Page iv • PlaceWorks January 2019

PlaceWorks has performed a Phase I Environmental Site Assessment (Phase I) on behalf of Riverside Unified School District for the proposed expansion of Longfellow Elementary School, currently located at 3610 Eucalyptus Avenue in the City of Riverside, Riverside County, California (Figures 1 and 2). The proposed expansion site is comprised of two adjacent parcels located on the east side of the school, 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. The total expansion area is approximately 0.61 acres, comprised of 0.36 acres for the two residential parcels, 0.06 acres for the alley way behind the two residential parcels, and 0.19 acres for the cul-de-sac in front of the two residences. The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-13 Standard and discussed in the Introduction section of this report. The Phase I followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites.

The 5.09-acre existing Longfellow Elementary School campus is identified with Assessor's Parcel Number [APN] 211-105-001. Figure 3 is an aerial photograph showing current site conditions of the school and the expansion parcels and the outline of the proposed expansion parcels boundaries. The project site for the Phase I is the expansion area. The existing school site and expansion parcels are in the City of Riverside, northeast Riverside County, and are completely surrounded by the City of Riverside. Regional access to the site is provided by State Route 91, approximately 0.7 mile west of the site. The proposed expansion parcels are in a residential community with residences on three sides and Longfellow Elementary School to the north and west. 6th Street borders the existing school site on the north, and University Avenue borders the school site on the south. The expansion parcel including the two residences (2226 7th Street and 2210 7th Street, APN 211-143-007 and APN 211-143-008), are bordered by Longfellow Elementary School playfield to the south of the dirt alleyway, followed by school playfields to the south. Figure 2 shows the local vicinity of the school site. Figures 3 and 4 show the current conditions of the existing school and proposed expansion site.

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the subject site. Our opinion regarding an REC's potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-13 Standard defines an REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

No RECs were identified for the proposed expansion site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

No HREC were identified for the proposed expansion site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

DEPARTMENT OF TOXIC SUBSTANCES CONTROL PROTOCOL

Based on a review of historical information; the two residential buildings have occupied the subject site since 1908. Due to the age of the current structures in the proposed expansion parcels area, the DTSC would require testing to assess for potential impacts to soil from lead-based paint and organochlorine pesticides from possible termiticide usage. PlaceWorks recommended that a Phase I Addendum be implemented to collect soil samples in the project area to assess the existing structures. Following DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers dated June 2006, soil samples were collected on June 7, 2018, to assess the proposed expansion parcels for

Page vi • PlaceWorks

January 2019

potential lead-based paint and termiticides contamination. This Phase I Addendum is included in Appendix D.

SUMMARY

Based on the results of this assessment, REC, CRECs, and HRECs were not identified for the project site. However, elevated concentrations of lead were found at both parcels and elevated levels of chlordane were found at parcel 2210 7th Street at sample location 2210-4. A Phase I Addendum for potential lead-based paint and organochlorine pesticides from termiticides was implemented (Appendix D). PlaceWorks recommends that approximately 70 cubic yards of shallow surface soil be removed in the dripline of the buildings as discussed in the Phase I Addendum.

Section 17213 of the California Education Code and Section 21151.8 of the California Public Resources Code prohibit construction of a school upon a current or former hazardous waste disposal site or solid waste disposal site. Based on site inspection and information reviewed for preparation of this report, the existing school site and proposed expansion parcels are not located on a current or former disposal site.

The remainder of this report contains additional information regarding the Phase I work performed, the findings summarized above, and any limitations.

This page intentionally left blank.

Page viii • PlaceWorks January 2019

This Phase I Environmental Site Assessment (Phase I) was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard for Riverside Unified School District proposed expansion project located adjacent to Longfellow Elementary School campus, Riverside County, California (Figures 1 and 2). The Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-13 Standard. The Phase I followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites.

The Riverside Unified School District proposes to acquire approximately 0.35 acres comprised of two adjacent residential parcels located at 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. The total expansion area is approximately 0.61 acres, comprised of 0.36 acres for the two residential parcels, 0.06 acres for the alley way behind the two residential parcels, and 0.19 acres for the cul-de-sac in front of the two residences. Figure 3 and 4 are aerial photographs showing the current boundaries of the elementary school and site conditions, along with the proposed expansion site, the project area.

1.1 OBJECTIVE

The objective of this assessment was to evaluate site history, existing observable conditions, current site use, and current and historic uses of surrounding properties to identify the potential presence of Recognized Environmental Conditions (RECs) in connection with the subject site. RECs are defined by ASTM as

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

In addition, the Standard requires the identification of historical RECs (HRECs) and known or suspect environmental conditions in the Phase I report. The standard defines historical RECs as

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, defined by ASTM as "a risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate. Consideration of environmental risk issues may involve addressing one or more non-scope considerations."

1.2 SITE IDENTIFICATION

The expansion site is rectangular in shape and is approximately 0.61 acres comprised of two residential parcels located at 2226 7th Street and 2210 7th Street, alleyway behind the two residences and the cul-de-sac area in front of the two residential parcels.

Address	APN	Location
2226 7 th Street	211-143-007	Western parcel adjacent to Longfellow Elementary School
2210 7 th Street	211-143-008	Southwest corner of 7th Street and Franklin Avenue

The proposed expansion parcels, are surrounded by residences and border the existing Longfellow Elementary School. Access to the expansion site is from 7th Street on the north and Franklin Avenue on the east. Figure 3 is an aerial photograph showing the current site conditions.

The existing Longfellow Elementary School campus is located at 3610 Eucalyptus Avenue, Riverside County, Riverside, California (Figure 1). Figure 2, *Local Vicinity*, provides a map depicting the general location of the proposed expansion parcels.

1.3 DETAILED SCOPE OF SERVICES

PlaceWorks performed the following detailed scope of services to complete our Phase I assessment:

- 1. Visual observations of site conditions, and of adjoining property use, to evaluate the nature and type of activities that have been or are being conducted at and adjacent to the site, in terms of the potential for release or threat of release of hazardous substances or petroleum products.
- 2. Review of federal and state environmental database information within the ASTM- specified radii from the subject site using a database service to access records. Use of 7.5-minute topographic maps

Page 2 • PlaceWorks January 2019

- to evaluate the site's physical setting.
- 3. Review of federal and state environmental files, as necessary, pertaining to the subject site and nearby sites with the potential to impact the subject site.
- 4. Review of previous reports (if any) prepared for the subject site.
- 5. Review of historical aerial photographs.
- 6. Contacts with state and local agencies, as necessary, regarding the site and surrounding properties and structures.
- 7. Interviews with the Key Site Manager and property tenant representatives (if any). Interpretation of information and data assembled as a result of the above work tasks, and formulation of conclusions regarding the potential presence and impact of RECs as defined by the ASTM E 1527-13 Standard.

1.4 NON-SCOPE CONDSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice: Asbestos-Containing Materials, Biological Agents, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality unrelated to releases of hazardous substances or petroleum products in the environment and mold.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, the assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as "electrical or hydraulic equipment known or likely to contain PCBs" to the extent visually and or physically observed or identified from the interview or records review.

1.5 EXCEPTIONS AND DEVIATIONS

PlaceWorks has completed this assessment in substantial conformance with ASTM E 1527-13. In our opinion, there were no exceptions, addition, deviations or deletions made to the ASTM work scope.

1.6 LIMITATIONS

Our work for this project was performed generally consistent with the ASTM E 1527-13 Standard for Phase I Environmental Site Assessments. Several organizations other than ASTM, such as professional associations (e.g. ASFE and AGWSE) have also developed "guidelines" or "standards" for environmental site assessments. The Phase I presented herein is consistent with the ASTM E 1527-13 Standard, which may vary from the specific "guidelines" or "standards" required by other organizations.

This Report was prepared pursuant to an Agreement between the District and PlaceWorks. All uses of this Report are subject to, and deemed acceptance of, the conditions and restrictions contained in the Agreement. The observations and conclusions described in this Report are based solely on the Scope of Services

provided pursuant to the Agreement. PlaceWorks has not performed any additional observations, investigations, studies or other testing not specified in the Agreement. PlaceWorks shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Agreement.

This Report is prepared for the exclusive use of the District in connection with the site of the proposed school reconstruction. There are no intended beneficiaries other than the District. PlaceWorks shall owe no duty whatsoever to any other person or entity on account of the Agreement or the Report. Use of this Report by any person or entity other than the District for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from the District and from PlaceWorks. Use of this Report by such other person or entity without the written authorization of the District and PlaceWorks shall be at such other person's or entity's sole risk, and shall be without legal exposure or liability to PlaceWorks.

Use of this Report by any person or entity, including by the District, for a purpose other than the site, is expressly prohibited unless such person or entity obtains written authorization from PlaceWorks indicating that the Report is adequate for such other use. Use of this Report by any person or entity for such other purpose without written authorization by PlaceWorks shall be at such person's or entity's sole risk and shall be without legal exposure or liability to PlaceWorks.

This Report reflects site conditions observed and described by records available to PlaceWorks as of the date of report preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the report. Accordingly, the District and any other party to whom the report is provided recognize and agree that PlaceWorks shall bear no liability for deviations from observed conditions or available records after the time of report preparation.

The findings, conclusions, and recommendations contained in this report are based on site conditions as they existed at the time of our investigation. Our review of documents, lists, databases, and public agency files have been conducted with due diligence. However, our conclusions are based on available information and are subject to constraints imposed by public agencies on review procedures and information retrieval. As a result, PlaceWorks may have been unable to identify potential concerns. PlaceWorks assumes no responsibility for conditions that did not come to our attention despite reasonable care, or for conditions that were not generally recognizable as environmentally unacceptable at the time of this report. Opinions and judgments expressed are based on our understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice.

Use of this Report by any person or entity in violation of the restrictions expressed in this Report shall be deemed and accepted by the user as conclusive evidence that such use and the reliance placed on this Report, or any portions thereof, is unreasonable, and that the user accepts full and exclusive responsibility and liability for any losses, damages or other liability which may result.

Page 4 • PlaceWorks January 2019

Site Description

This section describes the site location and ownership of the site as well as other pertinent details.

2.1.1 Name of Site Owner

The proposed expansion parcels are composed of two residential parcels bordering the east side of the campus. 2226 7th Street is currently owned by Rita Sanchez and 2210 7th Street is currently owned by Tomasa Perez. The expansion parcel also includes the 7th Street cul-de-sac located on the north and the alleyway on the south, both owned by the City of Riverside.

2.1.2 Site Location Map

The United States Geological Survey (USGS) topographic map for the site is the Riverside East, California Quadrangle. The USGS topographic map was used as the source for site setting information. The proposed expansion parcels are located in Riverside County at approximately 33.977 north latitude and 117.358 west Longitude. The proposed expansion parcels are located in Section 24 of Township 2 South, Range 5 West of the San Bernardino Base Line and Meridian.

2.2 SITE AND VICINITY DESCRIPTION

The District proposes expanding the campus to include two adjacent residential parcels located at 2210 7th Street and 2226 7th Street, on the east side of the campus, the alley way behind the two homes, and the cul-desac in front of the homes. The total expansion area is approximately 0.61 acres, comprised of 0.36 acres for the two residential parcels, 0.06 acres for the alley way behind the two residential parcels, and 0.19 acres for the cul-de-sac in front of the two residences. The two adjacent parcels total 0.35 acres in size and each parcel has one dwelling residence with no garage. The existing Longfellow Elementary School campus is located at 3610 Eucalyptus Avenue west of the two parcels. Figure 1, Regional Location, provides a map depicting the general location of the site and Figure 2 shows the local vicinity. The existing Longfellow Elementary School campus is rectangle-shaped and is approximately 5.56 acres in size in total (Figures 3 and 4). The expansion area is the project site as shown in Figure 4.

Access to the proposed expansion area is off of 7th Street on the north and Franklin Street on the east. The campus and proposed expansion parcels are surrounded predominantly by residences to the north and east, with a few commercial facilities to the south and west off University Avenue and Eucalyptus Avenue, respectively.

2. Site Description

2.3 PHYSICAL SETTING

Geology and hydrology were evaluated on the basis of readily-available public information or references, and/or based upon our experience and understanding of subsurface conditions in the subject property area.

2.3.1 Topography

Topographically, the property gently slopes to the northwest. Based on a review of the USGS 7.5-minute Topographic Series, Riverside East, California Quadrangle Map (USGS 2012), surface elevation of the proposed expansion parcels varies between approximately 920 feet above msl near the southeastern boundary to about 915 feet above msl at the northwestern boundary.

2.3.2 Geologic Information

The northern and eastern boundaries of the Upper Santa Ana River Drainage area are created by San Gabriel, San Bernardino, and San Jacinto mountains. The western and southern boundaries consist of the Chino Hills and the Santa Ana Mountains (Amec, 2015). These encompassing mountain ranges and the surrounding basement rocks in the area are composed of Mesozoic-age granitic, metamorphosed clastic and volcanic rocks. The geologic make-up of the Upper Santa Ana River is predominately recent alluvium, Pleistocene non marine sedimentary rocks, and exposed Mesozoic granitic basement rocks (Amec, 2015).

No active faults are known to have been mapped within a half mile radius of the property. The proposed expansion parcels are approximately five and half miles southwest of the Rialto-Colton Fault.

The United States Department of Agriculture Natural Resources Conservation Services maps the soil beneath the proposed expansion site. The soil component is Arlington, which has surface texture classified in the report as fine sandy loam. This soil has moderate infiltration rated and is considered a well-draining soil (USDA 2018).

2.3.3 Naturally Occurring Asbestos Containing Minerals

Based on a review of A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos (Department of Conservation, Division of Mines and Geology 2000) and Van Gosen and Clinkenbeard (2011), the site is not located within a ten-mile radius from an area thought to contain naturally occurring asbestos (NOA).

2.3.4 Groundwater and Surface Water Information

The Longfellow Elementary School and the proposed expansion parcels are located in the Upper Santa Ana River Drainage Area. The northern and eastern boundaries of the Upper Santa Ana River Drainage area are created by San Gabriel, San Bernardino, and San Jacinto mountains. The western and southern boundaries consist of the Chino Hills and the Santa Ana Mountains (Amec, 2015).

Page 6 • PlaceWorks January 2019

2. Site Description

The Riverside Canal, located approximately 2,700 feet west of the proposed expansion site, and the Santa Ana River, located approximately 2 miles west of the proposed expansion site, are the principal surface water drainage features. These principal surface water drainage features are situated in the sub-basin of the Upper Santa Ana River Valley, with the Santa Ana River beginning in the San Bernardino Mountains and flowing to the southwest through the Upper Santa Ana River Valley to the Santa Ana Canyon below Prado Dam (Amec, 2015).

Depth to groundwater in the vicinity of the project site has been observed ranging from 117 to 120-feet bgs (Cardno, 2015). Based on the EDR report and the Riverside County GIS system, the proposed expansion parcels are not located in a flood risk zone.

2. Site Description

This page intentionally left blank.

Page 8 • PlaceWorks January 2019

3. Site History and Background Information

3.1 PREVIOUS REPORTS

No previous environmental reports for the proposed expansion parcels was provided by the District or reviewed by PlaceWorks in preparation of the Phase I.

3.2 PAST USAGE OF THE SITE

Past usage of the proposed expansion parcels was assessed through review of historical aerial photographs, topographic maps, and databases. Copies of historical information reviewed are included in Appendix A. Based on a review of historical information; the proposed expansion parcels have been used as residential parcels since 1908.

3.2.1 Historical Aerial Photographs

Aerial photographs for the proposed expansion parcels obtained from EDR for the years 1931, 1938, 1949, 1953, 1959, 1966, 1968, 1975, 1978, 1985, 1989, 1994, 2006, 2009 and 2012 were reviewed for the subject site. Copies of the aerial photographs are included in Appendix A.

- 1931 Site: The parcels appear to have two housing structures situated near the north side of the project area. Towards the southern fence line of both the properties there appears to be shed type structures. Next to the project area on the west side is a large unidentified structure, possibly a school building.
- Offsite: Across 7th Street is the Longfellow Public School. Surrounding the sites is predominately residential development. 7th Street does not end near the western expansion parcel but continues.
- 1938 Site: The project area appears to be relatively unchanged in comparison to the 1931 aerial photograph.
- Offsite: Again the surrounding area appears to be mostly residential development with the school campus located to the north and west of the expansion project area.
- 1949 Site: The project area appears to be relatively unchanged in comparison to the 1938 aerial photograph.
- Offsite: Again the surrounding area appears to be mostly residential development. Longfellow Elementary School looks to have expanded its northern portion.
- 1953 Site: The project area appears to be relatively unchanged in comparison to the 1949 aerial photograph.

3. Site History And Background Information

0

- Offsite: The large unidentified structure to the west of the expansion site is no longer there. The old Longfellow Public School building has been removed as newer structures are built.
- 1959 Site: The project area appears to be relatively unchanged in comparison to the 1953 aerial photograph.
- Offsite: Portions of the parcel next to the site on the west side appear to have been paved.
- 1966 Site: The project area appears to be relatively unchanged in comparison to the 1953 aerial photograph.
- 1968 Site: The project area appears to be relatively unchanged in comparison to the 1966 aerial photograph.
- 1975 Site: The project area appears to be relatively unchanged in comparison to the 1968 aerial photograph.
- 1978 Site: The project area appears to be relatively unchanged in comparison to the 1975 aerial photograph.
- Offsite: Longfellow Elementary school continues expansion across the street from the proposed site.
- 1985 Site: The project area appears to be relatively unchanged in comparison to the 1978 aerial photograph.
- o Offsite: Longfellow Elementary school continues expansion across the street from the expansion project
- 1989 Site: The project area appears to be relatively unchanged in comparison to the 1985 aerial photograph.
- 1994 Site: The project area appears to be relatively unchanged in comparison to the 1989 aerial photograph. 7th Street is now a cul-de-sac.
- Offsite: Longfellow Elementary school continues expansion across the street from the proposed sites. 7th Street (Mission Avenue) now appears to be blocked off at Eucalyptus Street and to the west of the expansion parcel.
- 2006 Site: The shed structure on the corner portion of the site (2210 7th Street) appears to have been removed.
 - Offsite: Longfellow Elementary School built up the existing property and has expanded development on the west side of the sites, where the large unidentified structure had been until 1953.

Page 10 • PlaceWorks January 2019

3. Site History and Background Information

- 2009 Site: The project area appears to be relatively unchanged in comparison to the 2006 aerial photograph.
- 2012 Site: The project area appears to be relatively unchanged in comparison to the 2009 aerial photograph.

3.2.2 Historical Topographic Maps

Historical Topographic Maps obtained from EDR for the years 1901, 1942, 1947, 1953, 1967, 1980 and 2012 were reviewed for the proposed expansion project area. Copies of the topographic maps are included in Appendix A.

- 1901 The proposed expansion project area and surrounding area appear to be undeveloped vacant property. No structures depicted.
- 1942— The proposed expansion project area is depicted as having one structure per parcel. On the parcel directly next to parcel 2226 7th Street (on the west side) is depicted as having a school building.
- 1947 The proposed project area is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the area. However, Longfellow Public School and the school structure next to 2226 7th Street parcel are represented on the map.
- 1953 Again the topographic map is highlighted in omission tint, but Longfellow Elementary School is now the only school building depicted in on 7th Street.
- 1967— The proposed project area is depicted as each having one structure.
- 1980 The only change to the proposed project area is one additional structure on the southern portion of 2226 7th street.
- 2012 Only streets are depicted on the topographic map. Recent topographic maps no longer depicted structures.

3.2.3 Sanborn Maps

Sanborn maps obtained from EDR were reviewed for the proposed expansion project area for the years 1908, 1950, 1952, 1953, 1953, 1954, 1955, 1957, 1958, 1959, 1960, 1961, 1962, 1965, 1968, and 1969. Copies of the maps are included in Appendix A.

1908 – The proposed expansion project area only depicts the 2210 7th Street parcel (corner parcel) as having a dwelling structure and a horse stable on its southern portion. Longfellow Public School is depicted

3. Site History And Background Information

- 1950 The 2210 7th Street parcel still has the dwelling structure depicted, but the horse stable has been removed, and a shed has appeared on the property. The 2226 7th Street parcel now also has a dwelling structure and a shed built. On the north corner of 2210 7th Street, a double hydrant is now also present. The original Longfellow Public School Building has been replaced and multiple school buildings on the north side of 7th Street are now depicted.
- 1952 The proposed expansion project area appears relatively unchanged in comparison to the 1950 Sanborn map.
- 1953 The proposed expansion project area appears relatively unchanged in comparison to the 1952 Sanborn map.
- 1954 The proposed expansion project area appears relatively unchanged in comparison to the 1953 Sanborn map.
- 1955 The proposed expansion project area appears relatively unchanged in comparison to the 1954 Sanborn map.
- 1957 The proposed expansion project area appears relatively unchanged in comparison to the 1955 Sanborn map.
- 1958 The proposed expansion project area appears relatively unchanged in comparison to the 1957 Sanborn map.
- 1959 The proposed expansion project area appears relatively unchanged in comparison to the 1958 Sanborn map.
- 1960 The proposed expansion project area appears relatively unchanged in comparison to the 1959 Sanborn map.
- 1961 The proposed expansion project area appears relatively unchanged in comparison to the 1960 Sanborn map.
- 1962 The proposed expansion project area appears relatively unchanged in comparison to the 1961 Sanborn map.
- 1965 The proposed expansion project area appears relatively unchanged in comparison to the 1962 Sanborn map.
- 1968 The proposed expansion project area appears relatively unchanged in comparison to the 1965 Sanborn map. Additional structures are located on Longfellow Elementary School on the north side of 7th Street.

Page 12 • PlaceWorks January 2019

3. Site History and Background Information

1969 – The proposed expansion project area appears relatively unchanged in comparison to the 1968 Sanborn map.

3.2.4 City Directory

EDR provided an EDR-City Directory of the proposed expansion project area and surrounding area. A copy of the EDR-City Directory is in Appendix A. City Directory data was searched for the years spanning from 1921 through 2014. The first listing of the parcels is in 1930 as residential dwellings. Both the 2210 7th Street parcel and the 2226 7th Street parcel are listed as residential dwellings through the year 2001. No listings past 2001 were provided for the proposed expansion parcels in the EDR-City Directory. The properties adjacent to the proposed expansion parcels were listed as either educational or residential.

3.2.5 Prior Agricultural Use

Based on the review of historical aerial photographs and topographic maps, the proposed expansion parcels appears to not have been used for agricultural purposes.

3.2.6 Mines

Based on the review of historical aerial photographs and topographic maps, the proposed expansion parcels appears to not have ever been a site for mining operations.

3.2.7 Illegal Drug Manufacturing

The proposed expansion parcels were not identified by the California Hazardous Material Incident Report System (CHMIRS) which is maintained by the California Office of Emergency Services and contains information regarding hazardous material incidents such as accidental releases or spills. Clandestine Drug Laboratory Locations (CDL) database maintained by the U.S. Department of Justice was also reviewed for the presence of drug laboratories or dumpsites. Drug-related waste was not observed on the site during the site inspection.

3.2.8 Prior U.S. Government Ownership

Based on the review of the EDR, historical aerial photographs, and topographic maps reviewed, the proposed expansion parcels are both developed starting in the late 1930s with no indication that the property was owned by the U.S. Government or devoted to military use or operations.

3.3 SURROUNDING PROPERTY LAND USES

Based on the review of the EDR, historical aerial photographs, topographic maps, and Sanborn Maps the adjoining properties surrounding the proposed expansion project area are predominately residential. Over the years a few industrial/commercial sites are developed in the surrounding area. Of these non-residential sites, the majority of the industrial/commercial sites relate to automotive repair shops or gas stations located near University Avenue to the south.

3. Site History And Background Information

This page intentionally left blank.

Page 14 • PlaceWorks January 2019

4.1 STANDARD ENVIRONMENTAL RECORDS REVIEW

PlaceWorks utilized the electronic database service EDR to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced Agency records, located within the American Society for Testing and Materials (ASTM)-specified search radii indicated below:

Database	Approximate Search Distance	Subject Site Listed?	Number of Sites within Search Area
Federal NPL Sites	1 mile	No	1
Federal Delisted NPL Sites	0.5 mile	No	0
CERCLIS Sites	0.5 mile	No	0
CERCLIS-NFRAP Sites	0.5 mile	No	1
Federal ERNS	Site only	No	0
RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
RCRA CORRACTS Facilities	1 mile	No	0
RCRA Generators	Site and Adjoining	No	3
Federal Institutional/Engineering Control Registry	0.5 mile	No	0
State and Tribal Equivalent NPL Sites	1 mile	No	0
State and Tribal Equivalent CERCLIS Sites	1 mile	No	13
State and Tribal Registered Storage Tanks	Site and Adjoining	No	2
State and Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tanks	0.5 mile	No	6
State and Tribal Institutional Controls/Engineering Control	Site only	No	0
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	2
Local Brownfield Sites	0.5 mile	No	25
Orphan Site List	Site and Adjoining	No	4
HAZNET	Site only	No	0

A review of selected regulatory agency databases for documented environmental concerns on the site, or in close proximity to the site, was conducted by EDR. A copy of the radius report, dated May 23, 2018 is included in Appendix B. The proposed expansion parcels for Longfellow Elementary School was not listed on any of the searched databases.

4.1.1 NPL Sites

The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for clean-up by the EPA.

- The proposed expansion parcels is not listed on the NPL list.
- The database search identified one NPL site within a mile radius of the proposed expansion site.

O Alark Hard Chrome, located at 2777 Main Street which is about 0.978-mile northwest, was identified on the Federal NPL Site list. As of 2011, the site is listed open NPL site, however, based on the distance, the gradient, the hydrology of the Riverside Canal, and looking at the listed chemicals of concern this facility is not expected to impact the proposed expansion site.

4.1.2 Federal Delisted NPL Sites

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

- The proposed expansion parcels is not listed on the delisted NPL list.
- The database identified no delisted NPL sites within a mile radius of the proposed expansion site.

4.1.3 CERCLIS Sites

The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess if they should be considered for inclusion on the NPL.

- The proposed expansion parcels is not listed on the CERCLIS list.
- The database search did not identify any CERCLIS listings within a half mile radius of the proposed expansion site.

4.1.4 CERCLIS-NFRAP Sites

CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.

- The proposed expansion parcels is not listed on the CERCLIS-NFRAP list.
- The database search identified one CERCLIS-NFRAP Site within a half mile radius of the proposed expansion site.
 - o Riverside Fertilizer Works, located at 2622 3rd Street about 0.451-mile northwest of the subject site, was listed April 4, 2006 and was assigned a medium corrective action priority. Based on the site being delisted as a CERCLIS site and on the distance and topographic gradient from the site, this facility is not expected to impact the proposed expansion site.

Page 16 • PlaceWorks January 2019

4.1.5 RCRA CORRACTS Facilities

The RCRA CORRACTS Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

- The proposed expansion parcels is not listed as a RCRA CORRACTS TSD Facility.
- The database search did not identify any RCRA CORRACTS TSD Facilities within a one-mile radius
 of the proposed expansion site.

4.1.6 RCRA Non-CORRACTS TSD Facilities

The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.

- The proposed expansion parcels is not listed as a RCRA non-CORRACTS TSD facility.
- The database search did not identify any RCRA non-CORRACTS TSD facilities within a one-half mile radius of the proposed expansion site.

4.1.7 RCRA Generators

The RCRA Generator list is maintained by the EPA to track facilities that generate hazardous waste.

- The proposed expansion parcels is not listed as a RCRA Generator facility.
- The database search identified three RCRA Generators within a quarter mile radius of the proposed expansion site.
 - United Speedometer located at 2431 University Avenue about 0.149-mile to the southwest of the site was identified as a RCRA small quantity generator (SQG). No violations were found.
 - o M&F Muffler and Radiator Service located at 2512 University Avenue, about 0.179-mile southwest of the site was identified as a RCRA small quantity generator (SQG). No violations were found.
 - O Kansas Avenue Industrial Park located at 3613 Kansas Avenue about 0.110-mile northeast of the site was identified as a RCRA small quantity generator (SQG). No violations were found.

Based on the topography, distance and regulatory status these facilities are not expected to have impacted the project site.

4.1.8 Federal Institutional Control / Engineering Controls

A listing of sites with institutional and or engineering controls in place is maintained by the EPA. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

• The proposed expansion parcels is not listed as having an institutional or engineering control.

4.1.9 Federal ERNS List

The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The list is maintained by the National Response Center United States Coast Guard.

• The proposed expansion parcels is not listed on the Federal ERNs list.

4.1.10 State-and Tribal- equivalent NPL

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- The proposed expansion parcels is not listed on state- and tribal-equivalent NPL.
- The database search did not identify any state-and tribal equivalent NPL sites within a one mile radius of the proposed expansion site.

4.1.11 State and Tribal- equivalent CERCLIS

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

- The proposed expansion parcels is not listed on the state-and tribal-equivalent CERCLIS.
- The database search identified thirteen state-and tribal-equivalent CERCLIS within a mile radius of the proposed expansion site.

Page 18 • PlaceWorks January 2019

- o Eastside Elementary School was a proposed school site to be located at University Avenue and Ottawa Avenue about 0.425-mile southeast of the proposed site. This registered on the database search due to the site being a potential school site that had an assessment done with the Riverside School district in 2005 under the oversight of the DTSC. The district decided not to proceed with the project and the site has been listed as inactive as of February 7, 2007. This is not expected to impact the proposed expansion site.
- O Riverside Scrap Iron and Metal Corp. located 2993 Sixth Street about 0.489-mile northwest of the subject site was listed as an active voluntary cleanup site, but in 2017 it is reported to be mostly cleared and the site will be open for unrestricted land use in the future. Based on the distance of this facility and regulatory status, it is not expected to impact the proposed expansion site.
- o SO CAL Gas/ Riverside MGP located at 10th Street and Howard about 0.489-mile southwest of the site was listed in August 20, 1993. By 2012 the site had the contaminated soil removed and currently is paved over. Based on the 2012 monitoring results and the distance of the facility, it is not expected to impact the proposed expansion site.
- o Riverside Fertilizer Works located at 2622 3rd Street about 0.451-mile northwest of the site is listed as inactive as of March 6, 2006. Based on distance and DTSC oversight of the facility, it is not expected to impact the proposed expansion site.
- O Weiland & Company located at 3491 Commerce Street about 0.480-mile northwest of the site was listed on June 13, 2006 as an inactive site. Based on the distance of the facility and it being under DTSC oversight, it is not expected to impact the proposed expansion site.
- O California Spray Chemical Co. located at 3530 Chicago Avenue about 0.592-mile east of the site is considered inactive and no longer a concern. Based on the distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.
- O Thermoclad Co. located at 1541 7th Street about 0.747-mile east of the site is listed as inactive as the EPA determined in 2006 that the site was no longer a concern and not eligible to be on the CERCLA list. Based on the distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.
- o Alcan, INC. located at 3016 Kansas Avenue about 0.611-mile northeast of the site was listed on June 13, 2006 but subsequently had the impacted soil removed and is listed as not requiring further action as of 2011. Based on distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.
- O Devoe Marine Coating located at 2625 Durahart Street about 0.868-mile northeast of the site was a LUST site that was cleaned up and had its case closed on June 17, 1997. Based on the distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.

- o Fairfield Chemicals locate at 3075 14th Street about 0.761-mile southwest of the site is listed as being inactive as of March 6, 2006. Based on the distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.
- O LA Dist Eng Con Proj located about 0.775-mile southwest of the site had a military evaluation done and has been listed as inactive since 2005. Based on the distance of the facility, it is not expected to impact the proposed expansion site.
- O Grin Chemical Co. located at 3972 Main Street about 0.988-mile west of the site is listed as not requiring further action as of April 1, 1985. Based on the distance of the facility and regulatory status, it is not expected to impact the proposed expansion site.
- O Alark Hard Chrome, located at 2777 Main Street which is about 0.978-mile northwest, was identified on the Federal NPL Site list. As of 2011, the site is listed open NPL site, however, based on the distance, the gradient, the hydrology of the Riverside Canal, and looking at the listed chemicals of concern this facility is not expected to impact the proposed expansion site.

4.1.12 State and Tribal- equivalent Landfill and/or Solid Waste Disposal Sites

The database search did not identify any State Landfills or Solid Waste Disposal Sites within a one-half mile radius of the subject site.

- The proposed expansion project site is not listed on state- and tribal- equivalent landfill and/or solid waste disposal site lists.
- The database search did not identify any state-and tribal equivalent Landfill and/or Solid Waste Disposal sites within a half mile radius of the proposed expansion site.

4.1.13 State and Tribal Leaking Underground Storage Tanks

The State Water Resources Control Board Leaking Underground Storage Tank Information System contains an inventory of Leaking Underground Storage Tank (LUST) Incident Reports.

- The proposed expansion parcels are not listed on state- and tribal leaking underground storage tanks.
- The database search identified six LUST facilities within a half-mile radius of the proposed expansion site.
 - o Riverside Scrap Iron and Metal Co.: See listing under state-and tribal-equivalent CERCLIS list. Section 4.1.11.
 - o Circle K # 5231 (former Stop N' Go #1065) located at 2371 University Avenue about 0.112-mile southwest of the site is listed as having its LUST Cleanup case closed October 26, 1995.

Page 20 • PlaceWorks January 2019

- o USA Gasoline #240 located at 2658 University Avenue about 0.206-mile southwest of the site is listed as having its LUST Cleanup case closed on August 18, 2010.
- o Ken's Arco located at 2871 University Avenue about 0.300-mile west of the site is listed as having its LUST Cleanup case closed June 24, 2011.
- o Inland Frame & Design located at 3596 Commerce Street about 0.449-mile northwest of the site is listed as having its LUST Cleanup case closed on July 17, 1995.
- o West Coast Wire and Steel located at 3120 5th Street about 0.439-mile northwest of the site is listed as having its LUST Cleanup case closed on March 6, 1990.

Based on a review of the sites on the Geotracker website and EDR database, the distance from the site, expected groundwater direction, substances involved, and/or regulatory status, these facilities are not expected to have impacted the proposed expansion parcels.

4.1.14 State and Tribal Registered Underground Storage Tanks

The State Water Resources Control Board's Hazardous Substance Storage Container Database maintains a list of USTs regulated by the Resource Conservation and Recovery Act.

- The proposed expansion parcels is not listed on the registered UST list.
- The database identified one registered UST facilities within a quarter mile radius of the proposed expansion site.
 - o Anna's 76 located at 2658 University Avenue about 0.216-mile west from the site was identified on the UST list with the facility ID FA0040156.

4.1.15 State and Tribal Voluntary Cleanup Site

The DTSC maintains a list of low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

- The proposed expansion parcels is not listed on the state and tribal voluntary cleanup program.
- The database identified two state and tribal voluntary cleanup program sites within a half mile radius
 of the proposed expansion site.
 - Riverside Scrap Iron and Metal Co. listed under the state-and tribal-equivalent CERCLIS list.
 Section 4.1.11.
 - SO CAL Gas/ Riverside MGP listed under the state-and tribal-equivalent CERCLIS list.
 Section 4.1.11.

4.1.16 Orphan Sites

The EDR database identified four sites that were indicated as being potentially in the area and were not mapped due to incomplete address information.

- UCR Parking Lot 6: Located about 1.85-mile east of the site is listed as a LUST case that is no longer a concern.
- UCR Pesticide Pit: Located about 1.46-mile south east of the site is a facility that is considered closed and undergoing long term monitoring.
- Central Ave and Chicago: Located about 1.60-mile southeast from the site had an illegal drug lab operating out of van in 2000. Based on distance and mobile nature of the illegal drug lab, it is not expected to impact the site.
- 7th Street: Located about 0.758-mile east of the site is a listed as a LUST case that is no longer a concern.

Based on a review of the orphan sites locations and current regulatory status the, proposed expansion parcels is not expected to be impacted.

4.2 ADDITIONAL ENVIRONMENTAL RECORDS REVIEW

In conformance with ASTM inquiry was made with the additional agencies described below.

4.2.1 Local Brownfield Lists

The DTSC's Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. Twenty-five brownfield sites were identified on the EnviroStor database in the radius searched for the proposed expansion site. These brownfield sites have all already been discussed in previous sections and found not to be a concern for the proposed expansion site.

- Alcan, INC. is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- Devoe Marine Coatings is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- Thermoclad Company is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- California Spray Chemical Company is listed under the state-and tribal-equivalent CERCLIS list.
 Section 4.1.11.
- Eastside Elementary School is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.

Page 22 • PlaceWorks January 2019

- SO CAL Gas/Riverside MGP is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- Riverside Scrap Iron & Metal Corp. is listed under the state-and tribal-equivalent CERCLIS list.
 Section 4.1.11.
- Weiland & Company is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- Riverside Fertilizer Works is listed under the CERCLIS-NFRAP list. Section 4.1.11.
- Fairfield Chemical is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- LA DIST ENG CON PROJ is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- Grin Chemical Company is listed under the state-and tribal-equivalent CERCLIS list. Section 4.1.11.
- The following sites listed were all part of an area that the City of Riverside was considering for redevelopment, resulting in them being listed in the EDR as Local Brownfield sites. These sites are not a concern for the proposed expansion parcels and they range in distance from 0.077-mile to 0.490-mile from the parcels:
- 2993 7th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site
- 2622 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 2992 5th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3008 5th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 2992 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 2991 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3008 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 2544 3rd Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.

- 2570 3rd Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 2580 3rd Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3070 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3069 4th Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 4th and Commerce Street (RCTC) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 4th and Commerce Street (RSIMC) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3496 Commerce Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3460 Commerce Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 5th and Commerce Street (Lerner) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 5th and Commerce Street (Zamora) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 5th and Commerce Street (SPTC) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 5th and Commerce Street (Frankel) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3008-3032 6th Street (RSIMC parcel 022) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3008-3032 6th Street (RSIMC parcel 021) is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 3596 Commerce Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.

Page 24 • PlaceWorks January 2019

- 3604 Commerce Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.
- 6th and Commerce Street is listed because it is a part of a corridor that the City of Riverside is looking at for reassessment. This is not expected to impact the proposed expansion site.

4.2.2 Local Lists of Hazardous Waste Contaminated Sites

A record search was done on the following databases: Clandestine Drug Labs, HIST Cal-Sites Historical CalSites Database, and Toxic Pits Cleanup Act Sites. School Property Evaluation Program records were searched.

The proposed expansion parcels and nearby sites within the designated search radius were not identified on the above databases.

4.2.3 Local Lists of Registered Storage Tanks

A record search was done of the local lists of registered storage tanks. Seven registered UST sites were identified with 0.25 miles of the site. Based on the downgradient locations of these facilities, none are expected to impact the site.

4.2.4 High Risk Historical Records

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and dry cleaners. Seven historical facilities were identified both downgradient and up gradient of the proposed expansion parcels.

- All Pro Brakes & More located at 2291 University Avenue is about 0.058-mile southwest of the proposed expansion site. It is at a higher gradient than the prosed expansion site, however this facility does not show up on any other database or list, it is not likely to have impacted the proposed expansion parcels.
- Almost Home Laundry & Dry Cleaners located at 3771 Kansas Avenue is about 0.081-mile southeast of the proposed expansion site. It is at a higher gradient than the prosed expansion site, however this facility does not show up on any other database or list, it is not likely to have impacted the proposed expansion parcels.
- Kettering Allen F located at 2290 University Avenue is about 0.089-mile south of the proposed expansion parcels is now a McDonald's. Additionally, this facility does not show up on any other database or list, it is not it is not likely to have impacted the proposed expansion parcels.

4. Environmental Records Review

- B&J Garage INC located at 2323 University Avenue is about 0.090-mile southwest of the proposed expansion site. This facility is downgradient and does not appear on any other database or list and therefore it is not it is not likely to have impacted the proposed expansion parcels.
- Riverside Car Wash located at 2100 University Avenue is about 0.111-mile southeast of the proposed expansion site. It is at a higher gradient than the prosed expansion site; however, this facility does not appear on any other database or list, it is not it is not likely to have impacted the proposed expansion parcels.
- Bloch & Shelton Garage located at 2371 University Avenue is about 0.112-mile southwest of the proposed expansion site. This facility is downgradient and does not appear on any other database or list and therefore it is not it is not likely to have impacted the proposed expansion parcels.
- Riverside Gas & Electric Co. located at 3084 East 10th Street about 0.549-mile west of the proposed expansion site. This facility is downgradient and does not appear on any other database or list and therefore it is not it is not likely to have impacted the proposed expansion parcels.

4.2.5 State of California Division of Oil and Gas Records

A review of California Division of Oil and Geothermal Resources (DOGGR) Well Finder indicates that there are no oil wells or oil fields in the vicinity of the project site. The closest oil well is located over 5 miles northeast of the proposed expansion site. The well is identified as a plugged and abandoned well that was advanced by Floyd Amundson. The well was drilled in 1926 to a depth of 213 feet and was promptly abandoned and filled.

4.2.6 Vapor Migration

The ASTM 1527-13 standard states that "for the purposes of this practice, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether or not we perceive a risk of vapor migration to the subject site.

To assess a vapor migration risk a review and analysis of the site-specific environmental database report and other reasonably ascertainable records was implemented to assess whether:

- 1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
- 2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on the records review, it is unlikely that a potential source of vapor migration currently exists beneath the site from off-site properties. No chlorinated VOC contamination was identified and underground storage tanks were not identified adjacent or within 100 feet of the project site.

Page 26 • PlaceWorks January 2019

4. Environmental Records Review

4.2.7 User-Provided Information

The ASTM Standard requires disclosure in the Phase I report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs or HRECs, or whether the user has determined that the property's Title contains environmental liens or other information related to environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations, as defined by ASTM. In addition, we are required by the ASTM Standard to inquire whether the user of the report has prior knowledge that the price of the property has been reduced for environmentally-related reasons.

PlaceWorks was informed by the user that to their knowledge there are no liens or other information about the environmental condition of the property in the Title. In addition, the user was not aware of specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs with the exception of the information provided above, and has not indicated that the price of the property has been reduced for environmentally-related reasons.

4. Environmental Records Review

This page intentionally left blank.

Page 28 • PlaceWorks January 2019

Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe site conditions was conducted by PlaceWorks on June 7, 2018. No weather-related conditions or other conditions that would limit our ability to observe the site occurred during our site reconnaissance. PlaceWorks personnel observed the exterior portions of the property, including the property boundaries. Site photographs are included in Appendix C.

ASTM requires that the current site owner or Key Site Manager and user, if different from the current owner or Key Site Manager, be asked if there are any helpful documents or information that can be made available for review. These consist of environmental site assessment reports, audits, permits, tank registrations, Material Safety Data Sheets, Community Right-to-Know plans, safety plans, hydrogeologic or geotechnical reports, or hazardous waste generator reports.

5.1 CURRENT USE OF THE PROPERTY

The two adjacent parcels, 2226 7th Street and 2210 7th Street, located on the east side of Longfellow Elementary School are currently occupied single-family residential dwellings. The two residential structures are wood-frame single family residences with associated outbuildings near the alleyway. The house at 2210 7th Street has stucco on the outside and the house at 22267th Street has wood siding. The alleyway to the south of the two residences has a gate for access to the residence located at 2226 East 7th Street. The alleyway is not paved and had two cars parked in the alley during the site visit. The cul-de-sac area of the project site consists of a paved roadway, sidewalks and landscaping. A fire hydrant is located near the stop sign located within the project area in the cul-de-sac.

5.2 SITE VISIT OBSERVATIONS

5.2.1 General Description of Structures

2226 7th Street is a single-story residential dwelling comprised of wood siding. This parcel shares a fence line with Longfellow Elementary School on the west side. 2210 7th Street is a single-story residential dwelling comprised of concrete and stucco. This parcel is located on the southwest corner of 7th Street and Franklin Avenue. Both parcels are surrounded by mostly residential buildings and have Longfellow Elementary School situated on the west side. No structures are located in the alleyway or cul-de-sac.

5.2.2 Heating and Cooling System

The two residential buildings have central heating and air conditioning with supplemental window mounted AC units.

5. Site Reconnaissance and Key Personnel Interview(s)

5.2.3 Potable Water Supply and Sewage Disposal System or Septic Systems

Potable water is supplied by the Western Municipal Water District. Sewage disposal systems are provided by the Riverside County Department of Waste.

5.2.4 Use of Petroleum Products and Hazardous Materials

Use of hazardous materials was not observed at the subject site. Diminutive use of motor oil, household pesticides, and paints were observed on site.

5.2.5 Storage of Petroleum Products and Hazardous Materials (Storage Tanks, Drums)

No storage of petroleum products or hazardous materials was observed at the subject site.

5.2.6 Disposal of Petroleum Products and Hazardous Materials

No evidence of disposal of petroleum products or hazardous materials was observed at the subject site.

5.2.7 Vehicle Maintenance Lifts

No vehicle maintenance lifts were observed at the subject site.

5.2.8 Emergency Generators and Sprinkler System Pumps

No sprinkler system pumps were observed on the subject site. Four portable generators were noted at 2210 7th Street.

5.2.9 Polychlorinated Biphenyls (PCBs) Associated with Electrical or Hydraulic Equipment

No electrical or hydraulic equipment was observed on the subject site. No pole-mounted transformers were observed in the cul-de-sac and alleyway. Based on the information above, PCBs are not expected to have impacted the subject site.

5.2.10 Floor Drain and Sumps

No outdoor sumps were observed at the site.

5.2.11 Catch Basins

No catch basins were observed at the subject site.

Page 30 • PlaceWorks January 2019

Site Reconnaissance and Key Personnel Interview(s)

5.2.12 Dry Wells

No dry wells were observed at the subject site.

5.2.13 Pits, Ponds, Lagoons, and Pools of Liquid

No pits, ponds, lagoons, or pools of liquid were observed at the subject site.

5.2.14 Odors

Petroleum hydrocarbon odors were not noted at the site.

5.2.15 Stains or Corrosion on Floors, Walls, or Ceilings

No unusual staining or corrosion was observed on the subject site.

5.2.16 Stained Soil or Pavement

No stained soil or pavement was observed at the subject site.

5.2.17 Stressed Vegetation

No stressed vegetation was observed at the subject site.

5.2.18 Solid Waste and Evidence of Waste Filling

No solid waste disposal or evidence of waste filling was observed on the subject site.

5.2.19 Wastewater and Stormwater Discharge

No wastewater discharge was observed on the subject site. Stormwater is expected to exit the subject site via overland flow to local roadways and creeks.

5.2.20 Monitoring, Water Supply, or Irrigation Wells

No monitoring, water supply or irrigation wells were observed at the subject site.

5.2.21 Non-Scope Considerations

No railroad tracks are located within 1,500 feet of the subject site.

5.3 INTERVIEWS

A questionnaire was completed by Daniel Rodriguez, Assistant Director of Facilities Projects for Riverside Unified School District, on May 30, 2018. Mr. Rodriguez was not aware of any leaks, spills or discharges of hazardous materials to the proposed expansion parcels or adjacent to the proposed expansion parcels. He was

5. Site Reconnaissance and Key Personnel Interview(s)

not aware of any environmental cleanup liens against the properties nor was he aware of any land use limitations due to environmental issues. He was also not aware of any environmental cleanups, spills, or chemical releases that may have occurred on the project site. The questionnaire is included in Appendix E.

Page 32 • PlaceWorks January 2019

6. Data Gap Identification

Adjacent residential land owners were not interviewed for this Phase I Environmental Site Assessment. The school district was interviewed regarding their knowledge of the site. Chain-of-title documentation was not reviewed so it could not be ascertained if the complete title report contains environmental liens or other information related to environmental condition of the property. However, the database search contained in Appendix B indicates that the site is not on the Recorded Environmental Cleanup Liens database which is maintained by the DTSC and contains a listing of liens placed upon real properties. The site is also not listed on the DTSC's Deed Restriction database which lists sites with DTSC with restricted land use. The site is not listed on NPL Liens, a database the EPA maintains on real property, in order to recover remedial action expenditures when the property owner has received notification of potential liability.

6. Data Gap Identification

This page intentionally left blank.

Page 34 • PlaceWorks January 2019

PlaceWorks has performed a planned Environmental Site Assessment (Phase I) on behalf of Riverside Unified School District for the proposed expansion of the existing Longfellow Elementary School campus located at 3610 Eucalyptus Avenue in the City of Riverside, Riverside County, California. The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the "environmental risk" associated with the site, as defined in the ASTM E 1527-13 Standard and discussed in the Introduction section of this report. The Phase I also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites, however, the report is not being submitted to the DTSC for their review and approval because state funding for new construction is not occurring.

The proposed expansion site is comprised of two adjacent parcels located on the east side of the school, 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. The total expansion area is approximately 0.61 acres, comprised of 0.36 acres for the two residential parcels, 0.06 acres for the alley way behind the two residential parcels, and 0.19 acres for the cul-de-sac in front of the two residences. The existing Longfellow Elementary School campus is identified with Assessor's Parcel Number [APN] 211-105-001. The existing school site is rectangular-shaped and is approximately 5.09 acres in size. Figures 3 and 4 are aerial photographs showing current site conditions and the outline of the school site boundaries and the project area.

The existing school site and the adjacent parcels are in the City of Riverside. They are situated in the northeast portion of Riverside County, completely surrounded by the City of Riverside. Regional access to the site is provided by State Route 91, approximately 0.7 mile west of the site. The project site is in a residential community and surrounded by residences and the Longfellow Elementary School. 6th Street borders the existing school site on the north, and University Avenue borders the school site on the south. The two parcels are bordered by Mission Inn Avenue (7th Street) to the north and University Avenue to the south. Figure 2 shows the local vicinity and Figure 3 the current conditions of the existing school and proposed expansion site.

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the subject site. Our opinion regarding an REC's potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-13 Standard defines an REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

No RECs were identified for the project site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

No HRECs were identified for the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

DEPARTMENT OF TOXIC SUBSTANCES CONTROL PROTOCOL

Based on a review of historical information; the two residential buildings have occupied the subject site since 1908. Due to the age of the current structures in the proposed expansion parcels area, the DTSC would require testing to assess for potential impacts to soil from lead-based paint and organochlorine pesticides from possible termiticide usage. PlaceWorks recommended a Phase I Addendum be implemented to collect soil samples in the project area to assess the existing structures. Following DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers dated June 2006, soil samples were collected on June 7, 2018, to assess the proposed expansion parcels for

Page 36 • PlaceWorks January 2019

potential lead-based paint and termiticides contamination. This Phase I Addendum is included in Appendix D.

SUMMARY

Based on the results of this assessment, REC, CRECs, and HRECs were not identified for the project site. However, elevated concentrations of lead were found at both parcels and elevated levels of chlordane were found at parcel 2210 7th Street at sample location 2210-4. A Phase I Addendum for potential lead-based paint and organochlorine pesticides from termiticides was implemented (Appendix D). PlaceWorks recommends that approximately 70 cubic yards of shallow surface soil be removed in the dripline of the buildings as discussed in the Phase I Addendum.

Section 17213 of the California Education Code and Section 21151.8 of the California Public Resources Code prohibit construction of a school upon a current or former hazardous waste disposal site or solid waste disposal site. Based on site inspection and information reviewed for preparation of this report, the existing school site and proposed expansion parcels are not located on a current or former disposal site.

8. Credentials

We declare to the best of our professional knowledge and belief, that we meet the definition of Environmental Professional as defined in the ASTM Standard. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Qualifications information for the project personnel is provided in Appendix F.

Denise Clendening, Ph.D.

Denise Clendening

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PlaceWorks were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ALARK HARD CHROME	2777 MAIN ST	NNW 1/2 - 1 (0.978 mi.)	0	8

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RIVERSIDE FERTILIZER	2622 3RD ST	NW 1/4 - 1/2 (0.451 mi.)	L44	119

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 02/08/2018 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RIVERSIDE GAS AND EL	3084 E. 10TH STREET	W 1/2 - 1 (0.548 mi.)	63	168

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist

Cleaner site within approximately 0.125 miles of the target property.

Summary Details:

Conditions at Proposal July 27, 2000): The Alark Hard Chrome site occupies approximately 0.25 acre in a light industrial area of the city of Riverside. An electroplating shop operated on site from 1971 to 1985. Eighteen open plating tanks werehoused in the front and middle rooms of the shop. The tanks were set directly on the ground in cut outs in the concrete floor. As metal parts were lifted out of each tank, the plating solution would drip and spill onto the floor and into the 3-inch to 5-inch gap between the tank and the floor. Plating solutions were also allegedly discharged directly into a 4-foot wide by 40-foot deep pit located in the middle room. Water from washdowns in the plating areas flowed into three floor drains that were routed to a 500-gallon underground holding tank located outside the rear of the building. The back room of the shop housed grinders and polishers. During a 1982 investigation of the site, personnel from the Riverside County Departmentof Health observed pools of chemicals outside the back door of the shop. In 1985, the owners of Alark Hard Chrome ceased operations and took the plating tanks off site. The underground holding tank was also taken off site sometime in the mid-or late-1980s. In 1990 and 1991, a contractor to the California Environmental Protection Agency, Department of Toxic Substances Control DTSC) conducted a subsurface soil investigation at the site. One hundred three 103) soil samples were collected from 24 boreholes drilled to depths ranging from 7.5 feet below ground surface bgs) to 60 feet bgs. Analytical results indicated the presence of total chromium and hexavalent chromium at concentrations up to 4,380 milligrams per kilogrammg/kg) and 1,100 Map ID

mg/kg, respectively, to depths of at least 40 feet bgs in the middle room, 15 feet bgs in the back room, and 20 feet bgs adjacent to the former underground holding tank and outside the back door. Cadmium, cyanide, and nickel were also detected at elevated concentrations, but at fewer sample locations. In 1994, a contractor to DTSC excavated 1,207.73 cubic yards of contaminated soil from a 26-foot wide by 30-foot long area in the middle room to depths ranging from 27 to 40 feet bgs. Post-excavation sampling results, as well as the 1990 and 1991 sampling results, indicate that contaminated soil is still present beneath the excavated area in the middle room and in other areas of the site. Ten ground water monitoring wells have been installed in the vicinity of the site. Analytical results from a 1995 DTSC sampling event indicated the presence of total chromium and hexavalent chromium at concentrations up to 0.21 milligrams per liter mg/l) and 0.27 mg/l, respectively, in the two monitoring wells located within 20 feet of the middle room of the shop. These two wells are screened in alluvial deposits. Eighteen municipal drinking water wells, which draw ground water from the Riverside basin alluvial deposits, are located within 4 miles of the Alark Hard Chrome site. Surface runoff from the site enters a storm drain system that discharges into Springbrook Channel approximately 0.5 mile northwest of the site. The channel terminates in adiversion dam at Fairmount Lake, approximately 200 feet downstream of the discharge point. During periods of heavy rainfall, the flow in Springbrook Channel exceeds the capacity of the diversion dam, resulting in storm drain water flowing from thechannel into Fairmount Lake. In 1992, a contractor to the U.S. Environmental Protection Agency EPA), collected sediment samples from Springbrook Channel and Fairmount Lake. Total chromium was detected at concentrations of 6.5 mg/kg in the samplecollected from the channel 300 feet upstream of the discharge point and 28.7 mg/kg in the sample collected from Fairmount Lake. Fairmount Lake flows into Lake Evans. Both are urban fishing lakes that are stocked with trout and catfish by the California Departmentof Fish and Game. Status December 2000): EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the ha ardous substances identified in thisnarrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at http://www.atsdr.cdc.gov/toxfaq.html or by telephone at 1-888-42-ATSDR or 1-888-422-8737.

The facility was formerly an industrial machining and plating shop where plating solutions were disposed of or spilled onto soils from tanks. The site encompasses approximately 10,000 square feet and is located in a light industrial area. Operations at the site ceased in 1985, and the facility has since remained unoccupied. The facility used an electroplating process that involved plating metal parts using chemical baths containing cadmium (Cd), Chromium (Cr), and Nickel (Ni). Grinding equipment and chemical rinse baths were also used during the electroplating process which contributed to the contamination. The soil at the site was contaminated as a result of spills, drips, and possible discharge of plating bath solutions that occurred during the fourteen years of operation. A preliminary investigation completed in 1983, included soil sampling under the building and found higher than normal levels of metals Cd, Cr, and Ni. Exposure to these hazardous substances can occur from inhalation, ingestion, or direct contact. The area where the contaminants were found is inside a secured building and no exposure is anticipated. In February 1987, a Remedial Order (RAO) was issued to the Responsible Parties (RPs) to characterize and remediate the hazardous substances at the site. In July 1989, a Final Determination of Noncompliance was issued for failure to submit required documents. This case was referred to the AG's office for enforcement. In July 1990, the Department conducted a soil investigation to determine the extent of the contamination. The investigation confirmed high levels of Cr and lead. An Imminent and Substantial Endangerment Determination and Remedial Action Order (Order) was issued to the responsible parties (RPs) on November 24, 1993. DTSC issued a Notice of Final

Determination of Non-Compliance on January 12, 1994. In June of 1994,

DTSC conducted a removal action excavating the highest concentration of heavy metal contaminated soil from the middle room of the Alark facility. A total of 1,810 tons of contaminated soil was excavated and transported to a treatment and disposal facility. The excavated area was backfilled and a temporary cap was constructed. DTSC conducted a groundwater investigation in January of 1995. Groundwater monitoring wells were constructed around the Alark facility. Initial results of the groundwater investigation detected hexavalent chromium in the groundwater. DTSC conducted an additional groundwater investigation constructing monitoring wells and additional sampling. DTSC approved a groundwater remedial investigation prepared by URS consultants on 3/11/96. Due to the high threat to human health at the site and the lack of state and PRP funds to perform the necessary work, DTSC requested the U.S. EPA to become the lead agency and conduct the necessary remedial activities at the Site. U.S. EPA is now the lead agency, and the Site is on U.S. EPA's National Priorities List (NPL). The two men who owned this Site were William Clark and Bill Allen. Mr. Clark filed for Chapter 7 bankruptcy which was discharged, and Mr. Allen has no appreciable assets. Therefore a NFCRA has been finalized for over \$2 million regarding this site. According to our attorney, Mr. Allen has recently deceased. Mr. Allen's sons would like to sell the site, and claim that Mr. Clark signed a guit claim for the site, but there is no evidence of this. Mr. Allen's sons could be considered responsible parties, and so could anybody that bought the site. Currently U.S. EPA has no contract for any work to be done at the site, nor do they know when will they will have any. They will have no documents to give DTSC until at least the first of 2019.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site History:

discrepancy sufficient to prompt exploratory maintenance of a suspected product line leak. USA maintenance personnel subsequently discovered and repaired a leak in a gasket immediately above one of the turbine pumps on one of the underground fuel storage tanks (USTs). In December 1990, a site assessment was conducted that consisted of drilling and installing three (3) groundwater monitoring wells (MW-2-P through MW-4-P) and one (I) vadose zone monitoring well (MW-1-P). Soil samples collected from MW-1-P, located near the presumed source of the gasoline leak, contained high concentration of total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene, and total xylenes (BTEX) to the total depth of the soil boring (MW-I-P was drilled and sampled to a total depth of 103-feet below ground surface [bgs], however it was later completed with 4-inch diameter PVC casing and screen only to a total depth of 75 feet bgs). Analytical results from soil samples collected from borings MW-2-P, MW-3-P, and MW-4-P showed petroleum hydrocarbons were at very low or below detection concentrations. The maximum detectable TPHg concentration was 1.4 milligrams per kilogram (mg/kg) in MW-3-P at 40-feet bgs. Soil samples collected from these peripheral borings had a maximum benzene concentration of 0.29 mg/kg. Results of these site assessment activities suggested that the lateral extent of hydrocarbon impacts in soil in the vadose zone were restricted to a limited area along the western portion of the USTs. Groundwater conditions beneath, adjacent, and further downgradient of the Site, however, had not been fully assessed. Park subsequently initiated field operations at one (1) off-site well location, MW-5-P, on March 22, 1993. The groundwater monitoring well was installed to a total depth of approximately 146- feet bgs. The well is situated approximately 150 feet to the east of the Site, on the north side of University Avenue. Results of laboratory analysis of soil samples collected from MW-5-P indicated the presence of very low concentrations of TPHg at 1.4 mg/kg and 0.96 mg/kg at 120- and

125-feet bgs, respectively. Low concentrations of BTEX were detected in soil samples collected from depths of 100, 120-, and 125-feet bgs. A total of two (2) soil borings, later constructed as groundwater

monitoring wells MW-6-P and MW-7-P, were drilled in September 1994 to

During 1990, USA Station No. 240 records showed a gasoline inventory

EPA ID Number

depths ranging from 145 feet to 147 feet bgs, respectively. A total of fourteen (14) soil samples were submitted to the laboratory for analyses of TPHg and BTEX using EPA Methods 8015M (modified as gasoline) and 8020, respectively. Analytical results from all soil samples collected TPHg and BTEX concentrations below the method detection detection limits of 0.05 mg/kg and 0.003 mg/kg. respectively. In October 1999, one additional groundwater monitoring well, MW-8-P, was drilled and installed southwest (downgradient) of the USTs to further assess groundwater conditions between wells MW-6-P and MW-7-P. The soil samples collected from this well also showed below detection concentrations for all targeted (TPHg and BTEX) compounds. Based on the lateral and vertical extent of gasoline-impacted soil and groundwater beneath the Site, soil vapor extraction (SVE) was selected as the primary remedial method to mitigate the hydrocarbon impacts in soil and groundwater beneath the Site. To recover vapor phase and dissolved phase hydrocarbons from shallow soils and groundwater beneath the Site, three wells (MW-1-P. MW-3-P, and MW-4-P) were converted for vapor extraction. Vapor extraction activities were initiated from all three SVE wells on February 28, 1996.SVE operations were active for total cumulative of 535 days (from February 28, 1996 through December 31, 1998) and recovered and destroyed a total cumulative volume of approximately 86.800 pounds of hydrocarbon vapor. During this interval. TPHa concentrations in the influent vapor stream decreased from over 2,700 ppmv to less than 400 ppmv. Benzene concentrations in the influent vapor stream decreased from approximately 50 ppmv to less than 1 ppmv during this interval.SVE operations were shut down on November 30, 1998 when benzene concentrations in the influent vapor had decreased to levels below 1 ppmv during four (4) consecutive monthly sampling events. In addition, quarterly groundwater sampling of well MW-4-P had shown reductions of dissolved TPHg and benzene concentrations from over 13,000 and 3,300 ppb, respectively in May 1997 to below detection concentrations for both compounds during the 3rd and 4th quarter 1998 sampling events. Following the suspension of SVE operations in November 1998, two confirmation soil borings (SB-1 and SB-2) were advanced and sampled during April 2000 in former hydrocarbon impacted areas west of the USTs. Analytical results from sampling these two soil borings revealed that residual hydrocarbon concentrations were still present within a very localized area of the Site, directly adjacent to the western edge of the USTs (near MW-1-P), from approximately 100 to 125 feet below ground surface. These soil borings showed that previous soil vapor extraction activities significantly reduced the overall concentration of these hydrocarbons in shallower soil intervals within this area. However, the remedial effect of vapor extraction on the unsaturated interval from the bottom of MW-1-P to the top of the groundwater table was observed to be minimal, based on the soil sampling results. The total depth of well MW-1-P was measured at approximately 75 feet bgs. The depth to the top of the groundwater table beneath well MW-1-P was observed to be approximately 125 feet. Vapor extraction well (MW-1 A), was drilled on October 26, 2001, directly adjacent to well MW-1-P, and completed to a total depth of 125 feet and completed with two casing strings of 2" diameter PVC casing with slotted intervals from approximately 74-99 bgs (upper zone) and from 100-125 feet bgs (lower zone). Following modifications to the subsurface SVE extraction piping, the new well was connected to the system, SVE activities were resumed from wells MW-1-P and MW-1A (upper and lower

EDR ID Number

EPA ID Number

zone) on November 15, 2001. Resumed SVE operations were active for a total cumulative of 1,467 days (from November 15, 2001 through April 2, 2007) and recovered and destroyed an additional 13,528 pounds of hydrocarbon vapor. Following resumption of SVE activities, TPHg concentrations in the influent vapor stream decreased from a maximum of 1,200 ppmv to less than 25 ppmv. Benzene concentrations in the influent vapor stream decreased from a maximum of 1.8 ppmv to less than 1 ppmv during this interval. A soil vapor rebound test was conducted during August 2006 to assess remaining TPHg, BTEX, and MTBE vapor concentrations from all wells. Following discrete soil vapor sampling on August 2, 2006, SVE operations were suspended for approximately 3 weeks. On August 22, 2006, the SVE system was re-activated, and after approximately 30 minutes after system startup, discrete vapor samples were again collected from each well to measure any hydrocarbon rebound in the soil vapor. Except for xylene concentrations in wells MW-1, MW-1U, and MW-1L, all wells showed TPHg, BTEX, and MTBE concentrations to below the analytical detection limit. Xylene concentrations in well MW-1, MW-1U, and MW-1L were reported at 0.27, 1.30, and 0.38 ppmv, respectively, following the rebound test. This vapor rebound test, along with analytical from previous monthly sampling events of the influent vapor stream, indicated that the resumed soil vapor extraction remedial effort had recovered most of the recoverable hydrocarbon vapor from the impacted area from 75 to 125 feet bgs. TPHg concentrations in the influent vapor stream following the rebound test period were sustained at levels below 100 ppmv for more than 6 months, SVE operations wereterminated on March 31,2007. To further verify the completion of additional soil remedial activities from remaining soil impacts in the deeper zones, two confirmation soil borings (SB-3 and SB-4) were advanced and sampled on November 15 and 16, 2007, respectively. Both of these borings were adjacent to a total depth of approximately 125 feet bgs and sampled at 10 foot depth intervals above 70 feet bgs, and at 5 foot intervals from 75 to 125 feet bgs. The analytical results from this sampling showed a significant reduction in hydrocarbon concentrations from 75-125 feet bgs and indicated most of the recoverable hydrocarbon compounds were removed from this interval. February 2, 2009 Final groundwater sampling event. All seven groundwater monitoring wells were sampled. Maximum groundwater concentrations were ND<50 ppb TPHg, 0.76J ppb B (MW-4-P), ND<0.5 ppb TEX, MTBE, ETBE, TAME, ND<5.0 TBA, ND<500 ppb Ethanol, 6.55 ppb FC-12(Dichlorodifluoromethane) (MW-6-P), and 1.42 ppb Chloroform (MW-6-P). Groundwater Monitoring Groundwater sampling results showed concentrations below detection limits for petroleum hydrocarbons and fuel oxygenates since December 2003. The three off-site groundwater monitoring wells (MW-6-P, MW-7-P, and MW-8-P) downgradient of the site have not showed TPHg or MTBE concentrations above detection limits since February 2000. Since April 2009, RCDEH has been waiting on well destructions prior to issuing a no further action letter. As per the SWRCBs directive to close the site regardless of non-compliance with well destructions, a site closure letter dated 8/18/10 was prepared. A cover letter was attached to the closure letter requiring documentation of well destructions by 11/30/10.

Minor Threat to Water Quality. A violation of a regional board order Treat To Water:

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Category C - Facilities having no waste treatment systems, such as Complexity:

> cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Completed Document Type: Supplemental Site Investigation Report

Completed Date: 12/09/2005

Comments: DTSC conditionally approved the SSI/HRA report and recommended to

proceed with the submittal of the RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan

Completed Date: 10/15/2007

Comments: DTSC approved the RAP and the Negative Declaration for the site. The

site's soil is contaminated with elevated levels of polycyclic

aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), benzidine, lead and arsenic. The selected remedial alternative is the excavation of all contaminated soil above site target criteria. The excavated soil will be removed and transported off-site for treatment/recycling or disposal. It is expected that approximately 100,000 tons on contaminated soil will be removed from the site. The excavated area will be restored by backfilling with clean imported

soil, followed by compacting and grading.

Comments: DTSC approved the Negative Declaration.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Supplemental Site Investigation Report

Completed Date: 12/09/2005

Comments: DTSC conditionally approved the SSI/HRA report and recommended to

proceed with the submittal of the RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan

Completed Date: 10/15/2007

Comments: DTSC approved the RAP and the Negative Declaration for the site. The

site's soil is contaminated with elevated levels of polycyclic

aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), benzidine, lead and arsenic. The selected remedial alternative is the excavation of all contaminated soil above site target criteria. The excavated soil will be removed and transported off-site for treatment/recycling or disposal. It is expected that approximately 100,000 tons on contaminated soil will be removed from the site. The excavated area will be restored by backfilling with clean imported

soil, followed by compacting and grading.

Local Agency: RIVERSIDE COUNTY LOP

File Location: Local Agency
Local Case Number: 2013RO6600623
Potential Media Affect: Under Investigation

Potential Contaminants of Concern: Diesel

Site History:

July 2012 - One 1000 gallon gasoline UST (T1) was removed and three 1000 gallon gasoline UST's(T2,T3,T4) were abandoned in-place. Three slant borings were drilled under the abandoned UST's and soil samples were collected at four and six feet . All soil samples were ND (non-detect) for TPH, BTXE, & oxygenates except: 1855 mg/kg TPHd (T1-N-2) and 605 mg/kg TPHd (T4-N-4).Lead was detected in all samples with highest detection of 9 mg/kg.. The site was placed into the LOP in October 2013. Assessment: October 2013 One slant-boring (SB2) was advanced to 50 feet below grade (ft bg) under T4 and one vertical boring (SB1) was advanced to 40 ft bg through the former T1 tank cavity. All soil samples from SB1 were non-detect for TPH (C4- C40) and VOCs (8260 full scan). Soil samples from SB2 had detections of TPHd (C12-C22) to a maximum depth of 25 ft bg with the highest concentrations at 20 ft bg (1190 ppm TPHd SB2-20). Samples above and below this depth had detections of 970 ppm TPHd (15-foot sample) and 230 ppm TPHd (25-foot sample). A 25-ft clean zone was established from 30 to 50-ft bg. Groundwater Monitoring: Groundwater was not encountered during drilling to 50 ft. bg and is estimated to be deeper than 100 ft bg. Based on the limited mass and depth to groundwater, remaining hydrocarbon impacts do not pose a threat to groundwater quality. Justification for Closure: The primary source of diesel from the USTs has been removed. The remaining TPHd C4-C40 impacts appear to be limited in mass and confined within shallow soils above 30 feet in the area of former T4 UST. Based on the lack of VOC detections in the soil and low volatility of diesel hydrocarbons, the risk of vapor intrusion appears negligible. Although the site does not meet the LTCP media-specific criteria for petroleum vapor intrusion to indoor air due to TPHd concentrations greater than 100 ppm in the bioattenuation zone and the less than 30-foot of separation between impacted soil and the foundation of existing buildings, this site should be closed. Remediation: not required Other information: The site is currently occupied by a commercial Solar company. 7/2/2014 NFA/Case closure letter issued by

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

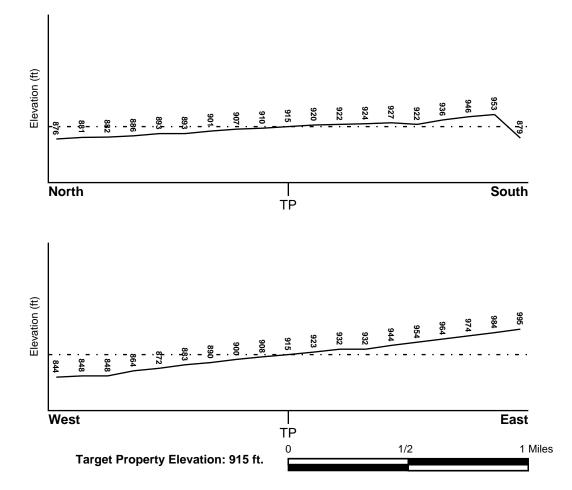

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NOT AVAILABLE YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ARLINGTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Boundary		ındary		Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Oon Nouvelon
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	11 inches	50 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 6.1
3	50 inches	59 inches	cemented	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: Min:

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Executive Summary

PlaceWorks has performed a Phase I Environmental Site Assessment (Phase I) Addendum on behalf of the Riverside Unified School District for proposed expansion of Longfellow Elementary School located in the City of Riverside, Riverside County California (Figures 1 and 2). The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites. The Phase I concluded that there were no Recognized Environmental Conditions (RECs), no historical Recognized Environmental Conditions (HRECs), and no Controlled Recognized Environmental Conditions (CRECs). A Phase I Addendum to assess for potential lead-based paint and organochlorine pesticides (OCPs) from termiticides was recommended in the Phase I following DTSC guidance documents for school sites for the two residential parcels.

The Riverside Unified School District proposes to acquire approximately 0.61 acres and expand the existing Longfellow Elementary School, located at 3610 Eucalyptus Avenue, to include the two adjacent parcels of land located at 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. Figure 3 and 4 are aerial photographs showing the current boundaries of the elementary school and site conditions, along with the proposed expansion site.

Sampling was conducted in the area of the proposed expansion parcels following DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers dated June 2006 to assess the project site for potential lead-based paint and termiticides. No pad or pole mounted transformers are located near the project area. Based on the age of both residences, lead based paint and termiticide testing is required for the project site.

The sampling program that follows DTSC guidance and results are summarized below:

- A total of 28 soil samples plus two duplicates were collected. Samples were collected from 14 locations from 0 to 0.5 feet below ground surface (bgs) and from 2.5 to 3.0 feet bgs. Six sample locations were selected for 2210 7th Street (corner parcel) and eight sample locations were selected for 2228 7th Street (adjacent to school site). Sample locations were selected based on surface covering, low lying areas and proximity to driplines.
- Eight composite soil samples and two composite duplicate soil samples were analyzed for
 organochlorine pesticides (OCPs) by a State certified laboratory using United States Environmental
 Protection Agency (EPA) Method 8081A to evaluate the possible impact to soil from termiticides
 that may have been used on site. Samples were analyzed from both sample depths.

Executive Summary

- Based on the initial composite samples, one composite sample collected from 2210 7th Street was analyzed discretely for a total of 4 discrete analyses for OCPs.
- Fourteen soil samples plus two duplicates were analyzed discretely for lead by EPA Method 6010B to
 evaluate the possible impact to soil from lead-based paint in building materials in the shallow surface
 samples.
- Based on the initial surface sample results an additional seven soil samples from the 2.5 foot sample depth were analyzed for lead.
- Up to five OCPs (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, and chlordane) were detected in two of the composite samples analyzed. Most of the concentrations were significantly below their respective EPA Region 9 Residential Regional Screening Levels (RSLs) and DTSC's Modified Screening Levels. Composite 2210-1, 2210-2, 2210-3, 2210-4 from 0.5 feet showed elevated levels of chlordane Discrete testing of the four samples that comprised the composite sample showed levels of chlordane above DTSC and EPA regional levels in one sample, 2210-4. The deeper corresponding composite sample was not elevated for any OCP indicating that the chlordane is shallow.
- Lead was detected in all 14 original soil samples plus the two duplicate samples above laboratory detection limits. Lead concentrations ranged from 3.43 milligrams per kilogram (mg/kg) to 353 mg/kg at 0.5' bgs. Seven surface samples exceeded the DTSC screening level for lead of 80 mg/kg. Based on these results the seven corresponding deeper samples were analyzed. The deeper samples were all below levels of concern with concentrations that ranged from 3.55 mg/kg to 48.2 mg/kg. All lead concentrations at 2.5' bgs were below DTSC's lead screening level of 80 mg/kg.
- Four of the elevated lead locations were located at 2210 7th Street and three of the elevated lead locations were located at 2226 7th Street.
- Risk estimates were calculated for the site using both the PEA screening level assessment method. The risk estimates show that the levels at the site from organochlorine pesticides and lead from lead-based paint do pose a potential human health risk to the students or to the staff using an unrestricted residential land use scenario. A limited removal action of the impacted shallow soil is recommended.

The results of the Phase I Addendum support the following conclusions and recommendations:

If the District decides to proceed with acquiring the two parcels, a Removal Action Program may be necessary. The recommendation for a Removal Action Program is due to the concentrations of lead and chlordane that exceed DTSC screening levels. The Removal Action Program would consist of removing soils around sampling locations where concentrations of lead and or chlordane exceeded DTSC screening levels, below is a breakdown of the approximate amount of soil that would be removed during the Removal Action Program:

The total cubic yards of impacted soil that is recommended for excavation from the 2210 7th Street parcel is estimated at 33 cubic yards based on the following sample locations (see Figure 5 for sample locations).

Page 2 • PlaceWorks January 2019

Executive Summary

- The area near sample location 2210-1 is estimated at approximately 9.4 cubic yards (lead [152 mg/kg])
- The area near sample location 2210-2 is estimated at approximately 8.5 cubic yards (lead [92.8 mg/kg])
- The area near sample location 2210-3 is estimated at approximately 12 cubic yards (lead [125 mg/kg])
- The area near sample location 2210-4 is estimated at approximately 3.1 cubic yards (lead [353 mg/kg] and chlordane [2.4 mg/kg])

The total cubic yards of impacted soil that is recommended for excavation from the 2226 7th Street parcel is 37.4 cubic yards based on the following sample locations.

- The area near sample location 2226-1 is estimated at approximately 3.6 cubic yards (lead [328 mg/kg])
- The area near sample location 2226-4 is estimated at approximately 14.4 cubic yards (lead [119 mg/kg])
- The area near sample location 2226-7 is estimated at approximately 19.4 cubic yards (lead [268 mg/kg])

For the two parcels, the total impacted soil that is estimated for removed is approximately 70.4 cubic yards. Prior to the removal, additional sampling could be implemented to possibly reduce the volume of soil by further delineating the area of impacted soil. The removal can occur following acquisition and demolition of the structures.

1. Introduction

This document presents a Phase I Addendum Report for the Riverside Unified School District proposed expansion parcels located at 2210 7th Street and 2226 7th Street, Riverside, Riverside County, California. Figure 1 shows the regional location of the existing school site and Figure 2 shows the local Vicinity. Figure 3 is an aerial photograph showing the boundaries of the school site and project area. The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites. The Phase I concluded that there were no Recognized Environmental Conditions (RECs), no historical Recognized Environmental Conditions (HRECs), and no Controlled Recognized Environmental Conditions (CRECs). A Phase I Addendum to assess for potential lead-based paint and organochlorine pesticides (OCPs) from termiticides was recommended in the Phase I following DTSC guidance documents for school sites.

The Riverside Unified School District proposes to acquire approximately 0.61 acres and expand the existing Longfellow Elementary School, located at 3610 Eucalyptus Avenue, to include the two adjacent parcels of land located at 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. Figure 3 and 4 are aerial photographs showing the current boundaries of the elementary school and site conditions, along with the proposed expansion site.

Based on the information obtained during the Phase I, the following additional investigation was conducted in this Phase I Addendum:

 Potential impacts to soil from lead-based paint and termiticides were investigated near the existing structures. Soil samples were collected in accessible areas and analyzed for lead by EPA Method 6010B and organochlorine pesticides by EPA Method 8081A.

Sampling was conducted using the DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers (June 2006). The soil sampling was conducted on June 7, 2018. This report summarizes the lead and OCP testing results. Figure 5 shows the sample locations on the two proposed residential acquisition parcels.

1.1 SCOPE OF WORK

The scope of work implemented to prepare this Phase I Addendum included:

• Developing sampling and analysis plans to further assess site conditions;

1. Introduction

- Implementing field and laboratory data collection and evaluation to further assess environmental conditions at the site; and
- Preparing this Phase I Addendum report.

A sampling and analyses program was conducted to evaluate the potential presence of lead and organochlorine pesticides in shallow soils due to the potential for lead-based paint and termiticides from historic buildings. The investigation was conducted on June 7, 2018. The scope for the field and laboratory investigation is discussed in Section 2. The field and laboratory program included:

- A total of 28 soil samples plus two duplicates were collected. Samples were collected from 14 locations from 0 to 0.5 feet below ground surface (bgs) and from 2.5 to 3.0 feet bgs. Six sample locations were selected for 2210 7th Street (corner parcel) and eight sample locations were selected for 2228 7th Street (adjacent to school site). Sample locations were selected based on surface covering, low lying areas and proximity to driplines.
- Eight composite soil samples and two composite duplicate soil samples were analyzed for
 organochlorine pesticides (OCPs) by a State certified laboratory using United States Environmental
 Protection Agency (EPA) Method 8081A to evaluate the possible impact to soil from termiticides
 that may have been used on site. Samples were analyzed from both sample depths.
- Based on the initial composite samples, one composite sample collected from 2210 7th Street was analyzed discretely for a total of 4 discrete analyses for OCPs.
- Fourteen soil samples plus two duplicates were analyzed discretely for lead by EPA Method 6010B to
 evaluate the possible impact to soil from lead-based paint in building materials in the shallow surface
 samples.
- Based on the initial surface sample results an additional seven soil samples from the 2.5 foot sample depth were analyzed for lead.

1. Introduction

This page intentionally left blank.

Page 6 • PlaceWorks January 2019

Sampling Activities and Results

This section describes methods and results of the soil sampling activities conducted at the site on June 7, 2018. The soil sampling was implemented at the site by the project geologist.

2.1 UTILITY CLEARANCE

Prior to commencement of field activities, USA was notified of our intent to conduct subsurface investigations at least 48 hours prior to initiation of intrusive field tasks. USA contacted all utility owners of record within the site vicinity and notified them of our intention to conduct subsurface investigations in proximity to buried utilities. All utility owners of record, or their designated agents, were expected to clearly mark the position of their utilities on the ground surface throughout the area designated for investigation.

2.2 SOIL SAMPLING

Based on the information from the Phase I, the approximate 0.61 acres of the proposed expansion parcels had been vacant land until a residential dwelling building and a horse stable were built on the 2210 7th Street parcel in 1908 and by 1931 both parcels are occupied by residential dwellings. The 1950 Sanborn Map reflects that the parcels' residential dwellings still remain, but they no longer each have a horse stable. For the termiticide and lead-based paint assessment the DTSC requires soil samples to be collected near wood structures constructed prior to 1979 to assess for potential lead-based paint impacts and structures constructed prior to 1989 for termiticides. Due to the age of the structures on the two parcels, samples were collected and analyzed for lead and organochlorine pesticides (OCPs) to assess the possibility of residual termiticides and potential impacts from lead-based paints.

A total of 28 soil samples (plus two duplicates and one equipment blank) were collected on June 7, 2018 from 14 locations to characterize soil from surface to 0.5 and 2.5 feet bgs. Six locations were selected for the parcel located at 2210 7th Street and eight locations were selected for the parcel at 2226 7th Street for a total of fourteen sample locations plus two duplicates. Low lying unpaved areas were selected to assess the structures.

Surface soil samples and two duplicates collected from the surface to 0.5 feet were analyzed discretely for lead by a State certified laboratory using United States Environmental Protection Agency (EPA) Method 6010B to evaluate the possible impact to soil from lead-based paint in building materials.

Eight composite soil samples and two composite duplicate samples were analyzed for organochlorine pesticides by EPA Method 8081A to evaluate the possible impact to soil from termiticides that may have been used on site. Samples were analyzed from both surfaces to 0.5 and 2.5 feet bgs. Table 1 is a summary table of the sampling and analysis program and Figure 5 shows the sample locations.

2. Site Description

2.2.1 Sampling Methods and Procedures

Soil samples were collected from surface to 0.5 feet and 2.5 feet below ground surface using a hand auger. The hand auger was advanced from the surface to 0.5 feet and to 2.5 feet below ground surface. Soil from the sample interval was emptied from the hand auger barrel into a certified pre-cleaned glass jar from the laboratory and sealed. Each sample was labeled with the sample number, sample depth, and the date and time sampled. Samples were immediately placed in an ice-filled cooler and listed on a Chain-of-custody (COC) form.

Observations pertaining to the soil type were described by a field geologist in accordance with the Unified Soil Classification System (USCS). Any observation pertaining to potential soil contamination was recorded.

2.3 QUALITY CONTROL SAMPLING PROCEDURES

Field quality control samples associated with the sampling program included duplicates, equipment blanks, and soil matrix spike/matrix spike duplicate (MS/MSD) samples, in accordance with the DTSC PEA Guidance Manual (DTSC 2015).

2.4 DECONTAMINATION PROCEDURES AND WASTE MANAGEMENT

All equipment that came into contact with the soil was decontaminated consistently to assure the quality of samples collected. Decontamination was conducted prior to and after each use of a piece of equipment. All sampling devices used were decontaminated using the following procedures:

- Non-phosphate detergent and distilled water wash, using a brush;
- Initial deionized/distilled water rinse; and
- Final deionized/distilled water rinse.

Soil cuttings were immediately backfilled into the original boring and decontamination water was disposed of in accordance to the Office of Emergency and Remedial Response (OERR) Directive 9345.3-02 (1991). Used personal protection equipment (PPE) were double bagged and placed in a municipal refuse dumpster.

2.5 RESULTS

Organochlorine pesticide concentrations from soil are summarized in Table 2, analyzed by EPA Method 8081A. Lead concentrations in surface soil are summarized in Table 3, analyzed by EPA Method 6010B. All laboratory data is included in Appendix A.

Page 8 • PlaceWorks January 2019

2. Site Description

2.5.1 Soil Description

The native soils encountered and collected during the investigation consisted of loose to medium stiff dark brown to brown silt with or without fine sand. No odors or staining were observed by the field geologist. Groundwater was not encountered.

2.5.2 Pesticides

Up to five OCPs (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, and chlordane) were detected in two of the composite samples analyzed. Most of the concentrations were significantly below their respective EPA Region 9 Residential Regional Screening Levels (RSLs) for residential land use and DTSC's Modified Screening Levels. Composite 2210-1, 2210-2, 2210-3, 2210-4 from 0.5 feet showed elevated levels of chlordane Discrete testing of the four samples that comprised the composite sample showed levels of chlordane above DTSC and EPA regional levels in one sample, 2210-4. The deeper corresponding composite sample was not elevated for any OCP indicating that the chlordane is shallow. Table 2 provides a summary of the OCP results.

4,4'-DDD was reported in composite sample Composite 2210-1, 2210-2, 2210-3, 2210-4 at 0.5' at 0.1 mg/kg, which is below the EPA RSL for a 4:1 composite of 4,4'-DDD at 0.475 mg/kg. In a discrete testing of sample 2210-4 at 0.5', 4,4'-DDD concentration was found to be 0.38 mg/kg, below the EPA RSL of 1.9 mg/kg for 4,4'-DDD. 4,4'-DDD was not detected in the other discrete soil samples of Composite 2210-1, 2210-2, 2210-3, 2210-4.

4,4'-DDD was also detected in Composite 2226-1, 2226-2, 2226-3, 2226-4 at 0.5' at 0.0076 mg/kg, a concentration below the EPA RSL of 1.9 mg/kg.

4,4'-DDE was detected in a discrete sample of 2210-3 at 0.5' at 0.0037 mg/kg a concentration below the EPA RSL of 2 mg/kg. 4,4'-DDE was not detected in any composite samples.

4,4'-DDT was detected in a discrete sample of 2210-3 at 0.5' at 0.006 mg/kg a concentration below the EPA RSL of 1.9 mg/kg. 4,4'-DDT was also detected in a discrete sample of 2210-1 at 0.5' at 0.0044 mg/kg a concentration below the EPA RSL of 1.9 mg/kg. 4,4'-DDT was not detected in any composite samples.

Chlordane was reported in composite sample Composite 2210-1, 2210-2, 2210-3, 2210-4 at 0.5' at 0.61 mg/kg, a concentration above EPA RSL for Chlordane in a 4:1 composite of 0.425 mg/kg. Chlordane was also reported in the discrete samples of 2210-1 and 2210-4 at 0.5' at 0.01 mg/kg and 2.4 mg/kg respectively. The Chlordane concentration in the discrete sampling of 2210-1 at 0.01 mg/kg is below the EPA RSL of 1.7 mg/kg. However, the discrete sample test of 2210-4 at 0.5' at 2.4 mg/kg is again above EPA RSL of 1.7 mg/kg.

Chlordane was also reported in Composite 2226-1, 2226-2, 2226-3, and 2226-4 at 0.5' at a concentration of 0.048 mg/kg which is below the EPA RSL for Chlordane in a 4:1 composite at 0.425 mg/kg.

2. Site Description

2.5.3 Lead

Lead was detected in all 14 original soil samples plus the two duplicate samples above laboratory detection limits. Lead concentrations ranged from 3.43 milligrams per kilogram (mg/kg) to 353 mg/kg at 0.5' bgs. Seven surface soil samples exceeded the DTSC screening level for lead of 80 mg/kg. Based on these results the seven corresponding deeper samples were analyzed. The deeper samples were all below levels of concern with concentrations that ranged from 3.55 mg/kg to 48.2 mg/kg. All lead concentrations at 2.5' bgs were below DTSC's lead screening level of 80 mg/kg.

The next highest concentration of lead was in sample 2226-1 at 0.5' at 328 mg/kg, at 2.5' the level of lead drops to 4.51 mg/kg.

Sample 2226-7 at 0.5' had a concentration of lead at 268 mg/kg, at 2.5' the level of lead drops to 3.55 mg/kg.

Sample 2210-1 at 0.5' had a concentration of lead at 152 mg/kg, at 2.5' the level of lead drops to 48.2 mg/kg.

Sample 2210-3 at 0.5' had a concentration of lead at 125 mg/kg, at 2.5' the level of lead drops to 5.25 mg/kg.

Sample 2226-4 at 0.5' had a concentration of lead at 119 mg/kg, at 2.5' the level of lead drops to 3.57 mg/kg.

Sample 2210-2 at 0.5' had a concentration of lead at 92.6 mg/kg, at 0.5' the level of lead drops to 35.2 mg/kg.

The seven samples at 0.5' that are above the DTSC SL of 80 mg/kg, when tested at 2.5' all drop below the DTSC SL of 80 mg/kg. Four of the elevated lead locations were located at 2210 7th Street and three of the elevated lead locations were located at 2226 7th Street. Table 3 provides a summary of the lead concentrations detected in soil at the site.

Page 10 • PlaceWorks January 2019

3. Human Health Screening Evaluation

3.1 LEAD SCREENING

For the screening for lead concentrations on existing and proposed school sites, the highest detected concentration of lead is compared to the screening value of 80 mg/kg derived from the DTSC Lead Spread 8 model. The screening value is based on exposures to children using statewide and regional air concentrations of lead. This screening value is considered appropriate for former residential and uncontaminated commercial properties where lead from lead-based paint is the only potential contaminant on the site.

Lead was detected in all 21 soil samples and the two duplicate samples above laboratory reporting limits (Table 3). Lead concentrations at 0.5' ranged from 3.43 mg/kg to 353 mg/kg, with seven surface samples above the DTSC screening level of 80 mg/kg. The corresponding deeper soil samples all had lead concentrations below the DTSC SLs.

3.2 PESTICIDE SCREENING

The maximum concentrations of the pesticides detected in samples collected during the Phase I Addendum were compared to EPA Region IX Regional Screening Level (RSL) for residential land use (EPA Region IX May 2018) or DTSC Screening Level (SL) if available (DTSC June 2018). RSLs are updated on a regular basis on EPA Regions IX's website. RSLs are developed using risk assessment guidance from the EPA Superfund program. RSLs are risk-based concentrations derived from standardized equations combining exposure information assumptions with EPA toxicity data. RSLs are considered to be protective for humans (including sensitive groups) over a lifetime.

A summary table is provided below showing the highest reported pesticide concentration at the site and the corresponding residential RSL or SL.

Compound	Maximum Concentration mg/kg	Residential Land Use RSL mg/kg	Ratio Maximum Concentration to RSL
4,4'-DDD	0.38	1.9	0. 2
4,4'-DDE	0.0037	2	0.00185
4,4DDT	0.006	1.9	0.003
Dieldrin	0.0058	0.034	0.17
Chlordane	2.4	0.44**	5.4
		Total Risk	5.77E-06

^{** =} Chlordane screening level is DTSC RSL June 2018.

Because there are multiple chemicals detected at the site, the cumulative risk for the site is calculated by summing the individual risk from each chemical

3. Human Health Screening Evaluation

Cumulative Risk = $(conc_x/RSL_x + conc_y/RSL_y + conc_z/RSL_z) \times 10^{-6}$

The estimated carcinogenic risk using the maximum concentrations reported at the site is 5.77E-06, above the level on concern of one in a million increased cancer risk. The risk driver is chlordane that was found on one side of the residence at 2210 7th Street.

3.3 UNCERTAINITY ANALYSIS

The data collected are subject to uncertainty associated with sampling and analysis. In the risk analysis it was assumed that samples collected were representative of conditions to which various populations may be exposed. However, the collected samples may not be completely representative due to biases in sampling and to random variability of samples. In general, sampling was biased toward areas of known and suspected elevated chemical concentrations, which will lead to an overestimation of risk when these results are assumed to represent a larger area. The placement of soil borings was in part, purposely biased to detect and characterize potential hot spots of soil based on historical site use. This type of sampling approach is likely to overestimate the chemical concentrations to which a receptor would be exposed and the potential health impact to the receptors evaluated.

Samples were analyzed using California State Certified Laboratory procedures and were subjected to limited review, to obtain data suitable for decision-making. However, it should be understood that sample analysis is subject to uncertainties associated with precision, accuracy and detection of chemicals at low concentrations.

Page 12 • PlaceWorks January 2019

4. Quality Assurance/Quality Control Implementation

The Quality Assurance/Quality Control (QA/QC) Program was implemented in accordance with the DTSC PEA Guidance Manual (DTSC 1999). The primary quality control features of the QA/QC program include the collection and analysis of field quality control samples and the data validation. All proper chain of custody procedures were followed and the chain of custody is included in Appendix A.

Quality control samples collected in the field included equipment rinseate blanks as described in Section 3. The data for these quality control samples were reviewed as part of the data validation process, along with results from laboratory quality control analyses. Data validation was performed in compliance with DTSC's PEA Guidance Manual, using protocols consistent with the USEPA National Functional Guidelines (DTSC 1999). Each sample was analyzed for the specified suite of analyses presented in Section 3. Data from each of the analyses were evaluated with respect to the quality control criteria listed below. Data for the project as a whole were evaluated in terms of completeness.

- Holding times;
- Field blanks;
- Laboratory method and calibration blanks;
- Initial and continuing calibrations;
- System monitoring compounds (surrogates organic analyses only);
- Laboratory control samples (LCS) and LCS duplicate samples (LCSD) as applicable;
- Matrix spikes (MS)/Matrix spike duplicates (MSD); and
- Compound identification and quantitation.

Data quality for the project is good, and the data collected are of acceptable quality for use in the screening evaluation.

Data validation qualifier flags have been added to those data that did not meet acceptance criteria defined in School Quality Assurance Project Plans. Results of the validation indicate that all samples collected and analyzed are useful in characterizing the site and assessing the human health and ecological risks for the site. No detectable concentrations were qualified as rejected (R) or were considered to be unusable based on the validation evaluation. Data qualified as estimated (J/UJ) exhibited some bias during analysis and should be

4. Quality Assurance/Quality Control Implementation

considered as an approximate measure of the respective analyte concentration. Qualified data are presented along with the data results in the analytical summary tables provided in this report.

Field activities were observed to be conducted in a manner consistent with the QA/QC procedures presented in the DTSC PEA Guidance Manual (DTSC 1999). No findings were identified that significantly affect the quality of the samples collected or the resulting data evaluation.

4.1 DATA VALIDATION

Data validation was performed for all samples submitted as part of PlaceWorks evaluation of soil. A & R Laboratories located in Ontario was the lead laboratory for the project and performed the required analyses.

Validation was performed in accordance with the general guidance provided in the USEPA Functional Guidelines for Evaluating Inorganic Analyses (USEPA 1994) and in accordance with the professional judgment of the validation team. Validation was performed to assess analytical performance in terms of the DQOs accuracy, precision, sensitivity, and completeness. Comparability and representativeness DQOs for the samples collected are addressed by the correct implementation of the procedures defined in the sampling and analysis plan.

A summary of the validation program, in terms of the DQOs listed above, is provided in the following sections. Data qualifiers assigned to results, if required, were as follows:

- J Result is estimated due to failure to meet one of the DQO criteria associated with the sample result or associated sample batch. Results reported at concentrations below standard laboratory reporting limits, but above method detection limits, were flagged "J" by the laboratory, or "B" in the case of metals. These data are validated as J/estimated because they are below the reliable quantitation limits determined by the laboratory.
- U Result is qualified as not-detected at the reported value. This qualifier is used when results from blank analyses indicate that detections in associated samples may be biased high due to potential contaminant conditions in the field or laboratory.
- UJ Result is qualified as not-detected at the reported value, and the value is determined to be estimated. This qualifier commonly results when quality control failures are associated with analytes that are not detected, or when detections are qualified "U" due to blank contamination combined with a "J" qualifier resulting from another QC problem.
- R Result is rejected due to severe QC failure, or due to multiple lesser QC problems that are determined to be additive.

4.2 ACCURACY

Accuracy was evaluated by assessing the results of holding times, field and laboratory blanks, initial and continuing calibrations, surrogate spike recoveries (organic analyses), LCS recoveries, MS analyses, and interference check samples (metals by inductively coupled plasma).

Page 14 • PlaceWorks January 2019

Quality Assurance/Quality Control Implementation

Holding times were met for all analyses. Frequency and control criteria for initial and continuing calibration verifications were met. The method blank data showed non-detectable levels for all constituents. LCS analysis was performed at required frequencies and all recoveries were within acceptable limits. Surrogate recoveries for all samples were within acceptable control limits. MS and MSD were performed at the required frequencies. All recoveries were within acceptable limits.

4.3 PRECISION

Precision was evaluated by assessing the results between MS and MSD analyses, LCS and LCSD analyses, between laboratory duplicate analyses. The precision DQO was generally satisfied for the samples collected during the project. Precision was evaluated as the relative percent difference (RPD) between control sample results. RPD criteria reported by the laboratory were used to assess precision. RPDs were within the appropriate control limits.

4.4 SENSITIVITY

Sensitivity was addressed by ensuring that the reporting limits provided by the laboratories met those as requested in the workplans and task orders provided to the laboratory. Data were qualified in cases where results were reported at concentrations below standard laboratory reporting limits, but above the method detection limits that may have been required to meet the sensitivity requirements for the project. Such results were flagged by the laboratory as either J or B qualified data. These data retain a J/estimated qualifier due to potential decreased reliability at low concentration levels.

4.5 COMPLETENESS

Completeness is an evaluation of the overall sampling program with respect to data generated that is usable versus data that may have been rejected. No data was rejected during the data validation process for this project. The completeness objectives (minimum 90 percent) for this project are therefore considered to be satisfied for all analyses.

4.6 DATA VALIDATION CHART

The following table is a summary of pertinent quality indicators that were verified during the data validation process.

January 2019 PlaceWorks • Page 15

4. Quality Assurance/Quality Control Implementation

5. Health and Safety Procedures

PlaceWorks followed a site-specific HASP pursuant to Health and Safety Code 1910.120. The plan addressed the following:

- Identification and description of potentially hazardous substances that may be encountered during field operations;
- PPE and clothing for site activities; and
- Measures that need to be implemented in the event of an emergency.

PlaceWorks field personnel reviewed the HASP prior to commencing fieldwork. Prior to initiation of field activities each day, a site safety briefing was conducted to identify potential physical and chemical hazards and measures to be taken in event of an emergency. All on-site personnel were required to sign the site safety briefing form.

During field activities, all personnel within the exclusion zone wore appropriate level D PPE. No incidents or emergency actions related to site sampling occurred during the field program.

6. Conclusions and Recommendations

PlaceWorks has performed a Phase I Environmental Site Assessment (Phase I) Addendum on behalf of the Riverside Unified School District for proposed expansion of Longfellow Elementary School located in the City of Riverside, Riverside County California (Figures 1 and 2). The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites. The Phase I concluded that there were no Recognized Environmental Conditions (RECs), no historical Recognized Environmental Conditions (HRECs), and no Controlled Recognized Environmental Conditions (CRECs). A Phase I Addendum to assess for potential lead-based paint and organochlorine pesticides (OCPs) from termiticides was recommended in the Phase I following DTSC guidance documents for school sites.

The Riverside Unified School District proposes to acquire approximately 0.61 acres and expand the existing Longfellow Elementary School, located at 3610 Eucalyptus Avenue, to include the two adjacent parcels of land located at 2226 7th Street and 2210 7th Street, the alley way behind the two homes, and the cul-de-sac in front of the homes. Figure 3 and 4 are aerial photographs showing the current boundaries of the elementary school and site conditions, along with the proposed expansion site.

Sampling was conducted in the area of the proposed expansion parcels following DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers dated June 2006 to assess the project site for potential lead-based paint and termiticides. No pad or pole mounted transformers are located near the project area. Based on the age of both residences, lead based paint and termiticide testing is required for the project site.

The soil sampling was conducted on June 7, 2018. This report summarizes the lead and OCP testing results.

The sampling program and results are summarized below:

- A total of 28 soil samples plus two duplicates were collected. Samples were collected from 14 locations from 0 to 0.5 feet below ground surface (bgs) and from 2.5 to 3.0 feet bgs. Six sample locations were selected for 2210 7th Street (corner parcel) and eight sample locations were selected for 2228 7th Street (adjacent to school site). Sample locations were selected based on surface covering, low lying areas and proximity to driplines.
- Eight composite soil samples and two composite duplicate soil samples were analyzed for organochlorine pesticides (OCPs) by a State certified laboratory using United States Environmental Protection Agency (EPA) Method 8081A to evaluate the possible impact to soil from termiticides that may have been used on site. Samples were analyzed from both sample depths.

January 2019 PlaceWorks • Page 19

6. Conclusions and Recommendations

- Based on the initial composite samples, one composite sample collected from 2210 7th Street was analyzed discretely for a total of 4 discrete analyses for OCPs.
- Fourteen soil samples plus two duplicates were analyzed discretely for lead by EPA Method 6010B to
 evaluate the possible impact to soil from lead-based paint in building materials in the shallow surface
 samples.
- Based on the initial surface sample results an additional seven soil samples from the 2.5 foot sample depth were analyzed for lead.
- Up to five OCPs (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, and chlordane) were detected in two of the composite samples analyzed. Most of the concentrations were significantly below their respective EPA Region 9 Residential Regional Screening Levels (RSLs) and DTSC's Modified Screening Levels. Composite 2210-1, 2210-2, 2210-3, 2210-4 from 0.5 feet showed elevated levels of chlordane Discrete testing of the four samples that comprised the composite sample showed levels of chlordane above DTSC and EPA regional levels in one sample, 2210-4. The deeper corresponding composite sample was not elevated for any OCP indicating that the chlordane is shallow.
- Lead was detected in all 14 original soil samples plus the two duplicate samples above laboratory detection limits. Lead concentrations ranged from 3.43 milligrams per kilogram (mg/kg) to 353 mg/kg at 0.5' bgs. Seven surface samples exceeded the DTSC screening level for lead of 80 mg/kg. Based on these results the seven corresponding deeper samples were analyzed. The deeper samples were all below levels of concern with concentrations that ranged from 3.55 mg/kg to 48.2 mg/kg. All lead concentrations at 2.5' bgs were below DTSC's lead screening level of 80 mg/kg.
- Four of the elevated lead locations were located at 2210 7th Street and three of the elevated lead locations were located at 2226 7th Street.
- Risk estimates were calculated for the site using both the PEA screening level assessment method.
 The risk estimates show that the levels at the site from organochlorine pesticides and lead from lead-based paint do pose a potential human health risk to the students or to the staff using an unrestricted residential land use scenario. A limited removal action of the impacted shallow soil is recommended.

The results of the Phase I Addendum support the following conclusions and recommendations:

If the District decides to proceed with acquiring the two parcels, a Removal Action Program may be necessary. The recommendation for a Removal Action Program is due to the concentrations of lead and chlordane that exceed DTSC screening levels. The Removal Action Program would consist of removing soils around sampling locations where concentrations of lead and or chlordane exceeded DTSC screening levels, below is a breakdown of the approximate amount of soil that would be removed during the Removal Action Program:

The total cubic yards of impacted soil that is recommended for excavation from the 2210 7th Street parcel is estimated at 33 cubic yards based on the following sample locations (see Figure 5 for sample locations).

Page 20 • PlaceWorks January 2019

- The area near sample location 2210-1 is estimated at approximately 9.4 cubic yards (lead [152 mg/kg])
- The area near sample location 2210-2 is estimated at approximately 8.5 cubic yards (lead [92.8 mg/kg])
- The area near sample location 2210-3 is estimated at approximately 12 cubic yards (lead [125 mg/kg])
- The area near sample location 2210-4 is estimated at approximately 3.1 cubic yards (lead [353 mg/kg] and chlordane [2.4 mg/kg])

The total cubic yards of impacted soil that is recommended for excavation from the 2226 7th Street parcel is 37.4 cubic yards based on the following sample locations.

- The area near sample location 2226-1 is estimated at approximately 3.6 cubic yards (lead [328 mg/kg])
- The area near sample location 2226-4 is estimated at approximately 14.4 cubic yards (lead [119 mg/kg])
- The area near sample location 2226-7 is estimated at approximately 19.4 cubic yards (lead [268 mg/kg])

For the two parcels, the total impacted soil that is estimated for removed is approximately 70.4 cubic yards. Prior to the removal, additional sampling could be implemented to possibly reduce the volume of soil by further delineating the area of impacted soil. The removal can occur following acquisition and demolition of the structures.

QUALIFIERS ABBREVIATIONS

B = Detected in the associated Method Blank at a concentration above the routine RL.

B1 = BOD dilution water is over specifications . The reported result may be biased high.

D = Surrogate recoveries are not calculated due to sample dilution.

E = Estimated value; Value exceeds calibration level of instrument.

H = Analyte was prepared and/or analyzed outside of the analytical method holding time

I = Matrix Interference.

J = Analyte concentration detected between RL and MDL.

Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

S = Customer provided specification limit exceeded.

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the

appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

PlaceWorks January 2019

Environmental Site Assessment Questionnaire for Client

The following information is requested to evaluate the potential for environmentally-related impacts and property contamination. This questionnaire is to be completed by the User of the Phase I Environmental Site Assessment, as defined by ASTM E-1527-13, or its authorized representative.

PART I

- Project description: Riverside Unified School District is planning on the possible expansion of Longfellow Elementary Scholl by acquiring two adjacent school sites located at 2226 and 2210 7th Street. Riverside Unified School District requested the preparation of a Phase I Environmental Site Assessment (ESA) as part of its due diligence responsibilities for the proposed school modernization.
- 2. <u>Property address(es) and Assessor Parcel Number(s) (APN)</u>: The campus is located at 3610 Eucalyptus Avenue in Riverside, CA and the parcels are located at 2226 and 22107th Street. APNs for the parcel are 211-143-007 and -008..
- 3. Current property owner (name, address, telephone number):

SEE ATTACHED

- 4. Current property development/improvements: Each parcel is developed with a single family residence.
- 5. Date(s) of current property development/improvements: The houses were constructed prior to 1930.
- 6. <u>Past property use, development/improvements</u>: No identified land uses prior to the construction of the homes.
- 7. Neighboring property uses: The surrounding community is a mix of educational and residential.

PART II

1.	. Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, local or state law?							
2.	Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?							
3.	Do you have any specialized knowledge or experience related to the <i>property</i> or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the <i>property</i> or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes	No					
4.	Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,	Yes	No					
	(a) do you know of specific chemicals that are present at the property?							
	(b) do you know of spills or other chemical releases that have taken place at the property	?						
	(c) do you know of any environmental cleanups that have taken place at the property?							
5.	Based on your knowledge and experience related to the <i>property</i> , are there any obvious indicators that point to the presence or likely presence of contamination at the <i>property?</i>	Yes	No					
6.	If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this <i>property</i> reasonably reflect the fair market value of the <i>property?</i> If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the <i>property?</i>	Yes	No					
7.	Are you aware of any past or present above ground or underground storage tanks on the <i>property</i> ? To your knowledge, has there ever been any hazardous substances or wastes stored on the <i>property</i> ?	Yes	No					
	"Yes" response was provided to Questions 1 – 5 or a "No" response was provided to Questiovide details below:	on 6,	please					
the	rtify that the information provided herein is true and correct to the best of my know date signed below.	wledg	ge as of

DENISE CLENDENING, PhD

Associate Principal, Site Assessment Services

Denise has over 27 years of experience providing technical oversight and performing human health risk assessments, site assessments, and investigations of chemical waste at multiple sites including Resource Conservation & Recovery Act (RCRA) and Superfund sites. She is adept at applying alternatives that are economical yet protective of human health and the environment. She conducts realistic assessments and calculates target cleanup levels based on site-specific exposure scenarios. Her work has involved pesticides, heavy metals, solvents, and petroleum-contaminated soils. She assists multiple school districts in California with site assessment, public relations, and the Department of Toxic Substance Control (DTSC) school site approval process. She participates in public hearings and school board meetings and coordinates her projects with the CEQA process.

Before joining PlaceWorks, Denise managed large divestiture environmental due diligence projects for the electric power industry and was involved in numerous environmental projects for oil field operation. Her experience also includes the development and testing of risk assessment software and teaching training courses in risk assessment using different software programs.

Denise has established a very good reputation with regulatory agencies and negotiates risk-related issues on behalf of her clients. She is a member of the Los Angeles Regional Water Quality Control Board Underground Storage Tank Advisory Board and has extensive experience with site closure activities with the DTSC, Environmental Protection Agency, Regional Water Quality Control Boards, and local oversight agencies throughout California.

HIGHLIGHTS OF EXPERIENCE

ENVIRONMENTAL & HEALTH RISK ASSESSMENTS

- » Xerox Corporation Preliminary Environmental Assessment and Health Risk Assessment | Santa Ana CA
- » Human Health Risk Evaluation, Literature Research for American Petroleum Institute
- » City of Redlands Health Risk Assessment | Redlands CA
- » Caltrans Risk Assessment and Groundwater Impact Analysis | California
- » Risk Assessments and Indoor Air Sampling for Confidential Client(s) | Various Locations
- » Human Health & Ecological Risk Assessment Technical Review | Various Locations
- » Landfill Risk Assessments | Various Locations
- » Risk Assessments for Pesticide Contaminated Soil | Various Locations
- » Human Health Risk Assessment for Confidential Mineral Resources Client | Arizona
- » Human Health Risk Assessment at Whites Point Nike Missile Site | Los Angeles County CA
- » Human Health Risk Assessment at Fort MacArthur | Los Angeles County CA

EDUCATION

- » PhD, Soil Physics, University of California, Riverside
- » MS, Soil Science, University of California, Riverside
- » BS, Geology, University of California, Riverside

CERTIFICATIONS

» Oil Spill Response Training

AFFILIATIONS

- » Soil Science Society of America
- » American Geophysical Union
- » American Chemical Society
- » Society of Risk Analysis
- » Coalition of Adequate School Housing

Team member since 2005

SITE ASSESSMENTS

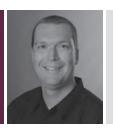

- » Site Remediation for Hull Middle School | Torrance CA
- » PEA for New High School, William S. Hart UHSD | Castaic CA
- » Phase I for Property at East Briar Drive | San Bernardino County CA
- » PEA for Stella Academy Middle School | Los Angeles CA
- » Phase I for Valley Boulevard Widening | City of Industry CA
- » Oil Field Preliminary Environmental Assessment | Culver City CA
- » Lead-Based Paint Evaluations | Various Locations
- » Cogeneration Facilities Permit Applications | Various Locations throughout California
- » NRG Energy Environmental Due Diligence Investigations | California
- » AES Environmental Due Diligence Work Plans | California
- » Remedial Investigation and Remedial Action for Jersey Avenue Elementary School Site (Congresswomen Grace Napolitano presented award for special congressional recognition for project), Little Lake City School District | City of Santa Fe Springs CA
- » Preliminary Environmental Assessments for over 100 school sites throughout California
- » Phase I ESA and PEAs for four school sites, Moreno Valley USD
- » Phase I ESAs, PEAs, SSIs and RAWs for eight school sites, San Bernardino County Superintendent of Schools
- » Phase I ESA for Elementary School No. 19, Rialto USD
- » PEA and SSI for the New High School No. 3 Site, Colton Joint USD
- » Phase I ESA and PEAs for four school sites, Lynwood USD
- » Phase I ESA for the Proposed Elementary School No. 8, San Ysidro School District
- » Phase I ESA for the Proposed K–8 Parker Dam School, Needles USD
- » PEAs for three school sites and environmental and legislative support services, Santa Ana USD
- » Phase I ESA, PSHA, and PEA for Community Day School, Eastside USD
- » PEAs for five school sites in Clovis | Clovis CA
- » PEA for redevelopment project for the City of South Gate | South Gate CA
- » Phase I ESA for Arrowhead Springs Resort I | San Bernardino CA
- » Phase I ESA for two Charter Schools for Green Dot Public Schools | Los Angeles CA
- » Phase I and Phase II ESA for Former Service Station | Los Angeles CA
- » Phase I ESAs, PEA, SSIs, and fill testing for multiple school sites, Pomona USD
- » PEA and methane gas testing, Encinitas USD
- » Phase I ESA and lead testing for multiple sites, Fontana USD
- » Proponent's Environmental Assessment for PUC | Long Beach CA
- » Initial Site Assessments for Street Widening Projects | Santa Ana CA
- » Phase I ESAs for Renaissance Community Fund | Corona CA

TITLE 5/CDE RISK ASSESSMENTS

- » Geohazard Assessment for Inglewood Site, Today's Fresh Start Charter School
- » PEAs and Title 5 Assessments for three school sites, Redlands USD
- » Title 5 Compliance Study Reports for four sites, Whittier Union High School District
- » Prairie Vista Lead Testing, Hawthorne USD
- » Environmental Support and Risk Assessment for school sites, San Dieguito Union High School District
- » Human Health Risk Assessment School Site, Pomona USD
- » Title 5 Hazard and Constraints Analysis for four school sites, Irvine USD
- » Title 5 Hazard and Constraints Analysis for school site, Rialto USD

MICHAEL WATSON, PG

Project Geologist

With over a decade in the environmental consulting industry, Mike is proficient in providing field and office support to project managers performing site assessment and remediation. He performs site assessments, geohazard studies, air quality and industrial hygiene assessments, groundwater investigations, and remedial actions. Mike also manages materials acquisition, field equipment maintenance, and subcontractor coordination on large field investigations and monitoring programs.

A dedicated geologist, Mike continually strives to refine his knowledge, methods, and efficacy. He is especially committed to his current work for numerous school districts throughout California, where he assists in site assessment services and the Department of Toxic Substances Control's school site approval process. He performs Phase I ESAs, PEAs, geohazard studies, supplemental site investigations, remedial investigation reports, removal action documents, feasibility study reports, Title 5 Constraints Studies, and fill testing reports. In addition, he assists with the management and implementation of field investigations, assembles project data, and arranges methodical and comprehensive procedures to attain the client's goals.

HIGHLIGHTS OF EXPERIENCE

SITE ASSESSMENTS

- » PEAs, Phase I ESAs, Geohazards Study Reports, and Title 5 Studies for various schools | Moreno Valley USD
- » PEAs and Fill Testing for various schools | Clovis USD
- » PEA for Proposed Castaic High School | William S. Hart Union High School District
- » Phase I ESA for Proposed K-8 Parker Dam School | Needles USD
- » Removal Action, Fill Testing, and Quarterly Groundwater Sampling for Central Region High School No. 13 | Los Angeles USD
- » Removal Actions for Chaffey West Community Day School and Chino Early Education Center | San Bernardino County Superintendent of Schools
- » Phase I ESA for Citrus Creek Residential Development | Upland CA
- » Phase I ESA for the Arrowhead Springs Resort | San Bernardino CA
- » Phase I/II ESAs for Former Gas Station | Los Angeles CA
- » Quarterly Groundwater Sampling, Remedial Investigation and Remedial Action for Santa Fe Springs Athletic Fields | Little Lake City School District/Santa Fe Springs CA
- » Environmental Services for various schools | Hayward USD

REGULATORY COMPLIANCE & STRATEGIC PLANNING

- » Environmental Auditing for General Motors Railroad Locomotive Service Facility | Commerce CA
- » Construction Site Review Implementation, RAW, and Methane Mitigation System Inspection for Hull Middle School | Torrance USD
- » Underground Storage Tank Closure Report and Construction Response Removal of Six Hydraulic Lifts for Central Region Elementary School No. 13 | Los Angeles USD
- » Removal Action, Oil Well Reabandonment, Crude Oil Pipeline Removal, Construction Response Services, and Construction Site Review Implementation for Harry Bridges Span K–8 | Los Angeles USD

EDUCATION

» BS, Geology, University of California, Riverside

REGISTRATIONS

» California Professional Geologist No. 8177

CERTIFICATIONS

- » 40-Hour Hazardous Waste Workers (HAZWOPER) Certification
- » 24-Hour First Responders Certification
- » 8-Hour HAZWOPER Refresher Certification
- » CPR/First Aid Certification
- » NITON X-ray Fluorescence (XRF) Analyzer Certification

AFFILIATIONS

- » Geological Society of America
- » Association of Environmental and Engineering Geologists
- » Seismological Society of America
- » Inland Geological Society
- » South Coast Geological Society

Team member since 2005

- » Operations and Maintenance Inspection and Monitoring Reports, Five-Year Review Report, and Decommissioning of Methane Mitigation System at Woodcrest Jr. High and Liberty Elementary | Chino Valley USD
- » Corrective Measures Study and Quarterly Groundwater Monitoring for Raymond A. Villa Fundamental Intermediate School | Santa Ana USD
- » Soil Vapor and Groundwater Monitoring, Soil Vapor Extraction System Monitoring and AQMD compliance for Former Sargent Industries Facility | Huntington Park CA

MICHAEL WATSON Project Geologist mwatson@placeworks.com

CEQA/TITLE 5 ASSESSMENTS

- » CollegeTown Specific Plan EIR | Fullerton CA
- » Anaheim Canyon Specific Plan EIR | Anaheim CA
- » Title 5 studies for various schools in Westminster and Huntington Beach | Westminster School District
- » City of El Monte General Plan | El Monte CA
- » City of Industry General Plan | Industry CA
- » Irvine Business Center | Irvine CA
