SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/13/2018 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WESTINGHOUSE ELECTRI	401 HENDY AVENUE	E 1/8 - 1/4 (0.212 mi.)	0	8

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WESTINGHOUSE ELECTRI	401 HENDY AVENUE	E 1/8 - 1/4 (0.212 mi.)	0	8

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are

individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 19 CA ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

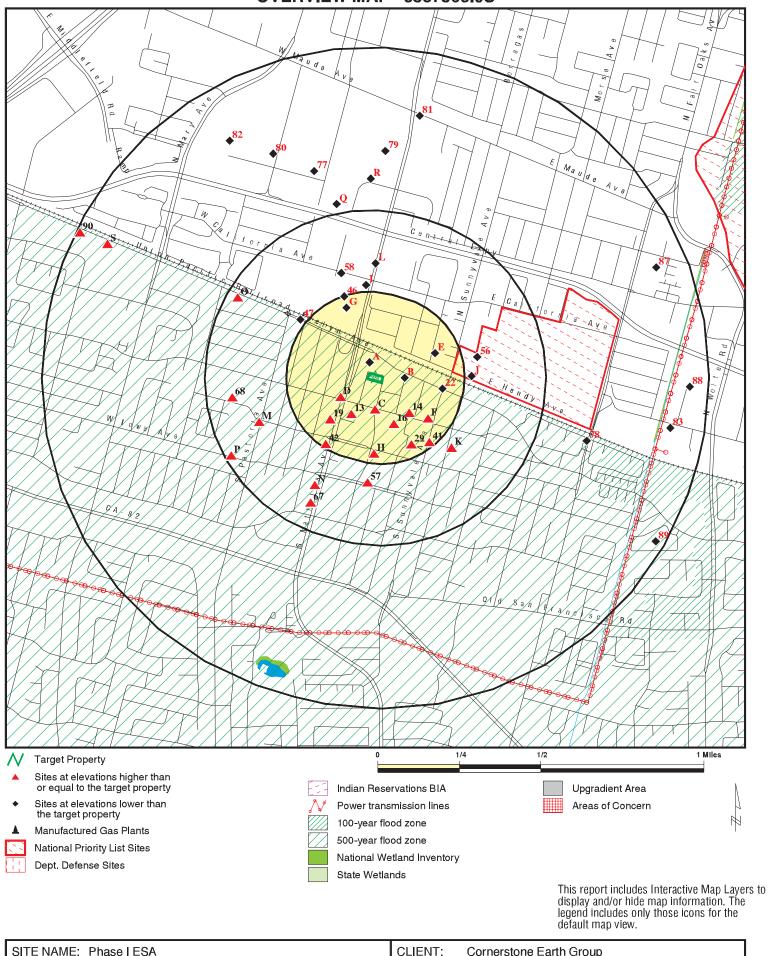

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

MAP FINDINGS

Conditions at proposal October 15, 1984): Westinghouse Electric Corp. formerly manufactured electrical transformers at a plant covering 75 acres in Sunnyvale, Santa Clara County, California. The facility is surrounded by residential, industrial, and business areas. Monitoring wells on the site are contaminated with PCBs and dichloro-, trichloro-, and tetrachloroben ene, according to analyses conducted by a consultant to Westinghouse. Contamination is believed to have resulted from a leaking PCB storage tank and from locali ed spills. About 300,000 people depend on ground water within 3 miles of the site as a source of drinking water. Westinghouse has removed the leaking tanks and is working with the California Regional Water

WESTINGHOUSE ELECTRIC CORP. (SUNNYVALE PLANT) (Continued) 1000413449 Quality Control Board CRWQCB) to determine the extent of soil and ground water contamination. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary.Status June 10, 1986): In July 1985, CRWQCB issued Waste Discharge Requirements to the company for interim measures and a remedial investigation. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

In 1986 two 4,000 gallon and one 2,000 gallon UST were removed. Up to 15 ppm petroleum hydrocarbons were detected in soil. In 1989 a 550 gallon used oil UST was removed. In 1992 MW1 was installed and detected up to 1.3 ppm benzene at a depth of 45 feet bgs. Three additional soil borings were constructed (AA, B, and C) and two more groundwater monitoring wells were installed (MW2, and MW3). Hydrocarbons were detected in each of the borings and in the groundwater sample collected from MW3. In 1994 three off-site monitoring wells were installed (MW4, MW5, and MW6) and two soil

borings were constructed. Hydrocarbons were detected in a groundwater sampled collected from MW4, but were not detected in MW5 and MW6. A test showed that air sparging and soil vapor extraction (SVE) were feasible methods for site remediation. From June 11, to August 29, 1996 an SVE system was operated. Approximately 890 pounds of TPH-g was extracted. The system was shut down due to rising groundwater levels. From June 26, to August 1996 a groundwater extraction system (GETS) was operated. Approximately 5 pounds of TPH-g was extracted. In 1997 groundwater monitoring well MW7 was installed downgradient to monitor shallow groundwater. In 1999 eight borings (B1 through B8) were constructed to evaluate hydrocarbons in the shallow soils and groundwater. The soil sample collected from B1 At 25 feet bgs detected 1,800 ppm TPH-g. Grab groundwater samples were collected. The sample collected from B1 Detected 230,000 ppb TPH-g. In 2000 an extraction well (EW3) was installed in through the former UST excavation and a monitoring well (MW8) was installed near the former excavation. Up to 4,600 ppm TPH-g (27.5 feet bgs) was detected in soil samples collected from EW3. On November 28, 2000 an SVE system began removing vapors from EW3. The system operated intermittently up to August 27, 2003. Approximately 1508 pounds of hydrocarbons were removed. In 2002 four soil borings were constructed (SB1 through SB4), and two groundwater monitoring wells were installed (MW9 and MW10). In 2003 two soil borings (GP1 and GP2) were constructed. Maximum TPH-g soil concentrations were detected at 46.5 feet bgs in GP1 at 8,000 ppm. In October 2004 two groundwater monitoring wells (EW4 and EW5) were installed to a depth of approximately 46 feet bgs. Groundwater samples collected from EW4 and EW5 detected TPH-g at 14,000 and 55,000 ppb, respectively. On September 29, 2004 dual phase extraction (DPE) began operating. Groundwater and soil vapors were extracted from EW3 and MW10 to from September 29, 2004 to October 27, 2004. Groundwater and soil vapors were extracted from EW4 and EW5 from October 29, 2004 to November 10, 2004. Approximately 68.5 pounds of hydrocarbons were removed from the vapor stream. An upgraded DPE system operated from November 21, 2005 to February 7, 2007. DPE was applied to EW3, EW4, and EW5. Approximately 116 pounds of hydrocarbons were removed from the vapor stream. In 2008 two groundwater monitoring wells were installed. TPH-g and BTEX were not detected in soil and groundwater samples.

		collection of soil, soil vapor and groundwater samples. PCE contamination was discovered in the eastern portion of the Site and off-Site, predominantly towards the north-northeast. The contamination is believed to be the result of past releases from the three dry cleaners that were located on the eastern portion of the Site. Low levels of PCE contamination was detected in on-Site soil at

concentrations ranging from 5 to 470 parts per billion (ppb).

Significant PCE contamination was detected in on-Site soil vapor at locations throughout the northeastern parking lot area and around the southeastern parking structure area at concentrations up to 690,000 micrograms per cubic meter ("g/m3). Significant PCE contamination was detected in on-Site shallow groundwater samples collected at 40 feet at concentrations up to 2,270 ppb, and decrease to less than 5 ppb at approximately 115 feet deep. PCE contamination in groundwater has been detected at locations north of Washington Avenue to East Evelyn Avenue. The downgradient extent (to the north) of the PCE contaminated groundwater is not defined. The City of Sunnyvale provides drinking water to the area. Past and recent testing shows no indication that PCE found at the Site has contaminated the City water system. Groundwater monitoring wells have been installed on- and off-Site to help complete the characterization of groundwater contamination, as well as monitor the effectiveness of the groundwater cleanup. Two soil vapor extraction (SVE) systems were installed as an interim remedial measure at the Site in late 2007 and are currently operating. The purpose of each system is to remove PCE-contaminated soil vapor. Concentrations of PCE in soil vapor have decreased significantly since the SVE systems began operating in January 2008. The SVE systems will continue to operate to remove and treat PCE in soil vapor. The proposed interim groundwater cleanup plan consists of cleaning up PCE-contaminated groundwater by a process called dechlorination. Iron filings were injected into the ground using specialized drilling equipment. Iron filings cleanup PCE contaminated groundwater by destroying the chemical through a process called dechlorination. This process progressively removes the chlorine atoms leaving harmless end products. Vegetable oil with naturally occurring bacteria that break down PCE were also be injected into the ground. Vegetable oil provides a food source for the bacteria. These harmless bacteria will cleanup any remaining chemicals not cleaned up by the iron filings, completing the PCE-dechlorination process. In addition to remediating groundwater, this interim groundwater cleanup will help to reduce residual soil vapor contamination by removing PCE in groundwater that may be volatizing into the soil vapor. The SVE systems were shut down in July 2015 for rebound testing. The SVE system was restarted in May 2016.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Northrup Grumman Corp. 9/7/2012 Sunnyvale Department of Public Safety Not reported Yes Storm Drain Not reported Sprinker water with trace petroleum product. 100,000-200,000 Not reported Per the RP: This is a large machine shop. Their sprinkler water comes from their fire suppression ponds. This sprinker system has an underground pipe which broke. Due to the broken pipe water gushed through the building picking up trace amounts of petroleum products that were on the ground and through their processes. This release

entered the storm drain feeds to a body of water that ultimately feed to the San Francisco Bay.

However, in order for the remedy to be protective in the long-term, the planned Land Use Covenants for the main portion of the Site need to be recorded, the source of elevated polychlorinated biphenyls outside the Westinghouse property need to be investigated, and a groundwater remediation system evaluation needs to be conducted.

Surface cracks that were visibly evident on the capping system at the Site were identified as an issue; however, it was noted that it was not affecting the protectiveness of the remedy, but could in the future. Continual cap inspections on a routine basis and repair of areas showing signs of deterioration were recommended. The Five-Year Review Report conclude that the remedy at the Site currently protects human health and the environment because routine cap inspections are conducted, groundwater extraction and treatment continues, and access controls are in place. However, in order for the remedy to be protective in the long-term, deed restrictions, as required by the 1991 Record of Decision should be completed for the Site.	эd

It encompasses approximately 75 acres of land. From 1947 to 1964, Westinghouse operated a production and repair plant for electrical apparatus which contained polychlorinated biphenyl (PCB) fluids as a coolant. Soil and groundwater are contaminated with PCBs as a result of the manufacturing of electrical equipment. High levels of PCBs have been found in soils near a PCB-storage tank, and at shallower depths throughout open areas. The contamination extends to boundary fence lines and to backyards of the residences and other properties along the west boundary. Groundwater is also contaminated near the PCB-storage tank. The project was listed on the Federal Superfund List and U.S. EPA is the lead agency. Please go to http://lustop.sccgov.org/files/06S2W25M01f / A 1,000 gallon waste oil tank was removed on March 8, 2004. A soil sample collected at one foot below the fill pipe contained 14,000 ppm oil and grease and 2,300 ppm diesel. April 2004 - A limited over excavation was performed that extended to a depth of approximately 6 feet below ground surface (bgs). The exact limits and location of the excavation were not reported. 2005 On January 31, 2005, soil borings WT-1 and WT-2 were drilled to a depth of 40 and 35 feet bgs respectively. A soil sample in WT-1 at 40 feet bgs contained 1,300 ppm TPHq, 6,700 ppm TPHd, 4.9 ppm benzene, 48 ppm Toluene, 23 ppm Ethylbenzene, 120 ppm Xylenes, 3.5 ppm 1,1,1-Trichloroethane and 10 ppm tetracholorethene (PCE). On August 30, 2005, monitoring wells MW-1, MW-2, and MW-3 were installed to a total depth of 40 feet and screen intervals from 15-40 feet bgs. Groundwater samples contained 2,600 ppb TPH (a smotor oil) and 380 ppb TPHd. 2008 Beginning in March 2008, free product was detected in well MW-1. Free product thicknesses ranged from 0.34 feet in March 2008 to a maximum thickness of 2.38 feet in September 2008. Product removal during this period was not reported. March 2008 to March 2010, no work was performed. 2010 In March 2010, groundwater samples contained 1, for performed. 2010 In March 2010, groundwater monitoring was resumed and free product was measured in well MW-1 + at a thickness of 0.02 feet. Product was baeled from MW-1. Free p

January 27, 2011 a dual-phase extraction event occurred on-site and removed approximately 8.37 pounds of TPHg (vapor phase) and 0.0633 pounds of TPHg (dissolved phase). 2011 Groundwater monitoring occurred on a semi-annual basis from September 2011 to July 2012. 2012 In March 2012, a risk assessment was performed and concluded that case closure is appropriate based on a low apparent risk to human health or the environment. The risk assessment also concluded that modeling indicates that there is a very unlikely (less than a one in a million risk) to pose a threat to human health/indoor air quality. On July 19, 2012 the most recent groundwater monitoring event occurred. The maximum groundwater concentrations reported during this event were 720 ppb TPHd, 6,800 ppb TPH as oil range organics, 22 ppb R22, and 9.1 ppb PCE at MW-1. In December 2012, DEH reviewed the case against the LTCP. The site does not qualify based on the presence of PCE and vapor intrusion at the site from PCE has not been assessed. Soil vapor samples were collected in February 2013 and were reported to have a maximum PCE concentration of 3,300 micrograms per cubic meter. Also at that time a soil sample collected at 40 feet was reported to have 10 ppm PCE, which exceeds the leaching to groundwater screening level. This is the only soil vapor sampling conducted.

The site has been overseen by the Regional Water Quality Control Board (RWQCB) since May 1982. The main contaminants of concern onsite were trichloroethylene and other volatile organic compounds (VOCs) in groundwater. RWQCB did not hold Zymos responsible for cleanup because it appeared the contamination came from upgradient sources. There has been no documented investigation activity at the site since 1990. Groundwater monitoring data (the most recent from 1990) showed a steady decrease in the concentrations of VOCs in the groundwater. Current Program: History:	County, California. The City of Sunnyvale currently owns the land and has converted it into a city park known as Washington Park, a senior citizens center, a school, and a residential area. Military munitions were produced or demilitarized at this location and therefore may present an explosive hazard. Not reported The site was used as a bivouac area for the army. from February to October 1943. The U.S. constructed buildings required for housing troops to include barracks, latrines, shower facilities, and a mess hall. The army personnel participated in routine military training to include physical training, drill, and classroom work and housed staff and command vehicles of the II Armored Corps. After WWII, the site reverted back to city of Sunnyvale.

These soil samples were composited from multiple depths. 1985 In November, 3 USTs were removed. Soil was excavated and placed onsite for aeration. Following an unknown period of aeration, the soil was reported to have been replaced in the extent of soil and groundwater contamination. In 1992, when the wells were sampled, MW1 was reported to have 0.9-inches of free floating product (FP). FP bailing began at this

time and continued through October 1994. Beginning in April, FP was also measured on the groundwater in well MW3. In June 1993, passive absorbent socks were placed in wells MW1 and MW3 for FP removal. It is not clear when these socks were removed. In August 1993, a soil vapor extraction system began operation onsite. It is believed that the system operated through early 2000 and removed approximately 2,473 gallons of Gasoline. A final remediation report was not found in the file. 2002 In the Corrective Action Plan it states that 2 permeable water-bearing units are present beneath the site, one designated as the A-aquifer that is between about 37 and 43 ft bgs, and another one designated as the B-aquifer that is between about 52 and 60 ft bgs. The B-aquifer is believed to be confined because its piezometric surface is approximately 0.1-0.9 feet higher than that of the A-aquifer. In December 2004, air sparging with soil vapor extraction began onsite and continued through November 2007. Also at this time, periodic groundwater extraction from the source area commenced. The groundwater extraction continued through August 2007. Approximately 54,868 gallons of groundwater were extracted primarily from wells MW6, V1 and V2.

Waste code:

D001 IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name: LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

D002 Waste code: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name: CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

	LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS
	CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE
	FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,
	WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE
	MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT
	WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

	CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A
	CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN
	OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS
	USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN

Comments:	DTSC performed a site screening to determine whether any release of	
	hazardous substances or wastes have occurred at the site that require	
	corrective actions. The site has been overseen by the Regional Water	
	Quality Control Board (RWQCB) since March 1996. The main contaminants	5
	of concern onsite were trichloroethylene; tetrachloroethylene;	
	1,2-dichloroethane; TCA; and freon, chloroform; 1,1-dichloroethene.	
	Philips Electronics assumed full responsibility for meeting all	
	cleanup requirements at the site. RWQCB rescinded its Site orders in December 2015.

RB Case Number:	43S0113	
File Location:	Regional Board	
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil	
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum	
	Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)	
Site History:	The 740 Kifer Road site is located between Fair Oaks Avenue and Wolfe	,
	Road (see site location map). Land use in the area is predominantly	
	commercial and light industrial. Signetics Corporation (Signetics)	
	operated a semiconductor fabrication facility that used volatile	
	organic compounds (VOCs) such as trichloroethylene (TCE) in	
	manufacturing processes at this site from 1970 to 1982. Underground	
	storage tanks (USTs) and two former wastewater neutralization systems	
	were used at the site. Philips acquired Signetics and assumed	
	responsibilities for cleanup per Order No. 97-064 adopted on Mary 21,	
	1997. The site is no longer owned or operated by Philips, and is now	
	occupied by Maxim Integrated Products. The Regional Water Quality	
	Control Board (Water Board) is the lead regulatory agency overseeing	
	soil and groundwater investigation and cleanup activities at this	
	site. Site Investigation: Site investigations began in 1982 to	
	determine the vertical and horizontal extent of the area impacted	
	with VOCs. The investigations found the USTs and two former	
	wastewater neutralization systems were VOC source areas. Groundwate	۶r
	at the site is approximately 8 to 15 feet below the ground surface.	
	In 2014, the maximum TCE groundwater concentration onsite was 44	
	ug/Ldetected, and offsite was 130 ug/L. Offsite TCE concentrations in groundwater have decreased from 35 ug/L in 1986 to 1.7 ug/L in 2014	
	in the furthest distal monitoring well (S110A) located approximately	
	700 feet downgradient of the Sites northern property boundary. There	
	are no locations at the site where groundwater reaches the surface,	
	or can be directly contacted. Shallow groundwater beneath the site is	
	not used for drinking water. The City of Sunnyvale provides drinking	
	water for the site and surrounding areas. Site Cleanup: In 1982, the	
	USTs and impacted soil were removed. Soil samples collected from the	
	excavated areas confirmed that VOC concentrations were below soil	
	cleanup standards. Treatment of impacted groundwater began in 1988,	
	and continued until April 8, 2009 when the system was shut down. The	
	groundwater was pumped from two extraction wells and treated using	
	granular activated carbon. The treatment process has significantly	
	reduced contaminants at the site over the last two decades. The	
	system has been removed. Groundwater monitoring for natural attention	
	was completed between 2009 and 2015, after the groundwater treatmen	t
	system was shut down and removed. The groundwater concentrations w	ere
	monitored regularly using a network of wells, and reports were	
	prepared and submitted annually to the Regional Water Board for	
	review. In December 2015, the Water Board issued Order No.	
	R2-2015-0051, Rescission of Site Cleanup Requirements (Order Nos.	
	96-037 and 97-064). The basis for rescission included the groundwater plume is decreasing and cleanup levels are expected to be achieved	
	within a reasonable time frame. Risk management measures are not	
	necessary, but if the Site is ever re-zoned residential, it is	
	standard practice for a redeveloper of a site with a history of	
	contamination to perform a current soil gas survey, which would	
	inform the developer of any remaining concentrations. Refer to Order	
	No. R2-2015-0051 for more details of rescission. Next Steps: Per the	
	new Order, referenced above, the former groundwater treatment system	
	and monitoring wells owned by the discharger need to be properly	
	removed before this case is closed by the Water Board, to eliminate

Completed Area Name: Completed Sub Area Nar Completed Document Ty Completed Date: Comments:		PROJECT WIDE Not reported Phase 1 Addendum 04/18/2017 DTSC performed a site screening to determine whether any release of hazardous substances or wastes have occurred at the site that require corrective actions. The Regional Water Quality Control Board (RWQCB) has been overseeing investigation and cleanup activities at the site since January 20, 1988. The main contaminants of concern at the site were trichloroethene and other volatile organic compounds in groundwater. RWQCB identified Signetics as the discharger responsible for cleanup in its initial order. Philips acquired Signetics, and RWQCB identified Philips as the discharger responsible for cleanup in subsequent orders. The site was sold and converted into an apartment complex in 1989, and Philips has continued to work with the new owner and RWQCB in performing groundwater remediation.

(see site location map). Currently, land use in the area is predominantly residential. Historically, the site and surrounding area was commercial/industrial. Philips operated a semiconductor fabrication facility that used volatile organic compounds (VOCs) such as trichloroethene (TCE) in manufacturing processes at this site from 1975 to 1984. Underground storage tanks (USTs) were used at the site. The site is no longer owned or operated by Philips, and is now occupied by the Bristol Commons apartment complex. The Regional Water Quality Control Board (Water Board) is the lead regulatory agency overseeing soil and groundwater investigation and cleanup activities at this site since at least 1988. Site Investigation: Site investigations began in 1982 to determine the vertical and horizontal

extent of the impacted area with VOCs. The investigations found the USTs were VOC source areas. Groundwater at the site is located approximately 15 to 20 feet below the ground surface. The current maximum TCE concentration is detected in groundwater offsite at 170 micrograms per liter in well S099A. Historically, the highest TCE concentrations were detected in onsite well S022A. The TCE plume extends approximately 1,000 feet northeast of the site. There are no locations at the site where groundwater reaches the surface, or can be directly contacted. Shallow groundwater beneath the site is not used for drinking water. The City of Sunnyvale provides drinking water for the site and the surrounding areas. Soil gas investigations were completed in 2014 and 2015 surrounding historical high groundwater concentrations detected in onsite well S022A. Site Cleanup: In 1983, the USTs and impacted soil were removed. Soil samples collected from the excavated areas confirmed that VOC concentrations were below soil cleanup standards. Treatment of impacted groundwater began in 1988 and ended March 30, 2009. The groundwater was pumped out from an extraction well and treated using granular activated carbon. The treatment process has significantly reduced contaminants at the site over time. The groundwater concentrations are monitored regularly using a network of wells, and reports are prepared and submitted annually to the Water Board for review. Next Steps: Groundwater monitoring and cleanup activities will continue until groundwater cleanup standards for the site are met. A third vapor intrusion assessment was completed in 2017 to evaluate offsite risks to residents. On December 21, 2017, the Regional Water Board required additional soil vapor intrusion assessment workplan for soil gas and indoor air to evaluate risks to offsite residents based on the results in the December 7, 2017, Soil Gas Investigation Report.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- Groundwater flow direction, and
 Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

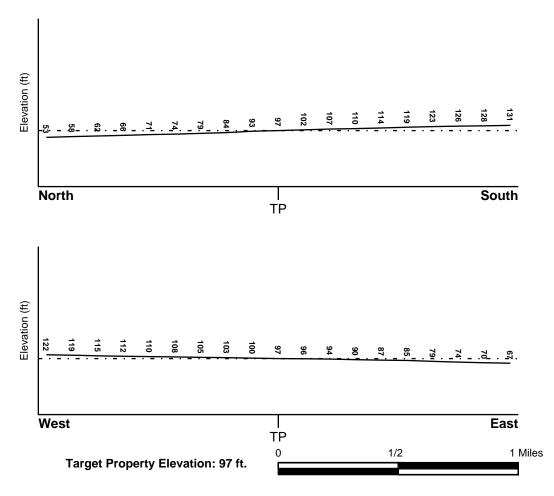

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GENERAL DIRECTION GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

- Surficial Soil Types: No Other Soil Types
- Shallow Soil Types: No Other Soil Types
- Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
