Project No.: 102-105-101

EXECUTIVE SUMMARY

SJ CityView LLC (CityView) retained Path Forward to conduct a Phase I Environmental Site Assessment (ESA) in conjunction with a financial transaction of the property located at 100 W. San Fernando Street; 170 Park Center Plaza; 110, 130 and 150 Almaden Boulevard; 177 and 185 Park Avenue; and 115 and 125 S. Market Street in San Jose, Santa Clara County, California (subject property of Site). Historical addresses associated with the subject property include 101, 115, 170 and 177 Park Center Plaza, and the approximate historical address ranges of 19 to 196 Vine Street; 10 to 345 W. San Antonio Street; 10 to 179 Orchard Street; 155 to 191 Guadalupe Street; 133 to 242 Park Avenue; 147 to 191 W. Market Street; 142 to 226 W. San Fernando Street; and 101 to 195 Almaden Avenue. These addresses were also researched as part of this assessment.

Path Forward conducted this ESA in conformance with *ASTM Designation: E1527-13 Standard Practice for ESAs: Phase I ESA Process*. The scope of work and the terms and conditions are described in our Proposal Number 102-105-101 dated October 24, 2018. Exceptions and limitations encountered during this ESA are identified in the report.

The approximately 6.9-acre subject property is currently developed with nine office and retail buildings with integrated garage structures, and one small banking kiosk, which are occupied by a variety of retail restaurant, store and office occupants. The southwest building, 170 Park Center Plaza, is unoccupied and was most recently utilized as the Family Courthouse of the Santa Clara County Superior Court.

Path Forward identified obvious subject property uses from the present back to 1884, at which time the subject property was developed with a roadway known as Orchard Street (and later as Almaden Avenue) bisecting the property on a general north to south axis. Uses were primarily residential in 1884, and also included a lumber yard on the north central portion. From the 1880s to the 1950s, the subject property was developed with a variety of residential, commercial and industrial uses, including blacksmiths, a large nursery, gas stations and vehicle repair, a convent and school, a theater, and numerous retail stores. The entire property was vacant land by 1968, after which it was developed with the current structures between 1968 and 1993, except that two small structures in the interior of the plaza were removed in approximately 2006. Since development with the current buildings, subject property uses generally have been consistent with the current occupancy.

This ESA has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs), as defined in Section 1.1, in connection with the subject property, except for the following:

- The subject property had a lengthy history of diverse industrial uses from the 1880s to the 1960s. Historical uses included vehicle fueling and servicing, a laundry business, lumber yard and nursery, and historical blacksmiths, as well as the construction and demolition of numerous structures. It is likely that construction of the current buildings entailed the excavation and removal of soils in several areas to facilitate construction of the subsurface parking garage beneath the majority of the subject property. However, no subsurface investigation is known to have been performed on the subject property, and documentation of historical uses prior to the 1970s is limited. Subsurface features may remain in association with historical uses. Therefore, the lengthy history of industrial uses on the subject property is considered to be a REC.
- The subject property building at 150 Almaden Avenue is equipped with two sumps which operate continuously to discharge groundwater that enters the building's foundation dewatering system to prevent flooding into the lowest level of the parking structure in this portion of the subject property. The groundwater is treated under a National Pollutant Discharge Elimination System (NPDES) permit under the regulatory oversight of the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) due to the presence of contaminants, including tetrachloroethene (PCE), in the influent groundwater as it enters the dewatering system. As part of the system NPDES permit, system influent and effluent are sampled quarterly. PCE concentrations in the water have been consistently below the California and Federal Maximum Contaminant Level (MCL) for drinking water, which is 5 micrograms per liter (µg/L.) The origin of the PCE detected in groundwater is unknown, and records reviewed during this Phase I ESA indicate that the subject property is not considered to be a source of the PCE in groundwater. Based on continuing regulatory oversight of this condition, with the treatment system operating under a permit and concentrations of PCE remaining below drinking water standards, the presence of PCE in groundwater beneath the subject property is a CREC. In addition, based on the detected concentrations of PCE and presence of the subsurface parking structure beneath the subject property, the condition is not considered to present a potential vapor intrusion concern.
- The subject property is equipped with four diesel aboveground storage tank (AST) systems in association with back-up generators; one of the ASTs is located on the rooftop of 150 Almaden Boulevard. The total diesel fuel storage capacity on the subject property is less than 1,000 gallons. In addition, one used oil collection AST containing used food oil/grease associated with restaurant usage at 177 Park Avenue (~3,500-gallon capacity) was observed, and a below-grade used food oil/grease underground storage tank (UST) exists within the sidewalk at 185 Park Avenue (~4,500-gallon capacity) associated with restaurant use. These used food oil/grease containers are routinely pumped out and the waste is transported to off-Site recycling facilities. No indications of spills or releases were noted in the records reviewed. Furthermore, these features were observed during site reconnaissance and were found to include adequate containment systems, and no leaks were evident. Based on the quantity stored,

conditions observed and regulatory status, the use of four diesel ASTs and used food oil/grease AST/UST on the subject property is considered to be *de minimis*.

- The subject property was listed with several removal events for asbestos containing materials (ACMs) and polychlorinated biphenyls (PCBs) consistent with multiple renovation and tenant improvement events indicated in historical Building Department records. In addition, the majority of subject property buildings were developed prior to 1978 and may contain lead-based paint (LBP). The presence of ACMs and PCBs, and potential for LBP in building materials is a business environmental risk but is considered to be a *de minimis* condition. An Asbestos Operations and Management (O&M) plan is reportedly in use for the subject property.

Based on the findings of this Phase I ESA, Path Forward recommends the following:

1. Comply with NPDES permit requirements for continuing operation of the two sumps at 150 Almaden Avenue.
2. Develop a Site Risk Management Plan to manage known and unknown conditions that may be encountered during future redevelopment earthwork activities to assure proper material handling, waste disposal and worker health and safety.
3. Comply with the existing Asbestos O&M plan and all requirements for the proper management of ACMs and LBP in accordance with applicable local, state and federal guidelines/regulations.
4. Review requirements of Federal Spill Prevention, Control, and Countermeasure (SPCC) Regulation 40 CFR Part 112 for applicability to ASTs containing petroleum products and food oil/grease on the subject property and prepare an SPCC Plan for the subject property if one is required.

1.0 INTRODUCTION

SJ CityView LLC (CityView) retained Path Forward to conduct a Phase I Environmental Site Assessment (ESA) in conjunction with a financial transaction of the of the property located at 100 W. San Fernando Street; 170 Park Center Plaza; 110, 130 and 150 Almaden Boulevard; 177 and 185 Park Avenue; and 115 and 125 S. Market Street in San Jose, Santa Clara County, California (subject property of Site). Figure 1 shows the approximate subject property location.

1.1 Purpose

One purpose of this Phase I ESA is to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability. A Phase I ESA is performed to identify recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) in connection with the subject property by performing all appropriate inquiry into subject property ownership and use as well as into uses of adjoining properties and surrounding areas within approximate minimum search distances from the subject property.

ASTM Designation: E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessments Process (ASTM E1527) defines the terms REC, CREC, HREC and de minimis as follows (emphasis in original to indicate formally defined terms):

> **REC** – "The presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any *release* to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis* conditions are not *recognized environmental conditions*."
>
> **CREC** – "A *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls*, or *engineering controls*). A condition considered by the *environmental professional* to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment report*, and as a recognized environmental condition in the conclusions section of the *Phase I Environmental Site Assessment report*."
>
> **HREC** – "A past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the

applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*). Before calling the past release a *historical recognized environmental condition*, the *environmental professional* must determine whether the past *release* is a *recognized environmental condition* at the time the *Phase I Environmental Site Assessment* is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past *release* to be a *recognized environmental condition* at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a *recognized environmental condition*."

De Minimis Condition – "A condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not *recognized environmental conditions* nor *controlled recognized environmental conditions*.

In addition, this ESA addresses the following ASTM E1527 Non-Scope Considerations: asbestos, lead paint, mold, compliance, and wetlands.

1.2 Methodology

Path Forward conducted the Phase I ESA in conformance with ASTM E1527. The scope of work and the terms and conditions are described in our Proposal Number 102-105-101 dated October 24, 2018.

1.3 Limitations

Path Forward obtained information for this ESA from various sources including historical sources, public records, the User, interviews and an environmental database report. For purposes of performing this Phase I ESA, this information is assumed to be correct and complete. Path Forward is not responsible for the quality or content of information from these sources.

Path Forward encountered the following data gaps or limitations in performing this ESA:

- Access was not available to the L3 portion of 185 Park Boulevard or the Verizon Wireless room at 150 Almaden Boulevard; however, this limitation did not impede our ability to perform this Phase I ESA.
- Two reportedly hydraulic elevators were observed in the parking structure in the central portion of the Site. The elevators are out of use and locked. The associated equipment rooms were inaccessible. No information was provided regarding abandonment of the elevators. Based on the age of these features, lack of access and information regarding the elevators is a significant data gap.

- Path Forward identified obvious subject property uses from the present back to 1884, when the subject property developed with a roadway known as Orchard Street (and later as Almaden Avenue), residential structures and a lumber yard. This constitutes data failure because Path Forward did not establish the history of subject property use since 1940 or first development, whichever is earlier. This is not a significant data gap because prior uses were likely similar to or less intensive than those in 1884, which would not present additional concerns. Furthermore, information regarding subject property use prior to 1884 is not considered to be reasonably ascertainable.

The information and opinions rendered in this report are exclusively for use by SJ CityView LLC. Path Forward will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment. The services provided by Path Forward in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

2.0 RECONNAISSANCE

Date of Site Visit:	November 7, 2018
Path Forward Person(s):	Craig Pelletier
Property Escort:	Ms. Julie Garcia (CBRE) Mr. Mark Mullins (Able Services) Mr. Adam Midulla (Able Services)
Inaccessible Areas:	Access was not available to the L3 portion of 185 Park Boulevard, the Verizon Wireless room at 150 Almaden Boulevard, or the elevator equipment rooms for two hydraulic elevators in the central portion of the Site.

The subject property reconnaissance was performed on foot. Adjoining properties were observed from the subject property and from public thoroughfares. Photographs are appended. Figure 2 depicts a site plan.

2.1 Subject Property Use

The approximately 6.9-acre subject property is currently developed with nine office and retail buildings, some with integrated garage structures, and one small banking kiosk, which are occupied by a variety of retail restaurant, store and office occupants. The southwest building, 170 Park Center Plaza, is unoccupied, and was most recently utilized as the Family Courthouse of the Santa Clara County Superior Court.

Utilities are provided to the subject property as follows:

Power: PG&E

Natural Gas: PG&E

Sewer: City of San Jose (Additional information in Section 2.1.4)

Water: San Jose Water Company

2.1.1 Hazardous Substances and Petroleum Products

Path Forward assessed the subject property for indications of the use, storage, or disposal of hazardous substances and petroleum products (e.g., manufacturing activities, drums, containers, stressed vegetation, stains, sheen, and heating/cooling systems). Path Forward observed no such indications, except for materials used for building maintenance, such as shelf-top quantities of paints and household/janitorial chemicals; photo developer and fixer in the retail printing tenant space (185 Park Avenue, Unit 187); cooling water treatment, inhibitors and water biocides; and refrigerant.

2.1.2 Underground Storage Tanks (USTs)

Path Forward assessed the subject property for indications of USTs (*e.g.*, vent piping, dispensing equipment, pavement variations, and fill ports). Path Forward observed no such indications except for an approximate 4,500-gallon used food oil/grease interceptor UST located in the sidewalk in front of 185 Park Avenue. The UST is reportedly double-walled and is associated with the restaurant use at the subject property. According to CBRE and Able Services, the contents of the grease interceptor UST are routinely removed from the subject property by Burr Plumbing in San Jose for appropriate reuse/disposal.

2.1.3 Aboveground Storage Tanks (ASTs)

Path Forward assessed the subject property for indications of ASTs (*e.g.*, pavement bolts, containers, reservoirs, and generators). Path Forward observed no such indications, except for the following:

- 100-gallon diesel AST mounted on the rooftop of 150 Almaden Avenue.
- 150-gallon diesel AST in a maintenance room of 150 Park Avenue.
- 125-gallon diesel AST in a maintenance room of 125 S. Market Street.
- 500-gallon diesel AST in a maintenance room of 125 S. Market Street.

The diesel ASTs are within secondary containment and are associated with emergency generators. The piping to two of the ASTs runs underground to S. Market Street, where the fill port is located along the sidewalk. The piping was replaced in 2007. Diesel fuel is supplied to the ASTs via an off-Site vendor as needed.

In addition, Path Forward observed an approximate 3,500-gallon AST containing used food oil/grease in the subsurface parking garage (to the east of 177 Park Avenue) associated with the

restaurant use at the subject property. This AST is also within secondary containment. According to CBRE and Able Services, the contents of this AST are routinely removed from the subject property by Sacramento Rendering Company for appropriate reuse/disposal.

2.1.4 Liquid Waste

Path Forward assessed the subject property for indications of liquid waste discharge sources (*e.g.*, sumps, drains, clarifiers, pools of liquid, pits, ponds, lagoons, septic systems, wastewater, and storm water). Path Forward observed no such indications, except for:

- Wastewater from building restrooms, sinks, and shower is conveyed to the local sanitary sewer system.
- Stormwater runoff is conveyed through various catch basins to the municipal storm drain system.
- A multi-level underground parking structure beneath 150 Almaden Boulevard includes two sumps that remove groundwater to prevent the garage from flooding. The sumps each have a carbon treatment system to remove low levels of tetrachloroethene (PCE) that is present in the groundwater, prior to discharge into the storm drain. Refer to Section 5.3.5 for additional information.
- An additional sump with a groundwater pump is located in the fire pump room of 125 S. Market Street. We understand that this sump is not operational and is used on an emergency basis.

2.1.5 Solid Waste

Path Forward assessed the subject property for indications of solid waste disposal (*e.g.*, mounding, depressions, fill material, bins, debris, and active human use). Path Forward observed no such indications, except for municipal trash and food wastes. Kitchen-related grease traps are serviced periodically. See Section 2.1.2 and 2.1.3 for further details.

2.1.6 Polychlorinated Biphenyls (PCBs)

Path Forward assessed the subject property for indications of PCBs (e.g., transformers, capacitors, elevators, and lifts). Path Forward observed three transformers on the subject property, located in the sidewalk to the southwest of 185 Park Avenue; to the north of 150 Almaden Boulevard; and in the sidewalk and south of 177 Park Avenue. Path Forward observed no signs of staining or indications of a release associated with these transformers.

The subject property primarily utilizes traction elevators, which do not utilize hydraulic fluid. However, two reportedly hydraulically-operated elevators were observed in the parking structure in the central portion of the Site. The elevators are out of use and locked. They reportedly were used to provide access to the ground level of the CityView plaza. The

associated equipment rooms were inaccessible. No information was provided regarding abandonment of the elevators.

In addition, the vacant courthouse building at 170 Park Avenue contained three hydraulic elevators; two of these elevators were decommissioned recently, and the remaining hydraulic elevator remains operational. Path Forward did not observe significant indications of staining in association with these elevators.

2.1.7 Wells

Path Forward assessed the subject property for indications of supply, irrigation, monitor, injection, dry, abandoned, or other wells (*e.g.*, protruding pipes, cover plates, pumps, small sheds, large water storage containers, and mounded grout). Path Forward observed no such indications, except for those used for the dewatering system (at 150 Almaden Boulevard) and emergency use (in the fire pump room of 125 S. Market Street) as noted above.

2.2 Adjoining Property and Surrounding Area Use

Adjoining property and surrounding area uses are primarily commercial/industrial.

- North: A bank directly adjoining the northeast portion at 121 S. Market Street; W. San Fernando Street to the north followed by: restaurants at 98 S. Almaden Avenue and within the address range of 97 to 167 W. San Fernando Street.
- South: Park Avenue, followed by a hotel at 282 S. Almaden Boulevard and a large museum and civic theater complex at 201 S. Market Street and 180 to 200 Park Avenue.
- East: S. Market Street, followed by a large city park at 194 S. Market Street.
- West: Radio station offices directly adjoining the northwest portion at 190 Park Center Plaza; Almaden Boulevard to the west, followed by office buildings at 11 and 151 Almaden Boulevard, and 321 Park Avenue.

Photographs of the adjoining properties are enclosed.

3.0 USER PROVIDED INFORMATION

ASTM E 1527 defines “user” as the party seeking to use Practice E 1527 to complete an environmental site assessment of the subject property, and in this case, the user is SJ CityView LLC (c/o Jay Paul Company). Mr. Nick Zolintakis of CityView completed a User Questionnaire. According to the questionnaire, the User is unaware of any environmental liens, AULs, or any other environmental issues associated with the subject property, except that the subject property formerly included a dry cleaner, car rental facility, auto / metal salvage and tire reclamation uses. He indicated that groundwater is monitored and treated for PCE (Refer to Section 5.3.5) and provided a previous Phase I ESA (AEI 2016), which is discussed in Section 5.6.

4.0 INTERVIEWS

Craig Pelletier with Path Forward conducted or attempted to conduct interviews at various times in October and November 2018. Unless otherwise noted, interviewed persons were generally forthcoming.

4.1 Current Owner, Operators, Occupants

On November 7, 2018 Path Forward interviewed Ms. Julie Garcia of CBRE, General Manager of CityView Plaza. Ms. Garcia indicated that she has been working at the CityView property since 2012. Ms. Garcia provided information and access regarding existing tenants, current building addresses, and the locations and operations of ASTs, elevators, and the dewatering system.

4.2 Past Owners, Operators, and Occupants

Path Forward did not identify past subject property owners, operators, and occupants for interviews, except that Ms. Garcia has been associated with the subject property longer than the current owners.

4.3 Nearby Property Owners and Occupants

The subject property is not abandoned. Therefore, Path Forward did not interview nearby property owners and occupants.

5.0 RECORDS REVIEW

Path Forward reviewed records pertaining to the subject property. In addition, where warranted and practical, Path Forward reviewed records pertaining to adjoining and nearby properties.

5.1 Physical Setting Sources

5.1.1 Physiography

Path Forward reviewed the United States Geological Survey's (USGS) 2012 7.5-minute Series San Jose West Quadrangle Topographic Map. The ground surface elevation at the subject property is approximately 90 feet above mean sea level (msl), with a gentle slope toward the west. The subject property is located in an urban commercial setting within the Coast Ranges physiographic province of California. The nearest surface water body to the subject property is the Guadalupe River, located approximately 0.15 mile to the west.

5.1.2 Geology

No site-specific investigation reports were found for the subject property during this ESA. Path Forward reviewed *Off-Site Assessment Report, Pacific Bell Telephone Company Facility, 95*

South Almaden Avenue, San Jose, California (Aptim 2018), which describes investigation and remediation that is ongoing on the property nearby to the north of W. San Fernando Street. According to that report, lithology encountered in borings on the property consisted primarily of interbedded sands and silts, consistent with a fluvial depositional environment. A clay layer was encountered at approximately 11 feet bgs and ranged in thickness from approximately 1.5 to 5 feet. See Section 5.1.3 for additional information.

5.1.3 Hydrology

No site-specific groundwater information was found during this ESA for the subject property, except that groundwater is known to continually enter the building foundation dewatering system at 150 Almaden Avenue. Groundwater at 95 South Almaden Avenue occurs at depths of 14 to 16 feet bgs and flows to the northeast (Aptim 2018).

Based on a review of a cross-section obtained on GeoTracker, there appear to be three water-bearing zones beneath the Site vicinity that consist of sands and gravels separated by layers of fine-grained sediments. The A-Aquifer occurs approximately 15 to 30 feet bgs; the B-Aquifer extends approximately 35 to 90 feet bgs; and the deeper C-Aquifer is encountered below a depth of 100 feet bgs (Lewis Brisbois 2017, Appendix D).

5.2 Historical Use Information

The following table summarizes historical uses and occupancies of the subject property as identified by this ESA. Details of reviewed records are discussed below.

Years	Development/Use
1884	Residential development and a roadway (Orchard Street) running north/south; lumber yard on the southeast corner of W. San Fernando and Orchard Street.
1891	Additional residential development and a hotel and saloon on the northwest corner of Park Avenue and Orchard Street. Horticultural hall/theater on northeast corner; lumber yard across the middle, east/west.
1915	Higher density residential; stores; French laundry with water tank and wash house (166 W. San Fernando); sign painter; vacant theater (former horticultural hall); nursery; wagon house; corral and stables; sausage factory and smokehouse with apparent oil storage; two blacksmiths.
1930s	From city directories: Plumbing supply, warehouse, auto electric service, French laundry (Madame Costere Laundry), coal dealer, nursery, residences, realty office, gas station.
1939	Residential and one large building on western central side (likely St. Elizabeth's). Larger commercial or industrial structures on a general southwest to northeast axis on the east central portion, with one building facing the bisecting roadway, and the others extending eastward. Commercial or industrial buildings on the northeast corner.
1940s	From city directories: Residences, gas stations, auto repair businesses, Madame Costere Laundry, vehicle repair and garage listings, nursery, realty office.

Years	Development/Use
1948	Additional commercial or industrial development along Orchard and W. San Fernando Street. Large surface parking lot on the north central portion; gas station on the southeast corner. Mostly cleared central east/west axis, providing access from the bisecting roadway, except for a commercial complex on the eastern side of the property along S. Market Street.
1950	Residences; St. Elizabeth's Convent, kindergarten and sewing school; hotel / furnished rooms; gas station with service on southeast corner (101 Park); furniture and other stores; French laundry. The aerial photograph depicts a new large building on the former north central parking lot.
1950s	From city directories: Residential, gas stations, auto service, truck rental, Madame Costere Laundry, City of SJ Traffic Analysis City Traffic Squad Room, police garage, painter, contractors, accountant, realty.
1956	Expansion of St. Elizabeth's (northwest). Southwest corner cleared and vacant.
1961	Identified as City Plaza. Bisecting road was named Almaden Avenue.
1963, 1966	Three large commercial buildings and a surface parking lot along W. San Fernando Street; two mid-size commercial buildings along S. Market Street; several small commercial buildings with rear surface parking on the southeast corner (unclear if the gas station remained); cluster of residential buildings on the southern portion, west and east of the bisecting road. Vacant land at site of former commercial building on east side of bisecting road. Some demolitions west of the bisecting roadway; southwest of the property corner remains vacant.
1968	Vacant land; bisecting road demolished.
1969	Redeveloped as Park Center Plaza with buildings present in the general locations of the current buildings at 100 W. San Fernando, 130 Almaden Boulevard, 115 S. Market Street, and some additional smaller structures that are no longer present.
1970	Being developed, with structures on the sites of 100 W. San Fernando, 130 Almaden Boulevard, and 115 S. Market Street. Areas of remaining present-day buildings in development.
1972	170 Park Center Plaza building developed.
1973	Developed with six of the current buildings. Bank of America in 101 Park Avenue; United California Bank in 177 Park Avenue; Bank of California 170 Park Avenue; also, restaurants, offices.
1974, 1982	Developed with the current structures, except that 185 Park Avenue under construction or in a previous configuration, and 150 Almaden Boulevard site is a paved surface parking lot. Two small structures present in the interior portion of the property, just east of 130 Almaden Boulevard.
1983	Construction of 150 Almaden Boulevard
1993 to 2006	Developed as it is today; the two smaller buildings east of 130 Almaden Boulevard demolished in 2005/2006.
2009 to Present	Developed generally as it appears today.

5.2.1 Fire Insurance Maps

Path Forward requested a search of historical Sanborn Fire Insurance Maps from the Environmental Data Resources, Inc. (EDR) collection. Numerous historical addresses were

associated with the subject property. These were reviewed on the maps to corroborate occupancy in the city directory review and are listed in Section 5.2.4. Notable historical uses identified on the Sanborn Fire Insurance Maps are depicted on Figure 3. The subject property was identified on the maps as follows:

Years Listed	Subject Property and Adjoining Property Uses
1884	The subject property is bounded to the west by Vine Street (currently S. Almaden Blvd.), to the north by W. San Fernando Street, to the east by Market Street (running straight through the present-day park, with the surrounding oval street not labeled), and to the south by W. San Antonio Street, except for adjoining lots on the northwest and northeast corners. Maps of surrounding areas indicate that west of the Guadalupe River, W. San Antonio was named Park Avenue. Orchard Street passes through the subject property in alignment with (as an extension of) present day Almaden Avenue, which now terminates to the north at W. San Fernando Street. West of Orchard Street, the subject property is developed single family homes and two-unit dwellings facing the roadways, with numerous sheds and at least on coop on a north south axis between the dwelling. East of Orchard Street is also primarily residential, but includes a lumber yard on the southeast corner of W. San Fernando and Orchard Street; some of the buildings are adobe. Addresses appear to be in process of renumbering and are non-sequential (no addresses marked on structures). Surrounding properties are generally residential, where depicted (not depicted north of W. San Fernando Street).
1891	<u>West of Orchard Street</u> Generally unchanged, except that the residential development appears more uniform and denser. San Antonio Street is now Park Avenue, and there is a hotel and saloon on the northwest corner of Park Avenue and Orchard Street. <u>East of Orchard Street</u> Developed with a lumber yard covering much of the central portion, with perimeter housing. A large horticultural hall /theater is present on the northeast corner. Addresses along Orchard are 118 to 178. To the east, the previously unlabeled road is depicted as Guadalupe. Surrounding properties remain generally residential to the east, west and south. North of W. San Fernando Street is generally commercial, with storefronts labeled as paint shop and soda works, as well as a school and exhibition hall / theater across the street to the north of the subject property horticultural hall.
1915	<u>West of Orchard Street</u> Not depicted. <u>East of Orchard Street</u> Higher density residential along Orchard Street, including an apartment building. The lumber yard is no longer indicated. From west to east along W. San Fernando, the subject property includes four houses (196, 188, 180 and 178); a house with store in basement (170 and 170 ½); French Laundry with a water tank and wash house (166); store fronts and a sign painter business along the front of the prior horticultural hall (now a vacant theater). Along Park Avenue, the subject property is residential. The central east/west axis running between Orchard and Market (no longer Guadalupe) is developed, generally west to east, with a nursery, wagon house, corral and stables; a sausage factory and smokehouse with apparent oil storage; two blacksmith shops; and other (illegible) uses.

Years Listed	Subject Property and Adjoining Property Uses
	Surrounding properties are residential to the south, except for a cigar factory and hand laundry on the southwest corner of Market Street and Park Avenue; not depicted to the west; West Market Street, a city park and city hall east of the southern portion; a nursery directly abutting to the northwest, a parking garage with machine shop behind it, dwellings, stores and a greenhouse east of the northern portion. To the north across W. San Fernando are now multiple stores, a painter and paints, auto repair on the northeast corner of San Pedro Street and W. San Fernando Street, and wagon making and carriage painting on the northwest corner of those streets.
1950	West of Orchard Street (now labeled Almaden Avenue) Dwellings, except for St. Elizabeth's convent, kindergarten and sewing school on the northwest corner. The former hotel is now furnished rooms. East of Almaden Avenue Residential along Park Avenue, except for a gas station on the southeast corner of the Site (101 Park), with a service building indicated. Furniture store, parking lots, nursery and apartment building across the middle; and large furniture store, store, French laundry and stores (former theater site) along W. San Fernando, with the addresses along W. San Fernando ranging east to west from 150 to 196. Surrounding properties are residential to the west of Vine Street and south of Park Avenue, except for auto service on the southeast corner of Almaden Avenue and Park Avenue, and a police department on the southwest corner of S. Market (formerly West Market) and Park Avenue. The property directly abutting to the northeast (comprising the southwest corner of S. Market and W. San Fernando) has been redeveloped and is now mostly vacant of structures except for storage and a gas station (on the corner, 111 S. Market), and a small building identified as Auto Washing directly abutting the subject property where a nursery was noted in 1915 (146 W. San Fernando). The property directly abutting to the northwest is identified as used auto sales with an auto repair building, followed by a vacant playground lot on the southeast corner W. San Fernando and Vine Street (associated with St. Elizabeth's school on the eastern portion of the subject property). North of W. San Fernando is now auto parking, a telephone company exchange building, auto sales, stores and a taxi garage. There is a gasoline and service station on the northeast corner of W. San Fernando and S. Market.
1956	West of Almaden Avenue Expansion of St. Elizabeth's facility with added buildings, with remaining areas still residential. East of Almaden Avenue Not depicted. Surrounding properties are generally unchanged, where depicted. Property to the west, north, and east is not depicted.
1966	West of Almaden Avenue It appears the St. Elizabeth's area is redeveloped, but the map is unclear. Other uses not indicated. East of Almaden Avenue Not depicted. Surrounding properties are generally unchanged, where depicted, but most are not depicted.

Years Listed	Subject Property and Adjoining Property Uses
1969, 1984	West of Almaden Avenue Not depicted; however, it is evident that a roadway no longer passes through the subject property in the Almaden Avenue alignment, because structures are present in the former roadway location. Eastern portion Redeveloped as Park Center Plaza, with buildings present in the general locations of the current buildings at 100 W. San Fernando, 130 Almaden Boulevard, 115 S. Market Street, and some additional smaller structures that are no longer present. Surrounding properties not depicted to the west, south or east, except that a bank is now present on the former gas station that adjoined the north portion of the subject property to the east. Uses to the north of W. San Fernando Street are generally unchanged.

5.2.2 Aerial Photographs

Path Forward reviewed aerial photographs of the subject property, adjoining properties, and surrounding area obtained from EDR. Photograph summaries follow:

Years Listed	Subject Property and Adjoining Property Uses
1939	The subject property is bounded by roads, except for adjoining lots on the northwest and northeast corners. A road passes through the property just west of the central axis, running northwest to southeast. The southern and western perimeters of the subject property appear to be developed with residential structures, except for one larger building on the western central side. The east central portion is developed with larger commercial or industrial structures on a general southwest to northeast axis, with one building facing the bisecting roadway, and the others extending eastward. Commercial or industrial buildings are also present on the northeast corner. Adjoining properties generally appear to be residential developed, except that the northeast abutting property is developed with a commercial building and surface parking, and the northwest abutting property appears to be a vacant lot with small structure, followed by apparent residential structures (at the corner).
1948	The southern and western side of the subject property are generally unchanged. Additional commercial or industrial development is visible along the bisecting roadway alignment and along W. San Fernando Street. A large surface parking lot is present on the north central portion of the subject property. A gas station (consistent with placement of features on the 1950 Sanborn map) is visible on the southeast corner of the subject property. The central east/west axis has been mostly cleared, providing access from the bisecting roadway, except for a commercial complex on the eastern side of the property along S. Market Street. Adjoining properties generally appear to be residential to the west, except for larger buildings along W. San Fernando Street and S. Market Street, and the prior noted vacant lot with small building abutting to the northwest.

1950	The former north central parking lot area has been redeveloped with a large building. The remainder of the subject property and surrounding area appear similar to the 1948 photograph; however, photograph quality is poor. Abutting property to the northwest appears to be vacant.
1956	The subject property appears similar to the 1950 photograph, except that the southwest corner has been cleared of building and is vacant; photograph quality is poor. The former playground lot to the west is developed with a large building. Property to the south across Park Street between the bisecting roadway (Almaden Avenue) and S. Market appears to be partially vacant land with approximately five structures remaining.
1963	The subject property is developed with three large commercial buildings and a surface parking lot along W. San Fernando Street; two mid-size commercial buildings along S. Market Street; several small commercial buildings with rear surface parking on the southeast corner (unclear if the gas station remains); and a cluster of residential buildings on the southern portion, west and east of the bisecting road (generally consistent with prior images, but photograph quality is good). The commercial building on the east side of the bisecting road has been demolished, and the location is vacant. West of the bisecting roadway, it appears that some buildings have been removed as well, and the southwest of the property corner remains vacant. Property to the south across Park Street between the bisecting roadway (Almaden Avenue) and S. Market is vacant and paved. Property to the north along W. San Fernando is developed with additional commercial or industrial buildings.
1968	The subject property is vacant land. The bisecting roadway appears to have been demolished. Adjoining lots to the northwest and northeast are vacant land. Adjoining land to the south of Park Avenue and west of Almaden Boulevard is vacant. Property to the north of W. San Fernando Street appears generally unchanged.
1970	The subject property is being developed. The 100 W. San Fernando, 130 Almaden Boulevard, and 115 S. Market Street buildings are present. The areas of remaining present-day buildings appear to be in development, but structures are not apparent. The southern adjoining property remains vacant and is used for parking. Land to the west of Almaden Boulevard remains vacant. Property to the north of W. San Fernando appears generally unchanged.
1974	The subject property is developed with the current structures, except that 185 Park Avenue appears to be under construction or in a previous configuration, and the current 150 Almaden Boulevard site is a paved surface parking lot. Two small structures are present in the interior portion of the property, just east of 130 Almaden Boulevard. A building resembling the current structure is present on the southwest corner of W. San Fernando Street and Almaden Avenue. Two other apparent office buildings adjoin it southward along Almaden Avenue but do not appear to be the current buildings. Property immediately to the south across Park Avenue remains vacant, but development appears to be underway just south of that, and on the southeast corner of Park Avenue and Almaden Boulevard. Property to the north is generally unchanged, except that the current building is present on the northeast corner of W. San Fernando and Almaden Boulevard. The current tall building is present on the northeast abutting property.
1982	The subject property is generally unchanged. The northwest abutting property is developed with the current radio station building. The southern adjoining property is developed generally as it is today, except that the museum building on the southwest corner of S. Market Street and Park Avenue is not yet present.

1993	The subject property is developed as it is today, except that the two smaller buildings remain just east of 130 Almaden Boulevard. Adjoining properties are generally unchanged.
1998, 2006	The subject property is generally unchanged. The museum building has been developed to the south. The western adjoining properties across Almaden Boulevard appear to have been redeveloped or remodeled and appear to be partially completed as they are today.
2009, 2012, 2016	The subject property and adjoining properties appear as they do today. The two smaller buildings that were on the subject property just east of 130 Almaden Boulevard are no longer present.

5.2.3 Topographic Maps

Path Forward reviewed USGS topographic maps of the subject property, adjoining properties, and surrounding area from the EDR collection. Map summaries follow.

Years	Scale	Subject Property and Adjoining Property Uses
1889, 1897, 1899	1:62,000	The subject property is bounded by roads to the west (current S. Almaden Blvd.), north (current W. San Fernando Street), east (park and current S. Market Street), and south (current Park Avenue). A road passes through the subject property in alignment with (as an extension of) present day Almaden Avenue. The surrounding area is also developed with a street grid, consistent with the descriptions in Section 5.2.1.
1953	1:24,000	The subject property and surrounding area are shaded pink to indicate urban development, and S. Market Street is additionally identified as Highway 101, a four-lane highway. The southern adjoining property is developed as a municipal auditorium (current museum and theater complex site).
1961, 1968	1:24,000	The subject property is identified as City Plaza. Surrounding roads are labeled as W. San Fernando Street, Park Avenue, and Market/101. The western bounding road is unlabeled. Almaden Avenue is labeled passing through the property northwest to southeast. Coloration indicates that the present-day Highway 280 and Guadalupe Parkway (87) are under construction nearby to the south and west. A cloverleaf associated with the present-day alignment of Highway 101 is visible several blocks to the northeast on both maps; on the 1968 map, the eastern adjoining roadway is no longer identified as Highway 101.
1973	1:24,000	The subject property is developed with six of the current buildings (five on the eastern half and one on the southwest corner). A road no longer passes through the property. Highway 280 and the Guadalupe Parkway are partially constructed.
1980	1:24,000	The subject property appears generally unchanged. The northwest abutting property is developed with the current radio station building. Surrounding areas are generally consistent.

Years	Scale	Subject Property and Adjoining Property Uses
2012	1:24,000	The subject property and surrounding areas are not depicted with any structures. Road alignments appear as they are today.

5.2.4 Local Street Directories

Path Forward reviewed local street directory entries for the subject property and adjoining/nearby properties that EDR researched in approximately five-year intervals between the years 1922 and 2014. For historical listings, Sanborn maps were used to corroborate the likely presence of an address on the subject property. For completeness of review, historical non-residential listings identified by the prior Phase I ESA (Section 5.6) are included in italics, as that report utilized a different information source. The subject property was listed as follows:

Address	Listings
100 W. San Fernando St.	1975 to 2014 – Bank, offices and Park Center Plaza Garage
170 Park Center Plaza	As 170 Park Ave., presumed alternate address: *1973 – Bank of California* 1975 to 1996 – Banks, law offices and other offices
110 Almaden Blvd.	No listings
130 Almaden Blvd.	2010 - Offices
150 Almaden Blvd.	1930 – Plumbing Supply 1985 to 2014 – Office occupancy (primarily law and financial firms)
177 Park Ave.	1975 to 1991 – Banks and offices 2010 to 2014 – Restaurants and law offices / offices
185 Park Ave.	1986 to 2014 – Restaurants and offices 1991 – Delia's Cleaners and Draperies 1991, 1996, 2006 – Sir Speedy Printing
115 S. Market St.	2010 to 2014 – Bakery
125 S. Market St.	*As 101 Park Avenue:* *1940, 1945, 1950 – Gas station* *1955 – Cal's Auto Service* As 101 Park Center Plaza and 101 Park Center Plz: 1975 to 2014 – Bank and offices, including Bank of America 1975 to 2014 As 125 S. Market: 1930 – Blase Bros & Co Whse 2006 to 2014 – Offices, San Jose Carpet and Rug Cleaners (2010)

Historical Address	Listings
150 W. San Fernando	1930, 1935 – Auto Elec Service 1940 – Morgan A H Auto Repair 1950 – Friction Clutches and Brakes, Bruno & Genes Automotive Service 1955 – Sparacino Anthony, Hertz Auto & Truck Rental 1960 – Pacific Rent A Car Sys
166 W. San Fernando St.	1922 – Jean Costere 1925 – Jos Bidou 1930 – New French Laundry 1935 – Costere Jean Laundry 1940, 1945, 1950, 1955, 1957, 1960 – Madame Costere Laundry
133 Almaden Ave.	*1931, 1935 – Coal dealer*
171 S. Market St.	1930 to 1955 – Vehicle repair and garage listings, including police garage in 1955 1966 – Vacant
163 S. Market St.	1931, 1935, 1940, 1945, 1950 – Ruehl Wheeler Nursery 1955, 1960 – Vacant
167 S. Market St.	1935 to 1950 – Residential 1955 – City of SJ Traffic Analysis City Traffic Squad Room 1960 – San Jose Off Street Parking Dept
181 S. Market St.	1935, 1940 – Auto supply, repairs 1945, 1950 – Vacant 1955, 1960 – Painter, contractors, accountant 1970 – City public parking
185 S. Market St.	1930 to 1960 – Realty offices
170 W. San Fernando St.	1922 to 1955 – Residential 1960 – Quement Dir Electronics
198 W. San Fernando St.	1935 – A F Estensen gas station 1940 – Estensen motor service

5.3 Regulatory Agencies

Path Forward requested records of the following agencies to obtain information regarding the subject property.

5.3.1 Tax Assessor

Path Forward reviewed records on the website of the Santa Clara County Assessor and in the Lien Search obtained from EDR (Section 5.4). According to the Assessor's website and the Assessor's recorded parcel maps, the assessor's parcel number (APN) assigned to the subject property, and the associated acreage are as follows (acreage from parcel map only). The

Assessor lists historical addresses for some parcels; addresses currently in use, if different or additional, are shown in parentheses.

APN	Addresses	Acres
259-41-057	101 and 121 Park Center Plaza (for 125 S. Market)	0.89
259-41-066	177 Park Center Plaza (for 177 Park Avenue)	0.50
259-41-067	170 Park Center Plaza (170 Park Avenue)	0.61
259-41-068	150 Almaden Boulevard, 130 Park Center Plaza (also, 110 Almaden Boulevard and 185 Park Avenue)	1.97
259-41-070	100 W. San Fernando Street, 130 Almaden Boulevard and 104 S. Market Street (also 115 S. Market Street)	2.93
	Total	6.9

5.3.2 Building Department

San Jose Building Department records are maintained on the city's public website. Path Forward reviewed records for the subject property current and historical addresses on several dated in November 2018. Records generally consisted of documentation of office and retail uses from the 1970 to the present. Records were not on file for prior earlier structures identified prior to 1970 in the historical Sanborn maps review (Section 5.2.1), except for limited demolition records. The following is a synopsis of reviewed records by parcel (additional addresses identified by the City):

APN	Addresses
Whole Site	2005 – Demolition of three single story structures at the plaza level; project included addition to one existing building, but net reduction in total site square footage.
259-41-057	101 Park Avenue / 101 Park Center Plaza 1970 to 2000 – Permits to construct and modify building to be occupied by Bank of America. 1970 – Plumbing permit indicating sump O.K. 125 S. Market Street 2000 to 2018 – Office-related tenant improvement projects for the current building.
259-41-066	177 Park Avenue 1971 to 2004 – Permits to construct and modify building to be occupied by United California Bank and subsequent office, restaurant and retail businesses. 177 Park Center Plaza 1990 to 2016 – Permits to modify building to occupied for office, restaurant and retail use.
259-41-067	170 Park Center Plaza 1977 to 2008 – Tenant improvements for bank / office building.
259-41-068	150 Almaden Boulevard

APN	Addresses
	1983 – New construction bank office building, including excavation. 1980 to 2018 – Permits to modify building occupied for office use.
	130 Park Center Plaza
	1976 – Tenant improvement of second floor offices. 1970s to 2000 – Tenant improvements of offices.
	110 Park Center Plaza
	1979 to 1996 – Tenant improvements to bank.
	179 Park Avenue
	1963 – Demolition of two-story dwelling by Redevelopment Agency.
	185 Park Avenue
	1963 – Demolition of one-story building by Redevelopment Agency. 1985 – Construction of 100 Park Center Plaza (offices); Delia's Cleaners occupies. 1986 – Delia's Cleaners (pick up cleaners) 1980s to 2016 – Various office, commercial and restaurant tenant improvements.
	183 Park Avenue (addresses identified, but with no unique listings)
259-41-070	100 W. San Fernando Street
	2008 to 2016 – Various renovations and tenant improvements to offices.
	106 Park Center Plaza
	1983 – Permit for office and telecom use.
	130 Almaden Boulevard
	2008 to 2014 – Various renovations and tenant improvements for office use.
	100 Park Center Plaza
	1971 – Signage for EF Hutton (offices). 1970s to 2007 – Tenant improvements and renovations of offices.
	102 Park Center Plaza
	1975 – Construction of office "Kiosk #2." 1991 – Renovation of building.
	104 Park Center Plaza
	1986 to 2007 – Renovations and tenant improvements to office.
	115 S. Market Street
	2008 to 2010 – Renovations and tenant improvements to offices, retail, and restaurants.

5.3.3 Fire Department

San Jose Fire Department permit and life safety records are maintained on the city's public website. Path Forward reviewed records for the subject property current and historical addresses on several dated in November 2018. Records generally consisted of documentation of life safety inspections and features (e.g., fire sprinklers). The following notable records were identified:

APN	Addresses
259-41-057	125 S. Market Street

APN	Addresses
	2005 – Replace diesel piping and extend vent for aboveground tank / piping system 2007 – Replace existing fuel oil supply and fuel oil return piping for fire pump; extend vent line; replace supply line to day tank. An inspection notes, "AST pump ok." The secondary containment was tested.
259-41-068	150 Almaden Boulevard
	2005 – Diesel piping replacement and vent extension. 2007 – Replace fuel oil supply and fuel oil return piping for rooftop generator, extend vent line.
	185 Park Avenue
	1999 – Sir Speedy Printing hazardous materials registration; Facility uses less than 10 gallons each of photo developer-related chemicals. 2007 – Wastes include mercury vapor and lead.
259-41-070	100 W. San Fernando Street
	2014 – Propane stored onsite.
	100 Park Center Plaza
	1999, 2000 – HMBPs for small amounts of maintenance chemicals 2004 – Heritage Bank vacated; power supply back-up system (battery system) inspected and closed; no issues. 2007 – Replace existing 100-gallon diesel tank for fire pump with new 100-gallon diesel tank. AST system inspection, pass. HMBP facility stores less than 2 gallons paint/epoxy remover et al.

5.3.4 Environmental Health

Based on the type of occupancy of the subject property and other records reviewed, Path Forward reviewed public records on the California Environmental Protection Agency (CalEPA) Registered Site Portal, which provides abstracts of information related to hazardous materials use and storage. The subject property was listed as follows:

APN	Addresses
259-41-057	125 S. Market Street
	2013 to 2016 – CityView Plaza. Chemical storage (listed in CERS), with last inspection 2016 and no violations.
259-41-068	150 Almaden Boulevard
	2018 – Chemical storage (CERS); category of 120 to 599 gallons diesel fuel; maintenance chemicals. 2018 – Verizon wireless lead acid battery storage. .

5.3.5 Regional Water Quality Control Board

On October 13, 2018, Path Forward reviewed public records on the State Water Resources Control Board (SWRCB) GeoTracker database. The subject property address was listed as follows:

The subject property address of 150 Almaden Boulevard is listed as a "non-case information" site (no associated environmental release) for a storm water discharge permit. The San Francisco Bay Regional Water Quality Control Board (SFRWQCB) issued a National Pollutant Discharge Elimination System (NPDES) permit allowing the subject property owner to discharge water from the building's foundation dewatering system to the storm drainage system, which discharges to the nearby Guadalupe River to the west via two outfalls. The water is treated by a carbon treatment system prior to discharge due to contaminants, including tetrachloroethene (PCE) present in the water as it enters the dewatering system via two sumps (East Sump and West Sump). Dewatering began in 1998; the current system operation was initiated in 2005 (Lewis Brisbois 2017, Appendix D). According to a letter to the SFRWQCB dated October 1, 2018 (TEC 2018b), the dewatering system may not be turned off or the garage will flood. The system is operated to remove PCE down to 0.8 micrograms per liter (µg/L). (The California and Federal Maximum Contaminant Level (MCL) for drinking water is 5 µg/L.

Influent and effluent data is collected quarterly for the two sumps. The most recent monitoring report includes data through the second quarter of 2018 (TEC 2018a). A summary of August 2018 data is included in October 2018 letter (TEC 2018b). The following is a summary of available quarterly data for 2017 and 2018 data:

- East Sump – PCE was detected in influent at concentrations between 0.7 and 1.4 µg/L. During 2017, PCE was not detected above the laboratory reporting limit (0.5 µg/L) in the East Sump effluent. Some detections (with lower validity) were reported below the laboratory reporting limit. In 2018, PCE was detected in effluent at 0.5 to 0.7 µg/L during the first two quarters, and was below the laboratory reporting limit in April, May and June.

- West Sump – PCE was detected in influent at concentrations between 1.8 and 3.9 µg/L. During 2017, PCE was detected up to 0.8 µg/L in the spring, and was not detected above the laboratory reporting limit for the remainder of the year. In the first two quarters of 2018, PCE was detected at very low concentration of 0.2 to 0.3 µg/L, flagged because they were below the laboratory reporting limit.

The overall concentrations of PCE detected in the effluent samples appear to be decreasing over time since start-up of the system began. The treatment system was bypassed twice in the second quarter 2018 (TEC 2018a), with the second event lasting 5 hours. CityView LLC purchased the property in July 2018 and made upgrades to the system at both sumps to include additional power that will achieve higher flow rates. The October 2018 letter (TEC 2018b) requested that selenium treatment requirements be reduced for the currently pending NPDES permit so that the treatment system can meet the requirements, as there are "no viable alternatives" for selenium treatment.

There is no indication in the records reviewed that the subject property is considered to be a source of the PCE in groundwater.

5.3.6 Department of Toxic Substances Control

On DATE, Path Forward reviewed public records on the Department of Toxic Substances Control (DTSC) EnviroStor database. The subject property current and historical addresses were not listed.

In addition, Path Forward reviewed records on the DTSC's Hazardous Waste Tracking System (HWTS) database. The subject property was listed with several removal events for asbestos containing materials and polychlorinated biphenyls (PCBs) consistent with the multiple renovation and tenant improvement events indicated in historical Building Department records, as well as limited removal of small quantities of other wastes. No records were found for Delia's Cleaners and Drapers, listed at the subject property in 1985 (Section 5.3.2) and 1991 (Section 5.2.4).

5.4 Activity & Use Limitations (AULs)

Path Forward reviewed a report of title and judicial records prepared by EDR and National Environmental Title Research for indications of environmental liens and AULs recorded against the subject property. No environmental liens were identified for the APNs 259-41-068 and 259-41-070, which are the two largest parcels of the subject property. The parcels are owned by SJ CityView LLC. EDR provided a deed recorded July 24, 2018 indicating the sale of all five subject property parcels.

5.5 Prior Reports

The Client provided a prior Phase I ESA for the subject property (AEI 2016). The report describes the subject property generally as it is today. In addition, the report includes copies of historical HMBPs for the subject property addresses, which were reviewed for this report and document the use and storage of diesel fuel in ASTs, as well as small quantities of other materials consistent with current subject property uses.

6.0 REGULATORY DATABASE REVIEW

Path Forward reviewed a regulatory agency database search report prepared by EDR for the subject property. EDR conducted a search of publicly available information from federal, state, tribal, and local databases for information pertinent to the subject property associated with plotted addresses located within ASTM-specified search distances from the subject property. The database report identifies about 387 facilities as well as the accessed databases.

The subject property address was identified in the databases searched by EDR as follows:

Site Name:	CityView Plaza; Verizon Wireless; Divco West
Address:	150 Almaden

Database(s):	CA CERS, CA CIWQS, FINDS, CA San Jose Hazmat, CA Non-Case Info, CA CUPA, ECHO, CA WDS
These listings are primarily related to the waste water treatment and discharge system associated with sumps in the building, as discussed in Section 5.3.5.	

Site Name:	Principal Financial; Park Center Plaza; 101 Park Center Buil (sic); 177 Park LLC; Bank of America; Level 3 Communication; Park City Plaza Investors
Address:	101 Park Center Plaza; 125 S. Market; 177 Park Ave.; 100 W. San Fernando; 185 Park Center Plaza; 130 Almaden
Database(s):	CA Haznet
These listing are related to the regulated disposal of hazardous wastes, as discussed in Section 5.3.6.	

Site Name:	CityView Plaza; Level 3 Communication; 170 Park Center Plaza
Address:	125 S. Market; 100 W San Fernando; 185 Park Center; 170 Park Center Plaz
Database(s):	CA San Jose Hazmat; CA CUPA
The CityView and 170 Park Center Plaza listings indicate that the address is classified as Miscellaneous Complex firms and labs. The listing may relate to another building at CityView Plaza. There is no indication of an environmental case. The Level 3 listing indicates Auto Wrecking/Misc. Simple Facility and may be erroneous.	

Site Name:	Herrick WB; Estensen AF; Cal S Auto Service; Auto Electric Service Co, Morgan A H
Address:	171 Market; 198 W. San Fernando Street; 101 Park Way; 150 W. San Fernando
Database(s):	EDR Hist Auto
EDR Hist Auto is a proprietary EDR database derived from historical city directory listings and does not indicate a regulatory database listing. The listings indicate that prior business names at the subject property appears to have been associated with automotive service, as discussed in Section 5.2.1 and Section 5.2.4.	

Site Name:	New French
Address:	166 W. San Fernando
Database(s):	EDR Hist Cleaner
EDR Hist Cleaner is a proprietary EDR database derived from historical city directory listings and does not indicate a regulatory database listing. This listing indicates that a prior business name at this address appears to have been associated with clothes cleaning, as discussed in in Section 5.2.4. There is no indication in reviewed records that the laundry business was a dry cleaner.	

No sites were identified nearby and up- to cross-gradient with cases involving groundwater that may impacts the subject property. The identified cases involving groundwater are more than 500 feet from the subject property, generally to the east and west, and based on their regulatory status do not appear likely to be impacting the subject property.

In addition, the following notable listed was identified:

Site Name:	Wells Fargo Bank		
Address:	121 Park Center Plaza		
Distance: Adjoining		**Direction:** Northeast	**Relative Elevation:** Reportedly higher
Database(s):	Haznet, CA EMI, CA San Jose Hazmat, CA Sweeps UST		
The report mis-plots this site to the south; however, it is associated with the northeast abutting property and is downgradient or cross gradient of the subject property. Several listings for Wells Fargo Bank relate to the regulated disposal of inorganic solid waste, asbestos, and small quantities of liquids, as well as the apparent use of a generator. The listings also identify a 1,000-gallon diesel UST used for motor vehicle fuel, with no other information. Path Forward researched historical UST registrations on Geotracker and did not identify one for Wells Fargo at this address or with the SWRCB Tank ID number included in the listing. Based on multiple records indicating generator use, this may be an AST or a historical listing, as the site is also listed for historical auto wrecking (as Wells Fargo), which is consistent with the historical uses noted on Sanborn maps in Section 5.2.1.			

7.0 ASTM NON-SCOPE CONSIDERATIONS

Path Forward assessed ASTM non-scope considerations associated with the subject property. Assessment of criteria presented in this section was generally limited and should not be considered comprehensive.

7.1 Asbestos

Path Forward performed a visual inspection to identify suspect asbestos-containing materials (ACMs). During reconnaissance Path Forward observed no readily accessible suspect ACMs. Physical sampling was not conducted. However, numerous records were noted regarding the regulated disposal of asbestos containing wastes from subject property buildings (Section 5.3.6); therefore, it is assumed that asbestos containing materials are present. In addition, Ms. Garcia informed Path Forward that an Asbestos Operations and Management (O&M) plan is in use.

7.2 Lead Paint

The majority of subject property buildings were developed prior to 1978 and may contain lead-based paint. Physical sampling was not conducted.

7.3 Microbial Growth & Moisture Intrusion

A visual inspection of all areas associated with the subject property for evidence of moisture incursion and visible fungal growth was performed. During the inspection, no evidence of suspect mold growth was observed.

7.4 Wetlands

Path Forward reviewed data maintained by the U.S. Fish and Wildlife Service Wetland Mapper to determine if wetlands are present on the subject property. No wetlands are mapped to the subject property or adjoining properties.

7.5 Compliance

Four ASTs and associated day tanks containing petroleum products and one AST containing food oil/grease were observed on-Site; collectively, these containers that are in excess of a total volume capacity of 1,320 gallons. Determination of applicability of the Federal Spill Prevention, Control, and Countermeasure (SPCC) Regulation 40 CFR Part 112 to the subject property was not within the scope of this ESA.

8.0 FINDINGS AND OPINIONS

Path Forward identified obvious subject property uses from the present back to 1884, at which time the subject property was developed with a roadway known as Orchard Street (and later as Almaden Avenue) bisecting the property on a general north to south axis. Uses were primarily residential in 1884, and also included a lumber yard on the north central portion. From the 1880s to the 1950s, the subject property was developed with a variety of residential, commercial and industrial uses, including blacksmiths, a large nursery, gas stations and vehicle repair, a convent and school, a theater, and numerous stores. The entire property was vacant land by 1968, after which it was developed with the current structures between 1968 and 1993, except that two small structures in the interior of the plaza were removed in approximately 2006. Since development with the current buildings, subject property uses generally have been consistent with the current occupancy.

This ESA identified the following findings with respect to RECs, CRECs, HRECs and de minimis conditions, as defined in Section 1.1 of this report:

- The subject property had a lengthy history of diverse industrial uses from the 1880s to the 1960s. Historical uses included vehicle fueling and servicing, a laundry business, lumber yard and nursery, and historical blacksmiths, as well as the construction and demolition of numerous structures. It is likely that construction of the current buildings entailed the excavation and removal of soils in several areas to facilitate construction of the subsurface parking garage beneath the majority of the subject property. However, no subsurface investigation is known to have been performed on the subject property, and documentation of historical uses prior to the 1970s is limited. Subsurface features may remain in association with historical uses. Therefore, the lengthy history of industrial uses on the subject property is considered to be a REC.
- The subject property building at 150 Almaden Avenue is equipped with two sumps which operate continuously to discharge groundwater that enters the building's foundation dewatering system to prevent flooding into the lowest level of the parking

structure in this portion of the subject property. The groundwater is treated under a NPDES permit under the regulatory oversight of the SFBRWQCB due to the presence of contaminants, including PCE, in the influent groundwater as it enters the dewatering system. As part of the system NPDES permit, system influent and effluent are sampled quarterly. PCE concentrations in the water have been consistently below the California and Federal MCL for drinking water, which is 5 µg/L. The origin of the PCE detected in groundwater is unknown, and records reviewed during this Phase I ESA indicate that the subject property is not considered to be a source of the PCE in groundwater. Based on continuing regulatory oversight of this condition, with the treatment system operating under a permit and concentrations of PCE remaining below drinking water standards, the presence of PCE in groundwater beneath the subject property is a CREC. In addition, based on the detected concentrations of PCE and presence of the subsurface parking structure beneath the subject property, the condition is not considered to present a potential vapor intrusion concern.

- The subject property is equipped with four diesel AST systems in association with back-up generators; one of the ASTs is located on the rooftop of 150 Almaden Boulevard. The total diesel fuel storage capacity on the subject property is less than 1,000 gallons. In addition, one used oil collection AST containing used food oil/grease associated with restaurant usage at 177 Park Avenue (~3,500-gallon capacity) was observed, and a below-grade used food oil/grease UST exists within the sidewalk at 185 Park Avenue (~4,500-gallon capacity) associated with restaurant use. These used food oil/grease containers are routinely pumped out and the waste is transported to off-Site recycling facilities. No indications of spills or releases were noted in the records reviewed. Furthermore, these features were observed during site reconnaissance and were found to include adequate containment systems, and no leaks were evident. Based on the quantity stored, conditions observed and regulatory status, the use of four diesel ASTs and used food oil/grease AST/UST on the subject property is considered to be *de minimis*.
- The subject property was listed with several removal events for ACMs and PCBs consistent with multiple renovation and tenant improvement events indicated in historical Building Department records. In addition, the majority of subject property buildings were developed prior to 1978 and may contain LBP. The presence of ACMs and PCBs, and potential for LBP in building materials is a business environmental risk but is considered to be a *de minimis* condition. An Asbestos Operations and Management (O&M) plan is reportedly in use for the subject property.

9.0 CONCLUSIONS

Path Forward conducted a Phase I ESA in conformance with ASTM Designation: E1527of the subject property located at 100 W. San Fernando Street, 170 Park Center Plaza, 110, 130 and 150 Almaden Boulevard, 177 and 185 Park Avenue, and 115 and 125 S. Market Street, in San

Jose, Santa Clara County, California. This ESA has revealed no evidence of RECs in connection with the subject property, except for the following:

- The lengthy history of industrial uses on the subject property is considered to be a REC.
- Based on continually regulatory oversight of this condition, with the treatment system operating under a permit and concentrations of PCE remaining below drinking water standards, the presence of PCE in groundwater beneath the subject property is a CREC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Based on the findings of this Phase I ESA, Path Forward recommends the following:

1. Comply with NPDES permit requirements for continuing operation of the two sumps at 150 Almaden Avenue.
2. Develop a Site Risk Management Plan to manage known and unknown conditions that may be encountered during future redevelopment earthwork activities to assure proper material handling, waste disposal and worker health and safety.
3. Comply with the existing Asbestos O&M plan and all requirements for the proper management of ACMs and LBP in accordance with applicable local, state and federal guidelines/regulations.
4. Review requirements of Federal Spill Prevention, Control, and Countermeasure (SPCC) Regulation 40 CFR Part 112 for applicability to ASTs containing petroleum products and food oil/grease on the subject property and prepare an SPCC Plan for the subject property if one is required.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Path Forward Partners were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Path Forward Partners were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Violations

Violation ID	Occurred Date	Violation Type	(-) Violation Description	Corrective Action	Status	Classification	Source
1046598	06/11/2018	UAUTHDISC	Unauthorized Bypass. The East Sump treatment system was partially bypassed to address inlet-side pressure buildup within the system. After the system was backflushed, the treatment system returned to normal operation without further partial bypass. Total bypassed discharge volume: 47,250 gallons - based on discharge flowrate capacity of transfer pump (Pump 3). Duration of bypass: 5 hours and 15 minutes.	The Discharger has proposed to upgrade electrical and plumbing systems of the East Sump to increase treatment capacity and avoid potential future bypasses. A flowmeter will be installed on Pump 3 to measure flowrates accurately. The Discharger upgraded plumbing and electrical systems in the West Sump system which aim to increase the dewatering and treatment capacity of the site as a whole (West and East sumps).	Violation	B	Report
1042498	04/16/2018	UAUTHDISC	Unanticipated treatment system bypass. Total estimated volume bypassed is 3,500 gallons. The discharger initiated the bypass to offset the high groundwater inflow rates in the sump and mitigate flooding. The bypass is a violation of Discharge Prohibition III.F.	The discharger is currently evaluating alternatives to increase the pumping capacity of the treatment system.	Violation	B	Report
1023907	02/10/2017	UAUTHDISC	Anticipated bypass to make mitigate flooding and perform treatment system	The corrective action is related to the bypass period and reconfiguration of the treatment system. Fifteen GAC vessels	Violation	3	Report

			changes. Bypass period: February 10-16. Net bypass 0.8 MGD.	are operating while 1 remains offline while its manifold is replaced. The Discharger plans to install an additional sump pump to increase the reliability of the treatment system. However, this additional change may require a bypass. As of 4/27/17, no request has been made to allow this maintenance-related bypass.			
1019476	02/02/2017	UAUTHDISC	Unanticipated bypass allowed to mitigate flooding. The West Sump which has been experiencing increasing groundwater inflows was brought up to full capacity (addition of GAC vessels) on 2/1/17. Despite this effort, flooding could not be resolved and an additional bypass was allowed on 2/1/17. The West Sump area also has electrical and elevator equipment.	Per 2/2/17 email, the Discharger will submit a Modified NOI request to increase treatment capacity of the West Sump. This will include a proposal for single stage treatment (double, currently) and review of additional upgrades to the system. February 10, 2017: it was found that a Modification of NOI was not needed to make the corresponding changes in the treatment system. As of 2/16,17, the West Sump has 16 GAC vessels in parallel.	Violation	3	Report

Report displays most recent five years of violations. Refer to the Interactive Violation Report for more data.

Total Violations: 4 **Priority Violations: 0**

*Click the "(+/-) Violation Description" link to expand and contract the violation description.

*As of 5/20/2010, the Water Board's Enforcement Policy requires that all violations be classified as 1, 2 or 3, with class 1 being the highest. Prior to this, violations were simply classified as Yes or No. If a 123 classification has been assigned to a violation that occurred before this date, that classification data will be displayed instead of the Yes/No data.

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

RE: 100, 170, 130 Park Center Plaza, 177 & 185 Park Avenue, 125 South Market & 150 Almaden Blvd. (Assessor's Parcel Numbers 259-41-057; -066; -067; -068 & -070)
File No. CRL04-012

Dear Ms. Maacks:

In response to your letter requesting information about the above referenced property, the following is being provided:

Zoning & General Plan: The subject property is located in the DC Downtown Commercial Zoning District. The property has a General Plan Land Use/Transportation Diagram designation of Core Area.

Allowable Uses: Chapter 20.70 of the San José Municipal code pertains to the Downtown Commercial Zoning Districts; Part 2, Section 20.70.100 lists the permitted uses; Part 3 lists the Development Regulations; and Part 4 of Chapter 20.70 of the San José Municipal code pertains to the Parking Requirements in the aforementioned zoning district. A copy of this Chapter of the code has been included for your reference. Alternatively, you can view the Zoning Ordinance in its entirety online at http://www.ci.san-jose.ca.us/planning/sjplan/zoning/index.htm.

Planning and Redevelopment Agency Permits: The attached Exhibit A shows the permits that were approved for the subject properties by the Redevelopment Agency (RDA). Planning permits approved by the Director of Planning, Building and Code Enforcement for the subject property are listed below:

- Tentative Map Permit File No. T83-086 approved on the 12th of October 1983, allowed four (4) lots for commercial use (see attached).
- Permit Adjustment File No. AD04-258, approved on the 5th of May 2004, allowed installation of one dish antenna on the roof of the building behind the parapet.

Copies of the permits that were approved by RDA are available upon request and copy charges will be assessed.

As of July 21, 2004, the Code Enforcement Division showed no pending code cases for the subject property. Planning staff has no specific compliance information involving the project sites. Information regarding the site's compliance history may be obtained by contacting the Code Enforcement Division of this Department at (408) 277-4528. For questions regarding the issuance of building permits and certificates of occupancy, contact the San Jose Building Division at (408) 277-4541 or at http://www.ci.san-jose.ca.us/building/.

Should you have any further questions regarding the above matter, please feel free to contact me at (408) 277-3565.

Sincerely,

Dipa Chundur

Dear Sir or Madam:

We are counsel for RREEF America, L.L.C. in its purchase of the above-referenced property. As part of the due diligence review, we have been asked to obtain a Zoning Letter covering the property(ies) identified above and on the attached sample letter and applicable sections of the City Code identified therein.

Enclosed is a check in the amount of $55.00 along with an executed Research Request Form. Once completed please send a facsimile copy of each Letter to me at (415) 773-5759 and mail the originals and applicable codes to me at the address below. Thank you for your assistance in this matter. Should you have any other questions or need additional information, please feel free to contact me.

Sincerely,

Laureen Maacks

CONTAIN-IT PIPING SPECIFICATIONS FOR INTERIOR PIPE RUNS BETWEEN THE DAY TANK & FIREWATER PUMP

MANUFACTURER

THE SECONDARY CONTAINMENT PIPING SYSTEM SHALL BE +OF+CONTAIN-IT, AS MANUFACTURED BY GEORGE FISCHER SLOANE, INC. (OR EQUIVALENT)

MATERIALS

A. BASIC MATERIAL DIMENSIONS: THE PIPING SYSTEM SHALL CONSIST OF CLEAR, UNPIGMENTED POLYVINYL CHLORIDE PIPE AND FITTINGS, SDR IN DIMENSION.

B. PIPE AND FITTINGS: THE PIPE SHALL BE EITHER SOLID OR LONGITUDINALLY SPLIT. THE FITTINGS SHALL BE MANUFACTURED IN TWO EQUAL HALVES. THE PIPE SHALL ALIGN VIA TONGUE AND GROVE CONSTRUCTION.

C. JOINING METHOD: THE PIPE AND FITTING JOINTS SHALL BE WELDED TOGETHER VIA FISCHER INJECTION BONDING PROCESS. PRIOR TO INJECTION BONDING, THE FITTINGS SHALL BE HELD TOGETHER BY THE CLIPS PROVIDED. THE CLIPS SHALL BE AFFIXED OVER THE INTEGRAL FITTING CLIP LOCATORS.

INSTALLATION

A. CONTAIN-IT PIPE AND FITTINGS SHALL BE INSTALLED ACCORDING TO THE CURRENT INSTALLATION INSTRUCTIONS AS PUBLISHED BY THE MANUFACTURER.

B. A MANUFACTURER'S REPRESENTATIVE, WHO HAS BEEN CERTIFIED AS A TRAINING INSTRUCTOR, SHALL BE AT THE SITE PRIOR TO THE DAY THE PIPING SYSTEM INSTALLATION IS TO COMMENCE. A MANUFACTURER'S REPRESENTATIVE WILL PERFORM A COMPLETE TRAINING SESSION ON THE PROPER METHOD OF INSTALLATION FOR THE PIPING SYSTEM. UPON COMPLETION OF THE TRAINING, THE INSTALLERS WILL BE GIVEN A TEST ON THE ITEMS COVERED IN THE SESSION. PERSON'S SUCCESSFULLY COMPLETING THE TEST SHALL BE GIVEN A LAMINATED CARD WHICH CERTIFIES THEM FOR ONE YEAR AS INSTALLERS OF THE CONTAIN-IT SECONDARY CONTAINMENT PIPING SYSTEM.

TESTING

FINAL CONTAINMENT INSPECTION SHALL BE ACCOMPLISHED VIA LOW PRESSURE AIR OR HYDROSTATIC TEST PER MANUFACTURER'S RECOMMENDATIONS.

APPROVED FOR COMPLIANCE WITH HAZ MAT REQUIREMENTS.

CITY OF SAN JOSÉ, CALIFORNIA
DEPARTMENT OF PLANNING, BUILDING AND CODE ENFORCEMENT
STATEMENT OF EXEMPTION

FILE NO.	H05-014
LOCATION OF PROPERTY	Northeast corner of Park Avenue and Almaden Blvd (104 PARK CENTER PLAZA)
PROJECT DESCRIPTION	Site Development Permit to construct a 2,544-square-foot addition to an existing 6,411 square foot building; remove three small existing buildings; and allow related waterproofing and landscaping on a 6.9 gross acres site
ASSESSOR'S PARCEL NUMBER	259-41-070

CERTIFICATION

Under the provisions of Section 15303(c) of the State Guidelines for Implementation of the California Environmental Quality Act (CEQA) as stated below, this project is found to be exempt from the environmental review requirements of Title 21 of the San José Municipal Code, implementing the California Environmental Quality Act of 1970, as amended.

New Construction or Conversion of Small Structures. Class 3 consists of construction and location of limited numbers of new, small facilities or structures; installation of small new equipment and facilities in small structures; and the conversion of existing small structures from one use to another where only minor modifications are made in the exterior of the structure. The numbers of structures described in this section are the maximum allowable on any legal parcel. Examples of this exemption include but are not limited to:

A store, motel, office, restaurant or similar structure not involving the use of significant amounts of hazardous substances, and not exceeding 2500 square feet in floor area. In urbanized areas, the exemption also applies to up to four such commercial buildings not exceeding 10,000 square feet in floor area on sites zoned for such use if not involving the use of significant amounts of hazardous substances where all necessary public services and facilities are available and the surrounding area is not environmentally sensitive.

Stephen M. Haase, AICP

(PLEASE PRINT OR TYPE)

PROJECT DESCRIPTION (Include square footage of any new construction)

DEMOLITION OF 3 EXISTING SINGLE STORY STRUCTURES ON PLAZA LEVEL.
REMOVE, REPAIR & REPLACE PLAZA TOPPING SLAB. MAKE ADDITION TO EXISTING STRUCTURE.

ASSESSOR'S PARCEL NUMBER(S): 259-41-57; 259-41-66; 259-41-67; 259-41-68; 259-41-70

ACREAGE (~~gross~~) NET: 6.9

DOES THE PROJECT INVOLVE HUD FEDERAL FUNDING? ☑ NO ☐ YES

PLEASE INDICATE WHETHER USE OF HUD FUNDING IS ANTICIPATED, FOR THE PROPOSED PROJECT.

☑ NO ☐ YES

If yes, indicate type of funding (i.e. CDBG Grant, HOME Investment Partnership Program, Section 108 Loan Guarantee, etc.), funding amount, whether awarded (if known) or application is pending, and fiscal year of award or application request.

PLEASE NOTE: Projects involving 1) acquisition of real property involving a change of use, or 2) new construction may require an Environmental Assessment (EA). Concurrent environmental review per the California Environmental Quality Act (CEQA) is also required. The obtainment of a qualified environmental consultant to provide documentation services (i.e. a combined Initial Study/EA) is strongly recommended.

PLEASE REFER TO THE ATTACHED LIST OF EXEMPTIONS AND FIND THE SECTION NUMBER OF THE EXEMPTION THAT BEST DESCRIBES YOUR PROJECT. WRITE THAT SECTION NUMBER IN THE SPACE PROVIDED.

SECTION #: 15301(a)

Describe how your project conforms to the code section cited above:

OUR PROJECT IS EXTERIOR ALTERATIONS WITH A RESULT OF LESS GROSS & NET SQUARE FOOTAGE.

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Department of Planning, Building and Code Enforcement

STEPHEN M. HAASE, AICP, DIRECTOR

PUBLIC HEARING NOTICE

The Planning Director of the City of San José will consider a **Site Development Permit** at a public hearing in accordance with Title 20 of the San José Municipal Code on:

Wednesday, May 25, 2005
9:00 a.m.
City Council Chambers, Room 205
City Hall
801 North First Street
San Jose, CA 95110

The project being considered is:

H05-014. Site Development Permit to construct a 2,544-square- foot addition to an existing 6,411 square foot building; remove three small existing buildings; and allow related waterproofing and landscaping on a 6.9 gross acres site **in the DC Downtown Primary Commercial Zoning District, located at the northeast corner of Park Avenue and Almaden Blvd (104 Park Center Plaza) (Divco west, Charles Noll, Owner). Council District 3. SNI: None. CEQA: Exempt.**

Reports, drawings, and documents for this project are on file and available for review, and a permit with recommendations will be available for your review during the week of the public hearing from **9:00 a.m. to 5:00 p.m.**, Monday, Wednesday, Fridays, and from **10:00 a.m. to 5:00 p.m.** Tuesday and Thursdays at:

Department of Planning, Building and Code Enforcement
801 North First Street, Room 400
San José, CA 95110
(408) 277-4576
http://www.sanjoseca.gov/planning/index.htm

You are welcome to attend and to speak on this issue. To arrange an accommodation under the Americans with Disabilities Act to participate in this meeting, please call (408) 277-4576 (Voice) at least 48 hours before the meeting. The decision of the Director may be appealed in accordance with the requirements of the San José Municipal Code. Instructions for filing a permit appeal are available from the Department of Planning, Building and Code Enforcement.

** If you choose to challenge this land use decision in court, you may be limited to only those issues you, or someone else, raised and discussed at the public hearing or in written correspondence delivered to the City at or prior to the public hearing.*

Comments and questions are welcome and should be referred to the **Project Manager, Lee Butler,** at the e-mail address: *lee.butler@sanjoseca.gov* in the Department of Planning, Building and Code Enforcement. Please refer to the above file number for further information on this project.

Joseph Horwedel,
Deputy Director, Plan Implementation Division

Cc: Aguilar, Mirabel
Subject: FW: Review of DivcoWest proposals for the park center plaza Improvements - Site Development Permit 3/16/05 drawings by Delawie Wilkes Rodgerues Barker

Hi Bob,

Revised plans were submitted for the subject project. Mirabel in Public Works has reviewed them, and it does not appear that the changes match the DT Streetscape MP. The revisions call out 4" x 4" granite sets on Market (9' x 6'), San Fernando (8' x 10'), and Park (11'10" x 15'). Open area around trees with decomposed granite are proposed on Market and San Fernando, and evergreen hedges are proposed around the trees on Park.

The project is set for the Wed., 5/25 Director's Hearing. We have several options for proceeding:

1. Require that revised plans be submitted with a Permit Adjustment w/in 30 days and prior to PW/Building clearance.
2. Move forward with the current plans and indicate that the streetscape improvements are conceptual only and that final streetscape improvements will be reviewed at the PW street improvement phase.

Mirabel prefers option 1. Do you have any thoughts on the proposed changes and their conformance with the DT Streetscape MP? I can copy relevant portions of the plans and fax them to you if needed.

Thanks,
Lee

Re: Sidewalk materials
I noticed on their drawing notes that they are quoting the Streetscape Masterplan, p58-59, regarding their proposed "special paving" for Market Street. Obviously they have interpreted this wrong but in their minds they are following the Masterplan. We need to be specific on what that material needs to be otherwise they will get it wrong again. My reading for Market St. is that it should be: French Gray, medium sandblast finish, scoring pattern to match Tech Museum. Is this correct?

Importance: High

Staff is providing comments only for the area within the public right of way or immediately adjacent to it. The internal improvements within the property are not being reviewed.

- Sheet 2-EX - There is no reason to remove street trees unless they are to be replaced with other trees as designated in the Downtown Streetscape Master Plan. Therefore keep 114, 142, 143, 144,
- Sheet 2-EX - In regards to 35, 36, the trees appear to be removed to accommodate more raised planters. Sheet 2-H - Why are planters and steps up to them being proposed along Market Street? Is there a new door to the building here? There are a lot of people crossing the street here to go to the Tech and the Bank of America and reducing the sidewalk area, even if on private property, is undesirable. What is proposed at TW18"? Some of it is in the public right of way and would not be permitted if a pole/structure, etc.
- The Downtown Streetscape Master Plan illustrates the sidewalk materials that are allowed on Market Street, Park Ave, Almaden Blvd, and San Fernando Street. All improvements must be in accordance with the adopted Downtown Streetscape Master Plan.
- Bow-ins are not permitted in the Downtown Streetscape Master Plan. Therefore the bow-in along San Fernando Street cannot be constructed. Existing bow-ins are to be eliminated whenever sidewalk/street improvements are approved.

Please call me if you have questions.

Memorandum

TO: Lee Butler
Planning and Building

FROM: Michael Liw
Public Works

SUBJECT: **FINAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 05/19/05

PLANNING NO.: H05-014
DESCRIPTION: Site Development Permit to construct a 2,544-square- foot addition to an existing 6,411 square foot building; remove three small existing buildings; and allow related waterproofing and landscaping on a 6.9 gross acres site
LOCATION: northeast corner of Park Avenue and Almaden Blvd
P.W. NUMBER: 3-16386

Public Works received the subject project on 05/18/05 and submits the following comments and requirements.

Project Conditions:

Public Works Clearance for Building Permit(s): Prior to the issuance of Building permits, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits.

1. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. This permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

2. **Transportation**: The projected traffic for this project was reviewed and found to be minimal, therefore no further traffic analysis is required.

3. **Grading/Geology:** The Project site is within the State of California Seismic Hazard Zone. A soil investigation report addressing the potential hazard of liquefaction must be submitted to, reviewed and approved by the City Geologist prior to issuance of a grading permit or Public Works Clearance. The investigation should be consistent with the guidelines published by the State of California (CDMG Special Publication 117) and the Southern California Earthquake Center ("SCEC" report). A recommended depth of 50 feet should be explored and evaluated in the investigation.

4. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) that include site design measures, source controls, and stormwater treatment controls to minimize stormwater pollutant discharges.

5. **Street Improvements**:
   a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
   b) Remove and replace broken or uplifted curb, gutter, and sidewalk along project frontage.
   c) Close unused driveway cut(s).
   d) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.
   e) Repair, overlay, or reconstruction of asphalt pavement may be required. The existing pavement will be evaluated with the street improvement plans and any necessary pavement restoration will be included as part of the final street improvement plans.
   f) The replacement of the existing cluttered news racks on both Park Avenue and Market Street with pedestal mounted news racks may be required.

6. **SNI:** This project is located within the Downtown Core SNI area. Public improvements shall conform to the approved EIR and neighborhood improvement plan.

7. **Electrical**:
   a) Installation of electrolier(s) on all project frontages to the satisfaction of the Director of Public Works.
   b) Relocation and/or removal of electrolier(s) along project frontage may be required.
   c) Locate and protect existing electrical conduit in driveway and/or sidewalk construction.
   d) Provide clearance for electrical equipment from driveways. The minimum clearance from driveways is 10' in commercial areas and 5' in residential areas.
   e) Clearance from electrolier(s) must provide a minimum of 10' from high voltage lines; 3' from secondary voltage lines; and 1' from communication lines.
   f) Painting and renumbering existing electroliers along project frontage may be required.
   g) Salvage of existing luminaire(s) and installation of new luminaires may be required.
   h) Installation of pedestrian lighting along project frontage(s) may be required.

8. **Landscape**:
   a) The locations of the street trees will be determined at the street improvement plan stage. Street trees shown on this permit are conceptual only.
   b) Removal or planting of any street trees requires a separate permit. Contact the City Arborist at (408) 277-2756.

c) The installation of tree guard(s) and/or tree grate(s) may be required, per the Downtown Streetscape Master Plan.

9. **Referrals**: This project should be referred to the Downtown Business Association, the Valley Transit Authority, and the San Jose Redevelopment Agency.

Please contact the Project Engineer, Mirabel Aguilar, at (408) 277-5161 if you have any questions.

CHARLES NOLL
DIVCOWEST
400 HAMILTON AVE
PALO ALTO CA 94301

Dear Mr. Noll:

RE: Site Development Permit, H05-014, located at/on the northeast corner of Park Avenue and Almaden Blvd (104 PARK CENTER PLAZA).

There is an outstanding balance of $204.18 for application fees related to your Site Development Permit. A copy of the invoice(s) is/are enclosed. In order for us to proceed to hearing on Wednesday, May 25, 2005 for your application(s), payment is promptly due in full. If we do not receive payment we will need to defer your hearing date to the next available hearing after we have received payment. You may submit a check or money order **payable to the City of San José**. We will also accept payment of this balance by a VISA, MasterCard or Discover Card by calling (408) 277-4576.

If you have any questions, please feel free to contact your Project Manager, Lee Butler, at (408) 277-4576 or by e-mail at lee.butler@sanjoseca.gov.

Sincerely,

Joseph Horwedel, Deputy Director

Dear Mr. Ternasky & Mr. Salud:

RE: File No. H05-014
Your application, referenced above, for development at/on the northeast corner of Park Avenue and Almaden Blvd (104 Park Center Plaza) in the City of San Jose has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with information as early as possible so you can appropriately respond to the issues identified below. While I continue to work on your application, your timely response will help expedite the process.

We have thoroughly evaluated your project based on the plans and information currently on file. Additional comments may be made at a later time when we receive revised plans and additional information.

COMPLETENESS OF YOUR APPLICATION

Permit Streamlining Act. Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application is complete. However, the following issues must be addressed for me to complete the review of your project.

- *Trees.* Thank you for providing the table showing the existing trees and their disposition. Please provide a separate table that indicates the total number of trees to be removed as a function of their size at two feet above grade. The different size categories that should be specified, along with the standard mitigation measures, are noted below. Along with the number of trees to be removed, please demonstrate that the number of replacement trees is in conformance with the below standards. Trees that are to be relocated on-site do not need to be counted in the "to be removed" numbers, and therefore do not need to meet the mitigation standards.
    - All non-orchard trees that are to be removed shall be replaced at the following ratios:
        - Each tree less than 12" in diameter to be removed = one 15 gallon tree
        - Each tree 12" to 18" diameter to be removed = two 24" box trees
        - Each tree greater than 18" diameter to be removed = four 24" box trees

- *Signage.* Detached/freestanding signage is shown at the Market St. pedestrian entrance. Please provide details of this signage (dimensions, materials, etc.).

- *Mechanical Equipment.* Where will the mechanical equipment for the proposed Building 104 be located?

- *Fountain.* Please provide rough details of the proposed fountain. The maximum height is the major concern.

- *Landscaping Suggestions.* Above the northerly garage entry from San Fernando, you may want to consider larger trees to block the wind. I was out the site today, and while it was more windy than usual, that area was particularly windy where a north/south break occurred in the buildings. To compliment this wind break, the trees you have proposed above the southerly garage entry from Park Ave. may be beneficial, however, they would block the view of the dome on the top of the Tech Museum (SW/c of Park & Market). You may want to consider preserving this view.

- *Parking Level.* Please confirm that no changes are proposed on sheet 2-P, the existing parking garage plan.

- *Lighting.* Please show the locations of and provide details for all exterior uncovered lighting. All lighting should conform to the City of San Jose Outdoor Lighting Policy (http://www.sanjoseca.gov/planning/counter/policies/pol_lighting.pdf). No uplighting is permitted.

COMMENTS FROM OTHER DEPARTMENTS/DIVISIONS AND AGENCIES

Preliminary Comments. Attached are memorandum(s) from other departments/divisions and outside agencies as indicated below. These comments are preliminary and are intended to notify you about potential requirements for development. As required, comments contained in the attached memos shall be incorporated into the revised plan sets. Please read the comments carefully, as some significant issues need to be addressed. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

- Public Works, Fire Dept.

Comments Requested. I have requested that the following agencies identify any potential development issues for your project. I will notify you when I receive their response.

- Redevelopment Agency, Airport, Environmental Services Department, Dept. of Transportation, Building Division, Police

SCHEDULE

The decision to approve, deny, or conditionally approve this proposal will occur at a Director's Hearing. These public hearings are held every Wednesday of the month, except for the first Wednesday of each month. At least two weeks lead time is needed to review revised plans and reports before proceeding with the public hearing notice, and sixteen days lead time is needed between the notice preparation and the public hearing date. Because the revisions requests contained herein are minor, I would estimate that we could potentially proceed to the May 25th Director's Hearing. For this to happen, I would need all revised plans and/or responses to comments on or before April 26, 2005.

CONCLUSION

Please be advised that this summary does not constitute a final review. Additional comments may be necessary upon review of additional information and plan revisions submitted in response to this letter. In

addition, the project may be subject to the City's standard conditions, such as underground on-site utilities, providing any needed street trees, securing a City grading permit, cleaning public streets during construction and the like. You may also want to contact the Pacific Energy Center at (408) 973-2277 and the Pacific Gas and Electric Design and Implementation On-call Advisor at (800) 468-4743 for information about energy conservation for your project. These resources provide design/technical support as well as information on financial incentives for energy-efficient systems.

Please be aware that additional fees may be assessed at a later date. Fees for community meetings, for additional public noticing requirements, and for other processes/reviews included in the adopted fee schedule may be applicable to this proposal. I will inform you as soon as any of these fees would be applicable. The project will not be brought to hearing and may be deferred until all fees have been paid in full.

If you have any questions regarding the information contained in this letter, please feel free to contact me via e-mail at lee.butler@sanjoseca.gov or to give me at call on my direct line at (408) 277-8731.

Sincerely,

Lee Butler
Project Manager

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Memorandum

TO: Lee Butler
Planning and Building

FROM: Mirabel Aguilar
Public Works

SUBJECT: **INITIAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 04/15/05

Approved _____ Date 04/15/05

PLANNING NO.: H05-014
DESCRIPTION: Site Development Permit to construct 2544 square feet of modification to an existing 6411 square foot building and to remove three small existing buildings on a 6.9 gross acres site
LOCATION: northeast corner of Park Avenue and Almaden Blvd
P.W. NUMBER: 3-16386

Public Works received the subject project on 03/18/05 and submits the following comments and requirements.

Actions / Revisions Required:

1. **Public Works Development Review Fee:** An additional Public Works Review Fee is due. This project is located in a flood zone and is subject to the Flood Review Fee. Prior to the project being cleared for the hearing and approval process, a sum of $150.00 shall be paid to the Department of Public Works (Room 308).

2. **Landscape**: The plan shows removal of street trees. We require clarification and further coordination with the City Arborist.

3. **Meeting with Applicant**: The above comments are based on our review to date. Due to the size and complexity of this development, we anticipate additional issues may surface with subsequent review and revised plans. We recommend that a meeting with the Developer and his representatives be scheduled as soon as possible to answer any questions regarding Public Works comments or issues.

4. **Referrals**: Please contact Primo DeGuzman of Roads and Bridges at (408)277-4639 to coordinate Champ Care Race improvements along Park Avenue and Almaden Blvd.

Project Conditions:

Public Works Clearance for Building Permit(s): Prior to the issuance of Building permits, the applicant will be required to have satisfied all of the following Public Works conditions. The

applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits.

5. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. This permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

6. **Transportation**: The projected traffic for this project was reviewed and found to be minimal, therefore no further traffic analysis is required.

7. **Grading/Geology:** The Project site is within the State of California Seismic Hazard Zone. A soil investigation report addressing the potential hazard of liquefaction must be submitted to, reviewed and approved by the City Geologist prior to issuance of a grading permit or Public Works Clearance. The investigation should be consistent with the guidelines published by the State of California (CDMG Special Publication 117) and the Southern California Earthquake Center ("SCEC" report). A recommended depth of 50 feet should be explored and evaluated in the investigation.

8. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) that include site design measures, source controls, and stormwater treatment controls to minimize stormwater pollutant discharges. Post-construction treatment control measures, shown on the project's Stormwater Control Plan, shall meet the numeric sizing design criteria specified in City Policy 6-29 -or- the project shall provide an Alternative Measure, where installation of post-construction treatment control measures are impracticable, subject to the approval of the Director of Planning, Building & Code Enforcement.

9. **Flood: Zone A0, Depths 1' and 2'**
The proposed project appears to be in Flood Zone AO, Depths 1' and 2'. If so, you are required to do the following:
   a) Elevate the lowest floor more than (1, 2, or 3) feet above the highest existing adjacent grade to the proposed structure or floodproof to the same elevation. For insurance rating purposes, the building's floodproofed design elevation must be at least one foot above the base flood elevation to receive rating credit.
   b) An Elevation Certificate (FEMA Form 81-31) for each proposed structure, based on construction drawings, is required prior to issuance of a building permit. Consequently, an Elevation Certificate for each built structure, based on finished construction is required prior to issuance of an occupancy permit.
   c) If the structure is to be floodproofed, a Floodproofing Certificate (FEMA Form 81-65) for each structure, floodproofing details, a Flood Emergency Operation Plan, and an Inspection & Maintenance Plan are required prior to the issuance of a Public Works Clearance.

d) Building support utility systems such as HVAC, electrical, plumbing, air conditioning equipment, including ductwork, and other service facilities must be elevated above the base flood elevation or protected from flood damage.

e) The project site is within the limits of the Santa Clara Valley Water District's Downtown Guadalupe River Flood Protection Project. Upon completion, the flood protection project may remove the property from the Special Flood Hazard Area (SFHA) thereby reducing its risk from flooding. The District is also pursuing a temporary designation of Zone A99 for properties that will eventually be removed from the SFHA. Earliest estimated map revision for Zone A99 is late Summer 2005. For updates, contact Maria Angeles at (408) 277-5161.

10. **Street Improvements:**

a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.

b) Remove and replace broken or uplifted curb, gutter, and sidewalk along project frontage.

c) Close unused driveway cut(s).

d) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

e) Repair, overlay, or reconstruction of asphalt pavement may be required. The existing pavement will be evaluated with the street improvement plans and any necessary pavement restoration will be included as part of the final street improvement plans.

f) The replacement of the existing cluttered news racks on both Park Avenue and Market Street with pedestal mounted news racks may be required.

11. **SNI:** This project is located within the Downtown Core SNI area. Public improvements shall conform to the approved EIR and neighborhood improvement plan.

12. **Electrical**:

a) Installation of electrolier(s) on all project frontages to the satisfaction of the Director of Public Works.

b) Relocation and/or removal of electrolier(s) along project frontage may be required.

c) Locate and protect existing electrical conduit in driveway and/or sidewalk construction.

d) Provide clearance for electrical equipment from driveways. The minimum clearance from driveways is 10' in commercial areas and 5' in residential areas.

e) Clearance from electrolier(s) must provide a minimum of 10' from high voltage lines; 3' from secondary voltage lines; and 1' from communication lines.

f) Painting and renumbering existing electroliers along project frontage may be required.

g) Salvage of existing luminaire(s) and installation of new luminaires may be required.

h) Installation of pedestrian lighting along project frontage(s) may be required.

13. **Landscape**:
    a) The installation of tree guard(s) and/or tree grate(s) may be required.
    b) Obtain a tree removal permit for any on-site trees over 18" in diameter that are to be removed.

14. **Referrals**: This project should be referred to the Downtown Business Association, the Valley Transit Authority, and the San Jose Redevelopment Agency. Please contact Primo DeGuzman of Roads and Bridges at (408)277-4639 to coordinate Champ Care Race improvements along Park Avenue and Almaden Blvd.

Please contact me at (408) 277-5161 if you have any questions.

CITY OF SAN JOSE
PLANNING DIVISION

Memorandum

DATE: 03/30/05

TO: Lee Butler
FROM: Nadia Naum-Stoian

Re: Plan Review Comments

PLANNING NO:	H05-014
DESCRIPTION:	Site Development Permit to construct 2,544 square feet of modification to an existing 6,411 square foot building and to remove three small existing buildings on a 6.9 gross acres site
LOCATION:	northeast corner of Park Avenue and Almaden Blvd
ADDRESS:	northeast corner of Park Avenue and Almaden Blvd (104 PARK CENTER PLAZA)
FOLDER #:	05 008080 DV

The Fire Department's review was limited to verifying compliance of the project to Article 9, Appendix III-A, and Appendix III-B of the 2001 California Fire Code with City of San Jose Amendments (SJFC). Compliance with all other applicable fire and building codes and standards relating to fire and panic safety shall be verified by the Fire Department during the Building Permit process.

- These comments are based on the following information from drawings dated 3/16/05 by R B F Consulting

Largest building:	6411 sq. ft.
Construction Type:	V N
Occupancy Group:	B
Number of stories:	1

1. The Fire Department does not recommend approval of the project at this time due to the following discrepancies:

a) Fire apparatus access is not in accordance with the requirements of the SJFC.

The requirement for all exterior structures to be within 150 feet from an approved emergency vehicle access road without crossing property lines as per the Fire Code, is not complied with. All alternate means of access shall be approved by the Fire Department; - preliminary variance meeting between applicant and Fire Dept. held on 3/17/05. Submittal to follow.

b) The plans do not indicate that the required fire flow of 2250GPM will be available at the project site. Please ask the applicant to immediately contact Jim Bariteau of San Jose Water Co. at 408-279-7874_ to get the water flow information.

c) The plans do not show location of hydrants. The required fire flow shall be provided through 2 hydrants.

2. Please advice the applicant to submit plans to the Fire Department that provide the following information:

a) Width, length, and grade of the fire apparatus access roads, streets, avenues, and the like. Every portion of all building exterior walls shall be within 150 feet of an access road. The fire access shall:

- be at least 20 feet wide;
- have an unobstructed vertical clearance of not less than 14 feet;
- be designed and maintained to support the loads of fire apparatus of at least 69,000 pounds;
- have a minimum inside turning radius of 30 feet and an outside turning radius of 50 feet;
- **Curbs are required to be painted red and marked as "Fire Lane - No Parking" under the following conditions:**

  i) **Roads, streets, avenues, and the like that are 20 to less than 26 feet wide measured from face-of-curb to face-of-curb shall have curbs on both sides of the road painted and marked**

  ii) **Roads, streets, avenues, and the like that are 26 to less than 32 feet wide measured from face-of-curb to face-of-curb shall have one curb painted and marked**

b) Location of fire hydrants. The average distance between hydrants shall not exceed 450 feet.

c) Available fire flow. Provide a copy of the letter from San Jose Water Co that indicates the water flow available.

d) All fire department connections shall be located within 100 feet from a standard public fire hydrant. All alternate means of protections shall be reviewed by the Fire Department. The public fire hydrant(s) shall be located on the same frontage as all fire service connections.

e) Provide Fire Department personnel route of travel for the interior podium for access. The Fire Department requires all exterior stairways to have direct egress to all interior court(s) without obstructions for equipment (i.e., ladders, etc.) used by this Department for rescue as well as suppression. All exterior stairways to interior podium shall be 6 feet wide for the fire personnel for reasons as noted.

f) Provide proper signage for all Fire Protection valving, and Fire Dept.Connections throughout the Plaza.

Note: The plans shall be submitted to the Fire Department by appointment only (call Nadia Naum-Stoian) as soon as possible.

Subject: RE: City File No. H05-014

Hi Dana,

I apologize that this proposal was referred to you. The City would like to respectfully withdraw the courtesy referral of file number H05-014. We will make every effort to cease these errors in the future, and again, I apologize that the application was referred. Please let me know if you would still like the information you have requested below, and I will be happy to provide it.

If you have any questions, feel free to contact me at this e-mail address or on my direct line at (408) 277-8731. Have a great day!

Sincerely,

Lee Butler

Subject: City File No. H05-014

Hi Lee.
I am looking for a little more information regarding the above cited project referred by the City of San Jose to the ALUC. The referral form cites proposed the construction of 2,544 square feet of modification to an existing 6,411 square foot building.

- What is Building 104 (Center Plaza) currently used for?
- Will the use change with the proposed new construction/renovation?
- What is the proposed height of Building 104?
- What are the current uses of Buildings 109, 108 and 102 proposed for demolition?

Thanks,
Dana A. Peak, Program Manager

Re: Park Center Plaza
N&A # 0419.1

Dear David,

This letter is in response to the comments dated April 26, 2005 received via email from Bob Ruff at the San Jose Redevelopment Agency:

Sheet L1.1

Note that Bob's comments referenced sheet 2-EX, however this existing tree information is now shown on sheet L1.1.

Almaden Boulevard - All existing trees along Almaden in grass parkway are to remain. This sheet has been updated to reflect this.

Park Avenue – Trees #111, #112, and #114 are being removed due to their poor condition and are being replaced with Gleditsia triacanthos as required by the Downtown Streetscape Masterplan. Tree #40 will be removed by the City as part of the preparation for the Grand Prix Race.

Market Street – Trees #35 and #36 are proposed to be removed. These will be replaced by (3) new Prunus cerasifera as required by the Downtown Streetscape Masterplan. These trees will be at the existing grade elevation and will integrated into the new raised people watching area proposed on the east side of Bank of America (see the revised design for this seating area) on sheets 2-H, 6.0, 6.1. This seating area has been shifted back toward Bank of America and out of the public right-of-way to allow for a 15' wide clear pedestrian zone along Market Street.

Sheet 2-H

Hardscape materials are delineated on this plan. Almaden Boulevard, Park Avenue, and West San Fernando will all receive concrete paving that is integral color "French Gray" with a medium sandblast finish and a 5'x5' scoring pattern as required by the Downtown Streetscape Masterplan. Market Street will receive integral color "French Gray" concrete with a medium sandblast finish with a scoring pattern that matches the Tech Museum frontage. The stone paving previously shown at the grand stair entry has been removed.

4010 Goldfinch Street
San Diego, CA 92103
TEL: 619 325 1990
FAX: 619 325 1997
EMAIL: mail@nowellassociates.co

General

The "bow in" shown on West San Fernando Street is an existing condition and is proposed to remain.

As discussed with Bob Ruff, the details on sheet 7.0 showing 4"x4" granite sets to be used in existing or reconfigured tree cutouts around the project is acceptable since we are conforming to existing tree locations.

Please let me know if we can be of further assistance.

Sincerely,

Brad Lenahan, ASLA, RLA #4470
Associate Principal

Re: DivcoWest - Park Center Plaza
Plan File No. - H05-014
A|DWRB No. - 04171

Dear Lee:

Listed below are Architects | Delawie Wilkes Rodrigues Barker's responses to Site Development Permit Application comments dated April 14, 2005. See attached for other project disciplines.

Letter dated April 14, 2005 from Lee Butler:

Completeness of Application:

Issues addressed to complete Project Review:

- *Trees.* Thank you for providing the table showing the existing trees and their disposition. Please provide a separate table that indicates the total number of trees to be removed as a function of their size at two feet above grade. The different size categories that should be specified, along with the standard mitigation measures, are noted below. Along with the number of trees to be removed, please demonstrate that the number of replacement tress is in conformance with the below standards. Trees that are to be relocated on-site do not need to be counted in the "to be removed" numbers, and therefore do not need to meet the mitigation standards.
    - All non-orchard trees that are to be removed shall be replaced at the following ratios:
        - Each tree less than 12" in diameter to be removed = one 15 gallon tree.
        - Each tree 12" to 18" diameter to be removed = two 24" box trees.
        - Each tree greater than 18" diameter to be removed = four 24" box trees.

Response: *See Landscape Attachment.*

Facsimile 619-299-5513
a-dwrb.com

- *Signage.* Detached/freestanding signage is shown at the Market St. pedestrian entrance. Please provide details of this signage (dimensions, materials, etc.).

  Response: *Signage design is not complete at this time. Will submit a separate signage package for City of San Jose Department of Planning review, confirmed via phone on 04/22/05 with Lee Butler (project manager for the City of San Jose Department of Planning).*

- *Mechanical Equipment.* Where will the mechanical equipment for the proposed Building 104 be located?

  Response: *See Mechanical, Electrical and Plumbing Attachment.*

- *Fountain.* Please provide rough details of the proposed fountain. The maximum height is the major concern.

  Response: *See Landscape Attachment.*

- *Landscaping Suggestions.* Above the northerly garage entry from San Fernando, you may want to consider larger trees to block the wind. I was out the today, and while it was more windy than usual, that area was particularly windy where a north/south break occurred in the buildings. To compliment this wind break, the trees you have proposed above the southerly garage entry from Park Ave. may be beneficial; however, they would block the view of the dome on the top of the Tech Museum (SW/c of Park & Market). You may want to consider preserving the view.

  Response: *See Landscape Attachment.*

- *Parking Level.* Please confirm that no changes are proposed on sheet 2-P, the existing parking garage plan.

  Response: *See Sheet 2-P2 for Proposed Parking Garage P1, P2, P3 Level. The changes made on the P1 Level are; the removal of the Parking Garage Office and its new location; addition of fountain pump-room; addition of new stair/elevator and elevator equipment room at Building 104 entry; new signage, as well as enhanced ceilings at the entries of Buildings 100, 104 and 150. The parking ratio has not been affected.*

- *Lighting.* Please show the locations of and provides details for all exterior uncovered lighting. All lighting should conform to City of San Jose Outdoor Lighting Policy (www.sanjoseca.gov/planning/counter/policies/pol_lighting.pdf) No up-lighting is permitted.

  Response: *See Mechanical, Electrical and Plumbing Attachment.*

Memorandum dated April 15, 2005 from Mirabel Aquilar (Public Works):

Actions / Revisions Required:

1. *Public Works Development review Fee.* An additional Public Works review Fee is due. This Project is located in a flood zone and is subject to the Flood Review Fee. Prior to the project being cleared for the hearing and approval process, a sum of $150.00 shall be paid to the Department of Public Works (Room 308).

   Response: *Amount of $150.00 was paid to the City of San Jose 04/26/05 by A|DWRB, see attached receipt.*

2. *Landscape.* The plan shows the removal of street tree. We require clarification and further coordination with the City Arborist.

   Response: See *Landscape Attachment.*

3. *Meeting with Applicant.* The above comments are based on our review to date. Due to the size and complexity of this development, we anticipate additional issues may surface with subsequent review and revised plans. We recommend that a meeting with the Developer and his representatives be scheduled as soon as possible to answer any questions regarding Public Works comments or issues.

   Response: P*er our phone conversation 04/20/05 with Maria Angeles (408.277.5161) it was determined a meeting was not necessary at this time due to further explanation of the project scope.*

4. *Referrals.* Please contact Primo De Guzman of Roads and Bridges at (408) 277-4639 to coordinate Champ Care Race Improvements along Park Avenue and Alamaden Blvd.

   Response: See *Landscape Attachment.*

Project Conditions:

5. *Minor Improvement Permit.* The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. This permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

   Response: *See Civil Attachment.*

6. *Transportation.* The project traffic for this project was reviewed and found to be minimal; ***therefore no further traffic analysis is required.***

7. *Grading/Geology.* The Project site is within the State of California Seismic Hazard Zone. A soil investigation report addressing the potential hazard of liquefaction must be submitted to, reviewed and approved by the City Geologist prior to issuance of grading permit or Public Works Clearance. The investigation should be consistent with the guidelines published by the State of California (CDMG Special Publication 117) and the Southern California Earthquake Center ("SCEC" report). A recommended depth of 50 feet should be explored and evaluated in the investigation.

   Response: *Per our phone conversation 04/20/05 with Maria Angeles (408.277.5161) it was determined the said soil investigation report was not necessary due to further explanation of the project scope.*

8. *Stormwater Runoff Pollution Control Measures.* This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) that include site design measures, source controls, and stormwater treatment controls to minimize stormwater pollutant discharges. Post-construction treatment control measures, shown on the project's Stormwater Control Plan, shall meet the numeric sizing design criteria specified in City Policy 6-29 –or- the project shall provide an Alternative Measure, where installation of post-construction treatment control measures are impracticable, subject to the approval of the Director of Planning, Building & Code Enforcement.

   Response: *See Mechanical, Electrical and Plumbing & Civil Attachments.*

9. *Flood: Zone A0, Depths 1' and 2'.* The proposed project appears to be in Flood Zone A0, Depths 1' and 2'. If so, you are required to do the following.

   a) Elevate the lowest floor more than (1,2, or 3) feet above the highest existing adjacent grade to the proposed structure or floodproof to the same elevation. For insurance rating purposes, the building's floodproofed design elevation must be at least one foot above the base flood elevation to receive rating credit.

      Response: *The current project is to remodel an existing one story office building on an existing concrete podium deck, over an existing subterranean parking. The new remodeled building will include 2544SF of added new building area with a new total of 8955SF. With this scope of construction work the Flood Zone A) is not applicable to this remodel.*

   b) An Elevation Certificate (FEMA Form 81-31) for each proposed structure, based on construction drawings, is required prior to issuance of a building permit. Consequently, an Elevation Certificate for each built structure, based on finished construction is required prior to issuance of an occupancy permit.

      Response: *See response 9a above.*

*See Attachment 'A'

c) If the structure is to be floodproofed, a Floodproofing Certificate (FEMA Form 81-65) for each structure, floodproofing details, a Flood Emergency Operation Plan, and an Inspection & Maintenance Plan are required prior to the issuance of a Public Works Clearance.

Response: *See response 9a above.*

d) Building support utility systems such as HVAC, electrical, plumbing, air conditioning equipment, including ductwork, and other service facilities must be elevated above the base flood elevation or protected from flood damage.

Response: *See Mechanical, Electrical and Plumbing Attachment.*

10. *Street Improvements.*

a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.

Response: *See Civil Attachment.*

b) Remove and replace broken or uplifted curb, gutter, and sidewalk along project frontage.

Response: *See Civil Attachment.*

c) Close unused Driveway cut(s).

Response: *See Civil Attachment.*

d) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Response: *See Civil Attachment.*

e) Repair, overlay, or reconstruction of asphalt pavement may be required. The existing pavement will be evaluated with the street improvement plans and any necessary pavement restoration will be included as part of the final street improvement plans.

Response: *See Civil Attachment.*

f) The replacement of the existing cluttered news racks on both Park Avenue and Market Street with pedestal mounted news racks may be required.

Response: *See Civil Attachment.*

11. *SNI.* This project is located within the Downtown Core SNI area. Public improvements shall confirm to the approved EIR and neighborhood improvement plan.

    Response: *See Civil Attachment.*

12. *Electrical*

    a) Installation of electrolier(s) on all project frontages to satisfaction of the Director of Public Works.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    b) Relocation and/or removal of electolier(s) along project frontage may be required.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    c) Locate and protect existing electrical conduit in driveway and/or sidewalk construction.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    d) Provide clearance for electrical equipment from driveways. The minimum clearance from driveways is 10' in commercial areas and 5' in residential area.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    e) Clearance from electrolier(s) must provide a minimum of 10' from high voltage lines; 3' from secondary voltage lines: and 1' from communication lines.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    f) Painting and renumbering existing electroliers along project frontage may be required.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    g) Salvage of existing luminaire(s) and installation of new luminaries may be required.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

    h) Installation of pedestrian lighting along project frontage(s) may be required.

    Response: *See Mechanical, Electrical and Plumbing Attachment.*

13. *Landscape.*

a) The installation of trees guard(s) and/or tree grate(s) may be required.

Response: *See Landscape Attachment.*

b) Obtain a tree removal permit for any on-site trees over 18" in diameter that are to be removed.
Response: *See Landscape Attachment.*

14. *Referrals.* This project should be referred to the Downtown Business Association, the valley Transit Authority, and the San Jose Redevelopment Agency. Please contract Primo DeGuzman of Roads and Bridges at (408)277-4639 to coordinate Champ Race improvements along Park Avenue and Alamaden Blvd.

Response: *see #4 response; [see Landscape Attachment].*

Memorandum dated March 30, 2005 from Nadia Naum-Stoian (Fire Protection):

1. The City of San Jose Fire Department discrepancies:

a) Fire apparatus is not in accordance with the requirements of the SJFC. The requirement for all exterior structures to be within 150 feet from an approved emergency vehicle access road without crossing property lines as per the Fire Code, is not complied with. All alternate means of access shall be approved by the Fire Department; - preliminary variance meeting between applicant and Fire Dept. held on 3/17/05. Submittal to follow.

Response: *said variance was **approved** 04/07/05. Under Site Development Package #H05-014 (05008080); Plan Check #H05-014; Associated Folder # 05009824. Per an e-mail dated 04/20/05 Nadia Naum-Stoian to A|DWRB, stated this approved variance mitigates access.*

b) The plans do not indicate that the required fire flow of 2250GPM will be available at the project site. Please ask the applicant to immediately contact Jim Bariteau of San Jose Water Co. at 408-297-7874_ to get the water flow information.

Response: *See Mechanical, Electrical and Plumbing Attachment.*

c) The plans do not show location of hydrants. The required fire flow shall be provided.

Response: *See Mechanical, Electrical and Plumbing & Civil Attachments.*

2. Please advise the applicant to submit plans to the Fire department that provide the following information:
   a) Width, length, and grade of the fire apparatus access roads, streets, avenues, and the like. Every portion of all building exterior walls shall be within 150 feet of an access road. The fire access shall:
      - be at least 20 feet wide;
      - have an unobstructed vertical clearance of not less than 14 feet;
      - be designed and maintained to support the loads of fire apparatus of at least 69,000 pounds;
      - have a minimum inside turning radius of 30 feet and an outside turning radius of 50 feet;
      - Curbs are required to be painted red and marked as "Fire Lane – No Parking" under the following conditions:
        i) Roads, streets, avenues, and the like that are 20 to less than 26 feet wide measured from face-of-curb to face-of-curb shall have curbs on both sides of the road painted and marked
        ii) Roads, streets, avenues, and the like that are 26 to less than 32 feet wide measured from face-of-curb to face-of-curb shall have one curb painted and marked.

   Response: *Due to this 'existing' development there is no fire apparatus access onto the existing concrete podium. A variance application has been approved 04.07.05 by Robert King (Fire Marshall); allowing this development to provide 2(two) new fire department connections located on the perimeter of the site on West San Fernando Street and Park Avenue; giving fire fighters direct connection to 4(four) new standpipes located throughout the podium level.*

   b) Location of fire hydrants. The average distance between hydrants shall not exceed 450 feet.

   Response: *see Mechanical, Electrical and Plumbing Attachment.*

   c) Available fire flow. Provide a copy of the letter from San Jose Water Co that indicates the water flow available.

   Response: *see Mechanical, Electrical and Plumbing Attachment.*

   d) All fire department connections shall be located within 100 feet from a standard public fire hydrant. All alternate means of protections shall be reviewed by the Fire Department. The public fire hydrant(s) shall be located on the same frontage as all fire service connections.

   Response: *see Mechanical, Electrical and Plumbing Attachment.*

e) Provide Fire Department personnel route of travel for interior podium for access. The fire Department requires all exterior stairways to have direct egress to all interior court(s) without obstructions for equipment (i.e., ladders, etc.) used by this Department for rescue as well as suppression. All exterior stairways to interior podium shall be 6 feet wide for the fire personnel for reasons as noted.

Response: *see Sheet FD-1 for Fire Department personnel route of travel.*

f) Provide proper signage for all Fire Protection valving, and Fire Dept. Connections throughout the Plaza.

Response: *see Mechanical, Electrical and Plumbing Attachment.*

If you have any questions regarding the above information, please give me a call. Thank you.

Sincerely,

David Salud

Subject: Park Center Plaza - File No. H05-014

Dear David:

Here are our responses to the City of San Jose Comments for Park Center Plaza.

Responses to Memorandum to Lee Butler from Mirabel Aguilar dated 04/15/05:

Actions/Revisions Required:

5. A Minor Street Improvement Permit will be processed if required as part of the conditions for this project.

8. A Stormwater Control Plan will be developed and the project will comply with the City's Post-Construction Urban Runoff Management Plan, which includes the implementation of Best Management Practices.

9. Any proposed structures will comply with the Flood Zone A0 requirements.

10. If required the Applicant shall perform the necessary items in this section.

11. Noted.

Responses to Memorandum to Lee Butler from Nadia Naum-Stoian dated 034/30/05:

1.c. The location of all existing fire hydrants are now shown on the existing conditions plan.

Sincerely,

Alissa Sigala
Design Engineer

Re: Park Center Plaza
N&A # 0419.1

Dear David,

This letter is in response to the following letters from the City of San Jose Department of Planning, Building and Code Enforcement and the City of San Jose Department of Public Works. Our responses correspond to landscape related items:

Letter from Lee Butler dated 4.14.05

Trees. A tree replacement schedule has been added to sheet 6.1. We have exceeded the minimum requirements for tree replacement in both tree quantity and box sizes.

Fountain. Sheet L7.1 which shows the fountain design has been added to the package. Concerns were raised regarding wind potentially blowing water outside of the basin. The fountain will be equipped with a computer controlled adjustable wind sensor (anemometer) to handle windy situations and avoid spray onto the deck.

Landscaping suggestions. Trees have been added at the garage entry from West San Fernando Street as suggested to buffer wind.

Lighting. Sheet L7.2 which shows details for various types of proposed "uncovered" lighting has been added to the package.

Letter from Maribel Aguilar dated 4.15.05

2. *Landscape.* The plan shows the removal and replacement of (4) Honey Locust trees on Park Avenue. We have contacted the City arborist, Ralph Mize to confirm the process for tree removal. We will obtain the proper permit from the Department of Transportation prior to starting this work. Ralph also conveyed that the existing Carob tree south of Bank of America will be removed by the City.

4010 Goldfinch Street
San Diego, CA 92103

TEL: 619 325 1990
FAX: 619 325 1997
EMAIL: mail@nowellassociates.com

11. SNI. Public improvements will conform to the Downtown Streetscape Master Plan dated October 2003.

13. Landscape. At the locations along Park Avenue where 4 existing trees are proposed to be removed the plans call for the new trees to be installed in tree cut-outs rather than in grates. This is due to the fact that the adjacent trees that are to remain are currently in cut-outs. We feel that it is important for the design of the tree installation in this area to be consistent and that adding tree grates and guards would create an inconsistent look along this edge. The plans call for the installation of 4"x4" granite sets (similar to the Tech Museum frontage along Market Street) at both the new and existing tree locations in the cut-outs to further add consistency to the streetscape. This was discussed with Marian Dixon in Maribel's absence, however no conclusion was reached as to the acceptability of this solution.

No trees greater than 18" are proposed to be removed.

14. Referrals. Paul Izadyar of Roads and Bridges was contacted in Primo DeGuzman's absence. Although we were not able to reach Mr. Izadyar prior to this resubmittal, the design of any public improvements will accommodate any improvements associated with the Champ Car Race along Park Avenue and Almaden Blvd.

Please let me know if we can be of further assistance.

Sincerely,

Brad Lenahan, ASLA, RLA #4470

Re: Park Center Plaza (DivcoWest)
F+K Ref. No.: S05.09050.00

Dear David,

This letter is written in response to the following letters from the San Jose Depart of Planning, Building and Code Enforcement. We offer responses related to the Mechanical, Electrical, and Plumbing/Fire Protection systems:

Letter Dated April 14, 2005 from Lee Butler:
Mechanical Equipment: Mechanical Equipment for Building 104 will be located on the roof behind a perforated metal screen roof.

Lighting: Per the referenced City of San Jose Outdoor Lighting Policy and as confirmed via phone on 04/19/05 with Lee Butler , project manager for the City of San Jose Department of Planning, this project is located in the Downtown Core and therefore is an exemption to this policy:

The subsection entitled ***Exemptions,*** on page 3 of 3 of the policy, clearly states: "*The Downtown Core, as defined in the General Plan, is exempt from the provisions of this policy, as are any areas that the Council has exempted up until the date of this revision.*"

Regardless of this exemption we feel the lighting design is responsive to the intent of the policy. The plaza is a Pedestrian Oriented space in which color rendition is critical to its safety and comfort. Pole lights are reused existing plaza fixtures, all other lights are aimed in such a way as to light the surfaces of adjacent features. Please reference the attached fixture cut sheets. The following is a summary of how the light fixtures are intended to be used/aimed:

F1. Adjustable ingrade fixture to be aimed at sculpture.
F2. Recessed wall mounted steplight located inside planters to light tall grasses.
F3. Ingrade wallwasher , light focused at wall of New Building 104.
F4. Grade mounted accent light at low height planting. Fixture aimed at low height planting.
F5. Grade mounted accent light at light trees. Fixture aimed at trees.
F6. Recessed wall mounted accent light at landscape plinths. Fixture will be shielded with parallel louver over faceplate. Fixtures mounted low, close to paving, light aimed in narrow beam across paving.
F7. Recessed wallmounted steplight area light. Fixture will be shielded with parallel louver.
F8. Wall mounted area light to illuminate garage signage. Fixture with horizontal narrow linear flood will be aimed at signage.
F9. Wall mounted canopy uplight at new Building 104 canopy.
F10. Grade mounted accent light to be aimed at south wall of Wells Fargo Building. Colored lenses to be used. Color shall be within the red/orange range.

F11. Building mounted accent light. Fixture shall be aimed at main sculpture adjacent to Building 104.
F12. Bollard. Light distribution shall throw light out and down.
F13. Not used
F14. Pole light mounted within cluster of trees. Fixture lights adjacent trees.
F15. Existing plaza pole lights to be relocated.
F16. Existing pole lights at Market Street entrance to plaza. Fixtures to be relocated.
F16A. New pole lights to match existing F16 fixtures.
F17. Integral lighting at Plaza signage/monument.. Design in development.
F18. Concealed fiberoptic at roof top ridge of Building 104. Low level light serves to accent separation of roof planes.

Memorandum Dated April 15, 2005 from Mirabel Aguilar (Public Works):

Item 8. Storm Runoff Pollution Control Measures:

Per our telephone conversation with Transportation and Development Services Divisions (408.277-5161), dated 4/18/05; this note will be added as part of the General Notes on Plumbing Legend Sheet.

Item 9 Flood: Zone A0, Depths 1' and 2':

d) Per our today's telephone conversation (4/19/05) with Maria Angeles (408.277-5161) this note will be added as part of the General Notes on Plumbing Legend Sheet for information only.

Item 12 Electrical:

a) Electroliers are existing. We see no need for modifications to the existing Electroliers.

b) Electroliers are existing. We see no need for modifications to the existing Electroliers.

c) There is no work within the driveway and sidewalk.

d) There are no planned modifications to the driveways and existing electroliers.

e) Electroliers are existing. We see no need for modifications to the existing Electroliers.

f) We see no need for modifications to the existing Electroliers.

g) Pedestrian lighting along project frontage is existing. We see no need in modifying the existing lighting along project frontage.

h) At project frontage, pedestrian lighting has been added at major entrances to site only.

Memorandum Dated March 30, 2005 from Nadia Naum-Stoian (Fire Protection):
Item 1:

a) Architect to respond.

b) Awaiting fire hydrant(s) flow information from Michael Asahina with San Jose Water Company (408-279-7850). Copy of the Facility map shall be submitted to the attention of Jim Bariteau of San Jose Water Department (Tel.: 408-279-7874). A request of the Facility map was made

Monday 4/18/05 and the contact person is Viki with San Jose Water Company (408-279-7800, ext. 5838).

c) Awaiting fire hydrant(s) flow information from San Jose Water Company. Location of existing fire hydrants will be shown on Flack + Kurtz drawing.

Item 2:

a) Architect to respond.

b) Location of existing fire hydrants will be shown on Flack + Kurtz drawing.

c) Awaiting fire hydrant(s) flow information from San Jose Water Company. A copy of the letter from San Jose Water Co will be provided after receiving hydrant flow information.

d) All new two-way free standing fire department connections will be shown on Flack + Kurtz drawings. Sketch for review and comments was sent on April 19, 2005 via email and faxed to the attention of Nadia Naum-Stoian (FAX. 408-277-2475).

e) Architect to respond.

f) Two-way free standing fire department connection will be specified by Flack + Kurtz. Signage information will be determined by the architect.

Please let us know if we can be of further assistance.

Very truly yours,

FLACK + KURTZ Inc.

SPECIFICATIONS

Fixture Housing
Corrosion-free composite, made from high strength, thermo-formed sheet molded polyester compound. Glass reinforced, flame retardant and UV stabilized. (2) Bottom-Entry ½" NPT female conduit entries with knockout plugs and (4) side flats for ½" or ¾" conduit adapters

Aiming
Dual axis OptiLock™ stainless steel aiming bracket rotates 360° and provides vertical adjustment up to 10° (w/o AH) or 8° (w/ AH) from nadir. Positive lock action ensures optical orientation.

Socket
Specification grade ceramic body lamp holder rated for 4kV starting pulse. Medium base, nickel-plated copper alloy lamp grip and screw shell. Corrosion resistant coil spring under center contact.

Ballast Assembly
Class H Insulated, High Power Factor, Magnetic Ballast. 120VAC or 277VAC input. Integral, removable gear tray with quick disconnect and carrying handle

Wiring / Connectors
Teflon coated wire, 18 gauge, 600V, 250°C rated and certified to UL1659 standard. OptiLock™ and gear tray quick disconnects. HydroLock™ (pat. pend.) with anti-siphon valve (ASV™) wireway. (3) Water-Tight connectors supplied for line connection. Maximum (2) #10 & (1) #18. Minimum (1) #12 & (1) #18.

Lens
High heat shock resistant, tempered ¼" borosilicate flat glass lens. Suitable for walk-over and drive-over applications

Seal
High temperature silicone 'O' Ring at faceplate and HydroLock™ (pat. pend.) creates hermetic seal in optical enclosure. Anti-siphon valve (ASV™) prevents "wicking" through conductor insulation

Faceplate
Solid ½" machined 6061T6 aluminum with (5) black oxided, captive, stainless steel mounting screws. Faceplate options include solid, ½" machined brass and solid, ½" machined stainless steel

Finish
All machined aluminum components are first cleaned and sealed in an exclusive (8) stage, chrome free passivation system, then finished with a Class 'A' TGIC polyester powder coating. Brass components are available in a powder coat finish or one of three handcrafted metal finishes. Stainless steel components are available in one of three handcrafted metal finishes

Designed for low mounting heights for the illumination of steps, stairs, ramps, aisles and other locations indoors and outdoors where guidance and security lighting is required

Housing: Constructed of die cast and extruded aluminum with integral wiring compartment. Mounting tabs provided

Enclosure: One piece die cast aluminum faceplate, ¼" thick. Clear tempered glass with translucent white ceramic coating. Faceplate is secured by two (2) socket head, stainless steel, captive screws threaded into stainless steel inserts in the housing casting. Continuous high temperature O-ring gasket for weather tight operation

Electrical: Compact fluorescent lampholder, G23 (9W), GX23 (13W), 2-pin, rated 75W, 600V

Ballast: Magnetic, HPF available in 120V or 277V - specify

Low voltage lampholder: Double contact bayonet with ceramic insulator and high temperature leads. Integral electronic 120V/11.6V transformer

Through Wiring: Maximum of four (4) No. 12 AWG conductors (plus ground) suitable for 75°C. Two ⅞" knockouts provided for ½" conduit

Finish: Standard finish is an eight step process consisting of two coats of black or white polyurethane, one with light texture over a phosphate base

Custom colors supplied on special order

U.L. listed, suitable for wet locations and for installation within 3 feet of ground. Suitable for all types of construction including poured concrete

M9700 SERIES
METAL HALIDE 175 WATT MAX.
MDDULAR IN-GRADE LUMINAIRE
SINGLE LENS

TYPE _____

MODEL #: _____

DESCRIPTION:

The M9700 series modular in-grade lights are Multi-Purpose units designed for Flush Mounting in a variety of substrates or materials. The M9700's are used to uplight Architectural and Landscape features. The units consist of a Factory –Sealed, thermally protected Lamp Module. Power Module is in a secured Rough-In section (RIS) which includes Channeled Convective Cooling, an Integral Junction Box, and Door Assembly. The M9700 has a small footprint with a cylinder configuration.

SPECIFICATIONS:

DOOR FINISH: Cast aluminum, cast bronze, cast aluminum or bronze with stainless perforated trim insert or Stainless Steel. Round or square with two stainless steel captive fasteners that lock the Lamp Module into the Rough-In Section.

ROUGH-IN SECTION: Injection molded polymer with integral junction box for branch wiring, U.V. stabilized, impact and corrosion resistant for use in all types of environments. Houses Power Module, Lamp Modules and finishing components. Adjustment ring provides 360° aim rotation with keyed section to receive Lamp Module. Ring locks into position with stainless steel fasteners. RIS has a cylinder/ vault configuration.

LAMP MODULE: Stainless steel, sealed and purged of all moisture with silicone gaskets, stainless steel clamp band and single fastener. Electrical connection to Lamp Module is done through submersible connector with gold-plated contacts. **THERMALLY PROTECTED. LAMP INCLUDED**

LAMP TYPES: See ordering guide. If a specific lamp is desired, specify manufacturer's lamp number, most lamps can be supplied. **LAMP INCLUDED.**

VOLTAGES: 120V, 208V, 240V, 277V, 347V - 60 Hz, 220V, 230V, 240V - 50 Hz. Some restrictions may apply.

LIGHT DISTRIBUTIONS (Non Reflectorized Lamps):
TSP (G-12 T6)
SP (E-17, Elliptical)
NFL (E-17, Elliptical, T-6)
MFL (E-17, Elliptical, T-6)
WFL (E-17, Elliptical)
WW (E-17, Elliptical, T-6)

FINISHING SECTION:
Single Lens: Includes 360° Rotolock Module Support Ring and Door Assembly providing maintenance and relamping without re-aiming. Active lenses are available to bend beams for flood and spot distributions (10° tilt and 20°). 5° spread lenses are provided for wall wash distribution. Simple module rotation provides aiming.

POWER MODULE: Ballast is encapsulated in a custom-heat dissipating epoxy resin to eliminate all moisture intrusion to the ballast. Provided with submersible rated cord/connector for connection to integral junction box and lamp module. HID ballasts are magnetic. **THERMALLY PROTECTED.**

ELECTRICAL ENTRIES/JUNCTION BOX: Two PG 16 or two 3/4" NPT bottom openings, standard. One hole is provided with IP68 cord seal that accepts ø10mm to ø14 mm cable (outside U.S. only). Second hole plugged. Box suitable for through branch wiring. Splicing volume 52 cu. in.

ACCESSORIES: Internal Glare Control, Internal Honeycomb Louvers, Rock Guards, Trim Rings, Re-enterable Potting Compound, Polycarbonate Covers, External Glare Shields are available.

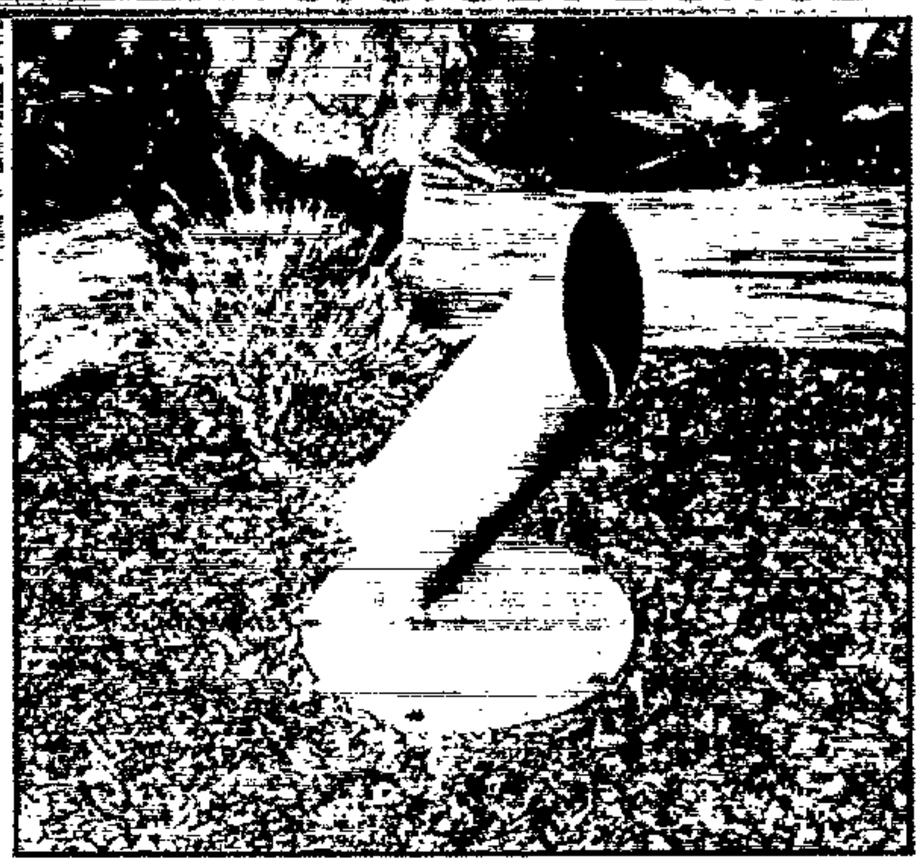
Everest Series™



The **Everest Series™** utilizes the popular Master Color™ PAR20 metal halide lamp. The Master Color™ lamp provides long life, high lumen output and great color. The Everest Series will provide years of trouble free performance. Available in three different cutoff configurations and when combined with the many optical, accessory and ballast options, the Everest Series is unmatched in metal halide lighting performance. The Everest Series™ uses B-K Lighting's exclusive 360SL™ Mounting System which incorporates the Posilock™ Knuckle. This allows for horizontal and rotational aiming without removing the ballast cover and will ensure the integrity of the aiming position.

Features

- Tamper proof design.
- Completely sealed optical compartment.
- Clear, tempered glass lens, factory sealed
- Machined aluminum construction with stainless steel hardware.
- 360SL™ Mounting System allows vertical to horizontal and rotational aiming with Posilock™ feature, provides integral wireway
- Medium base, pulse rated lamp holder with 250° C, 18 ga. wire leads
- cULus Listed with 35W PAR20 metal halide lamps
- For use with 35W, 120V or 277V metal halide ballast.

Specifications

Fixture Housing
Corrosion-free composite, made from high strength, thermo-formed, sheet molded polyester compound. Glass reinforced, flame retardant and UV stabilized. (2) bottom-entry, ½" NPT female conduit entries with knockout plugs and (4) side flats for ½" or ¾" conduit adapters.

Aiming
Dual axis OptiLock™ stainless steel aiming bracket rotates 360° and provides vertical adjustment up to 35° from nadir. Positive lock action ensures optical orientation.

Socket
Specification grade ceramic body, miniature bi-pin quartz lamp holder.

Transformer Assembly *(TR Housing)*
Integral 75VA, Class H insulated low voltage transformer. 120VAC to 12VAC or 277VAC to 12VAC. Integral, removable gear tray with quick disconnect and carrying handle.

Wiring / Connectors
Teflon coated wire, 18 gauge, 600V, 250°C rated and certified to UL1659 standard. RD & TR feature OptiLock™ and gear tray quick disconnects. HydroLock™ (pat. pend.) with anti-siphon valve (ASV™) wireway. (3) Water-Tight connectors supplied for line connection. Maximum (2) #10 & (1) #18. Minimum (1) #12 & (1) #18.

Lens
High heat, shock resistant, tempered ¼" borosilicate flat glass lens. Suitable for walk-over and drive-over applications.

Seal
High temperature silicone 'O' Ring at faceplate. RD & TR feature HydroLock™ (pat. pend.), which creates hermetic seal in optical enclosure. Anti-siphon valve (ASV™) prevents "wicking" through conductor insulation.

Faceplate
Solid, ½" machined 6061T6 aluminum with (5) black oxided, captive, stainless steel mounting screws. Faceplate options include solid, ½" machined brass and solid, ½" machined stainless steel.

Finish
All machined aluminum components are first cleaned and sealed in an exclusive (8) stage, chrome free passivation system, then finished with a Class 'A' TGIC polyester powder coating. Brass components are available in a powder coat finish or one of three handcrafted metal finishes. Stainless steel components are available in one of three handcrafted metal finishes.

Listings
ARL and CSA Listed.

Louvered recessed wall luminaires with asymmetrical distribution

Type:
BEGA Product #:
Project:
Voltage:
Color:
Options:
Modified:

Housing: Constructed of die cast aluminum with integral wiring compartment.

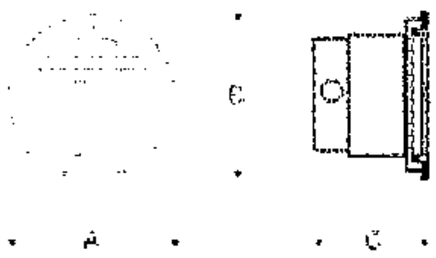
Enclosure: One piece die cast aluminum faceplate ¾" thick, clear tempered glass machined flush with faceplate. Internal aluminum louvers painted black on inside surface, provide direct lamp shielding. Faceplate is secured with flush, flat head stainless steel captive screws threaded into stainless steel inserts in the housing casting. High temperature molded silicone gasket for water tight operation. Internal reflector is semi-specular anodized aluminum.

Electrical: (2312) Incandescent G9, ceramic bi-pin lampholder with high temperature leads. Internal thermal protection device is provided. (2313F) Compact fluorescent lampholder G24q-3 (26W). Electronic ballast is universal voltage (120V through 277V).
(2314P) Compact fluorescent socket (26, 32, 42W multi-watt socket) G24q-3, Gx24q-3, Gx24q-4 rotary lock lampholder rated 75W, 600V. Electronic multi-watt ballast is universal voltage (120V through 277V).

Through Wiring: Maximum of four (4) No. 12 AWG conductors (plus ground) suitable for 90° C. Two ¾" knockouts provided for ½" conduit.

Finish: These luminaires are available in five standard BEGA colors: Black (BLK), White (WHT), Bronze (BRZ), Silver (SLV), Eurocoat™ (URO). To specify, add appropriate suffix to catalog number. For complete description of BEGA finishing process, refer to technical information section at end of catalog. Custom colors supplied on special order.

U.L. listed, suitable for wet locations and for installations within 3 feet of ground. Suitable for all types of construction including poured concrete. Protection class: IP 65.



Die cast aluminum faceplate. Flush mounted clear tempered glass. Internal aluminum louvers. Flush stainless steel fasteners.
U.L. listed, suitable for wet locations. IP 65.
Color: Standard BEGA finishes.

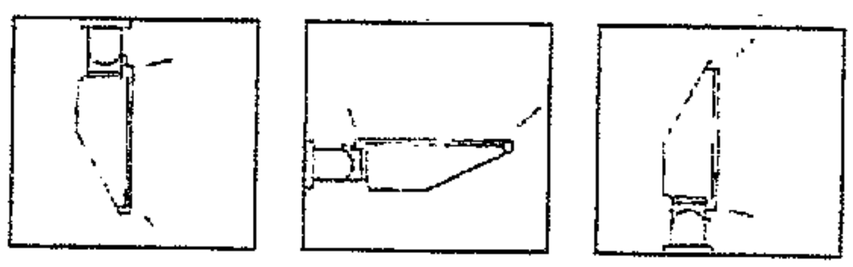
Twin fasteners and locking pin permit stapless and permanent aiming.



Mounting options

PIA240

- Facade and ceiling washlight
- Asymmetrical 'forward throw' distribution
- MH 70-250 W
- HPS 70-250 W

IP66, dust and water jet tight. Electrical protection class I. 40°C ambient temperature rating. Corrosion resistant die-cast aluminium alloy body and wall bracket. Superior powdercoat finish in black RAL 9004. Also available at no extra charge, grey aluminium RAL 9007 and white RAL 9016. Toughened safety glass, in a hinged cast aluminium frame. Weatherproof and durable silicone rubber gasket. Anodized high purity aluminium reflector, chemically brightened. Integral HPF control gear. LPF versions are available on request.

Aiming range vertical +15°/-30°, horizontal +45°/-45°

Suitable for 'wash' illumination of vertical and horizontal surfaces.

Floodlights for high output H.I.D. lamps

Type:
BEGA Product #:
Project:
Voltage:
Color:
Options:
Modified:

Highly efficient floodlights utilizing Metal Halide, Ceramic Metal Halide and High Pressure Sodium light sources from 150W through 1000W. By selecting a clear or spread lens combined with clear or coated lamps a variety of beam patterns can be obtained for special lighting effects. A lamp focusing feature ensures perfect beam pattern maintenance by allowing compensation for lamp irregularities which is critical for precise narrow beam attainment.

Housing: Two piece die cast aluminum consisting of a reflector housing with integral yoke mounting flanges and a separate cylindrical ballast housing with integral cooling fins. Ballast housing is secured to reflector housing by two (2) stainless steel latches which allow easy access to the ballast and lamp focusing screws.

Lamp enclosure: One piece die cast aluminum with integral drainage slots. Tempered glass, ¼" thick (clear on 8336/7/8374/8393) (spread lens with 14 linear prisms per inch on 8338/9/8373/8394). One piece molded, U-channel, high temperature silicone rubber gasket. Full specular anodized aluminum internal reflector. Frame secured to reflector housing by six (6) captive socket head stainless steel screws threaded into stainless steel inserts in the housing

Mounting yoke: ¾" thick stainless steel, allows for full vertical adjustment with die cast aluminum aiming angle indicator and two (2) heavy duty stainless steel locking bolts. Yoke is pre-drilled for mounting to various BEGA mounting accessories

Lamp focusing: Three (3) socket head stainless steel screws are provided for precise leveling and focusing of the H.I.D. lamp arc tube within the reflector optical system. This feature ensures perfect beam pattern maintenance by allowing compensation for lamp irregularities

Electrical: Lampholders: (8337/9) are medium base or (8373/4/8393/4/8397/8) mogul base porcelain with nickel plated copper screw shell supplied with 200°C high temperature leads, pulse rated 4KV. (8336/8) are type G12, bi-pin porcelain with stainless steel contacts. Ballasts are magnetic HPF available in 120V or 277V - specify

Finish: Standard finish is an eight step process consisting of two coats of black or white high solids, UV stabilized polyurethane, one with light texture over a phosphate base
Custom colors supplied on special order

U.L. listed, suitable for wet locations and any mounting orientation

Note: 1000W floodlights are supplied with a remote mounted, rain tight Nema 3R ballast box

Compact accent floodlight with medium beam distribution for Compact fluorescent and Ceramic Metal Halide lamps. Ideal floodlight for the demanding environment where a high degree of beam control is required, such as the illumination of facades, architectural features, bridges, monuments, etc. These floodlights feature a wide array of optical accessories to realize the most challenging lighting tasks. Designed and U. L. approved for installation in any directional orientation

Materials: Luminaires constructed of high-pressure die-cast marine grade aluminum alloy.
Thermal shock, clear glass lens.
One piece, moulded rubber gasket and internal accessory holder.
One piece anodized high purity and chemically brightened aluminum medium beam reflector (except for PAR lamps).
Captive, socket head stainless steel hardware and stainless steel inserts.

Electrical: Integral electronic ballast is std. for ceramic Metal Halide luminaires. Specify 120 or 277 volt.
Integral electronic compact fluorescent ballast std. for compact fluorescent sources.
Medium base porcelain or G12 lamp holder with nickel plated screw shell supplied with 200 deg. high temperature leads. Compact fluorescent lamp holder: GX24q-3 base, 4-pin, 32 watt lamp required (lamp by other).

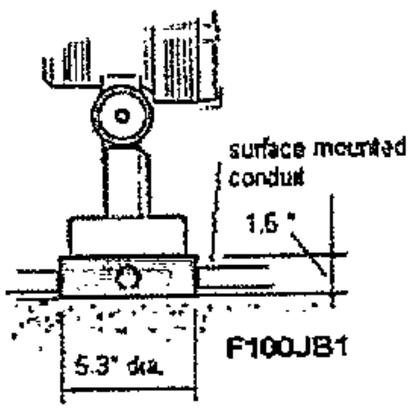
Mounting: Designed for mounting over 4" recessed octagon box. Universal mounting canopy for horizontal adjustment. Full range "locking" knuckle for vertical adjustment.

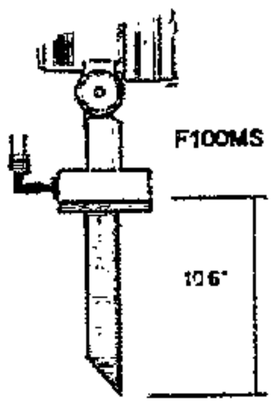
Finish: Standard finish: White RAL 9016, polyester powder coat with fine texture
Optional finishes: Black RAL9004, polyester powder coat with fine texture
Grey Metallic RAL 9007 polyester powder coat with fine texture.
Consult factory for special RAL color options. Specify finish.

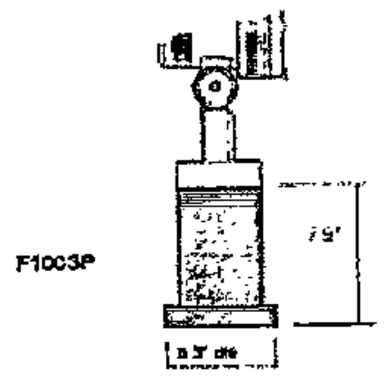
Listing: **U. L., cUL** listed for wet locations.
International Standards: IP66.

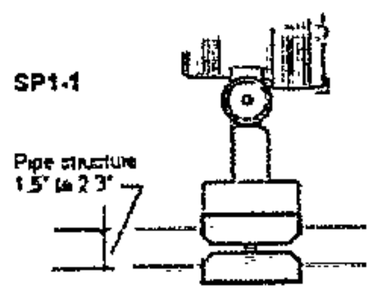
Options:
F141360: Internal glass spread lens.
F141180: Internal linear glass spread lens.
F141SS: Internal Source Shield for T8 ceramic metal halide lamps only
F141OCF: Internal di-chroic glass color filter. Specify color: Red, Green, Blue, or Yellow
F141WG: External wire guard.
F141GS: External glare shield.
F141FS: External Framing snoot
For other mounting options such as pole, short post, grade mounting stake, or surface junction box mounting, please refer to mounting accessories for accent floodlights.

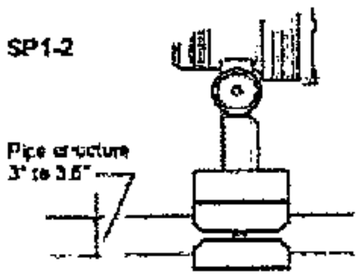
Note: This Fixture Cut Is For Information Only. Refer to Specs For All Catalogue Numbers, Lamps, Finishes, Accessories, Etc

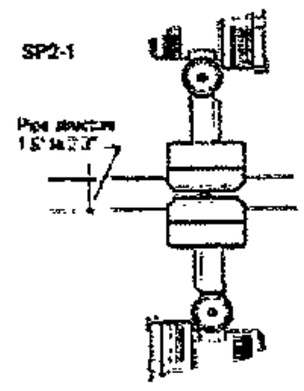


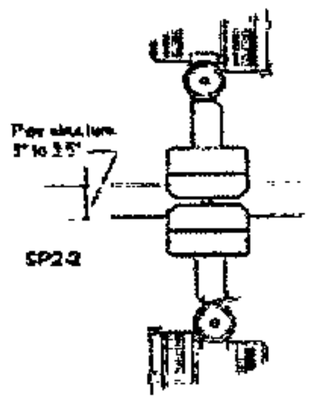












FLC131 & FLC141 Mounting Accessories:
Surface junction box, Short Post, Mounting clamps, Ground mounting stake

Cat. #	Description
F100JB1	Surface junction box for mounting FLC131 or FLC141 accent floodlight.
F100MS	Portable mounting stake for mounting FLC131 or FLC141. Provided with 6' long 3 - wire cord and plug.
F100SP	Short mounting post for FLC131 or FLC141
SP1-1	Pipe clamp for mounting (1) FLC131 or FLC141 to pipe 1.5" to 2.3" in dia.
SP1-2	Pipe clamp for mounting (1) FLC131 or FLC141 to pipe 3.0" to 3.5" in dia.
SP2-1	Pipe clamp for mounting (2) FLC131 or FLC141 to pipe 1.5" to 2.3" in dia
SP2-2	Pipe clamp for mounting (2) FLC131 or FLC141 to pipe 3.0" to 3.5" in dia.

Mounting Accessories for FLC131 and FLC141 accent floodlights.

Surface junction box: Die-cast aluminum junction box with stainless steel hardware Provided with (3) knockouts spaced at 90 deg. threaded for ½" N.P.T. for surface mounted conduit. Specify Finish.

Portable mounting Stake: Die-cast aluminum and stainless steel portable mounting stake provided with 6' long, 3-wire cord and plug. For use with incandescent, halogen, or fluorescent luminaires only – Type M-1 or M-2. Specify finish

Short mounting post: Die-cast aluminum construction with concealed stainless steel hardware. Ideal architectural solution for mounting accent floodlights near ground level. Specify finish

Pipe clamps: Architecturally-designed, die-cast aluminum pipe clamps with stainless steel hardware. Ideal for mounting (1) or (2) accent floodlights to any structure, whether round or square up to 3.5" in diameter. Specify finish.

External Optical Accessories for FLC131 and FLC141 accent floodlights, including protective wire guards, glare shields, and framing snoots.

Wire guard: Provides protection for the glass lens. External bayonet mounting system.

Glare shield: Provides cut-off glare control in one direction only. Inner surface provided in a powder coat paint matte black finish for glare control. External bayonet mounting system allows glare shield to be rotated and fixed in increments of 90 degrees.

Framing snoot: Provides all-round glare cut-off as well as effective framing and trimming of beam. Inner surface provided in a powder coat paint matte black finish for glare control. External bayonet mounting system. Recommended for downward aiming only.

Materials: Accessories constructed of marine grade aluminum alloy.
Captive, socket head stainless steel hardware.

Mounting: External bayonet mounting system with four stainless steel hardware.

Finish:
Standard finish. White RAL 9016, polyester powder coat with fine texture.
Optional finishes: Black RAL9004, polyester powder coat with fine texture.
Grey Metallic RAL 9007 polyester powder coat with fine texture.
Consult factory for special RAL color options. Specify finish

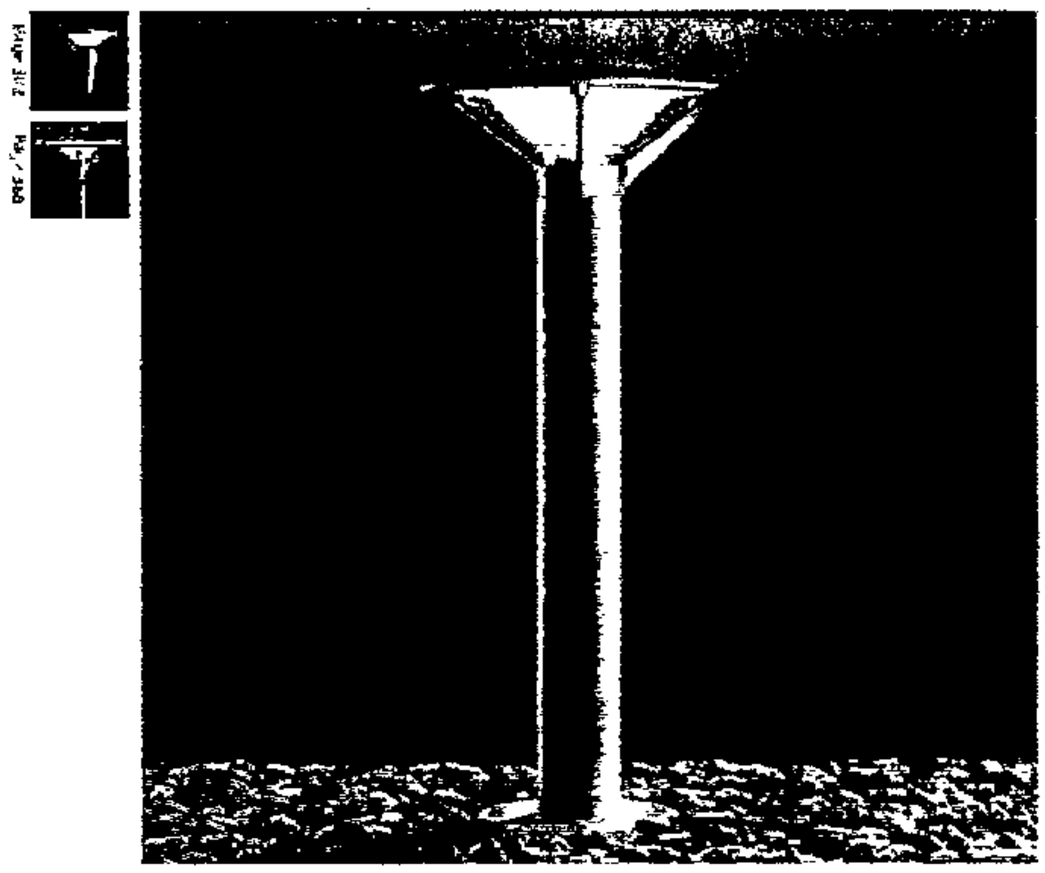
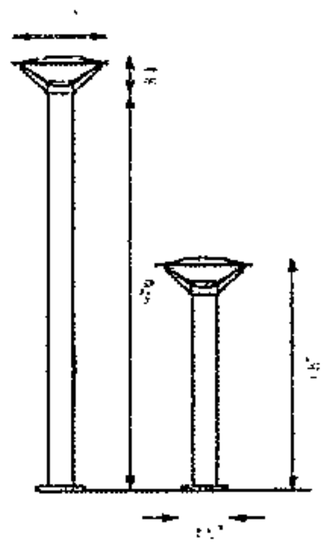
Kipp Bollard

Design Alfred Homann





Kipp Bollard emits symmetrical, downward illumination. The relationship between the curved design of the top shade and the calculated distance to the light source ensures a uniform and wide distribution of light. The design of the internal diffuser ensures an optimal even and glare free illumination.

Finish
White, natural painted aluminum, charcoal grey or black, powder coated.

Material
Top shade: Die cast aluminum. Diffuser: Injection molded white opal acrylic. Enclosure: Injection molded clear polycarbonate. Frame: Die cast aluminum. Post: Extruded aluminum. Base plate: Die cast aluminum.

Mounting
Base plate: Mounted to a concrete base with 3 anchor bolts. Base plate dimension: 11.0" dia.

Weight
Max. 47 lbs.

Label
cUL, Wet location, IBEW.

Linear fluorescent luminaires

Type:
BEGA Product #:
Project:
Voltage:
Color:
Options:
Modified:

For illumination and delineation of outdoor spaces such as open landscape and pedestrian areas, plazas and building entrances These luminaires provide soft, uniform illumination. Available in two-sided or three-sided light output.

Post construction: One piece extruded aluminum, .188" wall thickness, with one piece die cast aluminum top and base and three structural extruded aluminum "fins" welded into an assembly.

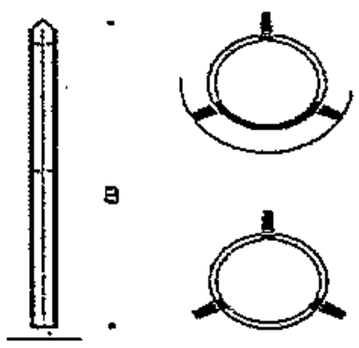
Lamp enclosure: Full 5½" O.D. cast, white acrylic diffuser. Die cast aluminum cap secured by one (1) socket head stainless bolt threaded into a stainless steel coupling. A spring loaded inner cap applies pressure forcing the diffuser against a molded O-ring.

Electrical: Lampholders: Recessed double contact R17d base for 75W, F60T12 HO lamp. Ballast: electronic type for -15°F starting, available in 120V or 277V - specify.

Anchor base: The #890A anchorage consists of a heavy gauge welded assembly of .157" thick galvanized steel. Luminaire slip fits over base and is secured by six (6) stainless steel socket head screws.

Finish: Standard finish is an eight step process consisting of two coats of black or white polyurethane, one with light texture over a phosphate base.
Custom colors supplied on special order.

U.L. listed, suitable for wet locations.



Requires a free space of 72" above luminaire for re-lamping. Ballast for -15° F starting temperature is standard - specify 120V or 277V. Anchorage unit fabricated of galvanized steel is included. Color: Black or white.

Project Information:

• Job Description: NEW HVAC EQUIPMENT LOCATED IN THE PENTHOUS AND THE ELEVATOR MACHINE ROOM.	
• Type of Work: Tenant Improvement	• Date of Plans: 03/01/06
• Type of Construction: I FR / AS	• Occupancy Group: N/A – NOT OCCUPIED
• Area in Sq-Ft: 450	• Occupant Load: N/A

The San Jose Fire Department has reviewed a set of the project's plans and will recommend its approval to the Building Division with the following conditions (see plan check comments below) and subject to field inspections. Plan re-submittal is not required; however, Fire Department Inspections are required. Attached is a list of required Fire Inspections.

Sheet Number	Code Section	#	Plan Check Comments
M0.01-M4.01	UFC/ 1006	-	**Fire Alarm-** Submit shop drawings and a permit application to the Bureau of Fire Prevention for review and approval. Include the plan check number on your submittal and all correspondence. A copy of these Plan Check Comments will be required at the time of permit application.
M0.01-M4.01	SJMC/ 17.12.460	1	**Sprinkler Permit-** Alter the sprinkler system as needed. Submit shop drawings and a permit application to the San Jose Fire Department for approval before altering the system. A copy of these Plan Check Comments will be required at the time of permit application. Call (408) 535-7750 for more information.
M0.01-M4.01	UBC/ 1003.3.1.8	2	**Door Hardware-** Exit doors shall be operable from the inside without the use of a key or any special knowledge or effort.
M0.01-M4.01	UFC/ 1002.1	3	**Fire Extinguishers**- All portions of the building shall be within 75 feet of a fire extinguisher. The minimum size of the extinguisher shall be 2-A: 10-BC.
M0.01-M4.01	UFC/ 901.4.4	4	**Address-** Addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Said numbers shall contrast with their background.

M0.01-M4.01	UMC/ 609	5	**Automatic Shutoffs-** Each single system providing heating or cooling air in excess of 2,000 cubic feet per minute shall be equipped with an automatic shutoff activated by smoke detectors.
M0.01-M4.01	UBC/ 307.11.2.4/ 1202.2.5	6	**Ventilation systems** shall comply with the Mechanical Code. Smoke detectors shall be installed in the circulating air stream and shall initiate a signal at the emergency control station.
M0.01-M4.01	NOTE	7	**Hazardous Materials-** Comply with the Hazardous Materials Plan Check Comments below.

Sheet Number	Code Section	#	Hazardous Materials Plan Check Comments
	UFC 8001.3	1	Obtain a Hazardous Materials Installation Permit for the refrigeration alarm system. Permit applications are available on the 2nd floor of City Hall. Fee will be $557.55.
	UFC 6313	2	Obtain a Fire Alarm Permit for the alarm connection to the buildings Fire Panel.
	UFC 6311	3	Ventilation system shall be in accordance with Article 63.

150 Almaden Blvd.

PETRO-ANALYTICAL, INC.

150 Almaden Roof Generator piping upgrade

1. Prepare Professional Engineer stamped drawing, permit application and obtain SJFD permit for piping replacement per the scope of work listed below
2. Mobilize crew
3. Install temporary fuel lines from existing day tank to emergency generator for temporary fueling
4. Disconnect and dispose of existing FOS/FOR piping from day tank to generator
5. Provide and install new black iron FOS/FOR from day tank to fire pump
6. Provide and install new Unistrut bracing for FOS/FOR
7. Provide and install secondary containment of piping using Contain-It or equivalent, from day tank to generator 'sump'
8. Design, provide and install custom-built 'sump' at generator
9. Provide and install 'tray' beneath piping from 'sump' to extend underneath generator
10. Provide and install new check valve on FOR
11. Provide and install new solenoid valve on FOS
12. Provide and install new day tank vent line
13. Arrange for and conduct SJFD inspection
14. Remove temporary fuel lines
15. Demobilize crew

Building Data

CODE CONFORMANCE: 1997 UBC

OCCUPANCY TYPE: B - Office/Retail Building (3 Story)

CONSTRUCTION TYPE: Type V-NH with 1 hr. Exit Enclosures. (3-story wood framed)

SPRINKLERED: 100%

SITE AREA: 18,800 SF (.43 AC)

PARKING REQUIRED: 14,433 NET LEASABLE SF DIVIDED BY 250SF/STALL = 58 STALLS

PARKING PROVIDED: 48 STALLS

BUILDING AREAS:

	leasable	common	total
FIRST LEVEL	2,780 SF	970 SF	3,750 SF
SECOND LEVEL	5,825 SF	950 SF	6,775 SF
THIRD LEVEL	5,825 SF	950 SF	6,775 SF
TOTAL BUILDING	14,430 SF	2,870 SF	17,300 SF (GROSS)

ACCESSIBILITY: 100% APPLICABLE FOR STUDIO APARTMENT USE

OCCUPANCY LOAD CALC: Office/ Retail Occupancy: 17,300 @ 100/SF = 173 Occupants

BUILDING MATERIALS: Aluminum Sash Windows/ GFRC Pilasters and Main Lintel, Canvas Awnings, Exterior Type Wall Sconces (all @ Street Level). Plaster @ Upper Walls, glass and steel tubular framing at Corner Tower Structure with Copper Roof, Clay Tile Mansard with Built-Up-Roof. Wrought Iron Grilles at Parking Screens.

General Notes

Circles shown indicate the approximate mature size of the plant.

No plant shall be planted until a fully automatic irrigation system has been installed, tested and is operational in all proposed planting areas.

SOIL PREPARATION: thoroughly incorporate the following amendments into the top 4" of all areas to be planted (amounts per 1000 S.F.)

a. 4 cu. yds of Nitrogen Stabilized Redwood Shavings
b. 2 cu. yds. Of "Gro-power" or eq.
c. 8 lbs. Of all purpose fertilizer (8-8-4)

Note: All on slab planter areas shall receive a light weight soil mix "U.C. Mix" or eq.

Contractor shall guarantee all small trees, shrubs, vines and groundcovers for a period of 90 days from the date of installation. All trees 15 g.c. size and larger shall be similarly guaranteed for a period of one year.

Upon completion of planting operations, contractor shall apply an approved pre-emergent herbicide "Ronstar" or eq. to all planter areas of the site.
In addition, a 2" layer of organic top dressing (fir bark fines) shall be applied to all finished planter areas.

MAINTENANCE PERIOD: Contractor shall maintain the project for a period of 90 calendar days from the time of completion.

ALL LANDSCAPING, IRRIGATION, & MAINTENANCE OF SAME SHALL CONFORM TO THE CITY OF SAN JOSE - LANDSCAPE & IRRIGATION GUIDELINES.

Conceptual Zone Irrigation System:

ZONE "A"

Perimeter in-grade planter areas shall be installed with drought tolerant landscaping.
Use conventional pop-up spray heads with low precipitation output.
Use "Hunter" PGH Series and "Toro" 570 pop-up shrub head Series as manufacturers.

ZONE "B"

On slab landscape: Use drip irrigation system with emitters at each tree or shrub.
Use three (3) emitters per tree and one (1) emitter for each shrub or vine.
Emitters shall be 1 GPM type. Automatic controllers shall be set to allow for efficient and adequate application of water. Use "Salco" or equal as manufacturer.

User Questionnaire

PATH FORWARD

Environmental Engineering & Geology

Phase I Environmental Site Assessment
User Questionnaire

In order to qualify for one of the Landowner Liability Protections (LLPs)[1] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),188 the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

1. **Environmental liens that are filed or recorded against the property (40 CFR 312.25).**
   Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

   ☑ No ☐ Recorded records not searched for liens ☐ Yes (Please explain below):

   NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

2. **Activity and use limitations (AULs) that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)).**
   Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

   ☑ No ☐ Recorded records not searched for AULs ☐ Yes (Please explain below):

   Evidence indicating the existence of AULs was not on file for the subject property with the San Jose Planning Department.

[1] Landowner Liability Protections, or LLPs, is the term used to describe the three types of potential defenses to Superfund liability in EPA's Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide) issued on March 6, 2003.

3. **Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**
   Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   ☑ No ☐ Yes (Please explain below):

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).**
   Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   ☑ Yes ☐ Not Applicable ☐ No (Please explain below):

5. **Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).**
   Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

   (a.) Do you know the past uses of the property?

   (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?

   ☐ No ☑ Yes (Please explain below):

   The site previously had a dry cleaner, car rental, auto / metal salvage and tire reclamation, which results in groundwater monitoring and treatment for PCE - please seem Phase I completed by ESA in 2016

6. **The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by ap- propriate investigation (40 CFR 312.31).**
   Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

   ☑ No ☐ Yes (Please explain below):

THE ABOVE REFERENCED INFORMATION IS TRUE TO THE BEST OF MY KNOWLEDGE:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 18 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site

within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 12 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 100 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 23 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 8 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 6 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the CA EMI list, as provided by EDR, and dated 12/31/2017 has revealed that there are 2 CA EMI sites within approximately 0.001 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WELLS FARGO BANK Facility Id: 14985	121 PARK CENTER PLZ	0 - 1/8 (0.000 mi.)	A35	33
WELLS FARGO BANK Facility Id: 14985	121 PARK CENTER PLAZ	0 - 1/8 (0.000 mi.)	A39	36

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are

5 CA HAZNET sites within approximately 0.001 miles of the target property.

CA HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the CA HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 56 CA HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

GARDEN CITY GAS WORK	W. ST JOHN AND MONTG	W 1/2 - 1 (0.511 mi.)	BI377	1134

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 21 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 12 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Violations:
Site ID: 348231
Site Name: Cityview Plaza
Violation Date: 02-10-2017
Citation: California Water Code
Violation Description: Not reported
Violation Notes: Anticipated bypass to make mitigate flooding and perform treatment system changes. Bypass period: February 10-16. Net bypass 0.8 MGD.
Violation Division: Water Boards
Violation Program: NPDNONMUNI
Violation Source: CIWQS

Site ID: 348231
Site Name: Cityview Plaza
Violation Date: 02-02-2017
Citation: California Water Code
Violation Description: Not reported
Violation Notes: Unanticipated bypass allowed to mitigate flooding. The West Sump which has been experiencing increasing groundwater inflows was brought up to full capacity (addition of GAC vessels) on 2/1/17. Despite this effort, flooding could not be resolved and an additional bypass was allowed on 2/1/17. The West Sump area also has electrical and elevator equi
Violation Division: Water Boards
Violation Program: NPDNONMUNI
Violation Source: CIWQS

Site ID: 348231
Site Name: Cityview Plaza
Violation Date: 04-16-2018
Citation: California Water Code
Violation Description: Not reported
Violation Notes: Unanticipated treatment system bypass. Total estimated volume bypassed is 3,500 gallons. The discharger initiated the bypass to offset the high groundwater inflow rates in the sump and mitigate flooding. The bypass is a violation of Discharge Prohibition III.F.

92 ft.

Registry ID: 110070112750

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Status Date:	01/01/1990
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Case Worker:	MJD
Local Agency:	Not reported
RB Case Number:	43S1052
Loc Case Number:	Not reported
File Location:	Not reported
Potential Contaminants of Concern:	* Solvents
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Board s NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

SIC Code:	6512
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

FINDS:

Registry ID: 110002952207

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	07S1E08N03f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel
Site History:	The site is currently an AT&T property occupying an entire city block. The surrounding area is primarily commercial properties. Currently a nine story office building which originally dates back to approximately 1950 when AT&T purchased land from the Greyhound bus lines company. In 1992, five 10,000 gallon underground storage tanks (USTs) containing diesel fuel and all associated piping were removed from the southwest corner of the site. Soil samples collected during the UST removal contained elevated concentrations of petroleum hydrocarbons. Three new 20,000 gallon USTs were subsequently installed approximately 90 feet to the north of the original UST pit. In 1995 six monitoring wells were installed on-site to monitor groundwater contamination. In 1996 free product was observed in monitoring wells MW-1 and MW-6 and both passive and active free product removal activities were initiated. Groundwater monitoring and free product recovery continued through 2001 when a corrective action plan (CAP) was approved. The CAP approved injection of oxygen-releasing compound (ORC) into the subsurface to promote biodegredation. In 2002 passive free product recovery skimmers were installed in wells MW-1 and MW-6 and currently remain in these wells. In 2008 another CAP was submitted recommending the removal of remaining contamination through excavation. In 2012 the pre-excavation design investigation was performed during which two direct push soil borings and nineteen CPT UVOST borings were drilled to determine the extent of soil contamination in order to help finalize and excavation design. Groundwater monitoring is currently being performed on a semi-annual basis in the first and third quarters.

Violations:

Site ID:	434127
Site Name:	AT&T California - N1011
Violation Date:	10-06-2015
Citation:	23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description:	Failure to maintain on site an approved monitoring plan.
Violation Notes:	Returned to compliance on 05/19/2016. AT&T is introducing errors by submitting information that is not required and which is either incomplete or inaccurate. Limit information in the Leak Sensor Model # information to identifying the model #(s) and do not include the sensor ID (e.g., "L1" etc.). Specific sensors are identified in the monitoring Site Plan so there is no need to be redundant. Sensor Model Numbers monitoring the piping at this facility are Models 794380-208 and 794390-420, not merely 794380-208. Overfill prevention is covered in the UST Tank Information data and does not need to be addressed in the UST Monitoring Plan.

Site Name:	AT&T California - N1011
Violation Date:	10-06-2015
Citation:	19 CCR 6.95 25508(a)(1) - California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes:	Returned to compliance on 02/13/2016. Business Activities page incorrectly states that this facility is subject to the Aboveground Petroleum Storage Act (APSA). The only aboveground petroleum storage at the site that is not APSA-exempt is the Diesel storage in the trailered generator (103 gallons) and in the Day Tanks (240 gallons in Basement, and 100 and 200 gallon tanks on 9th Floor). Aggregate storage is less than the 1,320 gallon APSA threshold. Petroleum in oil-filled electrical equipment (i.e., transformers) is not subject to APSA if the aggregate quantity on-site of such oil is less than 10,000 gallons.

Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	434127
Site Name:	AT&T California - N1011
Violation Date:	09-27-2016
Citation:	23 CCR 16 2635(b)(1), 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2635(b)(1), 2665
Violation Description:	Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes:	Returned to compliance on 01/03/2017. The U001 (East) fill spill bucket failed hydrostatic testing today. Air bubbles were observed to migrate from the drain valve area to the water s surface at a consistent rate and water was visually confirmed to be entering the fill pipe. Investigate the scope of work needed to repair the spill

AT&T CALIFORNIA - N1011 (Continued) **S121784502**

bucket and apply for a permit from HMCD if needed. Please note that a permit from HMCD is not required for a drain valve replacement.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/13/2016. The only Diesel storage included in the inventory is the fuel in the USTs and in the trailered generator. Add the fuel in the aboveground day tanks. Report HazMat inventory by storage location as you did previously (i.e., separate inventory page for each floor, rather than simply reporting aggregated information on one page for the facility as a whole).

Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Inspection to witness triennial testing of underground storage tank (UST) system secondary containment components. Testing is being overseen by UST Service Technician Samantha McMahan of Tait Environmental Services. Ms. McMahan has current ICC California UST Service Technician certification (#8487177, exp. 12/29/2018) and Franklin Fueling Systems Incon Level 4 (TS-STS Sump Test System) certification (exp. 4/28/2018). The USTs are steel tanks manufactured by Modern Welding. Test protocol was vacuum testing the tank annular spaces @ 10" Hg for 2 hours. Results: - Tank N1011U001 (East tank) = Testing underway at end of inspection. - Tank N1011U002 (Center tank) = PASS - Tank N1011U003 (West tank) = PASS The underground product piping is double-wall Western Fiberglass flexible pipe. Test protocol was pressure testing the secondary containment pipe @ 5 p.s.i. for 1 hour. Results: - Tank N1011U001 Fuel Supply Line = Visual FAIL due to defective test boot. [Truncated]

AT&T CALIFORNIA - N1011 (Continued) **S121784502**

(#B42126 exp. 1/18/2017). This inspection report was issued on 9/27/2016. The underground storage tank (UST) system is comprised of three, 20,000 gallon, double-walled steel primary, fiberglass secondary tanks that are used for emergency generator fueling. All tanks have a reported installation date of 11/1/1992. Additionally, there are two day tanks (1 x 200 gallon, 1 x 100 gallon) located on the roof and are used in association with each of the two roof generators. A separate, 240 gallon day tank is located within the sub-basement. The UST system has conventional suction piping. Observed testing of the following components on 9/26/2016*: - 3 Annular space sensors (Veeder-Root (VR) 794390-420) - 3 Fill [Truncated]

Eval Notes: Submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website for CERSID 10091848 on 2/19/2015 was reviewed on the morning of 9/30/2015 in preparation for this inspection, which began on 10/1/2015 with facility walk-through and concluded today. AT&T submitted an updated HMBP on the afternoon of 9/30/2015, so that submittal was reviewed prior to issuing this report. Violations noted in this Official Notice of Inspection refer to the contents of the 9/30/2015 HMBP submittal. Please try to make any future updated CERS submittals at least one week prior to scheduled inspections to provide sufficient time for review. Materials observed during this inspection that are present at or above HMBP reporting thresholds include Diesel; Lead Acid Batteries; compressed Nitrogen; Sanacor 2621; R-123 and Transformer Oil.

Eval Notes:	This inspection began on 10/1/2015 with facility walk-through and concluded today. The most recent electronic submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website for AT&T Corp. - CAK166 (CERSID 10420972) was made on 3/22/2013. Submittal was "Accepted" on 4/8/2013. Per Rose Blackmer, the equipment and backup power batteries owned by AT&T Corp. with the Facility ID CAK166 is now being operated by Pacific Bell Telephone Company dba AT&T California. Disclosure of those batteries has been incorporated into the HMBP for AT&T California Site N1011 (CERSID 10091848) as part of an internal reorganization that occurred in 2014. The HMBP permit that was issued to AT&T Corp. CAK166 will be inactivated.

Eval Notes: Submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website for CERSID 10091848 on 2/19/2015 was reviewed on the morning of 9/30/2015 in preparation for this inspection, which began on 10/1/2015 with facility walk-through and concluded today. AT&T submitted an updated HMBP on the afternoon of 9/30/2015, so that submittal was reviewed prior to issuing this report. Violations noted in this Official Notice of Inspection refer to the contents of the 9/30/2015 HMBP submittal. Please try to make any future updated CERS submittals at least one week prior to scheduled inspections to provide sufficient time for review. Materials observed during this inspection that are present at or above HMBP reporting thresholds include Diesel; Lead Acid Batteries; compressed Nitrogen; Sanacor 2621; R-123 and Transformer Oil.

Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. This inspection report was issued on 9/27/2016. Wastes generated include used oil, used oil-saturated debris, asbestos-waste, and other hazardous wastes related to spill clean-up. - California EPA ID Number: CAT080023021 (ACTIVE) - TSDF-copies of Uniform Hazardous Waste Manifests and Land Disposal Restriction Notifications from the past 3 years are on-site and were reviewed during inspection. - Universal waste is collected and shipped on a bill of lading. Bills of lading from the past 3 years are on-site and were reviewed during inspection. - Weekly container area inspections are conducted and logged when hazardous waste is accumulating on-site. Hazardous waste shipments typically occur within 30 days of any waste being generated. - Emergency procedures are posted throughout the facility. Spill clean-up equipment is located in the hazardous waste accumulation area. Fire extinguishers are actively maintained [Truncated]

Eval Type: Routine done by local agency
Eval Notes: On-site for an Annual Monitoring System Certification on 9/26/2016 performed by Tait Environmental Services, Inc. Service Technician Garrett Warren. Mr. Warren has a current ICC Service Technician Certification (exp. 6/9/2017) and Veeder-Root Level 4 certification (#B42126 exp. 1/18/2017). This inspection report was issued on 9/27/2016. The underground storage tank (UST) system is comprised of three, 20,000 gallon, double-walled steel primary, fiberglass secondary tanks that are used for emergency generator fueling. All tanks have a reported installation date of 11/1/1992. Additionally, there are two day tanks (1 x 200 gallon, 1 x 100 gallon) located on the roof and are used in association with each of the two roof generators. A separate, 240 gallon day tank is located within the sub-basement. The UST system has conventional suction piping. Observed testing of the following components on 9/26/2016*: - 3 Annular space sensors (Veeder-Root (VR) 794390-420) - 3 Fill [Truncated]

Eval Date:	10-06-2015
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Inspection began on 10/1/2015 and concluded today. All underground storage tank (UST) monitoring equipment was tested on 10/1/2015 by UST Service Technician Victor Guerrero of Tait Environmental Services and functioned properly. Mr. Guerrero has current ICC California UST Service Technician certification (exp. 6/9/2017) and Veeder-Root level 4 certification (exp. 6/28/2017). Sensors were tested using water and triggered audible and visual alarms. The 3 UST fill spill buckets were hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valves in tank fill drop tubes was visually confirmed. Notes: 1. Designated UST operator monthly inspection and facility employee training records are in order. 2. Records of visual inspections of unburied piping (Routine #1) monthly and each time the system is operated are in order, as are inspections of fuel tank in basement to maintain exemption from UST Regulations pursuant to California Health and [Truncated]

Eval Notes:	Submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website for CERSID 10091848 on 2/19/2015 was reviewed on the morning of 9/30/2015 in preparation for this inspection, which began on 10/1/2015 with facility walk-through and concluded today. AT&T submitted an updated HMBP on the afternoon of 9/30/2015, so that submittal was reviewed prior to issuing this report. Violations noted in this Official Notice of Inspection refer to the contents of the 9/30/2015 HMBP submittal. Please try to make any future updated CERS submittals at least one week prior to scheduled inspections to provide sufficient time for review. Materials observed during this inspection that are present at or above HMBP reporting thresholds include Diesel; Lead Acid Batteries; compressed Nitrogen; Sanacor 2621; R-123 and Transformer Oil.

Eval Notes:	This inspection began on 10/1/2015 with facility walk-through and concluded today. The most recent electronic submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website for AT&T Corp. - CAK166 (CERSID 10420972) was made on 3/22/2013. Submittal was "Accepted" on 4/8/2013. Per Rose Blackmer, the equipment and backup power batteries owned by AT&T Corp. with the Facility ID CAK166 is now being operated by Pacific Bell Telephone Company dba AT&T California. Disclosure of those batteries has been incorporated into the HMBP for AT&T

logs were available at the time of inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-07-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection conducted with Jon Blazo. Facility has the following reportable chemicals on-site: 500 gallon diesel fuel for back up generator Facility has two labs to prepare science demonstrations and activities for students. All chemicals are under reporting thresholds and include materials for flame tests, agar preparation, and basic endo and exothermic neutralization reactions involving baking soda and vinegar. Lab supervisors stated that no liquid wastes are created other than baking soda/vinegar combos and all biological agar/bacteria wastes are picked up by Stericycle. Facility was advised that while current wastes are likely non-hazardous, the raw materials (such as copper sulfate solutions for flame tests) would likely qualify as hazardous waste if they become expired or cannot be used for their current intended purposes. A hazardous waste generator's permit does not appear to be necessary at this time.

. Waste code: D001

ABOVENET COMMUNICATIONS INC (Continued) **1001967550**

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Pool chemicals on the 4th floor pool deck and propane (~43 x 5 gallon containers) stored at the South Tower ground level have not been reported in the Hazardous Materials Business Plan.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 29482
Site Name: FAIRMONT HOTEL SAN JOSE
Violation Date: 07-15-2015
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Hazardous waste containers must be inspected weekly when placed in the hazardous waste storage area (not in Point of Generation accumulation areas, where they are at or near the point of generation). Per discussion with Chief Engineer, weekly inspections have not been performed in the hazardous waste storage area on P1 Level when waste containers were stored there. However, monthly inspections have been performed. One container of spent DF2000 filters generated in 2014 was reportedly stored in this waste storage area prior to the 1/31/2015 waste pick up by Safety Kleen.

Eval Notes: Routine Aboveground Petroleum Storage Act Program inspection began on 7/9/2015 and concluded on 7/15/2015. Aboveground petroleum storage includes: -4,000 gallon diesel tank on P2 Level -200 gallon diesel tank on P2 Level -493 gallon diesel tank in a generator unit at the

FAIRMONT HOTEL SAN JOSE (Continued) **S103946068**

South Tower ground level *Note: The 4,000 gallon diesel tank on P2 level contains approximately 300 gallons according to the tank level measuring device. This tank was previously used to fuel boilers prior to switching to natural gas as a fuel. This tank is reportedly not in use at this time and has been disconnected from discharge piping. It is no longer capable of being used as originally designed. If this tank is emptied, cleaned and designated as "Permanently Closed", this facility will no longer be subject to APSA requirements.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

FAIRMONT HOTEL SAN JOSE (Continued) **S103946068**

Violation Description: Failure to prepare and implement a Spill Prevention Control and Countermeasure (SPCC) Plan .
Violation Notes:
Violation Division: Santa Clara County Environmental Health
Violation Program: APSA
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-15-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: CERS ID# 10347319 (No CERS submittals to date) Routine Hazardous Materials Business Plan inspection began on 7/9/2015 and concluded on 7/15/2015.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-15-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: EPA ID# CAD982374159 (Active as of 7/15/2015) Routine Hazardous Waste inspection began on 7/9/2015 and concluded on 7/15/2015. Hazardous wastes generated at this facility: -Compressor oil (disposed of through Safety Kleen) -Spent absorbent (disposed of through Safety Kleen) -Spent DF2000 dry cleaning solution filters (disposed of through Safety Kleen) -Universal waste including batteries and fluorescent light tubes (disposed of through mail back program 3-6 times per year) Documentation for hazardous waste disposal observed, including Uniform Hazardous Waste Manifests for 2012 and 2013 from the state hazardous waste tracking system and one manifest for 2015 in facility records.
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-15-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine Aboveground Petroleum Storage Act Program inspection began on 7/9/2015 and concluded on 7/15/2015. Aboveground petroleum storage includes: -4,000 gallon diesel tank on P2 Level -200 gallon diesel tank on P2 Level -493 gallon diesel tank in a generator unit at the South Tower ground level *Note: The 4,000 gallon diesel tank on P2 level contains approximately 300 gallons according to the tank level measuring device. This tank was previously used to fuel boilers prior to switching to natural gas as a fuel. This tank is reportedly not in use at this time and has been disconnected from discharge piping. It is no longer capable of being used as originally designed. If this tank is emptied, cleaned and designated as "Permanently Closed", this facility will no longer be subject to APSA requirements.

FINDS:

Registry ID: 110002689779

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110009556079

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	DURING THE REVIEW OF THE HAZARDOUS MATERIALS BUSINESS PLAN IT WAS OBSERVED THE CHEMICAL INVENTORY STATEMENT WAS MISSING DETAILED LOCATIONS OF WHERE THE CHEMICALS WERE STORED (SUCH AS FLOOR OR ROOM NUMBERS). THE LOCATION ONLY REFERENCED BUILDING WHICH MADE IT ALMOST IMPOSSIBLE FOR REFERENCE THE CHEMICAL LOCATION WITH THE INVENTORY AS THE FACILITY WAS A 15 STORY HIGH RISE BUILDING. UPDATE THE CHEMICAL INVENTORY LOCATION STATEMENT TO REFERENCE FLOOR AND ROOM NUMBER. SUBMIT THIS UPDATE ELECTRONICALLY USING THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM WITHIN 30 DAYS. THE CHEMICAL INVENTORY STATEMENT HAS THE BATTERIES LISTED IN THE UNINTERRUPTED POWER SUPPLY ROOMS IN POUNDS NOT GALLONS OF ELECTROLYTE (SULFURIC ACID). SEE CERS GUIDANCE DOCUMENT ON ELECTROLYTE BATTERY REPORTING REQUIREMENTS. SUBMIT ALL BATTERIES LOCATED IN THE CORRECT UNIT OF MEASUREMENT (GALLONS OF ELECTROLYTES NOT POUNDS OF BATTERIES) ELECTRONICALLY USING THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM WITHIN [Truncated]

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: A ABOVEGROUND PETROLEUM STORAGE ACT INSPECTION WAS CONDUCTED WITH MR. HUGO GARAY- DATA CENTER CHIEF ENGINEER WITH DATAPIPE ON SEPTEMBER 14, 2017. A facility walk through was conducted and the two 10,000 gallon diesel fuel tanks were inspected. Both tanks have adequate secondary containment and are electronically monitored by a Veeder Root TLS-350 monitoring system. The last annual monitoring certification was conducted in April 10, 2017. The two 10,000 gallon diesel fuel tanks have overflow prevention monitoring alarms. Two bulk storage aboveground diesel fuel tanks were also inspected on the roof (one 100 gallon and one 228 Gallon diesel tanks). The facility also has three Step-down electrical transformers containing insulating oil for a total storage capacity of 3,777 gallons and three Single -walled

Eval Notes: A ABOVEGROUND PETROLEUM STORAGE ACT INSPECTION WAS CONDUCTED WITH MR. HUGO GARAY- DATA CENTER CHIEF ENGINEER WITH DATAPIPE ON SEPTEMBER 14, 2017. A facility walk through was conducted and the two 10,000 gallon diesel fuel tanks were inspected. Both tanks have adequate secondary containment and are electronically monitored by a Veeder Root TLS-350 monitoring system. The last annual monitoring certification was conducted in April 10, 2017. The two 10,000 gallon diesel fuel tanks have overflow prevention monitoring alarms. Two bulk storage aboveground diesel fuel tanks were also inspected on the roof (one 100 gallon and one 228 Gallon diesel tanks). The facility also has three Step-down electrical transformers containing insulating oil for a total storage capacity of 3,777 gallons and three Single -walled elevator steel reservoirs containing hydraulic oil. The facility had a current Spill Prevention, Control and Countermeasures Plan (SPCC) that was dated July [Truncated]

ABOVENET COMMUNICATIONS INC (Continued) **1001967549**

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110002935245

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 04/10/2017. Metal fines with regulated metal content are generated from a polisher, grinder, and milling machine in the shop area. The facility recently acquired a vacuum system that will be used to clean up the metal fines and deposit them into a 55 gallon drum for accumulation. A hazardous waste determination must be conducted on the metal fines waste. If the fines are less than 100 microns in diameter, they must be collected and managed as hazardous

SAN JOSE CONVENTION CENTER (Continued) **S102416494**

waste. If they are greater than 100 microns in diameter, they can be recycled for their scrap metal value or managed as hazardous waste. Provide documentation of the hazardous waste determination to HMCD for review.

Site Name: SAN JOSE CONVENTION CENTER
Violation Date: 03-09-2017
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Returned to compliance on 04/10/2017. The facility's current practice is to rinse their 55 gallon drums that formerly contained a hazardous material (e.g. AC-200 Closed Loop Treatment, Brommax 7.1, BCP 1015) after use, dispose of the rinse waste to the sanitary sewer, and

SAN JOSE CONVENTION CENTER (Continued) **S102416494**

recycle/dispose of the drums. Rinsing containers that formerly held a hazardous material/waste constitutes "treatment" of hazardous waste as defined by HSC 25123.5(a) and cannot be conducted without authorization from HMCD. Immediately cease this treatment practice and properly dispose of the drums by either reconditioning, recycling, or reclaiming the drums for their scrap value on-site or shipping the container off-site, or by returning it to the supplier to be refilled [CCR 66261.7(f)]. Note that if being shipped off-site, the containers must be transported in accordance with US DOT Regulations. Otherwise, obtain a treatment permit from HMCD to continue to conduct this treatment practice.

Violation Date:	03-09-2017
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 04/10/2017. Metal fines with regulated metal content are generated from a polisher, grinder, and milling machine in the shop area. The facility recently acquired a vacuum system that will be used to clean up the metal fines and deposit them into a 55 gallon drum for accumulation. A hazardous waste determination must be conducted on the metal fines waste. If the fines are less than 100 microns in diameter, they must be collected and managed as hazardous waste. If they are greater than 100 microns in diameter, they can be recycled for their scrap metal value or managed as hazardous waste. Provide documentation of the hazardous waste determination to HMCD for review.

SAN JOSE CONVENTION CENTER (Continued) **S102416494**

Citation:	HSC 6.7 25281.5(b)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25281.5(b)(3)
Violation Description:	Failure to meet one or more exemption requirements for emergency generator tank system unburied fuel piping: Conduct daily visual inspections each time the tank is operated. Conduct daily visual inspections at least monthly. Maintain a log of inspection results for review by the CUPA.
Violation Notes:	Returned to compliance on 03/09/2017. As evidenced by the amount of diesel and diesel residue in the secondary containment for the piping run between the emergency generator day tank and the emergency generator, the employees lack of knowledge regarding the leak, and the lack of notation in the inspection records regarding the diesel leak, the piping run is not being inspected during the facility's daily EGTS unburied piping inspections. Ensure that all portions of the EGTS unburied piping are inspected as required.

Citation:	23 CCR 16 2635(b)(1), 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2635(b)(1), 2665
Violation Description:	Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes:	Returned to compliance on 12/06/2016. The fill spill bucket failed initial hydrostatic testing. Mr. Stromecki repaired the fill cap and the fill spill bucket was re-tested. Upon re-test, the spill bucket was able to hold 5 gallons of liquid for one hour. This violation was corrected at the time of inspection. No further action is needed.

Violation Description:	Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes:	Returned to compliance on 03/09/2017. Wet diesel and significant amounts of diesel residue coat the entire bottom third of the secondary containment for the unburied fuel piping that runs from the emergency generator day tank to the generator itself. It is also of note that degraded and aged-looking, contaminated absorbent pads were observed within the secondary containment, but it is unknown as to how long the absorbent pads have been there. Investigate the source of the leak and provide a scope of work plan to HMCD as to how the leak will be corrected. If a repair is needed, a retrofit permit from our office may be necessary.

Citation:	HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description:	Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes:	Returned to compliance on 04/10/2017. The facility's current practice is to rinse their 55 gallon drums that formerly contained a hazardous material (e.g. AC-200 Closed Loop Treatment, Brommax 7.1, BCP 1015) after use, dispose of the rinse waste to the sanitary sewer, and recycle/dispose of the drums. Rinsing containers that formerly held a hazardous material/waste constitutes "treatment" of hazardous waste as defined by HSC 25123.5(a) and cannot be conducted without authorization from HMCD. Immediately cease this treatment practice and properly dispose of the drums by either reconditioning, recycling, or reclaiming the drums for their scrap value on-site or shipping the container off-site, or by returning it to the supplier to be refilled [CCR 66261.7(f)]. Note that if being shipped off-site, the containers must be transported in accordance with US DOT Regulations. Otherwise, obtain a treatment permit from HMCD to continue to conduct this treatment practice.

Violation Date: 03-09-2017
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 04/10/2017. Metal fines with regulated metal content are generated from a polisher, grinder, and milling machine in the shop area. The facility recently acquired a vacuum system that will be used to clean up the metal fines and deposit them into a 55 gallon drum for accumulation. A hazardous waste determination must be conducted on the metal fines waste. If the fines are less than 100 microns in diameter, they must be collected and managed as hazardous waste. If they are greater than 100 microns in diameter, they can be recycled for their scrap metal value or managed as hazardous waste. Provide documentation of the hazardous waste determination to HMCD for review.

Site ID: 64612
Site Name: SAN JOSE CONVENTION CENTER
Violation Date: 12-06-2016
Citation: HSC 6.7 25281.5(b)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25281.5(b)(3)
Violation Description: Failure to meet one or more exemption requirements for emergency generator tank system unburied fuel piping: Conduct daily visual inspections each time the tank is operated. Conduct daily visual inspections at least monthly. Maintain a log of inspection results for review by the CUPA.
Violation Notes: Returned to compliance on 03/09/2017. As evidenced by the amount of diesel and diesel residue in the secondary containment for the piping run between the emergency generator day tank and the emergency generator, the employees lack of knowledge regarding the leak, and the lack of notation in the inspection records regarding the diesel leak, the piping run is not being inspected during the facility's daily EGTS unburied piping inspections. Ensure that all portions of the EGTS unburied piping are inspected as required.

Citation: 23 CCR 16 2635(b)(1), 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2635(b)(1), 2665
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes: Returned to compliance on 12/06/2016. The fill spill bucket failed initial hydrostatic testing. Mr. Stromecki repaired the fill cap and the fill spill bucket was re-tested. Upon re-test, the spill bucket was able to hold 5 gallons of liquid for one hour. This violation was corrected at the time of inspection. No further action is needed.

Site Name: SAN JOSE CONVENTION CENTER
Violation Date: 03-09-2017
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 04/10/2017. The facility stated that they transport their hazardous waste to a Santa Clara County Household Hazardous Waste Collection Facility (HHW) on an as-needed basis, but has not maintained any documentation or records pertaining to the proper disposal of all hazardous waste. It is of note that the facility confirmed that they complete an HHW waste inventory sheet for each drop-off, but has not retained those inventory sheets for review. Retain a copy of the inventory sheets used to transport and dispose of hazardous waste at a local HHW center or keep a record of the date, volume/amount of hazardous waste transported, the type and condition of container used to transport each hazardous waste, the name of the person transporting the hazardous waste, and the location of disposal of the hazardous waste. Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Returned to compliance on 04/10/2017. The facility's current practice is to rinse their 55 gallon drums that formerly contained a hazardous material (e.g. AC-200 Closed Loop Treatment, Brommax 7.1, BCP 1015) after use, dispose of the rinse waste to the sanitary sewer, and recycle/dispose of the drums. Rinsing containers that formerly held a hazardous material/waste constitutes "treatment" of hazardous waste as defined by HSC 25123.5(a) and cannot be conducted without authorization from HMCD. Immediately cease this treatment practice and properly dispose of the drums by either reconditioning, recycling, or reclaiming the drums for their scrap value on-site or shipping the container off-site, or by returning it to the supplier to be refilled [CCR 66261.7(f)]. Note that if being shipped off-site, the containers must be transported in accordance with US DOT Regulations. Otherwise, obtain a treatment permit from HMCD to continue to conduct this treatment practice.

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On-site for an Annual Monitoring System Certification on 12/6/2016 performed by Advanced Fuel Services, Inc. Service Technician Michael Stromecki. Mr. Stromecki has a current ICC Service Technician Certification (#8339168 expiration3/22/2018) and Veeder-Root Level 2/3 certification (#B45732 expiration 9/31/2017). The underground storage tank (UST) system is comprised of one, 8,000 gallon, double-walled fiberglass tank containing diesel fuel and is used for emergency generator fueling. The tank has a reported installation date of 1/1/1988. There is also an approximately 275 gallon emergency day tank situated next to the emergency generator in the generator room and an approximately 250 gallon emergency fire pump tank in the emergency fire pump room. Both day tanks are above-grade level. Observed testing of the following components on 12/6/2016*: - 1 Annular space sensor (Veeder-Root (VR) 794390-407) - 1 Piping Sump sensor (VR 794380-208) *All components listed [Truncated]

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Eddie Martinez (certifications current) of Advanced Fuel Services. Single tank, suction system for emergency generator and backup for the fire pump. Piping sump and annular space sensors tested in water and provided audible and visible alarms. Overfill protection is provided in all tanks by a flapper valve in the fill riser. The spill buckets are direct buried and was

SAN JOSE CONVENTION CENTER (Continued) **S102416494**

hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, emergency generator aboveground piping log, testing reports and maintenance documentation. Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 12/10/2015 is accurate as observed. Permit valid through March 31, 2015. Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy [Truncated]

FINDS:

Registry ID: 110002891559

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Contaminants of Concern:	Waste Oil / Motor / Hydraulic / Lubricating, * Metals
Site History:	The "Block 2 - City of San Jose Parking Lot Site" is located at 8 East San Fernando Street, between South First Street and South Second Street, in downtown San Jose. This 1-acre parcel has been used as a paved parking lot since at least 1980. Prior to 1980, the Site was occupied by several small stores and the OB Hale and Company Department Store. Prior to 1900, the Site operation included a paint shop. Block 3, an adjacent lot, has similar land use histories and has detected VOCs and TPHs in soil and groundwater. A former coal gasification plant was formerly located about 300 feet away. The Redevelopment Agency of the City of San Jose (the Agency) is currently planning to construct a new mixed-use building complex and underground parking structure. Specifically, the planned development includes excavation of the entire site to a depth of about 40 feet below the current surface to accommodate a three-level, underground parking structure. The space above the parking structure at ground level is planned for commercial use. The space above the commercial area is planned for hotel and residential use. To date, three rounds of site investigation have been conducted to study Site soil, groundwater, and soil gas. Investigation results were used in a Human Health Risk Evaluation and compared to screening levels such as CHHSL, ESLs and PRGs for the proposed exposure scenarios. Overall, the Site data compare favorably to these screening levels. Exceedances of those screening levels were found in only one soil sample for mercury (21 mg/kg vs. 18 mg/kg) and in soil gas samples for 1,3-butadiene (16.0 vs. 4.85 ug/cubic meter). However, the targeted exposure pathway may not even be complete when considering the proposed land use scenario (i.e., with the underground parking) and construction method.

Local Case Number:	07S1E08M03f
Potential Media Affect:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Benzene, Toluene, Trichloroethylene (TCE), Xylene, Gasoline, Waste Oil / Motor / Hydraulic / Lubrica
Site History:	In 1997 a Phase I Environmental Site Assessment (ESA) was performed and a potential UST was noted near the northern site boundary. In January 1998, a Phase II ESA was performed and discovered the presence of petroleum hydrocarbons and related constituents in soil and groundwater beneath the site. In May 1998 two USTs were removed from the site. On May 10, 1998 a UST (Tank 1) with an estimated volume of 8,000 gallons was removed and was suspected to have contained leaded gasoline. On May 19, 1998 a second UST (Tank 2) with an estimated volume of was removed and was suspected to have also contained leaded gasoline. The UST removal included overexcavation of the impacted soils. However, excavation of visibly impacted soils to the north was stopped due to concerns regarding the integrity of Carlysle Street. The maximum level of TPH-g detected below the tank were was 3,300 ppm. At that time 460 tons of soil was removed to Kirby Canyon landfill in Morgan Hill. In September 1999 additional soil sampling was performed. The maximum level of contamination in soil was 280 ppm TPH-g, 2 ppm benzene, 9 ppm toluene, 8.5 ppm ethylbenzene and 38 ppm xylenes. Groundwater contamination was up to 2,400 ppb TPH-g, 11 ppb benzene, 44 ppb toluene, 28 ppb ethylbenzene and 170 ppb xylenes. MTBE was not detected. On December 9, 1999 additional soil was excavated from the area around the former USTs. Approximately 344 tons of soil was removed and disposed of at the Forward Landfill in Manteca on December 17, 1999. Eight soil samples were collected in and around the excavated area. The maximum detected soil concentrations were 14 ppm lead, 19 ppm TPG-g and 0.22 ppm benzene. On December 29, 1999 approximately 93 tons of soil was excavated from the area near the former USTs (between shoring columns 10 and 14) and eventually disposed of at the Forward Landfill in Manteca. Confirmation soil samples detected TPH-g and benzene up to 250 and 1.6 ppm, respectively in sample location E-1-19'). On December 30, 1999 302 tons of soil was excavated and transported to Forward Landfill. Confirmation soil samples collected from sample location E-13 identified an area of concern. Consequently, on December 31, 1999 further excavation was performed between columns 17 and 19 and confirmation samples E-14 through E-16 were collected for chemical analyses. It was determined that the area of concern had been removed. Approximately 302 tons of soil was removed to the

SAN JOSE MERCURY NEWS (Continued) **S103473094**

Forward Landfill. On February 10, 2000 approximately 20 tons of soil was excavated and disposed at Forward Landfill. Confirmation soil samples taken from the excavation indicated that all constituents were below the affected zone criteria. Prior to March 13, 2000 13 soil samples were collected from the base of the northern portion of the site excavation area. A sample collected between columns 13 and 14 at a depth of 23.5 feet contained 0.83 ppm benzene. Approximately 5 cubic yards (7 tons) of soil was excavated at this location and disposed of off-site. Two additional soil samples collected at this location on January 10, and February 18, 2000. The soils samples were below the affected zone criteria. Groundwater extraction was used to dewater the site to allow for construction activities beginning on October 11, 1999. Extraction rates varied between 5 and 30 gallons per minute (gpm) from the eleven extraction wells. The permit to discharge water was terminated on March 9, 2000. Approximately 7,176,000 gallons of impacted water was discharged to the sanitary sewer during site development activities.

Violation Date: 03-20-2017
Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes: _____ Diesel was observed to be pooling the piping sump and pipe transition sump during today s inspection. In aggregate, approximately 0.5 gallons of diesel was removed from the piping sump and pipe transition pump. Diesel has previously been observed in the pipe transition sump during the 3/23/2015 and 3/22/2016 inspections and in the piping sump during the 3/23/2015 inspection. Per maintenance records and Ms. Walker s statements, no repairs or corrective actions have been taken to repair the piping. IMMEDIATELY begin investigating the source of the fuel leak and submit a work plan for any necessary repairs to HMCD for review. Depending on the scope of work necessary, a permit from HMCD may be required for the repairs. THIS IS A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS I VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016 AND A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS II VIOLATION THE [Truncated]

Citation:	23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description:	Failure to maintain secondarily contained piping to allow liquid in the event of a leak to drain into sump (i.e. failure to remove test boot, pipe swelling).
Violation Notes:	Schrader valve secondary piping pressure test ports for both supply lines and both return lines in the tank top piping sump had valve cores left installed after last secondary containment test. Secondary piping for the new supply and return lines were similarly plugged in the piping transition sump. This prevented the secondary pipes from draining into the monitored sumps. The valve cores and plugs were removed today during this inspection. Ensure that the lines remain free to drain into monitored sumps when not undergoing triennial pressure testing.

Violation Date:	03-14-2018
Citation:	HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description:	Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes:	This is a violation originally cited on 3/20/2017, 3/22/2016 and 3/24/2015. Secondary piping pressure test ports for supply line and return line have had their valve cores removed as required to allow drainage of the secondary lines into the monitored sump, but valves for both lines appeared to be in the closed position at the time of inspection, isolating them from the fuel in the UST. Ms. Walker stated during the inspection that repairs have been made, but no records are available to document any repairs. Submit documentation showing how, when, and by whom any repairs to these lines were made. (Note: No work plan was submitted as directed in the 3/20/2017 Official Notice of Inspection.)

Citation:	HSC 6.7 25281.5(b)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25281.5(b)(3)
Violation Description:	Failure to conduct daily visual inspections each time the tank is operated, but not less than monthly, and maintain a log of inspection results for review of the CUPA.
Violation Notes:	Returned to compliance on 04/10/2014. The single-wall section of piping at the generator on the 27th floor did not have documented inspections for 11/2013, 12/2013, 1/2014 or 2/2014. Ensure the once-a-month minimum inspections are performed and documented and the documentation is available for review.

Violation Date: 03-20-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.
Violation Notes: The DUSTO Monthly Inspection Report for 11/7/2016 incorrectly listed N/A to the question of whether secondary containment tests have been completed within the required timeframe. Additionally, the DUSTO Inspection Report from 4/4/2016 incorrectly listed N/A to the question of whether each alarm for the previous month has been responded to appropriately (alarms occurred due to annual monitoring system certification and the correct answer should be yes).

Waste-Lamp(s)". 4) Each electronic devices or the container or pallet in or on which the electronic devices are contained as "Universal Waste-Electronic Device(s)". 5) Each CRTs or the container or pallet in or on which the CRTs are contained as "Universal Waste-CRT(s)". 6) A container of CRT glass shall be labeled or marked clearly with the following phrase: "Universal Waste-CRT glass". 7) In lieu of labeling individual electronic devices, CRTs, and/or containers of CRT glass pursuant to subsections d) through f) of this section, a universal waste handler may combine, package, and accumulate those universal wastes in appropriate containers or within a designated area demarcated by boundaries that are clearly labeled with the applicable portion(s) of the following phrase: "Universal Waste-Electronic Device(s)/Universal Waste - CRT(s)/Universal Waste-CRT Glass".

Violation Notes: Mark all containers holding Universal Waste with the words, "UNIVERSAL WASTE - LAMPS" (for used fluorescent lamp tubes and bulbs) or "UNIVERSAL WASTE - BATTERIES" (for consumer-type batteries). Either implement an inventory system (e.g., log) to keep track of Universal waste container accumulation times or mark each container with the initial date of accumulation.

Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: This is an uncorrected violation. Permit application information submitted via CERS on 3/13/2018 still identifies the UST Operator as San Jose Marriott, which appears to be an unregistered fictitious business name, not the name of a legal entity. Property records identify the owner of the real estate on which the hotel is located as CWI 2 San Jose Hotel LP / Ryan LLC since 5/10/2013 when the property was purchased from PR SJM Hotel LLC. Correct and resubmit the UST Facility Information in CERS. Along with your written response to this Notice of Violation, include an explanation of the current and historic relationships between Marriott International Inc., CWI 2 San Jose Hotel LP, CWI 2 San Jose Hotel GP LLC, Ryan LLC, SP6 San Jose Hotel Owner LLC, SP6 San Jose Hotel Lessee LLC, and SP6 TRS LLC (i.e., parent/subsidiary and/or partnership relationships, and exactly who currently owns and operates the hotel and the UST).

Chapter 16, Section(s) 2630(d), 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: The Veeder-Root 794380-208 sensor was observed to be in a location that does not provide the earliest opportunity of leak detection. The sensor s improper location was verified by the fact that the diesel accumulating in the sump was at a different location than the sensor (i.e. the sensor was dry while there was diesel in the sump). The sensor was re-located to a location that provides leak detection at the earliest opportunity. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED. However, ensure that the sensor remains in the proper location.

Violation Date: 03-20-2017
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284
Violation Description: Failure to obtain a valid permit to operate from the CUPA.
Violation Notes: The facility does not currently have a UST Permit to Operate. Correct all open violations and provide a written response documenting the actions taken to correct each violation and a signed Certification of Compliance to HMCD. A Permit to Operate will be issued upon verification that the facility has returned to full compliance and all information provided on CERS is up-to-date. THIS IS A REPEAT UNCORRECTED CLASS I VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016 AND A REPEAT UNCORRECTED CLASS II VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/23/2015.

Violation Date:	03-24-2015
Citation:	23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description:	Failure to maintain secondarily contained piping to allow liquid in the event of a leak to drain into sump (i.e. failure to remove test boot, pipe swelling).
Violation Notes:	Schrader valve secondary piping pressure test ports for both supply lines and both return lines in the tank top piping sump had valve cores left installed after last secondary containment test. Secondary piping for the new supply and return lines were similarly plugged in the piping transition sump. This prevented the secondary pipes from draining into the monitored sumps. The valve cores and plugs were removed today during this inspection. Ensure that the lines remain free to drain into monitored sumps when not undergoing triennial pressure testing.

SJRA-HOTEL EAST (Continued) **S108219554**

Violation Date: 03-14-2018
Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes: This is a violation originally cited on 3/20/2017, 3/22/2016 and 3/24/2015. Secondary piping pressure test ports for supply line and return line have had their valve cores removed as required to allow drainage of the secondary lines into the monitored sump, but valves for both lines appeared to be in the closed position at the time of inspection, isolating them from the fuel in the UST. Ms. Walker stated during the inspection that repairs have been made, but no records are available to document any repairs. Submit documentation showing how, when, and by whom any repairs to these lines were made. (Note: No work plan was submitted as directed in the 3/20/2017 Official Notice of Inspection.)

Violation Date: 03-20-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.
Violation Notes: The DUSTO Monthly Inspection Report for 11/7/2016 incorrectly listed N/A to the question of whether secondary containment tests have been completed within the required timeframe. Additionally, the DUSTO Inspection Report from 4/4/2016 incorrectly listed N/A to the question of whether each alarm for the previous month has been responded to appropriately (alarms occurred due to annual monitoring system certification and the correct answer should be yes).

Violation Notes: The facility has not reviewed and submitted a complete HMBP on CERS since 2/21/2014, as noted in the 3/24/2015 and 3/22/2016 Official Notice of Inspection Reports. Ensure all items noted in the 3/24/2015 inspection report are addressed and submit a complete HMBP to CERS. Ensure that the HMBP is properly updated within 30 days of changes to personnel, chemicals stored, and operations. Ensure that the HMBP is certified at least annually and all hazardous materials/wastes at or above HMBP reportable thresholds are included. If you would like assistance with your HMBP submittal, contact Molly Pritz at molly.pritz@cep.sccgov.org or Michelle Santos at (408)918-1981. THIS VIOLATION HAS BEEN ESCALATED TO A CLASS I VIOLATION AS THIS IS A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS II VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016 AND A CONTINUOUS, REPEAT, AND UNCORRECTED MINOR VIOLATION FROM [Truncated]

the Official Notice of Inspection Reports issued on 3/24/2015 and 3/22/2016 have been submitted to HMCD. A copy of both reports were provided during today s inspection. THIS VIOLATION HAS BEEN ESCALATED TO A CLASS I VIOLATION AS THIS IS A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS II VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016. ALL CLASS I VIOLATIONS REQUIRE IMMEDIATE CORRECTIVE ACTION.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 64623
Site Name: SAN JOSE MARRIOTT
Violation Date: 03-20-2017
Citation: 23 CCR 6.7 25284, 25286 - California Code of Regulations, Title 23, Chapter 6.7, Section(s) 25284, 25286
Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: The UST Facility Operating Permit Application information on CERS identifies San Jose Marriott as the tank operator, but Ms. Walker and the Secretary of State s website s business search, San Jose 2 Hotel Operator, LLC CWI2 is the tank operator. This is a repeat violation from the Official Notice of Inspection Report issued on 3/24/2015 and has therefore been escalated to a Class II violation. ALL CLASS II VIOLATIONS REQUIRE IMMEDIATE CORRECTIVE ACTION.

Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS

Citation: 23 CCR 16 2630(d), 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2630(d), 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: The Veeder-Root 794380-208 sensor was observed to be in a location that does not provide the earliest opportunity of leak detection. The sensor s improper location was verified by the fact that the diesel accumulating in the sump was at a different location than the sensor (i.e. the sensor was dry while there was diesel in the sump). The sensor was re-located to a location that provides leak detection at the earliest opportunity. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED. However, ensure that the sensor remains in the proper location.

Eval Date: 03-07-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Timothy Elebeck (ICC #8001435-UT, exp. 11/26/2014; VR L4 #B35252, exp. 9/9/2015) of Tanknology. Site consists of a single UST supplying an emergency backup generator located on the 27th floor penthouse. The annular space, piping sump, transition sump, and pump room floor (bermed epoxy floor used for secondary containment) are monitored by a Veeder-Root TLS-300C located in the pump room. The time on the TLS-300C was off by 2 hours on arrival and was immediately corrected. On the 27th floor, the day tank secondary and single-walled piping at the generator are monitored by the generator panel remote annunciator/light located in the engineering office. The sensors (piping sump, transition sump, pump room containment- VR 208; annular VR -420) were tested in water and provided audible and visible alarms at the VR panel. The day tank and single walled piping sensors (VR [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection began on 3/13/2018 and finished today. On site yesterday with Greg Breshears of HMCD to witness the annual monitoring system certification performed by Brent Bowen of Tanknology Inc. Verified Mr. Bowen’s ICC (#8211862, expires 6/23/19), and Veeder Root (#B48215, expires 4/26/19). 1 tank : Diesel The UST system s piping is a conventional suction system. Observed testing of the following components yesterday: - 1 Annular space sensor (Veeder-Root (VR) 794390-420) - 1 Piping Sump sensor (VR 794380-208) - 1 Piping Transition Sump sensor (VR 794380-208) - 1 Pump Room sensor (VR 794380-208) All sensors listed above provided audible and visual alarms when tested. The spill bucket was tested using Tanknology’s

SJRA-HOTEL EAST (Continued) **S108219554**

Vacuum testing apparatus. The spill bucket held at 30" water column for 60 seconds without loss. The diesel tank uses mechanical overfill prevention valve in the drop tube. The unburied fuel piping connected to the emergency generator tank [Truncated]

Eval Notes: NOTES: 1) The diesel waste and spill bucket liquid waste removed from the piping sump, pipe transition sump, and spill bucket was transferred into a 5 gallon plastic bucket container at the time of inspection. The container was properly labeled with a completed hazardous waste label. ENSURE THAT ALL HAZARDOUS WASTE IS COLLECTED, MANAGED, AND DISPOSED OF IN ACCORDANCE WITH ALL APPLICABLE HAZARDOUS WASTE REQUIREMENTS. 2) Approximately 1.5 gallons of liquid suspected of being primarily water was observed in the fill spill bucket during today's inspection. The liquid was removed and collected as noted above. 2) Submit a copy of the Monitoring Certification and Spill Bucket Test reports to HMCD within 30 days. On-site for an annual monitoring system certification performed by UST Service Technician Steven Williams of Tanknology, Inc. Mr. Williams has current ICC California UST Service Technician certification (#8234559 exp. 6/3/2018) and Veeder-Root certification [Truncated]

Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes: Diesel was observed to be pooling the piping sump and pipe transition sump during today s inspection. In aggregate, approximately 0.5 gallons of diesel was removed from the piping sump and pipe transition pump. Diesel has previously been observed in the pipe transition sump during the 3/23/2015 and 3/22/2016 inspections and in the piping sump during the 3/23/2015 inspection. Per maintenance records and Ms. Walker s statements, no repairs or corrective actions have been taken to repair the piping. IMMEDIATELY begin investigating the source of the fuel leak and submit a work plan for any necessary repairs to HMCD for review. Depending on the scope of work necessary, a permit from HMCD may be required for the repairs. THIS IS A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS I VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016 AND A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS II VIOLATION THE [Truncated]

Violation Source: CERS

Site ID: 64623
Site Name: SAN JOSE MARRIOTT
Violation Date: 03-24-2015
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure to maintain secondarily contained piping to allow liquid in the event of a leak to drain into sump (i.e. failure to remove test boot, pipe swelling).
Violation Notes: Schrader valve secondary piping pressure test ports for both supply lines and both return lines in the tank top piping sump had valve cores left installed after last secondary containment test. Secondary piping for the new supply and return lines were similarly plugged in the piping transition sump. This prevented the secondary pipes from draining into the monitored sumps. The valve cores and plugs were removed today during this inspection. Ensure that the lines remain free to drain into monitored sumps when not undergoing triennial pressure testing.
Violation Division: Santa Clara County Environmental Health

Site ID: 64623
Site Name: SAN JOSE MARRIOTT
Violation Date: 03-14-2018
Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes: This is a violation originally cited on 3/20/2017, 3/22/2016 and 3/24/2015. Secondary piping pressure test ports for supply line and return line have had their valve cores removed as required to allow drainage of the secondary lines into the monitored sump, but valves for both lines appeared to be in the closed position at the time of inspection, isolating them from the fuel in the UST. Ms. Walker stated during the inspection that repairs have been made, but no records are available to document any repairs. Submit documentation showing how, when, and by whom any repairs to these lines were made. (Note: No work plan was submitted as directed in the 3/20/2017 Official Notice of Inspection.)

Violation Date: 03-20-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.

SJRA-HOTEL EAST (Continued) **S108219554**

Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: The DUSTO Monthly Inspection Report for 11/7/2016 incorrectly listed N/A to the question of whether secondary containment tests have been completed within the required timeframe. Additionally, the DUSTO Inspection Report from 4/4/2016 incorrectly listed N/A to the question of whether each alarm for the previous month has been responded to appropriately (alarms occurred due to annual monitoring system certification and the correct answer should be yes).

SJRA-HOTEL EAST (Continued) **S108219554**

Violation Description: Failure to notify the CUPA of the designated operator (DO) identification and/or change of the DO within 30 days.
Violation Notes: The facility has not submitted an updated Owner Statement of Designated UST Operator Compliance as directed to do in the 3/24/2015 and 3/22/2016 Official Notice of Inspection Reports. Additionally, the past 12 months of DUSTO inspections have been conducted by Richard Reed and Michael Pietsch, neither of whom are in included on the outdated Owner Statement of Designated UST Operator Compliance. THIS VIOLATION HAS BEEN ESCALATED TO A CLASS I VIOLATION AS THIS IS A CONTINUOUS, REPEAT, AND UNCORRECTED CLASS II VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/22/2016 AND A CONTINUOUS, REPEAT, AND UNCORRECTED MINOR VIOLATION FROM THE OFFICIAL NOTICE OF INSPECTION REPORT ISSUED ON 3/23/2015. ALL CLASS I VIOLATIONS REQUIRE IMMEDIATE CORRECTIVE ACTION.

Violation Date: 03-20-2017
Citation: 23 CCR 16 2630(d), 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2630(d), 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: The Veeder-Root 794380-208 sensor was observed to be in a location that does not provide the earliest opportunity of leak detection. The sensor s improper location was verified by the fact that the diesel accumulating in the sump was at a different location than the sensor (i.e. the sensor was dry while there was diesel in the sump). The sensor was re-located to a location that provides leak detection at the earliest opportunity. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED. However, ensure that the sensor remains in the proper location.

Eval Notes: On site to witness the annual monitoring system certification and spill bucket test performed by Mr. Michael Gathright (certifications current) of Petro-Analytical. UST is a conventional suction system for an emergency generator. The annular and 3 sump sensors (piping sump, transition sump from loading dock down to pump room and pump room floor containment) were tested in water and provided audible and visible alarms. The spill bucket was hydrostatically tested for one hour with no loss. Observed the schrader valves removed from all of the test boots and brass connections. Observed the reducer fitting on the supply line removed at the transition sump. A copy of the 3/24/2015 Notice of Inspection was delivered with this report. Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation and daily Emergency Generator Tank System unburied piping inspection logs. NOTE: Secondary containment (SB989) testing is due in [Truncated]

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-23-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: All UST monitoring equipment was tested today by UST Service Technician James Ruble of Advanced Fuel Services, Inc. and functioned properly. Mr. Ruble has current ICC California UST Service Technician certification (exp. 3/29/2015) and Franklin Fueling Systems (Incon) Level 1 & 2 certification (exp. 12/27/2014). All sensors were tested using water and triggered audible and visual alarms. ATG probe was visually inspected. The UST fill spill bucket was hydrostatically tested for 1 hour and passed. Presence of mechanical overfill prevention valve in drop tube was visually confirmed. Submit a copy of the completed Monitoring System Certification form and spill bucket test report within 30 days. Notes: 1. Designated UST operator monthly inspection records are in order. Records of visual inspections of unburied fuel piping monthly and each time the system is operated are in order. 2. Federal facilities are not required to demonstrate UST Financial Responsibility. Check [Truncated]

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 05-11-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: UST secondary containment systems were tested by UST Service Technician Eddie Martinez of Advanced Fuel Services, Inc. and functioned properly. Mr. Martinez has current ICC California UST Service Technician certification (exp. 3/17/2016) and Franklin Fueling Systems (Incon Level 4) Sump test System (TS-STS) certification (exp. 2/25/2017). UST is a single-wall tank, so no annular space to test. Fuel supply and return line secondary containment piping were both pressure tested using nitrogen at 5.2 p.s.i.g. for 1 hour. Both lines passed. Gauges returned to zero when pressure was released at end of test. Tank top piping sump was tested using the Incon TS-STS accelerated hydrostatic testing apparatus and passed. Submit a copy of the UST secondary containment system test report within 30 days. Note: Next round of triennial secondary containment testing is due in May of 2018.

Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-25-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: All UST monitoring equipment was tested today by UST Service Technician Steven Parmenter of Service Station Systems, Inc. and functioned properly. Mr. Parmenter has current ICC California UST Service Technician certification (exp. 3/19/2017) and Franklin Fueling Systems (Incon) Level 1 & 2 certification (Level 1 exp. 9/23/2016, Level 2 exp. 10/13/2016). Both sensors were tested using water and triggered audible and visual alarms on Incon TS-1001 automatic tank gauging (ATG) console. ATG probe was visually inspected. The UST fill spill bucket was hydrostatically tested for 1 hour by the tank operator and passed. Presence of mechanical overfill prevention valve in drop tube was visually confirmed. Notes: 1. Designated UST Operator monthly inspection and facility employee training records are in order. 2. Records of visual inspections of emergency generator tank system (EGTS) unburied piping monthly and each time the system is operated are in order. 3. Since [Truncated]

Eval Notes: Underground storage tank (UST) retrofit inspection associated with replacement of Incon UST leak detection monitoring console. All UST monitoring equipment was tested today by UST Service Technician Steven Parmenter of Service Station Systems, Inc. and functioned properly. Mr. Parmenter has current ICC California UST Service Technician certification (exp. 3/19/2017) and Franklin Fueling Systems (Incon) Level 1 & 2 certification (Level 1 exp. 9/23/2016, Level 2 exp. 10/13/2016). Both sensors were tested using water and triggered audible and visual alarms on Incon TS-1001 automatic tank gauging (ATG) console. ATG probe was visually inspected. TS-1001 is programmed to perform 0.2 g.p.h. ATG tests each day at midnight. Retrofit is complete. Final HMCD project sign-off is granted. Submit a copy of the completed Monitoring System Certification form within 30 days.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	UST secondary containment systems were tested by UST Service Technician Eddie Martinez of Advanced Fuel Services, Inc. and functioned properly. Mr. Martinez has current ICC California UST Service Technician certification (exp. 3/17/2016) and Franklin Fueling Systems (Incon Level 4) Sump test System (TS-STS) certification (exp. 2/25/2017). UST is a single-wall tank, so no annular space to test. Fuel supply and return line secondary containment piping were both pressure tested using nitrogen at 5.2 p.s.i.g. for 1 hour. Both lines passed. Gauges returned to zero when pressure was released at end of test. Tank top piping sump was tested using the Incon TS-STS

ROBERT F PECKHAM FEDERAL BLDG (Continued) **S111217077**

accelerated hydrostatic testing apparatus and passed. Submit a copy of the UST secondary containment system test report within 30 days. Note: Next round of triennial secondary containment testing is due in May of 2018.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Type: Routine done by local agency
Eval Notes: On-site for an Annual Monitoring System Certification on 11/17/2016 performed by Services Station Systems, Inc. Service Technician Israel Santillan. Mr. Santillan has a current ICC Service Technician Certification (#8057571 exp. 10/2/2017) and Veeder-Root Level 4 certification (#B33310 Exp. 5/11/17). The underground storage tank (UST) system is comprised of one, 1,000 gallon, double-walled steel tank containing diesel fuel and is used for emergency generator fueling. The tank has a reported installation date of 10/15/1991. There is also a 250 gallon, double-walled, steel, below-grade tank in the Fire Pump Room, and one, single-walled, belly tank in the generator system on the roof. The UST system has a conventional suction piping system with double-walled underground piping and single-walled aboveground piping. Observed testing of the following components on 11/17/2016*: - 1 Annular space sensor (Veeder-Root (VR) 794390-420) - 1 Piping Sump sensor (VR [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-25-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan(certifications current) of Service Station Systems. Annular, sump, and pump room piping containment sensor tested in water and provided audible and visible alarms. Fire pump room above ground tank annular sensor also tested in water as it is connected to the Veeder-Root panel and it provided audible and visible alarms. Overfill protection is provided by a flapper valve in the fill riser. The spill buckets are direct buried was hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, unburied emergency generator piping inspection logs, testing reports and maintenance documentation. Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 11/25/2015 is

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-02-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection began on 3/28/14 and concluded on 4/2/14. A Monitoring System Equipment Certification was performed on 3/28/14 by Service Station Systems, Inc. Technician Israel Santillan (ICC# 8057571-UT Exp. 10/4/15, Veeder Root (VR) #B33310 Level 4 Technician Exp. 10/2/15). The underground storage tank (UST) system is an Emergency Generator Tank System (EGTS) comprised of one double walled 1,000 gallon steel underground storage tank containing diesel fuel, one double walled 250 gallon steel aboveground storage tank containing diesel fuel in the Fire Pump Room, and one single walled 100 gallon steel aboveground storage tank containing diesel fuel in the generator system on the roof. This is a suction delivery system with double walled underground piping and single walled aboveground piping. Components tested on 3/28/2014: -1 UST Annular space sensor (VR-420); registered on Gilbarco as "ANNULAR/SUMP" -1 UST Piping Sump sensor (VR-208); registered on Gilbarco as [Truncated]

Eval General Type: Other/Unknown
Eval Date: 07-07-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: NOTE TO FACILITY: Submit a copy of the Secondary Containment Test report to our office within 30 days and keep a copy available for review for at least 3 years. On-site to observe Secondary Containment (SB989) Testing performed by Able Maintenance Service Technician, Erik Salinger (ICC UST Service Technician #8729425, exp. 4/24/2019 and Incon Level 4 Sump Tester Certification #1018893709, exp. 5/2/2109). The UST system is an emergency generator tank system comprised of one double-walled steel underground tank, one exempted fire pump tank in a below-grade structure, and one belly tank connected to the main emergency generator. The reported date of tank installation is 10/15/1991. Overfill prevention for the underground tank is through use of mechanical overfill prevention valves pursuant to 23CCR 2635(b)(2)(C) and the fill spill bucket is direct bury. The following components subject to SB989 testing were tested today: -1 x Piping Sump -1 x Tank Annular [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-17-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site for an Annual Monitoring System Certification on 11/17/2016 performed by Services Station Systems, Inc. Service Technician Israel Santillan. Mr. Santillan has a current ICC Service Technician Certification (#8057571 exp. 10/2/2017) and Veeder-Root Level 4 certification (#B33310 Exp. 5/11/17). The underground storage tank (UST) system is comprised of one, 1,000 gallon, double-walled steel tank containing diesel fuel and is used for emergency generator fueling. The tank has a reported installation date of 10/15/1991. There is also a 250 gallon, double-walled, steel, below-grade tank in the Fire Pump Room, and one, single-walled, belly tank in the generator system on the roof. The UST system has a conventional suction piping system with double-walled underground piping and single-walled aboveground piping. Observed testing of the following components on 11/17/2016*: - 1 Annular space sensor (Veeder-Root (VR) 794390-420) - 1 Piping Sump sensor (VR [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-25-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan(certifications current) of Service Station Systems. Annular, sump, and pump room piping containment sensor tested in water and provided audible and visible alarms. Fire pump room above ground tank annular sensor also tested in water as it is connected to the Veeder-Root panel and it provided audible and visible alarms. Overfill protection is provided by a flapper valve in the fill riser. The spill buckets are direct buried was hydrostatically tested for one hour with no loss. Reviewed DUSTO Monthly Reports, DUSTO Training records, unburied emergency generator piping inspection logs, testing reports and maintenance documentation. Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 11/25/2015 is accurate as observed. NOTE: Your Certification of Financial

. Waste name:	Alkaline solution without metals (pH > 12.5)

. Waste code:	131

WALGREENS #5219 (Continued) **1004676053**

. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D010
. Waste name: SELENIUM

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No

SAFEWAY STORE NO 2934 (Continued) **1014950693**

Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 05/31/2012
Site name: SAFEWAY STORE NO 2934
Classification: Large Quantity Generator

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: P075
. Waste name: NICOTINE, & SALTS

Violation Status: No violations found

HEART OF THE CITY - BLOCK 3 (Continued) **S108937594**

RB Case Number: 43S1109
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Petroleum - Automotive gasolines, * Solvents, Stoddard solvent / Mineral Spriits / Distillates
Site History: Development of site is in two phases. Phase I is complete. About one half of the site is included in Phase 1. Phase 1 was excavated to 30-40 feet and dewatered during construction. Contaminated soil and groundwater were handled in accordance with an approved RAP. An nfa letter was issued for the Phase 1 portion of the site. Phase 2 is currently a parking lot. A RAP was being developed for Phase 2 prior to the elimination of the redevelopment agency. Currently the site R.P. for the Phase 2 portion of the site is the Sucessor Agency to the San Jose Redevelopment Agency.

Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 07S1E08P02f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: Underground heating oil tank located within the basement of the building. In 1992, a water main/line ruptured near this building and flooded the basement. The flooding caused the product to come out of the tank. The tank was taken out of service and the tank was left in place. Subsurface investigation conducted in 2010 found soil and groundwater contamination. The UST will be properly closed in place.

Potential Media Affected: Other Groundwater (uses other than drinking water)

DR. EU BUILDING (Continued) **S103881542**

Potential Contaminants of Concern: * Chlorinated Solvents - PCE
Site History: This site is an historical building in downtown San Jose. It was formerly a hotel that had a dry cleaning facility in the basement. There has been a release of tetrachloroethene (PCE), a solvent used in dry cleaning, to soil and groundwater. Soil and groundwater investigation is underway and a remedial action plan is required.

Potential Media Affected:	Aquifer used for drinking water supply, Indoor Air, Soil Vapor, Under Investigation
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The Regional Water Boards August 22, 2017, letter (Requirement Letter) has required an investigation based on the historical dry cleaner operations. The initial investigation report was submitted on March 27, 2018. Diamond Cleaners and Laundry enrolled in our cost recovery oversight program on June 6, 2018. The Regional Water Board will prepare a response to the initial investigation report. The February 26, 2016, site history report indicates the Diamond Laundry and Cleaners has operated since 1952. The March 27, 2018 investigation report indicates the dry cleaner operated since construction of the building in 1943.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22,

ROSE-MURTY TIRE CO. (Continued) **S103881042**

	Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	- Used antifreeze tank was labeled with accumulation time of 4/16/2012. Last consolidated manifest for used antifreeze was 4/23/2012. Owner confirmed that used antifreeze has not been picked up since 4/23/2012. - Consolidated manifests were reviewed for used oil picked up 4/27/2015 (290 gal), 3/29/2014 (275 gal), and 7/9/2013 (370 gal). Owner confirmed that no other used oil pick ups occurred in the past 3 years.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-17-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: CERS ID: 10353262 On-site to conduct a routine hazardous materials business plan (HMBP) inspection with the consent of owner, Eddie Ma. The following hazardous materials/wastes were observed in HMBP quantities: 1. 1 x 150 gallon tank of new antifreeze 2. 1 x 150 gallon tank of used antifreeze + 2 x30 gallon drums of used antifreeze + pans of used antifreeze on work area floor 3. 8 x 55 gallon drums of used oil + 1 x 30 gallon drum of used oil in work area + pans of used oil in hazardous waste area 4. 4 x 55 gallon drums of used oil filters The following hazardous materials/wastes were observed in non-HMBP quantities: 1. SW-20, SW-30 (< 55 gallons/type) 2. Small amounts of grease (~15 gal) NOTES: - Last HMBP submittal was 2/20/2014. - As of 1/1/2015, employee training for the past 3 years must be documented and able to be reviewed at facility at the time of inspection.

Case Worker:	Not reported
RB Case Number:	01-038
Local Agency:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	07S1E08L01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	12/83, a leak in the gasoline product line was discovered near the southwestern edge of the fuel dispenser island and a corroded section of pipe was replaced to stop the leak. 1/84, 6 groundwater monitoring wells were installed and commenced weekly monitoring for free product (FP). 2/84, one inch of FP measured in well MW-5 and also present in monitoring wells located near the USTs. 6/84, a pinhole sized leak was detected and repaired in the dispenser filter located at the southeastern edge of the fuel dispenser island. 2 additional monitoring wells were installed 10/84. 11/84 a hole was discovered near the northwest corner of a UST containing regular gasoline. The gasoline was pumped out of the UST, and the UST was removed from service until it was replaced in 1985. 5/85, USTs and piping were replaced. Product conveyance piping was also replaced with cathodic-protected conveyance piping. 11/89, advanced 6 soil borings, installed 2 wells, and determining the hydraulic conductivity and transmissivity after performing slug tests. Three areas containing soil and/or groundwater contamination were identified in the investigation: UST complex; waste oil UST and steam-cleaning area; and dispsenser islands in the southeast portion of the Site. 3/90, wells MW-6 and MW-8 located near the waste oil UST and steam-cleaning area were destroyed. Both wells had contained measurable amounts of FP and it was suspected that oily residue from the steam cleaning process was collecting in them and providing an additional source of groundwater contamination. Well MW-11 was installed as a replacement. Jan-Aug 1990, 5 soil borings advanced onsite; 19 borings and 1 monitoring well were advanced off-site. 4 extraction wells were also installed onsite along the northern border of the property. 4/90, conducted hydraulic testing and a soil vapor extraction (SVE) pilot study. The results of the SVE pilot study indicated that a full-scale SVE system could be used to remediate hydrocarbons in the unsaturated soils beneath the Site. 12/91, 4 off-site monitoring wells were installed. Groundwater extraction and treatment (GWET) system operated 2/92-6/96 and removed approximately 1,765,354 gal. of water and removed approximately 17 pounds of petroleum hydrocarbons. 5/00, 11 soil borings and 2 piezometers were advanced. 2002, a risk-based corrective action (RBCA) assessment was conducted to determine if the petroleum hydrocarbons in the soil and groundwater on and off-site presented a risk to human health. The RBCA indicated that all soil concentrations were below risk-based screening levels (RBSLs) assigned by the Regional Water Quality Control Board for the specified receptors (commercial workers, construction workers on and residents). Residents were included as on-site receptors based on the proximity of the Site to the senior apartment complex and the potential for the dissolved hydrocarbon plume to migrate beneath the building. The only exposure pathway of concern identified in the RBCA assessment was inhalation of benzene vapors in indoor air. The theoretical excess cancer risks and hazard quotients (for non carcinogens) were less than the respective Cal-EPA limits of one in a million. 1/04 a 2-phase extraction and treatment (TPET) system began operating and ran through 11/06. 9/08, 9 soil borings were advanced

FOURTH & SANTA CLARA CHEVRON (Continued) **U001602681**

to collect confirmation soil samples.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 02-22-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The SB-989 Secondary Containment Testing was performed by Tony Fontana, ICC UST Service technician #1064273, exp. date = 5/29/16; Incon Tester # 1718713702, exp. date = 2/21/18 The following components were completed during the inspection: 3 Tank annulars (87, 91, diesel) tested at 10 inches of mercury for one hour. Test result = pass. 3 secondary product piping runs (87, 91, diesel) tested at 5 psi for hour. Test results = pass. 3 STP sumps (87,91 diesel) were tested hydrostatically using the INCON accelerated test method. Test results = pass. 1 UDC sump (1/2) was tested hydrostatically using the INCON accelerated test method. Test results = pass. The waste oil tank was under test at 10 inches of mercury for one hour and holding at the completion of the inspection. The UDC sump 3/4 was under test and passing at the completion of the inspection. The following components shall be tested on this date: 2 UDC sumps (5/6, 7/8). Send the secondary [Truncated]

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 02-22-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The SB-989 Secondary Containment Testing was performed by Tony Fontana, ICC UST Service technician #1064273, exp. date = 5/29/16; Incon Tester # 1718713702, exp. date = 2/21/18 The following

FOURTH & SANTA CLARA CHEVRON (Continued) **U001602681**

components were completed during the inspection: 3 Tank annulars (87, 91, diesel) tested at 10 inches of mercury for one hour. Test result = pass. 3 secondary product piping runs (87, 91, diesel) tested at 5 psi for hour. Test results = pass. 3 STP sumps (87,91 diesel) were tested hydrostatically using the INCON accelerated test method. Test results = pass. 1 UDC sump (1/2) was tested hydrostatically using the INCON accelerated test method. Test results = pass. The waste oil tank was under test at 10 inches of mercury for one hour and holding at the completion of the inspection. The UDC sump 3/4 was under test and passing at the completion of the inspection. The following components shall be tested on this date: 2 UDC sumps (5/6, 7/8). Send the secondary [Truncated]

Eval Type: Routine done by local agency
Eval Notes: On-site today to oversee annual monitoring certification and spill bucket testing. Technician Jeff Conger from Pinnacle Fuel Compliance Service performed the testing and has valid ICC, Veeder-Root, and VMI testing certifications. Site consists of: 1x10,000 gal 87 Gasoline 1x10,000 gal 91 Gasoline 1x10,000 gal Diesel Facility recently switched (approximately 4 months ago) from 89 to diesel. Tested annular space sensors (Veeder Root 409) of all gasoline and diesel tanks. Annular space of the used oil tank is currently monitored by a Veeder-Root 407 sensor. All sensors were tested in water and performed as designed. STP sump sensors (Veeder-Root 208) were tested in water and performed as designed. Positive shutdown of turbines was observed. UDCs are monitored by a Veeder-Root 208 sensors. Sensors were tested in water and positive shutdown of turbines was observed. Fail Safe and sensor out was performed shutting down all turbines. Overfill prevention is provided [Truncated]

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 02-22-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The SB-989 Secondary Containment Testing was performed by Tony Fontana, ICC UST Service technician #1064273, exp. date = 5/29/16; Incon Tester # 1718713702, exp. date = 2/21/18 The following components were completed during the inspection: 3 Tank annulars (87, 91, diesel) tested at 10 inches of mercury for one hour. Test result = pass. 3 secondary product piping runs (87, 91, diesel) tested at 5 psi for hour. Test results = pass. 3 STP sumps (87,91 diesel) were tested hydrostatically using the INCON accelerated test method. Test results = pass. 1 UDC sump (1/2) was tested hydrostatically using the INCON accelerated test method. Test results = pass. The waste oil tank was under test at 10 inches of mercury for one hour and holding at the completion of the inspection. The UDC sump 3/4 was under test and

FOURTH & SANTA CLARA CHEVRON (Continued) **U001602681**

passing at the completion of the inspection. The following components shall be tested on this date: 2 UDC sumps (5/6, 7/8). Send the secondary [Truncated]

Eval Notes: On-site today to oversee annual monitoring certification and spill bucket testing. Technician Jeff Conger from Pinnacle Fuel Compliance Service performed the testing and has valid ICC, Veeder-Root, and VMI testing certifications. Site consists of: 1x10,000 gal 87 Gasoline 1x10,000 gal 91 Gasoline 1x10,000 gal Diesel Facility recently switched (approximately 4 months ago) from 89 to diesel. Tested annular space sensors (Veeder Root 409) of all gasoline and diesel tanks. Annular space of the used oil tank is currently monitored by a Veeder-Root 407 sensor. All sensors were tested in water and performed as designed. STP sump sensors (Veeder-Root 208) were tested in water and performed as designed. Positive shutdown of turbines was observed. UDCs are monitored by a Veeder-Root 208 sensors. Sensors were tested in water and positive shutdown of turbines was observed. Fail Safe and sensor out was performed shutting down all turbines. Overfill prevention is provided [Truncated]

File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	07S1E18H09f
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Benzene, Ethylbenzene, Gasoline, Naphthalene, Toluene, Xylene
Site History:	The approximately 0.71-acre site is located on the northwest corner of West San Carlos Street and Sonoma Street in an urban mixed commercial and residential area of the City of San Jos. The site was developed with the current commercial buildings, associated paved parking, and landscaped areas sometime between 1960 and 1984. A Phase I Environmental Site Assessment (ESA) dated September 17, 2014 indicated eastern portions of the site were occupied by a gasoline station from at least 1935 to the late 1970s or early 1980s. Based on subsurface investigations conducted at the site, the subsurface generally consists of fine grained materials such as silts and silty sands to up to 8 feet below ground surface (bgs), underlain by fine- to coarse-grained sand with silt, clay, and gravel to about 22 feet bgs, subsequently underlain by clays with some clayey sand to the maximum depth encountered at 26 feet bgs. First encountered groundwater has been observed during drilling activities at the site at depths between 19 and 25 feet bgs. Subsequent to the 2014 Phase I ESA that identified the former gasoline service station, several environmental investigations were performed in 2014 and 2015 to characterize the extent of the apparent petroleum hydrocarbon release

BAILEY PROPERTY (Continued) **S117638607**

from the former underground storage tanks (USTs) and related volatile organic compound (VOC) impacts. In 2016 an additional assessment was performed to define the extent of groundwater contamination, which extends off-site to the east. Low levels of the chlorinated solvents tetrachloroethene (PCE) and trichloroethene (TCE) were reported in soil vapor samples collected on-site at 5 feet bgs. The concentrations of these chemicals are well below the current environmental screening levels (ESLs) for the current land use and the DEH considers their presence a low risk. For more detailed information please refer to the Conceptual Site Model prepared by AEI Consultants, which can be found in the February 3, 2017 Additional Subsurface Investigation Report on GeoTracker

Case Worker:	Not reported
RB Case Number:	14-180
Local Agency:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	07S1E17E01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The San Jose Glass Company manufactured commercial residential window including glass cutting, edge polishing, and fabrication at the Site from 1964 to 1988. San Jose glass operated a 1,000-gallon UST during their opration at the Site. The 1,000-gallon UST was abandoned in-place in approximately 1988. Soil Samples were collected from a boring advanced adjacent to the abandoned UST in 1998. Laboratory analyses of soil samples revealed the presence of total petroleum hydrocarbons as gaoline, benzene, toluene, ethyl benzyne and xylenes. Subsurface investigation conducted in 1999 and 2000 also revealed the presence of TPHg and BTEX in soil and groundwater at the Site. as well as the presence of free product in the vicinity of the abandoned UST. The Santa Clara Valley Water District requested that CAP be prepared to evaluate alternatives for cleanup of soil and groundwater associated with the release from the UST (SCVWD, 2001). This CAP has been prepared in accordance with the technical requirements of the State of California UST regulations. This CAP presents the results of investigations performed to delineate impacts, identifies applicable cleanup goals and evaluates remedial alternatives to achieve these goals. The validity of groundwater sampling data collected during 2009 and 2010 has not been documented, and the water quality data does not appear to be reliable. Groundwater samples should be collected in a manner that reduces or eliminates the possibility of loss of volatile constituents from the sample. The water sample field data sheets provided, indicate that wells sampled during 2009 and 2010 were evacuated to dryness and allowed to recover prior to sampling. GRI reported that high-volume high-vacuum extraction was performed in unspecified wells at unspecified periods between January 1, 2009 and June 19, 2009. The dates of groundwater sample collection in 2009 relative to extraction work have not been reported. This wellhead extraction/wellcleaning work may have resulted in air being trapped in the pore spaces, with lingering effects on water

SAN JOSE GLASS COMPANY (Continued) **S101303846**

chemistry. The reports for 2009 and 2010 well sampling failed to provide documentation to prove that site monitoring wells were properly gauged, purged, and sampled thereby failed to document a valid groundwater sampling procedure resulting in unreliable groundwater quality testing results.

Case Worker:	AC
Local Agency:	SANTA CLARA COUNTY LOP
RB Case Number:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Lead, Diesel, Gasoline, Total Petroleum Hydrocarbons (TPH)
Site History:	Site is planned for development of two 28 story towers with 3 levels of below grade parking. Residual contamination from past site use has been reported at the site. Select areas of the site with elevated levels of lead will be excavated down to 3 feet and disposed of off-site. The remaining soils will then be excavated to approximately 40 feet and disposed of off-site. Please refer to the Soil and Groundwater Management Plan to review details of the reported contamination as well as the mitigation measures proposed to protect human health and the environment.

STATE RADIATOR (Continued) **S103653353**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 12/27/1991
Comments: Completed Site Screening. In January 1989, additional sampling was conducted at the site. Soil boring results detected total oil and grease (TOG) and total petroleum hydrocarbons as diesel (TPHd) in excess of 1000 ppm. Lead was detected at 938 ppm. In May 1989, two groundwater monitoring wells (MW-1 and MW-2) were installed at the property. Lead was detected in groundwater at a concentration of 0.181 ppm. In May 1989, contaminated soil was removed from the previous sampled area. Final soil sample results indicated only one sample contained TOG at 780 ppm and lead at 191 ppm. The sample that contained the TOG and lead was collected beneath the foundation of the building. The excavations were backfilled with clean, imported fill.

FINDS:

Registry ID: 110002889679

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

NATIONAL RAILROAD PASSENGER CO (Continued) **1000819563**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Media Affected: Soil
Potential Contaminants of Concern: Gasoline
Site History: This proposed site closure is based on the July 1992 Report of Findings - Excavation of Contaminated Soils (Report) Environmental Solutions. The Report documented the excavation of contaminated petroleum hydrocarbons around the oil-water separator pit and the associated sump. Based on available information, the excavation removed total petroleum hydrocarbons as diesel, gasoline and benzene/toluene/ethylbenzene/xylenes to non-detectable levels.

Local Agency:	SANTA CLARA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	07S1E07Q01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The site is located in a commercial and industrial area of San Jose on the northern corner of North Montgomery and West Saint John Streets. The property (APN 259-29-001), presently vacant, was occupied by the San Jose Foundry until 2008. A combined warehouse and office building is located along the eastern, southern, and western property boundaries. The central and northern areas of the site are paved. Prior to this phase of work, a network of three groundwater monitoring wells were installed at the site (Figure 3, Table 1). The San Jose Arena is located south and west of the site, and commercial parcels are located north and east of the site. The confluence of the Guadalupe River and the Los Gatos Creek is approximately 750 feet east of the site. Evidence of gasoline leakage into soils at the site was discovered when an underground gasoline storage tank (UST) was excavated in March 1987. The former UST location is illustrated in Figure 3. Analytical results for soil samples collected during a 1987 phase of investigation indicated that soils in the immediate vicinity of the former UST contained up to 2,200 parts per million (ppm) of total petroleum hydrocarbons as gasoline (TPHg). Four exploratory soil borings, SB-1 through SB-4 were drilled in the vicinity of the former UST in 1987 (Figure 3). The results for the analysis of two soil samples from Boring SB-4 located approximately 24 feet east of the tank excavation area ranged from 50 to 110 ppm of TPHg (Table 2). Two groundwater monitoring Wells, LF-1 and LF-2 were installed at the site in 1991. A third groundwater monitoring well, LF-3, was installed in 1992. A soil sample collected at a depth of 14 feet from the boring for well LF-1 contained 3,500 ppm of TPHg. Concentrations

SAN JOSE FOUNDRY (Continued) **S103880999**

of gasoline compounds in groundwater samples collected from Well LF-1 have remained at levels above regulatory concern since the well was installed in 1991. Groundwater testing data collected from Wells LF-2 and LF-3 have not indicated any significant gasoline-impact above laboratory reporting levels for TPHg, BTEX, and MTBE during the six sampling events for these wells. The historic groundwater flow direction has been toward the northeast. Cores recovered during previous drilling operations revealed that the upper 10 to 13 feet of sediments beneath the site are composed generally of silty and clayey sediments. Thin sandy units interbedded with silts and clays have been logged in sediments beneath 13 feet bgs to the total depths explored (28 feet bgs). Soil samples collected from the boring from well LF-1, drilled near the former UST, indicate that the vertical extent of the petroleum hydrocarbon release attenuates with depth. In various phases WELLTEST has advanced a total of 11 direct-push exploratory borings and collected continuous soil-core and grab-groundwater samples from these borings. Groundwater was firstencountered approximately 16 feet bgs in the borings. Based upon the historical groundwater monitoring data and the results of the grab groundwater samples collected, the plume appears to be migrating toward the northeast. The lateral extent of the plume has been defined to the north, east and west, and has been define to moderate concentrations to the south.

Case Worker: GOR
RB Case Number: 14-225
Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 07S1E17G02f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The first soil borings were drilled onsite in may 1993. 5 soil borings (B1 through B5) were drilled near the former dispenser islands, gasoline USTs and the "unknown featur" at the reas of the building. Petroleum hydrocarbons were detected in both soil and groundwter samples from the soil borings. In August 1994, 7 additional soil borings (SB1 through SB7) were advanced onsite. 4 were completed as groundwater monitoring wells (MW1 through MW4). TPHg was reported in groundwater from well MW1 at 50,000 ppb. In July 1999, 9 geoprobe borings (GP1 through GP9) were advanced for the collection of soil and groundwater samples. In December 2000, 4 wells (MW5 through MW8) were installed on and offsite. In October 2004, a two-phase extraction system (TPET) was installed at the site. In the fourth quarter 2008, the TPET system was replaced with a new dual-phase extraction and treatment (DPET) system. Remediation and monitoring are ongoing.

WDS:
Facility ID: San Francisco Bay 438620001
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAG912002 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 9169793862
Facility Contact: Garrett Turner (SAIC)
Agency Name: CHEVRONTEXACO
Agency Address: P.O. Box 6012
Agency City,St,Zip: San Ramon 94583
Agency Contact: Mark Lafferty Project Manager

FORMER TEXACO STATION (Continued) **S106203321**

Agency Telephone:	9258428953
Agency Type:	Private
SIC Code:	5541
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Violation Description:	Failure to maintain secondary containment (e.g. failure of secondary containment testing).
Violation Notes:	The last SB989 (secondary containment testing) was conducted on 11/07/2016. On the Secondary Containment Testing Report it was noted that secondary product line for the 87 tank failed when tested at the Hex nut O ring at UDC 3/4. Technician recommended that this be repair and or replace. Additionally, a violation was also issued for this same problem on the inspection report issued on 11/07/2016 by an inspector from our Department. At this time there are no records to show that this issue has been resolved. Provide to our office in writing an explanation how this issue will be resolved. Repair permits will be required by our Department to make the necessary repairs.

Violation Description:	Failure to maintain secondary containment (e.g. failure of secondary containment testing).
Violation Notes:	The last SB989 (secondary containment testing) was conducted on 11/07/2016. On the Secondary Containment Testing Report it was noted that secondary product line for the 87 tank failed when tested at the Hex nut O ring at UDC 3/4. Technician recommended that this be repair and or replace. Additionally, a violation was also issued for this same problem on the inspection report issued on 11/07/2016 by an inspector from our Department. At this time there are no records to show that this issue has been resolved. Provide to our office in writing an explanation how this issue will be resolved. Repair permits will be required by our Department to make the necessary repairs.

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	All UST system leak detection equipment was tested today by by UST Service Technician David Winkler of Afforda-Test and functioned properly. Mr. Winkler has a current California Tank Tester license (exp. 3/31/2017), and current ICC UST Service Technician certification (exp. 3/3/2016), Veeder-Root Level 4 certification (exp. 2/10/2016), and Vaporless Manufacturing (VMI) LDT-890 line leak detector testing certification (exp. 11/10/2015). The 1 Model 794390-420 tank annular sensor (twin-compartment tank), and 2 Model 794380-208 submersible turbine pump (STP) sump sensors were tested using water to obtain audible and visual fuel alarms on the TLS-350 console. Fail safe turbine shutdown was confirmed for the STP sump sensors. TLS-350 system setup programming is okay. The Model B-2000 mechanical leak detection units in the under dispenser containment (UDC) pans were tested using water and tripped the dispenser shear valves. The 2 Model 99 LD-2000 mechanical line leak [Truncated]

Local Case Number: 07S1E17B03f
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The Site is located at the north corner of the South Fourth Street and East William Street intersection within the City of San Jose . A small convenience store occupies the north portion of the Site and a remediation treatment plant occupies the east portion of the Site. Total petroleum hydrocarbons as gasoline (TPHg) and diesel fuel (TPHd) were initially detected in soil and groundwater beneath the Site during investigation activities in 1989. Since 1989, corrective action work including soil and groundwater investigations and remediation work has been performed under the direction of the local

SPARTAN GAS STATION (Continued) **S104162848**

oversight agency (currently Santa Clara County Department of Environmental Health) and the Site has been assigned Fuel Leak Case No. 14-049. Investigation and remediation work completed to date include drilling of more than 40 soil borings, installation of 24 groundwater monitoring/extraction wells, and construction and operation of a remediation system. Investigative results indicate that the fuel leak originating from the Site contained a mixture of fuel-related compounds, including TPHg and methyl tertiary butyl ether (MTBE). While this mixture of dissolved TPHg and MTBE has advected down-gradient to the north-northeast, a TPHg plume without MTBE has been detected up- and cross-gradient to the southeast and east. The up- and cross-gradient TPHg contamination was attributed to Fuel Leak Case No. 14-049 and the local oversight agency required several stages of investigation work to characterize its lateral extent. At least six borings and nested wells MW-7A and MW-7B were installed southeast and east of the Site in order to characterize up- and cross-gradient contamination, and groundwater extraction well EW-4 was installed in order to control further migration of these cross-gradient contaminants. Possible Up-Gradient Source of Petroleum Hydrocarbon Contamination In 2004, Allterra hypothesized that the up- and cross-gradient hydrocarbon contamination did not originate from the Site, but from an unidentified leaking UST located somewhere east to southeast of the Site. To evaluate the hypothesis, Allterra performed a historical survey of the area immediately southeast of the Site, as documented in Allterras March 31, 2005 Corrective Action Plan. A brief description of the rationale for this hypothesis is as follows: Up- and Cross-Gradient Groundwater Data: The fuel oxygenate MTBE is listed as a chemical of concern for Fuel Leak Case No. 14-049. As expected, MTBE has been detected in borings and wells down-gradient of the Site (north to northeast). However, while the TPHg-MTBE plume has migrated down-gradient, analytical data for up- and crossgradient samples indicate high levels of TPHg and non-detect levels of MTBE. A Gas Station Formerly Operated at 502 South Fourth Street: Interviews with residents in the surrounding neighborhood indicated that the apartment complex located at the east corner of the South Fourth Street and East William Street intersection (502 South Fourth Street) had been the former location of gasoline service station up until about 1960. The operation of a gas station at 502 South Fourth Street was verified after a review of (1) Polk Directories from 1940 and 1942 (Bob and Teds Station), (2) an 1954 aerial photograph, and (3) a 1950 Sanborn Map. Comparing the location of the former gas station at 502 South Fourth Street with the available groundwater data suggests that the TPHg contamination east and southeast of the Site originated from the former gas station. However, before proceeding with possible enforcement action, an additional stage of investigation was appropriate. Up-Gradient Source Investigation Activities The following is a discussion of investigation activities up-gradient of the Site, that included a series of five Geoprobe soil borings advanced through the sidewalk area along East William Street. The purpose of the investigation was to further characterize up- and cross-gradient hydrocarbon contamination that is suspected to be migrating from the former gas station located at 502 South Fourth Street. Rationale for Boring Locations Five Geoprobe borings, designated UB-1 through UB-5, were advanced through the sidewalk along the southeastern side of East William Street. The borings were aligned in a transect that began at the east corner of South Fourth and East William Streets and extended

SPARTAN GAS STATION (Continued) **S104162848**

northeast toward South Fifth Street. Exact boring locations were determined in the field based on three considerations: 1) locations suspected to be directly down-gradient of the former gas station; 2) locations that would fill-in gaps in historical data; and 3) locations where drilling equipment was not constrained by physical barriers. An encroachment permit (Permit No. 3-16984) was obtained from the City of San Jose for installing borings in the public right-of-way. Soil and groundwater samples were submitted, under chain-of-custody protocol, for chemical analysis to McCampbell Analytical, Inc., of Pacheco, California, a state of California certified laboratory (ELAP #1644).

CERS ID:	10158045
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	390599

SJSU-CORPORATION YARD (12A, B) (Continued) **S103473126**

Site Name: SJSU-Corporation Yard (12A, B)
Violation Date: 06-29-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 07/01/2015.

FACILITY DID NOT SUBMIT THEIR TRAINING PLAN ON CERS. THIS VIOLATION WAS CORRECTED DURING THE INSPECTION ON CERS ON 6/24/15; NO FURTHER ACTION IS REQUIRED.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 390599
Site Name: SJSU-Corporation Yard (12A, B)
Violation Date: 06-29-2015
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:

OBSERVED 2-55 GALLON DRUMS OF USED OIL NEAR THE GASOLINE TANK WITHOUT LABELS.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 390599
Site Name: SJSU-Corporation Yard (12A, B)
Violation Date: 06-29-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: ROOM 110: THE MEZZANINE CHEMICAL STORAGE AREA IS NOT INDICATED ON THE HMBP SITE MAP. NEAR EMERGENCY GENERATOR: SITE MAP DOES NOT IDENTIFY THE LOCATION OF THE COMPRESSED GAS CYLINDER STORAGE. BELOW VIOLATION WAS CORRECTED DURING THE INSPECTION ON CERS ON 6/23/15. --NEAR ROOM 111: SITE MAP DOES NOT IDENTIFY THE LOCATION AND CAPACITY OF 2-POLY TANKS WITH A CAPACITY OF 230 GALLONS EACH CONTAINING MOTOR OIL.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 390599
Site Name: SJSU-Corporation Yard (12A, B)
Violation Date: 06-29-2015

Violation Description: Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 07/01/2015.
_____
FACILITY DID NOT SUBMIT THEIR TRAINING PLAN ON CERS. THIS VIOLATION WAS CORRECTED DURING THE INSPECTION ON CERS ON 6/23/15; NO FURTHER ACTION IS REQUIRED.
_____
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 402301
Site Name: SJSU-CENTRAL PLANT (4)
Violation Date: 09-15-2014
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to

SJSU-CORPORATION YARD (12A, B) (Continued) **S103473126**

	product due to overfilling.
Violation Notes:	Returned to compliance on 09/15/2014. Mechanical overfill prevention valve was removed to facilitate testing of spill bucket. Valve was found to be coated with sludge sufficient to impede proper operation of the floats. Valve was cleaned to ensure free movement of the floats and all other mechanical components and reinstalled in the tank fill opening today. No permit or other corrective action is required.

Violation Date:	09-13-2016
Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes:	Returned to compliance on 09/13/2016. The Ronan LS3 annular failed to activate the audible and visual alarm when tested in water. The LS3 sensor was replaced with another LS3 sensor and tested to confirm functionality as well as create an audible and visual alarm at the monitoring panel. This violation was corrected during today’s inspection, no further action is required.

Violation Date: 09-15-2014
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description: Failure to maintain on site an approved monitoring plan.
Violation Notes: UST Monitoring Plan submitted via CERS does not address required visual inspections of the fuel piping between the point where the lines surface outside the building wall and the tank located on the upper catwalk to maintain exemption of the unburied Emergency Generator Tank System (EGTS) piping from UST regulations. Revise plan to indicate that visual pipe monitoring is performed minimum monthly and each time the system (fuel pump) is operated.

Violation Date:	09-15-2014
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes:	Returned to compliance on 09/15/2014. Mechanical overfill prevention valve was removed to facilitate testing of spill bucket. Valve was found to be coated with sludge sufficient to impede proper operation of the floats. Valve was cleaned to ensure free movement of the floats and all other mechanical components and reinstalled in the tank fill opening today. No permit or other corrective action is required.

SJSU-CORPORATION YARD (12A, B) (Continued) **S103473126**

Site Name: SJSU-CENTRAL PLANT (4)
Violation Date: 09-13-2016
Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 09/13/2016. The Ronan LS3 annular failed to activate the audible and visual alarm when tested in water. The LS3 sensor was replaced with another LS3 sensor and tested to confirm functionality as well as create an audible and visual alarm at the monitoring panel. This violation was corrected during today's inspection, no further action is required.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: There was no hazardous waste accumulated at this location during the inspection. Hazardous waste manifests for the past 3-yrs were inspected and documented under the Natural Science building: FA0205225. Area employees receive annual training in conjunction with the site's Emergency Contingency Plan for emergency procedures, chemical handling & hazardous waste management. Below are violations that were corrected during the inspection and do not require further action: 22G114: EMERGENCY AISLE SPACE Observed blocked access to a fire extinguisher along the south wall of the building; boxes were moved and access to the fire extinguisher was regained. Notes: The 2-uniquely shaped black poly drums are used as a maintenance tools and will be marked as such by SJSU Central Plant personnel. These maintenance drums will be stored in a location other than on top of the drum containment while empty.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-01-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This building is undergoing construction on the roof. Only the outside ground floor was available for inspection. There was no hazardous waste accumulated at this location during the inspection. Hazardous waste manifests for the past 3-yrs were inspected and documented under the Natural Science building: FA0205225. Area employees receive annual training in conjunction with the site's Emergency Contingency Plan for emergency procedures, chemical handling & hazardous waste management.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-01-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Conducted an inspection of this area for Hazardous Materials Business Plan. Only the ground floor areas were inspected due to ongoing construction on the roof. Facility has created a uniform emergency procedures posting, which will replace current emergency procedures throughout the campus. All eyewash/safety shower inspection tags were current. Observed emergency spill kit & fire extinguisher near chemical storage areas. Areas employees receive annual training in conjunction with the site's Emergency Contingency Plan (emergency procedures, chemical handling & hazardous waste management).

Site Name:	SJSU-CENTRAL PLANT (4)
Violation Date:	09-15-2014
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes:	Returned to compliance on 09/15/2014. Mechanical overfill prevention valve was removed to facilitate testing of spill bucket. Valve was found to be coated with sludge sufficient to impede proper operation of the floats. Valve was cleaned to ensure free movement of the floats and all other mechanical components and reinstalled in the tank fill opening today. No permit or other corrective action is required.

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 09/13/2016. The Ronan LS3 annular failed to activate the audible and visual alarm when tested in water. The LS3 sensor was replaced with another LS3 sensor and tested to confirm functionality as well as create an audible and visual alarm at the monitoring panel. This violation was corrected during today's inspection, no further action is required.

Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

RB Case Number:	43S0253
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Aquifer used for drinking water supply, Sediments, Soil, Soil Vapor, Surface water
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Trichloroethylene (TCE), Vinyl chloride, Other Petroleum
Site History:	The area of the Site is approximately 13 acres, centered on Old West Julian Street, bounded on the west by the Guadalupe River, on the east by the Guadalupe Parkway (Route 87), on the north by the Union Pacific Railroad, and on the south by West Julian Street. The Site is under development by Sobrato Development Companies (SDC), the current owner. Two buildings and a parking structure have been completed. Construction on a third building was iscontinued prior to completion due to economic reasons. FMC and predecessor companies occupied the Site from the early 1900s through 1986. Manufacturing operations, including production of agricultural machinery, food-processing equipment, and military tracked vehicles, occurred at the Site beginning in the early 1900s. Manufacturing operations at the Site ceased in 1986 and the facility was leased for warehousing and other storage purposes. In June 1998, FMC sold the property to SDC.FMC initiated environmental investigations at the Site in 1986. Soil sampling in former manufacturing and product storage areas revealed the presence of petroleum hydrocarbons, volatile organic compounds (VOCs), and metals. Further investigations included the installation of groundwater monitoring wells that detected VOC constituents in two shallow water-bearing zones beneath the Site. Quarterly groundwater monitoring was conducted from the third quarter of 1989 through the first quarter of 2001. Semi-annual groundwater monitoring and reporting began in April 2001. On June 21, 1989, the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) adopted Order Number 89-107, Site Cleanup Requirements for FMC Corporation-Ground Systems Division, 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 1989). On August 15, 1990, Order Number 90-122 (RWQCB, 1990) was adopted by the RWQCB, amending Order Number 89-107 with respect to the adoption of final Site cleanup

FMC 333 WEST JULIAN (Continued) **S106235203**

levels. On January 21, 1998, Order Number 98-006 was adopted (RWQCB, 1998) for the Site, amending Orders 89-107 and 90-122 with respect to revising soil cleanup standards and adding additional tasks to protect groundwater and address risks associated with exposure to residual soil contamination. On March 21, 2001, Order No. 01-031, Final Site Cleanup Requirements and Rescission of Orders Nos. 89-107, 90-122, and 98-006 for FMC Corporation, for the property located at 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 2001) was adopted by the RWQCB. This annual compliance report is being submitted to the RWQCB as required by Order No. 01-031, Provision D.5. FMC implemented VOC source removal using a Soil Vapor Extraction system in thesouthwest portion of the Site from 1991 through March 1994. In addition, a groundwater extraction and treatment system for the A-level aquifer operated at the Site from March 1992 through January 1997, when it was discontinued due to changed groundwater flow directions, limited mass removal over time, and completion of effective source removal. Authorization to discontinue operation of the groundwater extraction and treatment systemwas given by the RWQCB in their letter to FMC, dated January 2, 1997 (RWQCB, 1997). The RWQCB documented the achievement of meeting the Site soil cleanup goals forchlorinated solvents in prior Order No. 98-006. FMC performed a natural attenuation evaluation in 2000 (HSI GeoTrans, 2000) to consider methods of remediating the residual VOCs present in Site groundwater. The evaluation concluded that VOC degradation could be accelerated through the introduction of an electron donor that would enhance the biodegradation. Cheese whey was selected as the electron donor material, and, in accordance with Task C.2. of Order Number 01-031 and the Work Plan for In-Situ Bioremediation Using Cheese Whey Injection (Work Plan) dated May 30, 2001 (GeoTrans, 2001), cheese whey injection was conducted at ten Site monitoring wells and piezometers in July2001 to enhance biodegradation of VOCs in groundwater. Additional cheese whey was injected at nine monitoring wells and piezometers in May 2003 to increase the in-situ reactive zone and further promote an environment for biodegradation. Groundwater sampling was conducted to evaluate the effectiveness of enhanced biodegradation on a monthly basis from September through December 2001, and on a semi-annual basis from March 2002 to March 2005. Discharger was urged to evaluate the site for case closure under the low threat closure criteria in February 2015.

Completed Date: 05/02/2008
Comments: The remedy (cap) continues to be protective of public health, safety and the aenvironment. the next 5 year review is due March 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Report of Completion of Interim Remedial Measure/Removal Action (IRM/RA). Polynuclear aromatic hydrocarbons (PAHs) contaminated soil (23,000 cubic yards(CY)) resulting from a former PG&E gas manufacturing site was excavated and encapsulated into the nearby parking lots. Gasoline contaminated soil (17,000 CY) was also excavated and stockpiled nearby for vapor extraction treatment. The excavated area was backfilled with clean fill.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/28/1991
Comments: Completion of Phase I Construction Documentation Report. Required a deed restriction to be filed. PNA contaminated soil from a former PG&E site was excavated and encapsulated into a nearby parking lot. Gasoline contaminated soil was also excavated and stockpiled on a nearby lot for vapor extraction treatment. The excavated areas were backfilled with clean soil. The volume of excavation for PNA contaminated soil was approximately 23,000 cubic yards. The volume of excavation for gasoline contaminated soil was approximately 17,000 cubic yards. Groundwater treatment was performed under San Francisco RWQCB's requirements. Current files at the RWQCB list the site closed on 06/20/97.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SAN JOSE SPORTS ARENA (Continued) **S105954447**

Completed Document Type: Land Use Restriction
Completed Date: 05/23/2003
Comments: A Deed Restriction limiting future use of property including the material encapsulation areas which requires no disturbance of the encapsulated areas and the slurry wall. If the areas are disturbed, DTSC is to be notified, a health and safety plan prepared, the material from the encapsulation area will be handled properly, and repairs to the area will be done as quickly as possible.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/30/2012
Comments: DTSC conducted its annual site visit to check the condition of the cap over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. During the inspection, numerous cracks were observed in the Hewlett Packard Pavilion parking lot. The cap consists of two feet of fill and clay and is overlaid with asphalt for use as a parking lot. The observed cracks appeared to only be in the asphalt, and the cap appears to remain protective of human health. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Area Name: PROJECT WIDE

Background Info:	The current address on the building is 525 West Santa Clara Street. The site is bounded by Autumn Street to the east; West Santa Clara Street to the south; Julian Street, Montgomery Street, and St. John Street to the north; and the Southern Pacific Railroad tracks to the west. In May 1987, a site screening identified contaminants in the soil as polycyclic aromatic hydrocarbons (PAH's) from a former Pacific Gas & Electric (PG&E) site with concentrations ranging from non-detect to above 3,000 ppm in localized areas. EPA completed screening site inspection in 1989. The City of San Jose Redevelopment Agency (SJRA) acquired 22 parcels in a former industrial area in downtown San Jose that had a former Pacific Gas & Electric (PG&E) coal gasification plant, various automobile repair and service businesses, underground storage tanks, oil/water clarifers, and drums.

LAUREL GROVE FAMILY APARTMENTS AND THE PARK AVE SENIOR APART (Continued) **S118757327**

Comments: DTSC reviewed several Phase I Environmental Site Assessment reports as well as Limited Soil Sampling and Analysis Reports prepared for the site. Organochlorine pesticides and metals were detected at relatively low concentrations in soil samples collected from the site in June 2016. Lead was detected in 8 soil samples at concentrations greater than DTSC's screening level for residential land use. The lead screening exceedances were localized and limited in extent, with most of the exceedances at 1.5 feet below ground surface (bgs), with one exceedance at 3 feet bgs. The lead-impacted soil was removed when excavation for the construction of an underground parking garage occurred. The lead- and arsenic-impacted soil was disposed at Republic Services Newby Island Landfill in Milpitas, California. DTSC concluded that no further action is required at the Site and that the planned residential development is acceptable.

Eval Date:	01-12-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site with Ana Bui of HMCD to witness the annual monitoring system certification performed by Jarrod Cooke of Tanknology. Verified Mr. Cooke's ICC Certification, ICC-8155550 expires 4/5/19, Veeder Root Certification, B35255 expires 5/9/18, and VMI Certification, expires 2/23/19. 2 tanks: 87 and 91. Annular, STP, and under dispenser containment(UDC) sensors were tested in water and provided audible and visual alarms. STP and UDC sump sensors also provided positive shutdown. Sensor out and power out (fail safe) were tested and provided positive shutdown of all turbines. Overfill prevention is provided by flapper vales in the fill tubes. A 3 gph leak at 10 psi was simulated using the Tanknology LDT-5000 apparatus. The electronic line leak detectors were able to detect the simulated leak and shut down all turbines. Spill buckets for 87 and 91 are direct buried and were tested using Tanknology's vacuum apparatus with no loss. DUSTO monthly reports, DUSTO [Truncated]

Eval Notes: On site with Ana Bui of HMCD to witness the annual monitoring system certification performed by Jarrod Cooke of Tanknology. Verified Mr. Cooke's ICC Certification, ICC-8155550 expires 4/5/19, Veeder Root Certification, B35255 expires 5/9/18, and VMI Certification, expires 2/23/19. 2 tanks: 87 and 91. Annular, STP, and under dispenser containment(UDC) sensors were tested in water and provided audible and visual alarms. STP and UDC sump sensors also provided positive shutdown. Sensor out and power out (fail safe) were tested and provided positive shutdown of all turbines. Overfill prevention is provided by flapper vales in the fill tubes. A 3 gph leak at 10 psi was simulated using the Tanknology LDT-5000 apparatus. The electronic line leak detectors were able to detect the simulated leak and shut down all turbines. Spill buckets for 87 and 91 are direct buried and were tested using Tanknology's vacuum apparatus with no loss. DUSTO monthly reports, DUSTO [Truncated]

Site Name: 7-Eleven INC #17496
Violation Date: 01-14-2016
Citation: 23 CCR 16 2638 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2638
Violation Description: Failure to test leak detection equipment as required every 12 months (VPH, sensor, LLD, ATG, etc.) and/or submit monitoring system certification to the CUPA within 30 days of completion of the test
Violation Notes: Returned to compliance on 01/14/2016.

The 2015 Monitoring System Certification report was not received by our office. Ensure the report is submitted directly to our office or uploaded to CERS within 30 days. A copy of the report was obtained during the inspection. No further corrective actions required.

Eval Type:	Routine done by local agency
Eval Notes:	On site with Ana Bui of HMCD to witness the annual monitoring system certification performed by Jarrod Cooke of Tanknology. Verified Mr. Cooke's ICC Certification, ICC-8155550 expires 4/5/19, Veeder Root Certification, B35255 expires 5/9/18, and VMI Certification, expires 2/23/19. 2 tanks: 87 and 91. Annular, STP, and under dispenser containment(UDC) sensors were tested in water and provided audible and visual alarms. STP and UDC sump sensors also provided positive shutdown. Sensor out and power out (fail safe) were tested and provided positive shutdown of all turbines. Overfill prevention is provided by flapper vales in the fill tubes. A 3 gph leak at 10 psi was simulated using the Tanknology LDT-5000 apparatus. The electronic line leak detectors were able to detect the simulated leak and shut down all turbines. Spill buckets for 87 and 91 are direct buried and were tested using Tanknology's vacuum apparatus with no loss. DUSTO monthly reports, DUSTO [Truncated]

Eval Notes:	On-site to witness the underground storage tank system secondary containment (SB989) testing performed by Mr. Jarrod Cooke (certifications current) of Tanknology. Product piping is flexible pipe and the secondary was tested at 5 psi for one hour with no loss.

7-ELEVEN FOOD STORE 2222-17496 (Continued) **1000282134**

The annular space of the tanks were tested at 10 inHg for one hour. The regular passed one hour with no loss. The Super test could not be completed due to time constraints. The piping sumps and under dispenser containment (UDC) were tested with a Tanknology VPLT accelerated test. The sumps passed a 30 minute test and the UDCs passed a 15 minute test. Contact our office at least two days prior to testing the Premium tank annular space. Submit a copy of the Secondary Containment Test report to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/17/2018

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/17/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/18/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2018
Date Data Arrived at EDR: 08/10/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics

Qualifications

PATHFORWARD

Environmental Engineering & Geology

CRAIG PELLETIER, P.G.

PARTNER/PRINCIPAL GEOLOGIST

Mr. Pelletier is a Partner and Principal Geologist at Path Forward Partners. He has over 20 years of experience as a reputable environmental consultant with a focus in geology, hydrogeology, and contaminated site investigation and remediation projects with emphasis and specialty in brownfield redevelopments. His work includes: project management; emergency response action; remediation of subsurface media including soil, groundwater and soil vapor using innovative and practical technologies; contaminant fate and transport; hydrogeology; due diligence; and, regulatory negotiations.

PROFESSIONAL LICENSES

Professional Geologist (No. 8283) in California

EDUCATION

The Cooking and Hospitality Institute of Chicago, Le Cordon Blue Program, Chicago, Illinois – 1997

Master of Science Program, Geological Sciences, Northern Illinois University (1994-1996; coursework completed)

Bachelor of Science, Geological Sciences, Lehigh University – 1994

WORK HISTORY

1996-1999 – Delta Environmental Consultants (IL)

1999-2000 – GaiaTech, Inc (IL)

2000-2003 – Culinary Profession (IL & CA)

2004-2012 – Clayton Group Services / Bureau Veritas North America, Inc. (CA)

2012-2018 – Iris Environmental / RPS Group, Inc. (CA)

2018-Present – Path Forward Partners, Inc. (CA)

RELEVANT EXPERIENCE

- ✓ Investigated and performed remediation of an 8-parcel Site in Redwood City, California build upon a former slough containing fill material with asbestos wastes and asphaltic tar for a future commercial office complex.
- ✓ Investigated and remediated a 30-acre redevelopment site in Sunnyvale, California built upon a former aerospace facility containing TCE in groundwater and hexavalent chromium in soil under RWQCB oversight.
- ✓ Conducted emergency response, investigation, and abatement attributable to a release of PCE adjacent to a day care facility in Sunnyvale, California.
- ✓ Investigated and remediated a 2,000-foot long section of a former petroleum pipeline in an area that was later developed as residential housing in Mountain House, California.
- ✓ Developed and implemented a remediation plan of a former brick manufacturing facility in Newark, California containing VOCs, metals, and dioxins/furans in soil and groundwater to allow for a residential development under RWQCB oversight.
- ✓ Designed and implemented a remedial investigation and bench scale study to abate soil, soil gas, and regional groundwater subsurface impacts at a former dry-cleaning site in Davis, California.
- ✓ Performed remediation and investigation for former petroleum operable units in Mission Bay, San Francisco.
- ✓ Conducted a PEA at a government research testing facility in Santa Clarita, California under DTSC oversight.
- ✓ Assessed over 500 petroleum service stations throughout Illinois and California and performed hundreds of subsurface investigations to assist in obtaining environmental closure with no further action required.
- ✓ Extensive experience with remediation strategies including bench-scale and pilot studies pertaining to biological and chemical injection programs, soil vapor and groundwater extraction/treatment, excavation, phytoremediation, air sparging, NAPL recovery.
- ✓ Develops short-term and long-term site management plans including dust and asbestos air monitoring programs.
- ✓ Manages due diligence environmental site assessments at numerous properties including evaluation of properties for potential liability due to hazardous waste contamination; collection of soil, groundwater and soil vapor samples; and, preparation of conceptual cost estimates.
- ✓ Expert in the abatement of USTs, ASTs, sumps, clarifiers, piping, and other associated features.
- ✓ Conducts vapor intrusion evaluations, indoor air, and other human health risk assessments.

PATHFORWARD

Environmental Engineering & Geology

LIZ SMITH

SENIOR SCIENTIST

Ms. Smith has more than 15 years of technical and collaborative experience in multi-disciplinary consulting practices in the fields of environmental due diligence and health & safety. Her work includes Phase I ESAs and senior technical review of environmental reports.

EDUCATION

Bachelor of Arts, Political Science, University of California at Berkeley - 1995

WORK HISTORY

2001-2006 – Clayton Group Services (CA)

2006-2015 – Bureau Veritas North America (CA)

2015-2017 - AEI Consultants (CA)

2017-2018 – EHS Consultant and Writer/Multiple Firms

RELEVANT EXPERIENCE

Led, managed, performed, and reviewed thousands of Phase I Environmental Site Assessments (ESAs) of industrial, commercial and residential properties and major redevelopments for developers, lenders, REITs, attorneys, and industrial clients. Experienced with requirements of due diligence performed for Freddie Mac, Fannie Mae and SBA lending, and state redevelopment agencies. Consulted with lenders, prospective purchasers and property owners regarding due diligence findings.

- Writes detailed reports for due diligence, remediation, compliance, operations and maintenance (O&M), risk assessment, risk control, loss control, pollution insurance, litigation support, and conceptual cost estimating.
- Performs peer reviews and portfolio reviews, and develops executive level summary reviews for complex projects.
- Provides QA/QC review for compliance O&M, environmental insurance risk assessments, and a variety of investigation and remediation methods and programs.
- Writes and revises environmental and health & safety programs, white papers, presentations, manuals and procedures in collaboration with subject matter experts and stakeholders to establish organizational consistency, utility, functionality and compliance.
