SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 21 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

date9: 6/21/2001

CA SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA SLIC list, as provided by EDR, has revealed that there are 11 CA SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 7 CA UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 3 CA HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

VIKING TECHNOLOGY INC (Continued) **1000257051**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013293186

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 6556

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 94380

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

Completed Date: 11/05/2015
Comments: The First Amendment to Agreement for Facility-Initiated Corrective Action adds a Land Use Covenant and associated public notice to the scope of work of the original agreement.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Acknowledgement of Satisfaction
Completed Date: 05/20/2016
Comments: The Land Use Covenant recommended by the Final Preliminary Endangerment Assessment report, approved by DTSC on September 21, 2015, was executed and recorded with Santa Clara County. DTSC determined and conveyed in a May 13, 2016 letter to the property owner/proponent that no further action is necessary with respect to the investigation and remediation of hazardous substances or wastes at the Elcon Precision facility, with the exception of the compliance with the requirements and restrictions of the Land Use Covenant. An Acknowledgment of Termination and Satisfaction was fully-executed on May 20, 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 05/06/2016
Comments: The Land Use Covenant was recorded with Santa Clara County on May 6, 2016 and restricts sensitive uses on the site and requires a Soil Management Plan approved by DTSC if the soil is disturbed.

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

related to the project. The RPs will pay all costs associated with remedial investigations and cleanup activities.

Site Description: A solvent recycler has operated at this site since about 1972. Extensive contamination of soil, shallow ground water and potential deep aquifer contamination exist due to releases of spend solvents and other chemicals. This site was formerly known as Berryessa Road, San Jose.

Hazardous Waste Desc: Volatile organic compounds are the primary contaminants of concern. A "petroleum channel" has been discovered on one corner of the property where offsite contamination has been discovered.

Threat To Public Health & Env: Ground water contamination and its potential effect on drinking water supplies is the primary threat to public health. Approximately 22 wells are registered with Santa Clara Valley Water District within a one-half mile radius of the site. Three domestic wells are perforated in zones likely to be affected by onsite contamination. However, that aquifer has recently been demonstrated to be uncontaminated.

Site Activity Status: Remedial investigations and interim measures have been occurring at the site since 1983. The RP has prepared a "screening" FS and implemented a steam injection/vapor extraction pilot study for soil heavily contaminated with solvents. Low temperaturethermal stripping pilot test apparatus and a ground water treatment system using air stripping, carbon filtration and biotreatment are being constructed. The plume of ground water contamination has been essentially contained and the extent of soil contamination delineated. After evaluation of pilot tests, a FS will be prepared and a RAP developed and implemented.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

CLEAN HARBORS SAN JOSE (Continued) **1000430269**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 655794

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Potential Contaminants of Concern:	1,4-Dioxane, Acetone, Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Xylene, * * CHLOROMETHANE, * * CIS-1,2-DICHLOROETHYLENE
Site History:	Clean Harbors currently owns and operates the waste-chemical storage, treatment, and recycling facility at the Site. The facility has been in operation since 1975 under several different owners including Solvent Services Company (now dissolved) and Safety-Kleen Corporation (currently in bankruptcy). Clean Harbors purchased the Site in 2002. Plume/Contaminant Description: Extremely high concentrations of VOCs (1,500,000 ppm) and 23,000 ppb of 1,4-dioxane in the groundwater, Soil Description: Extremely high concentrations of VOCs and 1,4-dioxane in the soil underneath the facility. The extent of soil

and groundwater pollution has been fully defined. In January 2008 the Source Area Feasibility Study was submitted to the RWQCB. This study evaluated the feasibility of several remedial technologies and concluded that in-situ biological remediation using in-situ bioreactors (ISBRs) was the preferred remedy for the source area. Cleanup actions taken at the Site include 1) removal of all underground storage tanks and associated soil, 2) operation of a steam injection and vapor extraction system, 3) operation of a groundwater extraction system using wells and trenches, 4) operation of an in-situ bioremediation system in May 2013 The HVAC system at the office building has been modified to mitigate the VOCs that were detected in indoor air testing conducted in April 2015. Indoor air samples collected in August 2015 and March 2016 indicate that the potential risk has been mitigated by operating the HVAC. Additional indoor air testing is required.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site History:	The site is located at 1020 Berryessa Road and currently operates as a Chevron Bulk Fuel Terminal. The terminal facility covers approximately 10 acres and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. The current site configuration is shown on the site plan. The fuel terminal, in operation since the mid-1960s, is used as a transfer station distributing motor fuel and jet fuel throughout the San Francisco Bay Area. The facility receives refined petroleum-hydrocarbon products from the Chevron Richmond Refinery by pipeline. This site is related to two separate cases under the Site Cleanup Program (CASE #: 2189.8309) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Site Cleanup Program case can be found at: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id= SL374291196

Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, Gasoline, Heating Oil / Fuel Oil, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The site is an operating Chevron bulk fuel terminal and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. Since the mid-1960s, the bulk fuel terminal has been in operation as a transfer station for the distribution of vehicular and jet fuels. The facility receives refined petroleum hydrocarbon products via pipeline from the Chevron refinery in Richmond, California. The products are stored at the bulk fuel facility in above ground storage tanks, and are subsequently distributed from the facility by tanker trucks to various locations. Several spills and leaks were reported for this site between February, 1984 and July, 1986. Reports of these spills and leaks were based on observation or detection of hydrocarbons (I--ICs) in soil and groundwater monitoring wells. The storage tanks and oil water separators may be sources for the leaks. Site Cleanup requirements were adopted for this site in January 1990. The Order included tasks for onsite investigation and remediation, offsite investigation and remediation, and final cleanup for both onsite and offsite. Investigation of the extent of the problem and installation of onsite interim remedial actions has been ongoing. This site is related to two separate cases under the Leaking Underground Storage Tank (CASE #: 43-0021) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Leaking Underground Storage Tank case can be found at: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id= T0608500093

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Date: 02/07/2014
Comments: A series of subsurface investigations and limited remedial work was performed at the site from 2005 to 2008. Because the site development was put on hold due to real estate economic conditions, data evaluation and reporting was not performed. The Site Status Update was submitted prior to preparing the Preliminary Endangerment Assessment Report in order to obtain a determination from DTSC on whether additional sampling was needed. The Site Status Update summarized sampling activities performed as part of the Preliminary Endangerment Assessment investigation and presented a synopsis of the sample analytical data. DTSC identified additional areas where sampling was needed in the letter it sent in response.

Completed Date: 12/15/2015
Comments: The soil vapor report presents the results of soil gas sampling at three locations along the northeastern site boundary that was performed to assess the lateral extent of tetrachloroethylene (PCE) in soil gas. The sampling showed that the PCE in soil gas does not extend to the northeastern site boundary. PCE and other volatile organic compounds were not detected, except at one location where PCE was detected at a concentration of 4.2 micrograms per cubic meter, which was below the residential screening level of 480 micrograms per cubic meter

Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 12/16/2016
Comments: The Soil Management Plan this SMP provides the environmental protections for the planned multifamily residential development of the Site, including excavation to remove soils with elevated hexavalent chromium in the vicinity of soil sample location SB-36, collection of additional samples to further characterize nickel concentrations in soil in the vicinity of soil sample locationsSB-36 and SB-37, and management of potential construction worker exposure to volatile organic compounds (VOCs) in areas with potentially-affected soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Workplan
Completed Date: 04/14/2017
Comments: The Work Plan describes additional sampling to be performed to characterize the residual volatile organic compounds (VOCs) in soil gas within an affected area that was identified during previous Site investigations. The soil gas sampling results will be used to assess whether there remains an unacceptable risk to human health via the vapor intrusion pathway and whether the residential buildings that are to be constructed in the VOC-affected area require a vapor intrusion mitigation system as recommended by the Preliminary Endangerment Assessment Report.

Completed Document Type: Land Use Restriction
Completed Date: 09/21/2017
Comments: The Land Use Covenant was recorded with Santa Clara County and includes restrictions on the type of residential land use on the Site. A portion of the Site has soil vapor impacted with volatile organic compounds, primarily tetrachloroethene. This portion of the Site is identified in the Covenant as the VOC-Affected Area and there is a restriction in the Covenant that no structures may be built on this area without a vapor intrusion mitigation system approved by DTSC.

Completed Date: 10/21/1988
Comments: Completed SI. In August 1986, while transferring solvent from one subsurface underground tank to another, about 260 gallons solvent (Hi Sol #10) spill occurred in the underground storage tank (UST) farm. The subsequent investigation found levels of total hydrocarbons in the soil (7600 ppm) at the site and in the groundwater (56 ppb) below the site. SF Regional Water Quality Control Board (RWQCB) issued Cleanup and Abatement Order (CAO) No. 87-004 to Dap. Starting in August 1988, seven USTs and contaminated soil were removed. The soil analyses results showed ethyl benzene (5 to 14 ppb), 1,4-dichlorobenzene (15 ppb), toluene (0.8 to 20 ppb) and xylene (15 to 150 ppb).

Comments: Completed Site Screening. In August of 1989, three underground storage fuel storage tanks were removed under the supervision of the San Jose Fire Department. Soil discoloration was observed. Eight soil

samples detected elevated levels of total petroleum hydrocarbons as gasoline (TPHg); total petroleum hydrocarbons as diesel (TPHd); and benzene, toluene, ethylbenzene, and total xylenes (BTEX). The contaminated soil was excavated and disposed offsite. Residual levels are below residential screening levels.

Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1E33H01f
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, Gasoline
Site History: Site history based on conclusions and recommendations in the March 30, 2102, Site Conceptual Model Report: The chemicals of concern (COCs) for the case appear to be limited to TPHd, TPHg, BTEX, and MTBE. Of these compounds, the release appears to be predominantly TPHd with low concentrations of TPHg and trace levels of MTBE and benzene within source area soils and groundwater. Overall, the site investigations to date have characterized the subsurface lithology and COC impacts associated with the release, except for the areas down-gradient of boring EB-6, cross-gradient boring EB-4, and in the area near the former USTs adjacent to the existing site building. Therefore, data gaps remain in the understanding of the subsurface lithology and COCs in these areas associated with the release resulting in an unknown hazard risk for occupants of the site building and off-site residences from breathing MTBE-vapor associated from vapor intrusion from impacted groundwater and soil. These data gaps should be addressed by the installation of up to three direct-push borings, and the collection of soil, groundwater, and/or soil gas samples from the borings. One step-out boring is proposed to be drilled to a depth of 25 feet bgs approximately 35 feet west of

SAN JOSE CRANE & RIGGING (Continued) **S101482292**

boring EB-4. Grab water samples collected from this boring should be tested for TPHd. A second 25 feet deep step-out boring is proposed 40 feet northwest of EB-6. Groundwater samples collected from this boring should be tested for MTBE. Soil gas samples should also be collected from approximately five feet bgs from the step-out boring northwest of EB-6, and from a boring adjacent to the site building near the former USTs. The soil-gas samples should be tested for MTBE. The soil-gas concentration data can be compared to soil-gas concentration criteria (criteria with and without a document bio-attenuation zone beneath the site) to determine if the fuel-release case may pose an unacceptable risk to occupants of the site building and off-site residences (breathing hazard from vapor intrusion). A discussion with the CCDEH representative should be made before future work is performed, and a work plan should be prepared and approved by the SCCDEH to document the proposed work scope.

Completed Date: 04/28/2016
Comments: The RCRA Facility Investigation (RFI) report documents the results of an investigation that was performed to determine the nature and extent of releases of hazardous waste or constituents from formerly permitted units, solid waste management units, and other source areas. Soil and groundwater were found to be contaminated with pesticides, total petroleum hydrocarbon, volatile organic compounds (VOCs), and metals. VOCs in soil gas were found in limited areas of the Site. The data gathered during the RFI will be used to prepare a Corrective Measures Study report that will evaluate corrective measures alternatives for the Site.

Completed Document Type:	Monitoring Report
Completed Date:	04/07/2016
Comments:	The quarterly groundwater monitoring data were consistent with the previous quarters. However, one observation was made in wells MW-4 and MW-5 that some of the constituents in the analytical results do not meet the Data Quality Objectives. If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

ULTRA-CHEM/ALL-CHEM/SCOTT INTERPRISES (Continued) **S109467291**

Comments:	The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Document Type:	Community Profile
Completed Date:	08/31/2016
Comments:	The Community Profile describes community demographics and land uses and documents the results of a community survey that was mailed out to determine the potential concerns that the community has or might have regarding health risks and cleanup at the site. It describes anticipated public participation activities. Recommended activities include publishing a notice of the draft Removal Action Workplan, providing a public comment period of 30 days, holding a public meeting if necessary, and preparing a response to public comments.

Completed Document Type:	Monitoring Report
Completed Date:	12/15/2016
Comments:	The report presents the results of groundwater sampling from 13 monitoring wells across the Site on September 7 and 8, 2016. This was the tenth groundwater sampling event and the first semi-annual sampling event for the Site with the current monitoring well network. The results were consistent with the previous monitoring results.

Completed Date:	07/05/2017
Comments:	The Semiannual Groundwater Monitoring Report presents the results of the March 2017 sampling event. The groundwater results were consistent with the previous sampling events. Groundwater elevations in both the A-zone and B-zone monitoring wells had increased from the previous sampling event in September 2016.

Completed Date:	12/10/2015
Comments:	The Remedial Investigation (RI) Report was prepared pursuant to the Imminent and Substantial Endangerment and Remedial Action Order issued to the former Moyer Chemical Company (previous owner) and San Jose Concrete Transfer Company (current owner). The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. No volatile organic compounds (VOCs) were detected in soil vapor above any regulatory screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Removal Action Workplan will be prepared to address the contamination at the site.

Completed Date:	11/14/2016
Comments:	The Final Removal Action Workplan (RAW) addresses soil and groundwater impacted with metals, pesticides, volatile organic compounds, and total petroleum hydrocarbons (TPH). The selected removal action includes capping the contaminated soil, TPH free product removal, institutional controls, and groundwater monitoring. Field activities are scheduled to begin in the spring 2017.

MOYER CHEMICAL (Continued) **S111842224**

Completed Date: 04/07/2016
Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, an observation was made that there were constituents in the analytical results for well SJMW-4 that did not meet the Data Quality Objectives (screening values, e.g. benzene, ethylbenzene etc.). If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Document Type: Phase 1
Completed Date: 02/13/2012
Comments: The Phase I Environmental Site Assessment was performed on the property in January/February 2012. Operations have included Moyer Chemical and Diamond Alkali Chemical from 1953 through the mid 1960s as pesticide manufacturers, Howard Electric, Inc. from the mid 1960s to late 1980s, and San Jose Concrete Pipe Company from the late 1980s to present. From the file and record search and based upon the historical uses, the property may have contributed to the contamination to soil or groundwater in the surrounding area and the report recommended collection of soil and groundwater samples for the property.

Completed Document Type:	Technical Report
Completed Date:	08/12/1997
Comments:	The Report describes a Preliminary Site Assessment that was conducted on the Site on July 16, 1997. Work included advancement of five soil borings, completion of three groundwater monitoring wells, and collection and chemical analysis of soil and groundwater samples. The work was conducted in accordance with a work plan approved by the Santa Clara Valley Water District. The Report concluded that there were minimal subsurface impacts, no further action at the Site was warranted, and recommended a request for case closure be submitted to the Santa Clara Valley Water District.

Comments:	Originally, Cristina Warehouse operated as a storage facility for hazardous materials. In 1980, Cristina Warehouse submitted a Part A hazardous waste storage permit application to the U.S. Environmental Protection Agency (EPA). Due to economic reasons, Cristina Warehouse withdrew the Part A application and discontinued storing hazardous materials/wastes. In August 1987, the Department of Health Services, Toxic Substances Control Division notified Cristina Warehouse that its operation was no longer regulated as a treatment, storage or disposal facility under State law and regulations as authorized by EPA according to the provisions of the Resources Conservation and Recovery Act and its interim status document was rescinded. Two underground storage tanks, a 550-gallon gasoline tank and a 5,000 gallon diesel tank, were removed from the Site in 1988. On February 23, 1999, Santa Clara Valley Water District issued a Fuel Leak Site Case Closure letter. Based on the documentation found and reviewed during this site screening, DTSC has determined that no further action is needed for the Site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

SAN JOSE FLEA MARKET

SAN JOSE, CALIFORNIA

1.0 INTRODUCTION

1.1 Purpose

This Phase I environmental site assessment was performed for Flea Market Inc., who we understand is considering the redevelopment of the site located at 1590 Berryessa Road, shown on Figures 1, 2, and 3. The planned development includes a mixture of residential, retail, commercial, office/industrial facilities, including a school, parks, a BART station, and associated parking.

The purpose of this study was to strive to document recognized environmental conditions at the site related to current and historic use of hazardous substances and petroleum products. The term "recognized environmental conditions" means the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate a significant release or significant threat of a release into the ground, ground water, or surface water.

1.2 Scope of Work

As requested, the scope of work for this study was performed in general accordance with the American Society for Testing and Materials (ASTM) Designation E 1527-00 as outlined in our agreement dated February 10, 2005. The scope of work included the following tasks.

- Reconnaissance of the site and limited drive-by survey of adjacent properties for readily observable indications of current or historic activities that have impacted or could significantly impact the site.

- Review of readily available topographic maps and reports to evaluate local hydrogeologic conditions including anticipated ground water depth and flow direction.

- Review of readily available documents, maps, and aerial photographs, and interviews with knowledgeable persons to evaluate past land uses.

- Acquisition and review of a regulatory agency database report to evaluate potential impacts to the site from reported contamination incidents at nearby facilities.

- Review of available regulatory agency files to obtain information about the use and storage of hazardous materials at the site.

Our scope of services did not include sampling or analysis of on-site building materials, air, soil, or ground water. The limitations of this Phase I environmental site

assessment are presented in Section 6.0; the terms and conditions of our agreement are presented in Appendix A.

2.0 SITE RECONNAISSANCE

2.1 Site Location and Ownership

The site is located at 1590 Berryessa Road and 1411 Mabury Road in San Jose, California, in a commercial/light industrial area. The site is bounded by residential development to the north and northwest; commercial and light industrial development to the south, west, and southwest; Coyote Creek to the west and southwest; a Union Pacific Railroad spur and City of San Jose service yard to the southeast; Union Pacific Railroad tracks and two industrial parks to the southeast and east; and commercial/light industrial businesses to the north and northeast. Berryessa Road extends from the southwest to the northeast through the proposed site. Upper Penitencia Creek crosses the site from northeast to southwest and parallels to Berryessa Road. Site location and ownership information is shown in Table 1.

Table 1. Site Information

2.2 Topographic Features and Hydrogeology

Based on U.S. Geological Survey (USGS) topographic maps, the site's elevation is approximately 80 feet above mean sea level. Topography in the vicinity of the site is variable, but generally slopes gently to the west toward Coyote Creek. Based on ground water data obtained during on-site underground storage tank (UST) closure activities, the shallow water-bearing zone likely is encountered at depths of approximately 5 to 15 feet. Ground water beneath the site reportedly flows to the southwest (The Flea Market, Inc. 1993; SCVWD 1996).

2.3 Site Visit

To observe current site conditions, our representative, environmental engineer Belinda Blackie, visited the site on March 4, 2005 and was accompanied by Mr. Brian Bumb, president and general manager of The Flea Market. At the time of our site visit, the subject property was developed with "The Flea Market" grounds and two associated surface parking lots.

2.3.1 Parking Lots

Parcels 241-04-006 and –007 and parcel 354-17-095 were asphalt-paved surface parking lots for The Flea Market at the time of our reconnaissance (Figure 2). The parking lots were fenced, and entrance tollbooths were present on the northern parking. An under crossing beneath Berryessa Road was observed to connect the northern parking lot to The Flea Market proper. Minor staining of the asphalt surface of the parking lots was observed.

2.3.2 Flea Market - Merchandise Sales Area

Parcels 254-17-007, -052, -053, and –084 comprise the flea market portion of the site (Figure 2). The Flea Market is the property owner of the market portion of the site; it leases sales space to more than 2000 individual sellers in both daily and permanent sales spaces. A summary of the categories of merchandise sold, as well as some seller names, is presented in Appendix B. Merchandise sales booths consisted of a variety of permanent corrugated metal structures aligned in rows primarily in the middle portion of the market, small permanent buildings of other construction scattered about the flea market, and temporary sales booths comprised of fabric awnings supported on metal conduit frames. Some sales booths may have contained small quantities of hazardous materials, most likely gasoline, assorted oils, and possibly paints, as some merchandise with small engines was observed. The interiors of the merchandise sales booths were not viewed at the time of the reconnaissance.

The flea market weekday office was located in a "permanent" structure near Berryessa Road (Figure 3). Across an internal street from the weekday office was a "permanent" building, housing a painting contractor's office (Schaper Painting), dentist office (Dentista Familiar), and a barber shop (Figure 3); access to the interior of these businesses was not available. In addition to the businesses and sales booths, approximately 18 snack-bar buildings/food vendor booths, seven restroom buildings, a merry-go-round, picnic/rest areas, playgrounds, automatic teller machines, and a security office were also present (Figure 3). Numerous food service carbon dioxide canisters were observed adjacent to some of the snack bar buildings. The entire merchandise sales area appeared to be asphalt paved.

Three emergency generators were observed throughout the merchandise sales area. One generator was observed within a fenced enclosure on a concrete pad immediately adjacent to the rear of the main snack bar building (Figure 3). Two generators were located on a concrete pad within a fenced enclosure near the main entrance (Figure 3). One generator had an approximately 250-gallon associated diesel aboveground storage tank (AST) at an adjacent location; the second generator was completely enclosed within a steel structure and was not directly observed.

One active water production well was present within the fenced generator enclosure near the flea market entrance (Figure 3). The well is used occasionally.

2.3.3 Flea Market – Maintenance Area

All maintenance activities for upkeep of the flea market reportedly were performed at the far southeastern boundary of the flea market portion of the site (Figure 3). Numerous wood and steel buildings housed (in order from southwest to northeast) the steam cleaning pad, food vendor storage area, fuel UST and dispenser, paint shop/storage area, carpentry shop, small engine mechanic's area, larger engine mechanic's area, print shop, hazardous materials storage area, and trash compacting area. An electrician's shop was located immediately across an internal road from the other maintenance buildings. At several locations near the maintenance buildings, the rain runoff was observed to have an oily sheen.

The steam cleaning area consisted of a concrete pad beneath an overhang. A drain trench with a metal grate was observed running down the middle of the pad. A steam-cleaning unit was present on a concrete pad within an adjacent shed. Some accumulated oil was observed on the steam cleaner and minor staining of the concrete pad was also present. According to Mr. Bumb, food vendor equipment is cleaned in this area.

The food vendor storage area was operated by Aramark and the interior of the building was locked at the time of our reconnaissance. Dry goods were stored on a concrete pad beneath an overhang. Also on the concrete pad in this area, three 55-gallon plastic drums labeled as Sparkle glass cleaner and Aqua Power degreaser were observed on a wooden pallet. An electric batter charger and two food service carbon dioxide canisters were also present in this area.

The fill ports of one 8,000-gallon split UST (4,000 gallons of gasoline and 4,000 gallons of diesel) were observed adjacent to the fuel dispenser, which was located within a small shed on a concrete slab. A side-by-side, approximately 100-gallon cube-shaped AST containing motor oil and hydraulic oil within a metal secondary containment bin in the shed was also observed within a metal secondary containment bin in the shed.

The paint shop/storage area consisted of a spray booth and paint storage area. The spray booth was a metal structure on a concrete slab. Adjacent to the spray booth, on a concrete pad beneath an overhang, approximately seventy-five 5-gallon plastic containers of assorted paints and approximately thirty 2-gallon containers of paint were stored. No significant spills or releases of the paint were observed. A small building adjacent to the paint storage area was also observed to house approximately 100 to 150 cans and other containers (ranging from 1 quart to 1 gallon in volume) of assorted paints, thinners, and other related materials on wooden shelves. Minor staining of the concrete floor of the building was observed. Adjacent to the exterior of the door to the building was one 55-gallon steel drum labeled as hazardous waste – miscellaneous paint and thinner. The drum was located on a wooden pallet on asphalt pavement. Approximately twenty 1-gallon cans of paint were observed on a table adjacent to the drum.

Typical woodworking tools and machinery were observed in the carpentry shop, consisting of the southwestern-most portion of a large building. A sign shop was observed at the rear of the carpentry shop where sign painting for the flea market was performed. Two flammable materials cabinets were observed on carpet covering

the concrete slab floor of the building. Approximately six 1-gallon cans of paint were observed on top of the cabinet, and approximately 100 to 150 containers (less than 1 quart to 1 gallon in size) of assorted sign paints and lettering enamel were observed within the cabinet.

The small engine mechanic's area was located in the middle portion of the building housing the carpentry shop. Numerous carts, scooters, motorcycles, lawnmowers, and other equipment and vehicles with small engines were observed on the concrete slab floor. One flammables liquid cabinet was observed to house approximately 100 small (aerosol cans and containers of 1 quart to 1 gallon in size) containers of engine repair-related chemicals, including lubricants, gasoline, and oil. Small quantities of other engine repair-related chemicals and WD-40 were also observed at other workstation areas within the building, as were numerous automotive batteries. Extensive shelving units filled with assorted mechanical parts were also present. In the welding area, several cylinders of compressed gases were observed chained to the wall. The concrete floor was observed to be visibly darkened in this area of the building.

Larger vehicles and engines were serviced in the larger engine mechanic's area. Two above-grade hydraulic hoists were observed in this area. Beneath the above-grade hoists were two sub-grade hoists no longer in use but reportedly still in working condition. Two oily waste disposal cans, one self-contained bead blasting unit, and a self-contained "Zep" solvent parts washer were observed on the concrete floor in this area. Adjacent to the parts washer were two 5-gallon containers of parts cleaner. Approximately fifty 1 quart or smaller containers of assorted automotive repair-related chemicals, including oils, lubricants, automatic transmission fluid, and windshield cleaner, were observed on a wooden work bench in this area. One locked flammable liquids storage cabinet was adjacent to the workbench. The concrete floor was observed to be visibly darkened in this area of the building.

A print shop was located at the rear of the larger engine mechanic's area. Several printing presses were present on the moderately stained and discolored floor. Approximately 100 cans of printing ink were stored on wall-mounted shelves. Several open ink cans were present on a table and rolling cart, with one small open can of grease present on the floor. Several other small containers of printing-related chemicals were also present on the shelves and presses.

The hazardous materials storage area included one metal shed with a concrete slab floor and an adjacent concrete slab with a roof. One 55-gallon drum of waste drained oil filters, one 55-gallon drum of spent absorbent, one 55-gallon drum of fresh absorbent, and one partially-full 55-gallon drum labeled as hazardous waste but of unknown contents were observed on the concrete pad outside the shed. Two plastic milk-crates of motor oil were observed within the shed. Three 55-gallon drums of virgin motor oil, three 55-gallon drums of waste oil, one 55-gallon drum of waste ethylene glycol, two 55-gallon drums of virgin ethylene glycol (one with a hand pump), two 30-gallon drums of virgin automatic transmission fluid, seven 15-gallon cans of gasoline, nine approximately 5-gallon cans of assorted automotive-repair chemicals, one 55-gallon drum of virgin kerosene (with a hand pump), and one 55-gallon drum of "LPL Blend" paint-related material were observed on two sets of secondary containment pallets within the shed.

Two emergency generators on a concrete slab were observed in front of the hazardous materials storage area. One approximately 500-gallon diesel AST on a steel frame was associated with the generators. Minor staining of the concrete beneath the generators was observed.

Across an internal road from the generators was a building housing the electrical shop. Numerous shelving units containing electrical parts were present in the shop. Approximately ten small cylinders of assorted types of Freon (including Forane 408! HCFC Blend and Forane 404A HFC Blend) were observed on the concrete floor and on shelving units, as were several cylinders of compressed welding gasses. A propane AST was observed next to the electrical shop.

The trash compacting area was located at the far eastern corner of the flea market. A trash compactor and a cardboard compactor were observed in this area. Compacted trash and cardboard reportedly are hauled by The Flea Market personnel to an off-site landfill for disposal.

A concrete-paved parking area was present behind the maintenance area. Storage of a variety of vehicles and other equipment was observed. A landscaping storage area included numerous potted plants. One small stockpile of asphalt chunks mixed with brick was observed, with two 1-gallon cans of tar present next to it.

According to Mr. Bumb, a sub-grade, 8-inch diameter petroleum pipeline runs along the northeastern boundary of the flea market portion of the site before cutting from northeast to southwest immediately behind the maintenance area. The pipeline then runs to the Chevron bulk storage facility located approximately 2,000 feet west of the site.

Additional observed site features are listed in Table 2.

2.5 Property Owner/Tenant Interview

At the time of our reconnaissance, Mr. Brian Bumb of The Flea Market was interviewed regarding past and current site usage. Mr. Jerry Denny, environmental health and safety coordinator for The Flea Market, also provided assistance. Information obtained during the interview is summarized below.

According to Mr. Bumb, the flea market portion of the site (APNs 254-17-052, -053, and –084) was a cattle feed lot and meat packing plant prior to purchase of the property by his father for construction of The Flea Market in 1960. Mr. Bumb believed the meat packing plant was operated by the government. The main snack bar building was actually the historical slaughterhouse and is the only remaining building on-site constructed prior to occupation of the site by The Flea Market. Mr. Bumb believed at least three wells had been present on this portion of the site prior to purchase by The Flea Market. According to Mr. Bumb, these wells were properly abandoned during construction of the site improvements.

The far northeastern corner of the flea market portion of the site (APNs 254-17-7 and –53) was historically agriculturally cultivated, owned by the Nicora family (possibly incorrectly spelled). The Nicora family also reportedly farmed the southern parking lot (APN 354-17-095) prior to its purchase by The Flea Market sometime after 1960. Mr. Bumb recalled at least one agricultural well having historically been present on this portion of the site; the well reportedly was property abandoned in 1998 prior to construction of the parking lot.

The northern parking lot (APNs 241-04-006 and –007) historically was farmed by four different property owners. Mr. Bumb recalled the Cancilla family to be one of the historical owners; the Cancilla family cultivated strawberries on the parcel.

According to Mr. Bumb, the approximately 120-acre site has been operating as The Flea Market since 1960. Hazardous materials used on-site include gasoline and diesel contained in the UST, paint, and automotive repair chemicals, as well as any other chemicals related to mechanical, carpentry, welding, and painting work. Emergency generators, equipment and auto servicing areas, transformers, and stockpiles of sand, mulch, and wood clippings were all reported present at the site. Mr. Bumb stated that Coyote and Penitencia Creeks, as well as Union Pacific Railroad tracks, bordered the site. Mr. Bumb also described the location of the Chevron petroleum pipeline described in Section 2.3.3 above.

Mr. Denny stated that the ground water monitoring wells previously present on-site to characterize ground water following a release from a former UST had been abandoned under SCVWD oversight.

3.0 HISTORICAL REVIEW

3.1 Photograph and Map Review

To evaluate the site history, we reviewed the following.

- Stereo-paired aerial photographs (dated 1939, 1956, 1965, 1982, 1993, and 1998) from Environmental Data Resources, Inc. (EDR) in Southport, Connecticut.

- USGS 15-minute and 7.5-minute topographic maps (1953, 1961, 1968, 1973, and 1980).

- Historic Sanborn fire insurance maps were requested from EDR. However, no Sanborn maps were available.

The above maps and photographs commonly provide historical information regarding a site including land uses and changes in development over time. Copies of these maps and photographs are presented in Appendix C. Table 4 presents a summary of our observations for the site; site vicinity observations are summarized following the table.

3.1 Site

Table 4. Historical Site Observations

Area of Site	Observations
1939	
Northern parking lot	The majority of the northern parking lot was planted with three different orchards. Two or more small buildings, likely within the orchard near the southwestern corner of the lot; one small building, likely residential, was present near the southern boundary of the lot near the middle; and several small buildings, likely residential and/or agricultural, were present in two areas near the southeastern corner of the lot. A rectangular area within the eastern-most orchard appeared to be cultivated with row crops.
Southern parking lot	The southern parking lot was cultivated with a mix of orchards and row crops. Areas of undeveloped land along Coyote Creek were also visible. Orchards primarily were located on the western portion of the lot, with row crops and two small orchards present on the eastern portion. At least one building was present at the southern-most boundary of the lot.
Flea market	Upper Penitencia Creek and associated undeveloped/riparian areas were visible along the northern boundary of the flea market parcels. The western 2/3 of the flea market parcels appeared to be cultivated primarily with row crops, with some small orchards mixed in. The northeastern corner of the parcels was also planted with an orchard. The remainder of the flea market parcels were developed with what was likely the former feed lot and meat packing plant. What appeared to be pens were present in the eastern and southern areas of the feed lot; several large buildings were clustered near the middle of the feed lot and what was likely the office/entrance building was present adjacent to Penitencia Creek. The land in the feedlot area appeared unpaved, with the exception of the buildings; what appeared to be several small water ponds were present. What appeared possibly to be a small stream ran from the northwest to the southeast adjacent to the western boundary of the feed lot/meat packing plant.

(continued)

Table 4. Historical Site Observations
(continued)

Area of Site	Observations
1953	
Northern parking lot	The eastern 2/3 of the northern parking lot parcels were depicted as an orchard. Two small structures were depicted immediately north of Berryessa Road.
Southern parking lot	One small and one slightly larger structure were shown along the Mabury Road boundary. No other development was depicted.
Flea market	Fourteen buildings of assorted size were depicted near the center of the flea market parcel, in the location of the feed lot/meat packing plant. A topographical depression in the location of the small stream visible on the 1939 photograph was depicted on the topographic map.
1956	
Northern parking lot	The structures present on the 1956 aerial photograph appeared generally similar to those shown on the 1939 photograph, with perhaps additional structures present at the southwestern corner, appearing agricultural in nature. The northern parking lot parcels remained agriculturally developed. The eastern 2/3 of the parcels were planted with orchards, with the far northeastern corner of the parcels cultivated with row crops. The small rectangle of row crops visible on the 1939 photograph appeared to have a portion converted to an orchard with the remaining portion appearing undeveloped. The western 1/3 of the parking lot parcels was primarily cultivated with row crops, although an orchard was present along the western boundary.
Southern parking lot	The southern parking lot parcel appeared to be undeveloped land, possibly fallow row cropland. Dirt roads were present, appearing to divide the area into three sub lots.
Flea market	What was assumed to be the feed lot/meat packing plant appeared to have expanded to include the entire flea market parcels, with the exception of the far northeastern corner which appeared to remain row crops or fallow agricultural land. The western portion of the facility, previously agriculturally developed, appeared to have numerous rectangular enclosures. Numerous buildings (ten to twenty) or varying sizes were present in the main portion of the feedlot. Many of the buildings appeared different than those present on the feedlot on the 1939 photograph. Two parallel rows of buildings were observed in the location of the current flea market maintenance buildings. The land in the feedlot area appeared to remain unpaved and appeared uneven.

(continued)

Table 4. Historical Site Observations
(continued)

Area of Site	Observations
1961	
Northern parking lot	This portion of the site appeared generally similar to the 1953 topographic map, but a small orchard was depicted immediately east of Coyote Creek.
Southern parking lot	This portion of the site appeared generally similar to the 1953 topographic map. Although the site elevation remained the same, the topographic contour of the site appeared to have changed slightly on the southern portion.
Flea market	Ten buildings of assorted size were depicted near the center of the flea market parcel, in the location of the feed lot/meat packing plant. A gravel pit was also depicted in the same area. The topographical depression depicted on the 1953 map appeared present in a slightly different location.
1965	
Northern parking lot	Portions of the northern parking lot area were not shown on the 1965 aerial photograph. Of the area shown, the parcels appeared generally similar to the 1956 photograph.
Southern parking lot	The southern parking area appeared generally similar to the 1956 aerial photograph. The southern-most tip of the parcel was not shown on the photograph.
Flea market	The feed lot/meat packing facility had been replaced by what appeared to be a smaller version of the current flea market. The far northeastern corner of the parcels may not yet have been a part of the flea market property and appeared to be undeveloped former agricultural land. The eastern ½ of the flea market parcels appeared to be graded dirt, likely a parking lot. Many buildings/structures (perhaps 100 or more) of varying sizes were present on the middle portion of the flea market parcels. Buildings were present in the current location of the weekday offices; one large building and an adjacent smaller building were present in the current location of the maintenance buildings (along with other unidentifiable objects and material stockpiles). One building near the middle of the parcels remained present from the previous meat packing facility.
1968	
Northern parking lot	This portion of the site appeared generally similar to the 1965 topographic map, with one additional small structure depicted on the undeveloped portion (western area) of the parcels.
Southern parking lot	This portion of the site appeared generally similar to the 1965 topographic map.
Flea market	Thirteen buildings of assorted size were depicted on the central and eastern portions of the flea market. A gravel pit remained depicted on or immediately adjacent east of the site.

(continued)

Table 4. Historical Site Observations
(continued)

Area of Site	Observations
1973	
Northern parking lot	This portion of the site appeared generally similar to the 1968 topographic map, with several streets depicted on the center portion.
Southern parking lot	This portion of the site appeared generally similar to the 1968 topographic map.
Flea market	Numerous structures appearing to be the some of the flea market buildings depicted on the 1968 topographic map as well as new vendor booths were present on the flea market parcels. The main maintenance building at the southern end of the parcels was also depicted. Due to the locations of the on-site buildings, the gravel pit label appeared to apply to the property adjacent east of the site.
1980	
Northern parking lot	This portion of the site appeared generally similar to the 1973 topographic map, with additional structure depicted in the area with the streets.
Southern parking lot	This portion of the site appeared generally similar to the 1973 topographic map.
Flea market	This portion of the site appeared generally similar to the 1973 topographic map, with numerous additional vendor booths and other buildings depicted.
1982	
Northern parking lot	Agricultural development was no longer present on the northern parking lot parcels. The western portion of the parcels appeared to be undeveloped land with an unidentifiable dark rectangle present in the middle. The remainder of the parcels appeared to be dirt lots graded with horizontal and/or vertical lines. A cluster of unidentifiable structures, appearing on the photograph as small white circles, was present, adjacent to Berryessa Road. The center portion of the parcels adjacent to Berryessa Road appeared to be part of the main flea market. A vast number of small structures, possibly cars and sales booths of sellers, were visible.
Southern parking lot	The southern parking lot appeared to be cultivated with row crops. One to two buildings were present at the far southern end of the parcel and what may have been a narrow, rectangular building was present along the western boundary of the parcel.
Flea market	The flea market had increased in size on the 1965 photograph. The far northeastern corner of the parcels had been incorporated into the flea market. In addition to the buildings present on the 1965 photograph, numerous additional vendor booths and buildings were observed on the center portion of the flea market and what appeared to be hundreds of small structures, possibly cars and sales booths of sellers, were present on both sides of the main flea market development. Additional buildings were present in the location of the current maintenance buildings.

(continued)

Table 4. Historical Site Observations
(continued)

Area of Site	Observations
1993 and 1998	
Northern parking lot	The entire northern parking lot parcels appeared to be a parking lot on the 1993 and 1998 photographs. A cluster of small structures, possibly vehicles, was observed in the 1998 photograph at the northeastern corner of the parcels. What appeared to be vehicles were also observed parked at the southwestern corner of the parking lot.
Southern parking lot	The southern parking lot parcel appeared to be graded, undeveloped land. A structure still appeared present at the southern property boundary on the 1993 photo but was no longer visible on the 1998 photo.
Flea market	The center portion of the flea market appeared generally similar to the 1982 photograph, with the possible addition of some smaller structures in the maintenance area. The eastern and western flea market areas appeared to have been developed into stall areas, rather than the random distribution of sellers observed on the 1982 photograph. Additional seller booths were visible on the 1998 photograph.

3.1.2 Site Vicinity

1939: The 1939 aerial photograph showed the site vicinity largely agriculturally developed with a mix of row crops and orchards. Residential and agricultural structures were present throughout the area, as were some larger complexes of buildings. Western Pacific Railroad tracks bordered the site to the east; Berryessa Road and Mabury Road were present; Coyote Creek bordered the site to the west and Upper Penitencia Creek ran through the middle of the site adjacent to Berryessa Road.

1950s: The site vicinity remained primarily agriculturally developed with row crops and orchards on the 1956 aerial photograph and 1953 topographic map. What appeared to be commercial/light industrial development in the form of several buildings was present immediately west of Coyote Creek from the site.

1960s: In the 1960s, agricultural development was still present north and northeast of the site, but commercial/light industrial development was present east of the site. A gravel pit was indicated immediately east of the Western Pacific Railroad tracks. The properties immediately east and northeast of the site appeared graded for future development. The site vicinity to the south was not shown on the photograph available.

1970s and 1980s: On the photographs and maps from this time period, the site vicinity was still agricultural to the north, northeast, and southeast, but primarily light industrial/commercial to the northwest, west, southwest, south, and east. The adjacent gravel pit remained depicted on the 1973 topographic map.

1990s: Agricultural development was no longer present in the site vicinity on the aerial photographs from the 1990s. Residential development was present to the

north and northeast. Commercial/light industrial development was present in the vicinity in all other directions.

3.2 City Directories

Our review of available city directories obtained from EDR suggested that past site occupants were primarily commercial. Listed past site occupants are presented in Table 5, and the EDR report is presented in Appendix D.

4.0 REGULATORY RECORDS

4.1 City and County Agencies File Review

To obtain information on hazardous materials usage and storage, we reviewed readily available information at the San Jose Building Department (SJBD), San Jose Fire Department (SJFD), and Santa Clara County Environmental Health Department (SCCEHD) pertaining to current street addresses 1590 Berryessa Road and 1411

Mabury Road and historical site address 12000 Berryessa Road (SJBD and SJFD only). We also obtained case closure letters for the previous on-site USTs from the SCVWD website. The information made available to us is summarized in Table 6; key documents are included in Appendix E. All documents reviewed pertained to the San Jose Flea Market.

Table 6. Available File Review Information

SJFD	7/21/80	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted. Tent permit to be added in following year.
SJFD	6/2/82	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	10/19/83	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	5/31/84	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	1/23/85	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. A 100-gallon portable degreaser tank on a pick-up was to be researched. A 1,000-gallon fiberglass gas AST reportedly was not being used. Secondary containment was needed for hydraulic fluid and motor oil as they were spilling when dispensed, and also for four 55-gallon drums likely containing oil, one 20-gallon drum of lubricant, an emergency generator, and a 15,000-gallon diesel AST. Size and number of USTs needed to be determined; five vent lines were present. Monitoring plan for USTs was needed. All unmarked drums were to be labeled.
SJFD	5/85	Fire system inspection reports for on-site areas including: Chuckwagon Bakery, trailer #5, BIET building, Chuckwagon, yellow trailer, trailer #1, concrete snack bar, "fish" grotto, cotton candy #1, taco shack, "green shack", trailer #4, trailer #7, trailer #10, trailer #6, trailer #9, and trailer #8.

Agency	Date	Remarks
SJFD	6/10/85	ROI indicating flammable liquids and finish present on-site. The facility reportedly included a lumber/wood plant, repair garage, and welding and cutting activities. Mention of the performance of dust-producing activities and tent erection was to be deleted.
SJFD	10/10/88	ROI indicating flammable/combustible liquids/tank present on-site. The facility reportedly included garages with spraying/dipping, welding/cutting, and woodworking performed. The inspection noted that flammable liquid drums needed to be grounded, flammable liquids needed to be secured in storage cabinets or sheds, waste oil drums needed secondary containment, waste disposal record keeping needed, documentation of fuel deliveries and monitoring for UST near garage needed, and unnecessary refrigeration tanks in electric shop area needed to be eliminated.
SJFD	10/11/88	ROI indicating chemicals in gardener's shed needed to be properly stored in an upright manner, all flammable liquids needed to be in approved safety cans, and gardener's shed needed hazardous materials placarding. A hazardous materials management plan (HMMP) was needed.
SJFD	7/10/90	ROI indicating flammable/combustible liquids/tank and hazardous materials storage, and liquid petroleum gas present on-site. The facility reportedly included garages with spraying/dipping, welding/cutting, and woodworking performed. The inspection noted that an HMMP was needed, as were UST forms A & B. Evidence of third party monitoring of vapor and water wells was also required.
SJFD	11/6/90	Fire safety permit with the following permits: flammable combustible liquid/tank, garages, spraying/dipping, welding/cutting, and woodworking.
SJFD	1/31/91 & 2/6/91	ROI indicating that secondary containment for 55-gallon drums of lacquer/paint thinner and antifreeze were needed. Evidence that diesel AST was monitored daily and had approved secondary containment was needed. The abandoned diesel AST needed to be removed. An approved dispensing pump for lacquer and paint thinner (not gravity) was needed.
SJFD	2/21/91	Note stating that SJFD notified Mr. G. Bumb Jr. that a precision test on the 15,000-gallon UST was required within 5 days.
SJFD	2/22/91	UST unauthorized release report stating that a release of gasoline and diesel was detected during subsurface monitoring. TPHg (190 ppb), TPHd (440 ppb), benzene (6.6 ppb), ethylbenzene (3.9 ppb), and toluene (1.7 ppb) were detected.
SJFD	4/8/91	ROI discussing issues related to UST release. Documentation of verification of source of contamination to monitoring well required. UST required to be emptied and closure report submitted for removal. Documentation of permitted installation of AST.
SJFD	5/22/91	Fire safety permit for liquid petroleum gas.
SJFD	6/18/91	Fire safety permit with the following permits: flammable/combustible liquid/tank, garages, liquid petroleum gas, place of assembly, spraying/dipping, welding/cutting, and woodworking.
SJFD	7/1/91	Hazardous materials storage permit.

Agency	Date	Remarks
SJFD	10/3/91	Record of inspection (ROI) with hand-written note indicating the flea market was working with the SCVWD on a self-directed cleanup plan.
SJFD	8/12/92	ROI indicating flammable/combustible liquids/tank, hazardous storage, and liquid petroleum gas present on-site. The facility reportedly included garages with spraying/dipping, welding/cutting, and woodworking performed. The inspection noted that a hazardous materials management plan (HMMP) was needed, proper monitoring of tanks and piping was needed, secondary containment was needed for used batteries, and compressed gas cylinders needed to be secured.
SCCEHD	9/15/92	NOI with violations including disposal of used solvent containers and other hazardous containers to dumpster, lack of labeling on four 55-gallon waste oil drums, one 55-gallon used diesel drum, and one 55-gallon paint sludge drum, lack of regular inspection of hazardous waste storage area, and incomplete manifest tracking.
SCCEHD	9/21/92	Hazardous waste generator permit application stating that The Flea Market, Inc. generated less than 5 tons of hazardous waste/year. Hazardous waste inventory included 600 gallons/year waste motor oil, 100 gallons/year waste paint, and 328 gallons/year Safety-Kleen hydrocarbon solvents.
SCCEHD	9/28/92	Environmental health permit for The Flea Market, Inc. as a generator of less than 5 tons per year. Expiration date was 9/30/97.
SCCEHD	10/8/92	Letter from The Flea Market, Inc. to SCCEHD providing a listing of corrections to violations documented in September 15, 1992 inspection.
SCCEHD	11/9/92	HMMP with hazardous waste inventory including 5 used batteries, 220 gallons used motor oil, and 55 gallons paint sludges. The Flea Market listed as generating less than 5 tons of waste per year. Used motor oil and batteries reportedly recycled and paint sludge hauled by licensed waste hauler.
SCCEHD	4/13/93	Letter from The Flea Market, Inc. to SCCEHD regarding asbestos release. Written confirmation of report of an accidental release of a small amount of asbestos resulting from a small gas explosion in a large bakery oven. The material released contained 10% chrysotile asbestos. Preparation to clean up the contaminated areas was underway.

Agency	Date	Remarks
SJFD	4/26/93	Ground water monitoring report for 1st quarter 1993. Sampling was performed from wells located in the area of the USTs. Report references six USTs, one AST, and three product dispensers. Water samples were collected from three monitoring wells installed in 1985. The results from the two wells located near the five-UST cluster (GX-34A and –34D) were non detectable for TPHg, TPHd, and BTEX. The result from the third well (near UST #5; GX-34C) showed a declining level of TPHg from the 4th quarter of 1992 (970 ppb down to 120 ppb), benzene (12 ppb down to 2.7 ppb), toluene (6.0 ppb to not detected), ethylbenzene (from 8.5 ppb to 1.2 ppb), and total xylenes (27 ppb to 0.96 ppb). There was an increase in the TPHd concentration from 100 ppb to 200 ppb. A work plan was included in the report to remove UST #5 and continue monitoring well GX-34C. Based on the site plan included, it appeared that the five-UST cluster was located near the location of the current on-site UST.
SCCEHD	4/29/93	Letter from The Flea Market, Inc. to SCCEHD regarding asbestos clean-up at Chuck Wagon snack bar. Asbestos insulation was released on April 10 and American Asbestos Service performed cleanup. Cleanup was accomplished using wetting agent HEPA filtration under full containment with negative air pressure.
SJFD	5/10/93	UST closure plan for one 15,000-gallon unleaded gasoline tank (UST #5). Based on site plan included, it appeared the UST was located near the eastern corner of the flea market portion of the site, at the far northeastern end of the maintenance area.
SJFD	5/25/93	AST closure plan for one 15,000-gallon Jet "A" tank (AST #1). Based on site plan included, it appeared the UST was located near the eastern corner of the flea market portion of the site, at the far northeastern end of the maintenance area, adjacent to the UST described above. The site plan also showed three other ASTs present in vicinity of current maintenance area.
SJFD	6/8/93	ROI indicating that one AST was removed and one 15,000-gallon single-walled steel UST was removed. The secondary containment for the AST reportedly was stained and the wood cradles that held the AST within the containment had penetrated the concrete slab down to the underlying gravel. One soil sample was collected 12 inches below concrete for total petroleum hydrocarbons as diesel (TPHd) and benzene, toluene, ethylbenzene, and xylenes (BTEX) analysis. Sample reportedly had slight petroleum odor. Ground water was encountered at 10 feet. Three soil samples were collected from sidewalls above water line for TPHg and BTEX analysis.

Agency	Date	Remarks
SJFD	7/8/93	Blaine Tech Services report for UST removal on 6/8/93.
SJFD	7/27/93	Tank removal report for UST #5. UST #5, reported to be a 15,000-gallon Jet "A" tank, was removed on 7/8/93. Preceding the UST removal, removal of one 15,000-gallon "sister" AST had been performed at the same location. Both removals were done under SJFD permit by The Flea Market personnel. Non-detectable concentrations of TPHg, TPHd, and BTEX were found in the verification samples collected, with the exception of one sample from beneath the AST and one sample from beneath the fill end of the UST which demonstrated 260 parts per million (ppm) and 3.3 ppm TPHd, respectively. Overexcavation was performed in these areas and verification samples subsequently demonstrated non-detectable concentrations of TPHd. Impacted soil was planned to be bioremediated on The Flea Market property. A ground water sample was collected from recharged ground water pooled within the UST pit. Analysis of the sample revealed 0.54 parts per billion (ppb) benzene and 3.0 ppb total xylenes.
SJFD	8/2/93	UST unauthorized release site report. Release discovered during tank removal.
SJFD	9/9/93	ROI indicating facility similar to that described in 8/12/93 ROI. The inspection noted no hazardous materials-related violations.
SCCEHD	9/16/93	NOI with violations including improper labeling of hazardous waste containers, missing training records, and incomplete HMBP. Hazardous materials present on-site included four 55-gallon drums of waste oil and one 55-gallon drum of paint sludge.
SCCEHD	9/16/93	Certification of compliance stating all violations marked on the NOI had been corrected.
SJBD	1/11/94	Building permit for auction hall kitchen and restroom improvements.
SCCEHD	6/1/94	Hazardous waste generator self-audit form. Hazardous waste not treated on-site, no extremely hazardous waste present on-site, all containers of hazardous waste are labeled and in good condition, liquid hazardous wastes are stored in secondary containment with exception of automotive batteries which are stored separately, hazardous waste storage areas inspected weekly, and training and record keeping is appropriate. Hazardous wastes listed include 45 gallons/month of waste oil, 25 gallons/month of cleaning solvents, 10 gallons/month of paint sludge, and 10 gallons/month of contaminated absorbent.
SJBD	8/1/94	Building permit application to erect cover over existing merry-go-round.
SJBD	8/25/94	Building permit application to repair underground electrical conduit for entertainment area.
SJFD	5/31/95	ROI indicating facility similar to that described in 8/12/93 ROI. The inspection noted that secondary containment was needed for waste solvent and that gas cylinders needed to be secured.
SJBD	1/29/96	Building permit application for snack bar relocation/renovation.
SJBD	3/2/96	Building plans for new restrooms.

Agency	Date	Remarks
SCVWD	4/4/96	SCVWD UST case closure letter confirming completion of site investigation and remedial action for USTs formerly located on-site. Case closure was based on land use at the time the letter was composed, but stated that corrective action did not require review if land use changed. Case closure summary included one 15,000-gallon gasoline UST and one 15,000-gallon jet fuel AST that had been removed and further referenced one 10,000-gallon gasoline UST, one 3,000-gallon gasoline UST, one 500-gallon gasoline UST, and two 4,000-gallon diesel USTs remaining in-place. Three monitoring wells were installed in 1985, prior to removal of the tanks. In 1994, one additional monitoring well was installed. Based on the closure summary, one or two of the wells were destroyed, but the method of destruction was unknown. Soil samples collected from exploratory borings in the vicinity of the former AST and UST contained up to 18 ppm TPHg, 300 ppm TPHd, 0.016 ppm xylenes, and 0.031 ppm ethylbenzene; verification samples from the walls of the over-excavated tank pit did not contain detectable concentrations of TPHg, TPHd, or BTEX. Final ground water samples from the tank pit contained no detectable concentrations of TPHg, TPHd, or BTEX; hydropunch samples contained 100 ppb TPHd, but no detectable concentrations of TPHg or BTEX.
SJBD	7/10/96	Building permit application for three steel frame tents for sales.
SCCEHD	4/11/97	Hazardous waste generator-permit application. Hazardous wastes generated were listed to be 600 gallons/year of waste motor oil, 100 gallons/year of paint waste, and 328 gallons/year of Safety-Kleen hydrocarbon solvents.
SCCEHD	3/12/98	NOI with violations including paint rags found in trash and not handled as hazardous waste, drums of waste oil, waste paint, antifreeze, and waste solvent not properly labeled, buckets of waste paint and container of waste oil filters also not labeled, waste drums stored open, and lack of hazardous waste worker training.
SCCEHD	4/10/98	Letter from The Flea Market to SCCEHD providing summary of corrective actions for violations from previous inspection.
SJFD	11/26/98	Letter from SJFD to San Jose Flea Market regarding removal of USTs. The letter stated that the site had USTs that had not been upgraded to the appropriate standards and a plan to do so must be presented by March 1999.
SJFD	8/27/98	ROI indicating flammable/combustible liquids, hazardous materials (including waste antifreeze and Freon), a diesel aboveground storage tank (AST), and liquid petroleum gas present on-site. The facility reportedly included repair garage and motor vehicle dispensing facility with spraying/dipping, welding/cutting, and woodworking performed. The inspection noted that the hazardous materials business plan (HMBP) needed updating and that all five USTs needed to be removed or upgraded by 12/22/98. The USTs reported did not have 5-gallon spill containers or overfill prevention devices and there were other UST permit deficiencies. Dispensing of kerosene and storage of two drums of other flammable liquids reportedly was performed in Area H3, referred to as the hazardous materials building.

SJBD	2/9/99	Building permit application for dental office plumbing and mechanical.
SJFD	2/24/99	Letter from SJFD to San Jose Flea Market regarding removal of USTs. The letter stated that the site had USTs that had not been upgraded to the appropriate standards and a plan to do so must be presented by March 1999.
SJFD	3/10/99	UST permit application Form A stating that 5 USTs were removed and 2 USTs were installed.
SJFD	3/10/99	Hazardous materials storage system installation application for installation of one 8,000-gallon fiberglass split UST with 4,000 gallons gasoline and 4,000 gallons diesel.
SJBD	4/28/99	Inspection notice for flea market gas station.
SJBD	6/9/99	Certificate of occupancy for dental office of M. Villar, DDS.
SJFD	6/24/99	UST removal final report stating the USTs were located at the intersection of the internal streets known as Produce Row and 18th Street (approximate location of current UST). New 8,000-gallon split gasoline/diesel UST was installed at same time. Analysis of initial verification soil samples from the tank pits revealed up to 110 ppm TPHg, 0.34 ppm methyl tertiary butyl ether (MTBE), 0.96 ppm benzene, 0.18 ppm toluene, 1.1 ppm ethylbenzene, and 0.80 ppm xylenes. The tank pits were over excavated and additional verification soil samples were collected. Analysis of these samples revealed residual TPHg up to 12 ppm, MTBE up to 0.26 ppm, toluene up to 0.016 ppm, total xylenes up to 0.047 ppm, and lead up to 29 ppm. Initial pit ground water sampling results indicated TPHg at up to 11,000 ppb, TPHd at up to 12,000 ppb, MTBE at up to 5,800 ppb, benzene at up to 2,200 ppb, toluene at up to 810 ppb, ethyl benzene at up to 410 ppb, and total xylenes at up to 1,900 ppb. Approximately 975 gallons of ground water were pumped from the excavations prior to pit ground water sampling. Final concentrations of TPHg, TPHd, MTBE, and BTEX in ground water were non detectable. The report referenced one active and two decommissioned ground water monitoring wells located in the vicinity of the current UST (previous location of the 5-UST cluster).
SJFD	7/8/99	UST system closure plan for removal of five USTs (USTs 1, 2, 3, 4, and 5): one 10,000-gallon gasoline, one 3,000-gallon gasoline, one 500-gallon gasoline, and two 4,000-gallon diesel tanks. Installation date for USTs was unknown. Two verification soil samples were collected from beneath each UST and four samples were collected from beneath the dispensers.
SJFD	7/8/99	UST unauthorized release report stating that release was discovered during tank removal.

Agency	Date	Remarks
SCCEHD	8/9/00	NOI stating that oil-solvent metal paint waste cans could not be disposed in the trash, nor could spent exhaust spray booth filters; they must be managed as hazardous waste. Other violations included the lack of labeling on waste containers, including waste oil, waste oil filters, and waste antifreeze, spent bead blast not being managed as a hazardous waste, paint waste drum not properly labeled, storage of open waste containers (waste absorbent, crushed oil filters, and paint waste), and improper procedure of laundering contaminated rags on-site. Corrective actions were listed as having been taken for each violation.
SCCEHD	9/5/00	Letter from The Flea Market to SCCEHD responding to violations of August 9, 2000 hazardous waste inspection. Outlined corrective actions previously summarized in the NOI for that date.
SJFD	10/30/00	SCVWD closure letter confirming completion of the investigation and cleanup of the reported release. Closure letter referenced the two 4,000-gallon diesel USTs, one 500-gallon gasoline UST, one 3,000-gallon gasoline UST, and one 10,000-gallon gasoline UST that had been removed as well as the 8,000-gallon gasoline/diesel UST installed in 4/99. Soil samples collected from the tank pit walls and from vicinity soil borings following removal of the USTs reportedly contained up to 110 ppm TPHg, 700 ppm TPHd, 0.96 ppm benzene, 0.84 ppm toluene, 1.1 ppm ethylbenzene, 1.2 ppm xylenes, 29 ppm lead, and 0.34 ppm MTBE. Ground water grab samples collected from exploratory borings advanced near the former USTs in 2000 contained up to 63 ppb TPHg, 1,100 ppb TPHd, 0.99 ppb benzene, 1.1 ppb toluene, 0.64 ppb ethylbenzene, 2.7 ppb xylenes, and 34 ppb MTBE. In April 1999, two previously existing ground water monitoring wells near the tank excavations were removed and one other existing well was left intact. Residual contamination was stated to remain on-site, but at levels below regulatory concern. In addition, the SCVWD recommended that on-going monitoring of the on-site wells be continued for methyl tertiary butyl ether (MTBE) and other additives. No further action related to the petroleum release was required.
SJFD	5/16/01	ROI indicating similar hazardous present on-site as those included on the 8/27/98 ROI. The facility reportedly was a hot works, repair garage, and motor vehicle dispensing facility with spraying/dipping and woodworking performed. The inspection noted that the financial responsibility for the UST owner needed to be updated, training records needed to be kept, compressed gas cylinders needed to be secured, secondary containment for "carbocleaner" and rust removers was needed, a valid operating permit for USTs needed to be found, and diesel needed to be removed from the tank sump and the source of the leak determined.
SJFD	5/16/01	UST inspection checklist indicating UST #7 was 4,000-gallon gasoline and UST #8 was 4,000-gallon diesel, both installed in April 1999 and were double-walled with interstitial monitors.
SJFD	5/7/02	Monitoring certification form for split UST (gasoline and diesel). Results of testing were favorable.

SJFD	5/15/02	Unified program consolidated form for business activities and business owner/operator identification. Hazardous materials were present on-site, as were USTs and petroleum ASTs greater than 1,320 gallons. Hazardous waste reportedly was generated on-site. The hazardous materials inventory for the facility included 4,200 gallons diesel, 4,025-gallons gasoline, 61 gallons lacquer thinner, 116 gallons paint thinner, 940 gallons assorted oil and latex paints, 80 gallons varnish, 2 gallons acetone, 11 gallons vandalism remover, 2 gallons solvent V-39195, 1 gallon Stoddard solvent, 2 gallon isopropanol (IPA), 10 gallons petroleum naptha/dipropylene glycol, 1 gallon phosphoric acid, 1 gallon methanol, 127 gallons ethylene glycol, 1 gallon developing gum, 1 gallon glaze remover, 1 gallon Release Away, 1 gallon 1,1,1-trichloroethane (TCA), 1 gallon carbon tetrachloride, 1 gallon stabilizer, 1 gallon potassium hydroxide, 55 gallons heating fuel, 503 gallons propane, 180 gallons motor oil, 160 gallons transmission fluid, 20 gallons gear oil, 120 gallons hydraulic oil, 2 gallons ceiling tile adhesive, 15 gallons adhesive containing perchloroethylene (TCE), 7.5 gallons Super Bond, 14.5 gallons floor and floor tile adhesive, 64 gallons Safety Kleen solvent, 10 gallons D. Bl. Handica, 6 pounds carburetor cleaner, 4 pounds brake cleaner, 14 pounds Brakleen, 64 ounces gumout carburetor cleaner, 39 gallons WD-40, 9 pounds asphalt base, 60 ounces sealant, 36 ounces Bostik Seal, 6 gallons Zep Formula 50, 10 gallons Zep 45, 6 gallons rust arrester, 8 gallons Zep Reach, 6 gallons Zep cleaner, 250 pounds of welding rods, 2 pounds nozzle gel, 255 cubic feel acetylene, 1,260 cubic feel oxygen, 580 cubic feet argon, 762 cubic feet shielding gas, 40,000 cubic feet carbon dioxide, 120 pounds freon R-12, 90 pounds freon-22, 30 pounds freon R-134A, 30 pounds freon SUVA HP 62, 110 gallons kerosene ("Jet A"), 6 gallons sewer degreaser, 6 gallons Water B insecticide, 60 gallons Citrusolv, 60 gallons Reoderant, and 60 gallons Jettacin. Hazardous wastes generated were listed as 220 gallons waste motor oil, 55 gallons waste paint, 120 gallons safety clean parts cleaner solvent, 110 gallons oil saturated absorbent, 15 gallons printer waste, and 55 gallons waste ethylene glycol. Hazardous materials reportedly were stored in Storage Area 1, Storage Area II, and the corporation yard.

Agency	Date	Remarks
SJFD	5/15/02	(Continued) A site map in the document included the following on-site areas: brick office, security trailer, non-perishable warehouse, spray booth, paint shop storage building, sign shop/printing, private dwellings, shop, oil storage shed, storage containers in the bull pen, garbage crew, and gardener/plumbing/electrical shed. In Area 1, building 4 reportedly was used as a paint spray booth and building 5 reportedly was used for paint and waste paint storage. Fuel pumps, UST #7 for diesel and UST #8 for gasoline were reportedly located outside in Area 1. In Area 2, building 6 was a sign shop with paints, thinners, and cleaning agents. Building 8 was a maintenance shop with various solvents, cleansers, oil, greases, batteries, paints, print inks and print cleaners (from the print shop) compressed gas, wood glues and adhesives, and welding rods. In Area 3, building 12 was storage for the garbage crew, including cleansers, degreasers, and insecticides. Outside building 12 was a collector for grease trap sludges from the compactor. Building 9 was a hazardous materials storage shed with oils, gasoline, thinners, and used motor oil. Outside building 9 was used absorbent storage, used oil filter collection, and AST #3 with diesel for the generators. Building B13 was an electrical shop with compressed gasses and a gardeners shop with fertilizer, insecticides, herbicides, and gasoline. AST #2, a propane tank, was outside building B13. Final information in this document stated that the USTs were installed in April 1999.
SJFD	5/17/02	UST inspection sheets for one 4,000-gallon, double-wall steel gasoline UST and one 4,000-gallon, double-wall steel diesel UST. Facility had a valid operating permit and UST monitoring plan, annual monitoring certification had been conducted, and the facility was in significant compliance.
SJFD	5/17/02	ROI stating that flammable/combustible liquids, aqueous parts washing solution, liquid petroleum gas, and hazardous materials were present on-site. The facility reportedly was a hot works, motor vehicle fueling station, and repair garage with spraying/dipping and woodworking performed. Report said that diesel needed to be cleaned from overfill spill bucket and that gas cylinders needed to have valve caps in place.
SJFD	3/8/03	ROI noting that propane tank must be protected from corrosion, gas cylinders must be firmly secured, diesel tank must be appropriately placarded, and (what appeared to be) well monitoring results must be provided.
SJFD	5/8/03	UST inspection sheets for one 8,000-gallon, double-wall steel, split UST (4,000-gallons gasoline and 4,000-gallons diesel). Facility reportedly had a valid operating permit and UST monitoring plan, annual monitoring certification had been conducted, and the facility was in significant compliance.
SJFD	8/14/03	HMBP certification form for 9/9/02 HMBP.
SCCEHD	10/6/03	Notice of inspection (NOI) stating that one 2.5-gallon container of waste oil was stored without being closed and was not labeled as hazardous waste. Corrective actions noted included capping the container and emptying the container into an appropriately-labeled container.

4.2 Regulatory Agency Database Report

During this study, a regulatory agency database report was obtained and reviewed to help establish whether contamination incidents have been reported in the site vicinity. A list of the database sources reviewed, a detailed description of the sources, and a radius map indicating the location of the reported facilities relative to the project site are presented in Appendix F.

The project site was listed in the regulatory agency database report as San Jose Flea Market at 1590 Berryessa Road (identification number G40). The site was included on the Haznet, leaking UST (LUST), and Cortese databases. The Haznet listing was for generation/disposal of unspecified oil-containing waste, other organic solids, and unspecified organic liquid mixture. The LUST and Cortese listings were for the previous hydrocarbons releases from the historical USTs to ground water. The site was listed as receiving closure on April 4, 1996.

There were no reported nearby hazardous materials spills or releases with a potential to significantly impact the site. The potential for site impact was evaluated based on information in the database records regarding the type of release, current case status, and distance and direction from the site.

5.0 CONCLUSIONS

5.1 Historical Summary

Based on the aerial photographs reviewed, the two parking lot portions of the site were agriculturally cultivated with a mix of row crops and orchards, as well as several residential and/or agricultural structures, as early as 1939. Row crops and orchards were also present on portions of the flea market area of the site in 1939, while the central portion of the flea market area was developed with what reportedly was a feed lot/meat packing plant. Site information prior to 1939 was unavailable from sources researched, but based on our experience, site use prior to 1939 likely was either agricultural or undeveloped land.

By the mid-1950s, the feed lot/ meat packing plant had expanded to include nearly all of the current flea market parcels, but by 1960, the flea market was present on this portion of the site. The flea market development started small in the early 1960s, but expanded to include the entire area it currently occupies by the early 1980s. By 1982, the northern parking lot parcels had been partially developed with a parking lot

and the entire area was developed with a parking lot by 1993. The southern parking lot parcel remained agricultural through the early 1980s, but was graded during the 1990s. The current parking lot on the southern portion of the site was constructed in the late 1990s/early 2000s.

Currently APNs 241-04-006 and –007 and 354-17-095 (the parking lot parcels) are entirely developed as paved surface parking lots. APNs 254-17-007, -052, -053, and –084 are entirely developed with The Flea Market. According to Mr. Bumb, one building from the historical feed yard/meat packing facility was converted to the main snack bar at the flea market; the remainder of the permanent and all the temporary structures on the site were constructed between 1960 and the present . Facilities at the flea market include/have included offices (including a dental office and paint contractor's office), permanent retail structures, semi-permanent and temporary sales booths, snack bar buildings/food vendor booths, restroom buildings, a merry-go-round and amusement slide, picnic/rest areas, playgrounds, maintenance buildings, and automatic teller machines.

5.2 Agricultural Use

Portions of the site (APNs 241-04-006 and –007, 354-17-095, and portions of 254-17--052, -053, and –084) were used for agricultural purposes, including row crops and orchards, for several decades. During the course of agricultural use, pesticides such as DDT and lead arsenate may have been applied to crops and trees in the normal course of farming operations. Because redevelopment of the site for mixed use, including residential and school uses, is planned, soil sampling and analyses is currently being conducted to evaluate the residual pesticide concentrations, if any, and potential health risks to future residents. This data will be submitted in a separate letter.

5.3 Chemical Storage and Use

Current chemical storage and use on-site by The Flea Market involves moderate quantities of automotive/engine repair and maintenance-related chemicals (waste and virgin oils, waste and virgin ethylene glycol, gasoline, diesel, Safety-Kleen hydrocarbon solvent, and automatic transmission fluid) and painting/printing-related chemicals (paints lacquers, stains, inks, and thinners). A paint spray booth, petroleum pipeline, print shop, paint shop, steam cleaning area, and several storage areas currently are present on-site. Smaller quantities of numerous automotive/engine repair and maintenance-related chemicals, kerosene, solvents, assorted cylinders of Freon, and compressed welding gases were observed. Chemical drums and some smaller containers were observed largely to be stored within secondary containment. Many smaller containers, however, were not secondarily contained and the majority of the paint and paint-related materials were not stored within secondary containment. Chemical use was observed primarily to occur on concrete-paved surfaces. Although minor to moderate staining/discoloration of chemical use areas was observed, visual indications of a significant release of chemicals to the site was not observed.

Based on SJFD and SCCEHD documents reviewed, it appeared that historical chemical use by The Flea Market involved, with the exception of the petroleum hydrocarbon fuels, similar quantities of the same types of chemicals, with the possible addition of

small quantities of insecticides and herbicides that were not observed at the time of our current site reconnaissance. Larger volumes of gasoline, diesel, and Jet "A" historically were stored on-site in six USTs and one AST (see Section 5.4 below). SJFD and SCCEHD documents indicated on-going lack of appropriate storage/secondary containment for some chemicals, in addition to other minor chronic violations. An inspection report from 1985 documented the spillage of hydraulic fluid and motor oil during dispensing, due to the lack of a secondary containment system.

Although no evidence of significant leaks or spills was observed, due to the historic chemical use at the site and the proposed site development to include residential and school use, we recommend evaluating soil, and ground water quality in areas where hazardous materials may have been used, stored, or released prior to developing the site.

We understand that a feed lot/meat packing facility existed on-site prior to construction of the current flea market. A gravel pit was also historically present in the same on-site area. No detailed information concerning the operations of either the feed lot/meat packing plant or gravel pit, however, was available from the sources researched. Due to the lack of readily available information, there is insufficient information upon which to base a conclusion regarding the likelihood that these historic activities may have impacted the site. The potential for soil or ground water to have been significantly impacted by these activities appears moderate. To evaluate the potential impact of historical site development on soil and ground water quality on this portion of the site, we recommend evaluating soil and ground water quality prior to site development.

5.4 Historic USTs

The Flea Market historically maintained gasoline, diesel UST and one Jet "A" AST on-site.

The tanks were removed and soil and ground water samples were collected during the removal, and showed that residual contamination at low concentrations remained. The SCVWD issued case closure letters for the site dated April 4, 1996 and October 30, 2000, stating that residual contamination existed at the site but at concentrations beneath regulatory agency concern under current site use. The SCVWD stated that no further action related to the petroleum release(s) was required. The California Regional Water Quality Control Board (RWQCB) subsequently issued a letter in August 6, 2004 stating that, based on continuing ground water monitoring following the SCVWD case closure, MTBE was determined to not have impacted the site and no further action related to MTBE monitoring was required. We recommend contacting the Water Board and/or Water District to evaluate if the change in site use may require the remediation of this residual contamination.

Based on the available SJFD and SCVWD documents, two monitoring wells were installed in the vicinity of the former five-UST cluster and one additional monitoring well was installed adjacent to the former 15,000-gallon gasoline UST in 1985. One additional monitoring well was installed in the vicinity of the former five-UST cluster in 1994. Two of the wells near the former five-UST cluster were removed in 1999. According to Mr. Jerry Denny of The Flea Market, the two other ground water monitoring wells were also appropriately abandoned; SCVWD files had no record of

this activity. We recommend that the appropriate abandonment of the former monitoring wells be confirmed with the SCVWD.

Although the site was granted case closure for the UST releases, it appears that residually-impacted soil and ground water likely remain on-site in the vicinity of the former tanks. If impacted soil and/or ground water are encountered during site redevelopment, they must be segregated, characterized, and appropriately disposed by a contractor appropriately licensed to handle this material.

5.5 Current UST

One 8,000-gallon split gasoline/diesel UST currently is present in the maintenance are of the site. Although the UST appeared to be in compliance with applicable regulations, it must be removed, and the appropriate verification sampling performed, under SJFD oversight at the time its use is no longer needed.

5.6 Water Supply Wells

According to Mr. Bumb, at least four wells were historically present at different on-site locations and were appropriately closed during development of the site with The Flea Market and associated parking lots. If additional wells are discovered during redevelopment of the site, they must be properly abandoned in accordance with applicable regulations.

5.7 Hydraulic Lifts

Two subgrade hydraulic lifts were observed in the larger engine repair area at the site. These lifts must be appropriately removed prior to site redevelopment. Hydraulic fluid leaks potentially can occur from the pistons, reservoirs, and piping of the lifts. Although hydraulic fluid is typically not highly toxic or mobile in the soil, some hydraulic fluids may have contained polychlorinated biphenyls (PCBs). Following removal of the lifts, verification soil samples should be collected to document soil quality.

5.8 Asbestos

Due to the age of the on-site buildings, asbestos-containing materials (ACMs) may be present. An inadvertent release of asbestos from an on-site restaurant was documented in 1993, indicating that ACMs are present in on-site buildings. Since demolition of the buildings is under consideration, an asbestos survey must be conducted under National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. In addition, NESHAP guidelines require that all potentially friable ACM be removed prior to building demolition or renovation that may disturb the ACM.

5.9 Lead-Based Paint

In 1978, the Consumer Product Safety Commission banned the use of lead as an additive in paint. Based on the age of the on-site buildings, lead-based paint may be present. If lead-based paint is still bonded to the building materials, its removal is not required prior to demolition. It will be necessary, however, to follow the requirements outlined by Cal/OSHA Lead in Construction Standard, Title 8, California

Code of Regulations (CCR) 1532.1 during demolition activities; these requirements include employee training, employee air monitoring, and dust control. If lead based paint is peeling, flaking or blistered, it should be removed prior to demolition. It is assumed that such paint will become separated from the building components during demolition activities; thus, it must be managed and disposed as a separate waste steam. Any debris or soil containing lead paint or coating must be disposed at landfills that are permitted to accept the waste being disposed.

5.10 Urban Runoff Pollution Prevention Program

The Urban Runoff Pollution Prevention Program, also called the Non-Point Source Program, was developed in accordance with the requirements of the 1986 San Francisco Bay Basin Water Quality Control Plan to reduce water pollution associated with urban storm water runoff. This program was also designed to fulfill the requirements of the Federal Clean Water Act, which mandated that the EPA develop National Pollution Discharge Elimination system (NPDES) Permit application requirements for various storm water discharges, including those from municipal storm drain systems and construction sites.

Construction activity resulting in a land disturbance of 1 acre or more, or less than 1 acre, but part of a larger common plan of development or sale, must obtain a Construction Activities Storm Water General Permit. A Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) must be prepared prior to commencement of construction.

5.11 Potential Environmental Concerns Within the Site Vicinity

Based on the information obtained during this study, no hazardous material incidents have been reported in the site vicinity that would be likely to significantly impact the site. As is typical to many commercial/industrial areas, many facilities in the vicinity were reported as hazardous materials users. If leaks or spills occur at these facilities, contamination could impact the site, depending upon the effectiveness of cleanup efforts.

5.12 Soil Management Plan

Based on the long commercial, light industrial, and agricultural history of the site, buried structures, debris, or impacted soil may be encountered during site development activities; these materials may require special handling, characterization, and disposal. To limit construction delays, we recommend that a Soil Management Plan (SMP) be developed to establish management practices for handling these materials/structures if encountered.

6.0 LIMITATIONS

As with all site assessments, the extent of information obtained is a function of client demands, time limitations, and budgetary constraints. Our conclusions and recommendations regarding the site are based on readily observable site conditions, review of readily available documents, maps, aerial photographs, and data collected and/or reported by others. Due to poor or inadequate address information, the regulatory agency database report listed several sites that may be inaccurately

mapped or could not be mapped; leaks or spills from these or other facilities, if nearby, could impact the site. We are not responsible for the accuracy of information or data presented by others.

Because publicly available information often cannot affirm the presence of recognized environmental conditions, there is the possibility that such conditions exist. Our conclusions and recommendations in this site assessment are qualified in that no soil, ground water, air, or building material analyses were performed. Sampling and analysis lead to a more reliable assessment of environmental conditions, conditions that often cannot be noted from typical Phase I activities. Should you desire a greater degree of confidence, these samples should be obtained and analyzed to further evaluate environmental conditions.

This report was prepared for the sole use of The Flea Market Inc. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time and location.

RE: SOIL QUALITY EVALUATION
SAN JOSE FLEA MARKET
SAN JOSE, CALIFORNIA

Dear Mr. Bumb:

We are pleased to present this letter summarizing the results of soil sampling services performed at the San Jose Flea Market site located at 1590 Berryessa Road in San Jose, California (Figure 1). You indicated that the property is being considered for redevelopment with a mixture of residential, retail, commercial, office/industrial facilities, including a school, parks, a BART station and associated parking.

Since portions of the site were previously used for agricultural purposes, near surface soil samples were collected for laboratory analyses. This work will help evaluate if the site has been impacted by pesticides and whether the property is suitable for residential use.

SOIL SAMPLING AND ANALYSIS

Twelve borings (EB-1 through EB-12) were completed at randomly selected, accessible locations across the site (approximately one per 10-acre section) (Figure 2). Two samples per boring location were collected from the natural ground surface to a depth of ½ foot, and from 1½ to 2 feet. The soil samples were collected in acetate liners; the ends of the liners were covered with Teflon film, fitted with end caps, taped, and labeled with a unique identification number. The samples were then placed in an ice-chilled cooler and transported to a state-certified laboratory with chain of custody documentation. All drilling and soil sampling equipment was cleaned in a solution of laboratory grade detergent and distilled water before use at each sampling point.

The surface to ½ foot samples were analyzed at a state-certified laboratory for organochlorine pesticides (EPA Test Method 8081), and pesticide related metals (lead, mercury, and arsenic) by EPA Test Method 6010/7000. The 1½ to 2 feet samples were placed on hold at the laboratory pending the results of the shallower samples.

RESULTS

Analytical results of this assessment were evaluated against the California Human Health Screening Levels (CHHSLs). CHHSLs are concentrations of 54 hazardous chemicals in soil or soil gas that the California Environmental Protection Agency (Cal EPA) considers to be below thresholds of concern for risks to human health. The thresholds of concern used to develop the CHHSLs are an excess lifetime cancer risk of one-in-a-million (10^{-6}) and a hazard quotient of 1.0 for noncancer health effects. The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. The presence of a chemical at concentrations in excess of a CHHSL does not indicate that adverse impacts to human health are occurring or will occur, but suggests that further evaluation of potential human health concerns is warranted.

Analytical results are presented in Table 1. Copies of the analytical results and chain of custody documentation are presented as an attachment to this letter.

< Indicates that the compound was not detected at or above the stated laboratory reporting limit
* The California Human Health Screening Levels (CHHSL), published by OEHHA (Cal/EPA 2004b)
1 Only the organochlorine pesticides listed in Table 1 were detected above laboratory reporting limits as shown
2 Laboratory reporting limit is above the residential CHHSL
BOLD Concentration is above the residential CHHSL

The organochlorine pesticides dieldrin, endrin, DDT, DDE and DDD were detected in shallow soils at the site, and concentrations of endrin, DDT, DDE and DDD were below the respective residential CHHSLs.

Due to the concentrations of organochlorine pesticides detected in the shallow soil sample collected from boring EB-4, the laboratory reporting limit for dieldrin was raised to a level above the residential CHHSL for this sample. Thus, concentrations of dieldrin in this sample may be above the residential CHHSL.

Although the concentrations of DDT and DDE detected in the soil sample collected from boring EB-4 are below their respective residential CHHSLs, the total DDT (sum of DDT, DDE and DDD) concentration of 2.31 ppm exceeds the total threshold limit concentration (TTLC), California's hazardous waste criteria, of 1.0 ppm. Exceeding the TTLC would require special handling of contaminated soils during site redevelopment.

Concentrations of dieldrin detected in the shallow soil sample collected from boring EB-8 (0.069 ppm) exceeded the residential CHHSL of 0.035 ppm. However, the dieldrin concentration did not exceed the TTLC of 8.0 ppm.

The metal arsenic was detected above the direct exposure residential CHHSL (0.07 ppm) in all the shallow soil samples collected and analyzed. However, due to naturally occurring arsenic in the Bay Area, arsenic concentrations typically exceed the residential CHHSL. Typical mean background concentrations of arsenic in Bay Area soils range from approximately 5 ppm to 20 ppm, with some soils containing up to 40 ppm arsenic (LBNL 2002, in RWQCB, 2003). The site-specific arsenic concentrations are within the range of regional background (upper confidence level [UCL] for 95% probability less than 10 ppm) acceptable for residential development.

Lead was detected in all samples, but only the shallow soil sample collected from boring EB-7 (820 ppm) exceeded the residential CHHSL of 150 ppm. Mercury was detected at concentrations below the residential CHHSL of 18 ppm in all the samples analyzed, except in the soil sample collected from boring EB-5 where it was below the laboratory reporting limit.

CONCLUSIONS

Based on the results of the soil quality evaluation performed and the limited number of samples collected (approximately one sample per 10 acres), we recommend that additional soil sampling be conducted in the vicinities of borings EB-4, EB-7 and EB-8 to further characterize the chemical impacts identified.

LIMITATIONS

This report was prepared for the use of The Flea Market, Inc. in evaluating soil quality at the referenced site at the time of this study. The accuracy and reliability of geo- or hydrochemical studies are a reflection of the number and type of samples taken and extent of the analyses conducted, and are thus inherently limited and dependent upon the resources expended. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time and location. The chemical and other data presented in this report can change over time and are applicable only to the time this study was performed.

Soil and Ground Water Quality Evaluation
San Jose Flea Market
San Jose, California

1.0 INTRODUCTION

1.1 Purpose

This report presents the results of the soil and ground water quality evaluation activities performed at the San Jose Flea Market, located in San Jose, California. This work was performed for The Flea Market, Inc. who is considering selling the property for redevelopment with a mixture of residential, retail, and commercial use.

1.2 Site Background

The approximately 120-acre site is located at 1590 Berryessa Road in San Jose, California, and is occupied by the San Jose Flea Market and parking lots (Figure 1 and Figure 2).

Lowney Associates completed a Phase I environmental site assessment of the site in March 2005. Based on the results of the Phase I, several areas of potential environmental concern were identified. These areas of concern included the following former and current site uses: Former agricultural land at the current parking lots and flea market areas; a former feed lot/meat packing plant at the current flea market area; current paint spray booth, sign shop/print shop, paint shop, steam cleaning area, maintenance shop and several chemical storage areas in the corporate yard at the eastern side of the flea market site; and current underground storage tanks (USTs), and former USTs and aboveground storage tanks (ASTs) located within and adjacent to the corporate yard. Lowney recommended that a soil and ground water evaluation in these areas be performed due to historic and current land use.

In addition, Lowney Associates completed a limited soil quality evaluation in April 2005. Shallow soil samples were collected and analyzed to evaluate impacts from historic agricultural use. Based on the results of the limited soil quality evaluation, two areas with concentrations of pesticides above applicable screening levels (borings EB-4 and EB-8) and one area with a concentration of lead above the applicable screening level (boring EB-7) were identified. Further soil quality evaluation was recommended in these areas.

1.3 Scope of Work

The scope of work for this study was outlined in our agreements dated June 7 and September 29, 2005 and included the following tasks.

- Drilling seven exploratory borings to approximate depths of 10 to 15 feet near the location of the former feed lot/meat packing facility, and collection of soil and ground water samples for laboratory analyses.

- Drilling two exploratory borings to approximate depths of 10 to 15 feet near the locations of the current USTs, and former USTs and ASTs, and collection of soil and ground water samples for laboratory analyses.

- Drilling six borings to approximate depths of 4 feet at locations in the corporate yard identified in the 2005 Phase I, and collection of soil samples for laboratory analyses.

- Drilling 12 borings to depths of approximately 4 feet near previous boring locations EB-4, EB-7, and EB-8, and collection of soil samples for laboratory analyses.

- Drilling three exploratory borings near building 4 (paint spray booth) and building 5 (paint storage) within approximately 15 feet of the previous boring EB-20 to approximate depths of 4 feet below ground surface, and collection of soil samples for laboratory analyses.

- Drilling three borings near building 8 within approximately 15 feet of the previous boring EB-22 to approximate depths of 4 feet below ground surface, and collection of soil and ground water samples for laboratory analyses.

- Drilling three borings near building 9 within approximately 15 feet of the previous boring EB-23 to approximate depths of 4 feet below ground surface, and collection of soil and ground water samples for laboratory analyses.

- Drilling two approximately 4 feet deep borings northeast of building 12 and adjacent to the trash compactor, and collection of soil and ground water.

- Evaluating collected data and preparing a report.

2.0 SOIL AND GROUND WATER QUALITY EVALUATION

On June 30th and July 1st, 2005, staff geologist Andrew Matthew directed a subsurface exploration program and drilled 22 borings at the site (EB-13 through EB-18, EB-19, EB-19a, EB-19b, EB-19c, EB-20 through EB-23, EB-24, EB-24a, EB-24b, EB-24c, EB-25, EB-25a, EB-25b, and EB-25c). Based on the results of the soil and ground water samples collected from these borings, further work was recommended, and an additional 16 borings were completed at the site on November 8th and 9th, 2005 (EB-26 through EB-32, EB-33a, EB-33b, EB-33c, EB-34a, EB-34b, EB-34c, EB-35a, EB-35b, and EB-35c). Soils were logged continuously to record changes in lithology; logs for borings EB-13 through EB 16 and EB-26 through EB-30 are presented in Appendix A. Ground water was encountered at depths of approximately 8 to 12 feet beneath the site during the June and July 2005 investigation and at depths of approximately 5½ to 7 feet beneath the site during the November 2005 investigation. The goal of this soil and ground water evaluation was to supplement previous investigation data and to further assess the possible presence and extent of chemicals of concern due to historic and/or current activities in select or random locations.

Sample depths are referenced to first encountered soils below surfacing materials. Where historical agricultural usage was of concern, initial soil samples were collected below surfacing materials as well as any apparent fill materials. To evaluate potential impact to soils associated with current site usage, samples were collected immediately below surfacing materials. Generally, approximately ½ to 1-foot of surfacing materials were encountered across the site. Within the corporate yard, the thickness of the surface material (concrete) was variable and reportedly increased in thickness

in the northeastern corner. Soil and ground water sampling protocols are presented in Appendix A. Copies of the analytical reports and chain of custody documentation are presented in Appendix B.

2.1 Regulatory Screening Levels

Analytical results of soil and ground water samples were compared to the Environmental Screening Level (ESL) concentrations in a residential land use setting (San Francisco Bay Regional Water Quality Control Board, 2005). ESLs are considered conservative. As stated by the Water Board, the ESLs are not regulatory "cleanup standard". The presence of a chemical at a concentration exceeding an ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring; exceeding ESLs indicates that the potential for impacts may exist and that additional evaluation may be needed.

Due to the proposed residential development of the site, selected analytical results were also compared to the residential California Human Health Screening Levels (CHHSLs) (Cal/EPA, January 2005). The CHHSLs were developed to protect human health and are considered conservative. The presence of a chemical at a concentration above a CHHSL does not necessarily indicate that adverse impacts to human health are occurring; exceeding a CHHSL indicates that the potential for impacts may exist and that additional evaluation may be needed.

Ground water analytical results were also compared to the California Drinking Water Maximum Contaminant Levels (MCLs).

2.2 General Area of Former Feed Lot/Meat Packing Facility

The presence of a former feed lot/meat packing facility was identified during the Phase I environmental site assessment (Lowney, March 2005) dating back to 1939. Associated with the meat packing facility were several large buildings, pens and other unpaved surfaces, and several small water ponds. Aerial photos from 1953 depicted a change in the number and type of structures, and the surface remained unpaved. The meat packing plant continued in operation into the early 1960s, but it appears to have ceased operations by the late 1960s. Currently, the only remaining structure associated with the meat packing facility is the main snack bar (previously used as a slaughterhouse). Soil and ground water sampling was recommended due to the potential for petroleum hydrocarbon spills or releases associated with likely former on-site equipment maintenance, chemical storage and use. The field location of this former facility was based on review of historical maps and aerial photographs; therefore, boring locations are only estimated to be in the vicinity of the former feed lot/meat packing facility.

2.2.1 Soil and Ground Water Sampling and Analysis

In June 2005, two borings (EB-13 and EB-14) were completed to approximate depths of 11 feet and 12 feet, respectively, at randomly selected locations near the estimated location of the former feed lot/meat packing facility (see Figure 2). Approximately ½ foot of apparent fill material was observed beneath surface asphalt and baserock within boring EB-13. Approximately 6 feet of fill was observed beneath the baserock in boring EB-14. Ground water was encountered at approximately 9½ feet deep in boring EB-13 and approximately 8¼ feet in boring EB-14.

To evaluate soil and ground water quality for potential impacts associated with the former feed lot/meat packing facility, soil samples were collected from boring EB-13 at approximate depths of 5 to 5½ feet and 9 to 9½ feet, and from boring EB-14 at 6 to 6½ feet and 9 to 9½ feet. In addition, grab ground water samples were collected from each boring. The soil and ground water samples were analyzed for total petroleum hydrocarbons in the gasoline range (TPHg) (EPA Test Method 8015); benzene, toluene, ethylbenzene, and xylenes (BTEX) and Methyl Tertiary Butyl Ether (MTBE) (EPA Test Method 8020); total petroleum hydrocarbons in the diesel range (TPHd) and oil range (TPHmo) (EPA Test Method 8015M); and California Assessment Manual (CAM) 17 Metals (EPA Test Method 6010/7000) by a state certified analytical laboratory.

Additionally, to evaluate soil quality for potential impacts from historic agricultural use in soil borings EB-13 and EB-14, the shallow soil samples collected from immediately beneath the apparent surface fill at these locations were analyzed for organochlorine pesticides (EPA Method 8081) and pesticide-related metals (lead, arsenic and mercury) (EPA Method 6010/7000).

In an effort to further evaluate vertical extent of soil contamination and the lateral extent ground water contamination, five additional borings (EB-26 through EB-30) were drilled to approximately 15 feet below ground surface in this area in November 2005. The five borings were located in accessible areas near the previous two borings and near the estimated location of the former feed lot/meat packing facility. Soil samples were collected from boring EB-26 at approximately ½ to 1, 3 to 3½, 8 to 8½, and 10½ to 11 foot depths; from boring EB-27 at approximately ½ to 1, 3½ to 4, 9 to 9½, and 11 to 11½ foot depths; from boring EB-28 at approximately 1½ to 2, 4½ to 5, and 6½ to 7 foot depths; from boring EB-29 at approximately 1½ to 2, 4 to 4½, and 8 to 8½ foot depths; and from boring EB-30 at approximately 1½ to 2, and 4 to 4½ foot depths. Soil samples collected from borings EB-26 through EB-30 were analyzed for TPHg, TPHd and TPHmo. Ground water samples were collected from each boring and analyzed for CAM 17 metals, TPHg, TPHd and TPHmo, BTEX, and MTBE by a state certified laboratory. Ground water and soil samples were screened using silica gel to remove naturally occurring hydrocarbons. Since the site was formerly used as a feed lot, and due to the shallow depth of ground water, the ground water samples were also analyzed for nitrates.

2.2.2 Soil and Ground Water Sampling Results

2.2.2.1 Soil Sample Results

Concentrations of TPHd (140 parts per million [ppm]) and TPHmo (720 ppm) detected in the soil sample collected from boring EB-14 (9 to 9½ feet) exceeded the residential ESLs of 100 ppm and 500 ppm, respectively. Concentrations of TPHmo (448 ppm) detected in the soil sample collected from boring EB-14 (½ to 1 feet) exceeded the ESL of 100 ppm. The remainder of the soil samples collected and analyzed did not have detected concentrations of TPHd or TPHmo above their respective residential ESL. Concentrations of TPHg, BTEX and MTBE were not detected above laboratory reporting limits in the soil samples analyzed.

The metal concentrations detected in the apparent native soil samples collected from borings EB-13 and EB-14 did not exceed their respective residential CHHSL or ESL, with the exception of cobalt and arsenic. Concentrations of cobalt detected in soil samples EB-13 (5-5½ feet) and EB-19 (9-9½ feet) only slightly exceeded the ESL of 10 ppm, and did not exceed the CHHSL of 660 ppm; cobalt appeared to be within typical background concentrations. The arsenic concentrations detected in EB-13 and EB-14 generally exceeded the CHHSL and the ESL, but appeared to be within typical background concentrations. Concentrations of naturally occurring metals, such as, arsenic in the Bay Area, typically exceed the ESLs. Typical mean background concentrations of arsenic in Bay Area soils range from approximately 5 ppm to 20 ppm, with some soils containing up to 40 ppm arsenic (LBNL 2002). For this reason, regional background concentrations (up to 20 ppm) previously have been accepted by California regulatory agencies for commercial and residential development.

Organochlorine pesticides either were not detected above the respective laboratory reporting limits, or were below their respective residential CHHSL or ESL in the soil samples collected from this area.

2.2.2.2 Ground Water Sampling Results

The ground water sample collected from EB-14 contained concentrations of TPHd (1,600 parts per billion [ppb]) and TPHmo (660 ppb) above the ground water ESLs of 100 ppb, respectively. Additionally, the ground water samples collected from EB-28, EB-29 and EB-30 contained concentrations of TPHmo (110 ppb and 210 ppb, respectively) above the ground water ESL (100 ppb). Concentrations of TPHd and TPHmo in the remaining ground water samples and concentrations of TPHg in all of the ground water samples either were not detected at or above the laboratory reporting limit or were below their respective ESL. Concentrations of benzene detected in ground water samples EB-13 and EB-27 (2.3 ppb and 10 ppb, respectively) exceeded the ground water ESL and the drinking water MCL of 1.0 ppb. Remaining BTEX constituents either were not detected at or above laboratory reporting limits or were below their respective ESL and MCL in the ground water samples collected from this area.

The concentrations of several metals detected in the ground water samples collected from EB-13 and EB-14 exceeded their respective ESLs or MCLs. Often due to the turbid nature of the unfiltered grab ground water samples (as in ground water collected from EB-13 and EB-14) concentrations of metals may exceed the ESLs or MCLs. These unfiltered grab samples likely reflect the total metal concentrations in the sample (sediment and ground water) instead of the metal concentrations dissolved in ground water.

Based on the results of ground water samples EB-13 and EB-14, ground water samples collected from EB-26 through EB-30 were filtered to evaluate the concentrations of the dissolved phase metals. Metals concentrations in these ground water samples were generally lower than in the previous ground water samples, with the exception of mercury. Concentrations of dissolved mercury in the five ground water samples exceeded the ESL of 0.012 ppb, but did not exceed the MCL of 2 ppb. Concentrations of dissolved nickel in the ground water samples also exceeded the ESL of 8.2 ppb but not the MCL of 100 ppb. The concentration of arsenic in ground water sample EB-30 (63 ppb) exceeded both the ESL (36 ppb) and MCL (50 ppb). Concentrations of cobalt, copper, lead, selenium and silver detected in the ground water samples exceeded their respective ESL, but did not exceed their respective MCLs. The remainders of the dissolved metals either were not detected at or above the laboratory reporting limits, or were below their respective ESL and MCL.

Nitrate concentrations in the ground water samples collected from EB-26 through EB-30 were below the laboratory reporting limit, with the exception of the ground water sample collected from EB-27, which had a nitrate concentration of 470 ppb. This concentration did not exceed the MCL of 1,000 ppb. There is no ESL established for nitrate.

2.2.3 Conclusions and Recommendations

Random sampling of soil near the former feed lot/meat packing facility revealed low to moderate concentrations of petroleum hydrocarbons (primarily TPHmo) in subsurface soil, and low concentrations of TPHmo in shallow soils. High molecular weight petroleum hydrocarbons, such as the diesel to motor oil range petroleum hydrocarbons, typically exhibit characteristics of low toxicity and low mobility in the environment. Based on the concentrations of petroleum hydrocarbons detected in the soil samples (maximum of 720 ppm), the petroleum hydrocarbons do not appear to pose a significant risk to human health or the environment. However, these results do indicate that a petroleum hydrocarbon release to surface and subsurface soils has occurred from an unknown source. We recommend that petroleum hydrocarbon contaminated soils be excavated and disposed at an appropriately licensed facility if they are encountered during site redevelopment activities.

Concentrations of metals detected in soil and ground water samples collected near the former feed lot/meat packing facility appear to be within typical site background concentrations and do not appear to pose a significant risk to human health or the environment. Based on the analytical results, ground water beneath this area appears to have been impacted by petroleum hydrocarbons. These concentrations do not appear pose a significant threat to human health, the environment, and the proposed development.

Based on the long agricultural and commercial history of this area, buried structures, burn pits, debris or impacted soil may be encountered during site development activities; these materials may require special handling and disposal. To limit construction delays we recommend that a Soil Management Plan be developed to establish management practices for handling these materials/structures encountered.

We recommend contacting an environmental attorney to assess liabilities and reporting requirements associated with the contamination detected. Consideration should also be given to reporting these results to local regulatory agency.

2.3 Split UST Location

One 8,000-gallon split UST (4,000 gallons of gasoline and 4,000 gallons of diesel) was observed on-site during the 2005 Phase I. The UST is currently operational and is located near the southwestern corner of the Corporate Yard (see Figure 3).

2.3.1 Soil and Ground Water Sampling and Analysis

In June 2005, one boring (EB-15) was completed to an approximate depth of 16 feet and was located approximately 10 feet west and in the anticipated down-gradient direction (in terms of ground water flow) of the current UST location. Thin layers of dark, cohesive, granular material with a petroleum odor were observed at approximately 5 feet and 9 feet in boring EB-15. Fill material at that location extends to at least a depth of approximately 12 feet. Ground water was encountered at approximately 12 feet deep in boring EB-15.

To evaluate soil and ground water quality for potential impacts from the current UST, a grab ground water sample and soil samples collected from boring EB-15 at approximately depths of 5 to 5½ feet and 10 to 10½ feet were analyzed for TPHg, BTEX, MTBE, TPHd and TPHmo by a state certified analytical laboratory.

2.3.2 Soil and Ground Water Sampling Results

Petroleum hydrocarbon constituents either were not detected above the respective laboratory reporting limit, or were well below their respective ESL in soil and ground water samples collected from boring EB-15. However, the laboratory's reporting limit for TPHmo for the ground water sample collected from EB-15 was greater than the ESL of 100 ppm; therefore, it is possible low concentrations of TPHmo may have been present.

2.3.3 Conclusions and Recommendations

Based on the analytical results of soil samples collected from boring EB-15, it does not appear that a significant petroleum hydrocarbon release from the current on-site UST has occurred. The low concentrations detected likely reflect minor spillage events. No further work appears required at this time. However, we recommend that this UST be removed prior to the property transfer.

2.4 Former UST and AST Locations

Based on information obtained during the 2005 Phase I, the Flea Market historically maintained one gasoline and one diesel UST, and one Jet "A" AST on-site. The tanks reportedly were removed, and soil and ground water samples collected during the removal showed that moderate concentrations of residual contamination (110 ppm TPHg and 700 ppm TPHd) remained in the soil within the tank pit area. The residual contamination was stated by the Santa Clara Valley Water District (SCVWD) to be below levels of regulatory concern. The SCVWD and the California Regional Water Quality Control Board (RWQCB) issued case closure letters for the petroleum hydrocarbon release dated April 4, 1996 October 30, 2000, and August 6, 2004.

Although the site was granted case closure for the UST release, it appears that residual petroleum hydrocarbon impacted soil and ground water likely remained on-site in the vicinity of the former tanks. The UST and AST were located near the northeastern end of the Corporate Yard; more exact locations of the UST and AST were determined by The Flea Market personnel.

2.4.1 Soil and Ground Water Sampling and Analysis

In June 2005, one boring (EB-16) was completed to an approximate depth of 12 feet and was located approximately 5 feet west and in the anticipated down-gradient ground water flow direction of the reported former UST and AST locations (see Figure 3). Apparent fill material was observed to a depth of approximately 8 feet, and ground water was encountered at approximately 8 feet in boring EB-16.

To evaluate soil quality for potential impacts from the former UST and AST, soil samples collected from boring EB-16 from the surface to ½ foot, 3 to 3½ feet, 5 to 5½ feet and 10 to 10½ feet were analyzed for TPHg, BTEX, MTBE, TPHd and TPHmo by a state certified laboratory. A grab ground water sample also was collected and analyzed for the same constituents.

2.4.2 Soil and Ground Water Sampling Results

With the exception of low levels of TPHd reported in two soil samples, petroleum hydrocarbon constituents were not detected above the respective laboratory reporting limit in soil or ground water collected from boring EB-16. TPHd was detected in the surface to ½ foot deep soil sample (9.1 ppm) and the 2½ to 3 feet deep soil sample (1.7 ppm) collected from this boring, well below the ESL of 100 ppm. However, the laboratory's reporting limit for TPHmo for the ground water sample collected from EB-16 was greater than the ESL of 100 ppm; therefore, it is possible low concentrations of TPHmo may have been present.

2.4.3 Conclusions and Recommendations

The analytical results of soil and ground water samples collected from boring EB-16 appear to indicate that residual petroleum hydrocarbons associated with the former UST or possible releases from the former AST have not significantly impacted soil and/or ground water in the anticipated down-gradient direction of the former UST.

We recommend contacting the local regulatory agency to inform them of the planned change in use of the site in order to determine if this agency may require additional investigation in this area. We also recommend preparing a Soil Management Plan to establish management practices for handling fuel and oil impacted soil, if encountered during construction activities.

2.5 Corporate Yard Locations

To evaluate soil quality and to screen for the possible presence of soil and/or ground water impacts in the shop/maintenance/chemical storage areas located at the corporate yard, six exploratory borings (EB-17, EB-18, and EB-20 through EB-23) were drilled in June 2005, and 11 exploratory borings were drilled in November 2005 (EB-31, EB-32, EB-33a, EB-33b, EB-33c, EB-34a, EB-34b, EB-34c EB-35a, EB-35b, and EB-35c). A site plan of the corporate yard showing boring/sample locations is presented in Figure 3.

Sample locations were based on areas of concern identified during the 2005 Phase I. In addition to historical areas of concern, current site use (within the corporation yard) and previous sampling results further aided in sample location. For locations within the corporation yard, borings were advanced near doorways, near areas of apparent staining, and in areas clear of underground utilities (identified by private utility locator, and Flea Market staff).

2.5.1 Building 12- Garbage Crew Storage/Trash Compactor

City of San Jose Fire Department inspection records reviewed as part of the 2005 Phase I indicated that chemicals including cleansers, degreasers, and insecticides were stored at the garbage crew storage building (building 12) on-site. Soil sampling was recommended in this area.

2.5.1.1 Soil Sampling and Analysis

In June 2005, boring EB-17 was drilled to a depth of approximately 3 feet in an accessible area approximately 25 feet southwest building 12. Soil samples were collected from the surface to ½ foot, 1 to 1½ feet and 2½ to 3 deep within the boring. The soil sample collected from surface to ½ foot was analyzed for organochlorine pesticides (EPA Test Method 8081); pesticide-related metals (lead, arsenic and mercury) (EPA Test Method 6010/7000); and VOCs (EPA Test Method 8260B) by a state certified laboratory. The 1 to 1½ feet and 2½ to 3 feet deep soil samples were kept on hold at the laboratory pending the results of the shallowest soil sample.

Based on the analytical results of soil samples collected from boring EB-17, two additional soil borings (EB-31, and EB-32) were advanced northeast of building 12 and adjacent to the trash compactor in November 2005. Soil samples were collected from immediately below surfacing materials to ½ foot, 1 to 1½ feet, and 2½ to 3 feet deep. Soil samples EB-31 and EB-32 (½ to 1 foot) were analyzed for the same constituents as EB-17 plus TPHg, TPHd, TPHmo, BTEX and MTBE. The soil samples were screened with silica gel to remove naturally occurring hydrocarbons. The 1 to 1½ feet and 2½ to 3 feet deep soil samples were kept on hold at the laboratory pending the results of the shallowest soil sample.

2.5.1.2 Soil Sampling Results

Concentrations of petroleum hydrocarbons either were not detected at or above the laboratory reporting limit or were below their respective CHHSL and ESL.

Concentrations of organochlorine pesticides and VOCs were not detected above the respective laboratory reporting limits in the soil samples collected from this area, and

concentrations of pesticide-related metals appeared to be within typical background levels. Only arsenic was detected slightly above the CHHSL and ESL, but appeared to be within typical background concentrations.

2.5.1.3 Conclusions and Recommendations

Based on the soil sampling results, concentrations of petroleum hydrocarbons and arsenic detected in the soil samples do not appear to pose a significant risk to human health or the environment.

2.5.2 Building 13- Gardener's Shop

City of San Jose Fire Department inspection records reviewed as part of the 2005 Phase I indicated that chemicals including fertilizer, insecticides, herbicides, and gasoline were stored in building 13. Soil sampling was recommended near this building.

2.5.2.1 Soil Sampling and Analysis

In June 2005, boring EB-18 was drilled to approximately 3 feet deep at a location adjacent to building 13 (Figure 3). Soil samples were collected from the surface to ½ foot, 1 to 1½ feet and 2½ to 3 deep within the boring. The soil sample collected from surface to ½ foot was analyzed for organochlorine pesticides, pesticide-related metals, herbicides (EPA Test Method 8151), TPHg, BTEX, MTBE, TPHd and TPHmo by a state certified laboratory. The 1 to 1½ feet and 2½ to 3 feet deep soil samples were kept on hold at the laboratory pending the results of the shallowest soil sample.

2.5.2.2 Soil Sampling Results

Concentrations of organochlorine pesticides, herbicides, BTEX and MTBE were not detected above the respective laboratory reporting limits in soil sample EB-18 (surface to ½ foot). Concentrations of TPHg, TPHd and TPHmo detected in this sample were below their respective residential ESLs. Concentrations of pesticide-related metals appeared to be within typical background levels, and generally were below the residential CHHSL and ESL in this sample. The laboratory reporting limit for arsenic was above the residential CHHSL, therefore, concentrations of arsenic may be present above the residential CHHSL in this sample, but would be within typical background concentrations previously accepted by California regulatory agencies for commercial and residential development (20 ppm).

2.5.2.3 Conclusions and Recommendations

Based on the soil sampling results, concentrations of chemicals detected in the soil sample collected from boring EB-18 do not appear to pose a significant risk to human health or the environment.

2.5.3 Buildings 4, 5 and 6- Paint Spray Booth/Paint Storage/Sign Shop

Site reconnaissance performed and municipal records reviewed during the 2005 Phase I indicated that buildings 4, 5 and 6 used and stored paint and paint waste. Soil sampling was recommended near these buildings.

2.5.3.1 Soil Sampling and Analysis

In June 2005, boring EB-20 was drilled approximately 10 feet northwest of building 4 and between building 4 and building 5, and boring EB-21 was drilled approximately 5 feet southwest of building 6. Each boring was drilled to approximately 3 feet deep, and soil samples were collected from the surface to ½ foot, 1 to 1½ feet and 2½ to 3 deep within each boring. The soil samples collected from the surface to ½ foot were analyzed for CAM 17 metals and VOCs by a state certified laboratory. The 1 to 1½ feet and 2½ to 3 feet deep soil samples collected from both borings were kept on hold at the laboratory pending the results of the shallowest soil samples.

To further evaluate shallow soil quality, three borings (EB-35a, EB-35b, EB-35c) were drilled within 15 feet surrounding boring EB-20 and to approximate depths of 4 feet below ground surface in November 2005. Soil samples were collected from ½ to 1 foot, 1 to 1½ feet, and 3 to 3½ feet within each boring. The ½ to 1 foot samples collected from EB-35a, EB-35b, and EB-35c, were analyzed for VOCs including BTEX and MTBE by a state certified laboratory. Samples taken from the three borings at 1 to 1½ feet deep, and 3 to 3½ feet deep, were kept on hold at the laboratory pending the results of the shallowest soil samples.

2.5.3.2 Soil Sampling Results

Concentrations of metals detected in the shallow soil samples collected EB-20 and EB-21 generally appeared to be within typical background levels and were below their respective residential CHHSLs or ESLs, with the exception of cobalt, which exceeded the ESL in both samples. The VOC constituent 1,1,1-trichloroethane (0.043 ppm) was detected in soil sample EB-20 (surface to ½ foot), but did not exceed the residential ESL of 7.8 ppm. 1,2,4-trimethylbenzene and 1,2,5-trimethylbenzene were detected in soil sample EB-35a (1.1 ppm and 0.463 ppm, respectively); however, there are no ESLs established for these constituents. Additional VOCs, BTEX or MTBE were not detected above the respective laboratory reporting limits in the shallow soil samples collected from this area.

2.5.3.3 Conclusions and Recommendations

Based on the analytical results from the soil samples collected in the vicinity of buildings 4, 5 and 6, concentrations of chemicals detected do not appear to pose a significant risk to human health or the environment. However, the presence of the trichloroethane and trimethylbenzene indicates that VOCs have impacted shallow soils in this area. Since VOCs were not detected in shallow soil samples collected from the remaining borings, it does not appear that the lateral extent of VOC impacts to shallow soils is significant.

We recommend contacting an environmental attorney to assess liabilities and reporting requirements associated with the low levels of contamination detected. Consideration should also be given to reporting these results to the local regulatory agency. We also recommend preparing a Soil Management Plan to establish management practices for handling impacted soil, if encountered during construction activities.

2.5.4 Building 8- Maintenance Shop

Site reconnaissance performed and municipal records reviewed during the Phase I environmental site assessment completed in March 2005 indicated that engine repair-related chemicals, including lubricants, gasoline, oil, used oil, and solvents were used and stored in this building. Soil sampling was recommended near this building.

2.5.4.1 Soil Sampling and Analysis

In June 2005, boring EB-22 was drilled near building 8 to an approximate depth of 3 feet. Soil samples were collected from the surface to ½ foot, 1 to 1½ feet and 2½ to 3 deep within the boring. The surface to ½ foot deep soil sample was analyzed for CAM 17 metals, VOCs, TPHg, BTEX, MTBE, TPHd and TPHmo by a state certified laboratory. Based on the results of the surface soil sample analyses, the 1 to 1½ feet deep soil sample was analyzed for total chromium, TPHd and TPHmo. The 2½ to 3 feet deep soil sample was kept on hold at the laboratory.

In an effort to delineate the lateral and vertical extent of petroleum hydrocarbon and metals impacts in soil near building 8, three borings (EB-34a, EB-34b, and EB-34c) were drilled within approximately 15 feet of boring EB-22 to approximate depths of 4 feet below ground surface in November 2005. Soil samples were collected from the ½ to 1 foot depth, 1 to 1½ foot depth, and 3 to 3½ foot depth within each boring. Soil samples from EB-34a, EB-34b, and EB-34c at ½ to 1 foot depth were analyzed for TPHd, TPHmo, and CAM 17 metals. The soil samples were screened with silica gel to remove naturally occurring hydrocarbons. The 1 to 1½ feet and 3 to 3½ feet deep soil samples collected from the three borings were kept on hold at the laboratory pending the results of the shallowest soil samples.

To evaluate ground water in this area, an additional boring EB-34b (located near former boring EB-22) was drilled to ground water, and a grab ground water sample was collected for analysis of TPHd and TPHmo with silica gel, and dissolved CAM 17 metals by a state certified laboratory.

2.5.4.2 Soil Sampling Results

Soil sample EB-22 (surface to ½ foot) also contained concentrations of TPHd (410 ppm) and TPHmo (2,000 ppm) that exceeded the residential ESLs of 100 ppm and 500 ppm, respectively. BTEX and MTBE were not detected above the respective laboratory reporting limits in this sample.

Due to the elevated concentrations of petroleum hydrocarbons detected in the 0 to ½ foot sample, the 1 to 1½ foot sample was also analyzed for TPHd and TPHmo by a state certified laboratory. TPHd was detected at 3.5 ppm, and TPHmo was not detected above the laboratory reporting limit in this sample. Although the analyses performed on soil sample EB-22 (1 to 1½ feet) were conducted after the laboratory holding time had expired, the results appear to show a significant decrease in diesel and motor oil concentrations with depth in boring EB-22.

Concentrations of petroleum hydrocarbons detected in soil samples collected from EB-34a, EB-34b, and EB-34c were below the respective ESLs.

Chromium (99 ppm), cobalt (15 ppm) and thallium (1.3 ppm) were detected in soil sample EB-22 (surface to ½ foot) at concentrations exceeding the respective ESLs. Remaining metals detected appeared to be within typical background levels and are below the respective CHHSLs and ESLs. Due to the elevated concentration of chromium in this sample, soil sample EB-22 (1 to 1½ feet), was analyzed for chromium. Chromium was detected at a concentration of 48 ppm, which was below the direct exposure ESL and appeared to be within the typical background level.

Concentrations of cobalt were detected in soil samples collected from EB-34a, EB-34b, and EB-34c (13 ppm, 13 ppm, and 11 ppm, respectively), which are above the ESL of 10 ppm. Chromium was detected in EB-34b (59 ppm) slightly above the ESL of 58 ppm. In addition, arsenic was detected in EB-34a (6.4 ppm) slightly above the ESL of 5.5 ppm. In our opinion, the metal concentrations detected likely reflect typical background concentrations.

2.5.4.3 Ground Water Sampling Results

Analytical results of the ground water sample collected from boring EB-34b indicated that concentrations of petroleum hydrocarbons were not detected above the respective laboratory reporting limits.

The concentration of nickel (15 ppb) detected in the ground water sample exceeded the ESL of 8.2 ppb but not the MCL of 100 ppb. The remainder of the metals either were not detected above the respective laboratory reporting limits, or were below the respective ESL or MCL. The laboratory reporting limits for lead, silver and thallium were above the ESLs; therefore, it is possible that concentrations of these metals were present above the ESLs in this sample.

2.5.4.3 Conclusions and Recommendations

Based on the results of soil sampling near Building 8, it appears that shallow and isolated motor oil spills may be present in this area. These spills are likely limited in extent and do not appear to pose a significant threat to human health and the environment. Metal concentrations appear to represent background levels.

Based on the analytical results of the ground water sample collected and analyzed, it appears that ground water has not been significantly impacted.

We recommend contacting an environmental attorney to assess liabilities and reporting requirements with the low levels of contamination detected. Consideration should also be given to reporting these results to local regulatory agency. We also recommend preparing a Soil Management Plan to establish management practices for handling impacted soil, if encountered during construction activities.

2.5.5 Building 9- Hazardous Materials Storage Shed

Site reconnaissance performed during the 2005 Phase I indicated that hazardous waste and materials including oil, used oil, and gasoline were stored in this building. Soil sampling was recommended near this building.

2.5.5.1 Soil Sampling and Analysis

One boring (EB-23) was completed in June 2005, and was located approximately 5 feet from the entrance to the shed. The surface to ½ foot deep soil sample collected from boring EB-23 was analyzed for VOCs, TPHg, BTEX, MTBE, TPHd and TPHmo by a state certified laboratory. The 1 to 1½ feet and 2½ to 3 feet deep soil samples were kept on hold at the laboratory pending the results of the shallowest soil sample. The location of boring EB-23 was constrained by the presence of underground utilities.

In an effort to delineate the lateral and vertical extent of petroleum hydrocarbon impacts in soil near building 9, three borings (EB-33a, EB-33b, EB-33c) were drilled within approximately 15 feet surrounding boring EB-23 in November 2005. During drilling of the boring EB-33a, refusal was met at ½ foot below the ground surface. Due to the abundance of utilities located throughout this area, an alternate boring location was not chosen. Consequently, soil samples were only collected from EB-33a at ½ foot below the ground surface. Soil samples were collected from EB-33b at 1 to 1½ foot, 2 to 2½ feet, and 3½ to 4 feet deep, and soil samples were collected from EB-33c at ½ to 1 foot, 1 to 1½ feet, and 3 to 3½ feet deep. The shallowest soil samples from EB-33a, EB-33b, and EB-33c were analyzed for TPHd, and TPHmo by a state certified laboratory. The soil samples were screened with silica gel to remove naturally occurring hydrocarbons. The deeper soil samples collected from the borings were kept on hold at the laboratory pending the results of the shallowest soil samples.

To evaluate ground water in this area, boring EB-33b was drilled to ground water and a grab ground water sample was collected for analysis. The ground water sample was analyzed for TPHd and TPHmo with silica gel, and dissolved CAM 17 metals by a state certified laboratory.

2.5.5.2 Soil and Ground Water Sampling Results

Concentrations of TPHd (130 ppm) and TPHmo (600 ppm) detected in soil sample EB-23 (surface to ½ foot) exceeded the residential ESLs of 100 ppm and 500 ppm, respectively. VOCs, BTEX and MTBE were not detected above the respective laboratory reporting limits in this sample.

Concentrations of cobalt were detected in soil samples EB-33a, EB-33b, and EB-33c (15 ppm, 12 ppm, and 15 ppm respectively), which are above the ESL of 10 ppm. Concentrations of chromium (60 ppm) and lead (170 ppm) detected in the soil sample collected from boring EB-33b were above the ESLs of 58 ppm and 150 ppm, respectively. In addition, arsenic was detected above the ESL in EB-33a (8.2 ppm). The metal concentrations detected likely reflect typical background concentrations, although lead appeared elevated in concentration.

Analytical results of the ground water sample collected from boring EB-33b indicated that concentrations of TPHd, TPHmo and metals were below the respective laboratory reporting limits. The reporting limits for lead, silver and thallium were above the

respective residential ESLs; therefore, concentrations of lead and/or silver may be present in the ground water sample above the ESLs.

2.5.5.3 Conclusions and Recommendations

Analytical results of soil sampling near building 9 indicates that low levels of TPHd and TPHmo are present in shallow soils. High molecular weight petroleum hydrocarbons, such as the diesel to motor oil range petroleum hydrocarbons, typically exhibit characteristics of low toxicity and low mobility in the environment. Based on the concentrations of petroleum hydrocarbons detected in the soil samples (maximum of 600 ppm), the petroleum hydrocarbons do not appear to pose a significant risk to human health or the environment. However, these results do indicate that a petroleum hydrocarbon release to surface soils has occurred.

Concentrations of metals detected in shallow soil samples do not appear to pose a significant risk to human health or the environment and likely represent background concentrations, except for lead. The source of lead detected in the shallow soil sample collected from boring EB-33b is unclear; it maybe associated with lead based paint. Additional soil samples should be performed in this area to further evaluate the elevated lead concentration detected.

Based on the analytical results of the ground water sample collected from boring EB-34b, ground water quality appears representative of natural background conditions.

We recommend contacting an environmental attorney to assess liabilities and reporting requirements with the low level of contamination detected. Consideration should also be given to reporting these results to the local regulatory agency. We also recommend preparing a Soil Management Plan to establish management practices for handling impacted soil, if encountered during construction activities.

2.6 AGRICULTURAL PESTICIDES AND METALS

Organochlorine pesticides (dieldrin, endrin, and total DDT) were detected in shallow soils at the site during the previous soil quality evaluation (Lowney, April 2005); concentrations of endrin were below the respective residential CHHSL. Total DDT (sum of DDT, DDE and DDD) exceeded the total threshold limit concentration (TTLC), California's hazardous waste criteria (1.0 ppm) and the residential CHHSL (1.6 ppm) in one of 12 samples. Dieldrin exceeded the residential CHHSL (0.035 ppm) in one of 12 samples (boring EB-8 at 0.069 ppm). Due to the concentrations of other organochlorine pesticides detected in the shallow soil sample collected from boring EB-4, the laboratory reporting limit for dieldrin was raised to a level above the residential CHHSL for this sample. Thus, concentrations of dieldrin in this sample may also be above the residential CHHSL. However, the dieldrin concentration did not exceed the TTLC of 8.0 ppm. Exceeding the TTLC and/or CHHSL would likely require special handling of contaminated soils during site redevelopment.

In an effort to determine if the area of elevated total DDT concentration (EB-4) and the area of elevated dieldrin concentration (EB-8) were related to isolated leaks or spills or appeared more typical of common agricultural application procedures, four soil borings were drilled near each of these areas. At each location, one boring was drilled immediately near the previous boring, and three borings were drilled within approximately 15 feet surrounding the previous boring. The borings were drilled to approximate depths of 3 feet.

2.6.1 Soil Sampling and Analysis

The 1 to 1½ and the 2½ to 3 foot deep soil samples collected from boring EB-24 (located near the former boring EB-4) and boring EB-25 (located near the former boring EB-8) were analyzed for organochlorine pesticides and pesticide-related metals by a state certified laboratory. The surface to ½ foot deep soil samples collected from the three borings surrounding boring EB-24 (EB-24a, EB-24b and EB-24c) and boring EB-25 (EB-25a, EB-25b and EB-25c) were also analyzed for organochlorine pesticides and pesticide-related metals. The 1 to 1½ feet and 2½ to 3 feet deep soil samples were kept on hold at the laboratory pending the results of the shallowest soil samples.

In addition, shallow soil samples collected from borings EB-17, EB-18, EB-31 and EB-32 were analyzed for organochlorine pesticides and pesticide-related metals.

2.6.1.1 Soil Sampling Results

Organochlorine pesticides detected in the three surface soil samples collected near EB-4 were below their respective residential CHHSL.

Concentrations of dieldrin in the three surface soil samples collected near EB-8 exceeded the residential CHHSL of 0.035 ppm. Due to the elevated levels of dieldrin detected, deeper soil samples (1 to 1½ feet) were analyzed for organochlorine pesticides. Organochlorine pesticides were not detected above their respective residential CHHSL in these soil samples.

Arsenic concentrations were generally above the residential ESL but appeared to be within the typical mean background concentrations of arsenic in Bay Area soils. The remaining metals were below their respective residential CHHSL.

2.6.1.2 Conclusions and Recommendations

Based on these results and our understanding of site history, agricultural chemicals were likely applied to the fields using typical farming protocol. Total DDT exceeded the residential CHHSL, direct exposure ESL and TTLC (California hazardous waste standard) in only one of 19 samples analyzed. The 95 percent upper confidence limit of the 19 shallow soil samples analyzed for total DDT was calculated at 0.46 ppm, which is below both the residential CHHSL, direct exposure ESL and the TTLC. Based on this review, the concentrations of total DDT detected in on-site soils do not appear to pose a significant risk to human health in a residential scenario.

Dieldrin exceeded the residential CHHSL and direct exposure ESL in four of 19 samples; the dieldrin concentrations, however, did not exceed the TTLC of 8 ppm. The 90 percent upper confidence limit of the 19 surface soil samples analyzed for dieldrin was calculated at 0.027 ppm, which does not exceed the direct exposure ESL of 0.034 and at the residential CHHSL of 0.035. Based on these results, dieldrin also does not appear to pose a significant risk to human health in a residential scenario across the majority of the site. If soil is planned to be off-hauled from the site, special handling, testing and disposal procedures may be required.

We recommend that these results be reported to the local regulatory agency for their review and approval of proposed site use.

2.6.2 Lead

The April 2005 soil quality evaluation performed by Lowney revealed that lead was detected in all samples analyzed, but only the surface soil sample collected from boring EB-7 (820 ppm) exceeded the residential CHHSL and ESL of 150 ppm.

In an effort to define the extent of lead impact in this area, four soil borings were drilled near the former location of EB-7. One boring was drilled immediately near the previous boring, and three borings were drilled within approximately 15 feet and surrounding the previous boring. The borings were drilled to an approximate depth of 3 feet.

2.6.2.1 Soil Sampling and Analysis

The 1 to 1½ and the 2½ to 3 foot soil samples collected from boring EB-19, located immediately adjacent former boring EB-7, and the surface to ½ foot deep soil samples collected from the borings near the former boring EB-7 (EB-19a, EB-19b, EB-19c) were analyzed for lead (EPA Test Method 6010/7000) by a state certified laboratory. The 1 to 1½ feet and 2½ to 3 feet deep soil samples collected from the borings surrounding the former boring EB-7 were kept on hold at the laboratory pending the results of the shallowest soil samples.

2.6.2.2 Soil Sampling Results

Total lead (180 ppm) was detected above the residential CHHSL and ESL of 150 ppm in soil sample EB-19 (1 to 1½ feet); however, concentrations of lead detected in soil sample EB-19 (10 ppm at 2½ to 3 feet), and the surface to ½ foot deep soil samples EB-19a (8.4 ppm), EB-19b (9.1 ppm) and EB-19c (28 ppm) did not exceed the residential CHHSL and ESL, and appeared more representative of background conditions.

2.6.2.3 Conclusions and Recommendations

Lead impacted soil detected near borings EB-7 and EB-19 appeared to be limited to surface or near surface soils and within approximately 15 feet of these borings. We recommend over-excavation of the lead impacted soil containing concentrations above the residential CHHSLs and ESL. This work would involve soil over-excavation, confirmation soil sampling and off-site disposal at an appropriately licensed facility.

We recommend contacting an environmental attorney to assess liabilities and reporting requirements with the low level of contamination detected. Consideration should also be given to reporting these results to the local regulatory agency. We also recommend preparing a Soil Management Plan to establish management practices for handling impacted soil, if encountered during construction activities.

3.0 LIMITATIONS

This report was prepared for the sole use of The Flea Market, Inc in evaluating soil and ground water quality at The San Jose Flea Market at the time of this study. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time

and location. The chemical and other data presented in this report can change over time and are applicable only to the time this study was performed. We are not responsible for the data presented by others.

The accuracy and reliability of the geo- and hydrochemical studies are a reflection of the number and type of samples taken and extents of the analyses conducted, and are thus inherently limited and dependent upon the resources expended. Chemical analyses were performed for specific parameters during this investigation, as detailed in the scope of services. Please note that additional constituents not analyzed for during this evaluation may be present in soil and ground water at the site. Our sampling and analytical plan was designed using accepted environmental principles and our judgment for the performance of a soil and ground water quality evaluation and was based on the degree of investigation approved by you. It is possible to obtain a greater degree of certainty, if desired, by implementing a more rigorous soil and ground water sampling program or evaluating the risk posed by the contaminants detected, if any.

SOIL AND GROUND WATER SAMPLING PROTOCOLS

Drilling: The subsurface investigation was performed using a truck-mounted drill rig equipped with Direct Push Technology equipment. The borings were advanced by hydraulically driving a 2-inch-diameter by 4- or 5-foot-long open sampler with an interior clear acetate sample liner. After being driven to a depth of 4 or 5 feet, the sampler was retracted to the surface. A new sampler was then lowered into place and the tools advanced further to collect the next soil sample. Soil samples were obtained continuously from the borings for observation and logging purposes.

Soils encountered in borings SB-13 through SB-16 were logged using the Unified Soil Classification System (ASTM D-2487). The logs of the borings, as well as a key to the classification of soil (Figure A-1), are included as part of this appendix. Copies of the permits obtained for the borings are also included. The borings were backfilled with neat cement grout.

Soil Sampling: Soil samples for laboratory analysis were collected in brass or acetate liners. The ends of the liners were covered in Teflon film, fitted with plastic end caps, taped, and labeled with a unique identification number. The sample reference depth was based on first encountered soils below paving surfaces (including baserock). The samples were then placed in an ice-chilled cooler, and transported to a state-certified analytical laboratory with chain of custody documentation.

Ground Water Sampling: After the borings were completed, ¾-inch I.D., flush-threaded, PVC casing was lowered into the boreholes. The lower portion of the casing had factory-machined slots to allow for the infiltration of ground water. Ground water was collected using either a small diameter bailer or a 3/8-inch polyethylene tube with bottom check valve inserted down the inside of the 1¼-inch drive rod to the screen zone. The samples were placed in appropriate sample bottles labeled with a unique identification number. The samples then were placed in an ice-chilled cooler and transported to a state-certified analytical laboratory with chain of custody documentation.

Equipment Decontamination: All drilling and sampling equipment was cleaned in a solution of laboratory grade detergent and distilled water or steam cleaned before use at each sampling point.

Legend and Notes

Sample Comment

Lab ID: 2005-07-0056 -18

Siloxane peaks are found in the sample which are not believed to be gasoline related. If they were t be quantified as gasoline, the concentration would be 130 ug/L.

Analysis Flag

N1

Internal standard out of range.

Result Flag

Q6

The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.

R1

Analyte RPD was out of QC limits.

S7

Surrogate recoveries higher than acceptance limits.

RE: 2121-1B Pre client request, report re-issued to the MDL for all analyses.
Order No.: 0511061

Dear Deborah Varty:

Torrent Laboratory, Inc. received 27 samples on 11/9/2005 for the analyses presented in the following report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc, is certified by the State of California, ELAP #1991. If you have any questions regarding these tests results, please feel free to contact the Project Management Team at (408)263-5258;ext: 204.

Sincerely,

Laboratory Director 2/27/06 Date

Patti Sandrock
QA Officer

Project: 2121-1B
Lab Order: 0511061

CASE NARRATIVE

Analytical Comments for METHOD TPH_D/MO_S_8015B, All SAMPLES, Note: Silica gel cleanup employed.

Analytical Comment for METHOD 6010B_S, Note:The % recoveries in the MS and/or MSD for Barium, Copper, Nickel, Silver, Vanadium and Zinc are outside of laboratory control limits but within % RPD limits and % recovery limits for the LCS/LCSD. No corrective action is required.

Report re-issued 2/27/06 in order to supply ALL data to the MDL. All QC has been validated to the MDL.

Definitions, legends and Notes

Note	Description
ug/kg	Microgram per kilogram (ppb, part per billion).
ug/L	Microgram per liter (ppb, part per billion).
mg/kg	Milligram per kilogram (ppm, part per million).
mg/L	Milligram per liter (ppm, part per million).
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate.
MDL	Method detection limit.
MRL	Modified reporting limit. When sample is subject to dilution, reporting limit times dilution factor yields MRL.
MS/MSD	Matrix spike/matrix spike duplicate.
N/A	Not applicable.
ND	Not detected at or above detection limit.
NR	Not reported.
QC	Quality Control.
RL	Reporting limit.
% RPD	Percent relative difference.
a	pH was measured immediately upon the receipt of the sample, but it was still done outside the holding time.
sub	Analyzed by subcontracting laboratory, Lab Certificate #

CORNERSTONE EARTH GROUP

General Environmental Questionnaire

Cornerstone Earth Group is performing a Phase I environmental site assessment (ESA). The purpose of the ESA is to evaluate current and historic uses of the property that may have involved the use, generation, or storage of hazardous materials. Please respond to these questions to the best of your knowledge.

Return the completed, signed questionnaire by fax at (408) 245-4620 or by mail to the address below. Alternatively, a copy can be emailed to sfoster@cornerstoneearth.com. The completed questionnaire will be attached to the ESA report. Thank you for your assistance and timely response.

GENERAL PROPERTY INFORMATION

1) **Site Address(es) and Assessor's Parcel Number(s):** Please list all current and former addresses. Some sites have multiple addresses; all are needed, even if they are not in current use.

Address(es)	APN Number(s)
1590 Berryessa Road	APN 254-17-007, 052, 053 and 084
1411 Mabury Road	APN 254-17-095 **Prior APN 254-17-085**
12000 Berryessa Road	**APN 254-17-007, 052, 053 and 084**

2) **Property Size:** **60.562** Sq. Ft. or (Acres)

3) **Current site owner(s) and purchase date:**

Current Owner Name	Year Purchased
The Flea Market, INc.	**1960 & 1997**

4) **Previous site owner(s) and dates of ownership:**

Prior Owner Name	Year Purchased	Year Sold
1411 Mabury Victor Nicora	**Unknown**	**1997**
12000 Berryessa Road - San Jose Meat / Feed Lot		**1950? - 1960**

CORNERSTONE EARTH GROUP

STRUCTURES AND OCCUPANTS

5) Please describe all on-site buildings:

Building Size (sq. ft)	Building Use	Date of Construction
See Attachment B		

Potable Water Source (*e.g.*, city or other water agency, on-site well, etc.): City Water

Sewage Disposal System (*e.g.*, city sewer, septic tank, etc.): City Sewer

Heating/Cooling System and Fuel Source (*e.g.*, electric, natural gas, fuel oil, etc.): Electic / N.G

6) Current site tenant(s), site use, and years of occupancy:

Tenant	Site Use	Years of Occupancy (*e.g.*, From 1995 to 2007)
The Flea Market	Open Air Market	1960 to present

7) Prior site tenant(s), site use, and years of occupancy:

Tenant	Site Use	Years of Occupancy (*e.g.*, From 1975 to 1983)
NONE		

OTHER SITE FEATURES AND INFORMATION

8) Please indicate if you are aware of any of the following structures, features, or activities currently or formerly at the site.

Structure/Feature	Yes	No	Do Not Know
Aboveground Storage Tanks (ASTs)	X		
Agricultural fields	X		
Agricultural or drinking water supply wells	X		
Air emission control systems		X	
Areas where garbage or other wastes have been disposed on-site		X	
Boilers		X	
Chemical mixing or processing activities		X	
Chemical storage areas	X		
Current or former drainage ditches, ponds, or streams		X	
Dry cleaning equipment		X	
Dry wells		X	
Elevators		X	
Emergency generators	X		
Equipment maintenance or repair areas	X		
Fill materials placed on-site (*i.e.,* fill used to build up the site elevation to current level)	X		
Ground water monitoring wells	X		
Ground water or soil remediation systems		X	
Hydraulic lifts	X		
Incinerators		X	
Manufacturing machinery		X	
Medical Waste		X	
Oil or gas wells		X	
Petroleum pipelines	X		
Railroad lines		X	
Septic tanks	X		
Stockpiles of soil or debris	X		
Storage sheds	X		
Sumps, clarifiers, oil/water separators, or similar structures		X	
Transformers	X		
Underground Storage Tanks (USTs)	X		
Vapor or dust control hoods and ducting		X	
Waste burning areas (i.e. burn pit) or ash disposal area		X	

If you checked yes to any of the above, please provide additional information here or attach to this questionnaire.

See Attached Table 2

9) Please indicate if, to your knowledge, any of the following documents exist:

Document	Yes	No	Do Not Know
Environmental site assessments	X		
Environmental permits or violation notices	X		
Underground or above ground storage tank documents/permits	X		
Geotechnical reports or hydrogeologic studies	X		
Risk assessments	X		
Hazardous materials management plans or chemical inventories	X		
Safety/emergency response plans or spill prevention plans	X		
Compliance audits or community right-to-know plans	X		
Asbestos or lead based paint surveys	X		

If you checked yes to any of the above, please indicate the location of the documents.
Can copies be provided? Yes X No _____

EHS Office - See Attached Table 6

10) Have significant quantities of hazardous materials been used, stored, or generated on-site?
Yes X No _____

If so, please list types and quantities and where these materials are or were located.
Hydrobarbon wastes, paint wastes - see HMBP

located around shop

11) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, do you know of past uses of the site, specific chemicals that were or are present at the site, have knowledge of spills or other chemical releases at the site, or any environmental cleanups at the site.
Yes X No _____

If so, please briefly describe below, including whether reports documenting the activities are available for review by Cornerstone Earth Group.
Several - HMBP, UST reports, permits are available in

EHS Office - see Attached Table 6

12) Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state, or local law?
Yes _____ No X

13) Are you aware of any activity or use limitations (UALs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

Yes X No ____

If so, please briefly describe below.

See Attached Table 6

14) Are you aware of 1) any pending, threatened or past litigation, or administrative proceedings relevant to hazardous substances or petroleum products at the site, or 2) any notices from any governmental entity regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products?

Yes X No ____

If so, please briefly describe below.

See Attached Table 6

Note: An unchecked box does not warrant that these features are not present on-site; it only states that these features were not readily observed during our site visit.

2.4 Site Vicinity Drive-By Survey

To evaluate adjacent land use, we performed a limited drive-by survey. Our observations are presented in Table 3.

TABLE 6

Mabury Road and historical site address 12000 Berryessa Road (SJBD and SJFD only). We also obtained case closure letters for the previous on-site USTs from the SCVWD website. The information made available to us is summarized in Table 6; key documents are included in Appendix E. All documents reviewed pertained to the San Jose Flea Market.

Table 6. Available File Review Information

Agency	Date	Remarks
1590 (12000) Berryessa Road		
SJBD	3/27/67	Electrical permit application for building used as "sausage bar".
SJBD	10/11/67	Addressing notice from USPS stating that old address was 12000 Berryessa Road and new address was 1590 Berryessa Road. Site occupant was The Flea Market.
SJBD	3/27/68	Electrical permit applications for buildings used as "Cable Car #2", office and snack bar, taco stand; and "Cable Car #1".
SJBD	8/18/70	Investigation record for large slide and other structure.
SJBD	12/8/70	Building permit application for amusement slide.
SJBD	2/2/76	Investigation record of several new "buildings" in parking lot without permits. "Buildings" were found to be temporary and portable.
SJFD	7/21/80	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted. Tent permit to be added in following year.
SJFD	6/2/82	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	10/19/83	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	5/31/84	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. No violations noted.
SJFD	1/23/85	ROI indicating flammable liquids and finish present on-site. The facility reportedly included performance of dust-producing activities, tent erection, lumber/wood plant, repair garage, and welding and cutting activities. A 100-gallon portable degreaser tank on a pick-up was to be researched. A 1,000-gallon fiberglass gas AST reportedly was not being used. Secondary containment was needed for hydraulic fluid and motor oil as they were spilling when dispensed, and also for four 55-gallon drums likely containing oil, one 20-gallon drum of lubricant, an emergency generator, and a 15,000-gallon diesel AST. Size and number of USTs needed to be determined; five vent lines were present. Monitoring plan for USTs was needed. All unmarked drums were to be labeled.
SJFD	5/85	Fire system inspection reports for on-site areas including: Chuckwagon Bakery, trailer #5, BIET building, Chuckwagon, yellow trailer, trailer #1, concrete snack bar, "fish" grotto, cotton candy #1, taco shack, "green shack", trailer #4, trailer #7, trailer #10, trailer #6, trailer #9, and trailer #8.

Table 6. Available File Review Information
(continued)

Agency	Date	Remarks
SJFD	10/3/91	Record of inspection (ROI) with hand-written note indicating the flea market was working with the SCVWD on a self-directed cleanup plan.
SJFD	8/12/92	ROI indicating flammable/combustible liquids/tank, hazardous storage, and liquid petroleum gas present on-site. The facility reportedly included garages with spraying/dipping, welding/cutting, and woodworking performed. The inspection noted that a hazardous materials management plan (HMMP) was needed, proper monitoring of tanks and piping was needed, secondary containment was needed for used batteries, and compressed gas cylinders needed to be secured.
SCCEHD	9/15/92	NOI with violations including disposal of used solvent containers and other hazardous containers to dumpster, lack of labeling on four 55-gallon waste oil drums, one 55-gallon used diesel drum, and one 55-gallon paint sludge drum, lack of regular inspection of hazardous waste storage area, and incomplete manifest tracking.
SCCEHD	9/21/92	Hazardous waste generator permit application stating that The Flea Market, Inc. generated less than 5 tons of hazardous waste/year. Hazardous waste inventory included 600 gallons/year waste motor oil, 100 gallons/year waste paint, and 328 gallons/year Safety-Kleen hydrocarbon solvents.
SCCEHD	9/28/92	Environmental health permit for The Flea Market, Inc. as a generator of less than 5 tons per year. Expiration date was 9/30/97.
SCCEHD	10/8/92	Letter from The Flea Market, Inc. to SCCEHD providing a listing of corrections to violations documented in September 15, 1992 inspection.
SCCEHD	11/9/92	HMMP with hazardous waste inventory including 5 used batteries, 220 gallons used motor oil, and 55 gallons paint sludges. The Flea Market listed as generating less than 5 tons of waste per year. Used motor oil and batteries reportedly recycled and paint sludge hauled by licensed waste hauler.
SCCEHD	4/13/93	Letter from The Flea Market, Inc. to SCCEHD regarding asbestos release. Written confirmation of report of an accidental release of a small amount of asbestos resulting from a small gas explosion in a large bakery oven. The material released contained 10% chrysotile asbestos. Preparation to clean up the contaminated areas was underway.

Agency	Date	Remarks
SJFD	7/8/93	Blaine Tech Services report for UST removal on 6/8/93.
SJFD	7/27/93	Tank removal report for UST #5. UST #5, reported to be a 15,000-gallon Jet "A" tank, was removed on 7/8/93. Preceding the UST removal, removal of one 15,000-gallon "sister" AST had been performed at the same location. Both removals were done under SJFD permit by The Flea Market personnel. Non-detectable concentrations of TPHg, TPHd, and BTEX were found in the verification samples collected, with the exception of one sample from beneath the AST and one sample from beneath the fill end of the UST which demonstrated 260 parts per million (ppm) and 3.3 ppm TPHd, respectively. Overexcavation was performed in these areas and verification samples subsequently demonstrated non-detectable concentrations of TPHd. Impacted soil was planned to be bioremediated on The Flea Market property. A ground water sample was collected from recharged ground water pooled within the UST pit. Analysis of the sample revealed 0.54 parts per billion (ppb) benzene and 3.0 ppb total xylenes.
SJFD	8/2/93	UST unauthorized release site report. Release discovered during tank removal.
SJFD	9/9/93	ROI indicating facility similar to that described in 8/12/93 ROI. The inspection noted no hazardous materials-related violations.
SCCEHD	9/16/93	NOI with violations including improper labeling of hazardous waste containers, missing training records, and incomplete HMBP. Hazardous materials present on-site included four 55-gallon drums of waste oil and one 55-gallon drum of paint sludge.
SCCEHD	9/16/93	Certification of compliance stating all violations marked on the NOI had been corrected.
SJBD	1/11/94	Building permit for auction hall kitchen and restroom improvements.
SCCEHD	6/1/94	Hazardous waste generator self-audit form. Hazardous waste not treated on-site, no extremely hazardous waste present on-site, all containers of hazardous waste are labeled and in good condition, liquid hazardous wastes are stored in secondary containment with exception of automotive batteries which are stored separately, hazardous waste storage areas inspected weekly, and training and record keeping is appropriate. Hazardous wastes listed include 45 gallons/month of waste oil, 25 gallons/month of cleaning solvents, 10 gallons/month of paint sludge, and 10 gallons/month of contaminated absorbent.
SJBD	8/1/94	Building permit application to erect cover over existing merry-go-round.
SJBD	8/25/94	Building permit application to repair underground electrical conduit for entertainment area.
SJFD	5/31/95	ROI indicating facility similar to that described in 8/12/93 ROI. The inspection noted that secondary containment was needed for waste solvent and that gas cylinders needed to be secured.
SJBD	1/29/96	Building permit application for snack bar relocation/renovation.
SJBD	3/2/96	Building plans for new restrooms.

Agency	Date	Remarks
SJBD	2/9/99	Building permit application for dental office plumbing and mechanical.
SJFD	2/24/99	Letter from SJFD to San Jose Flea Market regarding removal of USTs. The letter stated that the site had USTs that had not been upgraded to the appropriate standards and a plan to do so must be presented by March 1999.
SJFD	3/10/99	UST permit application Form A stating that 5 USTs were removed and 2 USTs were installed.
SJFD	3/10/99	Hazardous materials storage system installation application for installation of one 8,000-gallon fiberglass split UST with 4,000 gallons gasoline and 4,000 gallons diesel.
SJBD	4/28/99	Inspection notice for flea market gas station.
SJBD	6/9/99	Certificate of occupancy for dental office of M. Villar, DDS.
SJFD	6/24/99	UST removal final report stating the USTs were located at the intersection of the internal streets known as Produce Row and 18th Street (approximate location of current UST). New 8,000-gallon split gasoline/diesel UST was installed at same time. Analysis of initial verification soil samples from the tank pits revealed up to 110 ppm TPHg, 0.34 ppm methyl tertiary butyl ether (MTBE), 0.96 ppm benzene, 0.18 ppm toluene, 1.1 ppm ethylbenzene, and 0.80 ppm xylenes. The tank pits were over excavated and additional verification soil samples were collected. Analysis of these samples revealed residual TPHg up to 12 ppm, MTBE up to 0.26 ppm, toluene up to 0.016 ppm, total xylenes up to 0.047 ppm, and lead up to 29 ppm. Initial pit ground water sampling results indicated TPHg at up to 11,000 ppb, TPHd at up to 12,000 ppb, MTBE at up to 5,800 ppb, benzene at up to 2,200 ppb, toluene at up to 810 ppb, ethyl benzene at up to 410 ppb, and total xylenes at up to 1,900 ppb. Approximately 975 gallons of ground water were pumped from the excavations prior to pit ground water sampling. Final concentrations of TPHg, TPHd, MTBE, and BTEX in ground water were non detectable. The report referenced one active and two decommissioned ground water monitoring wells located in the vicinity of the current UST (previous location of the 5-UST cluster).
SJFD	7/8/99	UST system closure plan for removal of five USTs (USTs 1, 2, 3, 4, and 5): one 10,000-gallon gasoline, one 3,000-gallon gasoline, one 500-gallon gasoline, and two 4,000-gallon diesel tanks. Installation date for USTs was unknown. Two verification soil samples were collected from beneath each UST and four samples were collected from beneath the dispensers.
SJFD	7/8/99	UST unauthorized release report stating that release was discovered during tank removal.

Agency	Date	Remarks
SJFD	5/15/02	Unified program consolidated form for business activities and business owner/operator identification. Hazardous materials were present on-site, as were USTs and petroleum ASTs greater than 1,320 gallons. Hazardous waste reportedly was generated on-site. The hazardous materials inventory for the facility included 4,200 gallons diesel, 4,025-gallons gasoline, 61 gallons lacquer thinner, 116 gallons paint thinner, 940 gallons assorted oil and latex paints, 80 gallons varnish, 2 gallons acetone, 11 gallons vandalism remover, 2 gallons solvent V-39195, 1 gallon Stoddard solvent, 2 gallon isopropanol (IPA), 10 gallons petroleum naptha/dipropylene glycol, 1 gallon phosphoric acid, 1 gallon methanol, 127 gallons ethylene glycol, 1 gallon developing gum, 1 gallon glaze remover, 1 gallon Release Away, 1 gallon 1,1,1-trichloroethane (TCA), 1 gallon carbon tetrachloride, 1 gallon stabilizer, 1 gallon potassium hydroxide, 55 gallons heating fuel, 503 gallons propane, 180 gallons motor oil, 160 gallons transmission fluid, 20 gallons gear oil, 120 gallons hydraulic oil, 2 gallons ceiling tile adhesive, 15 gallons adhesive containing perchloroethylene (TCE), 7.5 gallons Super Bond, 14.5 gallons floor and floor tile adhesive, 64 gallons Safety Kleen solvent, 10 gallons D. Bl. Handica, 6 pounds carburetor cleaner, 4 pounds brake cleaner, 14 pounds Brakleen, 64 ounces gumout carburetor cleaner, 39 gallons WD-40, 9 pounds asphalt base, 60 ounces sealant, 36 ounces Bostik Seal, 6 gallons Zep Formula 50, 10 gallons Zep 45, 6 gallons rust arrester, 8 gallons Zep Reach, 6 gallons Zep cleaner, 250 pounds of welding rods, 2 pounds nozzle gel, 255 cubic feel acetylene, 1,260 cubic feel oxygen, 580 cubic feet argon, 762 cubic feet shielding gas, 40,000 cubic feet carbon dioxide, 120 pounds freon R-12, 90 pounds freon-22, 30 pounds freon R-134A, 30 pounds freon SUVA HP 62, 110 gallons kerosene ("Jet A"), 6 gallons sewer degreaser, 6 gallons Water B insecticide, 60 gallons Citrusolv, 60 gallons Reoderant, and 60 gallons Jettacin. Hazardous wastes generated were listed as 220 gallons waste motor oil, 55 gallons waste paint, 120 gallons safety clean parts cleaner solvent, 110 gallons oil saturated absorbent, 15 gallons printer waste, and 55 gallons waste ethylene glycol. Hazardous materials reportedly were stored in Storage Area 1, Storage Area II, and the corporation yard.
