

3. Cumulative Scenario

This section presents the scenario used to determine the cumulative impacts associated with the proposed Project. Cumulative effects are those impacts from related projects that would occur in combination with similar impacts of the proposed Project. To document the process used to determine cumulative impacts, this section provides the CEQA requirements, the methodology used in the cumulative assessment, and the projects identified and applicable to the cumulative analysis. The analysis of cumulative impacts is presented within each issue area section.

3.1 Introduction

Preparation of a cumulative impact analysis is required under CEQA. CEQA identifies three basic types of potential impacts: direct, indirect, and cumulative. “Cumulative impact” is the impact on the environment that results from the incremental impact of the proposed Project when considered with other past, present, and reasonably foreseeable future actions regardless of which agency or person undertakes such other actions. Cumulative effects can result from individually minor but collectively significant actions taking place over time.

Both CEQA and the State CEQA Guidelines require that cumulative impacts be analyzed in a SEIR when the resulting impacts are cumulatively considerable and, therefore, potentially significant. The discussion of cumulative impacts must reflect the severity of the impacts, as well as the likelihood of their occurrence; however, the discussion need not be as detailed as the discussion of environmental impacts attributable to the project alone. Further, the discussion is intended to be guided by the standards of practicality and reasonableness. As stated in Public Resources Code Section 21083(b), “a project may have a significant effect on the environment if” the “possible effects of a project are individually limited but cumulatively considerable.”

According to Section 15355 of the State CEQA Guidelines:

“Cumulative impacts” refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts.

- (a) The individual effects may be changes resulting from a single project or a number of separate projects.
- (b) The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

Further, according to State CEQA Guidelines Section 15130 (a)(1):

As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.

In addition, as stated in State CEQA Guidelines Section 15064(h)(4) it should be noted that:

The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable.

Therefore, the cumulative discussions in a SEIR focus on whether the impacts of the project under review are cumulatively considerable within the context of impacts caused by other past, present, or future projects. The determination of whether an impact is cumulatively considerable takes into consideration the severity and likelihood of the impact as well as the magnitude of the project's contribution to the cumulative impact. In some circumstances, even a minor project effect can make a substantial contribution to a cumulative impact, meaning that as a cumulative impact becomes more acute, even a small individual contribution to that impact can be considered cumulatively considerable. Cumulative impact discussions for each issue area are provided in the respective sections.

3.2 Methodology

The area within which a cumulative effect can occur varies by resource or issue. For example, air quality impacts tend to disperse over a large area, while traffic impacts are typically more localized. For this reason, the geographic scope for the analysis of cumulative impacts must be identified for each issue area.

The analysis of cumulative effects considers a number of variables, including geographic (spatial) limits, time (temporal) limits, and the characteristics of the resource being evaluated. The geographic scope of each analysis is based on the topography surrounding the proposed Project and the natural boundaries of the resource affected, rather than jurisdictional boundaries. The geographic scope of cumulative effects will often extend beyond the scope of the direct effects, but not beyond the scope of the indirect effects of the proposed Project. In addition, each project (see Table 3-1), has its own implementation schedule, which may or may not coincide or overlap with the proposed Project's schedule.

Cumulative impacts evaluated in this SEIR would likely represent a "worst-case" scenario for the following reasons:

- Not all of the related projects will be approved and built. It is also possible that related projects will not be constructed or opened until after the proposed Project has been built;
- Some related projects may be completed prior to the initiation of proposed Project construction; and
- Related projects would likely be, or have been, subject to unspecified mitigation measures, which would reduce potential impacts.

The analysis focuses on addressing the following: (1) the area(s) in which the effects of the proposed Project would occur (i.e., the geographic scope); (2) the effects that are expected in the area(s) from the proposed Project; (3) past, present, and reasonably foreseeable future projects that have or that are expected to have impacts in the same area; (4) the impacts or expected impacts from these other projects; (5) and the overall impact(s) that can be expected if the individual impacts are allowed to accumulate.

3.3 Relevant Cumulative Projects

For preparation of the cumulative projects list, the County of Santa Barbara and the City of Lompoc provided a current list of projects within their respective jurisdictions. The SEIR preparers also attempted to ascertain whether any cumulative projects are planned on Vandenberg Air Force Base, but were unable to identify any such projects. Other relevant previously prepared documents were consulted to ensure completeness of the cumulative project list, presented in Table 3-1 below. The locations of these projects are shown in Figure 3-1.

Table 3-1. Cumulative Projects Scenario

Map Key Number	Case No. / Project No.	Project Name	Assessor Parcel Number(s)	County Area	Description	Status	Use Type
County of Santa Barbara							
1	03DVP-00000-00041	Santa Barbara Ranch	079-160-067	Gaviota Coast	<p>Equestrian facilities and agricultural support buildings encompassing a 13,421-square-foot horse barn, 547-square-foot ranch office, and equipment storage building of 5,530 square feet.</p> <p>Public facilities including an access roadway to a 30-space public auto and horse trailer parking area, public use horse stalls, 423-square-foot public restrooms, and picnic areas with covered tables.</p> <p>Includes 16 SFDs in 03DVP-00041 and five SFDs in 08CDP-00098 – 08CDP-00101. 08DVP-00024 includes the other 50 SFDs in Santa Barbara Ranch.</p>	In process	Ag Development (Excluding wineries)
2	06CDH-00000-00038	Paradiso Del Mare Ocean Estate New SFD	079-200-004	Gaviota Coast	<p>SFD and potable and reclaimed water lines (two separate lines) up to 12 inches in diameter and more than one-half mile in length.</p> <p>(06CDH-00038 = parent case with one residence. 06CDH-00039 = second residence. 07CUP-00065 = water lines.)</p>	Approved	Residential
3	06CDH-00000-00039	Paradiso Del Mare Inland Estates New SFD	079-200-008	Gaviota Coast	1 Residence	Approved	Residential
