

**APPENDIX C**

**AIR QUALITY MEMORANDUM**

City's emission reduction efforts should coordinate with the state strategies in order to accomplish emission reductions in an efficient and cost-effective manner.

The proposed Plan includes a baseline GHG emissions inventory and recommendations for GHG reduction strategies as a foundation for these efforts. An indicator of the success of these efforts will be a measured reduction in GHG emissions using the measures in the Plan. The Plan is another implementation tool of the General Plan that can be used to guide development in the City by focusing on attaining the various goals and policies of the General Plan as well as the GHG reduction goals.

The Plan achieves the purpose and goals described above by providing: an analysis of GHG emissions and sources attributable to the City; estimates on how those emissions are expected to increase; recommended policies and actions that can reduce GHG emissions to meet state, federal, and international targets.

### **Regional Air Quality Regulations and Standards**

The SDAPCD is the local agency responsible for the administration and enforcement of air quality regulations for the San Diego Air Basin (SDAB), which includes all of San Diego County. The SDAPCD regulates most air pollutant sources, except for motor vehicles, marine vessels, aircraft, and agricultural equipment, which are regulated by the California Air Resources Board (ARB) or Environmental Protection Agency (EPA). State and local government projects, as well as projects proposed by the private sector, are subject to SDAPCD requirements if the sources are regulated by the SDAPCD. Additionally, the SDAPCD, along with the ARB, maintains and operates ambient air quality monitoring stations at numerous locations throughout San Diego County. These stations are used to measure and monitor ambient criteria and toxic air pollutant levels.

The San Diego Association of Governments (SANDAG) is the San Diego region's primary public planning, transportation, and research agency, providing the public forum for regional policy decisions about growth, transportation planning and construction, environmental management, housing, open space, energy, public safety, and binational topics. The SDAPCD and SANDAG are responsible for developing and implementing the clean air plan for attainment and maintenance of the Ambient Air Quality Standards (AAQS) in the SDAB. The San Diego County RAQS were initially adopted in 1991, and are updated on a triennial basis. The Regional Air Quality Strategy (RAQS) were updated in 1995, 1998, 2001, 2004, 2009, and most recently in December 2016 (County of San Diego 2016). The RAQS outline the SDAPCD's plans and control measures designed to attain the State air quality standards for O<sub>3</sub>. The SDAPCD has also developed the SDAB's input to the State Implementation Plan (SIP), which is required under the Clean Air Act (CAA) for pollutants that are designated as being in nonattainment for national air quality standards for the SDAB.

The RAQS rely on information from the ARB and SANDAG, including mobile and area source emissions, as well as information regarding projected growth in the County, to project future emissions and then establish the strategies necessary for the reduction of emissions through regulatory controls. The ARB mobile source emission projections and SANDAG growth projections are based on population and vehicle trends and land use plans developed by the cities and by the

Table A shows that the Plan would decrease all criteria air pollutants emissions from baseline and thus would not exceed the corresponding SDAPCD daily emission thresholds for any criteria pollutants. Therefore, Plan-related long-term air quality impacts would be less than significant.

Source: Compiled by LSA (December 2018).

Note: <sup>1</sup> Assume all particulate matter emissions from off-road equipment are PM<sub>10</sub>.

CO = carbon monoxide

lbs/day = pounds per day

NO<sub>x</sub> = nitrogen oxides

PM<sub>2.5</sub> = particulate matter less than 2.5 microns in size

PM<sub>10</sub> = particulate matter less than 10 microns in size

ROG = reactive organic gas

SCAQMD = South Coast Air Quality Management District

SO<sub>x</sub> = sulfur oxides

### Air Quality Management Plan Consistency

The applicable air quality plans are the SIP and RAQS. As discussed above, the SIP includes strategies and tactics to be used to attain and maintain acceptable air quality in the SDAB. The RAQS is a separate document that contains a list of strategies to maintain acceptable air quality. Consistency with the RAQS is typically determined by two standards. The first standard is whether the proposed project would exceed assumptions contained in the RAQS. The second standard is whether the proposed project would increase the frequency or severity of existing air quality violations, contribute to new violations, or delay the timely attainment of air quality standards or interim reductions as specified in the RAQS.

The RAQS and SIP are intended to address cumulative impacts in the SDAB based on future growth predicted by SANDAG in the 2030 Regional Growth Forecast Update. SANDAG uses growth projections from the local jurisdictions' adopted General Plans; therefore, development consistent with the applicable General Plan would be generally consistent with the growth projections in the air quality plans.
