20-26.

emissions, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies. Due to the potential persistence of GHGs in the environment, construction-period impacts are not assessed independently of operational-period impacts, which are discussed in the next section.

TABLE 5
ESTIMATED UNMITIGATED CONSTRUCTION GREENHOUSE GAS EMISSIONS

Construction Year	CO_2e (Metric Tons) [a, b]
Phase 1 (2020/2021)	1,264
Phase 1 Amortized Emissions (30-years)	**42**
Phase 2 (2030/2031)	799
Project Construction Total	**2,062**
Total Construction Amortized Emissions (30-years)	**69**

NOTES:
[a] Totals may not add up exactly due to rounding in the modeling calculations.
[b] CO_2e emissions are calculated using the global warming potential values from the Intergovernmental Panel on Climate Change Fourth Assessment Report: 25 for CH_4 and 298 for N_2O (Intergovernmental Panel on Climate Change, Fourth Assessment Report: The Physical Science Basis, Summary for Policy Makers, (2007))

Operational Emissions

GHG emissions associated with operation of the Project were calculated to disclose operational emissions from the Project. Annual operational GHG emissions were estimated using CalEEMod. CalEEMod incorporates the efficiencies from complying with California's Title 24 Building Energy Efficiency Standards.

Maximum annual net GHG emissions resulting from non-delivery and delivery vehicles, energy (i.e., electricity, natural gas), water conveyance and wastewater treatment, solid waste, emergency generators, and TRUs were calculated for Phase 1 operations (2021) and Full Buildout operations (2031). GHG emissions from operation of the Project at completion of Phase I and at Full Buildout are shown in **Table 6**, *Annual Operational Greenhouse Gas Emissions*.

TABLE 6
ANNUAL OPERATIONAL GHG EMISSIONS, PHASE 1 AND FULL BUILDOUT

	Annual CO_2e Emissions (MT CO_2e per year)	
Emission Source	**Phase 1 2021**	**Full Buildout 2031**
Area	<1	<1
Electricity	677	844
Natural Gas	247	263
Non-Delivery Vehicles (Running)	9,324	11,141
Light-Duty Vehicles (Idling at Gas Station)	377	287

Emission Source	Annual CO_2e Emissions (MT CO_2e per year)	
	Phase 1 2021	**Full Buildout 2031**
Delivery Vehicles (Running)	687	1,725
Delivery Vehicles (Idling)	31	119
TRUs	213	807
Costco Generator	26	26
Hotel Generator	26	26
Solid Waste	392	489
Water and Wastewater	22	53
Construction (amortized over 30 years)	42	69

Estimated Reductions from EV Charging Infrastructure [a]	-136	-92
Estimated Reductions from Costco Solar PV installation [b]	-150	-141
Total Net Operational Project GHG Emissions Including EV and Solar PV Reduction	**11,778**	**15,617**

NOTES:

Categories defined as follows:

Area = Emissions from landscaping equipment. Emissions were modeled using CalEEMod.

Electricity = Emissions from electricity consumption in buildings. Emissions were modeled using CalEEMod.

Natural Gas = Emissions from natural gas combustion for space heating and cooking. Emissions were modeled using CalEEMod.

Non-Delivery vehicles (running) = Operating emissions from daily commercial non-delivery vehicle trips. Emissions from these trips were estimated using CalEEMod.

Light-duty vehicles (idling at gas station) = Idling emissions from autos queueing in line at gas station. Emissions were estimated outside of CalEEMod using EMFAC2017 emissions factors and an idling time of 10 minutes.

Delivery Vehicles (Running) = Operating emissions from daily commercial delivery vehicle trips. Emissions were estimated outside of CalEEMod using emission factors from EMFAC2017.

Delivery Vehicles (Idling) = Operating emissions from daily commercial delivery vehicles idling. Emissions were estimated outside of CalEEMod using emission factors from EMFAC2017 and an idling duration of 15 minutes.

Transportation Refrigeration Units (TRUs) = Operating emissions from daily TRU usage at commercial land uses. Emissions were estimated outside of CalEEMod using emission factors from the National Renewable Energy Laboratory.

Costco and Hotel Generators = Operating emissions from diesel-powered emergency generators. Emission were estimated outside of CalEEMod using emission factors from The Climate Registry.

Solid Waste = Downstream fugitive methane emissions associated with landfilling solid waste. Emissions were modeled using CalEEMod.

[a] This represents the reduction in emissions from conventional fossil-fueled vehicles that would be replaced by EVs using the charging infrastructure at the Project site. See Appendix A for calculation details.

[b] This represents the reduction in emissions from a rooftop solar PV system at the Costco warehouse that would generate 1,128 MWh of clean energy annually.

Total operational emissions, including amortized construction emissions, are estimated to be 12,065 MT CO_2e in 2021 (Phase 1) and 15,850 MT CO_2e in 2031 (full buildout). With emission reductions anticipated through the use of the 10 EV charging stations at the Costco warehouse, and the installation of a 1,128 MWh rooftop solar PV system at the Costco warehouse, net total operational emissions are estimated to be 11,778 MT CO_2e in 2021 (Phase 1) and 15,617 MT CO_2e in 2031 (full buildout).

As stated above, this quantitative analysis is provided for informational purposes and is not presented as the method to analyze GHG impacts or to demonstrate compliance with a quantitative threshold. Instead, the analysis is presented to quantify the Project's potential GHG emissions in order to inform the qualitative analysis. These figures can be used to determine whether emissions reductions are possible, and, if so, from which sources, as well as to demonstrate consistency with certain GHG reduction plans and policies.

Consistency with Plans

A significant impact would occur if the Project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment by conflicting with state goals and applicable regulatory plans and policies to reduce GHG emissions including AB 32, SB 32, Executive Order S-3-05 and CARB's 2017 Climate Change Scoping Plan Update, as well as the region's Sustainable Communities Strategy/Regional Transportation Plan (Plan Bay Area 2040) and the City's Climate Action Plan.

State Goals and CARB's Climate Change Scoping Plan

The primary goal of AB 32 is the requirement for statewide GHG emissions to be reduced to 1990 levels by 2020. AB 32 also required the adoption of discrete Early Action Measures Items[67] which resulted in the development of the Low Carbon Fuel Standard, among other things. Further, AB 32 required the development of the first Scoping Plan (2008) for achieving the necessary GHG reductions in a technologically and economically feasible manner, the adoption of a mandatory GHG emissions reporting regulation, and the establishment of a market-based declining emission limit program (i.e., the cap-and-trade program). The First Update to the Scoping Plan was approved by CARB in May 2014 and built upon the initial Scoping Plan with new strategies and recommendations to achieve the AB 32 target.

Executive Order B-30-15 established a GHG emission reduction goal for California of 40 percent below 1990 levels by 2030. This Executive Order also directed all state agencies with jurisdiction over GHG-emitting sources to implement measures designed to achieve the new interim 2030 goal, as well as the pre-existing, long-term 2050 goal identified in Executive Order S-3-05. Additionally, the Executive Order directed CARB to update its Scoping Plan to address the 2030 goal, which it has done with the 2017 Scoping Plan Update. SB 32 codifies the 2030 emissions reduction goal of Executive Order B-30-15 requiring CARB to ensure that statewide GHG emissions are reduced to 40 percent below 1990 levels by 2030.

The Project would be consistent with key state plans and regulatory requirements referenced in the 2017 Scoping Plan Update designed to reduce statewide emissions. According to the 2017 Scoping Plan Update, reductions needed to achieve the 2030 target are expected to be achieved by increasing the RPS to 50 percent of the State's electricity by 2030, greatly increasing the fuel economy of vehicles and the number of zero-emission or hybrid vehicles, reducing the rate of growth in VMT, supporting high speed rail and other alternative transportation options, and increasing the use of

[67] CARB. 2007. Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California Recommended for Board Consideration. Available online at: https://www.arb.ca.gov/cc/ccea/meetings/ea_final_report.pdf

high efficiency appliances, water heaters, and HVAC systems. As discussed previously, the Governor has already signed into law SB 350 (Chapter 547, Statues of 2015), which increased the Renewables Portfolio Standard to 50 percent by 2030 and included interim targets of 40 percent by 2024 and 45 percent by 2027. With the passage of SB 100, California's Renewables Portfolio Standard was further increased and requires retail sellers and local publicly-owned electric utilities to procure eligible renewable electricity for 44 percent of retail sales by the end of 2024, 52 percent by the end of 2027, and 60 percent by the end of 2030; and requires that CARB should plan for 100 percent eligible renewable energy resources and zero-carbon resources by the end of 2045, which would reduce Project electricity-related emissions.

The Project would support or not impede implementation of these potential reduction strategies identified by CARB, and it would benefit from statewide and utility-provider efforts towards increasing the portion of electricity provided from renewable resources. The Project would also benefit from statewide efforts towards increasing the fuel economy standards of vehicles and reducing the carbon content of fuels. The Project would utilize energy efficiency appliances and equipment, as required by Title 24, and it would provide electric vehicle charging stations to support the future use of electric and hybrid-electric vehicles by employees and visitors traveling to and from the site. For these reasons, the Project's post-2020 emissions trajectory is expected to follow a declining trend, consistent with the 2017 Scoping Plan Update, and the Project would not conflict with or obstruct implementation of the 2017 Scoping Plan Update.

Executive Order S-3-05

Executive Order No. S-3-05 established a goal of reducing the State's GHG emissions to 80 percent below the 1990 level by the year 2050. This goal has not been codified by the Legislature and CARB has not adopted a strategy or regulations designed to meet the 2050 goal. However, studies have shown that, in order to meet the 2050 goal, aggressive technologies in the transportation and energy sectors, including electrification and the decarbonization of fuel, will be required. In its original *Climate Change Scoping Plan*, CARB acknowledged that the "measures needed to meet the 2050 goal are too far in the future to define in detail."[68] In the First Update, CARB generally described the type of activities required to achieve the 2050 target: "energy demand reduction through efficiency and activity changes; large-scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and rapid market penetration of efficiency and clean energy technologies that requires significant efforts to deploy and scale markets for the cleanest technologies immediately."[69] The 2017 Scoping Plan recognizes that additional work is needed to achieve the more stringent 2050 target: "While the Scoping Plan charts the path to achieving the 2030 GHG emissions reduction target, we also need momentum to propel us to the 2050 statewide GHG target (80 percent below 1990 levels). In developing this Scoping Plan, we considered what policies are needed to meet our mid-term and long-term goals."[70] For example, the 2017 Scoping Plan acknowledges that "though Zero Net Carbon Buildings are not

68 California Air Resources Board, 2008. *Climate Change Scoping Plan*. December. Page 117. Available at: https://www.arb.ca.gov/cc/scopingplan/document/adopted_scoping_plan.pdf. Accessed May 2019.

69 California Air Resources Board, 2014. *First Update to the Change Scoping Plan*. May. Page 32. Available at: https://www.arb.ca.gov/cc/scopingplan/2013_update/first_update_climate_change_scoping_plan.pdf. Accessed May 2019.

70 California Air Resources Board, 2017. *California's 2017 Climate Change Scoping Plan*. November. Available at: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed May 2019.

feasible at this time and more work needs to be done in this area, they will be necessary to achieve the 2050 target. To that end, work must begin now to review and evaluate research in this area, establish a planning horizon for targets, and identify implementation mechanisms."[71]

In developing the 2017 Scoping Plan Update, CARB, CEC, CPUC, and the California Independent System Operator (CAISO) commissioned a study to evaluate the feasibility and cost of meeting the 2030 target along the way to reaching the State's goal of reducing GHG emissions to 80 percent below 1990 levels by 2050. With input from the agencies, the California State Agencies' PATHWAYS Project explores scenarios for meeting the State's long term GHG emissions targets, encompassing the entirety of California economy with detailed representations of the buildings, industry, transportation, and electricity sectors.[72] While acknowledging the inherent uncertainty associated with its modeling assumptions, the PATHWAYS study emphasizes the need for significant action and continued policy development by the State to support low-carbon technologies and markets for energy efficiency, building electrification, renewable electricity, zero emission vehicles, and renewable liquid fuels. The study underscores the need for a periodic review of State policies and programs for reducing GHG emissions, as was anticipated by AB 32 in its directive to update the Scoping Plan at least every five years.

A 2018 update to the PATHWAYS study advances the understanding of what is required for technology deployment and other GHG mitigation strategies if California is to meet its long-term climate goals. To achieve high levels of consumer adoption of zero-carbon technologies, particularly of electric vehicles and energy efficiency and electric heat in buildings, the 2018 study concludes that market transformation is needed to bring down the capital cost and to increase the range of options available. This market transformation can be facilitated by 1) higher carbon prices (which can be created by the state's cap and trade and LCFS programs); 2) codes and standards, regulations and direct incentives, to reduce the upfront cost to the customer; and 3) business and policy innovations to make zero-carbon technology options the cheaper, preferred solution compared to the fossil fueled alternative.[73]

Based on existing emissions trends, the proposed Project's emissions are expected to decline from its full buildout year of 2031 through at least 2050 due to continued regulatory and technological advancements. The extent to which GHG emissions from mobile sources indirectly attributed to the proposed Project would change in the future depends on the quantity (e.g., number of vehicles, average daily mileage) and quality (i.e., carbon content) of fuel that would be available and required to meet both regulatory standards and resident and worker needs. In addition, renewable power requirements, the LCFS, and vehicle emissions standards discussed above will all decrease GHG emissions per unit of energy delivered or per VMT. Due to the technological shifts required and the unknown parameters of the regulatory framework in 2050, further quantitatively analyzing the

73 Energy + Environmental Economics (E3), 2018. *Deep Decarbonization in a High Renewables Future. Updated Results from the California PATHWAYS Model*. Available at: https://www.ethree.com/wp-content/uploads/2018/06/Deep_Decarbonization_in_a_High_Renewables_Future_CEC-500-2018-012-1.pdf . Accessed March 18, 2019.

proposed Project's impacts relative to the 2050 target would be speculative for purposes of CEQA. Section 15145 of the State CEQA Guidelines directs that "[i]f, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact."

While it would be speculative to quantitatively estimate the Project's emissions level in 2050 and to assess the impact to the 2050 horizon-year goal set in EO S-3-05, statewide efforts are underway to facilitate the State's achievement of that goal and it is reasonable to expect the proposed Project's GHG emissions level to decline as the regulatory initiatives identified by CARB in the 2017 Scoping Plan Update are implemented, and other technological innovations occur. Given the reasonably anticipated decline in proposed Project emissions once fully constructed and operational, the Project would not conflict with the 2050 horizon-year goal of EO S-3-05.

Plan Bay Area

Pursuant to California Senate Bill 375, ABAG and the MTC adopted Plan Bay Area to establish targets and strategies intended to meet the region's needs for housing at all income levels, while reducing GHGs associated with private passenger and light duty truck traffic. Plan Bay Area 2040 includes a target to reduce per capita vehicular-related GHGs by at least 19 percent by 2040 compared to 2005 baseline levels. A key strategy for meeting these targets is to facilitate growth in Priority Development Areas and Transit Priority Areas within urbanized centers where there are more mobility options available to reduce driving by cars and light trucks.

Although the proposed Project is not within a PDA as identified in Plan Bay Area, a portion of it is located within a Transit Priority Project area, and the Project is consistent with the City's General Plan land use policies, which are reflected in the Plan Bay Area's growth projections for the area. Moreover, the Project will further reduce GHG emissions from passenger vehicles and light-duty trucks by providing electrical charging stations at the commercial parking lot, per the requirements of CALGreen and the City conditions of approval. Consequently, the proposed Project would not conflict with or obstruct implementation of Plan Bay Area.

City of Pleasanton Climate Action Plan

The City's CAP is a roadmap for the City to achieve its 2020 GHG reduction goal of 15 percent below 2005 levels. The CAP includes GHG reduction measures grouped under five broad strategies for transportation, energy use, solid waste, water and wastewater, and community engagement. Since the CAP was developed as a plan to achieve the City's 2020 target, its applicability to the Project is limited since the Project will not become operational until 2021 and won't be fully built out until 2031. However, the measures and policies in the CAP will remain relevant after 2020. Thus it is appropriate to qualitatively assess the Project's consistency with the CAP.

In general, the Project would comply with applicable City strategies to reduce GHG emissions by implementing energy efficient building designs, reducing indoor and outdoor water demand, and installing energy-efficient appliances and equipment. These measures are consistent with the City's GHG reduction, sustainability, and smart-growth goals of improving energy and water efficiency

in buildings, decreasing per-capita water use, using energy efficient appliances and equipment, and creating a more livable city.

Table 7, *Project Consistency with City of Pleasanton Climate Action Plan*, contains a list of the CAP's GHG-reducing strategies and actions applicable to the Project. The Project-level analysis describes the consistency of the Project with these goals, strategies and actions. As shown in the Table, the Project would be consistent with the City's CAP and would support or not impede implementation of the GHG reduction strategies identified in the CAP.

TABLE 7
PROJECT CONSISTENCY WITH CITY OF PLEASANTON CLIMATE ACTION PLAN

Action	Description	Consistency Analysis
Land Use and Transportation Strategies		
LU1	Support Infill and higher density development	**Consistent** – Objective #2 of the Project is to "maximize the benefits of the location of the EDZ area as an infill site located along transportation corridors and near transit by encouraging the development of both locally and regionally accessible uses in the EDZ area" (see Draft SEIR Chapter 3, Project Description).
LU2	Support mixed-use infill and new development near local-serving commercial areas	**Consistent** –The Project would include re-zoning of parcels within the EDZ area to allow a mix of uses that could include club retail, hotel, recreational, and small- and large-format retail establishments. These uses would be located near existing local-serving commercial areas including light industrial, office, commercial, retail, and institutional uses. Also see LU1 above.
LU3	Improve transportation efficiency through design improvements	**Consistent** – The Project would be consistent with General Plan goals for maintaining and expanding pedestrian and bicycle access. Bicycle lanes will be maintained on Johnson Drive, buffered bicycle lanes would improve bicycle safety along the corridor, and Johnson Drive would be widened to the west to accommodate a new bike lane. Final design of all improvements along Johnson Drive shall maintain or enhance existing bicycles, transit, and pedestrian facilities (see Draft SEIR Chapter 4.D Transportation and Traffic). Also see LU1 and LU2 above and NM1 below.
NM1	Create and maintain a safe, convenient, and effective system for pedestrians and bicyclists	**Consistent** –The Project would be consistent with General Plan goals for maintaining and expanding pedestrian and bicycle access. Bicycle access to and around the EDZ area is provided by the Class I Alamo Canal and bicycle lanes on Johnson Drive. Per the EDZ Design Guidelines, bicycle lanes will be maintained on Johnson Drive, and buffered bicycle lanes would improve bicycle safety along the corridor. In addition, Johnson Drive would be widened to the west to accommodate a new bike lane. Finally, Draft SEIR Mitigation Measure 4.D-3 requires that "final design of all improvements along Johnson Drive shall maintain or enhance existing bicycles, transit, and pedestrian facilities, and shall ensure bicycle and pedestrian facilities and access to

Action	Description	Consistency Analysis
		the Alamo Canal Trail at the signalized crossing at Commerce Circle and any other signalized locations on Johnson Drive." (see Draft SEIR Chapter 4.D Transportation and Traffic).
TR1	Improve and increase transit ridership with incentives, partnerships, and related investments	**Consistent** – The Project would generate transit ridership and would be required to comply with existing General Plan provisions that encourage the use of alternative modes of transportation (see Draft SEIR Chapter 4.D Transportation and Traffic).
TDM1	Use parking pricing/policy to discourage single occupancy vehicle (SOV) travel	**NA** – this strategy is implemented by the City
TDM2	Promote alternatives to work and school commutes	**NA** – this strategy is implemented by the City
TDM3	Improve traffic flow to relieve congestion	**NA** – this strategy is implemented by the City
VE1	Develop a supportive community infrastructure for alternative fuel vehicles	**Consistent** – The Project is providing EV charging stations
VE2	Develop a city fleet replacement program	**NA** – this strategy is implemented by the City
Energy		
EC1	Use city codes, ordinances, and permitting to enhance green building, energy efficiency, and energy conservation.	**Consistent** – The Project will conform to the 2019 Title 24 Standard, which according to the CEC is expected to be 30 percent more energy efficient than the 2016 code. The Project must also conform to the City's 2006 green building ordinance, which requires commercial buildings of more than 20,000 square feet to incorporate green features consistent with a LEED rating. According to Costco's web site, Costco's warehouse designs are consistent with the requirements of LEED.[74]
EC2	Leverage state and local programs to increase energy efficiency and conservation	**NA** – this strategy is aimed at improving energy efficiency of existing buildings
EC3	Establish and promote financing and financial incentive programs to support energy efficiency and conservation.	**NA** – this strategy is implemented by the City
EC4	Develop programs to increase energy efficiency and conservation.	**NA** – this strategy is implemented by the City
EG1	Promote green building and energy efficient development for government operations and city infrastructure.	**NA** – this strategy is implemented by the City
ER1	Implement local ordinances and permitting processes to support renewable energy.	**NA** – this strategy is implemented by the City
ER2	Develop programs to promote on-site renewable energy to the community.	**Consistent** – As described in Project Design Features, the Costco warehouse will install rooftop solar PV to supply renewable electricity to the building. As described in Project Design Features, the Phase 1 hotel and retail buildings would also be required to install rooftop solar PV, and all Phase 2 uses would be required to install rooftop solar PV, pending specific building and roof characteristics and the feasibility of PV installations during the time of construction and development.

[74] Costco Wholesale Corporation, 2019. Sustainability – Buildings. Available: https://www.costco.com/sustainability-buildings.html. Accessed: April 2019.

Action	Description	Consistency Analysis
ER3	Promote use of renewable energy for municipal operations.	**NA** – this strategy is implemented by the City
Solid Waste		
SW1	Increase recycling, organics diversion, and waste reduction associated with municipal operations.	**NA** – this strategy is implemented by the City
SW2	Increase recycling, organics diversion, and waste reduction associated with the entire community.	**Consistent** – The Project will participate in the City's waste hauling and diversion programs, and be required to provide adequate onsite collection service for recyclables and compostable materials (organics), as required by state law and county ordinance.
Water and Wastewater		
WA1	Conserve community water through building and landscape design and improvements	**Consistent** – The Project will adhere to CalGreen requirements for indoor and outdoor water conservation.
WA2	Conserve water used by municipal operations through building and landscape design and improvements	**NA** – this strategy is implemented by the City
WA3	Increase or establish use of reclaimed/grey water systems	**NA** – this strategy is implemented by the City
Community Engagement		
PE1	Provide information and resources to the community.	**NA** – this strategy is implemented by the City
PE2	Partner with schools to promote sustainability efforts.	**NA** – this strategy is implemented by the City
PE3	Implement outreach programs for local businesses and residents.	**NA** – this strategy is implemented by the City

SOURCE: City of Pleasanton Climate Action Plan, 2011; ESA, 2019

5.2 Conclusion

As set forth above, the Project would make an incremental contribution to climate change by resulting in new GHG emissions compared to existing conditions.[75] However, even a very large individual project would not generate enough GHG emissions on its own to significantly influence global climate change, given the worldwide scope of GHG emissions. As discussed above, the Project would be consistent with the 2017 Climate Change Scoping Plan Update, Plan Bay Area 2040, and the City of Pleasanton Climate Action Plan. The Project's consistency with these applicable plans and policies to reduce GHG emissions, along with implementation of project design features discussed in this Technical Analysis, including the EV charging stations, would minimize the Project's GHG emissions. The Project would be designed to incorporate green building techniques as required by the Title 24 Building Energy standards and would incorporate the sustainability features discussed in Section 3.2.

[75] Consistent with standard environmental analysis, vehicle trips generated by newly developed uses at the Project site (including the Costco store) and the resulting GHG emissions from those trips, are considered net new. In reality, the presence of a new Costco store, for example, is likely to result in some redistribution of customer travel to and from existing Costco stores, meaning that the analysis is conservative and likely overstates both total vehicle miles traveled and also GHG emissions.

As noted above, both the 2017 Scoping Plan Update and the City's Climate Action Plan call for, among other things, distributed power generation; that is, on-site electricity generation from sources such as solar photovoltaic (PV) systems. Accordingly, a rooftop solar PV system would be installed at the Costco warehouse, within two years of the store opening. This project design feature is estimated to generate 1,128 MWh of clean energy annually, reducing GHG emissions by approximately 150 MT CO_2e per year in 2021 and 141 MT CO_2e per year, based on PG&E's expected electricity emission factors in 2021 and 2031, respectively. The 2017 Scoping Plan and the City's Climate Action Plan also call for a more supportive infrastructure for alternatively-fueled vehicles. Accordingly, the Project includes 10 EV charging stations to be operational at the opening of the store in 2020. With implementation of these design features, net total operational emissions are estimated to be 11,778 MT CO_2e in 2021 (Phase 1) and 15,617 MT CO_2e in 2031 (full buildout). In addition, rooftop solar PV systems will be installed on the Phase 1 hotel(s) and retail space and the Phase 2 retail space. The design of these systems is currently not known, so the anticipated energy production and resulting GHG emission reductions were not estimated for these project design features. Collectively, the solar energy generation on the Costco Warehouse and other Project buildings would reduce the Project's GHG emissions below those estimated herein.

Furthermore, in addition to the Project's consistency with applicable GHG reduction strategies, the Project would not conflict with the future anticipated statewide GHG reductions goals. CARB has outlined a number of potential strategies for achieving the 2030 reduction target of 40 percent below 1990 levels. These potential strategies include renewable resources for 60 percent of the State's electricity by 2030, increasing the fuel economy of vehicles and the number of zero-emission or hybrid vehicles, reducing the rate of growth in VMT, supporting high-speed rail and other alternative transportation options, and use of high-efficiency appliances, water heaters, and HVAC systems. The Project would benefit from statewide and utility-provider efforts towards increasing the portion of electricity provided from renewable resources. The Project would also benefit from statewide efforts towards increasing the fuel economy standards of vehicles. The Project would help reduce VMT growth by locating retail development at an infill location close to existing transit (including the Pleasanton BART station) and by locating retail development close to large areas of existing residential development in the City of Pleasanton. This means that nearby residents who are, in particular, Costco shoppers, could travel lesser distances than they currently do.[76]

In Summary, the Project as designed would be generally consistent with actions referenced in state, regional and local plans, policies and regulations designed to reduce GHG emissions. Consequently, the Project would not conflict with applicable plans, policies and regulations adopted for the purpose of reducing the emissions of GHGs, and the impact would be **less than significant**.

[76] While transit accessibility may not result in a substantial decrease in Costco customer vehicle travel, it could result in transit use by store employees and by employees and customers of other retail uses within the Johnson Drive Economic Development Zone.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - PG&E's 2016 CO2 emission factor based on The Climate Registry's 2018 Emissions Factor Report

Land Use - Project Specific Information

Consumer Products - Consumer product emissions only associated with hotel land use

Area Coating - Coating only applied to parking lot asphalt surfaces

Energy Use - CalEEmod default 2016 T24 energy rates adjusted to represent 2019 T24 energy rates.

Area Mitigation - Low VOC-Paints, 10g VOC/liter

Fleet Mix - Light duty vehicle categories consistent with HRA

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2031
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	276.04	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 emission factor modified to reflect PG&E's 2030 RPS

Land Use - Project Specific Information

Consumer Products - Consumer product emissions only associated with hotel land use

Area Coating - Coating only applied to parking lot asphalt surfaces

Energy Use - CalEEmod default 2016 T24 energy rates adjusted to represent 2019 T24 energy rates.

Area Mitigation - Low VOC-Paints, 10g VOC/liter

Fleet Mix - Light duty vehicle categories consistent with HRA

CITY OF PLEASANTON JOHNSON DRIVE ECONOMIC DEVELOPMENT ZONE REPORT

Energy Analysis Technical Memo

Executive Summary

This technical memorandum (Memo) analyzes the impacts on energy resources due to construction and operation of the Johnson Drive Economic Development Zone Project (Project) located in the City of Pleasanton (City). In accordance with the requirements under the California Environmental Quality Act (CEQA) Guidelines, specifically Appendix G, Environmental Checklist, and Appendix F, Energy Conservation, this assessment provides an estimate of energy consumption for the Project and the potential impacts from associated construction and operational activities. The assessment includes the categories and types of energy consumption resulting from the Project, the calculation procedures used in the analysis, and any assumptions or limitations.

Construction of the Project would occur in two phases. Phase 1 would begin in 2020 with a one-year duration and Phase 2 would begin in 2030 with a one-year duration. Each of the construction phases would utilize energy for necessary on-site construction activities and to transport materials, soil, and debris to and from the site. Phase 1 construction would consume approximately 114,345 gallons of diesel and 19,813 gallons of gasoline during the one-year construction timeframe. Phase 2 construction would consume approximately 64,504 gallons of diesel and 14,051 gallons of gasoline during the one-year construction timeframe.

Phase 1 diesel consumption would represent approximately 0.10 and 0.003 percent of total 2017 diesel fuel consumption in Alameda County and California, respectively. Phase 1 gasoline consumption would represent approximately 0.003 and 0.0001 percent of County and State 2017 gasoline consumption, respectively. Phase 2 diesel consumption would represent approximately 0.06 and 0.002 percent of County and State 2017 diesel consumption, respectively. Phase 2 gasoline consumption would represent approximately 0.002 and 0.0001 percent of County and State 2017 gasoline consumption, respectively. The estimated annual average construction fuel usage would represent a very small fraction of annual (2017) fuel usage in Alameda County and the State. As stated in the Health Risk Assessment prepared for the Project, Phase 1 would not require haul trucks to export rubble resulting from the demolition of existing buildings at the site; all rubble and new construction and demolition debris would be reused on-site. By using this material on-site as construction base, the Project would eliminate both disposal trips for the demolition debris and haul trips for new aggregated fill material, thus eliminating the diesel fuel consumption associated with each truck trip. The Project would comply with applicable

construction regulations that affect energy demand, such as idling restrictions that would result in less fuel combustion and energy consumption and minimize the Project's construction-related energy use. As a result, construction energy impacts would be considered **less than significant**.

Operational energy consumption would occur from building energy needs (electricity and natural gas), off-site water supply and wastewater treatment, and from transportation fuels (e.g., diesel and gasoline) used for vehicles traveling to and from the site, transportation refrigeration units (TRUs), and emergency generators. Project operations would occur in two phases. Phase 1 operations would commence in 2021 and Full Buildout operations would commence in 2031.

Phase 1 operations would have an annual electricity demand of approximately 5.19 million kilowatt-hours (kWh), which represents approximately 0.006 percent of Pacific Gas & Electric Company (PG&E) network sales for 2017. Phase 1 operations would represent approximately 0.05 percent of electricity supplied by PG&E to the County in 2017. Phase 1 operations would have an annual natural gas demand of approximately 4.43 million standard cubic feet (scf), which represents approximately 0.002 percent of the PG&E network sales for 2017. Phase 1 operations would represent approximately 0.01 percent of natural gas supplied by PG&E to the County in 2017.

Phase 1 operations would consume approximately 130,009 gallons of diesel and 1,134,300 gallons of gasoline annually associated with vehicle trips and emergency generators. Phase 1 diesel consumption would represent approximately 0.11 percent and 0.003 percent of County and State 2017 diesel consumption, respectively. Phase 1 gasoline consumption would represent approximately 0.19 percent and 0.007 percent of County and State 2017 gasoline consumption, respectively.

Full Buildout operations would have an annual electricity demand of approximately 7.07 million kWh, which represents approximately 0.009 percent of PG&E's network sales for 2017. Full Buildout operations would represent approximately 0.06 percent of electricity supplied by PG&E to the County in 2017. Full Buildout operations would have an annual natural gas demand of approximately 4.72 million scf, which represents approximately 0.002 percent of PG&E's network sales for 2017. Full Buildout operations would represent approximately 0.01 percent of natural gas supplied by PG&E to the County in 2017.

Full Buildout operations would consume approximately 303,191 gallons of diesel and 1,407,991 gallons of gasoline annually associated with vehicle trips and emergency generators. Full Buildout diesel consumption would represent approximately 0.27 and 0.008 percent of County and State 2017 diesel consumption, respectively. Full Buildout gasoline consumption would represent approximately 0.24 and 0.009 percent of County and State gasoline 2017 consumption, respectively.

The amount of energy used would represent an insubstantial fraction of the region's available energy supply and capacity. The Project would be consistent with energy efficiency standards in the applicable Title 24 Energy Efficiency Standards for Nonresidential Buildings and the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards (CALGreen) Code and include electric vehicle supply equipment (EVSE) to promote

transportation energy efficiency. Additionally, the Costco warehouse will install a rooftop solar PV system of at least 500 kilowatts (kW) of AC power within two years of the store opening (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*). This system is estimated to reduce the warehouse's consumption of electricity provided by PG&E by 1,128,400 kWh annually. In addition, this analysis assumes that rooftop solar photovoltaic systems would be installed on the Phase 1 hotel(s) and retail space and on the Phase 2 retail space (or other Phase 2 development as may be approved), in compliance with Mitigation Measure GHG-2. The systems shall be designed to maximize electricity production pending the final design of each building type and shall cover a minimum of 50 percent of the available rooftop space (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*).

Because the Project would be consistent with energy efficient building standards and promote transportation energy efficiency, it would not result in the wasteful, inefficient, and unnecessary consumption of energy or preclude opportunities for improving overall fuel efficiency and future energy conservation. As a result, operational energy impacts would be considered **less than significant**.

CITY OF PLEASANTON JOHNSON DRIVE ECONOMIC DEVELOPMENT ZONE REPORT

Energy Analysis Technical Memo

1 Introduction

This section analyzes impacts on energy resources due to construction and operation of the Project. Section 15126.2 (b) of the 2019 California Environmental Quality Act (CEQA) Guidelines (CEQA Guidelines) states that a project's energy use shall be analyzed to determine the potential energy impacts of proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. The analysis should also evaluate compliance with building codes and renewable energy features that are or could be incorporated into the project. Appendix G of the CEQA Guidelines, Environmental Checklist, provides screening questions to assist lead agencies when assessing a project's potential energy impacts. Additionally, Appendix F, Energy Conservation, provides guidance on information to use when evaluating a project's energy use.

Appendix F of the CEQA Guidelines states that, in order to ensure that energy implications are considered in project decisions, the potential energy implications of a project shall be considered in an EIR, to the extent relevant and applicable to the project. Appendix F further states that a project's energy consumption and proposed conservation measures may be addressed, as relevant and applicable, in the Project Description, Environmental Setting and Impact Analysis portions of a project's Environmental Impact Report (EIR), as well as through mitigation measures and alternatives.

In accordance with Appendix G and utilizing guidance from Appendix F of the CEQA Guidelines, this EIR includes relevant information and analyses that address the energy implications of the Project. This section represents a summary of the Project's anticipated energy needs, impacts, and conservation measures.

1.1 Project Description

The Project site would be developed with approximately 148,000 square feet (sf) of club retail (Costco store) with a 20-pump (dispensers) gas station on parcel 6. Parking for up to 800 vehicles and landscaping and site improvements, including bio-retention areas to manage on-site stormwater runoff and trees planted throughout the parcel to provide shading and visual screening around the perimeter, would also be developed on this parcel. A 231-room hotel consisting of

approximately 132,000 sf and 5,000 sf of retail would be developed on parcels 9 and 10, and the remaining parcels would be developed with approximately 184,000 sf of retail space.

1.2 Environmental Setting

Electrical and gas services in the Project area are provided by PG&E. PG&E obtains its energy supplies from power plants and natural gas fields in northern California, as well as from energy purchased outside its service area and delivered through high voltage transmission lines and pipelines. Power is generated from various sources, including fossil fuel, hydroelectric, nuclear, wind, and geothermal plants; and is fed into the electrical grid system serving Northern California.

PG&E updates all load forecasts for gas and electricity services every year. Load growth forecasts for this area are currently determined using load growth projection tools that use a number of sources of data including past peak loading, population, development characteristics, and temperature history information. The tables below present the electricity, natural gas, and transportation fuel throughputs for 2017 (the most recent year for which data is available) for PG&E's entire service area and for Alameda County.

TABLE 1
ELECTRICITY AND NATURAL GAS DELIVERED TO RETAIL CUSTOMERS IN 2017 FOR ALAMEDA COUNTY AND PG&E'S SERVICE AREA

Energy Resource	Alameda County[a]	PG&E Service Area[b]
Electricity (million kWh)	11,112	82,226
Natural Gas Total Sales/Usage (million cubic feet)	36,551	234,181

Diesel is adjusted to account for retail (51%) and non-retail (49%) diesel sales.

1.3 Regulatory Setting

1.3.1 Federal

National Energy Conservation Policy Act

The National Energy Conservation Policy Act (NECPA) serves as the underlying authority for federal energy management goals and requirements. Signed into law in 1978, it has been regularly updated and amended by subsequent laws and regulations. This act is the foundation of most federal energy requirements. NECPA established energy-efficiency standards for consumer projects and includes a residential program for low-income weatherization assistance, grants and loan guarantees for energy conservation in schools and hospitals, and energy-efficiency standards for new construction. Initiatives in these areas continue today.

National Energy Policy Act of 2005

The National Energy Policy Act of 2005 sets equipment energy efficiency standards and seeks to reduce reliance on nonrenewable energy resources and provide incentives to reduce current demand on these resources. For example, under the act, consumers and businesses can attain federal tax credits for purchasing fuel-efficient appliances and products, including hybrid vehicles; constructing energy-efficient buildings; and improving the energy efficiency of commercial buildings. Additionally, tax credits are available for the installation of qualified fuel cells, stationary microturbine power plants, and solar power equipment.

Executive Order 13423 (Strengthening Federal Environmental, Energy, and Transportation Management), signed in 2007, strengthens the key energy management goals for the federal government and sets more challenging goals than the Energy Policy Act of 2005. The energy reduction and environmental performance requirements of Executive Order 13423 were expanded upon in Executive Order 13514 (Federal Leadership in Environmental, Energy, and Economic Performance), signed in 2009.

Energy and Independence Security Act of 2007 and Corporate Average Fuel Economy Standards

The Energy and Independence Security Act of 2007 sets federal energy management requirements in several areas, including energy reduction goals for federal buildings, facility management and benchmarking, performance and standards for new buildings and major renovations, high-performance buildings, energy savings performance contracts, metering, energy-efficient product procurement, and reduction in petroleum use, including by setting automobile efficiency standards, and increase in alternative fuel use. This act also amends portions of the National Energy Policy Conservation Act.

EPA and NHTSA Joint Rulemaking for Vehicle Standards

In April 2010, the EPA and NHTSA issued a final rulemaking establishing new federal greenhouse gas and fuel economy standards for model years 2012 to 2016 passenger cars, light-duty trucks, and medium-duty passenger vehicles. In addition, on August 9, 2011, the EPA and

NHTSA finalized regulations to reduce GHGs and improve fuel efficiency of medium- and heavy-duty vehicles, including large pickup trucks and vans, semi-trucks, and all types and sizes of work trucks and buses.

In August 2016, the USEPA and NHTSA, working jointly with the California Air Resources Board (CARB), adopted the next phase (Phase 2) of the fuel economy and GHG standards for medium- and heavy-duty trucks, which apply to vehicles with model year 2018 and later.[1] In response to the USEPA's adoption of the Phase 2 standards, CARB developed the California Phase 2 standards to align with the federal Phase 2 standards in structure, timing, and stringency, but with some minor differences that are necessary to ease enforcement, align with existing California programs, and provide incentives to bring advanced technologies to market. On February 8, 2018, CARB approved the proposed California Phase 2 GHG standards and amendments to the Tractor-Trailer GHG regulation.[2]

1.3.2 State

Warren-Alquist Act

The 1975 Warren-Alquist Act established the California Energy Resources Conservation and Development Commission, now known as the California Energy Commission (CEC). The Act established a State policy to reduce wasteful, uneconomical and unnecessary uses of energy by employing a range of measures.

California Energy Plan

California's Energy Action Plan II is the state's principal energy planning and policy document.[3] California Energy Action Plan II describes a coordinated implementation plan for state energy policies and refines and strengthens California's original Energy Action Plan I published in 2003. California Energy Action Plan II identifies specific action areas to ensure that California's energy is adequate, affordable, technologically advanced, and environmentally sound. It adopts a loading order of preferred energy resources to meet the state's needs and reduce reliance on natural gas and other fossil fuels, also important for achieving greenhouse gas (GHG) emission reductions from the electricity sector.

Energy efficiency and demand response are considered the first ways to meet the energy needs of California's growing population.[4] Renewable energy and distributed generation are considered the best ways to achieve this on the supply side. To the extent that energy efficiency, demand

1 United States Environmental Protection Agency, 2016. 4 Demand response is the reduction of customer energy usage during peak periods in order to address system reliability and support the best use of energy infrastructure.

response, renewable resources, and distributed generation are unable to satisfy increasing energy and capacity needs, CEC supports clean and efficient fossil fuel-fired generation to meet California's energy needs. The 2008 Energy Action Plan Update provides a status update to the 2005 Energy Action Plan II and continues the goals of the original California Energy Action Plan.[5]

State of California Integrated Energy Policy Report

Senate Bill (SB) 1389 was signed into law in 2002, and requires the CEC to "conduct assessments and forecasts of all aspects of energy industry supply, production, transportation, delivery and distribution, demand, and prices." These assessments and forecasts are used to develop recommendations for energy policies that conserve state resources, protect the environment, provide reliable energy, enhance the state's economy, and protect public health and safety. The CEC is required to issue a report every two years, and the most recent report is the 2016 Integrated Energy Policy Report, which provides the results of the CEC's assessments of a variety of energy issues facing California including "environmental performance of the electricity generation system, landscape-scale planning, the response to the gas leak at the Aliso Canyon natural gas storage facility, transportation fuel supply reliability issues, updates on Southern California electricity reliability, methane leakage, climate adaptation activities for the energy sector, climate and sea level rise scenarios, and the California Energy Demand Forecast".[6]

State Alternatives Fuel Plan

The State Alternatives Fuel Plan presents strategies and steps that California must take to increase the use of alternative fuels without adversely affecting air quality, water quality, or causing negative health effects.[7] The State Alternatives Fuel Plan recommends alternative fuel targets of 9 percent in 2012, 11 percent in 2017, and 26 percent by 2022. The State Alternatives Fuel Plan also presents a 2050 Vision that extends the plan outcomes and presents a transportation future that greatly reduces the energy needed for transportation, provides energy through a diverse set of transportation fuels, eliminates over-dependency on oil, and achieves an 80 percent reduction in GHG emissions. With these goals, more than 4 billion gasoline gallon equivalents (20 percent) would be displaced by alternative fuels in 2020. CEC estimates that by 2050, alternative fuels could provide more than half of the energy needed to power California's transportation system.

CARB's 2017 Update to the Climate Change Scoping Plan

CARB's Climate Change Scoping Plan, which functions as a roadmap to achieve the California GHG reductions required by Assembly Bill (AB) 32 (2006) and SB 32 (2018) through subsequently enacted regulations, is discussed in detail in the *Greenhouse Gas Technical Analysis*. On December 14, 2017, CARB approved the final version of *California's 2017 Climate*

7 California Air Resources Board (CARB), California Energy Commission (CEC), 2007. State Alternative Fuels Plan – Commission Report, December 2007, https://www.energy.ca.gov/2007publications/CEC-600-2007-011/CEC-600-2007-011-CMF.PDF.

Change Scoping Plan (2017 Scoping Plan Update), which outlines the proposed framework of action for achieving California's new SB 32 2030 GHG target: a 40 percent reduction in GHG emissions by 2030 relative to 1990 levels (CARB 2017). The 2017 Scoping Plan Update identifies key sectors of the implementation strategy, which includes improvements in low carbon energy, industry, transportation sustainability, natural and working lands, waste management, and water.

Senate Bill 350

SB 350 was signed into law in October 2015, and establishes a requirement for California to reduce the use of petroleum in cars by 50 percent, to generate half its electricity from renewable resources, and to increase energy efficiency by 50 percent at new and existing buildings, all by the year 2030.

Title 24, Building Standards Code and CALGreen Code

The California Energy Commission (CEC) first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the state. These standards also have co-benefits of reducing building emissions of greenhouse gases and other pollutants as a result of reduced consumption of electricity, natural gas, and other fuels from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

The California Building Standards Commission (CBSC) adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality".[8] The CALGreen Code is not intended to substitute for or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission. The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design and overall environmental quality.[9] The CALGreen Code was most recently updated in 2016 to include new mandatory measures for residential as well as nonresidential uses; the new measures took effect on January 1, 2017.[10] California's Building Energy Efficiency

8 California Building Standards Commission (CBSC), 2010. 2010 California Green Building Standards Code, (2010).

9 Ibid.

10 California Building Standards Commission (CBSC), CALGreen, Guide to 2016 California Green Building Standards Code-Nonresidential, https://www.dgs.ca.gov/BSC/Resources/Page-Content/Building-Standards-Commission-Resources-List-Folder/CALGreen. Accessed March 2019.

Standards continue to build upon the 2016 standards with implementation of the 2019 Standards that will go into effect January 1, 2020.[11] Although the CALGreen Code was adopted as part of the State's efforts to reduce GHG emissions, the standards have co-benefits of reducing energy consumption from residential and nonresidential buildings subject to the standard.

Zero Net Energy

For newly constructed low-rise homes, the State is steadily moving toward implementing zero-net energy buildings, in which energy efficiency is part of an integrated solution to developing homes that generate as much energy as they consume. The CPUC has set a goal of achieving zero net energy (ZNE) performance for all new low-rise homes constructed in or after 2020, and for all new commercial buildings constructed in or after 2030. Outstanding issues remain, however, including needing to identify compliance pathways when on-site renewable generation is not feasible, and the appropriate role for natural gas in ZNE buildings. The primary challenge is to build a technical and regulatory foundation for orchestration of energy efficiency and all other feasible distributed and customer-sited clean energy resources.

Renewables Portfolio Standard

SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010. In November 2008, Governor Schwarzenegger signed Executive Order S-14-08, which expands the State's Renewables Portfolio Standard to 33 percent renewable power by 2020. Pursuant to Executive Order S-21-09, CARB was also preparing regulations to supplement the Renewables Portfolio Standard with a Renewable Energy Standard that will result in a total renewable energy requirement for utilities of 33 percent by 2020. But on April 12, 2011, Governor Jerry Brown signed SB X1-2 to increase California's Renewables Portfolio Standard to 33 percent by 2020.

Additionally, the 100 Percent Clean Energy Act of 2018, was enacted on September 10, 2018 as SB 100. This Act accelerates the RPS Program goals as follows: (1) 50 percent renewable resources target by December 31, 2026; and (2) 60 percent renewable resources target by December 31, 2030. This Act also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt-hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030. Finally, this Act establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045.

[11] California Energy Commission, 2019 Building Energy Efficiency Standards, https://www.energy.ca.gov/title24/2019standards/documents/2018_Title_24_2019_Building_Standards_FAQ.pdf. Accessed March 2019.

California Air Resources Board On-Road and Off-Road Vehicle Regulations

In 2004, the California Air Resources Board (CARB) adopted an Airborne Toxic Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling in order to reduce public exposure to diesel particulate matter emissions (Title 13 California Code of Regulations [CCR] Section 2485). The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than five minutes at any given location. While the goal of this measure is primarily to reduce public health impacts from diesel emissions, compliance with the regulation also results in energy savings in the form of reduced fuel consumption from unnecessary idling.

In addition to limiting exhaust from idling trucks, CARB also promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower (hp) such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. The In-Use Off-Road Diesel-Fueled Fleets regulation adopted by CARB on July 26, 2007 aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission controlled models (13 CCR Section 2449). The compliance schedule requires full implementation by 2023 in all equipment for large and medium fleets and by 2028 for small fleets.

California Assembly Bill No. 1493 (AB 1493, Pavley), (Chapter 200, Statutes of 2002)

In response to the transportation sector accounting for more than half of California's carbon dioxide (CO_2) emissions, AB 1493 (Chapter 200, Statutes of 2002), authored by Assembly Member Fran Pavley and enacted on July 22, 2002, required CARB to set GHG emission standards for passenger vehicles, light duty trucks, and other vehicles whose primary use is non-commercial personal transportation manufactured in and after 2009. Referred to as the Pavley standards, implementation of AB 1493 was delayed due to litigation, but ultimately upheld by the Supreme Court. The standards established tailpipe GHG emissions standards for model year 2012 through 2016 light-duty vehicles under Phase I and model year 2017 through 2025 light-duty vehicles under Phase II. Although these standards were adopted as part of the State's efforts to reduce GHG emissions, the standards have co-benefits of reducing energy consumption from the transportation section by improving fuel economy and reducing fuel consumption as a means to reduce emissions. The United States Environmental Protection Agency (USEPA) and United States Department of Transportation (USDOT) adopted federal equivalent standards for model year 2012 through 2016 light-duty vehicles and model year 2017 through 2025 light-duty vehicles. The federal standards are slightly different from the Pavley Phase I and Phase II standards, but the State of California has agreed not to contest these standards, in part due to the fact that while the national standard would achieve slightly lower reductions in California, it would achieve greater reductions nationally and is stringent enough to meet state GHG emission

reduction goals .[12] On November 15, 2012, CARB approved an amendment that allows manufacturers to comply with the national standards to meet state law.

California Mobile Source Strategy

In May 2016, CARB released the updated Mobile Source Strategy that demonstrates how the State can simultaneously meet air quality standards, achieve GHG emission reduction targets, decrease health risk from transportation emissions, and reduce petroleum consumption over the next fifteen years, through a transition to ZEVs, cleaner transit systems and reduction of vehicle miles traveled. The Mobile Source Strategy calls for 1.5 million ZEVs (including plug-in hybrid electric, battery-electric, and hydrogen fuel cell vehicles) by 2025 and 4.2 million ZEVs by 2030. It also calls for more stringent GHG requirements for light-duty vehicles beyond 2025 as well as GHG reductions from medium-duty and heavy-duty vehicles and increased deployment of zero-emission trucks primarily for class 3 – 7 "last mile" delivery trucks in California. Statewide, the Mobile Source Strategy would result in a 45 percent reduction in GHG emissions, and a 50 percent reduction in the consumption of petroleum-based fuels (CARB, 2016).

1.3.3 Local

City of Pleasanton General Plan

The City of Pleasanton General Plan (General Plan) is the official document used by city decision-makers and citizens to guide the long-range development of land and the conservation of resources in Pleasanton, and discusses elements related to public safety, land use, community character, transportation, economics, air quality, and other topics.[13] The General Plan sets forth objectives, policies, standards, and programs to connect the community's values and development decisions to be made by the City. The Energy Element of the General Plan contains the following goals related to energy:

> **Goal 1:** Move toward a sustainable energy future that increases renewable energy use, energy conservation, energy efficiency, energy self-sufficiency, and limits energy-related financial burdens in Pleasanton.
>
> **Goal 2:** Save transportation energy by implementing a more effective transportation system.

2 Methods

2.1 Construction Energy

Construction of the Project would require energy in the form of diesel and gasoline fuels through the use of heavy-duty construction equipment, such as excavators and forklifts, and through vehicle trips generated from worker trips and haul trucks traveling to and from the Project site. Construction activities can vary substantially from day to day, depending on the specific type of

[12] California Air Resources Board, Advanced Clean Cars Summary, http://www.arb.ca.gov/msprog/clean_cars/acc%20summary-final.pdf. Accessed March 2019.

[13] City of Pleasanton, General Plan Update, https://www.cityofpleasantonca.gov/gov/depts/cd/planning/general.asp. Accessed March 2019.

construction activity and the number of workers and vendors traveling to the site. The assessment of construction energy impacts considers these factors.

Construction of the Project would occur in two phases. Phase 1 would begin in 2020 with a one-year duration and Phase 2 in 2030 with a one-year duration. Each of the construction phases would utilize energy for necessary on-site building activities and to transport materials, soil, and debris to and from the Project site. Energy use during construction is forecasted by assuming a conservative estimate of construction activities (i.e., maximum daily equipment usage levels). The Project's construction fuel consumption is estimated based on information from the Technical Memo on Updated Air Quality Analysis for the Project (January 2019). Pertinent information includes the number and type of construction equipment that would be used during Project construction, the extent that various equipment are utilized in terms of equipment operating hours or miles driven, and the estimated duration of construction activities. Energy for construction haul truck, vendor truck, and worker commuting trips are estimated based on the number of haul truck trips and workers for the various phases of construction and the associated vehicle miles traveled (VMT). As stated in the Health Risk Assessment prepared for the Project, Phase 1 would not require haul trucks to export rubble resulting from the demolition of existing buildings at the Project site; all rubble and new construction and demolition debris would be reused on-site. By using this material on-site as construction base, the Project would eliminate both disposal trips for the demolition debris and haul trips for new aggregated fill material, thus eliminating the diesel fuel consumption associated with each truck trip.

The construction equipment would likely be diesel-fueled (with the exception of construction worker commute vehicles, which would primarily be gasoline-fueled). For the purposes of this assessment, it is assumed heavy-duty construction equipment and haul trucks would be diesel-fueled because a majority of heavy-duty construction equipment and haul trucks fleets in the state are diesel-powered. The estimated fuel economy for heavy-duty construction equipment is based on fuel consumption factors from the California Air Resources Board's (CARB) OFFROAD emissions model, which is a state-approved model for estimating emissions from off-road heavy-duty equipment. These factors are 0.41 pounds of diesel fuel per horsepower-hour for equipment less than 100 horsepower and 0.37 pounds of diesel fuel per horsepower-hour for equipment greater than 100 horsepower, along with the diesel fuel density of 7.11 pounds per gallon.[14] For a conservative analysis, haul and vendor trucks were categorized as heavy-heavy duty trucks (HHDT), which have a higher fuel use rate than all other vehicle types. Based on EMFAC2014, HHDT trucks operating in the Bay Area Air Quality Management District (BAAQMD) would have a fuel consumption rate of 0.18 gallons of diesel per mile in 2020 and 0.16 gallons of diesel per mile in 2030. Idling fuel consumption factors for haul and vendor trucks were estimated to be 0.9 gallons of diesel per hour based on a study from the United States Department of Energy (DOE).[15] For worker trips, according to EMFAC2014, passenger vehicles (light-duty automobiles and light-duty trucks) operating in the BAAQMD would have an average fuel consumption factor

[14] California Air Resources Board, 2017 Off-road Diesel Emission Factors, https://www.arb.ca.gov/msei/ordiesel/ordas_ef_fcf_2017_v7.xlsx. Accessed March 2019.

[15] U.S. Department of Energy. 2015. *Fact #861 February 23, 2015 Idle Fuel Consumption for Selected Gasoline and Diesel Vehicles*, available at https://www.energy.gov/eere/vehicles/fact-861-february-23-2015-idle-fuel-consumption-selected-gasoline-and-diesel-vehicles. Accessed March 2019.

of 0.039 gallons of gasoline per mile in 2020 and 0.028 gallons of gasoline per mile in 2030. For light-duty automobiles and light-duty trucks, EMFAC2014 data shows that these vehicle classes are overwhelmingly gasoline-powered, therefore only gasoline consumption is included for workers.

Both OFFROAD and EMFAC are incorporated into the California Emissions Estimator Model (CalEEMod) version 2016.3.2, which is a state-approved emissions model used for the Project's air quality and GHG emissions assessment. Although EMFAC2017 is currently available, EMFAC2014 was used in the energy analysis to estimate vehicle fuel consumption because construction criteria pollutant and GHG emissions were generated by CalEEMod which uses EMFAC2014 emission factors and fuel efficiencies. Therefore, this energy assessment is consistent with the modeling approach used for other environmental analyses in the EIR and consistent with general CEQA standards.

In addition to the Project's construction energy demand, the energy assessment also includes a discussion of the Project's compliance with relevant energy-related regulatory measures that would minimize the amount of energy usage during construction. Detailed construction fuel consumption calculations are provided in Appendix A of this assessment.

2.2 Operational Energy

Operation of the Project would require energy in the form of electricity and natural gas for building heating, cooling, cooking, lighting, water demand and wastewater treatment, consumer electronics, and other energy needs, and from transportation fuels (e.g., diesel and gasoline) used for vehicles traveling to and from the site, TRUs, and emergency generators.[16] Project operations would occur in two phases. Phase 1 operations would commence in 2021 and Full Buildout operations would commence in 2031.

The Project's annual electricity consumption (in kWh) for each land use type was generated by CalEEMod. Natural gas would be consumed from natural gas combustion in heaters and boilers and miscellaneous area sources. CalEEMod generated the annual natural gas consumption in thousand British thermal units (kBtu), but are presented as million scf in this analysis. Default CalEEMod energy usage rates were adjusted to reflect the 2019 Title 24 Building Energy Efficiency Standards. Detailed energy consumption calculations are provided in Appendix A.

Transportation fuel consumption from non-delivery vehicles (employees and visitors) traveling to and from the Project site were based on Project-specific trip rates, annual vehicle miles traveled as calculated by CalEEMod, and fuel consumption factors from EMFAC2014. Compared to the land uses in the Draft EIR traffic study, the square footage of some land uses have changed slightly, therefore, the travel demand (trip generation) in the Project's traffic study were prorated based on square footage for each land use.[17] According to EMFAC2014, the average fuel consumption factor for non-delivery vehicles (excluding HHDT) in the BAAQMD is

[16] This analysis thus includes energy that would be expended at locations away from the project site (e.g., off-site energy consumption, potable water pumping, and wastewater treatment and disposal).

[17] Johnson Drive Economic Development Zone Transportation Impact Analysis, Fehr & Peers, 2015.

approximately 0.043 gallons per mile for gasoline and 0.033 gallons per mile for diesel in 2021 (Phase 1) and approximately 0.034 gallons per mile for gasoline and 0.026 gallons per mile for diesel in 2031 (Full Buildout). For gasoline and diesel vehicles, gasoline vehicles account for approximately 95 percent of the total VMT and diesel vehicles accounting for approximately 5 percent of the total VMT.[18] Fuel consumption was also estimated for customer vehicle queuing/idling at the gas station assuming each vehicle would idle for 10 minutes while waiting for gasoline using the idling fuel consumption factor of 0.39 gallons per hour from the DOE.[19]

Fuel consumption was estimated separately for heavy-duty delivery truck travel, heavy-duty delivery truck idling, TRU operation, and emergency generator operations.[20] For diesel fuel use associated with heavy-duty delivery truck travel, fuel economy is based on EMFAC2017 since the criteria pollutant and GHG emissions for heavy-duty delivery truck travel were estimated using EMFAC2017. Consistent with the criteria pollutant and GHG analyses, the Costco delivery truck fleet has an average model year of 2016 based on information provided by the City; therefore, fuel consumption factors for model year 2016 were applied to Costco delivery trucks. Non-Costco delivery trucks utilized fuel consumption factors based on an aggregate model year from EMFAC2017. According to EMFAC2017, model year 2016 heavy duty delivery trucks in the BAAQMD are predicted to have a diesel fuel consumption factor of 0.14 gallons of diesel per mile in 2021 (Phase 1) and 0.15 gallons of diesel per mile in 2031 (Full Buildout). For an aggregate model year, heavy duty delivery trucks in the BAAQMD are predicted to have a diesel fuel consumption factor of 0.16 gallons of diesel per mile in 2021 (Phase 1) and 0.12 gallons of diesel per mile in 2031 (Full Buildout). Travel emissions for Costco delivery trucks, including warehouse and gasoline fuel trucks, were based on travel distances to their respective distribution facilities which were provided by the City. Costco warehouse trucks delivering goods to Costco have an estimated trip length of 24.5 miles based on the distance to the Tracy depot facility. Costco trucks delivering fuel to the gas station have an estimated trip length of 30 miles based on the distance to the nearest fuel delivery location in Benicia. Travel emissions for non-Costco delivery trucks were estimated assuming 7.3 miles per trip, which is the CalEEMod default trip length for "commercial-nonwork" trip types.[21]

For heavy-duty delivery truck idling, fuel consumption was estimated assuming 15 minutes of idling per roundtrip delivery and the idling fuel consumption factor of 0.9 gallons of diesel per hour from the DOE.[22] Diesel fuel use for TRU operation was estimated using the fuel

18 Based on the California Air Resources Board on-road vehicle emissions model, EMFAC2014 (Modeling input: Bay Area Air Quality Management District, All Vehicle Categories except HHDT, 2021,2031. The modeling input values are considered generally representative of project buildout conditions for the region and representative of the majority of vehicles associated with project-related VMT.

19 U.S. Department of Energy. 2015. *Fact #861 February 23, 2015 Idle Fuel Consumption for Selected Gasoline and Diesel Vehicles*, available at https://www.energy.gov/eere/vehicles/fact-861-february-23-2015-idle-fuel-consumption-selected-gasoline-and-diesel-vehicles. Accessed March 2019.

20 Estimates of fuel consumption from these sources are consistent with the parameters used in the health risk assessment prepared for the Project.

21 Commercial-nonwork trips represent trips associated with commercial land uses other than customers or workers, such as delivery vehicles of goods

22 U.S. Department of Energy. 2015. *Fact #861 February 23, 2015 Idle Fuel Consumption for Selected Gasoline and Diesel Vehicles*, available at https://www.energy.gov/eere/vehicles/fact-861-february-23-2015-idle-fuel-consumption-selected-gasoline-and-diesel-vehicles. Accessed March 2019.

consumption factor of 1.33 gallons per hour from the National Renewable Energy Laboratory.[23] Diesel fuel use for emergency generators was estimated using the CO_2 emission rate of 1.15 grams CO_2 per horsepower hour and the carbon intensity of diesel fuel of 10.21 kilograms CO_2 per gallon.[24,25] Detailed fuel consumption factors are provided in Appendix A.

3 Energy Assessment

3.1 Thresholds of Significance

For the impacts analyzed in this section, the Project would have a significant impact related to energy if it were to:

a) result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or

b) conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

Appendix F of the CEQA Guidelines recommends the following considerations for evaluating energy impacts, as applicable:

- The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction, operation, maintenance and/or removal. If appropriate, the energy intensiveness of materials maybe discussed.
- The effects of the project on local and regional energy supplies and on requirements for additional capacity.
- The effects of the project on peak and base period demands for electricity and other forms of energy.
- The degree to which the project complies with existing energy standards.
- The effects of the project on energy resources.
- The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.

3.2 Project Impacts

ENERGY-1: Would the Project result in a potentially significant environmental impact to due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Construction Energy Use

Construction energy consumption during Phase 1 and Phase 2 would result primarily from transportation fuels (e.g., diesel and gasoline) used for haul and vendor trucks, heavy-duty off-road construction equipment, and construction workers commute trips for travel to and from the site. This analysis provides the estimated maximum construction energy consumption for the purposes of evaluating the associated impacts on energy resources.

Off-road equipment associated with construction would include equipment such as backhoes, dozers, and excavators. Fuel consumption is based on the equipment type, quantity and usage during construction activities and fuel consumption factors from the OFFROAD model. Fuel consumption for off-road equipment, haul/vendor trucks, and workers are shown in **Table 3, Estimated Project Construction Fuel Usage**.

TABLE 3
ESTIMATED PROJECT CONSTRUCTION FUEL USAGE

	Phase 1 Fuel Consumption (gallons)		Phase 2 Fuel Consumption (gallons)	
Category [a]	**Diesel**	**Gasoline**	**Diesel**	**Gasoline**
Fuel Use by Source				
Off-Road Equipment	86,786	0	46,186	0
Haul/Vendor	27,559	0	18,318	0
Workers	0	19,813		14,051
Total	114,345	19,813	64,504	14,051
Fuel Usage Comparisons				
Alameda County	113,725,490	583,000,000	113,725,490	583,000,000
Project Percent of Alameda County	0.10%	0.003%	0.06%	0.002%
California	3,798,039,216	15,584,000,000	3,798,039,216	15,584,000,000
Project Percent of California	0.003%	0.0001%	0.002%	0.0001%

NOTES:
[a] Categories defined as follows:
Off-Road Equipment = operating energy use from heavy-duty equipment, such as bulldozers, cranes, and excavators. Energy was modeled using CalEEMod and OFFROAD2017.
Haul/Vendor = Travel and idling energy use from heavy-duty on-road vendor/haul trucks. Energy use was modeled using CalEEMod and EMFAC2014.
Workers = Operating energy use from employee vehicles. Energy use was modeled using EMFAC2014.

ABBREVIATIONS:
CalEEMod = CALifornia Emissions Estimator MODel
EMFAC2014 = EMission FACtors model, version 2014

SOURCE: ESA, 2019

Phase 1 off-road equipment would consume approximately 86,786 gallons of diesel fuel during its one-year duration from 2020 to 2021. Phase 2 off-road equipment would consume approximately 46,186 gallons of diesel fuel during its one-year duration in 2030. Haul trucks would be used to haul material to and from the Project site. Vendor trucks would be used to deliver supplies necessary for Project construction. Based on the proposed development program and engineering estimates that form the basis of the construction-related impact analyses, it is estimated that Phase 1 haul and vendor trucks would result in approximately 155,600 vehicle miles traveled (VMT) and Phase 2 haul and vendor trucks would result in approximately 115,080 VMT. Based on the information described above, Phase 1 and Phase 2 construction diesel fuel consumption for on-road haul and vendor trucks would total approximately 27,559 gallons and 18,318 gallons, respectively.

The number of construction workers required at the site would vary based on the phase of construction and activity taking place. The transportation fuel required by construction workers to travel to and from the Project site would depend on the total number of worker trips estimated for the duration of construction activity for each phase. Based on the proposed development program and engineering estimates that form the basis of the construction-related impact analyses, Phase 1 worker commute trips would total approximately 511,855 VMT and Phase 2 worker commute trips would total approximately 493,085 VMT. For light-duty automobiles and light-duty trucks, EMFAC2014 data shows that these vehicle classes are overwhelmingly gasoline-powered, therefore only gasoline consumption was analyzed for workers. Assuming construction worker light-duty automobiles and light-duty trucks have an average fuel consumption factor consistent with the EMFAC2014 model, workers would consume approximately 19,813 gallons and 14,051 gallons of gasoline during construction of Phase 1 and Phase 2, respectively.

Based on fuel consumption data from the California Energy Commission (CEC), in 2017, Alameda County consumed 583 million gallons of gasoline and 113 million gallons of diesel. Furthermore, California consumed 15,584 million gallons of gasoline and 3,798 million gallons of diesel in 2017.[26]

Based on the estimated fuel usage amounts presented above, Phase 1 construction would consume approximately 114,345 of diesel and 19,813 gallons of gasoline. Phase 2 construction would

[26] California Energy Commission, California Retail Fuel Outlet Annual Reporting (CEC-A15) Results, 2017. Available at: https://www.energy.ca.gov/almanac/transportation_data/gasoline/piira_retail_survey.html. Accessed February 2019. Diesel is adjusted to account for retail (51%) and non-retail (49%) diesel sales.

consume approximately 64,504 of diesel and 14,051 gallons of gasoline. Phase 1 diesel consumption would represent approximately 0.10 and 0.003 percent of County and State 2017 diesel consumption, respectively. Phase 1 gasoline consumption would represent approximately 0.003 and 0.0001 percent of County and State 2017 gasoline consumption, respectively. Phase 2 diesel consumption would represent approximately 0.06 and 0.002 percent of County and State 2017 diesel consumption, respectively. Phase 2 gasoline consumption would represent approximately 0.002 and 0.0001 percent of County and State 2017 gasoline consumption, respectively. A comparison of the Project's estimated fuel usage to County and State annual 2017 fuel usage is provided in Table 1.

Construction of the Project is not expected to require substantial electricity usage. Electricity use during construction would be variable depending on lighting needs and the use of electric-powered equipment and would be temporary for the duration of construction activities. If electric-powered construction equipment or vehicles are used, they would replace diesel- and gasoline-fueled equipment assumed in this analysis. Therefore, it is expected that construction electricity use would generally be considered as temporary and negligible and accounted for in the fuel estimates discussed above.

As discussed above, construction of the Project would require temporary and short-term energy supplies and would not represent a substantial fraction of the available energy supply in terms of equipment and transportation fuels. Phase 1 construction would reuse all rubble and new construction and demolition debris on-site as construction base, thus eliminating fuel consumption from trucks trips associated with debris disposal and import of new fill material. Based on the available data, construction would utilize energy for necessary on-site activities and to transport materials, soil, and debris to and from the site. It is reasonable to conclude that idling restrictions would result in less fuel combustion and energy consumption and minimize the Project's construction-related energy use. Costco warehouses are typically constructed of prefabricated structural steel containing approximately 80 percent recycled content. This would reduce material deliveries to the site during Phase 1A as compared to a typical masonry building, reducing diesel fuel use for vendor trips. In addition, as required under Mitigation Measure M-AQ-1, all off-road equipment greater than 50 horsepower is required to have engines that meet United States Environmental Protection Agency (USEPA) Tier 3 off-road emission standards. Although the standards do not require equipment to be more fuel efficient, manufacturers can partly meet the standards with more fuel-efficient equipment, and as engine technology improves over time, both emissions and fuel use declines in off-road engines. Therefore, construction of the Project would not result in the wasteful, inefficient, or unnecessary consumption of energy, and impacts would be considered **less than significant.**

Operational Energy Use

Operational energy consumption would occur from building energy needs, transportation fuels (e.g., diesel and gasoline) used for vehicles traveling to and from the site, TRUs, and emergency generators. This analysis provides the estimated maximum annual operational energy consumption for the purposes of evaluating the associated impacts on energy resources. The operation of the Project would generate demand for electricity, natural gas, and water, as well as

generate wastewater requiring conveyance, treatment, and disposal off-site. Operation of the Project would also result in transportation-related energy use, including gasoline and diesel for heavy-duty delivery trucks, TRU operation, and emergency generators operations.

In addition, as part of the Project's development, existing land uses would be removed along with their associated energy use. Energy use for existing land uses includes electricity, natural gas, and transportation fuels, similar to the Project's energy use. However, energy use for existing land uses to be removed was not calculated and included in the analysis below. Therefore, the energy use estimates for the Project below are an overestimate of the net energy use associated with the Project because they don't account for reduced energy use under existing conditions. In actuality, the net energy use of the Project would be less than what is presented below.

A summary of the Project's operational estimated energy usage is shown in **Table 4**, **Estimated Project Electricity and Natural Gas Usage**, and **Table 5**, **Estimated Project Transportation Fuel Usage**.

TABLE 4
ESTIMATED ANNUAL PROJECT ELECTRICITY AND NATURAL GAS USAGE FOR PHASE 1 AND FULL BUILDOUT

Source	Phase 1 (2021)	Full Buildout (2031)
Project Electricity Consumption (million kWh) [a]	5.19	7.07
Percent of Total PG&E 2017 Sales	0.006%	0.009%
Percent of Alameda County PG&E 2017 Sales	0.05%	0.06%
Project Natural Gas Consumption (million scf)	4.43	4.72
Percent of Total PG&E 2017 Sales	0.002%	0.002%
Percent of Alameda County PG&E 2017 Sales	0.01%	0.01%

NOTES:

[a] Electricity supplied by PG&E would be reduced through installation of rooftop solar PV systems, which are Project Design Features. These features would replace PG&E electricity with on-site renewable energy generation. Please refer to the *Greenhouse Gas Technical Analysis* for more information (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*).

TABLE 5
ESTIMATED ANNUAL PROJECT TRANSPORTATION FUEL USAGE FOR PHASE 1 AND FULL BUILDOUT

Category	Phase 1 (2021) Fuel Consumption (gallons)		Full Buildout (2031) Fuel Consumption (gallons)	
	Diesel	Gasoline	Diesel	Gasoline
Non-Delivery Vehicles (Running)	37,793	1,094,309	52,573	1,368,000
Light-Duty Vehicles (Idling at Gas Station)	0	39,991	0	39,991
Delivery Vehicles	72,789	0	191,118	0
TRUs	14,357	0	54,430	0
Generators	5,070	0	5,070	0
Total [a]	*130,009*	*1,134,300*	*303,191*	*1,407,991*
Fuel Usage Comparisons				
Alameda County	113,725,490	583,000,000	113,725,490	583,000,000
Project Percent of Alameda County	0.11%	0.19%	0.27%	0.24%
California	3,798,039,216	15,584,000,000	3,798,039,216	15,584,000,000
Project Percent of California	0.003%	0.007%	0.008%	0.009%

NOTES:

[a] Categories defined as follows:
Non-Delivery vehicles (running) = Energy use from daily commercial non-delivery vehicle trips. Energy use estimated using EMFAC2014
Light-duty vehicles (idling at gas station) = Energy use from autos idling and queueing in line at gas station. Energy use was estimated using idling fuel use rates from the U.S. Department of Energy (2015) and assumes an idling time of 10 minutes per vehicle.
Delivery Vehicles = Energy use from daily commercial delivery vehicle trips, including idling and running. Energy use was estimated using EMFAC2017 and idling fuel use rates from the U.S. Department of Energy (2015) and assuming an idling duration of 15 minutes per roundtrip.
TRUs = Energy use from daily TRU operations at commercial land uses. Energy use was estimated using fuel consumption values from NREL (2010).
Generators = Energy use from diesel-powered emergency generators. Energy use was estimated using the carbon content of diesel fuel from the Climate Action Registry (2018).

ABBREVIATIONS:
TRUs = Transportation Refrigeration Units
EMFAC2014 = EMission FACtors model, version 2014
EMFAC2017 = EMission FACtors model, version 2017

SOURCES:
1. ESA, 2019
2. California Energy Commission, California Retail Fuel Outlet Annual Reporting (CEC-A15) Results, 2017. Available at: https://www.energy.ca.gov/almanac/transportation_data/gasoline/piira_retail_survey.html. Accessed February 2019. Diesel is adjusted to account for retail (51%) and non-retail (49%) diesel sales.

Based on the proposed development program and engineering estimates that form the basis of the operational-related impact analyses, the Project would have an electricity demand of approximately 5.19 million kWh for Phase 1 in 2021 and 7.07 million kWh for Full Buildout in 2031. These values include electricity for water supply and wastewater treatment.

To put the Project's electricity consumption into perspective, the value is compared to the PG&E network demand, which is the utility provider for the Project region. In 2017, PG&E had annual electric deliveries to all customers of approximately 82,226 million kWh.[27] Phase 1 and Full Buildout operations would represent approximately 0.006 and 0.009 percent of the PG&E

27 PG&E, 2017 Join Annual Report to Stakeholders, Available at: http://s1.q4cdn.com/880135780/files/doc_financials/2017/annual/2017-Annual-Report-Final.pdf. Accessed February 2019.

network sales for 2017, respectively, which is a relatively very small fraction. PG&E had annual electricity deliveries to Alameda County of approximately 11,112 million kWh in 2017.[28] Phase 1 and Full Buildout operations would represent approximately 0.05 and 0.06 percent electricity supplied to the County in 2017, respectively. Furthermore, PG&E's infrastructure accounts for and accommodates an increase in energy demand and load growth. As discussed in Section 1.2, *Environmental Setting*, PG&E updates all load forecasts, including peak load forecasts, for gas and electricity services every year. In addition, the installation of rooftop solar PV on the Costco warehouse and all other buildings (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*) would reduce the amount of electricity necessary for PG&E to supply to the Project (see the *Greenhouse Gas Technical Analysis* for more information). Therefore, electricity service and supply impacts from PG&E are not anticipated.

Based on the proposed development program and engineering estimates, the Project would have an annual natural gas demand of approximately 4.43 million scf for Phase 1 in 2021 and 4.72 million scf for Full Buildout in 2031. To put the natural gas consumption into perspective, the value is compared to the PG&E network demand, which is the regional utility provider. PG&E had natural gas sales of approximately 234,181 million scf in 2017. Both Phase 1 and Full Buildout operations would represent approximately 0.002 percent of the PG&E network sales for 2017, which is a very small fraction. PG&E had natural gas sales of approximately 36,551 million scf within Alameda County in 2017. Both Phase 1 and Full Buildout operations would represent approximately 0.01 percent of the PG&E network sales for 2017. For the same reasons as discussed above for electricity service and supply, natural gas service and supply impacts from PG&E are not anticipated due to PG&E's annual load growth planning. Consequently, given the ample regional natural gas supplies available, the Project would not have a significant impact on regional natural gas supply or require additional capacity to be constructed.

Operation of the Project would also result in transportation-related energy use. Transportation fuels of gasoline and diesel would be provided by local or regional suppliers and vendors. Vehicles would require a fraction of a percent of the total state's transportation fuel consumption. Non-delivery vehicles (employees and visitors) traveling to and from the Project site would consume approximately 37,793 gallons of diesel and 1,094,309 gallons of gasoline during Phase 1 in 2021 and 52,573 gallons of diesel and 1,368,000 gallons of gasoline during Full Buildout in 2031. Fuel consumption for customer vehicle queuing/idling at the gas station is anticipated to be 39,991 gallons of gasoline during both Phase 1 in 2021 and Full Buildout in 2031. Heavy duty delivery trucks would consume approximately 72,789 gallons of diesel during Phase 1 in 2021 and 191,118 gallons of diesel during Full Buildout in 2031 (these vehicles are not anticipated to consume gasoline). The Project would also consume diesel fuel for the operation of TRUs on delivery vehicles and for the operation and testing of emergency generators located at the Costco warehouse and hotel. Phase 1 operations would consume approximately 19,427 gallons of diesel from these sources in 2021. Full Buildout operations would consume approximately 59,500 gallons of diesel from these sources in 2031.

28 PG&E, 2017 Join Annual Report to Stakeholders, Available at: http://s1.q4cdn.com/880135780/files/doc_financials/2017/annual/2017-Annual-Report-Final.pdf. Accessed February 2019.

In total, Phase 1 operations would consume approximately 1,134,300 gallons of gasoline and 130,009 gallons of diesel annually starting in 2021. Full Buildout operations would consume approximately 1,407,991 gallons of gasoline and 303,191 gallons of diesel annually starting in 2031. Phase 1 operational diesel consumption would represent approximately 0.11 percent and 0.003 percent of County and State annual diesel fuel consumption, respectively. Phase 1 operational gasoline consumption would represent approximately 0.19 percent and 0.007 percent of County and State annual gasoline fuel consumption, respectively. Full Buildout diesel consumption would represent approximately 0.27 percent and 0.008 percent of County and State annual diesel fuel consumption, respectively. Full Buildout gasoline consumption would represent approximately 0.24 percent and 0.009 percent of County and State annual gasoline fuel consumption, respectively. Total annual fuel consumption for the Project would therefore represent a small fraction of County and State annual transportation fuel consumption. Overall, the Project would not have a substantial impact on the local or regional fuel supplies or require additional capacity to be constructed.

Operation of the Project would result in energy demand from building energy use and transportation-related energy use associated with vehicles traveling to and from the Project Site. The Project would also consume transportation fuels (diesel and gasoline) for TRUs and emergency generators. The total amount of energy used by the Project would represent a small fraction of the region's available energy supply and capacity. Because the Project would be consistent with energy efficient building standards and promote transportation energy efficiency through bike and pedestrian improvements and the installation of electric vehicle supply equipment (see Impact ENERGY-2 below), and would install rooftop solar PV systems on all buildings (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*), it would not result in the wasteful, inefficient, and unnecessary consumption of energy. Overall, the Project would not have a substantial impact on the local or regional energy or fuel supplies or require additional capacity to be constructed. Therefore, operation of the Project would not result in the wasteful, inefficient, or unnecessary consumption of energy and would not increase the need for new energy infrastructure or preempt opportunities for future energy conservation. Therefore, operational energy impacts would be **less than significant.**

ENERGY-2: Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Construction Energy Use

As discussed in Section 1.3.2 above, CARB has adopted the ATCM to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter. This measure prohibits diesel-fueled commercial vehicles greater than 10,000 pounds from idling for more than five minutes at any given time (13 CCR Section 2485). The Project would also be required to utilize construction contractors that demonstrate compliance with applicable CARB regulations governing the accelerated retrofitting, repowering, or replacement of heavy duty diesel equipment

(13 CCR Section 2449). The regulation aims to reduce emissions by requiring the installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models.

While intended to reduce construction criteria pollutant emissions, compliance with the above anti-idling and emissions regulation would also result in efficient use of construction-related energy and the minimization or elimination of wasteful and unnecessary consumption of energy. According to the CARB staff report that was prepared at the time the anti-idling ATCM was being proposed for adoption in late 2004/early 2005, the regulation was estimated to reduce non-essential idling and associated emissions of diesel particulate matter and nitrogen oxide (NO_X) emissions by 64 and 78 percent respectively in analysis year 2009.[29] These reductions in emissions are directly attributable to overall reduced idling times and reduced idling fuel combustion as a result of compliance with the regulation, and the Project's compliance would result in total energy savings of approximately 974 gallons of diesel fuel, assuming a fuel reduction equivalent to the percent reduction of particulate matter or NO_X as estimated by CARB (the lesser value [i.e., 64 percent] is used as a conservative assumption). These savings are incorporated into Table 3.

Additional construction fuel savings would be expected from the In-Use Off-Road Diesel-Fueled Fleets regulation, although it is difficult to quantify since the regulation is based on a construction contractor's total fleet of equipment and does not regulate specific equipment that could be used for an individual Project. As required under Mitigation Measure M-AQ-1, all off-road equipment greater than 50 horsepower is required to have engines that meet USEPA Tier 3 off-road emission standards. Although the standards do not require equipment to be more fuel efficient, manufacturers can partly meet the standards with more fuel-efficient equipment, and as engine technology improves over time, both emissions and fuel use declines in off-road engines. While some level of construction fuel savings would be expected from the In-Use Off-Road Diesel-Fueled Fleets regulation, estimates are not included in the energy savings calculations for the Project since the underlying regulation applies to construction contractor's total fleet of equipment and not to specific equipment. Based on the available data, construction would utilize energy for necessary on-site activities and to transport materials, soil, and debris to and from the site. It is reasonable to conclude that idling restrictions would result in less fuel combustion and energy consumption and minimize the Project's construction-related energy use.

Construction of the Project would require temporary and short-term energy supplies and would not represent a substantial fraction of the available energy supply in terms of equipment and transportation fuels and would not substantially affect existing local and regional supply and capacity. Furthermore, construction of the Project would use equipment that would be consistent with the energy standards applicable to construction equipment including limiting idling fuel consumption and using contractors that comply with applicable CARB regulatory standards that affect energy efficiency. Finally, because Project construction will entail energy demands largely associated with equipment and transportation fuels, construction of the Project would not increase

[29] CARB, 2004. Staff Report: Initial Statement of Reasons for Proposed Rulemaking, Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling, Appendix F, July 2004, https://www.arb.ca.gov/regact/idling/idling.htm, accessed November 2016.

demands on the electric power network during peak and base period demand periods. As a result, the Project's construction energy use would not conflict with or obstruct state or local plans for renewable energy or energy efficiency, therefore, impacts would be considered **less than significant**.

Operational Energy Use

The Project would comply with or exceed the applicable provisions of the Title 24 standards and the CALGreen Code in effect at the time of building permit issuance. Examples of energy measures in the Title 24 standards and the CALGreen Code include energy efficiency metrics and performance standards for appliances, space-conditioning equipment (i.e., heating, ventilation and air conditioning [HVAC]), water heating systems, windows and doors, insulation, lighting, and roofing materials; indoor and outdoor water use efficiency and conservation performance metrics; and requirements to provide solar-ready buildings with a minimum solar zone area (solar zone is defined as a section of the roof designated and reserved for the future installation of a solar electric or solar thermal system). California's Build Energy Efficiency Standards continue to build upon the 2016 standards with implementation of the 2019 Standards that will go into effect January 1, 2020.[30] The Project's modeling incorporated the 2019 Title 24 standards for its commercial land uses. According to the California Energy Commission, non-residential buildings would use about 30 percent less energy compared to the 2016 Title 24 Standards.[31]

The California Public Utilities Commission (CPUC) has also designed the Zero Net Energy Action Plan to make new residential and commercial construction in California zero net energy by 2030 in order to meet the state's GHG goals. The ZNE Action Plan's key milestones are achieved by improving and expanding Title 24 standards based on the future state of energy efficiency technologies and innovations, providing incentives, mandating carbon benchmarking and labeling, and developing performance data. Furthermore, Title 24 only regulates a portion of a buildings energy usage primarily related to lighting, heating, cooling, ventilation, and water heating; therefore, is it not possible to speculate how future Title 24 standards would reduce the overall energy profile of a building. As a result, the energy estimates provided above are considered conservative estimates, as they do not take into account anticipated energy reductions from future potentially applicable standards beyond the 2019 Title 24 standards, which are not yet known or available. Nonetheless, the Project would be built to achieve or exceed the energy efficiency metrics in the applicable Title 24 standards and the CALGreen Code in affect at the time of building permit issuance, including any ZNE requirements for new commercial buildings. Therefore, the Project's increase in electrical demand would not have a substantial impact on the local or regional electrical supplies or require additional capacity to be constructed. In addition, given the ample regional natural gas supplies available, the Project would not have a significant impact on regional natural gas supply or require additional capacity to be constructed.

30 California Energy Commission, 2019 Building Energy Efficiency Standards, https://www.energy.ca.gov/title24/2019standards/documents/2018_Title_24_2019_Building_Standards_FAQ.pdf. March 2019.

31 Ibid.

In addition, the Costco facility would include a number of sustainability features to reduce building energy use. All Costco stores have an Energy Management System. Costco's warehouse designs are consistent with the requirements of Leadership in Energy and Environmental Design (LEED) for green building design and construction. Buildings are designed with high efficiency HVAC systems and reflective roofs that lessen the heat gain on the roof. Mechanical heat from refrigeration systems is captured to preheat hot water tanks. All indoor and outdoor lighting in new construction utilizes high-efficiency LED technology.[32] Additionally, consistent with the Project Design Features, Costco shall install a rooftop solar PV system of at least 500 kilowatts (KW) of AC power within two years of the warehouse opening. Costco estimates that the rooftop system would consist of more than 2,000 modules with a total rating of 540,000 watts, and produce approximately 1,128,400 kWh of clean electricity annually. For all other land uses at the Project site, rooftop solar photovoltaic systems will be installed on the Phase 1 hotel(s) and retail space and on the Phase 2 retail space (or other Phase 2 development as may be approved). The systems shall be designed to maximize electricity production pending the final design of each building type and shall cover a minimum of 50 percent of the available rooftop space (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*, for more information).

With respect to operational transportation-related fuel usage, the Project would support statewide efforts to improve transportation energy efficiency and promote efficient transportation alternatives. The Project would include the installation of electric vehicle supply equipment (EVSE) pursuant to Section 5.106.5.3, Electric Vehicle Charging of the CALGreen Code.[33] Six percent of the Costco warehouse parking spaces would be prewired during construction to accommodate EVSE. In addition, the City is requiring as a condition of approval that Costco install 10 EV charging stations to be operational at the opening of the store in 2021. These stations will support the future use of electric and hybrid-electric vehicles by employees and visitors traveling to and from the site, and would reduce the Project's consumption of gasoline and diesel. Use of EVs will increase overall demand for electricity from the utility (i.e., PG&E). The Project's other commercial land uses would comply with requirements of Section 5.106.5.3. Alternative-fueled, electric, and hybrid vehicles, to the extent these types of vehicles would be utilized by employees and visitors traveling to and from the site, would reduce the Project's consumption of gasoline and diesel; however, the effect would be minimal in the current vehicle market, but as electric vehicles proliferate in response to the state policy (e.g., Mobile Source Strategy) and regulatory environment, they will increase overall demand for electricity. Plug-in electric vehicles generally obtain battery power from utilities, which as discussed in Section 1.3.2, are required to provide an increasing share of electricity from renewable sources under the State's Renewables Portfolio Standard. Therefore, while plug-in electric vehicles would replace traditional transportation fuels (i.e., gasoline) with utility provided electricity, the electricity would be provided by an increasing share of renewable sources resulting in an overall reduction in energy resource consumption.

The Project would also improve transportation efficiency. Bicycle lanes will be maintained on Johnson Drive, buffered bicycle lanes would improve bicycle safety along the corridor, and

[32] Costco Wholesale Corporation, 2019. Sustainability – Buildings. Available: https://www.costco.com/sustainability-buildings.html. Accessed: April 2019.

Johnson Drive would be widened to the west to accommodate a new bike lane. Final design of all improvements along Johnson Drive shall maintain or enhance existing bicycles, transit, and pedestrian facilities. The project will maximize the benefits of the location of the EDZ area as an infill site located along transportation corridors and near transit by encouraging the development of both locally and regionally accessible uses in the EDZ area. The Project would include re-zoning of parcels within the EDZ area to allow a mix of uses that would be located near existing local-serving commercial areas including light industrial, office, commercial, retail, and institutional uses. Overall, operational transportation-related fuel usage would not substantially affect existing local and regional supply and capacity.

The City's applicable General Plan Energy Element goals call for increasing energy conservation, energy efficiency, and energy self-sufficiency. The Project would be consistent with this goal by achieving or exceeding the energy efficiency metrics in the applicable Title 24 standards and the CALGreen Code and by supporting statewide efforts to improve transportation energy efficiency thereby reducing energy consumption and associated air pollutant emissions.

The Project would be consistent with energy efficiency standards in the applicable Title 24 standards and the CALGreen Code and include EVSE to promote transportation energy efficiency. Additionally, the Costco warehouse would be designed to be solar ready; installation of rooftop solar in the future would reduce the amount of electricity that PG&E would need to provide.[34] The Project would not preclude opportunities for improving overall fuel efficiency and future energy conservation. Furthermore, due to PG&E's load planning process, the relatively small energy demand from the Project, including demand during peak times, would be expected to be accommodated within PG&E's projected and planned for capacity. In addition, the installation of rooftop solar PV on all buildings would reduce the demand for PG&E electricity (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*). Overall, the Project would not have a substantial impact on the local or regional energy supplies or require additional capacity to be constructed. Consequently, the Project's operational energy use would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, operational energy impacts would be considered **less than significant**.

4 Conclusion

Based on the estimated annual fuel usage for the Project presented above, Phase 1 construction would consume approximately 114,345 of diesel and 19,813 gallons of gasoline during its one-year duration. Phase 2 construction would consume approximately 64,504 of diesel and 14,051 gallons of gasoline during its one-year duration. Phase 1 diesel consumption would represent approximately 0.10 and 0.003 percent of County and State 2017 diesel consumption, respectively. Phase 1 gasoline consumption would represent approximately 0.003 and 0.0001 percent of County and State 2017 gasoline consumption, respectively. Phase 2 diesel consumption would represent approximately 0.06 and 0.002 percent of County and State 2017 diesel consumption, respectively. Phase 2 gasoline consumption would represent approximately 0.002 and 0.0001

[34] Costco has installed solar electricity generating panels on selected stores in the Bay Area, including, but not necessarily limited to, Livermore (closest to the Pleasanton site), Richmond, Hayward, Fremont, Redwood City, Santa Clara, and at least two stores in San José. No determination has been made with respect to this store.

percent of County and State 2017 gasoline consumption, respectively. Phase 1 construction would reuse all rubble and new construction and demolition debris on-site, thus eliminating fuel consumption from trucks trips associated with debris disposal and import of new fill material. The Project would comply with applicable construction regulations that affect energy demand, such as the ATCM idling restrictions and the In-Use Off-Road Diesel-Fueled Fleets regulation that would result in reduced fuel consumption and minimize the Project's construction-related energy use. As a result, construction energy impacts would be considered **less than significant**.

Operational energy consumption would occur from building energy needs and from transportation fuels (e.g., diesel and gasoline) used for vehicles traveling to and from the site, TRUs, and emergency generators. The Project would have an electricity demand of approximately 5.19 million kWh and 7.07 million kWh for Phase 1 and Full Buildout, respectively. These values include electricity for water supply and wastewater treatment. Phase 1 and Full Buildout operations electricity use would represent approximately 0.006 and 0.009 percent of the PG&E network sales for 2017, respectively, which is a relatively very small fraction. Also, Project operations would represent approximately 0.05 and 0.06 percent of electricity supplied to the County in 2017 for Phase 1 and Full Buildout operations, respectively. In addition, the installation of rooftop solar PV on all buildings would reduce the demand for PG&E electricity (see the *Greenhouse Gas Technical Analysis*, section 3.2 *Project Design Features*). The Project would have an annual natural gas demand of approximately 4.43 million scf and 4.72 million scf for Phase 1 and Full Buildout, respectively. Both Phase 1 and Full Buildout operations natural gas use would represent approximately 0.002 percent of the PG&E network sales for 2017, which is a very small fraction. Both Phase 1 and Full Buildout operations would represent approximately 0.01 percent of natural gas supplied to the County in 2017.

Phase 1 operations would consume approximately 1,134,300 gallons of gasoline and 130,009 gallons of diesel. Full Buildout operations would consume approximately 1,407,991 gallons of gasoline and 303,191 gallons of diesel. Phase 1 consumption would represent approximately 0.11 and 0.003 percent of County and State 2017 diesel consumption, respectively. Phase 1 gasoline consumption would represent approximately 0.19 and 0.007 percent of County and State 2017 gasoline consumption, respectively. Full Buildout diesel consumption would represent approximately 0.27 and 0.008 percent of County and State 2017 diesel consumption, respectively. Full Buildout gasoline consumption would represent approximately 0.24 and 0.009 percent of County and State 2017 gasoline consumption, respectively. Total annual fuel consumption for the Project would therefore represent a small fraction of County and State transportation fuel consumption.

The amount of energy used would represent an insubstantial fraction of the region's available energy supply and capacity. The Project would be consistent with energy efficiency standards in the applicable Title 24 standards and the CALGreen Code and include EVSE to promote transportation energy efficiency. Additionally, the Costco warehouse would be designed to be solar ready which would reduce its consumption of electricity provided by PG&E. Because the Project would be consistent with energy efficient building standards and promote transportation energy efficiency, it would not result in the wasteful, inefficient, and unnecessary consumption of energy. The Project would not preclude opportunities for improving overall fuel efficiency and

future energy conservation. Overall, the Project would not have a substantial impact on the local or regional energy supplies or require additional capacity to be constructed. As a result, operational energy impacts would be considered **less than significant**.

Re: Economic Impact Analysis for Johnson Drive Economic Development Zone

Dear Ms. Herron:

ALH Urban & Regional Economics (ALH Economics) is pleased to present this economic impact analysis of the planned Johnson Drive Economic Development Zone in the City of Pleasanton. This study highlights the study findings regarding the economic impact of the planned retail and hotel components of the EDZ, including potential club retail space. The purpose of this report is to provide an assessment of the potential for the project to cause or contribute to changes in the economy.

It has been a pleasure working with you on this project. Please let me know if you have any questions or concerns.

Sincerely,

Amy L. Herman
Principal

I. EXECUTIVE SUMMARY

INTRODUCTION

The purpose of this study is to assess economic impacts resulting from development of new club retail, general retail, and hotel space in the Johnson Drive Economic Development Zone (EDZ) in the Pleasanton, CA. This report also evaluates the potential of the EDZ to result in urban decay, which comprises prolonged physical deterioration resulting from sustained economic impacts. The EDZ is a proposed 40-acre area along Johnson Drive. Implementation of the EDZ would allow the City of Pleasanton to use zoning and land use designations, incentive programs, completed California Environmental Quality Act (CEQA) documentation, and standards and guidelines to streamline the development process and encourage investment.

The EDZ site is located in a commercial area with other nearby commercial establishments, industrial uses, and a hotel. Proposed new development includes 189,037 square feet of new general retail space, 148,000 square feet of club retail space, and a 150- or 231-room hotel. This mix of new uses is hereafter defined as the "Project." This study estimates the potential impacts of the Project on existing retailers in the Project's market area, primarily in the form of diverted sales from existing retailers. The study also estimates the potential impacts on existing hotels. The study further estimates the extent to which the opening of the Project and other cumulative retail or hotel projects may or may not contribute to urban decay pursuant to potential store closures attributable to existing retailer sales diversions and hotel closures. The key indicator of urban decay from a CEQA perspective is impacts on the physical environment, which includes existing stores and hotels and commercial real estate conditions, as measured by the current baseline. This is the baseline reflected by existing conditions discussed in this report.

The Johnson Drive EDZ new retail and hotel development would occur incrementally. Phase 1 development of 5,000 square feet of general retail space, the 148,000 square feet of club retail space, and the hotel are assumed to be complete and fully operational by 2018. The remaining balance of new general retail space would be developed sometime prior to Full Buildout of the EDZ, which is assumed to occur by 2028.

SUMMARY OF FINDINGS

Project Sales and Market Area

ALH Economics estimates that stabilized sales for the Project would total $172.3 million in Phase I and a total of $241.3 million upon Full Buildout, all in 2015 dollars. Not all Project sales are deemed competitive with the existing retail sales base. Sales components not anticipated to be competitive with the retail sales base include sales made to wholesalers with resale licenses, purchases made by market area consumers recaptured from other regional club retailers, and sales made to consumers from outside the Project's market area.

The Project's general retail and club retail spaces are anticipated to draw 80% and 60% of their sales from the market area, respectively. The percentage is lower for the club retail space because market area data for nearby club retail stores suggests demand originates from a large area, with less than 60% sourced from households in the nearby environs. Based largely on locations of

competing club retail venues, the Project's market area was defined to include 18 full census tracts and three partial census tracts spanning the City of Pleasanton, the majority of the City of Dublin, and some unincorporated Alameda County areas. Consumer origin data for nearby club retail venues indicates that a large part of their consumers originate from the market area defined for the Project. This means market area consumers who want to shop at a club retail store are already doing so. It is assumed that these sales will be captured by the Project's club retail store. These redirected sales will not be diverted from any existing market area retailers but will comprise sales new to Pleasanton.

Based upon considerations of wholesale purchases, redirected sales, outside market area demand, the Project's sales anticipated to be most competitive with the existing retail base include $66.5 million in Phase I sales and $119.7 million in total sales at Full Buildout. These are the new sales anticipated to be generated by market area retail consumers.

The distribution of sales by retail category will vary between the general retail and club retail portions of the Project, but the overall distribution is summarized in Table 1. This distribution is based on assumptions regarding the allocation of Project space by type of retail category, and associated average sales estimates.

Table 1. Summary of Project Sales Competitive with Market Area Retail Sales Base

	General Retail		Club Retail		Full Buildout	Percent of
Retail Category	Phase 1	Full Buildout	Phase 1	Full Buildout	Total	Total
Motor Vehicles and Parts Dealers	$0	$0	$3,143,726	$3,143,726	$3,143,726	3%

Source: Exhibit 15.

The categories of sales are based upon categories defined by the State of California Board of Equalization. The "Other Retail" category is a broad category that includes a wide range of goods, such as office supplies, pet supplies, books, toys, pharmacy, jewelry, sporting goods, and gifts. As noted, the largest component of Project retail sales is estimated to comprise Food & Beverage store sales. This is attributable to the large share of club retail store sales comprising Food & Beverage sales.

Retail Sales Base and Characterization

The combined sales bases of Pleasanton and Dublin are estimated to total $3.0 billion, comprised of approximately equal portions between the two cities. Both Pleasanton and Dublin are retail attraction markets, meaning that more sales are captured by area retailers than would be expected from resident spending alone. This retail base attraction is characteristic of all major retail sectors except for two in Pleasanton – Building Materials & Garden Equipment and Gasoline Stations, meaning these two categories are not fully meeting demand generated by Pleasanton consumers. However, both of these categories are attraction categories in Dublin, thus the analysis assumes

the market area as a whole has attraction in all major retail categories. This suggests that recaptured leakage beyond the sales assumed to be recaptured from area club retail stores is not a likely source of demand for the Project's retail components.

Project Sales and Store Impacts

Recognizing that the market area is a sales attraction market, the analysis estimates that for the Project to be successful, all of its sales from market area residents would comprise sales diverted from existing retailers, excepting demand generated by new market area households, which is significant. Based on estimated household growth averaging just over 1.0% a year, this new demand is estimated to total $51.7 million in retail sales by 2018, an additional $171.1 million between 2018 and Full Buildout, for a cumulative total of $1.7 billion by Full Buildout, or 2028.

Taking Project sales generated by market area households and new demand into consideration, Phase I Project's sales impacts are estimated to total $26.7 million for existing retailers, or 0.9% of existing market area sales. This is the amount of sales estimated to be diverted from existing market area retailers after new household demand is taken into consideration. Overall this is a nominal level of impact. However, the sales impact is anticipated in three retail categories, including $0.3 million in Gasoline Stations, $1.9 million in Home Furnishings & Appliances, and $23.2 million in Food & Beverage Stores. The sales impacts in Home Furnishings & Appliances and Gasoline Stations are nominal and given the size of the sales base are not deemed large enough to result in existing retail outlet closures. Moreover, these sales impacts are anticipated to be offset quickly following completion of Phase I, including a period of less than one year for the Gasoline Station impact and just over two years for the Home Furnishings & Appliances impact. Thus, these impacts are not deemed severe enough to result in existing outlet closures.

The estimated Phase I sales impacts in the Food & Beverage Stores category are more substantial. At $23.2 million these impacts are equivalent to 7.4% of the existing sales base. This volume of sales could result in lower store sales performance among a number of existing Food & Beverage stores, which includes at least 17 more traditional food stores in the market area, as well as numerous ethnic and other small food markets. Or the sales impacts could be concentrated among just several retailers most comparable to the discounted or bulk food options available at a club retailer. Based upon average store sales performance, the estimated volume of diverted Food & Beverage Store sales is sufficient to support approximately 36,000 square feet of space. While this level of impact could suggest the potential for one existing grocery store in the market area to be at risk of potential closure following Phase I Project development, it is unlikely based on the outcomes experienced in similar jurisdictions after club stores opened. It is further unlikely because the nature of goods available at club retail stores are typically bulk in nature, with very limited variety, such that they do not lend themselves to the average household consumer who needs to stop by a grocery store once or twice a week for basic household needs or to round out the pantry and purchase ingredients for intimate family dinners. In addition, spread over just the more traditional market area food stores, the estimated level of impact is equivalent to less than $1.4 million in sales impact per store, which is likely not a sufficient sales volume loss to trigger store closure. Many stores can likely compensate for this loss through product repositioning and other operational changes. Further, some of these impacts will be offset over time as additional new demand is generated, averaging about $3.0 million a year after 2018.

If a store closes there are other demand opportunities available to backfill the space, thus reducing the likelihood of long-term retail vacancy. For some Project sales categories new market area demand will exceed the portion of Phase I Project sales estimated to be generated by market area households, thus no impact will result and demand available for other retailers will result. Thus, while there could be the potential for store closure, the likelihood of the space remaining vacant following Phase I development for a prolonged period of time and leading to urban decay is very low.

By the time of Full Buildout of the Project, estimated to comprise 2028, more than sufficient new market area demand will be generated to absorb the Project's anticipated sales generated by market area retail consumers. There is one minor exception to this, which is the Clothing & Clothing Accessories category, with a nominal sales impact. The estimated level of impact in this category is so limited it comprises 0.0% of the market area sales base. Moreover, the findings suggest that over $100 million in additional demand for retail will remain at Full Buildout, providing support for yet other retail venues as well as any retail space that might become vacated as a result of Project impacts. Such potential vacancies, however, are not deemed likely given the negligible sales impacts projected by Full Buildout.

Downtown Pleasanton Impacts

Downtown Pleasanton is anticipated to experience very limited, if any, sales impacts associated with the Project. This assessment is attributable to several factors, including the nature of the impacts, Downtown Pleasanton's retail base and orientation, and historical precedents. Specifically, the Project's impacts in sales categories represented Downtown are very low and unlikely to be experienced by Downtown retailers. This is especially the case because the nature of these and other goods sold in Downtown Pleasanton is generally very different from the type of goods available at a club retail store like Costco or other generic retailers that might occupy the Project's general retail space. Further, while there may be some club retail goods overlap, the quality of goods available Downtown is typically much greater and of a broader variety than available at a club retailer. In addition, Downtown Pleasanton retailers provide services not available at a club retailer. Downtown Pleasanton also provides a unique, pedestrian-oriented shopping opportunity with a customer-friendly atmosphere, which cannot be replicated at the Project. Further, shoppers who want the type of goods available at a club retail store already have regional opportunities for this kind of shopping. Thus, there is no motivation for Downtown shoppers to change their shopping patterns.

Downtown Pleasanton is quite distant from the Project site, at 4.3 miles. Shoppers who choose to shop in Downtown Pleasanton are unlikely to bundle a Downtown shopping with a Project shopping trip, further helping Downtown Pleasanton retain its existing shoppers. Finally, anecdotal information suggests that the opening of the San Francisco Premiums Outlets in Livermore, located even closer to Downtown Pleasanton than the Project site (3.9 miles versus 4.3 miles), did not result in negative economic impacts on Downtown Pleasanton retailers. This is supported by comparative sales analysis in Pleasanton spanning 2011, the year before the Outlets opened, and 2013, the year following the Outlets opening. This suggests that City of Pleasanton as a whole did not experience any retail sales repercussions associated with this significant retail addition to the region's retail base. This also supports the finding that the Project's impacts on the existing retail base may be limited, given the greater size of the San Francisco Premium Outlets relative to the Project.

Costco Case Study Findings

Case study research in select California communities with Costco stores provides some insight into the potential for more granular store impacts than results from the study's quantitative analysis. This includes research in Livermore, where the Costco store opened in 1993 but where gasoline sales were added within the past 5 years, plus Hayward and Huntington Beach, which have some sales base comparability to Pleasanton and newer Costco stores opened in 2009 and 2012, respectively. The case study findings indicate that none of the cities noted negative impacts on the existing business community associated with Costco, including the small business community, downtown, gas stations, or food stores. In the case of Huntington Beach, the Costco store was instead seen as a catalyst for small business development and area economic development, with spin-off benefits noted for other, previously struggling retail districts.

These case study findings indicate that other communities of a similar scale to Pleasanton did not experience negative impacts on their retail community when local Costco stores were developed. This includes no reported small business community impacts or impacts on gasoline stations. Therefore, these findings suggest the study conclusion that the Project's Phase I development could result in food store sales impacts is a conservative conclusion, not borne out by the experience in comparable cities.

Secondary Impacts

In addition to sales impacts throughout the Project's market area, there will be potential for more localized secondary impacts on the businesses located in the area proposed for the Johnson Drive EDZ. These include a higher volume of traffic through the area impacting employees and customers as well as existing businesses encountering a more competitive environment when seeking land or building acquisition for expansion purposes. Yet there are also potential beneficial impacts including traffic-related benefits associated with enhanced visibility of existing businesses, the proximate availability of low cost club retail merchandise and gasoline, other shopping and eating opportunities close to work, and possible long-term property value increases associated with economic development improvements throughout the area. Thus, as noted in the Huntington Beach Costco case study, Project development could serve as a catalyst for economic development, bringing shoppers to an area that was previously underutilized, and creating synergistic opportunities for business growth.

Cumulative Project Sales Impacts

ALH Economics identified 12 potential cumulative retail development projects in or near the market area. Cumulative projects are defined as retail developments that have the potential to generate net new retail sales that may be competitive with the Project, especially sales generated by market area consumers. Of these 12 projects, eight are anticipated to be completed by the end of 2018, concurrent with the Project's Phase I. The remaining four projects have unknown timing because they are either in very early planning stages or are phased projects that do not have estimated starting dates for the outstanding retail portion. These projects are assumed to be completed by the Project's Full Buildout timeframe.

The cumulative projects will have their own unique market areas, so only a portion of the cumulative project retail space will be competitive with the Project or relate to the market area sales

base. This share of space is estimated to total 173,321 square feet by 2018. There are 293,721 total square feet of estimated occupied development with unknown timing; however, a portion of this square footage may be developed between those years. This brings the total competitive square footage estimate to 467,042 square feet for the market area and surrounding areas, exclusive of the Project. Notably, these figures include one retail project in Dublin that City of Dublin representatives suggest may convert to an all residential project.

Cumulative project analysis taking into consideration the portion of Project and cumulative project retail space anticipated to capture sales from the Project's market area, future market area demand for retail, and timing of development indicates that by the completion of Phase I, suggest there will be a projected shortfall of 111,200 square feet of market area demand to support the cumulative projects. This is a nominal amount of shortfall based upon the current size of the combined retail base in Pleasanton and Dublin, which comprises 9.2 million square feet. If this 11,200–square-foot increment of retail space became vacant as a result of the cumulative projects (possibly including the estimated Phase I Project grocery store impacts), the current retail base vacancy rate would increase by 1.2%. This retail vacancy increment is very low, and would comprise an insignificant impact on the market area's retail base.

By the time Project Full Buildout occurs, there will continue to be insufficient new market area demand to absorb all the cumulative projects with known development timeframes. Similar to the Phase I timing analysis, however, this insufficient demand is estimated to be relatively low. Inclusive of the cumulative project anticipated to be unlikely to be developed as retail, this demand shortfall comprises an estimated 267,650 square feet. Excluding the unlikely development project reduces this figure to 154,800 square feet. Thus, the market area retail base vacancy rate is estimated to increase by 1.7% to 2.9% by Full Buildout pursuant to the cumulative retail development.

The degree to which these percentage increases will be significant to the market will depend upon the prevailing market conditions at the time of Full Buildout. While these conditions cannot be predicted, current conditions suggest that the projected increases in vacancy attributable to the cumulative projects at Full Buildout will not be detrimental to the commercial retail market, and that the market would continue to operate within healthy parameters. Therefore, ALH Economics concludes that the cumulative projects, inclusive of the Johnson Drive EDZ Project, are unlikely to result in negative sales impacts contributing to the potential for prolonged economic impacts and that urban decay is not likely to occur in the market area.

Hotel Impact Analysis

The Project has the potential for a 150- to 231-room hotel. There are a minimum of 15 existing hotels in Pleasanton and Dublin with a total of 2,297 rooms. These hotels represent five classes of hotel, including economy, midscale, upper midscale, upscale, and upper upscale. All of the existing hotels appear to be in good general repair, with attractive physical conditions and no signs of urban decay or deterioration, such as litter, graffiti, weeds or rubbish. Average annual occupancy rates of the hotels vary with economic conditions, with occupancy ranging from a low of 56% in 2009 at the peak of the Great Recession to 81% in 2015.

ALH Economics projected future demand for hotel rooms and assessed the Project's impact on future occupancy to identify if there could be negative impacts on occupancy sufficient to cause existing hotels to close. Demand was projected out at the combined projected employment rate for

Pleasanton and Dublin. This analysis effectively accommodates hotel rooms demand associated with expansion of the city's economic base. The results indicate that in 2018, when the Project's hotel is assumed to be added to supply for the full year, occupancy is projected to range from 79% to 81%. On the low end this rate is above the industry standard hotel occupancy rate of 75% and at the high end the rate is generally equivalent to the current baseline rates. Thus, the addition of the Project hotel is not anticipated to result in negative impacts on the existing hotel base contributing to potential hotel closure.

In addition to the Project, there are two cumulative hotels planned. This includes the 122-room Aloft Hotel at Grafton Plaza in Dublin, anticipated to be added to supply in 2017, a year before the Project, and the 75-room Project Clover hotel in Dublin, anticipated to be added to supply in 2018, the same year as the Project hotel. The near-term results after the addition of the new Grafton Plaza hotel in 2017 indicate that hotel occupancy is projected to remain stable at 81%, the rate noted in 2015. When the Project Clover and Johnson Drive EDZ Project hotels are further added to supply in 2018 the occupancy rate is projected to decrease, down to 73% to 75%, and recover thereafter. These projected rates are close to or above industry standard levels, and exceed levels achieved by the market as recently as 2011 and 2012. Thus, market performance is anticipated to remain close to or above industry standard levels reflective of a healthy hotel market. Therefore, the study concludes that the Project and cumulative projects may result in reduced occupancy among existing hotels, but that the existing hotels are not anticipated to be impacted to the point that hotel closure is a potential risk.

CEQA URBAN DECAY DETERMINATION

Definition of Urban Decay

For the purpose of this analysis, urban decay is defined as, among other characteristics, visible symptoms of physical deterioration that invite vandalism, loitering, and graffiti that is caused by a downward spiral of business closures and long term vacancies. This physical deterioration[1] to properties or structures is so prevalent, substantial, and lasting for a significant period of time that it impairs the proper utilization of the properties and structures, and the health, safety, and welfare of the surrounding community. For this study, urban decay is only considered a risk factor if the economic impact analysis suggests the potential for prolonged market area vacancies to occur resulting from Project- and cumulative project-related sales impacts.

Retail Market Characteristics

Historically, Pleasanton has maintained a healthy retail market sector, while Dublin has experienced more fluctuations. As of 4th quarter 2015 Pleasanton had an overall retail vacancy rate of 2.3%. This rate comprises a relative low in recent years, since hitting a peak of 6.0% in 4th quarter 2012. Prior to that time period the Pleasanton vacancy rate was as low as 1.4% in 1st quarter 2007, which is an exceedingly low vacancy rate. All of these rates, however, indicate an

[1] The manifestations of urban decay include such visible conditions as plywood-boarded doors and windows, parked trucks and long term unauthorized use of the properties and parking lots, graffiti and other building defacement, dumping of refuse on site, overturned dumpsters, broken parking barriers, broken glass littering the site, dead trees and shrubbery together with weeds, lack of building maintenance, homeless encampments, and unsightly and dilapidated fencing.

extremely healthy and very stable retail base throughout the city. The retail market in Dublin is not as strong as in Pleasanton, but is still operating within healthy parameters. Dublin retail vacancy peaked at 14.7% in the 3rd quarter of 2009, but dropped by 2011 to below 10.0%. Since then, vacancy was lowest in 1st quarter 2015, at 3.9%, which is an extremely low vacancy rate. The vacancy rate as of 4th quarter 2015 was slightly higher at 5.9%, but still relatively low by commercial market standards. These favorable retail vacancy rates in Pleasanton and Dublin bode well for the market area with respect to any potential increases in vacancy attributable to potential Project impacts resulting in store closures.

Retail vacancies in Pleasanton and Dublin are finding new tenants. At least 35 retail leases were executed in Pleasanton over the one-year time frame from approximately mid-January 2015 to mid-January 2016, totaling approximately 72,000 square feet. Comparable figures in Dublin over the same time frame were 44 leases totaling over 140,000 square feet. These lease transactions ranged in size, up to 19,500 square feet. Over a longer period of time the Pleasanton market alone has demonstrated the ability to backfill even larger spaces, including spaces vacated by grocery stores.[2] Field observation indicates that properties that are not immediately backfilled and remain vacant are in generally good condition and do not exhibit signs of urban decay. These factors suggest that retail vacancies that might occur in the Project's market area as a result of Project or cumulative project economic impacts will be well-maintained during any period of vacancy and will not contribute to conditions of urban decay or deterioration.

Urban Decay Conclusion

ALH Economics focused on determining whether or not physical deterioration in existing retail centers and area hotels would likely result from the opening of the Project and other cumulative retail or hotel developments in reaching a conclusion about economic impacts contributing to or leading to urban decay. The conclusion is based on consideration of current market conditions, findings regarding diverted sales, and regulatory controls. Highlights of these findings are as follows:

> ***Current Market Conditions***: The fieldwork and market research indicated that retail market conditions are moderate to very strong in the market area's core commercial areas, with low to moderate retail vacancy rates. Retail leasing activity is strong and existing vacancies are well maintained.
>
> ***Sales and Vacancy Impacts:*** The findings suggest the Project's Phase I development could potentially result in the closure of one grocery store and that at Full Buildout the cumulative project impacts (including the Project) could result in a modest increase in the market area's vacancy rate, as new market area demand will not be sufficient to support all the competitive retail space. While the grocery store closure is deemed unlikely, due to factors such as the anticipated distribution of impacts and the lack of variety and bulk orientation of goods available at club retail stores, even if the modest amount of vacancy occurs, the resulting vacancy rate increment will be nominal, with the resulting vacancy rate well within the range indicative of a healthy retail market. Moreover, the market's demonstrated retail absorption, including backfilling of larger retail spaces, coupled with the strong to

[2] Backfilling refers to re-tenanting of vacant retail spaces.

moderately strong market conditions, suggest that vacancies that might occur as a result of the cumulative project impacts would likely be backfilled within a reasonable time and not be characterized by prolonged vacancy.

Even if some sites experience prolonged vacancy because they might be of a size that experiences less demand or they are located in shopping centers with poor visibility or other undesirable characteristics, the prevailing conditions in the market area suggest that these vacancies would be well-maintained and would not devolve into urban decay or deterioration. Moreover, it should be noted that when tenants vacate prior to lease expiration, they continue to be responsible for rent and their share of building operating expenses, such as the Fresh & Easy example in Exhibit 46. While not all tenants would have the wherewithal to continue these payments, national or regional retailers are more likely to have this capability. This is an important consideration because landlords would continue to receive income on these vacated spaces through committed lease payments, which means they would have available financial resources to continue to maintain their properties.

Regulatory Controls: During Project-related fieldwork conducted in February 2016, ALH Economics found there were little-to-no visible signs of litter, graffiti, weeds, or rubbish associated with existing commercial nodes in the Project's market area. Thus, ALH Economics concludes that existing measures to maintain private commercial property in good condition in Pleasanton and Dublin are generally effective and would serve to help preclude the potential for urban decay and deterioration in the event any existing retailers in the market area close following the operations of the Project and other cumulative retail projects.

Based upon these findings, ALH Economics concludes that the Johnson Drive EDZ Project and the identified cumulative projects would not cause or contribute to urban decay.

Fiscal Impact Analysis

A fiscal impact analysis of the Project was prepared based upon the methodology and assumptions included in a fiscal impact study prepared for the entirety of the Johnson Drive EDZ in February 2015.[3] This study used the City of Pleasanton's Fiscal Year 2014/15 Operating Budget as a key resource. ALH Economics updated some of the factors included in this fiscal impact study pursuant to the more recent Fiscal Year 2015/16 budget as well as operating characteristics specific to the Project included in this analysis, such as taxable sales performance and forecasted sales diversions.

The fiscal impact analysis results indicate that on a worst case basis, assuming that all diverted sales are diverted from Pleasanton retailers (as opposed to retailers outside of Pleasanton), the Project is anticipated to generate a projected $1.4 to $1.7 million annual contribution to the City of Pleasanton's General Fund at the completion of Phase I. This net revenue estimate increases to $2.1 to $2.3 million annually upon Full Buildout. At Full Buildout these net fiscal revenues represent an annual contribution equivalent to approximately 2.1% to 2.3% of the City's General

[3] "Draft Summary – Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton," February 5, 2015, Brion & Associates.

Fund expenditures. This analysis does not include any potential City of Pleasanton share of Project-related transportation costs, which will be ultimately determined by the Pleasanton City Council. The expenditure of any such costs will result in a reduction in the Project's estimated annual net fiscal revenues.

The fiscal impact analysis for the entire Johnson Drive EDZ included a lower per square foot sales estimate for the Project's club retail space than projected in this study. This figure was $700 per square foot vs. the $1,152 per square foot figure included in the economic impact analysis. Net fiscal impacts results reflecting this lower per square foot club retail sales performance estimate include a range of $1.1 to $1.4 million at the completion of Phase I and $1.9 to $2.2 million annually upon Full Buildout. Thus, the net fiscal impact results would be equal to approximately 79% to 86% the amount projected with the higher club retail sales performance estimate.

II. INTRODUCTION

STUDY BACKGROUND

The City of Pleasanton proposes to implement a pilot Economic Development Zone ("EDZ", or "Project") within a 40-acre area along Johnson Drive currently developed with office, commercial, institutional, and industrial uses. The EDZ would allow the City of Pleasanton to use zoning and land use designations, incentive programs, completed CEQA documentation, and standards and guidelines to streamline the development process and encourage new investment. ALH Urban & Regional Economics was engaged to examine the net increment of the Project development in addition to "Existing Development", which includes general retail among other uses, such as commercial service, office, industrial, and institutional/religious space, some of which will be phased out gradually from the area over the period of Full Buildout. This net increment includes "Phase I" development, which includes the development of club retail, general retail, and hotel uses, and "Full Buildout" development, which includes Phase I as well as additional general retail.

The Project site is in a commercial area with other nearby commercial establishments, industrial uses, and a hotel (see Exhibit 1 for site location). At Full Buildout the proposed EDZ will include a total of 227,940 square feet of general retail, a 148,000-square-foot club retail store, and either an 88,000-square-foot hotel with 150 rooms (Option 1) or 132,000 square feet of hotel space with 231 rooms (Option 2).[4] At Full Buildout this equates to a cumulative net new 189,037 square feet of general retail, 148,000 square feet of club retail, and either 150 or 231 hotel rooms. The Project's Draft Supplemental Impact Report (Draft SEIR) reflects analysis of a 150-room hotel. However, this study also conservatively analyzes a larger hotel option with 132,000 square feet.

The City of Pleasanton circulated the Draft SEIR for the Project, which tiers from EIRs prepared previously by the City for its General Plan update and Housing Element and Climate Action Plan. Several comments submitted by public stakeholders as well as City of Pleasanton Planning Commission members have requested that the Final SEIR include the results of an analysis of potential economic impacts that would be caused by the Project. In addition, the City requested that a fiscal impact analysis of the Project be completed, consistent to the extent possible with a February 2015 fiscal impact study prepared for the Johnson Drive EDZ in its entirety, which included analysis of several potential development scenarios.

To support this effort and comply with the California Environmental Quality Act ("CEQA"), ALH Urban & Regional Economics ("ALH Economics") was asked to prepare an analysis of the economic effects of the project, including the potential for the Project to cause or contribute to urban decay and to assess the Project's fiscal impact on the City of Pleasanton's General Fund. The decision by the Fifth District Court of Appeal in *Bakersfield Citizens for Local Control v. The City of Bakersfield* indicated that CEQA requires a lead agency to consider and analyze the potential for the introduction of planned retailers to result in adverse physical impacts on the environment by causing a chain reaction of store closures and long-term vacancies, otherwise referred to as a condition of "urban decay." This analysis is not required for all projects subject to CEQA, but only projects where there is the perceived potential for urban decay or deterioration to result. In

[4] Option 2 could include more than one hotel. For the sake of simplifying the presentation and analysis, the balance of the report and analysis refers to this as one hotel option with 231 rooms.

addition, a fiscal impact analysis is not a required component of CEQA. The comment period for the Draft SEIR ended November on 23, 2015.

This study addresses the Bakersfield decision by considering the potential impact of the Project in conjunction with the introduction of other relevant cumulative retail and hotel developments. The key indicator from a CEQA perspective is impacts on the existing physical environment, which in the context of an urban decay analysis includes existing stores and commercial real estate conditions, as measured by the current baseline. The Notice of Preparation (NOP) for the EIR was released in August 2014 and the Draft SEIR was released in September 2015. The market conditions were most recently assessed in February 2016, comprising the study baseline. Other data included in the report were the most recently available at the time of study initiation. For study purposes, Phase I of the Project is anticipated to be completed and fully operational in 2018 and Full Buildout is anticipated to occur by 2028.

STUDY TASKS

ALH Economics engaged in numerous tasks to complete this assignment assessing the prospective economic and fiscal impacts of the Project. These tasks included the following:

- Identified the Project's market area, i.e., the area from which the majority of the Project's consumers are anticipated to originate;
- Developed a definition of the Project, including net incremental square footage estimates by type of space and by Phase;
- Estimated the Project's net retail sales;
- Conducted fieldwork to review the Project's site and evaluate existing market conditions;
- Conducted retail sales leakage analyses for the cities of Pleasanton and Dublin;
- Estimated demand generated by households added to the market area by the time the Project achieves stabilized sales;
- Estimated the Project's economic impacts on existing retailers;
- Identified planned market area retail projects;
- Assessed the cumulative impacts of planned retail projects;
- Assessed the Project's economic impact on the existing hotel market;
- Assessed the extent to which operations of the Project and the cumulative projects may or may not contribute to economic impacts contributing to or leading to urban decay; and
- Estimated the annual net fiscal impact of the Project at the completion of Phase I and full buildout.

The findings pertaining to these tasks are reviewed and summarized in this report, with analytical findings presented in the exhibits in Appendices A and B.

STUDY RESOURCES AND REPORT ORGANIZATION

Study Resources

The economic impact analysis relied upon a number of key resources. These resources are all identified in the sources and notes to the exhibits developed to support the analysis. These resources include the following:

- *Governmental resources.* These sources include representatives from the City of Pleasanton Planning, Economic Development, and Code Enforcement; City of Pleasanton Operating Budget Fiscal Year 2015/16 – FY 2016/16; City of Dublin Planning Department; City of Hayward Community Development Department; City of Huntington Beach Economics Development Department; City of Livermore Economic Development Department; the United States Bureau of Labor Statistics, Consumer Price Index; the U.S. Census, U.S. Economic Census; State of California Board of Equalization; Association of Bay Area Governments (ABAG), "Population & Household Projections 2013"; City of Pleasanton Municipal Code; City of Dublin Municipal Code; and U.S. Bureau of Labor Statistics, Consumer Expenditures Survey.

- *Third party resources.* These sources include Environmental Science Associates; Costco Wholesale Corporation 10-K form and Annual Report for the fiscal year ending August 30, 2015; Walmart Inc. 10-K Form for the fiscal year ending January 31, 2015; Streetlightdata.com; Hinderliter de Llamas (HdL); CB Richard Ellis; CoStar; Nielsen, a national resource for demographic estimates and projections; Retail Maxim, a retail industry performance resource; Tax Policy Center; californiagasprices.com; Smith Travel Research; GoogleMaps; ESRI ArcMap; US Census Tigerline Shapefiles; Yelp; and Brion & Associates. In addition, ALH Economics was asked to reach out to two parties interested in the environmental review process for the Johnson Drive EDZ. These included Carrie Fox of Cox Family Stores, a local chain of gas stations, and Bill Wheeler, Manager of Black Tie Transportation, a transportation provider located in the Johnson Drive EDZ. Both parties declined the opportunity to discuss their concerns with ALH Economics.

All of these resources are identified as warranted in the text and/or the series of exhibits found in Appendices A and B that document the study analysis.

Report Organization

This report includes 10 chapters, as follows:

I. Executive Summary
II. Introduction
III. Project Retail Sales Estimation
IV. Market Area Definition, Share of Project Sales, and Retail Characterization
V. Market Area Demographics and Retail Spending Potential
VI. Project Sales Impact Analysis
VII. Cumulative Project Impacts
VIII. Hotel Impact Analysis
IX. CEQA Urban Decay Determination
X. Fiscal Impact Analysis

This report is subject to the appended Assumptions and General Limiting Conditions.

III. PROJECT RETAIL SALES ESTIMATION

A description of the planned EDZ Project and ALH Economics' estimates of the retail sales generated by the Project are presented below. This includes sales generated by retail category. This estimate is necessary to facilitate analysis of the Project's economic, urban decay, and fiscal impacts.

PROJECT DESCRIPTION

This analysis evaluates the proposed incremental retail and hotel development of the EDZ Project. The focus in this chapter includes the anticipated retail sales generated by the Project. The Project components include new general retail and club retail development in addition to a small amount of existing retail development. The full development program is presented in Exhibit 2, and summarized below in Table 2.

In summary, the development program includes 375,940 square feet of retail space upon full buildout. Of this, 38,903 square feet currently exist. Thus, the net square footage includes 5,000 square feet of general retail space and the 148,000-square-foot club retail space in Phase I. The incremental amount of retail space anticipated to be further developed by buildout, which is anticipated by 2028, is another 184,037 square feet of general retail space.

Table 2. Summary Project Square Feet and Hotel Rooms

	Development Characteristics			Incremental Development		
Development	Existing	Phase I	Full Buildout	Phase I	Full Buildout	Total
Retail						
General Retail	38,903	43,903	227,940	5,000	184,037	189,037
Club Retail	0	148,000	148,000	148,000	0	148,000
	38,903	**191,903**	**375,940**	**153,000**	**184,037**	**337,037**
Hotel Option 1	0	150 rooms	150 rooms	150 rooms	0	150 rooms
Hotel Option 2	0	231 rooms	231 rooms	231 rooms	0	231 rooms

Source: Exhibit 2.

Thus, as noted in Table 2, the total amount of net new retail space upon buildout will include 189,037 square feet of general retail space and 148,000 square feet of club retail space, totaling 337,037 square feet of net additional retail space. Hereafter, all reference to retail space planned for the Project includes this net increment of retail space.

PROJECTED SALES

Retail Categories

There will be several retail sales components associated with the Project. These include general retail space and club retail space. Given anticipated Project phasing, the first new Project sales are anticipated to occur in 2018, with the balance of sales anticipated to occur by 2028. The sales for the general retail and club retail space will differ dramatically, given the difference in

market orientation, with club retailers typically oriented toward bulk sales and/or discounted pricing with a no frills shopping setting.

ALH Economics engaged in an estimation procedure for both types of retail space to develop assumptions regarding space allocation by type of retail good and then sales by type of retail good. The approaches were different for the different types of retail space but the goal for both was to develop sales estimates for the retail categories consistent with the retail categories defined by the State of California Board of Equalization (BOE), which publishes taxable retail sales figures for cities and counties. To maximize the use of these data, the analysis is benchmarked to the BOE retail categories and the related sales figures reported in its *Taxable Sales in California* publication (with some adjustments, as noted in the Retail Sales Base Characterization chapter.) These categories, as typically reported for cities, are listed below, including examples of representative retail goods by category.[5]

- Motor Vehicles & Parts (new and used auto sales, auto parts and tires);
- Home Furnishings & Appliances (furniture, electronics, home appliances, linens, bed and bath supplies);
- Building Materials & Garden Equipment (hardware stores, home improvement stores, nurseries);
- Food & Beverage Stores (grocery stores, convenience stores, liquor stores);
- Gasoline Sales (gas stations);
- Clothing & Clothing Accessories Stores (apparel, boutiques, shoes, western wear, purses);
- General Merchandise Stores (department stores and dollar stores);
- Food Services & Drinking Places (restaurants and bars); and
- Other Retail Stores (a wide range of retailers, such as pet supplies, office supplies, drug store sales, sporting goods, jewelry, florists, and gifts).

Notably, these retail sales categories do not include some services that typically occupy commercial retail space, including personal and business services such as hair and nail salons, postal services, and banks and insurance companies.

The BOE records a retailer's sales in only one sales category. For example, the actual sales for a club retailer are reported by the BOE under the General Merchandise classification. For purposes of this study, however, the impact of the Project's club retail space is more appropriately analyzed across several retail categories since the new retail space will likely compete with a range of retailers, not just general merchandise retailers.

The approach to estimating the share of Project sales by category and associated sales follows.

Club Retail Space by Retail Category and Total Sales

The operator for the Project's club retail space has not been identified. The universe of club retailers is relatively limited, primarily including Costco and Sam's Club. Consequently, ALH Economics researched performance data for both retailers to develop estimates of the Project's club retail sales by retail category. This included obtaining information about typical store sales by the categories defined by each retailer, allocating and translating these sales into BOE

[5] The category list is based on the 2013 *Taxable Sales in California* report (Table 5), which was the most recent full year of reported data provided by the BOE at the time of this study.

categories, developing a study assumption regarding sales distribution by BOE category, developing a store sales per square foot estimate, and allocating the resulting store sales estimate across the retail categories.

The process of store sales space allocation is documented in Exhibits 3 through 5. Exhibit 3 includes analysis regarding the percentage distribution of sales by BOE retail category. This is based upon information included in investor documents on file with the United States Securities and Exchange Commission and assumptions developed by ALH Economics based upon site visits and knowledge of Costco stores. Exhibit 4 includes comparable estimates for Sam's Club, based upon similar sources. Exhibit 5 then averages the resulting percentage distributions for the two club retailers to develop a study assumption regarding the distribution of club retail sales. ALH Economics then translated these percentage distributions into estimated space allocations for the Project's club retailer, also shown in Exhibit 5. The result indicates that the largest allocation of space is anticipated to comprise Food & Beverage sales space, with 51.5% of the total store space. The next largest category is the Other Retail category, at 11.9%. All other categories are assumed to comprise sales shares less than 10.0%.

To estimate the Project's club retail sales ALH Economics examined sales performance at the same two club retailers – Costco and Sam's Club. The sales performance analysis for Costco is presented in Exhibit 6 while the sales performance analysis for Sam's Club is presented in Exhibit 7. The results indicate estimated 2015 sales per square foot performance of $1,152 per square foot for Costco and $671 for Sam's Club. At these sales rates, the club retail total sales would be $170.4 million using the Costco sales performance and distribution information and $99.3 million using the Sam's Club sales performance and distribution information (see Exhibits 6 and 7, respectively).

The sales assumption for the club retail space is an important assumption for the economic impact analysis. This assumption determines the total sales estimate, which in turn impacts the degree to which the club retail component could, in combination with the general retail space, result in prospective sales impacts on existing retailers. The larger the club retail sales figure the greater the potential for sales impacts. The opposite is of course true, which is that the lower the club retail sales figure the less potential for sales impacts.

For analytical purposes ALH Economics assumes the Project's club retail space will perform at the sales level comparable to Costco. The implications of this assumption are discussed below, in the **Total Project Sales** section.

General Retail Space by Retail Category

There are no specific retailers currently identified to comprise the Project's general retail component. ALH Economics therefore prepared generic assumptions to shape the analysis. The most significant assumption is the allocation of the Project's general merchandise space by type of retail category (see Exhibit 8). This assumption is equal allocations of space by retail category with several exceptions. One exception is an allocation of no retail space to the Food & Beverage store and Gasoline sales categories. This is attributable to the expectation that the club retail space will include both these sales categories, such that demand by other food and gasoline retailers would be limited in the balance of the Project. The other exception is that the Other Retail category was ascribed a double weight of space, i.e., twice as much space as any of the other categories. This is attributable to the wide range of retailers represented by the Other Retail category, such as office supply stores, pet supply stores, book stores, and gift

shops. The result is building blocks of 12.5% or 25% of the total Project space, reflecting the incorporation of seven retail categories and double-weighting of the Other Retail category.

The resulting allocations of general retail space by type of retail were adjusted for a stabilized vacancy rate. This is due to the expectation that retail sales will be generated by occupied retail space and not vacant retail space. Because retail vacancy tends to be low in Pleasanton, the stabilized vacancy rate included in this analysis is 5%. Thus, the general retail space sales estimate is based on an occupied square footage of 4,750 square feet for Phase I, an incremental 174,835 square feet by Project buildout, and a total of 179,585 square feet for the entire Project.

Project Sales

The Project's estimated retail sales are presented in Exhibit 9. This includes estimates for the general retail space and the club retail space. For the general retail space sales per square foot estimates were developed based upon national averages associated with the assumed retail categories. These sales figures are based upon analysis of trend data presented by Retail Maxim, a retail industry performance resource. Retail Maxim, prepares an annual publication that culls reports for numerous retailers and publishes their annual retail sales on a per square foot basis. This type of information for a range of retailers or type of retailers is presented in Exhibit B-1 annually from 2010 through 2013. The figures are then averaged and presented in inflated 2015 dollars as a generalized estimate of sales per square foot for key retail categories. The resulting sales per square foot range from a low of $297 per square foot for General Merchandise stores to a high of $643 per square foot for Food and Beverage Stores (e.g., grocery stores). The total club retail store sales estimate is also presented in Exhibit 9. This sales figure is based upon the $1,152 per square foot store sales estimate pursuant to analysis of national average Costco performance. As noted earlier, application of this high sales rate is the most conservative approach to estimating club retail store sales given that the higher the store sales figure the greater the potential for store impacts.

The results of the Project's total sales estimates are presented in Exhibit 9 and summarized below in Table 3. This indicates that total Project sales will comprise $172.6 million in Phase I, an additional $69.0 million for the subsequent increment of space to buildout, with a grand total of $241.3 million. The allocation of total sales is approximately 30% generated by the general retail space and 70% generated by the club retail space.

Table 3. Summary of Total Project Sales

Retail Category	Phase I	Increment to Buildout	Total
General Retail	$1,873,558	$68,960,801	$70,834,359
Club Retail	$170,441,418	$0	$170,441,418
Total	**$172,314,976**	**$68,960,801**	**$241,275,777**

Source: Exhibit 9.

While these sales estimates pertain to the total project sales, not all the estimated club retail store sales will be competitive with existing retail operations. This is because club retail membership at stores such as Costco includes business and household members. Some business members include businesses that purchase items wholesale from a club retailer, and then resell the items as part of their business operations. Businesses with resale licenses do not

pay sales tax on the purchased items. Thus, sales made under these circumstances are not considered taxable retail sales. As such, these sales are not competitive with the existing retail base, the size of which is estimated based upon taxable retail sales reported by the State of California Board of Equalization (see Chapter VI).

Using Costco as a study resource, nationally 24% of paid Costco memberships in 2015 were Business or Business add-on memberships.[6] However, Costco provides paid memberships with one free household card. Thus, business and business add-on cards comprised 13% of all cardholders.[7] Costco materials indicate that many business members also shop at Costco for their personal needs, but these materials do not indicate the share of total business member purchases that are personal.

To minimize risk of overstatement, ALH Economics assumes that based on the preceding information, 13% of Costco members are business members. Not all business purchases will entail the resale of merchandise, as many businesses purchase goods from club retailers for other purposes, such as cleaning supplies, snacks, office supplies, etc. However, ALH Economics further assumes that business members making tax exempt purchases (and other purchases for resale, including food sales that are tax exempt for all consumers) spend twice as much as other business cardholders do to their purchase of inventory/merchandise for later resale. Therefore, using the Costco data as a source, the analysis assumes that 13% of the Project's club retail sales will be to wholesale customers, i.e., customers whose typical purchases are not reported as retail purchases, and 87% will be to household and business customers that qualify to pay sales tax on taxable items. The exception is gasoline sales, all of which are allocated to retail consumers as all of these sales are assumed to be taxed and not subject to resale.

Based upon the assumption split between retail consumers and wholesale consumers, the portion of Project club sales attributable to retail consumers is presented in Exhibit 10. These sales figures are summarized below in Table 4, and include $152.3 million for Phase I, an additional $69.0 million increment to buildout, and an overall total of $230.4 million.

Table 4. Summary of Project Sales Generated by Retail Consumers

Retail Category	Phase I	Increment to Buildout	Total
General Retail	$1,873,558	$68,960,801	70,834,359
Club Retail	$150,167,946	$0	150,167,946
Total	**$152,041,504**	**$68,960,801**	**$221,002,305**

Source: Exhibit 10.

The distribution of these sales by retail category is presented in Exhibit 9 for general retail and Exhibit 10 for club retail. These figures are consolidated in Table 5 below for both retail components.

[6] See "Annual Report 2015, Costco Wholesale, Fiscal Year Ended August 30 2015," pages 8 and 9/

Total	**$152,041,504**	**$68,960,801**	**$221,002,305**	**100%**

Source: Exhibit 9.

Table 5 includes a summary of the estimated percent distribution of Project sales generated by retail consumers by retail category. This indicates that upon full completion of the Project, Food & Beverage Store sales are anticipated to comprise the largest share of sales, at 35%. This is due to the expectation that more than 50% of club retail store sales typically comprise food and beverage sales. The next largest category is the Other Retail category at 17%, which as described earlier includes a wide range of retail goods, such as office supplies, pet supplies, books, gifts, and jewelry. This is followed by Clothing & Clothing Accessories at 10%. All other retail categories range from an estimated 3% to 8% of the total retail sales anticipated to be generated by retail consumers.

IV. MARKET AREA DEFINITION, SHARE OF PROJECT SALES, AND RETAIL CHARACTERIZATION

This report chapter discusses the approach to estimating the Project's market area, which is the area from which the majority of shoppers are anticipated to originate. This chapter describes the market area and characterizes the area's existing retail inventory

PROJECT MARKET AREA DEFINITION

Approach to Defining Market Area

The Project's market area definition for consumer retail sales is based on the principle that most consumers will travel to the shopping destination most convenient to their homes given the type of goods available. A market area is the geographic area from which the majority of a retail shopping center's demand is anticipated to originate. Several tasks were completed to identify the Project's market area, foremost of which included mapping the location of the Project relative to other club retail and shopping centers, including existing or planned stores, and taking into consideration comparative travel time and the size and composition of the retail base in the market area.

Market Area Conceptual Description

In developing a market area, ALH Economics strives to identify the area from which the majority of demand for a shopping center will originate, typically at least 70%, based upon the following industry resources.

Materials published by major industry organizations indicate that a retail store's trade area generally supplies 70% to 90% of the store's sales, while the remaining 10% to 30% of sales are attributed to consumers residing outside of the store's market area. In its Shopping Center Development Handbook, Third Edition, the Urban Land Institute (ULI) states the following:

> "A site generally has a primary and a secondary trade area, and it might have a tertiary area. The primary trade area should generally supply 70 to 80 percent of the sales generated by the site. These boundaries are set by geographical and psychological obstacles."[8]

ULI is a nonprofit research and education organization representing the entire spectrum of land use and real estate development disciplines. Among real estate, retail, and economic development professionals, this organization is considered a preeminent educational forum.

Information published by the International Council of Shopping Centers (ICSC), a trade association for the shopping center industry, also provides instructional information about market area definitions. In the recent publication Developing Successful Retail in Secondary & Rural Markets, the ICSC says:

[8] Shopping Center Development Handbook, Third Edition, Urban Land Institute, 1999, page 44.

> "A trade area is the geographic market that you will be offering to potential retailers as a consumer market. … Defining a retail trade area is an art and a science. In general, a trade area should reflect the geography from which 75-90 percent of retail sales are generated. Different stores can have different trade areas based on their individual drawing power and the competitive market context."[9]

In summary, these industry resources suggest that a retail project's trade area, or market area, typically is defined as the geographic area from which at least 70% of demand is anticipated to originate. However, depending upon the nature of the retail, the share of sales originating from the geographic area deemed most consistent with a market area can be less, as discussed below.

Market Area for Johnson Drive EDZ Project

ALH Economics conducted research to develop an estimate of the retail consumer market area for the Project, i.e., the area from which the majority of shoppers will originate. This market area took into consideration the location of other retail nodes where consumers can shop, including nodes with other club retail stores, as club retail will be a large portion of the Johnson Drive EDZ Project. The locations of similar club retail stores such as Costco and Sam's Club were taken into consideration (though there are no Sam's Club locations in the area, with the closest one 25 miles north in the City of Concord). For market area definition purposes, ALH Economics assumes that households that live closer to any other club retail store will shop there and not shop at the club retail in the Johnson Drive EDZ. However, locations closer to the Johnson Drive EDZ are assumed to comprise areas included in the Johnson Drive EDZ's market area.

To identify these closer areas ALH Economics selected several geographic locations and calculated their travel time and distance between Johnson Drive EDZ and the next nearest club retail store as well as noting both natural and man-made boundaries, area topography, and freeway access. This mapping was achieved using the Google Maps functionality. Thus, the general boundary of the Project's market area was determined based upon this mapping analysis. ALH Economics then superimposed census tract boundaries over the general boundary to identify the census tracts that would best comprise the market area for the Project. An advantage of using census tracts is that the market area definition is easily defined, easily replicable, and key demographic estimates and projections can often be readily available in this format.

Estimated drive times from household locations within each census tract were analyzed to determine which club retail stores were closer. This resulted in the identification of 18 full census tracts and three partial census tracts spanning the City of Pleasanton, the majority of the City of Dublin, and some unincorporated Alameda County areas. The three partial census tracts were modified to better define the market area as they included areas that were not reasonable to be included in the Project's market area. This is because they were either very large and included areas that are too far to be considered as part of the Project's market area, including areas hindered by natural boundaries or that have little-to-no population. These three partial census tracts are Census Tract 4506.01, 4507.01, and 4507.45. For Census Tract 4506.01, which is large and includes portions of the City of Pleasanton, Sunol Census Designated Place (CDP),

[9] Developing Successful Retail in Secondary & Rural Markets, International Council of Shopping Centers in cooperation with National Association of Counties, 2007, page 7.

and unincorporated Alameda County, ALH Economics modified the portion of this census tract for inclusion in the Project market area to follow along the geographical boundary for the City of Pleasanton down to where it meets Interstate 680. This adjustment removes areas of little-to-no population and areas that are bounded by natural boundaries such as Pleasanton Ridge Regional Park. For Census Tract 4507.01, a large census tract that also includes portions of the City of Pleasanton, Sunol CDP, and Unincorporated Alameda county, ALH Economics modified this census tract for the Project market area to follow along the northern portion of State Route 84 to where it meets Interstate 680 to remove areas too far to be deemed reasonable for the market area, as well as areas of little-to-no population. For Census Tract 4507.45, a medium-sized census tract, which includes portions of the City of Pleasanton and Unincorporated Alameda County, ALH Economics modified this census tract for the Project market area to follow along the eastern geographical boundary of the City of Pleasanton to remove the bodies of water in the unincorporated area from the market area where there is no population.

The resulting market area is presented in Exhibit 11, and includes the locations of key club retail stores considered in defining the market area.

MARKET AREA SUPPORT OF PROJECT SALES

For the purpose of this study, ALH Economics developed an estimate of the percentage of Project retail consumer sales from market area resident spending. This estimate is based on considering the geographic size of the market area, the Project size and tenant orientation, population density of the area, amount of existing retail in the market area, and Project proximity to major thoroughfares, including Interstates 680 and 580 and State Route 84. In addition, ALH Economics obtained data from streetlightdata.com to identify home locations of customers shopping at the Danville and Livermore Costco locations, as representative club retail shopping. These data provide an assessment of the home location of origin by zip code for shoppers with a smart electronic device traveling to these stores during calendar year 2013, which comprises the most recent time period for which these data are available. The home location is determined based upon the location where the device is observed to spend the greatest amount of time. While these data do not pertain to all store shoppers, for the sake of analysis ALH Economics assumes they are representative of all shoppers, and thus provide information on the market area definition of stores as well as store demand by geography.

Area Costco Market Areas and Project Club Retail Recaptured Sales

The streetlight.com data for the Danville Costco store are presented in Exhibit 12. These findings are also presented visually in Exhibit 13, which shows the density of demand for the store by zip code and the geographic dispersion of the store's market area. As these data indicate, demand for the Danville Costco store is strongest in the three zip codes that surround the store location. However, yet additional demand is generated from other zip codes radiating out from the store location, including zip codes located in the Project's market area. Based on the mapped zip code findings, ALH Economics believes the most appropriate market area definition for the Danville Costco store comprises the 8 zip codes above the dotted line on Exhibit 12, which includes all zip codes generating more than 1.7% of demand for the store. This includes the zip codes depicted on the map extending from Alamo south through Pleasanton, and east to include zip code 94588 but not Livermore's zip code 94550. These 8 zip codes are estimated to provide 58.6% of the store's shoppers. This includes repeat shoppers, as each shopper visit is counted separately.

The Danville Costco store information indicates that Costco market areas appear to obtain a high level of demand from shoppers dispersed over a wide area, likely associated with other shopping trips, travel, workday trips, etc. Thus, Costco stores appear to derive less than the typical amount of demand from a logically defined market area. This has bearing on the percent of demand the Project is estimated to derive from its market area. In addition, the Danville Costco store customer data indicate that the Danville store obtains significant demand from the zip codes that correspond with much of the Project's market area. These zip codes include 94568, 94588, and 94566. As noted in Exhibit 12, these three zip codes provide a collective total of 8.0% of shoppers for the Danville Costco store. Assuming that all shoppers spend equally, this suggests that 8.0% of the Danville Costco store sales are generated from the Project's market area. ALH Economics assumes that when the Project's club retail store is opened, these sales will be diverted from the Danville Costco store and comprise recaptured sales at the Project's club retail store. Thus, these sales that are already being made by market area retail consumers will comprise a base amount of sales for the Project's club retail space, generated by existing market area consumers.

Exhibit 14 presents shopper zip code of origin data for the Livermore Costco store. This exhibit demonstrates that the Livermore Costco store market area is even more diffuse than the Danville store, with 45.9% of store shoppers originating from zip codes comprising 1.7% or more of shoppers. This store additionally captures shoppers from further away, such as the Modesto and Stockton areas, which are over 40 and 50 miles away from the Livermore Costco store, respectively. ALH Economics believes this more dispersed shopper origin is influenced by the location of the large-scale Premium Outlets in Livermore, which has a wide geographic draw. Because of this wide dispersal ALH Economics did not prepare a representative map of the Livermore Costco market area. However, the information presented in Exhibit 13 indicates that 14.1% of the Livermore Costco store shoppers originate from the three zip codes that best correspond with the Project's market area. Thus, by extension, this suggests that 14.1% of the Livermore Costco store demand is generated by the Project's market area.

As with the Danville Costco store, ALH Economics assumes that when the Project's club retail store is opened, the market area sales captured by the Livermore Costco store will be diverted to the Project's store and comprise recaptured sales at the Project's club retail store. However, ALH Economics attributes greater weight to these recaptured sales than represented by the 14.1% share of demand. This is attributable to the assumed high retail sales achieved by the Livermore Costco store. Information obtained by ALH Economics regarding this store suggests that its performance exceeds national averages, with total store sales significantly greater than projected for the Project's club retail store, likely in the direction of 50% higher than projected for the Project. Thus, Project market area sales contribution of 14.1% to this store will comprise a greater percentage share of sales for the Project's club retail store. Applying a 50% higher factor results in an estimate of approximately 21% of Project club retail sales generated by market area shoppers already shopping at area club retail stores. Combining this figure with the 8% derived from the Danville store (assuming the Danville store performs on par with the Project store projection) results in an assumption that approximately 30% of Project club retail sales will comprise recaptured demand from existing market area consumers. This finding suggests that market area shoppers who want to shop at a club retail store are already doing so. Thus, these shoppers are unlikely to change their shopping habits other than to redirect their club retail shopping closer to home, at the Project's club retail component.

Notably, recaptured sales from existing club retail stores is an expected phenomena among club retailers. For example, in the company's 2015 10-K on file with the Securities and

Exchange Commission Costco states: "A new warehouse may draw members away from our existing warehouses and adversely affect comparable warehouse sales performance and member traffic at those existing warehouses."[10] This supports the assumption that a portion of Project club retail sales will be recaptured sales from existing club retail stores.

Share of Project Sales Generated by Market Area

Based on the preceding information, ALH Economics developed two different assumptions for the share of Project retail sales generated by market area residents. One assumption pertains to the Project's general retail space while the other pertains to the club retail space. The general retail space is anticipated to be relatively traditional retail space, with competitive opportunities located nearby and in other Tri-Valley communities. Thus, ALH Economics assumes that 80% of the demand for this space will be generated from the defined market area. Consumers living outside this market area are assumed to have similar nearby shopping opportunities, and be less likely to travel to patronize the Project's general retail space. This could be a conservative figure given that the Project's club retail space is anticipated to have a greater draw (see below), but this is a reasonable figure to assume based upon the preceding review of industry standards and the amount of retail in communities neighboring Pleasant and Dublin, which comprise the bulk of the Project's market area.

For the club retail space, however, ALH Economics assumes a smaller percentage of demand will originate from the market area. This is largely based on the findings pertinent to the Danville and Livermore Costco stores. These two stores have widely dispersed areas from which shoppers originate, with primary market areas that seemingly generate 58.6% and 44.4% of demand. Based on this finding, ALH Economics assumes that market area retail consumers will account for 60% of sales at the Project's club retail space.

Market Area Sales Generated by Market Area Consumers

Exhibit 15 presents the Project-based retail sales that comprise the core of the economic impact analysis. These are the sales that are anticipated to be generated by market area retail consumers, and which comprise sales that could be diverted from other market area retailers if sufficient new demand is not generated to support the sales. This takes in to account the earlier assumption that select sales will be wholesale in nature, and thus not competitive with the market area's traditional retail base, plus the recaptured sales from existing area club retail stores and the share of sales generated by market area consumers.

The competitive market area sales are presented in Exhibit 15 by type of retail, i.e., general retail and retail, and by development status, i.e., Phase 1, Increment to Buildout, and at Full Buildout. The total sales are summarized below in Table 6.

[10] United States Securities and Exchange Commission, Costco Wholesale Corporation 10-K form for the fiscal year ending August 30, 2015, page 8.

Table 6. Summary of New Project Sales Generated by Market Area Retail Consumers

Retail Category	Phase I	Increment to Buildout	Total
General Retail	$1,498,846	$55,168,640	$56,667,487
Club Retail	$63,070,537	$0	$63,070,537
Total	**$64,569,384**	**$55,168,640**	**$119,738,024**

Source: Exhibit 15.

This table indicates that the Project's competitive sales are estimated to total $64.6 million for Phase I, an incremental $55.2 million to buildout, and a total of $119.7 million upon Full Buildout.

The estimated distribution of sales by type of retail varies by retail component. The general retail sales allocation by retail category is summarized in Table 7 while the club retail space sales allocation by retail category is summarized in Table 8.

As noted below in Table 7, there are three retail categories where general retail sales are anticipated to exceed $10.0 million at Full Buildout. These include Other Retail, Clothing, and Food Services (e.g., restaurants).

Table 7. Project General Retail Sales Generated by Market Area Retail Consumers

Retail Category	Phase 1	Increment to Buildout	Total	Percent of Total
Motor Vehicles and Parts Dealers	$0	$0	$0	0%
Home Furnishings and Appliance Stores	$153,189	$5,638,474	$5,791,663	10%
Building Materials and Garden Equip.	$142,416	$5,241,964	$5,384,380	10%
Food and Beverage Stores	$0	$0	$0	0%
Gasoline Stations	$0	$0	$0	0%
Clothing and Clothing Accessories Stores	$365,722	$13,461,289	$13,827,011	24%
General Merchandise Stores	$141,136	$5,194,861	$5,335,998	9%
Food Services and Drinking Places	$288,849	$10,631,773	$10,920,622	19%
Other Retail Group	$407,534	$15,000,279	$15,407,814	27%
Total	**$1,498,846**	**$55,168,640**	**$56,667,487**	**100%**

Source: Exhibit 15.

The sales distribution is different for the club retail space, with the majority of sales anticipated to comprise food store sales. These sales are anticipated to comprise $32.1 million generated by market area residents not already making food purchases at other area club retail stores, as these diverted sales are not included in the figures cited in Table 8. All other categories are anticipated to comprise less than $7.5 million in sales generated by market area retail consumers.

Table 8. Project Club Retail Sales Generated by Market Area Retail Consumers

Retail Category	Phase 1	Increment to Buildout	Total	Percent of Total
Motor Vehicles and Parts Dealers	$3,143,726	$0	$3,143,726	5%
Home Furnishings and Appliance Stores	$4,419,892	$0	$4,419,892	7%
Building Materials and Garden Equip.	$2,645,710	$0	$2,645,710	4%
Food and Beverage Stores	$32,075,342	$0	$32,075,342	51%
Gasoline Stations	$6,278,039	$0	$6,278,039	10%
Clothing and Clothing Accessories Stores	$2,023,190	$0	$2,023,190	3%
General Merchandise Stores	$4,840,093	$0	$4,840,093	8%
Food Services and Drinking Places	$249,008	$0	$249,008	0%
Other Retail Group	$7,395,537	$0	$7,395,537	12%
Total	**$63,070,537**	**$0**	**$63,070,537**	**100%**

Source: Exhibit 15.

MARKET AREA RETAIL ORIENTATION

The Project will be located in a market area currently characterized by a large and healthy retail sector characterized by low retail vacancy rates. Thus the Project's club retail and general retail space will comprise a modest addition to an already large and varied retail base, which includes a range of big box, discount, traditional, and specialty retailers, many of which have regional draw.

The market area comprises desirable residential communities and offers unique regional amenities, including the Alameda County Fairgrounds and Pleasanton Ridge Regional Park, and is home to a strong office sector, including various business parks, such as Hacienda Business Park. Many companies are based out of Pleasanton, such as Workday, Veeva, and Ellie Mae. In addition, close proximity to Interstates 580 and 680 and BART make the market area attractive for Bay Area connectivity.

There are numerous retail shopping districts and shopping centers in the market area. Key shopping centers and districts are listed in Exhibit 16 and mapped for locational reference purposes in Exhibit 17, including locations relative to the Project site. In the discussion below, reference numbers for each cited shopping area are presented in parentheses following the area/center name, with the numbers matching ones referenced in Exhibits 16 and 17.

The largest retail option in the Project's market area is Stoneridge Mall (#5). With approximately 1.3 million square feet this regional mall includes many national big box and smaller retail chain options. Adjacent to the mall is JC Penney Plaza (#2), an older center with medium-sized chain stores such as Office Max and Cost Plus. Beyond this mall area, Pleasanton offers several small retail corridors with groupings of two or three shopping centers, mostly older neighborhood-serving centers that are well maintained. These areas include:

- Along the Hopyard Road corridor near Stoneridge Drive is a mix of service and retail at Gateway Square (#3) and the Crossroads Shopping Center (#4);
- Also along the Hopyard Road corridor near Valley Avenue is Gene's Fine Food/Rite Aid center (#8) and the upscale Hopyard Village (#9);
- In south Pleasanton on Bernal Avenue near Valley Avenue are Bernal Plaza (#29) and Pleasanton Gateway (#30), a newer retail center, which appears at the heart of newer multifamily development;

- Along the Santa Rita Road corridor near Valley Avenue are the small neighborhood-serving retail centers of Mission Plaza (#26), Amador Center (#27), and Valley Plaza (#28), which are mostly older, but well maintained with low vacancy; and
- Also along the Santa Rita Road corridor near Las Positas Boulevard are the small, neighborhood-serving retail centers of Santa Rita Square (#16) and Meadow Plaza (#17).

The southernmost part of the market area includes Downtown Pleasanton and select neighborhood-serving shopping centers. Downtown Pleasanton (#31) is a very pedestrian-oriented shopping district, with restaurants, boutique apparel stores, specialty stores, and hotels. Examples of specialty stores include western apparel, jewelry (new and repair), bakeries, floral-based gift shops, and home goods. Downtown Pleasanton largely comprises an approximate 7-block long area along Main Street, but with additional retailers located on adjoining streets. It is also adjacent to Pleasanton's Civic Center. This area is organized into the Pleasanton Downtown Association (PDA), which operates as an assessment district with the goal of developing and promoting a vibrant downtown community. Fieldwork observation suggests the PDA achieves this goal, with a unique mix of retailers, strong pedestrian shopper activity, and a friendly atmosphere, such as welcoming dogs into many of the small shops. There are currently several small shop vacancies in Downtown Pleasanton, but most already have new tenants in progress. For example, another coffee shop will be backfilling the former Tully's space and across the street a women's clothing store is being replaced by a women's shoe store.[11] Another example includes Tara's Organic Ice Cream, which left in December 2015, with the property owner negotiating a lease with an undisclosed new tenant. The speedy rate at which these Downtown Pleasanton retail vacancies are backfilled is a testament to the vibrancy of Downtown as an important Pleasanton shopping district.

Pleasanton's Pleasant Plaza (#34) is located near Downtown Pleasanton and a residential area. This small neighborhood-serving shopping center includes Cole's Market (a convenience store), Bob's Burgers, and non-retail services such as a barber and nail salon. Also in southern Pleasanton, Oak Hills Shopping Center (#36) is located adjacent to residential neighborhoods, This is a larger neighborhood-serving shopping center anchored by Raley's. Southern Pleasanton also features Vintage Hills Shopping Center (#37), which is a small neighborhood-oriented shopping center with a relatively new market, New Leaf Market, and a fitness center, Montessori school, jewelry store, frozen yogurt, and other neighborhood-oriented tenants.

A very large regional-serving retail node that straddles the Interstate 580 corridor includes retail in both the cities of Pleasanton and Dublin. To the south of Interstate 580, in Pleasanton, is an older retail node comprising Metro 580 (#7), Rose Pavilion (#24), and Pimloco Plaza (#25), which include stores such as Walmart, Kohl's, Party City, Macy's Furniture, Ranch 99, Dollar Tree, and Trader Joe's. Within the Dublin portion of this corridor there is newer retail stock which includes Persimmon Place (#10), Hacienda Crossings (#21), Dublin Corners (#23), and Shops at Waterford (#33), all within the Project's market area and Grafton Station (#32) and Fallon Gateway (#35), which both lie outside the Project market area. This Dublin section of the corridor includes stores such as Whole Foods, Nordstrom Rack, HomeGoods, TJ Maxx, Bed, Bath, & Beyond, Best Buy, Safeway, Lowe's, Target, and Dick's Sporting Goods.

[11] Backfilling refers to re-tenanting of vacant retail spaces

In Dublin, to the north across Interstate 580 from Stoneridge Mall, there is a large retail node along Dublin Boulevard, San Ramon Road, Amador Valley Boulevard, and Amador Valley Plaza. This node includes Dublin Place (#14), Dublin Plaza Center (#13), Dublin Center (#12), Almond Plaza (#11), Lamps Plus Plaza (#15), Shamrock Village (#18), Amador Plaza (#20), and a Safeway-anchored center (#21). These eight shopping centers include stores such as Target, Hobby Lobby, DSW Shoes, Michael's, OSH, Ross, Marshall's, Sprouts, Jo-Ann's Fabrics, REI, Dollar Tree, 99 Ranch, Sports Authority, and Safeway. This area of Dublin, near Interstate 680 and Dublin Boulevard, also includes Valley Center Shopping Center (#19), a small strip center with tenants such as restaurants, a nail salon, and a laundromat.

The market area also features shopping centers located adjacent to residential or office space but no other retail offerings. In Pleasanton these include Pleasanton Square Shopping Center (#1) located in northern Pleasanton near office space in Pleasanton and includes tenants such as Home Depot, Smart & Final Extra, Tap Plastics, and BevMo!. Val Vista Center (#6) is a Lucky-anchored neighborhood-serving shopping center located within a residential area.

As noted during February 2016 fieldwork, market area retail vacancies were actively being marketed and there was a lack of large big box type of vacancies, the exception being Rose Pavilion (#24) in Pleasanton, which contains a former Ethan Allen (recently moved to the brand new Persimmon Place in Dublin), a former Fresh & Easy, and a vacant CVS, which built a brand new store within the newer portion of the same shopping center.

Typical signs of urban decay include graffiti, trash, boarded windows, none of which are prevalent in Pleasanton and Dublin. As in any retail market, there will be vacancies and some chronic vacancies, particularly when new retail is constructed and some retailers prefer newer retail stock in updated developments as seen in the new CVS in Rose Pavilion and the relocation of Ethan Allen from Rose Pavilion to Persimmon Place. Pursuant to fieldwork observation, indicators of urban decay such as graffiti, boarded windows, and trash in parking lots were largely not present in the market area. Most vacancies appear to be well maintained and are actively being marketed. Thus, overall, ALH Economics finds the market area to comprise a healthy retail market with a varied mix of retail offerings.

In summary, the Project's location close to Interstates 680 and 580 would serve to strengthen Pleasanton's retail base and the existing retail node adjacent to Highway 580. In addition to the Project's general environs being a strong retail node, the market area as a whole appears to have a relatively healthy, large, and diverse retail base. The area includes neighborhood through regional shopping opportunities. The neighborhood and community shopping centers include approximately 17 stores selling groceries (excluding ethnic food stores but including general merchandise retailers like Target with a strong food sales component) while the regional shopping opportunities include department stores such as Macy's and Nordstrom's that are not located elsewhere in the Tri-Valley area. Thus the Project's market area serves a broad range of consumer shopping needs.

V. MARKET AREA DEMOGRAPHICS AND RETAIL SPENDING POTENTIAL

This report chapter identifies the market area's demographic characteristics, including in comparison to the cities of Pleasanton and Dublin. The chapter additionally estimates retail demand generated by the market area's residents.

DEMOGRAPHIC CHARACTERISTICS

ALH Economics developed population and household estimates and projections for the market area to provide a basis for estimating market area retail demand. These estimates and projections were prepared based upon projections formulated by the Association of Bay Area Governments (ABAG), the Regional Council of Governments for the San Francisco Bay Area. These projections were prepared in 2013, and provide estimates and projections in 5-year increments, up to the year 2040. These projections are provided on a jurisdictional basis, such as cities, as well as by census tract. The projections are prepared for population and household counts, among other demographic factors.

ALH Economics culled the population and household projections for the City of Pleasanton, the City of Dublin, and the census tracts comprising the market area. These figures were pulled for the years straddling the Project's anticipated development timeline, and then interpolated for years key to the analysis. These key years are 2018, the first year during which Phase I development is anticipated to be fully operational is anticipated to be complete, and 2028, which is anticipated to coincide with full Project buildout.

The resulting demographic estimates and projections for the Project's market area indicate that the market area has an estimated 2015 household count of 39,409 (See Exhibit 18). The population equivalent is 113,799. This is for the 21 census tracts that collectively comprise the market area. By 2018, the first estimated year of full operations for the Project, the household count is forecasted to increase to 40,824, for an increase of 1,415 households. By 2028, the Project's buildout year, the household count is forecast to rise to 45,504, or by an additional 4,680 households. Based on the estimates in Exhibit 18, the market area comprises approximately 92% of the combined household counts for Pleasanton and Dublin.

Household incomes in the market area vary somewhat by geography, with the average household income in 2015 comprising $153,130 in Pleasanton and $140,220 in Dublin. For the market area as a whole, the average is $146,232 as presented in Table 9 below.

Table 9. Market Area Average Household Income

Geographic Area	2015 Income
City of Pleasanton	$153,130
City of Dublin	$140,220
Market Area	$146,232

Source: Nielsen Reports.

These average household incomes are estimated by Nielsen Reports, as there are no governmental resources with current household income estimates for the jurisdictions comprising the market area, or of course for the customized market area itself.

MARKET AREA RETAIL DEMAND POTENTIAL

Approach to Estimating Retail Demand

ALH Economics prepared a retail spending potential analysis, or demand analysis, for the Project's market area households. This spending analysis takes into consideration average household income, the percent of household income spent on retail goods, and prospective spending on retail by the same retail categories reported by the BOE. Pursuant to data published by the U.S. Bureau of Labor Statistics, 2013 Consumer Expenditures Survey, households in the income group with annual household incomes $70,000 or more throughout the United States spent an average of 25% of household income on the type of retail goods tracked by the BOE. This is the highest income bracket analyzed by the Consumer Expenditures Survey, and these households had average household incomes of $131,945 before taxes. This average income is high because the income bracket includes all households earning over $70,000. Select other income ranges and associated average household incomes include the $40,000 to $49,999 range with a $44,576 average, spending 40% of income on retail, and the $50,000 to $69,999 range with a $59,101 average, spending 36% of income on retail.

The spending pattern for households earning $70,000 and more is the most appropriate Consumer Expenditures Survey match for the market area. Therefore, ALH Economics assumes that for the market area households, 25% of income will be spent on retail goods. This results in a per household retail spending estimate of $36,558.

As a proxy for household spending patterns, ALH Economics analyzed statewide taxable sales trends for 2013 and converted them to estimated total sales.[12] The results, presented in Exhibit B-5, indicate that household spending by retail category ranges from a low of 5.2% on Home Furnishings & Appliances to a high of 17.1% on Food & Beverage stores.

Market area retail demand projections for the market area's current and future household bases were estimated based upon the percent share of income spent on retail and estimated distribution of retail spending. The demand projection for the current household base is presented in Exhibit 19 and the demand estimates for the incremental new households to 2018 and 2028 are presented in Exhibit 20. These demand estimates are then combined in Exhibit 21, which presents the total demand estimate for the current 2015 time period as well as future household demand in 2018 and 2028, all in 2015 dollars.

Retail Demand Findings

The household demand estimates in Exhibit 21 are summarized below in Table 10. This indicates that the current household base has the estimated potential to spend $1.4 billion on retail goods. The largest share of spending is for Food & Beverage stores, which totals $246.7 million for the existing household base. The total demand estimate will increase by almost $52.0 million by the time the Project's Phase I is fully operational, totaling $1.5 billion 2018.

[12] The year 2013 comprises the most recent year for which annual taxable sales are published by the State of California Board of Equalization.

Yet another $171.1 million in demand will be generated between 2018 and Project buildout in 2028, comprising total market area demand of $1.7 billion by 2028.

Table 10. Market Area Retail Demand Estimates, in millions

Type of Retailer	Existing 2015	2015-2018	2018-2028	Total by 2028
Motor Vehicles and Parts Dealers	$199.0	$7.1	$23.6	$229.7
Home Furnishings and Appliance Stores	$74.4	$2.7	$8.8	$85.9
Building Materials and Garden Equip	$86.9	$3.1	$10.3	$100.3
Food and Beverage Stores	$246.7	$8.9	$29.3	$284.8
Gasoline Stations	$166.4	$6.0	$19.8	$192.1
Clothing and Clothing Accessories Stores	$102.2	$3.7	$12.1	$118.0
General Merchandise Stores	$200.7	$7.2	$23.8	$231.7
Food Services and Drinking Places	$183.7	$6.6	$21.8	$212.1
Other Retail Group	$180.9	$6.5	$21.5	$208.9
Total	**$1,440.7**	**$51.7**	**$171.1**	**$1,663.5**
Cumulative Total	**$1,440.7**	**$1,492.4**	**$1,663.5**	**$1,663.5**

Source: Exhibit 21.

These figures demonstrate that the market area has very strong retail spending potential.

VI. PROJECT SALES IMPACT ANALYSIS

This chapter assesses the extent to which the Project's sales might impact the existing retail sales base. It examines the characterization of the sales bases in Pleasanton and Dublin, the two cities that comprise the bulk of the Project's market area, and then considers the extent to which the Project may or may not divert sales away from existing retailers.

RETAIL SALES BASE CHARACTERIZATION

Approach

For the purpose of this study, ALH Economics characterized the retail sales bases of Pleasanton and Dublin with regard to the extent to which they attract or leak retail demand generated by their population base. Toward this end, ALH Economics uses a retail model that estimates retail spending potential for an area based upon household counts, income, and consumer spending patterns. The model then computes the extent to which the area is or is not capturing this spending potential based upon taxable sales data published by the State of California Board of Equalization (BOE) or provided by local government municipal tax consultants. This analysis can be most readily conducted for cities, groupings of cities, or counties, consistent with the geographies reported by the BOE.

For any study area, retail categories in which spending by locals is not fully captured are called "leakage" categories, while retail categories in which more sales are captured than are generated by residents are called "attraction" categories. This type of study is generically called a retail demand, sales attraction, and spending leakage analysis, or retail gap analysis. Generally, attraction categories signal particular strengths of a retail market while leakage categories signal particular weaknesses. ALH Economics' model, as well as variations developed by other urban economic and real estate consultants and economic analysts, compares projected spending to actual sales.

For the purpose of generating a Retail Demand, Sales Attraction, and Spending Leakage Analysis for the relevant cities, and the market area as a whole, ALH Economics obtained taxable retail sales data for 4th Quarter 2013 through 3rd Quarter 2014 as reported by the BOE and adjusted the taxable sales to reflect total, more current sales. These were the most recent BOE data available at the time the study was conducted. Using the retail sales data, combined with household counts from the demographic estimates benchmarked to ABAG forecasts and household income figures estimated by Nielsen Reports, ALH Economics conducted Retail Demand, Sales Attraction, and Spending Leakage Analyses. These analyses compared total estimated household spending to actual retail sales in both Pleasanton and Dublin. To the extent possible, sales estimates were updated to reflect a more current time period than measured by the BOE data. This included analyzing sales tax trend data in Pleasanton from 2nd Quarter 2014 through 4th Quarter 2015, to generate sales adjustment factors by category to result in an estimated 2015 retail sales base. These data were provided by the City of Pleasanton via the City's tax consultant. Comparable data were requested for the City of Dublin; therefore, sales adjustments for Dublin were based upon the CPI index, with the exception of gasoline sales, which was adjusted as the same rate as Pleasanton because the volatility of gasoline sales is not tied to the CPI index. Retail sales for both cities were also adjusted upward to adjust for nontaxable sales in key sales categories, including Food &

Beverage stores and the drug store component of Other Retail sales. All these adjustments are noted as relevant in the analysis.

Household Spending Estimates

ALH Economics' Retail Demand, Sales Attraction, and Spending Leakage Analysis requires household count, average household income, and percent of income spent on retail inputs for the area of analysis. As noted in Table 9, the annual household income profiles vary modestly between Pleasanton and Dublin, with both exceeding $130,000. Accordingly, the percent of income spent on retail is assumed to be similar to the percentage assumed in the market area, which is 25%. The resulting annual retail household spending estimate by city is presented in Table 11, along with the earlier referenced market area finding. These figures are $38,283 for Pleasanton and $35,055 for Dublin.

Table 11. Market Area Average Household Spending

City	2015 Income	% Spent on Retail	Average HH Spending
Pleasanton	$153,130	25%	$38,283
Dublin	$140,220	25%	$35,055
Market Area	$146,232	25%	$36,558

Sources: Nielsen Reports; and ALH Urban & Regional Economics.

Retail Demand, Sales Attraction, and Spending Leakage Findings

City of Pleasanton. The estimate of Pleasanton's retail sales base pursuant to the most recently available BOE data is presented in Exhibit 22. This figure, reflective of annual retail sales ending the 3rd Quarter of 2014, is approximately $1.6 billion. With interim adjustments to year-end 2015 based on changes in citywide retail sales trends, the sales base was estimated to increase modestly, but still rounds to a total of $1.6 billion by the end of 2015 (see Exhibit 23). This indicates average sales on a per household basis of $60,348. This figure reflects sales captured per household, not demand per household. Pursuant to the estimated distribution of household demand based upon the pattern noted earlier in Exhibit B-4, and cited in Tables 8 and 10, estimated retail spending per household in Pleasanton is $38,283. This demand figure is substantially lower than the sales per household figure, indicating in the aggregate that Pleasanton captures more sales than is spent by its own households. In other words, Pleasanton as a whole attracts retail sales. This result is not surprising, as Pleasanton has a large retail base, including a regional shopping center.

Overall, the Retail Demand, Sales Attraction, and Spending Leakage estimates in Exhibit 24 suggest that just over 36% of the sales achieved in Pleasanton are attracted from elsewhere. As Exhibit 24 further indicates, this retail sales attraction extends across almost every retail category, with the exception of Building Materials and Garden Equipment and Gasoline Stations. This would suggest some potential for retail new to Pleasanton to stem leakage and recapture sales lost to Pleasanton retailers in these two categories. However, as noted below, when analyzed in the context of neighboring Dublin's retail base, which has attraction in these two categories, the leakage in Pleasanton is likely being measured as attraction to the City of Dublin. Therefore, instead of comprising recaptured sales leakage, sales achieved by new Pleasanton retailers will comprise sales generated by new market area household growth, sales

diverted away from existing market area retailers, sales that serve to strengthen the city's existing sales attraction, or some combination thereof.

City of Dublin. The findings for the City of Dublin demonstrate an even greater level of estimated attraction compared to Pleasanton. The estimated 4th Quarter 2013 through 3rd Quarter 2014 sales base in Dublin totaled $1.4 billion (see Exhibit 25). Adjusted to 2015 based upon changes in the CPI index, coupled with the more volatile estimate of changes in Gasoline sales, results in a slightly lower 2015 sales estimate, but one which continues to round to $1.4 billion (See Exhibit 26; the decline is due to the lower cost of gasoline). Per household sales generally equaled $88,078, compared to the per household demand estimate of $35,055. Thus, Dublin achieves even higher retail sales attraction than Pleasanton, estimated at 60.2% of all sales (see Exhibit 27). In contrast to Pleasanton, Dublin achieves retail sales attraction in all major retail categories.

PROJECT SALES IMPACTS

This section estimates the extent to which the Project's sales may comprise a negative sales impact on the existing retail sales base. For study purposes, ALH Economics combined the Pleasanton and Dublin estimated retail sales bases as a proxy for the market area. This includes some Dublin retail sales generated by retail stores not included in the market area. However, this is deemed a more meaningful basis for analysis than estimating through imprecise means the portion of Dublin's sales base that is not included in the market area. Moreover, while consumer demand may originate from within the defined market area, likely all outlets in Pleasanton and Dublin receive some increment of demand from households in the Project's defined market area.

Approach

ALH Economics has developed an analytic approach that estimates the impact of the Project's incremental sales on existing retailers. For this analysis, the approach assumes that if the Project is adding sales to a category in an amount greater than any potential recaptured leakage in the category, ***then at worst***, the amount of sales in that category in excess of any recaptured leakage would be diverted away from existing area retailers. In cases when this applies, this can be a conservative assumption given that diverted sales beyond the amount of recaptured leakage could also occur among other retailers beyond the market area or relevant city boundaries. Or, in cases where new household growth occurs, demand captured from these new households can offset impacts by increasing total sales captured by retailers throughout the area under study. In the case of the Johnson Drive EDZ Project, the combined cities of Pleasanton and Dublin do not appear to exhibit any retail leakage. This analysis therefore focuses exclusively on the potential for Project sales generated by the Project's market area retail consumers to be absorbed by new demand, with any resulting sales not absorbed by new demand comprising potential sales impacts.

Market Area Retail Sales Base

To best assess the Project's sales impacts it is optimal to have an understanding of the size of the existing retail sales base. As stated above, for the purpose of this study this sales base is anticipated to comprise the summation of the retail sales bases in Pleasanton and Dublin. Pursuant to the analyses presented in Exhibits 23 and 26 this sales base is estimated to total $3.0 billion in 2015.

Future Growth Considerations

As noted earlier, the market area is estimated to grow by 1,415 households between 2015 and 2018, the year the Project's Phase I is estimated to be fully operational, and by another 4,680 households by 2028, the Project's year of Full Buildout. These new households will generate additional demand for retail sales, as documented in Exhibits 19 through 21. These new sales are estimated to total $51.7 million by 2018 and an incremental $171.1 million by 2028, and include sales in all the categories of estimated Project sales.

Estimated Project Sales Base Impacts

Approach. ALH Economics analyzed the Project impacts on the existing sales base based upon the amount of Project sales generated by market area residents not absorbed by new household demand. This does not mean that the new households are anticipated to spend all their retail dollars at the Project, but that as new retail dollars are spent in the market it provides support for all retailers, which may or may not include the Project's retailers. Thus, if the Project diverts retail dollars spent at existing market area retailers, new demand generated by household growth can potentially offset these sales diversions. Moreover, new demand for sales categories not represented by the Project can additionally provide support for yet other retailers, and hence support retail occupancy for additional new retailers. This analysis was conducted for the Project's Phase I development as well as the incremental development to Full Buildout, and consolidated in a Full Buildout scenario.

Phase I Sales Base Impacts. The analysis assessing the Project's Phase I impacts on the market area's estimated existing retail sales base is fully presented in Exhibit 28 and summarized below in Table 12. Taking into consideration prospective demand generated by households new to the market area prior to the full operation of Phase I, the Project's sales impacts may result in estimated sales decline of $26.7 million for existing retailers, or 0.9% of existing market area sales. Overall this is a nominal level of impact, which comprises approximately 16% of all Phase I Project sales. Thus, overall, at least 84% of the Project's $172.3 million in estimated Phase I sales will comprise net new sales to the City of Pleasanton's (see Exhibit 9 for the $172.3 million figure).

Table 12. Project Phase I Sales Impacts on Existing Sales Base

Retail Category	Total Net New Consumer Retail Sales	New Market Area Demand 2015-2018	Sales Impact Less New Demand	% Impact on Sales Base	Remaining Demand For Backfilling
Motor Vehicle & Parts Dealers	$3,143,726	$7,145,800	$0	0.0%	$4,002,074
Home Furnishings & Appliances	$4,573,080	$2,670,856	$1,902,224	0.9%	$0
Building Materials & Garden Equipment	$2,788,126	$3,119,560	$0	0.0%	$331,434
Food & Beverage Stores	$32,075,342	$8,860,179	$23,215,163	7.4%	$0
Gasoline Stations	$6,278,039	$5,976,404	$301,636	0.2%	$0
Clothing & Clothing Accessories	$2,388,912	$3,670,104	$0	0.0%	$1,281,192
General Merchandise Stores	$4,981,229	$7,207,640	$0	0.0%	$2,226,411
Food Services & Drinking Places	$537,857	$6,598,189	$0	0.0%	$6,060,332
Other Retail Group	$7,803,072	$6,496,950	$1,306,122	0.6%	$0
Total	$64,569,384	$51,745,682	$26,725,145	0.9%	$13,901,443

Source: Exhibit 28.

While the overall sales impact is relatively nominal as a percent of the sales base, there are three retail categories with estimated sales impacts. These categories include the following:

- Home Furnishings & Appliances with $1.9 million in sales impacts, or less than 1.0% of the category sales base;
- Food & Beverage Stores with $23.2 million in sales impacts, or 7.4% of the category sales base; and
- Gasoline Stations with approximately $0.3 million in sales impacts, or 0.2% of the sales base.

The sales impacts in Home Furnishings & Appliances and Gasoline Stations are nominal and, given the size of the sales base, are not deemed large enough to result in existing retail outlet closures. The impacts are likely to be experienced by a number of existing market area retailers, and thus not concentrated amongst any single retailer to the point where business closure could result from declining sales. In addition, these impacts assume the Project's Phase I components achieve stabilized sales during the first full year of operations. More typically, new retailers achieve stabilized sales over a period of several years, such that the full amount of estimated Phase I sales will not be achieved until sometime after 2018. By this time, yet additional new market area demand will be generated, further offsetting the projected sales impacts. For example, based upon findings presented in Exhibit 21, the average annual new demand generated for Gasoline Stations between 2018 and 2028 is almost $2.0 million a year. Thus, the anticipated Gasoline Stations impacts will be offset within a year after the start of the Project's Phase I operations. In like manner, the Home Furnishings & Appliances estimated sales impacts of $1.9 million could be offset in just over two years. These findings further reinforce the conclusion that existing Home Furnishings & Appliances and Gasoline Stations are unlikely to experience sales impacts from Phase I development severe enough to result in existing outlet closures.

The estimated sales impacts in the Food & Beverage Stores category are more substantial than the other category impacts. At $23.2 million, these impacts are equivalent to 7.4% of the existing sales base. While the Project's estimated Food & Beverage Store sales may also not achieve stabilization until sometime after 2018, these impacts are more substantial and could result in lower store sales performance among a number of existing Food & Beverage stores. As noted earlier, this includes at least 17 more traditional food stores, as well as numerous ethnic and other small food markets. These include a wide variety of stores, such as Safeway, Raley's, and Lucky, and more specialty or upscale grocers such as Whole Foods, Trader Joe's, Sprouts, New Leaf, and Gene's Fine Foods. The existing stores also include stores more comparable to the discounted or bulk food options available at a club retailer, such as Walmart Neighborhood Market, Smart & Final Extra, and Target.

Food & Beverage stores achieve a wide range of per square foot sales performance. Assuming an overall industry average of $643 per square foot (see Exhibit 9), the estimated volume of diverted Food & Beverage Store sales is sufficient to support approximately 36,000 square feet of space. This level of impact suggests the potential for one existing grocery store in the market area to be at risk of potential closure following Phase I development of the Project, although the impact will morel likely be spread among the more than 17 market area stores selling groceries. If spread equally among just these 17 stores the level of impact would be less than $1.4 million in sales impact per store, which is likely not a sufficient sales volume loss to trigger store closure. Many stores can likely compensate for this loss through product repositioning and other operational changes. Further, some of these impacts will be offset over time as additional new demand is generated, averaging about $3.0 million a year after 2018 (see figures included in Exhibit 21).

There are a number of factors endemic to the club retail shopping experience that could minimize the impacts on the existing Food & Beverage retailers, or especially on specific food stores. Using examples from Costco, club retail merchandise is not targeted to the average grocery store consumer. Many Costco items are only available in bulk. This includes mostly foodstuffs and other items one could purchase at a grocery store, such as two loaves of sliced bread bundled together, a case of kidney bean cans, 15 rolls of paper towels, and a 33.9-ounce can of ground coffee. It is not possible at Costco to purchase an individual-sized pastry, a quart of milk, a small spice jar, a dozen eggs, or just a pound of butter. Costco food sales are clearly targeted toward large families, restaurants, event organizers, and other consumers with extensive storage capacity. Accordingly, Costco is not the type of store where the average household consumer will stop by once or twice a week to round out the pantry and purchase ingredients for intimate family dinners.

In addition, Costco typically carries only one brand at a time of certain items, such as canned peaches or tomato sauce. Thus, selection is not the hallmark of Costco. In fact, Costco typically carries 3,700 items, or SKUS (stock-keeping units) for sale throughout the entire store.[13] This compares to 15,000 to 60,000 at a traditional supermarket for just grocery goods.[14] Thus shoppers seeking food product variety will not find it at Costco.

Costco is further distinguished from the average retailer pursuant to its payment options and how it assembles items purchased by customers. Costco warehouses accept cash, checks, certain debit cards, and Visa. No other major credit cards are accepted for the payment of merchandise. These methods of payment may limit Costco's customer base. Once a customer has made purchases, Costco does not provide bags or bagging services. Some items are loaded into packing boxes by Costco cashiers, but the balance of goods are either reloaded back into the shopping cart by the Costco cashiers or can be placed into bags provided by the customer. This approach may further limit Costco's customer base among customers accustomed to merchandise bagging.

The preceding club retail merchandising factors may contribute to the dispersal of the estimated Food & Beverage sales impacts, or even lessening of the impacts. Moreover, stores can adapt their merchandising mix and customer service strategies to be more resistant to Project sales impacts. Yet, if a store closes there are other demand opportunities available to backfill the space, thus reducing the likelihood of long-term retail vacancy. For some Project sales categories new market area demand will exceed the portion of Project sales estimated to be generated by market area households, thus no impact will result and demand available for other retailers will result. As noted in Exhibit 28, after absorption of Project sales, an estimated $13.9 million in new retail demand will still be available for a range of retail categories. Thus, while there could be the potential for store closure, the likelihood of the space remaining vacant for a prolonged period of time and leading to prolonged economic impacts is not high.

Full Buildout Sales Base Impacts. Sales impact analysis findings for the Project at Full Buildout were prepared in an analysis parallel to the Phase I analysis. These findings were also generated for the increment of development between Phase I and Full Buildout. These findings

[13] Costco Wholesale Corp, 10-K, Filed on 10/14/15, page 4.
[14] http://www.fmi.org/facts_figs/?fuseaction=superfact

are presented in Exhibit 29 for the increment to Full Buildout and Exhibit 30 for Full Buildout. The Full Buildout findings are also summarized in Table 13, below.

The summary findings in Table 13 indicate that by the time Full Buildout occurs, estimated to comprise 2028, more than sufficient new market area demand will be generated to absorb the Project's anticipated sales generated by market area retail consumers. There is one minor exception to this, which is the Clothing & Clothing Accessories category, with a nominal sales impact of $46,544. This level of impact is so limited it comprises 0.0% of the market area sales base.

Table 13. Project Sales Impacts on Existing Sales Base at Full Buildout

Retail Category	Total Net New Consumer Retail Sales	New Market Area Demand 2015 - 2028	Sales Impact Less New Demand	% Impact on Sales Base	Remaining Demand For Backfilling
Motor Vehicle & Parts Dealers	$3,143,726	$30,770,182	$0	0.0%	$27,626,456
Home Furnishings & Appliances	$10,211,555	$11,500,843	$0	0.0%	$1,289,289
Building Materials & Garden Equipment	$8,030,090	$13,432,983	$0	0.0%	$5,402,893
Food & Beverage Stores	$32,075,342	$38,152,384	$0	0.0%	$6,077,042
Gasoline Stations	$6,278,039	$25,734,700	$0	0.0%	$19,456,661
Clothing & Clothing Accessories	$15,850,201	$15,803,657	$46,544	0.0%	$0
General Merchandise Stores	$10,176,090	$31,036,468	$0	0.0%	$20,860,377
Food Services & Drinking Places	$11,169,630	$28,412,138	$0	0.0%	$17,242,508
Other Retail Group	$22,803,351	$27,976,200	$0	0.0%	$5,172,849
Total	$119,738,024	$222,819,555	$46,544	0.9%	$103,128,075

Source: Exhibit 30.

Based on the projected level of market area demand up to 2028, the limited amount of Clothing & Clothing Accessories sales impact would likely be absorbed shortly after Project completion. Moreover, the findings suggest that over $100 million in additional demand for retail will remain at Full Buildout, providing support for yet other retail venues as well as any retail space that might become vacated as a result of Project impacts. Such potential vacancies, however, are not deemed likely given the negligible sales impacts projected by Full Buildout.

DOWNTOWN PLEASANTON IMPACTS

Based upon the preceding impacts analysis, ALH Economics believes that Downtown Pleasanton will experience very limited, if any, sales impacts associated with the Project. This assessment is attributable to several factors, including the nature of the impacts, Downtown Pleasanton's retail base and orientation, and historical precedents, especially including the development of the significant San Francisco Premium Outlets in Livermore.

Phase I Project sales impacts are most anticipated to occur in Food & Beverage Stores, Gasoline Stations, and Home Furnishings & Appliances, while Full Buildout sales impacts are isolated to just Clothing & Clothing Accessories, and for just a limited period of time. Among all these categories, only Home Furnishings & Appliances and Clothing & Clothing Accessories stores are located in Downtown Pleasanton. As these impacts are anticipated across the entire market area, which includes many other shopping areas in Pleasanton as well as Dublin, it is very unlikely the limited sales impacts in these categories will be specifically diverted from Downtown Pleasanton stores. This is especially the case because the nature of these and other goods sold in Downtown Pleasanton is generally very different from the type of goods available at a club retail store like Costco or other generic retailers that might occupy the Project's general retail

space. Further, while there may be some club retail goods overlap, the quality of goods available Downtown is typically much greater and of a broader variety than available at a club retailer. In addition, Downtown Pleasanton retailers provide services not available at a club retailer.

Downtown Pleasanton stores sell a very carefully selected mix of merchandise not typically found at other market area retailers. Downtown Pleasanton provides a unique, pedestrian-oriented shopping opportunity with a customer-friendly atmosphere. These experiences cannot be replicated at the Project. Moreover, shoppers who want the type of goods available at a club retail store already have regional opportunities for this kind of shopping. Thus, there is no motivation for Downtown shoppers to change their shopping patterns assuming the new shopping opportunities will not be significantly different from other shopping opportunities already available.

Downtown Pleasanton is quite distant from the Project site, at 4.3 miles. Shoppers who choose to shop in Downtown Pleasanton are unlikely to bundle a Downtown shopping with a Project shopping trip, further helping Downtown Pleasanton retain its existing shoppers. Finally, anecdotal information suggests that the opening of the San Francisco Premiums Outlets in Livermore, located even closer to Downtown Pleasanton than the Project site (a distance of 3.9 miles versus 4.3 miles), did not result in negative economic impacts on Downtown Pleasanton retailers. The San Francisco Premium Outlets opened as Paragon Outlets during the holiday season of 2012, and subsequently expanded in 2015. Examination of taxable retail sales data for the City of Pleasanton indicates that for all major retail categories, sales in Pleasanton were higher in 2013 than in 2012, while sales in 2012 were higher yet again than in 2011.[15] This suggests that in addition to the anecdotal information about Downtown Pleasanton that the City of Pleasanton as a whole did not experience any retail sales repercussions associated with this significant retail addition to the region's retail base totaling approximately 540,000 square feet initially, and then expanding by almost another 200,000 square feet. This also supports the finding that the Project's impacts on the existing retail base may be limited, given the greater size of the San Francisco Premium Outlets relative to the Project.

CLUB RETAIL CASE STUDY INFORMATION

The preceding Project Impact analysis focuses on relatively high level analysis, examining impacts on a category-specific basis. In order to gain some insight into the potential for more granular impacts, ALH Economics conducted research regarding several existing club retail stores. This included the Costco store in nearby Livermore, which opened in 1993 and added gasoline sales within the past 5 years, and stores in California developed more recently. The nearby Danville store was not included because it was developed in 1989, prior to the tenure of existing Economic Development staff, and too long ago to be of much relevancy.

The case study stores opened more recently in California included a Costco warehouse in Hayward and in Huntington Beach. These two stores comprise two of the four most recent Costco stores opened in California, among 11 that have opened since 2006. These two locations were selected for case study purposes because of their relative retail sales base comparability to Pleasanton. Most of the other cities where Costco stores have opened in California since 2006 have either much smaller sales bases (less than $1.0 billion) or much

[15] The only 2011 to 2012 exception being in the General Merchandise category, which likely has limited bearing on the Outlets given the strong apparel orientation of the Outlets.

larger sales bases (greater than $4.5 billion). Thus, Hayward and Huntington Beach seemed well-matched to Pleasanton, especially given their recent development in 2009 and 2012, respectively. Thus, these stores have been in the market long enough to achieve stabilized operations, but are recent enough that current city staff should have familiarity with their impacts on their respective sales bases.

As noted, the Livermore Costco store opened many years ago in 1993. Accordingly, little information is available about its immediate impacts on the nearby retail base. However, Livermore's outgoing Economic Development Director, with a relatively long tenure in Livermore, indicated she was not familiar with any negative sales impacts resulting from the store, including on small businesses or Downtown Livermore. This includes no negative impacts on food stores or individual small businesses. Of particular relevance to the Project is the gas station operation that was added to this store within the past 5 years. According to the outgoing Economic Development Director, the City of Livermore has not noted any drop off in gasoline sales since Costco added this component. ALH Economics believes a large contributor to this lack of impact is the dispersed geography associated with Livermore Costco customers, as discussed previously and documented in Exhibit 14.

The Hayward Costco store is located in an industrial area of Hayward near the border of Union City. Similar to Livermore, city representatives are not aware of any existing business impacts that occurred following the opening of this Costco store, including small businesses, Downtown Hayward, existing food stores, or gas stations. Some of the lack of impacts is attributed to the store's location, which is somewhat devoid of other retail establishments.

Finally, the Huntington Beach case study information suggests that rather than impacting existing retailers negatively, the new Costco store serves as a catalyst for retail demand, bringing shoppers to an area that was previously occupied by obsolete retail uses. After Costco was developed small businesses chose to be near Costco to benefit from retail synergies. Yet there is no indication that small businesses located elsewhere in the City of Huntington Beach, including Downtown, were impacted in a negative way. This Costco store is part of a larger plan for area economic development, has served as a catalyst for other property improvements, and has added to the critical mass of retail in the area, with spin-off benefits noted for other, previously struggling retail districts.

In summary, these case study findings indicate that other communities of a similar scale to Pleasanton did not experience negative impacts on their retail community when local Costco stores were developed. This includes no reported small business community, Downtown, or gasoline station impacts. Therefore, these findings suggest the study conclusion that the Project's Phase I development could result in food store sales impacts is a conservative conclusion, not borne out by the experience in comparable cities.

SECONDARY IMPACTS

In addition to sales impacts throughout the Project's market area, there will be potential for more localized secondary impacts on the businesses located in the area proposed for the Johnson Drive EDZ. One certain impact is a higher volume of traffic through the area, which is addressed in the SEIR's Transportation Impact Analysis. As this traffic occurs it may make take longer for employees and customers to travel to and from existing area businesses and traffic may become more congested. In addition, existing businesses seeking to expand at their current location might find the environment more competitive for land or building acquisition given

anticipated economic development efforts in the area and prospective new uses. However, there are also potential beneficial impacts, including the enhanced visibility and business exposure as a result of the greater volume of traffic through the area. Prospective customers can gain knowledge of the existing area businesses through repeated sightings of business signage and facilities, and the presence of existing customers. Thus, there can be positive as well as negative impacts associated with greater area traffic volume. Additional potential positive secondary impacts include the proximate availability of low cost club retail merchandise and gasoline, other shopping and eating opportunities close to work, and possible long-term property value increases associated with economic development improvements throughout the area. For example, as noted in the case studies above, Costco development served as a catalyst for economic development in Huntington Beach, and is credited with bringing shoppers to an area that was previously underutilized, and creating synergistic opportunities for business growth. The experience in Huntington Beach demonstrates there can be positive secondary impacts for existing area businesses as well as the potentially negative secondary impacts cited above.

VII. CUMULATIVE PROJECT IMPACTS

This analysis seeks to quantify the impact of the Project taking into consideration other planned competitive retail projects within and near the market area. The cumulative projects assessed for impacts include retail developments that are in various stages of entitlement or planning. Because specific development timelines are not available for many of the projects, the analysis carefully considers each project prior to determining the set of projects most likely to be operational during the Project's approximate timeframe.

IDENTIFIED RETAIL DEVELOPMENT PROJECTS

ALH Economics identified 12 potential cumulative retail development projects in and near the market area by reviewing development pipeline materials maintained by the cities of Pleasanton and Dublin. While nine of the 12 projects are located within the Project's market area, all of them may have some market area commonality, and thus were reviewed and considered for relevancy. Information about these projects was primarily derived from the major project documents from each city, supplemented by additional information from planning staff, project websites, the San Francisco Business Journal, and Pleasanton-Dublin area news provider, The Independent. These 12 projects are described in Exhibit 31, which includes their address, square footage, development status, anticipated completion date, and distance from the Project Site. Number references for projects in the following discussion match the numbers listed in Exhibit 31, as well as the accompanying map in Exhibit 32.

The 12 projects included in Exhibit 31 total approximately 1.3 million square feet of retail space. The projects range in size from just over 5,000 square feet up to 430,000 square feet. Some of the projects are in the preliminary stages of planning or are in the latter phases of development and therefore have an undetermined timeframe. These projects add up to 1.1 million square feet; one of these projects is the second largest project in the pipeline at 225,000 square feet, Project #8, the Boulevard/Dublin Crossing located in Dublin. Though this project has been approved for commercial space, planning staff from the City of Dublin relayed that the developer is most likely going to develop the site as residential.

ALH Economics reviewed the information on the planned projects, status, and anticipated timing, and identified the projects most likely to be developed during two timeframes concurrent with the Project, i.e., by 2018 corresponding with Phase I and by 2028, corresponding with Full Buildout, as well as unknown timing. To allow for a conservative analysis ALH Economics includes all of the projects listed on Exhibit 31. These 12 identified cumulative projects are summarized below, with more project detail included in Exhibit 31. The cumulative project locations are mapped in Exhibit 32.

- **Pacific Pearl/Staples Ranch (#1)** - This is an approved 112,000-square-foot shopping center with probable tenants including Marina Foods, King Wah restaurant, additional restaurants/quick serve, beauty/nail salons & spa services, learning/tutoring services, medical/dental, general retail, and the remaining square footage is unknown. This project is located 4.8 miles east of the Project site and anticipated to be completed in 2017;
- **Vintage Sustainable Mixed-Use Village (#2) -** This is a proposed mixed-use project with 345 apartment units and 38,781 square feet of retail. The retail tenants are unknown,

but the anchor tenant is estimated to be a small grocery or drugstore, located 4.9 miles southeast of the Project site, with potential completion in 2016;

- **CarMax (#3)** - An 11,783-square-foot auto dealership under construction, located 4.8 miles east of the Project site, estimated to be complete in 2016;
- **Essex Site 1 (#4)** - This is a mixed-use high-density residential/commercial development containing 251 residential units, 4 live/work units, and approximately 5,700 square feet of retail space under construction, located 1.8 miles east of the Project site, estimated to be complete in 2017;
- **Chick-fil-A Restaurant (#5)** - A 5,399-square-foot Chick-fil-A restaurant under construction, approximately 1.2 miles northeast of the Project site, estimated to be complete in 2016;
- **Project Cover (#6)** – This is a newly announced project that will soon be going before the City of Dublin for approval. The project includes a 339,000-square-foot IKEA store and additional pads for another 91,000 square feet of retail space and a 75-room hotel. This project, in the planning stages, is anticipated to be complete in 2018. This project is located 2.8 miles northeast of the Project site.
- **Kaiser Medical Center (#7)** - This preliminary project is a medical campus comprising a 950,000-square-foot medical facility and 250,000 square feet of commercial development built over 25 years, located 4.3 miles northeast of the Project site, with unknown timing;
- **The Boulevard/Dublin Crossing (#8)** - The EIR and Specific Plan for this site allow up to 225,000 square feet of commercial space; however, the developer is leaning toward building only residential. This site is located 3.2 northeast miles from the Project site with unknown timing;
- **Fallon Gateway (#9)** – This project is a partially complete 379,000-square-foot retail center with 140,000 square feet that has yet to be built, tenants and timing for the remaining square footage are unknown, located 5.1 miles northeast of the Project site;
- **Grafton Plaza Mixed-Use Development (#10)** - An integrated mixed-use project in review with 115 townhomes, a 122-room Aloft hotel, and a 55,000-square-foot retail center, located 4.3 miles northeast from the Project, projected to open in 2017/2018;
- **Bay West Mixed Use Project (#11)** - A small mixed-use downtown Dublin project under construction with 17,000 square feet of first floor commercial with 314 apartments above, located 2.3 miles northwest from the Project, estimated to open by 2016; and
- **Sutter Retail (#12)** – This preliminary project is a 2,600-square-foot Starbuck and a 5,400-square-foot retail shop building, located 2.6 miles northwest from the Project, timing is unknown.

Of these 12 projects, eight are anticipated to be completed by the end of 2018. The remaining four projects have unknown timing because they are either in very early planning stages or are phased projects that do not have estimated starting dates for the outstanding retail portion.

CUMULATIVE PROJECT MARKET AREA OVERLAP

The cumulative retail projects will compete with the Project's market area only to the extent that their market areas overlap. Exhibit 31 also shows estimates of the share of each cumulative project sales anticipated to be sourced from the same market area as the Project. These estimates are the result of generalized assumptions, based on consideration of the location of the projects, their distance from the Project site, and the anticipated nature of their retail space and likely consumer. Pursuant to individual assumptions regarding share of market area

overlap with the Project, the cumulative projects are estimated to generate approximately 492,000 square feet in retail competitive with the Project, and also generated by market area households. Following are explanations of the market area overlap assumptions for key cumulative projects.

- Vintage Sustainable Mixed-Use Village (#2), Essex Site 1 (#4), Chick-fil-A Restaurant (#5), Bay West Mixed Use Project (#11), and Sutter Retail (#12) are anticipated to have much smaller, localized market areas than the Johnson Drive EDZ Project. Large portions of these cumulative projects' market areas are estimated to be subsumed within the Johnson Drive EDZ Project's market area and are estimated to have a 95% overlap of market area sales with the Project.
- The Boulevard/Dublin Crossing (#8), Fallon Gateway (#9), and Grafton Plaza Mixed-Use Development (#10) are estimated to have a different market area than the Project, extending north and east of areas encompassed by the Project's market area. Therefore, these projects are estimated to have a 66% overlap with the Project's market area.
- Pacific Pearl/Staples Ranch (#1) and Kaiser Medical Center (#7) are estimated to have large and different market areas than the Project, extending beyond the north and east of areas encompassed by the Project's market area. Therefore, these projects are estimated to have a 50% overlap with the Project's market area.
- CarMax (#3) is estimated to have a specialized market area, focused on serving the needs of consumers seeking to purchase cars. Thus, the analysis assumes only approximately 25% of the sales at this project will be generated by Johnson Drive EDZ Project market area residents.
- Project Clover (#6) is estimated to have only a 10% overlap with the Project's market area. This low overlap is attributable to the tremendous market draw experienced by Ikea. This store will be only the third Ikea store in the Bay Area region, and will likely draw customers from a broader area to the north, east, and west of the Project site. There may also be the potential to draw from the south as well, but many of these consumers may live closer to the existing Ikea store in Palo Alto.

As with the demand projections, the timeframes for anticipated development are presented consistent with the anticipated timeframe for the Project and other major retail development in Pleasanton and Dublin, i.e., 2018 and 2028.

CUMULATIVE PROJECT IMPACTS

Cumulative Project Supply

As noted in Exhibit 31, there are eight projects identified in Pleasanton and Dublin with prospective retail development by the years 2018 and 2028 and four with unknown timeframes, as some of these projects are further along in the conceptualization process than others. A summary of the market area cumulative retail projects is presented in Exhibit 33. This summary indicates that the cities of Pleasanton and Dublin have a total estimate of 4917,623 square feet of competitive prospective retail development planned excluding the Project (i.e., square footage anticipated to require support by the Project's market area). ALH Economics applied a 5% vacancy rate assumption to the square footage, which means an estimate of 95% of the total retail space is occupied (this is the same as the assumption for the Project).

Per the benchmark periods associated with the Project, an estimated 173,321 square feet of occupied competitive retail project space are anticipated to be complete by 2018. Between 2018 and 2028 the estimated timing for Full Buildout, there are no cumulative projects confirmed to have development completion estimates. There is 293,721 total square feet of estimated occupied development with unknown timing; however, a portion of this square footage may be developed between those years. This brings the total competitive square footage estimate to 467,042 square feet for the market area and surrounding areas. Notably, these figures include The Boulevard/Dublin Cross project in Dublin, which City of Dublin representatives suggest may convert to an all residential project.

Future Market Area Demand

Prospective tenants and tenant mixes are not known for many of the cumulative projects. Therefore, the impacts of the cumulative supply are best assessed relative to prospective demand. Thus, the market area's demand for retail space between 2015 and 2028 is converted to supportable retail space to facilitate a space-based supply and demand analysis. This conversion is documented in Exhibit 34, which incorporates estimated demand, estimated sales performance per square foot, an increment of space for personal and business services, and a modest vacancy allocation to allow for market fluidity.

The results of the supportable demand analysis indicate that new market area retail shoppers are estimated to have the ability to support 120,000 square feet of new retail space by 2018, another 390,000 square feet by Project buildout, for a total of 510,000 square feet by Full Buildout, i.e., between 2015 and 2028.

Cumulative Projects Impact

The supply and demand analyses relevant to analysis of the cumulative retail (including the Project) are consolidated and summarized in Exhibit 35. This exhibit pulls together the retail supply figures for the Project and the identified cumulative retail projects by the time periods relevant to the timing of the Project's retail development (based upon occupied competitive square feet). The exhibit also pulls together the market area demand estimates presented as supportable square feet. Table 14 below summarizes the findings of Exhibit 35. This analysis includes sensitivity analysis for the cumulative project that is deemed unlikely to be developed (e.g., the 225,000-square-foot The Boulevard/Dublin Crossing project in Dublin, about which City of Dublin representatives suggest may convert to an all residential project).

The cumulative retail analysis results indicate that based on the projects with estimated completion dates consistent with the Project's Phase I development, there will be a projected shortfall of 111,200 square feet of market area demand to support the cumulative projects. This is a nominal amount of shortfall based upon the current size of the combined retail base in Pleasanton and Dublin, which comprises 9.2 million square feet.[16] If this 111,200–square-foot increment of retail space became vacant as a result of the cumulative projects (possibly including the Phase I Project grocery store impacts referenced in Project impacts), the current retail base vacancy rate would increase by 1.2%. This retail vacancy increment is very low, and would comprise an insignificant impact on the market area's retail base.

[16] See subsequent Exhibits 43 and 44 for estimates of the Pleasanton and Dublin retail inventories.

Table 14. Cumulative Impacts of Johnson Drive EDZ and Cumulative Retail Projects

Supply and Demand Characteristic	Retail Development Timing 2018	2028	Unknown	Total
Johnson Drive EDZ and Cumulative Project Additions to Supply (1)	231,200	371,068	180,861	551,929
Cumulative Retail Demand	120,000	510,000	NA	510,000
Additional Demand Needed to Support New Supply				
Projects with Estimated Timing	111,200	0	NA	267,649
Less Unlikely Projects	111,200	0	NA	154,789
Resulting Increase in Combined Pleasanton/Dublin Retail Vacancy Rate				
Projects with Estimated Timing	1.2%	0.0%	NA	2.9%
Less Unlikely Projects	1.2%	0.0%	NA	1.7%

Source: Exhibit 35.
(1) Includes retail space anticipated to attract demand from the market area.

By the time Project Full Buildout occurs, there will continue to be insufficient new market area demand to absorb all the cumulative projects with known development timeframes. Similar to the Phase I timing analysis, however, this insufficient demand is estimated to be relatively low. Inclusive of the cumulative project anticipated to be unlikely to be developed as retail, this demand shortfall comprises an estimated 267,650 square feet. Excluding the unlikely development project reduces this figure to 154,800 square feet. Thus, the market area retail base vacancy rate is estimated to increase by 1.7% to 2.9% by Full Buildout pursuant to the cumulative retail development.

The degree to which these percentage increases will be significant to the market will depend upon the prevailing market conditions at the time of Full Buildout. While these conditions cannot be predicted, current conditions suggest that the projected increases in vacancy attributable to the cumulative projects at Full Buildout will not be detrimental to the commercial retail market, and that the market would continue to operate within healthy parameters. This is also the case taking into consideration historical retail vacancy trends, as discussed in the study chapter addressing urban decay (see Chapter IX. CEQA Urban Decay Determination). Therefore, ALH Economics concludes that the cumulative projects, inclusive of the Johnson Drive EDZ Project, are unlikely to result in negative impacts contributing to the potential for urban decay to occur in the market area.

VIII. HOTEL ANALYSIS

CONTEXT FOR JOHNSON DRIVE EDZ PLANNED HOTEL

The Johnson Drive EDZ has the potential for a 150- to 231-room hotel. There are 15 existing hotels in Pleasanton and Dublin that participate in hotel industry surveys, with a total of 2,297 rooms.[17] The Project's hotel would increase the existing rooms supply by 6% to 9%. The nearest hotel to the Johnson Drive EDZ Project site is located on Johnson Drive, approximately 0.5 miles away. This is an upscale hotel, with one of the three highest room rates in the Pleasanton and Dublin area, with all other hotels located over 1.0 miles away (see Exhibit 36). The distribution of the hotels is mapped in Exhibit 37.

The fiscal impact analysis conducted for the entire Johnson Drive EDZ in February 2015 assumed the area's hotel would comprise a limited-service hotel.[18] The study assumed there would be sufficient demand for the hotel from business and resident demand segments and priced the hotel for analytical purposes at $125 a night with an average occupancy rate of 75%.[19] For the purpose of this study the City of Pleasanton assumes the Project's hotel may have a more full-service orientation, with a potential focus on serving business travelers.

ALH Economics conducted analysis of hotel demand relevant to the Project's potential hotel. The analysis is based upon growing out the met demand at existing Pleasanton and Dublin hotels pursuant to employment growth projections, assuming economic growth is a relative generator of demand. Because a CEQA urban decay analysis must also look at cumulative impacts, there is additional analysis comparing the projected demand for hotel rooms in Pleasanton and Dublin to the supply of other planned hotels. This study chapter closes with an assessment of the Project's potential impact on existing hotels and hence the existing physical hotel stock.

BASELINE HOTEL CONDITIONS

Existing Supply of Pleasanton and Dublin Hotels

The 15 existing hotels in Pleasanton and Dublin were identified through internet research and review of a list of hotels maintained by Smith Travel Research, a company that tracks supply and demand data for the hotel industry and provides market share analysis. ALH Economics reviewed a list of hotels throughout the Tri-Valley area that participate in Smith Travel Research's trend analysis, which includes operating trends such as rooms, average daily room rate, demand, supply (measured by rooms available per period), and revenue, among other characteristics. ALH Economics then researched room rates for the listed hotels. From the larger set of Tri Valley hotels ALH Economics determined that hotels in Pleasanton and Dublin were

[17] Includes hotels that participate in trend analysis conducted by Smith Travel Research. Therefore, not all hotels are included. For example, the inventory does not include downtown Pleasanton's Rose Hotel with 38 rooms (considered an Upper Upscale Class hotel by Smith Travel Research) or the Pleasanton's Tri Valley Inn & Suites Economy Class hotel on Santa Rita Road with 34 rooms.
[18] "Draft Summary – Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton," February 5, 2015, Brion & Associates, page 2.
[19] Ibid, page 2 and Table A-5.

most relevant to the market best served by the Project's hotel given its location and local economic dynamics.

Smith Travel Research classifies the existing Pleasanton and Dublin hotels into five classes of hotel, including economy, midscale, upper midscale, upscale, and upper upscale. Overall there are 2,297 rooms distributed among the 15 hotels (see Exhibit 36). Approximately 75% of the hotels are located in Pleasanton, with 25% in Dublin. The room count generally parallels these percentages. Among the hotels with known opening dates, approximately half opened prior to the 1990s, another six opened in the 1990s, and the newest hotel, the economy class Extended Stay America Dublin Hacienda Drive opened in 2000. The upscale hotels were built in the 1980s and 1990s, with the most expensive hotel, the Marriot Pleasanton, built in 1986. Notably, no new hotels have been added to this market since 2000, comprising a 16-year gap. This is the longest gap in the area's rate of hotel development.

ALH Economics conducted field reconnaissance in February 2016 to examine the physical condition of the existing hotels. All of the existing hotels were found to be in good general repair, with attractive physical conditions and no signs of urban decay or deterioration, such as litter, graffiti, weeds or rubbish. Photographs demonstrating existing conditions for all of the identified hotel properties are maintained in the ALH Economics project files.

Historic and Current Hotel Performance

Smith Travel Research provided a summary report of the performance of the 15 existing competitive hotels. This included aggregate performance data from 2009 through 2015. These data are presented in Exhibit 38. As noted in this exhibit, the average number of rooms available per year changed nominally over time, dropping from 2,312 in 2009 to 2,297 in 2015. The number of rooms sometimes changed on a monthly basis, hence the minor vacillation by year.

The Smith Travel research data also include a supply estimate, which reflects the summation of the number of rooms available per month times the number of days in the period. This is effectively a measure of the number of room nights available among the competitive supply throughout the year. Thus, in 2015, there were a total of 838,405 room nights available among the 15 hotels.

Smith Travel Research also measures demand, which is based on occupancy reported by the participating hotels. As the data in Exhibit 38 indicate, annual demand rose consistent from 2009 onward, despite the tail end of the Great Recession. This increasing demand corresponds with increasing annual occupancy rates, which changed from a low of 56% in 2009 to 81% in 2015. This 81% occupancy rate comprises the baseline for analysis of the Project. Notably, however, a hotel occupancy rate of 75% is generally considered an industry standard stabilized occupancy rate. Further, this is the rate assumed in the Brion & Associates fiscal impact study.

Over the 2009 through 2015 time period, the rate of increase in demand was lumpy, with a significant 16.5% increase from 2009 to 2010, slowing to a nominal 0.4% rate from 2013 to 2014 from 2011 to 2012, but then increasing thereafter, including an 11% increase from 2013 to 2014. Overall, hotel demand grew on annual average of 6.3% percent since 2009, and a slightly lower 4.3% from 2010 onward. These data clearly indicate that hotel demand in Pleasanton and Dublin is trending upward. Since the number of rooms effectively stayed

relatively constant from 2000 onward, the increasing demand also translated into higher occupancy rates.

PROJECT HOTEL AND CUMULATIVE HOTEL IMPACTS

Projected Hotel Demand

ALH Economics developed projections for hotel demand applicable to the existing supply based upon an economic growth projection range. The purpose of these projections was to prepare estimates of aggregate hotel occupancy rates following the Project's addition to the supply. The premise is that if hotel occupancy drops below a level considered unhealthy for the hospitality industry, then there could be some negative impacts on the market, which could raise concerns about the Project contributing to prolonged economic impacts and urban decay. Alternatively, if hotel occupancy rates are estimated to remain the same as the current baseline, or improve, then the Project would not be expected to contribute to urban decay.

ALH Economics updated the supply of existing hotel rooms to include the Project's hotel entering the market in 2018, comprising part of the Project's Phase I development. The analysis was conducted using two hotel size options – 150 rooms and 231 rooms. Thus, Project introduction would increase the supply of rooms to 2,528 for Option 1 (150 rooms) and the annual supply of room nights to 893,155. For Option 2 (231 rooms) the supply of rooms would increase to 2,528 and the annual supply of room nights to 922,720. Information about the changed number of rooms and annual supply of rooms is reflected in Exhibit 39, which projects future hotel supply and demand trends. The projection is extended to 2028 to depict projected supply and demand conditions consistent with Project buildout.

ALH Economics prepared a demand trend based upon blended employment growth trends for Pleasanton and Dublin. These trends are presented in Exhibit 40, and summarized in Table 15, and reflect a 2.1% employment growth rate from 2015-2020 and 0.6% growth rate from 2020 to 2030. These growth trends are based upon Association of Bay Area Government's employment projections, prepared in 2013.

Table 15. Projected Annual Growth Rate
Cities of Pleasanton and Dublin

	Compound Annual Growth Rate		
Period	Pleasanton	Dublin	Total
2015-2020	1.5%	3.9%	2.1%
2020-2025	0.4%	1.2%	0.6%
2025-2030	0.4%	1.3%	0.6%

Source: Exhibit 40.

Johnson Drive EDZ Hotel Impact

The projected annual estimated occupancy rates by year are also depicted in Exhibit 39, and summarized I Table 16 on the following page. As these figures indicate, by 2018, the Project's estimated year of market entry, annual average occupancy among the existing hotels, including the Project, is estimated to range from 79% to 81%, depending upon the Project's room count.

This range is projected to increase to 85% to 88% by 2028, the Project's assumed buildout year. The projected rate in 2018 for the Option 2 hotel with 230 rooms of 79% is below the 2015 stabilized rate. However, this projected rate continues to be above the industry standard stabilized rate. The buildout year 2028 rates reflect enhanced market performance relative to the baseline rate of 81% in 2015.

Table 16. Historic and Projected Occupancy
Pleasanton/Dublin Hotels and Project

	Annual Occupancy (1)		
Year	Option 1		Option 2
2009		56%	
2010		66%	
2011		71%	
2012		74%	
2013		77%	
2014		77%	
2015		81%	
2016		83%	
2017		85%	
2018	81%	to	79%
2019	83%	to	81%
2020	84%	to	81%
2021	84%	to	82%
2022	85%	to	82%
2023	85%	to	83%
2024	86%	to	83%
2025	86%	to	84%
2026	87%	to	84%
2027	88%	to	85%
2028	88%	to	85%

Sources: Exhibits 38 and 39.

Note: Projected occupancy below the dotted line.
(1) Option 1 reflects 150 rooms and Option 2 reflects 231 rooms in the Project hotel.

The analysis indicates that hotel occupancy rates initially following the assumed market entry of the Project's hotel are projected to be comparable to the high occupancy rate noted in 2015, or slightly below this rate but still above the industry standard stabilized 75% occupancy rate. Occupancy is only projected to increase thereafter, including the occupancy rate for the larger Option 2 hotel returning to the 2015 level by 2021, or three years following introduction of the Project hotel. Based on this finding, ALH Economics concludes that the Project's hotel operations are not anticipated to reduce or impact hotel occupancy to the extent that any hotels would significantly falter and operations would cease. Thus, no existing hotels are anticipated to close as a result of the Project's development and operations. Moreover, the occupancy impacts are relatively minor and short-term, with occupancy rates continually increasing each year after the assumed opening of the Project.

Cumulative Hotel Impacts

To conduct a cumulative analysis ALH Economics researched information about other planned hotel projects in Pleasanton and Dublin. The research findings about the planned supply are presented in Exhibit 41. These results provide information on two planned Dublin hotel projects, comprising a 122-room Aloft Hotel at Grafton Plaza and a 75-room hotel at Project Clover accompanying the anticipated IKEA store. As of February 2016 the Aloft Hotel project was in Planning review with the City of Dublin, and was expected to be heard by the Dublin Planning Commission in February or March 2016. Based upon the project's entitlements status ALH Economics assumes the hotel could open as soon as 2017 or 2018, either just prior to or relatively concurrent with the Project. The review date for the Project Clover hotel is not known but the project as a whole is anticipated to be completed by sometime in 2018.

Similar to the analysis for just the Project, ALH Economics prepared a future projection of hotel supply and demand and then examined the occupancy impacts pursuant to the addition of the planned Grafton Plaza hotel project. This analysis is presented in Exhibit 42 and summarized in Table 17. For analytic purposes, the Aloft Hotel was conservatively added into the supply in 2017, the Project Clover hotel was added in 2018, and the Project hotel continues to be added to supply in 2018.

Table 17. Historic and Projected Occupancy
Pleasanton/Dublin Hotels and Cumulative Projects

Note: Projected occupancy below the dotted line.
(1) Option 1 reflects 150 rooms and Option 2 reflects 231 rooms in the Project hotel.

The near term results after the addition of the new Grafton Plaza hotel in 2017 indicates that hotel occupancy is projected to decrease to 81%, comprising stability with the 81% rate noted in 2015. When the Project Clover and Johnson Drive EDZ hotels are further added to supply in 2018 the occupancy rate is projected to decrease to 73% to 75%, depending upon the Project hotel option. These projected rates are close to or above industry standard levels, and exceed levels achieved by the market as recently as 2011 and 2012. Occupancy rates are then projected to recover thereafter, reaching up to 80% by 2025 for the Project's lower room count Option 1 and 78% for the higher room count Option 2. Regardless of option, the results indicate that hotel occupancy in the Pleasanton and Dublin market is generally anticipated to remain close to or above 75% following the cumulative impacts of the planned Grafton Plaza hotel, Project Clover hotel, and the Project. Thus, market performance is anticipated to remain close to or above industry standard levels reflective of a healthy hotel market.

JOHNSON DRIVE EDZ PROJECT AND CUMULATIVE HOTEL PROJECTS IMPACTS CONCLUSION

The preceding analysis for the Project hotel indicates that occupancy impacts on the existing base of hotels will likely be limited, and that existing hotels will continue to be able to perform close to or above the industry standard occupancy rate of 75%. This finding also pertains to the cumulative impact scenario including the addition of a 122-room hotel in Dublin one year prior to the Project's assumed development and a 75-room hotel the same year as the Project's hotel. Based on these findings, ALH Economics concludes that existing hotels will not be impacted by the Project, individually or cumulatively, to the point that hotel closure is a potential risk. The CEQA urban decay implications of this finding are presented in the following chapter, Chapter IX. CEQA Urban Decay Determination.

IX. CEQA URBAN DECAY DETERMINATION

The purpose of this chapter is to assess the degree to which development of the Johnson Drive EDZ Project would or would not contribute to or cause urban decay pursuant to the economic impact analysis findings. This includes impacts associated with the Project combined with other cumulative planned retail and hotel development. This chapter discusses the definition of urban decay, the study's approach to determining urban decay potential, and ALH Economics' urban decay determination.

STUDY DEFINITION OF URBAN DECAY

For the purpose of this analysis, urban decay is defined as, among other characteristics, visible symptoms of physical deterioration that invite vandalism, loitering, and graffiti that is caused by a downward spiral of business closures and long term vacancies. This physical deterioration[20] to properties or structures is so prevalent, substantial, and lasting for a significant period of time that it impairs the proper utilization of the properties and structures, and the health, safety, and welfare of the surrounding community.

APPROACH TO DETERMINING URBAN DECAY POTENTIAL

ALH Economics engaged in several tasks to assess the probability of urban decay ensuing from Project development and the identified cumulative projects. These tasks directly result from the economic impact analysis findings regarding potential store impacts pursuant to prospective store sales losses. As a result, the urban decay determination revolved around assessing the potential for closed retail store spaces, if any, to either (a) remain vacant for a prolonged period of time such that they contribute to the multitude of causes that could eventually lead to urban decay, or (b) be leased to other retailers within a reasonable marketing period. Similar considerations were made regarding prospective hotel development as well.

The purpose of this research was to determine if sufficient retailer demand exists to absorb vacated space in the event existing retailers close due to any negative economic impacts of the Project and the development of other planned retail, as well as parallel hotel analysis. An additional purpose was to assess the potential for long-term vacancies to devolve into urban decay. ALH Economics conducted field research and reviewed third party resources to determine the commercial health of the market area.

THE CURRENT ENVIRONMENT

ALH Economics conducted fieldwork throughout portions of the City of Pleasanton and Dublin. The purpose of this fieldwork was to perform reconnaissance of the Project site, examine the physical condition of major shopping centers, commercial shopping corridors, and hotels, and identify existing retail vacancies and assess their condition and appearance. These personal observations are complemented by historical and current retail and hotel market performance

[20] The manifestations of urban decay include such visible conditions as plywood-boarded doors and windows, parked trucks and long term unauthorized use of the properties and parking lots, graffiti, and other building defacement, dumping of refuse on site, overturned dumpsters, broken parking barriers, broken glass littering the site, dead trees and shrubbery together with weeds, lack of building maintenance, homeless encampments, and unsightly and dilapidated fencing.

data, demonstrating the underlying strength or weakness of the local commercial retail and lodging markets.

Retail Market Statistics

Historically, Pleasanton has maintained a healthy retail market sector, while Dublin has experienced more fluctuations. Historical trend data in Exhibits 43 and 44 present quarterly vacancy, absorption, and new construction trends in Pleasanton and Dublin, respectively, beginning 2nd quarter 2006. Select 4th quarter 2015 market statistics are summarized in Table 18. This table indicates that the retail inventory totals 5.2 million square feet in Pleasanton and a smaller 4.0 million square feet in Dublin.

As summarized in Table 18, as of 4th quarter 2015, Pleasanton had an overall retail vacancy rate of 2.3%. This rate comprises a relative low in recent years, since hitting a peak of 6.0% in 4th quarter 2012. Prior to that time period the Pleasanton vacancy rate was as low as 1.4% in 1st quarter 2007, which is an exceedingly low vacancy rate. All of these rates, however, indicate an extremely healthy and very stable retail base throughout the city.

In general, retail markets are deemed most healthy when there is some increment of vacancy, at least 5.0%, which allows for market fluidity and growth of existing retailers. Even retail vacancy rates at the 10.0% level are generally considered a reasonably healthy retail market. Thus, the current Pleasanton retail vacancy rate of 2.3% is a very low vacancy rate and indicative of a very strong market.

Table 18. Fourth Quarter 2015 Retail Vacancy and Inventory
Pleasanton and Dublin

City	Vacancy Rate	Retail Inventory	Vacant Sq. Ft.
Pleasanton	2.3%	5,219,542	128,286
Dublin	5.9%	3,986,959	211,861

Sources: Exhibits 43 and 44.

The retail market in Dublin is not as strong as in Pleasanton, but is still operating within healthy parameters. As shown in Exhibit 44, Dublin retail vacancy peaked at 14.7% in the 3rd quarter of 2009, but dropped by 2011 to below 10.0%. Since then, vacancy was lowest in 1st quarter 2015, at 3.9%, which is an extremely low vacancy rate. The vacancy rate as of 4th quarter 2015 was slightly higher at 5.9%, but still relatively low by commercial market standards.

Generally speaking, the 2.3% vacancy rate in Pleasanton and 5.9% vacancy rate in Dublin are indicative of strong to moderate retail markets. This bodes well for the market area with respect to any potential increases in vacancy attributable to potential Project or cumulative project impacts resulting in store closures.

Representative Retail Lease Transactions

Table 19 demonstrates that retail vacancies in Pleasanton and Dublin are finding new tenants. This table summarizes 35 lease transaction in Pleasanton and 44 in Dublin for previously occupied spaces that occurred over the one-year time frame generally from late January 2014 to late January 2015.

In Pleasanton these lease transactions totaled approximately 72,311 square feet of leased space with a relatively small average of 2,066 square feet. The largest lease transaction during this timeframe was 9,694 square feet for Max Muscle Sports Nutrition (the former Iron Horse Nutrition under new ownership). Other lease transactions in Pleasanton during this timeframe included 6,124 square feet for Inklings Coffee & Tea Bar, 2,410 square feet for a fitness facility, 2,500 square feet for Mongolian BBQ, and 1,400 square feet for Academic Plus, a tutoring center.

Table 19. Pleasanton and Dublin Retail Lease Transactions
1/22/15 - 1/22/16

Type	Number of Leases	Total Sq. Ft.	Largest Space	Average Sq. Ft.
Pleasanton	35	72,311	9,694	2,066
Dublin	44	140,267	19,500	3,188

Sources: CoStar; and ALH Urban & Regional Economics.

Over the cited time period there was a greater volume of leasing activity in Dublin, in some part reflecting the higher vacancy rate and thus great supply of available retail spaces. The 44 lease transactions in Dublin totaled 140,267 square feet, with the largest fill vacancy totaling 19,500 square feet occupied by Home Goods. Other representative lease transactions over the time period included 7,200 square feet for Ethan Allen, 5,949 square feet for Sur La Table, and 5,000 square feet for a Pilates studio. There were yet numerous other smaller retail lease transactions, reflected in the overall average lease transaction size of 3,188 square feet.

This strong lease transaction information, paired with the each city's low retail vacancy rate, indicates that Pleasanton and Dublin are attractive retail markets.

Existing Vacancies

ALH Economics conducted fieldwork in Pleasanton and Dublin to assess the condition of existing retail vacancies. A selection of properties was viewed representing a range of vacancies from small to large. As a fieldwork guide ALH Economics assembled a list of existing retail vacancies, which is presented in Exhibit 45. All the properties included on this list highlighted in bold italics were photographed in February 2016 as part of the fieldwork process. These photographs, which demonstrate existing vacant retail conditions, are maintained in the ALH Economics project files along with descriptive notes on each property.

In general, the observed properties all indicate that existing market area vacancies are very well maintained, with no visible signs of urban decay or deterioration. Pleasanton and Dublin contain many small neighborhood-serving retail centers as well as larger community-oriented retail options. Some of these centers are over 30 years of age. Despite their age, these centers have low vacancy rates and are generally well maintained. This includes Mission Plaza, which contains only one small vacancy that is actively being marketed. Some retail centers have been remodeled or rehabilitated in recent years. This includes the Vintage Hills Plaza, which is anchored by a New Leaf Market, and Shamrock Village, which is currently being remodeled.

Many of the centers have no visible vacancies. The Pleasanton Square Shopping Center and Meadow Plaza, amongst others, are 100% occupied. For those centers not 100% occupied, the

properties are well maintained and most vacancies are actively being marketed. An example is at 2803 Hopyard Road, a former Straw Hat Pizza, which is actively being marketed. This property is adjacent to other retail options that are characterized by very low retail vacancy rates. Rose Pavilion, a larger community-oriented retail center in Pleasanton, contains three medium to larger vacancies. Within this center, CVS relocated to a new site within the center, Ethan Allen moved to the newly constructed Persimmon Place in Dublin, and Fresh and Easy Market closed all stores in California. All three of these vacant retail spaces are well maintained and located adjacent to active retail options within the shopping center. During fieldwork observation the center had heavy shopping volume because of the Macy's Furniture store, Ranch 99 Market, and other retail options. Moreover, while vacant for several years, the CVS space, which is owned by CVS, has recently been acquired by the shopping center's owner.

A few of the observed shopping center parking lots show some signs of minor cracking of the pavement. This included Gateway Square and Val Vista Center. This cracking is largely normal wear and tear and minor cracking of pavement is common with older shopping centers. Both centers did not exhibit signs of decay and Val Vista Center is 100% occupied. Some of the older centers are poorly oriented relative to the street, which is not favorable. This includes Valley Plaza; however, despite this center's poor orientation, only two retail vacancies were observed, one which appears to be backfilled by a new Thai restaurant.

The Project's market area is characterized by very few long-term vacancies. One such vacancy is the former Borders bookstore space at Metro 580. This approximately 30,000-square-foot space was vacated in 2011 when Borders went bankrupt. Numerous prospective users negotiated over the space over the years, and reports are that Party City will be relocating to the space soon, opening in early 2016. This will entail Party City's relocation from Dublin. Despite this long-term vacancy, this property has been well-maintained over the years. Since the pool of demand is smaller for larger tenant spaces such as the former Borders bookstore space these spaces can often remain vacant longer than small shop spaces with a great pool of tenant demand. Moreover, negotiations and tenant improvements can also be time consuming for these larger tenant spaces. Thus, longer-term vacancies are not necessarily an indicator of poor commercial market health, and property owners are motivated to maintain the properties in good physical condition to maximize potential tenant interest.

One indicator of urban decay is chronic trash and litter. A small amount of trash was observed in the parking lot of the former Denny's restaurant at 6455 Owens Drive. However, the trash appeared to be mostly fast food containers due to the proximity to nearby fast food restaurants and did not appear to be a chronic problem. Overall, the Pleasanton and Dublin vacancies were found to be well maintained with no visible signs of urban decay, especially with regard to boarded up windows, graffiti, or visible signs of trash.

Retail Backfilling Examples

As demonstration of the potential for backfilling of retail vacancies, including any vacancies that might result from project or cumulative project's sales impacts, ALH Economics compiled a list of examples of backfilled tenants, with a focus on larger tenant spaces backfilled in Pleasanton. The above discussion regarding retail lease transactions demonstrates the ability for smaller retail spaces to be backfilled in the market area.

The representative list of larger backfilled retail vacancies, presented in Exhibit 46, includes 5 examples of backfilled tenant spaces, comprising 136,500 square feet of space. This includes the above-referenced Borders bookstore space. The average space cited totals approximately 27,300 square feet, and period of vacancy for the properties ranged from approximately 1 year to up to 5 years for the Borders space. The distance of these properties from the Project site range from 1.2 miles to 3.8 miles.

The quantity of good-sized retail backfill examples in just Pleasanton is a very strong indicator of the reuse potential of larger retail spaces and the attraction of the market area. The information in Exhibit 46 identifies the current tenant and the prior tenant. Other examples beyond the Borders/Party City transition include CompUSA's closure in 2006 and subsequent backfilling of approximately 17,500 square feet by Smart & Final. The 2010 closure of Nob Hill Grocery's 30,000-square-foot store was later backfilled by Walmart Neighborhood Market. Another example of a new large grocery store tenant includes 99 Ranch Market taking over the 45,000 square feet vacated by Levitz Furniture in 2008 after a two-year vacancy. Finally, in 2011 Fresh & Easy took over an approximate 10,000-square-foot space after Fitness Express closed in 2010. After Fresh & Easy vacated the California market this space again became vacant in 2015; however, Fresh & Easy continues to hold the lease for the space, and thus it is not currently available to the market.

These backfilled retail space examples demonstrate that the market has the ability to backfill retail vacancies, including former grocery store space as well as larger spaces. This is in addition to the high demand demonstrated for smaller retail spaces as well. This information suggests that any retail vacancies that might occur in the Project's market area as a result of Project or cumulative project impacts will be well-maintained during any period of vacancy and will not contribute to conditions of urban decay or deterioration.

REGULATORY CONTROLS

Owners of commercial retail properties are generally financially motivated to maintain property in a manner appropriate to retain existing tenants and attract new retail tenants. This appears to be the case in the Project's market area as evidenced by the overall positive prevailing physical condition of the market area's retail vacancy. If property owners lag, however, and property maintenance begins to show signs of deferred maintenance or other disrepair, both of the market area cities have regulatory controls that can be implemented to avoid the onset of deterioration or decay. A review of these regulations by market area city follows.

City of Pleasanton

City ordinances such as the City of Pleasanton Municipal Code of Ordinances Chapter 9.08 on Litter, Chapter 9.20 on Garbage, Chapter 9.28 on Property Maintenance, Chapter 9.34 on Graffiti Abatement, Chapter 11.44 on Removal of Vehicles from Private Property, and Chapter 20.65 on International Property Maintenance Code require property owners to maintain their properties so as not to create a nuisance by creating a condition that reduces property values and promotes blight and neighborhood deterioration.[21] Chapter 9.28.020 on Unlawful Property Maintenance covers many property nuisances such as, but not limited to, "broken or discarded furniture, household equipment and furnishings or shopping carts when visible from a public street," "Overgrown vegetation visible from a public street likely to harbor rats, vermin

[21] City of Pleasanton, "Municipal Code," http://qcode.us/codes/pleasanton/ (accessed January 2016).

or other nuisances or which obstructs the view of drivers on public streets or private driveways, or which impedes, obstructs or denies pedestrian or other lawful travel on sidewalks, walkways, or other public rights-of-way," "Packing boxes, cardboard boxes, lumber, junk, trash, barrels, drums, salvage materials, or other debris kept on the property for an unreasonable period and visible from a public street," "Buildings which are abandoned, partially destroyed, left in an unreasonable state of partial construction or have been declared substandard or dangerous by the building official," "Buildings with windows containing broken glass or no glass at all, where the window is of a type which normally contains glass, which constitutes a hazard and/or invites trespassers and malicious mischief. Plywood or other material used to cover such window space, if permitted under this code, shall be painted in a color or colors compatible with the remainder of the building," "Building exteriors, walls, fences, driveways, sidewalks, or walkways which are maintained in defective or unsightly condition," and "Maintenance of property out of harmony or conformity with the standards of the neighborhood."[22] The enforcement of these ordinances can help prevent physical deterioration due to any long-term closures of retail spaces.

Pleasanton's Code Enforcement Division is part of the Community Development Department and comprises one Senior Code Enforcement Officer. Code enforcement within the City of Pleasanton is done on a mainly reactive basis through complaints made by the public, with obvious and dangerous enforcement done on a proactive basis.[23] Public complaints can be made through the City's website, through the Mobile Citizen App, and by calling the Code Enforcement Division directly. The process for abating the violation depends on the severity and hazard level of the violation. Typical violations are resolved between seven to 30 days.[24] When a violation occurs the property owner will receive a written notice from the city, and the owner is given a reasonable amount of time, but no less than 15 calendar days, to fix the nuisance, as well as suggested methods for correcting the violation. If nothing is done to correct the violation, an administrative hearing will be held to determine whether or not a violation has occurred. After the administrative hearing, the case will either continue on to City Council or the owner will be given a certain amount of time to correct the violation. If the owner continues to not abate the violation, the City Manager shall cause it to be abated by city employees or by private contract. The costs shall be billed to the owner, as specified in Section 9.28.13 or a lien will be placed on the property.[25] According to the City of Pleasanton, "over 90 percent of all reported problems are resolved on the initial contact by Code Enforcement Officers."[26]

In 2013 the Code Compliance Division opened 532 cases and closed 531, providing a closure rate of 99%; in 2014 561 cases were opened and 552 were resolved, resulting in a closure rate of 98%; and in 2015 517 cases were opened and 476 were resolved, with some carrying over into 2016, providing a closure rate of 99%. The majority of these cases are violations related to property maintenance, signs, encroachments, residential zoning, commercial zoning, business licenses, trailer parking, noise, garbage, and heritage trees. Code Compliances estimates that

[26] City of Pleasanton, "Code Enforcement," http://www.cityofpleasantonca.gov/gov/depts/cd/code/default.asp (accessed February 2016).

65% of cases relate to residential property and 35% relating to commercial property. The majority of commercial property violations comprise sign violations, construction noise violations, business licenses violations, zoning violations, conditions of approval violations, and design review violations. Graffiti violations are handled through the Police Department and given to either the Operations Service Center if located on public property or Code Enforcement if located on private property for abatement and are removed within 10 days after notification.[27]

City of Dublin

City ordinances, such as the City of Dublin Municipal Code of Ordinances Chapter 5.32 on Solid Waste Management, Chapter 5.64 on Property Maintenance, Chapter 5.66 on Maintenance of Foreclosed Residential Properties, Chapter 5.68 on Graffiti, Chapter 5.70 on Weeds and Refuse, and Chapter 6.80 on Abatement of Abandoned Vehicles, require property owners to maintain their properties so as not to create a nuisance by creating a condition that reduces property values and promotes blight and neighborhood deterioration.[28] Enforcement of these ordinances can help prevent physical deterioration due to any long-term closures of retail spaces. Code enforcement in Dublin is managed by the City's Community Development Department and includes one full time Senior Code Enforcement Officer, who primarily enforces the Zoning Ordinance, Residential Property Maintenance Ordinance, Non-Residential Property Maintenance Ordinance, Graffiti Ordinance, and other relevant public nuisance ordinances on occasion. This position is assigned to the Planning Division and reports to the Assistant Community Development Director. In addition, the Building Division is responsible for the enforcement of the California building code and other related City adopted technical codes. The assigned building code enforcement officer reports directly to the Building official.

Code enforcement is done on both a pro-active and complaint basis. Community Development staff work with business owners, residents, outside agencies, and other City departments to resolve any violations. Citizens can report code violations by calling, using the online form, by U.S. mail, or in person.[29] Once a violation has been determined, a written notice is issued to the property owner in person or by mail and the owner is given a reasonable amount of time to abate the nuisance.[30] Most routine violations are resolved within two-three weeks; however, this timeframe varies based on the nature of the violation.[31] According to the Code Enforcement division most violations are resolved after initial contact is made; however, if violations are not corrected, "within a reasonable amount of time, there are a number of additional actions that can be taken by the City to achieve compliance including: mediation, citation, abatement, lien, and/or judicial proceedings."[32]

---

[31] Code Enforcement Department, Senior Code Enforcement Officer, City of Dublin; interview conducted February 2016.

32 City of Dublin, "How Compliance is Achieved," http://dublinca.gov/727/How-Compliance-is-Achieved (accessed February 2016).

Also, according to Municipal Code Chapter 7.52.140:

> If the nuisance is not abated within the time period set forth in the abatement order, the Enforcement Official may cause the nuisance to be abated by city employees or private contract in accordance with appropriate procedures applicable to the city. Absent consent to enter the subject property for the purpose of nuisance abatement, the City Manager shall direct the City Attorney to obtain the necessary judicial authority for entry and abatement purposes. All costs incurred by the city in abating the nuisance shall be chargeable to the property and shall be collected as hereinafter provided.[33]

According to the Senior Code Enforcement Officer the annual closure rate for violations is very high and the most common complaints include unkempt residential front yards, overgrown vegetation and weeds, litter junk debris stored in yards, and inoperable vehicles. The majority of code violation cases occur in the residential districts, comprising a three year average (2013-2015) of 64%, with 36% Commercial code enforcement cases. The majority of commercial cases involve Sign regulation, Temporary Use Permits, Conditions of Approval, and Graffiti abatement.[34]

Summary

During the fieldwork conducted in February 2016 there were limited visible signs of litter, graffiti, weeds, or rubbish associated with existing commercial retail nodes and corridors in the Project's market area. There appear to be isolated examples of cracked parking lot pavement and light trash, but these are not endemic throughout the market area. Instead, vacant commercial retail examined properties were reasonably well-maintained with no significant signs of decay or deterioration. Thus, ALH Economics concludes that existing measures to maintain private commercial property in good condition in the cities of Pleasanton and Dublin are effective and would serve to preclude the potential for urban decay and deterioration in the event any existing area retailers or hotels close following the operations of the Project and any cumulative projects.

POTENTIAL FOR URBAN DECAY RESULTING FROM THE PROJECT

Contributing Causes to Urban Decay

Before considering how the Project and cumulative projects might affect the market and environs, it is useful to focus on what constitutes the *environmental* impact known as urban decay. The leading court case on the subject, *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1204, described the phenomenon as "a chain reaction of store closures and long-term vacancies, ultimately destroying existing neighborhoods and leaving decaying shells in their wake." The court also discussed prior case law that addressed the potential for large retail projects to cause "physical deterioration of [a] downtown area" or "a general deterioration of [a] downtown area." (Id. at pp. 1206, 1207).

33 City of Dublin, "Municipal Code," http://www.codepublishing.com/CA/Dublin/ (accessed February 2016).

34 Code Enforcement Department, Senior Code Enforcement Officer, City of Dublin; interview conducted February 2016.

When looking at the phenomenon of urban decay, it is also helpful to note economic impacts that do not constitute urban decay. For example, a vacant building is not urban decay, even if the building were to be vacant over a relatively long time. Similarly, even a number of empty storefronts would not constitute urban decay. Based on the preceding descriptions regarding urban decay, therefore, ALH Economics' analysis examined whether there was sufficient market demand to support the Project without affecting existing retailers so severely such as to lead to a downward spiral toward decay of the commercial real estate market.

Project and Cumulative Project Vacancy Impacts

The preceding analysis indicated that Phase I development of the Project could result in the closure of an existing grocery store, with the level of sales impact equivalent to approximately 36,000 square feet of food store space. By the time of Full Buildout there are only negligible sales impacts, anticipated to contribute to no store closures. The cumulative projects analysis indicates the potential for up to 111,200 square feet of unmet demand by Phase I, increasing to approximately 154,800 to 267,650 square feet by Full Buildout anticipated in 2028.

Given the size of the combined Pleasanton and Dublin retail base, it would take about 92,500 square feet of incremental vacancy to increase the vacancy rate by 1.0%. Thus, the prospective Phase I Project or cumulative project impacts would raise the combined area vacancy rate by just over 1.0%. The cumulative project impacts by Full Buildout could result in a higher vacancy rate increase, but still relatively low at 1.7% to 2.9%. The combined cities vacancy rate is currently 3.9%.. A 1.7% to 2.9% increase in this vacancy rate would increase the rate to 5.5% to 6.8%. These rates are within the range previously experienced by Pleasanton and Dublin, and within the 5% to 10% range generally deemed sufficient to maintain a healthy retail market, which includes some increment of vacancy to allow for market fluidity and growth of existing retailers. Thus, this potential increment in retail vacancy is not perceived to be detrimental to the real estate sector, and hence the physical environment of the Project's market area. Further, the actual increment in vacancy will be less because as new development occurs the inventory will increase, so the vacancy will be a smaller percentage of the increased base.

In addition to increasing the prevailing vacancy rate by a nominal amount, the market has demonstrated the ability to backfill retail vacancies, including larger vacancies such as might be caused by the closure of a grocery store. The examples presented in Exhibit 46 demonstrate that the market is resilient and that larger scale vacancies can be successfully backfilled. This provides support and evidence to suggest that continued backfilling can occur, without risk the market devolving into urban decay.

Urban Decay Conclusion

In developing a conclusion regarding the potential for urban decay, ALH Economics relied on the definition presented earlier in this chapter, which focused on determining whether or not physical deterioration would likely result from the opening of the Project and other cumulative developments. ALH Economics' conclusion is based on consideration of current market conditions, findings regarding sales and vacancy impacts, and regulatory controls, as summarized below:

> ***Current Market Conditions***: The fieldwork and market research indicated that retail market conditions are moderate to very strong in the market area's

core commercial areas, with low to moderate retail vacancy rates. Retail leasing activity is strong and existing vacancies are well maintained.

Sales and Vacancy Impacts: The findings suggest the Project's Phase I development could result in the closure of one grocery store and that at Full Buildout the cumulative project impacts (including the Project) could result in a modest increase in the market area's vacancy rate, as new market area demand will not be sufficient to support all the competitive retail space. While the grocery store closure is deemed unlikely, due to factors such as the anticipated distribution of impacts and the lack of variety and bulk orientation of goods available at club retail stores, even if the modest amount of vacancy occurs, the resulting vacancy rate increment will be nominal, with the resulting vacancy rate well within the range indicative of a healthy retail market. Moreover, the market's demonstrated retail absorption, including backfilling of larger retail spaces, coupled with the strong to moderately strong market conditions, suggest that vacancies that might occur as a result of the cumulative project impacts would likely be backfilled within a reasonable time and not be characterized by prolonged vacancy.

Even if some sites experience prolonged vacancy because they might be of a size that experiences less demand or they are located in shopping centers with poor visibility or other undesirable characteristics, the prevailing conditions in the market area suggest that these vacancies would be well-maintained and would not devolve into urban decay or deterioration. Moreover, it should be noted that when tenants vacate prior to lease expiration, they continue to be responsible for rent and their share of building operating expenses, such as the Fresh & Easy example in Exhibit 46. While not all tenants would have the wherewithal to continue these payments, national or regional retailers are more likely to have this capability. This is an important consideration because landlords would continue to receive income on these vacated spaces through committed lease payments, which means they would have available financial resources to continue to maintain their properties.

Regulatory Controls: During Project-related fieldwork conducted in February 2016, ALH Economics found there were little-to-no visible signs of litter, graffiti, weeds, or rubbish associated with existing commercial nodes in the Project's market area. Thus, ALH Economics concludes that existing measures to maintain private commercial property in good condition in Pleasanton and Dublin are generally effective and would serve to help preclude the potential for urban decay and deterioration in the event any existing retailers in the market area close following the operations of the Project and other cumulative retail projects.

In conclusion, while some existing stores may experience negative impacts following the addition of the Project, evidence suggests that closed store spaces would not exhibit traditional signs of deterioration and decay, such as graffiti, refuse dumping, and dilapidated fencing. Existing vacant spaces throughout the market area appear well-maintained, including longer-term vacancies. This, plus the recent area leasing activity, indicates that the Project's market area is an inherently appealing retail market. Based upon these findings, ALH Economics

concludes that the Johnson Drive EDZ Project and the identified cumulative projects will not cause or contribute to urban decay.

X. FISCAL IMPACT ANALYSIS

The purpose of this study chapter is to present a net fiscal impact analysis of the Project components included in the economic impact analysis. This includes the new general retail, club retail, and hotel development included in the analysis. The chapter discusses the anticipated City of Pleasanton General Fund revenues anticipated to be generated by the Project, the associated expenditures to service the Project, and the net fiscal impact, both at the completion of Phase I and on an annual recurring basis after buildout. All of the fiscal impact analysis findings are documented in a series of exhibits. These are referenced in the text and include Exhibits 47 through 57. Because the analysis includes two time periods (Phase I and Full Buildout) and two hotel options the findings do not lend themselves to text table presentation.

APPROACH TO THE ANALYSIS

In February 2015 Brion & Associates prepared a draft memorandum pertaining to the Johnson Drive Economic Development Zone for the Project applicant. This memorandum is titled "Draft Summary – Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton," and is dated February 5, 2015. The analysis in this memorandum was prepared for the entire 40-acre area under consideration for designation as an EDZ. The Brion & Associates analysis was prepared for five site project scenarios, which included a mix of club retail, hotel, retail, HQ office, and office space.

ALH Economics was directed to use as much of the Brion & Associates analysis as possible in preparing a fiscal impact analysis specific to the Project included in the economic impact analysis. This pertains to the club retail space, general retail space, and hotel development to be developed above the existing base of retail space. ALH Economics therefore reviewed the Brion & Associates analysis, identified the key assumptions relevant to the Project, and updated select factors pursuant to the passage of time since completion of the Brion & Associates study. The Brion & Associates study was benchmarked to the City of Pleasanton's Fiscal Year 2014/15 Operating Budget. ALH Economics benchmarked the current Project fiscal impact analysis to the Fiscal Year 2015/16 Operating Budget where relevant. Exceptions to this update are noted in the following fiscal impact analysis presentation.

In general, the Brion & Associates analysis is based upon the average cost approach to fiscal impact analysis. In this approach, costs are derived by determining an average cost to provide existing services on a per capita basis for the relevant population served, which is then applied to the comparable population base for the project under study. In this approach revenues are also sometimes calculated on a per capita basis as well, with other revenues estimated based upon a project's anticipated performance or valuation. The ALH Economics analysis parallels the Brion & Associates approach to General Fund revenues and expenditures. Therefore, this current analysis relies upon the Brion & Associates report as a source document. The logic or support for the resulting fiscal impact factors or assumptions can be found in the referenced Brion & Associates report and are not repeated herein except as warranted to support the current analysis.

FISCAL ASSUMPTIONS

The fiscal impact analysis is dependent upon key assumptions and building blocks. These are presented in Exhibits 47 through 50, which include inputs to the analysis. Following is a review of these key assumptions and building blocks.

Project Description, Employment, and Service Population Estimates

Exhibit 47 summarizes the proposed Project development program as reviewed earlier. For analytic purposes, ALH Economics bases the analysis on occupied square feet. As noted there are two hotel options. One option includes 150 rooms (Option 1) and one option includes 231 rooms (Option 2). The employment assumption is sourced to the Brion & Associates study, and includes an estimated 800 square feet per club retail employee, 400 square feet per general retail employee, and 3,000 square feet per hotel employee. For this analysis ALH Economics applies the general retail employment density assumption to occupied square feet. The result includes a range of 226 to 241 employees for Phase I development and an increment of 437 employees to full buildout, for a cumulative total of 663 to 678 employees. These employment estimates provide a foundation for estimating the Project's "service population," which is estimated to range from 113 to 120 for Phase I, an additional 219 to full buildout, and a cumulative total of 332 to 339. These service population estimates comprise one-half the estimated employees, on the assumption that employees do not require the same level of service as residents. This is an industry-standard assumption reflected in the Brion & Associates study and is relevant to the calculation of average cost city expenditures as well as some revenues.

City of Pleasanton Demographic, Employment, and Tax Characteristics

Exhibit 48 contains many of the baseline assumptions and information necessary to generate estimates of City of Pleasanton revenues and expenses applicable to the Project. Unless other cited, these figures all match the Brion & Associates analysis. These include population and employment estimates used to generate the size of the City's existing service population for the purpose of deriving existing average cost expenditures and some per capita revenues. These estimates are the same as included in the Brion & Associates study for 2015 and include a population base of 73,500 and an employment base of 58,520. Based on the assumption that each employee is equivalent to one-half a resident, the City's service population is estimated to total 102,760.

This exhibit also includes key tax-related information unique to Pleasanton, such as property and sales tax rates, vehicle in lieu of property tax revenues, and assessed property valuation, all of which are germane to the fiscal impact analysis as noted in subsequent exhibits. Most relevant is the City's estimated share of the basic 1% property tax rate collected by the County, which is 24.64%. In addition, the exhibit indicates the City's sales tax rate is 1.0% and Transient Occupancy Tax (TOT) is 8% of hotel revenues.

Finally, this exhibit also includes information on the City of Pleasanton's Vehicle in Lieu of Property Tax Revenues, which was updated from the Brion & Associates study to reflect the FY 2015/16 budget. This figure is $5,580,000. This revenue item is generated on the basis of property valuation increases. Toward this end, ALH Economics also updated the City's projected assessed valuation, to also reflect the FY 2015/16 budget, estimated at almost $19.6 billion.

Taxable Project Sales

The City of Pleasanton will receive sales taxes based upon the taxable portion of the Project's sales. This excludes the portion of club retail sales assumed to be made to wholesale consumers with a resale license. It will also exclude taxable sales that might be diverted from existing retailers. The economic impact analysis identified estimates of sales diverted from existing market area retailers, but does not differentiate between retailers in the portion of the market area in the City of Pleasanton or the City of Dublin. To be conservative, this analysis assumes as a worst case scenario that all these sales are diverted from existing Pleasanton retailers as opposed to retailers outside of Pleasanton. This represents a cautious approach because it results in the maximum reduction in the Project's potential taxable retail sales.

The amount of Project sales providing the basis for sales tax for the Project is derived in a series of three exhibits. Exhibit 49 includes the estimate of all taxable sales, regardless of the amount that might be diverted from existing retailers (i.e., excluding wholesale purchases). When gas sales occur, they are fully loaded with all applicable taxes. Thus, ALH Economics assumes that the estimated portion of Gasoline Station sales for the Project includes taxes. Therefore, analysis is presented in Exhibit 50 that estimates the portion of gasoline sales that is the taxable basis, to which the City's 1.0% sales tax rate would be applied to estimate sales tax. Finally, Exhibit 51 presents the estimate of Project-related taxable sales that will comprise net new taxable sales to the City of Pleasanton. This takes into account the earlier Project sales impacts identified at the end of Phase I and at Full Buildout (e.g., no sales impacts are estimated at this time).

The findings in Exhibit 51 result in net new taxable sales estimated to accrue to the City of Pleasanton totaling $94.5 million at the end of Phase I, an additional $69.0 million attributable to the incremental development between 2018 and Full Buildout, and a grand total of $163.5 million per year at Full Buildout, all in 2015 dollars. This Full Buildout figure will likely increase nominally within a year of full completion of the Project as the small increment of sales impact in the Clothing & Clothing Accessories category is absorbed through new demand generated after the Full Buildout date (see Exhibit 30 for the sales impact figure).

Currently, the Johnson Drive EDZ generates limited taxable retail sales, estimated to total $8.3 million in Fiscal Year 2015. This figure was derived by ALH Economics from reported sales tax revenues of $83,432.[35] These taxable retail sales were generated by four businesses. However, for reasons of confidentiality, the City cannot disclose the sales taxes generated by the individual businesses.

Johnson Drive EDZ Project Property Valuation

Exhibit 52 presents the assumptions and conclusions regarding the property valuation of the Project upon the completion of development and the estimated property tax revenues that will accrue to the City of Pleasanton General Fund. The valuation is based on value per square foot assumptions prepared by Brion & Associates. These values are $300 per square foot for club retail, $400 per square foot for general retail, and $300 per square foot for hotel.[36] The

[35] Provided by the City of Pleasanton Finance Department, pursuant to the City's tax consultant, Hinderliter de Llamas.

[36] ALH Economics believes the hotel valuation figure may be low given the current hotel concept. However, for the sake of both consistency and conservatism this fiscal impact analysis continues to assume the $300 per square foot value included in the Brion & Associates analysis.

resulting values are $72.7 to $85.9 million for Phase I development, depending upon hotel option; and $69.9 million for the incremental general retail space built between 2018 and Full Buildout in 2028. Thus, the total Project valuation at Full Buildout is $142.6 to $155.8 million.

As a point of comparison, in 2014 the assessed value of the parcels in the Johnson Drive EDZ totaled $41.7 million.[37] Assuming the value of the properties increased 2% from 2014 to 2015 pursuant to the provisions of Proposition 13, this would place the current value of the properties at about $42.6 million in 2015.

FISCAL REVENUE ESTIMATES

The revenue calculations for the fiscal impact analysis are presented in Exhibits 52 through 55. A summary of these exhibits and their primary purpose follows.

Johnson Drive EDZ Property Taxes

Exhibit 52 also includes estimates of the property taxes that will accrue to the City of Pleasanton's General Fund pursuant to Project development. Based on the estimated valuation and pursuant to the City of Pleasanton's share of property tax revenues, the Project is estimated to generate $179,133 to $211,658 in property taxes at the end of Phase I and $351,450 to $383,975 at Full Buildout.

Pursuant to the estimated existing Johnson Drive EDZ valuation of $42.6 million, ALH Economics estimates that the City of Pleasanton currently receives an estimated $105,000 in annual property taxes.

Tax in Lieu of VLF Estimates

Property Tax in Lieu of Vehicle License Fees (VLF) is derived from the Project's anticipated contribution to increased property valuation throughout the City of Pleasanton. This is the method by which such tax revenues are estimated by the State of California and redistributed to local jurisdictions. This is a state substitute for prior motor vehicle license taxes that were redistributed by the State to municipalities. The results of these calculations presented in Exhibit 53 indicate that the incremental value associated with the Project is estimated to increase the City of Pleasanton's assessed valuation by 0.73% to 0.80% upon Full Buildout. The VLF Revenues associated with this increase range from $20,711 to $24,472 at the completion of Phase I, an additional $19,923 at Full Buildout, for a total of $40,634 to $44,395 for the entire Project at Full Buildout.

Select City of Pleasanton General Fund Revenue Factors

The Brion & Associates study identified a number of per capita revenues applicable to Project employees. These are included in Exhibit 54. The factors under "Daytime Population Factors" exactly match the factors calculated by Brion & Associates. ALH Economics did not adjust these factors based on the more current City of Pleasanton Operating Budget because their derivation involved several steps that were not readily adaptable to a more current budget. Matching these figures to the Brion & Associates analysis is therefore conservative, as it does not adjust for modest increases anticipated between fiscal years. These factors total $72.68 per daytime

[37] Brion & Associates Memorandum, Table A-4.

population, which is equivalent to $36.34 per employee pursuant to the study's approach to estimating service population.

Exhibit 54 also includes "Sales Tax Factors" that pertain to sources other than the Project's taxable retail sales. These include retail sales tax pursuant to employee taxable spending in Pleasanton and anticipated local taxable retail spending by hotel guests. These factors were derived from analysis in the Brion & Associates study, and include $26.38 a year per employee and $0.50 per occupied hotel rom.

Select City of Pleasanton General Fund Revenues

Exhibit 55 presents estimated General Fund revenues associated with sales tax, transient occupancy tax (TOT), and employee-based revenues. All of the revenues factors were presented earlier, such as the Project's estimated taxable sales net new to the City of Pleasanton, the per employee and per occupied hotel room annual sales tax, TOT rate, and the per employee General Fund revenues. The only piece of information new to this exhibit includes the assumptions relevant to the TOT estimate. For this revenue source, the analysis assumes the same $125 hotel room rate assumed in the Brion & Associates study. ALH Economics believes this is conservative given hotel room rates in the Pleasanton and Dublin area as presented in Exhibit 55, but using a conservative room rate results in a conservative estimate of TOT revenues. The analysis further assumes the same 75% occupancy rate assumed by Brion & Associates. Thus, for Option 1's 150 rooms there will be an estimated 41,062.5 occupied room a year, increasing to 63,236.25 for Option 2's 231 rooms.

The revenue estimates in Exhibit 55 include $814,819 in Project-generated retail sales tax at the completion of Phase I, increasing to $1.7 million a year at Full Buildout (this compares to $83,432 in sales taxes generated in Fiscal Year 2015 from existing Johnson Drive EDZ businesses). This is the largest revenue source included in Exhibit 55, followed by TOT taxes of $410,625 to $632,363 a year beginning with the completion of Phase I. All other revenues included in this exhibit are estimated to total approximately $30,000 or less a year, even at Full Buildout.

FISCAL EXPENDITURES ESTIMATES

The Brion & Associates Memorandum calculated fiscal expenditures based upon the average cost methodology. This approach as implemented by Brion & Associates looks at departmental costs, estimates the amount likely to vary with the size of the population served, determines the share likely to be applicable to employment-generated uses, and derives a per employee expenditure estimate. ALH Economics replicated the Brion & Associates analysis using projected City of Pleasanton expenditures from the FY 2015/16 Operating Budget. The sole exception to replicating the Brion & Associates approach pertains to the estimation of Offsetting Revenues. For this column, ALH Economics could not fully replicate the Brion & Associates approach because some matching figures could not be found in the FY 2015/16 Operating Budget. In these cases, ALH Economics calculated the percent offsetting revenues from the Brion & Associates analysis and applied these percentages to the departmental revenues to deduce the offsetting revenue amounts. This is explained and documented in Exhibit 56.

The expenditures analysis documented in Exhibit 56 results in a per employee annual expenditure estimate of $293.63. The comparative figure in the Brion & Associates Memorandum based upon Fiscal Year 2014/15 expenditures is $269.69.

NET FISCAL IMPACT

The results of the Project fiscal impact analysis are presented in Exhibit 57. These findings present the estimated annual revenues and expenditures accruing to the City of Pleasanton's General Fund at completion of Phase I and at Full Buildout of the Project. The results are also presented for the two hotel options. As referenced earlier, the analysis assumes a worst case analysis, in that all diverted taxable sales are diverted from City of Pleasanton retailers. This is conservative in that taxable sales diversions, if they occur, are likely to pertain to retailers throughout the Project's market area.

Summary of Revenues

The fiscal impact findings indicate that on an annual basis, the Project is estimated to generate $1.5 to $1.7 million in gross revenues to the City of Pleasanton at the completion of Phase I, depending upon the hotel room count option. These revenues are projected to increase to $2.5 to $2.7 million upon Full Buildout. The largest General Fund revenue component is retail sales tax estimated at $0.8 million for Phase I and $1.6 million for Full Buildout. All other General Fund revenues are much lower, with property taxes comprising the next largest General Fund revenue source followed by Transient Occupancy taxes. There are likely to be yet additional General Fund revenues generated by the Project, but the most substantial revenue sources are reflected in Exhibit 57.

Summary of Expenditures

The average General Fund expenditures estimated to be attributable to the Project total $66,422 to $70,728 annually at the completion of Phase I and $194,764 to $199,071 annually at the completion of Full Buildout. This reflects the average City of Pleasanton service costs for General Government, Community Development, Operations Services, Community Services, Library, Police, and Fire. These are the estimated average service costs for the Project's estimated employees.

These expenditures estimates do not include any City of Pleasanton cost allocation for the Project's transportation costs. It is possible the City of Pleasanton may be responsible for a portion of the Project's transportation costs. However, the amount of this expenditure is not presently identified and will be ultimately determined by the Pleasanton City Council. Thus, Project expenditures may increase by some as yet unidentified amount.

Net Fiscal Impact Summary

The net result of the Project's fiscal impact at stabilized operations assuming on a worst case basis that all diverted sales are diverted from Pleasanton retailers, is a projected $1.4 to $1.7 million annual contribution to the City of Pleasanton's General Fund at the completion of Phase I. This net revenue estimate increases to $2.1 to $2.3 million annually upon Full Buildout. At full buildout these net fiscal revenues represent an annual contribution equivalent to approximately 2.1% to 2.3% of the City's General Fund expenditures.

As noted above, the Project expenditures analysis does not include any potential City of Pleasanton share of Project-related transportation costs. The expenditure of any such costs will result in a reduction in the Project's estimated annual net fiscal revenues.

Sensitivity Analysis for Reduced Club Retail Sales

The Brion & Associates analysis of the Johnson Drive EDZ included a lower per square foot sales estimate for the Project's club retail space. This figure was $700 per square foot vs. the $1,152 per square foot figure included in the economic impact analysis.[38] Net fiscal impacts results reflecting this lower $700 per square foot club retail sales performance estimate are included in Exhibit 57, pursuant to sensitivity analysis. These results indicate that if the club retail space achieved this lower level of sales performance that the Project's Phase I net fiscal impact would range from $1.1 to $1.4 million. This net fiscal impact would increase to $1.9 to $2.2 million annually upon Full Buildout. Thus, the net fiscal impact results would be equal to approximately 79% to 86% the amount projected with the club retail sales performance benchmarked to Costco's national average performance level.[39]

FISCAL IMPACT LIMITATIONS

The foregoing fiscal impact analysis is intended to give a general sense of the net fiscal impact of the Johnson Drive EDZ Project. The figures are not precise estimates and changes will occur if the revenue and expenditure factors or other assumptions are developed with more precision. Nonetheless, the findings suggest a strong likelihood that the Project will result in a significant net positive fiscal impact to the City's General Fund. However, some limitations to the analysis, listed below, may affect the degree of the Project's estimated net benefit and change the net fiscal impact balance.

General Limitations

- The analysis is benchmarked to estimated stabilized operations. The net impacts during the ramp up period to stabilized operations will vary from the stabilized operations estimate. It may take several years before the full stabilized impacts transpire.

- The analysis may not be inclusive of all revenue and cost estimates. Major categories associated with ongoing revenues and costs are included, but there may be other less significant categories excluded from the analysis.

One-time Revenues and Appropriations

- The fiscal impact analysis does not include one-time fees that may be assessed by the City of Pleasanton. These fees are typically assessed on a cost recovery basis and are thus excluded from the analysis. Other potential fees, such as impact fees, are also excluded as they too are designed to provide a nexus with the services provided.

- Depending upon how construction contracts are structured, there may be the potential for the City of Pleasanton to benefit from construction-related sales and use taxes associated with the construction effort. These revenues are excluded from the analysis but could comprise a strong source of one-time revenues.

---

[38] Brion & Associates Memorandum, Table A-3.

[39] See Exhibit 57, footnote 10 for information on the percentage impact on sales tax revenues assuming the lower club retail sales performance figure.

- Another one-time revenue that could benefit the City of Pleasanton during the construction period includes retail sales tax revenues resulting from construction worker spending in Pleasanton.

Ongoing Revenue and Appropriation Factors

- The analysis does not include any increase in valuation, such that would occur with the maximum 2% allowable increase pursuant to Proposition 13 or that would occur based upon increased valuation upon sale.

- The analysis does not take into account long-term service cost inflation, which may or may not be greater than the estimated rate of inflation.

- The Johnson Drive EDZ Project may trigger the need for additional services not accounted for in this analysis. The costs associated with these services could be meaningful, and could reduce the estimated net positive annual impacts. The likelihood of such additional costs being high, however, is deemed to be low.

In summary, the Johnson Drive EDZ Project net fiscal impact findings estimated above may change as more information and factors are considered. The results, however, suggest a strong likelihood that the Project will result in a significant net positive fiscal impact to the City of Pleasanton's General Fund.

ASSUMPTIONS AND GENERAL LIMITING CONDITIONS

ALH Urban & Regional Economics has made extensive efforts to confirm the accuracy and timeliness of the information contained in this study. Such information was compiled from a variety of sources, including interviews with government officials, review of City and County documents, and other third parties deemed to be reliable. Although ALH Urban & Regional Economics believes all information in this study is correct, it does not warrant the accuracy of such information and assumes no responsibility for inaccuracies in the information by third parties. We have no responsibility to update this report for events and circumstances occurring after the date of this report. Further, no guarantee is made as to the possible effect on development of present or future federal, state or local legislation, including any regarding environmental or ecological matters.

The accompanying projections and analyses are based on estimates and assumptions developed in connection with the study. In turn, these assumptions, and their relation to the projections, were developed using currently available economic data and other relevant information. It is the nature of forecasting, however, that some assumptions may not materialize, and unanticipated events and circumstances may occur. Therefore, actual results achieved during the projection period will likely vary from the projections, and some of the variations may be material to the conclusions of the analysis.

Contractual obligations do not include access to or ownership transfer of any electronic data processing files, programs or models completed directly for or as by-products of this research effort, unless explicitly so agreed as part of the contract.

Sources: Environmental Science Associates (ESA); and ALH Urban & Regional Economics.

(1) Retail allocations for General Retail are based on an estimated equal allocation of space per retail category. Exceptions include the exclusion of Gasoline Sales, Food and Beverage Store sales, and Motor Vehicle & Parts Dealers, as these retail uses are anticipated to be well represented by the Project's Club Retail use. In addition, the Clothing and clothing Accessories and Other Retail categories have a double allocation due to the breadth of retail uses represented by these categories.
(2) Analysis assumes a stabilized retail vacancy rate of 5.%.

Source: ALH Urban & Regional Economics.

(1) See Exhibit 8 for space distribution. Sales are based on stabilized occuppied square feet.
(2) The Motor Vehicles and Parts sales per square foot is estimated by ALH Urban & Regional Economics.
(3) The Home Furnishings and Appliance Stores sales per square foot is based on the average estimated sales for Domestics for 2015, see Exhibit B-1.
(4) The Building Material and Garden Equip. sales per square foot is based on the average estimated sales for Home Improvement for 2015, see Exhibit B-1.
(5) The Food and Beverage Stores sales per square foot is based on the average estimated sales for Supermarkets and Specialty/Organic for 2015, see Exhibit B-1.
(6) The Clothing and Clothing Accessories Stores sales per square foot is based on the average estimated sales for Apparel for 2015, see Exhibit B-1.
(7) The General Merchandise Stores sales per square foot is based on the average estimated sales for Discount Stores and Department Stores for 2015, see Exhibit B-1.
(8) The Food and Drinking Places sales per square foot is based on the average estimated sales for Restaurants Category for 2015, see Exhibit B-1.
(9) The Other Retail sales per square foot is based on the average estimated sales for other retail categories for 2015, see Exhibit B-1.
(10) See Exhibit 5 for space distribution.
(11) The analysis conservatively benchmarks the Project's club retail sales to the Costco sales calculated in Exhibit 6. This is conservative as it maximizes the Project's potential sales impacts. Use of a lower figure would result in lower potential sales impacts.

Sources: Annual Report 2015, Costco Wholesale, Fiscal Year Ended August 30, 2015, pages 8 and 9; and ALH Urban & Regional Economics.

(1) See Exhibit 9.

(2) A portion of Costco sales are made by businesses that later engage in resales of the products purchased from Costco. These sales are considered wholesale purchases, and are exempt from sales tax at the time of purchase. They are also not reported by the State of California Board of Equalization in the same manner as other, more commercial purchases. This is relevant because subsequent analysis reflected in this study's series of exhibits is highly dependent on taxable sales data reported by the State Board of Equalization. Information in Costco investor documents indicates that in 2015 Costco's 10.6 million Business Cardholders (and add-ons) comprised 24% of Costco's 44.6 million paid Costco memberships, including individual and business memberships with add-on cards. Costco provides all paid memberships with an additional free household card, so in 2015 there were a total of 80.1 million cardholders. The business cardholders comprised 13% of these total cardholders. For the sake of the analysis, ALH Urban & Regional Economics assumes that 50% of the business cardholder purchases are made by businesses with resale licenses, and thus comprise tax exempt purchases. However, ALH Economics further assumes that business cardholders with resale licenses spend twice as much as other business cardholders due to their purchase of inventory/merchandise for later resale. Therefore, the analysis assumes that 13% of Pleasanton Costco store sales will be to wholesale customers, i.e., customers whose typical purchases are not reported as retail purchases, and 87% will be to household and business customers that qualify to pay sales tax on taxable items. The exception is gasoline sales, all of which are allocated to retail consumers as all of these sales are assumed to be taxed, and this is the same as a consumer-based taxable retail sales purchase.

(3) Gasoline sales are not assumed to be subject to potential resale, and thus are considered only as retail sales.

(1) Data reflect trips to the Costco store location measured by mobile devices. Measures individual trips, not individual visitors, i.e., a visitor making 5 trips will be counted in the dataset 5 times, not once.
(2) Dotted line reflects approximate natural break in defining primary market area, the geographic area from which the majority of shoppers originate.
(2) Reflects zip codes that are all or mostly encompassed in the Johnson EDZ Project market area, thus includes shoppers who are anticipated to redirect their club retail shopping trips to the Project's club retail component.

Source: ALH Urban & Regional Economics.

(1) This pertains to the share of Project sales anticipated to be generated by households residing in the market area. Sales generated by households or other consumers living outside the market area are not subject to diversion from market area retailers, and thus are not included in the analysis. This also excludes club retail sales made to wholesale customers with resale licenses. See footnote (4) regarding the recaptured sales assumption.

(2) See Exhibit 9 for General Retail sales and Exhibit 10 for Club Retail sales.

(3) ALH Urban & Regional Economics estimates that the majority but not all sales at the Johnson Drive EDZ will be generated by market area consumers, with additional sales attributed to consumers residing outside of the market area. The percentage of sales estimated to be generated by market area residents is estimated as 80% for the General Retail portion of the Project.

(4) The study assumption is that 60% of demand for the Johnson Drive EDZ club retail sales made to retail consumers (vs. wholesale) will be generated by market area residents. This is a lower percentage than for the General Retail because of the distance shoppers are anticipated to travel to shop at a club retail store, pursuant to market area findings documented in the study text regarding the market area draw for two nearby club retail stores, e.g., Costco stores in Danville and Livermore. The study further assumes that of the sales generated by market area residents, 30% of these sales will comprise sales recaptured from other regional club retail stores. The basis for this assumption is also discussed in the study text.

Source: ALH Urban & Regional Economics.

(1) All figures are expressed in 2015 dollars.
(2) The per household spending estimates for the market area were generated by ALH Urban & Regional Economics by taking the estimated average 2015 market area household income figure of $146,232 and multiplying by 25%, utilizing the assumption that 25% of household income is spent on BOE type retail.This figure was then multiplied by the percentages calculated from the ratio of the BOE sales for the State of California. See Exhibit B-5.
(3) Represents per household spending multiplied by the respective household count in Exhibit 18.
(4) Building Materials and Garden Equipment includes hardware stores, plumbing and electrical supplies, paint and wallpaper products, glass stores, lawn and garden equipment, and lumber.
(5) Other Retail Group includes drug stores, electronics, health and personal care, pet supplies, gifts, art goods and novelties, sporting goods, florists, electronics, musical instruments, stationary and books, office and school supplies, second-hand merchandise, and miscellaneous other retail stores.

Motor Vehicle & Parts Dealers	$79,549	$73,363	$81,566	$83,887	$318,365	$318,365
Home Furnishings & Appliances	$18,548	$15,187	$14,907	$19,510	$68,152	$68,152
Building Materials & Garden Equipment	$13,312	$12,913	$15,483	$13,919	$55,627	$55,627
Food & Beverage Stores	$20,736	$14,427	$16,444	$16,205	$67,812	$226,040 (2)
Gasoline Stations	$27,679	$28,142	$32,023	$30,260	$118,104	$118,104
Clothing & Clothing Accessories	$66,629	$43,242	$51,516	$51,758	$213,145	$213,145
General Merchandise Stores	$68,579	$42,583	$49,723	$47,810	$208,695	$278,260 (3)
Food Services & Drinking Places	$42,685	$41,927	$46,792	$47,546	$178,950	$178,950
Other Retail Group	$29,481	$21,572	$25,641	$27,670	$104,364	$132,456 (4)
Total (5)	**$367,198**	**$293,356**	**$334,095**	**$338,565**	**$1,333,214**	**$1,589,099**

Sources: California State Board of Equalization (BOE), "Taxable Sales in California (Sales & Use Tax)" reports, for Fourth Quarter 2013, First Quarter 2014, Second Quarter 2014, and Third Quarter 2014; U.S. Economic Census, "Retail Trade: Subject Series - Product Lines: Product Lines Statistics by Kind of Business for the United States: 2007"; and ALH Urban & Regional Economics.

(1) Taxable sales are pursuant to reporting by the State of California Board of Equalization (BOE).

(2) Sales for Food and Beverage Stores have been adjusted to account for non-taxable sales; only 30.0% of all food store sales are estimated to be taxable.

(3) Sales for General Merchandise Stores have been adjusted to account for non-taxable food sales, since some General Merchandise Store sales include non-taxable food items. ALH Urban & Regional Economics estimates that at least 25% of General Merchandise sales are for grocery items that are also non-taxable. This estimate is based on analysis of the 2007 U.S. Economic Census, which attributes 26% of General Merchandise Stores sales to food.

(4) Sales for Other Retail Group have been adjusted to account for non-taxable drug store sales, since drug store sales are included in the Other Retail Group category. ALH Urban & Regional Economics estimates that 33.0% of drug store sales are taxable, based on discussions with the California BOE and examination of U.S. Census data. In Alameda County, drug store sales in Q4 2013, Q1 2014, Q2 2014, and Q3 2014 represented approximately 13.26% of all Other Retail Group sales. ALH Urban & Regional Economics applied that percentage and then adjusted upward for non-taxable sales.

(5) Totals may not add up due to rounding.

(1) All figures are expressed in 2015 dollars.
(2) The per household spending estimates for the City of Dublin were generated by ALH Urban & Regional Economics by taking the estimated average 2015 area household income figure of $140,220 for 2015 from Nielsen Reports and multiplying by 25%, utilizing the assumption that 25% of household income is spent on BOE type retail.This figure was then multiplied by the percentages calculated from the ratio of the BOE sales for the State of California. See Exhibit B-5.
(3) See Exhibit 26.
(4) Represents per household spending multiplied by the respective household count for Paradise of 16,340.
(5) Building Materials and Garden Equipment includes hardware stores, plumbing and electrical supplies, paint and wallpaper products, glass stores, lawn and garden equipment, and lumber.
(6) Other Retail Group includes drug stores, health and personal care, pet supplies, gifts, art goods and novelties, sporting goods, florists, musical instruments, stationary and books, office and school supplies, second-hand merchandise, and miscellaneous other retail stores.

Identified Planned and Proposed Retail Projects (1)
Project Details and Timing Estimates
Cities of Pleasanton and Dublin
January - March 2016

	Project	Description	Potential Retail Sq. Ft.	Status	Location	Expected Opening / Completion	Driving Distance from Project Site	Percent Sales from Inside the Johnson Drive EDZ Market Area (2)	Percent Market Area Sales (3)	Market Area Competitive Sales Space (4)
Pleasanton										
1	Pacific Pearl/Staples Ranch	This project is approved for a 112,000 square-foot shopping center on approximately 11.5 acres at Staples Ranch. Estimated tenants include a 30,125-square-foot Marina Foods, 15,625 King Wah, 16,333 square feet for restaurants/quick serve, 3,632 square feet for beauty/nail salons & spa services, 1,301 square feet for learning/tutoring services, 1,605 square feet of medical/dental, 1,230 square feet of general retail, with the remaining square footage unknown.	112,000	Approved	Stoneridge Dr and El Charro Rd	Summer 2017	4.8	50%	90%	50,400
2	Vintage Sustainable Mixed-Use Village	This is a mixed-use project with 345 apartment units and 38,781 square feet of retail. The retail tenants are unknown, but the anchor tenant is estimated to be a small grocery (20,400 square feet) or drugstore (14,648 square feet).	38,781	Proposed	3150 Bernal Ave	2016	4.9	95%	95%	35,000
3	CarMax	This project is an automobile dealership consisting of an approximately 11,783-square-foot sales and presentation building, an approximately 45,000-square-foot service building, an approximately 3,930-square-foot quality control building and non-public car wash, vehicle sales display area, and related site improvements at the Auto Mall site at Staples Ranch.	11,783	Under Construction	Staples Ranch Auto Mall Site, Stoneridge Drive	2016	4.8	25%	95%	2,798
4	Essex Site 1	This project is a mixed-use high-density residential/commercial development containing 251 residential units, 4 live/work units, and approximately 5,700 square feet of retail space.	5,700	Under Construction	SE corner of Owens Dr and Willow Rd	Spring 2017	1.8	95%	95%	5,144
5	Chick-fil-A Restaurant	This project includes a 5,399-square-foot Chick-fil-A restaurant with two drive through lanes and related site improvements.	5,399	Under Construction	Johnson Ct	August 2016	1.2	95%	95%	4,873
	Subtotal		***173,663***							***98,215***

Identified Planned and Proposed Retail Projects (1)
Project Details and Timing Estimates
Cities of Pleasanton and Dublin
January - March 2016

	Project	Description	Potential Retail Sq. Ft.	Status	Location	Expected Opening / Completion	Driving Distance from Project Site	Percent Sales from Inside the Johnson Drive EDZ Market Area (2)	Percent Market Area Sales (3)	Market Area Competitive Sales Space (4)
Dublin										
6	Project Clover	This proposed commercial shopping center will be anchored by a 339,000-square-foot IKEA store and also contains four pads with retail, restaurant, and a potential 75-room boutique hotel for a total center square footage up to 430,000 square feet.	430,000	In planning stages	5144 and 5344 Martinelli Way	2018	2.8	10%	80%	34,400
7	Kaiser Medical Center (5)	This project is a medical campus comprising a 950,000-square-foot medical facility and 250,000 square feet of commercial development built over 25 years. The zoning for the project has yet to be approved and the commercial space is extremely conceptual.	250,000	In planning stages	Dublin Blvd between Grafton St and Fallon Rd	Unknown	4.3	50%	80%	100,000
8	The Boulevard/Dublin Crossing	The EIR and Specific Plan for the site allow up to 225,000 square feet of commercial space; however, the developer is leaning toward building only residential and according to a Dublin City Planner the commercial is unlikely.	225,000	Initial entitlements approved November	Bounded by 5th St Arnold Rd, Dublin Blvd, and Scarlett Dr	Unknown	3.2	66%	80%	118,800
9	Fallon Gateway (5)	This project is a partially complete 379,000-square-foot retail center with a completed 146,000-square-foot Target, 9,000-square-foot BJ's Restaurant & Brewhouse, a 55,000-square-foot Dick's Sporting Goods, and other smaller shop spaces. The remaining 140,000 square feet include 3 anchor tenants and shop space. The tenants and timing for the remaining square footage are unknown.	140,000	Approved	Fallon Rd and Dublin Blvd	Unknown	5.1	66%	90%	83,160
10	Grafton Plaza Mixed-Use Development (5)	This is an integrated mixed use project with 115 townhomes, a 122-room Aloft hotel, and a 55,000-square-foot retail center. This project is expected to be heard by the Planning Commission in February/March 2016.	55,000	In planning review	SE corner Grafton Dr and Dublin Blvd	2017 / 2018	4.3	66%	95%	34,485
11	Bay West Mixed Use Project	This is a small mixed-use downtown project with 17,000 square feet of first floor commercial with 314 apartments above.	17,000	Under Construction	Golden Gate Dr and Dublin Blvd	2016	2.3	95%	95%	15,343
12	Sutter Retail	This project is a 2,600-square-foot Starbucks with drive-thru and a 5,400-square-foot retail shop building.	8,000	In planning stages	7080 San Ramon Rd	Unknown	2.6	95%	95%	7,220
	Subtotal		***1,125,000***							***393,408***
		Grand Total	**1,298,663**							**491,623**

Sources: City of Pleasanton Planning Department; City of Pleasanton Memo titled, "Community Development Department Update January 15, 2016"; City of Dublin Planning Department; City of Dublin, "City of Dublin - Commercial and Residential Project List - 11/10/2015"; local news websites; and ALH Urban & Regional Economics.

(1) Includes retail development projects 5,000 square feet or larger with development plans in progress. Projects are generally listed in descending order of size.
(2) The cumulative retail projects are estimated to be competitive with the Johnson Drive EDZ Project to varying degrees, based on project orientation, location, and estimated amount of market area overlap, i.e., portion of sales achieved at the cumulative projects generated by consumers in the Johnson Drive EDZ Project market area. This column presents the project-specific assumptions developed by ALH Urban & Regional Economics.
(3) Reflects the percentage of project sales estimated to be generated by the project's respective market area. For projects less than 100,000 square feet the study assumes this share is 95%. For projects between 100,000 and 200,000 square feet the study assumes this share is 90%. For projects greater than 200,000 square feet the study assumes this share is 80%, which is comparable to the study assumption for the Project's general retail space.
(4) Comprises the project square footage multiplied by the assumed market area overlap and percent of sales generated by market area consumers. Reflects amount of sales space anticipated to be supported by Johnson Drive EDZ Project market area consumers.
(5) Includes projects located near but not in the Johnson Drive EDZ market area.

Cumulative Retail Impacts (1)
2018 and Through Johnson Drive Economic Development Zone (EDZ) Project Buildout in 2028

Supply and Demand Characteristic	Johnson Drive EDZ Retail Development Timing (2) Phase 1 (2015-2018)	Full Buildout (2015-2028)	Unknown (3)	Total
Retail Supply				
Johnson Drive Occupied General Retail Space Supported by the Market Area (4)	3,800	143,668	0	143,668
Johnson Drive Club Retail Space Supported by the Market Area (5)	54,079	54,079	0	54,079
Occupied Cumulative Retail Supported by the Market Area (6)	173,321	173,321	293,721	467,042
Total Cumulative Retail Additions to Supply	231,200	371,068	293,721	664,789
Cumulative Retail Unlikely to be Built (7)	0	0	112,860	112,860
Forecasted Retail Demand				
Market Area Demand (6)	120,000	510,000	NA	510,000
Supply and Demand Findings (8)				
Additional Demand Needed to Support Cumulative Retail	111,200	0	NA	267,649
Additional Demand Needed to Support Cumulative Retail Less Unlikely Projects (7)	111,200	0	NA	154,789
Resulting Increase in Combined Pleasanton/Dublin Retail Vacancy Rate (9)				
All Cumulative Projects	1.2%	0.0%	NA	2.9%
Cumulative Projects Less Unlikely Projects	1.2%	0.0%	NA	1.7%

Source: ALH Urban & Regional Economics.

(1) Considers impacts of Johnson Drive EDZ Project retail as well as other identified market area planned retail development within the timeframe similar to Johnson Drive EDZ.
(2) The phasing figures match the timing of Johnson Drive EDZ retail development. Aggregates figures by phase, so each subsequent phase (or year) includes the supply additions from the prior phase (or years)
(3) Project timing unknown, although some projects could be developed within the 2018 to 2028 time period corresponding with development of the Johnson Drive EDZ planned retail space.
(4) See Exhibit 8 for occupied square footages. These occupied square footages are then multiplied by 80% for general retail to account for demand from within the market area, see Exhibit 15.
(5) The club retail space incorporated in the cumulative analysis is a proxy for the share of store space anticipated to be supported by new market area demand generated by retail consumers.This excludes demand generated by wholesale consumers (i.e., 13%), demand generated by retail consumers from outside the market area (i.e., 33%, and recaptured sales from . area club retail stores generated by existing Project club retail market area consumers (i.e., 30%).The resulting figure of 54,079 was produced as follows: 148,000*(100%-13%)* 60%*(100%-30%) = 54,079.
(6) See Exhibit 33.
(7) The Boulevard/Dublin Crossing project is very unlikely to be retail according to the City of Dublin Planning Department; ALH Urban & Regional Economics included in part of the analysis to be conservative.
(8) Comprises the remaining demand needed to support the Johnson Drive EDZ retail space and cumulative projects.
(9) As noted in subsequent Exhibits 43 and 44, the combined retail base in Pleasanton and Dublin comprises 9,249,180 square feet. These percentages comprise the potential increase in the market area's combined vacancy rate attributable to cumulative project impacts. The combined vacancy rate as of year-end 2015 was 3.9%.

(1) Includes hotels that participate in the Smith Travel Research trend analysis. Therefore, not all hotels are included. For example, this inventory does not include downtown Pleasanton's two hotels - the Rose Hotel with 38 rooms (considered an Upper Upscale Class hotel by Smith Travel Research) and Pleasanton Hotel.
(2) The site location assumed for distance mapping purpose is the intersection of Johnson Drive and Commerce Circle.
(3) Average room rate for a single room with a king-sized bed for 2 adults, free cancellation. No special pricing applied. Internet-based room queries, approximately 3 weeks prior to notice.
(4) The hotel does not offer king-sized beds, the average rate is for a single room with a queen-sized bed.

2014	2,298	838,765	-0.09%	649,010	0.4%	77%
2015	2,297	838,405	-0.04%	682,934	5.2%	81%

Sources: Smith Travel Research, Hotel Trend Report, Pleasanton and Dublin, CA, January 2009 through December 2015, created February 8, 2016; and ALH Urban & Regional Economics.

(1) Includes hotels listed and mapped in Exhibit 36 and Exhibit 37.
(2) Comprises the average number of rooms throughout the calendar year. Derived from Annual Supply figures (i.e., Annual Supply/365 days in a year).
(3) Annual supply is reported by Smith Travel Research. Annual supply is equal to the summation of the number of rooms available per month times the number of days in the period.
(4) Annual demand is reported by Smith Travel Research. See footnote (6) for information about the 2015 estimate.
(5) Annual occupancy comprises annual demand divided by annual supply.

Sources: Smith Travel Research; and ALH Urban & Regional Economics.

(1) Includes existing hotels listed in Exhibit 28 plus the planned Johnson Drive EDZ Project hotel options with 150 rooms (Option 1) and 231 rooms (Option 2).
(2) Comprises annual number of rooms multiplied by 365 days in a year.
(3) Forecasted based on the incremental growth rates identified in Exhibit 40, which collectively comprise 2.1% a year from 2015-2020; and .6% a year from 2020 to 2030.
(4) Annual occupancy comprises annual demand divided by annual supply. Note the existing 2015 baseline occupancy rate is estimated as 81.5%, as reported in Exhibit 38.
(5) Per Exhibit 38 the Smith Travel Research report pertains to 2,297 hotel rooms.
(6) The analysis examines the impact of the planned Johnson Drive EDZ hotel by year 2018. Each option includes the addition of the anticipated number of hotel rooms in that year.

(1) Figures in bold are provided by ABAG.
(2) The interim years of 2018 and 2028, which also constitute timing for Johnson Drive EDZ Project Phase 1 and Full Buildout, respectively, were calculated using the average annual growth rate.

Exhibit 41
Identified Planned and Proposed Hotel Projects (1)
Cities of Pleasanton and Dublin (2)
February 2016

	Project	Description	Potential Net New Hotel Rooms	Status	Location	Expected Opening / Completion
1	Grafton Plaza Mixed-Use Development - Aloft Hotel	This is an integrated mixed use project with 115 townhomes, a 122-room Aloft hotel, and a 55,000-square-foot retail center. This project is expected to be heard by the Planning Commission in February/March 2016.	122	In planning review	SE corner Grafton Dr and Dublin Blvd, Dublin	2017 / 2018
2	Project Clover	This proposed commercial shopping center will be anchored by a 339,000-square-foot IKEA store and also contains four pads with retail, restaurant, and a potential 75-room boutique hotel for a total center square footage up to 430,000 square feet.	75	In planning review	5144 and 5344 Martinelli Way, Dublin	2018
		Total	**197**

Source: ALH Urban & Regional Economics.

(1) See Exhibit 9.
(2) As noted on Exhibit 9, 30% of food sales are anticipated to be taxable.
(3) Gasoline sales to consumers include all applicable taxes. See Exhibit 50 for an estimate of the percentage of gasoline sales that comprises the taxable basis.
(4) See Exhibit 10. Reflects the sales anticipated to be made to retail consumers, not wholesale consumers with a resale license, which are assumed to be sales tax excempt due to purchases made subject to a resale license.

Exhibit 50
Estimated Taxable Basis of Gasoline Sales

Gasoline Sales Price Component	Figure	Measure
Gasoline Sales		
Hypothetical Sale Price per Gallon of Gasoline (1)	$3.00	per gallon
Fuel Taxes		
Federal Fuel Tax (2)	$0.184	tax per gallon
State Fuel Tax (3)	$0.395	tax per gallon
State Underground Storage Tank Fee (4)	$0.140	tax per gallon
State Sales Tax (3)	2.25%	total purchase
Local Fuel Tax (5)	1.00%	total purchase
Taxable Base Sales Price per Gallon estimate for 2013-2014 (6)		
Amount	$2.19	per gallon
Percent of Total Sales	72.9%	total purchase

Sources: Tax Policy Center, "State Motor Fuels Tax Rates, 2013," http://www.taxpolicycenter.org/taxfacts/displayafact.cfm?Docid=606; californiagasprices.com; California State Board of Equalization, Fuel Taxes Division - Tax Rates; California State Board of Equalization, "Tax Rates – Special Taxes and Fees," http://www.boe.ca.gov/sptaxprog/tax_rates_stfd.htm#18.; and ALH Urban & Regional Economics.

(1) This rate is entered as a hypothetical rate for the sole purposes of driving the analysis to deduce the taxable basis of gasoline sales, i.e., the percentage of sales that are taxable.
(2) Federal tax rate per Tax Policy Center for 2013.
(3) Gas prices at the pump are fully loaded with all relevant taxes. To estimate the taxable cost per gallon it is necessary to deduce the taxable base by backing out all applicable taxes. The effective date of the cited taxes is July 1, 2013 according to the State of California Board of Equalization.
(4) State underground storage tank fee per BOE as of January 2014.
(5) See Exhibit 48.
(6) Given the hypothetical sale price per gallon of gasoline, this is the estimated taxable portion less all applicable taxes.

Source: ALH Urban & Regional Economics.

(1) The purpose of this exhibit is to estimate the amount of taxable sales that the Project will attract to Pleasanton net of any potential taxable sales diversions from other Pleasanton retailers. The preceding urban decay analysis looked at the analysis relative to the market area, and not specifically the City of Pleasanton. Thus, the cited Project impacts pertain to the market area as a whole. To be extra conservative, subsequent analysis regarding retail sales tax generation assumes that all the Project impacts are experienced by Pleasanton retailers. This is conservative as the impacts will instead be spread throughout the market area, and not concentrated solely in Pleasanton.
(2) See Exhibit 49. Figures are summed for General Retail and Club Retail.
(3) See Exhibit 28. Food Sales and Gasoline Sales have been adjusted to reflect just the taxable portion (see footnoes 5 and 6).
(4) See Exhibit 30.

Total (2)	$72.68
Total per Employee (3)	$36.34
Sales Tax Factors	
Sales Tax Per Employee (4)	$26.38
Sales Tax Per Occupied Hotel Room (5)	$0.50

Sources: Memorandum, Brion & Associates, "Draft Summary - Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton, February 5, 2015; and ALH Urban & Regional Economics.

(1) These figures comprise the estimates prepared by Brion & Associates. They are presented in Table 4 of the Brion & Associates Memorandum. Some of these figures reflect adjustments that were difficult to track in the City of Pleasanton's FY 2015/16 Operating Budget, thus ALH Urban & Regional Economics conservatively incorporated the Brion & Associates figures into the current analysis. This is conservative as the Brion & Associates analysis reflects Fiscal Year 2014/15 dollars, while the current project analysis is based on Fiscal Year 2015/16 dollars.
(2) This comprises the total per employee General Fund revenue figure applicable to the Project in 2015 dollars.
(3) The Brion & Associates daytime figures pertain to the service population, which includes residents and one-half the population base. Thus, the revenue estimate per employee is equivalent to one-half the daytime estimate. This is reflected in the Brion & Associates analysis.
(4) This figure was deduced by ALH Urban & Regional Economics based upon figures included in Table A-3 in the Brion & Associates Memorandum. For all scenarios presented, ALH Urban & Regional Economics took the "City Employee Sales Tax Revenues" figure divided by the "Estimated Total Employment," to deduce a $26.38 per employee sales tax revenue figure.
(5) This figure was deduced by ALH Urban & Regional Economics based upon figures included in Table A-3 in the Brion & Associates Memorandum. For all scenarios presented, ALH Urban & Regional Economics took the "City Sales Tax from Visitors" and divided it by number of visitors to deduce a $0.50 per visitor sales tax revenue figure. For the purpose of the Brion & Associates analysis, visitors are equal to the number of occupied hotel rooms. ALH Urban & Regional Economics believes this is conservative as the analysis effectively assumes one visitor per hotel room, while hotel room occupancy typically exceeds one guest per room on average.

Exhibit 55
Johnson Drive Economic Development Zone
Select City of Pleasanton General Fund Revenues (1)
City of Pleasanton, FY 2015/16 Dollars

Revenue Source	Phase I	Full Buildout
Sales Tax		
Sales from Retail Businesses (2)	$841,369	$1,634,439
Sales from Employee Spending (3)		
Option 1 (150 rooms)	$5,967	$17,498
Option 2 (231 rooms)	$6,354	$17,885
Sales from Hotel Visitors		
Option 1 (150 rooms)	$20,531	$20,531
Option 2 (231 rooms)	$31,618	$31,618
Transient Occupancy Tax (4)		
Option 1 Hotel	$410,625	$410,625
Option 2 Hotel	$632,363	$632,363
Employee-Based Revenues (5)		
Option 1 (150 rooms)	$8,220	$24,104
Option 2 (231 rooms)	$8,753	$24,637

Source: ALH Urban & Regional Economics.

(1) Includes select revenue categories.
(2) Sales tax of 1.0% from Exhibit 48 is applied to the Project's estimated net taxable retail sales presented in Exhibit 51.
(3) Using the Brion & Associates assumptions, the analysis assumes hotel occupancy at 75%, with spending applied to the occupied room (i.e. annual visitors). Thus, Option 1 with 150 rooms has 41,062.5 occupied rooms a year (or visitors), and Option 2 has 63,236.25 occupied rooms a year (or visitors).
(4) The analysis assumes a nightly room rate of $125. This is the rate included in the Brion & Associates Memorandum. Based upon the room rates presented in Exhibit 36 this is a conservative figure. A more market-based assumption would result in higher estimated transient occupancy taxes.
(5) Reflects the per employee factor of $36.34 derived in Exhibit 54 multiplied by estimated employees.

Police	$27,301,462	4.3%	$1,178,549	$26,122,913	10%	$23,510,622	25%	58,520	$100.44
Fire	$16,941,162	7.8%	$1,313,077	$15,628,085	10%	$14,065,277	25%	58,520	$60.09
Total	$100,742,466	12.9%	$12,844,300	$87,898,166		$71,414,921		58,520	$293.63 (10)

Sources: Memorandum, Brion & Associates, "Draft Summary - Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton, February 5, 2015; "City of Pleasanton, California Operating Budget, FY 2015/16 - FY 2016/17"; and ALH Urban & Regional Economics.

(1) See "City of Pleasanton, California Operating Budget, FY 2015/16 - FY 2016/17," page 36. Total figure may not match source due to rounding.

(2) Except where noted, the offsetting revenues are estimated based upon the figures reported in Table 5a of the Brion & Associates Memorandum. ALH Economics was unsure of the correct more recent budget figures for select Brion & Associates figures in these columns based upon the documentation included in the Brion & Associates Memorandum, and thus calculated the Offsetting Revenues as a percentage of the cited expenditures in the Brion & Associates Memorandum and used the resulting percentages to estimate comparable offsetting revenues for Fiscal Year 2015/16.

(3) Comprises budgeted expenditures less the estimated offsetting revenues.

(4) See Table 5, Brion & Associates Memorandum.

(5) Fiscal impact studies that examine municipal expenditures on an average cost basis, such as this analysis, often assume a portion of City expenditures are fixed and will not vary with a change in the population served. The resulting variable expenditures are then allocated across the relevant population served, which could include just residents, just employees, or the service population, which includes both residents and an allocation for employees. For the purpose of this analysis, and to parallel the cited Brion & Associates analysis, the expenditures presented in this column comprise the expenditures applicable to allocation among the City's variable service population, comprising employees and residents.

(6) See Exhibit 48.

(7) Equal to (Net Variable Costs* Cost allocation to Employment Uses)/Existing Employment Base. This comprises a per employee estimate of the expenditure per city service area.

(8) See "City of Pleasanton, California Operating Budget, FY 2015/16 - FY 2016/17," page 145,.

(9) See "City of Pleasanton, California Operating Budget, FY 2015/16 - FY 2016/17," page 158.

(10) This compares to $269.69 derived by Brion & Associates for FY 2014/15. See Table 5A in the Brion & Associates Memorandum.

Sources: Memorandum, Brion & Associates, "Draft Summary - Johnson Drive EDZ Fiscal Impact Analysis, City of Pleasanton, February 5, 2015; and ALH Urban & Regional Economics.

(1) Includes estimated General Fund revenues less estimated General Fund expenditures.
(2) Includes the most substantial revenues anticipated to accrue to the City of Pleasanton General Fund resulting from the Project's stabilized operations. However, there may be yet additional revenues flowing to the General Fund pursuant to the Project's operations. This analysis also include the revenues and expenditures included in the Brion & Associates February 2015 analysis for the Johnson Drive EDZ.
(3) See Exhibit 52.
(4) See Exhibit 53.
(5) See Exhibit 55.
(6) The estimated service costs per employee were derived in Exhibit 56. These costs were multiplied by the estimated number of Project employees presented in Exhibit 47.
(7) It is possible the City of Pleasanton may be responsible for a portion of the Project's transportation costs, but the amount of this expenditure is not presently identified. Thus, Project expenditures may increase by some as yet unidentified amount.
(8) Comprises revenues less expenditures.
(9) Depending upon whether or not the City funds a portion of the Project's transportation costs, as referenced in footnote (7), the net revenues generated by the Project may be lower than estimated.
(10) The Brion & Associates analysis assumed a lower sales per square foot figure for the club retail space than assumed in the preceding urban decay analysis. This sales figure was $700 per square foot (see Table A-3 in the Brion & Associates Memorandum). At this lesser level of sales performance the amount of sales tax generated by the club retail space would be lower. ALH Economics estimates that the Retail Store Retail Sales Taxes assuming the $700 per square foot sales performance would result in approximately 35% lower retail sales taxes for Hotel Option 1, and 22% lower retail sales taxes for Hotel Option 2. This estimation was determined through sensitivity analysis, and continues to include some assumption for diverted retail sales from existing retailers.

Sources: Association of Bay Area Governments (ABAG), "Population & Households Projections 2013" by census tract; and ALH Urban & Regional Economics.

(1) These figures comprise 90% of the population and household estimates and projections prepared by ABAG for this census tract. This is attributable to most, but not all of the census tract being located in the market area, as some portions of this census tract are closer to other existing club retail locations and thus not anticipated to comprise the market area for the Project. However, observation of satellite imaging indicates that the majority of the population base is located in the portion of the census tract located in the market area. Hence the 90% assumption included in the analysis.
(2) These figures comprise 95% of the population and household estimates and projections prepared by ABAG for this census tract. This is attributable to most, but not all of the census tract being located in the market area, as some portions of this census tract are closer to other existing club retail locations and thus not anticipated to comprise the market area for the Project. However, observation of satellite imaging indicates that the majority of the population base is located in the portion of the census tract located in the market area. Hence the 95% assumption included in the analysis.
(3) These figures comprise 100% of the population and household estimates and projections prepared by ABAG for this census tract. This is attributable to most, but not all of the census tract being located in the market area, as some portions of this census tract are closer to other existing club retail locations and thus not anticipated to comprise the market area for the Project. However, observation of satellite imaging indicates that the majority of the population base is located in the portion of the census tract located in the market area. Hence the 100% assumption included in the analysis.

Exhibit B-5
State of California Board of Equalization Taxable Retail Sales Estimates by Retail Category
2013
(in $000s)

Type of Retailer	Total Taxable Sales (1)	State of California Taxable Sales Adjusted to Total Retail	% of Total
Motor Vehicle & Parts Dealers	$67,986,436	$67,986,436	13.8%
Home Furnishings & Appliances	$25,411,008	$25,411,008	5.2%
Building Materials & Garden Equipment	$29,680,053	$29,680,053	6.0%
Food & Beverage Stores	$25,289,203	$84,297,343 (2)	17.1%
Gasoline Stations	$56,860,585	$56,860,585	11.5%
Clothing & Clothing Accessories	$34,918,036	$34,918,036	7.1%
General Merchandise Stores	$51,431,094	$68,574,792 (3)	13.9%
Food Services & Drinking Places	$62,776,360	$62,776,360	12.8%
Other Retail Group	$48,086,943	$61,813,158 (4)	12.6%
Total (5)	**$402,439,718**	**$492,317,771**	**100%**

Sources: California State Board of Equalization (BOE), "Taxable Sales in California (Sales & Use Tax) during 2013; U.S. Economic Census, "Retail Trade: Subject Series - Product Lines: Product Lines Statistics by Kind of Business for the United States and States: 2007"; and ALH Urban & Regional Economics.

(1) Taxable sales are pursuant to reporting by the BOE.
(2) Sales for Food and Beverage Stores have been adjusted to account for non-taxable sales; only 30.0% of all food store sales are estimated to be taxable.
(3) Sales for General Merchandise Stores have been adjusted to account for non-taxable food sales, since some General Merchandise Store sales include non-taxable food items. ALH Urban & Regional Economics estimates that at least 25% of General Merchandise sales are for grocery items that are also non-taxable. This estimate is based on analysis of the 2007 U.S. Economic Census, which attributes approximately 26% of General Merchandise Stores sales to food.
(4) Sales for Other Retail Group have been adjusted to account for non-taxable drug store sales, since drug store sales are included in the Other Retail Group category. ALH Urban & Regional Economics estimates that 33.0% of drug store sales are taxable, based on discussions with the California BOE and examination of U.S. Census data. In California, drug store sales in 2013 represented approximately 14.06% of all Other Retail Group sales. ALH Urban & Regional Economics applied that percentage and then adjusted upward for non-taxable sales.

(5) Totals may not add up due to rounding.

Exhibit B-6
Household Income Spent on Retail (1)
United States
2013

Characteristic	All Consumer Units	Household Income Range $40,000 to $49,999	$50,000 to $69,999	$70,000 and more
Average HH Income	$63,784	$44,576	$59,101	$131,945
Amount Spent on Retail (2)	$20,555	$17,769	$21,104	$32,771
Percent Spent on Retail (3)	32%	40%	36%	25%

Sources: Table 1202. Income before taxes: Annual expenditure means, shares, standard errors, and coefficient of variation, Consumer Expenditure Survey, 2013, U.S. Bureau of Labor Statistics; and ALH Urban & Regional Economics.

(1) Includes retail categories estimated to be equivalent to the retail sales categories compiled by the State of California, Board of Equalization.
(2) Includes the Consumer Expenditures categories of: food; alcoholic beverages; laundry and cleaning supplies; other household products; household furnishings and equipment; apparel and services; vehicle purchases, cars and trucks, new; vehicle purchases, cars and trucks, used; vehicle purchases, other vehicles; gasoline and motor oil; 1/2 of maintenance and repairs (as a proxy for taxable parts); drugs; medical supplies; audio and visual equipment and services; pets, toys, hobbies, and playground equipment; other entertainment supplies, equipment, and services; personal care products and services; and reading; tobacco products and smoking supplies.
(3) Percentages may be low as some expenditure categories may be conservatively undercounted by ALH Economics.

Sources: California State Board of Equalization (BOE), "Taxable Sales in California" reports, for Fourth Quarter 2013, First Quarter 2014, Second Quarter 2014, and Third Quarter 2014; and ALH Urban & Regional Economics.

(1) The BOE omits certain sales because their publication would result in the disclosure of confidential information; the omitted sales are included in the Other Retail Group sales. The Other Retail Group is calculated by taking the figure given by the BOE and subtracting the new estimated for the categories that had been omitted.
