Corona, CA 92877

**SUBJECT: GILMAN SPRINGS MINE SUPPLEMENTAL TRAFFIC ASSESSMENT**

Dear Mr. Todd Pendergrass:

This letter serves as a supplement to the Gilman Springs Mine Traffic Impact Analysis (April 5, 2018) (referred to as “2018 Traffic Study”). Specifically, this focused traffic assessment evaluates the study area intersections and freeway facilities based on a new Opening Year of 2019. The 2018 Traffic Study had assumed and evaluated an Opening Year of 2018. The limits of the mining have changed although there are no changes to the proposed mining operations and resulting daily and annual tonnage (see Exhibit 1). As such, the same Project trip generation and trip distribution patterns utilized in the 2018 Traffic Study have also been utilized for the purposes of this supplemental traffic assessment. The analysis results have been compared back to the 2018 Traffic Study to determine if there were new impacts or mitigation measures.

## SUMMARY OF FINDINGS

Based on a comparison of the 2018 Traffic Study and the supplemental traffic assessment, all findings and recommendations for EAP (2019) and EAPC (2019) traffic conditions are consistent for the peak hour intersection operations, freeway off-ramp queues, basic freeway segment, and freeway ramp junction analyses with the exception of the following freeway ramp junction under EAP (2019) traffic conditions:

- SR-60 Freeway Eastbound, On-Ramp at Gilman Springs Road (#4) – LOS E PM peak hour only

However, at this time, Caltrans has no fee programs or other improvement programs in place to address the deficiencies caused by development projects in the County of Riverside (or other neighboring jurisdictions) on SHS roadway segments. As such, no improvements have been recommended to address the EAP deficiencies on the SHS, because there is no feasible mitigation available.

## TRAFFIC FORECASTS

### EXISTING PLUS AMBIENT GROWTH PLUS PROJECT (EAP) CONDITIONS

This scenario includes Existing (2018) traffic volumes plus ambient growth and Project traffic. Ambient growth assumed in the 2018 traffic study was 2.00%, as such, an ambient growth of 4.04% has been assumed for this supplemental traffic assessment. The ADT volumes and AM and PM peak hour

Mr. Todd Pendergrass  
Chandler Aggregates, Inc.  
March 29, 2019  
Page 2 of 6

intersection turning movement volumes are shown on Exhibit 2. Freeway mainline volumes for EAP (2019) traffic conditions are shown on Exhibit 3.

#### **EXISTING PLUS AMBIENT GROWTH PLUS PROJECT PLUS CUMULATIVE PROJECTS (EAPC) CONDITIONS**

This scenario includes cumulative development project traffic added to the EAP (2019) traffic forecasts discussed subsequently. The weekday ADT and AM and PM peak hour traffic volumes which can be expected for EAPC (2019) traffic conditions are shown on Exhibit 4. Freeway mainline volumes for EAP (2019) traffic conditions are shown on Exhibit 5.

### **EAP (2019) OPERATIONS ANALYSIS**

#### **INTERSECTION OPERATIONS ANALYSIS**

EAP (2019) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies and input parameters presented in Section 2 *Methodologies* of the 2018 Traffic Study. The intersection analysis results are summarized in Table 1, which indicates that there are no additional study area intersections anticipated to operate at a deficient LOS, in addition to those currently operating at a deficient level of service (LOS) during Existing conditions in the 2018 Traffic Study. The current findings are consistent with the findings from the 2018 Traffic Study for EAP traffic conditions. The intersection operations analysis worksheets for EAP (2019) traffic conditions are included in Attachment A.

#### **TRAFFIC SIGNAL WARRANT ANALYSIS**

Traffic Signal warrants for EAP (2019) traffic conditions are based on existing peak hour intersection turning volumes and the addition of ambient growth and Project traffic. For EAP (2019) traffic conditions, there are no study area intersections anticipated to meet peak hour volume-based traffic signal warrants (see Attachment B).

#### **OFF-RAMP QUEUING ANALYSIS**

Queuing analysis findings for EAP (2019) traffic conditions are presented in Table 2. As shown on Table 2, there are no movements that are anticipated to experience queuing issues during the weekday AM or PM peak hours based on the EAP 95<sup>th</sup> percentile traffic flows. This finding is consistent with the 2018 Traffic Study for EAP traffic conditions. Worksheets for EAP (2019) conditions off-ramp queuing analysis are provided in Attachment C.

#### **BASIC FREEWAY SEGMENT ANALYSIS**

As shown on Table 3, there are no additional freeway segments anticipated to operate at an unacceptable LOS under EAP traffic conditions during the peak hours, in addition to those previously

Mr. Todd Pendergrass  
Chandler Aggregates, Inc.  
March 29, 2019  
Page 3 of 6

identified under Existing traffic conditions in the 2018 Traffic Study. This finding is consistent with the 2018 Traffic Study for EAP traffic conditions. EAP (2019) basic freeway segment analysis worksheets are provided in Attachment D.

### **FREEWAY RAMP JUNCTION ANALYSIS**

Ramp merge and diverge operations were also evaluated for EAP conditions and the results of this analysis are presented in Table 4. The following additional ramp junction is anticipated to operate at an unacceptable LOS during the peak hours from those previously identified under Existing and EAP traffic conditions in the 2018 Traffic Study:

- SR-60 Freeway Eastbound, On-Ramp at Gilman Springs Road (#4) – LOS E PM peak hour only

EAP (2019) freeway ramp junction operations analysis worksheets are provided in Attachment E.

### **DEFICIENCIES AND RECOMMENDED IMPROVEMENTS**

#### **INTERSECTIONS**

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address EAP (2019) traffic deficiencies is presented in Table 5.

#### ***Recommended Improvement – Bridge St. & Gilman Springs Rd. (#4)***

- *Install a traffic signal (consistent with Existing and E+P conditions)*

#### ***Recommended Improvement – Driveway & Gilman Springs Rd. (#5)***

- *Install a traffic signal (consistent with Existing and E+P conditions)*

#### ***Recommended Improvement – SR-79 Northbound Ramps & Gilman Springs Rd. (#7)***

- *Install a traffic signal (consistent with Existing and E+P conditions)*

Worksheets for EAP (2019) conditions, with improvements, HCM calculations are provided in Attachment F.

#### **OFF-RAMP QUEUES**

As shown previously on Table 2, there are no peak hour queuing issues anticipated for EAP (2019) traffic conditions. As such, no improvements are recommended.

Mr. Todd Pendergrass  
Chandler Aggregates, Inc.  
March 29, 2019  
Page 4 of 6

## **FREEWAY FACILITIES**

At this time, Caltrans has no fee programs or other improvement programs in place to address the deficiencies caused by development projects in the County of Riverside (or other neighboring jurisdictions) on SHS roadway segments. As such, no improvements have been recommended to address the EAP (2019) deficiencies on the SHS, because there is no feasible mitigation available.

## **EAPC (2019) OPERATIONS ANALYSIS**

### **INTERSECTION OPERATIONS ANALYSIS**

As shown on Table 6, there are no additional study area intersections anticipated to operate at a deficient LOS, in addition to those previously identified for EAPC conditions in the 2018 Traffic Study. The intersection operations analysis worksheets for EAPC (2019) traffic conditions are included in Attachment G.

### **TRAFFIC SIGNAL WARRANT ANALYSIS**

The traffic signal warrant analysis for EAPC (2019) traffic conditions is based on existing peak hour intersection turning volumes, ambient growth, and the addition of both Project and cumulative development traffic. For EAPC (2019) traffic conditions, there are no study area intersections anticipated to meet peak hour volume-based traffic signal warrants (see Attachment H).

### **OFF-RAMP QUEUING ANALYSIS**

As shown on Table 7, there are no additional queuing issues anticipated for EAPC (2019) traffic conditions consistent with the 2018 Traffic Study. Worksheets for EAPC (2019) conditions off-ramp queuing analysis are provided in Attachment I.

### **BASIC FREEWAY SEGMENT ANALYSIS**

As shown on Table 8, there are no additional freeway mainline segments anticipated to operate at an unacceptable LOS from those previously identified for EAPC traffic conditions in the 2018 Traffic Study. EAPC (2019) basic freeway segment analysis worksheets are provided in Attachment J.

### **FREEWAY RAMP JUNCTION ANALYSIS**

Freeway ramp junction merge and diverge operations were also evaluated for EAPC (2019) traffic conditions and the results are presented in Table 9. There are no additional deficiencies anticipated in addition to those previously identified for EAPC traffic conditions in the 2018 Traffic Study. EAPC (2019) freeway ramp junction operations analysis worksheets are provided in Attachment K.

Mr. Todd Pendergrass  
Chandler Aggregates, Inc.  
March 29, 2019  
Page 5 of 6

## **DEFICIENCIES AND RECOMMENDED IMPROVEMENTS**

### **INTERSECTIONS**

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address EAPC traffic deficiencies is presented in Table 10.

#### ***Recommended Improvement – Gilman Springs Rd. & Alessandro Bl. (#2)***

- Install a traffic signal

#### ***Recommended Improvement – Jack Rabbit Trail & Gilman Springs Rd. (#3)***

- Install a traffic signal

#### ***Recommended Improvement – Bridge St. & Gilman Springs Rd. (#4)***

- Install a traffic signal (consistent with Existing, E+P, and EAP (2019) conditions)

#### ***Recommended Improvement – Driveway & Gilman Springs Rd. (#5)***

- Install a traffic signal (consistent with Existing, E+P, and EAP (2019) conditions)

#### ***Recommended Improvement – SR-79 Northbound Ramps & Gilman Springs Rd. (#7)***

- Install a traffic signal (consistent with Existing, E+P, and EAP (2019) conditions)

Worksheets for EAPC (2019) conditions, with improvements, HCM calculations are provided in Attachment L.

### **OFF-RAMP QUEUES**

As shown previously on Table 7, there are no peak hour queuing issues anticipated for EAPC (2019) traffic conditions. As such, no improvements are recommended.

### **FREEWAY FACILITIES**

At this time, Caltrans has no fee programs or other improvement programs in place to address the deficiencies caused by development projects in the County of Riverside (or other neighboring jurisdictions) on SHS roadway segments. As such, no improvements have been recommended to address the EAPC (2019) deficiencies on the SHS, because there is no feasible mitigation available.

## RECOMMENDED IMPROVEMENTS

### IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

A summary of off-site improvements needed to address intersection operational deficiencies for each analysis scenario is included in Table 11. These recommended improvements are consistent with or less than the geometrics assumed in the County of Riverside General Plan Circulation Element. Improvements found to be included in the Western Riverside Council of Governments (WRCOG) TUMF and County of Riverside's (lead agency) DIF program have been identified as such. For improvements that do not appear to be in the TUMF or DIF, a fair share financial contribution based on the Project's fair share impact may be imposed in order to mitigate the Project's share of impacts in lieu of construction. These fees (both to the County of Riverside, TUMF, and as determined, to surrounding agencies as fair-share contributions) are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected vehicle trip increases.

### PROJECT FAIR SHARE

Project mitigation may include a combination of fee payments to established programs (e.g., TUMF and/or DIF), construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the County of Riverside's discretion). When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Improvements included in a defined program and constructed by development may be eligible for a fee credit or reimbursement through the program, where appropriate. Detailed fair share calculations, for each analysis peak hour, has been provided on Table 12 for each of the cumulatively impacted intersections.

**BOLD** = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

<sup>1</sup> Number of lanes are in the specified direction and is based on existing conditions.

<sup>2</sup> Directional volumes based on current PeMS data.

<sup>3</sup> Density is measured by passenger cars per mile per lane (pc/mi/in).

<sup>4</sup> LOS = Level of Service

<sup>5</sup> HCS7 does not report density for freeway facilities operating at LOS F.

Table 4

			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
SR-79 SB Ramps / Gilman Springs Road	SBL/T	1,890	98	213	Yes	Yes	103	218	Yes	Yes
	SBR	235	7	4	Yes	Yes	8	4	Yes	Yes
SR-79 NB Ramps / Gilman Springs Road	NBL/T	1,600	625	450	Yes	Yes	670	460	Yes	Yes
	NBR	435	0	25	Yes	Yes	0	3	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

Table 8

## Basic Freeway Segment Analysis for EAPC (2019) Conditions

Freeway	Direction	Mainline Segment	Lanes <sup>1</sup>	Existing				EAPC (2018) - From TIA				EAPC (2019)			
				Density <sup>3</sup>		LOS <sup>4</sup>		Density <sup>3</sup>		LOS <sup>4</sup>		Density <sup>3</sup>		LOS <sup>4</sup>	
				AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
SR-60 Freeway	Westbound	West of Gilman Springs Road	2	36.3	38.4	E	E	38.7	41.3	E	E	40.2	43.1	E	E

		South of Gilman Springs Road	2	9.7	9.6	A	A	10.0	9.8	A	A	10.2	10.0	A	A

**BOLD** = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

<sup>1</sup> Number of lanes are in the specified direction and is based on existing conditions.

<sup>2</sup> Directional volumes based on current PeMS data.

<sup>3</sup> Density is measured by passenger cars per mile per lane (pc/mi/ln).

<sup>4</sup> LOS = Level of Service

<sup>5</sup> HCS7 does not report density for freeway facilities operating at LOS F.

Table 9

			<u>TS</u>	0	1	1	0	0	0	1	2	0	0	2	0	19.1	11.6	B	B

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; TS = Traffic Signal; TS = Improvements

**Table 11**

**Summary of Intersection Improvements**

#	Intersection Location	Jurisdiction	Recommended Improvements <sup>1</sup>				Improvements in TUMF or DIF <sup>2</sup> ?
			Existing (2018)	E+P	EAP (2018)	EAPC (2018)	
2	Gilman Springs Rd. / Alessandro Bl.	Riverside County	None	None	None	Traffic Signal	Yes (TUMF)
3	Jack Rabbit Trail / Gilman Springs Rd.	Riverside County	None	None	None	Traffic Signal	No
4	Bridge St. / Gilman Springs Rd.	Riverside County	Traffic Signal	Same	Same	Same	Yes (TUMF)
5	Driveway / Gilman Springs Rd.	Riverside County	Traffic Signal	Same	Same	Same	No
7	SR-79 NB Ramps / Gilman Springs Rd.	Riverside County, Caltrans	Traffic Signal <sup>3</sup>	Same	Same	Same	Yes (TUMF)

<sup>1</sup> All recommended improvements are consistent with the general plan designations of the respective jurisdictions in which they are located.

<sup>2</sup> Improvements are identified as being included in the Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) program and/or County of Riverside DIF.

<sup>3</sup> Recommended improvements are consistent with the proposed Phase 5 SR-79 Freeway and Gilman Springs Road Interchange Improvements. These improvements are anticipated to be completed in April 2018.

**Table 12**

**Project Fair Share Calculations**

#	Intersection	Existing	Project Only	EAPC (2019)	Total New Traffic	Project % of New Traffic <sup>1</sup>
2	Gilman Springs Rd. / Alessandro Bl.	AM: 1,544 PM: 1,742	86 80	1,787 1,986	243 244	<b>35.4%</b> 32.8%

# HCS7 Freeway Merge Report

## Project Information

Analyst	CS	Date	3/26/2019
Agency	Urban Crossroads, Inc.	Analysis Year	EAPC (2019)
Jurisdiction	Caltrans	Time Period Analyzed	PM Peak Hour
Project Description	Gilman Springs Mine TIA (JN 11379)		

## Geometric Data

	Freeway	Ramp
Number of Lanes (N), ln	2	1
Free-Flow Speed (FFS), mi/h	70.0	45.0
Segment Length (L) / Acceleration Length (LA),ft	1500	400
Terrain Type	Level	Level
Percent Grade, %	-	-
Segment Type / Ramp Side	Freeway	Right

## Adjustment Factors

Driver Population	All Familiar	All Familiar
Weather Type	Non-Severe Weather	Non-Severe Weather
Incident Type	No Incident	-
Final Speed Adjustment Factor (SAF)	1.000	1.000
Final Capacity Adjustment Factor (CAF)	1.000	1.000
Demand Adjustment Factor (DAF)	1.000	1.000

## Demand and Capacity

Demand Volume (Vi)	1498	573
Peak Hour Factor (PHF)	0.92	0.92
Total Trucks, %	1.00	2.00
Single-Unit Trucks (SUT), %	-	-
Tractor-Trailers (TT), %	-	-
Heavy Vehicle Adjustment Factor (fHV)	0.990	0.980
Flow Rate (vi),pc/h	1645	636
Capacity (c), pc/h	4800	2100
Volume-to-Capacity Ratio (v/c)	0.48	0.30

## Speed and Density

Upstream Equilibrium Distance (LEQ), ft	-	Density in Ramp Influence Area (DR), pc/mi/ln	20.5
Distance to Upstream Ramp (LUP), ft	-	Speed Index (M)	0.323
Downstream Equilibrium Distance (LEQ), ft	-	Flow Outer Lanes (vOA), pc/mi/ln	-
Distance to Downstream Ramp (LDOWN), ft	-	On-Ramp Influence Area Speed (SR), mi/h	61.0
Prop. Freeway Vehicles in Lane 1 and 2 (PM)	1.000	Outer Lanes Freeway Speed (SO), mi/h	-
Flow in Lanes 1 and 2 (v12), pc/h	1645	Ramp Junction Speed (S), mi/h	61.0
Flow Entering Ramp-Infl. Area (vR12), pc/h	2281	Average Density (D), pc/mi/ln	18.7
Level of Service (LOS)	C
