1.0 PROJECT SUMMARY

SECOR has completed a Phase I ESA of the Moreno Valley Community Hospital property located at 27300 Iris Avenue in Moreno Valley, California (Site). The Phase I ESA was conducted in general conformance with ASTM E 1527-05 on behalf of Kaiser as part of Kaiser's environmental due diligence prior to a property transaction.

The following is concluded with respect to the Site land use history:

- The Site appears to have been used for agricultural purposes from at least 1938 until approximately 1989;
- The Site was developed in approximately 1989 with the current hospital building; and
- Hospital operations include an emergency back up generator, chillers, on-site x-ray film processing, and a laboratory, which each have associated chemical materials use, handling, and storage.

Based upon the results of our Phase I ESA, the following RECs, HRECs, and/or other environmental concerns have been identified and associated recommendations are noted:

- A 12,000-gallon diesel underground storage tank (UST) and associated underground piping exist at the Site, and are associated with the emergency back up generator. The UST was installed in approximately 1989 when the hospital was constructed. While the UST appears to be in compliance with requirements for UST construction, integrity, and secondary containment testing, the presence of the UST is considered to be a recognized environmental condition (REC). Records on file with the Riverside County Department of Environmental Health (i.e., the local CUPA) indicate the UST had failed secondary containment testing in the past. The CUPA issued a Notice of Violation to the Site for the failed secondary containment testing on March 6, 2003. It is recommended that soil samples be collected in the vicinity of the UST to evaluate the potential for diesel impacts to soil surrounding the UST and piping.
- Two photo processing machines are currently located on the Site in the first floor of the main building. The machines have been in use since hospital construction, and include photo fixer and developer processes. Both machines discharge effluent through a silver recovery unit, to floor drains, which then discharge to the sanitary sewer. Both drains were replaced 6 years ago when an underground pipe sleeve apparently broke, causing sediment to back up into both drains. Riverside County records indicate that on-site treatment of silver-bearing photo processing hazardous waste historically occurred on the Site. Based on the reported pipe damage, there is a potential for silver-bearing photo process effluent to have impacted subsurface soils beneath the first floor of the hospital building. Therefore, the presence of the two photo processing machines with direct discharge to subsurface piping is considered to be a REC. It is recommended that soil samples be collected from soil beneath the two photo processing machines to evaluate the potential for elevated concentrations of silver in subsurface soils.

• The hospital chief engineer and hospital administrator indicated that the Site may have been used as pastureland for sheep grazing and farmland for potato crops in the past. The surrounding properties also appear to have been used for agricultural purposes. Therefore, there is a potential that widespread application of pesticides associated with former agricultural land use has impacted near surface soils. It is recommended that near surface soils across the Site parcel be evaluated for the presence of pesticides.

2.0 PROJECT METHODOLOGY

2.1 INTRODUCTION

SECOR International Incorporated (SECOR) has completed a Phase I Environmental Site Assessment (ESA) on the property located at 27300 Iris Avenue in Moreno Valley, California (Site). This Phase I ESA was prepared for Kaiser Foundation Health Plan, Inc. (Kaiser) for property transaction environmental due diligence purposes.

2.2 SCOPE

The objective of this ESA was to perform appropriate inquiry into the past ownership and uses of the Site consistent with good commercial or customary practice as outlined by the ASTM in Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-05. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including RECs of the Site that potentially have and/or may cause an adverse environmental impact to the Site. The project conforms to standards established in 2005 by ASTM E 1527-05, as it conforms to definitions and methodology of "all appropriate inquiry" as stipulated by the United States Environmental Protection Agency (EPA) in 40 CFR Part 312. The term recognized environmental condition is defined by ASTM E 1527-05 as:

"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum product into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws."

The term does not include *de minimis* conditions, which generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with our proposal to Kaiser dated February 26, 2007 and authorized on February 27, 2007. This scope consisted of a visual reconnaissance of the Site, interviews, review of historical aerial photographs, city directories, Sanborn® maps, review of previous environmental reports (if available), a current Environmental Data Resources, Inc. Radius Map Report (EDR Report), and a review of the practically available pertinent records of Local, State, and Federal agencies, including the local Certified Unified Program Agency (CUPA). The scope of work did not include an assessment for historical overall environmental regulatory compliance of every facility ever operated at the Site or sampling and analyzing of environmental media. SECOR was not contracted to perform any independent evaluation of the purchase or lease price of the Site and its relationship to current fair market value. No information relative to this matter was provided to SECOR by Kaiser (the users of this ESA Report), with the exception of the Facility Condition Assessment Report described in Section 2.4. The conclusions presented in this ESA Report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 9.0.

2.3 PREVIOUS ENVIRONMENTAL WORK

SECOR was not provided with any previous environmental assessment reports by Kaiser or the interviewees during completion of the ESA.

2.4 CLIENT-PROVIDED DOCUMENTS

Kaiser provided several documents for our review during completion of this ESA. These documents are listed and summarized below:

- Building Floor Plans A set of six floor plans dated August 8, 1999 prepared by Valley Health System Engineering-Biomedical Services was reviewed. These floor plans included floor layouts for the basement and floors 1 through 4, as well one plan with stair sections. Based on our review of these floor plans, the following areas were identified in the basement plan as areas where chemical materials are likely to be used, handled, or stored:
 - o service elevators: located on the east end of the building
 - o loading dock: located on the north end of the building
 - o maintenance area: located on the west end of the building
 - o boiler room: located on the west of the building
 - o emergency generator: located on the west end of the building
- Radiation Machine Registration A Certificate of Radiation Machine Registration (expires September 30, 2008) for Moreno Valley Community Hospital for the Site was provided.
- Facility Condition Assessment Draft Data Report A report titled Facility Condition Assessment Draft Data Report prepared by VFA, Inc. dated February 28, 2006 was reviewed. This report provided the following information on the Site:
 - o Size: 146,538 SF
 - Building constructed in 1989
 - Site slopes to the north
 - Site access is from the south on Iris Avenue
 - The basement is constructed of reinforced cast-in-place concrete
 - Two 300 ton chillers associated with the air conditioning system are located in the basement mechanical room
 - Two 30 horsepower gas fired boilers provide heat to the building and are located in the basement mechanical room
 - Domestic water is supplied by the Moreno Valley Municipal Water District
 - o Storm water runoff is directed to an underground drain system
 - Municipal sanitary sewer service is provided

- There are three medical gas vacuum pumps located in the basement mechanical room
- Electrical service is provided by Southern California Edison
- An SCE-owned pad mounted transformer is located on the southwest corner of the property
- A 300 liter diesel tank services the emergency generator in the Emergency Generator Room, and a 12,000-gallon underground storage tank (UST) (the main fuel supply for the generator) is located at the back yard of the Modular Records Storage building
- o Basic hospital lighting consists of fluorescent fixtures with electronic ballasts
- o There are four passenger elevators with DC hoist machines

3.0 ENVIRONMENTAL ASSESSMENT FINDINGS

3.1 SITE LOCATION

The Site is located at 27300 Iris Avenue, City of Moreno Valley, Riverside County, California (Figure 1). Photographs of the Site are presented in Appendix A. Note that during completion of this Phase I ESA, the Medical Office Building located in the northeast area of the Site parcel was indicated by the Riverside County Assessor's Office to have the mailing address of 27350 Iris Avenue.

3.2 GENERAL SITE DESCRIPTION

A site reconnaissance was performed on March 27, 2007 by SECOR personnel. At the time of the reconnaissance, SECOR personnel interviewed Mr. Corey Seale, Hospital Administrator, and Mr. Dan Williamson, Chief Engineer. The Site consisted of an approximately 2-acre parcel located in a moderately developed area of Moreno Valley (Figure 1). The parcel included the main hospital building, a medical offices building, a modular building, a trailer, paved parking lots and roadways, and an undeveloped portion (Figure 2). The current operations on the Site include the Moreno Valley Community Hospital, private practice offices, and nursing educational programs.

3.3 ADJACENT AND SURROUNDING LAND USE

As part of SECOR's reconnaissance, visual observation of properties adjoining the Site was conducted. The observations were made from the Site or from public thoroughfares. SECOR personnel also inquired with the Site contacts about current and past operations on the adjacent parcels. Properties adjacent to the Site are depicted on Figure 2 and included:

- North, West, and East Agricultural fields. According to Mr. Williamson, these adjacent properties have been in use as agricultural land or pastureland and have not been developed.
- South Public right of way, Iris Avenue. Residential developments were observed beyond Iris Avenue to the south.

Mr. Williamson was not aware of any current or historical (since 1989) environmental concerns on these adjacent properties. SECOR personnel did not observe any signs of visual or olfactory evidence of RECs or other adverse environmental conditions on the adjacent properties at the time of the Site visit.

3.4 SITE OPERATIONS

At the time of the Site reconnaissance, the Site was in operation as Moreno Valley Community Hospital at 27300 Iris Avenue (Appendix A – Photograph 1), private practice medical offices at 27350 Iris Avenue (Appendix A – Photograph 2), and nursing educational programs in a trailer building located on-site. Hospital operations included a laboratory, radiology department with

two x-ray film/photo processing machines (Appendix A – Photograph 6), a pharmacy, a kitchen (which includes a deep fryer), an emergency backup generator powered by a 12,000-gallon diesel underground storage tank and a 300-gallon day tank (Appendix A – Photographs 5, 10 and 11), a cooling system with treated effluent, and a trash autoclaving machine and associated trash compactor (Appendix A – Photograph 4).

According to Mr. Williamson and Mr. Seale, the Site has operated as a hospital since 1989 when the hospital building was constructed. Hand-drawn facility layout maps were provided by Mr. Williamson during the reconnaissance (Appendix B). These maps were included in the hospital's business plan, which is required to be submitted to the Riverside County Department of Environmental Health (i.e., the local CUPA).

3.5 SITE HISTORY

The object of consulting historical sources is to develop a history of the previous uses of the Site and surrounding area to evaluate if past uses may have resulted in RECs or other adverse environmental conditions in connection with the Site. During our review of multiple historical records, SECOR attempted to identify obvious uses of the Site from the present to the Site's first developed use. This research was performed to meet the following objectives: review only as many sources as are necessary to confirm a REC, and examine only those records that are reasonably ascertainable and useful.

During completion of this ESA, SECOR attempted to obtain information from the following historical document sources: historical aerial photographs (Appendix B), Sanborn® fire insurance industry maps (Appendix B), historical U.S. Geological Survey (USGS) topographic maps (Appendix B), historical city directory collections (Appendix B), previous environmental reports as listed in Section 2.5, building department permit and planning records, local environmental agency records (i.e., the Certified Unified Program Agency [CUPA]), and personal interviews. The following records were not available: Sanborn® maps (no coverage).

3.5.1 Aerial Photographs

SECOR reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes SECOR's observations of the reviewed historical aerial photographs.

Year	Document	Notes on Observations	
1938	Aerial Photograph (EDR) Scale 1" = 555'	Iris Avenue and Oliver Street are visible. The Site parcel appears to have been cleared of vegetation, and is divided into northern and southern halves that are discernable based on color. There are no buildings on the Site. A cluster of small buildings is present on the southeast corner of the parcel adjacent to the Site's eastern boundary.	

Year	Document	Notes on Observations	
1953	Aerial Photograph (EDR) Scale 1" = 555'	The Site remains unimproved, and is no longer divided into northern and southern areas. The Site parcel appears to be contiguous with the adjacent parcel to the east. The cluster of buildings visible on the adjacent parcel in 1938 is no longer present.	
1967	Aerial Photograph (EDR) Scale 1" = 555'	No significant changes on the Site since the 1953 photograph. Surrounding properties to the north, south, east and west have been divided into large square agricultural fields.	
1980	Aerial Photograph (EDR) Scale 1" = 600'	No significant changes since the 1967 photograph.	
1989	Aerial Photograph (EDR) Scale 1" = 666'	The Site has been developed with the existing hospital building, a paved parking lot along the southern area of the parcel, and additional parking areas and roadways around the building. The northern half of the parcel appears to be mostly cleared of vegetation. Properties to the south and east no longer appear to be in agricultural use; a golf course has been added, and two large ASTs are visible further to the south beyond the golf course area.	
1994	Aerial Photograph (EDR) Scale 1" = 666'	The Site building remains visible, the modular records storage building has been added, and additional paved parking areas appear to have been added to the Site in areas surrounding the building. The northern portion of the Site parcel remains undeveloped. Single family residences in various stages of grading and development have been added to the golf course area south of the Site. Properties adjacent to the west, north, and east of the Site remain undeveloped, with the exception of a cluster of commercial/industrial buildings across Oliver Street to the northeast.	
2002	Aerial Photograph (EDR) Scale 1" = 666'	The medical office building (27350 Iris Avenue) appears to have been added to the northeast corner of the Site. Parcels adjacent to the east and west of the Site appear to be in agricultural use. No significant changes in the surrounding properties have occurred since the 1994 photograph.	

Based on our review of the historical aerial photographs, the Site appears to have first been used as agricultural land prior to being redeveloped into a hospital in 1989 (as assumed based on comparison with other historical documents). No evidence of RECs, HRECs, or other significant environmental concerns were noted during our review of aerial photographs, although the apparent agricultural use of the Site may have resulted in the application of pesticides. Copies of the aerial photographs are included in Appendix B.

3.5.2 City Directories

SECOR contracted with EDR to research available reverse city directories for the Site. EDR's review of city directories was conducted for years between 1970 and 2005 in approximately 5

year intervals. Addresses for the Site were found beginning with the 2000 directory and continuing on through the 2005 directories. None of the listings reviewed for the subject or immediately adjacent properties appeared to pose a potential environmental concern to the Site.

The following table lists the known occupants of the Site based on a review of EDR's reverse city telephone directories:

Date	Address	Occupant Name	Business Type
1970 - 1995	27300	No listing	No listing
2000 - 2005	27300	Allergy Affiliates, Moreno Valley Allergy Center, Moreno Valley Community Hospital	Medical services, hospital

3.5.3 Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide prior land use history and assist in assessing whether there may be potential environmental contamination on or near the Site. These maps, which have been periodically updated since the late 19th Century, often provide valuable insight into historical Site uses.

SECOR contracted with EDR to provide a search for copies of historical fire insurance maps covering the subject and immediately adjacent properties. EDR reported that their collection of Sanborn® fire insurance maps do not cover the Site or nearby vicinity. The Sanborn® Map Search Report is presented in Appendix B.

3.5.4 Interviews

Several interviews of persons who are knowledgeable about the Site were conducted during completion of this ESA. The objective of the interviews was to obtain information indicating the potential for RECs in connection with the Site. According to ASTM E-1527-05 Section 3.2.43, interviews address questions to be asked of past and present owners, operators, and occupants of the Site and questions to be asked of local government officials. The results of these interviews are discussed in the text that follows.

Site Owner - According to ASTM E-1527-05 Section 3.2.59, the owner is defined generally as the fee owner of record of the Site. Mr. Corey Seale, Hospital Administrator, acted as the owner's representative, and was interviewed by SECOR personnel at the time of the Site reconnaissance. Mr. Seale indicated that he had been associated with the Site for approximately four years. Information provided by Mr. Seale is provided in the text of this report and is referenced where applicable.

Key Site Manager – According to ASTM E-1527-05 Section 3.2.44, the key Site manager is defined as the person identified by the owner or operator of the Site as having good knowledge of the uses and physical characteristics of the Site. Kaiser provided SECOR with contact information for Mr. Seale and Mr. Dan Williamson. SECOR personnel interviewed Mr.

Williamson, Chief Engineer, at the time of the Site reconnaissance. Mr. Williamson indicated that he had been associated with the Site since the construction of the hospital in 1989.

SECOR personnel interviewed Mr. Williamson and Mr. Seale at the beginning of the Site reconnaissance. During this initial interview, SECOR personnel asked Mr. Seale and Mr. Williamson about the their knowledge of current and past uses of the Site with respect to the use, handling, storage, and disposal of chemical materials. These individuals also were asked about their knowledge of past releases or environmental concerns in association with the Site and adjacent properties. Mr. Williamson and Mr. Seale indicated that to the best of their knowledge, Moreno Valley Community Hospital has not been made aware of any:

- Past or present chemical leaks or spills of reportable quantities on the Site or adjacent properties;
- Pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Pending, threatened, or past notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

Site Occupants - According to ASTM E-1527-05 Section 3.2.56, occupants are defined as those tenants, subtenants, or other persons or entities using the Site or a portion of the Site. Interviews with Site occupants were not conducted at the request of Kaiser.

Interviews With Local Government Officials - According to ASTM E-1527-00 Section 3.2.47, local government agencies are defined as those agencies of municipal or county government having jurisdiction over the property. Municipal and county government agencies include but are not limited to cities, parishes, townships, and similar entities. Information obtained from local government officials is provided in Section 5.0.

3.5.5 Tax Assessor Records and Property Ownership Information

According to the Riverside County Assessor's Office, the Site address includes the following Assessor Parcel Numbers (APNs): 486310023-9 and 485220009-2. APN 486310023-9 is 19.69 acres and APN 485220009-2 is 2.24 acres. Both parcels are associated with Moreno Valley Hospital. Copies of the parcel maps and associated parcel information obtained from Riverside County's online searchable website at (http://pic.asrclkrec.com/Default.aspx) are provided in Appendix B.

Research and assembly of a Chain-Of-Title Report were not included in the scope of work for this ESA, and SECOR personnel were not provided with copies of a title report, property appraisal, or similar documents that may provide information on environmental liens, deed restrictions, activity and use limitations (AULs), or other encumbrances by Kaiser.

3.5.6 Historical Topographic Maps

Historical topographic maps were obtained from EDR and were reviewed to identify past Site usage and areas of potential environmental concern. Copies of the topographic maps reviewed are located in Appendix B. The following table summarizes the maps reviewed and our observations. No environmental concerns were noted during our review of the topographic maps.

Year	Document	Notes On Observations	
1901	Elsinore 30 Minute Topographic Map Scale 1:125,000	The Site and surrounding properties do not appear to be developed with agricultural or other uses.	
1901	Southern CA 60 Minute Topographic Map Scale 1:250,000	No significant changes since the previous 1901 map.	
1943	Perris 15 Minute Topographic Map Scale 1:62,500	The Site and surrounding properties remain undeveloped. Streets surrounding the Site are not depicted.	
1953	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	The Site and surrounding properties remain undeveloped. The Site location appears to be located near 1520 feet above mean sea level at the foothills of a small mountain range located to the southwest. Oliver and South streets are shown north of the Site: these streets are located east and west of the Site, respectively. A few reservoirs and wells are visible, but are located several miles from the Site.	
1967	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	The site remains undeveloped. Reservoirs and wells are now shown to the west and north of the Site. Filaree Avenue, which would bound the Site to the north (if extended eastward), is visible. Iris Avenue is visible as an unimproved road.	
1980	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	No significant changes since the 1967 map.	

3.6 GENERAL SITE OBSERVATIONS

SECOR accompanied by Mr. Williamson and Mr. Seale performed a reconnaissance of the Site on March 27, 2007. Figure 2 provides land use information for the Site and adjoining properties and areas of potential environmental concern. The site visit focused on observation of current conditions and indications of past uses and conditions of the Site that may indicate the likelihood of RECs. The site visit was conducted on foot and visual and/or physical observations from the reconnaissance are noted in the following sections.

SECOR personnel entered the three site buildings (excluding the trailer) and visually observed common areas of the buildings. The visual reconnaissance of the hospital building was focused upon the observation of areas where chemical materials are used, handled, stored, or disposed. SECOR personnel also observed the exterior areas of the Site including the parking lots and roadways, landscaped areas, and the undeveloped/vacant area at the northern portion of the

parcel (Appendix A – Photographs 12 and 13). Adjoining properties were observed from the public thoroughfares or from the Site.

Weather conditions during the visit to the Site were clear and sunny. There were no weather related property access restrictions encountered during the reconnaissance visit. A description of the Site was provided in Subsection 3.2. SECOR was granted full access to the Site buildings and associated parking lots.

3.7 HEATING AND COOLING

The main hospital building includes two boilers and two chillers. Both systems require the use of water treatment chemicals composed primarily of sodium sulfite. The boilers and chillers were located on the basement level at the west end of the building.

3.8 PHYSIOGRAPHIC FEATURES

SECOR's understanding of subsurface conditions in the vicinity of the Site is based on experience in the area and review of available documentation regarding regional and local subsurface conditions. Copies of information pertaining to the geology and hydrogeology in the Site vicinity are provided in Appendix B.

3.8.1 Regional Topography

The USGS 7.5-Minute Topographic Map of Sunnymead, California Quadrangle (scale 1:24,000) and the Physical Setting Source Addendum included in the EDR Radius Map Report were reviewed to identify local and regional physiographic features in the vicinity of the Site (Figure 2). Based on our review of these information sources, the Site is located at an elevation between 1520 and 1550 feet above mean sea level (ft msl). Based on the review of the topographic map, the general topographic gradient in the property's vicinity is to the northnorthwest. The site is located at the base of the foothills of Mount Russell, which is part of the Lake Perris State Recreation Area.

3.8.2 Regional/Site Geology

SECOR personnel reviewed the Geologic Map of the Sunnymead 7.5-Minute Quadrangle, Riverside County, California dated 1996-1997 (scale 1:24,000). According to this map, surficial soils at the Site are underlain by "Very Old Alluvial Fan Deposits" (labeled as Qvof) of early Pleistocene age. These deposits are considered by the authors of the map to be associated with very old surficial deposits that are slightly to well consolidated with upper surfaces capped by moderate to well developed pedogenic soils. These pedogenic soils may be as much as two to three meters thick. The fan deposits (Qvof) are described as mostly well-dissected, well-indurated, reddish-brown sand deposits containing minor gravel. These deposits are widespread and flank bedrock areas.

According to the Physical Setting Source Summary portion of the EDR Report (Appendix C), soils at the Site are classified as the Greenfield sandy loam. These soils are described as well drained, moderately coarse textured soils with intermediate water holding capacity. The corrosion potential of these soils was listed as high for uncoated steel. A typical soil profile is

described as silty or clayey gravel and sand (0-40 inches), silty soils (40-60 inches), and stratified silty or clayey gravel and sand (60-72 inches). The depth to bedrock is reported to be greater than 5 feet.

3.8.3 Regional Hydrogeology

According to the Physical Setting Source Summary portion of the EDR Report (Appendix C), the closest groundwater well is USGS well 003S003W21A001S located approximately ½ mile west-northwest of the Site. The total depth of this well is 450 feet, and the well is screened in an unconfined aquifer. The depth to groundwater in this aquifer was reported to be 170 ft bgs in 2001.

SECOR personnel researched depth to shallow groundwater information on Gregg Drilling, Inc.'s website, which includes a table of encountered depth to groundwater measurements by Gregg Drilling (website http://www.greggdrilling.com/Resources/water table.html). According to the website, groundwater was encountered at 83 feet below ground surface (ft bgs) in 2004 at a property located approximately 5-6 miles northwest of the Site (at an elevation less than the Site). Because the Site is located on the flanks of Mount Russell, the depth to shallow groundwater is likely to be deeper than 83 ft bgs. Additionally, a UST Monitoring Alternative Application form received from the County of Riverside Community Health Agency indicated the depth to the groundwater beneath the Site was anticipated to be 114 to 133 ft bgs (Section 4.5).

3.9 ABOVEGROUND STORAGE TANKS (ASTs)

One 300-gallon diesel AST was observed in the generator room on the basement level of the building. This AST was observed to be in secondary containment, and was stored on the concrete slab floor of the room. Diesel from this AST was transferred to the generator through aboveground piping installed a few inches above the concrete slab floor. No floor drains were observed in the room, and no evidence of past leaks or spills was observed in connection with the AST and piping.

One compressed oxygen gas AST and several smaller compressed gas cylinders of oxygen were observed in a fenced area outside the northern portion of the hospital building near the loading dock.

Several compressed gas cylinders of nitrogen were observed in the chemical waste storage area located near the loading dock.

One waste cooking grease barrel was observed in the chemical waste storage area located near the loading dock.

3.10 UNDERGROUND STORAGE TANKS (USTs)

Access ports associated with a 12,000-gallon diesel UST were observed during the Site reconnaissance (Appendix A — Photographs 3 and 5). The UST was located outside the Modular Records Building on the west-central portion of the Site in a grassy landscaped area. Mr. Williamson indicated the subsurface piping for the UST extended to the east toward the

hospital building, and then directed north toward the generator room. No visual, olfactory, or other signs of releases from the UST were observed at the ground surface during the reconnaissance.

3.11 POLYCHLORINATED BIPHENYLS (PCBs)

Electrical transformers, hydraulic equipment, capacitors and similar equipment may contain polychlorinated biphenyls (PCBs) in hydraulic or dielectric insulating fluids within the unit. The federal Toxic Substances Control Act (TSCA) generally prohibited the domestic manufacture of PCBs after 1979; however, there is a potential for the dielectric fluid in electrical and hydraulic equipment manufactured prior to that date to contain PCBs.

Three pad-mounted transformers were observed on the Site. None of the transformers included a sticker noting PCB content. No leaks, stains, or signs of deterioration of the transformer cases were observed during the Site reconnaissance.

The trash compactor at the loading dock included a 7-gallon capacity hydraulic reservoir (Appendix A – Photograph 4). No evidence of leaks, stains, or deterioration of the reservoir were noted during the reconnaissance.

3.12 HAZARDOUS MATERIALS AND HAZARDOUS WASTE

Mr. Williamson indicated that hazardous waste is removed from the Site by Clean Harbors and Freedom Imaging (photo machine-related waste only). Hazardous materials were observed on the Site at the time of the Site reconnaissance. These materials included:

- new photo fixer and developer chemicals, which were contained in approximately 10gallon containers near the two photo processing machines on the first floor of the main building in the radiology department;
- small quantities of formaldehyde, acetone, and sodium hydroxide were observed beneath a hood in the laboratory;
- small quantities of cleaning supplies including Lime Away, Quaternary Ammonia, Degreaser (sodium hydroxide), and Kool Klene (freezer cleaner) were observed in a storage closet in the kitchen;
- Aqua Serv potassium polymaleate and sulfite-based water treatment chemical drums (4 drums) observed in the boiler room;
- One 300-gallon aboveground diesel tank and associated piping were observed in the generator room; and
- Two batteries were observed in the generator room.

Additional chemical containers were observed at the loading dock and included:

- 55-gallon kitchen grease barrel stored on a pallet with wheels; and
- Several compressed gas cylinders containing nitrogen.

One vertical compressed gas oxygen tank and several smaller compressed gas cylinders were observed in a fenced enclosure just north of the loading dock.

All containers appeared to be in good condition with no evidence of significant past leaks, spills, or ground staining. Some staining on the floor of the radiology department was observed beneath the photo fixer and developer chemical containers, and some staining beneath the kitchen grease barrel was observed on concrete. These stained areas appeared to be *de minimis*.

3.13 SOLID (NON-HAZARDOUS) WASTE

Solid waste is compacted and autoclaved on-site at the loading dock area. There is one on-site autoclave machine and one trash compactor with a 7-gallon hydraulic oil reservoir (Section 3.11). Solid waste also appeared to be stored in metal containers along the northern Site boundary.

3.14 EXISTING GROUNDWATER ISSUES

Based on the records reviewed during completion of this Phase I ESA, there are no documented regional or local plume issues concerning groundwater beneath the Site.

3.15 WATER, WASTEWATER, DRAINS, AND STORM WATER

Potable water and sanitary sewer service are supplied to the Site by the Eastern Municipal Water District. No water supply wells were observed during the reconnaissance visit. Our review of building permit records indicated the Site's sewer hook up was completed by November 11, 1992 (Section 5.2).

Storm water runoff at the Site is directed over paved areas to the northwestern Site boundary where it is collected into a low angle drainage ditch (Appendix A – Photograph 14). The runoff then appeared to travel north along the Site boundary where it discharges to the west onto an adjacent parcel. The runoff discharge area can be seen in the 1994 and 2002 aerial photographs of the Site (Appendix B). According to Mr. Williamson, the Site does not currently have a permit pertaining to storm water management, and has not had a storm water permit in the past. Storm water also is anticipated to infiltrate into the subsurface at landscaped/vegetated areas and at the undeveloped area on the northern portion of the Site.

Several floor drains were observed inside the main hospital building: two floor drains were observed in the laboratory, two floor drains in the radiology department in the main building, and one floor drain inside a small janitor's closet in the Medical Offices building at 27350 Iris Avenue (northern portion of Site). According to Mr. Williamson, all of the floor drains are directed to the sanitary sewer via underground piping beneath the hospital building. The floor drains in the laboratory and Medical Offices building appeared to be in good condition with no signs of staining.

The two floor drains associated with the radiology department were observed at each of the photo processing machines located on the first floor of the hospital. Both drains were observed to receive effluent from the associated photo machines through plastic tubing. The effluent appeared to first be directed through a small silver recovery unit, then to the floor drain, which drains to the sanitary sewer. According to Mr. Williamson, the silver recovery units are replaced on an as needed basis, and the waste silver recovery units are transported off-site by Freedom Imaging.

At the time of the reconnaissance, both drains were observed to have a concrete cut and patch surrounding their grates. Mr. Williamson indicated that both drains had been replaced approximately 6 years ago when a subsurface pipe sleeve broke. The pipe was assumed to have broken because sediment backed up into each of the floor drains. No testing of soil was evidently performed at the time of the pipe break and replacement of the floor drains. However, Mr. Williamson indicated that Eastern Municipal Water District (EMWD) had performed testing of the effluent in the past. Mr. Williamson did not have records for the testing, or contact information for EMWD.

SECOR personnel contacted the Source Control Department in the laboratory department at EMWD to follow up on the potential effluent test results. At the time of completion of this report, SECOR personnel had not received a response. If EMWD provides information to SECOR following submittal of this report, SECOR personnel will forward the information along with it's relevance to the results of this Phase I ESA to Kaiser under separate cover.

3.16 ODORS, POOLS OF LIQUID, STAINS, AND CORROSION

No significant noxious odors, pooled liquids, stains on floors, pavement, or the ground surface, or obvious signs of corrosion of facility equipment or structures were observed during the Site reconnaissance. *De minimis* stains were observed on the first floor of the main building and on the concrete surface of the loading dock area (Section 3.12).

3.17 PITS, PONDS, LAGOONS, AND STRESSED VEGETATION

No evidence of pits, ponds, lagoons or stressed vegetation was observed on or near the Site.

4.0 REGULATORY AGENCY LIST REVIEW

The objective of the records review is to obtain and review records that will assist in evaluating RECs in connection with the Site. On March 2, 2007, SECOR subcontracted EDR to conduct a search of standard environmental record sources published by federal, state, local, and tribal regulatory agencies. It should be noted that regulatory listings include only those sites that are: (a) known to the regulatory agencies to be contaminated, (b) in the process of evaluation for potential contamination, (c) or regulated at the time of publication.

It should also be noted that our review has relied upon EDR's compilation of listed sites. If material environmental information on a site not listed in the EDR report was discovered during completion of the Phase I ESA, it is presented in the appropriate sections of this report and reference is made to the source of the information.

SECOR reviewed the results of the EDR Radius Map with GeoCheck® database search to determine if the Site or nearby properties are listed as having a past or present record of actual or potential environment impact.

The databases that were searched in the EDR Report include those briefly described below:

- U.S. Environmental Protection Agency (EPA): National Priority List (NPL), Sites designated for Superfund clean-up by the EPA;
- EPA: Resource Conservation and Recovery Act (RCRA) Corrective Actions (CORRACTS) Facility Index System (FINDS);
- EPA: Comprehensive Environmental Response, Cleanup and Liability Information System (CERCLIS): Sites under review by the EPA;
- EPA: RCRA Permitted Treatment, Storage, Disposal Facilities (TSDF; RCRA-TSD) and TSDF subject to violations/enforcement corrective actions (RCRIS TSDC):
- California (State): (CAL CERCLIS): State Equivalent CERCLIS List (SCL)/ Cal Site (State Sites);
- State and Los Angeles Fire Department (LAFD; City): Leaking Underground Storage Tanks (LUST) listings: Sites with leaking underground storage tanks;
- State: Solid Waste Landfills/Waste Management Unit Database System (SWL/WMUDS) including Toxic Pits Clean-Up Facilities): Sites permitted as solid waste landfills, incinerators, or transfer stations;
- State: Properties With Hazardous Waste (CORTESE): Sites on State index of properties with hazardous waste. CORTESE sites are listed individually as SCL, LUST and SWL sites;

- State/City: Underground Storage Tanks/Aboveground Storage Tanks (USTs/ASTs): Sites with registered underground or aboveground storage tanks;
- EPA: Emergency Response Notification System (ERNS): Sites with previous hazardous materials spills;
- EPA: Large or Small Quantity Generators (RCRA LQG and SQG): Facilities that generate large or small quantities of hazardous waste; and
- Local: Riverside County Listing of Underground Tank Cleanup Sites and Underground Storage Tank List.

The complete EDR Report including maps showing the location of listed sites relative to the Site is presented in Appendix C.

It should be noted that EDR does not use the California Department of Toxic Substances Control Site Mitigation and Brownfields Reuse Program Database (CA SMBRPD) categorization required in the most recent UBOC Phase I ESA Scope of Work. As a result, the six databases included in CA SMBRPD: CALSITES; School Property Evaluation Program; Voluntary Cleanup Program; Properties Needing Further Evaluation; No Further Action Determination; and Unconfirmed Properties are still dispersed in the Cal-Sites, Toxic Pits, CA bond Exp. Plan, VCP, NFA, REF, SCH, SLIC and Brownfields findings summaries in the EDR Report.

4.1 SITE LISTINGS ON ENVIRONMENTAL DATABASES

This section lists the federal, state, and/or local environmental databases where the Site address, 27300 Iris Avenue was searched in EDR's Radius Map Report. The Site was not listed on any environmental databases searched by EDR.

Data Source	Listing
Federal Records	Site not listed
State and Local Records	Site not listed

4.2 VICINITY PROPERTY LISTINGS ON ENVIRONMENTAL DATABASES

This section lists the federal, state, and/or local environmental databases where vicinity properties located within ASTM-specified search distances (up to one mile from the Site) were searched in the EDR Radius Map Report. No vicinity properties were listed on any of the databases searched.

Data Source	Listing
Federal Records	Vicinity properties not listed
State and Local Records	Vicinity properties not listed

5.0 LOCAL GOVERNMENT RECORDS

5.1 DTSC HAZARDOUS WASTE RECORDS

SECOR personnel obtained hazardous waste records for the Site address from DTSC's online Hazardous Waste Tracking System at http://hwts.dtsc.ca.gov/report_list.cfm. Based on their records, the Site has California Hazardous Waste ID # CAL000067706 under the name of Moreno Valley Community Hospital. The status of the Site was listed as inactive as of June 30, 2004. According to their records, California manifested waste shipments were recorded for every year between 1993 and 2006. A copy of these records is provided in Appendix B.

5.2 LOCAL BUILDING DEPARTMENT RECORDS

SECOR personnel contacted the City of Moreno Valley Building and Safety Department (Building Department) on March 1, 2007 regarding building permits and plans on file for the Site. On March 2, 2007, Ms. Gina Gonzalez, Permit Technician, provided copies of eight permit documents issued for the Site. Note that the Building Department files exist for 1984 to present, and that prior to 1984, building permit records would have been maintained by the Riverside County Building and Safety Department. A summary of these permits with respect to potential environmental concerns is provided below. Copies of the eight permit documents are provided in Appendix B.

November 11, 1992 – Five out of the eight permits were finalized on this date, and these permits document the addition of a modular office building to the Site including signs, ramps, water, sewer, and electrical hookups. The property owner was listed as Moreno Valley Ortho Med Group.

May 27, 1994 – Two out of the eight permits were finalized on this date, and these permits document the addition of two modular buildings for California Kidney Centers including underground plumbing. The property owner was listed as Hemet Valley Hospital District.

May 8, 1998 – The eighth permit on file was finalized on this date, and documented the addition of a three foot by 75 foot retaining wall on the Site. The property owner was listed as Hemet Valley Hospital District.

SECOR personnel also received copies of a grading permit and grading plans from Ms. Gonzalez on March 19, 2007. The grading permit (Permit No. MW-196) dated October 18, 1988 indicated that a total of 44,100 cubic yards of fill were brought to the Site. The associated grading plans depict storm water runoff traveling north-northwest as sheet flow north of the Site building, and existing drainage ditches located along Filaree Avenue (oriented east-west), and along the western boundary of the Site (oriented north-south).

5.3 COUNTY OF RIVERSIDE COMMUNITY HEALTH AGENCY

SECOR personnel contacted the County of Riverside Community Health Agency Department of Environmental Health regarding environmental records for the Site. This agency acts as the local Certified Unified Program Agency (CUPA) that has jurisdiction over the Site. For

reference, in the State of California, a program was established under the amendments to the California Health and Safety Code made by Senate Bill 1082 in 1993. A Certified Unified Program Agency (CUPA) is a local agency that has been certified by Cal/EPA to implement the six state environmental programs within the local agency's jurisdiction. The six programs are the Hazardous Materials Business Plan/Emergency Response Plan, Hazardous Waste/Tiered Permitting, Underground Storage Tanks, Aboveground Storage Tanks (SPCC only), California Accidental Release Program and the Uniform Fire Code Hazardous Materials Management Plan. As part of these activities, CUPAs can, under certain circumstances, oversee the closure of facilities.

On March 26, 2007, SECOR personnel received copies of the documents on file for the Site at the CUPA. The following is a summary of the documents received that provide information on the Site history and that may indicate the potential presence of RECs, HRECs, or other environmental concerns in connection with the Site.

- June 8, 1989 CUPA UST Plan Check Application This form indicated that the Site UST
 was planned for installation by a direct burial method. The UST was described as a
 fiberglass double wall diesel tank with a "Pollulert" electronic fluid/vapor detection
 system.
- March 19, 1992 Moreno Valley Medical Center Business Plan This document included emergency planning procedures, notification procedures, preventive measures, emergency equipment, a site plan, Material Safety Data Sheets (MSDSs), and a chemical inventory. The following hazardous materials storage areas were listed: UST, Engineering Hazardous Waste Storage area, Fire Proof Storage Cabinet, Bio-Hazardous Waste Storage at the Receiving Dock, Bulk Oxygen, Nitrous Oxide and Nitrogen Storage, H tanks and manifold, and fire hydrants. The following chemical materials were listed in the inventory: Exxon Low-Sulfur Dieseline, acetylene, motor oil, nitrogen, Betz Entec 368, Betz Entec CPS-1, Betz Entec 840, Betz Entec 733, Betz Entec 550, Kodak x-ray fixer, Kodak x-ray developer, sulfuric acid, sodium hypochlorite, and Hg Absorb. Additionally, another list of chemicals used in the laboratory was included the maximum quantity of any chemical stored in the laboratory was 25 gallons of formaldehyde.
- December 8, 1992 Hazardous Waste Generator Inspection Report It was noted that no analytical testing of the silver recovery treatment unit effluent was available.
- December 21, 1992 UST Monitoring Alternative Application This form included construction details of the UST and ancillary equipment. This form also included an estimate of the depth to groundwater beneath the Site of 114 to 133 ft bgs.
- March 24, 1993 Onsite Hazardous Waste Treatment Notification Form This form indicated that approximately 60 gallons per month of silver-bearing waste was treated on-site by an automatic silver recovery unit, non-hazardous aqueous waste was discharged to the sewer, and hazardous waste was removed from the Site.
- April 21, 1994 Hazardous Waste Generator Inspection Report An inspection of the photo processing silver recovery area was conducted. Violations noted were improper labeling, improper spill containment equipment, no valid permit, hazardous waste

manifests were not available for three prior years, and training records were not maintained.

- April 26, 1994 Business Emergency Plan Inspection Report This report noted the following violations: no current hazardous waste permit on-site, business plan had not been updated in past two years, the chemical inventory had not been updated in the past year, and the Site plan needed to be updated with locations of all chemical storage (pesticides were noted).
- June 13, 1994 Letter from DTSC to Moreno Valley Community Hospital It was indicated that the facility no longer included on-site treatment of the hazardous waste generated by the radiology processors.
- June 21, 1994 Hazardous Materials Supplemental Report The report noted that the facility no longer treats photo fixer/developer effluent on-site, and that previous violations had been corrected.
- Undated document titled Business Plan Emergency Procedures This document indicated the Site maintained double-walled USTs with single walled piping
- October 14, 1995 Emergency Response, Complaint Investigations Report Complaints
 of a smokey odor and eye irritation on the fourth floor of the hospital. Following air
 monitoring by the hazardous materials response team, no hazardous atmospheres were
 detected. The report noted that the haz mat team felt that the odor was coming from a
 nearby off-site fire.
- November 24, 1995 Emergency Response, Complaint Investigations Report Unusual odors of sulfur, chlorine, and vinegar were reportedly emanating from the kidney dialysis area/rooms. An investigation of this area was performed, and it was determined that the odors were coming from beneath the manufactured building where there may have been broken drains causing standing water, or a deceased animal. It was recommended by the investigators that all underground plumbing beneath the manufactured building be checked for leaks, and that an industrial hygienist further investigate the cause of the odors.
- CUPA 1998 UST Compliance Review Worksheet This worksheet indicated the Site UST met 1998 upgrade requirements.
- September 22, 1999 Emergency Response, Complaint Investigations Report Eleven hospital workers became ill after riding in the elevator. The elevator shaft was checked by the elevator company and the CUPA, and no issues were noted. The cause of the illness in the workers was not determined.
- January 25, 2006 Emergency Response, Complaint Investigations Report This form indicated that the hazardous materials emergency response team was mobilized to the Site when a semi truck had collided with a pickup truck at the intersection of Iris Avenue and Oliver Street. An unknown quantity of diesel fuel spilled onto the street during the collision.

- Hazardous Materials Management Permit, Facility Number 80522, expiration date June 28, 2007 – This permit indicated the Site currently is classified as a hazardous waste generator, and that a 12,000-gallon UST containing diesel is located at the Site. Copies of expired versions of this permit also were included in the CUPA files.
- August 27, 2002 Letter from CUPA to Moreno Valley Community Hospital The letter indicated the on-site UST included secondary containment installed prior to 2001.
- March 6, 2003 Notice of Violation This letter from the CUPA indicated the UST had failed a secondary containment component of the UST system, and that a plan for repairs had not been submitted to the CUPA.
- July 20, 2003 Hazardous Materials Handler Inspection Report It was noted that flammable solvents were stored beneath a hood in the clinical lab, and that waste oil and waste fixer were located at the Site.
- December 8, 2003 Letter from Packham & Toomey to Valley Health System (Site) This letter documented the work plan for repairs associated with the UST system.
- October 30, 2002 Letter from GBC, Inc. to CUPA This letter indicated the secondary piping and piping sump failed testing. This document also indicated the UST was construction of fiberglass and steel.
- July 7, 2005 Hazardous Materials Supplemental Report This report included inspection of the UST and ancillary equipment. The inspection noted that liquid should be removed from the UST piping sump.
- July 19, 2005 UST Inspection Form This form provided the construction details of the UST including that the UST was constructed of uncoated fiberglass/plastic. This form also indicated that releases had been reported or recorded. No specific information on the releases was noted.
- July 6, 2006 UST Inspection Form This form provided the construction details of the UST, and indicated that no releases had been reported or recorded.
- July 7, 2006 Spill Bucket Testing Report This report included testing of the UST spill bucket system. The report indicated that sump #2 failed its test. The UST, two piping runs, sump #1, fill sump #1, and spill box #1 passed.
- August 8, 2006 Hazardous Materials Handler Inspection Report Areas of the Site where hazardous materials were stored were inspected. It was indicated that the boilers and cooling tower are treated with AquaServe 2740-55, 3446-55, and 4619 for rust, pH, and cooling water treatment. It was indicated that diesel fuel is conveyed to the generator from the UST via an underground pipe. Photo developer/fixer chemicals were used in the X-ray laboratory, X-ray rooms and CT room, and waste photo-related chemicals were sent to an off-site facility for silver recovery. It was also noted that chemical containers and waste containers were not properly labeled.

- August 17, 2006 Hazardous Materials Supplemental Report Departments in the hospital that generate hazardous waste were inspected. The departments included: Photo processing – processing waste containing silver was collected from a machine into a waste container, then removed daily into drums, which are transported off-site; Environmental Services Department – oversees the disposal of biohazardous wastes, pharmaceutical wastes, hazardous wastes, and universal wastes (batteries).
- September 15, 2006 Certification of Financial Responsibility This certification was provided by Moreno Valley Medical Center to the RWQCB, and indicated that the medical center was insured by Beta Healthcare Group (Pollution Liability Coverage).

Based on our review of the CUPA documents, the following RECs, HRECs, and other environment concerns are noted:

- A 12,000-gallon UST and associated underground piping currently exist on the Site. The
 UST secondary containment was noted to have failed at least one leak/integrity test, and
 water was noted on more than occasion to have entered one of the sumps.
- The Site formerly included on-site treatment of silver-bearing photo processing waste associated with the radiology lab. Treated waste effluent was evidently directed to the sanitary sewer. No testing of the effluent composition was apparently conducted.
- The Site facility has received hazardous waste violations in the past including improper container labeling, improper spill containment equipment, no valid permit, hazardous waste manifests were not available for three prior years, and training records were not maintained.

5.4 OTHER AGENCY CONTACTS

SECOR contacted the following agencies in addition to those described in Sections 5.1 through 5.3:

DTSC – Ms. Sofia Olmedo, Regional Records Coordinator, responded to SECOR on March 5, 2007 and indicated that the DTSC does not have any records for the Site.

RWQCB – Ms. Sylvia Wellnatz of the San Diego RWQCB contacted SECOR on March 2, 2007 to indicate that the RWQCB does not have any records for the Site.

Moreno Valley Fire Department – SECOR personnel contacted the Moreno Valley Fire Department in writing on March 1, 2007 to request records for the Site. At the time of completion of this report, SECOR personnel had not received a response.

6.0 OTHER ENVIRONMENTAL CONSIDERATIONS

6.1 ASBESTOS

While the use of asbestos containing material (ACM) in the manufacture of most building materials has not been fully prohibited by federal law, the use of asbestos, for the most part, has been discontinued since the late 1970s.

The structure on the Site was built in 1989. According to Mr. Williamson, there are no ACMs on-site, and there is no asbestos management plan. However, it is still possible that ACMs were incorporated in some building materials. Building materials that were observed during the reconnaissance including drywall texture, floor tiles, and acoustic ceiling tiles appeared to be in good condition.

6.2 AIR EMISSIONS

The Site and vicinity properties were not identified in the EDR Radius Map report on the EMI database. Mr. Williamson indicated that the Site maintains an air permit, but did provide SECOR personnel with a copy at the time of the Site visit.

SECOR personnel reviewed Notice of Violation (NOV) and Notice to Comply (NOC) online searchable databases for the South Coast Air Quality Management District (SCAQMD) at http://www.aqmd.gov/nov/nov.aspx?notice-type=NOV for the years 1988 through 2008. According to these databases, the Site has not received a NOV or NOC.

6.3 RADON

Radon is a colorless, tasteless radioactive gas with a United States Environmental Protection Agency (EPA) specified action level of 4.0 picocuries per liter (pCi/L) of air. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is associated with its rate of accumulation within confined areas, particularly confined areas near to the ground, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

SECOR reviewed the Department of Health Services Radon Database for California (October 2002) and found that in zip code 92586 area where the Site is located, 4 tests were taken as part of the survey. Of the 4 tests, 0 percent (0 out of 4) had radon levels greater than 4.0 pCi/L.

Information regarding the presence of radon at the Site relies on regional data and does not represent site-specific data. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993). Based on the DHS survey results, radon should not be an environmental issue at the Site.

To determine site-specific radon levels a radon survey would have to be conducted. Because regional radon levels do not appear to represent a REC of the Site a radon survey is not recommended.

6.4 DRY CLEANING OPERATIONS

No dry cleaning operations were observed on or near the Site. No indication of past dry cleaning operations was identified.

6.5 PESTICIDES

Historical sources review indicates that the Site was developed initially as part of an agricultural field. No documentation of commercial on-site use of agricultural chemicals (e.g., pesticides, insecticides, herbicides or fertilizers) was identified during this ESA.

6.6 MOLD-LIKE SUBSTANCES

No mold-like substances were observed at the Site. Some areas of water damage were observed on ceiling tiles inside the hospital building, but these areas appeared to be minor, and no mold growth was observed in connection with the water-stained areas. Mr. Williamson indicated that he had no knowledge of any mold-related issues with the Site buildings.

6.7 ELECTROMAGNETIC RADIATION

No overhead high voltage electrical power transmission lines or other obvious sources of significant levels of electromagnetic radiation emissions (e.g., cellular communication station antennae) were observed at or adjacent to the Site.

7.0 DATA GAPS

There are no data gaps with respect to conformance to the ASTM standard at the completion of this Phase I ESA.

8.0 CONCLUSIONS AND RECOMMENDATIONS

SECOR has completed a Phase I ESA of the Moreno Valley Community Hospital property located at 27300 Iris Avenue in Moreno Valley, California (Site). The Phase I ESA was conducted in general conformance with ASTM E 1527-05 on behalf of Kaiser as part of Kaiser's environmental due diligence prior to a property transaction.

The following is concluded with respect to the Site land use history:

- The Site appears to have been used for agricultural purposes from at least 1938 until approximately 1989;
- The Site was developed in approximately 1989 with the current hospital building; and
- Hospital operations include an emergency back up generator, chillers, on-site x-ray film processing, and a laboratory, which each have associated chemical materials use, handling, and storage.

Based upon the results of our Phase I ESA, the following RECs, HRECs, and/or other environmental concerns have been identified and associated recommendations are noted:

- A 12,000-gallon diesel underground storage tank (UST) and associated underground piping exist at the Site, and are associated with the emergency back up generator. The UST was installed in approximately 1989 when the hospital was constructed. While the UST appears to be in compliance with requirements for UST construction, integrity, and secondary containment testing, the presence of the UST is considered to be a recognized environmental condition (REC). Records on file with the Riverside County Department of Environmental Health (i.e., the local CUPA) indicate the UST had failed secondary containment testing in the past. The CUPA issued a Notice of Violation to the Site for the failed secondary containment testing on March 6, 2003. It is recommended that soil samples be collected in the vicinity of the UST to evaluate the potential for diesel impacts to soil surrounding the UST and piping.
- Two photo processing machines are currently located on the Site in the first floor of the main building. The machines have been in use since hospital construction, and include photo fixer and developer processes. Both machines discharge effluent through a silver recovery unit, to floor drains, which then discharge to the sanitary sewer. Both drains were replaced 6 years ago when an underground pipe sleeve apparently broke, causing sediment to back up into both drains. Riverside County records indicate that on-site treatment of silver-bearing photo processing hazardous waste historically occurred on the Site. Based on the reported pipe damage, there is a potential for silver-bearing photo process effluent to have impacted subsurface soils beneath the first floor of the hospital building. Therefore, the presence of the two photo processing machines with direct discharge to subsurface piping is considered to be a REC. It is recommended that soil samples be collected from soil beneath the two photo processing machines to evaluate the potential for elevated concentrations of silver in subsurface soils.

• The hospital chief engineer and hospital administrator indicated that the Site may have been used as pastureland for sheep grazing and farmland for potato crops in the past. The surrounding properties also appear to have been used for agricultural purposes. Therefore, there is a potential that widespread application of pesticides associated with former agricultural land use has impacted near surface soils. It is recommended that near surface soils across the Site parcel be evaluated for the presence of pesticides.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.0. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Copies of report preparer's resumes are provided in Appendix D.

10.0 STATEMENT OF LIMITATIONS

The conclusions and recommendations contained in this report/assessment are based upon professional opinions with regard to the subject matter. These opinions were prepared in accordance with generally accepted environmental consulting and engineering standards and practices applicable to this location and existing at this time. The use of this report is subject to the following limitations:

- 1. The data and findings presented in this report are valid as of the dates when the investigations were performed. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.
- 2. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Work, budgetary constraints, site access and schedule, as defined in the contract with SECOR.
- 3. This report is based, in part, on unverified information supplied to SECOR by third party sources, such as regulatory agencies, prior owners or operators of the property, analytical laboratories, subcontractors, etc. While efforts may have been made to substantiate this third party information, SECOR cannot guarantee the completeness or accuracy of this information.
- 4. The findings, observations, and conclusions expressed by SECOR in this report are not, and should not be, considered an opinion concerning the compliance of any past or present owner or operator of the Site with any federal, state or local law or regulation.
- 5. No warranty or guarantee, whether expressed or implied, is made with respect to the data or the reported findings, observations, and conclusions, which are based solely upon Site conditions in existence at the time of investigation.
- 6. SECOR reports present professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of federal, state or local governmental agencies. Issues raised by the report should be reviewed by appropriate legal counsel.
- 7. This report is intended for the use of SECOR's client and the appropriate regulatory agency only; any other use must be approved by SECOR and the client in writing. If any such unauthorized use occurs, it shall be at the user's sole risk without liability to SECOR.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.

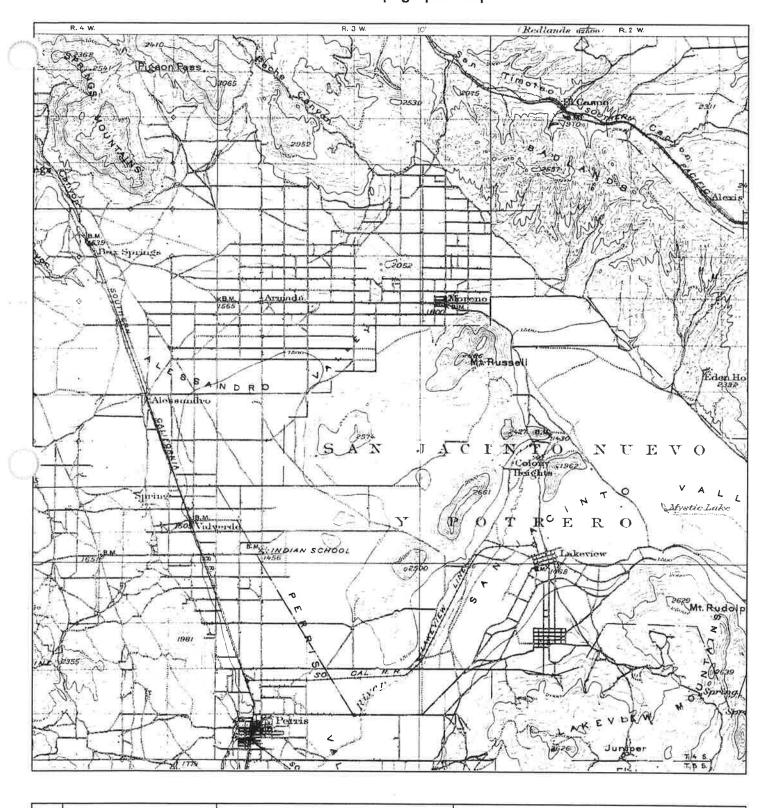

Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

RE: 27300 IRIS AVENUE, MORENO VALLEY, CA

Dear Ms. Confar:

We are in receipt of your letter dated March 1, 2007, requesting permit records for the above-mentioned address. We have completed our research and have found eight building permit records (attached). The City of Moreno Valley incorporated on December 3, 1984; prior to this date it was under the jurisdiction of the County of Riverside. As such, there may be additional information on subject address and you may wish to contact the County Building and Safety Records at 951, 955,2018.

The attached records only reflect **building permit history**. There may be fire and planning permit activity. You may wish to contact the City of Moreno Valley Fire Prevention Division at 951,413,3370 and the Planning Division at 951,413,3206.

If you require further assistance or have any questions, please feel free to contact me. Thank you.

Gina Gonzalez Permit Technician

AT APPROXIMATELY 0700 HRS, THE EMERGENCY COMMAND CENTER PAGED THE ON CALL MEMBERS OF THE HAZ MAT TEAM REQUESTING A RESPONSE TO A TRAFFIC COLLISION WITH DIESEL SPILL AT 27300 IRIS AVE IN MORENO VALLEY.

I ARRIVED ON SCENE AND OBSERVED THAT A SEMI TRUCK HAD COLLIDED WITH A PICKUP TRUCK AT THE INTERSECTION OF IRIS AVE AND OLIVER ST. THE CAB OF THE TRUCK HAD SPUN AROUND AND THE TRAILER HAD PUNCTURED THE SADDLE TANK DISCHARGING FUEL ONTO THE GROUND SURFACE. FIRST RESPONDERS ON SCENE HAD BUILT A BERM TO CONTAIN THE DIESEL FUEL THAT WAS FLOWING FROM THE TANK. I THEN PLACED A BUCKET UNDER THE GAS TANK TO COLLECT THE FUEL UNTIL CDF HAZ MAT PERSONNEL ARRIVED ON SCENE TO STOP THE LEAK AND DRAIN THE TANK. I THEN TALKED TO POLICE OFFICERS ON SCENE WHO SAID THAT THE DRIVER OF THE PICKUP TRUCK RAN THE RED LIGHT AT OLIVER AND WAS STRUCK BY THE SEMI TRAVELING WEST BOUND ON IRIS AVE. THE DRIVER OF THE PICKUP HAD BEEN TRANSPORTED TO THE HOSPITAL AND INFORMATION ON HIM WAS NOT AVAILABLE AT THIS TIME.

CDF HAZ MAT PERSONNEL ARRIVED ON SCENE AND CAPTAIN KATULS WAS BRIEFED ON THE SITUATION. WE THEN PROCEEDED TO STOP THE LEAK, THE TRUCK CAB HAD TO BE MOVED TO ALLOW ACCESS TO THE TANK AND A TOW TRUCK ALREADY ON SCENE HOOKED UP TO THE CAB AND STARTED TO DRAG THE CAB AROUND. ONCE ACCESS TO THE TANK WAS OBTAINED, THE FUEL TANK WAS DRAINED. APPROXIMATELY 30 GALLONS OF DIESEL FUEL WAS REMOVED FROM THE TANK, THE SEMI TRUCK WAS THEN MOVED FROM THE SCENE.

AN DURFFY WITH THE CITY OF MORENO VALLEY WAS ON SCENE AND AGREED TO HANDLE THE CLEANUP AS THE RESPONSIBLE PARTY S NOT AVAILABLE TO MAKE A DECISION ON THE CLEANUP. BRIAN DURFFY AGREED TO OVERSEE THE CLEANUP AND I CLEARED THE SCENE.

CASE CLOSED.

SAFE DRINKING WATER AND TOXIC ENFORCEMENT ACT OF 1986

DISCHARGE REPORT FORM

I.D. NO.: 15644

Date Reported: 9/22/99

Time: 1230hrs

Date of Discharge: 9/22/99

Incident Location/Address: Moreno Valley Community Hospital,

27300 Iris Ave

Telephone: (909) 243-0811

City: Moreno Valley

Zip: 92555

Responsible Party/address: Same as above

Telephone: (909) 243-0811

Description of Incident: Unknown odors caused 11 workers to become sick, shutting down the Emergency Room.

Substance(s) Discharged/Threatened Discharge: Unknown

Quantity: Unknown

Characteristics of Substance(s): Respiratory irritant

Extent of Contamination:

Soil: None Water: None

Air: Localized to the area around the elevator shafts from the basement to the 4th floor.

Other:

Health and Safety Threat: The unknown chemical caused headaches, burning of the throat, coughing, and shortness of breath.

Time of Threat: 1230hrs

Health Recommendations: Isolate area, ventilate elevator shafts, increase building air exchange to bring in more fresh air from outside building.

Description of Initial Mitigation Measures (evacuation, berming, absorption, containerizing): Elevators were evacuated and isolated from use. ER was shut down to new arrivals.

Cleanup Status: Clean

DISPOS	SITION	OR A	CTION:									

At approximately 11:45 A.M. the Perris Emergency Command Center paged the on call members of the Haz Mat with a request to respond to a suspicious substance complaint. The suspicious substance is located at the Moreno Valley Community Hospital, 27300 Iris Ave., in the city of Moreno Valley. The Haz Mat team at the time this complaint was received was involved in another complaint. It was decided that I would respond to this complaint with B.C. Bennett.

At the Moreno Valley Community Hospital I met with Deputy Valdivias. The white powder was reported to be in the waiting room for the Emergency Room. After B.C. Bennett arrived it was decided we should look into the Emergency Room's Waiting Room to see the white powder. The white powder has an appearance of large white crystalline material. This was determined to be consistent with food additives used for coffee.

The responders went over to a location near by that has coffee additives for the hospital staff. The Equal packet was open and appeared to be the same as the material seen on the tabletop in the Emergency Room Waiting

Room. The material could also be a creamer the staff has supplied in small packets.

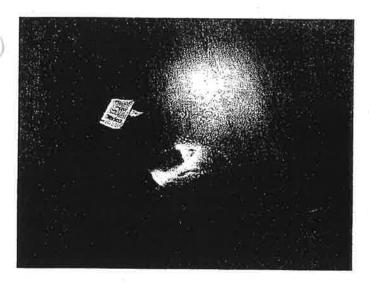

The responders then returned back to the Emergency Room Waiting Room to compare the two materials. The white powder appeared to be similar to the Equal. Using a nitrile glove for protection I swept the white powder in question into a baggie. This was done under the direction of B.C. Bennett.

The hospital was instructed to make a bleach solution similar to what they use for normal biological clean ups and treat the tabletop surface. The hospital was also asked to place someone into their waiting rooms to keep small children from playing with these food additives and causing additional complaints. It is very common for parents to give their children some thing to play with while they are waiting in these rooms. These food packets are very often used for this purpose.

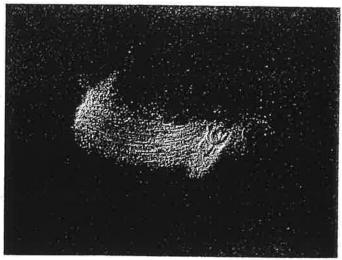

Ms. Annette Davis with the Infectious Control group for the hospital wanted this white powder tested by the Public Health Laboratory. I advised Ms. Davis that the white powder would be screen before any testing would be conducted. The threat posed by the white powder would most likely cause the Public Health Laboratory not to test the white powder. Placing of Anthrax onto a solid surface is not one of the means used to cause harm. The large size of the particles is also a negative factor in the screening process. The Public Health Laboratory will place the white powder in to storage for future testing if required. The decision for testing of the white powder will be made by Mr. Bill Lawrence. Ms. Barbara Cole will be able to supply the hospital staff after the decision as to its status has been made.

Nov. 2, 2001

The sample was transferred to the Public Health Laboratory for their screening process. Mr. Lawrence decided the laboratory would hold the substance and wait for any possible exposures to develop signs of sickness related to Anthrax exposure. No real threat factor could be determined from the situation as described.

Equal test sample

Actual white powder on hard table top

Status

The Emergency Room Waiting Room was returned back to the hospital for their treatment of the table surface and then to be reopened. A request to place someone in the waiting room to prevent this type of incident in the near future was made by the Division.

RE: Secondary Containment Testing Requirements for Underground Storage Tank Systems located at 27300 Iris Ave in Moreno Valley.

Dear Underground Storage Tank Owner/Operator:

This letter is to inform you that California law (Title 23, subdivision 2637 and California Health and Safety Code, Chapter 6.7, Section 25299.2) requires that all secondary containment systems installed prior to January 1, 2001 must have their first periodic secondary containment testing performed by January 1, 2003.

Don't delay scheduling testing for each of your underground storage tanks! Resources within the Underground Storage Tank industry may eventually become unavailable as the January 1, 2003 deadline approaches. Owners/operators who fail to complete the testing by the deadline may be subject to enforcement action including fines and permit revocation.

For additional information and assistance on complying with the testing requirements, please contact your local Department of Environmental Health Office at the telephone number listed below.

Sincerely,

Ce QX

Deputy Director

Dear HEMET VALLEY HOSPITAL DIS:

This office recently completed an information management system upgrade, consolidating information from all our permitted facilities. Our future invoices will include the fees for all activities related to your business on a single form. We are requesting your assistance in confirming the accuracy of our current billing records, as indicated below.

Commencing in 1994, all billings will be based on an "Anniversary" rather than a "Calendar" year. The anniversity date for your company is indicated Those companies currently permitted under the Hazardous Waste Generator program will maintain their current permit expiration date. Companies which are not permitted under the Generator program at this time have been assigned an anniversary date.

Please review the following information and make corrections where necessary.

RE:

Dear Sirs:

According to our records, the operating permits for the underground storage tanks at your facility are due for renewal. Review of your file revealed that submittal of the following items are required prior to the issuance of operating permits:

Payment of operating fees. Payment of State Surcharge. State Water Board Form A (one per site). State Water Board Form B (one per tank). State Water Board Form C (one per tank). Approved monitoring option application. Unauthorized release response plan. Initial full system tank integrity test(s). Tank integrity test(s). Pipeline integrity test(s). Annual certification of on-line leak detectors. Annual certification of continuous monitoring system. Annual inventory reconciliation summary report. Proof of annual dispenser meter calibration. Change of ownership notification. Statement of financial responsibility. Results of lab analysis.

Submittal of the indicated items will facilitate the permitting process. Failure to provide the required documents by may result in an unannounced routine site inspection and/or the withholding of the operating permits. Be advised that failure to obtain the required operating permits is a citable offense. If you have any questions regarding this notice, you can contact your area specialist at (909) 358-5055.

Sincerely,

Desmond Reid Hazardous Materials Specialist

Radiology Manager

Laboratory Manager

Environmental Services Manager

(*) Mandatory Agency Notification

10. PREVENTIVE MEASURES

- A. All cylinders are stored and chained securely in locked areas designed for cylinder handling with warning signage posted at the entries.
- B. Sulfuric acid and water treatment chemicals are in an isolated and locked enclosure to prevent access.
- C. X-Ray film "Fixer" and "Developer" are contained in fiberglass containers. Only that which is in use, is at this facility.
- D. The majority of hazardous materials and waste are stored in DOT approved containters and kept isolated in locked or secured areas.

- E. Hazardous materials are stored in close proximity to where they are used to reduce their transportation and handling.
- F. Storage containers are stored in a neat and orderly manner providing easy access to the materials.
- G. Paints are stored in cabinets designed for flammable liquids.
- H. Waste oil is stored, until collection, in a fiberglass container.
- I. Containment materials and protective clothing are in close proximity to the storage and use areas for easy access.
- J. Engineering department is responsible for training employees who manage and handle hazardous materials.
- K. Bio-Hazardous waste is stored in a locked, enclosed area at the receiving dock separated from other waste. The Bio-hazardous waste is stored in containers that have tight fitting covers, are leak proof and rodent proof.

11. FACILITY EMPLOYEE NOTIFICATION AND EVACUATION PLAN

- A. The hospital's internal disaster plan directs employees to immediately evacuate any hazardous area with patients that may be in the area and to instruct all visitors to exit.
- B. The hospital is equipped with fire alarm pull boxes throughout the hospital. Employees are instructed to pull the alarm box for any internal disaster, including hazardous material release or fire/smoke.
 - When the pull box is activated an alarm identifying the fire zone is sent to the P.B.X. operator and the Fire Department who initiate a response.
 - 2) When the pull box is activated an alarm in the area affected sounds and all personnel within that area evacuate to a designated collection area.
 - 3) When the pull box is activated all fire doors in the area automatically close to contain smoke and fire.
- C. After the pull alarm box has been activated the employee calls the operator using our dedicated emergency call number "300".
 - The employee informs the operator of the nature of the disaster, exact location, and size and scope of the disaster.
 - 2) The operator contacts the Fire Department to notify them of the nature of the disaster.

12. FACILITY TRAINING PLAN

- A: All employees receive orientation and annual updates regarding the Hazard Communication Act.
 - Employees are familiarized with MSDS of the chemicals they will be in contact with, including preventative measures for working with the materials, protective clothing, and response to release of those chemicals.

B. Engineering employees that would be required to respond to a release of chemicals receive special training in the use of protective clothing, containment methods and use of containment materials, and in the use of the notification plan and emergency telephone numbers.

13. LIST OF EMERGENCY EQUIPMENT

- A. Communication System: Pull Alarm Boxes and Telephones, underground storage are monitored.
- B. Protective Clothing: Face shields, gloves, aprons, breathing apparatus.
- C. Containment and Neutralinzing Materials: Absorbant, moldable dikes.
- D. Other Equipment: Eyewash stations, fire extinguishers.

14. EMERGENCY PROCEDURES

- A. The employee initiates the internal disaster plan.
 - 1) Evacuate
 - 2) Pull wall fire alarm
 - 3) Call extension "300" to inform the operator fully about the release.
 - a) Location, type of incident, name and quantity of materials involved, andy injuries, possible hazards to responders, and their name.
 - 4) Return to the site to direct responders.
- B. The operator will contact the Emergency Response Team.
- C. In the event of fire, explosion or any unplanned release of hazardous materials or waste which would constitute a threat to human health or the environment, the Coordinator of the Emergency Response Team shall implement the following procedures immediately.
- D. The Emergency Response Team (ERT) will take all reasonable measures to ensure that fires, explosions, and release do not occur.
- E. If the ERT requires additional assistance they should contact Consolidated waste (located in Riverside available 24 hours per day).
- F. The coordinator of the ERT will notify:
 - 1) Riverside County Department of Environmental Health.
 - 2) State of California Office of Emergency Services
 - 3) National Response Center (when appropriate)
- G. The ERT coordinator will take appropriate action after the emergency to treat, store, or dispose of recovered waste, contaminated soil or surface water or any other materials that result from the release, fire, or explosion.
- H. The ERT coordinator will make a report describing the details of any incident.
- I. A report will be submitted within 15 days after the incident to the Department of Health Services for any significant incident that requires the implementation of this plan, The report shall include:

- Name, address and telephone of the owner and I :-9 1) operator and facility.
 - Date, time, and type of incident.
 - Name and quantity of material(s) involved. 3)
 - The extent of any injuries, if any. 4)
 - 5) An assessment of actual or potential hazards to human health or the environment, where this is applicable.
 - Estimated quantity and disposition of recovered material that resulted from the incident.

15. LIST OF ARRANGEMENTS/AGREEMENTS

- Emergency Response Team (employees).
- Thermal Combustion Innovators (TCI).
- Consolidated Waste C .
- Moreno Valley Fire Department.
- Moreno Valley Police Department.

 - * (800) 852-7550 Office of Emergency Services
 - * (714) 358-5005 Riverside County, Department of Environmental Health Services
 - (800) 424-8802 National Response Center
- VI. Briefly explain lab employee emergency notification and evacuation procedures.

Laboratory supervisor on duty, or hospital operator will contact the lab manager (See list on Section VIII).

Evacuation plan is posted and is initiated when the pull box is activated. All personnel within that area are evacuated to a designated collection area.

VII. Briefly explain the lab employee Hazard Communication Program (OSHA) or training program (Ed. Code) currently implemented or proposed.

Each employee on hire date is given right-to-know information (including availability of summarized MSDS information) and a Laboratory Safety Check list to sign. In addition, general safety information is provided during the hospital orientation for all new hospital employees, and an annual employee update is presented as part of the continuing education program.

VIII. Briefly explain emergency procedures developed for laboratory personnel in case of emergency (list emergency coordinator and other emergency personnel.

Laboratory personnel have been instructed in the following safety procedures: Fire containment, Caustic Spill Containment, Activation of Internal Disaster Plan.

Emergency Personnel:

Karen Lavine (Laboratory Manager) is responsible for assessing the situation and contacting the following key personnel: Linda Hauck, Pete Townsend, Letitia Davis, and Larry Mize.

Briefly explain preventive measures currently implemented or proposed for the Laboratory (to prevent or minimize the potential for accidents).

All flammable and hazardous liquids are stored in proper continers.

Only amount required is drawn from stock.

Toxic, corrosive materials are stored on lower shelves.

Use of warning signs.

Policies for handling and disposal of hazardous waste. Use of goggles, gloves, mechanical pipettors.

X. List emergency equipment in Laboratory (Include fire extinguishers, eyewash stations, breathing apparatus, emergency kits, etc.).

Communication System: Pull alarm boxes and telephones Protective Clothing: Eye glasses/goggles, gloves, fire

blankets

Other Equipment:

Eyewash stations, fire extinguishers,

shower, spill clean-up kits, blankets (see Section XI for location of equipment).

XI. Provide Maps - See Page 5 of this document

Hazardous Material Inventory - see attached inventory. Any hazardous materials that are handled by your business which does not appear on the specific inventory page, LIST those substances here. Indicate the Quanitiy (maximum at any one time). The CAS number and submit a Material Safety Data Sheet for those substances.

Send forms in triplicate to:

RE: HAZMAT INVENTORIES AT: 27300 IRIS AVE MORENO VALLEY CA 92555

BUSINESS IDENTIFICATION #2094

HAZARDOUS MATERIALS DISCLOSURE PROGRAM BILLING NOTICE FOR 1993 OPERATING PERMIT

In accordance with Riverside County Ordinance 651 and California Health and Safety Code Chapter 6.95 you are required, as an owner/operator of a facility in which hazardous materials are stored or handled, to develop Business Plan and obtain a Hazardous Materials Handler Permit from this anch.

This permit is separate and distinct from any you may have for the operation of an underground storage tank or for the generation of hazardous waste.

DUE DATE:

WITHIN THIRTY DAYS OF THIS NOTICE

BILLING CATEGORY:

: F

AMOUNT DUE:

\$780.00

Please review the information on this invoice to confirm its accuracy and submit payment, along with a copy of this invoice to:

County of Riverside Hazardous Materials Management Division P.O. Box 7600 Riverside, CA 92513-7600

Remember you are required to update your Business Plan and submit the updates to this office at least once every two years, but you must submit an inventory every year.

If you have any questions you may telephone this office at (909) 358-5055.

Prestige Stations, Inc.

Health Services Agency
Post Office Box 7600
Riverside, CA 92513
Attn.: Desmond Reid

Dear Mr. Desmond Reid,

Enclosed please find the updated sheet (Page 3) of the Business Plan. Per conversation, I have added: "Single Walled Piping" to the description of our underground storage tanks.

If there are any questions, corrections or comments, please call me at (310) 402-1278, extension 3.

Sincerely yours,

Gemma S. Cortes

Environmental Analyst

BUSINESS PLAN EMERGENCY PROCEDURES

Emergency response plans and procedures are an integral part of the Business Plan. By taking the time to develop plans and procedures for your facility, you will avoid complications resulting from inaction or misguided action during an emergency. Once the plans and procedures are developed, your employees will have an informative guide to follow in the event of an emergency. You must address each of the following items, however the amount of detail you provide will depend upon the size and nature of the facility, the damage potential of the hazardous materials handled and the location of the facility with the respect to residential or other populated areas.

Person responsible for making immediate notification to emergency response agencies, the local Administering Agency, and the California Office of Emergency Services in the event of a release or threatened release.

MORENO VALLEY COMMUNITY HOSPITAL ROBERT PHILLIPS 27300 IRIS AVE MORENO VALLEY, CA 92555

27300 IRIS AVE MORENO VALLEY, CA 92555

DATE CLOSED:

06/13/94

Dear Onsite Treatment Facility:

The Department of Toxic Substances Control (Department) has received your letter notifying the Department of the closure of your facility or treatment unit(s).

The Department considers your facility or unit to be closed and no longer subject to the standards of your treatment authorization tier. The Department will change your facility or unit status in our tiered permitting database to "closed". Your facility will not be billed annual operating fees for treatment under these tiers for the closed facility or units for future reporting periods. Note, however, that a business is assessed the appropriate fee for being authorized under one of the onsite hazardous waste treatment tiers if it was authorized during any portion of a reporting period; a reporting period is a calendar year.

Please note that your facility may be inspected by the Department or a local environmental agency to ensure that the closure of your facility or unit was carried out in a manner consistent with the standards for closure under your treatment tier. Any violations of these standards, omissions, or misrepresentation may subject your business to enforcement action including, but not limited to, imposition of substantial fines and penalties.

Sincerely,

Michael S. Horner, Chief

Onsite Hazardous Waste Treatment Unit

On-Site Hazardous Waste Treatment Unit DTSC P.O. Box 806 400 P Street, 4th Floor Sacramento, CA 95812-0806

To Whom It May Concern:

This facility is no longer pre-treating the hazardous waste from the radiology processors.

The waste is now collected directly into containers from the processors and hauled away by QA Processor Service.

If you have any questions, you may contact me at 909/243-2011.

Sincerely,

Karen Lavine

Diagnostic Services Manager

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

400 P Street, 4th Floor P.O. Box 806 Corramento, CA 95812-0806

5) 323-5871

12/03/93

EPA ID: CAL000067706

MORENO VALLEY COMMUNITY HOSPITAL ROBERT PHILLIPS 27300 IRIS AVE. MORENO VALLEY, CA 92555 For facility located at:

27300 IRIS AVE. MORENO VALLEY, CA 92555

Authorization Date: 12/03/93

Dear Conditionally Authorized and/or Conditionally Exempt Facility:

ACKNOWLEDGEMENT OF UNITS OPERATING UNDER CONDITIONAL AUTHORIZATION AND/OR CONDITIONAL EXEMPTION

The Department of Toxic Substances Control (DTSC) has received your facility specific notification (form DTSC 1772) and forms for Conditional Authorization and/or Conditional Exemption for Specified Wastestreams (form DTSC 1772B and/or 1772C). Your notifications are administratively complete, but have not been reviewed for technical adequacy. A technical review of your notifications will be conducted when an inspection is performed. At any time, you may be inspected and will be subject to penalty if violations of laws or regulations are found.

The Department acknowledges receipt of your completed notification for the treatment unit(s) listed on the last page of this letter. These units operating under Conditional Authorization or Conditional Exemption are authorized by California law without additional Department action, pursuant to Health and Safety Code sections 25200.3 and 25201.5. Your authorization to operate continues until you notify DTSC that you have stopped treating waste and have fully closed the unit(s). You will be charged annual fees calculated on a calendar year basis for each year you operate and have not notified DTSC that the units have been closed.

You must notify the DTSC 60 days before first treating hazardous wastes in any new unit. You must also notify the DTSC whenever any of the information you provided in these notifications changes. To revise information, mail a cover letter to the above address explaining the changes, attach only the pages of your notification package that have changed, and re-sign and date at the signature space on page 3 of form 1772.

Your status to operate under Conditional Authorization and/or Conditional Exemption is contingent upon the accuracy of information submitted by you in the notifications mentioned above, and your compliance with all applicable requirements in the Health and Safety Code. Any misrepresentation or any failure to fully disclose all relevant facts shall render your authorization to operate null and void.

You are also required to properly close any treatment unit. Additional guidance on closure will be issued and distributed to all authorized onsite facilities later this year.

If you have any questions regarding this letter, or have questions on operating requirements for your facility, please contact the nearest DTSC regional office, or this office at the letterhead address or phone number.

Sincerely,

Michael S. Horner, Chief

SECTION B

(CON'T)

	A STATE OF THE STA		
<u> </u>		YES	NO
B2.	Do you dispose of any items in #B1 by discharging them into the sewer system, including down sinks, storm drains, floor drains, toilets, etc.? If yes, which category(ies) of by-products or wastes?		X
B3.	Do you dispose of any items in #B1 in a way other than disposal into the sewer system (for example: trash cans, dumpster, on the ground, evaporation ponds, land fills, etc.)? If yes, which category (ies) of by-products or wastes?		X
B4.	Do you recycle any of the items listed in #B1 through another company/contractor or by yourself? If yes, which category(ies) of by-products or wastes?	X	
B5.	Do you manifest (prepare the required transportation document for hazardous wastes) any items listed in #B1?	\times	
\bigcirc	Do you store any wastes or by-products in an underground storage tank?		X.
B7.	Do you store raw materials in an underground storage tank?		

SECTION C - FEE DETERMINATION

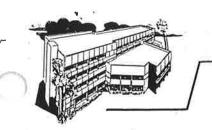

If you produce any of the wastes in B1, your business or service Does generate hazardous waste and a County of Riverside HEALTH PERMIT FOR HAZARDOUS WASTE GENERATORS IS REQUIRED. Determine the appropriate fee below.

Number of Employees	FEE
1- 10	\$ 250.00
11- 25	\$ 375.00
26-50	\$ 500.00
51-100	\$ 670.00
101-200	\$ 790.00
201-300	\$1,225.00
301-500	\$1,800.00
501-	\$1,800.00 - \$3.00
	For each employee over 500

If you do not produce any of the wastes in B1, your business does not appear to generate hazardous waste and a HEALTH PERMIT FOR HAZARDOUS WASTE GENERATORS IS NOT REQUIRED. However, this form must be COMPLETED AND RETURNED.

ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION FORM

FACILITY SPECIFIC NOTIFICATION For Use by Hazardous Waste Generators Performing Treatment Initial Under Conditional Exemption and Conditional Authorization, Revised and by Permit By Rule Facilities

Please refer to the attached Instructions before completing this form. You may notify for more than one permitting tier by using this notification form, DTSC 1772. You must attach a separate unit specific notification form for each unit at this location. There are different unit specific notification forms for each of the four categories and an additional notification form for transportable treatment units (TTU's). You only have to submit forms for the tier(s) that cover your unit(s). Discard or recycle the other unused forms. Number each page of your completed notification package and indicate the total number of pages at the top of each page at the 'Page of __'. Put your EPA ID Number on each page. Please provide all of the information requested; all fields must be completed except those that state 'if different' or 'if available'. Please type the information provided on this form and any attachments.

The notification will not be considered complete without payment of the appropriate fee for each tier under which you are operating. (Please note that the fee is per TIER not per UNIT. For example, if you operate 5 units but they are all Conditionally Authorized, you only owe \$1,140, NOT 5 times \$1,140. If you operate any Permit by Rule units and any units under Conditional Authorization you owe \$2,280.) Checks should be made payable to the Department of Toxic Substances Control and be stapled to the top of this form. Please write your EPA ID Number on the check. Fill in the check number in the box above.

I. NOTIFICATION CATEGORIES

Indicate the number of units you operate in each tier. This will also be the number of unit specific notification forms you must attach. Conditionally Exempt Small Quantity Treatment operations may not operate units under any other tier.

Number of units and attached	unit specific notifications	7/	Fee per Tier
A. 2 Conditionally I	Exempt-Small Quantity Treatment	(Form DTSC 1772A)	(not per unit) \$ 100
B Conditionally I	xempt-Specified Wastestream	(Form DTSC 1772B)	\$ 100

If you answered Yes, check this box and attach a listing of convictions, judgments, settlements, or orders and a copy of the cover sheet from each document. (See the Instructions for more information)

VI. ATTACHMENTS:

N

A plot plan/map detailing the location(s) of the covered unit(s) in relation to the facility boundaries.

Ø

- 2. A unit specific notification form for each unit to be covered at this location.
- VII. CERTIFICATIONS: This form must be signed by an authorized corporate officer or any other person in the company who has operational control and performs decision-making functions that govern operation of the facility (per title 22, California Code of Regulations (CCR) section 66270.11). All three copies must have original signatures.

Waste Minimization I certify that I have a program in place to reduce the volume, quantity, and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

<u>Tiered Permitting Certification</u> I certify that the unit or units described in these documents meet the eligibility and operating requirements of state statutes and regulations for the indicated permitting tier, including generator and secondary containment requirements. I understand that if any of the units operate under Permit by Rule or Conditional Authorization, I will also be required to provide required financial assurances by January 1, 1994, and conduct a Phase I environmental assessment by January 1, 1995.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are substantial penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

OPERATING REQUIREMENTS:

Please note that generators treating hazardous waste onsite are required to comply with a number of operating requirements which differ depending on the tier(s) under which one operates. These operating requirements are set forth in the statutes and regulations, some of which are referenced in the Tier-Specific Factsheets.

SUBMISSION PROCEDURES:

You must submit two copies of this completed notification by certified mail, return receipt requested, to:

Department of Toxic Substances Control Form 1772
Onsite Hazardous Waste Treatment Unit 400 P Street, 4th Floor (walk in only) P.O. Box 806
Sacramento, CA 95812-0806.

nust also submit one copy of the notification and attachments to the local regulatory agency in your jurisdiction as listed in the instruction materials. You must also retain a copy as part of your operating record.

All three forms must have original signatures, not photocopies.

En	iter the estin cated in any	nated monthly total volume of hazardous waste treated by this unit. This should be the maximum or highest amoun month. Indicate in the narrative (Section II) if your operations have seasonal variations.
I.	WAS	TESTREAMS AND TREATMENT PROCESSES:
	Estim	ated Monthly Total Volume Treated:pounds and/or25 gallons
	The fo	ollowing are the eligible wastestreams and treatment processes. Please check all applicable boxes:
	1.	Treats resins mixed in accordance with the manufacturer's instructions.
	2.	Treat containers of 110 gallons or less capacity that contained hazardous waste by rinsing or physical processes, such as crushing, shredding, grinding, or puncturing.
	3.	Drying special wastes, as classified by the department pursuant to title 22, CCR, section 66261.124, by pressing or by passive or heat-aided evaporation to remove water.
	4.	Magnetic separation or screening to remove components from special waste, as classified by the department pursuant to title 22, CCR, section 66261.124.
	5.	Neutralize acidic or alkaline (base) wastes from the regeneration of ion exchange media used to demineralize water. (This waste cannot contain more than 10 percent acid or base by weight to be eligible for conditional exemption.)
	6.	Neutralize acidic or alkaline (base) wastes from the food processing industry.
*	7.	Recovery of silver from photofinishing. The volume limit for conditional exemption is 500 gallons per generator (at the same location) in any calendar month.
	8.	Gravity separation of the following, including the use of flocculants and demulsifiers if
		a. The settling of solids from the waste where the resulting aqueous/liquid stream is not hazardous.
		b. The separation of oil/water mixtures and separation sludges, if the average oil recovered per month is less than 25 barrels (42 gallons per barrel).
	9.	Neutralizing acidic or alkaline (base) material by a state certified laboratory or a laboratory operated by an educational institution. (To be eligible for conditional exemption, this waste cannot contain more than 10 percent acid or base by weight.)

MORENO VALLEY MEDICAL CENTER 27300 IRIS AVENUE MORENO VALLEY CA 92555

Dear Business Owner/Operator:

RE: Fees for Health Permit for Hazardous Waste Generator

Thank you for your response in returning the completed Hazardous. Waste Generator Report Forms: However, the appropriate permit fee has not yet been received by our office.

According to the form (Section C), the correct fee for your business is \$790. Please send this amount on or before JUNE 15, 1992 to avoid a 20% penalty.

If you have any questions, please telephone Sally Evans at (714) 358-5055.

Sincerely.

Sandy Bunchek

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California Annual Houte Court.

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. If more than one monitoring system control panel is installed at facility, a separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency stating UST systems within 30 days of test date. Instructions are printed on the back of this page.

Results of Testing/Servicing

Software Version Installed:	_329753-002-A

Complete	the follow	ving checklist:		
⊠ Yes	☐ No*	Is the audible alarm operational?		
⊠ Yes	□ No*	Is the visual alarm operational?		
⊠ Yes	□ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?		
⊠ Yes	□ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?		
☐ Yes	□ No* □ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?		
□ Yes	□ No* □ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) \Bigcup Sump/Trench Sensors; \Bigcup Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? \Bigcup Yes; \Bigcup No.		
☐ Yes	□ No* □ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger?		
☐ Yes*	⊠ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.		
Yes*	⊠ No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; Water. If yes, describe causes in Section E, below.		
⊠ Yes	□ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable		
⊠ Yes	□ No*	Is all monitoring equipment operational per manufacturer's specifications?		
* In Sect	ion E beloy	w, describe how and when these deficiencies were or will be corrected.		
E. Com	ments:			
-				

-				
1				

☐ Check this box if tank gauging is used only for inventory control. ☐ Check this box if no tank gauging or SIR equipment is installed.				
This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.				
Complet	e the tollo	wing checklist:		
☐ Yes	□ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?		
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?		
☐ Yes	☐ No*	Was accuracy of system product level readings tested?		
☐ Yes	□ No*	Was accuracy of system water level readings tested?		
☐ Yes	□ No*	Were all probes reinstalled properly?		
☐ Yes	□ No*	Were all items on the equipment manufacturer's maintenance checklist completed?		
* In the	Section H,	below, describe how and when these deficiencies were or will be corrected.		
G. Lin	e Leak D	Detectors (LLD): Check this box if LLDs are not installed.		
OI DAN	o Louit D	Check this box it Elibs are not histaried.		
		wing checklist:		
☐ Yes	□ No* □ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 3 g.p.h.; 0.1 g.p.h; 0.2 g.p.h.		
☐ Yes	□ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?		
☐ Yes	□ No*	Was the testing apparatus properly calibrated?		
Yes	□ No*	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?

RE: Monitoring System Certification at Moreno Valley Community Hospital

Dear Mr. Schleicher:

This letter is to give at least 5 day notification prior to the start of the Monitoring System Certification to be performed at Moreno Valley Community Hospital, located at 27300 Iris Ave., Moreno Valley, CA 92555. The certification will be performed on Monday, December 19, 2001 at 9:00 a.m.

Please contact us at (909) 949-9141 should you have any questions or require additional information.

Very truly yours,

Joan Fuerte

January 28, 2005

Riverside Environmental Health Department 4065 County Circle Drive Riverside, CA 92503

To Whom It May Concern:

Please be advised that Kenneth Jones is the designated UST Operator for Valley Health System. Mr. Jones was certified by ICC upon passing the California UST System Operator examination on December 18, 2004.

The facilities he will be responsible for are:

Hemet Valley Medical Center 1117 E. Devonshire Avenue Hemet, CA 92546

Menifee Valley Medical 28400 McCall Blvd. Sun City, CA 92586

Moreno Valley Community Hospital 27300 Iris Avenue Moreno Valley, CA 92555

Should you have any questions, please feel free to call me at (951) 652-2811 ext. 5865.

Sincerely,

Valley Health System

Keith Garrison

Facility Administrator

Unauthorized Release Response Plan Valley Health System 23700 Iris St. Moreno Valley, Ca. 92555

- 1. Upon recognition of a suspected unauthorized release from the primary containment to the interstitial space of either the double walled tank or product line, or a suspected breach in the secondary containment, personnel shall notify the safety manager at (909) 243-0811 Ext #2095 for further instructions.
- 2. The safety manager will ensure that the nature of the alarm situation is immediately diagnosed. Arrangements will be made for a contractor to verify proper operation of the continuous monitoring system and/or confirm the suspected breach of the primary/secondary system.
- 3. If the continuous monitoring system is determined to be operating in a faulty manner, it shall be repaired, tested, and certified as operational according to the manufactures specifications.
- 4. Upon confirmation of a breach in the tank system, the system will be immediately taken out of service and the product properly removed and disposed of under manifest in accordance with all federal, state, and county requirements. Small quantities of product shall be removed by hand pump and placed in closed, labeled drums pending proper disposal. Larger quantities shall be removed by vacuum truck.
- 5. Removal and disposal of hazardous substances will be conducted by the contractor described below:

Packham & Toomey Inc. (909) 927-7429

- 6. The safety manager shall be responsible for authorizing all work necessary under this plan and for notifying HAZ MAT of any unauthorized release within 24 hours. Any repairs shall be conducted in accordance with the requirements set forth by Riverside County and the tank manufacturer.
- 7. Upon completion of repairs, but prior to the system being placed back into operation, the system shall be integrity tested and copies of the results submitted to HAS MAT for review.
- 8. Question regarding this plan shall be directed to:

Dan Williamson Engineering Services (909) 243-0811 Ext #2095

Re: Coordinated Compliance on UST's located at 27300 Iris Ave, Moreno Valley 92555

Dear Underground Storage Tank Owner/Operator

The California Code of Regulations, Title 23, Section 2637 (b) states that the monitoring equipment on your Underground Storage Tank System(s) must be tested and certified on an annual basis.

To better facilitate and coordinate our regulatory mandate to inspect each Underground Storage Tank (UST) system also on an annual frequency, we are requesting your notification to this department of scheduled annual monitoring certification for each of your UST's. Included in that notification should be the date, time, location, contractor or contact person with a phone number for the appointed monitoring certification.

Every effort will be made to ensure that staff from this department will be onsite to witness the monitoring certification) also complete a UST inspection report for your facility. This should avoid incomplete UST inspections now currently being attempted and fulfill the State Mandate of completing an annual inspection at each facility.

This coordination effort should provide a reduced interference in your UST operation by minimizing the disruption now caused by several equipment checks performed annually.

This new requirement will go into effect starting July 1, 2004. In summary, to satisfy your annual monitoring certification, you must now also include notification and scheduling with the District Specialist from this office. Please contact this office at (909) 358-5055 and request to speak with the District Specialist dependent upon the location of your UST facility.

Thank you in advance for your cooperation. We are confident that all parties will benefit in this matter. If you should have any questions regarding this correspondence, please do not hesitate to contact me at the number listed above.

Sincerely,

Vince Sternjacob

Supervisor Regulatory Compliance Area I

Hazardous Materials Division

COUNTY OF RIVERSIDE • COMMUNITY HEALTH AGENCY **DEPARTMENT OF ENVIRONMENTAL HEALTH**

May 5, 2003

Facility No: 80522 Moreno Valley Community Hospital 27300 Iris Ave Moreno Valley, CA 92555

Re: Underground Storage Tank System located at 27300 Iris Ave, Moreno Valley CA

REMINDER

UPCOMING CHANGES TO THE CALIFORNIA UNDERGROUND STORAGE TANK PROGRAM PURSUANT TO THE PASSAGE OF SENATE BILL 989 AND ASSEMBLY BILL 2481.

- Effective January 1, 2003 all owners/operators must annually test spill containment structure(s) designed to prevent a release in the event of a spill or overfill while a hazardous substance is being placed in the tank to show that it is capable of containing the substance until it is detected and cleaned up.
- All underground storage tank (UST) systems must have Under Dispenser Containment (UDC) installed with leak detection equipment by December 31, 2003.
- By June 1, 2003, the State Water Resources Control Board (SWRCB) must notify owners and operators of UST systems with secondary containment that are located within 1,000 feet of a public drinking water well of the requirement to test the UST system once using Enhanced Leak Detection (ELD). ELD testing must be performed by January 1, 2005.
- UST systems installed after July 1, 2003 are subject to new construction standards with an emphasis on "leak prevention" instead of "leak detection."

For information on regulatory requirements for UST systems design, construction, and monitoring please visit the SWRCB website at: www.swrcb.ca.gov/cwphome/ust/ and click on "UST Regulations". Additionally, you may contact your nearest Department of Environmental Health office at the locations listed below.

COUNTY OF RIVERSIDE • HEALTH SERVICES AGENCY **DEPARTMENT OF ENVIRONMENTAL HEALTH**

NOTICE OF VIOLATION

March 6, 2003

Facility No:

80522

Moreno Valley Community Hospital 27300 Iris Ave, Moreno Valley, CA 92555

RE: Failure of Secondary Containment System for Underground Storage Tank (UST) System located at 27300 Iris Ave, Moreno Valley CA

Dear Underground Storage Tank Owner/Operator:

The purpose of this letter is to inform you that the County of Riverside, Department of Environmental Health, Hazardous Materials Management Division guidelines require plan submittal and/or permit acquisition for repairs and further testing within thirty (30) days of the failure date on a test of any secondary containment component of an underground fuel tank system. Underground storage tank systems that continue to operate with failed secondary containment components are in violation of the California Health and Safety Code (Chapter 6.7) and the California Underground Storage Tank Regulations (Title 23).

Our records indicate that one or more of the UST secondary containment systems located at the above referenced facility failed their secondary containment testing. To date, a plan submittal/permit for repair(s) has not been obtained from this Department. Owners/operators of underground storage tank systems with failed components of the secondary containment system must submit plans and acquire permit(s) from the Department to address the failures no later than April 30, 2003.

The owners/operators of underground storage tank systems who fail to meet the April 30, 2003 deadline may be subject to enforcement action including fines, permit revocation and prohibition of future fuel deliveries.

If you believe you have received this notice in error and have already completed repairs to the failed system components or if you have any questions about the status of your system, please contact the Supervising Hazardous Materials Management Specialist at the nearest Department of Environmental Health Office regional office listed below.

Sincerely,

Earl Tuntland

Deputy Director

Valley Health System 23700 Iris St. Moreno Valley, Ca. 12/08/03

Work Plan for Repairs

Scope of work:

1. Install (2) SR 3.5 \times 2.4A Blueline split boots.

2. Retest secondary piping to determine where leaks are.

3. Excavate piping joints and retest, if needed.

3. Repair or replace primary and secondary piping if needed. * CONTRACTOR SHALL BE A BLUELINE TECHNOLOGIES
General Notes: CERTIFIED INSTALLER,

- 1. The existing monitoring system (Veeder Root TLS 350).
- 2. The health dept will be notified as to repair needed.
- Contractor is certified for installation by Blueline Technologies.

Electrical

- 1. All conduit is existing.
- 2. All wiring to meet local and national recognized codes.

Testing

1. Test secondary piping as per SB989 protocol.

Piping information

- 1. Existing piping is A.O.Smith Red Thread II, 2" inside 3"...
- 2. Piping is to be repaired or installed as per manufactures specification and nationally recognized codes. * PRIOR TO REPAIR 1012 PIPINIZ AND APP
- codes. X PRIOR TO REPAIR IN A PIPING AN APPROVED APPENDUM

 3. All materials used will be compatible and used as per 15 REQUIRED,

 nationally recognized codes.

Inspections

1. Site inspections will be scheduled a minimum of 5 working days in advance.

If you have any questions please call me at (909) 927-7429.

Sincerely,

John Packham

SR SERIES Repair Reducers

The **SR SERIES** Split Repair and Test Reducers are used to replace leaking fittings without breaking the main lines. They are also used to replace failed and deteriorating secondary test boots. All boots come with all required band clamps and are available with and without air test valves.

Repair / Test Reducers

RE: Secondary Containment Testing Requirements for Underground Storage Tank Systems located at 27300 Iris Ave, Moreno Valley CA.

Dear Underground Storage Tank Owner/Operator:

The purpose of this letter is to inform you that pursuant to California law (Title 23, subdivision 2637 and California Health and Safety Code, Chapter 6.7, Section 25299.2) all secondary containment systems installed on or after January 1, 2001 shall be tested upon installation, 6 months after installation and every 36 months thereafter. Secondary containment systems installed prior to January 1, 2001 shall be tested by January 1, 2003 and every 36 months thereafter.

Our records indicate that secondary containment testing has not as yet been scheduled or performed on the underground storage tanks maintained and operated at the above referenced facility. Owners/operators must complete the required testing by January 1, 2003 or provide written proof of scheduled testing to be completed within a reasonable length of time after the deadline. Testing schedules not in compliance with the testing deadline must be submitted in writing to the Department of Environmental Health Prior to January 1, 2003. Owners/operators who fail to complete the testing by the deadline may be subject to enforcement action including fines and permit revocation.

If you have received this notice in error and have already submitted your test results, please contact your local Department of Environmental Health Office at the telephone number listed below.

Sincerely,

Earl Tuntland
Deputy Director

Attention: Jackie Jones County of Riverside, DEH Hazardous Materials Division P. O. Box 7489 Riverside, CA 92415-7489

Re: Moreno Valley Community Hospital SB989 Testing of Oct. 23, 2002

Dear Ms. Jones:

Enclosed please find the results from the testing performed on October 23, 2002. Secondary piping and the piping sump failed testing. The fill sump passed testing. We will file for a permit prior to any repairs being performed and notify for re-testing 48 hours in advance.

Should you have any questions or require further information, please contact our office at (909) 944-3517.

Sincerely,

George E. Bryant

Secondary Containment Testing Report Form - DRAFT

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

Repleir a Retreat	
1	

If the testing method does not test the entire depth of the sump, specify how much of the sump was tested. Methods not testing the entire sump should only be used if the monitoring system provides fail-safe turbine shutdown.

² With the submersible pump running, place the sensor in product (discriminating sensors should also be placed in water). The time between placing the sensor in product and the turbine shutting down is the response time. This should be done if the secondary containment testing method used does not test the entire volume of the sump.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

POMECO 111 SLIP-ON SPILL CONTAINERS

1ECO 111 Slip-On Spill Iners are designed to provide reliable spill containment on the fill risers of new and existing underground storage tanks (USTs).

Features

- ◆ Easy To Install The 111 is designed to clamp directly to new and existing riser pipes eliminating the need for threaded joints. The flexible boot accommodates 4" riser pipes. Reducer inserts are available for 2" and 3" riser pipes. A lip is provided on the mounting ring to facilitate a smooth concrete finish.
- ◆ Maximum Protection Against Water Entry The patented dam-and-groove design (Patent No. 4593714) of the fingergrip lid and ring provides an excellent barrier against rain water entry. A higher level of protection against rain water intrusion is available with the raintight lid which comes equipped with a gasket. For the mate in watertight service, the amber's Plug" raintight sealable cover provides protection in high water table and tropical rain locations.
- ◆ Durable and Reliable The containment bucket is constructed of epoxy-powder coated steel for resistance to hydrocarbons and corrosion. The flexible boot design provides for tank/slab movement preserving the integrity of the seal on the riser pipe. All covers meet H20 load rating requirements.
- ◆ Rapid Liquid Removal -The 111-KP models feature an 8 oz./stroke (237 ml/stroke) pump and beveled sump for fast evacuation of excess liquid.
- ◆ Capacity 5 gallons (19 Liters)

Materials:

Container: Epoxy-Powder Coated Steel Cover: Cast Iron; Sealable Cover: Aluminum

Body Ring: Cast Iron Boot: Buna-N Clamp: Stainless Steel Seal Gasket: Buna-N

Pump: Polypropylene (111-KP only)

Flange: Aluminum

POMECO MULTI-PORT SPILL CONTAINMENT MANHOLES

POMECO Multi-Port Spill Containment Manholes provide spill containment for Underground Storage Tank (UST) fill pipes and vapor recovery risers in a completely integrated single manhole package. Multiports are installed over top of tank sumps to preserve future access to the tank top and to facilitate containment of tank bung fittings.

Model Descriptions

POMECO offers a vast array of standard Multiport configurations and options, in addition to an almost unlimited ability to provide custom solutions for virtually any spill containment application

- ◆ POMECO 311 Series Features a flush mounted manway with 5, 10, or 15 gallon, all metal, epoxy powder coated, slip-on style containment buckets with flexible boots. Fill and Vapor container drain valves are piped into the fill riser.
- ◆ POMECO 511 Series Features a flush mounted manway with flexible, 5 gallon, polyethylene, threadon style containment buckets with internal drain valves. A special single port model, the 511Y, is available with a funnel shaped bottom and a large fill opening for waste oil tank applications.
- ◆ POMECO 611 Series Features flexible, 5 gallon, polyethylene, thread-on style containment buckets with internal drain valves. The 611 also features a 37" or 42" I.D. raised (snow plow) mounting ring around the entire manway, with bolt down ears outboard of the seal surface area to provide the highest level of protection from surface water intrusion.

Features |

Watertight Service - Buna-N gaskets on the manhole and spill bucket mounting rings prevent contamination of the sump area from surface water intrusion. The 611's raised ring and outboard bolts provide an added measure of protection even on covers that are removed frequently.

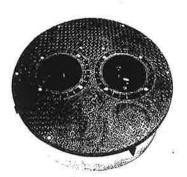

- Highway 20 Load Rating The ringged diamond plate steel manhole dowers, as well as the cast iron (RT) of Aluminum (SC) spill container dovers meet H20 Load Rating requirements
- Easy Installation Each unit is shipped fully assembled. The containment vessels are detached from the manhole cover by removing four bolts. The vessels are installed on the riser pipes, the manhole is set, and the vessels are reattached. No special lools are needed, and no intricate concrete sloping and finishing is

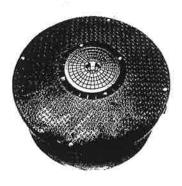

Standard Options

- Fall/Vapor Ports Configurations are available to accommodate a single fill riser, dual ports for both a fill and yapor riser, and triple and quad ports for multiple fill and vapor risers. Vapor ports can be supplied with or without containment buckets.
- Port Configurations Standard port locations match the popular riser spacings (12", 14", 16" or 24") and bung configurations on underground storage tanks. Custom port locations are easily accommodated.
- * Manhole Cover Sizes Standard Solt-down manhole cover diameters of 37" (94 cm), 42" (107 cm), and 48" (122 cm) allow ample access to the sump area. Provision for a 5"-13 lifing eyebolt is provided 9" 42" and 48" models.
- ♣ Sp⊞ Container Cover Options jita, dard spill container options Biclade the patented POMECO dam and groove Rain Tight (RT) design and the watertight Sealable Cover .(SC) "plumber's plug" design. The Rain Tight cover features a finger grip lifting facility and an integral seal. The sealable cover features a can. operated mechanism that expands the seal against the vertical Wall of the mounting ring. Both of these water shedding covers are protected by raised mounting rings. A below grade (BG) option is a pivailable which provides watertight underground containment vessels while maintaing a flush manhole cover surface.

POMECO

◆ Monitoring Ports -Bolt-down gasketed monitoring ports can be incorporated into the manhole cover to provide observation access to the sump without removing the entire cover. Standard port diameter is 5" (13 cm) with larger ports available upon request.

PCO 110 Series Round

1a. es are designed for use in a
vide range of service station driveway,
ndustrial, and commercial applicaions. The 110s are used to provide
ccess to all types of underground
quipment including vapor recovery
connections, UST monitoring equipnent and submersible pumps.

Features

- Standard and Watertight Models Available - Watertight models include Buna-N gaskets and recessed hex-head bolts to prevent water intrusion.
- ◆ Wide Range Of Sizes Sizes range from 8" to 48" (21 to 122 cm) to accommodate a wide range of applications. Custom sizes and configurations are also available.
- Easy Installation Manholes are shipped pre-assembled.
- ◆ Easy Cover Removal A convenient "T" handle is supplied with each watertight unit 24" and larger.

 cessed dropdown handle is produced on standard models and the watertight 37TX. A "T" handle and provision for a lifting ½"-13 eyebolt are provided on 42" and 48" models.
- H20 Load Rating The rugged steel covers meet H20 load rating requirements.

IMPORTANT: OPW products should be used in compliance with applicable federal, state and local laws and regulations. Product selection should be based on physical specifications and limitations and compatibility with the environment and materials to be handled. OPW MAKES NO WARRANTY OF FITNESS FOR A PARTICULAR USE. All illustrations and specifications in this literature are based on the latest product information available at the time of publication. OPW reserves the right to make changes at any time in prices, materials, specifications and models and to discontinue models without notice or obligation.

New! ILS-350 Compliance Console

- An economical solution to regulatory compliance for USTs.
- ► Quick, local availability in any configuration from your nearest authorized Veeder-Root distributor.
- Simple programming and operation.
- ► Reliable-low maintenance.
- Modular design for future sensor enhancement and new technologies.
- ► Two-line, 24 character-per-line liquid crystal display and six-button keyboard team for easy access to setup and operation data.
- ► Field serviceable.

The ILS-350 UST Monitoring System features a modular design that allows each system to be configured with interstitial, piping sump, vapor, and groundwater monitoring capabilities to meet your compliance needs.

Monitoring functions are provided by interstitial sensors located between the walls of double-wall tanks, sensors in the sumps of double-wall piping systems, and sensors in vapor and groundwater monitoring wells.

Five built-in output relays are available to control external alarm devices when an alarm condition is sensed by any of the sensors installed in the ILS-350 system. Relays can also shut down the submersible pumps if a leak is detected or power to the monitoring system is lost.

An RS-232 Interface Module may be installed in your system allowing you to transmit alarm and sensor status information to a computer, point-of-sale terminal or printing device through a modem over telephone lines.

Select the combination of features that meets your compliance needs.

System Capabilities

- Monitors up to Sixteen Sensors.
- ▶ Up to Four Snap-In, Two- and Three-Wire Sensor Interface Modules Accommodating Up to Four Sensors
 - Two-Wire Modules: Interstitial and Sump Sensors.
 - Three-Wire Modules: Vapor and Groundwater Sensors.
- ▶ Optional RS-232 Communications Interface.
- ► On-Site and Remote Self-Diagnostics.

Relay Capabilities

- Five built-in output relays:
 - Any relay can shut down the submersible if power to the monitor is lost.
 - Any relay can control submersibles, and shut them down when leak is detected.
 - The External Timed Relay allows you to preset its external activation to 10 sec., 60 sec., repeat, or normal operation.
- ► Each sensor can activate up to two relays.

Interstitial Leak Sensing Capabilities

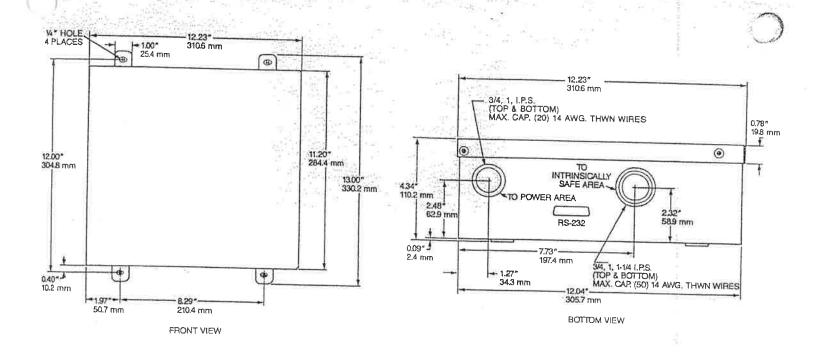

- Automatic, Continuous Leak Sensing:
 - Tank Annulus Piping Sump
- Audible Alarm and Display Messages Show Sensor Location.
- ▶ "Sensor Out" Display Messages Identify Failed or Disconnected Sensor.

Vapor and Groundwater Sensing Capabilities

- Automatic, Continuous Vapor and Groundwater Sensing:
 - Vapor Wells
 Groundwater Wells
- ► Audible Alarm and Display Messages Show Sensor Location.
- "Sensor Out" Display Messages Identify Failed or Disconnected Sensor.

Alarm Capabilities

- Alarm Indicators Identify:
 - Vapor
- Groundwater
- Leak Losses
- ► Alarm Relays can Trigger Alarm/Security Devices.
- ► Programmable Alarm Configuration Ties Sensors to Two Output Relays.

Interstitial Sensor for use in Double-Wall Fiberglass Tanks

- Positive alarm indication of any liquid in double-wall fiberglass tanks.
- System indicators pinpoint alarm location.
- ► Simple to install.
- ► Two-wire connection to system monitor.
- Fast action helps prevent serious safety and environmental problems.

The Veeder-Root Interstitial Sensor for use in Fiber-glass Tanks detects the presence of liquid in the interstitial space of a double-wall fiberglass tank. Liquid in the annulus could mean a dangerous leak. When liquid is detected, the sensor sends an alarm signal to a TLS-350R, TLS-350, ILS-350, TLS-300i, TLS-300C, TLS-250i or ILS-250 monitor. The monitor's visual and audible built-in alarm indicators immediately tell you where the problem is, so you can quickly take action to help prevent serious safety and environmental problems.

The TLS-350R, TLS-350, ILS-350, TLS-300i, TLS-300i, TLS-300i and ILS-250 systems feature internal alarm rejay: that can also trigger on-site alarms for even greate; warning capability. When connected to a TLS-350R, TLS-350 or TLS-300i system, the sensor alarm triggers a report showing the time and the location of the alarm condition. This information is stored in the TLS-350R, TLS-350, or TLS-250i's alarm history and can be retrieved through the more integral printer or remotely through its data communications interface.

The Veeder-Root Interstitial Sensor for fiberglass tanks can be used in the annulus of fiberglass tank with a sensor riser pipe of 4". Only two wires are required to connect the sensor to a TLS or ILS system.

Detection Capabilities

The presence of any liquid in the tank's interstitial space triggers a Fuel Alarm.

Operating Capabilities

Operating Temperature Range: -20°C to +70°C (Hydrocarbons); 0°C to 70°C (non-freezing Water).

- ▶ ∴ age Temperature Range: -40°C to +75°C
- ▶ Dimensions: 2.13" long, 1.27" wide, 0.58" high.

NOTE: An Interstitial Sensor Interface Module is required for use of the Interstitial Fiberglass Tank Sensor with the TLS-350 Console

** NOTE: A Two-Wire Module is required for use of the Interstitial Fiberglass Tank Sensor with the ILS-350 Console.

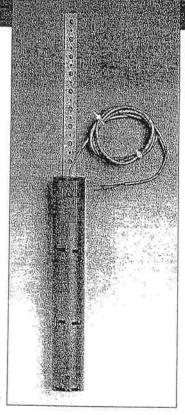

125 Powder Forest Drive, Post Office Box 2003, Simsbury, CT 06070-2003, TEL (860) 651-2700, FAX (860) 651-2700, FAX (860) 651-2753

Piping Sump Sensor

Positive Alarm Indication of any Liquid in Underground Fuel Storage Tank Piping Sumps

- ► For TLS-350R, TLS-350, ILS-350, TLS-300i, TLS-250i and ILS-250 UST Monitoring Systems.
- ► System Indicators Pinpoint Alarm Location.
- ► Simple to Install.
- ► Two-wire Connection to System Monitor.
- ► Complete with All Mounting Hardware.

Fast Action Helps Prevent Serious Safety and Environmental Problems

The Veeder-Root Piping Sump Sensor detects the presence of liquid in a UST piping sump. Liquid presence could mean a dangerous line leak.

When the sensor detects liquid, it sends an alarm signal to the TLS console monitor, where both visual and audible built-in alarm indicators immediately. Jentify the location of the problem. You can then wickly take action to help prevent serious safety and environmental problems.

Wif

For ever: greater warning capability, the TLS-350R, TLS-350. i. S-350, TLS-300i, TLS-250i and ILS-250 feature internal alarm relays that can also trigger on site alarms. With the TLS-350R, TLS-350 and TLS-300i, alarm signals from the sump sensor trigger a leak report showing the time and location of the alarm condition. The information is stored in the system's Alarm History and can be printed on the information's integral printer, or retrieval remotely through its data communications interface.

Simple to Install

The Veeder-Root Piping Sump Sensor can be used in the piping sumps of either steel or fiberglass ranks. Each sensor comes with complete hardware for recounting on an available junction box or directly to the side of a fiberglass sump. Only two wires are required to connect the sensor to a TLS or ILS systems.

July 30, 1997

Dan Williamson Moreno Valley Community Hospital 27300 Iris Avenue Moreno Valley, CA 92555

RE: Underground Storage Tank (UST) Inspection

Dear Mr. Williamson:

A UST inspection was conducted at your site on July 28, 1997. During that inspection it was found that the monitoring panel had been replaced and a modification permit was not obtained form this Department. This is a violation of Riverside County Ordinance 617.3, Section 8.

Your are required to complete an application for modification and submit it with the application fee of \$309 to this office NLT September 1, 1997. If the application and fee is not received by that date further regulatory action may be taken.

If you have any questions or problems, please contact this department. Thank you for your assistance in this matter.

Sincerely.

Desmond M. Reid

Hazardous Materials Management Specialist

RE: Underground Storage Tank at 27300 Iris Avenue, Moreno Valley

Dear Sirs:

According to our records, the operating permits for the underground storage tanks at your facility are due for renewal. Review of your file revealed that submittal of the following items are required prior to the issuance of operating permits:

- 1. Annual certification of continuous monitoring system.
- 2. Statement of financial responsibility.

Submittal of the indicated items will facilitate the permitting process. Failure to provide the required documents by **Dec. 15, 1994** may result in an unannounced routine site inspection and/or the withholding of the operating permits. Be advised that failure to obtain the required operating permits is a citable offense. If you have any questions regarding this notice, you can contact me at (909) 358-5055.

Sincerely,

Desmond Reid

Hazardous Materials Specialist

UNDERGROUND STORAGE TANK PROGRAM BILLING NOTICE FOR

In accordance with Riverside County Ordinance #617 and the applicable sections of the California Health and Safety Code, you are required, as owner/operator of an underground storage tank containing a hazardous substance, to obtain a separate operating permit for each underground storage tank under your control.

The operating permit fee is due annually. As presently set by Riverside County Ordinance #617, operating fees are \$180.00 for the first inderground storage tank at a facility and \$90.00 for each additional inderground storage tank at the same facility. A new permit certificate is issued yearly after receipt of the annual operating fee, a current tank integrity test result for each underground storage tank, as applicable.

The total permit fee due for calendar year 1992 is as follows:

Number of Tanks at Facility
1992 Operating Permit Fee \$

Total Fee Due \$ 180.

To avoid a 50% penalty fee, return the TOTAL FEE DUE ALONG WITH THIS BILLING NOTICE on or before JANUARY 31, 1992. Please make check payable to COUNTY OF RIVERSIDE. Please include your operating fees along with your applicable State Surcharge fees.

If the tank ownership has changed, please provide us with the new owners name and mailing address on the back of this notice. If it is your intention to close your tank(s), a closure permit must be obtained in lieu of paying the operating permit fee.

If you have any questions regarding this billing, please contact the Hazardous Materials Branch, Underground Storage Tank Program at our Riverside office at (714) 358-5055 or at our Indio office at (619) 342-8976.

OWENS-CORNING FIBERGLAS DOUBLE-WALL TANK & ACCESSORIES

ypical* System Overview

Double-Wall Tank

Owens-Corning Model DWT-2P tank with "built-in" Hydrostatic Tank Monitor.

Standard Features

A FIBERGLAS! RESERVOIR

The major monitoring component is the Fiberglas reservoir, which is surface mounted to the tank top.

B FLOW CHANNELS

Four engineered flow channels—running the length of the tank—assure a free flow of liquid between the entire surfaces of both shell walls and endcaps.

C CLUSTERED PRIMARY TANK FITTINGS.

All primary fittings are clustered (three in a manway cover and three tank mounted fittings on the opposite end of the tank) to facilitate secondary containment of pumps, piping and unused fittings.

U ADDITIONAL MONITORING FITTINGS

Additional fittings are provided for alternate monitoring sensors.

L BUMPER PADS

The tank is shipped with resilient bumper pads attached to both ends of the tank. This protective packaging protects the outer wall from shipping damage and accidental handling abuse at the jobsite. The tank may be buried without removing the pads.

TANK BOTTOM DEFLECTOR GAUGE PLATES

Deflector gauge plates are included under all primary tank fittings to prevent tank damage from dipstick abuse.

Optional Accessories from Owens-Cornina

RESERVOIR SENSOR

This sensor monitors the liquid level in the Fiberglas reservoir. Under normal conditions, the high and low liquid level switches are normally closed.

Z BRINE ANTIFREEZE

Hydrostatic Monitoring fluid for cold climate areas.

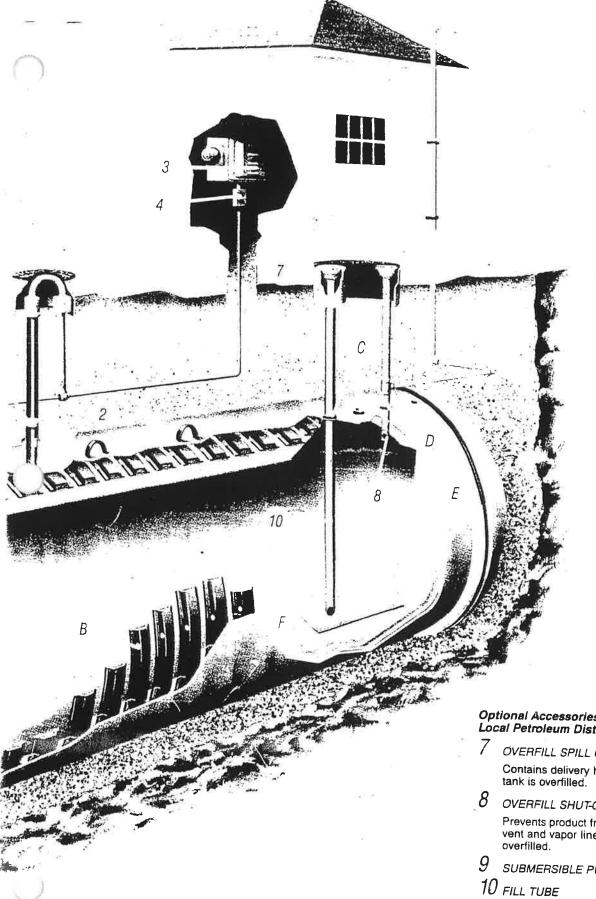

3 ELECTRONIC CONTROL PANEL

A U.L. listed control panel is available continuous electronic monitoring of a tank reservoir sensor and the piping sump sensor.

4 SWITCH PANEL

A switch panel expands the monitoring capability of each monitoring circuit in the electronic control panel to two sensors.

Typical double-wall tank installation with double-wall piping on the product lines, tank overfill prevention, overspill containment, and independent tank and pipe monitoring.

NOTE: Always consult local codes for specific piping detail. Other restrictions may apply to venting, filling and vapor recovery.

Optional Accessories Supplied by Your Local Petroleum Distributor

OVERFILL SPILL CONTAINER Contains delivery hose contents if the tank is overfilled.

OVERFILL SHUT-OFF SWITCH Prevents product from backing up into vent and vapor lines if the tank is overfilled.

SUBMERSIBLE PUMP

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing

Date of Government Version: 09/27/2006 Date Data Arrived at EDR: 11/01/2006 Date Made Active in Reports: 11/22/2006

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300,425,(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/27/2006 Date Data Arrived at EDR: 11/01/2006 Date Made Active in Reports: 11/22/2006

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 03/19/2007 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month, Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions, The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)): State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers, Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Most Recent Revision:

1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

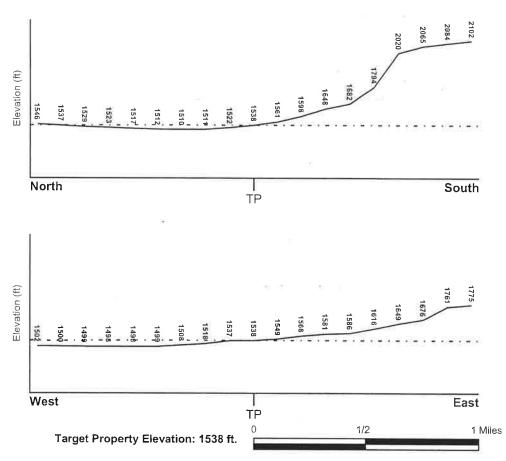

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:

1.25 miles

Status:

Not found

AQUIFLOW®

Search Radius: 1,000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported FROM TP

GENERAL DIRECTION **GROUNDWATER FLOW**

^{*®1996} Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:

GREENFIELD

Soil Surface Texture:

sandy loam

Hydrologic Group:

Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures

Soil Drainage Class:

Well drained. Soils have intermediate water holding capacity. Depth to

water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min:

> 60 inches

Depth to Bedrock Max:

> 60 inches

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	20 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 6.10
2	20 inches	40 inches	fine sandy loam	Granular materials (35 pct, or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 6.10
3	40 inches	60 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.80 Min: 6.10
4	60 inches	72 inches	stratified	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand	Max: 6,00 Min: 2.00	Max: 8.40 Min: 6₅60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: coarse sandy loam

gravelly - loamy fine sand

fine sandy loam gravelly - loamy sand

loamy sand

cobbly - coarse sandy loam

Surficial Soil Types:

coarse sandy loam

gravelly - loamy fine sand fine sandy loam

gravelly - loamy sand

loamy sand

cobbly - coarse sandy loam

Shallow Soil Types:

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5 Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U_{*}S_{*}Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection,

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA), Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOWR Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape, Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

CHRISTY L. CONFAR, RG

Associate Geologist

M.S.

Geology, 2000

Portland State University

B.S.

Geology with Anthropology Minor, 1996

University of Arizona

Expertise: Project Management, Environmental Due Diligence, Environmental Site Assessments, Subsurface Investigations, Regulatory Compliance/Permitting, CEQA Studies, Environmental Forensics, Potentially Responsible Party Identification,

Litigation Support, Technical Document Review

Ms. Confar has over six years of environmental consulting experience throughout the U.S. Southwest, Pacific Northwest, and Tennessee. Ms. Confar's experience has focused on environmental consulting services for commercial and industrial clients. Service areas include property transaction due diligence, environmental site assessments, hazardous materials assessments, subsurface investigations, remedial investigations, storm water management/compliance assistance, potentially responsible party (PRP) studies, environmental forensics, regulatory compliance, litigation support, and environmental impact studies.

In addition to her environmental consulting experience, Ms. Confar also has over six years of experience in geological research and instruction. She has extensive experience in field, laboratory, and instruction-related settings. She has published several scientific papers, prepared and presented numerous lectures to both student and professional audiences, and has lead several field trips.

Project Experience

Remedial Investigations

- RI/FS, Former Insecticide and Herbicide Manufacturing Facility, Portland, Oregon. Project Geologist. Ms. Confar has served as a project geologist for remedial investigation of a large facility impacted by historical insecticide and herbicide manufacturing processes, and located within a large multi-property superfund site adjacent to an impacted river. Chemicals of interest include pesticides, herbicides, dioxins/furans, phenols, volatile organic compounds, and metals. The investigation includes groundwater characterization, surface water and sediment characterization, ecological and human health risk assessment, and soils and NAPL investigations.
- Electric Heater Manufacturer, Vancouver Washington. Project Geologist. Ms. Confar has served as a project geologist on a large chlorinated solvent site, located in Vancouver, Washington. The remedial investigation/feasibility study (RI/FS) and the design/implementation of multiple Interim Remedial Action Measures (IRAMs) were conducted through an Agreed Order with the Washington Department of Ecology, with additional oversight by the Washington Department of Health. The chlorinated solvent plume consisted primarily of trichloroethene (TCE), tetrachloroethene (PCE) and trichloroethane (TCA). The size of the plume was approximately one square mile, and contamination extends over 250 feet beneath the water table. HVOC concentrations exceed 100,000 ppb in some places (cleanup level is 5 ppb); and dense non-aqueous phase liquid (DNAPL) is suspected.

Ms. Confar researched an area within a 3-mile radius of the client's property to identify other Potentially Responsible Parties (PRPs) for a regional HVOC groundwater plume. Sources utilized include state, federal, and local regulatory agencies, historical archives, aerial photographs, field reconnaissance, interviews, and historical records reviews. This research has contributed key litigation support throughout the project. Several other PRPs have been identified.

Ms. Confar also acted as project reviewer, which involved the scientific and technical review of a variety of reports, letters, work plans, and drawings produced during the projects. Ms. Confar reviewed project documents for completeness and technical accuracy prior to their submittal to the client, regulatory agencies, peer reviewers, and insurance carriers.

• Site Investigation/Site Characterization, Confidential Commercial Facility, Los Angeles, California. Project Geologist. A gasoline underground storage tank (UST) release was investigated at a facility in Los Angeles, California. Because of the complex geologic setting, more than one hundred borings, vapor wells, and groundwater wells were required to characterize the nature and extent of the release. Contaminant distribution and movement were assessed using capillary pressure analyses, multi-phase fluid theory, and a variety of aquifer test methods. It was determined that petroleum hydrocarbons were migrating via thin sandstone laminae and fractures of various orientations. The investigation was complicated by the need to assess immediate threats to buildings and their occupants from the infiltration of gasoline vapors.

Ms. Confar performed drilling oversight for borings and groundwater wells, assisted in characterization of the nature and extent of the release through reviewing historical and environmental records for the site facility and adjacent properties, and assisted in aquifer test methods to evaluate contaminant distribution and movement.

Environmental Site Assessments

- Phase I ESAs and Soil Sampling, Confidential Construction Yards, Washington and California. Project Manager. Ms. Confar managed two Phase I ESAs conducted under the new federal EPA All Appropriate Inquiry (AAI) Rule and new ASTM E1527-05 Standard. These Phase I ESAs were conducted on behalf of a buyer considering the purchase of a single business entity that owned and operated the construction yards in Washington and California. Management of these projects included coordination of AMEC staff located in four states, development of templates to ensure project deliverables for the sites were consistent, and coordination with the buyer's legal counsel under attorney-client privilege.
- Phase I and II ESA and Soil Remediation, Former Wood Products Manufacturing Facility, Grand Ronde, Oregon. Project Manager. Ms. Confar performed a Phase I ESA on an in operational wood products manufacturing facility. Based on the results of the Phase I ESA, Ms. Confar identified several areas of petroleum-contaminated soils on the site, and suspect asbestos-containing materials in the site buildings. MS. Confar recommended a Phase II ESA and Limited Asbestos Survey to evaluate the potential magnitude of environmental liability associated with identified recognized environmental conditions at the facility.

The Phase II ESA consisted of a subsurface investigation that included advancing temporary borings, excavation of more than 15 test pits, and an asbestos survey. Air rotary and hollow-stem auger drilling techniques were used to obtain groundwater samples from beneath the site. Based on the results of the Phase II ESA, Ms. Confar prepared a cost estimate to remediate approximately 900 tons of petroleum-contaminated soil at the site.

The soil removal action involved the excavation and removal of approximately 400 tons of petroleum-contaminated soil. The total tonnage of soil removed was decreased based on the results of pre-excavation assessment sampling at one location where the amount of the petroleum-contaminated soil had been estimated at 500 cubic yards.

All phases of the environmental assessment and remedial action were conducted as part of a property transaction, and, therefore, there was no regulatory oversight. In addition, the remedial action was conducted under contract with the property owner and the potential buyer, which was named as a third party beneficiary to the work. As such, the project involved considerable interfacing with the both the property owner and potential buyer to facilitate the property transaction process.

- Former Phosphorous Mine, Maury County, Tennessee. Project Geologist. Ms. Confar has served as a project geologist on a former phosphorous mine, aluminum recycling, and pesticide and herbicide manufacturing facility. The project involved collection of samples of various media including surface soil, surface water, groundwater, and sediment, and completion of an ecological reconnaissance and geophysical survey. Ms. Confar was responsible for compilation of the site historical data, field observations results, analytical results, preliminary screening results, ecological and geophysical survey results, and data gaps into a technical memorandum for the client. The results of the environmental assessment activities are to be used by the client to evaluate conditions at the site that could result in regulatory action.
- Phase I and II ESA, Undeveloped Property, Clackamas, Oregon. Project Manager. Ms. Confar performed a Phase I and II ESA on an undeveloped property located in a light industrial area of the City of Clackamas. Based on the review of historical and environmental records for the Site, and the Site reconnaissance, AMEC identified the potential for uncontrolled fill material on the slope of the Site and vicinity groundwater contamination from adjacent industrial facilities. AMEC recommended a Phase II ESA to evaluate the potential for uncontrolled fill on the Site, and the potential for chlorinated solvent migration onto the Site from an off-site source.

Six test pits were excavated on the Site slope to evaluate the presence of fill material, and two direct-push borings were placed at the base of the Site slope in an inferred downgradient location. Additionally, groundwater grab samples were collected from existing geotechnical piezometers located at the top of the Site slope. Based on the results of the Phase II ESA, AMEC identified the presence of uncontrolled fill material on the site. Value was added to the client by providing a rough delineation of the location and amount of uncontrolled fill material that could potentially affect planned future development activities.

- Phase I and II ESA, Two service stations, Vancouver, Washington. Project Manager. Ms. Confar performed a Phase I and II ESA on two currently operating service stations located at an intersection planned for road widening. Based on the results of the Phase I ESA, one of the service stations had a history of being a service station and/or a maintenance facility since at least the mid 1960's. Because groundbreaking activities were scheduled in the future, AMEC recommended a Phase II ESA to evaluate the soil and groundwater quality in the site vicinity.
- 1.5-Mile combined length of highway, local streets and land, La Grande, Oregon. Project Manager. Ms. Confar performed a corridor study that consisted of a Hazardous Materials Corridor Assessment conducted according to AASHTO criteria of an approximately 0.5-mile length of Wallowa Lake Highway (Island Avenue), and an approximately one mile combined length of adjacent local streets and land. The study involved the assessment of 38 parcels that included three active service stations, four active vehicle/truck maintenance shops, a compressed gas facility, a car wash, a railroad line, and other residential, commercial, and agricultural properties. The assessment included a two-day site reconnaissance, review of historical aerial photographs, city directories, and environmental records. The results of the assessment indicated the potential for adverse environmental impact on several areas of the project corridor including area-wide groundwater contamination along Island Avenue, and a petroleum groundwater plume with potential soil contamination in an area of planned new road construction. In addition, the assessment revealed the potential presence of an additional former service station; the remains of a concrete foundation and piping were observed on one parcel. As a result of the findings, a limited geophysical survey was recommended for six locations within the project corridor, as well as a subsurface investigation.

Phase I ESA, Former Hardboard Plant, Lebanon, Oregon. Project Manager. Ms. Confar
performed a Phase I ESA and a Limited Asbestos Screen on an approximately 50-acre
inoperational hardboard plant, which included more than 25 buildings. The facility had operated for
more than 60 years as a hardboard plant with a powerhouse comprised of two 3-story hog fuelfired boilers, and during World War II, the site operated a battery recycling plant.

Storm Water

- Underground Injection Control Permitting Assistance, Confidential Commercial Site, Northeast Portland. Project Manager. Ms. Confar has served as a project manager on a multiyear storm water management project on a 40-acre commercial mall site. At this site, all storm water runoff is managed by infiltration into the subsurface via over 80 drywells. Ms. Confar's role has involved providing storm water consulting services to aid the commercial mall's property manager in obtaining rule authorization for infiltration of the storm water runoff in the Oregon Department of Environmental Quality's (DEQ's) Underground Injection Control (UIC) Program. In partial fulfillment of the UIC Program requirements, Ms. Confar developed a storm water management plan, which included assessment of the site's original storm water best management practices (BMPs), and recommendation of additional BMPs. In addition, Ms. Confar also managed the registration of the site's drywells in the UIC Program, developed a storm water monitoring program, managed storm water monitoring events, coordinated with the site's various other contractors/consultants/vendors, and interfaced with the regulatory agency. regulation of UICs in Oregon is considered a priority by both EPA and DEQ, and that UIC regulation is in a current state of immense regulatory change in Oregon, management of this project has afforded Ms. Confar a unique opportunity to consult the site's property manager on navigation of the changing regulatory framework.
- Construction Storm Water Management Permitting Assistance, Eagle Rock Aggregates, Inc., Redmond, California. Project Geologist. Ms. Confar was responsible for the development of a Storm Water Pollution Prevention Plan (SWPPP) for the construction phase of an aggregate facility located along the San Francisco Bay. The facility was planned for construction on an EPA designated superfund site with documented pesticide-contaminated soil, groundwater, and surface water.
- Storm Water Management Permitting Assistance, Houghton International, Inc., Longview, Washington. Project Manager. Ms. Confar served as the project manager on this storm water management project on an inoperational oil products manufacturing facility. Because Houghton sought to maintain its general industrial storm water permit with the Washington Department of Ecology (Ecology) during a multi-year property transaction, Ms. Confar interfaced with Ecology to develop a reduced storm water monitoring program that enabled Houghton to maintain its permit during the transaction process.

Corridor Studies

• Multiple Sites. Project Manager. Ms. Confar has performed corridor studies for local and federal government agencies for the purposes of road improvements and new road construction. The studies involve a site reconnaissance, review of property ownership information, historical records review including aerial photographs, city directories, tax records, building permit/planning records, review of environmental records, and compilation of the information into a report containing conclusions and recommendations. Because the nature of corridor studies can involve multiple properties with multiple environmental issues, accurate and detailed management of information during the project is critical. In addition, corridor studies can also involve property takings by the governmental agency, which requires that the project be completed under sensitive conditions and tight time frames.

Hazardous Materials Services

- Ms. Confar has written several RCRA plans as required by federal law (40 CFR Part 264) for a former pesticide manufacturing facility located in a large superfund site, which stores hazardous waste. These plans consisted of an inspection plan, preparedness and prevention plan, recordkeeping and reporting procedures, security plan, and use and management of containers plan. In writing the plans, Ms. Confar was responsible for identifying potential changes to the ongoing facility hazardous waste procedures in order to keep the facility in compliance with federal law.
- Ms. Confar has performed hazardous material surveys, which have involved the identification of
 asbestos-containing building materials, lead-containing paint, and polychlorinated biphenyls
 (PCBs). These surveys have been performed for the purpose of material identification for in-place
 management, and prior to property acquisitions, building renovations and/or building demolition.
 Ms. Confar has managed surveys for numerous types of properties including residential structures,
 hotel and apartment buildings, office buildings, grocery stores, fueling stations, industrial facilities,
 and publicly-owned properties.
- Ms. Confar has performed a hazardous materials assessment according to AASHTO criteria for a combined approximately 1.5 mile length of highway, local streets, and land. This kind of assessment involves the identification and location of hazardous materials associated with structures prior to building demolition.

Litigation Support

Ms. Confar has provided technical consultation in litigation matters. Litigation support activities included insurance cost recovery support, PRP research and identification, allocation of defense and indemnity costs, peer reviews of work performed by others, obtaining and evaluating historical documents, assisting in discrete site investigations, assisting in preparation of questions to be posed to the opposing side's fact and expert witnesses, and assisting in the formulation of effective technical strategies. Litigation support also entails a host of behind-the-scenes activities, including the compilation of forensic databases, documentation of field/laboratory studies, and development of litigation-quality graphics.

Technical Review

Ms. Confar acts as a technical reviewer for a variety of project deliverables. In this role, Ms. Confar conducts both a content-based and format-based review of all parts of each deliverable. Ms. Confar's review is intended to ensure that AMEC deliverables are error-free, and are presented in a logical format. Specific tasks that are involved include review for grammar/syntax correctness, document completeness, and consistency in format and content.

Field, Laboratory, and Instructor of Geology

• Ms. Confar has over six years of combined experience as laboratory assistant, research assistant, and scientific instructor. As a scientific course instructor, she has extensive geologic field and laboratory experience including instruction of scientific courses that consisted of preparing and presenting lecture presentations, preparing and leading laboratory courses, and preparing and leading out-of-town field trips. As a laboratory and research assistant, she has extensive experience in conducting geologic mapping, structural mapping and analyses, soil and rock sample identification, collection, and preparation for various geochemical analyses, and surveying using global positioning systems

- Ms. Confar has conducted remote field geologic mapping of an approximately 70-square mile parcel in southern Oregon. Field activities included identification and characterization of surficial soils and bedrock, location and delineation of faults, soil and bedrock sampling, conducting magnetic surveys, surveying using global positioning systems, and management of field staff. Laboratory activities included selection and preparation of soil samples for grain size sieve analysis, selection and preparation of rock samples for x-ray fluorescence analyses, selection, preparation, and spectrum analysis of powdered rock samples using Instrumental Neutron Activation Analysis, and management of laboratory staff.
- Additional field mapping activities included construction of a 7.5-minute scale geologic map with accompanying cross sections, interpretation of geologic history, preparation of a published geological report, and coordination with state and federal government officials that funded the project.

Professional Memberships

Oregon Association of Clean Water Agencies (ACWA), 2004-2006 Geological Society of America, 1994-2000 Association of Engineering Geologists, 1997-2000

Professional Certifications and Registrations

Registered Geologist: Oregon #G1978, expires November 30, 2007 40 Hour OSHA Health & Safety Certification; #42822, June 2002 8-hr OSHA Health & Safety Certification Update, February 2007 8-hr OSHA Supervisor Training Certification, 2003 CPR Certification First Aid Certification
AHERA Certified Asbestos Inspector, 2002-2004

Professional Training and Continuing Education Courses

Storm Water Treatment 2-Day seminar (2005)
Federal Environmental Compliance Audit course (2005)
Oregon DEQ Storm Water Management and Underground Injection Control workshop (2005)
Environmental Law Education Center Storm Water conference (2005)
Oregon DEQ Remedial Investigation workshop (2004)
Lorman Lecture on Land Use Impacts on Real Estate Transactions in Oregon (2003)
Environmental Data Resources Due Diligence at Dawn seminars (2003-2005)
California Environmental Quality Act workshop (2006)

STEVEN C. BRADY, C.E.G., C.HG., R.E.A.

Principal Hydrogeologist/Project Manager

M.S.

Geology, 1988, Arizona State University

B.A.

Architecture, 1979, University of North Carolina

Mr. Brady is a registered geologist, certified engineering geologist, and registered hydrogeologist, and has 23 years of professional experience in the engineering and construction fields, as well as 14 years in environmental consulting. He has been involved in all aspects of regional and site-specific environmental, geohydrologic, and geotechnical investigations throughout the southwestern United States, as well as managed and participated on CERCLA/SARA, RCRA, NEPA, and CEQA regulated projects. His experience includes remedial investigations/feasibility studies; risk assessments; soil and groundwater assessments; contaminant fate and transport determinations; and contaminant delineation and treatment or removal. Other specialized activities include watershed and wetlands investigations; fault, earthquake, and landslide studies; siting investigations; forensic chemical investigations; and subsurface modeling and investigations using various investigative techniques. Mr. Brady also has an extensive history of managing construction-related projects.

Mr. Brady's background includes management and performance of major soil and groundwater contamination investigations and remedial activities, projects involving water rights issues, development of policies and procedures regarding geologic and geohydrologic matters; and geohydrologic input to EIR/EIS documents. Additional responsibilities involve maintaining a current understanding of changing regulations and protocols of the differing regulatory agencies regarding soil and groundwater contamination, management and training of staff, and QA/QC and peer review of reports and other documents. Mr. Brady has participated as an expert for the California Board of Geology for determination of pass point criteria for Engineering Geologist and Hydrogeologist Certifications.

Project Experience

- Evaluated a coastal property in Ventura County consisting of a power generating facility tank farm, hazardous materials storage area, and agricultural areas to be acquired and restored to wetland conditions. The project included research, soil, surface water, and groundwater sampling, assistance in property acquisition negotiations, and providing engineering geologic, hydrogeologic, and environmental opinions and recommendations aimed at facilitating the property acquisition while limiting liability to the State of California. Participation on the project includes oversight during tank farm and hazardous material storage area decommissioning and property restoration.
- Currently participating as an active member of the Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees. Providing engineering geologic and hydrogeologic opinions and recommendations to the committees aimed at consensus for management and obtainment of numerous conflicting goals of the various stakeholders. Selected as a member of the Calleguas Creek wetlands restoration team for a contract with the California Coastal Conservancy for identification and recommendations for wetlands restoration candidates in the watershed.
- Served as a member of the project team evaluating the hydrogeologic and hydrologic conditions
 within portions of the Santa Clara River watershed. An extensive water budget analysis was
 performed on individual watersheds and contributory streams to the Eastern Groundwater Basin,
 as well as for the entire Groundwater Basin, of the Santa Clara River, in order to estimate volumes
 of available water at any portion of the Basin.

- Served as Project Manager for fast-track compliance audits and historical evaluations of seven municipal airports in Southern California, Washington, and Pennsylvania. The project involved agency file and database research, historical document research, and site facility audits to determine compliance status with appropriate regulations, and generation of summary reports aimed at limiting future liability for the new operators at the airports.
- Project Manager for agricultural packing plant Storm Water Pollution Prevention Plan development and compliance project. The project involved site facility audits to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.
- Developed remedial closure reports for a multiple-owner tank farm in the City of South Gate. To facilitate development of the property, the tank farm was split into 4 separate parcels. Remediation of the soils was performed, with impacted soils exceeding cleanup levels excavated and transported off-site, impacted soils within cleanup levels inhumed into a constructed soil repository, and clean soils reused during regrading activities. The project was estimated by prior consultants to cost over \$9 million to complete; however, the project was finished on an expedited basis and received RWQCB closure for approximately \$1 million, a considerable savings to the client. Development of the property also was performed on a parcel-by-parcel basis, allowing the City's contractor to begin development in a timely manner.
- Project Manager for industrial client Storm Water Pollution Prevention Plan development and compliance project. The project involved a site facility audit to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.
- Served as Project Manager for a compliance status summary of the underground storage tanks at 250 client-owned golf courses throughout the UK and US. The project involved review of tank data from the various courses and management/oversight of the development of a database that contained pertinent details such as quantity of USTs and aboveground storage tanks, installation dates, and other tank/tank appurtenance information. The database allowed for searches and sorting to determine compliance with the US-EPA 12/22/98 UST compliance deadline.
- Served as Project Manager in support of property transfer of 3 metal stamping and forming facilities. Two of the sites were listed as potential contributors to the contamination in the San Gabriel Valley groundwater, with the third listed by the U.S. EPA as within the top 16 contributors to the groundwater contamination in the Baldwin Park Operable Unit (OU). Research was performed on the individual sites and their contribution to the San Gabriel Groundwater Basin contamination; on the nature and extent of contamination in the San Gabriel Valley Groundwater Basin; on the locations and calculated contributions to the contamination in the Baldwin Park OU from other known PRPs; and on the water delivery and remediation plans for the different San Gabriel Valley OUs, and in particular, in the Baldwin Park OU. Opinions were generated regarding potential future liability for ownership of each facility, and an evaluation of the sources of contamination found in the Baldwin Park OU was developed. Determinations of legal implications and calculations of environmental liability were performed, and a range of anticipated costs associated with ownership of the properties were presented. Results were used in negotiations for the properties. Facility audits were also performed at each site, with recommendations provided for equipment and process upgrades, which were aimed at limiting future releases and overall liability.
- Conducted an analysis of contamination released from underground storage tanks, calculated cleanup levels based on risk to groundwater, and developed Underground Storage Tank summary and closure request reports for a mining facility.

- Performed remedial oversight at a former military/aerospace manufacturer in Santa Ana, California. Extensive quantities of chlorinated solvents, metals, and fuels were released into subsurface soils and groundwater by a past military/aerospace tenant. Numerous remedial actions have been performed at the site. A summary report was developed detailing the nature and levels of contamination in the soil and groundwater aquifers, a summary of the prior assessments and remedial activities performed at the site, an opinion regarding the extent of contamination in the subsurface and different water-bearing zones, and an opinion regarding the adequacy of the former tenants proposed assessment and remedial activities. Assistance with negotiations with the tenant and the RWQCB regarding site remediation was provided.
- Served as Project Manager for a fast track investigation on a Brownfield investment property that was formerly a portion of the original McDonnell Douglas Aircraft manufacturing facility in Santa Monica. Work Plans were developed and approved by the client, property owner, and lender. Soil gas surveys and soil sampling assessments were performed to characterize the nature, levels, and potential sources of contamination at the site. The entire project was completed within 3 weeks, and recommendations were provided to the client aimed at limiting future liability. Negotiation support was provided to assist in obtaining funding.
- An investigation of the methane and leachate collection systems operational at a golf and country club, on the site of a former landfill in the Santa Monica Mountains, was performed. An extensive review of available landfill and facility construction and monitoring data was conducted, as well as research on documentation available from the RWQCB, the Department of Fish & Game, and the US Army Corps of Engineers. Site and facility audits were performed to evaluate the present condition of the methane, gas condensate, and leachate collection systems. Conclusions and opinions were provided to the client concerning the operation, maintenance, and adequacy of the collection systems. Mitigative measures were recommended to the client aimed at limiting offsite migration of methane and improving water quality downgradient from the landfill.
- Performed a subsurface soil and groundwater site assessment of a telecommunication property in Santa Barbara. Adjacent properties had released PCE and TCE into the subsurface soils and groundwater, but contamination at the site appeared disconnected from the larger plume originating offsite. A work plan and health and safety plan were developed and approved by the client and their corporate counsel. Multiple continuous-cored geoprobe borings were drilled and soil, soil vapor, and groundwater samples collected. Through analysis of the lithology, it was shown that the subsurface consisted of an ancient nearshore, lagoonal environment transected by stream channels. Two separated plumes were shown to occur at the site, with the larger plume derived from an offsite source and the smaller plume originating from onsite operations. A health based risk assessment was performed for the property to determining appropriate cleanup levels.
- Prepared permit applications, FESOP reporting forms, Storm Water Pollution Prevention Plans, Storm Water Monitoring Plans, and Notices of Intent for two oil fields in Ventura County. The plans involve documenting past releases, mitigative measures to control future releases, details of sampling methodology and timing of sampling events, and development of summary tables and forms for field personnel to use as documentation for sampling during storm events.
- Developed and implemented a workplan for investigation of a prior mining facilities siltation ponds, equipment areas, and stormwater runoff locations. Duties consisted of research, air photo analysis and map interpretation, site reconnaissance and mapping, and development of opinions regarding current condition of each siltation pond (erosion, piping, seepage, overflow potential, upstream sedimentation, foundation quality, settlement, etc.), and recommendations for mitigative measures.

- Served as Project Manager for commercial and industrial property transfers and litigation support in Los Angeles and Ventura Counties. Numerous specialized assessments have been conducted for various financial institutions. These investigations have involved drilling and sampling of soil and groundwater utilizing geoprobe, hydropunch, hollowstem auger, and other techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; and evaluation of facility usage, and Risk Assessments. Remediation of soils and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.
- Served as Project Manager for a site assessment of a Rock Crusher facility in San Bernardino.
 Adjacent to the former AT&SF intermodal facility and various auto dismantlers, and with known
 regional groundwater contamination in the site vicinity, a site assessment was required to
 determine the nature and level of contamination present at the site. Results of the investigation
 were used in negotiation for the property.
- Served as Project Manager for soil and groundwater assessment, facility audit, and oversight of remedial activities at an active dry cleaning facility. Releases of PCE from older dry cleaning equipment and drum storage locations were investigated, and the extent of both soil and groundwater contamination due to the releases was determined. Groundwater samples were also collected from perched zones and from below the groundwater table using a hydropunch sampling tool. Calculations of attenuation factors and PCE cleanup levels were performed using the LA RWQCB's Interim Guidance for VOC Impacted Sites.
- Served as Project Manager for soil and groundwater site assessment, quarterly groundwater monitoring, and oversight of remedial activities at an agricultural site. The site encompasses over 60 acres, with approximately 20 acres within the coastal zone of Santa Barbara. In addition to releases from pesticide and chemical storage areas, diesel boilers, and fuel tanks, large portions of the site consisted of undocumented landfills. An assessment of soil and groundwater was performed for the site, and the extent of both soil and groundwater contamination due to releases of fuels and chemicals was determined. Calculations of groundwater gradient and rates of contaminant flow in the subsurface were performed. Remedial action plans were developed and implemented to remove landfills from the site.
- Developed a feasibility study for remedial alternatives for a complex site in Oxnard where soil and groundwater were contaminated by releases from leaking fuel underground storage tanks. Numerous constraints occurred at the site, including high, artesian groundwater confined by clays in a silty matrix, and the needs of the client to keep the business operational during remedial activities. Differing remedial alternatives were presented and evaluated, including natural attenuation, physical confinement, air sparging combined with vapor extraction, and hydrogen peroxide enhanced bioremediation. Due to the physical and economic constraints at the site, hydrogen peroxide enhanced bioremediation was chosen as the methodology considered most viable for the site. The project involved research on proven remedial techniques, innovative remedial alternatives, and suggested methodologies that addressed site constraints.
- Served as Project Manager for a remedial investigation under the Installation Restoration Program for closure and property transfer of March Air Force Base, Hawes Site in San Bernardino County, California. The Hawes Site consists of a former auxiliary airport and radio tower, and encompasses approximately 305 acres of federally endangered species habitat. Initial duties included an endangered species survey of the Site, development of an endangered species Conservation Plan, and a geophysical survey of the Site. The Conservation Plan was reviewed and approved by the U.S. Fish and Wildlife Service. Site specific Work Plans, Sampling and Analysis Plans, and Health and Safety Plans were then developed for the Site and approved by the U.S. Army Corps of Engineers, the U.S. Air Force, the U.S. EPA, the California EPA, and the

Regional Water Quality Control Board. The planning documents detailed protection of endangered species and assessment of potential contamination and closure of fuel and waste oil USTs, removal of septic tanks and associated leach fields, removal of underground tanks, geophysical logging and closure of the onsite water supply well, removal of numerous utility vaults, demolition and removal of a storage building, removal of scrap and debris from the Site, and asbestos abatement of the bunker and bunker area.

- Served as Project Manager for an expedited remedial investigation under the Installation Restoration Program for closure of Edwards Air Force Base, Phillips Laboratory OU4, Sites 7 and 167. These sites are the beryllium storage and test firing range for the Phillips Laboratory, and together occupy approximately 48 acres. Site 7 was used to stockpile beryllium-contaminated soils after explosions destroyed buildings on the Site. Site 167 received beryllium fallout from test firings of rocket engines. Duties included development of the work, sampling and analysis, and Health and Safety Plans, which were reviewed and approved by the U.S. Army, the U.S. Air Force, and the U.S. EPA.
- Served as Deputy Project Manager for an Engineering Evaluation/Cost Analysis (EE/CA) for
 remedial actions at March Air Force Base Site 17, an abandoned pool which was backfilled with
 hazardous waste. Duties consisted of research, analysis, and generation of a report which
 includes development of scope and schedule for Removal Action Objectives adhering to statutory
 limits for removal actions; identification and analysis of Removal Action alternatives, including
 effectiveness, implementability, and cost; comparative analysis of Remedial alternatives; and
 recommendations for Removal Actions.
- Served as Project Manager for a fast-track remedial investigation supporting RCRA closure of Norton Air Force Base NPL site in San Bernardino, California. Initial tasks consisted of assessment and demolition of two hazardous material storage facility areas at the Base. Part of the DRMO, these two storage facilities received all hazardous materials generated at the Base. A Site-specific Work Plan, Chemical Data Quality Management Plan, and Health and Safety Plan were developed and approved by the U.S. Army Corps of Engineers, U.S. Air Force, and the California EPA. Field activities consisted of wipe sampling of facility surfaces prior to demolition, demolition and salvage of building materials, drilling 33 subsurface borings, and collecting concrete core, asphalt, and subsurface materials to assess conditions at the site. Demolition of the buildings was completed in 1 day and salvage operations were performed concurrent with the site assessment. A report was developed detailing activities and recommendations, and Certification of Closure was performed as a final task.
- Served as Project Manager for remedial investigations at the INS Border Patrol Stations in Campo and Calexico, California. Leaking underground fuel tanks had released significant quantities of gasoline into the subsurface and groundwater at each site. Unique, complex geohydrologic conditions occur in the subsurface, with groundwater contamination at the Campo site largely following an ancient buried river channel, but overflowing the subsurface "paleo-banks" during winter high water conditions. Groundwater contamination at the Calexico site occurred within interspersed sand lenses of a thick clayey (nearshore lacustrine) formation 10' below ground surface, and extends under a residential area. A geoprobe sampling device and onsite mobile laboratory was used to define the aerial extent of the groundwater plumes, and groundwater monitoring wells were installed for confirmation sampling and to determine groundwater gradient. Site specific Work Plans, Sampling and Analysis Plans, Health and Safety Plans, and reports detailing conclusions and recommendations were developed and approved by the U.S. Army Corps of Engineers for each major phase of the project. Negotiations with the lead regulatory agencies were performed on behalf of the INS.
- Served as Field Manager and Technical Reviewer for a soil and groundwater investigation at the Todd Pacific Shipyard at the Port of Los Angeles. The Shipyard was a 109-acre ship-building and repair facility at the Port. Responsibilities included management of the field sampling program at

potential contamination sources such as machine pit, sumps, clarifiers, and dry wells in the maintenance/manufacturing buildings; drilling of shallow borings with limited access rigs at the targeted source areas; and collection of numerous groundwater samples at locations where suspected groundwater contamination might exist. In addition, Quality Control Review of the reports developed for regulatory agency (L.A. Fire Department and RWQCB) compliance was also conducted.

- Served as Project Manager for an environmental assessment of a hazardous material Treatment, Storage, and Disposal facility in Alhambra. The project was to determine if hazardous materials present at the facility had adversely affected the subsurface at the site. Duties consisted of research; development of a site specific Work Plan and Health and Safety Plan; drilling and sampling; analysis for petroleum hydrocarbons, PCBs, volatile and semivolatile organics, and metals; and generation of a report with recommendations for the site.
- Served as Project Manager for the geohydrologic and environmental portions of an investigation to evaluate landslide potential and potential soil and groundwater contamination for a proposed force main line in the Pacific Palisades for the City of Los Angeles, Geotechnical Services Division. Numerous ancient and historic landslides occur in the Pacific Palisades, many of which have activated due to the presence of high groundwater. The study required review and compilation of prior geotechnical and environmental data; geologic field mapping and surveying; geotechnical and environmental drilling, sampling, and chemical and physical analysis of soil and groundwater; review of historical and site-specific oblique, vertical, and infrared aerial photographs; data compilation and analysis; determination of groundwater sources; and map and report preparation with evaluation of alternatives and recommendations.
- Served as In-House Project Manager for Metropolitan Transportation Authority (MTA) environmental services. Provided coordination and management of due diligence activities for the Phase I, II, and III site assessments on SPTCo, AT&SF, UPRR, and adjacent properties, as well as individual and multiple parcel acquisitions. Duties consisted of generation of RFP scope-ofwork and engineer's estimates for environmental and hydrogeologic investigations; evaluation of consultants reports and raw data; recommendations concerning liability and effects of soil and groundwater contamination on the proposed and ongoing rail line, station, and tunneling projects; recommendations for remedial actions/mitigative measures for each project; liaison with MTA Staff and legal council; and negotiations with property owners and regulatory agencies to set project cleanup criteria for contaminated sites. Summary reports were generated for presentation to the California Transportation Commission detailing activities regarding hazardous materials and their effects on the overall project. A commendation was received from the MTA for the work performed on this contract. Mr. Brady also managed site assessments on over 300 miles of MTA corridor right-of-way, as well as performed specialized assessments for individual parcels. These assessments have included evaluation of the quality of soil and groundwater from literature review and drilling, sampling, and chemical analysis. Conclusions and recommendations provided were used for property negotiations. Mr. Brady was also Response Team Manager for MTA Real Estate and METROLINK division of the MTA. His duties involved team dispatch, coordination with regulatory agencies, health and safety control, remedial activities, manifesting, and reporting.
- Served as Project Manager for an environmental investigation at the Army's Baseyard Facility in El Monte, California. This facility is the primary vehicle maintenance and equipment storage for the Corps of Engineers. The goal of the project was to determine if soil and groundwater contamination existed at the site. A Work Plan and H&S Plan were developed, drilling and sampling of multiple soil borings and monitoring wells was performed, and reports detailing activities and conclusions were prepared.
- Served as Project Manager for an environmental assessment aimed at gaining site closure for a 55-acre Nike missile battery located in the Puente Hills of Los Angeles County. The Site consisted of three areas on two separated ridge tops; the Administration Area and Launch Area (also known

as the Lower Site) were on one of the ridge tops, and the Control Area (also known as the Upper Site) was located on an adjacent ridge top. The Nike Site contained aboveground and underground storage tanks, a vehicle maintenance shop, underground missile storage and launch facilities, aboveground missile assembly, fueling, and testing facilities, surveillance facilities, barracks, and an underground network of tunnels. Duties consisted of research, negotiations with the Cal-EPA, development of Work Plans and Health and Safety Plans, geophysical and radiation surveys, drilling and sampling soil and bedrock, and sampling for asbestos containing building materials. Reports were developed detailing options and recommendations for property transfer of a complex military site.

- Served as Project Manager for an environmental assessment of the 64-acre Seven Oaks Dam Mitigation property in the Santa Ana River Flood Channel, Redlands. The project consisted of a Phase I level site assessment and soil gas survey. The project involved research, historic air photo analysis, site reconnaissance and mapping, installation of soil gas monitoring wells, soil-gas sampling for volatile organics, data compilation and analysis, and preparation of a report detailing activities and conclusions.
- Performed geohydrologic work for 5 earthfill dam evaluation projects at Camp Pendleton, California. Duties consisted of research, air photo analysis and interpretation, site reconnaissance and mapping, and development of opinions regarding current condition of each dam (erosion, piping, seepage, overflow potential, upstream sedimentation, foundation quality, settlement, etc.), and recommendations for mitigative measures.
- Served as Project Manager for a geologic, hydrologic, and contamination report for input to an EIR/EIS for the proposed Los Angeles Harbor Department's Henry Ford (Badger Ave.) Bridge replacement project at the Port of Los Angeles. Duties included review of existing geologic, hydrologic, environmental data, and historical aerial photos; data compilation; seismic analysis; identification of impacts to the environment, workers, and the project; evaluation of mitigative measures; and report preparation.
- Served as Project Manager for as-needed environmental services for the Port of Los Angeles.
 Duties included review and compilation of data from numerous prior reports into summary reports;
 and environmental drilling, sampling, and monitoring well installations at the proposed Terminal
 Island Container Transfer Facility (TICTF) to determine if contaminated soil occurred at hazardous
 levels, and the levels of volatile organic and metals contamination in the groundwater. A report
 detailing conclusions and recommendations was generated for the TICTF site. An additional study
 was performed at the Proposed Dry Bulk Handling facility to assess hydrocarbon and volatile
 organic contamination.
- Served as Project Manager for Site Assessments on the San Diego Mission Valley East and Mission Valley West commuter rail alignments and alternatives. Duties included development of Phase I alignment reports for the projects, including detailed environmental evaluation of alternatives with recommendations, and liaison with MTDB real estate and geotechnical design staff and local regulatory agencies. Each report involved research and government/regulatory database searches, historic air photo analysis, site reconnaissance, property owner interviews, generation of alignment maps indicating problematic areas, and detailed conclusions and recommendations. Additional assignments for the MTDB included peer review of other consultant's work and management of construction monitoring services for the MTDB's Cuyamaca Street Improvements project.
- Performed geologic portions of a geotechnical investigation for the proposed Foothill Transportation Corridor through in Orange County. The investigation provided geotechnical design criteria for proposed bridges, highway embankments, and appurtenant structures. Duties included

coordination of services, supervision of geologic field and trench mapping, down-hole logging of borings to 175' below ground surface, determination of groundwater depth and gradient, compilation of data and maps, and report preparation.

- Served as Project Manager for a geologic/geotechnical investigation and hazardous materials
 assessment for the California SR125 Corridor. The purpose of the study was to provide geologic,
 geotechnical, and environmental input for an EIR/EIS document consistent with CALTRANS
 requirements to the engineering team evaluating the various alignment alternatives. The project
 included an environmental assessment, geologic reconnaissance, and seismic analysis of the
 alignment and alternatives. A contingency Plan was developed for managing hazardous materials
 during road construction.
- Developed the geologic portion of an EIR investigation for the proposed Cajalco Transportation Corridor. Duties included review of existing geologic and geotechnical information; review of historical and project specific vertical stereographic photographs; geologic field reconnaissance; slope stability and seismic considerations; identification of impacts and evaluation of mitigative measures; and preparation and submittal of a report and maps presenting geologic units, existing landslides, and potential constraints. In addition, preliminary environmental data was compiled and provided to the design team for evaluation of the different corridor segments.
- Conducted characterization, delineation, and remediation of hydrocarbon and volatile organic
 contaminated soils and groundwater at Orange County's John Wayne Airport. Duties included
 development of site-specific work plans and health and safety plans; permitting, drilling and
 sampling soil borings; installation of groundwater monitoring wells; installation, maintenance, and
 monitoring of a groundwater treatment system; compilation and analysis of analytical results; and
 preparation of monthly and quarterly reports.
- Conducted siting of multiple Seismograph Station arrays to locate significant, active fault segments in Southern and Central California meeting specific lithological criteria. The seismograph arrays were designed to obtain near-field seismic effects. The project involved review of numerous geologic and geotechnical reports, evaluation of data from existing seismograph arrays, field mapping and site reconnaissance, contact with property owners to obtain lease permits, and generation of a report detailing conclusions and recommendations.

Re:

Limited Subsurface Soil Investigation

27300 Iris Avenue

Moreno Valley, California 92586

SECOR Project No:

37OT.20930.01

Mr. Becronis:

SECOR International Incorporated (SECOR) is pleased to provide Kaiser Foundation Health Plan, Inc. (Kaiser) with this letter report summarizing the results of a limited subsurface soil investigation conducted at 27300 Iris Avenue, Moreno Valley, Riverside County, California (Site) (Figure 1). It is our understanding that the results of this investigation will be used by Kaiser during completion of it's environmental due diligence prior to purchasing the Site, and that this investigation is not being conducted under environmental regulatory oversight.

BACKGROUND

SECOR International Incorporated (SECOR) completed a Phase I Environmental Site Assessment (ESA) in general accordance with ASTM E 1527-05 on April 11, 2007. Based upon the results of our Phase I ESA, the following RECs, HRECs, and/or other environmental concerns were identified and the associated recommendations were made:

- A 12,000-gallon diesel underground storage tank (UST) and associated underground piping exist at the Site, and are associated with the emergency back up generator. The UST was installed in approximately 1989 when the hospital was constructed. While the UST appears to be in compliance with requirements for UST construction, integrity, and secondary containment testing, the presence of the UST is considered to be a recognized environmental condition (REC). Records on file with the Riverside County Department of Environmental Health (i.e., the local CUPA) indicate the UST had failed secondary containment testing in the past. The CUPA issued a Notice of Violation to the Site for the failed secondary containment testing on March 6, 2003. It is recommended that soil samples be collected in the vicinity of the UST to evaluate the potential for diesel impacts to soil surrounding the UST and piping.
- Two photo processing machines are currently located on the Site in the first floor of the main building. The machines have been in use since hospital construction, and include photo fixer and developer processes. Both machines discharge effluent through a silver recovery unit, to floor drains, which then discharge to the sanitary sewer. Both drains were replaced 6 years ago when an underground pipe sleeve apparently broke, causing sediment to back up into both

Limited Subsurface Investigation Moreno Valley, California May 1, 2007 Page 2 of 7

drains. Riverside County records indicate that on-site treatment of silver-bearing photo processing hazardous waste historically occurred on the Site. Based on the reported pipe damage, there is a potential for silver-bearing photo process effluent to have impacted subsurface soils beneath the first floor of the hospital building. Therefore, the presence of the two photo processing machines with direct discharge to subsurface piping is considered to be a REC. It is recommended that soil samples be collected from soil beneath the two photo processing machines to evaluate the potential for elevated concentrations of silver in subsurface soils.

• The hospital chief engineer and hospital administrator indicated that the Site may have been used as pastureland for sheep grazing and farmland for potato crops in the past. The surrounding properties also appear to have been used for agricultural purposes. Therefore, there is a potential that widespread application of pesticides associated with former agricultural land use has impacted near surface soils. It is recommended that near surface soils across the Site parcel be evaluated for the presence of pesticides.

PURPOSE AND SCOPE

The purpose of the limited subsurface soil investigation was to assess the potential presence of significant and/or widespread impacts to soils beneath the Site that may have resulted from the land uses identified in the Phase I ESA. The scope of work included the following activities:

- Pre-field planning including development of a site-specific Health and Safety Plan, evaluation of permit requirements, boring location and utility clearance by both public and private services, coordination and scheduling of subcontractors, and coordination with on-site and Kaiser personnel.
- Advancement of soil borings at 14 locations on the Site using both hand auger and direct-push drilling techniques (Figures 2 through 4). The 14 soil borings were located at the following areas:
 - o Four corners of the Site parcel (5 borings; HA-1 through HA-5);
 - o UST and piping area (6 borings; UST-1 through UST-4, and USTP-1 and USTP-2); and
 - Photo processing floor drains (4 borings, PD1-1, PD1-2, PD2-1, and PD-2-2).
- Collection of 41 soil samples from the 14 soil borings. The soil samples were collected at the following locations:
 - Four corners of the Site parcel (5 samples);
 - o UST and piping area (28 samples); and
 - Photo processing floor drains (8 samples).
- Abandonment of the 14 soil borings following soil sample collection.
- Analysis of 28 soil samples for the following parameters:
 - Diesel-Range Petroleum Hydrocarbons (12 samples);
 - o Pesticides (8 samples); and
 - o Total Silver (8 samples).
- Characterization and disposal of investigation-derived waste.

Limited Subsurface Investigation Moreno Valley, California May 1, 2007 Page 3 of 7

Completion of a written letter report documenting the results of the investigation (i.e., this letter).

FIELD INVESTIGATION

The field investigation, which consisted of completion of the soil borings and soil sample collection, was conducted on April 11 and 12, 2007. Drilling services were subcontracted to CoreProbe International, Inc. (Irwindale, California). Each of the 14 soil borings were advanced to a depth of 5 feet below ground surface (ft bgs) using a hand auger, with the exception of one location which met refusal at 1 ft bgs (HA-2 at the northeast corner of the Site). Soil borings completed deeper than 5 ft bgs were advanced using a truck-mounted Geoprobe® drill rig equipped with a percussion hammer. Soils encountered during drilling were logged in the field according to the Unified Soil Classification System (USCS) and were recorded on boring log forms (Attachment A). During logging of the soils, representative soil samples from each interval were screened for volatile organic compounds (VOCs) using a photoionization detector (PID). The maximum PID measurement was 0.8 parts per million (ppm) at boring location UST-1 at a depth of 10 feet. The PID readings are recorded for each interval on the boring log forms in Attachment A.

Soils encountered during this investigation were primarily composed of silty sand and sandy silt to a total depth of 25 ft bgs, the maximum depth explored. No visual, olfactory, or field screening evidence of significant and/or widespread impacts to subsurface soils were identified during observation and logging of the soils. No groundwater was encountered.

SAMPLING RATIONALE

The following rationale was used during selection of soil sampling locations, depths, and submittal for laboratory analysis:

UST and piping area – Construction details for the location and depth of the UST and associated piping run to the generator were reviewed in the documents obtained from the Riverside County Department of Environmental Health during the Phase I ESA, from the on-site engineers, and from the private geophysical utility locator, Spectrum Geophysics (Burbank, California). Based on the information available, it was assumed that the bottom of the UST was located near 12 ft bgs, and that the associated piping was buried within the upper 5 feet of soil. Based on this assumed configuration, soil samples were selected for laboratory analysis from the 12 to 15 ft bgs depth interval around the perimeter of the UST at UST-1 through UST-4, and at 5 and 10 ft bgs from the piping area at USTP-1 and USTP-2.

Photo processing drains – Two soil borings were placed as close to each of the two photo floor drains as possible, given the limited space of the configuration of each drain area. Based on discussion with the on-site engineers, it was assumed that the effluent piping connected to each drain was buried within the upper 5 feet of fill soil beneath the slab of the building. Therefore, soil samples were collected at 3 and 5 ft bgs in each of the four soil completed soil borings at PD1-1, PD1-2, PD2-1, and PD2-2. An attempt was made to locate the effluent piping associated with each drain so that additional soil samples could be collected along the effluent piping, but the effluent piping could not be located following review of building permits, discussion with the on-site engineers, or the private geophysical utility locate. Therefore, no soil samples could be collected along the effluent pipe.

Pesticide analysis – Pesticide analysis was performed at multiple shallow soil locations across the Site parcel including the four corners of the parcel, the UST area, and the photo processing drain areas. Soil samples were collected from a depth of 5 ft bgs in each location at HA-1 (northwest corner of parcel), HA-4 (southeast corner of parcel), HA-5 (southwest corner of parcel), UST-1, USTP-1, PD1-1 and PD2-

Limited Subsurface Investigation Moreno Valley, California May 1, 2007 Page 4 of 7

1. One sample, HA-3 (northeast parcel corner), was collected at 3 ft bgs due to difficult hand augering conditions.

LABORATORY ANALYTICAL RESULTS

Soil samples collected during this project were transported to a fixed analytical laboratory, Centrum Analytical Laboratories, Inc. (Riverside, California), under standard chain of custody procedures. Soil samples were selected for analytical parameters based on the results of our Phase I ESA, field observations, and field screening results (using a PID). Soil samples that were collected, but not selected for laboratory analysis were submitted to the fixed lab and placed on hold. Copies of the final laboratory analytical reports and chain of custody documentation are provided in Attachment B.

Soil samples collected from the UST and piping area were analyzed for diesel-range petroleum hydrocarbons by EPA Method 8015B, soil samples collected from the photo processing drain area were analyzed for total silver by EPA Method 6010B, and soil samples collected from various locations across the Site were analyzed for organophosphorus pesticides by EPA Method 8081A.

Diesel-range petroleum hydrocarbons were not detected at or above the method reporting limit of 10 milligrams per kilogram (mg/kg) in any of the 12 soil samples collected from the UST and piping area. Total silver was not detected at or above the method reporting limit of 2.0 mg/kg in any of the eight soil samples collected in the area of the two photo processing drains. Pesticide compounds were not detected at or above their respective method reporting limits in six out of the eight soil samples submitted for analysis. The breakdown of pesticide compounds detected in the remaining two shallow soil samples is included in the table below.

	4,4-DDE	4,4-DDT	Toxaphene				
Sample Location	Concentration (mg/kg)						
HA-1@5 – northwest parcel corner at 5 ft bgs	0.051	0.014	0.16				
HA-5@5 – southwest parcel corner at 5 ft bgs	0.019	0.005					
Residential Soil PRG	1.7	1.7	0.44				

For comparison purposes, the Region 9 USEPA Preliminary Remediation Goal (PRG) for the residential soil exposure pathway is included in the table above. The detected pesticide compounds did not exceed the residential soil PRG, which are generally considered to be conservative screening values for use during environmental site assessments.

BOREHOLE ABANDONMENT

The 14 boreholes were immediately abandoned following sample collection by placing bentonite chips, which were hydrated upon entry, into the borehole. Boreholes completed in paved areas were patched at the surface with like material. Boreholes completed in unpaved areas were covered with soil from the surrounding area.

Limited Subsurface Investigation Moreno Valley, California May 1, 2007 Page 5 of 7

INVESTIGATION DERIVED WASTE

Excess soil and decontamination fluids generated during the drilling activities were placed in two 55-gallon capacity steel drums (one containing soil, and one containing decontamination fluids), labeled as non-hazardous waste, and left on-site on April 12, 2007 pending analytical results.

One composite soil sample was collected from the drum of soil cuttings following completion of the 14 soil borings. The composite sample identified as sample number IDW on the laboratory analytical report and chain of custody documentation was analyzed for VOCs by EPA Method 8260B, diesel-range and gasoline range petroleum hydrocarbons by EPA Method 8015B, and Title 22 CAM Metals. Based on comparison of the concentrations of detected analytes in the composite soil sample with State of California, Department of Health Services (22 CCR, Division 4.5, Chapter 11, Article 3, 66261.24) Total Threshold Limit Concentrations (TTLCs) and Soluble Threshold Limit Concentrations (STLCs), the detected concentrations of analytes were well below their applicable STLCs and TTLCs. Therefore, the soil cuttings generated at the Site were characterized as non-hazardous waste.

On April 23, 2007, Belshire Environmental Services, Inc. removed the drums from the Site, and disposed of the soil drum at TPST Soil Recyclers of California in Adelanto, California, and the decontamination fluid drum at the Demenno/Kerdoon recycling facility in Compton, California. The waste manifest was signed by an on-site representative. A copy of the laboratory analytical report containing the composite soil sample results is included in Attachment B, and a copy of the signed waste manifest is included in Attachment C.

Note that the concentration of arsenic in the soil composite sample was detected at 1.11 mg/kg, which exceeded the California-modified PRG of 0.062 mg/kg for the residential soil exposure pathway, while the concentration was well below its applicable TTLC of 500 mg/kg, and its applicable STLC of 50 mg/kg (where the comparison value for the STLC in mg/kg is approximately 10x the STLC value of 5 mg/L) for waste characterization purposes. However, the concentration of arsenic (1.11 mg/kg) is less than the typical background concentration of arsenic detected in California agricultural soils as published by the Kearney Foundation (1996) and Cal-EPA (1991).

CONCLUSIONS AND RECOMMENDATIONS

Based on the results of this limited subsurface soil investigation, significant and/or widespread impacts to subsurface soils were not identified in the vicinity of the UST and piping, the two photo processing floor drains, or the four corners of the Site parcel. Therefore, no additional environmental assessment is recommended.

LIMITATIONS

The purpose of this subsurface soil investigation was to reasonably evaluate the potential for adverse impact from past practices at the Site that were identified during the Phase I ESA. This subsurface soil investigation was limited in nature, and was not intended to eliminate all environmental risk during the due diligence process. The professional opinions in this report are based in part on the interpretation of data from discrete sampling locations that may not represent conditions at unsampled locations.

This report was prepared in accordance with the scope of work outlined in SECOR's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the Site. It was prepared for the exclusive use of Kaiser, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to SECOR. To the extent that this report is based on information provided to SECOR by third parties, SECOR may have made efforts

Limited Subsurface Investigation Moreno Valley, California May 1, 2007 Page 6 of 7

to verify this third party information, but SECOR cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by SECOR.

CLOSING

We appreciate the opportunity to continue to provide Kaiser with environmental due diligence services. Please contact the undersigned at 805-230-1266 if you have any questions regarding the results of this investigation. We look forward to providing environmental services on your next project.

Sincerely,

SECOR International Incorporated

CASE NARRATIVE

The following information applies to samples which were received on 04/11/07:

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested. The date of issue for this report is 04/13/07.

CASE NARRATIVE

The following information applies to samples which were received on 04/12/07:

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested. The date of issue for this report is 04/13/07.

Report approved by:

1.0 PROJECT SUMMARY

SECOR has completed a Phase I ESA of the 10-acre undeveloped parcel located near the corner of Iris Avenue and Olive Street in Moreno Valley, California (Site). The Phase I ESA was conducted in general conformance with ASTM E 1527-05 on behalf of Kaiser as part of Kaiser's environmental due diligence prior to a property transaction.

Based on the results of this Phase I ESA, no RECs, HRECs, or other environmental concerns were identified in connection with the Site. The following additional findings are noted:

 Based on our review of the title report and policy of title insurance provided by Kaiser, the northwestern corner of the Site is located within FEMA Flood Zone A, which corresponds to the 100-year flood plain. The Site is also located in an area associated with mitigation of impacts to potential habitat areas for endangered species in western Riverside County as implemented by the Riverside County Habitat Conservation Agency.

2.0 PROJECT METHODOLOGY

2.1 INTRODUCTION

SECOR International Incorporated, now Stantec (SECOR) has completed a Phase I Environmental Site Assessment (ESA) on the 10-acre undeveloped parcel located near the corner of Iris Avenue and Olive Street in Moreno Valley, California (Site). This Phase I ESA was prepared for Kaiser Foundation Health Plan, Inc. (Kaiser) for property transaction environmental due diligence purposes.

2.2 SCOPE

The objective of this ESA was to perform appropriate inquiry into the past ownership and uses of the Site consistent with good commercial or customary practice as outlined by the ASTM in Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-05. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including RECs of the Site that potentially have and/or may cause an adverse environmental impact to the Site. The project conforms to standards established in 2005 by ASTM E 1527-05, as it conforms to definitions and methodology of "all appropriate inquiry" as stipulated by the United States Environmental Protection Agency (EPA) in 40 CFR Part 312. The term recognized environmental condition is defined by ASTM E 1527-05 as:

"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum product into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws."

The term does not include *de minimis* conditions, which generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with our proposal to Kaiser dated April 10, 2008 and authorized on April 17, 2008. This scope consisted of a visual reconnaissance of the Site, interviews, review of historical aerial photographs, city directories, Sanborn® maps, review of previous environmental reports (if available), a current Environmental Data Resources, Inc. Radius Map Report (EDR Report), and a review of the practically available pertinent records of Local, State, and Federal agencies, including the local Certified Unified Program Agency (CUPA). The scope of work did not include an assessment for historical overall environmental regulatory compliance of every facility ever operated at the Site or sampling and analyzing of environmental media. SECOR was not contracted to perform any independent evaluation of the purchase or lease price of the Site and its relationship to current fair market value. No information relative to this matter was provided to SECOR by Kaiser (the user of this ESA Report). The conclusions presented in this ESA Report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 10.0.

2.3 PREVIOUS ENVIRONMENTAL WORK

SECOR was not provided with any previous environmental assessment reports by Kaiser or the interviewees during completion of the ESA.

2.4 USER-PROVIDED INFORMATION

Prior to initiating the Site reconnaissance, SECOR requested information relevant to performance of this Phase I ESA with a written questionnaire submitted to the User. A copy of the questionnaire completed by Mr. Peter Becronis of Kaiser Foundation HealthPlan is provided in Appendix D. The significant information provided by Mr. Becronis is summarized below.

Information on Environmental Cleanup Liens on the Subject Property:	Mr. Becronis indicated that he was not aware of environmental cleanup liens in connection with the Site.
Information on Subject Property Activity or Use Limitations (including Institutional and Engineering Controls):	Mr. Becronis indicated that he was not aware of Activity and Use Limitations (AULs) in connection with the Site.
Commonly Known or Reason	ably Ascertainable Information About Subject Property
1) Past Uses	Mr. Becronis indicated that he had no knowledge about past uses of the Site.
2) Current or former presence of chemicals, hazardous substances, or petroleum products	Mr. Becronis indicated that he had no knowledge of current or former presence of chemicals, hazardous substances, petroleum products, spills or releases, or environmental cleanups.
3) Spills or releases of chemicals, hazardous substances or petroleum products	
4) Environmental cleanups	
5) Obvious indicators of contamination	Mr. Becronis indicated that he had no knowledge of obvious indicators of contamination in connection with the Site.
Reason Why the User Wants to Have the Phase I ESA Performed:	As a component of the innocent landowner defense to CERCLA liability provided in 42USC§9601(35) and §9607(b)(3).

	5		

2.5 Specialized Knowledge or Experience

The Federal AAI rule (40 CFR §312.28) and ASTM E1527-05 require that all appropriate inquiry must take into account relevant and applicable specialized knowledge and experience on the part of the User regarding the Subject Property, the area surrounding the Subject Property, the conditions of adjoining properties, and any other experience relevant to identifying RECs on the Subject Property.

SECOR submitted a written questionnaire to the User inquiring whether the User had any specialized knowledge or experience relative to this inquiry. Mr. Becronis responded that he had no such specialized knowledge or experience.

2.6 Relationship of Purchase Price to Value of Property

The Federal AAI rule (40 CFR §312.29) and ASTM E1527-05 require that persons seeking defense to or protection from liability under CERCLA must take into account the relationship of the purchase price to the fair market value of the property if it were not contaminated to assess whether or not the differential is due to the presence of releases or threatened releases of hazardous substances. This portion of the inquiry is the responsibility of the User, and the User has the option of sharing or not sharing this information with the Environmental Professional performing the Phase I ESA.

SECOR has not performed an independent evaluation of the purchase price of the property and its relationship to fair market value. SECOR submitted a written questionnaire to the User inquiring about the User's knowledge regarding the relationship of the purchase price to the fair market value of the property if it were not contaminated. Mr. Becronis responded that the purchase price has not been reduced in comparison with the fair market value due to contamination known or believed to be present at the Site.

2.7 CLIENT-PROVIDED DOCUMENTS

Kaiser provided several documents for our review during completion of this ESA. These documents are listed and summarized below:

- Recent Aerial Photograph This photograph was obtained from Google Earth, which indicates the photograph date is 2003 or more recent. The Site boundary is depicted, and the Site consists of an unimproved square-shaped parcel of land.
- Environmental Due Diligence Information Form This form indicated the Site is currently vacant land, and was reportedly used for agricultural purposes in the past. This form also indicated the Site is 10 acres located neat the corner of Iris Avenue and Olive St., Moreno Valley, CA, immediately West of Moreno Valley Community Hospital (which Kaiser is in escrow to purchase). APN is 486-310-024.
- Title Report and ALTA Survey This document included a Grant of Easement for the Site parcel dated February 21, 2008 for a perpetual nonexclusive easement and right of way to Omni Moreno Valley, LLC (Grantee) from Valley Health System (Grantor). The ALTA survey map included in this document depicted the Site as a 10-acre square-shaped parcel of land. The northwest corner of the Site was shown

as FEMA Flood Zone A, which corresponds to the 100-year flood plain. The remainder of the Site was shown as FEMA Flood Zone X, which is not located in the 500-year flood plain. The map also included 1-foot topographic contour lines, which indicate the Site slopes to the north. The southern Site boundary is located near the 1,545 feet above mean sea level (ft msl) contour, and the northern portion of the Site is located near the 1,521 ft msl contour. The southeastern Site boundary includes a hospital access road that runs north-south and extends onto the adjacent hospital property to the east. The title report was prepared by First American Title in Riverside, California and dated February 14, 2006. The title report included a natural hazardous disclosure statement that indicated the Site is located in a special flood hazard area. The title report also included several notices which indicated the Site is located in FEMA Flood Zone A (100-yr flood plain), within 1/4 mile of an officially designated hillside area, in an officially designated area with a mapped, existing drainage plan, in a designated fee area associated with obtaining a grading permit (fee approximately \$500 per acre), the Site may be located in a Right-To-Farm area (Riverside County Ordinance No. 625.1), within 2 miles of an FAA approved landing facility, in an area designated as Zone 2 for radon gas potential (described further in Section 6.5), in an area of special tax assessment associated with Metropolitan Water District of Southern California, Eastern Municipal Water District, Moreno Valley Community Services District (Zone A and C), and County of Riverside. The Policy of Title Insurance included in this document included an endorsement for insurance against environmental protection liens (Section 3.5.5).

- City of Moreno Valley Planning Documents A series of recent (2006-2007) planning documents including an Initial Study and Negative Declaration generated as part of California Environmental Quality Act (CEQA) requirements were provided to These documents included information on the proposed development of two 40,000-square foot, 2-story medical office buildings on the Site. The documents also indicated the Site was planned to be subdivided into 6 separate parcels. The environmental review conducted by the City planners indicated that a biological assessment was conducted in the Site by LSA Associates, Inc. in August 2006, and that LSA concluded that there were no potentially significant impacts that would result from the development project, as there was no significant vegetation and the Site had recently been disturbed including a recent disking of the parcel. The environmental review also identified the Site as being located in an area that has been identified in the Riverside County Integrated Plan (RCIP) as having the potential for burrowing owl habitat, and as a requirement prior to development, a new survey for burrowing owls is required prior to obtaining a grading permit. environmental review did not identify any archeological resources on the Site. The Negative Declaration documentation indicated that no impact or less than significant impacts would result from the development project in connection with Geology and Soils, Hazards and Hazardous Materials, and Hydrology and Water Quality, among other resource areas.
- Geotechnical Due Diligence Report A report titled Due Diligence Report APN 486-310-024 prepared by Armstrong & Brooks Consulting Engineers dated June 7, 2006 was provided for review. This report indicated the Site currently exists in a natural undeveloped condition. This report also indicated that the City of Moreno Valley will permit the land to drain to the north to perpetuate the natural drainage

pattern, but that the peak flow rate could not be exceeded at the point of discharge without an acceptance letter from the adjacent property owner to the north. The report indicated that if storm water was required to remain on the Site, then an onsite detention basin, retention basin, or infiltration could be used. If storm water is allowed to be discharged to the north, then swales and gutter could be used. According to this report, Site soils were calculated to have an average infiltration rate of 0.00001 centimeters per second, which is not optimal for use of infiltration to manage storm water on-site.

- Geotechnical Investigation Report A report titled *Preliminary Geotechnical Investigation for the Proposed Medical Office Buildings and Assisted Living Buildings* prepared by LGC Inland, Inc. dated June 13, 2006. This report indicated that there are no known underground structures known to exist at the Site. This report also noted that seven hollow stem auger borings were completed at the Site on May 11, 2006 and were completed to a total depth of 51.5 feet. Additional information from this report is discussed in Sections 3.8.2 and 3.8.3. An updated report dated August 27, 2007 which included completion of three additional borings was also provided for review.
- O Phase I Environmental Site Assessment A Phase I ESA was completed for the Site by Hayden Environmental (HE) in May 2006. HE described the Site as a10.15 acre parcel of land located to the north of Iris Avenue between Nason Street and Oliver Street in the City of Moreno Valley, California. HE concluded in their Phase I ESA that there was no evidence of RECs in connection with the Site and that no further action was required.
- Habitat Assessment Report LSA Associates, Inc. (LSA) concluded in their September 8, 2006 report that a focused pre-construction survey is required for the burrowing owl as the Site contains marginally suitable habitat for this species.
- Species Report On October 2, 2006 LSA performed a survey for the western burrowing owl (Athene cunicularia hypugaea) on the Site. LSA concluded that no burrowing owls were observed during their survey.
- The following documents were provided for SECOR's review and pertain to the future development of two office buildings on the Site:
 - Traffic Impact Analysis Reports completed in 2006 and 2007
 - Water Quality Management Reports These reports primarily included storm water management and best management practices to be implemented at the Site following development.

3.0 ENVIRONMENTAL ASSESSMENT FINDINGS

3.1 SITE LOCATION

The Site is located to the north of Iris Avenue adjacent to the west of 27300 Iris Avenue, City of Moreno Valley, Riverside County, California (Figure 1). Photographs of the Site are presented in Appendix A.

3.2 GENERAL SITE DESCRIPTION

A site reconnaissance was performed on April 21, 2008 by SECOR personnel. The Site consisted of a 10-acre undeveloped parcel located in a moderately developed area of Moreno Valley (Figure 1). The parcel was surrounded by a chain-link fence and was observed from the perimeter over the fence (Figure 2).

3.3 ADJACENT AND SURROUNDING LAND USE

As part of SECOR's reconnaissance, visual observation of properties adjoining the Site was conducted. The observations were made from the Site or from public thoroughfares. Properties adjacent to the Site are depicted on Figure 2 and included:

- North and West Agricultural fields.
- South Public right of way, Iris Avenue. Residential developments were observed beyond Iris Avenue to the south.
- East Moreno Valley Community Hospital

3.4 SITE OPERATIONS

At the time of the Site reconnaissance, the Site was an unimproved parcel on Iris Avenue (Appendix A – Photograph 1). The Site consisted of exposed soil that appeared to have been used for agricultural purposes in the past.

3.5 SITE HISTORY

The object of consulting historical sources is to develop a history of the previous uses of the Site and surrounding area to evaluate if past uses may have resulted in RECs or other adverse environmental conditions in connection with the Site. During our review of multiple historical records, SECOR attempted to identify obvious uses of the Site from the present to the Site's first developed use. This research was performed to meet the following objectives: review only as many sources as are necessary to confirm a REC, and examine only those records that are reasonably ascertainable and useful.

During completion of this ESA, SECOR attempted to obtain information from the following historical document sources: historical aerial photographs (Appendix B), Sanborn® fire insurance industry maps (Appendix B), historical U.S. Geological Survey (USGS) topographic

		(A)	

maps (Appendix B), historical city directory collections (Appendix B), previous environmental reports as listed in Section 2.5, building department permit and planning records, local environmental agency records (i.e., the Certified Unified Program Agency [CUPA]), and personal interviews. The following records were not available: Sanborn® maps (no coverage).

3.5.1 Aerial Photographs

SECOR reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes SECOR's observations of the reviewed historical aerial photographs.

Year	Document	Notes on Observations
1938	Aerial Photograph (EDR) Scale 1" = 555'	The Site parcel appears as a square-shaped area with row crops. Buildings do not appear to be present, although a small structure and dirt road are visible on the southeast corner of the Site. The southern Site boundary and southern portion of the western boundary are lined with trees. A cluster of small buildings is present on a parcel to the east of the Site. Iris Avenue and Oliver Street are visible.
1953	Aerial Photograph (EDR) Scale 1" = 555'	The Site appears to no longer have row crops present, and the small structure and dirt road visible in the 1939 photograph are no longer present. However, the Site appears to remain with an agricultural land use based on the vegetation pattern in comparison to surrounding parcels. The cluster of buildings visible on the parcel to the east in 1938 is no longer present.
1967	Aerial Photograph (EDR) Scale 1" = 555'	No significant changes on the Site since the 1953 photograph. A drainage area is visible along the eastern Site boundary. This drainage trends onto the adjacent property to the east (Moreno Valley Hospital parcel) to the north. Surrounding properties to the north, south, east and west have been divided into large square agricultural fields.
1980	Aerial Photograph (EDR) Scale 1" = 600'	No significant changes since the 1967 photograph, although the drainage area visible in the 1967 photograph has increased in size on the adjacent parcel to the east.
1989	Aerial Photograph (EDR) Scale 1" = 666'	No significant changes on the Site since the 1980 photograph. The parcel to the east has been developed with a hospital building, a paved parking lot, and roadways around the building. Properties to the south no longer appear to be in agricultural use; a golf course has been added, and two large ASTs are visible further to the southeast beyond the golf course area.
1994	Aerial Photograph (EDR) Scale 1" = 666'	No significant changes on the Site since the 1989 photograph, although the Site appears to have been divided, based on vegetation patterns, into four square sections. Single family residences in various stages of grading and development have been added to the golf course area south of the Site. Properties adjacent to the west and north of the Site remain undeveloped.

Year	Document	Notes on Observations
2002	Aerial Photograph (EDR) Scale 1" = 666'	The Site appears to be in agricultural use, and has been divided into two rectangular sections. Parcels adjacent to the east and north remain undeveloped. No significant changes in the surrounding properties have occurred since the 1994 photograph.

Based on our review of the historical aerial photographs, the Site appears to have been used as agricultural land since at least 1939. No evidence of RECs, HRECs, or other significant environmental concerns was noted during our review of aerial photographs, although the apparent agricultural use of the Site may have resulted in the application of pesticides. Based on our experience in the vicinity of the Site, near surface soils may contain residual levels of pesticides at concentrations below applicable screening criteria, which are not considered to represent a significant risk to human health or the environment, and are not considered to result in future regulatory scrutiny. Therefore, the potential presence of residual concentrations of pesticides in near surface soils is not likely to represent a significant environmental concern for the Site. Copies of the aerial photographs are included in Appendix B.

3.5.2 City Directories

SECOR contracted with EDR to research available reverse city directories for the Site. EDR's review of city directories was conducted for years between 1970 and 2005 in approximately 5 year intervals. Addresses for were not found for the Site in the directories. None of the listings reviewed for the subject or immediately adjacent properties appeared to pose a potential environmental concern to the Site.

3.5.3 Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide prior land use history and assist in assessing whether there may be potential environmental contamination on or near the Site. These maps, which have been periodically updated since the late 19th Century, often provide valuable insight into historical Site uses.

SECOR contracted with EDR to provide a search for copies of historical fire insurance maps covering the subject and immediately adjacent properties. EDR reported that their collection of Sanborn® fire insurance maps do not cover the Site or nearby vicinity. The Sanborn® Map Search Report is presented in Appendix B.

3.5.4 Interviews

Several interviews of persons who are knowledgeable about the Site were conducted during completion of this ESA. The objective of the interviews was to obtain information indicating the potential for RECs in connection with the Site. According to ASTM E-1527-05 Section 3.2.43, interviews address questions to be asked of past and present owners, operators, and occupants of the Site and questions to be asked of local government officials. The results of these interviews are discussed in the text that follows.

		¥	

Site Owner - According to ASTM E-1527-05 Section 3.2.59, the owner is defined generally as the fee owner of record of the Site. Mr. Kip Dubbs of Omni West Group Inc. (property owner), referred SECOR to Mr. Christopher Hayden of Hayden Environmental (consultant to property owner) for questions related to the Site. SECOR personnel attempted to contact Mr. Hayden during completion of this Phase I ESA, but Mr. Hayden did not respond to SECOR's inquiry.

Key Site Manager – According to ASTM E-1527-05 Section 3.2.44, the key Site manager is defined as the person identified by the owner or operator of the Site as having good knowledge of the uses and physical characteristics of the Site. Mr. Kip Dubbs is the key Site manager (see above).

Site Occupants - According to ASTM E-1527-05 Section 3.2.56, occupants are defined as those tenants, subtenants, or other persons or entities using the Site or a portion of the Site. Since the Site was undeveloped with no structures, occupants were not interviewed.

Interviews With Local Government Officials - According to ASTM E-1527-00 Section 3.2.47, local government agencies are defined as those agencies of municipal or county government having jurisdiction over the property. Municipal and county government agencies include but are not limited to cities, parishes, townships, and similar entities. Information obtained from local government officials is provided in Section 5.0.

3.5.5 Tax Assessor Records and Property Ownership Information

According to the Riverside County Assessor's Office, the Site address includes the following Assessor Parcel Number (APN): 486-31024. The parcel is 10.15 acres. A copy of the parcel map and associated parcel information obtained from Riverside County's online searchable website at (http://pic.asrclkrec.com/Default.aspx) are provided in Appendix B.

Kaiser provided SECOR with a Title Report issued by First American Title for the Site parcel dated February 14, 2006. Based on the Title Report, the Site is located in a designated Habitat Conservation Area and is subject to fees of \$500 per acre for a grading permit. This fee is associated with mitigation of impacts to potential habitat areas for endangered species in western Riverside County as implemented by the Riverside County Habitat Conservation Agency. The Policy of Title Insurance also included an endorsement that indicated the policy insures Omni Moreno Valley, LLC against loss or damage sustained by reason of any environmental protection lien which is recorded at the date of the policy, and any environmental protection lien provided for by any state statute in effect at the date of the policy. Additional information activity and/or land use information is included in the policy, which is attached in Appendix C.

3.5.6 Historical Topographic Maps

Historical topographic maps were obtained from EDR and were reviewed to identify past Site usage and areas of potential environmental concern. Copies of the topographic maps reviewed are located in Appendix B. The following table summarizes the maps reviewed and our observations. No environmental concerns were noted during our review of the topographic maps.

22		
	::	

Year	Document	Notes On Observations
1901	Elsinore 30 Minute Topographic Map Scale 1:125,000	The Site and surrounding properties do not appear to be developed with agricultural or other uses.
1901	Southern CA 60 Minute Topographic Map Scale 1:250,000	No significant changes since the previous 1901 map.
1943	Perris 15 Minute Topographic Map Scale 1:62,500	The Site and surrounding properties remain undeveloped. Streets surrounding the Site are not depicted.
1953	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	The Site and surrounding properties remain undeveloped. The Site location appears to be located near 1520 feet above mean sea level at the foothills of a small mountain range located to the southwest. Oliver and South streets are shown north of the Site: these streets are located east and west of the Site, respectively. A few reservoirs and wells are visible, but are located several miles from the Site.
1967	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	The Site remains undeveloped. Reservoirs and wells are now shown to the west and north of the Site. Filaree Avenue, north of the Site, is visible. Iris Avenue is visible as an unimproved road.
1980	Sunnymead 7.5 Minute Topographic Map Scale 1:24,000	No significant changes since the 1967 map.

3.6 GENERAL SITE OBSERVATIONS

SECOR performed a reconnaissance of the Site on April 21, 2008. Figure 2 provides land use information for the Site and adjoining properties and areas of potential environmental concern. The site visit focused on observation of current conditions and indications of past uses and conditions of the Site that may indicate the likelihood of RECs. The Site visit was conducted on foot and visual and/or physical observations from the reconnaissance are noted in the following sections. Adjoining properties were observed from the public thoroughfares or from the Site.

Weather conditions during the visit to the Site were clear and sunny. There were no weather related property access restrictions encountered during the reconnaissance visit. A description of the Site was provided in Subsection 3.2. SECOR observed the parcel from its perimeter. The Site was able to be clearly viewed from various locations around the Site's surrounding chain-link fence.

3.7 HEATING AND COOLING

No method of heating or cooling appeared to be provided to the Site.

3.8 PHYSIOGRAPHIC FEATURES

SECOR's understanding of subsurface conditions in the vicinity of the Site is based on experience in the area and review of available documentation regarding regional and local

			*

subsurface conditions. Copies of information pertaining to the geology and hydrogeology in the Site vicinity are provided in Appendix B.

3.8.1 Regional Topography

The USGS 7.5-Minute Topographic Map of Sunnymead, California Quadrangle (scale 1:24,000) and the Physical Setting Source Addendum included in the EDR Radlus Map Report were reviewed to identify local and regional physiographic features in the vicinity of the Site (Figure 2). Based on our review of these information sources, the Site is located at an elevation between 1530 and 1550 feet above mean sea level (ft msl). Based on the review of the topographic map, the general topographic gradient in the property's vicinity is to the northnorthwest. The Site is located at the base of the foothills of Mount Russell, which is part of the Lake Perris State Recreation Area.

3.8.2 Regional/Site Geology

SECOR personnel reviewed the Geologic Map of the Sunnymead 7.5-Minute Quadrangle, Riverside County, California dated 1996-1997 (scale 1:24,000). According to this map, surficial soils at the Site are underlain by "Very Old Alluvial Fan Deposits" (labeled as Qvof) of early Pleistocene age. These deposits are considered by the authors of the map to be associated with very old surficial deposits that are slightly to well consolidated with upper surfaces capped by moderate to well developed pedogenic soils. These pedogenic soils may be as much as two to three meters thick. The fan deposits (Qvof) are described as mostly well-dissected, well-indurated, reddish-brown sand deposits containing minor gravel. These deposits are widespread and flank bedrock areas.

According to the Physical Setting Source Summary portion of the EDR Report (Appendix C), soils at the Site are classified as the Hanford coarse sandy loam. These soils are described as well drained, moderately coarse textured soils. The corrosion potential of these soils was listed as low for uncoated steel. Based on our experience in the vicinity of the Site, soils beneath the Site appear to be composed of sand/silt mixtures to a depth of at least 25 feet below ground surface (bgs).

According to the previous geotechnical investigation reports (Section 2.7), soils encountered beneath the Site consist of Quaternary alluvial materials consisting predominantly of silty sand to a depth of 20 feet bgs, underlain by light brown to olive brown, silty sand and occasional clayey sand to a depth of 51.5 feet bgs.

3.8.3 Regional Hydrogeology

According to the Physical Setting Source Summary portion of the EDR Report (Appendix C), the closest groundwater well is USGS well 003S003W21A001S located approximately ½ mile west-northwest of the Site. The total depth of this well is 450 feet, and the well is screened in an unconfined aquifer. The depth to groundwater in this aquifer was reported to be 170 ft bgs in 2001.

SECOR personnel researched depth to shallow groundwater information on Gregg Drilling, Inc.'s website, which includes a table of encountered depth to groundwater measurements by Gregg Drilling (website http://www.greggdrilling.com/Resources/water-table.html). According

		è		

to the website, groundwater was encountered at 83 feet below ground surface (ft bgs) in 2004 at a property located approximately 5-6 miles northwest of the Site (at an elevation less than the Site). Because the Site is located on the flanks of Mount Russell, the depth to shallow groundwater is likely to be deeper than 83 ft bgs. Based on our experience in the vicinity of the Site, shallow groundwater is not likely to be present within the upper 25 feet. Based on the previous geotechnical investigation described in Section 2.7, groundwater was not encountered beneath the Site to a depth of 51.5 feet bgs in 2006.

3.9 ABOVEGROUND STORAGE TANKS (ASTs)

No evidence of ASTs was observed on the Site at the time of the reconnaissance.

3.10 UNDERGROUND STORAGE TANKS (USTs)

No evidence of underground tanks was observed at the time of the Site reconnaissance.

3.11 POLYCHLORINATED BIPHENYLS (PCBs)

Electrical transformers, hydraulic equipment, capacitors and similar equipment may contain polychlorinated biphenyls (PCBs) in hydraulic or dielectric insulating fluids within the unit. The federal Toxic Substances Control Act (TSCA) generally prohibited the domestic manufacture of PCBs after 1979; however, there is a potential for the dielectric fluid in electrical and hydraulic equipment manufactured prior to that date to contain PCBs.

No potential PCB containing equipment was observed on the Site.

3.12 HAZARDOUS MATERIALS AND HAZARDOUS WASTE

No hazardous materials or hazardous wastes were observed during the Site reconnaissance.

3.13 SOLID (NON-HAZARDOUS) WASTE

No solid (non-hazardous) wastes were observed during the Site reconnaissance.

3.14 EXISTING GROUNDWATER ISSUES

Based on the records reviewed during completion of this Phase I ESA, there are no documented regional or local plume issues concerning groundwater beneath the Site.

3.15 WATER, WASTEWATER, DRAINS, AND STORM WATER

Storm water runoff at the Site does not appear to flow in any particular direction as the topography of the Site is fairly level. Note that a drainage ditch is present on the adjacent parcel to the east, and storm water runoff in that ditch flows to the north.

3.16 ODORS, POOLS OF LIQUID, STAINS, AND CORROSION

No significant noxious odors, pooled liquids, or stains were observed during the Site reconnaissance.

3.17 PITS, PONDS, LAGOONS, AND STRESSED VEGETATION

No evidence of pits, ponds, lagoons or stressed vegetation was observed on or near the Site.

· C	

4.0 REGULATORY AGENCY LIST REVIEW

The objective of the records review is to obtain and review records that will assist in evaluating RECs in connection with the Site. On April 18, 2008, SECOR subcontracted EDR to conduct a search of standard environmental record sources published by federal, state, local, and tribal regulatory agencies. It should be noted that regulatory listings include only those sites that are: (a) known to the regulatory agencies to be contaminated, (b) in the process of evaluation for potential contamination, (c) or regulated at the time of publication.

It should also be noted that our review has relied upon EDR's compilation of listed sites. If material environmental information on a site not listed in the EDR report was discovered during completion of the Phase I ESA, it is presented in the appropriate sections of this report and reference is made to the source of the information.

SECOR reviewed the results of the EDR Radius Map with GeoCheck® database search to determine if the Site or nearby properties are listed as having a past or present record of actual or potential environment impact.

The databases that were searched in the EDR Report include those briefly described below:

- U.S. Environmental Protection Agency (EPA): National Priority List (NPL), Sites designated for Superfund clean-up by the EPA;
- EPA: Resource Conservation and Recovery Act (RCRA) Corrective Actions (CORRACTS) Facility Index System (FINDS);
- EPA: Comprehensive Environmental Response, Cleanup and Liability Information System (CERCLIS): Sites under review by the EPA;
- EPA: RCRA Permitted Treatment, Storage, Disposal Facilities (TSDF; RCRA-TSD) and TSDF subject to violations/enforcement corrective actions (RCRIS TSDC);
- California (State): (CAL CERCLIS): State Equivalent CERCLIS List (SCL)/ Cal Site (State Sites);
- State and Los Angeles Fire Department (LAFD; City): Leaking Underground Storage Tanks (LUST) listings: Sites with leaking underground storage tanks;
- State: Solid Waste Landfills/Waste Management Unit Database System (SWL/WMUDS) including Toxic Pits Clean-Up Facilities): Sites permitted as solid waste landfills, incinerators, or transfer stations;
- State: Properties With Hazardous Waste (CORTESE): Sites on State index of properties with hazardous waste. CORTESE sites are listed individually as SCL, LUST and SWL sites;

- State/City: Underground Storage Tanks/Aboveground Storage Tanks (USTs/ASTs): Sites with registered underground or aboveground storage tanks;
- EPA: Emergency Response Notification System (ERNS): Sites with previous hazardous materials spills;
- EPA: Large or Small Quantity Generators (RCRA LQG and SQG): Facilities that generate large or small quantities of hazardous waste; and
- Local: Riverside County Listing of Underground Tank Cleanup Sites and Underground Storage Tank List.

The complete EDR Report including maps showing the location of listed sites relative to the Site is presented in Appendix C.

4.1 SITE LISTINGS ON ENVIRONMENTAL DATABASES

This section lists the federal, state, and/or local environmental databases where the Site, APN: 486-310-024 was searched in EDR's Radius Map Report. The Site was not listed on any environmental databases searched by EDR.

Data Source	Listing		
Federal Records	Site not listed		
State and Local Records	Site not listed		

4.2 VICINITY PROPERTY LISTINGS ON ENVIRONMENTAL DATABASES

This section lists the federal, state, and/or local environmental databases where vicinity properties located within ASTM-specified search distances (up to one mile from the Site) were searched in the EDR Radius Map Report. No vicinity properties were listed on any of the databases searched within a one mile radius extending from the perimeter of the Site.

Data Source	Listing		
Federal Records	Vicinity properties not listed		
State and Local Records	Vicinity properties not lister		

5.0 LOCAL GOVERNMENT RECORDS

5.1 DTSC HAZARDOUS WASTE RECORDS

SECOR searched DTSC's online Hazardous Waste Tracking System at http://hwts.dtsc.ca.gov/report_list.cfm for records regarding the Site. No records were found for the Site.

5.2 LOCAL BUILDING DEPARTMENT RECORDS

SECOR personnel contacted the City of Moreno Valley Building and Safety Department (Building Department) on April 17, 2008 regarding building permits and plans on file for the Site. On April 17, 2008, Ms. Sue Caims, Senior Administrative Assistant, responded that two medical buildings (permit numbers: B0701693 and B0701694) were in plan check and that no other permits were on file. A copy of the Building Department response is provided in Appendix C.

5.3 OTHER AGENCY CONTACTS

SECOR contacted the following agencies in addition to those described in Sections 5.1 through 5.2:

DTSC – Ms. Julie Johnson, Regional Records Coordinator, responded to SECOR on April 22, 2008 and indicated that the DTSC does not have any records for the Site.

RWQCB - Ms. Sylvia Wellnatz of the San Diego RWQCB contacted SECOR on April 24, 2008 to indicate that the RWQCB is unable to search for properties without an address.

Moreno Valley Fire Department – SECOR personnel contacted the Moreno Valley Fire Department in writing on April 17, 2008 to request records for the Site. At the time of completion of this report, SECOR personnel had not received a response.

County of Riverside, Department of Environmental Health – SECOR personnel contacted the County of Riverside, Department of Environmental Health in writing on April 17, 2008 to request records for the Site. At the time of completion of this report, SECOR personnel had not received a response.

i.		

6.0 OTHER ENVIRONMENTAL CONSIDERATIONS

6.1 SENSITIVE RECEPTORS AND WETLANDS

A sensitive receptor means any human or other ecological component (i.e., schools, hospitals, senior centers, municipal water wells, etc.) which is or may be affected by a contaminant from a contaminated site. EDR did not identify any sensitive receptors. However, the adjacent property to the east is developed with a hospital, and a water well is located approximately ½ mile west-northwest of the Site (Section 3.8.3).

Wetlands cannot be definitively identified through visual observation alone. Defensible wetland delineations require taxonomic classification of site vegetation, an investigation into the surface and subsurface hydrology of the site, and identification of hydric soils. This level of delineation is outside of the scope of work for this assessment; however, no lands usually considered 'wetlands' were observed by SECOR. EDR reported that no wetland areas exist on the Site, or adjacent to the Site. Additionally, EDR reported that the Site soils do not meet the criteria to be classified as hydric soils.

6.2 ENDANGERED SPECIES

SECOR personnel researched threatened and endangered species using the online searchable California Natural Diversity Database at http://www.dfg.ca.gov/bdb/html/cnddb.html. The California Natural Diversity Database (CNDDB) is a program that inventories the status and locations of rare plants and animals in California. According to the information listed for the Sunnymead 7.5 Minute topographic quadrangle, the following rare plants and animals and their status were identified:

SCINAME	COMNAME	FEDSTATUS	CALSTATUS	CDFG	CNPS LIST
Spea hammondii	western spadefoot	None	None	SC	
Accipiter cooperii	Cooper's hawk	None	None		
Buteo regalis	ferruginous hawk	None	None	CONTRACTOR OF STREET	
Coccyzus americanus occidentalis	western yellow-billed cuckoo	Candidate	Endangered		
Athene cunicularia	burrowing owl	None	None	SC	
Polioptila californica californica	coastal California gnatcatcher	Threatened	None	SC	
Icteria virens	yellow-breasted chat	None	None	SC	
Aimophila ruficeps canescens	southern California rufous- crowned sparrow	None	None		
Amphispiza belli belli	Bell's sage sparrow	None	None		SCHOOL SECTION
Agelaius tricolor	tricolored blackbird	None	None	SC	
Carduelis lawrencei	Lawrence's goldfinch	None	None		
Lasiurus xanthinus	western yellow bat	None	None		
Eumops perotis californicus	western mastiff bat	None	None	SC	
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None	None	sc	

	e

Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None	None	sc	
Taxidea taxus	American badger	None	None	SC	
Phrynosoma coronatum (blainvillii population)	coast (San Diego) horned lizard	None	None	sc	
Aspidoscelis hyperythra	orange-throated whiptail	None	None	SC	-
Crotalus ruber ruber	northern red-diamond rattlesnake	None	None	sc	
Southern Sycamore Alder Riparian Woodland	Southern Sycamore Alder Riparian Woodland	None	None		
Centromadia pungens ssp. laevis	smooth tarplant	None	None		1B.1
Caulanthus simulans	Payson's jewel-flower	None	None		4.2
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	None	None		1B.2
Chorizanthe parryi var. parryi	Parry's spineflower	None	None		3.2
Dodecahema leptoceras	slender-horned spineflower	Endangered	Endangered		1B.1
Brodiaea filifolia	thread-leaved brodiaea	Threatened	Endangered		1B.1

Notes:

SCINAME = Scientific Name

COMNAME = Common Name

FEDSTATUS = Federal Listing Status: United States legal status under the Federal Endangered Species Act

CDFG = Indicates whether the species is a California Department of Fish and Game Species of Concern. This applies to animals only. For the plant equivalent, see CNPSLIST.

CALSTATUS = California State listing status: State of California legal status

CNPLIST = California Native Plant Society (CNPS) List. In general, 1B=plants rare, threatened, or endangered in California and elsewhere, 4=plants of limited distribution – a watch list, and 3=plants about which more information is needed – a review list.

6.3 ASBESTOS

While the use of asbestos containing material (ACM) in the manufacture of most building materials has not been fully prohibited by federal law, the use of asbestos, for the most part, has been discontinued since the late 1970s.

No structures were present on the Site during Site reconnaisance.

6.4 AIR EMISSIONS

The Site and vicinity properties were not identified in the EDR Radius Map report on the EMI database.

SECOR personnel reviewed Notice of Violation (NOV) and Notice to Comply (NOC) online searchable databases for the South Coast Air Quality Management District (SCAQMD) at http://www.aqmd.gov/nov/nov.aspx?notice-type=NOV for the years 1988 through 2008. According to these databases, the Site has not received a NOV or NOC.

6.5 RADON

Radon is a colorless, tasteless radioactive gas with a United States Environmental Protection Agency (EPA) specified action level of 4.0 picocuries per liter (pCi/L) of air. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is associated with its rate of

accumulation within confined areas, particularly confined areas near to the ground, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

SECOR reviewed the Department of Health Services Radon Database for California (July 2007) and found that in zip code 92555 area where the Site is located, 2 tests were taken as part of the survey. Of the 2 tests, 0 percent (0 out of 2) had radon levels greater than 4.0 pCi/L.

Information regarding the presence of radon at the Site relies on regional data and does not represent site-specific data. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993). Based on the DHS survey results, radon should not be an environmental issue at the Site.

To determine site-specific radon levels a radon survey would have to be conducted. Because regional radon levels do not appear to represent a REC of the Site a radon survey is not recommended.

6.6 DRY CLEANING OPERATIONS

No dry cleaning operations were observed on or near the Site. No indication of past dry cleaning operations was identified.

6.7 PESTICIDES

Historical sources review indicates that the Site was developed initially as part of an agricultural field by at least 1939. Based on our experience in the vicinity of the Site, near surface soils may contain residual levels of pesticides at concentrations below applicable screening criteria, which are not considered to represent a significant risk to human health or the environment, and are not considered to result in future regulatory scrutiny.

No documentation of commercial on-site use of agricultural chemicals (e.g., pesticides, insecticides, herbicides or fertilizers) was identified during this ESA. SECOR did not identify any apparent agricultural chemical processing areas, such as crop dusting airfields, bulk mixing areas; or repacking, transfer, or agricultural chemical storage areas in the aerial photographs that were reviewed during this ESA. There was no evidence indicating that agricultural chemicals were improperly stored or used on the subject property.

6.8 MOLD-LIKE SUBSTANCES

No mold-like substances were observed at the Site.

6.9 ELECTROMAGNETIC RADIATION

No overhead high voltage electrical power transmission lines or other obvious sources of significant levels of electromagnetic radiation emissions (e.g., cellular communication station antennae) were observed at or adjacent to the Site.

		8	

7.0 DATA GAPS

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-05 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Deletions or Exceptions From Scope of Work:	None
Weather-Related Restrictions To Site Reconnaissance:	None
Facility Access Restrictions to Site Reconnaissance:	None
Other Site Reconnaissance Restrictions:	None
Data Gaps From Environmental Records Review:	None
Data Gaps From Historical Records Review:	None
Data Gaps From Interviews:	None
Other Data Gaps:	None

Based on the results of this Phase I ESA, no data gaps per ASTM 1527 were identified.

×	

8.0 CONCLUSIONS AND RECOMMENDATIONS

SECOR has completed a Phase I ESA of the 10-acre undeveloped parcel located near the corner of Iris Avenue and Olive Street in Moreno Valley, California (Site). The Phase I ESA was conducted in general conformance with ASTM E 1527-05 on behalf of Kaiser as part of Kaiser's environmental due diligence prior to a property transaction.

Based on the results of this Phase I ESA, no RECs, HRECs, or other environmental concerns were identified in connection with the Site. The following additional findings are noted:

 Based on our review of the title report and policy of title insurance provided by Kaiser, the northwestern corner of the Site is located within FEMA Flood Zone A, which corresponds to the 100-year flood plain. The Site is also located in an area associated with mitigation of impacts to potential habitat areas for endangered species in western Riverside County as implemented by the Riverside County Habitat Conservation Agency.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.0. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Copies of report preparer's resumes are provided in Appendix D.

10.0 STATEMENT OF LIMITATIONS

The conclusions and recommendations contained in this report/assessment are based upon professional opinions with regard to the subject matter. These opinions were prepared in accordance with generally accepted environmental consulting and engineering standards and practices applicable to this location and existing at this time. The use of this report is subject to the following limitations:

- The data and findings presented in this report are valid as of the dates when the investigations were performed. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in the report.
- 2. The data reported and the findings, observations, and conclusions expressed in the report are limited by the Scope of Work, budgetary constraints, site access and schedule, as defined in the contract with SECOR.
- 3. This report is based, in part, on unverified information supplied to SECOR by third party sources, such as regulatory agencies, prior owners or operators of the property, analytical laboratories, subcontractors, etc. While efforts may have been made to substantiate this third party information, SECOR cannot guarantee the completeness or accuracy of this information.
- 4. The findings, observations, and conclusions expressed by SECOR in this report are not, and should not be, considered an opinion concerning the compliance of any past or present owner or operator of the Site with any federal, state or local law or regulation.
- 5. No warranty or guarantee, whether expressed or implied, is made with respect to the data or the reported findings, observations, and conclusions, which are based solely upon Site conditions in existence at the time of investigation.
- 6. SECOR reports present professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of federal, state or local governmental agencies. Issues raised by the report should be reviewed by appropriate legal counsel.
- 7. This report is intended for the use of SECOR's client and the appropriate regulatory agency only; any other use must be approved by SECOR and the client in writing. If any such unauthorized use occurs, it shall be at the user's sole risk without liability to SECOR.

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from landowner liability under CERCLA as an innocent landowner, bona fide prospective purchaser, or contiguous property owner, ASTM standard practice E1527-05 and the Federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to SECOR along with the executed Attachment A form.

1.	Property Information.				
	Property Name:	and the second second			
	Property Address: APN: 486-310-024				
	City: Moreno Valley	State: CA	Zip: <u>92586</u>		
	Property Owner Name: Omni M	foreno Valley LLC, a Deleware lin	nited liability company		
	Property Owner Phone #: 949.	215.9790

3.	Environmental Cleanup Liens.				
	Are you aware of any environmental under Federal, tribal, state or local law	cleanup liens against the properw?	rty that are filed or recorded		
	☐ Yes ☐ No				
	If yes, describe or attach details of th	ne l <u>i</u> en:			
4.	Activity and Land Use Limitations.	•			
	Are you aware of any activity and restrictions, or institutional controls recorded as applicable to the proper cleanup, or related matters?	that are in place at the propert	y and/or have been filed or		
	☐ Yes ☐ No				
	If yes, describe or attach details of the	he limitations:			
5.	Specialized Knowledge or Experie	ence.			
	As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?				
	☐ Yes ☐ No				
	If you describe or attach details of y	vour specialized knowledge or ex	perience:		

		7

6.		Relationship of Purchase Price to Fair Market Value of Property.
	the the	es the purchase price being paid for this property reasonably reflect the fair market value of property? If you conclude that there is a difference, do you have any reason to believe that reduced purchase price may be related to contamination known or believed to be present at property?
		Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.
		No. I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.
	-	Not applicable. User is not involved in a purchase of the property.
7.	Co	mmonly Known or Reasonably Ascertainable Information.
	the	e you aware of commonly known or reasonably ascertainable information about the property at would help the Environmental Professional to identify conditions indicative of releases or realened releases of hazardous substances or petroleum products? For example:
	a.	Do you know the past uses of the property?
		Yes (describe):
		No
	h.	Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?
		Yes (describe):
		No
	Ċ.	Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?
		Yes (describe):
		□ No
	d.	Do you know of any environmental cleanups that have taken place at the property?
		Yes (describe):
		No
8.	Т	he Degree of Obviousness of Contamination.
	d tl a	1527-05 and the Federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the legree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?
		Yes (describe):
	Ė	D No

9. A	valiability of Previous Environmental Reports.
d	re you aware of previous environmental site assessment reports, other environmental reports, ocuments, correspondence, etc., concerning the property and its environmental condition? Yes (please identify and provide copies, if available):
] No

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

Dear Mr. Stagno:

The Department of Toxic Substances Control has received your request to review records under the Public Records Act.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available at each DTSC Regional File Room for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request. please contact our Regional Records Coordinators at (714) 484-5337.

Sincerely,

Julie Johnson

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

TC2198408.1s Page GR-1

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 06/16/2008 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

SSTS: Section 7 Tracking Systems

Section 7 of the Foderal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2006 Date Data Arrived at EDR: 03/14/2008 Date Made Active in Reports: 04/18/2008

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

USGS TOPOGRAPHIC MAP

Target Property Map:

33117-H2 SUNNYMEAD, CA

Most Recent Revision:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

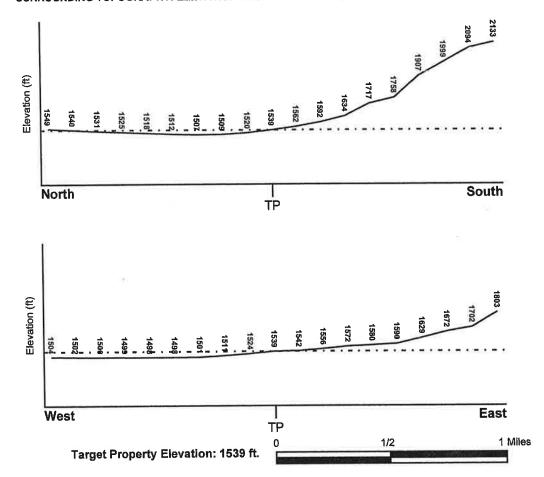

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:

1.25 miles

Status:

Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION

FROM TP

GENERAL DIRECTION

MAP ID Not Reported

GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:

HANFORD

Soil Surface Texture:

coarse sandy loam

Hydrologic Group:

Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class:

Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min:

> 0 inches

Depth to Watertable Min:

> 0 inches

			Soil Layer	Information			
	Bou	Boundary		Classif	ication	Saturated hydraulic

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5 Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOWR Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Amdt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SECOR PN: 370T.20977.01

JASON J. STAGNO

Staff Scientist

B.S.

Biology, Environmental, 2004

California State University, Northridge

Expertise: Environmental Due Diligence, Environmental Site Assessments, Subsurface Investigations, Regulatory Compliance

Mr. Stagno has over three years of environmental consulting experience. Mr. Stagno's experience has focused on environmental consulting services for commercial and industrial clients. Service areas include property transaction due diligence, environmental site assessments, hazardous materials assessments, subsurface investigations, and remedial investigations.

Project Experience

Remedial Investigations

Environmental Site Assessments

Phase I and II ESA, Goodyear Tire, Thousand Oaks, California. Staff Scientist. Mr. Stagno
performed a Phase I and Phase II ESA on a former auto repair facility to evaluate the potential
magnitude of environmental liability associated with identified recognized environmental conditions
at the facility.

The Phase II ESA consisted of a subsurface investigation that included advancing temporary borings. Direct push drilling techniques were used to obtain soil samples from beneath the site.

All phases of the environmental assessment were conducted as part of a property transaction, and, therefore, there was no regulatory oversight.

 Phase I and II ESA, Undeveloped Property, Santa Clarita, California. Engineering Technician. Mr. Stagno performed a Phase I and II ESA on an undeveloped property located in a residential/commercial area of the City of Santa Clarita. Based on the review of historical and environmental records for the Site, and the Site reconnaissance, Atkins Environmental H.E.L.P. (AEH) identified the potential for uncontrolled fill material and past chemical storage on the Site.
 AEH recommended a Phase II ESA to evaluate the potential soil contamination on the Site.

Based on the results of the Phase II ESA, AEH identified the presence of hydrocarbons in the soil. Value was added to the client by providing a rough delineation of the location of hydrocarbon impacted soil that could potentially affect planned future development activities.

 Phase II ESA, Parking Lot, Pasadena, California. Staff Scientist. Mr. Stagno performed a Phase II ESA on a parking lot for possible future development as a hospital.

The Phase II ESA consisted of a subsurface investigation that included advancing temporary borings. Direct push drilling techniques were used to obtain soil samples from beneath the site.

STEVEN C. BRADY, C.E.G., C.HG., R.E.A. Principal Hydrogeologist/Project Manager

M.S. Geology, 1988, Arizona State University

B.A. Architecture, 1979, University of North Carolina

Mr. Brady is a registered geologist, certified engineering geologist, and registered hydrogeologist, and has 23 years of professional experience in the engineering and construction fields, as well as 14 years in environmental consulting. He has been involved in all aspects of regional and site-specific environmental, geohydrologic, and geotechnical investigations throughout the southwestern United States, as well as managed and participated on CERCLA/SARA, RCRA, NEPA, and CEQA regulated projects. His experience includes remedial investigations/feasibility studies; risk assessments; soil and groundwater assessments; contaminant fate and transport determinations; and contaminant delineation and treatment or removal. Other specialized activities include watershed and wetlands investigations; fault, earthquake, and landslide studies; siting investigations; forensic chemical investigations; and subsurface modeling and investigations using various investigative techniques. Mr. Brady also has an extensive history of managing construction-related projects.

Mr. Brady's background includes management and performance of major soil and groundwater contamination investigations and remedial activities, projects involving water rights issues, development of policies and procedures regarding geologic and geohydrologic matters; and geohydrologic input to EIR/EIS documents. Additional responsibilities involve maintaining a current understanding of changing regulations and protocols of the differing regulatory agencies regarding soil and groundwater contamination, management and training of staff, and QA/QC and peer review of reports and other documents. Mr. Brady has participated as an expert for the California Board of Geology for determination of pass point criteria for Engineering Geologist and Hydrogeologist Certifications.

Project Experience

- Evaluated a coastal property in Ventura County consisting of a power generating facility tank farm, hazardous materials storage area, and agricultural areas to be acquired and restored to wetland conditions. The project included research, soil, surface water, and groundwater sampling, assistance in property acquisition negotiations, and providing engineering geologic, hydrogeologic, and environmental opinions and recommendations aimed at facilitating the property acquisition while limiting liability to the State of California. Participation on the project includes oversight during tank farm and hazardous material storage area decommissioning and property restoration.
- Currently participating as an active member of the Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees. Providing engineering geologic and hydrogeologic opinions and recommendations to the committees aimed at consensus for management and obtainment of numerous conflicting goals of the various stakeholders. Selected as a member of the Calleguas Creek wetlands restoration team for a contract with the California Coastal Conservancy for identification and recommendations for wetlands restoration candidates in the watershed.
- Served as a member of the project team evaluating the hydrogeologic and hydrologic conditions
 within portions of the Santa Clara River watershed. An extensive water budget analysis was
 performed on individual watersheds and contributory streams to the Eastern Groundwater Basin,
 as well as for the entire Groundwater Basin, of the Santa Clara River, in order to estimate volumes
 of available water at any portion of the Basin.

- Served as Project Manager for fast-track compliance audits and historical evaluations of seven municipal airports in Southern California, Washington, and Pennsylvania. The project involved agency file and database research, historical document research, and site facility audits to determine compliance status with appropriate regulations, and generation of summary reports aimed at limiting future liability for the new operators at the airports.
- Project Manager for agricultural packing plant Storm Water Pollution Prevention Plan development and compliance project. The project involved site facility audits to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.
- Developed remedial closure reports for a multiple-owner tank farm in the City of South Gate. To facilitate development of the property, the tank farm was split into 4 separate parcels. Remediation of the soils was performed, with impacted soils exceeding cleanup levels excavated and transported off-site, impacted soils within cleanup levels inhumed into a constructed soil repository, and clean soils reused during regrading activities. The project was estimated by prior consultants to cost over \$9 million to complete; however, the project was finished on an expedited basis and received RWQCB closure for approximately \$1 million, a considerable savings to the client. Development of the property also was performed on a parcel-by-parcel basis, allowing the City's contractor to begin development in a timely manner.
- Project Manager for industrial client Storm Water Pollution Prevention Plan development and compliance project. The project involved a site facility audit to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.
- Served as Project Manager for a compliance status summary of the underground storage tanks at 250 client-owned golf courses throughout the UK and US. The project involved review of tank data from the various courses and management/oversight of the development of a database that contained pertinent details such as quantity of USTs and aboveground storage tanks, installation dates, and other tank/tank appurtenance information. The database allowed for searches and sorting to determine compliance with the US-EPA 12/22/98 UST compliance deadline.
- Served as Project Manager in support of property transfer of 3 metal stamping and forming facilities. Two of the sites were listed as potential contributors to the contamination in the San Gabriel Valley groundwater, with the third listed by the U.S. EPA as within the top 16 contributors to the groundwater contamination in the Baldwin Park Operable Unit (OU). Research was performed on the individual sites and their contribution to the San Gabriel Groundwater Basin contamination: on the nature and extent of contamination in the San Gabriel Valley Groundwater Basin; on the locations and calculated contributions to the contamination in the Baldwin Park OU from other known PRPs; and on the water delivery and remediation plans for the different San Gabriel Valley OUs, and in particular, in the Baldwin Park OU. Opinions were generated regarding potential future liability for ownership of each facility, and an evaluation of the sources of contamination found in the Baldwin Park OU was developed. Determinations of legal implications and calculations of environmental liability were performed, and a range of anticipated costs associated with ownership of the properties were presented. Results were used in negotiations for the properties. Facility audits were also performed at each site, with recommendations provided for equipment and process upgrades, which were aimed at limiting future releases and overall liability.
- Conducted an analysis of contamination released from underground storage tanks, calculated cleanup levels based on risk to groundwater, and developed Underground Storage Tank summary and closure request reports for a mining facility.

- Performed remedial oversight at a former military/aerospace manufacturer in Santa Ana, California. Extensive quantities of chlorinated solvents, metals, and fuels were released into subsurface soils and groundwater by a past military/aerospace tenant. Numerous remedial actions have been performed at the site. A summary report was developed detailing the nature and levels of contamination in the soil and groundwater aquifers, a summary of the prior assessments and remedial activities performed at the site, an opinion regarding the extent of contamination in the subsurface and different water-bearing zones, and an opinion regarding the adequacy of the former tenants proposed assessment and remedial activities. Assistance with negotiations with the tenant and the RWQCB regarding site remediation was provided.
- Served as Project Manager for a fast track investigation on a Brownfield investment property that was formerly a portion of the original McDonnell Douglas Aircraft manufacturing facility in Santa Monica. Work Plans were developed and approved by the client, property owner, and lender. Soil gas surveys and soil sampling assessments were performed to characterize the nature, levels, and potential sources of contamination at the site. The entire project was completed within 3 weeks, and recommendations were provided to the client aimed at limiting future liability. Negotiation support was provided to assist in obtaining funding.
- An investigation of the methane and leachate collection systems operational at a golf and country club, on the site of a former landfill in the Santa Monica Mountains, was performed. An extensive review of available landfill and facility construction and monitoring data was conducted, as well as research on documentation available from the RWQCB, the Department of Fish & Game, and the US Army Corps of Engineers. Site and facility audits were performed to evaluate the present condition of the methane, gas condensate, and leachate collection systems. Conclusions and opinions were provided to the client concerning the operation, maintenance, and adequacy of the collection systems. Mitigative measures were recommended to the client aimed at limiting offsite migration of methane and improving water quality downgradient from the landfill.
- Performed a subsurface soil and groundwater site assessment of a telecommunication property in Santa Barbara. Adjacent properties had released PCE and TCE into the subsurface soils and groundwater, but contamination at the site appeared disconnected from the larger plume originating offsite. A work plan and health and safety plan were developed and approved by the client and their corporate counsel. Multiple continuous-cored geoprobe borings were drilled and soil, soil vapor, and groundwater samples collected. Through analysis of the lithology, it was shown that the subsurface consisted of an ancient nearshore, lagoonal environment transected by stream channels. Two separated plumes were shown to occur at the site, with the larger plume derived from an offsite source and the smaller plume originating from onsite operations. A health based risk assessment was performed for the property to determining appropriate cleanup levels.
- Prepared permit applications, FESOP reporting forms, Storm Water Pollution Prevention Plans, Storm Water Monitoring Plans, and Notices of Intent for two oil fields in Ventura County. The plans involve documenting past releases, mitigative measures to control future releases, details of sampling methodology and timing of sampling events, and development of summary tables and forms for field personnel to use as documentation for sampling during storm events.
- Developed and implemented a workplan for investigation of a prior mining facilities siltation ponds, equipment areas, and stormwater runoff locations. Duties consisted of research, air photo analysis and map interpretation, site reconnaissance and mapping, and development of opinions regarding current condition of each siltation pond (erosion, piping, seepage, overflow potential, upstream sedimentation, foundation quality, settlement, etc.), and recommendations for mitigative measures.

- Served as Project Manager for commercial and industrial property transfers and litigation support in Los Angeles and Ventura Counties. Numerous specialized assessments have been conducted for various financial institutions. These investigations have involved drilling and sampling of soil and groundwater utilizing geoprobe, hydropunch, hollowstem auger, and other techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; and evaluation of facility usage, and Risk Assessments. Remediation of soils and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.
- Served as Project Manager for a site assessment of a Rock Crusher facility in San Bernardino.
 Adjacent to the former AT&SF intermodal facility and various auto dismantlers, and with known
 regional groundwater contamination in the site vicinity, a site assessment was required to
 determine the nature and level of contamination present at the site. Results of the investigation
 were used in negotiation for the property.
- Served as Project Manager for soil and groundwater assessment, facility audit, and oversight of
 remedial activities at an active dry cleaning facility. Releases of PCE from older dry cleaning
 equipment and drum storage locations were investigated, and the extent of both soil and
 groundwater contamination due to the releases was determined. Groundwater samples were also
 collected from perched zones and from below the groundwater table using a hydropunch sampling
 tool. Calculations of attenuation factors and PCE cleanup levels were performed using the LA
 RWQCB's Interim Guidance for VOC Impacted Sites.
- Served as Project Manager for soil and groundwater site assessment, quarterly groundwater monitoring, and oversight of remedial activities at an agricultural site. The site encompasses over 60 acres, with approximately 20 acres within the coastal zone of Santa Barbara. In addition to releases from pesticide and chemical storage areas, diesel boilers, and fuel tanks, large portions of the site consisted of undocumented landfills. An assessment of soil and groundwater was performed for the site, and the extent of both soil and groundwater contamination due to releases of fuels and chemicals was determined. Calculations of groundwater gradient and rates of contaminant flow in the subsurface were performed. Remedial action plans were developed and implemented to remove landfills from the site.
- Developed a feasibility study for remedial alternatives for a complex site in Oxnard where soil and groundwater were contaminated by releases from leaking fuel underground storage tanks. Numerous constraints occurred at the site, including high, artesian groundwater confined by clays in a silty matrix, and the needs of the client to keep the business operational during remedial activities. Differing remedial alternatives were presented and evaluated, including natural attenuation, physical confinement, air sparging combined with vapor extraction, and hydrogen peroxide enhanced bioremediation. Due to the physical and economic constraints at the site, hydrogen peroxide enhanced bioremediation was chosen as the methodology considered most viable for the site. The project involved research on proven remedial techniques, innovative remedial alternatives, and suggested methodologies that addressed site constraints.
- Served as Project Manager for a remedial investigation under the Installation Restoration Program for closure and property transfer of March Air Force Base, Hawes Site in San Bernardino County, California. The Hawes Site consists of a former auxiliary airport and radio tower, and encompasses approximately 305 acres of federally endangered species habitat. Initial duties included an endangered species survey of the Site, development of an endangered species Conservation Plan, and a geophysical survey of the Site. The Conservation Plan was reviewed and approved by the U.S. Fish and Wildlife Service. Site specific Work Plans, Sampling and Analysis Plans, and Health and Safety Plans were then developed for the Site and approved by the U.S. Army Corps of Engineers, the U.S. Air Force, the U.S. EPA, the California EPA, and the

Regional Water Quality Control Board. The planning documents detailed protection of endangered species and assessment of potential contamination and closure of fuel and waste oil USTs, removal of septic tanks and associated leach fields, removal of underground tanks, geophysical logging and closure of the onsite water supply well, removal of numerous utility vaults, demolition and removal of a storage building, removal of scrap and debris from the Site, and asbestos abatement of the bunker and bunker area.

- Served as Project Manager for an expedited remedial investigation under the Installation Restoration Program for closure of Edwards Air Force Base, Phillips Laboratory OU4, Sites 7 and 167. These sites are the beryllium storage and test firing range for the Phillips Laboratory, and together occupy approximately 48 acres. Site 7 was used to stockpile beryllium-contaminated soils after explosions destroyed buildings on the Site. Site 167 received beryllium fallout from test firings of rocket engines. Duties included development of the work, sampling and analysis, and Health and Safety Plans, which were reviewed and approved by the U.S. Army, the U.S. Air Force, and the U.S. EPA.
- Served as Deputy Project Manager for an Engineering Evaluation/Cost Analysis (EE/CA) for remedial actions at March Air Force Base Site 17, an abandoned pool which was backfilled with hazardous waste. Duties consisted of research, analysis, and generation of a report which includes development of scope and schedule for Removal Action Objectives adhering to statutory limits for removal actions; identification and analysis of Removal Action alternatives, including effectiveness, implementability, and cost; comparative analysis of Remedial alternatives; and recommendations for Removal Actions.
- Served as Project Manager for a fast-track remedial investigation supporting RCRA closure of Norton Air Force Base NPL site in San Bernardino, California. Initial tasks consisted of assessment and demolition of two hazardous material storage facility areas at the Base. Part of the DRMO, these two storage facilities received all hazardous materials generated at the Base. A Site-specific Work Plan, Chemical Data Quality Management Plan, and Health and Safety Plan were developed and approved by the U.S. Army Corps of Engineers, U.S. Air Force, and the California EPA. Field activities consisted of wipe sampling of facility surfaces prior to demolition, demolition and salvage of building materials, drilling 33 subsurface borings, and collecting concrete core, asphalt, and subsurface materials to assess conditions at the site. Demolition of the buildings was completed in 1 day and salvage operations were performed concurrent with the site assessment. A report was developed detailing activities and recommendations, and Certification of Closure was performed as a final task.
- Served as Project Manager for remedial investigations at the INS Border Patrol Stations in Campo and Calexico, California. Leaking underground fuel tanks had released significant quantities of gasoline into the subsurface and groundwater at each site. Unique, complex geohydrologic conditions occur in the subsurface, with groundwater contamination at the Campo site largely following an ancient buried river channel, but overflowing the subsurface "paleo-banks" during winter high water conditions. Groundwater contamination at the Calexico site occurred within interspersed sand lenses of a thick clayey (nearshore lacustrine) formation 10' below ground surface, and extends under a residential area. A geoprobe sampling device and onsite mobile laboratory was used to define the aerial extent of the groundwater plumes, and groundwater monitoring wells were installed for confirmation sampling and to determine groundwater gradient. Site specific Work Plans, Sampling and Analysis Plans, Health and Safety Plans, and reports detailing conclusions and recommendations were developed and approved by the U.S. Army Corps of Engineers for each major phase of the project. Negotiations with the lead regulatory agencies were performed on behalf of the INS.
- Served as Field Manager and Technical Reviewer for a soil and groundwater investigation at the Todd Pacific Shipyard at the Port of Los Angeles. The Shipyard was a 109-acre ship-building and repair facility at the Port. Responsibilities included management of the field sampling program at

potential contamination sources such as machine pit, sumps, clarifiers, and dry wells in the maintenance/manufacturing buildings; drilling of shallow borings with limited access rigs at the targeted source areas; and collection of numerous groundwater samples at locations where suspected groundwater contamination might exist. In addition, Quality Control Review of the reports developed for regulatory agency (L.A. Fire Department and RWQCB) compliance was also conducted.

- Served as Project Manager for an environmental assessment of a hazardous material Treatment, Storage, and Disposal facility in Alhambra. The project was to determine if hazardous materials present at the facility had adversely affected the subsurface at the site. Duties consisted of research; development of a site specific Work Plan and Health and Safety Plan; drilling and sampling; analysis for petroleum hydrocarbons, PCBs, volatile and semivolatile organics, and metals; and generation of a report with recommendations for the site.
- Served as Project Manager for the geohydrologic and environmental portions of an investigation to evaluate landslide potential and potential soil and groundwater contamination for a proposed force main line in the Pacific Palisades for the City of Los Angeles, Geotechnical Services Division. Numerous ancient and historic landslides occur in the Pacific Palisades, many of which have activated due to the presence of high groundwater. The study required review and compilation of prior geotechnical and environmental data; geologic field mapping and surveying; geotechnical and environmental drilling, sampling, and chemical and physical analysis of soil and groundwater; review of historical and site-specific oblique, vertical, and infrared aerial photographs; data compilation and analysis; determination of groundwater sources; and map and report preparation with evaluation of alternatives and recommendations.
- Served as In-House Project Manager for Metropolitan Transportation Authority (MTA) environmental services. Provided coordination and management of due diligence activities for the Phase I, II, and III site assessments on SPTCo, AT&SF, UPRR, and adjacent properties, as well as individual and multiple parcel acquisitions. Duties consisted of generation of RFP scope-ofwork and engineer's estimates for environmental and hydrogeologic investigations; evaluation of consultants reports and raw data; recommendations concerning liability and effects of soil and groundwater contamination on the proposed and ongoing rail line, station, and tunneling projects; recommendations for remedial actions/mitigative measures for each project; liaison with MTA Staff and legal council; and negotiations with property owners and regulatory agencies to set project cleanup criteria for contaminated sites. Summary reports were generated for presentation to the California Transportation Commission detailing activities regarding hazardous materials and their effects on the overall project. A commendation was received from the MTA for the work performed on this contract. Mr. Brady also managed site assessments on over 300 miles of MTA corridor right-of-way, as well as performed specialized assessments for individual parcels. These assessments have included evaluation of the quality of soil and groundwater from literature review and drilling, sampling, and chemical analysis. Conclusions and recommendations provided were used for property negotiations. Mr. Brady was also Response Team Manager for MTA Real Estate and METROLINK division of the MTA. His duties involved team dispatch, coordination with regulatory agencies, health and safety control, remedial activities, manifesting, and reporting.
- Served as Project Manager for an environmental investigation at the Army's Baseyard Facility in El Monte, California. This facility is the primary vehicle maintenance and equipment storage for the Corps of Engineers. The goal of the project was to determine if soil and groundwater contamination existed at the site. A Work Plan and H&S Plan were developed, drilling and sampling of multiple soil borings and monitoring wells was performed, and reports detailing activities and conclusions were prepared.
- Served as Project Manager for an environmental assessment aimed at gaining site closure for a 55-acre Nike missile battery located in the Puente Hills of Los Angeles County. The Site consisted of three areas on two separated ridge tops; the Administration Area and Launch Area (also known

as the Lower Site) were on one of the ridge tops, and the Control Area (also known as the Upper Site) was located on an adjacent ridge top. The Nike Site contained aboveground and underground storage tanks, a vehicle maintenance shop, underground missile storage and launch facilities, aboveground missile assembly, fueling, and testing facilities, surveillance facilities, barracks, and an underground network of tunnels. Duties consisted of research, negotiations with the Cal-EPA, development of Work Plans and Health and Safety Plans, geophysical and radiation surveys, drilling and sampling soil and bedrock, and sampling for asbestos containing building materials. Reports were developed detailing options and recommendations for property transfer of a complex military site.

- Served as Project Manager for an environmental assessment of the 64-acre Seven Oaks Dam Mitigation property in the Santa Ana River Flood Channel, Redlands. The project consisted of a Phase I level site assessment and soil gas survey. The project involved research, historic air photo analysis, site reconnaissance and mapping, installation of soil gas monitoring wells, soil-gas sampling for volatile organics, data compilation and analysis, and preparation of a report detailing activities and conclusions.
- Performed geohydrologic work for 5 earthfill dam evaluation projects at Camp Pendleton, California. Duties consisted of research, air photo analysis and interpretation, site reconnaissance and mapping, and development of opinions regarding current condition of each dam (erosion, piping, seepage, overflow potential, upstream sedimentation, foundation quality, settlement, etc.), and recommendations for mitigative measures.
- Served as Project Manager for a geologic, hydrologic, and contamination report for input to an EIR/EIS for the proposed Los Angeles Harbor Department's Henry Ford (Badger Ave.) Bridge replacement project at the Port of Los Angeles. Duties included review of existing geologic, hydrologic, environmental data, and historical aerial photos; data compilation; seismic analysis; identification of impacts to the environment, workers, and the project; evaluation of mitigative measures; and report preparation.
- Served as Project Manager for as-needed environmental services for the Port of Los Angeles.
 Duties included review and compilation of data from numerous prior reports into summary reports;
 and environmental drilling, sampling, and monitoring well installations at the proposed Terminal
 Island Container Transfer Facility (TICTF) to determine if contaminated soil occurred at hazardous
 levels, and the levels of volatile organic and metals contamination in the groundwater. A report
 detailing conclusions and recommendations was generated for the TICTF site. An additional study
 was performed at the Proposed Dry Bulk Handling facility to assess hydrocarbon and volatile
 organic contamination.
- Served as Project Manager for Site Assessments on the San Diego Mission Valley East and Mission Valley West commuter rail alignments and alternatives. Duties included development of Phase I alignment reports for the projects, including detailed environmental evaluation of alternatives with recommendations, and liaison with MTDB real estate and geotechnical design staff and local regulatory agencies. Each report involved research and government/regulatory database searches, historic air photo analysis, site reconnaissance, property owner interviews, generation of alignment maps indicating problematic areas, and detailed conclusions and recommendations. Additional assignments for the MTDB included peer review of other consultant's work and management of construction monitoring services for the MTDB's Cuyamaca Street Improvements project.
- Performed geologic portions of a geotechnical investigation for the proposed Foothill Transportation Corridor through in Orange County. The investigation provided geotechnical design criteria for proposed bridges, highway embankments, and appurtenant structures. Duties included

coordination of services, supervision of geologic field and trench mapping, down-hole logging of borings to 175' below ground surface, determination of groundwater depth and gradient, compilation of data and maps, and report preparation.

- Served as Project Manager for a geologic/geotechnical investigation and hazardous materials assessment for the California SR125 Corridor. The purpose of the study was to provide geologic, geotechnical, and environmental input for an EIR/EIS document consistent with CALTRANS requirements to the engineering team evaluating the various alignment alternatives. The project included an environmental assessment, geologic reconnaissance, and seismic analysis of the alignment and alternatives. A contingency Plan was developed for managing hazardous materials during road construction.
- Developed the geologic portion of an EIR investigation for the proposed Cajalco Transportation Corridor. Duties included review of existing geologic and geotechnical information; review of historical and project specific vertical stereographic photographs; geologic field reconnaissance; slope stability and seismic considerations; identification of impacts and evaluation of mitigative measures; and preparation and submittal of a report and maps presenting geologic units, existing landslides, and potential constraints. In addition, preliminary environmental data was compiled and provided to the design team for evaluation of the different corridor segments.
- Conducted characterization, delineation, and remediation of hydrocarbon and volatile organic
 contaminated soils and groundwater at Orange County's John Wayne Airport. Duties included
 development of site-specific work plans and health and safety plans; permitting, drilling and
 sampling soil borings; installation of groundwater monitoring wells; installation, maintenance, and
 monitoring of a groundwater treatment system; compilation and analysis of analytical results; and
 preparation of monthly and quarterly reports.
- Conducted siting of multiple Seismograph Station arrays to locate significant, active fault segments in Southern and Central California meeting specific lithological criteria. The seismograph arrays were designed to obtain near-field seismic effects. The project involved review of numerous geologic and geotechnical reports, evaluation of data from existing seismograph arrays, field mapping and site reconnaissance, contact with property owners to obtain lease permits, and generation of a report detailing conclusions and recommendations.
