85-100%	>6	>4	$\geq$ 3	$\geq$ 2	$\geq$ 1

ARTERIAL/NON-STATE ROADWAY ADJUSTMENTS

(alter corresponding volume by the indicated percent)

Lanes	Median	Left Turn Lanes	Adjustment Factors
2 Divided	Yes	Yes	+5%
2 Undivided	No	No	-20%
Multi Undivided	Yes	Yes	-5%
Multi Undivided	No	No	-25%

ONE-WAY FACILITIES

Multiply the corresponding two-directional volumes in this table by 0.6.

G.3-1: TOD CASE STUDY RESEARCH AND APPLICATIONS

The updated Warner Center Specific Plan will have Transit Oriented Development (TOD) as its focus. The development of residential, office and retail uses in close proximity to each other and to transit stations is known to reduce auto use and therefore vehicle miles traveled. A survey was conducted of recent research efforts to quantify the effects of TOD on travel behavior. The purpose of this survey was to identify reasonable assumptions about travel behavior in TODs for use in the transportation analysis of the Warner Center Specific Plan.

Research

Four major research efforts were identified in the past 4 years. The following is a summary of each source.

1) TCRP Report 128 Effects of TOD on Housing, Parking and Travel, 2008

Key Findings:

TOD housing can generate 50% less traffic than conventional housing, based on counts of 17 projects in Washington DC, Portland, New Jersey, Philadelphia and San Francisco.

Relevancy:

None of the projects in the study have the same characteristics as Warner Center. However, most of the projects have lower densities than Warner Center.

2) Comparing Methodologies for Estimating Trip Internalization of Mixed Use Development, 2007

Key Findings:

Internal captures rates can vary from 10-46% depending on density and mix of development.

Relevancy:

When compared to the SCAG Model results used in the analysis of this study, the model projected peak internal capture rates for Warner Center to be:

- 15% for Existing 2008 Conditions;
- 18% for 2035 No Project Conditions; and,
- 29% for 2035 With Project Conditions.

These modeled rates are fall within the range of rates found in the researched study.

3) Quantifying TOD's Ability to Change Travel Behavior, ITE Journal, November 2007

Key Findings:

Percentage increase in transit trips due to project location in TOD: residential, 9%; retail, 20%; office, 13%.

4) Travel Characteristics of Transit-Oriented Development in California, 2004 / The Pasadena Gold Line: Development Strategies, Location Decisions, and Travel Characteristics along a new Rail Line in the Los Angeles Region, 2005

Key Findings:

The following Non-auto mode splits were observed for TODs in California: 24% for retail, 34% for office, and 27% for residential.

Relevancy:

In 2007, Iteris Inc. utilized these rates in the Study of the El Monte Transit Village.

Adjustments were made to account for the difference between Light Rail Transit (LRT) and Bus Rapid Transit (BRT) service to the TOD. The adjusted splits were: 17% for retail, 18% for office, and 27% for residential for the El Monte Transit Village Study.

Application of Findings

Proposed Non Auto Mode Share Adjustments

- 17% for retail, 18% for office, and 27% for residential as based on case studies of existing TOD's in southern California.

Internal Capture Rates

- Research of TOD case studies confirms the WCSP model results to be within reasonable ranges of observed internal capture at TOD's.

High (100%) More than 2/3 of TAZ within 2,000 ft of Orange Line

G.3-4: WARNER CENTER ADDITIONAL TRANSIT SYSTEM ESTIMATES - THROUGH 2035 BUILDOUT

	Metro Orange Line	Local Metro Service	Warner Center Dedicated Circulator	TOTALS
% Share of WC Transit Service	10%	30%	60%	100%
Share of WC Generated PM Peak Hour Revenue Miles	112	337	674	1,123
# Runs	8	43	169	
# Bus Routes	1	5	17	
Avg Speed Operating Speed (mph)	21	15	12.5	
Average Route Length (miles)	16	8	4	
Runs per Hour Per Bus	1.3125	1.875	3.125	
Buses Required Per Route	6	3	2	
<i>Buses for Peak Service (PM Peak)</i>	6	15	34	55
<i>Additional 15 % for Spare Buses</i>	1	3	6	10
Total Buses Purchased	7	18	40	65

Assumptions (See G.3-X):

Total 2035 Ridership Projections = ~8,382 PM Peak Hour Transit Trips

Existing 2008 Model Trips = 2,257

Net Increase in Transit Trips 2008-2035 = 6,738

Assume 6 Riders per Revenue Mile, $67385/6 = 1,123$

Critical Movements Diagram

Diagram illustrating the calculation of V/C Ratio and LOS for a four-way intersection. The intersection is shown with four approaches: NorthBound, SouthBound, EastBound, and WestBound. Each approach has two lanes: A (Adjusted Through/Right Volume) and B (Adjusted Left Volume). The intersection is controlled by a traffic signal with a North arrow pointing up.

Approach	Lane	Volume
NorthBound	A	0
NorthBound	B	0
SouthBound	A	0
SouthBound	B	0
EastBound	A	190
EastBound	B	0
WestBound	A	509
WestBound	B	633

Legend:
 A = Adjusted Through/Right Volume
 B = Adjusted Left Volume
 * = ATSAC Benefit

V/C RATIO	LOS
0.00 - 0.60	A
0.61 - 0.70	B
0.71 - 0.80	C
0.81 - 0.90	D
0.91 - 1.00	E

Results

North/South Critical Movements = A(N/B) + A(S/B)
 West/East Critical Movements = B(W/B) + A(E/B)

V/C = $\frac{0 + 0 + 633 + 190}{1425} = 0.578$ LOS = A

B:

SouthBound

A:

B:

WestBound

A:

B:

NorthBound

A:

B:

A = Adjusted Through/Right Volume

B = Adjusted Left Volume

* = ATSAC Benefit

V/C RATIO	LOS
0.00 - 0.60	A
0.61 - 0.70	B
0.71 - 0.80	C
0.81 - 0.90	D
0.91 - 1.00	E

Results

North/South Critical Movements = A(N/B) + B(S/B)

West/East Critical Movements = A(W/B) + B(E/B)

V/C = $\frac{745 + 9 + 28 + 37}{1500} = 0.546$ LOS = A
