1.0 Introduction

The purpose of this study is to analyze potential traffic impacts associated with the proposed Melon Property Multi-Family project of 152 apartments. Please note, the number of proposed apartments was reduced after completion of this traffic study based on 168 apartments. Therefore, this traffic study based on 168 apartments is a conservative analysis for the refined project of 152 apartments. The project is located within the County of Imperial adjacent to the City of Holtville. As part of the project, the applicant is proposing to annex the project site into the City of Holtville. The site is approximately 8.19 acres and is situated on the northeast corner of Melon Road and Alamo Road bordering the City of Holtville northwestern city limits. The project location is shown in **Figure 1**. A site plan is included in **Figure 2**.

This report describes the existing roadway network in the vicinity of the project site. It includes a review of the existing and proposed traffic activities for weekday peak AM and PM periods and daily traffic conditions. The format of this study includes the following chapters:

- 1.0 Introduction
- 2.0 Study Methodology
- 3.0 Existing Conditions
- 4.0 Project Description
- 5.0 Cumulative Projects
- 6.0 Near-Term 2019 Conditions
- 7.0 Near-Term Year 2019 + Project Conditions
- 8.0 Near-Term Year 2019 + Project + Cumulative Conditions
- 9.0 Horizon Year 2030 Conditions
- 10.0 Horizon Year 2030 + Project Conditions
- 11.0 Conclusions and Recommendations
- 12.0 References

Figure 1: Project Location

2.0 Traffic Analysis Methodology and Significance Criteria

The parameters by which this traffic study was prepared included the determination of what intersections and roadways are to be analyzed, the scenarios to be analyzed and the methods required for analysis. The criteria for each of these parameters are included herein.

2.1 Study Area Criteria

The project study area was determined based on coordination with City of Holtville and County of Imperial staff. The following intersections were analyzed as part of this study:

- 1) Melon Rd/Thiesen Rd (11th St)
- 2) Melon Rd/Underwood Rd (10th St)
- 3) Olive Rd/Underwood Rd (10th St)
- 4) State Route 115/Alamo Rd
- 5) Melon Rd/Alamo Rd (9th St)
- 6) Olive Rd/Alamo Rd (9th St)
- 7) Melon Rd/8th St
- 8) State Route 115/Zenos Rd
- 9) Melon Rd/Zenos Rd (6th St)

And, the roadway segment of Alamo Road (9th St) west of Olive Road.

2.2 Scenario Criteria

The number of scenarios to be analyzed is based on the methodology outlined in the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007. Excerpts from the *Traffic Study and Report Policy* showing the scenario criteria are included in **Appendix A**. Based on the aforementioned methodology source the following scenarios were analyzed:

- 1) Existing 2017 Conditions
- 2) Near-Term Year 2019 Conditions
- 3) Near-Term Year 2019 + Project Conditions
- 4) Near-Term Year 2019 + Project + Cumulative Conditions
- 5) Horizon Year 2030 Conditions
- 6) Horizon Year 2030 + Project Conditions

2.3 Traffic Analysis Criteria

In the traffic analyses prepared for this study, the *2010 Highway Capacity Manual* (HCM) operations analysis using Level of Service (LOS) evaluation criteria were employed. The operating conditions of the study intersections are measured using the HCM LOS designations ranging from A through F. LOS A represents the best operating condition and LOS F denotes the worst operating condition. The individual LOS criteria for each roadway component are described below.

2.3.1 Intersections

The study intersections were analyzed based on the **operational analysis** outlined in the 2010 HCM. This process defines LOS in terms of **average control delay** per vehicle, which is measured in seconds. LOS at the intersections were calculated using the computer software program Synchro 8.0 (Trafficware Corporation). The HCM LOS for the range of delay by seconds for un-signalized intersections is described in **Table 1**.

TABLE 1: INTERSECTION LEVEL OF SERVICE DEFINITIONS (HCM 2010)

Level of Service	Un-Signalized (TWSC and AWSC) Control Delay (seconds/vehicle)
A	0-10
B	> 10-15
C	> 15-25
D	> 25-35
E	> 35-50
F	> 50

TWSC: Two Way Stop Control. AWSC: All Way Stop Control. Source: Highway Capacity Manual 2010 (exhibit 19-1 for two way stop control, and exhibit 20-2 for all way stop control).

As noted on page 5 of Caltrans' *Guide for the Preparation of Traffic Impact Studies*, December 2002, the accepted methodology by Caltrans for un-signalized intersections is the most current edition of the HCM (excerpt included in **Appendix B**). Therefore, the two study intersections on State Route 115 were analyzed using the most current edition of the HCM. Additionally, the Caltrans truck percentage usage on SR-115 was reviewed and applied to the HCM calculations (Caltrans data included in **Appendix C**). Caltrans documented a 10.1% truck usage; however, to be conservative, a 15% truck usage was applied to northbound and southbound through movements on SR-115. For the remaining movements and remaining study intersections, a 5% truck usage was applied. The Synchro HCM default is set at 2% for truck usage.

2.3.2 Roadway Segments

The roadway segment was analyzed based on the functional classification of the roadway using the *City of Holtville General Plan* street classification capacity lookup table (copy included in **Appendix D**). The roadway segment capacity and LOS standards used to analyze roadway segments are summarized in **Table 2**.

TABLE 2: ROADWAY SEGMENT DAILY CAPACITY AND LOS (CITY OF HOLTVILLE)

Circulation Element Road Classification	NUMBER OF LANES	LOS A	LOS B	LOS C	LOS D	LOS E
Freeway	4	<30,000	<40,000	<50,000	<60,000	<70,000
Principal Arterial	4	<14,800	<24,700	<29,600	<33,400	<37,000
Secondary Arterial	4	<13,700	<22,800	<27,400	<30,800	<34,200
Two Lane Arterial (Primary or Secondary)	2	<2,000	<4,500	<7,700	<11,800	<17,500
Collector	2	<1,900	<4,100	<7,100	<10,900	<16,200
Residential Street	2	*	*	<1,500	*	*
Residential or Cul-de-Sac Loop Street	2	*	*	<200	*	*

Source: *City of Holtville General Plan* August, 2003. Notes: *Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.

2.4 Significance Criteria

The significance criteria for determining traffic impacts are based on the City of Holtville and County of Imperial standards. For Caltrans facilities, the *Caltrans' Guide for the Preparation of Traffic Impact Studies*, December 2002 does not provide specific traffic impact thresholds; therefore, the County and City significance criteria are applied to Caltrans' facilities.

The City of Holtville General Plan states "The performance of streets and roadways is typically measured by comparing the level of service to document standards for the type of street based on classification, number of lanes, and width. Imperial County has developed standards for roadway capacity that are applicable to conditions in the City of Holtville." An excerpt from the City of Holtville General Plan is included in Appendix D.

The Imperial County Planning & Development Services Department level of service standard are outlined on page 55 of the *Circulation and Scenic Highways Element* dated January 29, 2008, which states "The County's goal for an acceptable traffic service standard on an Average Daily Traffic (ADT) basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections." An excerpt from the *Circulation and Scenic Highways Element* is included in **Appendix E**. The current practice of determining direct or cumulative impacts is defined by the significance criteria outlined in **Table 3**, which was obtained from several EIRs for projects located in Imperial County. Copies of traffic significance criteria from other EIRs are included in **Appendix F**.

TABLE 3: SIGNIFICANCE CRITERIA

Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
Intersections			
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	NA	Direct
LOS D	LOS D and adds 2.0 seconds or more of delay	LOS D or worse	Cumulative
LOS D	LOS E or F	NA	Direct
LOS E	LOS F	NA	Direct
LOS F	LOS F and delay increases by ≥ 10.0 seconds	LOS F	Direct
Any LOS	Project does not degrade LOS and adds < 2.0 seconds of delay	Any LOS	None
Any LOS	Project does not degrade LOS but adds 2.0 to 9.9 seconds of delay	LOS E or worse	Cumulative
Segments			
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS C or better and v/c > 0.02	LOS D or worse	Cumulative
LOS C or better	LOS D or worse	NA	Direct (1)
LOS D	LOS D and v/c > 0.02	LOS D or worse	Cumulative
LOS D	LOS E or F	NA	Direct
LOS E	LOS F	NA	Direct
LOS F	LOS F and v/c increases by >0.09	LOS F	Direct
Any LOS	LOS E or worse & v/c 0.02 to 0.09	LOS E or worse	Cumulative
Any LOS	LOS E or worse and v/c < 0.02	Any LOS	None

Notes: LOS: Level of Service. (1) Exception: post-project segment operation is LOS D and intersections along segment are LOS D or better resulting in no significant impact. NA: Not Applicable.

3.0 Existing Conditions

This section describes the study area street system, peak hour intersection volumes, daily roadway volumes, and existing LOS.

3.1 Existing Street System

The existing roadway system and classifications are described below. The classifications are based on the *City of Holtville General Plan*, August, 2003 – excerpts included in Appendix D.

Alamo Road (9th Street) between Melon Road and Olive Road has a classification of Arterial in the *City of Holtville General Plan*. This roadway is currently constructed as a 2 lane un-divided roadway within approximately 32 feet of pavement with parking generally allowed on the south side of the roadway. A 25 Miles per Hour sign is posted on the north side just west of Olive Road. A capacity of 17,500 ADT at LOS E was applied to this segment based on existing conditions of 2 travel lanes (per *General Plan Roadway Performance Standards*) and to be consistent with roadway capacities listed in the *City of Holtville Service Area Plan/Municipal Service Review*, August 2014 (excerpts included in **Appendix G**). The *Service Area Plan/Municipal Service Review* has a limited number of segments listed with the closest one being Thiesen Rd (11th St) West of Melon Road with a capacity of 17,500 ADT at LOS E for a two lane Arterial roadway. The study area of Alamo Road also has two lanes; thereby, supporting use of 17,500 ADT at LOS E capacity. The existing roadway conditions are shown in **Figure 3**.

3.2 Existing Traffic Volumes and LOS Analyses

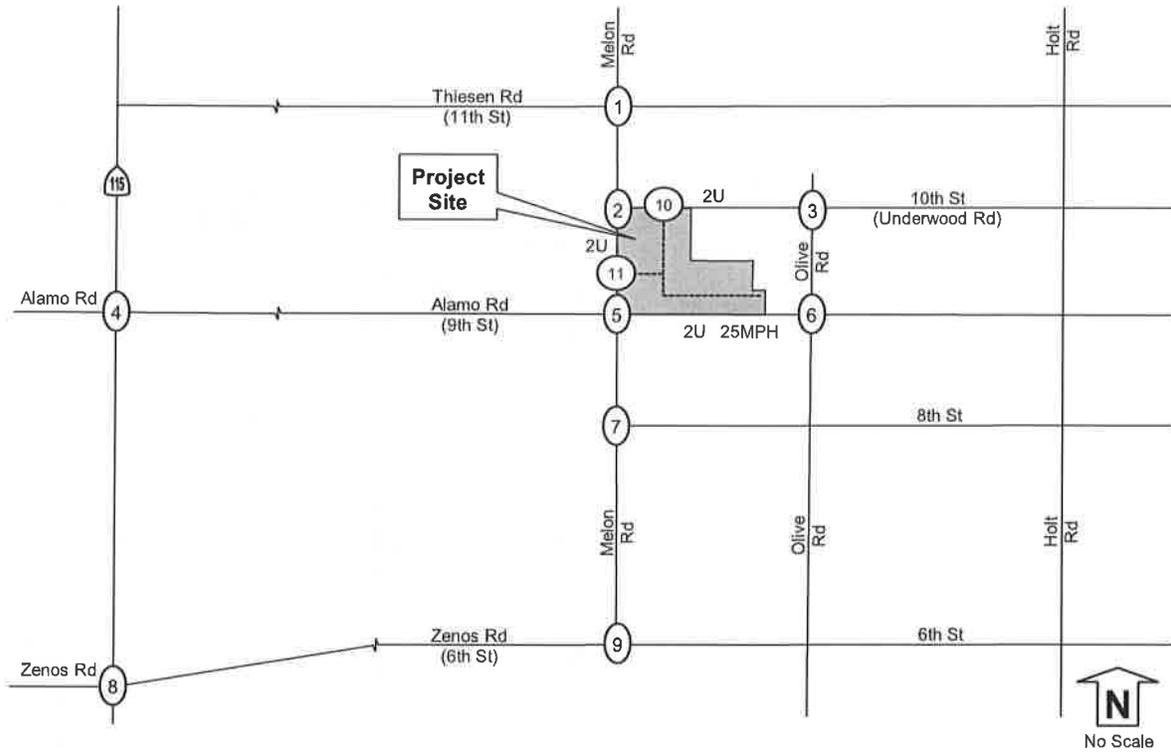

Existing AM and PM peak hour intersection volumes (with count dates) were collected for this study:

- 1) Melon Rd/Thiesen Rd [11th St] (Thursday 2/2/2017)
- 2) Melon Rd/Underwood Rd [10th St] (Thursday 2/2/2017)
- 3) Olive Rd/Underwood Rd [10th St] (Thursday 2/2/2017)
- 4) State Route 115/Alamo Rd (Thursday 2/2/2017)
- 5) Melon Rd/Alamo Rd [9th St] (Thursday 2/2/2017)
- 6) Olive Rd/Alamo Rd [9th St] (Thursday 2/2/2017)
- 7) Melon Rd/8th St (Thursday 2/2/2017)
- 8) State Route 115/Zenos Rd (Thursday 2/2/2017)
- 9) Melon Rd/Zenos Rd [6th St] (Thursday 2/2/2017)

And, the roadway segment of Alamo Road from Melon Road to Olive Road (Thursday 2/2/2017).

Existing AM, PM, and daily volumes are shown on **Figure 4**. Count data are included in **Appendix H**. The intersection and segment LOS are shown in **Tables 4 and 5** respectively. Intersections LOS calculations are included in **Appendix I**.

3) LOS: Level of Service. EB: Eastbound, WB Westbound, etc. All: combined LOS for all approaches.

TABLE 5: EXISTING SEGMENT LOS

Segment	Classification (as built)	Existing				LOS
		Daily Volume	# of lanes	LOS E Capacity	V/C	
Alamo Road (9th Street)						
Melon Rd to Olive Rd	Arterial (2U)	856	2	17,500	0.05	A

Notes: Classification based on City of Holtville General Plan. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio.

Under existing year 2017 conditions, the study intersections and segment were calculated to operate at LOS B or better.

4.0 Project Description

The multi-family project of 152 apartments is proposed on the northeast corner of Melon Road and Alamo Road adjacent to the City of Holtville. The apartment mix is proposed with 32 senior apartments and 120 non-age restricted apartments. Please note, the number of proposed apartments was reduced after completion of this traffic study based on 168 non-age restricted apartments. Therefore, this traffic study based on 168 apartments is a conservative analysis for the refined project of 152 apartments. The project can be further refined without redoing this traffic study provided the unit count does not exceed 168 apartments.

Project access is proposed from two driveways, a main driveway on Melon Road and a secondary driveway on Underwood Rd (10th St). The site is approximately 8.19 acres. The project site is currently vacant land. The project is anticipated to be completed by year 2019.

4.1 Project Trip Generation

The 9th Edition of the Institute of Transportation Engineers (ITE) Trip Generation, 2012 and the San Diego Association of Governments (SANDAG), 2002 trip generation rates were reviewed for applicability to the proposed project. Trip rates for both sources are included in **Appendix J**. ITE documents a rate of 6.59 daily trips per unit while SANDAG has 6.0 daily trips per unit. The higher and more conservative ITE rate was used for this analysis.

Using the ITE 9th Edition Trip Generation, the project with 32 senior apartments and 120 apartments is calculated to generate 901 daily trips with 62 AM peak hour trips (14 inbound and 48 outbound) and 77 PM peak hour trips (49 inbound and 28 outbound). As previously noted, the original project with 168 apartments is calculated to generate 1,107 daily trips with 77 AM peak hour trips (16 inbound and 61 outbound) and 97 PM peak hour trips (63 inbound and 34 outbound). This results in a conservative analysis of 206 additional daily trips, 15 additional AM peak hour trips, and 20 additional PM peak hour trips. The proposed project, original project, and overestimated project traffic is shown in **Table 6**.

TABLE 6: PROJECT TRIP GENERATION

ITE Land Use Code 221 & 252	Trip Rate	Size & Units	ADT	AM Peak Hour				PM Peak Hour					
				Rate	Split	IN	OUT	Rate	Split	IN	OUT

Additional Traffic Analyzed:			206				2	13				14	6

Source: ITE 9th Edition Trip Generation, 2012. ADT=Average Daily Traffic; Split % inbound and outbound. Rounding may result ±1 to above #s.

The construction phase will include site preparation, deliveries, and construction of structures and site features. Some large construction equipment would be required during construction. A majority of the construction traffic will be from construction workers. The concentration of

construction workers and deliveries is not anticipated to exceed the final apartment project trip generation; however, there may be some temporary periods during the construction phase may have slightly higher volumes than the final project trip generation.

4.2 Project Trip Distribution and Assignment

The project distribution is based on trip attractions within or near the City of Holtville (retail, services, schools, and jobs), and regional attractors such as major employers and regional shopping areas. The State of California Employment Development Department (EDD) data was reviewed for the major employers in Imperial County as shown in **Table 7**.

Walmart Supercenter	Calexico	Department Stores

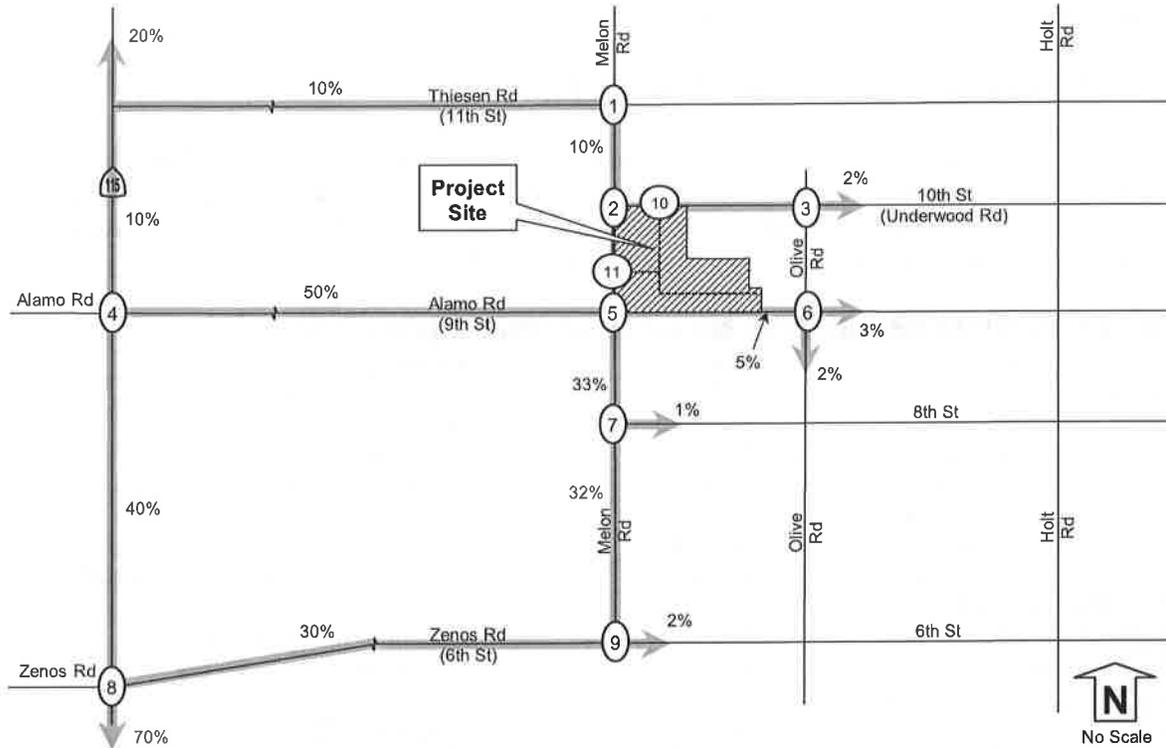

Source: State of California Employment Development Department

A distribution split of 10% local and 90% regional was based on a field review of businesses in and around the City of Holtville, and the above listing of major employer locations in Imperial County from the State of California EDD. The 10% local and 90% regional distribution split was applied to each study intersection based on travel patterns to and from the project driveways as shown in **Figure 5**. The project trip assignment is shown in **Figure 6**.

4.3 Project On-Site Parking

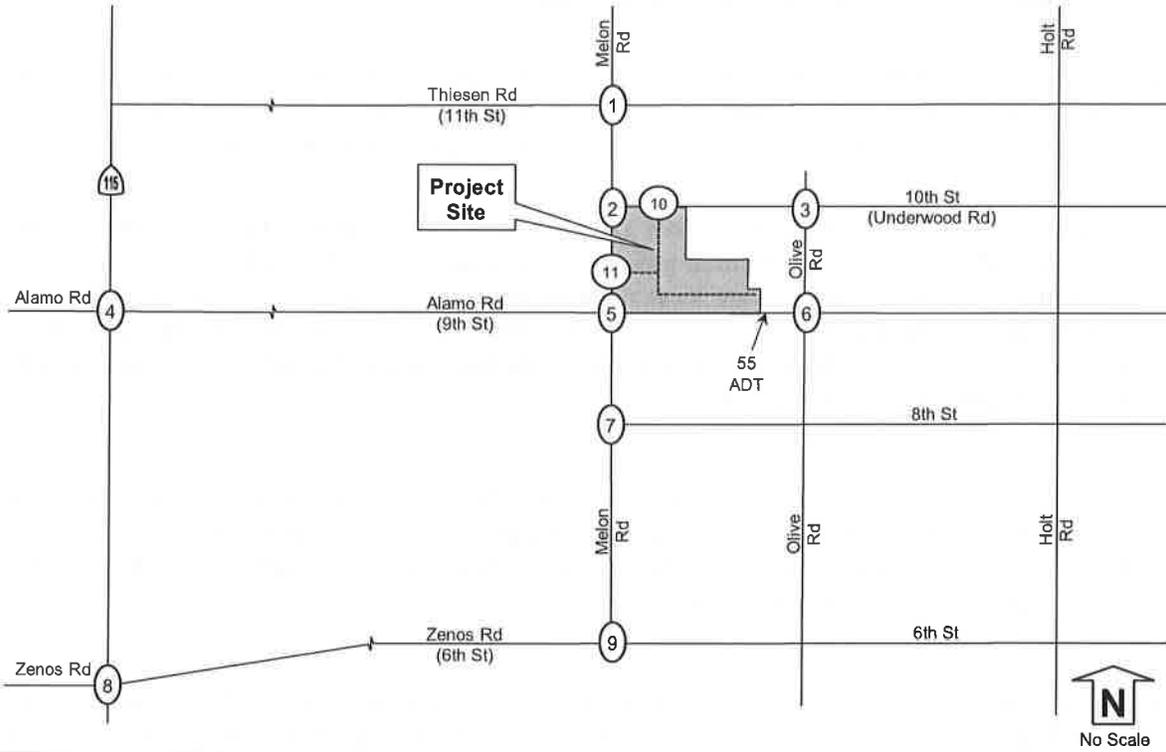

The project is proposed with a total of 266 on-site parking spaces, to which 16 are to be designed to meet the Americans with Disabilities Act (ADA) requirements.

5.0 Cumulative Projects (New Development)

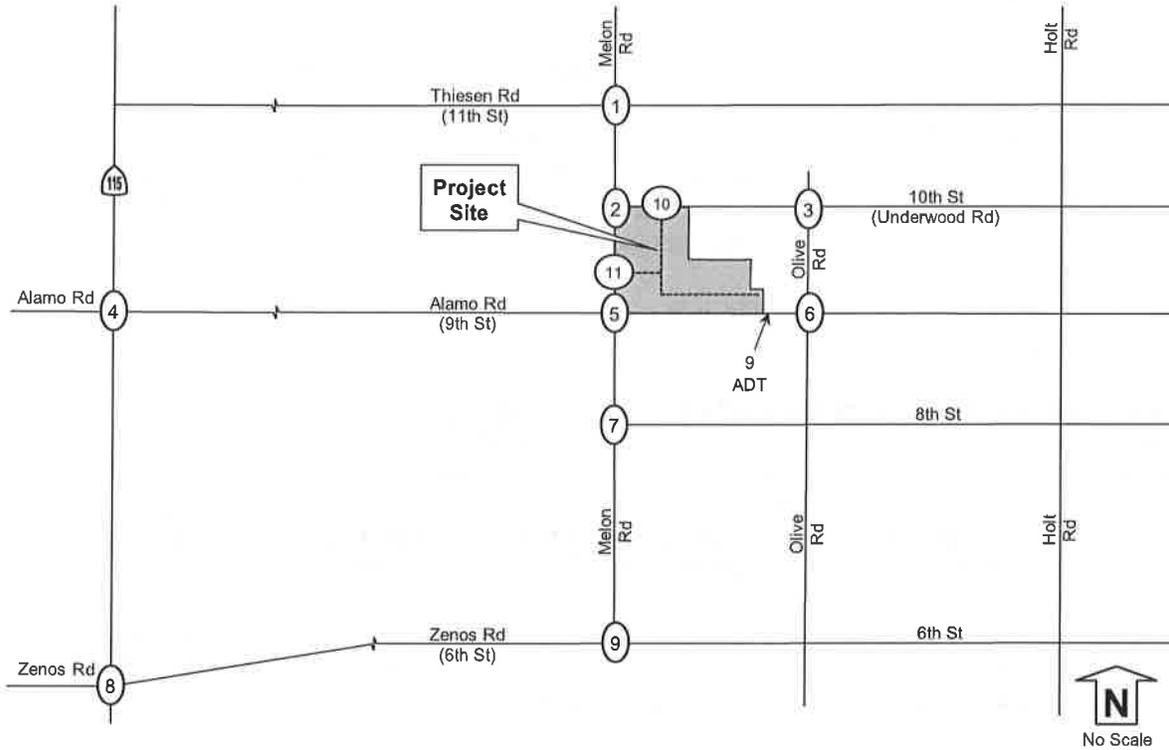

Information on cumulative projects was obtained from planning counter staff at the County of Imperial on February 9, 2017. Copies of County of Imperial maps showing planned cumulative projects are included in **Appendix K**. The list below describes the findings of cumulative projects:

- 1) *Geothermal Projects (Ormesa 1, Ormesa 1E, Ormesa 2, Gem 1, and Gem 2)* – expansion and improvements to existing geothermal power facilities located north of I-8 and east of the E. Highline Canal. These projects are located approximately 8 miles east of the project site (as a crow flies). No cumulative traffic is anticipated from these projects to be added the study area; however, to account for the possibility of some cumulative traffic that may be added, a growth factor was applied as described below.

- 2) *City of Holtville area* - a review of the City of Holtville web site for cumulative projects and a field review of the project study area resulted in no identified cumulative projects within the traffic study area; however, to account for the possibility of some cumulative traffic that may be added, a growth factor was applied as described below.

A growth factor of 0.5% per year (1% total to reach near-term year 2019 conditions) was multiplied against existing traffic for the study area intersections and segment to represent potential cumulative traffic. The volumes represented by a growth factor are relatively low due to being 1% of the background traffic, thus a cumulative 1 peak hour volumes is calculated from a background volume between 50 and 149 trips (i.e. 1% times 50 = 0.5 rounded up to 1). The growth volumes are most noticeable along SR-115 and Zenos Road. The cumulative project volumes represented by the 1% growth factor are shown in **Figure 7**.

6.0 Near-Term Year 2019 Conditions

This section documents near-term year 2019 conditions when the project is anticipated to be completed. The year 2019 forecasted volumes are based on increasing the existing year 2017 volumes by an annual growth rate. Determination of the annual growth rate was based on a review of historical census growth data from 2000 to 2010 for the City of Holtville and the vehicular growth from existing to the year 2030 documented in the City of Holtville *Service Area Plan/Municipal Service Review* (volume data included in Appendix G).

The U.S. Census historical growth rate over a 10 year period from 2000 to 2010 is 5.8% in total and 0.6% per year as shown in **Table 8**.

TABLE 8: U.S. CENSUS HISTORICAL GROWTH RATE FOR CITY OF HOLTVILLE

Population Center	2000 Census Population	2010 Census Population	Percentage of Total
Holtville	5,612	5,939	5.8%
Average Growth Rate Per Year (10 years between 2010 and 2000) =			0.6%

Source: Population data from U.S. Census Bureau (<http://2010.census.gov/2010census>).

The City of Holtville *Service Area Plan/Municipal Service Review* lists eleven roadway segments with daily volumes for existing and year 2030 conditions. The average growth rate is 26.5% and the average growth rate per year is 1.7% as shown in **Table 9**.

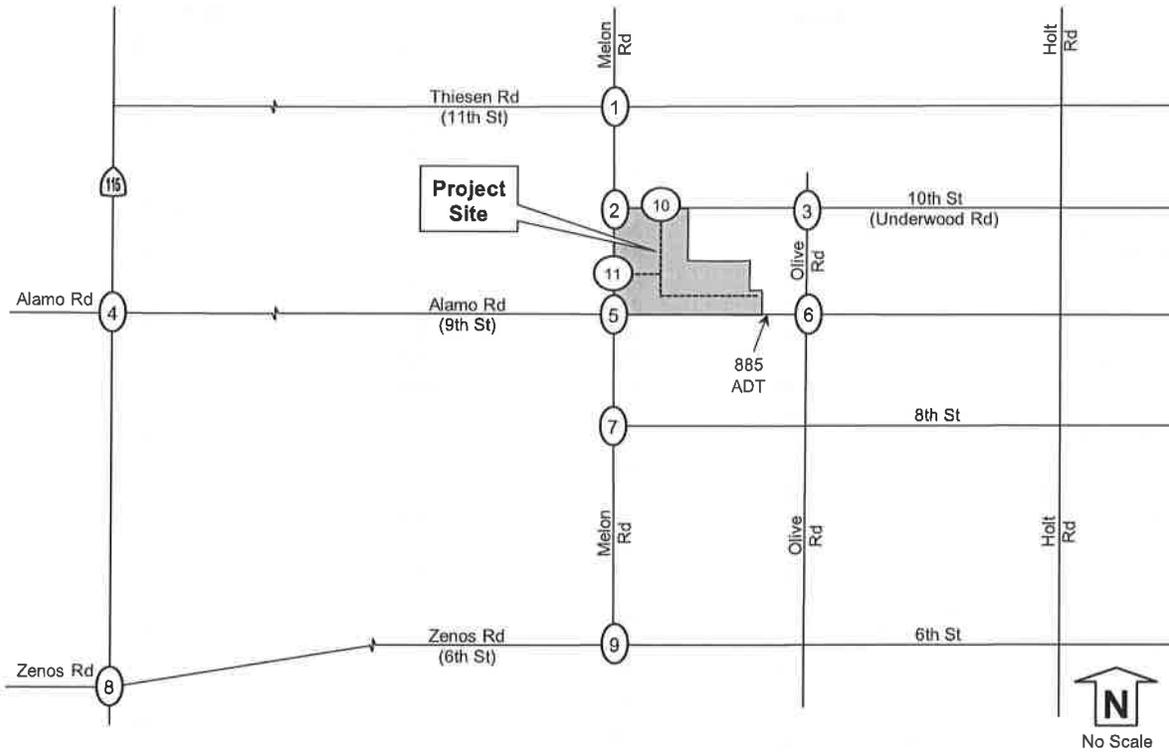

TABLE 9: CITY OF HOLTVILLE SERVICE AREA PLAN GROWTH RATES

Roadway	Location	Existing ¹ ADT	2030 ² ADT	Growth %
SR 115 (Evan Hewes Highway west of Fourth Street, Fifth Street east of Fourth Street)	West of Fourth	5,300	6,500	22.6%
	Cedar to Holt	5,300	6,500	22.6%
	Holt to Walnut	6,000	7,400	23.3%
	Walnut to Grape	2,100	2,600	23.8%
	Grape to Towland	1,100	1,400	27.3%
Eleventh Street	West to Melon	300	400	33.3%
Ninteh Street	Walnut to Towland	400	500	25.0%
Bonds Corner Road	South of Fourth	1,000	1,300	30.0%
Orchard Road	South of Fourth	2,600	3,200	23.1%
Towland Road	SR 115 to 9th	300	400	33.3%
Holt Avenue	North of 11th	1,500	1,900	26.7%
			Average Growth Rate =	26.5%
Average Growth Rate Per Year (16 yrs between 2030 and 2014) =				1.7%

Notes: 1) Existing taken as 2014 to match year of Service Area Plan report. 2) Year 2030 from Service Area Plan report dated 2014. ADT: Average Daily Traffic

For the purpose of this traffic study, the more conservative annual growth rate of **1.7 percent** was selected to forecast year 2019 traffic volumes. Year 2019 traffic data was factored up from existing year 2017 data through the application of a 1.7% growth rate per year or 3.4% total growth rate to represent year 2019 volumes that are shown in **Figure 8**. Intersection and segment LOS are shown in **Tables 10 and 11**. Intersection LOS calculations are included in **Appendix L**.

4) Delta is the increase in delay from project. 5) Type of impact: none, direct, or cumulative.

TABLE 15: NEAR-TERM YEAR 2019 + PROJECT + CUMULATIVE SEGMENT LOS

Segment	Classification (as built)	Near-Term Yr 2019 + Project			Cumulative Daily Volume	Near-Term Yr 2019 + Project + Cumulative						
		Daily Volume	LOS E Capacity	V/C LOS		Daily Volume	LOS E Capacity	V/C LOS	Change in V/C Impact?			
Alamo Road (9th Street)												
Melon Rd to Olive Rd	Arterial (2U)	940	17,500	0.05	A	9	949	17,500	0.05	A	0.001	None

Notes: Classification based on City of Holtville General Plan. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio. Impact? = type of impact (none, cumulative, or direct).

Under near-term year 2019 + project + cumulative conditions, the study intersections and segments were calculated to operate at LOS B or better with no cumulatively considerable impacts.

9.0 Horizon Year 2030 Conditions

A horizon year of 2030 was selected to be consistent with the year 2030 analysis documented in the City of Holtville *Service Area Plan/Municipal Service Review*. As shown previously in Table 9, an overall average growth rate for the City area was calculated at 26.5% between existing and year 2030 conditions. Applying the noted 26.5% to existing volumes, year 2030 volumes are shown in Figure 11. Intersection and segment LOS are shown in Tables 16 and 17. Intersection LOS calculations are included in Appendix O.

TABLE 16: HORIZON YEAR 2030 INTERSECTION LOS

11.0 Conclusions and Recommendations

The Multi-Family project with 152 apartments is proposed on the northeast corner of Melon Road and Alamo Road and is currently located within the County of Imperial. Please note, the number of proposed apartments was reduced after completion of this traffic study based on 168 apartments. Therefore, this traffic study based on 168 apartments is a conservative analysis for the refined project of 152 apartments. As part of the project, the applicant is proposing to annex the project site into the City of Holtville. The site is approximately 8.19 acres and is currently vacant land. Project access is proposed from two driveways, a main driveway on Melon Road and a secondary driveway on Underwood Rd (10th St).

Using the ITE 9th Edition Trip Generation, the project with 152 apartments is calculated to generate 901 daily trips with 62 AM peak hour trips (14 inbound and 48 outbound) and 77 PM peak hour trips (49 inbound and 28 outbound).

Nearby cumulative project were not identified; therefore, a growth factor of 0.5% per year (1% total to reach near term year 2019 conditions) was multiplied against existing traffic for the study area intersections and segment to represent potential cumulative traffic.

Six scenarios were analyzed, that accounted for existing, near-term, cumulative projects, and horizon year conditions. Operational findings by scenario are summarized below:

- 1) Under existing year 2017 conditions, the study intersections and segment were calculated to operate at LOS B or better.
- 2) Under near-term year 2019 conditions, the study intersections and segment were calculated to operate at LOS B or better.
- 3) Under near-term year 2019 + project conditions, the study intersections and segment were calculated to operate at LOS B or better with no significant direct project impacts.
- 4) Under near-term year 2019 + project + cumulative conditions, the study intersections and segments were calculated to operate at LOS B or better with no cumulatively considerable impacts.
- 5) Under horizon year 2030 conditions, the study intersections and segments were calculated to operate at LOS B or better.
- 6) Under horizon year 2030 + project conditions, the study intersections and segment were calculated to operate at LOS B or better with no project impacts.

No traffic impacts were calculated; therefore, mitigation measures are not required.

Excerpts from Imperial County's Traffic Study and Report Policy

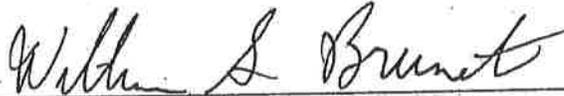

COUNTY OF IMPERIAL
DEPARTMENT OF PUBLIC WORKS

TRAFFIC STUDY AND REPORT POLICY

Date: March, 12, 2007

Revised June 29, 2007

APPROVALS:

WILLIAM S. BRUNET, P. E.
DIRECTOR OF PUBLIC WORKS
ROAD COMMISSIONER

JURG HEUBERGER
PLANNING DIRECTOR

necessary to develop a traffic report that determines whether the traffic study general criteria have been met.

In the case of significant development, it may be necessary to hold one or more scope of work meetings which would be attended by a ICPDS staff, the County Traffic Engineer or other County Advisory Staff, the individual who will be responsible for preparing the traffic study report and the Traffic and/or Civil Engineer responsible for the report and its recommendations. The individual preparing the traffic study should be familiar with the project site and the local conditions which may affect any final conclusions and recommendations.

Listed below are the basic criteria that will be used to make the determination for providing a complete traffic study as a part of the project review process. The criteria are not a complete or exhaustive list, but they are intended to define when such a report is to be prepared and to indicate the necessary components of the study report to be submitted.

1. General Criteria

- a. Any project that adds more than 8% of the total existing vehicle trips on the adjacent road system at full build-out of the project.
- b. Any project that generates more than 400 daily residential trip ends, 800 commercial or industrial trip ends or 200 peak hour trip ends, as determined by the average trip rates contained in the ITE Trip Generation Informational Report or the **Imperial County local exceptions in Section 2.**
- c. Any project that has the potential to degrade an existing road section, an existing signalized intersection, or an existing unsignalized intersection to below the existing level of service or to cause it to be lower than a level of service (LOS)

unit, unless it is for urban infill development, within one half mile of major retail and commercial development.

- b. Existing traffic on the adjacent road system and projected traffic on the adjacent road system, projected for a minimum of five (5) years, to project build-out, or both, depending on the project and the area; larger projects or high traffic generation may require future year build-out, currently Year 2030. Future CMP TIA reports would require additional traffic projection information.
- c. Traffic projections on the adjacent road system for both the project and "normal background growth" (demonstrated growth, as detailed in the general plan, or as agreed upon with County staff). Normally, traffic will be projected to Year 2030 or later for an updated future year condition.
- d. Traffic projections shall include the additional impact of undeveloped land or new development within an area surrounding the proposed development site (project) as agreed to by the County Director of Public Works, the County Planning Director and advisory staff.
- e. Projected impacts on intersections adjacent to or within the defined impact area of the project, using intersection capacity analysis - Highway Capacity Manual Operations Delay Method. Right turn-on-red volumes and changes in signal timing can be incorporated in a signalized intersection analysis, but any signal timing changes must be specifically identified in the study recommendations with additional cautions or impact conclusions identified if the timing changes are not

- m. Traffic counts, calculations, other basic information, and supporting data shall be included in an Appendix to the report or provided as a separate Technical Appendix. All actual traffic count data will be provided to the County in a useful summary form, digital and paper format, as specified by the County.

3. Analysis Methodology

The build-up method of traffic analysis will be followed, showing:

- a. Existing traffic;
- b. Existing traffic and normal background growth (rate and time to be agreed to by County staff);
- c. Existing traffic and normal background growth (see C. 3. b. above) and project build-out traffic;
- d. Existing traffic and normal background growth (see C. 3. b. above) and new development traffic (see C. 3. b. above);
- e. Existing traffic and 5 year normal background growth (see b. above) and new development (see b. above) and project build out, if longer than 5 years to build out of project.

If the study period to build-out is longer than 5 years, the future projection time period appropriate for a new development will be determined by the County staff. Significant projects may require a future projection time period of 20 years or General Plan build out. The future year is currently year 2030 as of the date of adopting this Policy. State Highway traffic projections will usually be carried to the year 2030 or to Caltrans current policy and procedures.

Appendix B

Excerpts from Caltrans' Guide for the Preparation of Traffic Impact Studies

GUIDE FOR THE PREPARATION

OF

TRAFFIC IMPACT STUDIES

STATE OF CALIFORNIA
DEPARTMENT OF TRANSPORTATION

December 2002

D. Travel Forecasting (Transportation Modeling)

The local or regional traffic model should reflect the most current land use and planned improvements (i.e., where programming or funding is secured). When a general plan build-out model is not available, the closest forecast model year to build-out should be used. If a traffic model is not available, historical growth rates and current trends can be used to project future traffic volumes. The TIS should clearly describe any changes made in the model to accommodate the analysis of a proposed project.

V. TRAFFIC IMPACT ANALYSIS METHODOLOGIES

Typically, the traffic analysis methodologies for the facility types indicated below are used by Caltrans and will be accepted without prior consultation. When a State highway has saturated flows, the use of a micro-simulation model is encouraged for the analysis (please note however, the micro-simulation model must be calibrated and validated for reliable results). Other analysis methods may be accepted, however, consultation between the lead agency, Caltrans and those preparing the TIS is recommended to agree on the data necessary for the analysis.

- A. Freeway Segments – Highway Capacity Manual (HCM)*, operational analysis
- B. Weaving Areas – Caltrans Highway Design Manual (HDM)
- C. Ramps and Ramp Junctions – HCM*, operational analysis or Caltrans HDM, Caltrans Ramp Metering Guidelines (most recent edition)
- D. Multi-Lane Highways – HCM*, operational analysis
- E. Two-lane Highways – HCM*, operational analysis
- F. Signalized Intersections⁸ – HCM*, Highway Capacity Software**, operational analysis, TRAFFIX^{TM**}, Synchro**, see footnote 8
- G. Unsignalized Intersections – HCM*, operational analysis, Caltrans Traffic Manual for signal warrants if a signal is being considered
- H. Transit – HCM*, operational analysis
- I. Pedestrians – HCM*
- J. Bicycles – HCM*
- K. Caltrans Criteria/Warrants – Caltrans Traffic Manual (stop signs, traffic signals, freeway lighting, conventional highway lighting, school crossings)
- L. Channelization – Caltrans guidelines for Reconstruction of Intersections, August 1985, Ichiro Fukutome

*The most current edition of the Highway Capacity Manual, Transportation Research Board, National Research Council, should be used.

**NOTE: Caltrans does not officially advocate the use of any special software. However, consistency with the HCM is advocated in most but not all cases. The Caltrans local development review units utilize the software mentioned above. If different software or analytical techniques are used for the TIS then consultation between the lead agency, Caltrans and those preparing the TIS is recommended. Results that are significantly different than those produced with the analytical techniques above should be challenged.

⁸ The procedures in the Highway Capacity Manual "do not explicitly address operations of closely spaced signalized intersections. Under such conditions, several unique characteristics must be considered, including spill-back potential from the downstream intersection to the upstream intersection, effects of downstream queues on upstream saturation flow rate, and unusual platoon dispersion or compression between intersections. An example of such closely spaced operations is signalized ramp terminals at urban interchanges. Queue interactions between closely spaced intersections may seriously distort the procedures in" the HCM.

Appendix D

Excerpts from City of Holtville General Plan

Circulation Plan

The City is supported by a diverse circulation system with vehicular, pedestrian, and bicycle components. This section of the element establishes the Circulation Plan. The Plan summarizes the approach to ensure safe and convenient operation of the circulation system and identifies improvements required to accommodate traffic from planned development.

Vehicular transportation (automobiles and trucks) is presently the primary mode of travel and a Circulation Master Plan is established with hierarchical roadway designations, physical design standards for the roadway designations, and service standards. The Circulation Master Plan includes regional roadways and anticipated regional traffic levels. The use of alternative modes of transportation is promoted to reduce dependency on vehicular transportation.

The City has adopted a program to establish pedestrian and bicycle routes that will provide connections between public activity centers and residential neighborhoods and businesses. In addition, roadway segments are designed to promote pedestrian-friendly neighborhoods.

The Plan is based on issues, goals, and policies identified in the previous section. The Circulation Element Implementation Program, contained in the following section of this Element, is an extension of the Circulation Plan and contains specific programs to coordinate planned development with vehicular and non-vehicular circulation improvements.

Roadway System

Nearly all roadways in Holtville have two lanes. The exception is the segment of SR-115 from Grape Avenue to Orchard Road. The intersection of SR-115 and Holt Avenue is controlled by a four-way stop. All other intersections in Holtville are either uncontrolled or controlled by a two-way stop.

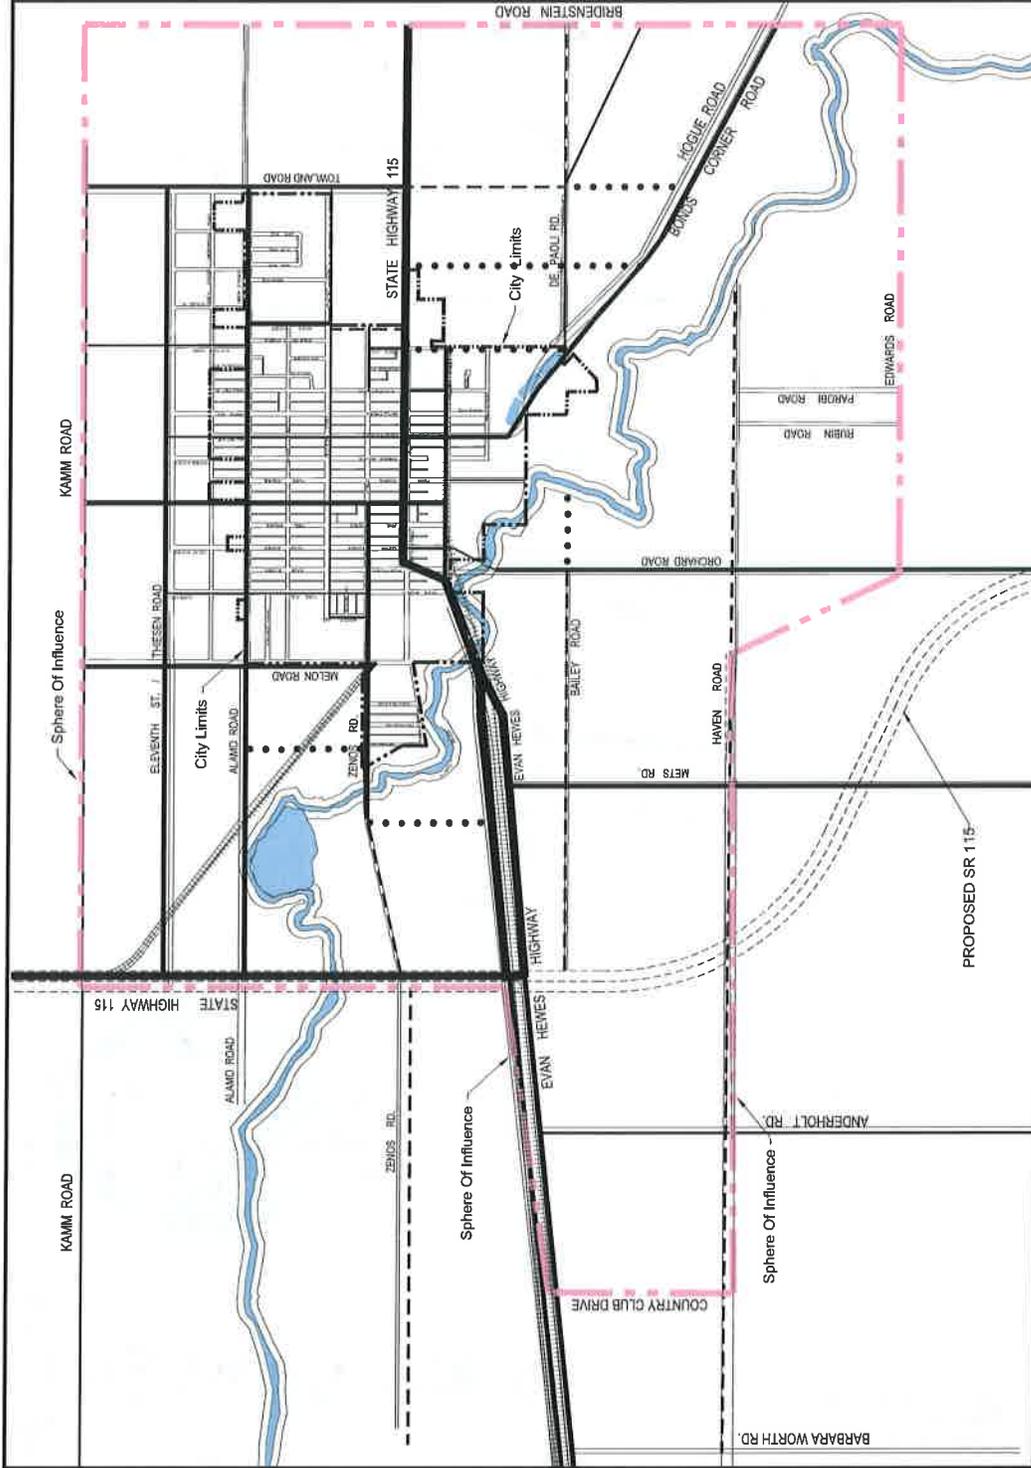

Roadways that comprise Holtville's roadway system are classified into the following categories:

- **Arterial Streets:** Intended to move through traffic between major traffic generators.
- **Collector Streets:** Collect and distribute traffic between arterial streets and local streets.
- **Local Streets:** Provide direct access to individual properties by local traffic.

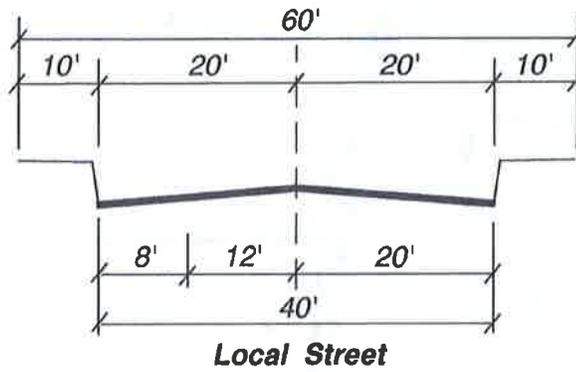

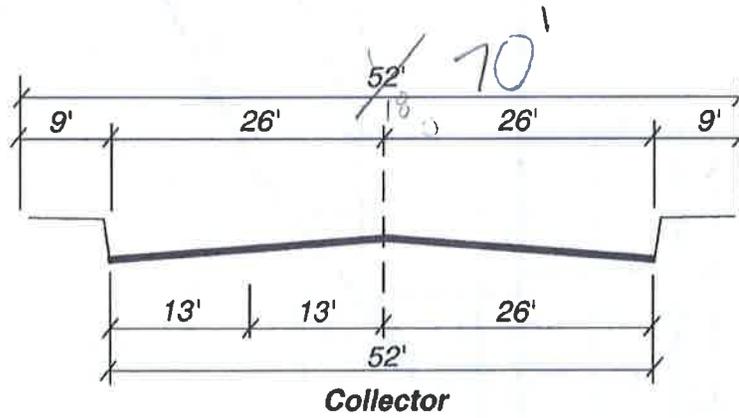

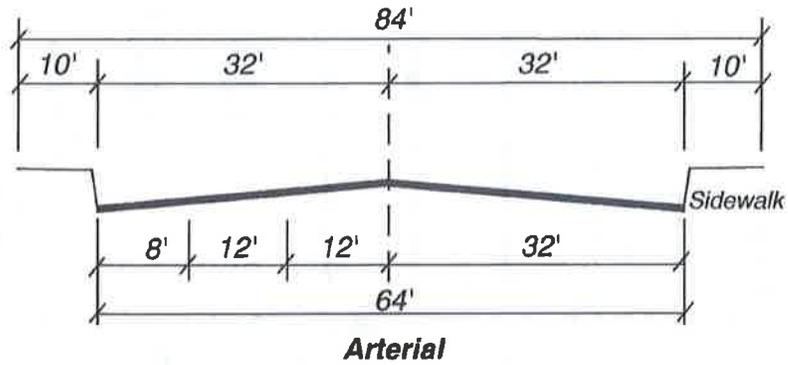

Figure C-1 depicts the current street classifications within the City and **Figure C-2** depicts cross sections for each of the classes of streets.

C-2 STREET CROSS SECTION

Performance Criteria

The performance of streets and roadways is typically measured by comparing the level of traffic to documented standards for the type of street based on classification, number of lanes, and width. Imperial County has developed standards for roadway capacity that are applicable to conditions in the City of Holtville. These roadway performance standards are shown in **Table C-1**.

Table C-1
Roadway Performance Standards
Maximum Average Daily Traffic by Level of Service (LOS)

Roadway Classification	Number of Lanes	A	B	C	D	E
Freeway	4	30,000	40,000	50,000	60,000	70,000
Principal Arterial	4	14,800	24,700	29,600	33,400	37,000
Secondary Arterial	4	13,700	22,800	27,400	30,800	34,200
Two Lane Arterial (Primary or Secondary)	2	2,000	4,500	7,700	11,800	17,500
Collector	2	1,900	4,100	7,100	10,900	16,200
Residential Street	2	*	*	1,500	*	*
Residential or Cul-de-Sac Loop Street	2	*	*	200	*	*

*Note: Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of Service, normally apply to roads carrying through traffic between major trip generators and attractors.

Source: Imperial County

In traffic engineering methodology, roadway levels of service (LOS) are typically rated from LOS A to LOS F. LOS A indicates light traffic conditions, in which drivers have a great deal of freedom to maneuver and little interference from other drivers. LOS F indicates a situation where the traffic relying on a particular facility is beyond the capacity of the facility, with significant delays and queues. A minimum performance standard of LOS C is considered to be consistent with the roadway conditions in smaller cities and rural areas.

Future Roadway Conditions

Holtville's Service Area Plan states that all streets in the City are expected to meet or exceed LOS C performance standard in the Year 2020. Therefore, the street system is expected to be adequate for Year 2020 conditions.

While the overall street system is expected to meet existing transportation performance standards for Year 2020 conditions, the following street improvements were recommended in the Service Area Plan:

- Installation of a traffic signal (if warranted) at the intersection of SR-115 and Holt Avenue.
- Provision of new collector and local streets to serve new development.

While traffic conditions beyond the Year 2020 are difficult to foresee, the next major roadway improvement that is needed in the Holtville area is a new arterial roadway running south of and parallel to SR-115. This new arterial would ultimately run from Towland Road to Barbara Worth Road and would cross the Alamo River at a location south of all existing developed areas. A first phase of this new arterial could be constructed from Bonds Corner Road to Orchard Road, with extensions built as needed. Based on current population projections, this new arterial street would not be needed until the Year 2030.

In addition, Holtville's 5/10 Year Plan identified approximately 15 roadway segments that needed to be repaved or maintained in 2001. The City continues to implement and update the 5/10 Year Plan as necessary.

Safe Drop-Off and Pick-Up Zones

Perhaps the greatest source of congestion within Holtville is in the immediate vicinity of local schools in the early morning and afternoon hours. School children often have to compete with vehicles to cross streets in order to get to, or leave from school, putting them at an undesirable level of risk. The City has adopted a program to work with the Holtville Unified School District, the Police Department, and parents to identify ways to reduce the risk to school children and relieve traffic around local schools by designating Safe Drop-Off and Pick-Up Zones as well as other alternatives such as staggered class times so that the number of children arriving at school and awaiting pick-up at any given time is reduced.

Alternative Transportation

Promotion of alternative modes of transportation such as public transit, bicycling, and pedestrian circulation is a key component of the Circulation Plan. Use of alternative modes of transportation produces a number of benefits for the community including reduced traffic, less need for costly roadway improvement projects, and less impact to air quality.

Transit

The City of Holtville is not large or dense enough to warrant a fixed right-of-way intra-city transit system. Imperial County Transit offers inter-city bus service with regular stops in Holtville, including ADA Para-transit service that includes a lift equipped van to serve physically or mentally disabled residents. Additionally, taxi cabs do provide a limited amount of service to the City. While the City does not currently have an intra-city public transit system, this will become an important consideration as the City develops and a necessity when the City approaches buildout of the planning area. As Holtville grows, the City will continue to cooperate with local and regional agencies and organizations to provide efficient, affordable, and reliable transit.

Pedestrian Circulation Network

The pedestrian circulation network consists of sidewalks adjacent to City streets, as well as within parks. On some streets, pedestrian usage is limited because of automobile circulation. All new developments are required to provide adequate sidewalks or other pedestrian walkways to facilitate the movement of pedestrians around Holtville.

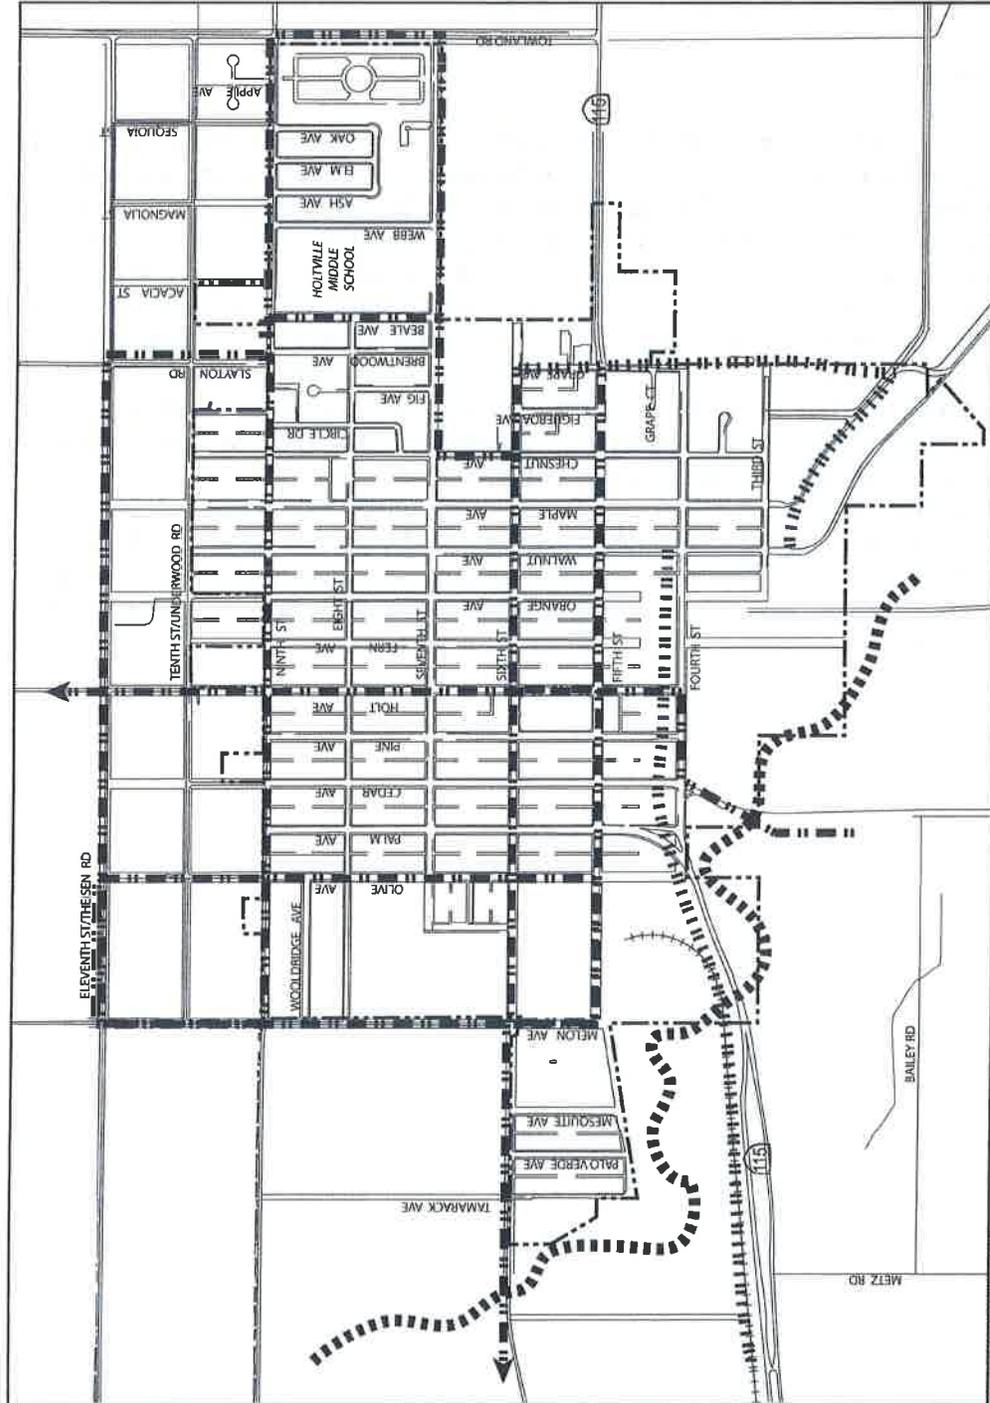

Bikeway System

Bicycle riding is another effective and desirable alternative form of transportation that may become more popular in the future. In the City, distances are reasonably short, and with the exception of the hot summer months, bicycling is a feasible mode of transportation and should be encouraged. In 2001, the City adopted a Bicycle Master Plan that establishes a system of designated bikeway paths within the planning area which are depicted in **Figure C-3**. The system consists of three different classes of bikeways. Class I bikeways are pathways that serve the exclusive use of bicycles and pedestrians, whereas a Class II bikeways are typically bike lanes established within the paved area of roadways through identifiable pavement striping or markings and signage. Class III bikeways are bike routes intended to provide continuity to the bikeway system. Bike routes are established along through routes not served by Class I or Class II bikeways, or to connect discontinuous segments of normal bike lanes. Class III bikeways are shared facilities, either with motor vehicles on the street or with pedestrians on sidewalks and therefore are not shown in **Figure C-3**. Holtville's Bicycle Master Plan is consistent with the Imperial County and El Centro Bicycle Master Plans and provides links to ensure continuity in the regional bicycle system. The City continues to update when necessary and implement the Bicycle Master Plan.

Appendix E

Excerpts from Imperial County's Circulation and Scenic Highways Element

**CIRCULATION AND
SCENIC HIGHWAYS ELEMENT**

**Prepared by:
Imperial County Planning & Development Services Department
801 Main Street
El Centro, CA 92243**

in collaboration with the

**Imperial County Public Works Department
155 South 11th Street
El Centro, CA 92243**

**WILLIAM S. BRUNET, P.E.
Director of Public Works**

**JURG HEUBERGER, AICP
Planning & Development Services Director**

**Approved by:
Board of Supervisors
January 29, 2008**

The County Director of Public Works shall review these transition areas and provide guidance in achieving this policy.

c. New or enlarged Roads:

Local Roads

The County shall require all new developments to provide for local roads to serve the direct access needs of abutting property. These streets should be designed with a discontinuous pattern to discourage through traffic. They generally should not intersect with arterial street classifications. Typical design features include two travel lanes with parking on both sides of the street. Local roads include loop streets and cul-de-sacs.

Regional Roads (Roads beyond the actual development project)

The County shall require that all new developments participate in the improvement of regional roads that may be impacted by the proposed development. The extent to which a project impacts regional roads is generally determined by a traffic study. In some cases however the County may have predetermined improvement requirements for certain road segments or road intersections. The new developments will be required to either make certain regional improvements or in the alternative contribute a "fair share" towards the cost of such improvements.

d. Level of Service Standards

As the County continues to grow, transportation demand management and systems management will be necessary to preserve and increase available roadway "capacity". Level of Service (LOS) standards are used to assess the performance of a street or highway system and the capacity of a roadway.

An important goal when planning the transportation system is to maintain acceptable levels of service along the federal and state highways and the local roadway network. To accomplish this, the California Department of Transportation (Caltrans), Imperial County and local agencies adopt minimum levels of service to determine future infrastructure needs.

Imperial County must provide and maintain a highway system with adequate capacity and acceptable levels of service to accommodate projected travel demands associated with the projected population growth within the Land Use Element. This can be accomplished by establishing minimum service levels for the designated street and conventional state highway system. Strategies that result in improvements to the transportation system, coupled with local job creation, will allow County residents to have access to a wide range of job opportunities within reasonable commute times.

The County's goal for an acceptable traffic service standard on an ADT basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections. These service values are defined by the 1985 or 2000 edition of the *Highway Capacity Manual* or any subsequent edition thereof. This policy shall acknowledge that the aforementioned level of service standards may not be obtainable on some existing facilities where abutting development precludes acquisition of additional right-of-way needed for changes in facility classification.

In order to achieve the level of service goals in the previous policy, the County shall develop and institute a long-range funding program in which new land development shall bear the major burden of the associated costs and improvement requirements.

e. Design Standards

The County shall adopt design standards for all streets in accordance with their functional classifications and recognized design guidelines. In developing these standards, the County shall consider the design standards of Caltrans and the American Association of State and Highway Transportation Officials (AASHTO). All streets within the County shall be designed in accordance with the adopted County of Imperial Design Standards. Typical cross sections and design criteria for the various street classifications are shown as an attachment to this document.

f. Private Streets

The County may permit construction of private streets within individual development projects (gated community). providing the following are addressed:

- They are designed geometrically and structurally to meet County standards.
- Only project occupants are served (gated community).
- Emergency vehicle access requirements are satisfied.
- The streets do not provide a direct through route between public streets.
- The Homeowners Associations and/or property owners provide an acceptable program for financing regular street maintenance.
- If the private street is permitted with a waiver of any of the above standards, any future requests to make the private street a public street shall require that all adjacent property owners provide and pay for all improvements and right of way required to bring the street to current public street or road standards. This includes road width, right of way widths and structural section. In no circumstance shall the County pay for any costs to upgrade a private street to public street standards if the above-mentioned requirements were waived at the request of the original developer or subdivider.

Appendix F

Traffic Impact Significance Criteria from Imperial area EIRs

4.6.2 Impact Significance Criteria

Significance Criteria

The significance criteria summarized in Table 4.6-2 by Linscott, Law and Greenspan Engineers is based upon the City of El Centro and the County of Imperial's goal for intersections and roadway segments to operate at LOS C or better. In general, a degradation in LOS from LOS C or better to LOS D or worse is considered a significant direct impact. A cumulative impact can occur if the intersection or segment LOS is already operating below City/County standards and the project increases the delay by more than 2 seconds or the v/c ratio by more than 0.02.

INTERSECTIONS			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS ¹ C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	-	Direct
LOS D	LOS E or F	-	Direct
LOS E	LOS F	-	Direct
Any LOS	Project does not degrade LOS and adds > 2.0 seconds of delay	LOS E or worse	Cumulative
Any LOS	Project does not degrade LOS and adds < 2.0 seconds of delay	Any LOS	None
SEGMENTS			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	-	Direct ²
LOS D	LOS E or F	-	Direct
LOS E	LOS F	-	Direct
Any LOS	LOS E or worse and v/c ³ > 0.02	LOS E or worse	Cumulative
Any LOS	LOS E or worse and v/c ³ < 0.02	Any LOS	None

Source: Linscott, Law & Greenspan, Engineers (July 2004)

Notes:

1. LOS: Level of Service
2. Exception: post-project segment operation is D and intersections along segment are D or better, no significant impact.
3. V/C: Volume to Capacity Ratio

In addition the project would have a significant impact if:

- It would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

5.0 SIGNIFICANCE CRITERIA

**TABLE 5.1
SIGNIFICANCE CRITERIA**

Intersections			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS C or better and project adds < 2.0 seconds of delay	LOS D or worse	None
LOS C or better	LOS C or better and project adds > 2.0 seconds of delay	LOS D or worse	Cumulative
LOS C or better	LOS D or worse	LOS D or worse	Direct
LOS D	LOS D and project adds < 2.0 seconds of delay	LOS D or worse	None
LOS D	LOS D and project adds > 2.0 seconds of delay	LOS D or worse	Cumulative
LOS D	LOS E or F	LOS E or F	Direct
LOS E	LOS E and project adds < 2.0 seconds of delay	LOS E or F	None
LOS E	LOS E and project adds > 2.0 seconds of delay	LOS E or F	Cumulative
LOS E	LOS F	LOS F	Direct
LOS F	Project add < 2.0 seconds of delay	LOS F	None
LOS F	Project adds 2.0 to 9.9 seconds of delay	LOS F	Cumulative
LOS F	Project adds 10.0 or more seconds of delay	LOS F	Direct
Segments			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS or better and project increases V/C by < 0.02	LOS D or worse	None
LOS C or better	LOS C or better and project increase V/C by > 0.02	LOS D or worse	Cumulative
LOS C or better	LOS D or worse	LOS D or worse	Direct ¹
LOS D	LOS D and project increases V/C by < 0.02	LOS D or worse	None
LOS D	LOS D and project increases V/C by > 0.02	LOS D or worse	Cumulative
LOS D	LOS E or F	LOS E or F	Direct
LOS E	LOS E and project increases V/C by < 0.02	LOS E or F	None
LOS E	LOS E and project increases V/C by > 0.02	LOS E or F	Cumulative
LOS E	LOS F	LOS F	Direct
LOS F	Project increases V/C by < 0.02	LOS F	None
LOS F	Project increases V/C by > 0.02 and < 0.09	LOS F	Cumulative
LOS F	Project increases V/C by > 0.09	LOS F	Direct

Notes: LOS = Level of Service; V/C = Volume to Capacity Ratio; ¹ Exception: If Existing + Project segment operation is LOS D and intersections along segment are LOS D or better, then there is no significant impact.

In addition to the above listed projects, the Lerno/Verhaegen project was recently submitted and is currently starting the CEQA process. This project is listed for information purposes but cannot be analyzed in cumulative terms. The following is a brief description based on the limited information available for this project.

Lerno-Verhaegen Specific Plan is proposed to be a mixed-use development of 2,708 dwelling units. The project consists of 680 acres on the west side of the City of El Centro. The project includes a zone change, Tentative Map, an amendment of the City's General Plan and an annexation.

Individual traffic assignments were completed for each cumulative project. Figure 2-7 depicts the total cumulative project traffic volumes in the area. Figure 2-8 shows the existing + project + cumulative projects traffic volumes for the vicinity. Appendix D of this Mitigated Negative Declaration contains the individual cumulative project traffic assignments.

Significance Criteria

The significance criteria summarized in Table 2-7 by Linscott, Law and Greenspan, engineers is based upon the County of Imperial's goal for intersections and roadway segments to operate at LOS C or better. Intersections or segments operating at LOS D, E or F are unacceptable and therefore constitute a significant impact.

Table 2-7 – Significance Criteria			
INTERSECTIONS			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS ¹ C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	-	Direct
LOS D	LOS E or F	-	Direct
LOS E	LOS F	-	Direct
Any LOS	Project does not degrade LOS and adds > 2.0 seconds of delay	LOS E or worse	Cumulative
Any LOS	Project does not degrade LOS and adds < 2.0 seconds of delay	Any LOS	None
SEGMENTS			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	-	Direct ²
LOS D	LOS E or F	-	Direct
LOS E	LOS F	-	Direct
Any LOS	LOS E or worse and v/c ³ > 0.02	LOS E or worse	Cumulative
Any LOS	LOS E or worse and v/c ³ < 0.02	Any LOS	None

Source: LL&G, July 2004.

Notes:

1. LOS: Level of Service
2. Exception: post-project segment operation is D and intersections along segment are D or better, no significant impact.
3. V/C: Volume to Capacity Ratio

**TABLE 5-1
SIGNIFICANCE CRITERIA**

INTERSECTIONS			
Existing	Existing + Project	Existing + Project + Cumulative Projects	Impact Type
LOS ^a C or better	LOS C or better	LOS C or better	None
LOS C or better	LOS D or worse	—	Direct
LOS D	LOS D and adds 2.0 seconds or more of delay	LOS D or worse	Cumulative
LOS D	LOS E or F	—	Direct
LOS E	LOS F	—	Direct
LOS F	LOS F and delay increases by ≥ 10.0 seconds	LOS F	Direct
Any LOS	Project does not degrade LOS and adds 2.0 to 9.9 seconds of delay	LOS E or worse	Cumulative
Any LOS	Project does not degrade LOS and adds < 2.0 seconds of delay	Any LOS	None
SEGMENTS

City of Holtville

DRAFT

Service Area Plan/Municipal Service Review

August 2014

Prepared for

Prepared by

4.5 TRANSPORTATION FACILITIES

4.5.1 Facility Planning and Adequacy Analysis

Performance Standard

The City of Holtville General Plan Circulation Element includes a classification of streets into the following categories:

- Arterial Streets: Intended to move through traffic between major traffic generators.
- Collector Streets: Collect and distribute traffic between arterial streets and local streets.
- Local Streets: Provide direct access to property by local traffic.
-

Figure 4.5-1 depicts current street classifications within the City and Figure 4.5-2 depicts cross sections for each of the classes of streets described above.

The performance of streets and roadways is typically measured by comparing the level of traffic to documented standards for the type of street based on classification, number of lanes, and width. Imperial County has developed standards for roadway capacity that are applicable to conditions in the City of Holtville. These roadway performance standards are shown in Table 4.5-1.

Roadway Classification	Number of Lanes	A	B	C	D	E
Freeway	4	30,000	40,000	50,000	60,000	70,000
Prime Arterial w/median	6	22,200	37,000	44,600	50,000	57,000
Major Arterial w/median	4	14,800	24,700	29,600	33,400	37,000
Secondary Arterial	4	13,700	22,800	27,400	30,800	34,200
2 lane Arterial	2	2,000	4,500	7,700	11,800	17,500
Collector	2	1,900	4,100	7,100	10,900	16,200
Residential Street	2	*	*	1,500	*	*
Residential or Cul-de-Sac Loop Street	2	*	*	200	*	*

Note: Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of Service normally apply to roads carrying through traffic between major trip generators and attractors.
Source: Imperial County.

In traditional traffic engineering methodology, roadway levels of service (LOS) are typically rated from LOS A to LOS F. The City of Holtville has adopted a minimum performance standard of LOS C in its General Plan. However, many jurisdictions have started using a different performance standard known as Complete Streets. Complete Streets is a transportation policy and design approach that requires streets to be planned, designed, operated, and maintained to enable safe, convenient and comfortable travel and access for users of all ages and abilities regardless of their mode of transportation. Modes of transportation include pedestrians, bicycles, cars, trucks, busses and emergency vehicles.

Inventory of Existing Facilities/Personnel

Nearly all roadways in Holtville have two lanes. The exception is the segment of SR 115 from Grape Avenue to Orchard Road. The intersection of SR 115 and Holt Avenue is controlled by a four-way stop. All other intersections in Holtville are either uncontrolled or controlled by a two-way stop.

Figure 4.5-2 depicts existing average daily traffic counts. Based on the street performance standards identified in Table 4.5-1, it is possible to calculate existing levels of service wherever existing traffic counts are available. The results are shown in Table 4.5-2. Currently, all streets in Holtville are considered to operate at LOS B or better. Therefore, the existing street system is considered to be adequate.

Table 4.5-2				
Roadway Performance Evaluation – Existing				
Roadway	Location	Average Daily Traffic	Capacity	Level of Service
SR 115 (Evan Hewes Highway west of Fourth Street, Fifth Street east of Fourth Street)	West of Fourth	5,300	34,200	A
	Cedar to Holt	5,300	34,200	A
	Holt to Walnut	6,000	34,200	A
	Walnut to Grape	2,100	17,200	A
	Grape to Towland	1,100	17,500	A
Eleventh Street	West of Melon	300	17,500	A
Ninth Street	Walnut to Towland	400	16,200	A
Bonds Corner Road	South of Fourth	1,000	17,500	A
Orchard Road	South of Fourth	2,600	17,500	A
Towland Road	SR 115 to 9th	300	17,500	A
Holt Avenue	North of 11th	1,500	17,500	A

The City's streets are maintained primarily by a Streets Maintenance Worker III, with the assistance of a Field Supervisor.

Inventory of Approved Facilities/Personnel

No additional transportation facilities or personnel have been approved at this time as existing facilities are adequate to serve projected Year 2030 growth.

Year 2030 Demand for Facilities/Personnel

Average daily traffic forecasts for the Year 2030 are shown in Figure 4.5-4. Table 4.5-3 shows capacity analysis conducted for City streets in the Year 2030. All streets in Holtville are expected to meet or exceed the LOS C performance standard in the Year 2030. Therefore, the street system is expected to be adequate for Year 2030 conditions.

Roadway	Location	Average Daily Traffic*	Capacity	Level of Service
SR 115 (Evan Hewes Highway west of Fourth Street, Fifth Street east of Fourth Street)	West of Fourth	6,500	34,200	A
	Cedar to Holt	6,500	34,200	A
	Holt to Walnut	7,400	34,200	A
	Walnut to Grape	2,600	17,500	A
	Grape to Towland	1,400	17,500	A
Eleventh Street	West of Melon	400	17,500	A
Ninth Street	Walnut to Towland	500	16,200	A
Bonds Corner Road	South of Fourth	1,300	17,500	A
Orchard Road	South of Fourth	3,200	17,500	B
Towland Road	SR 115 to 9th	400	17,500	A
Holt Avenue	North of 11th	1,900	17,500	B

* Average Daily Traffic is anticipated to increase in approximate proportion with population growth. SCAG estimates that population growth will increase by an average of 23% between 2014 and 2030.

While the overall street system is expected to meet existing transportation performance standards for Year 2030 conditions, the following street improvements are recommended:

- Improve Fern Street south of 4th Street.
- Construct bridge across Alamo River at Fern Street.

It is difficult to predict where and when new streets will be needed to be improved to serve Year 2030 conditions.

SR 115 will be realigned to line up with State Route 7 (SR-7) and by pass the City of Holtville. SR-7 connects with the Calexico East Port of Entry (POE) between the United States and Mexico. This alignment would have a limited number of traversing points allowed for major arterials. To meet the demand in 2030, it is estimated that one position will need to be added to current staffing levels: Maintenance Worker III (1).

4.5.2 Phasing

No major circulation improvements are currently needed. New local streets should be provided to serve new development as it occurs.

ITE and SANDAG Trip Rates

Low-Rise Apartment (221)

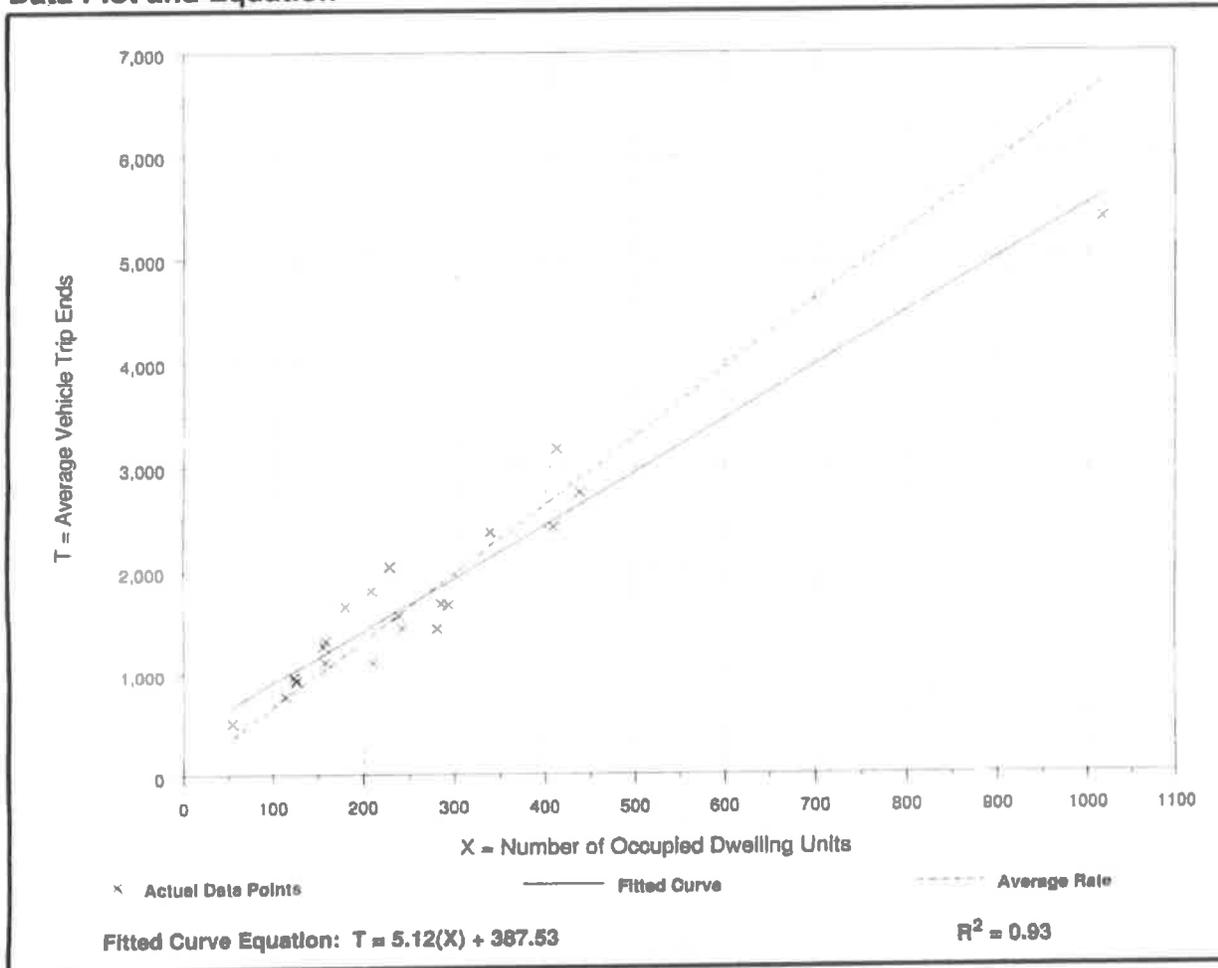

Average Vehicle Trip Ends vs: Occupied Dwelling Units
On a: **Weekday**

Number of Studies: 22
Avg. Num. of Occupied Dwelling Units: 264
Directional Distribution: 50% entering, 50% exiting

Trip Generation per Occupied Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
6.59	5.10 - 9.24	2.84

Data Plot and Equation

Low-Rise Apartment (221)

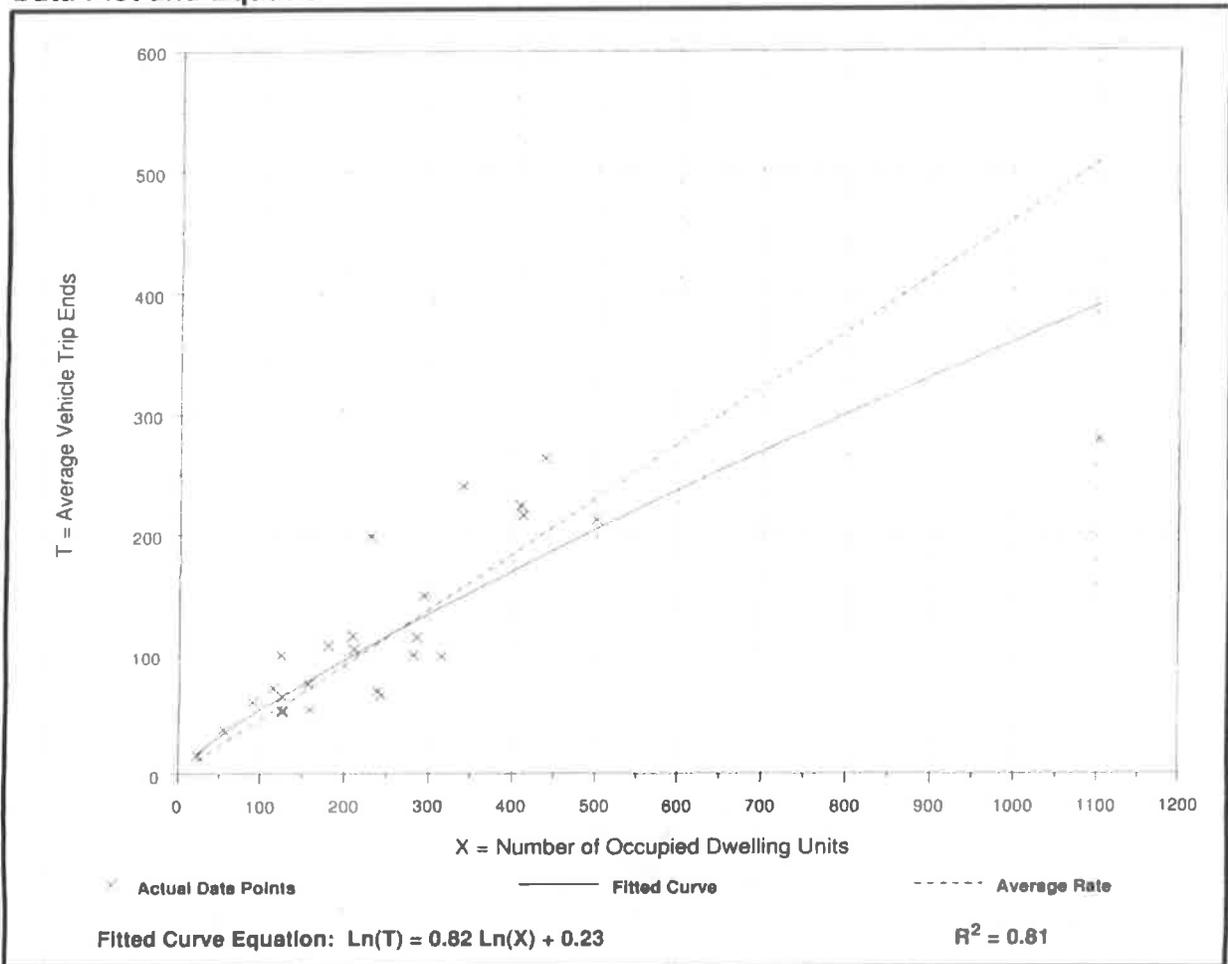

Average Vehicle Trip Ends vs: Occupied Dwelling Units
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 7 and 9 a.m.

Number of Studies: 27
 Avg. Num. of Occupied Dwelling Units: 257
 Directional Distribution: 21% entering, 79% exiting

Trip Generation per Occupied Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
0.46	0.25 - 0.86	0.70

Data Plot and Equation

Low-Rise Apartment (221)

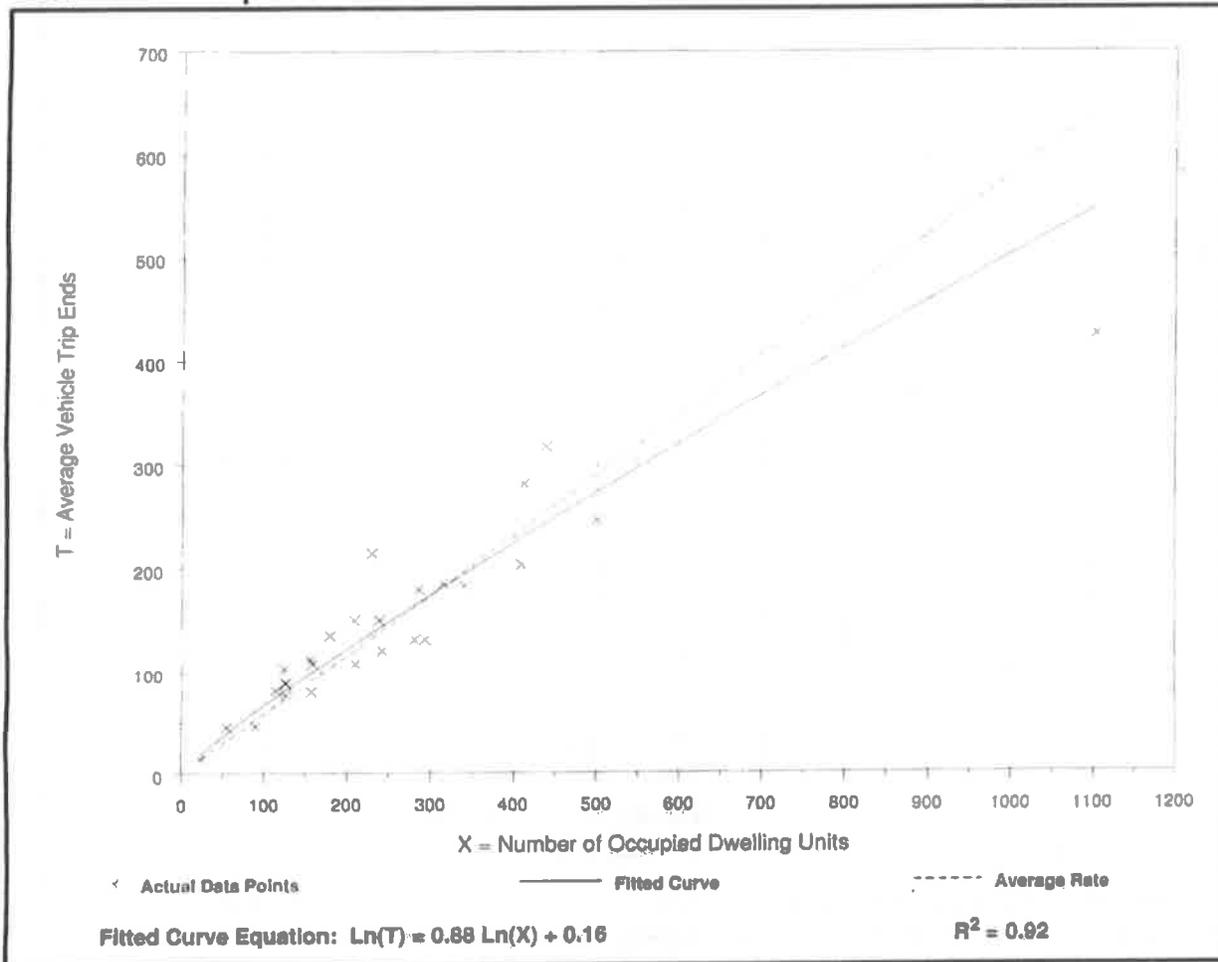

Average Vehicle Trip Ends vs: Occupied Dwelling Units
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 4 and 6 p.m.

Number of Studies: 27
 Avg. Num. of Occupied Dwelling Units: 257
 Directional Distribution: 65% entering, 35% exiting

Trip Generation per Occupied Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
0.58	0.38 - 0.93	0.77

Data Plot and Equation

Senior Adult Housing - Attached (252)

Average Vehicle Trip Ends vs: Dwelling Units
On a: **Weekday**

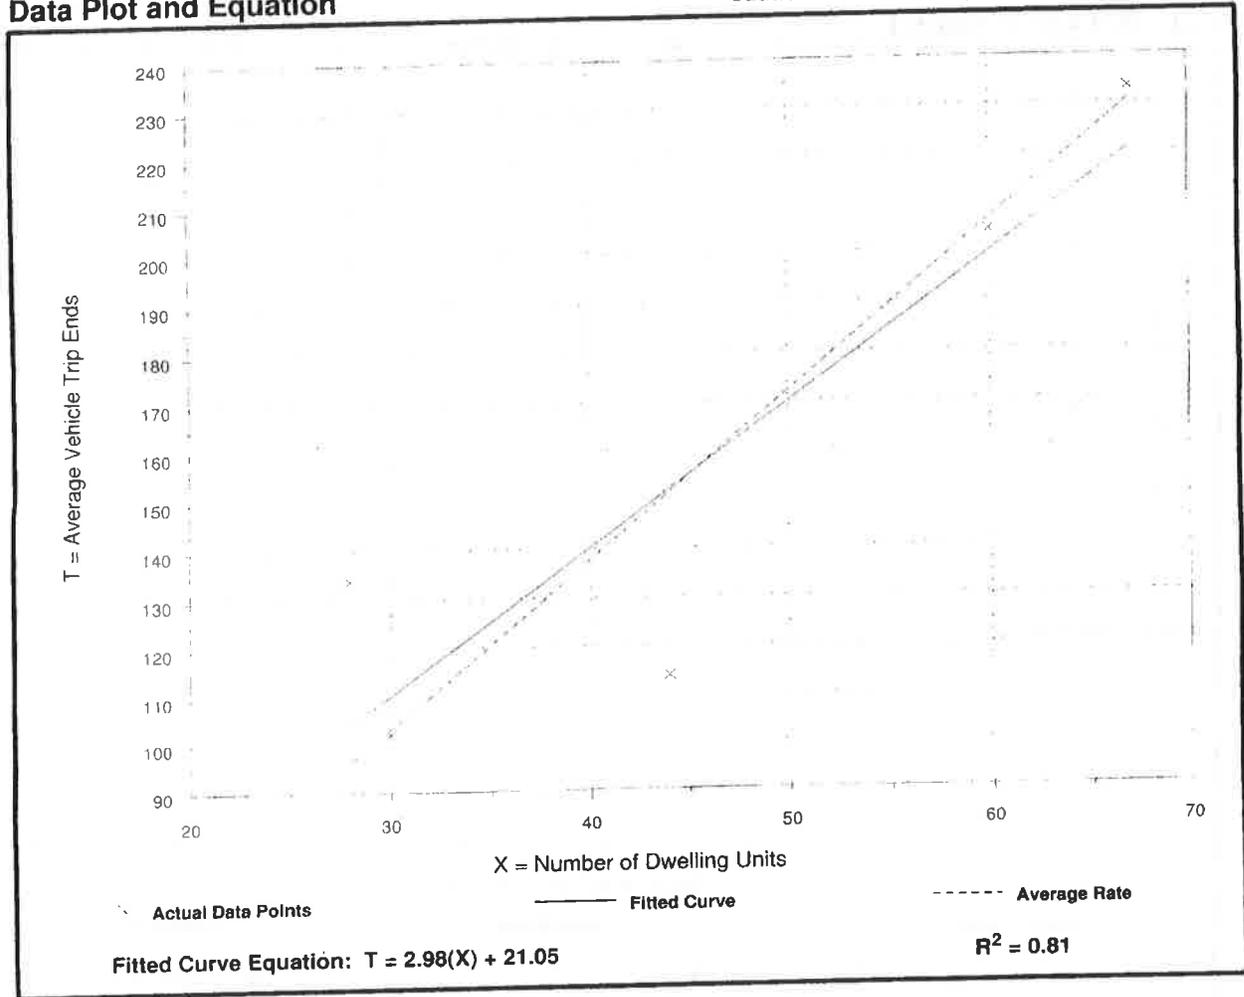

Number of Studies: 5
Avg. Number of Dwelling Units: 46
Directional Distribution: 50% entering, 50% exiting

Trip Generation per Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
3.44	2.59 - 4.79	1.93

Data Plot and Equation

Caution - Use Carefully - Small Sample Size

Senior Adult Housing - Attached (252)

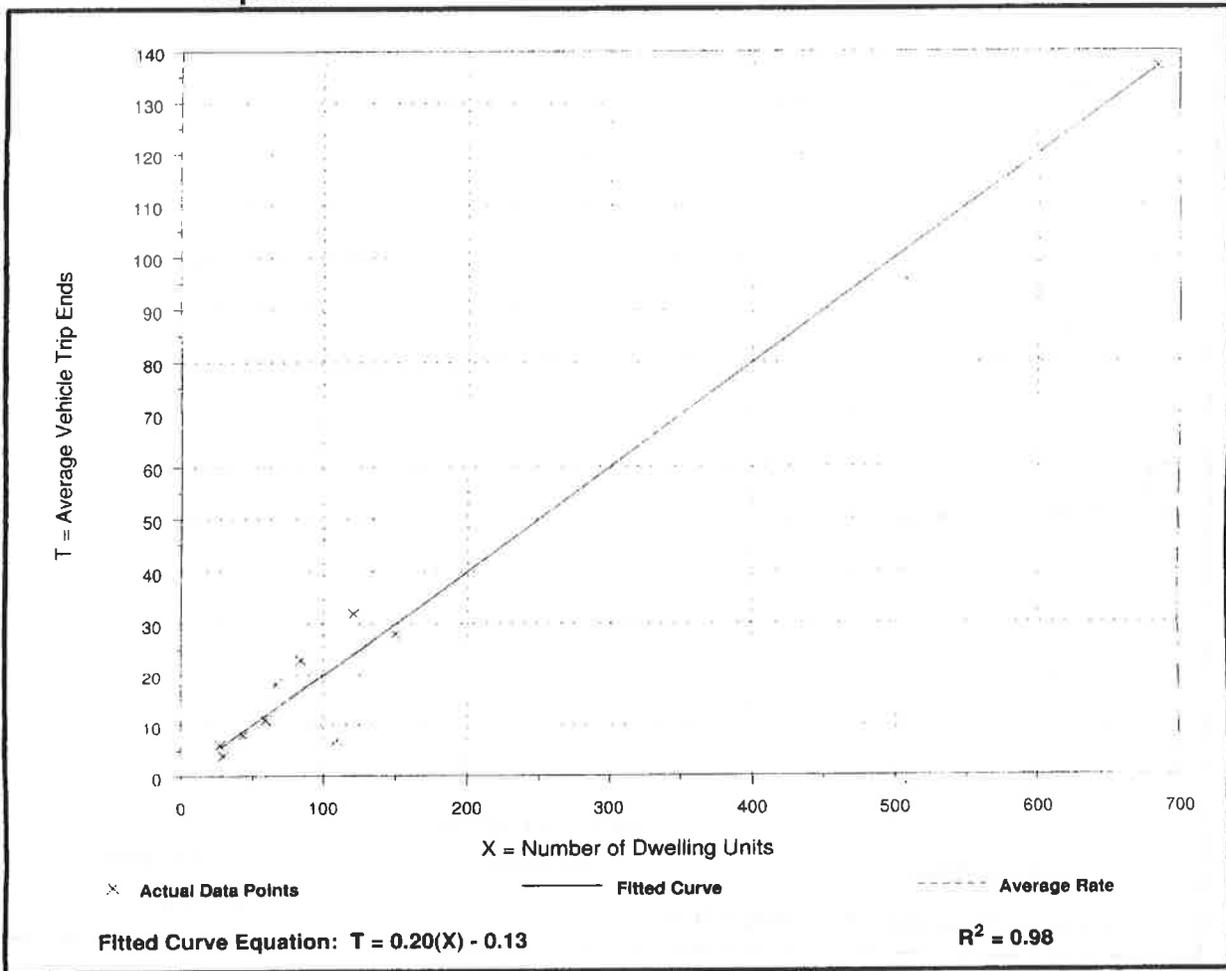

Average Vehicle Trip Ends vs: Dwelling Units
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 7 and 9 a.m.

Number of Studies: 10
 Avg. Number of Dwelling Units: 138
 Directional Distribution: 34% entering, 66% exiting

Trip Generation per Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
0.20	0.06 - 0.27	0.45

Data Plot and Equation

Senior Adult Housing - Attached (252)

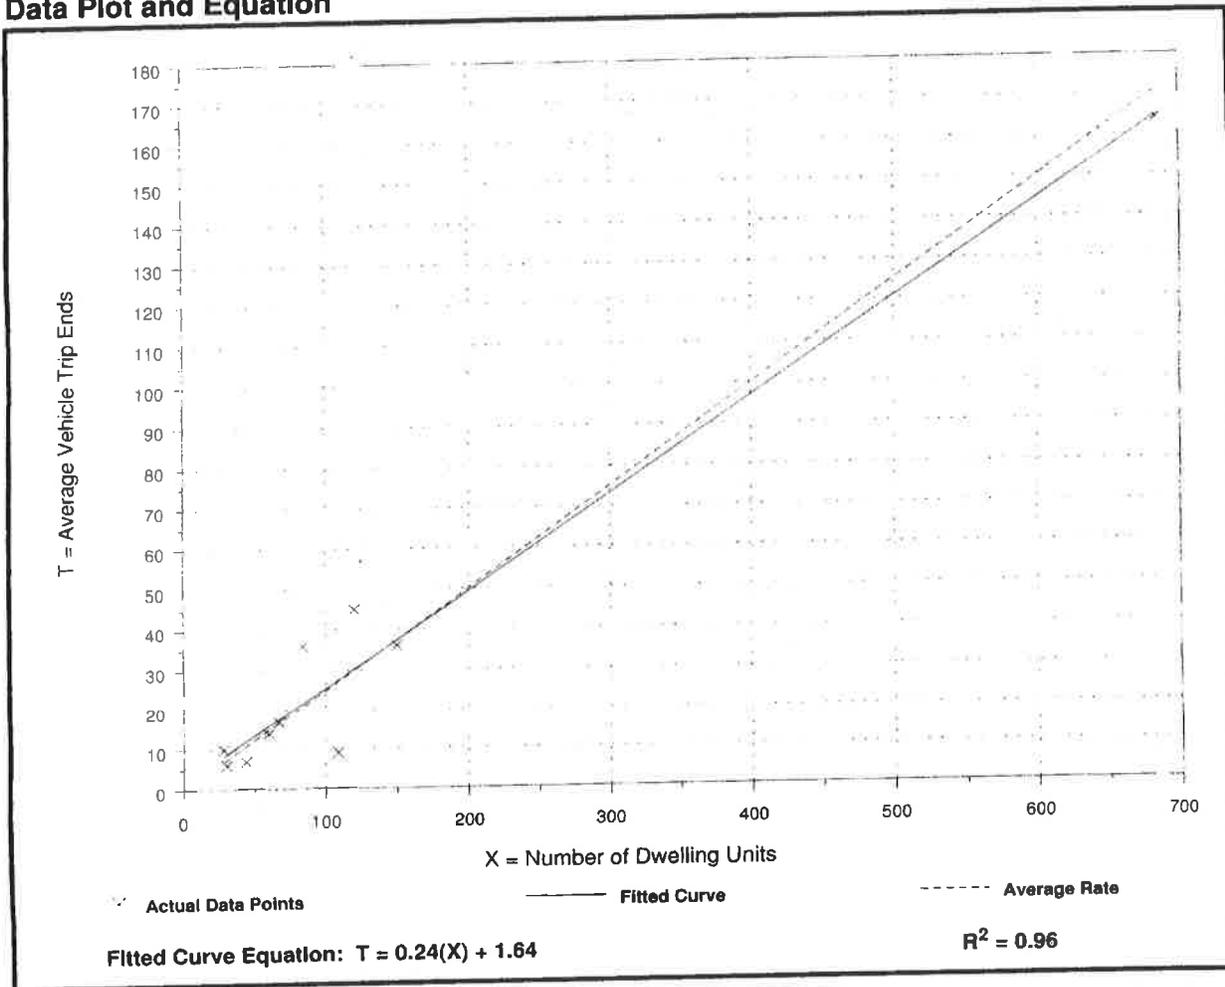

Average Vehicle Trip Ends vs: Dwelling Units
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 4 and 6 p.m.

Number of Studies: 10
 Avg. Number of Dwelling Units: 138
 Directional Distribution: 54% entering, 46% exiting

Trip Generation per Dwelling Unit

Average Rate	Range of Rates	Standard Deviation
0.25	0.08 - 0.43	0.50

Data Plot and Equation

BRIEF GUIDE OF VEHICULAR TRAFFIC GENERATION RATES FOR THE SAN DIEGO REGION

401 B Street, Suite 800
San Diego, California 92101
(619) 699-1900 • Fax (619) 699-1950

APRIL 2002

NOTE: This listing only represents a of average, or estimated, traffic generation "driveway" rates and some very general trip data for land uses (emphasis on acreage and building square footage) in the San Diego region. These rates (both local and national) are subject to change as future documentation becomes available, or as regional sources are updated. For more specific information regarding traffic data and trip rates, please refer to the San Diego Traffic Generators manual.

LAND USE	TRIP CATEGORIES [PRIMARY:DIVERTED:PASS-BY]*	ESTIMATED WEEKDAY VEHICLE TRIP GENERATION RATE (DRIVEWAY)	HIGHEST PEAK HOUR % (plus IN:OUT ratio)		TRIP LENGTH (Miles)*
			Between 6:00-9:30 A.M.	Between 3:00-6:30 P.M.	
AGRICULTURE (Open Space)	[80:18:2]	2/acre**			10.8

* Primary source:

** Other sources: Trip Generation Rates (other agencies and publications), various SANDAG & CALTRANS studies, reports and estimates

¹ Trip category percentage ratios are daily from local household surveys, often cannot be applied to very specific land uses, and do not include non-resident drivers

(draft SANDAG revised November, 1990)

PRIMARY - one trip directly between origin and primary destination

DIVERTED - linked trip (having one or more stops along the way to a primary destination) whose distance compared to direct distance ≥ 1 mile

PASS-BY - undiverted or diverted < 1 mile

¹ Trip lengths are average weighted for all trips to and from general land use site (All trips system-wide average length = 6.9 miles)

^o Filled curve equation: $\ln(T) = 0.502 \ln(x) + 6.945$ } T = total trips, x = 1,000 sq. ft.

^o Filled curve equation: $\ln(T) = 0.756 \ln(x) + 3.950$ }

^o Filled curve equation: $\ln(d) = -2.169 \ln(d) + 12.85$ } l = Trips/DU, d = density (DU/acre), DU = dwelling unit

^o Suggested PASS-BY (undiverted or diverted < 1 mile) percentages for trip rate reductions only during P.M. peak period (based on combination of local data review and other sources**)

Category	Percentage
COMMERCIAL/RETAIL	
Regional Shopping Center	20%
Community	30%
Neighborhood	40%
Specialty Retail/Strip Commercial (other)	10%
Supermarket	40%
Convenience Market	50%
Discount Club/Store	30%
FINANCIAL	
Bank	25%
AUTOMOBILE	
Gasoline Station	50%
RESTAURANT	
Quality	10%
Sit-down high turnover	20%
Fast Food	40%

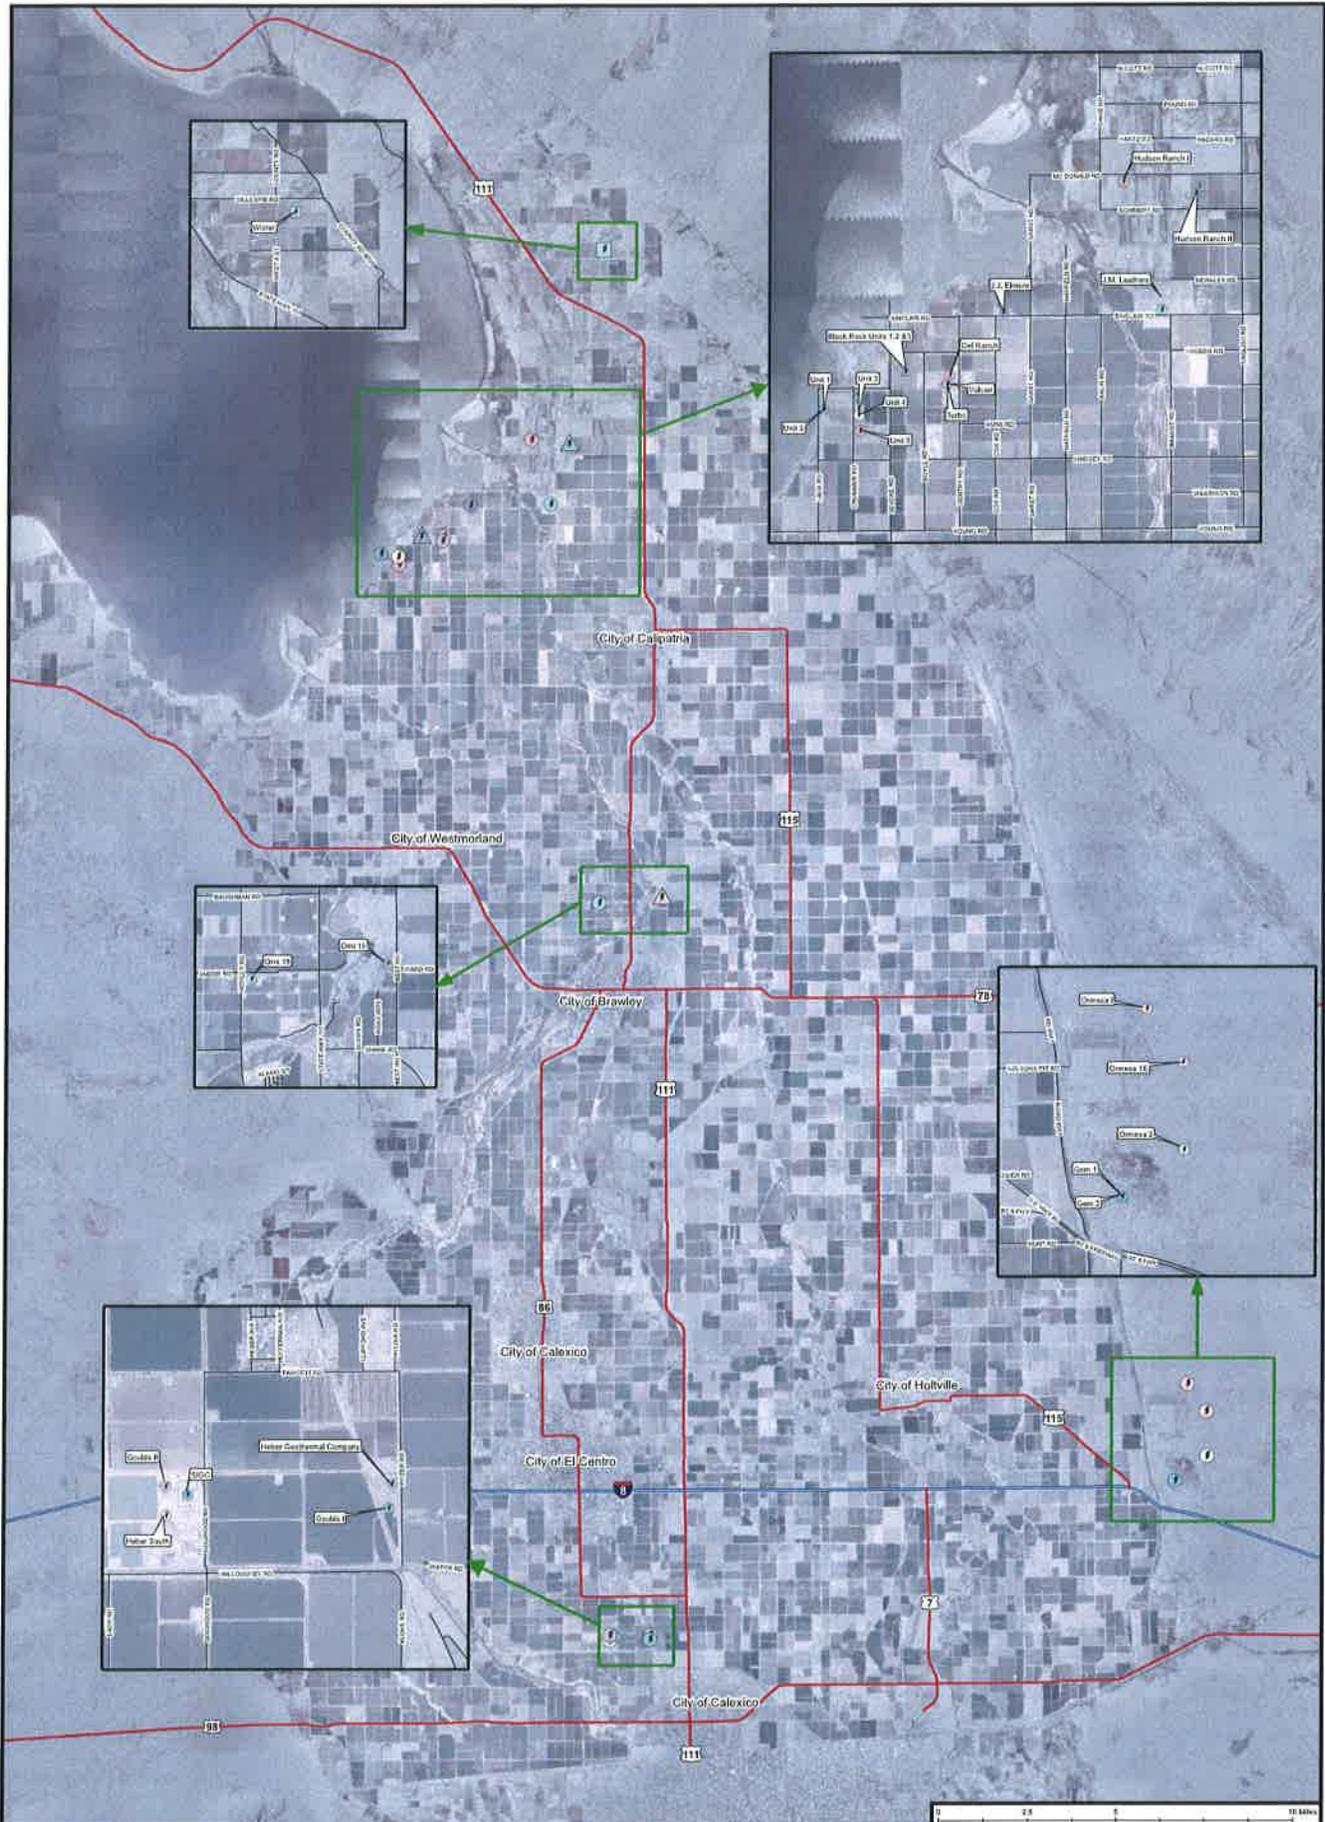

^o Trip Reductions - In order to help promote regional "smart growth" policies, and acknowledge San Diego's expanding mass transit system, consider vehicle trip rate reductions (with proper documentation and necessary adjustments for peak periods). The following are some examples.

[1] A 5% daily trip reduction for land uses with transit access or near transit stations accessible within 1/4 mile

[2] Up to 10% daily trip reduction for mixed-use developments where residential and commercial retail are combined (demonstrate mode split of walking trips to replace vehicular trips)
