The California Ocean Plan establishes water quality objectives for California's ocean waters and provides the basis for regulation of wastes discharged into the state's coastal waters. The plan applies to point and nonpoint source discharges. Both the SWRCB and the six coastal RWQCBs implement and interpret the California Ocean Plan. The California Ocean Plan identifies the applicable beneficial uses of marine waters. These beneficial uses include preservation and enhancement of designated Areas of Special Biological Significance (ASBS), rare and endangered species, marine habitat, fish migration, fish spawning, shellfish harvesting, recreation, commercial and sport fishing, mariculture, industrial water supply, aesthetic enjoyment, and navigation.

---

51 California Building Standards Commission. 2017. *2016 California Green Building Standards Code*. Available online at: https://ladbs.org/docs/default-source/publications/code-amendments/2016-calgreen_complete.pdf?sfvrsn=6, accessed August 27, 2019.

52 California Legislative Information. *Chapter 6. Fish and Wildlife Protection and Conservation [1600-1617], Section 1602*.

The California Ocean Plan establishes a set of narrative and numerical water quality objectives to protect beneficial uses. These objectives are based on bacterial, physical, chemical, and biological characteristics as well as radioactivity. The water quality objectives in Table 1 (formerly Table B) of the California Ocean Plan apply to all receiving waters under the jurisdiction of the plan and are established for the protection of aquatic life and for the protection of human health from both carcinogens and noncarcinogens. Within Table 1 there are 21 objectives for protecting aquatic life, 20 for protecting human health from noncarcinogens, and 42 for protecting human health from exposure to carcinogens. The Ocean Plan also includes an implementation program for achieving water quality objectives. Effluent limitations are established for the protection of marine waters.[53]

Urban Water Management Planning Act

In 1983, the California Legislature enacted the Urban Water Management Planning Act (Water Code, Section 10610 et seq.), which requires urban water suppliers to develop water management plans to actively pursue the efficient use of available supplies. Every five years, water suppliers are required to develop Urban Water Management Plans (UWMPs) to identify short-term and long term water demand management measures to meet growing water demands.[54]

Conservation Requirements

Executive Order B-37-16 established a new water use efficiency framework for California. The order bolstered the state's drought resilience and preparedness by establishing longer-term water conservation measures that include permanent monthly water use reporting, new urban water use targets, reducing system leaks and eliminating clearly wasteful practices, strengthening urban drought contingency plans and improving agricultural water management and drought plans. Based on monthly water use reporting, most urban water suppliers reported sufficient supplies to meet demand in three additional dry years and are not subject to state conservation mandates. On February 8, 2017, SWRCB adopted an emergency water conservation regulation to amend and extend the May 2016 regulation. The amended regulation allows certain suppliers the opportunity to submit or resubmit their water supply reliability assessments.[55]

California State Lands Commission

The California State Lands Commission (SLC) provides stewardship of California's public trust lands, waterways, and resources through economic development, protection, preservation, and restoration. The SLC is tasked with public land management and resource protection to ensure the future quality of the environment and balanced use of the lands and resources entrusted to its care. The State's public trust lands include tidelands, navigable waterways, and submerged coastal lands extending to a distance of three nautical miles, as well as the waters and underlying beds of more than 120 rivers, lakes, streams, and sloughs.

The California SLC regulates the use of tidelands and submerged lands under its jurisdiction to ensure that proposed uses of these lands are consistent with the Public Trust Doctrine principle that certain resources are preserved for public use. Generally, the SLC has jurisdiction over land below mean high tide (MHT). Public and private entities may apply to the SLC for land leases or permits on State lands for many purposes including dredging among others. CGC Section 65940 describes the degree of specificity and contents required for a surface land lease application.

California Geological Survey Tsunami Inundation Maps

The California Geological Survey provides geologic and seismic expertise to the public, other State government offices, and local government agencies (cities and counties). The California Geological Survey is working closely with the California Emergency Management Agency (Cal EMA) and the University of Southern California Tsunami Research Center to produce statewide tsunami inundation maps for California. These maps are used by coastal communities to produce emergency evacuation plans. The Cal EMA provides generalized maps for projected tsunami inundation to coastal government agencies for emergency planning purposes. These maps are used as a basic guideline for what areas are prone to tsunami inundation.

California Coastal Commission Sea-Level Rise Policy Guidance

The CCC has developed Sea-Level Rise Policy Guidance intended to help local governments, permit applicants, and other interested parties address the challenges presented by sea-level rise in California's coastal zone. The CCC's adopted Sea-Level Rise Policy Guidance outlines the types of information, analysis, and design considerations that the agency's staff requires to determine whether shoreline projects conform to the above-listed Coastal Act policies. Specifically, the Sea-Level Rise Policy Guidance provides step-by-step guidance on how to address sea-level rise in new and updated Local Coastal Programs (LCPs) and Coastal Development Permits (CDPs) according to the policies of the California Coastal Act. LCPs and the CDP processes are the fundamental land use planning and regulatory

governing mechanisms in the coastal zone. While it is advisory, the data requirements, resource considerations, projections for sea-level rise, alternatives analyses, and monitoring requirements outlined in detail in the CCC's Sea-Level Rise Policy Guidance represent information that would likely be required to produce as part of the CCC's evaluation of coastal projects in conformance with Sections 30235 and 30253 of the Coastal Act. Specifically, the Sea-Level Rise Policy Guidance outlines that projects will need to be planned, located, designed, and engineered for the changing water levels and associated impacts that might occur over the life of the development. In addition, project planning should anticipate the migration and natural adaptation of coastal resources (beaches, access, etc.) due to future sea-level rise conditions in order to avoid future impacts to those resources from the new development.

The most recent update in 2018 of the Sea-Level Rise Guidance document aims to respond to the needs for guidance that can help cities, counties and the State prepare for, and adapt to, sea-level rise. The 2018 update provides a science-based methodology for state and local governments to analyze and assess the risks associated with sea-level rise, and to incorporate sea-level rise into their planning, permitting, and investment decisions. The Guidance expands the preferred coastal adaptation planning approaches, incorporating existing law, expressed policy preferences by the Governor and Legislature, and the goal of fostering consistency across coastal and ocean government agencies. Some recommendations include protection of coastal habitats and public access, adaptation strategies that prioritize protection of vulnerable communities, and adaptive capacity should be built in to design and planning.[56]

California Stormwater Quality Association BMP Handbooks

The California Stormwater Quality Association (CASQA) is a professional member association dedicated to the advancement of stormwater quality management through collaboration, education, implementation guidance, regulatory review, and scientific assessment. CASQA's membership is comprised of a diverse range of stormwater quality management organizations and individuals, including cities, counties, special districts, industries, and consulting firms throughout the state. CASQA develops and publishes four BMP Handbooks. The New Development and Redevelopment Handbook provides guidance on developing project specific SWMPs, including selection and implementation of BMPs, for a particular development or redevelopment project.[57]

3.10.2.3 Regional

Water Quality Control Plan for the Central Coastal Basin

The Water Quality Control Plan for the Central Coastal Basin, or basin plan, identifies how the quality of the surface and ground waters in the Central Coast Region should be managed to provide the highest water quality reasonably possible. This basin plan lists the various water uses. Second, it describes the water quality which must be maintained to allow those uses. It then describes the programs, projects, and other actions which are necessary to achieve the standards established in this plan. It summarizes SWRCB and RWQCB plans and policies to protect water quality, and describes statewide surveillance and monitoring programs as well as regional surveillance and monitoring programs. The Regional Board implements the basin plan by issuing and enforcing waste discharge requirements to individuals, communities, or businesses whose waste discharges can affect water quality. These requirements can be either state waste discharge requirements for discharges to land, or federally delegated NPDES permits for discharges to surface water. Methods of treatment are not specified. When such discharges are managed so that: (1) they meet these requirements, (2) water quality objectives are met, and (3) beneficial uses are protected and water quality is controlled. The basin plan is also implemented by encouraging water users to improve the quality of their water supplies, particularly where the wastewater they discharge is likely to be reused. Public works or other projects which can affect water quality are reviewed and their impacts identified. Proposals which implement or help achieve the goals of the basin plan are supported; the Regional Board makes water quality control recommendations for other projects.[58]

Water Quality Control Plan for the Los Angeles Region

The RWQCB has prepared a Water Quality Control Plan for the Los Angeles Region. This basin plan encompasses all coastal drainages flowing to the Pacific Ocean between Rincon Point (on the coast of western Ventura County) and the eastern Los Angeles County line, as well as the drainages of five coastal islands (Anacapa, San Nicolas, Santa Barbara, Santa Catalina, and San Clemente). In addition, the Los Angeles region includes all coastal waters within three miles of the continental and island coastlines. As the eastern boundary, formed by the Los Angeles County line, departs somewhat from the hydrologic divide, the Los Angeles and Santa Ana regions share jurisdiction over watersheds along their common border.

---

58 California Water Boards. 2019. *Water Quality Control Plan for the Central Coastal Basin*. Available online at: https://www.waterboards.ca.gov/centralcoast/publications_forms/publications/basin_plan/docs/2019_basin_plan_r3_complete.pdf, accessed August 27, 2019.

This basin plan assigned beneficial uses to surface and groundwater such as municipal water supply and water-contact recreation to all waters in the basin. It also set water quality objectives, subject to approval by the EPA, intended to protect designated beneficial uses. These objectives apply to specific parameters (numeric objectives) and general characteristics of the water body (narrative objectives). An example of a narrative objective is the requirement that all waters must remain free of toxic substances in concentrations producing detrimental effects upon aquatic organisms. Numeric objectives specify concentrations of pollutants that are not to be exceeded in ambient waters of the basin. The Los Angeles RWQCB is involved in the regulation of several activities that are relevant to the consideration of the basin plan:

- Prepares, monitors compliance with, and enforces Waste Discharge Requirements, including NPDES permits;
- Implements and enforces local stormwater control efforts;
- Enforces water quality laws, regulations, and waste discharge requirements; and
- General Construction Activity Stormwater Discharges

Stormwater discharges that are composed entirely of runoff from qualifying construction activities may require regulation under the General Construction Activity Storm Water Permit issued by the SWRCB. Construction activities that qualify include clearing, grading, excavation, reconstruction, and dredge-and-fill activities that result in the disturbance of at least one acre and less than five acres of total land area. The evaluation of the plan does not generate the need for compliance with the Construction General Permit. The development of single-family residences would require permit coverage if the development disturbs greater than one acre of land. Additionally, the plan would require the consideration of a Standard Urban Stormwater Management Plan (SUSMP) as part of compliance with the NPDES General Construction Activity Storm Water Permit to reduce water quality impacts to the maximum extent practicable. A SUSMP is a report that includes one or more site maps, an identification of construction activities that could cause pollutants to enter the stormwater, and a description of measures or BMPs to control these pollutants to the maximum extent practicable.[59]

59 California Water Boards. 2019. *Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties*. Available online at: https://www.waterboards.ca.gov/losangeles/water_issues/programs/basin_plan/basin_plan_documentation.html , accessed August 27, 2019.

Water Control Plan for the Lahontan Region

This basin plan for the Lahontan Region sets forth water quality standards for the surface and ground waters which include both designated beneficial uses of water and the narrative and numerical objectives which must be maintained or attained to protect those uses. It identifies general types of water quality problems, which can threaten beneficial uses. It then identifies required or recommended control measures for these problems. The plan also summarizes past and present water quality monitoring programs, and identifies monitoring activities, which should be carried out to provide the basis for future basin plan updates and for waste discharge requirements or conditional waivers.

Additionally, the Lahontan basin plan implements a number of state and federal laws, the most important of which are the federal CWA and the State Porter-Cologne Water Quality Control Act. Other pertinent federal laws include the Safe Drinking Water Act, Toxic Substances Control Act, Resource Conservation and Recovery Act, and Endangered Species Act, and the Comprehensive Response, Compensation, and Liability Act (CERCLA or "Superfund") and Superfund Amendment and Reauthorization Act (SARA). Other applicable California laws include the Health and Safety, Fish and Game, and Food and Agriculture Codes.[60]

Water Control Plan for the Colorado River Basin

The intent of this basin plan is to provide definitive guidelines and give direction to the full scope of activities that serve to optimize the beneficial uses of the state waters within the Colorado River Basin by preserving and protecting the quality of these waters. Water uses and water benefits vary. Water quality is an important factor in determining use and benefit. For example, drinking water must be of higher quality than the water used to irrigate pastures. Both are beneficial water uses, but the quality requirements for irrigation water are different from those for drinking water. The basin plan recognizes the variations of water quality and water uses. The basin plan lists and defines the various beneficial water uses (Chapter 2). It describes the water quality which must be maintained to support such uses (Water Quality Objectives, Chapter 3). The section on implementation (Chapter 4) describes the programs, projects and other actions that are necessary to achieve the standards established in this basin plan. Plans, Policies and Issues (Chapter 5), summarize the various plans and policies which protect water quality. This chapter also describes water quality issues which require special attention.

60 California Environmental Protection Agency. *Water Quality Control Plan for the Lahontan Region (Basin Plan).* Available online at: https://www.waterboards.ca.gov/lahontan/water_issues/programs/basin_plan/references.shtml, accessed August 27, 2019.

Surveillance and Monitoring (Chapter 6), describes activities within the Colorado River Basin Region related to surveillance, monitoring, assessment, lab support, and quality assurance and quality control.[61]

Water Quality Control Plan for the Santa Ana River Basin

This basin plan establishes water quality standards for the ground and surface waters of the region. The term "water quality standards," as used in the federal CWA, includes both the beneficial uses of specific waterbodies and the levels of quality that must be met and maintained to protect those uses. The plan describes actions by the Regional Board and others that are necessary to achieve and maintain water quality standards. The Regional Board regulates waste discharges to minimize and control their effect on the quality of the region's ground and surface water. Permits are issued under several programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the plan, along with the causes, where they are known. For waterbodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included.[62]

Water Quality Control Plan for the San Diego Basin

The San Diego Regional Board's basin plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the plan: (1) designates beneficial uses for surface and ground waters, (2) sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's antidegradation policy, (3) describes implementation programs to protect the beneficial uses of all waters in the region, and (4) describes surveillance and monitoring activities to evaluate the effectiveness of the plan (California Water Code sections 13240–13244, section 13050(j)). Additionally, the plan incorporates by reference all applicable state and regional board plans and policies.[63]

3.10.2.4 Local

County of Los Angeles General Plan

As part of the Conservation and Natural Resources Element of the 2040 General Plan Update, the Board of Supervisors of the County of Los Angeles has adopted three goals for water quality initiatives related to hydrology and water quality and two goals related to watershed and river master plans:[64]

Water Quality Initiatives

- Support multi-benefit outcomes, such as water quality benefits arising from ecosystem restoration efforts, and identify, attract, and create funds and resources to implement this initiative.
- Participate in enhanced watershed management programs and watershed management programs in coordination with other agencies throughout Los Angeles County.
- Participate in coordinated integrated watershed monitoring plans in coordination with other agencies throughout Los Angeles County.

Watershed and Rivers Master Plans

- Participate with stakeholders in the preparation of watershed management plans in response to the NPDES MS4 Permit by promoting multi-benefit outcomes, including, but not limited to new public access to natural resources, new recreational opportunities, enhanced aquatic habitats, and restored natural features, where appropriate, while maintaining necessary levels of flood protection.
- Identify, attract, and create funds and resources to implement these plans.

County of Riverside General Plan

The County of Riverside General Plan specifically addresses hydrology and water quality in four categories: water resources, water quality (including groundwater quality), floodplain management, and wetlands.[65]

---

64 Los Angeles Department of Regional Planning. *General Plan, Chapter 9: Conservation and Natural Resources Element*. Available online at: http://planning.lacounty.gov/generalplan/generalplan, accessed August 27, 2019.

65 Riverside County Planning Department. 2015. *General Plan Multipurpose Open Space Element*. Available online at: https://planning.rctlma.org/Portals/14/genplan/general_Plan_2017/elements/OCT17/Ch05_MOSE_120815.pdf?ver=2017-10-11-102103-833, accessed August 27, 2019.

Water Resources

The General Plan acknowledges that contamination from natural or manufactured sources has reduced groundwater quality such that its use requires treatment. Management of the amount of water available (local and imported) and its quality, is identified as an important response to the gap between supply and demand in Riverside County. The General Plan provides policies that seek to protect and enhance the water resources in the county. These policies address broad water planning issues, and the relationship of land use decisions to water issues.

Water Quality

The General Plan recognizes BMPs established by the three applicable RWQCBs, Regions 7, 8, and 9 to provide state-level water quality policy and NPDES as effective means of managing water quality problems that have occurred in Riverside County. Such problems are related to inadequate subsurface sewage disposal, waste disposal management of the Santa Ana River, agriculturally related problems such as citricultural runoff in the western county and increasing salinity of the desert groundwater basins, sediment buildup of water bodies from construction-related erosion, lake water quality problems, and pollution due to urban stormwater system runoff.

Floodplain and Riparian Area Management

The intent of the county is to sustain living riparian habitats to the maximum extent possible, recognizing that flooding is part of the dynamic nature of healthy rivers an ecosystems. High flows and flood waters are needed to cleanse the channels of accumulated debris, build stream banks, import gravels for aquatic life, thin riparian forests and create riparian habitat. The open space of floodplains adjacent to rivers and streams helps store and slowly release floodwaters, thus reducing flood flow and peaks and their subsequent impacts during small and frequent flood events. Further, riparian habitat within floodplains is of great value to resident and migratory animal species, as it provides corridors and linkages to and from the biotic regions of the county. The numerous essential habitat elements provided by the remaining riparian corridors of Riverside County make them a significant contributor to wildlife habitat throughout the county.

Wetlands

The General Plan provides specific policies for the protection of wetlands including the requirement to ensure compliance with the Section 404 of the federal CWA in terms of wetlands mitigation policies and policies concerning fill material in jurisdictional wetlands during development review and approval process; preservation of buffer zones around wetlands where feasible and biologically appropriate; and

consideration of wetlands for use as natural water treatment areas that will result in improvement of water quality.

San Bernardino County General Plan

San Bernardino County has established goal and policies to ensure coordination and cooperation with governmental agencies at all levels to ensure safe, reliable, and high-quality water supply for all residents and ensure prevention of surface and ground water pollution. The County General Plan provides specific policies for adherence to federal and state water quality standards for surface and groundwater and wastewater discharge requirements in the review of development proposals that relate to type, location and size of the project to safeguard public health. Similarly, the County General Plan specifies the need to work with the RWQCBs to establish uniform criteria for appropriate sewering options for new development. The County General Plan further directs cooperation with state, regional, and responsible authorities to expand water sampling programs to determine ambient groundwater quality conditions affecting public, agricultural, and private wells. Identify the sources, extent, and types of organic and inorganic groundwater contaminants, and evaluation of their impacts on groundwater resources. The County General Plan calls for the prevention of surface and groundwater pollution through continued cleanup of contaminated waters and watersheds.[66]

Imperial County General Plan

The Imperial County General Plan provides specific goals and policies related to maintaining the viability of the Salton Sea and other surface water resources in the county.[67]

- **Goal 2:** Long-term viability of the Salton Sea, Colorado River, and other surface waters in the County will be protected for sustaining wildlife and a broad range of ecological communities.
    - **Objective 2.1:** The continued viability of the agricultural sector as an important source of surface water for the maintenance of valuable wildlife and recreational resources in the County.
    - **Objective 2.2:** A balanced ecology associated with the riparian and ruderal biological communities important as breeding and foraging habitats for native and migratory birds and animals occurring within the County.

---

66 San Bernardino County Land Use Services. 2007. *County of San Bernardino 2007 General Plan*. Available online at: http://www.sbcounty.gov/Uploads/lus/GeneralPlan/FINALGP.pdf, accessed August 27, 2019.

67 Imperial County Planning/Building Department. 1997. *Imperial County General Plan Water Element*. Available online at: http://www.icpds.com/CMS/Media/Water-Element.pdf, accessed August 27, 2019.

- **Objective 2.3:** Preservation of riparian and ruderal habitats as important biological filters as breeding and foraging habitats for native and migratory birds and animals.

Orange County General Plan

In the Orange County region, the protection of water quality is a major concern. The need to maintain safe water quality may constrain the development of energy resources, from methane (landfills) and geothermal sources. At a minimum, water quality concerns will need to be considered during the process of developing these resources and water intensive resources such as agriculture.

Development of land and the increase in population density has also created new sources of non-stormwater discharges and pollutants in stormwater discharges. The San Diego and Santa Ana RWQCBs require that water quality and watershed protection principles are considered as part of land use planning and development review.

Drainage Area Management Plan (DAMP)

The specific water pollutant control elements of the Orange County Stormwater Program are documented in the 2003 Drainage Area Management Plan (DAMP) which is the County of Orange, incorporated cities of Orange County, and Orange County Flood Control District's (collectively referred to as Permittees)primary policy, planning and implementation document for municipal NPDES Stormwater Permit compliance. The DAMP was prepared and is periodically updated using a consensus building process that involving public and private sector input and public review through the CEQA process.[68]

The DAMP describes the agreements, structures and programs that:

- Provide the framework for the program management activities and plan development (DAMP Section 2.0 and Section 3.0);
- Provide the legal authority for prohibiting unpermitted discharges into the storm drain system and for requiring BMPs in new development and significant redevelopment (DAMP Section 4.0);
- Improve existing municipal pollution prevention and removal best management practices (BMPs) to further reduce the amount of pollutants entering the storm drain system (DAMP Section 5.0);

68 Orange County Public Works. *2003 Drainage Area Management Plan (DAMP)*. Available online at: https://cms.ocgov.com/gov/pw/watersheds/documents/damp/mapplan.asp, accessed August 27, 2019.

- Educate the public about the issue of urban stormwater and non-stormwater pollution and obtain their support in implementing pollution prevention BMPs (DAMP Section 6.0);

- Ensure that all new development and significant redevelopment incorporates appropriate Site Design, Source Control and Treatment Control BMPs to address specific water quality issues (DAMP Section 7.0);

- Ensure that construction sites implement control practices that address control of construction related pollutants discharges including erosion and sediment control and on-site hazardous materials and waste management (DAMP Section 8.0);

- Ensure that existing development will address discharges from industrial facilities, selected commercial businesses, residential development and common interest areas/homeowner associations (Note: The San Diego permit explicitly outlines a residential component, but the Santa Ana permit is more general about residential requirements) (DAMP Section 9.0);

- Detect and eliminate illegal discharges/illicit connections to the municipal storm drain system (DAMP Section 10.0);

- Identify impacted receiving waters and produce environmental quality information to direct management activities, including prioritization of pollutants to support the development of specific controls to address these problems (DAMP Section 11.0); and

- Assess watersheds and manage urban runoff on a watershed basis (DAMP Section 12.0).

One of the major challenges for the Permittees in updating the programs was the reconciliation between the two Regional Board permits and the resulting program requirements that have significant differences for the first time. As a result of this separation, the 2003 DAMP now includes Local Implementation Plans (LIPs – also termed Jurisdictional Urban Runoff Management Programs – JURMP – in the San Diego Regional Board Third Term Permit). The LIPs were created to assist each Permittee in implementing an increasingly complex program within its jurisdiction while maintaining a single policy document that addresses two sets of permit requirements.[69] The LIPs were completed by the San Diego Permittees in February 2003 and by the Santa Ana Permittees in June 2003.

---

69 Orange County Public Works. *Drainage Area Management Plan (DAMP), Appendix A – Stormwater Program Local Implementation Plan (LIP)*. Available online at: https://media.ocgov.com/gov/pw/watersheds/documents/damp/lip.asp, accessed August 27, 2019.

The requirement to overlay separate, but nonetheless, highly interrelated water quality protection and planning processes based on hydrologic rather than political boundaries was addressed through the creation of Watershed Action Plans (WAP). A WAP (see DAMP Appendix D) was created for each of the six watersheds under the jurisdiction of the San Diego Regional Board in August 2003. A model WAP was created for the Newport Bay watershed during 2005-06 and draft WAPs are being prepared for the other watersheds in the area of Orange County under the jurisdiction of the Santa Ana Regional Board.[70]

Ventura County General Plan

The Ventura County General Plan provides specific goals and policies related to the inventory and monitoring of water quantity and quality to facilitate effective management of the resources. The Ventura County General Plan has identified ten specific programs to support achievement of the goals and policies. The programs include:

- Support of the Seawater Intrusion Abatement Project;
- Enforcement of Chapter 70 (Excavation and Grading) of the Uniform Building Code, as incorporated by reference in and amended by the Ventura County Building Code, to ensure that any proposed grading in a waterway or wetland is adequately investigated and that any development incorporates appropriate design provisions to protect waterways or wetlands;
- Support the Fox Canyon Groundwater Management Agency Plan for both the Upper and Lower Aquifer Systems;
- Continued coordination with water districts and other appropriate agencies to establish a data base on actual available supply, projected use factors for types of land use and development, and threshold limits for development within available water resources;
- Planning Division will continue to promote of the efficient use of water through the Landscape Design Criteria Program;
- Cooperation between the Public Works Agency and the Environmental Health Division, to pursue the use of reclaimed water for agricultural irrigation;
- Continued monitoring, inspection and regulation of underground storage tanks;

70 Orange County Public Works. *Drainage Area Management Plan (DAMP)*. Available online at: https://cms.ocgov.com/gov/pw/watersheds/documents/damp/default.asp, accessed August 27, 2019.

- Identification of waste disposal sites and seek to mitigate impacts to water resources; and consideration of the Board of Supervisors of a Countywide water conservation retrofit program to fund the installation of water conservation fixtures) for businesses and residents located within Ventura County.[71]

City General Plan and Ordinances

In accordance with Sections 65560(g) of the California Government Code, all cities are required to have a conservation element as part of their General Plans.[72] The conservation element provides goals and policies related to conservation, development, and utilization of natural resources including water and its hydraulic force, forests, soils, rivers and other waters, harbors, fisheries, wildlife, minerals, and other natural resources. One of the six required aspects of the open space element is for planning, conservation and management of open space for the preservation of natural resources, including habitat for fish and wildlife species; areas required for ecologic and other scientific study purposes; rivers, streams, bays and estuaries; and coastal beaches, lakeshores, banks of rivers and streams, and watershed lands. In addition, many cities have ordinances related to protection, conservation and management of natural water resources consistent with the applicable beneficial uses stipulated in the applicable RWQCB basin plan.

Furthermore, some local jurisdictions have started to address climate change impacts such as sea level rise in policy documents. For example, the City of Long Beach developed a draft of its Climate Action and Adaptation Plan (CAAP) to help reduce greenhouse gas (GHG) emissions, prepare the community for the impacts of climate change, improve the quality of life, and enhance economic vitality. The CAAP provides a framework for creating or updating policies, programs, practices, and incentives to reduce the City's GHG footprint, and ensure the community and physical assets are better protected from the impacts of climate change.[73]

3.10.3 ENVIRONMENTAL IMPACTS

3.10.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan could result in significant adverse impacts to hydrology and water resources, if the Plan would result in any of the following:

---

71 City of Ventura. *Ventura General Plan*. Available online at: https://docs.vcrma.org/images/pdf/planning/plans/Goals-Policies-and-Programs.pdf, accessed August 27, 2019.

72 California Legislative Information. *Article 10.5. Open-Space Lands [65560-65570], Section 65560.*

73 City of Long Beach Development Services. Climate Action and Adaptation Plan. Available online at: http://www.longbeach.gov/lbds/planning/caap/, accessed September 17, 2019.

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality;
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
  - Result in substantial erosion or siltation on- or off-site;
  - Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
  - Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
- In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation; or
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

3.10.3.2 Methodology

The analysis of water quality impacts identifies the types of pollutants potentially associated with future development as a result of implementation of the Plan and considers their effects on water quality. Consideration is given to BMPs, which would serve to minimize pollutants in stormwater runoff. Further, the Plan's consistency with relevant regulatory permits/requirements is evaluated to demonstrate how compliance would protect water quality.

As summarized in Regulatory Framework, independent of the CEQA process, there is a comprehensive set of regulations implemented at the State and jurisdictional level to impacts related to storm drainage, urban pollutants, and flood hazards. As such, the analysis presented herein assumes future projects would comply with these regulations.

This discussion of hydrology and water quality addresses impacts within the entire SCAG region. The impact analysis was based on several factors, including the policies and land uses of the Plan, the degree

to which existing land uses in the region would change, and the thresholds of significance for hydrology and water quality.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.10.3.3 Impacts and Mitigation Measures

Impact HYD-1 **Potential to violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.**

Significant and Unavoidable Impact - Mitigation Required.

Hydrology and water quality resources of concern within the SCAG region are subject to extensive regulatory controls at the federal, state, and local level. Grading, excavation, and other construction activities associated with implementation of transportation projects and development projects anticipated to occur under the Plan, could impact water quality due to erosion resulting from exposed soils that may be transported in stormwater runoff. In addition, construction activities have the potential to generate short-term water pollutants, including sediment, trash, construction materials, and equipment fluids. However, all construction activities are subject to NPDES GCASP permit requirements in addition to any applicable local requirements. As shown in **Table 3.10-3, Pollutants Associated with Transportation**, there are several pollutants specific to transportation that could also impact water quality. Many urban runoff pollutants are attributable to landscape irrigation, highway runoff, and illicit dumping that flows into nearby water bodies during storm events. These pollutants could include, but are not limited to, oil, grease, auto emissions, and pesticides, urban runoff debris, and air pollution residue. Highway runoff is a component of urban runoff contributing oil and grease, sediment, nutrients, heavy metals, and toxic substances. If such contaminated runoff remains largely untreated, long-term degradation of water quality could occur.

The SWRCB has developed trash, metal, and bacteria TMDLs for many watersheds in the region, including Dominguez Channel, Santa Monica Bay, Los Angeles River, Santa Clara River, Ventura River, Malibu Creek, Calleguas Creek, and Ballona Creek. The TMDLs provide a numerical threshold for each pollutant within each watershed to be used for regulating both point and non-point source discharges and is implemented through the NPDES permit process. An NPDES storm water permit is required for any construction activity that would disturb greater than one acre. Acquisition of the General Construction permit is dependent on the preparation of a SWPPP that should contain specific BMPs to control the discharge of pollutants, including sediment, into the local surface water drainages. In addition, all state projects for which Caltrans is the sponsor agency would comply with the Caltrans Statewide NPDES permit that regulates all storm-water discharges from Caltrans owned conveyances, maintained facilities and construction activities. The inclusion of runoff control measures in the design of future roadway projects should improve water quality and result in fewer impacts to the environment.

Table 3.10-3
Pollutants Associated with Transportation

Pollutant	Source
Asbestos	Clutch plates, brake linings
Cadmium	Tire wear and insecticides
Copper	Thrust-bearing, bushing, brake linings, and fungicides and insecticides
Chromium	Pavement materials, metal plating, rocker arms, crankshafts, rings, and brake linings
Cyanide	Anti-caking compound in de-icing salt
Lead	Leaded gasoline, motor oil, transmission babbit metal bearings, tire wear
Iron	Auto-body rust, steel highway structures, moving engine parts
Manganese	Moving engine parts
Nickel	Diesel fuel and gasoline, pavement material, lubricating oil, metal plating, bushing wear, and brake linings
Nitrogen and Phosphorus	Motor oil additives, fertilizers
Sulphates	Roadway beds, fuel, and de-icing salt
Zinc	Motor oil and tires
Grease and Hydrocarbons	Spills and leaks of oil and n-paraffin lubricants, antifreeze, hydraulic fluids
Rubber	Tire wear
Sediment	Pavement wear, construction and maintenance activities

U.S. Environmental Protection Agency, Office of Water. 1995. Controlling Nonpoint Source Runoff Pollution from Roads, Highways, and Bridges. EPA-841-F-95-008a.

Construction of transportation projects and development projects anticipated to occur under the Plan would increase impervious surfaces throughout the SCAG region. The growth projections reflected in the

Plan would substantially increase the amount of urbanized land or densify existing urbanized areas in the SCAG region. Connect SoCal envisions more compact, infill development patterns which may result in higher levels of paved surfaces and pollution associated with water run-off from paved surfaces into urban waterways.

Increased impervious surfaces could add to storm water runoff volumes and peak flow rates which could result in increased pollutants loads. Future projects could also result in increased stormwater runoff, and thus increased pollutant loading, being captured in existing storm drain systems and conveyed to local or regional wastewater treatment facilities. The land use patterns included in the Plan would generate new sources of sanitary sewage, which would also be conveyed to wastewater treatment facilities in the region for secondary or tertiary treatment. Suspended sediments, oxygen demanding substances, and oil and grease would constitute a substantial part of these pollutant loads. Total nitrogen and total phosphorous would increase less than these other pollutants, but would have the potential for influencing algal growth, reducing dissolved oxygen, and affecting aquatic species abundance and composition. Contaminated urban runoff, if left untreated, would result in incremental degradation of water quality. This is of particular concern where projects are located on previously contaminated sites. Without effective erosion and storm water control, contaminated soils exposed during construction activities may result in surface water contamination.

Transportation and land use strategies in the Plan anticipate increased urbanization in high-quality transit areas (HQTAs). Additional impervious surfaces in these already developed areas could increase the potential for pollutants to enter impaired receiving waters. Project grading and construction of impervious surfaces for the Plan's transportation projects and anticipated development projects have the potential to alter existing drainage patterns by altering slope and reducing infiltration. Many jurisdictions in the region, such as the County and City of Los Angeles, have strict guidelines requiring no net increase in runoff during construction and operation. These low impact development standards help to reduce the potential for contaminated runoff.

For development projects where construction activities would disturb more than one acre of land, construction activities are also subject to NPDES GCASP requirements, which require the preparation and implementation of a SWPPP. However, since implementation of the Plan would add an additional 6,346 lane miles to the region and 41,546 acres of greenfield land is anticipated to become developed, there is potential for water quality standards and waste discharge requirements to be exceeded due to an expected increase in impervious surfaces. As such, implementation of the Plan may result in significant, unavoidable impacts to surface and groundwater quality requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

SMM HYD-1: SCAG shall continue to work with local jurisdictions and water quality agencies to encourage regional-scale planning for improved water quality management and pollution prevention. Future impacts to water quality shall be avoided to the extent practical and feasible through cooperative planning, information sharing, and comprehensive pollution control measure development within the SCAG region. This cooperative planning shall occur as part of current and existing coordination, an integral part of SCAG's ongoing regional planning efforts.

Project Level Mitigation Measure

PMM HYD-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects from violation of any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Complete, and have approved, a Stormwater Pollution Prevention Plan (SWPPP) prior to initiation of construction.

b) Implement Best Management Practices to reduce the peak stormwater runoff from the project site to the maximum extent practicable.

c) Comply with the Caltrans storm water discharge permit as applicable; and identify and implement Best Management Practices to manage site erosion, wash water runoff, and spill control.

d) Complete, and have approved, a Standard Urban Stormwater Management Plan, prior to occupancy of residential or commercial structures.

e) Ensure adequate capacity of the surrounding stormwater system to support stormwater runoff from new or rehabilitated structures or buildings.

f) Prior to construction within an area subject to Section 404 of the Clean Water Act, obtain all required permit approvals and certifications for construction within the vicinity of a watercourse:

g) Where feasible, restore or expand riparian areas such that there is no net loss of impervious surface as a result of the project.

h) Install structural water quality control features, such as drainage channels, detention basins, oil and grease traps, filter systems, and vegetated buffers to prevent pollution of adjacent water resources by polluted runoff where required by applicable urban storm water runoff discharge permits, on new facilities.

i) Provide operational best management practices for street cleaning, litter control, and catch basin cleaning are implemented to prevent water quality degradation in compliance with applicable storm water runoff discharge permits; and ensure treatment controls are in place as early as possible, such as during the acquisition process for rights-of-way, not just later during the facilities design and construction phase.

j) Comply with applicable municipal separate storm sewer system discharge permits as well as Caltrans' storm water discharge permit including long-term sediment control and drainage of roadway runoff.

k) Incorporate as appropriate treatment and control features such as detention basins, infiltration strips, and porous paving, other features to control surface runoff and facilitate groundwater recharge into the design of new transportation projects early on in the process to ensure that adequate acreage and elevation contours are provided during the right-of-way acquisition process.

l) Upgrade stormwater drainage facilities to accommodate any increased runoff volumes. These upgrades may include the construction of detention basins or structures that will delay peak flows and reduce flow velocities, including expansion and restoration of wetlands and riparian buffer areas. System designs shall be completed to eliminate increases in peak flow rates from current levels.

m) Encourage Low Impact Development (LID) and incorporation of natural spaces that reduce, treat, infiltrate and manage stormwater runoff flows in all new developments, where practical and feasible.

Level of Significance after Mitigation

As previously discussed, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to water quality standards and waste discharge requirements could be significant and unavoidable even with implementation of mitigation.

Impact HYD-2 **Potential to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.**

Significant and Unavoidable Impact - Mitigation Required.

Given that most of the groundwater basins in the Plan area are already in a state of overdraft, future development may result in a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of preexisting nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted). Population growth of 3.2 million people by 2045 would increase regional water demand and could substantially deplete groundwater supplies. Additionally, urbanization to accommodate future growth would potentially interfere with groundwater recharge due to increased impervious surfaces.

According to the Public Policy Institute of California, groundwater overdraft in some agricultural regions averages about 2 million af annually.[74] In contrast to surface water, groundwater use has largely been unregulated under California law until recently. Many basins have experienced long-term overdraft, and 21 of the state's 515 basins are now considered critically overdrafted, including Indian Wells Valley Basin which has portions within San Bernardino County and the Santa Clara River Valley – Oxnard Basin in Ventura County.[75,76]

Most transportation projects involve the modification of existing facilities and do not themselves generate water supply impacts but could affect groundwater by increasing impervious surfaces and reducing opportunities for recharge. The Plan anticipates approximately 6,346 new lane miles would be added to the region in the form of new facilities, additional right-of-way on existing transportation facilities, extending roads to accommodate bike lanes on existing transportation facilities, and even associated landscaping and future plantings. Additionally, under the Plan, 41,546 acres of greenfield land is anticipated to urbanized as the region adds housing and jobs. Under natural conditions, vegetation intercepts and retains rainfall before infiltration or runoff occurs. Without hard-surfaced land areas, this hydrology cycle favors groundwater recharge. With a roadway or other hard surface this infiltration dynamic is significantly impeded. The magnitude of this effect is reported by studies indicating that the volume of storm water washed off one-acre of roadway is about sixteen times greater than that of a comparably sized meadow.

The increase in impervious surfaces due to additional lane miles and conversion of greenfields into developed land would potentially affect groundwater recharge rates. Reduction in groundwater recharge, either through a net deficit in aquifer volume or through a lowering of the local groundwater table level, presents a significant impact and requires the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

SMM HYD-2: SCAG shall build from existing efforts including those at the sub-regional and local level and shall continue to work with local jurisdictions and water agencies, to encourage regional-scale planning for improved stormwater management and groundwater recharge, including consideration of alternative recharge technologies and practices. Future adverse impacts may be avoided through cooperative planning, information sharing, and comprehensive implementation efforts within the SCAG region.

Project Level Mitigation Measures

PMM HYD-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation

Available online at: https://water.ca.gov/-/media/DWR-Website/Web-Pages/Programs/Groundwater-Management/Bulletin-118/Critically-Overdrafted-Basins/Files/2018CODBasins.pdf?la=en&hash=3014D2F2299AA503C469D41BBC0E8DCFCE0267F8, accessed September 17, 2019.

measures to reduce substantial adverse effects from violation of any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Avoid designs that require continual dewatering where feasible.

For projects requiring continual dewatering facilities, implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of surface water and minimizes adverse impacts on groundwater for the life of the project, Construction designs shall comply with appropriate building codes and standard practices including the Uniform Building Code.

b) Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimize new impervious surfaces, including the use of in-lieu fees and off-site mitigation.

c) Avoid construction and siting on groundwater recharge areas, to prevent conversion of those areas to impervious surface.

d) Reduce hardscape to the extent feasible to facilitate groundwater recharge as appropriate.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to groundwater supplies could be significant and unavoidable even with implementation of mitigation..

Impact HYD-3a **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition**

of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site.

Significant and Unavoidable Impact - Mitigation Required.

Implementation of transportation projects as well as anticipated development under the Plan would occur within watersheds that have impaired water bodies. Many of the impaired water bodies are located near a freeway, transit, or rail projects included in the Plan. Several projects may impact water bodies by placing fill material within a stream channel. For example, several of the lane widening projects and new transportation facilities could cross existing creeks or be expanded into wetland areas. However, these potential intrusions would have to comply with existing State and local regulations and would be subject to permitting by the USACOE and a RWQCB pursuant to Sections 404 and 401 of the CWA.

Stormwater runoff is influenced by rainfall intensity, ground surface permeability, watershed size and shape, and physical barriers. The introduction of impermeable surfaces greatly reduces natural infiltration, allowing for a greater volume of runoff. In addition, paved surfaces and drainage conduits can accelerate the velocity of runoff, concentrating peak flows in downstream areas faster than under natural conditions. Significant increases to runoff and peak flow can overwhelm drainage systems and alter flood elevations in downstream locations.

Construction and earth-moving activities can be a major source of sediment loading in local waterways. There is significant potential for unprotected soil to erode as stormwater runoff as a result of construction activity. However, state regulation requires that prior to commencement of construction, a SWPPP must be submitted to the SWRCB. SWPPPs identify best management practices (BMPs) used during construction. Individual projects included or discussed in the Plan, are expected to adopt BMPs appropriate to local conditions and to the proposed construction techniques that will reduce stormwater runoff.

The Plan recognizes that as population continues to grow, there is increasing pressure on natural lands. One of the goals of the Plan (See **Section 2.0, Project Description**) is to promote conservation of natural lands and restoration of critical habitats which would have a positive effect on the region's hydrology. The land use mix for the Plan assumes that 60 percent of new housing and 73 percent of new jobs will be in Growth Priority Areas and therefore would be directed away from sensitive habitat or greenfields. However, the Plan would still result in an overall increase in impervious surface.

In addition, due to the anticipated demographic growth in the SCAG region reflected in the Plan, urbanization may also occur in areas that have the potential to result in changes to the drainage patterns. Examples include hillsides and ridgelines which can experience development pressure as urbanization

increases in nearby cities. While the Plan encourages denser, infill development in existing urban areas near HQTAs, many of which are located on relatively flat lands, construction on hillsides and other similar land areas greatly increases the potential for impacts to occur. Therefore, impacts related to altering the existing drainage patterns of a site or area is considered significant.

Mitigation Measures

SCAG Mitigation Measures

See **SMM HYD-1** and **SMM HYD-2.**

SMM HYD-3: SCAG shall build from existing efforts including those at the sub-regional and local level and shall continue to work with local jurisdictions to encourage regional-scale planning for maintaining and/or improving existing drainage patterns. Future adverse impacts may be avoided through cooperative planning, information sharing, and comprehensive implementation efforts within the SCAG region.

Project Level Mitigation Measures

See **PMM HYD-1.**

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to drainage facilities and potential erosion or siltation could be significant and unavoidable even with implementation of mitigation.

Impact HYD-3b **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of flooding on- or off-site.**

Significant and Unavoidable Impact - Mitigation Required.

As discussed in Impact HYD-3a, the Plan has the potential to change existing drainage patterns. Transportation projects such as lane widening projects, new highways, as well as bridges/tunnels, and transportation facilities projects that could cross existing creeks, water crossings, rivers or be expanded into wetland areas may impact water bodies by placing fill material within a stream channel. Such changes could result in increased flooding. In addition, implementation of the Plan's land use strategies, while mostly aimed at concentrating development in more compact urban areas, would result in more impervious surfaces including the consumption of 41,546 acres of greenfield lands. Impacts related to the substantial alteration of the existing drainage pattern of the site or area and/or the substantial increase in the rate or amount of surface runoff that would result in flooding on site or off site would be significant, requiring mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

See **SMM HYD-1** through **SMM HYD-3.**

Project Level Mitigation Measures

See **PMM HYD-1** and **PMM HYD-2.**

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to flooding and drainage could be significant and unavoidable even with implementation of mitigation.

Impact HYD-3c **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff**

water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

Significant and Unavoidable Impact - Mitigation Required.

As discussed in Impact HYD-3a, the Plan has the potential to alter existing drainage patterns. Implementation of the Plan's transportation projects as well as land use strategies may increase impervious surfaces, which in turn could increase urban runoff if not regulated, resulting in the transport of greater volumes of polluted water into storm drain systems. Storm water runoff is influenced by rainfall intensity, ground surface permeability, watershed size and shape, and physical barriers. The introduction of impermeable surfaces greatly reduces natural infiltration, allowing for a greater volume of runoff.

As stated previously, paved surfaces and drainage conduits can accelerate the velocity of runoff, concentrating peak flows in downstream areas faster than under natural conditions. Significant increases to runoff and peak flow can overwhelm drainage systems and alter flood elevations in downstream locations. Increased runoff velocity can also promote scouring of existing drainage facilities, reducing system reliability and safety (see **Table 3.10-3, Pollutants Associated with Transportation**). In addition, this increase in velocity has the potential to create or contribute runoff flows that would exceed the capacity of existing or planned storm water drainage systems. In addition, placing new structures within an existing floodplain can impede flood waters, altering the flood risks both upstream and downstream. As a result, there is a significant impact to substantially create and contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems and providing substantial additional sources of polluted runoff, requiring mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

See **SMM HYD-1** through **SMM HYD-3.**

Project Level Mitigation Measures

See **PMM HYD-1** and **PMM HYD-2.**

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing

regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to drainage and stormwater facility capacity and potential for polluted runoff could be significant and unavoidable even with implementation of mitigation.

Impact HYD-4 **In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation.**

Significant and Unavoidable Impact – Mitigation Required.

The entire SCAG region is susceptible to impacts from seismic activity including the occurrence of seiches in Big Bear Lake, Lake Arrowhead, Lake Casistas, Castaic Lake, Pyramid Lake, Lake Elsinore, Diamond Valley Lake, and the Salton Sea. With more than 150 miles of coastline, significant portions of the SCAG region are also at risk of tsunamis.

With regard to flooding, implementation of transportation projects and development projects anticipated to occur under the Plan built in low-lying areas or in proximity to waterways and/or dam inundation zones may be subject to flood hazards. Flooding risks are associated with projects that are located downstream of dams and retention basins or afforded protection by levee system. These areas may be subject to failure as a result seismic ground-shaking or other natural or anthropogenic actions that compromise the stability of such structures. Additional compact urban development, as well as possible expansion of existing urban areas in areas that are potentially subject to flooding as a result of failure of a levee or dam, could create a potential to expose people or structures to a significant risk of loss, injury, or death involving flooding. Furthermore, for the Plan's transportation projects and anticipated development projects that are near the coast in areas susceptible to tsunamis, there is a potentially significant risk of releasing pollutants due to project inundation (See **Figure 3.7-6, Areas Susceptible to Tsunamis**). However, compliance with existing regulatory requirements described above and in 3.10.2 Regulatory Framework would ensure that the land use changes and transportation network would not expose people or structures to a significant risk of loss, injury, or death from flooding, tsunami, or seiche.

The Plan encourages higher-density housing and commercial development in the region's HQTAs. HQTAs are generally located in areas that are subject to Flood Management Plans (FMPs) and major

flood control infrastructure that have been constructed to constrain the 100-year flood in to flood control systems.

Flood-prone areas in Imperial County are managed pursuant to an FMP, which includes a future-oriented approach to planning in flood risk areas. It is a pre-disaster planning approach that is required by FEMA for the County to continue to participate in the National Flood Insurance Program (NFIP). When a community chooses to join the NFIP, it must adopt and enforce minimum floodplain management standards for participation. The floodplain management requirements within the Special Flood Hazard Area (SFHA) are designed to prevent new developments from increasing the flood threat and to protect new and existing buildings from anticipated flood events. When a community chooses to join the NFIP, it must require permits for all development within the SFHA and ensure that construction materials and methods used will minimize future flood damage.

The Los Angeles Flood Control District includes the vast majority of drainage infrastructure within incorporated and unincorporated areas in every watershed in the County, including 500 miles of open channel, 2,800 miles of underground storm drain, and an estimated 120,000 catch basins.

The County of Orange maintains 350 miles of concrete, rock lined and earthen flood control facilities. Flood control facilities are designed to handle water flow from storm drains and other runoff and "channel" the water into the bay or ocean.

The Riverside County Flood Control District owns and operates over 600 miles of channels storm drains and levees along with 74 dams and detention basin that reduce flood risk throughout the District.

Similarly, the San Bernardino County Flood Control District has developed a very extensive system of facilities, including dams, conservation basins, channels, and storm drains to intercept and convey flood flows through and away from the major developed areas of the County.

The Ventura County Flood Control District provides for the control and conservation of flood and storm waters and for the protection of watercourses, watersheds, public highways, life and property in the district from damage or destruction from these waters.

The flood control districts in the SCAG region participate in the NFIP, which is based on a mutual agreement between the federal government and communities. Participating communities agree to regulate floodplain development according to specified criteria and standards. Specifically, communities must adopt and enforce minimum floodplain management regulations so that development, including buildings, is undertaken in ways that reduce exposure to flooding.

The Plan encourages development in HQTAs and other land use patterns of development in areas that are generally located in areas afforded flood protection by flood control facilities and are subject to specific land use planning regulations pursuant to the NFIP; therefore, the Plan would not be expected to result in development in flood hazard zones.

Rising sea levels will increase the potential for coastal flooding and flood hazards in the future (see **Section 3.10.1.7**, above), and the issue of sea-level rise is a critical component of land use planning and hazard analysis in coastal areas. Until the year 2050, most of the climate models predict a similar degree of sea-level rise; however, after 2050, projections of sea-level rise become less certain because of divergent modeling results and differences in various estimates of greenhouse gas emissions (California Climate Action Team 2010). In 2045 it is expected that an additional 1,301 persons and 151 dwelling units would be at risk due to sea level rise.[77] **Figure 3.10-3, Areas Vulnerable to Sea Level Rise,** shows areas vulnerable to sea level rise with the Plan.

The CCC's Sea-Level Rise Policy Guidance outlines the types of information, analysis, and design considerations the CCC's staff requires to determine whether shoreline projects conform to the Coastal Act policies. In order to be consist with the Coastal Act, projects must be designed to minimize conflicts with applicable requirements, including that new development: (1) be designed to eliminate or mitigate adverse effects on local shoreline sand supply; and (2) ensure stability and structural integrity, and neither create nor contribute significantly to erosion, geologic instability, or destruction of a site or surrounding area or in any way require the construction of protective devices that would substantially alter natural landforms along the coast (California Coastal Act Sections 30235 and 30253).

Sea level rise and the risk of tsunamis are existing environmental conditions, and unless the Project will exacerbate these conditions, they are not considered potentially significant impacts under CEQA. As discussed in **Section 3.8, Greenhouse Gas Emissions**, the Plan could result in a significant impact with respect to greenhouse gas emissions (GHGs) and GHGs are considered a primary cause of global climate change and sea level rise. However, the relationship between development in any given region or country and measurable sea level rise is not possible to determine and is therefore considered too speculative to be analyzed any further in this environmental document.

Transportation and anticipated development projects are expected to be built in areas already subject to the flooding hazards discussed above, and existing planning and design standards and regulations would serve to address and minimize the associated potential impacts. In addition, project-specific technical studies would be required to reduce potential risks associated with the Plan to levels of

[77] SCAG SPM modeling 2019

insignificance. Based on the above analysis and compliance with the regulations outlined in Section 3.10.2, people or structures would not be exposed to a significant risk of inundation due to flooding, tsunamis, and seiches from development associated with the Plan. Therefore, the Plan would result in significant impacts with respect to risk of inundation by flooding, tsunami, or seiche. Consideration of the following mitigation measures is necessary.

Mitigation Measures

SCAG Mitigation Measure

SMM HYD-4: SCAG shall continue to work with local jurisdictions and water quality agencies to encourage flood protection and prevent development in flood hazard areas that do not have appropriate protections. This shall be accomplished through cooperation and information sharing regarding specific alignments and rights-of-way planning for RTP projects, and regional program development as part of SCAG's ongoing regional planning efforts. These include but are not limited to web-based data distribution planning tools and sustainability programs in conjunction with local governments. Such services would potentially consist of an inventory of areas located in or near a 100-year flood hazard zone or hazard areas that would potentially be affected by a failure of a levee or dam; or inundation by seiche, tsunami, or mudflow.

Project Level Mitigation Measure

PMM HYD-4: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures capable of avoiding or reducing the potential impacts of locating structures that would impede or redirect flood flows, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Ensure that all roadbeds for new highway and rail facilities be elevated at least one foot above the 100-year base flood elevation. Since alluvial fan flooding is not often identified on FEMA flood maps, the risk of alluvial fan flooding should be evaluated and projects should be sited to avoid alluvial fan flooding. Delineation of floodplains and alluvial fan boundaries should attempt to account for future hydrologic changes caused by global climate change.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to flood hazards could be significant and unavoidable even with implementation of mitigation.

Impact HYD-5 Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan

Significant and Unavoidable Impact - Mitigation Required.

As discussed in Section 3.10.1, there are six RWQCBs (either wholly or in part) that have jurisdiction within the SCAG region (**Figure 3.10-1, Regional Water Quality Control Boards)**. The RWQCB is responsible for the protection of the beneficial uses of waters within each county. In general, the RWQCB uses its planning, permitting, and enforcement authority to meet this responsibility and adopts a Water Quality Control Plan (basin plan) to implement plans, policies, and provisions for water quality management. The basin plan for each of the six SCAG counties is discussed in **Section 3.10.2.3**. In accordance with state policy for water quality control, the RWQCB employs a range of beneficial use definitions for surface waters, groundwater basins, marshes, and mudflats that serve as the basis for establishing water quality objectives and discharge conditions and prohibitions. The basin plan identifies existing and potential beneficial uses supported by the key surface water drainages throughout its jurisdiction. The basin plan also includes water quality objectives that are protective of the identified beneficial uses; the beneficial uses and water quality objectives collectively make up the water quality standards for a given region and basin plan.

As discussed under **Impact HYD-2**, implementation of Connect SoCal would increase impervious surfaces due to additional lane miles and conversion of greenfields to developed land. An increase in impervious surfaces would increase water runoff and potentially affect groundwater recharge rates and water quality in the basins. Therefore, the Plan may conflict with or obstruct the implementation of a water quality control plan or sustainable groundwater management plan and mitigation measures are required.

Mitigation Measures

3.11 LAND USE AND PLANNING

This section of the Program Environmental Impact Report (PEIR) describes the existing land use characteristics within the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect land use and planning, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.11.1 ENVIRONMENTAL SETTING

3.11.1.1 Definitions

Agricultural Lands Land designated for farming; specifically the production of crops and rearing of animals to provide food and other products.

Air Quality Management Plans: The Air Quality Management Plan (AQMP) is a plan prepared by local air districts and is a regional blueprint for achieving air quality standards and healthful air.

Carbon Sequestration The ability for natural elements such as forests, soils and oceans to store carbon instead of releasing it into the atmosphere, preventing GHG Emissions.

Complete Communities Suburban communities that provide a mix of land uses in strategic growth areas, wherein most daily needs can be met within a short distance of home. Complete communities provide residents with the opportunity to support their local area and run daily errands by walking or bicycling rather than traveling by automobile.

Established Community: Refers to a place where there are existing populations of people that have been living in that place for some period of time. The term is used in Appendix G of the *CEQA Guidelines* under the land use thresholds of significance

Farmland: §21060.1(a) of CEQA (Public Resources Code §§21000-21177) delineates the consideration of agricultural land to include "prime farmland, farmland of statewide importance, or unique farmland, as defined by the United States Department of Agriculture (USDA) land inventory and monitoring criteria,

as modified for California," and is herein collectively referred to as "Farmland." The following are categories mapped by the CDC:[1]

Federal Transportation Improvement Program: Federal Transportation Improvement Program – A six-year comprehensive listing of transportation projects proposed for federal funding, that require a federal action, or are regionally significant, and are within the planning area of an MPO, the last two years are for informational purposes only.

General Plan: California State Law requires every city and county to adopt a comprehensive General Plan to guide its future development. The General Plan essentially serves as a "constitution for development" - the document that serves as the foundation for all land use decisions. Every jurisdiction's General Plan includes seven required "Elements" that are mandated by State law; local governments may adopt additional optional Elements to address local priorities and planning goals.

Grazing Land: Land on which the existing vegetation is suited to the grazing of livestock. This category was developed in cooperation with the California Cattlemen's Association, University of California Cooperative Extension, and other groups interested in the extent of grazing activities. The minimum mapping unit for Grazing Land is 40 acres.

Greenfield: Also known as "raw land," land that is privately owned, lacks urban services, has not been previously developed, and is located at the fringe of existing urban areas.

Land Use Designation: A land use classification with associated land use or management policies. Land use designations are applied to specific areas through the county land use planning processes and culminate in the adoption of a land use element to the General Plan. Some land use designations have been established through legislation (e.g., National Forest), while other designations, such as Significant Ecological Areas, have been established through policy or planning processes.

Land Use Element: The land use element is one of seven mandatory elements of the General Plan required pursuant to General Land Use Law in California.

Natural Lands Biologically diverse landscapes such as forested and mountainous areas, shrub lands, deserts and other ecosystems which contain habitat that supports wildlife and vegetation.

---

1 California Department of Conservation, Division of Land Resource Protection. 2004. *A Guide to the Farmland Mapping and Monitoring Program*. Available at: http://www.conservation.ca.gov/dlrp/fmmp/Documents/fmmp_guide_2004.pdf, accessed October 25, 2018.

Open Space: Generally understood as any area of land or water which, for whatever reason, is not developed for urbanized uses and which therefore enhances residents' quality of life. Each county and city in California must adopt an open space element as part of its general plan. The element is a statement of local planning policies focusing on the use of unimproved land or water for: 1) the preservation or managed production of natural resources, 2) outdoor recreation, and 3) the promotion of public health and safety. Therefore, open space will be defined by each jurisdiction based on their own unique resources and environment.

Ordinance: A law set forth by a governmental authority; a municipal regulation.

Rangelands: Rangelands include any expanse of natural land that is not fertilized, irrigated, or cultivated and is predominately used for grazing by livestock and wildlife.

Recreation: Recreation areas may be composed of one large site or several sites located in proximity that together provide a recreation opportunity at the local and/or regional level. These parks may include areas of significant natural resources, as well as more developed activity sites.

Regional Housing Needs Assessment: Regional Housing Needs Assessment – Quantifies the need for housing within each jurisdiction of the SCAG region based on population growth projections. Communities then address this need through the process of completing the housing elements of their General Plans.

Regional Transportation Plan (RTP): A Regional Transportation Plan provides a vision for transportation investments throughout the region. SCAG updates its RTP every four years. Using growth forecasts and economic trends, the RTP considers the role of transportation in the broader context of economic, environmental, and quality-of-life goals for the future, identifying regional transportation strategies to address mobility needs.

Smart Growth: A term that covers a range of development and conservation strategies that help protect the natural environment and make communities more attractive, economically stronger, and more socially diverse. A balance is sought between economically prosperous, socially equitable, and environmentally sustainable community development.

Specific Plan: A specific plan is a tool for the systematic implementation of the general plan. It effectively establishes a link between implementing policies of the general plan and the individual development proposals in a defined area. A specific plan may be as general as setting forth broad policy concepts, or as detailed as providing direction to every facet of development from the type, location and intensity of uses

to the design and capacity of infrastructure; from the resources used to finance public improvements to the design guidelines of a subdivision.

Subregion: A total of 15 subregions represent portions of Southern California with shared interests, issues and geography. Subregions play an important role as a conduit between SCAG and the cities and counties of the region by participating and providing input on SCAG's planning activities. This involvement helps the Regional Council and its committees make better-informed decisions.

Urban Areas: Urban Areas in the SCAG region represent densely developed territory, and encompass residential, commercial and other nonresidential urban land uses where population is concentrated over 2,500 people in a given locale.

Vacant Land: Vacant land is generally referred to land with no buildings on it.

Zoning Designation: The regulation of the use of real property by local government, which restricts land use to residential, commercial, industrial, or other uses, is affected by the zoning designation allocated to each property. The local governing body considers the character of the property as well as its fitness for particular uses. It must enact the regulations in accordance with a well-considered and comprehensive plan intended to avoid arbitrary exercise of government power.

3.11.1.2 Existing Land Uses

The SCAG region serves as the nation's gateway for global trade. The SCAG region is comprised of six counties—Imperial, Orange, Los Angeles, Riverside, San Bernardino, and Ventura—and totals approximately 38,000 square miles in area (almost 25 million acres). The region stretches from the state borders with Nevada and Arizona to the Pacific Ocean and from the southernmost edge of the Central Valley to the Mexican border. The region includes the county with the largest area in the nation, San Bernardino County, as well as the county with the highest population in the nation, Los Angeles County. The SCAG region includes the second largest city in the nation, Los Angeles, and six additional cities that rank in the top 100 by population: Long Beach (36th), Anaheim (55th), Santa Ana (57th), Riverside (59th), Irvine (91st), and San Bernardino (98th). In addition to its numerous and diverse urban centers that serve as home for the approximately 19 million people, the vast area includes millions of acres of open space and recreational land as well as large amounts of farmland.

The SCAG region stretches from the state borders with Nevada and Arizona to the Pacific Ocean and from the southernmost edge of the Central Valley to the Mexican border. The region includes the county with the largest area in the nation, San Bernardino County, as well as the county with the highest population in the nation, Los Angeles County (**Figure 3.11-1, SCAG Region**). The SCAG region is

comprised of complex patterns of land uses including residential, commercial/office, industrial, institutional, agricultural, and open space land uses (**Figure 3.11-2, Existing Land Uses**). The four largest cities, which provide housing and employment for over half of the population in the SCAG region, are located in the coastal basins that are favored by moderate climate: Los Angeles, Long Beach, Santa Ana, and Anaheim.

While the SCAG region houses nearly half of the state's population, of the 38,000 square miles, nearly 61 percent of the land is open space, most of that is in public ownership, primarily federal. (**Figure 3.11-3, Protected Areas in the SCAG Region**).

As a whole, vacant lands account for more than 20 million of the total 25 million acres of overall land available in the SCAG region. Vacant lands include areas that have not been developed with man-made structures and contain no agricultural uses or water bodies. Generally, these areas are open, and contain natural or disturbed natural vegetation. Rangeland is included in this category. Undeveloped areas of parks are also included. Most vacant land is in an undeveloped state, containing native or non-native vegetation such as grasses, herbaceous plants, shrubs, and trees. Vacant lands outside of urban areas may also provide habitat for biological resources. No or few structures or improvements are present. Rangeland may be open land or fenced over large areas. Rangeland vegetation may be no different than open vacant land, or may contain grassland for grazing livestock. Additionally, vacant lands include abandoned orchards and vineyards, beaches, and vacant land with limited improvements.

Vacant lands with limited improvements include areas where streets have been laid in a subdivision pattern, but no further building or improvements have occurred over time. Lastly, vacant lands include open undeveloped land within urban areas that are not associated with a particular facility. Typically, these areas are vacant lots. They normally contain no structures but may have such improvements as curbs and sidewalks. The land may be in a graded condition with little or no vegetation, or may be in a successional vegetated state, with numerous shrubs and grasses, growing at different rates, in an unkempt condition. Examples of vacant lands in the SCAG region, include but are not limited to, the region's national forests, state parks, national parks and monuments, lands administered by the BLM, other public lands, and various private holdings. Some examples of the larger areas of vacant land in the SCAG region include the Los Padres National Forest, Angeles National Forest, Cleveland National Forest, San Bernardino National Forest, Joshua Tree National Park, Death Valley National Park, the East Mojave Preserve, and Anza Borrego Desert State Park. Military lands are included in a separate category and include, but are not limited to, Barstow Marine Corps Logistics Base, Edwards Air Force Base, El Centro Naval Air Facility, Fort Irwin, Los Angeles Air Force Base, March Air Reserve Base, Naval Warfare Assessment Station Corona, Naval Weapons Station Seal Beach, Point Mugu Naval Air Weapons Station,

Twentynine Palms Marine Corps Combat Center, and Chocolate Mountains Aerial Gunnery Range. With limited exceptions, the military lands are not open to the public.

Active farmlands account for slightly less than one million acres. Approximately 2.3 million acres in the region are developed with a highway network of 80,170 lane miles and transit network of 14,906 route miles.[2]

3.11.1.3 Established Communities

The SCAG region consists of six counties, 191 cities, and 16 tribal reservations. As shown in **Table 3.11-1, Summary of Established Communities in the SCAG Region**, the population in the unincorporated territories of the counties and the member cities varies widely by area. The table also shows the newest and oldest communities based on the date of incorporation, and current population for each county.

Table 3.11-1
Summary of Established Communities in the SCAG Region

	County					
	Imperial	**Los Angeles**	**Orange**	**Riverside**	**San Bernardino**	**Ventura**
Total county square miles	4,482	4,751	948	7,303	20,105	2,208
Total 2019 county population	190,266	10,253,716	3,222,498	2,440,124	2,192,203	856,598
Oldest city date of incorporation	City of Imperial – 1904	Los Angeles – 1850	Anaheim – 1876	Riverside – 1883	San Bernardino – 1869	San Buenaventura – 1866
Newest city date of incorporation	City of Westmorland – 1934	Malibu – 1991	Aliso Viejo – 2001	Jurupa Valley – 2011	Yucca Valley – 1991	Moorpark – 1983
Largest city by population (2019)	El Centro – 46,248	Los Angeles – 4,040,079	Anaheim – 359,339	Riverside – 328,101	San Bernardino – 219,233	Oxnard – 209,879
Smallest city by population (2019)	Westmorland – 2,461	Vernon – 301	Villa Park – 5,888	Indian Wells – 5,445	Needles – 5,085	Ojai – 7,769
Largest city by square miles	El Centro – 11	Los Angeles – 503	Irvine – 66	Palm Springs – 95	Hesperia – 73	Thousand Oaks – 55
Smallest city by square miles	Westmorland – 5.9	Hawaiian Gardens – 0.96	La Palma – 1.81	Canyon Lake – 5	Grand Terrace – 4	Filmore – 3.3

2 SCAG. 2019. Scenario Planning Model Output.

3.11.1.4 Counties

The SCAG region is composed of six counties: Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The Plan's land use policies and strategies encourage improvement in the jobs-housing balance by focusing new housing and employment in High Quality Transit Areas (HQTAs). A general discussion of the land use patterns is provided for each of the six SCAG counties below.

- **Imperial County:** The nature of land use within Imperial County is linked to its rural beginnings, beginning as an isolated farming community. Imperial County is predominantly an agricultural area.[3] However, pressure of growth from nearby San Diego and Riverside Counties have resulted in a significant population boom. Between 2000 and 2018, the County has seen a 33.9 percent population growth, higher than the SCAG region rate of 15.9 percent.[4] As such, a primary goal as stated in the Land Use Element of the Imperial County General Plan is to "diversify employment and economic opportunities in the County while preserving agricultural activity (Goal 2)."[5]

- **Los Angeles County:** One of the largest counties in the country, Los Angeles County encompasses approximately 4,083 square miles, consisting of 88 incorporated cities[6] and an unincorporated area that accounts for approximately 65 percent of the total land area of Los Angeles County.[7] Los Angeles County is further divided into nine SCAG subregions: North Los Angeles County; San Fernando Valley Council of Governments; Las Virgenes Malibu Conejo Council of Governments; Arroyo Verdugo; Westside Cities Council of Governments; South Bay Cities Council of Governments; City of Los Angeles; San Gabriel Valley Council of Governments; and Gateway Cities Council of Governments. Between 2000 and 2018, the total population of Los Angeles County increased by 8 percent, which was lower than the SCAG region increase of 15.9 percent. It is also important to note that 53.7 percent of the total 2018 population of SCAG region is in Los Angeles County.[8]

  The unincorporated areas in the northern portion of Los Angeles County are covered by large amounts of sparsely populated land, and include Angeles National Forest, part of Los Padres National Forest, and the Mojave Desert. The unincorporated areas in the southern portion of Los

Angeles County consist of many non-contiguous land areas, which are often referred to as the County's unincorporated urban islands. More than half of the unincorporated area is designated for natural resources. The next largest designation is rural, which accounts for approximately 39 percent of the unincorporated areas, followed by residential, which accounts for approximately three percent of the unincorporated areas.[9]

The incorporated areas of Los Angeles represent diverse urban, suburban, and rural land use patterns. Generally, the Land Use Element for each incorporated city encourages the retention of the stable residential neighborhoods and promotes growth to locate in neighborhood districts, commercial and mixed-use centers, along boulevards, industrial districts, and in proximity to transportation corridors and transit stations. These are general characterizations, and do not capture all land use types or patterns associated with the 88 incorporated cities that make up Los Angeles County.

- **Orange County:** Between 2000 and 2018, the total population of Orange County increased by 13.2 percent which was lower than the SCAG region increase of 15.9 percent.[10] The General Plan assessed that Orange County would experience a "steady but declining amount of land available for development." The General Plan projected a significant level of new housing is anticipated to be constructed in the south and eastern portions of the County, while infill and redevelopment are anticipated to occur in the northern and central regions. Significant commercial and industrial development is anticipated to occur along major transportation arteries over the lifetime of the Plan.[11]

- **Riverside County:** Between 2000 and 2018, the total population of Riverside County increased by 56.3 percent; much higher than the SCAG region increase of 15.9 percent. Riverside County adopted the County General Plan that strives to create a high-quality, balanced, and sustainable environment for the citizens of Riverside County and to make Riverside County's communities great places to live, work, and play. Riverside County is the fourth largest county in the State, encompassing approximately 7,400 square miles and extending westward from the Colorado River to within 14 miles of the Pacific Ocean, a stretch of some 200 miles. Riverside County contains diverse geographical features, including deserts, snowcapped peaks, deep valleys, forests, and rich agricultural lands. Set among this rich landscape is a variety of established and/or growing urban,

suburban and rural communities. The diversity of Riverside County offers a variety of living environments such as dense urban cities, suburban enclaves, resorts, rural communities, agricultural communities, equestrian communities and sparsely populated outposts.[12]

- **San Bernardino:** Between 2000 and 2018, the total county population increased by 27 percent; above the SCAG region increase of 15.9 percent.[13] Much of the development in San Bernardino has occurred on unincorporated county land. The General Plan focuses economic development along key corridors and in selected activity centers through the utilization of Strategic Area Overlay districts. The goal of these districts to achieve "greater private sector profit, public benefit, and sustainability over the long haul."[14]

- **Ventura County:** Between 2000 and 2018, Ventura County's population growth increase of 14.1 percent was lower than the SCAG region increase of 15.9 percent.[15] Ventura County and cities within the county have developed policies seeking to maintain a balance of protecting agricultural land while providing jobs and housing within a heavily used transportation network. The approach has been to provide urban growth boundaries as a way of channeling development and preserving farmland.

3.11.1.5 Cities

There are 191 cities in the six-county area, including the City of Los Angeles, which is the second largest city in the nation and the largest city in California, and the City of Long Beach, which is among the 50 largest cities in the nation and the seventh largest city in California. Urban centers in the SCAG region exist in the form of clusters, linked by freeways and commercial corridors interspersed with identifiable activity centers. Most existing urban development is found along the coastal plains of Los Angeles, Orange, and Ventura Counties, as well as in adjoining valleys that extend inland from the coastal areas. Urban development also has moved into the inland valleys such as the Antelope, San Bernardino, Yucca, Moreno, Hemet–San Jacinto, Coachella, and Imperial Valleys.

15 SCAG. 2019. Local Profiles. May. Available online at: https://scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx, accessed September 17, 2019.

Downtown Los Angeles is the largest urbanized center within the SCAG region. Other urbanized areas with substantial density in Los Angeles County include Long Beach, Burbank, Glendale, Pasadena, and Pomona. Office-core centers have emerged in Woodland Hills (Warner Center), Universal City, Westwood, around Los Angeles International Airport (LAX), and Century City. In the other five counties within the SCAG region, urban centers exist in the cities of Riverside, San Bernardino, Santa Ana, Anaheim, Irvine, Oxnard, and Ventura. Development centers in desert areas include the Lancaster-Palmdale corridor in the Antelope Valley (Los Angeles County); the Hesperia-Victorville corridor in Yucca Valley (San Bernardino County); and the Palm Springs–Palm Desert–Indio corridor in the Coachella Valley (Riverside County). El Centro is the county seat and focal point of activity in Imperial County. There is also substantial activity occurring in Imperial County at the three ports of entry along the border with Mexico.

3.11.1.6 Land Use Planning

Many of the key strategies for coping with climate change are linked to land use planning:

- Growth of vehicle-related GHG emissions are influenced by transportation infrastructure.
- Compact development protects ecologically valuable open space and requires less energy and materials to build and operate.
- Reducing GHG emissions from deforestation requires policies to protect woodlands and other valuable carbon sinks. Carbon sinks are natural or artificial reservoirs that remove and store carbon from the atmosphere, thereby offsetting carbon dioxide emissions. Examples include forests, soils, and oceans.
- Land use planning is critical in enabling communities to adapt to sea level rise, more frequent extreme weather conditions, and other climate-related hazards.[16]

"Smart growth" is a term that covers a range of development and conservation strategies that help protect the natural environment and make communities more attractive, economically stronger, and more socially diverse. Land use planning is an essential part of any smart growth strategy, and it is especially important when efforts to mitigate GHG emissions and adapt to climate change are needed.

Available online at: https://www.researchgate.net/publication/277478162_Sustainable_Systems_Integration_Model-Metrics_in_Design_Process, accessed September 17, 2019.

SCAG Roles and Responsibilities

In addition to the federal designation as an MPO, SCAG is designated under California state law as the Multicounty Designated Transportation Planning Agency and Council of Governments (COG) for the six-county region. Founded in 1965, SCAG is a Joint Powers Authority, established as a voluntary association of local governments and agencies.

SCAG serves as the regional forum for cooperative decision making by local government elected officials and its primary responsibilities in fulfillment of federal and state requirements includes the development of the Plan; the Federal Transportation Improvement Program (FTIP); and transportation-related portions of local air quality management plans. SCAG's other major functions include determining the regional transportation plans and ensuring programs are in conformity with state air quality plans; periodic preparation of a Regional Housing Need Allocation (RHNA); and intergovernmental review of regionally significant projects.

Regional Cooperation and Subregions

SCAGs role is to bring stakeholders together and participate in regional planning through collaboration and participation in regional programs and on-going dialogue. SCAG seeks feedback from local elected officials and their staff through 15 subregional organizations that have been recognized by the Regional Council as partners in the regional policy planning process. The subregional organizations represent various parts of the SCAG region that have identified themselves as having common interests and concerns. The subregions vary according to geographical size, number of local member jurisdictions, staffing, decision-making structure, and legal status.

Standing committees at SCAG include the Executive/Administration Committee, the Transportation Committee, the Community, Economic & Human Development Committee, the Energy & Environment Committee, and Legislative/Communications & Membership Committee. In addition to the standing committees, there are various subcommittees, technical advisory committees, working groups, and task forces that report to the standing committees, while other groups are established on an ad hoc basis to assist with specific projects or address specific regional policy. The Regional Council is SCAG's governing body. It consists of 86 elected officials, representing cities, counties, county transportation commissions, transportation corridor agencies, tribal governments, and air districts in the region. The Regional Council has general authority to conduct the affairs of SCAG and directs the actions of the agency throughout the year. Additionally, the Regional Council implements the policy direction provided at the annual General Assembly of the membership, acts upon policy recommendations from SCAG's standing policy committees and external agencies, and appoints subcommittees to study specific programs or issues.

County and City General Plans

Comprehensive land use planning for the SCAG region is provided by county and city general plans, which local governments are required by state law to prepare as a guide for future development. General plans contain goals and policies concerning topics that are mandated by state law or that the jurisdiction has chosen to include. Required topics are land use, circulation, housing, conservation, open space, noise, and safety. Other topics that local governments frequently choose to address include sustainability, public facilities, parks and recreation, community design, and growth management, among others. City and county general plans must be consistent with each other. Cities and counties implement their general plans through zoning ordinances. Zoning ordinances provide a much greater level of detail including the general plan land use designations and such information as permitted uses, yard setbacks, and uses that would require a conditional use permit (**Figure 3.11-4, General Plan Land Use Designations**, shows the general land use designations (consolidated for purposes of consistency and mapping) for the six SCAG member counties and 191 cities in the SCAG region).

Existing Land Uses by County

The land use elements of the county and city general plans within the SCAG region generally classify lands in to 20 land use categories (**Table 3.11-2, SCAG Region General Land Use Categories**).

The Plan would add an additional 41,546 urbanized acres to the region by 2045.[17] **Table 3.11-3, Existing Urban, Suburban, and Rural Land Use Patterns by County** displays the percent of each county in rural, urban and suburban land uses. The following paragraphs describe the existing land use categories found within the SCAG region.

Source: SCAG Existing Land Uses (03/2017). Land use patterns have been interpreted from the following existing land use categories:

- ***Urban**: multi-family residential, general office, commercial and services, facilities, education, industrial, transportation/communications/utilities, mixed commercial and industrial, and under construction.*
- ***Suburban** : single-family residential, mobile homes and trailer parks, mixed residential, and mixed residential and commercial*
- ***Rural**: rural residential, military installations, open space and recreation, agriculture, vacant, water, undevelopable, and unknown*

Residential Land Uses

The residential pattern of the SCAG region is largely shaped by topography. Most residents live in southern parts of Ventura, Los Angeles, and San Bernardino Counties, with the urban form limited by national forests and mountains. In Orange County, residents live near the coast and west of the Cleveland National Forest. Residents also have moved inland to the high desert in northern Los Angeles and San Bernardino Counties and the low desert in the Coachella and Imperial Valleys.

The majority of medium- and high-density housing in the region is found in the urban core of the region, in Downtown Los Angeles, East Los Angeles, the South Bay, and the "West Side" of Los Angeles. Large cities, such as Long Beach, Santa Ana, Glendale, Oxnard, and Pasadena, also have concentrations of high-density development in their downtown areas. Several beach communities, such as the Cities of Santa Monica, Manhattan Beach, Hermosa Beach, Redondo Beach, Huntington Beach, and Newport Beach, have high density close to the ocean.

Surrounding suburbs are predominantly low-density housing tracts. Low-density housing expands west into Ventura County, east through southeast Los Angeles County, throughout much of Orange County, and through the western Inland Empire. The resort communities and cities of the Coachella Valley in Riverside County also are built primarily on a low-density scale.

The developing land on the urban fringe, such as the Antelope Valley of Los Angeles County and the Victorville-Hesperia area, Lucerne Valley, and Yucca Valley of San Bernardino County, also are primarily low-density residential. The Imperial Valley in Imperial County is primarily an agricultural region with a growing, yet still relatively small, population that lives in primarily low-density developments. The SCAG region also contains mixed residential and commercial land uses.

The following provides definitions of the types of residential land uses found in the SCAG region:

The residential category of land uses in the SCAG region includes areas of single family residences, multi-unit dwellings, and mobile homes. Also included is a mixed residential category that consists of two or more of the aforementioned groups.

Single Family Residential

These residential areas are typically made up of detached dwellings, where each structure houses a single family, located in an urban or suburban setting. (Single family residential units located in a rural setting are classified as code 1151 or code 1152 under Rural Residential.) These single family residences are usually served by all utilities, are on paved streets, and are

provided with or have access to all urban facilities such as schools, parks, police, and fire stations.

Single family residential neighborhoods are normally large contiguous areas of residential lots. Some areas have subdivisions or tracts of homes with similar size or architectural design. In these areas the roofs may be similar in shape or color when viewed on the aerial photo. Typically, single family lots contain landscaped front and back yards, one driveway, and one walkway either to the sidewalk or to the driveway. Some lots may have swimming pools in the back yards. High or low density is determined by the size of the lot on which the residence is located. If an area is under construction, and the residential lots or pads are easily identifiable, then the area can be properly mapped.

High-Density Single Family Residential. This category contains single family detached residential units with a unit density of >2 units/acre. These units are typically found in modern urban and suburban subdivisions.

Low-Density Single Family Residential. This category contains single family detached residential units with a unit density of <2 units/acre. These units may include areas of urban ranch homes or estates. Also included are urban areas where single family lots have been established but houses have not been built on all of them and are not likely to be built in the near future. The homes are spaced at a density of <2 units/acre. In some situations, a low-density area may be rural in appearance because it was once a rural area but is now within the urban setting or a transitional area.

Multi-Family Residential

Multi-family units are attached residences, apartments, condominiums, and townhouses. Multi-family residences are usually served by all utilities, are on paved streets, and are provided with or have access to all urban facilities such as schools, parks, police and fire stations. Senior citizen apartment buildings are included in these classes. Also included are off-campus university owned housing and off-campus fraternity/sorority houses.

Mixed Multi-Family Residential. This category is used when there is a mixture of multi-family uses (duplexes, triplexes, apartments, condominiums, and/or townhouses of any type), none of which is over 2.5 acres in size, and no one type dominates. This situation may occur in older neighborhoods.

Duplexes, Triplexes, and 2- or 3-Unit Condominiums and Townhouses. This category is composed of duplexes, triplexes, and 2- or 3-unit condominiums and townhouses that are attached multi-family structures.

Duplex and triplex residences may occur together or mixed with single family houses in some older neighborhoods (see code 1121 and 1140). Typically, the multi-unit structure is one story located on a lot approximately the same size as nearby single-family residential lots. There may be minimal landscaping or yard space. On the aerial photo, one may be able to count the driveways, sidewalks, entryway overhangs, chimneys, or air conditioning units corresponding to the number of units in the structure. Some newer duplexes and triplexes occur as 2- or 3-unit structures in complexes as condominiums and townhouses, with common grounds.

Low-Rise Apartments, Condominiums, and Townhouses. This category includes multi-family structures of one to two stories and approximately 10 to 18 units/acre. The area consists of either a large single structure or a group of structures, of four or more units each, in a complex with associated common grounds, facilities and parking areas.

Typically, low-rise apartments, condominiums, and townhouses occur together in large contiguous areas since land use is restricted to multi-family zoned areas. However, in some areas one to a few buildings may occur on individual lots in single family residential neighborhoods. In newer neighborhoods they may appear as a large complex composed of many structures of similar architecture with common grounds and facilities. Some older structures are U-shaped or O-shaped with a swimming pool in the middle. A parking level maybe located underneath the living area, in which case it is not counted as a story. Parking for larger complexes may include garages or carports along the periphery of the complex. Low-rise apartments and condominiums are the most common types of multi-family structures in the study area. Also included are off-campus fraternity/sorority houses and senior citizen apartments. Residential units located above first floor commercial in buildings along a commercial strip are considered commercial use (1223, 1224). An area mapped as Low-Rise Apartments, Condominiums, and Townhouses may contain an occasional Medium-Rise building.

Medium-Rise Apartments and Condominiums. This category includes multi-family structures of three to four stories and >18 units/acre. The area consists of a large single structure or a group of structures, of four or more units each, in a complex with associated common grounds, facilities and parking areas.

Many medium-rise apartments and condominiums occur in older areas as hotel/apartments. Several may be located next to each other in compact areas. Some may occur as large complexes, composed of many structures of similar architecture, with common grounds and facilities. Medium-rise apartments and condominiums are not as common as low-rise. Senior citizen apartments are included. If an area contains commercial use on the first floor and multi-family residential use on the upper floors, then the area is considered strip commercial (codes 1223, 1224). Some older urban core cities contain apartment and condominium buildings predominantly of three, four, or more stories. An area mapped as Medium-Rise

may contain occasional Low-Rise or High-Rise buildings. Use of stereoscopic viewing of aerial photos is essential in determining relative height in relation to other structures in the area.

High-Rise Apartments and Condominiums. This category includes multi-family structures of five stories or greater and >18 units/acre. The area consists of either a single large structure or a group of adjacent structures with common grounds, facilities and parking areas.

Many high-rise apartments and condominiums occur as single or groups of high residential towers. Parking may be underground or in an adjacent parking structure. Smaller high-rise structures may contain only residential units with no other uses. High-rise residential structures are configured to maximize availability of window access to each individual residential unit. Thus the building may be long and narrow, or contain narrow lateral wings that provide window access. Senior citizen apartments are included. If an area contains commercial use on the first floor and multi-family residential use on the upper floors, then it is considered High-Rise Apartments and Condominiums.[18]

Commercial Land Uses

Across the region, commercial development typically follows transportation corridors. Office development generally locates at the terminals of major transportation features, particularly airports and train stations, or at the intersection of major freeways. Downtown Los Angeles is the historical center of jobs in the region. Los Angeles International Airport (LAX) and John Wayne Airport have considerable office clusters around them. Office buildings tend to cluster around major intersections, including areas such as the "El Toro Y" (intersection of the I-5 and the I-405) and the "Orange Crush" (intersection of I-5, SR-22, and SR-57) in Orange County. The SCAG region also contains some mixed commercial and industrial land uses.

Infrastructure and Institutional Land Uses

Institutional land uses, which include large government and private operations, such as military bases, airports, and universities, encompass a considerable footprint in the region. Military operations consume a substantial quantity of land. The 10 active duty military facilities in the SCAG region are listed below:

- El Centro Naval Air Facility
- Los Angeles Air Force Base
- Joint Forces Training Base, Los Alamitos

18 Aerial Information Systems. 1990. *Southern California 1990 Aerial Land Use Study*. Available online at: http://egis3.lacounty.gov/dataportal/2012/04/10/countywide-zoning/, accessed August 28, 2019.

- Naval Weapons Station, Seal Beach
- Naval Warfare Assessment Station, Corona
- March Air Reserve Base
- Barstow Marine Corps Logistics Base
- Fort Irwin
- Twentynine Palms Marine Corps Combat Center
- Naval Base Ventura County

In addition, land controlled by Edwards Air Force Base, based in Kern County, extends into Los Angeles and San Bernardino Counties. The Chocolate Mountains Aerial Gunnery Range in Imperial and Riverside Counties is also an institutional use that is off-limits to the public.

A substantial quantity of land is dedicated to airports in Los Angeles County. In the Antelope Valley, a large portion of land is dedicated to airport uses at Palmdale Airport. LAX is another major institutional land use. Bob Hope Airport and Long Beach Airport are the other commercial airports in Los Angeles County. Airports in other parts of the region include Ontario International Airport, Southern California Logistics Airport, and San Bernardino International Airport in San Bernardino County, Palm Springs International Airport and March Inland Port in Riverside County, John Wayne Airport in Orange County, and numerous general aviation airports scattered across the SCAG region.

University and college campuses are located in every county of the SCAG region. The largest are universities in the University of California system (Irvine, Los Angeles, and Riverside) and the California State University system (Channel Islands, Dominguez Hills, Fullerton, Long Beach, Los Angeles, Northridge, San Bernardino, and San Diego-Imperial Valley Campus). California Polytechnic University at Pomona and the University of Southern California are the other large universities in the region. There are numerous smaller universities and colleges in the region, both public and private, as well as an extensive community college system that spans the SCAG region.

Industrial Land Uses

The main focal points of industrial activity in the region are the Ports of Los Angeles and Long Beach. Altogether, these adjacent ports handle approximately 20 percent of the volume imported into the

country.[19] The industrial activity spreads north from the ports along the Alameda Corridor (a 20 mile freight line connecting downtown Los Angeles to the Ports of Los Angeles and Long Beach), and extends east through the City of Industry and the City of Commerce toward San Bernardino County.

Many manufacturing industries, distribution centers, and warehouses have established businesses in Riverside and San Bernardino Counties (also known as the Inland Empire). This activity has made the Inland Empire a distribution center for the region, state, and nation. Adding to the goods coming by highway and rail through San Bernardino County are goods coming to the county by air through several airports that cater to air cargo, primarily Ontario International Airport. Industrial uses tend to cluster around cargo-handling airports to take advantage of transportation options.

Significant air cargo and associated industrial land uses also are located around LAX. A third port in the region, located in Port Hueneme in Ventura County, is also surrounded with industrial activity.

Along the Mexican border, the three ports of entry in Imperial County have large amounts of commerce going back and forth between the two countries.

Extraction activities in the region focus on oil and minerals. Ventura County has extensive extraction activities in the far southwestern part of the county and along Route 126. These activities extend into Los Angeles County to the area around the City of Santa Clarita. Oil wells and oil refineries remain across southern Los Angeles County. Oil drilling and refining also takes place in Orange County, near Huntington Beach, Newport Beach, and Brea. Significant mining operations take place in the eastern portion of Imperial County. Wind energy generation facilities are located in the San Gorgonio Pass between Banning and Palm Springs.

Open Space, Recreation, and Agricultural Land Uses

There are vast areas of open space, recreation, and agricultural land uses throughout the SCAG region (**Figure 3.11-6, SCAG Region Open Space, Recreation, and Agricultural Land Uses**). Open spaces vary in size and location and, generally include but are not limited to, public parks, recreational facilities, national forests, national parks, national monuments, military reservations, and other areas planned for such uses. Some open spaces are comprised of lands that have been acquired by public agencies or private institutions for long-term management as open space. Other open space is comprised of land

19 U.S. Department of Transportation, Bureau of Transportation Statistics. 2018. *Freight Facts and Figures 2017.* January. Available online at: http://aapa.files.cms-plus.com/Statistics/Freight%20Facts%20and%20Figures%202013.pdf, accessed March 21, 2019.

designated for passive and active recreation. In addition, there are undeveloped areas in the SCAG region that are natural lands, designated for land uses other than open space or recreation.

Agriculture may be included as open space depending on the location and use. Agriculture may range from open grasslands and rangelands used for livestock grazing to areas supporting row and tree crops. These lands although in agricultural use, may also provide some habitat value, particularly open grasslands grazing land and rangelands. In yet other instances, lands may be designated or zoned as open space but still allow for development of a single-family home. Lands evaluated as natural lands in the Plan are generally evaluated as wildlife habitat in **Section 3.4, Biological Resources** and not agricultural lands. In general, in this PEIR, agricultural lands are farmlands and natural lands provide valued habitat.

Farmlands and rangelands are agricultural lands that are part of the region's open landscape and entail various types and degrees of modifications to natural lands. Also discussed in **Section 3.2, Agricultural and Forestry Resources**, farmlands include irrigated and non-irrigated crop production. Rangelands include any expanse of natural land that is not fertilized, irrigated, or cultivated and is predominately used for grazing by livestock and wildlife.

The distribution of farmlands and rangelands in the SCAG region and vicinity is based primarily on data provided by the California Department of Conservation (CDC). It also provides a summary of existing plans and programs in the region to conserve agricultural lands, plus a summary of growth management plans in other states that include provisions for conserving agricultural lands.

Based on the most recent available data from the CDC in 2016 (verified by SCAG, and it's member jurisdictions), there are approximately 2,603,158 acres of agricultural lands in the SCAG region consisting of 1,482,826 acres of grazing land and 1,120,312 acres of farmland which includes, Farmland of Statewide Importance, Prime Farmland, Unique Farmland, and Farmland of Local Importance.[20]

There is substantially more farmland than rangeland in Riverside and Imperial Counties and the reverse in Los Angeles, Orange, San Bernardino, and Ventura Counties. By comparison, Kern County has more farmland than the six SCAG counties combined and also has more total acres of rangeland.

Historically, development patterns in the region have been tied as much to the conversion of agricultural lands as to the consumption of natural lands for urban uses. A key issue in the region today is whether the high rate of farmland conversion in recent years can be slowed to prevent irreversible losses. If the

intense conversion of agricultural lands continues unabated, the existing inventory of agricultural lands could be reduced by 700,000 acres before 2030.[21]

Tribal Lands

Approximately 266,112 acres, or 416 square miles, of the SCAG region consist of tribal lands from 16 different tribal affiliations (**Table 3.11-4, Tribal Lands within the SCAG Region**, lists the name, county, and acreage of tribal lands within the SCAG region; and **Figure 3.11-7, Tribal Lands in SCAG Region**, shows where tribal lands are located within the SCAG region). Indian Trust Assets (ITAs) include land, natural resources, money, or other assets held by the federal government in trust or that are restricted against alienation for Indian tribes or individuals.[22] The Department of Interior Order No. 3175 requires all its bureaus and offices to explicitly address anticipated effects on ITAs in planning, decision, and operation documents.[23] The Bureau of Indian Affairs (BIA) develops inventories of ITAs for all Indian tribes. Tribes must conduct soil and range inventories, land evaluations and range utilization; collect data about soil productivity, erosion, stability problems, and other physical land factors for program development, conservation planning, and water rights claims settlements. In addition, tribes are required to develop land management plans.[24]

Sixteen tribal lands and their respective governments are in the SCAG region, including the Agua Caliente Band of Cahuilla Indians, Augustine Band of Mission Indians, Cabazon Band of Mission Indians, Cahuilla Band of Mission Indians, Chemehuevi Reservation, Colorado River Reservation, Fort Mojave Indian Tribe, Fort Yuma Reservation, Morongo Band of Mission Indians, Pechanga Band of Luiseno Indians, Ramona Band of Mission Indians, San Manuel Band of Mission Indians, Santa Rosa Band of Mission Indians, Soboba Band of Luiseno Indians, Torres-Martinez Desert Cahuilla Indians, and Twenty-Nine Palms Band of Mission Indians.

Coastal Programs

The Coastal Program in the SCAG region consists of approximately 350,956 acres, or 548 square miles, and includes the islands off of the Southern California coast. The Coastal Program affects Ventura, Los Angeles, and Orange Counties in addition to 28 incorporated cities (**Table 3.11-5, Cities in the SCAG Region with Coastal Zone Jurisdiction).** Each local jurisdictional authority (city or county) with lands within the coastal zone is required to develop, and comply with, a coastal management plan. The Coastal Act requires that any person or public agency proposing development within the Coastal Zone obtain a CDP from either the CCC or the city or county having the jurisdictional authority to issue a CDP. To comply with the Coastal Zone Management Act, localities develop Local Coastal Plans (LCPs).[25]

Regional Habitat Conservation Plans and Multi-Species Habitat Conservation Plans

HCPs and NCCPs are discussed more fully in **Section 3.4, Biological Resources.** There are 13 HCPs and NCCPs within the SCAG region (See **Section 3.4, Biological Resources,** and **Table 3.4-12, HCP's and NCCP's in the SCAG Region**). As a group, these plans provide protection for multiple species by conserving habitats, identifying locations for future mitigation efforts, providing conservation guidance

and practices, and preserving important wildlife linkages. More than 20 million acres of open space within the SCAG region are currently protected under an HCP or NCCP, or will be protected by a future HCP or NCCP that is currently in its planning stages. Major conservation areas in the region are displayed on **Figure 3.11-8 Los Angeles County Significant Ecological Areas** and **Figure 3.11-9 Regional Conservation Plans in the SCAG Region**.

Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP)

Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) is part of a comprehensive planning effort to address species conservation, land use, and transportation. The integration of thoughtful conservation planning with urban development and transportation is providing a more efficient, streamlined, cost-effective way of planning for the future. Approximately $2.2 billion has been spent on 25 large transportation projects within the Western Riverside County MSHCP. Through the streamlined permitting process, it is estimated that federal and state agencies, and other non-federal landowners saved between $126 and $278 million on these important infrastructure projects.[26]

Lower Colorado River MSHCP

On April 4, 2005, the Secretary of the Interior and representatives from agencies within Arizona, California, and Nevada implemented the Lower Colorado River Multi-Species Conservation Program (LCR MSCP). The LCR MSCP was created to balance the use of the Colorado River water resources with the conservation of native species and their habitats. The program area extends over 400 miles of the lower Colorado River from Lake Mead in Nevada, through southern California, to the southernmost border with Mexico. The HCP calls for the creation of over 8,100 acres of habitat for fish and wildlife species and the production of over 1.2 million native fish to augment existing populations. The Bureau of Reclamation is the implementing agency for the LCR MSCP.[27]

Orange County Southern Subregion HCP

The Orange County Southern Subregion HCP was approved in 2007 for a 75-year permit. This HCP is a program that established a permanent habitat reserve and perpetual land management program. This regional HCP covers large tracts of land in the County of Orange and the family-held Rancho Mission

Viejo. Benefits provided by this HCP include the creation of a subregion habitat reserve program including conservation of coastal California gnatcatcher habitat.[28]

Orange County Central-Coastal HCP/NCCP

In the 18 years since the Orange County Central-Coastal HCP/NCCP was completed, numerous regional HCPs have been approved or are in development throughout California. The NCCP program has also expanded to address a broad range of important natural habitats throughout the state.[29]

Coachella Valley MSHCP

The Coachella Valley MSHCP was adopted in 2008 and preserves over 240,000 acres of natural habitat in the Coachella Valley. This MSHCP protects 27 sensitive plant and animal species. This plan is managed by the Coachella Valley Conservation Commission.[30]

Desert Renewable Energy Conservation Plan (DRECP)

The DRECP, a part of the Bureau of Land Management, was undertaken due to statewide and national concerns regarding habitat fragmentation and loss of habitat for listed and candidate species. The DRECP is a landscape-level plan that streamlines renewable energy development, conserves valuable desert ecosystems and provides outdoor recreation opportunities. The DRECP was developed by the BLM, the U.S. Fish and Wildlife Service, the California Energy Commission and the California Department of Fish and Wildlife, collectively known as the Renewable Energy Action Team (REAT). Revisions to the Final Environmental Impact Statement, released in November of 2015, were made as a result of internal reviews, protests, Areas of Critical Environmental Concern (ACEC) public comments and other public feedback.[31] The DRECP is a proposed multispecies HCP intended to conserve threatened and endangered species and natural communities in the Mojave and Colorado Desert regions of Southern California, while also facilitating the timely permitting of renewable energy projects to help meet the state's goal of providing at least 33 percent of electricity generation through renewable energy by 2020, 50

percent by 2026, and 100 percent by 2045, as well as the federal government's goal of increasing renewable energy generation on public land. As planned, the approved DRECP and associated permits would provide renewable energy developers and entities undertaking DRECP conservation efforts with authorization for the incidental take of certain endangered, threatened, and special-status plant and animal species for covered activities (as defined in the DRECP). Such authorizations would be granted by agencies that are formal participants in the DRECP.[32]

California Desert Conservation Area Plan

The California Desert Conservation Area Plan is used to manage BLM-controlled areas. The BLM also implements biological resource management policies through its designation of Areas of Critical Environmental Concern.[33]

West Mojave Plan. The West Mojave Plan is an amendment to the Bureau of Land Management's (BLM) California Desert Conservation Area Plan. The West Mojave Plan also has a proposed HCP component that, if and when finalized, would provide a program for complying with the federal ESA on private lands within the West Mojave Plan area. Together, the West Mojave Plan and the proposed HCP component would cover over 9 million acres north of the Los Angeles metropolitan area with a purpose of creating a comprehensive strategy to conserve and protect almost 100 sensitive desert species and natural communities.[34]

3.11.2 REGULATORY FRAMEWORK

3.11.2.1 Federal

United States Department of Transportation Act, Section 4(f) of 1966 (49 U.S.C. § 303)

The Department of Transportation Act was enacted to preserve the natural beauty of the countryside, public park and recreation lands, wildlife and waterfowl refuges, and historic sites. Section 4(f) requires a comprehensive evaluation of all environmental impacts resulting from federal-aid transportation projects

---

32 California Energy Commission. 2011. Desert Renewable Energy Conservation Plan Environmental Impact Report. December. Available online at: http://www.energy.ca.gov/2011publications/DRECP-1000-2011-001/DRECP-1000-2011-001.pdf, accessed March 22, 2019.

administered by the Federal Highway Administration, Federal Transit Administration, and Federal Aviation Administration that involve the use – or interference with use – of the following types of land.

- Public park lands;
- Recreation areas;
- Wildlife and waterfowl refuges; and
- Publicly or privately-owned historic properties of federal, state, or local significance.

Endangered Species Act of 1973 (16 USC 1531 et seq.)

The Federal Endangered Species Act (FESA) was established by Congress in order to "provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved [and] to provide a program for the conservation of such … species." The US Fish and Wildlife Service (USFWS) administers the Federal Endangered Species Act (FESA), which designates critical habitat for Endangered species. This enables USFWS to carry out its mission to conserve, protect, and enhance the nation's fish and wildlife and their habitats for the continuing benefit of people. Critical habitat areas cannot be disturbed without permission from the USFWS and other federal agencies, depending on land ownership. The USFWS also manages a system of land and waters for the conservation of wildlife and associated ecosystems. These National Wildlife Refuges are primarily managed for the preservation and protection of unique or important resources and ecosystems. Habitat Conservation Plans (HCPs), established under Section 10(a)(1)(B) of the ESA, are planning documents that provide for partnerships with non-federal parties to conserve the ecosystems upon which listed (and candidate) species depend, ultimately contributing to their recovery. The USFWS requires HCPs as part of an application for an incidental take permit. HCPs describe the anticipated effects of the proposed taking, how those impacts will be minimized or mitigated, and how the HCP is to be funded. HCPs may be prepared on a project level when projects will require the acquisition of an Incidental Take Permit. Regional HCPs may also be prepared in an effort to protected threatened and endangered species during the land use planning process.

Department of Housing and Urban Development Act

The Department of Housing and Urban Development Act created the U.S. Department of Housing and Urban Development (HUD) as a Cabinet-level agency. HUD is responsible for national policy and programs that address housing needs in the U.S. HUD is responsible for enforcing fair housing laws. HUD plays a major role in supporting homeownership by underwriting homeownership for lower- and moderate-income families through its mortgage insurance programs.

Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970

The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (42 U.S. Code, § 4601 et seq.), passed in 1970 and amended in 1987, is intended to provide for uniform and equitable treatment for persons displaced through federally-funded or assisted transportation and redevelopment projects that require property acquisition. The act lays out rules for notification, relocation counseling, social services or assistance for disabled residents, and compensation for replacement housing and moving costs. The rules stipulate that replacement housing must be comparable to previous housing in terms of location, size, access to jobs and public facilities, and must be "decent, safe, and sanitary." The rules apply if federal funds are in any phase of the program or project, even if the property acquisition itself is not federally funded.

Federal Coastal Zone Management Act

The Federal Coastal Zone Management Act (CZMA; 16 USC 1451–1464, Chapter 33; Public Law 92-583, October 27, 1972; 86 Stat. 1280), administered by the National Oceanic and Atmospheric Administration (NOAA), provides for the management of the nation's coastal resources, including the Great Lakes. The goal is to "preserve, protect, develop, and where possible, to restore or enhance the resources of the nation's coastal zone." The CZMA outlines three national programs, the National Coastal Zone Management Program, the National Estuarine Research Reserve System, and the Coastal and Estuarine Land Conservation Program (CELCP). The National Coastal Zone Management Program aims to balance competing land and water issues through state and territorial coastal management programs, the reserves serve as field laboratories that provide a greater understanding of estuaries and how humans impact them, and CELCP provides matching funds to state and local governments to purchase threatened coastal and estuarine lands or obtain conservation easements.

Federal Land Policy and Management Act (FLPMA) of 1976, as Amended

The FLPMA (Public Law 94-579) governs how public lands administered by the Bureau of Land Management (BLM) are managed. FLPMA provides guiding principles for BLM land management including multiple use, sustained yield, and environmental protection. The intent of FLPMA is to ensure that the BLM manages public lands so that they are utilized in the combination that will best meet the present and future needs of the American people for renewable and non-renewable natural resources.

FLPMA addresses topics such as land use planning, land acquisition, fees and payments, administration of federal land, range management, and right-of-ways on federal land. FLPMA has specific objectives and time frames in which to accomplish these objectives, giving it more authority and eliminating the uncertainty surrounding the BLM's role in wilderness designation and management.

Code of Federal Regulations Title 25

Federally recognized Native American tribes are considered domestic dependent nations. Tribal sovereignty refers to tribes' right to govern themselves, define their own membership, manage tribal property, and regulate tribal business and domestic relations; it further recognizes the existence of a government-to-government relationship between such tribes and the federal government. In general, state and local governments do not have "civil regulatory" jurisdiction (i.e., land use) on Indian Land, which is land held in trust or restricted status for a tribe.

Federal Highway Administration (FHWA) National Scenic Byways Program

The FHWA National Scenic Byways Program, which was established in Title 23, Section 162 of the United States Code under the Intermodal Transportation Efficiency Act of 1991, is a grassroots collaborative effort that designates selected highways as "All American Road" (a roadway that is a destination unto itself), America's Byways or "National Scenic Byway" (a roadway that possesses outstanding qualities that exemplify regional characteristics).

United States Bureau of Land Management (BLM) Scenic Areas and Back Country Byways

The BLM designates some of its holdings as Scenic Areas and some roadways in remote areas as Back Country Byways. The BLM Back Country Byways Program was established in 1989 and is a component of the National Scenic Byways Program. The counties of San Bernardino, Riverside, and Imperial in the SCAG region include land with such BLM designations.

United States Forest Service (USFS) National Scenic Byways Program

The USFS also has a National Scenic Byways Program, independent from the BLM program, which was established in 1995 under the Intermodal Transportation Efficiency Act of 1991 to indicate roadways of scenic importance that pass through national forests. The SCAG region includes Forest Service Scenic Byways in the counties of San Bernardino, Ventura, Los Angeles, and Riverside.

3.11.2.2 State

California Coastal Act of 1976

The California Coastal Act constitutes the California Coastal Management Program for the purposes of the Federal Coastal Zone Management Act (California Coastal Act of 1976, Public Resources Code [PRC] §30000 et seq.). The act established the California Coastal Commission (CCC), identified a designated California Coastal Zone, and established the CCC's responsibility to include the preparation and ongoing

oversight of a Coastal Plan for the protection and management of the Coastal Zone. Each local jurisdictional authority (city or county) with lands within the coastal zone is required to develop, and comply with, a coastal management plan. The Coastal Act requires that any person or public agency proposing development within the Coastal Zone obtain a Coastal Development Permit (CDP) from either the CCC or the city or county having the jurisdictional authority to issue a CDP. New school construction in portions of the Central and South Los Angeles Unified School District (LAUSD) areas could require a CDP. Any construction within the Coastal Zone must conform to the requirements of the California Coastal Act generally, and Chapter 3, Section 6 (Development) specifically. On or near the shoreline, coastal-dependent developments have priority over those uses not dependent on a coastal location (PRC §30255). To comply with the Coastal Zone Management Act, localities develop Local Coastal Plans (LCPs).

Natural Community Conservation Planning Act of 1991, as Amended

The Natural Community Conservation Planning Act of 1991, as amended in 2003 (California Fish and Game Code Section 2800-2835) established the Natural Community Conservation Planning program for the protection and perpetuation of the state's biological diversity. The CDFW established the program in order to conserve natural communities at the ecosystem level while accommodating compatible land use. An NCCP identifies and provides for the regional or area-wide protection of plants, animals, and their habitats, while allowing compatible and appropriate economic activity. The CDFW provides support, direction, and guidance to participants in order to ensure that NCCPs are consistent with the state ESA.

Modernization of Transportation Analysis for Transit- Oriented Infill Projects Senate Bill 743 (SB 743)

On September 27, 2013, Governor Brown signed Senate Bill (SB) 743. To further the state's commitment to the goals of SB 375 and AB 32, SB 743 adds Chapter 2.7, Modernization of Transportation Analysis for Transit- Oriented Infill Projects, to Division 13 (Section 21099) of the Public Resources Code. Key provisions of SB 743 include reforming aesthetics and parking CEQA analyses for urban infill projects and eliminating the measurement of auto delay, including Level of Service (LOS), as a metric that can be used for measuring traffic impacts in transit priority areas. SB 743 provides that, "aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." This means that, effective January 1, 2014, aesthetics and parking will no longer be considered in determining if a project has the potential to result in significant environmental effects provided a project meets all of the following three criteria:

a) The project is in a transit priority area;

b) The project is on an infill site; and

c) The project is residential, mixed-use residential, or an employment center.

CEQA Streamlining for Infill Projects Senate Bill 226 (SB 226)

The CEQA Streamlining for Infill Projects (SB 226) sets forth a streamlined review process for infill projects and includes performance standards that will be used to determine an infill project's eligibility for streamlined review. The purpose of SB 226 and updated *CEQA Guidelines* Section 15183.3 is to streamline the environmental review process by "limiting the topics subject to review at the project level where the effects of infill development have been addressed in a planning level decision or by uniformly applicable development policies." Residential, commercial and retail, public office buildings, transit stations, and schools are eligible for this streamlining provided they meet the following requirements: (1) are located in an urban area on a site that has been previously developed or adjoins existing qualified urban uses on at least 75 percent of the site's perimeter; (2) satisfy the performance standards provided in Appendix M [of CEQA]; and, (3) are consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, with some exceptions.

Under SB 226, some development and transportation projects assumed as a part of the proposed Plan may be eligible to use a streamlined version of the environmental review process.

Housing Element Law

Enacted in 1969, Housing element law (Government Code Section 65580-65589.8) mandates that local governments adequately plan to meet the existing and projected housing needs of all economic segments of the community. The law acknowledges that, in order for the private market to adequately address housing needs and demand, local governments must adopt land use plans and regulatory systems that provide opportunities for, and do not unduly constrain, housing development. As a result, housing policy in the State rests largely upon the effective implementation of local general plans and, in particular, local housing elements. Housing element law also requires HCD to review local housing elements for compliance with State law and to report its written findings to the local government.

Regional Housing Needs Assessment

The California Legislature developed the RHNA process (Govt. Code § 65580 *et seq.*) in 1977 to address the serious affordable housing shortage in California. The California Department of Housing and

Community Development (HCD) in consultation with each council of governments determines each region's existing and projected housing need.[35] HCD must meet and consult with each council of governments, including SCAG, regarding the assumptions and methodology to be used by HCD to determine the region's housing need.[36] HCD's determination is based on population projected produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans.[37]

In consultation with HCD, each council of governments must develop and adopt a methodology for distributing the existing and projected regional housing need to cities, counties, and cities and counties within the region.[38] The council of government then adopts a final regional housing need plan that allocates a shore of the regional housing need to each city, county, or city and county.[39]

Local government must address their allocated share of housing needs of all economic segments of the community through their housing elements. [40] Local governments must adopt a housing element as part of their general plan. Unlike the rest of the general plan, where updates sometimes occur at intervals of 20 years or longer, under previous law the housing element was required to be updated as frequently as needed and no less than every five years. Under SB 375, this period has been lengthened to eight years and timed so that the housing element period begins no less than 18 months after adoption of the regional transportation plan, to encourage closer coordination between housing and transportation planning. SB 375 also changes the implementation schedule required in each housing element. Previous law required the housing element to contain a program which set forth a five-year schedule to implement the goals and objectives of the housing element. The new law instead requires this schedule of actions to occur during the eight-year housing element planning period, and requires each action have a timetable for implementation.[41]

The purpose of the housing element is to identify the community's housing needs, state the community's goals and objectives with regard to housing production, rehabilitation, and conservation to meet those needs. In addition, the housing element defines the related policies and programs that the community

41 California Legislative Information. *Senate Bill No. 375*.

will implement in order to achieve the stated goals and objectives. This would be accomplished through the allocation of regional housing needs consistent with the Plan.[42]

In prior cycles, factors such as household growth and household income distribution were the primary factors considered in determining a jurisdiction's RHNA allocation. For the 6th RHNA cycle, SCAG plans to consider other factors in addition to household growth. These factors include transit accessibility, job accessibility, and indicators that influence a community's environmental, educational, and economic resource accessibility.

As discussed above in the discussion of SB 375, state law requires preparation of a RHNA allocation plan every eight years. SCAG's 6th Cycle RHNA quantifies the regional need for housing and then allocates the regional need to each jurisdiction for a planning period between October 2021 and October 2029. Local jurisdictions are required to plan and zone to accommodate their respective RHNA allocation (housing units) by income categories through the process of updating the Housing Elements of their General Plans. The RHNA does not necessarily encourage or promote growth, but rather allows communities to anticipate growth and address existing need, so that they can grow in ways that enhance quality of life, improve access to jobs, transportation and housing, and not adversely impact the environment.[43]

This region's 6th Cycle RHNA allocation plan consists of two measurements of housing need: (1) existing need and (2) future need for very-low income, low-income, moderate, and above-moderate income categories.

The existing need assessment is based on data from the most recent US Census to measure ways in which the housing market is not meeting the needs of current residents. These variables include the number of households paying more than 30 percent of their income for housing, as well as overcrowding.

The future need for housing is determined primarily by the forecasted growth in households in a community, based on historical growth patterns, job creation, household formation rates, and other factors to estimate how many households will be added to each community over the projection period. The housing need for new households is then adjusted to account for an ideal level of vacancy needed to promote housing choice, maintain price competition, and encourage acceptable levels of housing upkeep and repair. The RHNA also accounts for units expected to be lost due to demolition, natural disaster, or conversion to non-housing uses. The sum of these factors including household growth, vacancy need and replacement need form the "projected need" assigned to each community. Per SB 375, the projected

need's portion of the 6th Cycle RHNA will be consistent with the Connect SoCal for the comparable period.

SCAG's RHNA allocation plan considers how each jurisdiction might grow in ways that will decrease the over-concentration of low-income households. The need for new housing is distributed among income groups so that each community moves closer to the county income distribution.

Consistent with the state housing law, the primary objectives the 6th Cycle RHNA allocation plan are:

1. Increase the housing supply and mix of housing types, tenure and affordability within each region in an equitable manner

2. Promote infill development and socioeconomic equity, the projection of environmental and agricultural resources, and the encouragement of efficient development patterns

3. Promote an improved interregional relationship between jobs and housing

4. Allocating a lower proportion of housing need in income categories in jurisdictions that have a disproportionately high share in comparison to the county distribution

5. Affirmatively furthering fair housing

On October 15, 2019, SCAG received the Final Regional Determination from HCD. On November 7, 2019, SCAG Regional Council approved a Draft RHNA Allocation Methodology for HCD's review. The Regional Council is scheduled to approve the Final RHNA Methodology in March 2020 and release the Draft RHNA Allocation by jurisdiction prior to adopting Connect SoCal in April 2020.

Sustainable Communities and Climate Protection Act of 2008 (SB 375)

Senate Bill 375 focuses on aligning transportation, housing, and other land uses to achieve regional GHG emission reduction targets established under the California Global Warming Solutions Act, also known as Assembly Bill 32 (AB 32). SB 375 requires California Metropolitan Planning Organizations to develop an SCS as part of the Regional Transportation Plan (RTP), with the purposes of identifying policies and strategies to reduce per capita passenger vehicle-generated GHG emissions. The SCS must:

- identify the general location of land uses, residential densities, and building intensities within the region;

- identify areas within the region sufficient to house all the population of the region;

- identify areas within the region sufficient to house an eight-year projection of the regional housing need;
- identify a transportation network to service the regional transportation needs;
- gather and consider the best practically available scientific information regarding resources areas and farmland in the region;
- consider the state housing goals;
- set forth a forecasted development pattern for the region; and
- allow the regional transportation plan to comply with the federal Clean Air Act (CAA) of 1970 (42 USC § 7401 et seq.).

The development pattern in the SCS, when integrated with the transportation network and other transportation measures and policies, must reduce the GHG from automobiles and light duty trucks to achieve the GHG emission reduction targets approved by the California Air Resources Board (ARB). If the SCS does not achieve the GHG emission targets set by ARB, an Alternative Planning Strategy must be developed to demonstrate how the targets could be achieved. SB 375 also imposes a number of new requirements on the regional housing needs process. Before SB 375, the regional transportation plan and regional housing needs processes were not required to be coordinated.

SB 375 now synchronizes the schedules of the RHNA and regional transportation plan processes. The RHNA, which is developed after the regional transportation plan, must also allocate housing units within the region consistent with the development pattern included in the SCS. Previously, the RHNA determination was based on population projections produced by the Department of Finance. SB 375 requires the determination to be based upon population projections by the Department of Finance and regional population forecasts used in preparing the regional transportation plan. If the total regional population forecasted and used in the regional transportation plan is within a range of three percent of the regional population forecast completed by the Department of Finance for the same planning period, then the population forecast developed by the regional agency and used in the regional transportation plan shall be the basis for the determination. If the difference is greater than three percent, then the two agencies shall meet to discuss variances in methodology and seek agreement on a population projection for the region to use as the basis for the RHNA determination. If no agreement is reached, then the basis for the RHNA determination shall be the regional population projection created by the Department of Finance.

Existing law requires local governments to adopt a housing element as part of their general plan. Unlike the rest of the general plan, where updates sometimes occur at intervals of 20 years or longer, under previous law the housing element was required to be updated as frequently as needed and no less than every five years. Under SB 375, this period has been lengthened to eight years and timed so that the housing element period begins no less than 18 months after adoption of the regional transportation plan to encourage closer coordination between the housing and transportation planning done by local governments and MPOs. SB 375 also changes the implementation schedule required in each housing element. Previous law required the housing element to contain a program which set forth a 5-year schedule of to implement the goals and objectives of the housing element. The new law instead requires this schedule of actions to occur during the eight-year housing element planning period, and requires each action have a timetable for implementation.

Regional Conservation Investment Strategy Program

On September 22, 2016, the Governor signed Assembly Bill 2087 which created CDFW's Regional Conservation Investment Strategy pilot program, and was amended by Senate Bill 103 on July 21, 2017. The program uses a science-based approach to identify conservation and enhancement opportunities that, if implemented, will help California's declining and vulnerable species by protecting, creating, restoring, and reconnecting habitat and may contribute to species recovery and adaptation to climate change and resiliency. The Program consists of three components: regional conservation assessments (RCAs), regional conservation investment strategies (RCISs), and mitigation credit agreements (MCAs). An RCA is a voluntary, non-regulatory, non-binding conservation assessment that includes information and analyses of important species, ecosystems, protected areas, and habitat linkages at the USDA ecoregion scale and may include more than one ecoregion. An RCIS is a voluntary, non-regulatory, and non-binding conservation assessment that includes information and analyses relating to the conservation of focal species, their associated habitats, and the conservation status of the RCIS land base. An RCIS establishes biological goals and objectives at the species level and describes conservation actions and habitat enhancement actions that, if implemented, will contribute to those goals and objectives. An MCA is a mitigation credit agreement developed under an approved RCIS. An MCA is developed in collaboration with CDFW to create mitigation credits by implementing the conservation or habitat enhancement actions identified in an RCIS.[44]

Enhanced Infrastructure Financing Districts

Enacted on September 29, 2014, the new state law, Enhanced Infrastructure Financing Districts (SB 628; Chapter 2.99 [commencing with Section 53398.50] to Part 1 of Division 2 of Title 5 of the Government Code) allows the legislative body of a city or a county, defined to include a city and county, to establish an infrastructure financing district, adopt and infrastructure financing plan, and issue bonds to finance public facilities upon approval by two-thirds of a jurisdiction's voters. Additionally, a city or county is authorized to issue bonds upon approval by 55 percent of the voters, for which only the district is liable; to finance public capital facilities or other specified projects of communitywide significance, including, but not limited to, brownfield restoration and other environmental mitigation; the development of projects on a former military base; the repayment of the transfer of funds to a military base reuse authority; the acquisition, construction, or rehabilitation of housing for persons of low and moderate income for rent or purchase; the acquisition, construction, or repair of industrial structures for private use; transit priority projects; and projects to implement a sustainable communities strategy. The bill would also authorize an enhanced infrastructure financing district to utilize any powers under the Polanco Redevelopment Act.

3.11.2.3 Local

General Plans and Land Use Regulations

The legal framework in which California cities and counties exercise local planning and land use functions is provided in the California Planning and Zoning Law (California Code section 65000 et seq.) Under state planning law, each city and county is required to adopt a general plan "for the physical development of the county or city, and any land outside its boundaries which bears relation to its planning" (California Code section 65300 et seq.).

The general plan expresses the community's development goals and embodies public policy relative to the distribution of future land uses, both public and private. A general plan consists of a number of elements, including land use, circulation, housing, conservation, open space, noise, and safety; other elements may be included at the discretion of the jurisdiction that relate to the physical development of the county or city. The general plan must be comprehensive and internally consistent. Of particular importance is the consistency between the circulation and land use elements; the general location and extent of existing and proposed major thoroughfares, transportation routes, terminals, and other public utilities and facilities must be consistent with the general distribution and intensity of land used for housing, business, industry, open space, education, public areas, waste disposal facilities, agriculture, and other public and private uses.

In addition, every local jurisdiction within the region has land use regulations that implement the general plan. The zoning ordinance is the primary land use regulation used to implement the goals and policies of its general plan. Zoning ordinances, which are required to be consistent with the general plan, provide detailed direction related to development standards; permitted, conditionally permitted, and prohibited uses; and other regulations such as parking standards and sign regulations.

Local jurisdictions may also adopt specific plans, which are used to implement the general plan in particular geographic areas (California Code section 65450). Zoning ordinances and land use approvals must be consistent with applicable specific plans as well as the general plan.

Cities and counties are also required to comply with the Subdivision Map Act (California Code section 66410 et seq.). The Subdivision Map Act sets forth the conditions for approval of a subdivision map and requires enactment of subdivision ordinances by which local governments have direct control over the types of subdivision projects to be approved and the physical improvements to be installed.

Community Plans, Specific Plans, and Master Plans

A city or county may also provide land use planning by developing community or specific plans for smaller, more specific areas within their jurisdiction. These more localized plans provide for focused guidance for developing a specific area, with development standards tailored to the area, as well as systematic implementation of the general plan. Counties, cities, and private developers may also choose to partner in the development of a master plan that shows an overall development concept that includes urban design, landscaping, infrastructure, service provision, circulation, present and future land use and built form. It consists of three dimensional images, texts, diagrams, statistics, reports, maps and aerial photos that describe how a specific location will be developed. It provides a structured approach and creates a clear framework for developing an area.

Zoning

City and county zoning codes are the set of detailed requirements that implement the general plan policies at the level of the individual parcel. The zoning code presents standards for different uses and identifies which uses are allowed in the various zoning districts of the jurisdiction. Since 1971, state law has required the city or county zoning code to be consistent with the jurisdiction's general plan.

3.11.3 ENVIRONMENTAL IMPACTS

3.11.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan could result in significant adverse impacts to land use, if the Plan would result in either of the following:

- Physically divide an established community.
- Cause a significant environmental impact due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

3.11.3.2 Methodology

The Plan includes transportation projects as well as transportation and land use strategies aimed to increase mobility, promote sustainability, and improve the regional economy. Although land use development is anticipated to occur within the region even without the Plan, the Plan includes policies and strategies that could influence growth, including distribution patterns. To address this, the analysis in the PEIR covers overall impacts of transportation projects and land use strategies described in the Plan and evaluates how conditions in 2045 under the Plan would differ from existing conditions. **Section 2.0, Project Description**, describes the Plan's vision, goals, guiding policies, performance measures, and land use and transportation strategies. A geographic information system (GIS) was used to analyze where major transportation (e.g., freeway, rail, and transit) projects would intersect areas used for residential development and business uses. A 500-foot potential impact zone was drawn around the freeway, rail, and transit projects in Connect SoCal to compute the number of acres that could potentially be affected by the construction and operation of transportation projects included in the Plan. **Table 3.11-6** shows the current land uses that are located within 500 feet of either side of Plan transportation projects.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743, or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.11.3.3 Impacts and Mitigation Measures

Impact LU-1 Potential for the Plan to physically divide an established community

Significant and Unavoidable Impact - Mitigation Required.

Physical division of an established community could occur as a result of real or perceived barriers to pedestrians, bicyclists, and motorists. Short-term construction related impacts could result from disturbances due to construction equipment; these impacts are discussed under other impact categories (e.g., Noise, Aesthetics, and Air Quality). Long-term impacts could result from the completion of new or expanded roadways or transit facilities in existing communities. Also, if freeway routes, particularly those that occur in rural areas, are widened, they can create a real or perceived barrier to pedestrians, bicyclists, and motorists. Freeway segments that would occur in rural areas, such as projects adding express lanes along I-15 in San Bernardino County connecting I-215 to US-395, also have the potential to create physical barriers. Such additions of new roadways or expansion of existing roadways may be perceived as a great distance to cross by a pedestrian (whereas it may not have been perceived as an issue previously), thereby dividing a community. Urban transportation projects, and the Plan's emphasis on expanded transit could expand urban uses into undeveloped areas and has the potential to physically divide established communities. For example, an elevated grade crossing may create a physical barrier in some locations.

The transportation strategies in the Plan, such as emphasis on complete streets and TDM strategies would have less of an ability to divide established communities because they are generally expected to occur in established communities. Further, many of these strategies (i.e., bike lanes, pedestrian access) improve connectivity.

Implementation of the Plan would affect land use patterns and the consumption of currently vacant and open space lands. As described above, the Plan would result in the conversion of 41,546 greenfield acres including 6,732 acres of agricultural land to urban uses. As land gets converted from urban or agricultural uses, there is the potential for infrastructure or land developments to divide existing communities. Anticipated significant impacts include substantial density increases in areas of the region adjacent to transit, or other rights-of-way that could separate residences from community facilities and services, and conversion of vacant lands, including agricultural lands, to transportation infrastructure and residential and commercial development.

A GIS analysis was performed to determine where major transportation projects in the Connect SoCal Plan intersected with different land uses to evaluate the potential for conflicts. For purposes of identifying potential land use conflicts, a 500-foot buffer was used around the Plan's major transportation

projects to identify the number of acres potentially affected. Highway and transit extensions and major interchange projects are assumed to have a higher potential to disrupt or divide existing communities since they would involve the creation of new roadways. Highway widening and other projects along established transportation rights-of-way were assumed to have a lower potential to divide or disrupt existing communities and neighborhoods. The analysis is based on general descriptions of transportation projects listed in the Plan and is regional and programmatic in nature. As shown in **Table 3.11-6, Potential Displacement of Existing Residential and Commercial Land Uses (in Acres**), approximately 10,254 acres of land zoned for residential use (including multifamily and single family) could be affected by projects in the Plan. However, most projects in the Plan are modifications or expansions (e.g., HOV, widening) of existing facilities and would have less potential to divide an existing community than new projects.

Table 3.11-6
Potential Displacement of Existing Residential and Commercial Land Uses (in Acres)

Land Use	County						Total
	Imperial	Los Angeles	Orange	Riverside	San Bernardino	Ventura	
Commercial and services	64	1,369	635	821	874	532	4,295
General office	6	468	269	284	359	130	1,516

Source: SCAG, 2019

Nonetheless, because the Plan would result in the location of transportation infrastructure in residential areas, it is possible division of communities would occur. As such, impacts are considered significant.

Mitigation Measures

SCAG Mitigation Measures

SMM LU-1: SCAG shall coordinate with local County Transportation Commissions, Caltrans and other implementing agencies when siting new facilities in residential areas to facilitate minimizing future impacts of transportation projects on established communities, through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts to promote best planning practices.

Project Level Mitigation Measures

PMM LU-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Facilitate good design for land use projects that build upon and improve existing circulation patterns

b) Encourage implementing agencies to orient transportation projects to minimize impacts on existing communities by:

- Selecting alignments within or adjacent to existing public rights of way.
- Design sections above or below-grade to maintain viable vehicular, cycling, and pedestrian connections between portions of communities where existing connections are disrupted by the transportation project.
- Wherever feasible incorporate direct crossings, overcrossings, or under crossings at regular intervals for multiple modes of travel (e.g., pedestrians, bicyclists, vehicles).

c) Where it has been determined that it is infeasible to avoid creating a barrier in an established community, consider other measures to reduce impacts, including but not limited to:

- Alignment shifts to minimize the area affected.
- Reduction of the proposed right-of-way take to minimize the overall area of impact.
- Provisions for bicycle, pedestrian, and vehicle access across improved roadways.

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts that physically divide a communities could be significant and unavoidable even with implementation of mitigation.

Impact LU-2 **Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect**

Significant and Unavoidable Impact - Mitigation Required.

As part of the Plan, SCAG has developed a population, housing and employment growth forecast, land use and transportation strategies and forecasted land use patterns. The Plan seeks to integrate the forecasted land use patterns with the transportation network, in response to projected growth and housing needs, changing demographics, and transportation demands. Transportation strategies included in the Plan emphasize system preservation, active transportation, transportation safety, electrification, and transportation demand management measures. Land use strategies included in the Plan aim to focus most of the new housing and job growth in high-quality transit areas (HQTAs), with 60 percent of new homes and 73 percent of new jobs being located in these Priority Growth Areas (PGAs) which include existing main streets, downtowns, and commercial corridors. Land use strategies also seek to focus growth in other PGAs such as job centers and neighborhood mobility areas (NMAs) to maximize existing infrastructure and encourage infill development (**Figure 3.11-5, SCAG Region Proposed Job Centers**).

The development patterns encouraged by the Connect SoCal Plan, where implemented by local jurisdictions, would influence the distribution of growth in existing urbanized areas or suburban town centers and opportunity areas such as in HQTAs, including livable corridors and neighborhood mobility areas. As described in **Chapter 2.0, Project Description**, by 2045, the SCAG region is anticipated to add 3.2 million people with or without the Plan. To accommodate the growth, the Plan includes transportation and land use strategies that encourage higher densities in areas with infill potential and existing infrastructure (e.g., HQTAs, NMAs); emphasizes an increase in transportation mode choice such

as transit, walking and biking; promote diverse housing choices; support implementation of sustainability policies, promote a green region, and other benefits. In particular, the policies and strategies in the Plan support the development of local climate adaptation and hazard mitigation plans as well as project implementation that improves community resiliency to climate change and natural hazards; supports local policies for renewable energy production, reduction of urban heat islands and carbon sequestration; encourages the integration of local food production into the regional landscape; promotes more resource efficient development focused on conservation, recycling and reclamation; preserve, enhance and restore wildlife connectivity; reduce the consumption of resource areas, including agricultural lands; and identify ways to improve access to public park space.

In other areas, land use policies and strategies in the Plan would encourage development of underutilized areas (infill, etc.). As stated previously, development patterns, would be supported by transportation investments that emphasize system preservation and enhancement, active transportation, and land use integration, and are generally consistent with local land use plans, goals, and policies calling for higher density, compact, mixed-use development that may be served by high-quality transit, bicycle and pedestrian improvements. The Plan's transportation strategies would have less ability to result in conflicts with general plans as they are generally expected to be implemented in established communities where such strategies are often included at the local level.

The Plan contains strategies to guide anticipated population, households, and employment growth in the region by 2045. The land use strategies were developed as a result of SCAG's bottom-up planning process outlined in the Plan. This process involved extensive outreach to and input from local jurisdictions, including counties, subregions, and local city planners.

While the Plan was developed primarily from assumptions derived from local general plans and input from local governments and transportation agencies, SB 375 does not require local land use policies, regulations or general plans to be consistent with the Plan. Also, although the transportation projects and land use strategies included in the Plan are generally compatible with county- and regional-level general plans, local general plans may have not have been updated since SCAG's last adopted 2016 RTP/SCS. As such, it is likely that there could be incompatibilities with existing general plans in the region.

SCAG has no authority to adopt, approve, implement, or otherwise regulate local land use plans or projects that are listed in the Connect SoCal Plan. SB 375 specifically provides that a regional transportation plan does not supersede the land use authority of cities and counties. In addition, cities and counties are not required to change their land use plans and policies, including general plans, to be consistent with the Plan. Rather, SB 375 requires the projections of a regional land use pattern integrated with the transportation network and the provision of strategies and recommended policies to reduce per

capita GHG emissions from automobiles and light trucks. Local governments reserve their land use authority and may incorporate, as appropriate, the recommended land use strategies, guiding principles, and policies include in the Plan.

In addition, it is possible that many general plans do not include similar regional policies as they are focused on land uses within the local jurisdiction. For example, while the Plan includes strategies for compact development and higher densities as a means to accommodate increased population in an efficient manner, many jurisdictions are planning for smaller individual numbers and may assume smaller densities. The growth pattern in the Plan assumes 21 percent of new housing would be urban infill and 63 percent would be compact (walkable). It is possible that local general plans have not been updated to reflect the land use assumptions within the Plan, despite SCAG's outreach and bottom up planning process for the reasons stated above. As a result, there exists the potential for a local general plan to conflict with SCAG's projected land use pattern. While this conflict would not result in a direct physical impact, physical impacts could occur indirectly as other pressures for increased densities grow in the region. As density increases, consistent with SCAG's land use policies and strategies, these policies and strategies could facilitate higher density in areas not currently planned for such densities (at the local level). As such, there is the potential for inconsistencies between SCAG's land use strategies and local planning documents that could potentially lead to physical environmental impacts.

Implementation of the Plan would also have a potential to result in conflicts with the provisions of applicable adopted HCPs, NCCPs as well as other open space/parklands. The Plan's land use strategies seek to reduce conflicts with applicable HCPs, NCCPs and open spaces by focusing new growth in existing urban areas and urban opportunity areas to help preserve natural habitat areas. In addition, parklands are usually zoned as open space and SCAG does not allocate growth to lands designated for open space/parks. However, because some planned major transportation projects could occur in or adjacent to lands protected under these plans, there is the potential for a significant impact (See **Section 3.4, Biological Resources,** for further analysis of the Plan's potential to conflict with provisions of an adopted HCP or NCCPP).

As previously discussed, there are areas subject to general plans that would be impacted by transportation projects. In addition, since the Plan's planning horizon year is beyond the timeline of many of the most recent general plans, implementation of the Plan's transportation projects and land use strategies could potentially result in changes in the land use patterns in the region. Therefore, there is potential for inconsistencies with general plans as well as regional conservation plans, constituting potentially significant effects requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

SMM LU-2: SCAG shall continue to promote the Intergovernmental Review (IGR) Program as an internal and external informational tool by reviewing and monitoring all projects submitted to SCAG for review and working with local jurisdictions to ensure that submitted projects support the most currently adopted Connect SoCal Plan. SCAG shall provide comment letters on regionally significant projects to recommend additional resources to help the lead agency support or develop a projects that are consistent with the Plan, as appropriate. The IGR Mapping Tool can also be utilized by local jurisdictions to assess regional impacts. To visit the IGR Mapping tool, please go to: https://maps.scag.ca.gov/IGR/. For more information on SCAG's IGR Program, please visit: http://www.scag.ca.gov/programs/Pages/IGR.aspx.

SMM LU-3: SCAG shall encourage cities and counties in the region to provide SCAG with electronic versions of their most recent general plan (and associated environmental document) and any updates as they are produced.

SMM LU-4: SCAG shall continue to provide targeted technical services such as GIS and data support for cities and counties to update their general plans at least every ten years, as recommended by the Governor's Office of Planning and Research.

SMM LU-5: SCAG shall provide technical assistance and regional leadership to encourage implementation of the Plan goals and strategies that integrate growth and land use planning with the existing and planned transportation network.

Project Level Mitigation Measures

PMM LU-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) When an inconsistency with the adopted general plan policy or land use regulation (adopted for the purpose of avoiding or mitigating an impact) is identified modify the transportation or land use project to eliminate the conflict;

or, determine if the environmental, social, economic, and engineering benefits of the project warrant an amendment to the general plan or land use regulation.

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to potential lack of consistency with land use plans, policies and regulations and potential to result in environmental impact could be significant and unavoidable even with implementation of mitigation.

3.12 MINERAL RESOURCES

This section of the Program Environmental Impact Report (PEIR) describes mineral resources in the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect mineral resources, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan") In addition, this PEIR provides regional-scale mitigation measures, as well as project-level mitigation measures for subsequent, site-specific environmental review documents prepared by lead agencies to reduce identified impacts as appropriate and feasible.

3.12.1 ENVIRONMENTAL SETTING

A mineral resource is a pure inorganic substance occurring in Earth's crust in such form, quantity or quality that there are reasonable prospects for economic extraction. With over 1,200 mines in California, the state relies on mineral resources as a continuous supply of construction aggregate materials (sand, gravel, and crushed stone) for urban infrastructure and essential to the economy of Southern California. Construction minerals, such as aggregate, constitute the state's most important mineral commodity in terms of tonnage, value, and societal infrastructure. California is number one in the United States (U.S.) for the production of sand and gravel, and fourth in the U.S. for total non-fuel mineral production. As of 2017, there were 663 active non-fuel mines in the state with a total market value of production valuing $3.6 billion.[1]

Mineral Resource Zones (MRZs) were initially mapped in 1980 as a result of the Surface Mining and Reclamation Act (SMARA) of 1975. MRZs are designated into four classes that indicate the potential for a specific area to contain significant mineral resources:

- **MRZ-1:** Areas where available geological information indicated there is little or no likelihood for presence of significant mineral resources.
- **MRZ-2:** Areas underlain by mineral deposits where geological data indicate that significant measured or indicated resources are present or where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists.
- **MRZ-3:** Areas containing known mineral occurrences of undetermined mineral resources significance.

[1] California Department of Conservation (DOC). 2017. California's Non-Fuel Mineral Production in 2017. Available online at: https://www.conservation.ca.gov/cgs/Documents/california-non-fuel-mineral-production-2017.pdf, accessed June 12, 2019.

- **MRZ-4:** Areas of known mineral occurrences where geological information does not rule out the presence or absence of significant mineral resources.[2]

3.12.1.1 Mineral Resources Project

To organize active and historic mining data as mandated by the Surface Mining and Reclamation Act of 1975 (SMARA), the California Department of Conservation created the Mineral Resources Project, to provide information about California's non-fuel mineral resources. Under the project, the California Geological Survey (CGS) classifies lands that contain regionally significant mineral resources and then develops objective maps and reports to be used by mining companies and consultants, government agencies, and the public to recognize, utilize, and protect California's mineral resources.

The Mineral Resources Project divides non-fuel mineral resources into three categories: metals (include gold, silver, iron and copper), industrial minerals (like clays, limestone, and gypsum), and construction aggregate (sand, gravel, and crushed stone).[3]

3.12.2 ENVIRONMENTAL SETTING

3.12.2.1 Mineral Resources of Regional Significance

County and city general plans are required to identify significant mineral resource areas and apply appropriate land use designations to ensure their future availability. Many city and county general plans in the SCAG region reference and map local mineral resources. Most of the comprehensive mineral resource mapping in California has been completed for urban areas where there is a high probability that converted land uses would be incompatible with mining. Gold, sand, and gravel are the primary mineral resources still extracted throughout the SCAG region. As shown in **Figure 3.12-1, Mineral Resources in the SCAG Region**, other mineral resources in the SCAG region consist of bentonite, boron, cement, common clay, crushed stone, dimension stone, feldspar, gemstones, gypsum, lime, perlite, salt, silver, soda ash, sodium sulfate, sulfur, talc, and zeolites.

Imperial County

A number of mineral resources in Imperial County are currently being extracted. These mineral resources include gold, gypsum, sand, gravel, lime, clay, stone, kyanite, limestone, sericite, mica, tuff, salt, potash, and manganese. Several issues influence the extraction of mineral deposits in Imperial County, including the location of geologic deposition, the potential for impacts to the environment, and land use conflicts. As a result, the extraction of mineral resources is limited to a relatively small number of sites throughout the County.[4]

Los Angeles County

In Los Angeles County, four major MRZ-2s are identified in, or partially within the unincorporated areas; Little Rock Creek Fan, Soledad Production Area, Sun Valley Production Area, and Irwindale Production Area. The Soledad and Little Rock Creek MRZ-2s contain significant commercially-viable aggregate or mineral deposits, such as sand, gravel, and other construction aggregate that are estimated to contain mineral resources through the year 2046.[5,6]

Orange County

In 1994, the California Department of Conservation, Division of Mines and Geology, published an updated report identifying significant sand and gravel resources for the Orange County region. These resource areas are located in portions of the Santa Ana River, Santiago Creek, San Juan Creek, Arroyo Trabuco and other areas.[7]

Riverside County

Mineral extraction is an important component of Riverside County's economy. The County of Riverside has extensive deposits of clay, limestone, iron, sand, and aggregates. Mineral deposits in the county are important to many industries, including construction, transportation and chemical processing. The value

of mineral deposits within the county is enhanced by their close proximity to urban areas. However, increasing urbanization also encroaches on the mineral resources within the county.[8]

San Bernardino County

The Desert Region Habitat, which covers approximately 93 percent of the San Bernardino County land area, contains mountain ranges which support exposed bedrock, mineral deposits in granite rock.[9]

Ventura County

The two principal mineral resources located in Ventura County are petroleum (oil and gas) and aggregate (principally sand and gravel). Other minerals of commercial value within Ventura County are: asphalt, clay, expansible shale, gypsum, limestone, and phosphate. Although many sand and gravel sites exist throughout the County, most of the extraction sites are located in and along the Santa Clara River bed.[10]

Construction Aggregate in the SCAG Region

Mapping information assists planners and decision-makers balance the need for construction aggregate with many other competing land use issues in their jurisdictions. It is estimated that in the next 50 years, California will need approximately 11 billion tons of aggregate, while current permits only allow for 7.6 billion tons, or 69 percent of the total need.[11]

Table 3.12-1, Permitted Aggregate Resources and 50-Year Demand in the SCAG Region, shows the forecasted demand as well as the permitted aggregate reserves within the SCAG region. The Temescal Valley-Orange County area has the highest projected demand over the next 50 years, with an estimated 1,079 million tons demanded. In contrast, Ventura County has a future demand of approximately 241 million tons of aggregate. All of the aggregate study areas within the SCAG region have less permitted aggregate reserves than they are projected to need for the next 50 years. The projected total 50-year

demand for the SCAG region is 4.4 billion tons [12] (It should be noted that although there are aggregate mines in Imperial County, the CGS does not provide permit and demand data for Imperial County).

Table 3.12-1
Permitted Aggregate Resources and 50-Year Demand in the SCAG Region

	County*	50-Year Demand (million tons)	Permitted Aggregate Reserves (million tons)	Permitted Aggregate Reserves Compared to 50-Year Demand (percent)	Projected Years Remaining

Total SCAG Region		**4,406**	**1,832**	**N/A**	**N/A**

*Note: *Aggregate reserves not analyzed for Imperial County*
Source: California Geological Survey (CGS). 2018. *Aggregate Sustainability in California.*

Current non-permitted aggregate resources are the most likely future sources of construction aggregate potentially available to meet California's continuing demand. Non-permitted aggregate resources are deposits that may meet specifications for construction aggregate, are recoverable with existing technology, have no land overlying them that is incompatible with mining, and currently are not permitted for mining. These resource areas include areas that that are known to contain aggregate resources and have compatible land uses such as agricultural land, open space lands (not designated as parks), and forest lands. Uses that are considered incompatible with mining include urban areas, county and state parks, national parks, and golf courses. It is unlikely that all of these resources would ever be mined as many are located in proximity to urban or environmentally sensitive areas or remote from a potential market to be economically viable. Land uses that are considered incompatible with mining include urban areas, county and state parks, national parks, and golf courses.

12 Ibid.

The estimated amount of non-permitted resources in the region is not easily quantifiable; California's non-permitted aggregate resources have been estimated to be approximately 74 billion tons.[13] While the estimated amount of nonpermitted resources is large, it is unlikely that all of these resources would ever be mined because of social, environmental, or economic factors. For example, aggregate resources located in proximity to urban or environmentally sensitive areas can limit or stop the development of mining operations, as such these sites are unlikely to be mined. These resources may also be located remote from a potential market to be economically viable, due to the cost of transporting such resources. In spite of such possible constraints, current nonpermitted aggregate resources are the most likely future sources of construction aggregate potentially available to meet California's continuing demand.

3.12.3 REGULATORY FRAMEWORK

3.12.3.1 Federal

Indian Mineral Development Act of 1982

The Indian Mineral Development Act of 1982 (25 U.S. Code [USC] 2101–2108) permits Indian tribes, through the Secretary of the Interior, to enter into a Minerals Agreement for the disposition of tribal mineral resources. A Minerals Agreement provides for the exploration for or extraction of oil, gas, uranium, coal, geothermal, or other energy or non-energy mineral resources for tribes that own a beneficial or restricted interest or provide for the sale or production of tribal mineral resources.[14]

3.12.3.2 State

Surface Mining and Reclamation Act (SMARA) of 1975

The SMARA (Public Resources Code [PRC] 2710–2796) requires that the State Department of Mines and Geology Board map areas throughout the state that contain regionally significant mineral resources. Construction aggregate resources (sand and gravel) deposits were the first commodity selected for classification by the Board. Once mapped, the Mines and Geology Board is required to designate for future use those areas that contain aggregate deposits that are of prime importance in meeting the region's future need for construction-quality aggregates. The primary objective of SMARA is for each jurisdiction to develop policies that would conserve important mineral resources, where feasible, that

---

13 California Geological Survey (CGS). 2018. *Aggregate Sustainability in California*. Available online at: https://www.conservation.ca.gov/cgs/Documents/MS_052_California_Aggregates_Report_201807.pdf, accessed September 10, 2019.

14 U.S. Congress. *S. 1894 – Indian Mineral Development Act of 1982*. Available online at: https://www.congress.gov/bill/97th-congress/senate-bill/1894, accessed August 19, 2019.

might otherwise be unavailable when needed. SMARA requires that once policies are adopted, local agency land use decisions must be in accordance with its mineral resource management policies. These decisions must also balance the mineral value of the resource to the market region as a whole, not just their importance to the local jurisdiction.[15]

Government Code Section 65302(d)

Government Code Section 65302(d) states that a conservation element of the general plan shall address minerals and other natural resources.[16]

3.12.3.3 Local

County and City General Plans

For the most part, local planning guidelines have been developed in county and city general plans to identify and encourage the utilization and conservation of mineral and energy resources, encourage sustainable management of resources, prevent or minimize adverse effects to the environment, and protect public health and safety. Pursuant to Government Code Section 65302, a general plan must include "A conservation element for the conservation, development, and utilization of natural resources including water and its hydraulic force, forests, soils, rivers and other waters, harbors, fisheries, wildlife, *minerals*, and other natural resources" (emphasis added).[17]

3.12.4 ENVIRONMENTAL IMPACTS

3.12.4.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of Connect SoCal could result in significant adverse impacts to mineral resources if the Plan would result in any of the following:

- Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

---

15 California Department of Conservation. 2018. *Surface Mining and Reclamation Act of 1975 Statues and Regulations*. Available online at: https://www.conservation.ca.gov/smgb/Regulations/Documents/SMARA-statutes-regs-7-2018.pdf, accessed August 19, 2019.

16 California Legislative Information. 1965. *ARTICLE 5. Authority for and Scope of General Plans [65300-65303.4].*

17 Ibid.

- Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

3.12.4.2 Methodology

The methodology for determining the significance of impacts on mineral resources impacts compares the existing conditions (2019) to the future 2045 conditions under the Plan, as required by *CEQA Guidelines* Section 15126.2(a). Specifically, the volume of aggregate material likely to be required to support the transportation projects and urban development encouraged by land use strategies in the Plan was evaluated in relation to availability of permitted mineral resources, and other potential mineral resource recovery sites in the SCAG region. Mineral resources within the SCAG region were evaluated at the programmatic level of detail, in relation to the general plans of the six counties and 191 cities within the six-county area, a review of *California Minerals and Mines*, and a review of related literature germane to the SCAG region.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in **Chapter 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.12.4.3 Impacts and Mitigation Measures

Impact MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

Significant and Unavoidable Impact – Mitigation Required.

Transportation projects contained in the Plan and development projects anticipated to occur under the Plan would require substantial amounts of aggregate resources for construction purposes, constituting a significant impact. The six-county and 191-city SCAG region has approximately 1,832 million tons of permitted aggregate reserves (**Table 3.12-1).** The CGS estimates that the SCAG region would need

approximately 4,406 million tons of aggregate over the next 50 years.[18] The difference of 2,574 million tons would need to be permitted over the next 50 years to meet the projected demand. **Table 3.12-1** indicates that, of the eight areas of permitted aggregate resources, one is projected to have less than 10 years remaining (San Fernando Valley/Saugus-Newhall) and three have 11 to 20 years left (Palmdale P-C Region, San Bernardino P-C Region, and Ventura County). The SCAG region's construction industry is greatly dependent on readily available aggregate deposits that are within a reasonable distance to market regions. Aggregate is a low-unit-value, high-bulk-weight commodity or material required for construction of most transportation projects and development projects that must be obtained from nearby sources in order to minimize costs to the consumer. If nearby sources do not exist, then transportation costs quickly could exceed the value of the aggregate.

Table 3.12-1 shows that just under 42 percent of the projected 50-year demand is currently permitted in the SCAG region (excluding mines in Imperial County). The Plan includes transportation system improvements, such as new or expanded highway/arterials, high-occupancy vehicle (HOV) lanes and connectors, new light and heavy rail, goods movement projects, and infrastructure that would require substantial amounts of aggregate resources. In addition, the regional land use strategies identified in the Plan would influence population distribution by focusing growth in HQTAs, existing suburban town centers, and more walkable, mixed-use communities. The development projects encouraged by these land use strategies included in the Plan would also result in a demand for aggregate resources for construction.

As a programmatic, long-range planning document, the Plan does not include specific construction information related to transportation projects or potential land use development. However, transportation projects included in the Plan and potential development could require substantial amounts of aggregate resources for construction. Therefore, impacts would be significant, requiring mitigation.

Mitigation Measures

SCAG Mitigation Measures

SMM MIN-1: SCAG shall coordinate with the Department of Conservation, California Geological Survey to maintain a database of (1) available mineral resources in the SCAG region including permitted and unpermitted aggregate resources and (2) the anticipated 50-year demand for aggregate and other mineral resources. Based on the results of this survey,

[18] California Geological Survey (CGS). 2018. *Aggregate Sustainability in California*. Available online at: https://www.conservation.ca.gov/cgs/Documents/MS_052_California_Aggregates_Map_201807.pdf, accessed August 19, 2019.

SCAG shall work with local agencies on strategies to address anticipated demand, including identifying future sites that may seek permitting and working with industry experts to identify ways to encourage and increase recycling to reduce the demand for aggregate.

Project Level Mitigation Measures

PMM MIN-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce the use of mineral resources that could be of value to the region, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Provide for the efficient use of known aggregate and mineral resources or locally important mineral resource recovery sites, by ensuring that the consumptive use of aggregate resources is minimized and that access to recoverable sources of aggregate is not precluded, as a result of construction, operation and maintenance of projects.

b) Where avoidance is infeasible, minimize impacts to the efficient and effective use of recoverable sources of aggregate through measures that have been identified in county and city general plans, or other comparable measures such as:

1) Recycle and reuse building materials resulting from demolition, particularly aggregate resources, to the maximum extent practicable.

2) Identify and use building materials, particularly aggregate materials, resulting from demolition at other construction sites in the SCAG region, or within a reasonable hauling distance of the project site.

3) Design transportation network improvements in a manner (such as buffer zones or the use of screening) that does not preclude adjacent or nearby extraction of known mineral and aggregate resources following completion of the improvement and during long-term operations.

4) Avoid or reduce impacts on known aggregate and mineral resources and mineral resource recovery sites through the evaluation and selection of project sites and design features (e.g., buffers) that minimize impacts on land suitable for aggregate and mineral resource extraction by maintaining portions of MRZ-2

areas in open space or other general plan land use categories and zoning that allow for mining of mineral resources.

Level of Significance after Mitigation

As previously discussed, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to the loss of availability of known mineral resources that could be of value to the region and the residents of the state could be significant and unavoidable even with implementation of mitigation.

IMPACT MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Significant and Unavoidable Impact – Mitigation Required.

Transportation projects contained in the Plan and development projects anticipated to occur under the Plan have the potential to impact availability of mineral resources if they are constructed in mineral resource zones. Improvements and modifications to existing rights-of-way, such as HOV lanes, high-occupancy toll (HOT) lanes, new bus-ways and capacity enhancement facilities, mixed flow lanes, and right-of-way maintenance would have less potential to impact mineral resources because these transportation projects improve facilities that already exist and are already impeding access to resources. Construction of new transportation projects, like new freeways, and even additional lanes, have the potential to impact availability of aggregate and mineral resources.

As noted in **Section 3.12.1.2** above, each county within the SCAG region contains mineral resources of local importance as noted in their respective general plans. These mineral resources generally include aggregate resources that are used in construction activities throughout the region. The Plan's transportation projects and anticipated development have the potential to reduce the availability of these resources, either directly by locating projects within mineral resource zones or indirectly through the use of aggregate and mineral resources in project development that may result in depletion of aggregate supply. Therefore, impacts would be significant, requiring mitigation.

Mitigation Measures

SCAG Mitigation Measure

See **SMM MIN-1.**

Project Level Mitigation Measure

See **PMM-MIN-1.**

Level of Significance after Mitigation

As previously discussed, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project-specific detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to loss of availability of delineated locally important mineral resource recovery sites could be significant and unavoidable even with implementation of mitigation.

3.13 NOISE

This section of the Program Environmental Impact Report (PEIR) describes the ambient noise characteristics in the SCAG region, identifies the regulatory framework with respect to laws and regulations that govern noise, and evaluates and discusses the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.13.1 ENVIRONMENTAL SETTING

3.13.1.1 Definitions

Terms and criteria used in the assessment of noise impacts are described below.

A-weighting: This is the method commonly used to quantify environmental noise that involves evaluation of all frequencies of sound, with an adjustment to reflect the constraints of human hearing. Because the human ear is less sensitive to low and high frequencies than to midrange frequencies, noise measurements are weighted more heavily within those frequencies of maximum human sensitivity in a process called A-weighting (dBA).

Ambient: Ambient is the total noise in the environment, excluding noise from the source of interest.

Community noise equivalent level (CNEL): CNEL represents the average daytime noise level during a 24- hour day, adjusted to an equivalent level to account for people's lower tolerance of noise during the evening and nighttime hours. Because community receptors are more sensitive to unwanted noise intrusion during the evening and night, an artificial decibel increment is added to quiet-time noise levels. Sound levels are increased by 5 dBA during the evening, from 7:00 p.m. to 10:00 p.m. and by 10 dBA during the nighttime, from 10:00 p.m. to 7:00 a.m. during this quiet time period.

Day-night equivalent level (L_{dn}): L_{dn} is a measure of the 24-hour average noise level at a given location. It is based on a measure of the L_{eq} noise level over a given time period. The L_{dn} is calculated by averaging the L_{eq} for each hour of the day at a given location after penalizing the "sleeping hours" (defined as 10:00 p.m. to 7:00 a.m.), by 10 dBA to account for the increased sensitivity of people to noises that occur at night. L_{dn} is also referred to as day-night average (DNL) sound level in some cases.

Decibel (dB): dB is a unitless measure of sound on a logarithmic scale that indicates the squared ratio of sound pressure amplitude to a reference sound pressure amplitude. The reference pressure is 20 micropascals.

Equivalent sound level (L_{eq}): L_{eq} is a term typically used to express time averages. It is a steady-state energy level that is equivalent to the energy content of a varying sound level over a stated period of time, which means that the L_{eq} represents the noise level experienced over a stated period of time averaged as a single noise level.

Frequency: Frequency is the number of cycles per unit of time (seconds), expressed in hertz (Hz).

Noise: Noise is any sound that annoys or disturbs humans or that causes or tends to cause an adverse psychological or physiological effect on humans. Any unwanted sound.

Noise level (L_N): Another measure used to characterize noise exposure, L_N is the variation in sound levels over time, measured by the percentage exceedance level. L_{10} is the A-weighted sound level that is exceeded for 10 percent of the measurement period, and L_{90} is the level that is exceeded for 90 percent of the measurement period. L_{50} is the median sound level. Additional statistical measures include L_{min} and L_{max}, the minimum and maximum sound levels, respectively, measured during a stated measurement period.

Peak Particle Velocity (PPV): Defined as the maximum instantaneous positive or negative peak of the vibration signal, usually measured in inches per second (in/sec).

Sound: A vibratory disturbance created by vibrating objects, which, when transmitted by pressure waves through a medium such as air, is capable of being detected by a receiving mechanism, such as the human ear or a microphone.

Sound Exposure Level (SEL): This metric represents all the acoustic energy (a.k.a. sound pressure) of an individual noise event as if that event had occurred within a one-second time period. SEL captures both the level (magnitude) and the duration of a sound event in a single numerical quantity, by "squeezing" all the noise energy from an event into one second. This provides a uniform way to make comparisons among noise events of various durations.

Vibration: Vibration is the mechanical motion of earth or ground, building, or other type of structure, induced by the operation of any mechanical device or equipment located upon or affixed thereto. For purposes of this report, the magnitude of the vibration shall be stated as the acceleration in "g" units (1 g is equal to 32.2 feet/second^2, or 9.81 meters/second^2).

Noise Fundamentals

Noise is defined as unexpected and unwanted sound. Unlike other linear measures, such as weight and time, noise levels are measured in decibels (dB) on a logarithmic scale. Thus, doubling a noise source, such as traffic volumes, does not double the noise level, but instead increases the resultant noise level by 3 dB.[1],[2] Conversely, reducing a noise source in half results in a 3 dB decrease.[3] Thus, due to the logarithmic scale of the decibel unit, sound levels are not added or subtracted arithmetically. Moreover, in cases where existing ambient noise levels are already relatively high, there will be a small change in overall noise levels when a newer and lesser noise source is added. For example, when 70 dB ambient noise levels are combined with a 60 dB noise source, the resulting noise level equals 70.4 dB.[4]

A significant challenge in managing and mitigating noise is that not every person or community perceives and responds to noise in the same way. From an individual to the neighborhood level, there are different thresholds and tolerances for sound. Furthermore, one community (e.g. urban environment) may deem a land use (e.g. airport expansion) acceptable within a certain noise level, while another (e.g. suburban) might not. Moreover, sensitive receptors, such as residential areas, convalescent homes, schools, auditoriums, and other similar land uses, may be affected to a greater degree by increased noise levels than industrial, manufacturing, or commercial facilities. The effects of noise can range from interference with sleep, concentration, and communication, to the causation of physiological and psychological stress, and at the highest intensity levels, hearing loss.[5]

The method commonly used to quantify environmental noise involves evaluation of all frequencies of sound, with an adjustment to reflect the constraints of human hearing. Since the human ear is less sensitive to low and high frequencies than to midrange frequencies, noise measurements are weighted more heavily within those frequencies of maximum human sensitivity in a process called "A-weighting," written as dBA.[6] In practice, environmental noise is measured using a sound level meter that includes an electronic filter corresponding to the A-weighted frequency spectrum. Typical examples can be used to

Vibration Measurement

Vibration is an oscillatory motion in terms of displacement, velocity, or acceleration. Vibration is typically measured as peak particle velocity (PPV) in inches per second. In this context, vibration refers to the minimum ground- or structure-borne motion that causes a normal person to be aware of the vibration by means such as, but not limited to, sensation by touch or visual observation of moving objects. The effects of ground-borne vibration include movements of the building floors that can be felt, rattling of windows, and shaking of items on shelves or hangings on the walls. In extreme cases, vibration can cause damage to buildings. The noise radiated from the motion of the room surfaces is called ground-borne noise (**Table 3.13-2, Typical Levels of Ground-Borne Vibration**). The vibration motion normally does not provoke the same adverse human reactions as the noise unless there is an effect associated with the shaking of the

building. In addition, the vibration noise can only occur inside buildings. Similar to the propagation of noise, vibration propagated from the source to the receptor depends on the receiving building (i.e., the weight of the building), soil conditions, layering of the soils, the depth of groundwater table, and so forth.

Table 3.13-2
Typical Levels of Ground-Borne Vibration

Response	Velocity Level*	Typical Sources (at 50 feet)
Minor cosmetic damage of fragile buildings	100	Blasting from construction projects
Difficulty with tasks such as reading a video display terminal (VDT) screen	90	Bulldozers and other heavy tracked construction equipment
Residential annoyance, infrequent events	80	Rapid transit, upper range
Residential annoyance, frequent events	70	High speed rail, typical
Approximate threshold for human perception	60	Bus or truck, typical
	50	Typical background vibration

Note:
** Root mean square (RMS) vibration velocity level in VdB relative to 10^{-6} inches/second*

Nelson, J.T., and H.J. Saurenman. December 1983. State-of-the-Art Review: Prediction and Control of Ground-Borne Noise and Vibration from Rail Transit Trains. U.S. Department of Transportation, Urban Mass Transportation Administration, Report Number UMTA-MA-06-0049-83-4, DOT-TSC-UMTA-83-3.

Ambient Noise Level

The 38,000-square-mile SCAG region includes 6 counties and 191 cities. It covers a diverse array of land uses that range from quiet, undeveloped rural areas to loud, dense, urban areas. Ambient noise levels for areas where sensitive receptors may be located can range from 46 dBA for a small town or quiet suburban area to greater than 87 dBA for an urban area next to a freeway.[7] Given the size of the SCAG region and the variation in sources, it is not useful to complete a detailed noise monitoring study for this PEIR.

7 U.S. Environmental Protection Agency, Office of Noise Abatement and Control. 1974. *Information on Levels of Environmental Noise Requisite to Protect Public Health with an Adequate Margin of Safety*. Available online at: https://nepis.epa.gov/Exe/ZyPDF.cgi/2000L3LN.PDF?Dockey=2000L3LN.PDF, accessed March 27, 2019.

Rather, this PEIR presents a discussion of noise levels associated with different noise sources, thereby allowing the reader to infer the noise level at different locations depending on the proximity of a location to a noise source. Since the range of ambient noise levels is so vast, a variety of land uses and locations was sampled in order to characterize their ambient noise levels. Six locations were selected within the SCAG region to represent the range of ambient noise conditions by land use types (**Table 3.13-3, Ambient Noise Sampling Data**).

Table 3.13-3
Ambient Noise Sampling Data

Location	Land Use	Peak Hour Noise Level (dBA, Leq)
City of Los Angeles (Mission Hills)	Cemetery	62
City of Los Angeles (Baldwin Hills)	Residential (Multi-Family/Industrial Adjacent)	60
City of Riverside	Institutional (University)	56

City of Los Angeles (Del Rey)	Residential (Single Family)	63
City of Moorpark	Recreational (City Park)	48
City of Los Angeles (Boyle Heights)	Institutional (High School/Middle School Adjacent)	57

Source: Impact Sciences, 2019

The most common noise sources within the SCAG region is traffic on highways and on arterial roadways. Higher levels of noise from traffic are generally due to higher traffic volumes and faster travel speeds. Aircraft noise is also present in many areas of the SCAG region, with higher noise levels generated during takeoff and landing. Rail traffic and industrial and commercial activities also contribute to the noise level. Other contributors may also include construction, garbage collecting trucks, helicopters (news, police activity and tourism) and sporting/special events.

Transportation

Many principal noise generators within the SCAG region are associated with transportation (i.e., airports, freeways, arterial roadways, seaports, and railroads). However, local collector streets are not considered to be a significant source of noise since traffic volumes and travel speeds are generally much lower than for freeways and arterial roadways.

Airports and Aviation

The six-county SCAG region is home to an expansive multiple airport system that includes seven commercial airports with scheduled passenger service, seven government/military air fields, and more

than 30 reliever and general aviation airports. The seven commercial service airports in the region with scheduled passenger service are: Hollywood-Burbank (BUR), Imperial (IPL), Long Beach (LGB), Los Angeles (LAX), Ontario (ONT), Palm Springs (PSP), and Santa Ana (SNA). Sixteen of the airports in the region are designated by the Federal Aviation Administration (FAA) as reliever airports, which means that those airports could provide congestion relief for any of the commercial service airports in the region if needed. With such a large and versatile transportation system, the SCAG region airports support a significant amount of passenger and goods movement, and the subsequent volume of air traffic. See **Table 3.13-4, Major Commercial Airports within the SCAG Region**.[8]

Table 3.13-4
Major Commercial Airports within the SCAG Region

Airport	Location	Airport Land Use Plan	Noise Contour Available?

Imperial County Airport	Imperial	Airport Land Use Compatibility Plan for Imperial County Airports	Yes

Source:
Southern California Association of Governments. 2019. Connect SoCal: Aviation and Airport Ground Access Technical Report.

Noise associated with aviation arise primarily from aircraft operations. Specifically, aircraft operations can generate substantial levels of noise exposure when one is in the immediate vicinity of airport runways, or when one is near the flight path of an aircraft departure or approach at lower altitudes. In addition to proximity to runways and departure/approach flight paths, other contributing factors to noise impacts include duration of noise exposure, the type of aircraft operated, number of aircraft operations (e.g. take-offs, landings, flyovers), altitude of the aircraft, and atmospheric conditions, which may influence the direction of aircraft operations and affect noise propagation.

8 Southern California Association of Governments. 2008. *SCAG Commercial Airport System Map*. Available at: http://www.scag.ca.gov/Documents/commercialairport_2008.pdf, accessed March 27, 2019.

Typically, most major public airports will have an airport land use plan that provides guidance on noise levels and land use in adjacent areas. The FAA measures airport-related noise in communities in terms of overall exposure rather than single events such as takeoffs and landings since overall exposure would account for the overall number of noise events and the time when these events occur. The day night average sound level (L_{dn}) is the standard federal (FAA and EPA) metric for this measurement; however, the FAA also accepts the CNEL when a state requires that metric to assess noise effects. The State of California Department of Transportation Division of Aeronautics adopted the CNEL as their methodology for describing airport noise exposure.[9] Noise levels computed by these two methods typically differ by less than 1 dBA. The resulting noise contour map identifies geographic areas that are exposed to various levels of impacts from airport noise. Areas that are within the noise contours of 65 dBA CNEL and above, associated with airport activities, are considered to be incompatible with certain land uses, including residences, schools, hospitals, and childcare facilities.[10]

Freeways, Highways, and Arterial Roadways

The SCAG region has more than 73,000 lane miles.[11] Regionally significant arterials provide access to the freeway system and often serve as parallel alternate routes; in some cases, they are the only major system of transportation available to travelers. Typical arterial roadways have one or two lanes of traffic in each direction, with some containing as many as four lanes in each direction. Traffic noise is generated primarily from vehicles and dominated by trucks. In general, higher traffic volumes, higher speeds, and greater numbers of trucks will increase the noise level. Vehicle noise comes from noises generated by the engine, exhaust, and tires, and is often exacerbated by vehicles in a state of disrepair, such as defective mufflers or struts.

There are also environmental factors that affect noise from highway and roads. The level of traffic noise can be reduced by distance, terrain, vegetation, and intervening obstructions. However, unlike construction noise, traffic noise is a line source, not a point source. Therefore, the attenuation with distance is not as great as for traffic noise. In comparison, a point source such as stationary construction equipment attenuates by 6 dB with every doubling of the distance, whereas a line source such as traffic attenuates only by 3 dB with every doubling of the distance.

---

9 California Department of Transportation. *Airport Noise Program*. Available online at: https://dot.ca.gov/programs/aeronautics/airport-noise-program, accessed September 4, 2019.

10 Federal Aviation Administration. 2007. *Environmental Desk Reference for Airport Actions*. Chapter 17, Noise. Washington, DC. October.

11 Southern California Association of Governments (SCAG). 2019. Model Output, September 10, 2019.

Traffic noise can therefore be a significant environmental concern where buffers (e.g., buildings, landscaping, etc.) are inadequate or where the distance to sensitive receptors is relatively short. Given typical daily traffic volumes of 10,000 to 40,000 vehicle trips, noise levels along arterial roadways typically range from L_{dn} 65 to 70 dB at a distance of 50 feet from the roadway centerlines.

In addition to distance, the line of sight also affects the extent to which traffic noise can affect sensitive receptors. Line of sight can be interrupted by roadways that are elevated above grade or depressed below grade; by intervening structures such as buildings, landscaping, and sound walls; or by terrain such as hills. For example, measurements show that depressing a freeway by approximately 12 feet yields a reduction in traffic noise relative to an at-grade freeway of 7 to 10 dB at all distances from the freeway due to the interrupted line of sight. Traffic noise from an elevated freeway is typically 2 to 10 dB less than the noise from an equivalent at-grade facility within 300 feet of the freeway, but beyond 300 feet, the noise radiated by an elevated and at-grade freeway (assuming equal traffic volumes, fleet mix, and vehicle speed) is the same because at short distances, the elevated structure of the freeway itself interrupts the line of sight between the traffic and the sensitive receptor, but that line of sight is reestablished at greater distances.[12] Caltrans also has an extensive sound wall program for areas with residential property built prior to the freeway or prior to a major widening and has hourly noise levels that exceed the 67-dB (L_{eq}) threshold, and where the wall would be able to achieve at least a 5-dB reduction and the cost would not exceed $35,000 per residential unit (1987 dollars).[13] A typical wall that interrupts the line of sight is capable of reducing noise levels by 10 dB to 15 dB.

Railroad Operations

Railroad operations generate high, relatively brief, intermittent noise events. These noise events are an environmental concern for sensitive receptors located along rail lines and in the vicinities of switching yards. Locomotive engines; the interaction of steel wheels and rails from rolling noise, impact noise when a wheel encounters a rail joint, turnout, or crossover, and squeal generated by friction on tight curves; and warning devices such as air horns and crossing bell gates are the primary sources of rail noise. Noise levels vary widely for different types of rail operations (**Table 3.13-5, Reference Noise Levels for Various Rail Operations**).

Table 3.13-5
Reference Noise Levels for Various Rail Operations

Source/Type		Reference Condition	Reference Noise Level (SEL, dBA)
Commuter rail, at-grade	Locomotives	Diesel-electric, 3,000 horsepower	92
		Electric	90
	Diesel multiple unit	Diesel-powered, 1,200 horsepower	85
	Horns	Within one-quarter mile of grade crossing	110
	Cars	Ballast, welded rail	82
Rail transit		At-grade, ballast, welded rail	82
Transit whistles/warning devices		Within one-eighth mile of grade crossing	93
Automated guideway transit	Steel wheel	Aerial, concrete, welded rail	80
	Rubber tire	Aerial, concrete, guideway	78
Monorail		Aerial, straddle beam	82
Maglev		Aerial, open guideway	72

Source:
Federal Transit Administration. May 2018. Transit Noise and Vibration Impact Assessment Manual. Washington, DC.

Freight Trains

Locomotive engine noise and wheel-to-rail interactions are the primary source of noise generated by freight train pass-by events. Engine noise increases when the train is being pulled uphill. Wheel noise increases approximately 6 dB for each doubling of train velocity. A rail line supporting 40 freight trains per day generates approximately L_{dn} 75 dB at 200 feet from the tracks. Freight trains also generate substantial amounts of ground-borne noise and vibration in the vicinity of the tracks. Ground-borne noise and vibration is a function of both the quality of the track and the operating speed of the train.

The SCAG region is served by two Class I railroads: Union Pacific Railroad (UP) and Burlington Northern/Santa Fe Railway (BNSF).[14] BNSF rail lines extend south from switching yards in eastern Los Angeles to the Los Angeles and Long Beach ports complex and east to Arizona and points beyond via San Bernardino County. In addition, there are three Class III railroads (short lines) serving the region, the Pacific Harbor Line (which handles all rail coordination in the Ports of Los Angeles and Long Beach), the

14 Southern California Association of Governments. 2012. *On the Move: Southern California Delivers the Goods*. Summary Report. December.

Los Angeles Junction Railway (which provides switching service in the Vernon area for the two main line railroads), and the Ventura County Railroad (which serves the Port of Hueneme).

Completed in 2002, the Alameda Corridor provides a substantial long-term reduction in noise and vibration associated with rail operations in the vicinities of the Ports of Long Beach and Los Angeles by eliminating over 200 grade-level street/rail crossings.[15] The Alameda Corridor consolidates the operations of UP and BNSF on 90 miles of existing branch line tracks into one 20-mile corridor along Alameda Street. This corridor provides a direct connection between the ports of Long Beach and Los Angeles and the UP and BSNF switching yards in eastern Los Angeles. The project includes four overpasses and three underpasses at intersections south of SR-91 that allow vehicles to pass above the trains. North of SR-91, trains pass through a 10-mile, 33-foot-deep trench.[16] The construction of tracks in a below-grade trench, track construction on new base materials, and the use of continuous welded track reduce noise impacts on adjacent uses from trains associated with the ports. The project also includes sound walls in certain locations to mitigate vehicle noise along Alameda Street in residential neighborhoods and other sensitive areas.

Commuter Rail

In general, the noise generated by commuter rail facilities (powered by either diesel or electric locomotives) is from the locomotives themselves. In the SCAG region, there are two commuter and intercity passenger train operators: Amtrak and the Southern California Regional Rail Authority (SCRRA).

Amtrak operates five routes that travel through the SCAG region: Texas Eagle, Coast Starlight, Pacific Surfliner, Southwest Chief, and Sunset Limited. These routes serve Chicago, St. Louis, Dallas, San Antonio, Los Angeles, Portland, Seattle, San Luis Obispo, Santa Barbara, San Diego, Albuquerque, and New Orleans.[17] A typical Amtrak pass-by event generates SEL 107 dB at 50 feet; two such events during the daytime or evening periods generate approximately L_{dn} 61 dB at 50 feet and approximately L_{dn} 52 dB at 200 feet. Nine such events generate approximately L_{dn} 67 dB at 50 feet and 58 L_{dn} dB at 200 feet.

16 Ibid.

17 Amtrak. *California Train Routes*. Available online at: http://www.amtrak.com/california-train-routes, accessed January 9, 2019.

The SCRRA operates the Metrolink commuter rail system. This system currently includes 59 stations and 7 rail lines: Antelope Valley, Inland Empire–Orange County, Orange County, Riverside, San Bernardino, Ventura, and 91.[18] Noise levels generated by Metrolink are similar to those associated with Amtrak.

Urban Rail Transit

This category includes both heavy and light rail transit. Heavy rail is generally defined as electrified rapid transit trains with dedicated guideways, and light rail as electrified transit trains that do not require dedicated guideways. In general, noise increases with speed and train length. Sensitivity to rail noise generally arises when there is less than 50 feet between the rail and sensitive receptors. Individual urban rail transit pass-by events generate substantially less noise than commuter rail events, but the aggregate noise impact for sensitive uses along the line can be similar or greater due to the much higher frequency of pass-by events. Complaints about ground-borne vibration from surface track are more common than complaints about ground-borne noise. A significant percentage of complaints about noise can be attributed to the proximity of switches, rough or corrugated track, or wheel flats.

In the SCAG region, the Los Angeles County Metropolitan Transportation Authority (Metro) provides urban rail transit for their 1,479-square-mile service area. Metro operates 98 miles of rail service on two subway lines (Purple and Red) and four light rail lines (Blue, Expo, Gold, and Green).[19] The Purple Line extends from downtown Los Angeles west to the Koreatown neighborhood with 8 existing stations. The Red Line extends from downtown Los Angeles west to the Koreatown neighborhood and then north to North Hollywood with 14 existing stations. The Blue Line extends from Long Beach to downtown Los Angeles with 22 existing stations. The Expo Line extends from downtown Los Angeles to Santa Monica with 19 existing stations. The Gold Line extends from East Los Angeles to Azusa with 27 existing stations. The Green Line extends from Norwalk west to El Segundo and south to Redondo Beach with 14 existing stations. In addition, Metro has two (Orange and Silver) bus rapid transit ways (BRTs). The Orange Line extends from North Hollywood, travels west to Woodland Hills, and then north to Chatsworth, with 18 existing stations. The Silver Line extends from El Monte west to downtown Los Angeles and then south to San Pedro with 11 existing stations.

Port Operations

The three major ports in the SCAG region, Port of Los Angeles, Port of Long Beach, and Port of Hueneme in Ventura County, provide a major link between the United States and the Pacific Rim countries. Noise associated with port operations is typically generated from three sources: ships using the port facilities, equipment associated with cargo activity within the port, and truck and rail traffic that move cargo to and from the ports. These sources affect the ambient noise levels in the port areas. Residential areas in San Pedro, Wilmington, and West Long Beach are affected most by truck and rail traffic related to the ports.

Since 2000, the Port of Los Angeles has handled more container volume of cargo than any other port in the United States. In fiscal year 2017, the Port of Los Angeles handled 198 million metric revenue tons (MMRT) of cargo,[20] Port of Long Beach handled 168.1 MMRT,[21] and Port of Hueneme handled 1.4 MMRT.[22] When combined together, the Port of Los Angeles and the Port of Long Beach rank ninth in the world for container volume. The Ports of Los Angeles, Long Beach, and Hueneme are major regional economic development centers. The San Pedro Bay Ports, which include the Los Angeles and Long Beach Ports, currently handle approximately 32 percent of the cargo volume in the country;[23] the Port of Hueneme in Ventura County is a major shipping point for automobiles, non-automotive roll-on roll off cargo, project cargo, fresh produce, and liquid bulk.[24]

Industrial and Manufacturing Noise

Noise from industrial complexes and manufacturing plants are characterized as stationary point sources of noise even though they may include mobile sources such as forklifts. Local governments typically regulate noise from industrial and manufacturing equipment and activities through enforcement of noise ordinance standards and implementation of general plan policies. Industrial complexes and manufacturing plants are generally located away from sensitive land uses, and, as such, noise generated from these sources generally has less effect on the local community.

Construction Noise

Noise from construction sites are characterized as stationary point sources of even though they may include mobile sources, such as graders, they generally move slowly. Local governments typically regulate noise from construction equipment and activities through enforcement of noise ordinance standards and imposition of conditions of approval for building or grading permits.

Construction noise related to transportation projects is typically addressed in each project's noise analysis report and related environmental document. Most projects will not require modeling or any form of analysis associated with construction-related noise. Some projects may require basic noise calculations. For projects that require compliance with local ordinances, more detailed analysis techniques may be required.

Construction-related noise levels generally fluctuate depending on the construction phase, equipment type and duration of use, distance between noise source and receptor, and line of sight between the noise source and the receptor (temporary barriers can block the line of sight to reduce noise levels). The Federal Transit Administration has established typical noise levels associated with various types of construction-related machinery (**Table 3.13-6, Construction Equipment Noise Levels**). In contrast to industrial and manufacturing plants, construction sites are located throughout the region and are often located within, or adjacent to, residential districts and other sensitive receptors. While individual construction sites come and go (as buildings are constructed and completed), there is generally on-going construction activity in the region.

In general, construction activities generate high noise levels intermittently on and adjacent to the construction sites, and the related noise impacts are short-term in nature for individual sites but on-going throughout the region. The dominant source of noise from most construction equipment is the engine, usually a diesel engine, with inadequate muffling. In a few cases, however, such as impact pile driving or pavement breaking, noise generated by the process dominates. Construction equipment can be considered to operate in two modes, stationary and mobile. Stationary equipment operates in one location for one or more days at a time, with either a fixed-power operation (pumps, generators, compressors) or a variable noise operation (pile drivers, pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion (bulldozers, loaders), or movement to and from the site (trucks). The noise levels of these point sources decrease by approximately 6 dB with each doubling of distance from the noise source (e.g., noise levels from excavation might be approximately 83 dB at 100 feet from the site, and about 77 dB at 200 feet from the site). Interior noise levels from construction are approximately 10 dB (open windows) to 20 dB (closed windows) less than exterior noise levels due to the attenuation provided by building walls.

Construction projects often create activities that extend beyond project limits. These can include activities such as trucks supplying material (stone, concrete, steel, etc.) to a project, trucks hauling soil and/or demolition materials from a project site, activity associated with off-site operations such as materials storage areas, and effects of detoured or rerouted traffic due to construction activities. Haul routes may be specifically designated for use by construction-related traffic when supplying and hauling excess material from the project site, potentially creating a high source of noise depending on the number and frequency of trucks utilizing the route.

Sensitive Receptors

Some land uses are considered more sensitive to ambient noise levels than others due to noise exposure (in terms of both exposure time and "insulation" from noise) and the types of activities typically involved. Residences, motels, and hotels; schools; libraries; churches; hospitals; nursing homes and senior centers; and natural areas, parks, and outdoor recreation areas are generally more sensitive to noise than are commercial and industrial land uses. The 38,000-square-mile SCAG region contains a large number of these sensitive land uses. The noise-sensitive areas of residences, schools, libraries, churches, hospitals, nursing homes, natural areas, and parks are generally more sensitive to noise than are commercial and industrial land uses. Increases in noise near these sensitive receptors are more likely to cause an adverse community response.

As such, the noise standards for sensitive land uses are more stringent than those for less sensitive uses. To protect various human activities and sensitive land uses (e.g., residences, schools, and hospitals) lower noise levels are needed. An exterior noise level of L_{dn} 55 to 60 dB is the upper limit for intelligible speech communication inside a typical home. In addition, social surveys and case studies have shown that complaints and community annoyance in residential areas begin to occur at L_{dn} 55 dB. Sporadic complaints associated with the L_{dn} 55 to 60 dB range give way to widespread complaints and individual threats of legal action within the L_{dn} 60 to 70 dB range. At L_{dn} 70 dB and above, residential community reaction typically involves threats of legal action and strong appeals to local officials to stop the noise.

Sensitive receptors for vibration are the same as for noise, with one exception. Historic structures are potentially sensitive to excessive vibration because ground vibration will excite building structures, and if the vibration levels are high, there is a potential for structural damage. The Caltrans Transportation and Construction Vibration Manual references the National Cooperative Highway Research Program report for a summary of construction effects on historic buildings.[25] Using the most conservative values in the report, historic buildings may be damaged when a single vibration event exceeds 0.20 ppv or frequent

25 Caltrans. 2013. *Transportation and Construction Guidance Manual*. Page 26. September.

vibration events exceed 0.13 ppv, whereas extremely fragile historic buildings may be damaged when a single vibration event exceeds 0.12 ppv or frequent vibration events exceed 0.08 ppv.[26]

3.13.2 REGULATORY FRAMEWORK

The federal government sets noise standards for transportation-related noise sources that are closely linked to interstate commerce, such as aircraft, locomotives, and trucks; and, for those noise sources, the state government is preempted from establishing more stringent standards. The state sets noise standards for those transportation noise sources that are not preempted from regulation, such as automobiles, light trucks, and motorcycles. Noise sources associated with industrial, commercial, and construction activities are generally subject to local control through noise ordinances and general plan policies.

3.13.2.1 Federal

Noise Control Act of 1972

The Noise Control Act of 1972, as codified in 42 U.S. Code §4901 et seq., establishes a means for effective coordination of federal research and activities in noise control, authorizes the establishment of federal noise emission standards for products distributed in commerce, and provides information to the public with respect to the noise emission and noise reduction characteristics of such products.[27]

Noise Emission Standards for Interstate Rail Carriers, Motor Carriers, Construction Equipment, and Medium and Heavy Duty Trucks (Title 40 of the Code of Federal Regulations Parts 201, 202, 204, and 205)

The Federal Highway Administration sets federal regulations related to noise limits for locomotives, and medium and heavy trucks, and standards for noise studies and studies for federal and federal-aid highway projects.

Part 201

Federal regulations for railroad noise are contained in Title 40 of the Code of Federal Regulations (CFR) Part 201 and 49 CFR Part 210. The regulations set noise limits for locomotives and are implemented through regulatory controls on locomotive manufacturers.[28,29]

27 U.S. Environmental Protection Agency. 2017. *Summary of the Noise Control Act, 42 U.S.C §4901 et seq. (1972)*

28 Code of Federal Regulations. 2018. *Title 40 Protection of the Environment, Parts 190 to 259*.

Part 202

Federal regulations regarding motor carriers engaged in interstate commerce are contained in Title 40 of the CFR Part 202. The regulations set noise limits for motor carriers engaged in interstate commerce, including setting standards for highway operations.[30]

Part 204

Title 40 of the CFR Part 204 sets noise emission standards for construction equipment. The regulations set noise standards and requirements as well as testing, for construction equipment including air compressors.[31]

Part 205

Federal regulations also establish noise limits for medium and heavy trucks (more than 4.5 tons, gross vehicle weight rating) under 40 CFR Part 205, Subpart B. The federal truck pass-by noise standard is 80 decibels (dB) at 15 meters from the vehicle pathway centerline. These controls are implemented through regulatory controls on truck manufacturers. The Federal Highway Administration (FHWA) regulations for noise abatement must be considered for federal or federally funded projects involving the construction of a new highway or significant modification of an existing freeway when the project would result in a substantial noise increase or when the predicted noise levels approach or exceed the Noise Abatement Criteria (NAC).[32]

Abatement of Highway Traffic Noise and Construction Noise (Title 23 of the Code of Federal Regulations Part 772)

Title 23 CFR § 772.1 *et seq.* provides procedures for preparing operational and construction noise studies and evaluating noise abatement considered for federal and federal-aid highway projects. Under 23 CFR §772.7, projects are categorized as Type I or Type II projects. FHWA defines a Type I project as a proposed federal or federal-aid highway project for the construction of a highway on a new location, or the physical alteration of an existing highway that significantly changes either the horizontal or vertical alignment, or increases the number of through-traffic lanes. A Type II project is a noise barrier retrofit project that involves no changes to highway capacity or alignment.

---

29 Code of Federal Regulations. 2018. *Title 49 Transportation, Parts 200 to 299*.

30 Code of Federal Regulations. 2018. *Title 40 Protection of the Environment, Parts 190 to 259*.

31 Ibid.

32 Code of Federal Regulations. 2018. *Title 40 Protection of the Environment, Volume 27*.

Type I projects include those that create a completely new noise source, as well as those that increase the volume or speed of traffic or move the traffic closer to a receiver. Type I projects include the addition of an interchange, ramp, auxiliary lane, or truck-climbing lane to an existing highway, or the widening an existing ramp by a full lane width for its entire length. Projects unrelated to increased noise levels such as striping, lighting, signing, and landscaping projects are not considered Type I projects.

Under Title 23 CFR § 772.11, noise abatement must be considered for Type I projects if the project is predicted to result in a traffic noise impact. In such cases, 23 CFR § 772 requires that the project sponsor consider noise abatement before adoption of the environmental document. This process involves identification of noise abatement measures that are reasonable, feasible, and likely to be incorporated into the project, and of noise impacts for which no apparent solution is available.

Traffic noise impacts, as defined in 23 CFR § 772.5, occur when the predicted noise level in the design year approaches or exceeds the NAC specified in 23 CFR § 772, or a predicted noise level substantially exceeds the existing noise level (a substantial noise increase). Under these regulations, an impact could result unrelated to the plan if existing noise levels already exceed the NAC. A substantial increase is defined as when an increase in L_{eq} of 12 dB during the peak hour of traffic noise occurs. For sensitive uses, such as residences, schools, churches, parks, and playgrounds, the NAC for interior and exterior spaces is L_{eq} 57 and 66 dB, respectively, during the peak hour of traffic noise.[33]

Aircraft Noise Standards (Title 14 Code of Federal Regulations, Part 36)

The Federal Aviation Administration (FAA) has federal regulatory authority over noise emissions levels by aircraft operated in the United States. These requirements are set forth in Title 14 CFR, Part 36. Part 36 establishes maximum acceptable noise levels for specific aircraft types, taking into account the model year, aircraft weight, and number of engines. Pursuant to the federal Airport Noise and Capacity Act of 1990, the FAA established a schedule for complete transition to Part 36 "Stage 3" standards by year 2000. This transition schedule applies to jet aircraft with a maximum takeoff weight in excess of 75,000 pounds, and thus applies to passenger and cargo airlines, but not to operators of business jets or other general aviation aircraft.[34]

Airport Noise Compatibility Planning (Title 14 Code of Federal Regulations Part 150)

Part 150 applies to airport noise compatibility planning and provides the procedures, standards, and methodology governing the development, submission, and review of airport noise exposure maps and

33 Code of Federal Regulations. 2018. *Title 23 Highways*.

34 Code of Federal Regulations. 2018. *Title 14 Aeronautics and Space Parts 1 to 59*.

airport noise compatibility programs, including the process for evaluating and approving or disapproving those programs. It provides guidance for measuring noise at airports and surrounding areas and for determining exposure of individuals to noise from the operations of an airport. Part 150 also identifies land uses that are normally compatible with various levels of exposure to noise by individuals. It provides guidance on the preparation and execution of noise compatibility planning and implementation programs.[35]

Noise Abatement and Control (Title 24 Code of Federal Regulations, Part 51, Subpart B)

The mission of the Department of Housing and Urban Development (HUD) includes fostering "a decent, safe, and sanitary home and suitable living environment for every American." Accounting for acoustics is intrinsic to this mission, as an environment's safety and comfort can be compromised by excessive noise. In order to facilitate the creation of suitable living environments, HUD has developed a standard for noise criteria. The basic foundation of the HUD noise program is set out in the noise regulation 24 CFR Part 51 Subpart B, Noise Abatement and Control.

HUD's noise policy clearly requires noise attenuation measures be provided when proposed projects are located in high noise areas. Within the HUD Noise Assessment Guidelines, potential noise sources are examined for projects located within 15 miles of a military or civilian airport, 1,000 feet from a road, or 3,000 feet from a railroad.

HUD exterior noise regulations state that 65 dBA DNL noise levels or less are acceptable for residential land uses and noise levels exceeding 75 dBA DNL are unacceptable. HUD's regulations do not contain standards for interior noise levels. Rather, a goal of 45 dBA is set forth, and the attenuation requirements are geared toward achieving that goal. It is assumed that, with standard construction, any building will provide sufficient attenuation so that if the exterior level is 65 dBA DNL or less, the interior level will be 45 dBA DNL or less.[36]

Federal Transit Administration Noise and Vibration Guidance

The Federal Transit Administration (FTA) has published the Transit Noise and Vibration Impact Assessment Manual to provide guidance on procedures for assessing impacts at different stages of transit project development.[37] The report covers both construction and operational noise impacts, and describes

---

35 Code of Federal Regulations. 2018. *Title 14 Aeronautics and Space, Parts 110 to 199*.

36 Code of Federal Regulation. 2018. *Title 24 Housing and Urban Development, Parts 0 to 199*.

37 Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment Manual*. September.

a range of measures for controlling excessive noise and vibration. The specified noise criteria are an earlier version of the criteria provided by the Federal Railroad Administration's High-Speed Ground Transportation Noise and Vibration Impact Assessment (**Table 3.13-8, Construction Vibration Damage Criteria**). In general, the primary concern regarding vibration relates to potential damage from construction. The guidance document establishes criteria for evaluating the potential for damage for various structural categories from vibration (**Table 3.13-8, Construction Vibration Damage Criteria**).

Table 3.13-8
Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

Railroad Noise Guidance

The Federal Railroad Administration provides implementation procedures for predicting and assessing noise and vibration impacts of high-speed trains within their *High-Speed Ground Transportation Noise and Vibration Impact Assessment*.[38] The document provides three levels of analysis, including a preliminary impact screening, a general assessment, and a detailed analysis, as well as a range of mitigation measures for dealing with adverse noise and vibration impacts. The report also includes noise criteria for potential impacts (**Table 3.13-9, Noise Levels Defining Impact for High-Speed Train Projects**, and **Table 3.13-10, Land Use Categories and Metrics for High-Speed Train Noise Impact Criteria**).

38 Federal Railroad Administration. 2012. *High-Speed Ground Transportation Noise and Vibration Impact Assessment*. Final Report. Washington, DC. September.

Federal Railroad Administration. September 2012. High-Speed Ground Transportation Noise and Vibration Impact Assessment. Final Report. Table 3-1.

Table 3.13-10
Land Use Categories and Metrics for High-Speed Train Noise Impact Criteria

Land-Use Category	Noise Metric (dBA)	Description of Land-Use Category
1	Outdoor L_{eq}(h)*	Tracts of land where quiet is an essential element in their intended purpose. This category includes lands set aside for serenity and quiet, and such land uses as outdoor amphitheaters and concert pavilions, as well as national historic landmarks with significant outdoor use. Also included are recording studios and concert halls.
2	Outdoor L_{dn}	Residences and buildings where people normally sleep. This category includes homes, hospitals, and hotels where a nighttime sensitivity to noise is assumed to be of utmost importance.
3	Outdoor L_{eq}(h)*	Institutional land uses with primarily daytime and evening use. This category includes schools, libraries, theaters, and churches, where it is important to avoid interference with such activities as speech, meditation, and concentration on reading material. Places for meditation or study associated with cemeteries, monuments, and museums can also be considered to be in this category. Certain historical sites, parks, campgrounds, and recreational facilities are also included.

Note:
** L_{eq} for the noisiest hour of transit-related activity during hours of noise sensitivity.*

3.13.2.2 State

California Government Code Section 65302

Section 65302 of California Government Code provides a framework for general plans and their content. It requires that the noise element include implementation measures and possible solutions that address

existing and foreseeable noise problems, if any. The adopted noise element shall serve as a guideline for compliance with the state's noise insulation standards. The noise element shall also identify and appraise noise problems in the community, analyze and quantify current and projected noise levels for (a) highways and freeways; (b) primary arterials and major local streets; (c) passenger and freight online railroad operations and ground rapid transit systems; (d) commercial, general aviation, heliport, helistop, and military airport operations, aircraft overflights, jet engine test stands, and all other ground facilities and maintenance functions related to airport operation; (e) local industrial plants, including, but not limited to, railroad classification yards; and (f) other ground stationary noise sources, including, but not limited to, military installations, identified by local agencies as contributing to the community noise environment.

Section 65302 also specifies that noise contours be shown for all of the above listed sources and be stated in terms of community noise equivalent level (CNEL) or day-night average level (L_{dn}). The noise contours shall be prepared on the basis of noise monitoring or following generally accepted noise modeling techniques for the various sources identified above. The noise contours shall be used as a guide for establishing a pattern of land uses in the land use element that minimizes the exposure of community residents to excessive noise.[39]

California Noise Control Act of 1973

The California Noise Control Act (California Health and Safety Code, Division 28, § 46000 et seq), as found in the California Health and Safety Code, Division 28, § 46000 et seq., declares that excessive noise is a serious hazard to public health and welfare, and establishes the Office of Noise Control with responsibility to set standards for noise exposure in cooperation with local governments or the state legislature.[40]

Airport Noise Standards (Title 21, CCR Section 5000 et seq.)

The State of California has the authority to establish regulations requiring airports to address aircraft noise impacts on land uses in their vicinities. The State of California's Airport Noise Standards, found in Title 21 of the California Code of Regulations, identify a noise exposure level of CNEL 65 dB as the noise impact boundary around airports. Within the noise impact boundary, airport proprietors are required to

39 California Legislative Information. *Article 5. Authority for and Scope of General Plans [65300-65303.4], Section 65302*.

40 California Legislative Information. *Division 28. Noise Control Act, 46000-46080*.

ensure that all land uses are compatible with the aircraft noise environment or the airport proprietor must secure a variance from the California Department of Transportation (Caltrans).[41]

Noise Insulation Standards (Health & Safety Code § 17922.6)

California Health and Safety Code § 17922.6 requires noise insulation standards for new multi-family residential units, hotels, and motels that may be subject to relatively high levels of transportation-related noise. For exterior noise, the noise insulation standard is DNL 45 dB in any habitable room and requires an acoustical analysis demonstrating how dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to noise levels greater than DNL 60 dB.[42]

Freeway Noise Attenuation (Streets and Highways Code, Article 6 and *Vehicle Code, Article 2.5)*

The State of California establishes noise limits for vehicles licensed to operate on public roads. For heavy trucks, the state pass-by standard is consistent with the federal limit of 80 dB.[43] The state pass-by standard for light trucks and passenger cars (less than 4.5 tons gross vehicle rating) is also 80 dB at 15 meters from the centerline.[44] Additionally, for a motor vehicle weighing more than 5 tons the pass-by standard is 88dB at 15 feet from the centerline of the vehicle.[45] For new roadway projects, Caltrans employs the NAC, promulgated by Title 40 of the Code of Federal Regulations (CFR), as administered by the FHWA.[46]

Section 216 of the California Streets and Highways Code relates to the noise effects of a proposed freeway project on public and private elementary and secondary schools. Under this code, a noise impact occurs if, as a result of a proposed freeway project, noise levels exceed 52 dBA Leq in the interior of public or private elementary or secondary classrooms, libraries, multipurpose rooms, or spaces. If a project results in a noise impact under this code, noise abatement must be provided to reduce classroom noise to a level that is at or below 52 dBA Leq. If the noise levels generated from freeway and non-freeway sources exceed 52 dBA Leq prior to the construction of the proposed freeway project, then noise abatement must be provided to reduce the noise to the level that existed prior to construction of the project.[47]

47 California Legislative Information. *Article 6. Freeway Noise Attenuation [215.5-216.5], Section 216*.

Section 215.5 of the Streets and Highways Code implements a priority system to determine the need for the installation of noise attenuation barriers (i.e. soundwalls) along freeways and expressways. The highest consideration is given to residential areas developed prior to the opening of the freeway or where alterations have been made to the freeway which resulting in a significant increase in ambient noise levels. Other criteria for determining priorities includes the existing and future sound intensity generated by the freeway, the increase in traffic flow since the freeway originally opened, the cost of constructing a soundwall related to expected noise reduction, and the number of nearby residents included whether they lived there prior to the opening of the freeway.[48] Pursuant to Section 215.6, a city or county can accelerate the priority of a noise attenuation project by contributing at least 33 percent of the estimated cost of a soundwall project. [49]

California Department of Health Services Land Use Guidelines for Community Noise Exposure

The state has published guidance for locating land uses in areas compatible with the existing noise environment (**Table 3.13-11, Community Noise Exposure**).[50] For example, it would normally be acceptable for a single-family residence to be located in an area with an existing noise level of 60 dBA CNEL or less.

48 California Legislative Information. *Streets and Highways Code, Article 6. Freeway Noise Attenuation [215.5-216.5].*

49 *Ibid.*

50 Governor's Office of Planning and Research. 2017. *State of California General Plan Guidelines*.

Table 3.13-11
Community Noise Exposure

Land Use Category	Community Noise Exposure (dB, Ldn or CNEL) 55 60 65 70 75 80
Residential - Low Density Single-Family, Duplex, Mobile Homes	
Residential - Multi-Family	
Transient Lodging - Motels Hotels	
Schools, Libraries, Churches, Hospitals, Nursing Homes	
Auditoriums, Concert Halls, Amphitheaters	
Sports Arena, Outdoor Spectator Sports	
Playgrounds, Neighborhood Parks	
Golf Courses, Riding Stables, Water Recreation, Cemeteries	
Office Buildings, Business Commercial and Professional	
Industrial, Manufacturing, Utilities, Agriculture	

Normally Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Conditionally Acceptable - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.

Normally Unacceptable - New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable - New construction or development should generally not be undertaken.

Caltrans Guidance

Traffic Noise. Chapter 30 of the *Caltrans Project Development Procedures Manual* offers guidance on highway traffic noise abatement criteria (NAC), corresponding to various land use activity categories.[51] However, the NAC in Chapter 30 has been superseded by the Caltrans *Traffic Noise Analysis Protocol for New Highway Construction, Reconstruction, and Retrofit Barrier Projects* (**Table 3.13-12, Activity Categories and Noise Abatement Criteria**).[52] Activity categories and related traffic noise impacts are determined based on the actual land use in a given area. The Caltrans *Technical Noise Supplement to the Traffic Noise Analysis Protocol* provides additional details on noise analysis procedures, practices, and other useful technical background information related to the analysis and reporting of highway and construction noise impacts and abatement.[53] It supplements and expands on concepts and procedures referred to in the *Traffic Noise Analysis Protocol for New Highway Construction, Reconstruction, and Retrofit Barrier Projects*.

Table 3.13-12
Activity Categories and Noise Abatement Criteria

Activity Category	Hourly A-Weighted Sound Level, Leq(h)*	Evaluation Location	Description of Activities
A	57	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B**	67	Exterior	Residential.
C**	67	Exterior	Active sport areas, amphitheaters, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails, and trail crossings.
D	52	Interior	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.
E	72	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties, or activities not included in A–D or F.
F			Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, manufacturing, mining, rail yards, retail facilities, shipyards, utilities (water resources, water treatment, electrical), and warehousing.
G			Undeveloped lands that are not permitted.

*Notes: The $L_{eq}(h)$ activity criteria values are for impact determination only and are not design standards for noise abatement measures. All values are A-weighted decibels (dBA). ** Includes undeveloped lands permitted for this activity category.*

Airport Noise. The Caltrans Division of Aeronautics California Airport Land Use Planning Handbook offers guidance on airport planning and developing compatible land use policies.[54] It also provides suggested criteria for the CNEL values commonly used as the limit for acceptable residential noise exposure **(Table 3.13-13, Noise Compatibility Criteria**).

Table 3.13-13
Noise Compatibility Criteria

CNEL (dB)	Criteria	Suggested Applicability
65	Set by the FAA and other federal agencies as the level above which residential land uses may be incompatible if not acoustically treated. Established by California state regulations as the maximum normally acceptable noise level for residential and certain other land uses at county-designated noise-problem airports.	Generally not appropriate for most new development. May be acceptable in noisy urban locations and/or in hot climates where most buildings are air conditioned.
60	The contour within which California Building Code (Section 1207.11) requires an acoustical analysis of proposed residential structures, other than detached single-family dwellings. Suggested by the California Governor's Office of Planning and Research General Plan Guidelines as the maximum "normally acceptable" noise exposure for residential areas. [Note: Individual noise events will occasionally cause significant interference with residential land use activities, particularly outdoor activities, in quiet suburban/rural communities.]	Suitable for new development around most airports. Particularly appropriate in mild climates where windows are often open.
55	Identified by the EPA as the level below which "undue interference with activity and annoyance" will not occur. [Note: Individual noise events will seldom significantly interfere with residential land use activities (e.g., interference with speech). In urban areas, aircraft contribution to this noise level may be less than that of other noise sources.]	Suitable for airports in quiet, rural locations.

Note:
When setting criteria for a specific airport, other characteristics of the airport and its environs also need to be considered.
Source::
California Department of Transportation. October 2011. California Airport Land Use Planning Handbook. Table 4B.

Construction Noise. Section 14-8.02, Noise Control, of Caltrans standard specifications provides guidance on preventing construction noise impacts. The specification states:

- Do not exceed 86 dBA at 50 feet from the job site activities from 9 p.m. to 6 a.m.
- Equip an internal combustion engine with the manufacturer recommended muffler. Do not operate an internal combustion engine on the job site without the appropriate muffler.

If adverse construction noise impacts are anticipated, project plans and specifications must identify abatement measures that would minimize or eliminate adverse construction noise impacts on the community.

54 California Department of Transportation. *California Airport Land Use Planning Handbook*. October 2011.

Construction Vibration. The *Transportation and Construction Vibration Guidance Manual* presents a variety of criteria for vibration impacts based on previously completed studies.[55] Caltrans recommends that extreme care be taken when sustained pile driving occurs within 7.5 meters (25 feet) of any building and 15 to 30 meters (50 to 100 feet) of a historic building or a building in poor condition.

3.13.2.3 Local

To identify, appraise, and remedy noise problems in local communities, each county and city in the SCAG region is required to adopt a noise element as part of its General Plan. Each noise element is required to analyze and quantify current and projected noise levels associated with local noise sources, including, but not limited to, highways and freeways, primary arterials and major local streets, rail operations, air traffic associated with the airports, local industrial plants, and other ground stationary sources that contribute to the community noise environment. Beyond statutory requirements, local jurisdictions are free to adopt their own goals and policies in their noise elements, although most jurisdictions have chosen to adopt noise/land use compatibility guidelines that are similar to those recommended by the state. The overlapping DNL ranges indicate that local conditions (existing noise levels and community attitudes toward dominant noise sources) should be considered in evaluating land use compatibility at specific locations.

In addition to regulating noise through noise element policies, local jurisdictions regulate noise through enforcement of local ordinance standards. These standards generally relate to noisy activities (e.g., use of loudspeakers and construction) and stationary noise sources and facilities (e.g., air conditioning units and industrial activities). Three cities in the SCAG region, Los Angeles, Long Beach, and Port Hueneme, operate port facilities. Noise from the Ports of Los Angeles, Long Beach, and Hueneme are regulated by the noise ordinances and noise elements of the Los Angeles, Long Beach, and Port Hueneme General Plans.

In terms of airport noise, airport operators have addressed local community noise concerns through a variety of methods changes including runway use and flight routing changes, aircraft operational procedure changes, and engine run-up restrictions. These actions generally are subject to approval by the FAA, which has the authority and responsibility to control aircraft noise sources, implement and enforce flight operational procedures, and manage the air traffic control system. Airport operators also consider limitations on airport use, but such restrictions can be overridden by the Federal Aviation Administration if it is determined that they unjustly discriminate against any user, impede the federal interest in safety and management of the air navigation system, or unreasonably interfere with interstate commerce. In

55 California Department of Transportation. 2013. *Transportation and Construction Vibration Guidance Manual*. Sacramento, CA. September.

addition airport operators have addressed community concerns by retrofitting homes under flight paths to provide additional noise insulation.

Some local jurisdictions regulate vibration through enforcement of local ordinance standards. These standards generally relate to preventing perceptible vibration from being generated past the property line of the source location.

3.13.3 ENVIRONMENTAL IMPACTS

3.13.3.1 Thresholds of Significance

The impacts related to noise from the Plan would be considered significant if they would exceed the following significance criteria, in accordance with Appendix G of the *State CEQA Guidelines*:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation or excessive groundborne vibration or groundborne noise levels;
- For a project within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

3.13.3.2 Methodology

This section evaluates the potential impacts of the proposed Connect SoCal Plan on ambient noise levels, identifies mitigation measures for the impacts, and evaluates the residual impacts in accordance with Appendix G of the 2019 State California Environmental Quality Act (CEQA) Guidelines. Noise within the SCAG region was evaluated at the programmatic level of detail, in relation to federal noise and vibration impacts guidelines; *State of California General Plan Guidelines for Noise Elements*; California Department of Transportation guidance documents; the general plans of the six counties and 191 cities within the SCAG region; and a review of related literature germane to the SCAG region, as well as a review of Connect SoCal.[56,57,58,59,60,61,62,63,64,65,66,67]

---

56 Federal Interagency Committee on Noise. 1992. *Federal Agency Review of Selected Airport Noise Analysis Issues.* August.

57 Cowan, James P. 1993. *Handbook of Environmental Acoustics*.

Ambient noise levels in the SCAG region vary widely as a function of the dramatic physical environment, land use, and density of people. Noise levels for various areas are identified according to the use of the area. Maximum allowable noise levels associated with various sensitive land uses are provided. Exposure of people to noise levels and ground borne vibration from transportation and transit infrastructure varies in relation to noise level at the source, density of the source, distance from the source, and sound modulating or attenuating structures between the source and the receptor.

The methodology for determining the significance of noise and vibration impacts compares the existing conditions to the conditions as a result of implementing the transportation projects and growth under the Plan.[68]

Permanent increases in operational noise associated with highway traffic is dependent on several variables:

- Traffic volume (the greater the number of vehicles passing through an area within a specified period result in greater noise)
- Vehicle speed (greater speed results in greater noise from tire and aerodynamic noise)

68 Note that ambient noise from the existing transportation network, including freeways, are generally not considered impacts under CEQA unless the project exacerbates the existing environmental conditions. *See* Cal. Building Industry Assn. v. Bay Area Air Quality Management District (2015) 62 Cal.4th 369 (California Supreme Court ruled that agencies subject to CEQA generally are not required to analyze the impact of existing environmental conditions on a project's future users or residents unless the proposed project risks exacerbating those environmental hazards or conditions that already exist.); *see also* Cal. Building Industry Assn. v. Bay Area Air Quality Management District (2016) 2 Cal.App.5th 1067.

- Vehicle types such as cars, trucks, and motorcycles (different engine and exhaust combinations, different tires, and different aerodynamic profiles result in different noise levels)

- Location of the roadway with respect to sensitive receptors (distance and intervening objects or topography will reduce noise levels).

The noise impacts analysis was based on the Project List (See **Appendix 2.0, Connect SoCal Project List**) located throughout the six counties and 38,000 square miles of the SCAG region.[69] Project types range from projects with substantial ground disturbance such as rail projects, mixed flow lane projects, and grade separation projects, to operations and maintenance projects with minimal ground disturbance such as traffic signal synchronization or lane-restriping projects.[70]

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743, or SB 226 (as described in **Section 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.13.3.3 Impacts and Mitigation Measures

Impact NOISE-1 **Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.**

Significant and Unavoidable Impact – Mitigation Required.

Implementation of transportation projects and development projects anticipated to occur under the Plan would likely result in exposure of persons to or generation of noise levels in excess of standards

69 SCAG. 2019. *Connect SoCal Transportation System Project List Technical Report.* November.

70 Note that as discussed in **Section 3.15.3, Public Services – Schools**, CEQA review of school construction generally does require an evaluation of the effects of existing air quality exposure on pupils, and to the extent the health risk is unacceptable, the school would not be built. CEQA also provides limited protection and requires analysis of impacts of the existing environment on certain housing development projects exercising exemptions under Pub. Res. Code § 21096.

established in the local general plan or noise ordinance, or applicable standards of other agencies, constituting a significant impact. Grading and construction activities would generate temporary increases in noise levels, and operational activities would generate permanent increases in noise levels in excess of standards established in the local general plan or noise ordinance, constituting a significant impact, requiring the consideration of mitigation measures.

As noted above, noise impacts are experienced locally and cannot be quantified at a regional level. Land uses support various noise environments depending on multiple factors. For example, urban environments tend to be louder than suburban environments due to denser, multi-use land use patterns. Urban environments also typically support higher volumes of traffic as well as other transportation modes that generate sound such as trains, light rail, and buses. Suburban environments, where land uses are often more segregated, have more moderate noise levels. Agricultural areas also have a unique noise environment as compared to urban and suburban environments. Agricultural operations require the use of heavy-duty equipment (e.g., mechanized plows, tractors) that produce high noise levels. However, because agricultural areas are sparsely populated, noise generally does not have the same adverse effect on surrounding land uses and may be protected by right-to-farm regulations or other local land use policies.

Construction. Impacts to sensitive receptors resulting from the construction of transportation projects as well as the implementation of land use strategies would depend on several factors, such as the type of project, adjacent land use, and duration and intensity of the construction activity. Construction noise levels would fluctuate depending on how the construction is phased, the equipment mix, the distance between the construction and the nearest sensitive receptor, and the presence of intervening objects. Furthermore, anticipated development to accommodate the forecast population, household, and employment would take a variety of forms, with a substantial number (60 percent of housing units and 73 percent of jobs) focused in Growth Priority Areas including in and around high-quality transit areas (HQTAs), as well as development in existing urbanized areas, and opportunity areas. Because development would be focused in HQTAs and urbanized areas, residents in and around those areas would be subject to increased frequency of construction noise.

Operations. Impacts to sensitive receptors resulting from the operation of transportation projects as well as increases in traffic due to anticipated development projects under the Plan would depend on several factors, such as the type of project and adjacent land use. Operational noise levels would fluctuate depending on traffic volume, vehicle speed, vehicle mix, location and distance of the roadway with respect to sensitive receptors, and the presence of intervening objects. A doubling of traffic generally corresponds to a 3 dB increase in noise level, which is only just perceptible to the human ear. Most major facilities do not have the capacity to allow a doubling of traffic and therefore this increase is generally not

expected.

Similar to construction impacts, anticipated development to accommodate the forecast population, household, and employment growth would take a variety of forms, with a substantial fraction focused in and around HQTAs, existing urbanized areas, and opportunity areas as reflected under Connect SoCal's land use strategies. As traffic volumes increase, the duration of the peak hour noise levels extend as well. Operation of transportation and transit projects in these HQTAs, existing urbanized areas, and opportunity areas would have the potential to increase noise level in excess of standards established in county and city general plans and noise ordinances.

Heavy rail would increase the number of passenger and freight trains in the region. Because of the number of existing passenger and freight trains that use the existing heavy rail tracks, additional trains are not expected to increase daily noise (CNEL) along any given track by more than 3 dB relative to baseline conditions. Light rail improvements will include increasing frequency on and making improvements to existing corridors and adding new corridors. In general, the proposed transit improvements along existing corridors will occur in developed urban areas where noise levels are already high from existing sources. In areas that do not currently have light rail operations, implementation of the Plan could increase noise levels above 65 dB CNEL and increase daily noise (CNEL) by more than 3 dB relative to baseline conditions. Increases in operational mobile source noise from the projected land use pattern and planned transportation improvements would result in new vehicles trips on existing roadways generating increases in noise. In locations where noise would exceed the CNEL threshold of 65 dB following the implementation of the Plan, a significant noise impact would occur.

Land use strategies in the Plan would encourage development in HQTA's and other urbanized areas. Urban areas experience noise from a number of sources associated with living in proximity to other people and among different land uses. Typical community noise sources include small mechanical devices (e.g., lawn mowers, leaf blowers), parks and playgrounds, restaurants and bars, commercial uses, events, and industrial plants. Traffic and other transportation-related noise is also a dominant noise source in urban areas. Light rails, passenger trains, and other forms of public transit generate noise from the contact of wheels on railways as well as loud bells that signal to cars, cyclists, and pedestrians of their arrival. Implementation of the Plan is likely to increase the amount of noise experienced in HQTAs because of the increased density in these areas as well as from improved transportation infrastructure.

In suburban and rural areas, noise sources are fewer and the addition of new stationary or mobile noise sources could result in an increase in ambient noise. As the Plan is expected to result in the conversion of 41,546 greenfield acres, there is the potential for increased ambient noise in suburban and rural areas.

Because of the nature of noise impacts (noise dissipates with distance from the source), new transportation operations may cause noise impacts, and those impacts may exceed applicable noise thresholds for determining significance within a localized area, but those impacts cannot be quantified at a regional level. Therefore, implementation of transportation projects and land use strategies in Connect SoCal would result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, which constitutes a significant impact requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

SMM-NOISE-1: SCAG shall coordinate with CTCs and member agencies as part of SCAG's outreach and technical assistance to local governments to encourage transportation projects and projects involving residential and commercial land uses to mitigate noise and vibration or be developed in areas that are normally acceptable or conditionally acceptable, consistent with applicable guidelines (i.e, OPR, Caltrans, etc.).

Project Level Mitigation Measures

PMM NOISE-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a. Install temporary noise barriers during construction.

b. Include permanent noise barriers and sound-attenuating features as part of the project design. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses.

c. Schedule construction activities consistent with the allowable hours pursuant to applicable general plan noise element or noise ordinance

d. Post procedures and phone numbers at the construction site for notifying the Lead Agency staff, local Police Department, and construction contractor (during regular construction hours and off-hours), along with permitted

construction days and hours, complaint procedures, and who to notify in the event of a problem.

e. Notify neighbors and occupants within 300 feet of the project construction area at least 30 days in advance of anticipated times when noise levels are expected to exceed limits established in the noise element of the general plan or noise ordinance.

f. Designate an on-site construction complaint and enforcement manager for the project.

g. Ensure that construction equipment are properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds silencers, wraps). All intake and exhaust ports on power equipment shall be muffled or shielded.

h. Use hydraulically or electrically powered tools (e.g., jack hammers, pavement breakers, and rock drills) for project construction to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust should be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves should be used, if such jackets are commercially available, and this could achieve a further reduction of 5 dBA. Quieter procedures should be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.

i. Where feasible, design projects so that they are depressed below the grade of the existing noise-sensitive receptor, creating an effective barrier between the roadway and sensitive receptors.

j. Where feasible, improve the acoustical insulation of dwelling units where setbacks and sound barriers do not provide sufficient noise reduction.

k. Using rubberized asphalt or "quiet pavement" to reduce road noise for new roadway segments, roadways in which widening or other modifications

require re-pavement, or normal reconstruction of roadways where re-pavement is planned

l. Projects that require pile driving or other construction noise above 90 dBA in proximity to sensitive receptors, should reduce potential pier drilling, pile driving and/or other extreme noise generating construction impacts greater than 90 dBA; a set of site-specific noise attenuation measures should be completed under the supervision of a qualified acoustical consultant.

m. Use land use planning measures, such as zoning, restrictions on development, site design, and buffers to ensure that future development is compatible with adjacent transportation facilities and land uses;

n. Monitor the effectiveness of noise reduction measures by taking noise measurements and installing adaptive mitigation measures to achieve the standards for ambient noise levels established by the noise element of the general plan or noise ordinance.

o. Use equipment and trucks with the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible) for project construction.

p. Stationary noise sources can and should be located as far from adjacent sensitive receptors as possible and they should be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the Lead Agency (or other appropriate government agency) to provide equivalent noise reduction.

q. Use of portable barriers in the vicinity of sensitive receptors during construction.

r. Implement noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings (for instance by the use of sound blankets), and implement if such measures are feasible and would noticeably reduce noise impacts.

s. Monitor the effectiveness of noise attenuation measures by taking noise measurements.

t. Maximize the distance between noise-sensitive land uses and new roadway lanes, roadways, rail lines, transit centers, park-and-ride lots, and other new noise-generating facilities.

u. Construct sound reducing barriers between noise sources and noise-sensitive land uses.

v. Stationary noise sources can and should be located as far from adjacent sensitive receptors as possible and they should be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the Lead Agency (or other appropriate government agency) to provide equivalent noise reduction.

w. Use techniques such as grade separation, buffer zones, landscaped berms, dense plantings, sound walls, reduced-noise paving materials, and traffic calming measures.

x. Locate transit-related passenger stations, central maintenance facilities, decentralized maintenance facilities, and electric substations away from sensitive receptors to the maximum extent feasible.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this EIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and lack of project-specific detail, including the inability to quantify noise impacts at the regional level, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to substantial temporary or permanent increases in ambient noise levels in excess of standards established in local general plans or noise ordinances, or applicable standards of other agencies, to be significant and unavoidable even with implementation of mitigation.

Impact NOISE-2 Generation of excessive groundborne vibration or groundborne noise levels.

Significant and Unavoidable Impact – Mitigation Required.

Implementation of the transportation projects and the construction of land use development projects anticipated to occur under the Plan would generate varying levels of vibration and groundborne noise. As noted above, urban environments tend to be louder than suburban environments due to denser, multi-use land use patterns. Urban environments also typically support higher volumes of traffic as well as other transportation modes that generate groundborne vibration and sound such as trains, light rail, and buses. Suburban environments, where land uses are often more segregated, have more moderate noise levels. Agricultural areas also have a unique noise environment as compared to urban and suburban environments. Agricultural operations require the use of heavy-duty equipment (e.g., mechanized plows, tractors) that produce high noise levels. However, because agricultural areas are sparsely populated, noise generally does not have the same adverse effect on surrounding land uses and may be protected by right-to-farm regulations or other local land use policies.

Traffic, especially heavy truck traffic, can be a source of vibration and groundborne noise. Rail operations, including freight and light rail trains, can also be a source of vibration. **Table 3.13-14** contains reference to vibration levels associated with heavy-duty equipment.

Construction. Transportation projects and development anticipated to occur under the Plan could result in temporary noise and vibration impacts from grading, paving, clearing, landscaping, staging, excavation, earthmoving, and other related construction activities. Such construction activities would require the use of heavy construction equipment (e.g., pile drivers, back hoes, jackhammers) and vehicles that generate significant amounts of noise and vibration in the immediate vicinity of the source, often resulting in noise and vibration levels substantially higher than existing conditions. **Table 3.13-14, Construction Equipment Source Noise Levels**, summarizes typical construction noise levels for various construction activities.

Table 3.13-14
Construction Equipment Source Noise Levels

Equipment	Levels in dB(A) at 50 feet
Front Loader	73-86
Trucks	82-95
Cranes (Moveable)	75-88
Cranes (Derrick)	86-89
Vibrator	68-82
Saws	77-82
Pneumatic Impact Equipment	83-88
Jackhammers	81-98
Pumps	68-72
Generators	71-83
Compressors	75-87
Concrete Mixers	75-88
Concrete Pumps	81-85
Back Hoe	73-85
Pile Driving (Peaks)	95-107
Tractor	77-98
Scraper/Grader	80-93
Paver	85-88

Source: US Environmental Protection Agency, Noise From Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971.

Noise impacts from construction activities depend on several factors including the types of surrounding land uses, duration and type of construction activities, distance between source and receptor, and the presence or absence of barriers between source and receptor. Construction impacts are considered temporary and localized in nature, as they are limited to the time during which the project is being constructed and confined to areas adjacent to the construction site. After construction is completed, all construction equipment and vehicles are removed. In urban areas, where most of the development takes place, construction is a frequent occurrence, and although construction can be a nuisance, it may not result in a significant impact. In rural and suburban areas, where ambient noise levels are lower, it may rise to the level of an impact. However, land uses are also further apart, thereby reducing the potential for conflicts. Further, many local jurisdictions have policies specifically dealing with construction noise including restrictions on hauling and hours of construction.

Transportation projects and anticipated development projects under the Plan have the potential to result in construction-related impacts that increase noise levels above the noise thresholds identified in **Table 3.13-14** and substantially increase noise levels in locations currently in exceedance of a CNEL threshold;

as well as the potential to result in excessive levels of vibration and groundborne noise from increased traffic and congestion, at the local level (see **Section 3.17, Transportation, Traffic and Safety,** for further discussion of how the Plan affects the transportation network). Although construction noise is short-term for individual project sites, it can nonetheless result in substantial increases in ambient noise levels in the immediate vicinity of each construction site. Construction activities would occur in accordance with applicable city or county standards. Most such standards address acceptable hours of operation, while some standards address allowable noise levels. If sensitive receptors are in the immediate vicinity of construction activities, they could be temporarily adversely affected. Land use strategies which would encourage more dense development near a sensitive receptor would result in increased temporary construction noise for those receptors. Construction activity, and associated groundborne vibration or noise levels, is a routine part of the urban environment. While construction of individual projects is considered to have a less than significant impact, construction activities are likely to be ongoing throughout the region and therefore impacts are considered significant.

As previously discussed, there are sensitive receptors such as residences, schools, libraries, churches, hospitals, nursing homes, natural areas, and parks in the SCAG region that could be affected by construction or operation of Plan projects. As such, impacts are considered significant.

Construction-related vibration has the potential to damage structures and be a source of annoyance to individuals who live or work near these construction activities. Pile drivers can generate vibrations in excess of 0.5 PPV at a distance of 25 feet, see **Table 3.13-15, Construction Equipment Vibration Levels**, which can result in damage to reinforced concrete. Vibration levels generated by pile driving vary depending on soil conditions, construction methods, and equipment used. Depending on the proximity of existing structures to the pile driving, the structural condition of the existing structures, and the methods of construction used, vibration levels caused by pile driving or other foundation work with a substantial impact component such as blasting, rock or caisson drilling, and site excavation or compaction may be high enough to damage existing structures. A vibration analysis completed by Caltrans indicated that "extreme care must be taken when sustained pile driving occurs within 7.5 m (25 ft) of any building, and 15–30 m (50–100 ft) of a historical building or building in poor condition."[71]

Operation. Normal operation of residential, office and commercial, and mixed-use buildings are unlikely to generate substantial vibration or groundborne noise. Industrial and public buildings could generate vibration and groundborne noise during operations that involve the use of machinery or other vibration-inducing equipment. However, the amount of vibration produced is not anticipated to be excessive, as workplace vibration is typically addressed from an occupational health and safety perspective. As with noise, vibration dissipates with distance from the source, therefore surrounding land uses would unlikely be affected. **Table 3.13-15** indicates that, even at close distances, vibration levels for most heavy-duty equipment are below 0.1 inches per second.

Traffic, especially heavy truck traffic, can be a source of vibration and groundborne noise. However, such vibration is rarely high enough to cause annoyance to surrounding uses, as vehicles are supported on spring suspensions and pneumatic tires, which reduce the amount of vibration and groundborne noise generated from vehicular traffic. Rail operations, including freight and light rail trains, can also be a source of vibration. Under the Plan there would be increases in both heavy rail and light rail. Existing and future growth and development near existing or planned light rail or heavy rail lines could result in excessive levels of vibration and groundborne noise as compared to existing conditions.

Impacts associated with transportation strategies such as complete streets and TSM would be minimal and they would generally improve overall traffic flow and would not be expected to increase noise or

vibration. Land use strategies would encourage compact development which would encourage more people in urbanized areas where vibration impacts would occur. Operation-related vibration would be a source of annoyance to individuals who live or work near new infrastructure associated with heavy duty truck and bus traffic along roadways and train traffic along rail lines. The amplitude of vibration generated by heavy trucks, buses, or trains has the potential to result in structural or cosmetic damage if the route is adjacent or in close proximity to fragile older buildings.

Based on vibration measurements throughout California, Caltrans determined the maximum traffic vibration levels from truck traffic drop below the threshold of perception at a distance of 42.5 metes (140 feet) from the source and that vibration level from truck traffic are unlikely to cause architectural damage to fragile historic buildings unless the building was adjacent or within 5 meters or 17 feet from the source.[72] Therefore, it is anticipated that operational activities would result in a significant impact related to the exposure of people to excess groundborne vibration or groundborne noise levels.

Furthermore, Caltrans measured a peak train vibration level of 0.36 in/sec PPV at 3 meters (10 feet).[73] A vibration level of 0.36 in/sec PPV at 3 meters or 10 feet would fall below the threshold of perception at a distance of 80 meters (263 feet) from the source. Therefore, it is anticipated that operational activities would result in a significant impact related to the exposure of people in excess groundborne vibration or groundborne noise levels.

As a result, implementation Connect SoCal would result in the exposure of persons to generation of excessive groundborne vibration or groundborne noise levels, which constitutes a significant impact requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

See **SMM NOISE-1.**

72 Ibid.

73 Ibid.

Project Level Mitigation Measures

See **PMM-NOISE-1.**

PMM NOISE-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:

a. For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the potential vibration impacts to the structural integrity of the adjacent buildings within 50 feet of pile driving locations.

b. For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the threshold levels of vibration and cracking that could damage adjacent historic or other structure, and design means and construction methods to not exceed the thresholds.

c. For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as predrilling the piles to the maximum feasible depth, where feasible. Predrilling pile holes will reduce the number of blows required to completely seat the pile and will concentrate the pile driving activity closer to the ground where pile driving noise can be shielded more effectively by a noise barrier/curtain.

d. Restrict construction activities to permitted hours in accordance with local jurisdiction regulation.

e. Properly maintain construction equipment and outfit construction equipment with the best available noise suppression devices (e.g., mufflers, silences, wraps).

f. Prohibit idling of construction equipment for extended periods of time in the vicinity of sensitive receptors.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this EIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and lack of project-specific detail, including project locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to excessive groundborne vibration or groundborne noise levels to be significant and unavoidable even with implementation of mitigation.

Impact NOI-3 **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.**

Significant and Unavoidable – Mitigation Required.

Implementation of transportation projects and development anticipated to occur under the Plan may result in exposure of persons to or generation of significant noise levels from aircrafts and other airport activity (including ground transportation) constituting a significant impact.

The SCAG region contains an expansive multiple airport system with seven commercial airports, seven government/military fields, and more than 30 reliever and general aviation airports. California's Airport Noise Standards identify a noise exposure level of CNEL 65 dB as the noise impact boundary around airports. Airport proprietors are required to ensure all land uses are compatible with the aircraft noise environment or secure a variance from the California Department of Transportation.

Note that SCAG has no authority over airport development. Rather SCAG includes aviation planning information within each RTP/SCS in order to facilitate ground transportation access planning. Development authority of airports rests with each airport (i.e. airport sponsors retain authority over planning and development decisions) and the Federal Aviation Administration (FAA), which makes airport funding decisions based on national priorities. Moreover, airports are not required to incorporate MPO planning recommendations into their capital plans, and FAA funding decisions are not necessarily tied to MPO RTP recommendations.

Despite some downturns, air passenger traffic in the region has increased at a steady rate over the past two decades, with a particularly high growth rate in recent years. In 2017, the six-county SCAG region was one of the most active and fastest growing regions for air passenger traffic in the United States. In 2017, at 110.17 million annual passengers, SCAG was second only to the New York/New Jersey region for air passenger traffic. The SCAG region saw a passenger growth rate of 5.12 percent from 2012 to 2017.[74]

As noted above, SCAG does not have any regulatory, developmental, operational, or planning authority over the airports. Rather, SCAG is primarily a regional surface transportation planning agency that maintains a list of airport ground access projects and a consultative relationship with the airports. Therefore, SCAG is focused on air and passenger cargo activity from the perspective of how the traffic coming and going from the airports affects the region's roads, highways, and transit system. SCAG also prepares an Aviation Technical Report to the Plan.

The Connect SoCal Aviation Technical Report references a comprehensive review of various forecasts for aviation growth in the SCAG region:[75]

- Regional air passenger transportation is anticipated to grow by an average of 2.1% annually; from 110.17 MAP in 2017 to 197.1 MAP in 2045
- Regional air cargo transportation is anticipated to grow by an average of 3.3% annually, from 3.14 million in 2017 to 7.77 million tons in 2045
- Total regional aircraft operations are not anticipated to grow as fast as passenger and/or cargo growth. Regional aircraft operations are anticipated to grow by an average of 0.74% annually, from 3.7 million operations in 2017 to 4.58 million operations in 2045

As mentioned above, LAX is the only regional large-hub primary airport, and the operational data listed for each regional airport indicates most regional airport operations are associated with LAX. Recent statistics show that while passenger traffic has increased by approximately 1% in 2019, aircraft operations have reduced by approximately 2%. The LAWA department of the City of Los Angeles is currently constructing an Automated People Mover (APM) electric train to reduce ground traffic congestion, accommodate future operational growth, and provide a direct rail connection to Los Angeles and adjacent cities.[76] The APM is planned to open for passenger services in 2023, and APM operation will reduce ground traffic and could incrementally reduce associated ground traffic noise.

74 Connect SoCal. 2019. *Aviation and Airport Ground Access Technical Report*.

75 Ibid.

76 https://www.lawa.org/en/connectinglax/automated-people-mover; 8/30/2019

The following information was obtained from the Airport Noise Overview Technical Report prepared as part of the PEIR. The full report is provided in **Appendix 3.13**. Region-wide growth between 2017 to mid-year 2019 is estimated to be up to approximately 2% for air passengers and less than 0.5% for aircraft operations. For the purposes of assessing regional noise impacts from aviation, the above bulleted forecasts reasonably approximate the 2019 to 2045 time period.

As noted above, the aircraft operations growth forecast is significantly smaller than the air passenger and air cargo percentages. This is anticipated because newer aircraft carry a higher volume of passengers and carriers are running at a higher load factor than in the past. When the airlines carry more passengers per flight, the flights are more profitable and fewer flights are needed to carry the same volume of passengers to a specific location. This allows the airlines to schedule some of these flights to other locations and/or reduce their airport operations.

The noise from airports is directly related to the number of aircraft operations as well as the size, aircraft type, and number and type of engines, with additional contributions from other airport activities and ground transportation (noise from ground transportation is as part of the overall transportation projects in the Plan).

In general, if the mix of aircraft remains constant, the aviation noise contours grow larger or shrink smaller as the operations increase or decrease. Noise levels do not increase algebraically as the noise sources increase but increase in a logarithmic fashion. For example, two noise sources each emitting a noise level of 60 dB add together to produce noise of 63 dB, not 120 dB. Doubling the number of noise sources increases the overall noise level by 3 dB and doubling the number of aircraft operations would also increase the overall airport noise level by 3 dB and expand the area inside the noise contours, assuming all other factors such as aircraft type, engines, flight tracks, etc., remain the same.

Considering the growth in airport operations from 3.7 million to 4.58 million, if all aircraft types and operational characteristics were to remain equal, the forecasted increase in noise would equate to 0.9 decibels. However, this average increase in aircraft operations would not occur at all airports, as different airports will experience different changes and noise contours may grow or shrink independently. Airport noise levels are expected to increase at the busiest airports such as LAX, ONT, PSP and BUR, while noise levels at airports with noise and/or operations constraints would not be expected to increase as much. The details needed to model airport noise level changes over the forecast period are not available to provide specific changes. Additionally, airports across the nation have received an increase in noise complaints since implementation in 2015 of FAA's *NextGen* program to modernize the nation's air

transportation system.[77] One aspect of *NextGen* utilizes satellite navigation that precisely direct aircraft flight tracks for more efficient performance, reducing fuel costs and associated carbon emissions, and to increase overall flight capacity.[78] Aircraft flight track changes in some cases moved flights over areas that previously did not experience overflights or concentrated aircraft over areas that already experienced overflights, and airport noise complaints increased.[79] As the FAA and airports such as LAX and BUR[80] wrestle with the contending issues of an efficient airspace and noise complaints, it is unclear whether aircraft flight tracks will remain constant, further complicating the details needed for forecasting airport noise level changes over the lifetime of the Plan.

Technological changes also play a role in understanding airport noise impacts. The aircraft industry continues to develop aircraft with higher capacity, lower fuel consumption, and lower carbon emissions, but as it does, the industry must also comply with FAA and international aircraft compliance requirements regarding noise. Aircraft noise is classified into various Stages, with current Stage 3 and 4 aircraft operating quieter than previously used Stage 2 aircraft. Stage 3 aircraft measure between 7 and 20 EPNdB (Effective Perceived Noise Level, decibels) quieter than State 2 aircraft, while Stage 4 aircraft are an additional 10 EPNdB quieter than Stage 3 aircraft. Stage 2 aircraft no longer fly in the U.S., with some exceptions for lighter weight aircraft, taking the noisiest aircraft out of service. As airlines replace older and noisier Stage 3 aircraft with quieter Stage 4 aircraft, the aircraft fleet becomes quieter. As a recent example, American Airlines retired the last of its Stage 3 compliant McDonnell Douglas MD-80 aircraft in September 2019 and looks to replace the aircraft with more fuel-efficient aircraft with lower maintenance costs.[81] Even as newer aircraft have more powerful engines, the requirements to comply with the quieter Stage 4 noise levels will result in a quieter fleet overall. In 2018, the FAA adopted regulations requiring newly designed aircraft to meet even quieter Stage 5 requirements with a reduction of 7 EPNdB,[82] and as these aircraft come into service (and some aircraft currently in operation already meet this standard), this will lower the aircraft noise level further.

It is possible that in the long term, as aircraft operations grow over the next 25 years, the lower noise levels of aircraft will offset the increased operations to maintain or even reduce the aircraft noise contour

footprints around airports, as this has been the general trend in aviation noise over the previous 40 years. It may also be possible that the growth in operations at some airports may overtake the trend toward a quieter aircraft fleet and cause aircraft noise and the noise contours to increase.

In addition, most major public airports have an airport land use plan that provides guidance on safety and land use in adjacent areas. State law mandates the creation of an Airport Land Use Compatibility Plan. The Airport Land Use Commissions (ALUC) coordinates planning for areas that surround public use airports. The ALUC is tasked with preparing airport land use plans to protect the public by minimizing their exposure to excessive noise and safety hazards within these areas.

Furthermore, the development of Airport Land Use Plans are guided by three federal regulations and two state codes:

- Title 14 Code of Federal Regulations, Part 36, establishes maximum acceptable noise levels for specific aircraft types.
- Title 14 Code of Federal Regulations, Part 150, provides guidance for measuring noise at airports and surrounding areas, determining exposure of individuals to noise from the operations of an airport, identifying land uses that are normally compatible, and preparing and executing noise compatibility planning and implementation programs.
- As part of Title 24 Code of Federal Regulations, Part 51, Subpart B, the HUD exterior noise regulations state that noise levels of 65 dBA DNL or less are acceptable for residential land uses and noise levels exceeding 75 dBA DNL are unacceptable.
- California Government Code Section 65302 specifies that noise contours be shown for all facilities related to airport operations and be stated in terms of CNEL or Ldn. These noise contours are intended to guide how patterns of land uses are established in the land use element in order to minimize the exposure of community residents to excessive noise.
- Title 21, California Code of Regulations Section 5000 et seq., identifies a noise exposure level of CNEL 65 dB as the noise impact boundary around airports. Within this noise impact boundary, airport proprietors are required to ensure that all land uses are compatible with the aircraft noise environment or the airport proprietor must secure a variance from Caltrans.

Additionally, each county and city in the SCAG region is required to adopt safety and noise elements as part of their General Plans. It is expected that local jurisdictions would conduct environmental review for projects that are within or near sensitive airport zones, and are expected to implement best management

practices and mitigation measures on a project-by-project basis, to minimize potential noise risks associated with air traffic.

Nevertheless, due to the regional scale of aviation operations and because the noise profiles of future aircraft types and their engines are unknown, as is the timeframe for phasing out older aircraft and replacing them with newer aircraft, impacts cannot be accurately determined at this time. Conservatively it is assumed sensitive receptors may experience greater noise impacts than at present in the vicinity of airports resulting in significant impacts.

Mitigation Measures

3.14 POPULATION AND HOUSING

This section of the Program Environmental Impact Report (PEIR) describes the existing land use characteristics within the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect population and housing, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.14.1 ENVIRONMENTAL SETTING

3.14.1.1 Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for population, housing, and employment are provided.

Employment: Paid employment consists of full- and part-time employees, including salaried officers and executives of corporations, who were on the payroll in the pay period. Included are employees on sick leave, holidays, and vacations; not included are proprietors and partners of unincorporated businesses.

Household: A household consists of all the people who occupy a housing unit. A household includes the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household.

Householder: The householder refers to the person (or one of the people) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly the householder may be either party. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Housing: As used in this analysis, *housing* is data available from the U.S. Census for the SCAG region for the period of 2000 through 2035. Housing is a general term used to describe multiple housing units.

Housing Unit: A house, an apartment or other group of rooms, or a single room are regarded as housing units when occupied or intended for occupancy as separate living quarters. Different jurisdictions have slightly different definitions of what constitutes a housing unit.

Population: As used in this analysis, *population* is data available from the U.S. Census for the SCAG region for the period of 1900 through 2010, with population projections available from SCAG in 2019 for the projected population growth through 2045.

Regional Housing Needs Assessment (RHNA): As discussed in more detail in the Regulatory Background, the RHNA quantifies the need for housing within each jurisdiction during specified planning periods. The RHNA is mandated by state housing law as part of the periodic process of updating local housing elements of the General Plan. The California Department of Housing and Community Development (HCD) provides a regional determination of housing need, and then SCAG allocates this housing need to jurisdictions in the region. The intention of the RHNA process is to create a better balance of jobs and housing in communities, ensure the availability of decent affordable housing for all income groups, and achieve sustainability through long-term strategic land use planning.

3.14.1.2. Existing Population, Housing, and Employment

Population

The six-county SCAG region encompasses 38,000 square miles in area (almost 25 million acres) and is home to approximately 19 million people as of 2019, making it the second most populous metropolitan region in the U.S.[1] Approximately 6 percent of the national population lives in the SCAG region, and for over half a century the region has been home to approximately half the population of California. At the turn of the 20th Century, the SCAG region comprised less than 1 percent of the U.S. population and less than 30 percent of the state population. By 1960, the region grew to represent nearly 5 percent of the national population.[2] Historically, population within the SCAG region was heavily influenced by net migration, or the difference between people coming into an area (immigrating) and the people leaving an area (emigrating) as opposed to the increase of births over deaths. However, since about 2000, net migration has slowed and has resulted in slower population growth across the SCAG region. The population growth within the SCAG region is similar to that of California and the U.S. as a whole.

As shown below in **Table 3.14-1, Population Growth in the SCAG Region (2000-2019 for Incorporated Cities and Unincorporated Areas),** existing populations have increased in every county within the SCAG region from 2000 to 2019. However, while increasing in population, the SCAG region's overall growth rate is slowing. The change is largely attributed to four key factors: (1) lower birth rates (fewer children),

---

2 Southern California Association of Governments (SCAG). 2016. *2016 RTP/SCS Program Draft Environmental Impact Report*.

(2) lower immigration rates (fewer immigrants), (3) aging population (fewer at childbearing age), and (4) high housing costs (lack of housing).[3]

Table 3.14-1
Population Growth in the SCAG Region
(2000-2019 for Incorporated Cities and Unincorporated Areas)

County	Population 2000[1]	Population 2010[2]	Population 2019[3]	Growth Rate 2000-2010	Growth Rate (2010-2019)
Imperial	142,361	174,528	207,682	22.6%	19%
Los Angeles	9,519,338	9,818,605	10,333,540	3.1%	5.2%

1 *SCAG. 2016 Draft RTP.SCS. 3.14 Population, Housing, and Employment. Table 3.14.2-3 "Population Growth in the SCAG Region for 2000-2014." Available online at: http://scagrtpscs.net/Pages/DRAFT2016PEIR.aspx, accessed September 3, 2019.*
2 *California Department of Finance (DOF). 2010. E-5 Population and Housing Estimates for Cities, Counties, and the State. January. Available online at: http://www.dof.ca.gov/Forecasting/Demographics/Estimates/E-5/, accessed August 30, 2019.*
3 *Southern California Association of Governments (SCAG). 2019.* 2019 Local Profiles*. Available online at: https://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx, accessed September 3, 2019.*

From the 1980s into the 2000s, the region was in a housing and economic boom, which led to increased immigration and household size, and a surge in population growth in all six SCAG counties. When the market slowed, beginning in 2006, growth slowed as well, and from the years 2010-2019, Imperial, Riverside, San Bernardino and Ventura counties all showed a significant decrease in population growth. During the same period, Los Angeles and Orange counties maintained similar growth rates for the years 2010-2019 compared to the years 2000-2010. This is not surprising, as the counties of Los Angeles and Orange contain coastal areas and metropolitan cities, which make them attractive destinations regardless of job and housing creation.

Housing

As shown in **Table 3.14-2, Households in the SCAG Region,** there were approximately 6.2 million households in the SCAG region in 2019, an increase from 2010. More than half of the households in the region are located in Los Angeles County. Unfortunately, California, like many other places in the U.S., is

3 Ibid.

experiencing a housing crisis. At a fundamental level, there is simply not enough housing for everyone who wants to live in the state.

Table 3.14-2
Households in the SCAG Region

County	Number of Households (2010)	Number of Households (2019
Imperial	79,126	58,000
Los Angeles	3,239,280	3,409,500
Orange	990,019	1,053,500
Riverside	686,260	758,300
San Bernardino	611,618	656,500
Ventura	266,920	276,100
SCAG	**5,873,223**	6,211,900

Source: SCAG, 2019

Household Income

Median household income in the SCAG region in 2018 varies widely, from $44,779 in Imperial County (incorporated cities) to $81,972 in Ventura County (incorporated cities). The county with the second highest median income is Orange County ($81,851) (incorporated cities). Across the SCAG region, the average income was $64,597 (incorporated cities). Homeownership rates also vary, from a low of 45.9 percent in Los Angeles County (incorporated cities) to a high of 65 percent in Riverside County (incorporated cities). The average homeownership rate in the SCAG region is 57.9 percent (incorporated cities).[4]

Household Size

Household size in the SCAG region (Incorporated Cities) increased between 2000 and 2018, from 3.16 persons per household to 3.2 persons per household, or an increase of the equivalent of an average of 0.04 persons per household (**Table 3.14-3, Household Size in the SCAG Region [Persons]**). In descending order, San Bernardino, Riverside, Imperial, and Orange Counties' household size grew, while Ventura and Los Angeles Counties' household size declined between 2000 and 2018.

4 Southern California Association of Governments (SCAG). 2019. *2019 Local Profiles*. Available online at: https://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx, accessed September 3, 2019.

Poverty

The U.S. Census Bureau reported 2.5 million people in the SCAG region were living in poverty in 2018, down from 2.9 million people in 2010 (**Table 3.14-4, Poverty Rates in the SCAG Region [1990–2018]**).[5] The average poverty rate in the SCAG region has remained above the state and national averages since 1990. Imperial County has the highest poverty rate, followed by San Bernardino County, and Los Angeles County, which are above the state and national averages, and then Riverside County which has fallen below the state and national averages in recent years. Orange County and Ventura County have consistently had poverty rates below state and national averages between 1990 and 2018.

1 Southern California Association of Governments (SCAG). 2016. 2016 RTP/SCS Program Draft Environmental Impact Report.
2 U.S. Census Bureau. 2018. Poverty Status in the Past 12 Months. Available online at: https://data.census.gov/, accessed October 29, 2019.

Using U.S. Census Bureau American Community Survey Data, SCAG has identified underserved communities in the SCAG region. See Connect SoCal Technical Report, Environmental Justice, for discussion and analysis of environmental justice communities relative to the Plan. Disadvantaged communities in the SCAG region include census tracts that have been identified by the California Environmental Protection Agency (Cal/EPA) as Disadvantaged Communities (DACs) based on the requirements set forth in SB 535, which seek to identify areas disproportionately burdened by and vulnerable to multiple sources of pollution. Environmental justice areas of concern include those areas where there are issues of public health, housing, impacts on racial and ethnic minority groups, and environmental impacts.

Note that while socioeconomic issues do not in and of themselves constitute physical environmental impacts, they do have the potential to lead to physical environmental impacts. For example, as gentrification occurs near urban job centers, increased housing costs could outpace income growth leading to households moving toward more affordable suburbs. This would increase commute times, resulting in increases in vehicle miles traveled and air pollution.

Employment

Throughout the SCAG region, jobs are frequently co-located along major transportation intersections and transportation corridors. **Figure 3.14-1, Employment Density in the SCAG Region**, depicts the employment density across the region. Employment trends in Southern California have long followed a "boom and bust" cycle. Much of the 2000s saw a boom of housing development, particularly in the Inland Empire, only to be followed by a bust starting in 2008 which affected employment, particularly in

the housing construction and service sectors. In 2019, there were approximately 8.7 million jobs in the SCAG region (**Table 3.14-5, 2019 Employment by County**). Based on available SCAG data (2019), the economy experienced a net increase in jobs, between 2000 and 2019, for every county in the SCAG region **(Table 3.14-6, Employment Growth from 2000 to 2019**). As of 2019, Imperial County saw the largest relative increase in job generation, growing by 67.1 percent (31,048 jobs), followed by Riverside with 26.2% growth (168,593 jobs). The largest increase in jobs overall occurred in Los Angeles County with nearly 401,695 jobs and in Orange County with more than 336,543 jobs. Overall, the SCAG region gained approximately 1,033,738 jobs (or 13.6 percent) between 2000 and 2019.

Table 3.14-5
2019 Employment by County

County	Total County Employment
Imperial	77,348
Los Angeles	4,826,595
Orange	1,765,643
Riverside	812,793
San Bernardino	828,342
Ventura	346,417
SCAG Region	8,657,138

Table 3.14-6
Employment Growth for 2000 to 2019

County	2000 (Jobs)[1]	2019 (Jobs)[2]	2000- 2019 Growth (Jobs)	Percent Change (2000- 2019)
Imperial	46,300	77,348	31,048	67.1%

Unemployment

Although unemployment rates declined between 2010 and 2018 for all counties in the SCAG region, rates of unemployment remain slightly above the national and state average (3.7 percent[6] and 4.1 percent,[7] respectively, as of August 2019) in Imperial, Los Angeles, and Riverside Counties (**Table 3.14-7, Unemployment Rates**). In 2018, Imperial County had the highest unemployment rate in the SCAG region (18.1 percent), while Orange County had the lowest in the SCAG region (2.9 percent, below the national and state averages). In 2018, the average unemployment rate in the SCAG region was 6.3 percent.

Table 3.14-7
Unemployment Rates

County	2000 Unemployment Rate[1]	2010 Unemployment Rate[1]	2018 Unemployment Rate[2]
Imperial	17.5%	29.9%	18.1%
Los Angeles	5.4%	12.6%	4.7%
Orange	3.5%	9.5%	2.9%
Riverside	5.4%	14.5%	4.4%
San Bernardino	4.8%	14.2%	4.0%
Ventura	4.5%	10.8%	3.8%
SCAG Region	**6.8%**	**15.3%**	**6.3%**
State Average	**4.9%**	**12.4%**	**4.2%**

Growth Forecasts

In order to develop growth forecasts, SCAG encourages and utilizes the participation and cooperation of all local government partners within the SCAG region. SCAG uses a bottom-up planning process by which all local governments are informed of the Connect SoCal planning process and have clear and adequate opportunities to provide input. Growth forecasts and land use updates for development under the Plan have been developed through this bottom-up local input process, reflecting the following guiding principles approved by SCAG's Regional Council on August 1, 2019 .

6 Bureau of Labor Statistics, *The Employment Situation—August 2019.* Available online at: https://www.bls.gov/news.release/pdf/empsit.pdf, accessed September 16, 2019.

7 State of California Employment Development Department, *California Unemployment rate dips to record low 4.1 percent in July.* Available online at: https://www.edd.ca.gov/newsroom/unemployment-august-2019.htm, accessed September 16, 2019.

- Principle #1: The draft plan forecast for Connect SoCal shall be adopted by the Regional Council at the jurisdictional level, thus directly reflecting the employment, population and household growth projections derived from local input and previously reviewed and approved by SCAG's local jurisdictions. The draft plan growth forecast maintains these projected jurisdictional growth totals, meaning further growth is not reallocated from one local jurisdiction to another.

- Principle #2: The draft plan forecast at the Transportation Analysis Zone (TAZ) level is controlled to be within the density ranges of local general plans or input received from local jurisdictional in this most recent round of review.

- Principle #3: For the purpose of determining consistency for California Environmental Quality Act (CEQA) streamlining, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the Plan.

- Principle #4: TAZ level data or any data at a geography smaller than the jurisdiction is included in the draft plan forecast only to conduct the required modeling analytical work and is therefore, only advisory and non-binding as SCAG's sub-jurisdictional forecasts are not formally adopted as part of the Plan.

3.14.2 REGULATORY FRAMEWORK

3.14.2.1 Federal

Federal Uniform Act (URA) (1970)

The Federal Uniform Act (Uniform Relocation Assistance and Real Property Acquisition Policies Act; 42 U.S. Code [USC] 61), passed by Congress in 1970, is a federal law that establishes minimum standards for federally funded programs and projects that require the acquisition of real property (real estate) or displace persons from their homes, businesses, or farms. The Uniform Act's protections and assistance apply to the acquisition, rehabilitation, or demolition of real property for federal or federally funded projects.[8]

Department of Housing and Urban Development Act

The Department of Housing and Urban Development Act created the U.S. Department of Housing and Urban Development (HUD) as a Cabinet-level agency. HUD is responsible for national policy and programs that address housing needs in the U.S. HUD is responsible for enforcing fair housing laws. HUD plays a major role in supporting homeownership by underwriting homeownership for lower- and moderate-income families through its mortgage insurance programs.[9]

Fixing America's Transportation Act (FAST)

The Fixing America's Surface Transportation (FAST) Act (Pub. L. No. 114-94), enacted in 2015, builds on the changes to federal transportation planning law made by MAP-21.[10] It was the first long-term surface transportation authorization enacted in a decade that provides long-term funding certainty for surface transportation. The FAST Act authorizes $305 billion over fiscal years 2016 through 2020 for highway improvements, highway and motor vehicle safety, public transportation, motor carrier safety, hazardous materials safety, rail, and research, technology, and statistics programs. The FAST Act maintains the focus on safety, keeps intact the established structure of the various highway-related programs, continues

efforts to streamline project delivery, and provides a dedicated source of federal dollars for freight projects.[11]

Federal Planning Regulations, Title 23 CFR 450.322(e)

This federal regulation requires that in development of the regional transportation plan that the related local Metropolitan Planning Organization (MPO) validate data utilized in preparing other existing modal plans (such as transit providers long range plans) for providing input to the regional transportation plan. In updating the plan, the MPO shall base the update on the latest available estimates and assumptions for population, land use, travel, employment, congestion, and economic activity. The MPO shall approve transportation plan contents and supporting analyses produced by a transportation plan update. [12]

3.14.2.2 State

SB 375- The Sustainable Communities and Climate Protection Act of 2008

Senate Bill 375 (SB 375) focuses on aligning transportation, housing, and other land uses to achieve regional greenhouse gas (GHG) emission reduction targets established under the California Global Warming Solutions Act, also known as Assembly Bill No. 32 (AB 32). SB 375 requires California MPOs to develop a Sustainable Communities Strategy (SCS) as part of its Regional Transportation Plan (RTP), with the purposes of identifying policies and strategies to reduce per capita passenger vehicle-generated GHG emissions. In application, the SCS must identify the general location of land uses, residential densities, and building intensities within the region; identify areas within the region sufficient to house all the population of the region; identify areas within the region sufficient to house an eight-year projection of the regional housing need; identify a transportation network to service the regional transportation needs; gather and consider the best practically available scientific information regarding resources areas and farmland in the region; consider the state housing goals; set forth a forecasted development pattern for the region; and allow the regional transportation plan to comply with the federal Clean Air Act (CAA) of 1970 (42 USC. § 7401 *et seq.*) (Gov. Code, § 65080, subd. (b)(F)(2)(B)), of which, when integrated with the transportation network, and other transportation measures and policies will reduce the GHG from automobiles and light duty trucks to achieve, if there is a reasonable way to do so, the GHG emission reduction targets approved by the California Air Resources Board (ARB). If the SCS does not achieve the

GHG emission targets set by ARB, an Alternative Planning Strategy (APS) must be developed to demonstrate how the targets could be achieved.

SB 375 also imposes a number of new requirements on the regional housing needs process. Prior to SB 375, the regional transportation plan and regional housing needs processes were not required to be coordinated. SB 375 now synchronizes the schedules of the RHNA (as discussed in more detail below) and RTP processes every eight years. The RHNA also allocates housing units within the region consistent with the development pattern included in the SCS.

Regional Housing Needs Assessment

The California Legislature developed the RHNA process (Govt. Code § 65580 *et seq.*) in 1977 to address the serious affordable housing shortage in California. The California Department of Housing and Community Development (HCD) in consultation with each council of governments determines each region's existing and projected housing need.[13] HCD must meet and consult with each council of governments, including SCAG, regarding the assumptions and methodology to be used by HCD to determine the region's housing need.[14] HCD's determination is based on population projected produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans.[15]

In consultation with HCD, each council of governments must develop and adopt a methodology for distributing the existing and projected regional housing need to cities, counties, and cities and counties within the region.[16] The council of government then adopts a final regional housing need plan that allocates a shore of the regional housing need to each city, county, or city and county.[17]

Local government must address their allocated share of housing needs of all economic segments of the community through their housing elements. [18] Local governments must adopt a housing element as part of their general plan. Unlike the rest of the general plan, where updates sometimes occur at intervals of 20 years or longer, under previous law the housing element was required to be updated as frequently as needed and no less than every five years. Under SB 375, this period has been lengthened to eight years and timed so that the housing element period begins no less than 18 months after adoption of the

14 Govt. Code § 65584.01(b).

15 Govt. Code § 65584.01(a).

16 Govt. Code § 65584.04.

17 Govt. Code § 65584(b).

18 California Legislative Information. *Article 10.6. Housing Elements [65580 – 65589.11].*.

regional transportation plan, to encourage closer coordination between housing and transportation planning. SB 375 also changes the implementation schedule required in each housing element. Previous law required the housing element to contain a program which set forth a five-year schedule to implement the goals and objectives of the housing element. The new law instead requires this schedule of actions to occur during the eight-year housing element planning period, and requires each action have a timetable for implementation.[19]

The purpose of the housing element is to identify the community's housing needs, state the community's goals and objectives with regard to housing production, rehabilitation, and conservation to meet those needs. In addition, the housing element defines the related policies and programs that the community will implement in order to achieve the stated goals and objectives. This would be accomplished through the allocation of regional housing needs consistent with the Plan.[20]

In prior cycles, factors such as household growth and household income distribution were the primary factors considered in determining a jurisdiction's RHNA allocation. For the 6th RHNA cycle, SCAG plans to consider other factors in addition to household growth. These factors include transit accessibility, job accessibility, and indicators that influence a community's environmental, educational, and economic resource accessibility.

As discussed above in the discussion of SB 375, state law requires preparation of a RHNA allocation plan every eight years. SCAG's 6th Cycle RHNA quantifies the regional need for housing and then allocates the regional need to each jurisdiction for a planning period between October 2021 and October 2029. Local jurisdictions are required to plan and zone to accommodate their respective RHNA allocation (housing units) by income categories through the process of updating the Housing Elements of their General Plans. The RHNA does not necessarily encourage or promote growth, but rather allows communities to anticipate growth and address existing need, so that they can grow in ways that enhance quality of life, improve access to jobs, transportation and housing, and not adversely impact the environment. [21]

This region's 6th Cycle RHNA allocation plan consists of two measurements of housing need: (1) existing need and (2) future need for very-low income, low-income, moderate, and above-moderate income categories.

19 California Legislative Information. *Senate Bill No. 375*.

20 California Legislative Information. *Article 10.6. Housing Elements [65580-65589.11], Section 65580*.

21 SCAG. *Regional Housing Needs Assessment (RHNA) & Housing*. Available online at: https://www.scag.ca.gov/programs/Pages/Housing.aspx, accessed August 29, 2019.

The existing need assessment is based on data from the most recent US Census to measure ways in which the housing market is not meeting the needs of current residents. These variables include the number of households paying more than 30 percent of their income for housing, as well as overcrowding.

The future need for housing is determined primarily by the forecasted growth in households in a community, based on historical growth patterns, job creation, household formation rates, and other factors to estimate how many households will be added to each community over the projection period. The housing need for new households is then adjusted to account for an ideal level of vacancy needed to promote housing choice, maintain price competition, and encourage acceptable levels of housing upkeep and repair. The RHNA also accounts for units expected to be lost due to demolition, natural disaster, or conversion to non-housing uses. The sum of these factors including household growth, vacancy need and replacement need form the "projected need" assigned to each community. Per SB 375, the projected need's portion of the 6th Cycle RHNA will be consistent with the Connect SoCal for the comparable period.

SCAG's RHNA allocation plan considers how each jurisdiction might grow in ways that will decrease the over-concentration of low-income households. The need for new housing is distributed among income groups so that each community moves closer to the county income distribution.

Consistent with the state housing law, the primary objectives the 6th Cycle RHNA allocation plan are:

1. Increase the housing supply and mix of housing types, tenure and affordability within each region in an equitable manner
2. Promote infill development and socioeconomic equity, the projection of environmental and agricultural resources, and the encouragement of efficient development patterns
3. Promote an improved interregional relationship between jobs and housing
4. Allocating a lower proportion of housing need in income categories in jurisdictions that have a disproportionately high share in comparison to the county distribution
5. Affirmatively furthering fair housing

On October 15, 2019, SCAG received the Final Regional Determination from HCD.[22] On November 7, 2019, SCAG Regional Council approved a Draft RHNA Allocation Methodology for HCD's review. The Regional Council is scheduled to approve the Final RHNA Methodology in March 2020 and release the Draft RHNA Allocation by jurisdictions prior to adopt the Connect SoCal in April 2020.

[22] HCD issued its final RHNA determination for the SCAG region of 1.34 million total housing units among four income categories for SCAG to distribute among its jurisdictions from 2021-2029. As discussed above, this total need includes both existing need and projected need.

As discussed above, under Government Code Section 65080(b)(2)(B)(iii), the SCS element of Connect SoCal must identify areas within the region sufficient to house an eight-year projection of SCAG's regional housing need. SCAG's regional housing need for the 6th Cycle RHNA as determined by HCD captures existing and projected need. As such, the SCS must accommodate the projected need portion of the 6th Cycle RHNA. SCAG satisfies this requirement by using local input (including projected households) which projects growth at the jurisdictional level in the SCS as further discussed in the Plan's Demographics and Growth Forecast Technical Report. Therefore, the projected housing need's portion of the 6th Cycle RHNA is consistent with Connect SoCal for the RHNA planning period (October 2021 to October 2029) per SB 375 requirements. In addition, while the existing housing need portion of the 6th cycle RHNA is not included in the SCS growth forecast, the existing need portion will be allocated in a manner to support the goals of Connect SoCal through the RHNA process.[23]

Senate Bill No. 2

SB 2 (Chapter 633, Statutes of 2007) strengthens state housing element law (Government Code Section 65583) by ensuring that every jurisdiction identifies potential sites where new emergency shelters can be located without discretionary review by the local government. It also increases protections for providers seeking to open a new emergency shelter, transitional housing or supportive housing development, by limiting the instances in which local governments can deny such developments.[24]

California Relocation Assistance Act

The California Relocation Assistance Act (Government Code Section 7260 *et seq.*) establishes uniform policies to provide for the fair and equitable treatment of people displaced from their homes or businesses as a direct result of state and/or local government projects or programs. The California Relocation Assistance Act requires that comparable replacement housing be made available to displaced persons within a reasonable period of time prior to the displacement. Displaced persons or businesses are assured payment for their acquired property at fair market value. Relocation assistance in the form of

---

23 Connect SoCal and this PEIR address reasonably foreseeable households in the SCAG region. The population and ***households*** are distributed in accordance with the growth forecast as described in Demographics and Growth Forecast Technical Report in the Plan. The RHNA is a separate planning requirement. It addresses the mandate to plan for ***housing units*** to implement planning policies. The difference between households and housing units is that households are occupied housing units. While HCD has issued its final RHNA determination for the SCAG region of 1.34 million total housing units, which includes both existing need and projected need, these units do not translate to households. As discussed above, SCAG has not yet approved the Final RHNA Methodology or developed its RHNA allocation. Furthermore, it is infeasible to predict if/when and how such housing units would be incorporated into housing elements and whether the housing elements will be implemented and converted to forecast growth.

24 California Legislative Information. *Senate Bill No. 2*.

advisory assistance and financial benefits would be provided at the local level. This includes aid in finding a new home location, payments to help cover moving costs, and additional payments for certain other costs.

Senate Bill 535: California Global Warming Solutions Act of 2006: Greenhouse Gas Reduction Fund (GGRF)

SB 535 was signed into law by Governor Brown on September 30, 2012. This bill sets aside cap and trade revenues to mitigate climate change in disadvantaged communities. The California EPA is the responsible agency for identifying disadvantaged communities for potential investment. The California Department of Finance must allocate 25 percent of the available moneys in the GGRF to projects that benefit disadvantaged communities and a minimum of 10 percent to projects located within disadvantaged communities.[25]

Homeowners and Private Property Protection Act

In 2008, California voters approved Proposition 99, the Homeowners and Private Property Protection Act, which amended the California Constitution so that local governments are prohibited from using eminent domain authority to acquire an owner-occupied residence for the purposes of conveying it to a private recipient, with limited exceptions. Proposition 99 applies only to owner-occupied residences but cities may still use eminent domain authority to convey multi-family and non-residential property to other private parties.[26]

3.14.2.3 Local

Housing Elements of County and City General Plans

The most comprehensive and detailed land use planning, including that for population, housing, and employment in the SCAG region, is provided by city and county General Plans, which local governments are required by state law to prepare as a guide for future development. As noted above, state law mandates that local governments adequately plan to meet the existing and projected housing needs of all economic segments of the community as discussed above. The housing element of a general plan illustrates strategies for future development and improvements to the area's housing stock, with specific goals for the short-term (see **Table 3.14-9, Summary of Housing Goals by County in the SCAG Region**). The housing element often includes programs to improve neighborhoods, provide adequate housing

25 California Legislative Information. *Senate Bill No. 535*.

sites, assist in the provision of affordable housing and promote fair and equal housing opportunities. Housing policy in the state rests largely upon the effective implementation of local general plans and, in particular, local housing elements.

Table 3.14-9
Summary of Housing Goals by County in the SCAG Region

County	County and City Policies and Ordinances
Imperial[a]	**Goal 1:** Ensure the availability of a variety of housing types for all income levels throughout the county. **Goal 2:** Encourage affordable housing developments by utilizing all available funding sources, offering developer incentives, and allowing a wide range of housing types to serve the housing needs of the county's labor force, special needs groups, and families of all income levels. **Goal 3:** Continue to facilitate the provision of housing suited to persons with special housing needs. **Goal 4:** Facilitate the provision of fair housing opportunities for all residents of Imperial County. **Goal 5:** Encourage the improvement, rehabilitation, and revitalization/ reinvestment of the county's existing residential neighborhoods. **Goal 6:** Promote sustainable development by encouraging the inclusion of energy conservation features in new and existing housing stock. **Goal 7:** Encourage and facilitate the regional coordination of public agencies and business organizations to maximize public and private sector resources that will support a vibrant community. **Goal 8:** Pursue actions to reduce regulatory constraints to housing that impede housing opportunities.
Los Angeles[b]	**Goal 1:** A wide range of housing types in sufficient supply to meet the needs of current and future residents, particularly for persons with special needs, including but not limited to low income households, seniors, persons with disabilities, large households, single-parent households, the homeless and at risk of homelessness, and farmworkers. **Goal 2:** Sustainable communities with access to employment opportunities, community facilities and services, and amenities. **Goal 3:** A housing supply that ranges broadly in housing costs to enable all households, regardless of income, to secure adequate housing. **Goal 4:** A housing delivery system that provides assistance to low- and moderate-income households and those with special needs. **Goal 5:** Neighborhoods that protect the health, safety, and welfare of the community, and enhance public and private efforts to maintain, reinvest in, and upgrade the existing housing supply. **Goal 6:** An adequate supply of housing preserved and maintained in sound condition, and located within safe and decent neighborhoods. **Goal 7:** An affordable housing stock that is maintained for its long-term availability to low- and moderate-income households and those with special needs. **Goal 8:** Accessibility to adequate housing for all persons without discrimination in accordance with state and federal fair housing laws. **Goal 9:** Planning for and monitoring the long-term affordability of adequate housing.
Orange[c]	**Goal 1:** An adequate supply of housing that varies sufficiently in cost, style, tenure, and neighborhood type to meet the economic and social needs of every existing and future resident of the county; and which provides sufficient housing opportunities to achieve a better jobs-housing balance for employees of businesses located in the unincorporated area. **Goal 2a:** To conserve and improve the condition of the existing housing stock, especially affordable housing. **Goal 2b:** Work cooperatively with cities and LAFCO to facilitate the annexation and revitalization of urbanized unincorporated islands. **Goal 3:** To promote equal housing opportunities for all persons without discrimination on the basis of race, religion, ethnicity, sex, age, marital status, disability, or household composition. **Goal 4:** Reduce residential energy use within the County. **Goal 5:** To encourage the provision of child care facilities in new affordable housing developments. **Goal 6:** To monitor changing circumstances and make adjustments to County programs as necessary to maximize progress toward established goals and objectives.
Riverside[d]	**Goal 1:** To assist in the development of adequate housing to meet the county's fair share of the region's housing needs for all

County	County and City Policies and Ordinances
	economic segments of the population, with an emphasis on lower-income households and households with special needs.
	Goal 2: To conserve and improve the condition of the housing stock, particularly affordable housing.
	Goal 3: To promote equal housing opportunities for all persons regardless of race, age, sexual orientation, religion, sex, etc.
	Goal 4: Establish adequate planning, administrative and fiscal tools to implement housing policies
	Goal 5: Reduce per capita residential energy use.
San Bernardino[e]	**Goal H-1:** A broad range of housing types in sufficient quantity, location, and affordability levels to meet the lifestyle needs of current and future residents, including those with special needs.
	Goal H-2: An efficient administrative process that recognizes the need for efficient and timely review of residential projects while also ensuring and valuing the need for quality design, environmental review, and planning.
	Goal H-3: Neighborhoods that protect the health, safety, and welfare of the community, and enhance public and private efforts in maintaining, reinvesting in, and upgrading the existing housing stock.
	Goal H-4: Assist in the development, maintenance, modernization, and preservation of affordable housing; provide assistance where feasible for residents to rent or purchase adequate housing in San Bernardino County.
	Goal H-5: Ensure an integrated planning and monitoring system whereby housing, employment, environmental, and other program data are integrated in a cohesive manner to implement the County's housing vision.
Ventura[f]	**Goal 1:** Monitor the rate and distribution of growth within the cities and unincorporated area of the County, and ensure that the population and dwelling unit forecasts of the County General Plan are periodically updated and are consistent with the cities' and County's General Plans and the ability to provide adequate public facilities and services.
	Goal 2: Ensure that the rate and distribution of growth within the County does not exceed the capacity of public facilities and services to meet the needs of the County's population and to protect the public health, safety, and welfare.
	Goal 3: Preserve the condition of the existing housing stock and the continuing affordability of currently affordable units.
	Goal 4: Continue and expand, where feasible, existing housing rehabilitation programs.
	Goal 5: Increase housing opportunities for households of all income levels, with special emphasis on lower-income households, senior citizens, mentally ill, single heads of household, large families, farmworkers, handicapped and homeless.
	Goal 6: Promote a diversity of housing types, tenure, and price.
	Goal 7: Promote housing opportunities for all persons regardless of race, religion, sex, marital status, age, ancestry, national origin, color, or socio-economic status by attempting to eliminate discrimination in housing through support of Federal, State and local fair housing laws and policies.
	Goal 8: Ensure that the Population and Housing Section of the County General Plan and new housing developments are consistent with the goals, objectives and policies of the various Area Plans and other County adopted plans and policies. Ensure that Area Plans are consistent with the goals, objectives and policies of the Population and Housing Section of the County General Plan.
	Goal 9: Ensure that the Population and Housing Section of the County General Plan is kept current by updating population data on an ongoing basis; by reassessing the goals, objectives and policies of the Population and Housing Section; and by evaluating the effectiveness of the Section's programs as specified by State law.

Local Coastal Programs

The Local Coastal Programs (LCPs) are local planning tools to monitor development and permitting in coastal areas. There are three counties and 27 cities within the SCAG region with coastlines that are mandated to prepare LCPs as a result of the California Coastal Act of 1976.[27] The LCPs prepared by these local jurisdictions may contain goals and policies related to housing type, location, and affordability.[28]

3.14.3 ENVIRONMENTAL IMPACTS

3.14.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan would result in significant impacts to the region's population and housing resources, if either of the following would occur:

- Induce substantial unplanned population growth to areas of the region either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., by extending roads and other infrastructure); and/or

- Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

3.14.3.2 Methodology

The methodology for determining the significance of population and housing impacts compares the existing conditions to future (2045) conditions, as required in CEQA Section 15126.2(a).

The Plan includes transportation projects as well as land use and transportation strategies that may influence population, housing and employment growth and distribution. Forecasted land use patterns are developed to accommodate growth projections by identifying distribution and anticipated land uses that may allow for well-planned growth. SCAG holds growth projection numbers constant at the county and regional level, meaning that as the distribution of population, housing and employment changes, the total numbers remain constant. In sum, the Plan includes a growth forecast, land use and transportation strategies, and projected land use patterns which are integrated with the transportation network and

---

27 California Legislative Information. *AB-976*.

28 California Coastal Commission. *Local Coastal Programs*. Available online at: https://www.coastal.ca.gov/lcps.html, accessed August 29, 2019.

investments (see Section 2.0, Project Description). This PEIR evaluates a range of feasible alternatives that consider the possibility of different growth patterns (see **Chapter 4.0, Alternatives**).

Although land use development would occur with or without the Plan, Connect SoCal has the potential to influence growth distribution patterns throughout the region, partially by encouraging new growth in existing urbanized areas and high-quality transit areas (HQTAs). To address this, the analysis in the PEIR covered overall impacts of transportation projects and anticipated land development patterns described in the Plan.

Transportation projects in the Plan were reviewed to identify those that may involve right-of-way (ROW) acquisition and the potential for displacement of homes and businesses. These projects that might require acquisition of right of way (ROW) were analyzed with a 500-foot buffer with a geographic information system (GIS) to generally identify locations within areas of residential land use that had the potential for large displacement of existing homes and businesses**.**

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743, or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.14.3.3 Impacts and Mitigation Measures

Impact POP-1 **Induce substantial unplanned population growth to areas of the region either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., by extending roads and other infrastructure).**

Significant and Unavoidable Impact – Mitigation Required.

The Plan includes land use strategies and transportation projects and supporting strategies that generally encourage population growth in urbanized areas and HQTAs. Land use strategies in the Plan include focusing growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, supporting implementation of sustainability policies, and promoting a green region. Implementation of these strategies may result in increased population densities in some urban

Due to the Plan's land use strategies that focus on compact development, there is potential to induce growth in some areas of the region although overall the Plan accommodates anticipated growth rather than inducing growth.

Transportation strategies included in the Plan such as TSM and complete streets would support increased density in existing urban areas by facilitating travel and would not be expected to induce population growth as these projects are growth accommodating and generally are aimed at improving the existing transportation networks.

Transportation projects such as new and expanded light and heavy rail projects, while not adding new homes or businesses directly, have the potential to create demand for new development around transit stations. However, many communities foresee these types of development, and plan for them accordingly.

Generally, most jurisdictions have started planning for this increase in density in urban areas and the Plan builds on local input (and is not intended to result in re-designation of areas where such re-designation is not approved by the local agency). However, there remains the potential for the Plan's strategies to influence population growth in areas where local general plans have not yet been updated to reflect such growth. Therefore, implementation of the Plan would have the potential to induce unplanned growth in some areas of the region resulting in a significant impact, requiring mitigation measures.

As discussed in **Section 2.0, Project Description**, as well as earlier in this section, the Plan's population, housing and employment growth forecast includes the projected population distribution that would occur in 2045 if the policies and investments included in the Plan were to be implemented. The growth forecast is based on local input, with a distribution of growth in urbanized areas, and within and around HQTAs, and other minor modifications at a regional policy level. The total SCAG region population is expected to increase by approximately 3.2 million persons by 2045. The land use development pattern of the Plan assumes a significant increase in small-lot, single-family, and multi-family housing that is expected to mainly occur in infill locations near transit infrastructure within HQTAs, including livable corridors[29] and neighborhood mobility areas.[30] In 2018, 55 percent of total housing units were single-family units and 45 percent were multi-family units. The Plan projects that in 2045, 39 percent of new homes in the SCAG region will be single-family units and 61 percent multi-family units.[31]

---

29 Most Livable Corridors would be located within HQTAs.

30 Neighborhood mobility areas are conducive to active transportation and include a "complete streets" approach to roadway improvements to encourage replacing single- and multi-occupant automobile use with biking, walking, skateboarding, neighborhood electric vehicles and senior mobility device.

31 SCAG modeling SPM Output, September 13, 2019.

In 2045, 27 percent of households are anticipated to be large-lot single-family units, 23 percent small-lot single-family units, 8 percent townhome units, and 42 percent multi-family units.[32] Government Code Section 65080(b)(2)(B)(ii) requires that the RTP/SCS must accommodate all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan. In accordance with requirement, this projected housing mix would help the region accommodate the projected housing needs over the life of the Plan, especially housing at the lower income categories.

As mandated by State Housing Law as part of the periodic (every eight years) process of updating local housing elements of the General Plan, SCAG is responsible for the allocation of regional housing need to jurisdictions in the region. As discussed in the Regulatory Framework above, SCAG is in the process of developing its 6th cycle RHNA Allocation Plan, which is expected to be adopted in 2020. The current RHNA Allocation Plan, which will cover the planning period from October 2021 through October 2029, is planned for adoption by SCAG's governing body, Regional Council, in October 2020.[33] As discussed above, local jurisdictions are required to plan and zone to accommodate their respective RHNA allocation (housing units). Communities may use the RHNA in land use planning, prioritizing local resource allocation, and in deciding how to address identified existing and future housing needs resulting from population, employment, and household growth.[34]

Implementation of the Plan's land use development pattern would accommodate 48 percent of the region's future household growth and 59 percent of the future employment growth in HQTAs,[35] while keeping jurisdictional totals consistent with local input. It moves the region towards more compact, mixed-use development with a variety of housing types leading to more opportunities for walking and biking, more transit use, and shorter auto trips. Additionally, the integrated transportation investments and land use strategies in the Plan would influence economic (jobs) and household growth in some areas, such as HQTAs, and could remove some obstacles to growth in other parts of the region. Specifically, improved accessibility and connectivity potentially gained from transportation investments in the Plan could facilitate population and economic growth in areas of the region that are currently not developed or underdeveloped. Therefore, implementation of the Plan would have a potential to indirectly induce unplanned growth in some areas of the SCAG region, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

SMM-POP-1: SCAG shall promote the Sustainability Program which will provide technical assistance to local jurisdictions that support local planning and implementation of the Connect SoCal Plan. The program recognizes sustainable solutions to local growth challenges and will result in local plans that promote sustainability through the integration of transportation and land use. For more information please visit: http://sustain.scag.ca.gov/Documents/Sustainable%20Communities%20Program%20Guidelines.pdf.

SMM-POP-2: SCAG shall provide technical assistance to local governments, transit agencies and developers within the region to build housing capacity to compete in the statewide Affordable Housing Sustainable Communities (AHSC) grants program. The AHSC program is one of the few state funding opportunities to address housing shortages within the state. For more information please visit: http://ahsc.scag.ca.gov/Pages/Home.aspx.

SMM-POP-3: SCAG shall host summits that addresses the housing crisis and provides solutions to build more housing. Examples include the 2016 Housing Summit (http://www.scag.ca.gov/SiteAssets/HousingSummit/index.html) and the Eighth Annual Economic Summit (https://www.scag.ca.gov/calendar/Pages/8thEconomicSummit.aspx).

SMM-POP-4: SCAG shall continue to produce the biennial Local Profile reports for all member jurisdictions in the SCAG region for the purpose of data and information sharing. The Local Profiles reports provide a variety of demographic, economic, education, housing, and transportation information that local jurisdictions can utilize like project and program planning. For more information about the most recently release 2019 Local Profiles, please visit: http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and

feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts to induce unplanned growth could be significant and unavoidable even with implementation of mitigation.

Impact POP-2 Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

Significant and Unavoidable Impact – Mitigation Required.

The construction of transportation projects that require expansion of existing or designation of new ROWs have the potential to result in the displacement of existing people and housing, necessitating the construction of replacement housing, thereby constituting a potentially significant impact. In general, transportation projects included in the Plan would attempt to use existing ROWs to the maximum extent feasible. However, the development of some highway, arterial, transit and rail projects included in the Plan would result in the disturbance and/or loss of residential and business uses. Connect SoCal includes system expansion projects, such as new freeway lane miles and new transit track miles, which have the potential to result in the loss of land currently used for residential and business purposes. In past regional transportation plans, SCAG has envisioned a system of truck-only lanes extending from the San Pedro Bay Ports to downtown Los Angeles along the I-710, connecting to an east-west segment, and finally reaching the I-15 in San Bernardino County (the East-West Freight Corridor). However, in March 2018, Metro Board of Directors selected Alternative 5C as the Locally Preferred Alternative for the I-710 Corridor project. This alternative reduced the extent of the truck-only lanes of the project, terminating at Del Amo Boulevard, south of SR-91 and well short of downtown Los Angeles connection to the East-West Freight Corridor along SR-60. Overall, the I-710 corridor project would add one lane in each direction between Long Beach and the SR-60 Freeway.[36] Based on analysis by Metro and Caltrans, Alternative 5C would acquire 109 homes and 158 businesses to expand the freeway, resulting in the displacement of an estimated 436 people.[37] Additional goods movement projects included in the Plan, such as grade separations, also have the potential to displace homes or businesses, as many of the areas where grade separations are proposed would be in developed urban areas.

---

36 Metro The Source. *710 project OK'd but widening deferred.* March 1, 2018. Available online at: https://thesource.metro.net/2018/03/01/board-approves-alternative-for-710-but-defers-decision-on-widening/, accessed October 28, 2019.

37 Los Angeles Times. *Metro staff support a $6-billion widening of the 710 Freeway.* February 13, 2018. Available online at: https://www.latimes.com/local/lanow/la-me-710-freeway-south-20180213-story.html, accessed October 28, 2019.

Geographic information systems (GIS) was used to analyze where major freeway, rail, and transit projects, such as those described above, would intersect areas used for residential development. A 500-foot potential impact zone was drawn around the freeway, rail and transit projects in the Plan to compute the number of acres that could potentially be affected by the construction and operation of major transportation projects in the Plan.

Table 3.14-10, Potential Displacement of Existing Residential and Commercial Land Uses (in Acres), shows the results of the analysis with the potential acreage of these affected areas by county.

Displacement of housing was assessed by evaluating the location of major transportation projects in relation to surrounding land uses and community development. Highway and transit/rail extensions and major interchange projects were assumed to have a higher potential to disrupt or divide existing communities since they would involve the creation of new roadways. Highway widening and other projects along established transportation rights-of-way were assumed to have a lower potential to divide or disrupt existing communities and neighborhoods. As shown in the table, a total of 20,138 homes or businesses could be affected by the Plan's transportation projects. The analysis is based on general descriptions of transportation projects listed in the Plan and is regional and programmatic in nature.

Table 3.14-10
Potential Displacement of Existing Residential and Commercial Land Uses (in Acres)

Land Use	County						Total
	Imperial	Los Angeles	Orange	Riverside	San Bernardino	Ventura

Source: SCAG, 2019

In total, the Plan includes approximately 6,346 new lane miles including freeways, toll roads, major and minor arterials, collectors, high-occupancy toll (HOT), and high-occupancy vehicle (HOV) lanes.[38] These transportation facilities including freeways, toll roads, major and minor arterials, collectors, high-occupancy toll (HOT), and high-occupancy vehicle (HOV) lanes could displace homes and businesses in the region, constituting a significant impact requiring the consideration of mitigation measures.

Communities may be affected by the implementation of land use strategies included in Connect SoCal, that may influence infill development with the potential for displacement of substantial amounts of existing housing necessitating the construction of replacement housing elsewhere. The Plan includes land use strategies that would target the region's growth in the next 25 years into HQTAs, urban areas, and more walkable, mixed-use communities. Supported by other public amenities and transit services, housing in these areas tends to command higher premiums and may be attractive to more affluent residents and unaffordable to current residents in these areas. This phenomenon contributes to gentrification and displacement[39] that has occurred in parts of Los Angeles in recent years, including Hollywood, Venice, Echo Park, and Koreatown. As a result, existing housing in some communities in the region may be displaced and replaced with higher density housing, in particular within HQTAs. The proposed land use patterns are anticipated to accommodate 48 percent of the region's future household growth in HQTAs.[40]

As local governments seek to provide the region's population with housing and jobs in areas with active transportation opportunities or transit amenities, it is anticipated that changes would occur in existing communities. As such, the potential for "gentrification," or the displacement of lower-income residents, could occur if new development brings higher-income residents into a neighborhood. Neighborhood residents in areas of low income and/or enclaves of marginalized minorities may not benefit from planned transit investment, stations, and other amenities (e.g., walkways and bikeways) that come with this new neighborhood revitalization. More affluent and less diverse residents have the potential to displace them because new development near transit areas could be popular and unaffordable. Hence, the potential to directly or indirectly induce substantial population growth and displace a community in such an area could occur.

Concerns about indirect displacement of people have been raised regionwide, even where no changes to land use designations or zoning are planned. The rising cost of housing is currently a concern throughout much of the SCAG region and is reflective of the shortage of housing and stagnant incomes. The Los

40 SCAG modeling, 2019.

Angeles-Long Beach-Anaheim metro area is considered the most cost-burdened housing market in the nation with 46 percent of renters and owners being cost burdened. As set forth by the Department of Housing and Urban Development, those who spend between 30 to 49 percent of their income on housing costs are considered cost-burdened.[41] As population growth continues to outpace the production of housing units, the existing supply of housing is in higher demand which leads to higher rents/prices. This occurrence may result in displacement of renters and the need for people to move from their present location to an area further from their jobs. But there is no substantial evidence that there is a reasonable method to predict how many people may potentially be displaced over the Plan horizon. Additionally, there is no industry standard methodology available to forecast transportation, air, noise or other impacts associated with people who relocate as result of pricing pressures.

Local jurisdictions, including the City of Los Angeles, are evaluating and implementing responses to help relieve pressures on housing supply (e.g., Affordable Housing Linkage Fee, Accessory Dwelling Units Ordinance, Unapproved Dwelling Unit Ordinance, etc.). As properties are redeveloped, there could be temporary displacement of housing units due to the separation of time between removal and replacement of housing. This impact would be temporary, is expected to be spread over the timeframe of the Plan and would be offset by overall increases in housing development under the Plan.

Displacement of low-income renters is also a concern but it is generally a social and economic impact, which is not an impact analyzed under CEQA unless it results in an indirect physical impact.[42] An impact from displacement and/or gentrification is only an impact under CEQA if it results in a physical impact to the environment. As identified in Appendix G, those physical impacts could be from construction of new housing. It may also be from transportation or other impacts related to people driving longer distances. As noted above, there is currently no methodology for estimating the number of people who would relocate and identifying where they would relocate to.

In conclusion, despite the proposed land use strategies that could influence more housing development in urbanized areas, the Plan would have the potential to displace substantial amounts of existing housing, necessitating the construction or replacement of housing elsewhere, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Level Mitigation Measure

See **SMM-POP-4**.

SMM-POP-5: SCAG shall assist cities to identify funding and financing opportunities and potential partnerships for public infrastructure improvements for transit-oriented development and other smart growth projects.

Project Level Mitigation Measures

PMM-POP-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce the displacement of existing housing, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Evaluate alternate route alignments and transportation facilities that minimize the displacement of homes and businesses. Use an iterative design and impact analysis where impacts to homes or businesses are involved to minimize the potential of impacts on housing and displacement of people.

b) Prioritize the use existing ROWs, wherever feasible.

c) Develop a construction schedule that minimizes potential neighborhood deterioration from protracted waiting periods between right-of-way acquisition and construction.

d) Review capacities of available urban infrastructure and augment capacities as needed to accommodate demand in locations where growth is desirable to the local lead Agency and encouraged by the SCS (primarily TPAs, where applicable).

e) When General Plans and other local land use regulations are amended or updated, use the most recent growth projections and RHNA allocation plan.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts, but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing

regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and SCAG's inability to require project-level mitigation measures, this PEIR finds impacts related to displacement of existing housing to be significant and unavoidable.

3.15 PUBLIC SERVICES

This section of the Program Environmental Impact Report (PEIR) describes the existing public services within the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect public services, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible. Other fire protection considerations are addressed in **Section 3.20, Wildfire,** in addition emergency access is addressed in **Section 3.17, Transportation, Traffic, and Safety,** and emergency response and evacuation plans are addressed in **Section 3.9, Hazards and Hazardous Materials.**

3.15.1 DEFINITIONS

County Offices of Emergency Services (OES): The County OESs provide emergency management and preparedness services to the unincorporated areas of the six counties within the SCAG region. Each OES is responsible for alerting and notifying appropriate agencies when disaster strikes, coordinating all agencies that respond, ensuring resources are available and mobilized in times of disaster, developing plans and procedures for response to and recovery from disasters, and developing and providing preparedness materials for the public. These responders include fire departments, police and sheriff department, hospitals, ambulance services, and transportation agencies. Coordination among public and private agencies within various cities and counties make the most use of all available resources in the event of any emergency. While each city and county has its own security procedures, the policies are generally similar. Mutual Aid agreements between cities, counties, and private organizations help to maximize resources and reduce the human suffering associated with disaster situations.

Federal Emergency Management Agency (FEMA): FEMA is a federal agency that has served America since 1979 to support U.S. citizens and first responders to ensure that the nation works together to build, sustain, and improve its capacity to prepare for, protect against, respond to, recover from, and mitigate all hazards.[1] FEMA coordinates the federal government's role in preparing for, preventing, mitigating the effects of, responding to, and recovering from all domestic disasters, whether natural or man-made, including acts of terror. FEMA is part of the DHS.

Governor's Office of Emergency Services (Cal OES): Cal OES is the state agency charged with the responsibility to assist local government in preparing for and responding to any type of natural or

[1] Federal Emergency Management Agency. *About the Agency*. Available online at: http://www.fema.gov/about-agency, accessed March 27, 2019.

manmade disaster in California. Cal OES protects the lives and property, build capabilities, and supports communities for a resilient California. Cal OES has six goals relevant to public services: (1) anticipate and enhance prevention and detection capabilities to protect the state from all hazards and threats; (2) strengthen California's ability to plan, prepare for, and provide resources to mitigate the impacts of disasters, emergencies, crimes, and terrorist events; (3) effectively respond to and recover from both human-caused and natural disasters; (4) enhance the administration and delivery of all state and federal funding, and maintain fiscal and program integrity; (5) develop a united and innovative workforce that is trained, experienced, knowledgeable, and ready to adapt and respond; and (6) strengthen capabilities in public safety communication services and technology enhancements.[2]

Joint Field Office (JFO): A temporary Federal facility established locally to provide a central point for Federal, State, local, and tribal executives with responsibility for incident oversight, direction, and/or assistance to effectively coordinate protection, prevention, preparedness, response, and recovery actions. In the event of multiple incidents, multiple JFOs may be established at the discretion of the Secretary of Homeland Security.

Master Mutual Aid Agreements (MAA): FEMA encourages federal, state, local, and tribal governments to enter into agreements to assist one another. Immediately following the 1994 Northridge earthquake, city and county emergency managers in the CalOES coastal, southern, and inland regions developed a coordinated emergency management concept called the Emergency Managers Mutual Aid (EMMA) system. The purpose of EMMA is to support disaster operations in affected jurisdictions by providing professional emergency management personnel from unaffected areas to support local jurisdictions, Operational Areas, and regional emergency operations during proclaimed emergencies; providing a system, including an organization, information, and forms necessary to coordinate the formal request, reception, assignment, and training of assigned personnel; establishing a structure to maintain this document (the Emergency Managers Mutual Aid Plan) and its procedures; providing for the coordination of training for emergency managers, including Standardized Emergency Management System (SEMS/NIMS) training, emergency management course work, exercises, and disaster response procedures; and promoting professionalism in emergency management.[3]

National Incident Management System/Standardized Emergency Management System (NIMS): The NIMS is a tool for states, counties and local jurisdictions to respond to catastrophic events through better communication and coordination. NIMS provides a consistent nationwide template to enable federal, state, local, and tribal governments and private sector and nongovernmental organizations to work together effectively and efficiently to prepare for, prevent, respond to, and recover from domestic incidents, regardless of cause, size, or complexity, including acts of catastrophic terrorism.[4]

National Preparedness System (NPS): The NPS, also a part of FEMA, is a part of NIM. The NPS is intended to be used by individuals, families, communities, the private and nonprofit sectors, faith-based organizations, and local, state, tribal, territorial, insular area, and federal governments to achieve the National Preparedness Goal.[5]

Transportation Management Centers (TMCs): The California Department of Transportation (Caltrans), in conjunction with the California Highway Patrol (CHP), has created TMCs to rapidly detect and respond to incidents while managing the resulting congestion. For the SCAG region, Caltrans Districts 7, 8, 11, and 12 all have TMCs. [6]

Transportation Security Administration (TSA): The TSA is a component of the DHS and is responsible for security of the nation's transportation systems. The TSA is responsible for security at airports in the SCAG region. With state, local, and regional partners, the TSA oversees security for highways, railroads, buses, mass transit systems, and ports.[7] A vast majority of its resources are dedicated to aviation security and is primarily tasked with screening passengers and baggage.

Unified Coordination Group (UCG): Unified Coordination Group (UCG) is a temporary federal multi-agency coordination center established locally to facilitate field-level domestic incident management activities related to prevention, preparedness, response and recovery when activated by the Secretary of Homeland Security. The JFO provides a central location for coordination of federal, state, local, tribal, nongovernmental and private-sector organizations with primary responsibility for activities associated with threat response and incident support.[8]

United States Coast Guard: The Coast Guard is both a federal law enforcement agency and a military force that operates as part of the DHS in times of peace to enforce the nation's laws at sea, protecting the marine environment, guarding the nation's vast coastlines and ports, and performing vital lifesaving missions. In times of war, or at the direction of the president, the Coast Guard serves as part of the Navy Department, defending the nation against terrorism and foreign threats. Since September 2001, the United States Coast Guard has assumed a dynamic role in protecting major ports. In addition, more than 3,500 volunteer Coast Guard Auxiliary members assist in many Coast Guard mission areas, including Boating Safety and Search and Rescue.[9]

United States Department of Defense (DOD): In the case of a large-scale emergency, the DOD is authorized to provide resources when response and recovery requirements are beyond the capabilities of civilian authorities and these efforts do not interfere with the DOD's core mission or ability to respond to operational contingencies. Requests for Defense Support to Civilian Authorities (DSCA) are made through the local, county, and state authorities as a request for assistance to the federal coordinating official in the appropriate lead federal agency and is normally accompanied by, or submitted after a request from the governor for a disaster declaration from the president. The California National Guard may be activated as part of the DSCA and can provide law enforcement support, crisis management, and consequence management services. Activation of the National Guard for local support during emergencies is done by the governor via CalOES.[10]

United States Department of Homeland Security (DHS): The DHS was established after the September 11, 2001, terrorist attacks as an office to oversee and coordinate a comprehensive national strategy to safeguard the country against terrorism and respond to any future attacks.[11] In 2003, DHS formally became a Cabinet-level department to further coordinate and unify national homeland security efforts. The vision of DHS is to ensure a homeland that is safe, secure, and resilient against terrorism and other hazards.

3.15.1 Fire Protection

3.15.1.1 ENVIRONMENTAL SETTING

3.15.1.1.1 Fire Protection Services

Fire protection within the SCAG region includes a variety of federal, state, county, city and local fire protection agencies. The primary fire protection services occur at the community level with city and county fire departments and fire protection districts providing this service. Also serving as fire protection services are a variety of volunteer fire companies. In addition, there are fire protection agencies that provide fire protection services within state and federal lands. These agencies include but are not limited to federal fire agencies (Bureau of Land Management, National Park Service, National Forest Service, Department of Defense, etc.), state forestry department, airport and harbor fire departments, and in some instances business sponsored fire departments (i.e., refineries). Each agency provides fire protection services within their own area of responsibilities, but they can call upon other agencies for fire support through mutual aid agreements. Generally, fire departments take proactive and preventative measures to provide fire suppression and emergency response services for all private, institutional, and public facilities within their area of responsibility.

Wildfires

Section 3.20, Wildfire, discusses in more detail the wildfire hazards and existing conditions within the SCAG region, as well as identifies the regulatory framework with respect to regulations that address wildfire and evaluates the significance of impacts that could result from the proposed Plan.

The wildfire season in southern California typically lasts six to eight months from summer to fall (although climate change has resulted in drier, hotter weather and longer fire seasons). Hazards arise from a combination of hot weather, the accumulation of dried vegetation, and low moisture content in the air. These conditions, if coupled with high winds and drought, can compound the risk and potential impact of a fire. Fires are usually classified as either urban fires or wildland fires. However, growth into rural areas has increased the number of people living in heavily-vegetated areas where wildlands meet urban development, also referred to as the wildland-urban interface. This trend is spawning a third classification of fires: the urban wildfire. A fire along the wildland-urban interface (as was seen recently in Ventura and Los Angeles counties with the Woolsey Fire) can result in major losses of property and structures.

Three major factors sustain wildfires and allow for predictions of a given area's potential to burn. These factors include fuel, topography, and weather. Certain areas in and surrounding the region are extremely

vulnerable to fires as a result of dense, grassy vegetation combined with a growing number of structures being built near and within rural areas. CAL FIRE has developed maps indicating fire hazard severity zones in each county across California.

Urban Fires

Urban fires occur in developed areas and include structural, chemical, and vehicular-related fires. Structural fires can result from mechanical failures, accidental occurrences, or arson. The building materials used in various structures can limit or be a catalyst for the spread of structural fires. Although structural fires can occur in any developed area, non-sprinklered commercial buildings in downtown areas and dwelling units in lower socio-economic areas appear to be more susceptible to fires, namely due to the age of the structures. Older structures are more susceptible to fire because they were built under older building standards and fire codes, are made from non-fire-resistive construction materials, and do not have internal sprinklers or other fire safety systems.

Urban-Wildland Fire

CAL FIRE has compiled a list of cities with Very High Fire Hazard Severity zones and has developed recommendations to local agencies for proper fire management within those areas. Within the SCAG region, Los Angeles County has 38 cities with such zones, Riverside County has 22, Orange County has 20, San Bernardino County has 15 and Ventura County has eight cities that CAL FIRE has recommended establishing Very High Fire Hazard Severity zones.[1]

Fire Protection Agencies

Fire suppression is the responsibility of various fire departments and districts, which often also employ paramedics for emergency medical services. The SCAG region has more than 100 county, city, or independent fire entities that provide fire prevention/suppression and emergency services throughout the area. Response times vary amongst the agencies, however urban areas usually maintain a standard around 6-minutes or less while response times in rural areas are around 10 minutes. County service covers unincorporated areas, independent fire districts, and municipalities that contract for fire protection and emergency services.

---

1 CAL FIRE. 2019. *Fire Hazard Severity Zones Maps*. Available online at: https://osfm.fire.ca.gov/divisions/wildfire-prevention-planning-engineering/wildland-hazards-building-codes/fire-hazard-severity-zones-maps/ , accessed August 20, 2019.

Bureau of Land Management

The Bureau of Land Management (BLM) is a federal agency that manages the nation's subsurface mineral resources under the U.S. Department of the Interior. The land and minerals under BLM authority include, but are not limited to, forests, mountains, and rangelands.

BLM operates the Fire and Aviation program which works with state and field offices to provide a fire and aviation management program. BLM provides coordination with state offices to provide effective interagency activities and policy through the National Interagency Fire Center (NIFC) in Boise, Idaho. BLM's fire and aviation program has three organizational levels: (1) the national office which provides leadership and oversight, and develops policy, procedures and budgets for the fire and aviation program; (2) state offices which are responsible for coordinating policies and interagency activities within their state; and (3) field offices which are responsible for on-the-ground fire management and aviation activities, often partnering with other agencies to maximize rapid initial attack.[2]

BLM plays a primary role in the nation's wildland fire management efforts and undertakes a broad range of activities to protect the public, natural landscape, wildlife habitat, and recreational areas. BLM trains firefighters in fire suppression, preparedness, predictive services, vegetative fuels management, prescribed fire, community assistance and protection, and education.[3]

National Park Service

The National Park Service (NPS), a federal agency under the U.S. Department of the Interior, helps manage wildland fires in designated National Parks, such as Joshua Tree National Park. The NPS finds wildfires beneficial to ecosystems, but NPS fire staff are trained and equipped to aggressively put out an unwanted fire when it is necessary for resource protection or public safety.[4]

U.S. Forest Service

The National Forest Service (USFS) is a federal agency under the U.S. Department of Agriculture. Similarly, to the National Park Service, the USFS works with other agencies to manage wildland fires that

threaten lives, homes, communities, and natural and cultural resources.[5] The USFS provides assistance with fire protective services in wildland areas, including Angeles National Forest.

California Department of Forestry and Fire Protection (CAL FIRE)

CAL FIRE is an emergency response and resource protection department that protects lives, property, and natural resources from fire; responds to emergencies of all types, and protects and preserves timberlands, wildlands, and urban forests throughout the State of California, through cooperative efforts via contracts and agreements between state, federal, and local agencies to respond to emergencies including wildland and structure fires, earthquakes, floods, hazardous material spills, medical aids, and terrorist attacks.[6] CAL FIRE provides fire protection services to California's privately-owned wildlands and works in collaboration with counties and local governments to provide emergency services. CAL FIRE responds to medical aids; hazardous material spills; swiftwater rescues; search and rescue missions; civil disturbances; train wrecks; floods; earthquakes and more.[7]

Office of Emergency Services (OES)

The OES leads the Department of the Interior's emergency management efforts. The OES develops guidelines for emergency preparedness, response, recovery and mitigation to natural, man-made and technological disasters. The State of California has its own OES (Cal OES), which allows for similar efforts of emergency management on a relatively smaller scale.

CAL OES has three administrative regions, Inland, Coastal, and Southern. All of the counties within the SCAG region are located within the Southern Region. Cal OES coordinates disaster response between state agencies and local governments, and offers guidance and assistance for emergency preparedness, response and recovery. In addition, Cal OES manages Emergency Operations Centers (EOC) in various counties across the state and assists local governments in developing emergency plans.[8]

SCAG County Agencies

Imperial County

Fire protection in Imperial County is managed by the Imperial County Fire Department and OES. The County Fire Department maintains eight stations; these stations are located in the communities of Heber, Seeley, Ocotillo, Palo Verde, Niland, Winterhaven, and the City of the Imperial. Additionally, it contracts fire service with the cities of Brawley, Calipatria, Holtville, Westmorland, Salton City and Salton Sea Beach. Each County station is staffed with a captain, firefighter, and reserve firefighter, and has at least a Type I engine. Average response times are between 8 and 10 minutes.[9] In addition, the OES provides emergency management services for the County/Operational Area including its seven cities/towns and special districts.[10] Six cities in the county maintain their own fire departments.[11]

Los Angeles County

The Los Angeles County Fire Department (LACoFD) serves unincorporated areas of the County as well as 59 cities. In addition to emergency response, the LACoFD also conducts field and business inspections, maintains prevention data systems, reviews new plans and projects, and even serves filming and special events industries. The County is divided into three regions, further split into nine divisions and 22 battalions.[12] Response time goals for LACoFD are five minutes or less for urban areas, 8 minutes for suburban areas, and 12 minutes for rural areas. In addition to the County Fire Department, 20 cities in the County maintain their own fire departments.[13]

Orange County

The Orange County Fire Authority (OCFA) was created in 1995, under a Joint Power Authority established among the cities of Buena Park, Cypress, Dana Point, Irvine, Laguna Hills, Laguna Niguel, Lake Forest, La Palma, Los Alamos, Mission Viejo, Placentia, San Clemente, San Juan Capistrano, Seal beach, Stanton, Tustin, Villa Park, and Yorba Linda to provide fire prevention and emergency services to them and unincorporated areas within the County. The cities of Westminster, Laguna Woods, Rancho

13 Ibid.

Santa Margarita, and Aliso Viejo also contract with the OCFA. There are 79 OCFA stations across the County and 12 cities maintain their own departments.[14,15]

Riverside County

Riverside County contracts with CAL FIRE for management of the Riverside County Fire Department (RCFD). The RCFD operates 94 fire stations across six service areas including 21 cities, although more than half of the stations are located in unincorporated areas. Additionally, the CalFire Riverside Unit serves portions of San Diego and Orange counties, and also operates 18 city fire departments and one community services district (CSD) fire department within Riverside County. The RCFD also assists various cities and communities under mutual and automatic aid agreements.[16]

San Bernardino County

The San Bernardino County Fire Department has a service area of more than 19,000 square miles and provides fire services to all 24 incorporated cities. The Fire Department maintains 65 active stations across six divisions and provides emergency response and fire protection and prevention services. The San Bernardino County Fire Department also manages hazardous waste programs, performs inspections and plan reviews, and assists with safety procedures at special events. The department is comprised of more than 1,000 personnel and maintains a variety of equipment such as boats, ambulances, Snow Cats, and a helicopter.[17]

Ventura County

The Ventura County Fire Protection District (VCFPD) provides fire prevention and suppression and rescue services. The VCFPD serves Camarillo, Moorpark, Ojai, Port Hueneme, Simi Valley and Thousand Oaks, as well as the unincorporated regions, including 860 square miles of forest reserve. The VCFPD is divided into four battalion areas and operates 31 fire stations across the County. The goal for average

response time for the District is under five minutes in urban areas and under seven minutes in rural areas.[18]

3.15.1.2 REGULATORY FRAMEWORK

3.15.1.2.1 Federal

Federal Emergency Management Act (FEMA)

FEMA's mission is to lead the effort to prepare the nation for all hazards and effectively manage federal response and recovery efforts following any national incident. FEMA also initiates proactive mitigation activities, trains first responders, and manages the National Flood Insurance Program and the U.S. Fire Administration.[19]

Disaster Mitigation Act of 2000

The Disaster Mitigation Act of 2000 (42 U.S.C. § 5121 note) was signed into law to amend the Robert T. Stafford Disaster Relief Act of 1988 (42 U.S.C. §5121-5207). Among other things, this new legislation reinforces the importance of pre-disaster infrastructure mitigation planning to reduce disaster losses nationwide, and is aimed primarily at the control and streamlining of the administration of federal disaster relief and programs to promote mitigation activities. Some of the major provisions of the Act include:

- funding pre-disaster mitigation activities;
- developing experimental multi-hazard maps to better understand risk;
- establishing state and local government infrastructure mitigation planning requirements;
- defining how states can assume more responsibility in managing the Hazard Mitigation Grant Program (HMGP); and
- adjusting ways in which management costs for projects are funded.

The mitigation planning provisions outlined in Section 322 of the Act establish performance based standards for mitigation plans and requires states to have a public assistance program (Advance Infrastructure Mitigation—AIM) to develop county government plans. The consequence for counties that

19 FEMA. *About the Agency*. Available online at: https://www.fema.gov/about-agency, accessed August 20, 2019.

fail to develop an infrastructure mitigation plan is the chance of a reduced federal share of damage assistance from 75 percent to 25 percent if the damaged facility has been damaged on more than one occasion in the preceding ten-year period by the same type of event.[20]

3.15.1.2.2 State

California Constitution Article XIII Section 35

Section 35 of Article III of the California Constitution at subdivision (a)(2) provides: "The protection of the public safety is the first responsibility of local government and local officials have an obligation to give priority to the provision of adequate public safety services." Public safety services include fire protection. Section 35 of Article XIII of the California Constitution was adopted by the voters in 1993 under Proposition 172. Proposition 172 directed the proceeds of a 0.50 percent sales tax to be used exclusively for local public safety services. California Government Code (CGC) Sections 30051-30056 provide rules to implement Proposition 172. Section 30056 provides that cities are not allowed to spend less of their own financial resources on their combined public safety services in any given year compared to the 1992-93 fiscal year. Therefore, an agency is required to use Proposition 172 to supplement its local funds used on fire protection, as well as other public safety services. In City of Hayward v. Trustee of California State University (2015) 242 Cal. App. 4th 833, the court found that, Section 35 of Article XIII of the California Constitution requires local agencies to provide fire services and that it is reasonable to conclude that a lead agency will comply with that provision and ensure that public services are provided. (See City of Hayward v. Trustee of California State University [2015] 242 Cal. App. 4th 833, 847, stating "the city has a constitutional obligation to provide adequate fire protection services".)

California Fire Code

Title 24, Part 9 of the California Code of Regulations (CCR) is the California Fire Code. Title 24, Part 9 of the CCR sets forth regulations regarding building standards, fire protection and notification systems, fire protection devices such as fire extinguishers and smoke alarms, high-rise building standards, and fire suppression training. The 2019 California Fire Code is the incorporation of the 2018 International Fire Code of the International Code Council with necessary California amendments. Development under the proposed project would be subject to applicable regulations of the California Fire Code.[21]

---

20 FEMA. 2000. *Disaster Mitigation Act of 2000*. Available online at: https://www.fema.gov/media-library-data/20130726-1524-20490-1678/dma2000.txt, accessed August 20, 2019.

21 International Code Council. *2019 California Fire Code, Title 24, Part 9*. Available online at: https://codes.iccsafe.org/content/CAFC2019, accessed August 20, 2019.

Title 8 California Code of Regulations Sections 1270 and 6773. In accordance with C.C.R., Title 8 Sections 1270 "Fire Prevention" and 6773 "Fire Protection and Fire Equipment," the California Occupational Safety and Health Administration (Cal OSHA) has established minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.[22]

Title 14 California Code of Regulations Division 1.5. These regulations constitute the basic wildland fire protection standards of the California Board of Forestry. They have been prepared and adopted for the purpose of establishing minimum wildfire protection standards in conjunction with building, construction, and development in state recreation areas. Title 14 regulates that the future design and construction of structures, subdivisions, and developments in a state recreation area shall provide for basic emergency access and perimeter wildfire protection measures.[23]

Uniform Fire Code

The Uniform Fire Code (UFC) contains regulations relating to construction, maintenance, and use of buildings. Topics addressed in the code include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, hazardous materials storage and use, provisions intended to protect and assist fire responders, industrial processes, and many other general and specialized fire-safety requirements for new and existing buildings and the surrounding premises.

California Health and Safety Code

State fire regulations are set forth in Sections 13000 *et seq.* of the California Health and Safety Code, which includes regulations for building standards (as set forth in the California Building Code), fire protection and notification systems, fire protection devices, and fire suppression training.[24]

Mutual Aid Agreements (MAA)

The Emergency Managers Mutual Aid (EMMA) system is a collaborated effort between city and county emergency managers in the OES in the coastal, southern, and inland regions of the state. EMMA provides service in the emergency response and recovery efforts at the Southern Regional Emergency Operations Center (REOC), local Emergency Operations Centers (EOCs), the Disaster Field Office (DFO), and community service centers. The purpose of EMMA is to support disaster operations in affected in affected jurisdictions by providing professional emergency management personnel. In accordance with the Master Mutual Aid Agreement, local and state emergency managers have responded in support of each other under a variety of plans and procedures. [25]

California Code of Regulations Division 2 Section 16

The State of California passed legislation creating the California Emergency Management Agency (Cal EMA) and authorizing it to prepare a Standard Emergency Management System (SEMS) program, which sets forth measures by which a jurisdiction should handle emergency disasters. Non-compliance with SEMS could result in the State withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster.

Cal EMA serves as the lead state agency for emergency management in the state. Cal EMA coordinates the state response to major emergencies in support of local government. The primary responsibility for emergency management resides with local government. Local jurisdictions first use their own resources and, as they are exhausted, obtain more from neighboring cities and special districts, the county in which they are located, and other counties throughout the state through the statewide mutual aid system. In California, the Standardized Emergency Management System (SEMS) provides the mechanism by which local government requests assistance. Cal EMA serves as the lead agency for mobilizing the state's resources and obtaining federal resources; it also maintains oversight of the state's mutual aid system.[26]

2018 Strategic Fire Plan for California

Strategic Fire Plans in California have been developed since the 1930s by the Board of Forestry and Fire Protection. The Plan is periodically updated to guide CAL FIRE in providing statewide fire protection of state responsibility areas. The 2018 Plan, an update to the 2010 Plan, reflects the effects of climate change and other environmental changes in the State. The 2018 Plan focuses on fire prevention and suppression, natural resource management, and the collaboration of fire protection and emergency service providers.[27]

California Vehicle Code 21806 VC

California Vehicle Code 21806 VC states that drivers in California must yield to emergency vehicles when they are using sirens and have at least one visible red light. This is to ensure that emergency vehicles safe and timely access for emergency vehicles as they respond to emergency calls.

3.15.1.2.3 Local

County and City General Plan Safety Elements and Public Services and Facilities Elements

In addition to federal and state regulations, cities and counties in the SCAG region also provide regulatory protection and advisement regarding public safety and associated public services. California law requires that a general plan include seven elements (land use, open space, conservation, housing, circulation, noise, and safety). Many jurisdictions incorporate policies related to public services into the Safety Element. Other jurisdictions choose to prepare a separate (optional) element dealing with public services and facilities issues.

California Code of Regulation Section 65302(g) specifically provides that a city may adopt the county's safety element if the county's element "is sufficiently detailed containing appropriate policies and programs for adoption by a city." The safety element must include methods to reduce the potential risk of fires, floods, earthquakes, landslides, and other hazards. Other locally relevant safety issues, such as emergency response, hazardous materials spills, and crime reduction, may also be included.[28] Some local jurisdictions have also incorporated their hazardous waste management plans into their safety elements. In addition, the safety element may be used to establish programs and policies that promote

28 California Legislative Information. 1965. *ARTICLE 5. Authority for and Scope of General Plan [65300-65303.4].*

neighborhood, institutional, governmental, and business safety. The safety element must identify and map urban fringe and rural-residential areas that are prone to wildfires, adequate evacuation routes and peak load water supplies to reduce fire hazards. The policies of the safety element form the basis of adopted fire safe ordinances and strategic fire defense system zoning. Several jurisdictions have also adopted a Public Services and Facilities Element that establishes goals, objectives, policies and standards for public services and utilities, including emergency response standards.

The safety elements and public services and facilities elements of the county general plans within the six-county SCAG region establish the following fire protection service standards at a County level:

Imperial County

Fire Response Standards: The Imperial County General Plan does not establish fire response standards for unincorporated areas.[29] Incorporated cities within Imperial County have established fire response standards. For instance, the City of El Centro's standard fire response time is approximately 7 to 10 minutes for emergencies and 10 to 15 minutes for non-emergencies.[30]

Los Angeles County

Fire Response Standards: According to the Safety Element of the Santa Clarita Valley Area Plan, the Los Angeles County Fire Department (LACFD) has adopted a goal of responding to calls in urban areas within five minutes, in suburban areas within eight minutes, and in rural areas within 12 minutes (Policy S3.3.1).[31] Incorporated cities within Los Angeles County have also established fire response standards.

Orange County

Fire Response Standards: In accordance with the Insurance Services Office (ISO) suggested standards, ultimate fire protection rating shall be maintained by Orange County's General Plan land use categories as follows: (1) ISO 3 for all urban developments including Residential (1C and 1B), Commercial (2A and 2B), Employment (3.0) and Public Facilities (4.0) which are within 5 miles from a fire station and less than 1,000 feet from a hydrant; and (2) ISO 4 for Rural Residential (1A) which are within 5 miles from a fire station and less than 100 feet from a hydrant. For areas greater than 5 miles or 1,000 feet, the ISO

suggested standard is 9. Fire/paramedic facilities shall be sited in locations so as to assure efficient fire rescue and paramedic response for the service area. General criteria for site selection shall include:[32]

- Call response time: for 80 percent of the service area, first fire engine to reach the emergency scene within 5 minutes and paramedic to reach the scene within 8 minutes
- Land use compatibility: stations shall be located in commercial or industrial, or open space zones in order to avoid disturbance to residential areas wherever possible
- Street access: stations shall be located adjacent to arterial highways with controlled traffic signalization

Incorporated cities within Orange County have also established fire response standards.

Riverside County

Fire Response Standards: According to the Riverside County Fire Department Strategic Plan 2009-2029, the Riverside County Fire Department considers National Fire Protection Association (NFPA) Standard 1710 as a guideline for fire station location methodology, which calls for an engine company within 4 minutes of travel time to fire incidents and EMS calls, and a full first-alarm group within 8 minutes, all for a minimum of 90 percent of annual incidents.[33] Incorporated cities within Riverside County have also established fire response standards.

San Bernardino County

Fire Response Standards: The San Bernardino County Fire Department established fire response standards for unincorporated areas, depending on service area type. For example, the response goal for urban areas is less than 4 minutes for the first arriving unit and for rural areas the response goal is 10 minutes for the first arriving unit.[34] Incorporated cities within San Bernardino County have established fire response standards.

34 San Bernardino County Fire Department. 2009. *Service Level and Deployment Goal Report*.

Ventura County

Fire Response Standards: The Ventura County Fire Protection District's goal is to maintain an average emergency response time under five minutes in urban areas and under seven minutes in rural areas.[35] Incorporated cities within Ventura County have also established fire response standards.

3.15.1.3 ENVIRONMENTAL IMPACTS

3.15.1.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Connect SoCal Plan would result in significant impacts to fire protection services, if the following could occur:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.

3.15.1.3.2 Methodology

The methodology for determining the significance of impacts on fire services compares existing conditions to the expected future use of fire service under the Plan. The criteria above were applied to compare current conditions to future 2045 Plan conditions. The analysis of these impacts is programmatic at the regional level.

The need for or deficiency in adequate fire and emergency response services in and of itself is not a CEQA impact, but a social or economic impact. (*City of Hayward v. B'd of Trustees* (2015) 242 Cal.App. 4th 833, 843. In accordance with CEQA, this PEIR analysis focuses on the extent to which the Plan promotes growth patterns resulting in a need for additional fire protection services that results in the construction of new facilities or additions to existing facilities. The impact from that construction and/or facilities operation would result in a potential impact to the environment. An increase in population, by itself, would not increase demand for fire protection services and associated facilities. Fire protection service needs are dependent on various factors, including the size of the service population and the geographic area served, the number and types of calls for service, the characteristics of a project and its surrounding community as well as available existing facilities and staffing in an area. This PEIR, analyzes the potential for the Plan to result in the need for new fire protection service facilities (i.e., fire stations) and

35 Ventura County Planning Division. *Ventura County General Plan: Public Facilities & Services Appendix*. Available at: https://cdm16255.contentdm.oclc.org/digital/collection/p266301ccp2/id/546, accessed November 5, 2018.

the associated potential for construction and subsequent operation of such facilities to cause physical environmental impacts.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in **Chapter 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.15.1.3.3 Impacts and Mitigation Measures

Impact PSF-1 **Result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.**

Significant and Unavoidable Impacts - Mitigation Required.

Impacts to fire protection services are associated with the physical impacts that would occur as a result of construction and operation of new facilities. Service ratios and response times are tools jurisdictions use to determine the need for such facilities, but do not necessarily indicate a significant impact under CEQA. The ability to provide adequate fire protection services is dependent on numerous factors including staffing levels, mutual aid agreements, deployment strategies, and technological advances in equipment. In conformance with California Constitution Article XIII Section 35(a)(2), existing policies, procedures, and practices related to fire protection and emergency services, fire departments would maintain acceptable emergency response times through the provision of additional personnel and equipment as needed, as well as potentially constructing new or expanding existing fire and emergency response facilities.

As described above, fire and emergency services in the SCAG region are provided by numerous agencies within multiple jurisdictions. Depending upon the timing, location, and duration of construction activities, several of the proposed projects, including grade crossings, arterials, interchanges, and

auxiliary lanes, as well as development project construction could delay emergency vehicle response times or otherwise disrupt delivery of emergency services.

Each jurisdiction has a methodology for determining appropriate response times, service ratios and needed facilities. As transportation projects and development projects are constructed, depending upon the timing, location, and duration of construction activities, projects, including grade crossings, arterials, interchanges, widenings, HOV and HOT lanes, as well as development projects could result in temporary changes in demand for fire services and fire vehicle response times.

The transportation projects included in the Plan that involve transit, passenger rail, and active transportation are concentrated in urban and suburban areas, including Palm Springs, Riverside, San Bernardino, Anaheim, Irvine, the Los Angeles Basin, the San Gabriel Valley, the San Fernando Valley, Santa Clarita, Palmdale, and Lancaster. As these urban and suburban areas increase in density, additional fire protection and emergency response services and associated facilities would be required to meet emergency response standards. Such increased density in these areas would have the potential to exceed the capacity of existing fire stations to provide adequate response, thus requiring either the expansion of existing stations to accommodate additional equipment and greater number of personnel or the construction of new stations, which are more strategically located and capable of reducing response time within a denser urban pattern of development. In addition, fire protection and emergency response services may need to be able to expand where development occurs in the wildland/urban interface in response to increased wildfire risk.

Construction activities associated with transportation and development projects may temporarily increase demand on fire protection and emergency medical services. Construction activities could potentially expose combustible materials (e.g., wood, plastics, sawdust, coverings, and coatings) to fire risks from machinery and equipment sparks, exposed electrical lines, chemical reactions in combustible materials and coatings and lighted cigarettes. However, in compliance with Cal-OSHA requirements, construction managers and personnel for individual development projects would be trained in emergency response and fire safety operations. Additionally, fire suppression equipment (e.g., fire extinguishers) specific to construction are required to be maintained on individual development sites.

By closing off one or more lanes of a roadway, response times could temporarily and intermittently increase as fire vehicles take longer routes due to construction activity. The closure of lanes could also potentially cause traffic delays and inhibit access when responding to service calls. Generally, impacts to emergency response vehicles during construction activities are reduced through adherence to roadway encroachment permits. Traffic control plans are typically required to further reduce impacts on traffic which would also reduce impacts to fire and emergency response vehicles. Refer to **Section 3.17,**

Transportation, Traffic, and Safety, for Mitigation Measures **SMM-TRA-1**, **PMM-TRA-1**, and **PMM-TRA-2**, which pertain to issues of this nature. These impacts would be brief in nature and would be unlikely to result in a determination by a jurisdiction that new facilities would be required. Therefore, construction impacts would be less than significant.

By 2045, the Plan area would grow by approximately 3.2 million people with 60 percent of new homes and 73 percent of new jobs in Growth Priority Areas which are primarily areas that are currently developed. As such, existing facilities and services could become overburdened during the lifetime of the Plan.

While the Plan would increase traffic on local roadways, there is no direct relationship between increased travel delay and emergency response times; California State law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed (CVC 21806). The impact on response times and overall fire service is not proportional to increasing traffic (see **Section 3.17, Transportation, Traffic and Safety)**. Generally, multi-lane arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. On congested roadways, multi-lane arterial roadways with continuous center left-turn lanes facilitate emergency access when the thru lanes experience delays.

In some cases, depending on the pattern of development, it could be necessary to construct new facilities to maintain adequate response times, equipment, and personnel. While construction of fire protection facilities does not typically result in substantial environmental impacts,[36] the location, size, design, and proximity to sensitive receptors of new facilities are currently unknown. Construction and operation of fire stations could have impacts similar to other development projects analyzed throughout this PEIR, including impacts to aesthetics, air quality, noise, cultural resources, and utilities. Noise impacts of emergency service provider facilities, which are unique to this type of operation, can affect nearby sensitive receptors but such impacts are unpredictable at this time. In any event, construction of these facilities would comply with all applicable, laws, regulations, and ordinances, and mitigation measures would be required to address any potentially significant impacts.

---

36 Fire protection facilities are generally anticipated to be located on infill lots that are between 0.5 and 1 acre in size. In urbanized areas new facilities would not involve expansion of the urban sphere beyond current boundaries and, thus, there would be no need for new or expanded infrastructure. As an example, in the City of Los Angeles, there are four basic configurations for fire stations, the typical standard fire/paramedic station consists of a 15,250-square foot building on a parcel that is approximately one acre. Based on the urban location and the relatively small size of typical facilities, the construction of a new fire facility or expansion of an existing facility would likely qualify for an infill exemption or result in less–than-significant impacts with standard regulatory compliance measures and design features.

While the PEIR analyzes anticipated effects of regional transportation projects and growth related to air quality, noise, traffic, utilities, and other environmental impact areas, given the increased growth as well as densified development (e.g., more families living and/or working there), implementation of Connect SoCal could affect the need for construction of new or physically altered fire protection and emergency response facilities in order to maintain acceptable service ratios. Although the location and size of such facilities is not yet known, impacts could occur, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

See **SMM PSP-1** through **SMM PSP-4.**

SMM PSF-1): SCAG shall assist planners, first responders, and recovery teams in a supporting role, in three key areas, before a major emergency and during the recovery period:

- Provide a policy forum to help develop regional consensus and education on security policies and emergency responses.
- Assist in expediting the planning and programming of transportation infrastructure repairs from major disasters.
- Encourage integration of transportation security measures into transportation projects early in the project development process by leveraging SCAG's relevant plans, programs, and processes, including regional ITS architecture. An example includes SCAG's participation in the development of the Southern California Catastrophic Earthquake Preparedness Plan.[37]

SMM PSF-2: SCAG shall facilitate minimizing future impacts to fire protection services through information sharing regarding Fire-wise Land Management (data regarding fire-resistant vegetation, fire-resistant materials, locations where development is potentially hazardous in regard to wildfire, and management of brush and other fire risks in the immediate vicinity of development in areas with high fire threat) with county and city planning departments.

---

Project Mitigation Measures

See **PMM-PSP-1.**

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to the need for new or physically altered fire protection facilities could be significant and unavoidable even with implementation of mitigation.

3.15.2 Police Protection

3.15.2.1 ENVIRONMENTAL SETTING

3.15.2.1.1 Police Protection Services

Law enforcement is provided by a variety of federal, state, county, city, and other local law enforcement agencies. Primary law enforcement is at the community level, with city police and County Sheriff's departments providing this service. Additionally, there are more specialized law enforcement agencies that assist in law enforcement at the community or resource level. These specialized agencies include, but are not limited to State Highway Patrol, School Police, Airport Police, Transit Police, Park Rangers (federal, state, County, and City), and a wide variety of federal agencies (FBI, ATF, etc.). In general, law enforcement agencies provide first response to all emergencies, perform preliminary investigations, and provide basic patrol services in their service area.

California Highway Patrol (CHP)

The California Highway Patrol (CHP) is a statewide law enforcement agency with jurisdiction over all highways and city roads. CHP officers are responsible for responding to car crashes, disabled vehicles, and other impediments to traffic flow. Although its primary mission is related to transportation, the CHP has broad enforcement power over state law.

Imperial County

Imperial County receives police protection from the Imperial County Sheriff's Office (ICSO), headquartered in El Centro. Substations are located in Niland, Ocotillo, Palo Verde, Salton City, and Winterhaven. The ICSO employs approximately 125 sworn officers and 95 personnel for an officer-to-resident ratio of about 1.5 sworn officers per 1,000 persons. The response time for priority and non-priority calls is approximately 10 to 12 minutes.[1] Additionally, each city in the County maintains its own police departments to serve their incorporated areas.

Los Angeles County

Law enforcement in Los Angeles County is provided by the Los Angeles Sheriff's Department (LASD), which is headquartered in the City of Los Angeles. With nearly 18,000 employees, LASD is the largest

[1] Imperial County. 1993. *Imperial County General Plan Environmental Impact Report*. Available at: http://www.icpds.com/CMS/Media/J-References,-Persons,-Agencies-Consulted.pdf, accessed Septermber 18, 2019.

sheriff's department in the U.S. LASD provides general law enforcement services to unincorporated Los Angeles County as well as contracted cities. Of the County's 88 municipalities, 42 contract with LASD for local police protection. LASD also provides services to 216 facilities, hospitals, and clinics, nine community college, the Metropolitan Transit Authority, and 37 Superior Courts. LASD desired officer-to-population ratio is one officer per 1,000 residents. The LASD's goal response time for emergency calls is 10 minutes or less.[2]

Orange County

The Orange County Sheriff-Coroner Department (OCSD) provides police services to unincorporated areas of Orange County as well as contracting cities of Aliso Viejo, Dana Point, Laguna Hills, Laguna Niguel, Laguna Woods, Lake Forest, Mission Viejo, Rancho Santa Margarita, San Clemente, San Juan Capistrano, Stanton and Villa Park. The OCSD headquarters are located in the City of Santa Ana. The department is split into five divisions: Noth, South, and West Operations Divisions, the Airport Divisionm, and the Harbor Patrol division. The OCSD is a large, multi-faceted law enforcement agency served by approximately 3,800 sworn and professional staff members and over 800 reserve personnel.[3] The OCSD provides first responder patrol services and hazardous devices services to all law enforcement agencies in the County.

Riverside County

The Riverside County Sheriff's Department provides community policing and operates the County's correctional facilities. The Department is headquartered in the City of Riverside and provides services to the unincorporated areas of the County as well as the cities of Calimesa, Canyon Lake, Coachella, Eastvale, Indian Wells, Jurupa Valley, Lake Elsinore, La Quinta, Menifee, Moreno Valley, Morongo Indian Reserve, Norco, Palm Desert, Perris, Rancho Mirage, San Jacinto, Temecula, Wildomar. The Department employs approximately 4,500 people, roughly 2,300 of which are sworn personnel. There are nine Sheriff Department stations throughout the County and five adult correction or detention centers. The Department has established a staffing requirement of one sworn officer per 1,000 population.[4]

San Bernardino County

The San Bernardino County Sheriff's Department (SBCSD) polices the largest geographical county in the nation. It serves over 2.1 million residents across 15 patrol stations. SBCSD employs over 3,800 employees and utilizes over 1,800 volunteers. The SBCSD also maintains three correctional facilities: the West Valley Detention Center in Rancho Cucamonga; the Glen Helen Rehabilitation Center, a two unit, male and female-inmate facility in Devore; and, the Central Rehabilitation Center that houses federal inmates for the United States Marshall Service located in the City of San Bernardino.[5]

Ventura County

The Ventura County Sheriff's Office provides primary law enforcement services in unincorporated areas of Ventura County and the contract cities of Ojai, Thousand Oaks, Camarillo, Moorpark and Fillmore. This jurisdiction makes up almost 95 percent of the County's land area and approximately half of the population. The Department is divided into seven divisions, based on location, and is headquartered at 800 South Victoria Avenue in the City of Ventura. The Sheriff's Office employees approximately 1,250 personnel, including allocations for more than 740 sworn positions.

3.15.2.2 REGULATORY FRAMEWORK

3.15.2.2.1 State

All law enforcement agencies within the State of California are organized and operate in accordance with the applicable provisions of the California Penal Code. This code sets forth the authority, rules of conduct, and training for peace officers. Under state law, all sworn municipal and county officers are state peace officers.

California Constitution, Article XIII Section 35.

Section 35 of Article XIII of the California Constitution was adopted by the voters in 1993 under Proposition 172. It directed the proceeds of a 0.50 percent sales tax to be used exclusively for local public safety services, including police. CGC §§30051-30056 provide rules to implement Proposition 172. Section 30056 provides that a city is not allowed to spend less of its own financial resources on its combined public safety services in any given year compared to its 1992-93 fiscal year. Therefore, an agency is required to use Proposition 172 to supplement its local funds used on police protection, as well as other

---

5 San Bernardino County Sheriff's Department. 2017. *2017 Annual Report* Available online at: http://wp.sbcounty.gov/sheriff/wp-content/uploads/sites/17/2017-annual-report_reduced.pdf, accessed August 28, 2019.

public safety services. As discussed in the Regulatory Framework" for Fire Protection and Emergency Services, in the *City of Hayward v. Trustee of California State University* (2015) 242 Cal. App. 4th 833, the court found that, Section 35 of Article XIII of the California Constitution requires local agencies to provide fire services and that it is reasonable to conclude that a lead agency will comply with that provision and ensure that public services are provided. It is reasonable to analogize that a similar analysis would apply to police services as Section 35 of Article XIII includes a responsibility for cities to give priority to public safety services, which includes police services. See the "Regulatory Framework" for Fire Protection and Emergency Services, above, for further discussion.

California Penal Code

All law enforcement agencies within the State of California are organized and operated in accordance with the applicable provisions of the California Penal Code. This code sets forth the authority, rules of conduct, and training for peace officers. Under state law, all sworn municipal and county officers are state peace officers.

California Emergency Services Act

In 2008, Governor Schwarzenegger signed AB 38, the California Emergency Services Act, which merged the duties, powers, purposes, and responsibilities of the Governor's Office of Emergency Services and the Governor's Office of Homeland Security into a new cabinet-level agency, the California Emergency Management Agency (Cal EMA).[6] Cal EMA is responsible for assuring the state's readiness to respond to and recover from natural, human-made, and war-caused emergencies, and for assisting local governments in their emergency preparedness, response, and recovery efforts. The legislation authorizes Cal EMA to prepare a Standard Emergency Management System (SEMS) program, which sets forth measures by which a jurisdiction should handle emergency disasters.[7] Non-compliance with SEMS could result in the State withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster.

Cal EMA serves as the central contact point in the state for any emergency or imminent disaster. It coordinates the notification of appropriate state administering agencies that may be required to respond, as well as the emergency activities of all state agencies in the event of an emergency. In doing so, Cal EMA does not focus on security specifically, but rather more broadly on addressing all potential incidents

---

6 California Legislative Information. *Assembly Bill No. 38*.

7 California Emergency Management Agency. *SEMS Guidelines.* Available online at: https://www.caloes.ca.gov/PlanningPreparednessSite/Documents/12%20SEMS%20Guidelines%20Complete.pdf, accessed August 28, 2019.

that could impact the state, such as earthquakes, fires, floods, and terrorist attacks. Furthermore, Cal EMA coordinates with federal agencies, such as the DHS and FEMA, as well as other state and local agencies such as the CHP. California's vision, mission, and principles for emergency management, as well as goals and objectives are located in its publication "Strategic Plan 2010-2015 – Keeping California Safe."[8]

While Cal EMA serves as the lead State agency for emergency management and coordinates the State response to major emergencies in support of local government. The primary responsibility for emergency management resides with local government. SEMS provides the mechanism by which local government requests assistance from Cal EMA, and as such, Cal EMA maintains oversight of the State's mutual aid system. Cal EMA may task State agencies to perform work outside their day-today and statutory responsibilities and serves as the lead agency for obtaining federal resources.

13 California Code Regulations Division 2

Division 2 of Title 13 of the California Code Regulations (CCR) governs the operations of the California Highway Patrol.[9]

California Vehicle Code 21806 VC

California Vehicle Code 21806 VC states that drivers in California must yield to emergency vehicles when they are using sirens and have at least one visible red light. This is to ensure that emergency vehicles safe and timely access for emergency vehicles as they respond to emergency calls.

3.15.2.2.2 Local

County and Cities General Plan and Safety Elements

Local planning policies related to public services and recreation are established in each jurisdiction's general plan. In general, jurisdictions have policies in place that state that public services must be provided at the same time (or in advance of) need for that service. In addition to these general policies,

---

8 California Emergency Management Agency. 2015. *Strategic Plan 2014-2018*. Available online at: https://www.caloes.ca.gov/NewsMediaSite/Documents/Cal%20OES%20Strategic%20Plan%20Summary%20Booklet%20(FINAL).pdf, accessed March 22, 2019.

9 California Code of Regulations. *Division 2. Department of the California Highway Patrol.* Available online at: https://govt.westlaw.com/calregs/Browse/Home/California/CaliforniaCodeofRegulations?guid=IDC5A8260D46811DE8879F88E8B0DAAAE&originationContext=documenttoc&transitionType=Default&contextData=(sc.Default), accessed August 28, 2019.

jurisdictions may have more specific policies tailored to performance objectives, such as those outlined below.

Policies and strategies for police protection services generally include language pertaining to the development of law enforcement programs to reduce and control crime, the planning of future law enforcement facilities concurrently with growth, and the prevention of crime through education. Many jurisdictions also have specific goals, such as a maintaining a certain ratio of sworn officers to citizens, reducing response times, or reducing the overall number of crimes in the community.

Applicable County General Plan elements regarding police protection are identified below.

Imperial County

Police Response Standards: The Imperial County General Plan does not establish police response standards for unincorporated areas.[10] However, individual jurisdictions have set standards, for instance, the El Centro Police Department's goal is to have 1.75 police officers per 1,000 population.[11]

Los Angeles County

Police Response Standards: To effectively and efficiently fulfill all of its functions, the Sheriff's Department requires a staff level of one deputy sheriff per each 1,000 population.[12] Incorporated cities within Los Angeles County have also established police response standards.

Orange County

Police Response Standards: The adequacy of Sheriff service for land use proposals is determined through the Environmental Impact Report (EIR), Fiscal Impact Report (FIR), and Annual Monitoring Report (AMR) review processes.[13] Incorporated cities within Orange County have also established police response standards.

13 OC Development Services. *Orange County General Plan: Chapter V. Public Services & Facilities Element.* Available online at: http://www.ocpublicworks.com/ds/planning/generalplan, accessed November 5, 2018.

Riverside County

Police Response Standards: The Riverside County Sheriff's Department has established a goal of maintaining 1.5 sworn officers per 1,000 population, as recommended by the International City Managers' Association (Riverside County Integrated Project (RCIP)).[14,15] According to EIR No. 441 for the 2003 RCIP General Plan, the Riverside County Sheriff's Department has established the following criteria for its staffing requirements in unincorporated areas of Riverside County:[16]

- One sworn officer per 1,000 population (Mitigation Measure 4.15.C for EIR No. 441 specifies the use of a 1.5-officer per 1,000 population standard for new development mitigation purposes)
- One supervisor and one support staff employee per seven officers
- One patrol vehicle per three sworn officers
- One school resource officer per school

Incorporated cities within Riverside County have also established police response standards. For instance, the City of Riverside endeavors to provide minimum response times of seven minutes on all Priority 1 calls and 12 minutes on all Priority 2 calls (Policy PS-7.5).[17]

San Bernardino County

Police Response Standards: The San Bernardino County General Plan does not establish police response standards for unincorporated areas.[18] Incorporated cities within San Bernardino County have established police response standards.For example, the City of Redlands desires a respone time of 4-5 minutes.[19]

Ventura County

Police Response Standards: The Ventura County General Plan does not establish police response standards for unincorporated areas.[20] Incorporated cities within Ventura County have established police response standards. For instance, the City of Fillmore has established a desired level of one patrol officer per 1,000 population.[21]

3.15.2.3 ENVIRONMENTAL IMPACTS

3.15.2.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan would result in significant impacts to police protection services, if any of the following would occur:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered police facilities, need for new or physically altered police facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.

3.15.2.3.2 Methodology

The methodology for determining the significance of impacts on public services compares existing conditions to the expected future use of police services under the Plan. A review of existing police facilties was conducted to determine the potential need for new or expanded facilities. This analysis was undertaken at the regional level and appropriately does not include details for each jurisdiction within the region. The criteria above were applied to compare current conditions to future 2045 Plan conditions. The analysis of these impacts is programmatic at the regional level.

The need for or deficiency in adequate police services in and of itself is not a CEQA impact, but a social or economic impact (*City of Hayward v. B'd of Trustees* [2015] 242 Cal.App. 4th 833, 843). In accordance with CEQA, this PEIR analysis focuses on the extent to which the Plan promotes growth patterns resulting in a need for additional police services that results in the construction of new facilities or additions to existing facilities. The impact from that construction and/or facilities operation would result in a potential impact to the environment. An increase in population, by itself, would not increase demand for police protection

---

20 Ventura County Planning Division. 2015. *Ventura County General Plan: Public Facilities & Services Appendix*. Available online at: https://docs.vcrma.org/images/pdf/planning/plans/GENERAL-PLAN-Public-Facilities-Services-Appendix.pdf, accessed November 5, 2018

services and associated facilities. Police service needs are dependent on various factors, including the size of the service population and the geographic area served, the number and types of calls for service, the characteristics of a project and its surrounding community as well as available existing facilities and staffing in an area. This PEIR, analyzes the potential for the Plan to result in the need for new police protection facilities (i.e., police stations) and the associated potential for construction and subsequent operation of such facilities to cause physical environmental impacts.

The mitigation measures in the PEIR are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.15.2.3.3 Impact and Mitigation Measures

Impact PSP-1 **Result in substantial adverse physical impacts associated with the provision of new or physically altered police facilities, need for new or physically altered police facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.**

Significant and Unavoidable Impacts - Mitigation Required.

Impacts to police protection services are associated with the physical impacts that could occur as a result of construction and operation of new facilities. Service ratios and response times are one tool jurisdictions use to determine the need for such facilities, but do not necessarily indicate a significant impact under CEQA.

New LRT and commuter rail routes/extensions in Los Angeles, Orange, Riverside, and San Bernardino counties, as well as transit-related projects, would involve the development of new transit stations. Operation of these new transit stations would require public protective security services. In some cases, such as with Metro, the governing transit authority, provides security as an element of the project, which would reduce the need for public protective security services. Overall, the Plan's strategies to encourage increased transit use could also result in an increased need for protective security services.

The Plan also includes transportation projects and land use strategies that focus new growth in HQTAs and encourage more walkable, mixed-use communities. According to the Plan, it is projected that approximately 48 percent of the new household growth and 59 percent of the new employment growth would be planned in HQTAs. These HQTAs are concentrated in suburban and urban areas, including Palm Springs, Riverside, San Bernardino, Anaheim, Irvine, the Los Angeles Basin, the San Gabriel Valley, the San Fernando Valley, Santa Clarita, Palmdale, and Lancaster. As these areas experience more people working and living there, additional police services would be required. As a result, the Plan would have a potential to increase the need for public protective services, usually in proportion to densified environment. This would likely increase the staffing of sworn officers and create a potential need to construct new stations to ensure acceptable levels of service that would have the potential to result in physical alterations and related significant effects on the environment. As discussed in **Section 3.15.1 Public Services, Fire**, it is also the case that the construction of police protection facilities does not typically result in substantial environmental impacts, however the location, size, design, and proximity to sensitive receptors of new facilities are currently unknown.

Police services are provided by several agencies within multiple jurisdictions. Local agencies are required to determine the degree of impact to police services and comply with county and city requirements to protect public safety.

While the Plan would increase traffic on local roadways, there is not a direct relationship between predicted travel delay and emergency response times as California State law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed (CVC 21806). Generally, multi-lane arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. On congested roadways, multi-lane arterial roadways with continuous center left-turn lanes facilitate emergency access when the thru lanes experience delays. Additionally, several jurisdictions can re-signal timing remotely for police operations during planned events, such as special events.

In some cases, depending on the pattern of development, it could be necessary to construct new facilities to maintain adequate response times, equipment, and personnel. Construction of police protection facilities themselves may not result in environmental impacts (depending on the size of the facility). In planning new facilities, local jurisdictions take in to account growth projections.

Construction sites can pose an attractive nuisance with respect to vandalism and theft. Depending upon the timing, location, and duration of construction activities, several of the proposed transportation projects, including grade crossings, arterials, interchanges, HOT lanes, HOV lanes, and auxiliary lanes, as well as development project construction, could delay police vehicle response times or otherwise delay

the response of police services. By closing off one or more lanes of a roadway, response times could temporarily and intermittently increase as police vehicles take longer routes due to construction activity. The closure of lanes could also potentially cause traffic delays and ultimately inhibit access when responding to service calls. Generally, police response times during project construction are reduced through adherence to road encroachment permits. Traffic control plans are typically required to further reduce impacts on traffic which would also reduce impacts to police response.

Noise impacts of police stations, which are unique to this type of operation, can affect nearby sensitive receptors but such impacts are unpredictable at this time since the location and design of new police stations, as well as the proximity to sensitive receptors, are currently unknown. In any event, construction of these facilities would comply with all applicable, laws, regulations, and ordinances, and mitigation measures would be required to address any potentially significant impacts.

While the PEIR analyzes anticipated effects of regional transportation and growth related to air quality, noise, traffic, utilities, and other environmental impact areas, given the increased growth as well as densified development, the Plan could contribute to the need for construction of new or physically altered police facilities in order to maintain acceptable service ratios. Although the location and size of such facilities is not yet known, and impacts could occur, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

See **SMM PSF-1.**

SMM PSP-1 SCAG shall facilitate minimizing future impacts to library services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to Map Gallery, GIS library, and GIS applications, and promote acceptable service ratios regarding library services.

SMM PSP-2: SCAG shall help to enhance the region's ability to deter and respond to acts of terrorism, human-caused or natural disasters through regionally cooperative and collaborative strategies. SCAG shall work with local officials to develop regional consensus on regional transportation safety, security, and safety security policies.

SMM PSP-3: SCAG shall help to enhance the region's ability to deter and respond to terrorist incidents, human-caused or natural disasters by strengthening relationship and coordination with transportation. This will be accomplished by the following:

- SCAG shall work with local officials to develop regional consensus on regional transportation safety, security, and safety security policies.
- SCAG shall encourage all SCAG elected officials are educated in NIMS.
- SCAG shall work with partner agencies, federal, state and local jurisdictions to improve communications and interoperability and to find opportunities to leverage and effectively utilize transportation and public safety/security resources in support of this effort.

SMM PSP-4: SCAG shall encourage and provide a forum for local jurisdictions to develop mutual aid agreements for essential government services during any incident recovery.

Project Mitigation Measures

PMM PSP-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new emergency response facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Coordinate with emergency response agencies to ensure that there are adequate governmental facilities to maintain acceptable service ratios, response times or other performance objectives for emergency response services and that any required additional construction of buildings is incorporated in to the project description.

b) Where current levels of services at the project site are found to be inadequate, provide fair share contributions towards infrastructure improvements, as appropriate and applicable, to mitigate identified CEQA impacts.

c) Project sponsors can and should develop traffic control plans for individual projects. Traffic control plans should include information on lane closures and the anticipated flow of traffic during the construction period. The basic objective of each traffic control plan (TCP) is to permit the contractor to work within the public right of way efficiently and effectively while maintaining a safe, uniform flow of traffic. The construction work and the public traveling through the work zone in vehicles,

bicycles or as pedestrians must be given equal consideration when developing a traffic control plan.

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and SCAG's inability to require project-level mitigation measures, this PEIR finds impacts related to the need for new or physically altered police facilities could be significant and unavoidable even with implementation of mitigation.

3.15.3 Schools

3.15.3.1 ENVIRONMENTAL SETTING

Counties and cities within the SCAG region provide public education facilities and services to residents including elementary schools, middle schools, secondary schools, postsecondary schools, and colleges/universities, as well as special and adult education. Additional discussion of schools is provided in **Sections 3.3, Air Quality**, and **3.11, Land Use and Planning**.

3.15.3.1.1 California Department of Education

The California Department of Education (CDE) oversees the state's public school system, which provides education to more than six million children and young adults in more than 10,000 schools. CDE and the State Superintendent of Public Instruction are responsible for enforcing education law and regulations; and for continuing to reform and improve public elementary school programs, secondary school programs, adult education, some preschool programs, and child care programs.

Although the California public school system is subject to state requirements, the CDE relies on local control for the management of school districts. In allocating resources among the schools of the district, school district governing boards and district administrators must follow the law, but also set the educational priorities for their schools. As of the 2018-2019 school year, there were more than 1,030 school districts in California.[1]

3.15.3.1.2 Educational Facilities

According to the California Department of Education, there are approximately three million students enrolled in schools in the SCAG region, ranging from kindergarten to 12th grade, with over 141,000 teachers (see **Table 3.15.3-1, Kindergarten through Grade 12 Enrollment and Teachers in the SCAG Region for the 2017–2018 School Year**). The number of public K–12 school districts range from a low of 19 in Imperial County to a high of 80 in Los Angeles County, with a corresponding range of schools from a low of 74 in Imperial County to over 2,300 in Los Angeles County (see **Table 3.15.3-2, Public and Private Schools in the SCAG Region**). Three counties have University of California campuses, and all but one county have one or more California State University campuses (see **Table 3.15.3-2**).

1 California Department of Education. 2019. *Fingertip Facts on Education in California*. Available online at: https://www.cde.ca.gov/ds/sd/cb/ceffingertipfacts.asp, accessed August 28, 2019.

Imperial County

Imperial County has 19 school districts, 11 private schools, three charter academies, and a community college, Imperial Valley College. Enrollment within the districts ranges from 9,200 students to 81 students. Within the County, 11 school districts have recently passed bond measures that will support new gymnasiums, classrooms, science labs, swimming pools, and three entirely new schools.[2] Additionally, San Diego State University has a satellite campus in Imperial County, located in Calexico.

Los Angeles County

Los Angeles County Office of Education is the largest regional education agency in the U.S. and serves as an intermediary between the local school districts and the California Department of Education. The County is served by 80 school districts.[3] As with all of California, the districts operate independently of the County government and elected governing school boards are responsible for budgeting and decision-making.

Orange County

The Orange County Department of Education is comprised of 27 K-12 school districts, four community college districts, one alternative school, and a special education school. There are more than 600 public schools and 20,000 educators serving more than 500,000 students. Although almost all of the Orange County schools are experiencing growth, the fastest growing districts are within South County: Saddleback Valley Unified School District and Capistrano Unified School District. The Orange County Department of Education also promotes a childcare program, offering before- and after school care for children of working parents, as well as youth and teen programs.[4]

Riverside County

Within Riverside County, the Riverside County Office of Education (RCOE) provides educational and administrative support services to the 23 school districts and nearly 430,000 students living in the County. Beyond acting as an intermediary between the State and local school districts, the RCOE also supports or directly provides a variety of specialized needs, such as Special Education for the severely handicapped,

Head Start, Migrant Education, Alternative Education through independent study, Community Schools and Juvenile Court Schools and Career Technical Education programs designed to teach workforce skills aiding future employment. The RCOE reports 515 school sites, including 18 charter schools, and employs approximately 19,000 teachers and non-teaching school employees.[5]

San Bernardino County

The San Bernardino County Superintendent of Schools manages approximately 403,000 students across more than 500 schools in 35 districts.[6,7,8] The County also has six Special Education Local Plan Areas, and five regional occupational programs.[9,10] The County Board of Supervisors exercises direct control over the County School System, which is under the jurisdiction of the State Board of Education.

Ventura County

The Ventura County Office of Education (VCOE) oversees the County's 20 public school districts, which serve nearly 138,000 K-12 students. The VCOE also promotes court and community schools, as well as special education facilities. The primary role of the office is to promote quality educational services to all students by providing leadership, support, assistance, and coordination to school districts and County operated programs through the provisions of administrative, educational, fiscal and clerical services. In addition, the District provides professional development opportunities for teaching staff and hosts countywide academic competitions including the spelling bee, mock trail, and academic decathlon.[11]

3.15.3.2 REGULATORY FRAMEWORK

3.15.3.2.1 Federal

Elementary and Secondary Education Act of 1965 (ESEA) and Every Student Succeeds Act (ESSA) of 2015

Since the Elementary and Secondary Education Act (ESEA) of 1965 (Public Law 89-10) was signed into law by President Lyndon B. Johnson, local school districts throughout the nation have received federal monies through grants to state educational agencies to improve the quality of elementary and secondary education. ESEA also offered new grants to districts serving low-income students and for text and library books, created special education centers, and created scholarships for low-income collect students. In 2002, Congress reauthorized ESEA and President George W. Bush signed the law under a new name: No Child Left Behind (NCLB). In 2015, President Obama reauthorized ESEA and improved upon the NCLB to focus on fully preparing all students for success in college and careers. The ESSA upholds critical protections for disadvantaged students, includes statewide assessments to measure progress, increases access to high-quality preschool and furthers goals to close achievement gaps and increase equity and positive outcomes for all students.[12]

3.15.3.2.2 State

California Government Code Section 65995

California Government Code Section 65995 is found in Title 7, Chapter 4.9 of the California Government Code. California Government Code Section 65995 authorizes school districts to collect impact fees from developers of new residential and commercial/industrial building space. Senate Bill 50 (SB 50) amended Government Code Section 65995 in 1998. Under the provisions of SB 50 schools can collect fees to offset costs associated with increasing school capacity as a result of development. The development that would occur within the SCAG region between now and 2044 would be subject to applicable fees determined by the local school districts per California Government Code Section 65995. The local school districts determine fees in accordance with California Government Code Section 65995 which can be adjusted every two years. The maximum fees authorized under SB 50 apply to zone changes, general plan amendments, zoning permits and subdivisions. The provisions of SB 50 are deemed to provide full and

12 Social Welfare History Project. *Elementary and Secondary Education Act of 1965*. Available online at: https://socialwelfare.library.vcu.edu/programs/education/elementary-and-secondary-education-act-of-1965/, accessed August 28, 2019.

complete mitigation of school facilities impacts, notwithstanding any contrary provisions in CEQA or other State or local laws. [13]

Assembly Bill 2926

In 1986, Assembly Bill No. 2926 (Statutes of 1986, ch. 887) (AB 2926) authorized the levy of statutory development fees, as well as placed a cap on the number of fees that could be levied, on new residential and commercial/industrial development in order to pay for school facilities. Its overall purpose was to enable school districts to impose developer fees to pay for new school construction (Government Code 53080).[14]

California Education Code

School facilities and services are subject to the rules and regulations of the California Education Code and governance of the State Board of Education (SBE). The SBE is the 11-member governing and policymaking body of the California Department of Education (CDE) that sets K–12 education policy in the areas of standards, instructional materials, assessment, and accountability.[15] The CDE and the State Superintendent of Public Instruction are responsible for enforcing education law and regulations; and for continuing to reform and improve public elementary school, secondary school, and childcare programs, as well as adult education and some preschool programs. The CDE's mission is to provide leadership, assistance, oversight, and resources so that every Californian has access to an education that meets world-class standards. The core purpose of the CDE is to lead and support the continuous improvement of student achievement, with a specific focus on closing achievement gaps.[16]

California Department of Education

The CDE is the government agency responsible for public education throughout the state. The department oversees funding, and student testing and achievement levels for all state schools. A sector of the CDE, the California State Board of Education is the governing and policy making sector

The core purpose of CDE is to lead and support the continuous improvement of student achievement, with a specific focus on closing achievement gaps.

Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998

Proposition 1A, the Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998 (Ed. Code, §§ 100400–100405) is a school construction funding measure that was approved by the voters on the November 3, 1998 ballot. The Act created the School Facility Program where eligible school districts may obtain state bond funds.[17]

Leroy Greene School Facilities Act of 1998

The Leroy Greene School Facilities Act of 1998 (Ed. Code, §§ 17070.10-17079.30) eliminated the ability of cities and counties to require full mitigation of school impacts and replaced it with the ability for school districts to assess fees directly to offset the costs associated with increasing school capacity as a result of new development. The Act states that payment of developer fees is "deemed to be complete and full mitigation" of the impacts of new development.[18]

Community Facilities Act of 1982, as amended

The Community Facilities Act of 1982 (Section 53324 of the Government Code), also commonly known as the Mello-Roos Act, enables certain public agencies to designate a Mello-Roos Community Facilities District, which allows for the financing of public improvements and services. These include basic infrastructure, police protection, fire protection, ambulance services, schools, parks, libraries, museums, and other cultural facilities. Mello-Roos Community Facilities Districts are usually created to finance improvements and services when no other funding sources are available and require a two-thirds majority vote of residents living within the proposed boundaries. They are used especially often (but not exclusively) in new development areas. Upon approval, a special tax lien is placed against each property

18 California Legislative Information. *Chapter 12.5. Leroy F. Greene School Facilities Act of 1998*. Available online at: https://leginfo.legislature.ca.gov/faces/codes_displayexpandedbranch.xhtml?tocCode=EDC&division=1.&title=1.&part=10.&chapter=12.5.&article=, accessed August 28, 2019.

in the district, and residents pay a special tax each year. This tax is not based on property value, but on formulas that take into account physical characteristics such as square footage and structure size.[19]

3.15.3.2.3 Local

School Districts

Although the California public school system is under the policy direction of the Legislature, the California Department of Education relies on local control for the management of school districts. In allocating resources among the schools of the district, school district governing boards and district administrators must follow the law, but also set the educational priorities for their schools. In addition, some jurisdictions issue bonds to finance school construction.

General Plans

Local planning policies related to education services are established in each jurisdiction's general plan. In general, jurisdictions have policies in place that state that public services must be provided at the same time (or in advance of) need for that service. In addition to these general policies, jurisdictions may have more specific policies tailored to performance objectives.

3.15.3.3 ENVIRONMENTAL IMPACTS

3.15.3.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the proposed Plan would result in significant impacts to educational facilities, if the following could occur:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios or other educational performance factors.

3.15.3.3.2 Methodology

The methodology for determining the significance of impacts on public services compares existing conditions to the expected future use of schools under the Plan. The criteria above were applied to compare current conditions to future 2045 Plan conditions. The analysis of these impacts is programmatic at the regional level, as such impacts for individual schools or school districts is not determined.

---

19 California Tax Data. *What is Mello-Roos?* Available online at: https://www.californiataxdata.com/pdf/Mello-Roos2.pdf, accessed November 5, 2018.

In *Goleta Union School District v Regents of University of California (1995)* 37 CA 4th 1025, the court held that school overcrowding is a social impact and does not require analysis in an EIR and mitigation, unless the overcrowding is linked to physical environmental effects (such as new school construction). However, the law is somewhat unclear on how to analyze impacts from school facilities. The legal practice guide, "Practice under the California Environmental Quality Act" by the Continuing Education of the Bar, provides the following discussion on impacts to schools:

State and local agencies may not deny either legislative or adjudicative approvals on the basis of a refusal to pay fees in excess of those limits (Government Code Section 65995).

The statutes also significantly limit the application of CEQA to school facilities impact issues. The fees set forth in Government Code Section 65996 constitute the exclusive means of both "considering" and "mitigating" school facilities impacts of projects (Government Code Section 5996(a)).

Because the statute states that the statutory fees are the exclusive means of considering, as well as mitigating, school impacts, it limits not only the mitigation that may be required but also the scope of impact review in CEQA documents and the findings for school impacts.

In *Chawanakee Unified School District v County of Madera* (2011) 196 CA 4th 1016, the court held that because the methods in the statute are the exclusive means of "considering" impacts on schools, an EIR need not describe and analyze a development's impacts on schools. Consistent with this view:

- Once the statutory fee is imposed, the impact should be determined to be mitigated because of the provision that the statutory fees constitute full and complete mitigation (Government Code Section 65995(b)); and

- It should not be necessary to adopt a statement of overriding considerations for school facilities impacts when the statutory fee is assessed, because the impact is deemed as a matter of law to be adequately mitigated (Government Code Section 65995(b)).

The *Chawanakee* court also ruled that the reach of the statute is limited to impacts "on" schools and does not extend to impacts on the non-school physical environment, even though they may be "related" to schools in some way. The implications of this ruling are uncertain, however, because the court did not consider the effect of Government Code Section 65995(b), which states that the statute provides full school facilities mitigation notwithstanding CEQA, or of Government Code Section 65995(c), which defines a school facility as "any school-related consideration relating to a school district's ability to accommodate enrollment."

Based on the above and the uncertainty created by the *Chawanakee* decision related to impacts to non-school property from the construction of school facilities, for purposes of this PEIR, an impact on schools would occur if the Plan promotes growth patterns resulting in the need for and/or the provision of new or physically altered public school facilities, the construction of which would cause significant environmental impacts in order to maintain classroom sizes or other performance objectives. The determination of whether there is a significant impact related to schools is based on whether a significant impact would result from the construction of new or expanded school facilities on non-school property. This PEIR analyzes the potential for the Plan to result in the need for new school facilities and the associated potential for construction and subsequent operation of such facilities to cause physical environmental impacts.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.15.3.3.3 Impact and Mitigation Measures

Impact PSS-1 **Result in substantial adverse physical impacts associated with the provision of new or physically altered educational facilities, need for new or physically altered educational facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.**

Significant and Unavoidable Impacts - Mitigation Required.

Population is anticipated to increase by approximately 3.2 million people over the lifetime of the Plan (with or without the Plan); some of this population increase would include school age children.[20]

[20] Southern California Association of Governments. Profiles of Imperial County, Los Angeles County, Orange County, Riverside County, San Bernardino County, and Ventura County. Available at: http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx

According to SCAG's Demographics and Growth Technical Report, the share of children will decline by 2.48 percent, but school age children will continue to make up a large share of the overall population.

Based on the 2018 enrollment of approximately 3 million students in the SCAG region (approximately 16 percent of an overall 2018 population of 19.1 million), and considering the projected growth scenario for 2045, the number of children enrolled in K-12 schools is anticipated to increase by approximately 558,000 students.[21,22] The land use strategies included in the Plan direct new growth to existing urbanized communities within the SCAG region. For example, as projected by the Plan, HQTAs are planned to accommodate 48 percent of the region's future housing unit growth. It is anticipated that this increase in population and households in existing communities and HQTAs would require construction or expansion of new schools in the region to accommodate the increased growth and densified development (e.g., more families living and/or working there). However, it is important to note that some public schools have experienced declines in enrollment as a result of changing demographics and/or as a result of parents choosing a private education. For example, according to the Superintendent's 2019-20 Final Budget Report, the largest district in the region, Los Angeles Unified School District (LAUSD), is expecting enrollment to decrease across its schools; LAUSD states that this is due to several factors, including the reduced birth rate in Los Angeles County and the increasing cost of living, including housing, in southern California.[23]

School standards, performance measures, and related policies are set for public schools in school district long-range plans. To meet increased demand, existing schools would likely need additional facilities and other resources to maintain adequate educational standards. In some cases, depending on the pattern of development, it could be necessary to construct new schools as has been the case in Orange County's Saddleback Valley Unified School District. Such construction could have impacts on aesthetics, air quality, cultural resources, noise, transportation, as well as public services and utilities.

It is assumed that if new or expanded schools are determined to be necessary at some point in the future, such facilities could occur in proximity to residential uses.[24] Depending on the location of new schools, if

---

21 Southern California Association of Governments. Profiles of Imperial County, Los Angeles County, Orange County, Riverside County, San Bernardino County, and Ventura County. Available at: http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx

22 Assuming the percent of school age children within the SCAG region remains constant at 15.5 percent, the increase in the number of students would be approximately 558,000 students, or 15.5 percent of the anticipated increase of 3.6 million people for the SCAG region over the lifetime of the Plan.

23 Los Angeles Unified School District. 2019. *2019-20 Superintendent's Final Budget*. Available at: https://achieve.lausd.net/cms/lib/CA01000043/Centricity/Domain/123/19_2019-20%20District%20Enrollment%20Trends%2005-17-19%20combined%20rev.pdf, accessed October 30, 2019.

24 As allowed under Section 53094 of the California Government Code, the LAUSD Board of Education has, by resolution, exempted many schools from complying with local zoning regulations.

they are determined to be needed, impacts related to particular locations could occur; however, such impacts are too speculative to assess without information as to design, location and proximity to the population to be served. Further, any significant impacts that could result from the unique characteristics of a specific project site, or specific characteristics of a given school (e.g. night lighting and performance spaces) would be speculative at this time. The construction of these facilities would be subject to project-specific CEQA review. While the PEIR analyzes anticipated effects of regional transportation and growth related to air quality, noise, traffic, utilities, and other environmental impact areas, given the increased growth as well as densified development the Plan could contribute to substantial adverse physical impacts associated with the construction and subsequent operation of new or physically altered school facilities in order to maintain acceptable service ratios. Although the location and size of such facilities is not yet known, impacts could occur, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

SMM PSS-1: SCAG shall facilitate minimizing future impacts to school services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to, Map Gallery, GIS library, and GIS applications, and direct technical assistance efforts to promote school planning efforts.

Project Mitigation Measures

PMM PSS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new or physically altered school facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Where construction or expansion of school facilities is required to meet public school service ratios, require school district fees, as applicable.

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing

regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to the need for new or physically altered school facilities could be significant and unavoidable even with implementation of mitigation.

3.15.4 Library Services

3.15.4.1 ENVIRONMENTAL SETTING

American Library Association

In the mid 1960's, the American Library Association (ALA) established library standards for public libraries. The ALA recommends service criteria of 0.5 square feet of library space and 2.5 volumes per capita. Many jurisdictions have not identified individual service criteria and utilize the ALA recommendations to meet the demand for library services in an area.

Imperial County

The County of the Imperial Free Library was founded in 1912 and serves County residents in unincorporated areas, as well as in the cities of Calipatria, Holtville, and Westmorland. There are currently four branches located in Salton City, Calipatria, Heber, and Holtville. The library facilities offer services for children and teens, such as homework assistance, education games, and college scholarship databases.[1] Many incorporated cities within Imperial County also provide library services.

Los Angeles County

The County of Los Angeles Public Library is one of the largest public library systems in the U.S. The system maintains 86 libraries across seven library planning areas. The system is equipped with 7.5 million books, in addition to magazines, newspapers, government publications, reference materials, audio-visual media, adult, teen and children programs, downloadable e-books, computers, and internet access. The County guidelines regarding facilities are a minimum of 0.5 gross square foot and 2.75 items (books and other library materials) per capita.[2] Many incorporated cities within Los Angeles County also provide their own library services.

Orange County

The Orange County Public Library provides library service to the unincorporated areas of Orange County plus the cities of Aliso Viejo, Brea, Costa Mesa, Cypress, Dana Point, Fountain Valley, Garden Grove, Irvine, Laguna Beach, Laguna Hills, Laguna Niguel, Laguna Woods, Lake Forest, La Habra, La Palma, Los Alamitos, Rancho Santa Margarita, San Clemente, San Juan Capistrano, Seal Beach, Stanton,

2 County of Los Angeles. 2015. *Los Angeles County General Plan*. Available at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan.pdf, accessed September 9, 2019.

Tustin, Villa Park, and Westminster. The library system operates 33 branch library facilities, which contain approximately 2.5 million volumes, as well as periodicals, pamphlets, audio and video recordings, graphics, maps, etc. The library system has determined a service standard of 0.2 square foot of library space per capita and it strives to locate facilities within a three mile radius of the communities they serve.[3] Within Orange County, many incorporated cities also provide library services.

Riverside County

Riverside County operates a library system of 36 libraries, two book mobiles, and a county museum. Library management offices are located in the City of Riverside while the bookmobiles travel to serve unincorporated communities in the Coachella Valley and in western Riverside County. In Fiscal Year 2018/2019, the County library had approximately 3.752 million visitors and issued 43,700 library cards.[4] Many incorporated cities within Riverside County also provide library services.

San Bernardino County

The San Bernardino County Library System (SBCL) maintains 32 branches, two book mobiles, and has an administration building in the City of San Bernardino.[5] The SBCL provides library resources such as books, internet, youth and adult literacy services, and braille institute services. The SBCL is available to unincorporated communities as well as 25 incorporated communities within the County. Combined, the branch facilities and administrative office total over 358,000 square feet of building area.[6] In addition, many incorporated cities within San Bernardino provide library services.

Ventura County

The Ventura County Library maintains 12 community branches across the County. The various branches provide services such as book and document loans, computer labs, meeting rooms, homework assistance, and STEAM events. The County Library also provides an adult literacy program and tutors, as well as an eLibrary.[7] The Ventura County Library maintains over 300,000 print books, as well as a variety of music,

movies, TV shows, magazines, toys, instruments, and sketch books.[8] In the Fiscal Year 2018-2019, the County Library circulated over 554,000 physical and digital items, issued 12,000 library cards, and held over 5,000 events.[9] Library services are also provided by many incorporated cities within Ventura County.

3.15.4.2 REGULATORY FRAMEWORK

3.15.4.2.1 State

Community Facilities Act of 1982, as amended

The Community Facilities Act of 1982 (Section 53324 of the Government Code), also commonly known as the Mello-Roos Act, enables certain public agencies to designate a Mello-Roos Community Facilities District, which allows for the financing of public improvements and services. These include basic infrastructure, police protection, fire protection, ambulance services, schools, parks, libraries, museums, and other cultural facilities. Mello-Roos Community Facilities Districts are usually created to finance improvements and services when no other funding sources are available, and require a two-thirds majority vote of residents living within the proposed boundaries. They are used especially often (but not exclusively) in new development areas. Upon approval, a special tax lien is placed against each property in the district, and residents pay a special tax each year. This tax is not based on property value, but on formulas that take into account physical characteristics such as square footage and structure size.[10]

3.15.4.2.2 Local

Developer Impact Fees

One primary source for financing library facilities within the SCAG region and across the state is developer impact fees. These fees reduce impacts of residential developments; generally, developers can construct new library facilities or pay impact fees to the library to mitigate the impacts from a specific project. Fees vary depending on the jurisdiction in which the project is located.

3.15.4.3 IMPACTS AND MITIGATION MEASURES

3.15.4.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the proposed Plan would result in significant impacts to library facilities, if the following could occur:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, need for new or physically altered library facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.

3.15.4.3.2 Methodology

The methodology for determining the significance of impacts on public services compares existing conditions to the expected future use of libraries under the Plan. The criteria above were applied to compare current conditions to future 2045 Plan conditions. Due to the size of the region, a detailed analysis of individual libraries and their capacity is not feasible. As such, the analysis focuses on region wide capacity and impacts. The analysis of these impacts is programmatic at the regional level.

The need for, or deficiency in, library facilities to serve residents is not in and of itself a CEQA impact, but a social or economic impact. (*City of Hayward v. B'd of Trustees* (2015) 242 Cal.App. 4th 833, 843). In accordance with CEQA, this PEIR analysis focuses on the extent to which the Plan's growth patterns result in a need for additional library facilities and the associated potential for construction and subsequent operation of such facilities to cause physical environmental impacts.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.15.4.3.3 Impact and Mitigation Measures

Impact PSL-1 **Result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, need for new or physically altered library facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives.**

Significant and Unavoidable Impacts - Mitigation Required.

Population in the SCAG region is anticipated to increase by approximately 3.2 million people over the next 25 years, with or without the Plan. As discussed above, the counties within the SCAG region all have different service criteria for library services, with some counties not having set any at the time of this PEIR. Across the nation, public libraries have experienced significant growth in programming since 2012. The number of public programs offered per capita has jumped 27.5% while the number of programs attended per capita has risen 16.9%. The Public Library Association (PLA) is responding to this trend by offering relevant initiatives designed to help public libraries offer targeted programs around issues that matter most to patrons, including access to on-line resources and e-books. Currently, 100% of public libraries offer access to the internet; 98% offer free Wi-Fi; 90% help patrons with basic internet skills; 97% help people complete online government forms; 90% offer access to e-books.[11]

New transportation facilities, especially those in urban areas, could facilitate access to libraries and result in increased use of some libraries. In addition, the anticipated growth in population and households would increase the demand for library facilities, which may result in a need for new and/or expanded library facilities. As communities grow, the need for library facilities would be assessed by each local jurisdiction and additional facilities would be constructed as needed. Depending on the location of new libraries, if they are determined to be needed, impacts related to locations could occur; however, without information as to design, location and proximity to the population to be served, such impacts are too speculative to assess The construction of these facilities would be subject to project-specific CEQA review. While the PEIR analyzes anticipated effects of regional transportation and growth related to air quality, noise, traffic, utilities, and other environmental impact areas, given the increased growth as well as densified development (e.g., more families living and/or working there), the Plan could contribute to substantial adverse physical impacts associated with the construction of library facilities in order to maintain acceptable service ratios. Although the location and size of such facilities is not yet known, impacts could occur, requiring the consideration of mitigation measures.

---

11 American Library Association, State of America's Libraries Report 2019, website: http://www.ala.org/news/state-americas-libraries-report-2019/public-libraries, accessed October 30, 2019.

Mitigation Measures

SCAG Mitigation Measure

SMM PSL-1 SCAG shall facilitate minimizing future impacts to library services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to Map Gallery, GIS library, and GIS applications, and promote acceptable service ratios regarding library services.

Project Mitigation Measure

P**MM PSL-1:** In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of construction of new or altered library facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Where construction or expansion of library facilities is required to meet public library service ratios, require library fees, as appropriate and applicable, to mitigate identified CEQA impacts.

Level of Significance After Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to the need for new or physically altered library facilities could be significant and unavoidable even with implementation of mitigation.

3.16 PARKS AND RECREATION

This section of the Program Environmental Impact Report (PEIR) describes the existing recreational resources within the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect recreation resources, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.16.1 ENVIRONMENTAL SETTING

3.16.1.1 Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for recreation are provided.

Recreation Level of Service (LOS):[1] In the context of recreation of recreational service, LOS refers to the amount of "service" each park, open land, trail, or other facility provides to its constituents.[2] Conventional recreation and park LOS analysis—often called the "NRPA standards" method because it was published by the National Recreation and Parks Association (NRPA)—is based on capacity only. NRPA standards suggest providing a certain number of facilities or acres of parkland per 1,000 population. The County of Los Angeles General Plan[3] and Orange County General Plan[4] have established a standard for parklands of four acres of local parkland and six acres of regional parkland per 1,000 county residents in unincorporated areas; the Imperial County General Plan[5] has established a standard of five net acres of overall parkland per 1,000 county residents in unincorporated areas; the San Bernardino County General Plan[6] has established a standard of 14.5 acres of undeveloped lands and/or

1 It should be noted that LOS may also refer to a transportation metric when discussing traffic impacts, however for the purposes of this section of the PEIR, LOS refers to the amount of "service" each park, open land, trail, or other facility provides to its constitutes.

trails per 1,000 county residents and 2.5 acres of regional parkland per 1,000 county residents; and Ventura County has not established numeric parkland standards.

Because park needs and definitions vary among jurisdictions, the following description are provided for informational purposes. The definitions below are not intended to define all parkland in the region, but rather, are intended to provide general guidance about different types of parks that can be found in the region.

Local Park: According to the Los Angeles County General Plan**,** a park that is considered to serve the local community (within a two-mile service radius of the park) is generally 20 acres or less in size.[7,8] Further, the Los Angeles County General Plan has refined local parks into the following categories:[9]

Park Node: Park nodes are small pieces of open space that serve as public destinations, connections, and community defining spaces. Examples include plazas, rest areas, playgrounds, landmarks, public art installations, etc.

Size: One-quarter acre or less
Service Area: No service radius area

Pocket Park: Pocket parks are less than three acres in size and serve residential or business areas within a quarter mile radius or within walking distance. Passive park amenities include picnic areas and seating areas. Active park amenities include children's play apparatus.

Size: Less than three acres
Service Area: Up to one-quarter mile radius of the park

Neighborhood Park: The common objective of all neighborhood parks is to bring people together to recreate and socialize close to home. Passive park amenities include informal open play areas, children's play apparatus, group picnic areas with overhead shelters, and barbecues. Active park amenities include practice sports fields, basketball, tennis, and

8 Orange County Public Works Development Services. 2015. *General Plan: Chapter VII. Recreation Element*. Available online at: http://ocplanning.net/civicax/filebank/blobdload.aspx?blobid=24960, accessed March 27, 2019.

9 Los Angeles County Department of Regional Planning. 2015. *Los Angeles County General Plan Adopted October 6, 2015: Chapter 10: Parks and Recreation Element*. Available online at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan.pdf, accessed July 7, 2019.

volleyball courts. Park facilities typically include public restrooms, and onsite parking and information kiosks.

Size: Three to 10 acres
Service Area: One-half mile radius of the park

Community Park: Community parks that are located in residential neighborhoods serve both the needs of the community park service radius and neighborhood park service radius. The amenities programmed into a community park are focused on meeting the needs of several neighborhoods or large sections of the community. Passive park amenities include informal open play areas, children's play apparatus, family and group picnic areas with overhead shelters, and barbecues; active sports activities including light sports fields, basketball courts and tennis courts, aquatics complexes, skate parks, soccer arenas, roller hockey, community gardens, and dog parks; and park facilities including public restrooms, concession buildings, community buildings, maintenance buildings, and on-site parking and information kiosks.

Size: 10 to 20 acres
Service Area: 1 to 2-mile radius around the park

Regional Park: A park greater than 20 acres in size is generally considered a regional park. A regional park may have a service radius of over 25 miles.[10,11] For instance, the Los Angeles County General Plan has refined regional parks into the following categories:[12]

Community Regional Park: Community regional parks protect and conserve natural resources, preserve open spaces, and provide recreational facilities that are not available in neighborhood or community parks. Passive park amenities include open play areas, children's play apparatus, group picnic areas with overhead shelters, and barbecues. Active sports activities include lighted sports fields, basketball courts, and tennis courts. Additional amenities include multiple sports facilities, aquatics centers, fishing lakes, community buildings, gymnasiums, and scenic views and vistas. Park facilities typically include public restrooms, concession buildings, community buildings, maintenance buildings, and on-site parking and information kiosks.

11 Orange County Public Works Development Services. 2015. *General Plan: Chapter VII. Recreation Element*. Available online at: http://ocplanning.net/civicax/filebank/blobdload.aspx?blobid=24960, accessed March 27, 2019.

12 Los Angeles County Department of Regional Planning. 2015. *Los Angeles County General Plan Adopted October 6, 2015: Chapter 10: Parks and Recreation Element*. Available online at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan.pdf, accessed July 7, 2019.

Size: 20 to 100 acres

Service Area: Up to 20-mile radius around the park

Regional Park: Regional Parks include unique areas such as lakes, wetlands, auditoriums, water bodies, and campgrounds, in addition to the active recreational facilities offered in community and community regional parks. Many of the recreation activities are associated with experiencing the natural environment. A regional park may also perform important ecological and environmental functions, including serving as wildlife habitats. Passive park amenities include group picnic areas with overhead shelters and barbecues. Additional park amenities include lakes, wetlands, auditoriums, water bodies for swimming, fishing and boating, and sports fields.

Size: Greater than 100 acres

Service Area: 25-mile or greater radius around the park

Special Use Facility: Special use facilities are generally single purpose facilities that serve greater regional recreational or cultural needs. Passive features include wilderness parks, nature preserves, botanical gardens, and nature centers. Active uses include performing arts, water parks, golf driving ranges, and golf courses.

Size: No size criteria

Service Area: No assigned service radius area

Trails/Linear Parks: SCAG,[13] Los Angeles County,[14] and San Bernardino County[15] define trails as linear parks that provide community access to increased health and fitness activities in the increasingly urbanized region.

Multi-Benefit Parks*:* According the Los Angeles County General Plan, multi-benefit parks and open spaces are created through collaborative efforts among city, county, state, and federal agencies; private organizations; schools; private landowners; and industries. These parks are characterized as having more than one function and contributing to multiple program goals. There are a number of applications of multi-benefit parks including: utility corridors and flood protection basins that can serve as areas for active or passive recreation; school sites located adjacent to parks that can share facilities, such as parking

13 SCAG. 2016. *2016-2040 RTP: Active Transportation Appendix*. Available online at: http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_ActiveTransportation.pdf, accessed September 4, 2019.

14 Los Angeles County Department of Regional Planning. 2015. *Los Angeles County General Plan Adopted October 6, 2015: Chapter 10: Parks and Recreation Element*. Available online at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan.pdf, accessed August 19, 2019.

15 San Bernardino County Land Use Services. 2007. *County of San Bernardino 2007 General Plan*. Available online at: http://www.sbcounty.gov/Uploads/lus/GeneralPlan/FINALGP.pdf, accessed August 19, 2019.

and park amenities; watershed areas that can protect critical wildlife habitats, preserve open space, provide trails for recreation, and contribute to water conservation objectives; and water districts, where trails can be located adjacent to flood protection channels and trailhead parks.[16]

School Sites: According the Los Angeles County General Plan, the County works with school districts to organize, promote, and conduct joint recreational and educational programs. These community recreation agreements are a form of joint-use agreement, where either a school or park facility may be put to some recreational use by the other party in exchange for some facility improvement and/or maintenance. A park does not have to be adjacent to a school (i.e., share a common boundary) for an agreement to be viable.[17]

City Parks and Facilities: According the Los Angeles County General Plan, city parks and facilities that are located close to the borders of the unincorporated areas are enjoyed by city and County residents alike. Similarly, local County parks that are located within or close to the borders of cities provide recreational amenities for both populations.[18]

Private Recreational Facilities: According the Los Angeles County General Plan, private recreational facilities play an important role in meeting recreational needs. The network of private recreational facilities consists of churches, health and fitness clubs, and other organizations that offer a variety of programs and facilities.[19]

Greenways: According the Los Angeles County General Plan, greenways provide a linear area along natural corridors, and often follow features such as rivers, man-made waterways, drainage channels, and utility easements. Greenways can accommodate various modes of uninterrupted pedestrian travel on pathways, including walking, jogging, and bicycling, and can include recreation areas and natural landscape features.[20]

17 Ibid.

18 Ibid.

19 Ibid.

20 Ibid.

Within the SCAG region, parks are classified into several subgroups: neighborhood, community, city, as well as specialized recreation areas, regional recreational areas, state and federal recreation areas, and open space areas.[21]

Neighborhood Park: A park or playground developed primarily to serve the recreational needs of citizens living within a 0.5-mile radius of the park. These facilities include pocket parks and neighborhood playgrounds.[22]

Community Park: A larger park or facility developed to meet the park and recreational needs of those living or working within a one to two-mile radius. Community parks may have a variety of playing fields and community recreation facilities.[23]

City Park: A park having a wide range of improvements not usually found in neighborhood and community parks and designed to meet the recreational needs of the entire city population. Recreational facilities might include a nature area, golf course, zoo, pool, skateboarding parks, playing fields, or structures like gymnasiums, community centers, and public or private educational institutions. Parks may also be themed, such as a park dedicated to the agricultural heritage of the area.

Specialized Recreation Area: A recreation area or facility devoted to a very specific activity or use, such as a linear park, golf courses, or soccer parks.

Regional Recreation Area: Regional recreation areas provide access to significant ecological, cultural, or historical features or unique facilities that attract visitors from throughout the entire region (including incorporated and unincorporated areas). Regional recreation areas may be composed of one large site or several sites located in proximity that together provide a significant recreation area for the region. These parks may include areas of significant natural resources, as well as more developed activity sites. Regional recreation areas may be supported by a wide variety of specialized facilities such as indoor recreation centers, large group picnic areas, special event facilities/festival space, and campgrounds.

State and Federal Recreation Areas: A park maintained by state or federal agencies and typically providing recreational opportunities like camping, hiking, bird watching, rafting, boating, and fishing. Many parts of the region have vast areas covered by state or federal parkland.

23 Ibid.

Open Space Areas: Open space refers to lands that are generally unimproved and used for resource conservation and/or the managed production of resources. Open space is comprised of both designated open space and "de facto" open space. Designated open space is land that has been left undeveloped by design. Other land is deemed open space not by design, but because the land is not involved in a productive use, or in the case of agricultural lands, the land is consumed by a productive use that contributes to the visual quality of the land or provides wildlife habitat.

3.16.1.2 Existing Conditions

The diverse natural resources located in the six counties within SCAG's jurisdiction provide a wide range of recreational opportunities for residents and tourists alike. Resources range from small neighborhood parks featuring playground equipment and sports fields to vast expanses of wilderness with hiking trails, rafting, and camping. In addition to parks for active recreation, the SCAG region also has a diversity of open space areas. The SCAG region contains approximately 150 miles of coastline, four national forests, two national parks, and several national wildlife refuges. There are 48 California state parks, 268 county parks, and over 3,300 city parks and open space areas in the SCAG region.[24,25] These lands are governed by a variety of agencies, including municipal park departments, independent park districts, counties, cities, community service districts, and federal and state agencies.

Open Space and Recreation Lands in the SCAG Region

Public parks and open space serve all of the residents in the SCAG region, as well as tourists and visitors. The variety of landscapes within the SCAG region allows for a broad range of parks and recreational facilities, many of which are quite unique. The multitude of parks and associated facilities make the SCAG region an ideal area for outdoor exploration and draw many tourists and visitors to the area. An effective regional transportation system would increase accessibility to such destinations, for tourists and residents alike. Improved access to outdoor spaces would benefit the overall health and well-being of residents, as well as public education and environmental awareness. **Table 3.16-1, Recreational Areas and Protected Open Space by County (Acres)**, shows California Protected Areas (CPAs), lands owned in fee, from small parks to large wilderness areas, in each SCAG county by acreage.

Each city and county within the SCAG region has a general plan containing an open space and/or parks and recreation element. Each element describes specific rules, regulations, and current conditions of

various local parks and recreation facilities to maximize recreational benefits within each jurisdiction. Based on the information found in the various county plans, Orange County and Los Angeles County have a deficiency in local parkland. Los Angeles, Orange, and San Bernardino counties have established regional parkland standards, which they currently meet. Imperial County also meets its combined local and regional parkland standard. Further detail regarding the condition of parks, recreation, and open space in counties within the SCAG region is described below.

Table 3.16-1
Recreational Areas and Protected Open Space by County (Acres)

County	Total Acres
Imperial County	1,575,196
Los Angeles County	906,082
Orange County	152,486
Riverside County	2,857,963
San Bernardino County	8,492,573
Ventura County	645,734
Total	**14,630,034**

Imperial County

Imperial County is a predominantly agricultural area and approximately 50 percent of County lands are undeveloped and under federal jurisdiction. A recreation designation covers the largest area of any land use in the County.[26] The County maintains approximately 1,575,196 acres of regional parkland and protected open space, 97 percent of which is open access land. Two and a half percent of protected land has no public access and less than one percent has restricted access, where the public can only enter with a permit. This total includes parkland owned by the federal, state, county, and city as well as special district, nonprofit, private, and joint parkland.[27] The Imperial County General Plan has established a standard of five net acres of overall parkland per 1,000 residents in unincorporated areas. With a total

26 Imperial County. 1993. *General Plan Environmental Impact Report, Update.* Available online at: http://www.icpds.com/?pid=829, accessed March 27, 2019.

27 Ibid.

population of 207,682 in 2019, there are approximately 7,585 protected acres per 1,000 inhabitants, which is significantly higher than the set overall standard.[28]

Imperial County contains the Ocotillo Wells and Heber Dunes State Parks as well as eight County parks.[29] County parks maintain sports courts and recreational facilities, trails, barbecues, and playgrounds and space for activities such as camping, boating, and fishing. The Heber Community Center is also operated by the County and includes a library, event area, kitchen, and sports courts. Ocotillo Wells is a State Vehicular Recreation Area (SVRA) and contains more than 85,000 acres of desert open for off-road exploration, recreation, and camping. The Heber Dunes State Park is also an SVRA; it is mostly utilized by all-terrain vehicle (ATV) riders. The 323 acres of parkland are exclusively for day utilization and no camping, shooting or hunting is allowed.

Los Angeles County

Los Angeles County has 906,082 acres of parkland, a majority of which is under the jurisdiction of the federal government.[30] This total includes parkland owned by the federal, state, county, and city as well as special district, nonprofit, private, and joint parkland.[31] The County maintains approximately 70,000 acres.[32] Over 92 percent of the total parkland is open access and less than one percent allows no public access. The Los Angeles County General Plan has established a standard of 4 acres of local parkland per 1,000 residents in the unincorporated areas and 6 acres of regional parkland per 1,000 residents of the total population in Los Angeles County. According to the General Plan (2015), the County has a substantial deficit in local parkland, providing approximately 0.6 acres of local parkland per 1,000 unincorporated residents but 7.02 acres of regional parkland per 1,000 residents (total), which is above the regional standard.[33]

33 Ibid.

Los Angeles County has 177 County parks and 24 state parks, the most of any county in the SCAG region.[34] Parks in Los Angeles include beaches, picnic areas, sports fields and courts, and hiking and camping opportunities. There are also multiple special use facilities, single purpose facilities serving greater regional recreational or cultural needs, such as the Hollywood Bowl.[35] Prominent parks in Los Angeles County include Santa Catalina Island Regional Park, Griffith Park, Topanga State Park, and the Antelope Valley Poppy Reserve.

Orange County

Orange County contains 152,486 acres of protected parkland, the majority of which is controlled on a federal or county level.[36] This total includes parkland owned by the federal, state, county, and city as well as special district, nonprofit, private, and joint parkland.[37] Orange County General Plan (2014) established parkland standards of 2.5 acres of local parkland per 1,000 residents in unincorporated areas and 6 acres of regional parkland per 1,000 residents.[38] With a total population of approximately 3,250,000 people,[39] the County provides about 46.9 acres of parkland per 1,000 residents, far surpassing regional parkland standards.

Orange County maintains 25 urban and wilderness parks, comprised of 60,000 acres including historical sites, beaches and harbors, and 150 miles of paved regional trails and 350 miles of off-road trails. Additionally, there are a host of local parks, beaches, and nature preserves.[40] Prominent parks include Laguna Coast Wilderness Park, Carbon Canyon Regional Park and Irvine Regional Park.

Riverside County

Riverside County has 2,857,963 acres of protected parkland, over 2.8 million of which are open access.[41] This total includes parkland owned by the federal, state, county, and city as well as special district,

nonprofit, private, and joint parkland.[42] Regional parks in the area cover approximately 23,317 acres.[43] The County does not have set standards regarding parklands but the vast amount of open space, the second-most in the SCAG region, allow for approximately 1,161 acres of protected parkland per 1,000 residents based on a 2019 population of 2,460,000 people.[44] Riverside County parks include Joshua Tree National Park, Anza-Borrego State Park, and the Salton Sea State Recreation Area.

San Bernardino County

San Bernardino has the most open space and protected parkland out of all of the counties in the SCAG region. It maintains a total of 8,492,573 acres of protected parkland, 8,469,686 of which are open access.[45] This total includes parkland owned by the federal, state, county, and city as well as special district, nonprofit, private, and joint parkland.[46] The 2007 General Plan denotes a standard of 2.5 acres of regional parkland per 1,000 residents.[47] With a population of approximately 2,210,000 people,[48] the County provides about 3,830 acres of parkland per 1,000 residents, far surpassing regional parkland standards.

The San Bernardino Regional Parks Department operates a total of 8,515 acres of regional parks. Numerous County special districts operate local parks in many unincorporated communities of the County. These districts operate independently from the County government and are financed by local taxes within each respective district boundary. The County also includes wilderness areas that are mostly under the jurisdiction of the BLM, including the Sand to Snow National Monument and the Mojave Trails National Monument. [49]

Ventura County

Ventura County is home to 645,734 acres of protected parkland and open space.[50] This total includes parkland owned by the federal, state, county, and city as well as special district, nonprofit, private, and joint parkland.[51] The County maintains 13 regional parks, 23 county parks, and a multitude of beach front parks and marinas, and community parks. The County also operates the Hungry Valley SVRA, 18,780 acres between Los Angeles and Ventura counties that are open to vehicular use, trail use, and camping.[52] Ventura County does not specify parkland and open space standards but with a population of approximately 868,000 persons[53], the County provides roughly 743 acres of total parkland and open space per 1,000 residents.

3.16.2 REGULATORY FRAMEWORK

The federal government sets public recreation standards for protection of publicly owned recreation areas; scenic, historic, and recreational trails; national forests, and recreational fisheries from conversion to non-compatible land uses that may include transportation projects through the recreational resource. The state sets recreation standards for protection of public parkland and establishment of new parkland to meet the needs of a growing population as a result of development project. The provision of new parkland and recreational facilities is generally subject to local general plan policies.

3.16.2.1 Federal

Section 4(f) of the U.S. Department of Transportation Act of 1966 (U.S. DOT Act)

Section 4(f) of the U.S. DOT Act (Public Law 89-670) was enacted as a means of protecting publicly owned public parks, recreation areas, and wildlife/waterfowl refuges as well as historic sites of local, state, or national significance, from conversion to transportation uses.

The provision states that the Secretary of the U.S. DOT may approve a transportation project requiring the use of publicly owned land of a public park, recreation area, or wildlife and waterfowl refuge, or land

from an historic site of national, state, or local significance (as determined by the federal, state, or local officials having jurisdiction over the park, recreation area, refuge or site) only if:[54]

- There is no feasible and prudent avoidance alternative to the use of land; and the action includes all possible planning to minimize harm to the property resulting from such use; or
- The Administration determines that the use of the property will have a de minimis impact.

National Trails System Act

The National Trails System Act (Public Law 90-543) was established by Congress in 1968 to establish a network of scenic, historic, and recreational trails. The act defined four categories of national trails: recreation trails, scenic trails, historic trails, and connecting or side trails. Trails within park, forest, and other recreation areas administered by the Secretary of the Interior or the Secretary of Agriculture or in other federally administered areas may be established and designated as "National Recreation Trails" by the appropriate Secretary.[55] Since the National Trails System Act was enacted, the list of qualifying national scenic trails and national historic trails has grown from the initial two trails (the Application National Scenic Trail and Pacific Crest National Scenic Trail) to the current list, which includes 11 national scenic trails and 19 historic trails. In addition, more than 1,000 national recreation trails have been designated nationwide, 91 of which are located in California.[56,57]

National Forests Land Management Plans

Each of the four Southern California national forests (Cleveland National Forest, Los Angeles National Forest, San Bernardino National Forest, and Los Padres National Forest) is included in the Southern California National Forests Vision. The Southern California National Forests Vision (forest plans) has created individual land management plans for each of the four Southern California national forests. The land management plans include strategic programmatic direction for managing the land in each national forest and its resources for the next 10 to 15 years. The plans include sections on resource management,

public use and enjoyment, facilities operation and maintenance, commodity and commercial uses, and fire management.[58]

Executive Order 12962—Recreational Fisheries

The objective of Executive Order 12962, dated June 7, 1995, is the conservation, restoration and enhancement of aquatic systems to provide for increased recreational fishing. Under the executive order, federal agencies shall improve the quantity function, sustainable productivity and distribution of U.S. aquatic resources for recreational fishing opportunities by:[59]

- Developing and encouraging government-private sector partnerships
- Identifying recreational fishing opportunities
- Implementing sound aquatic conservation and restoration practices
- Providing access and promoting awareness
- Supporting outreach programs
- Implementing laws
- Establishing cost-share programs
- Evaluating the effects of federally funded, permitted, or authorized actions on aquatic resources and recreational fishing
- Assisting private landowners to conserve and enhance aquatic resources

Land and Water Conservation Fund Act, Section 6(f)(3)

Section 6(f)(3) of the Land and Water Conservation Fund Act (LWCF Act) of 1965 (16 U.S.C. § 460l et seq.) contains provisions to protect federal investments in park and recreation resources and the quality of those assisted resources. The law recognizes the likelihood that changes in land use or development may make park use of some areas purchased with LWCF Act funds obsolete over time, particularly in rapidly changing urban areas, and provides for conversion to other use pursuant to certain specific conditions.

Section 6(f)(3) states that no property acquired or developed with assistance under Section 6(f)(3) shall, without the approval of the Secretary, be converted to other than public outdoor recreation uses. The

58 USDA. 2005. *Land Management Plan: Part 1 Southern California National Forests Vision*. Available online at: https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/stelprdb5166876.pdf, accessed August 20, 2019.

59 Government Publishing Office. 1995. *Executive Order 12962 of June 7, 1995*. Available online at: https://www.govinfo.gov/content/pkg/FR-1995-06-09/pdf/95-14407.pdf, accessed August 20, 2019.

Secretary shall approve such conversion only if he or she finds it to be in accordance with the then existing comprehensive statewide outdoor recreation plan and only upon such conditions as he or she deems necessary to assure the substitution of other recreation properties of at least equal fair market value and of reasonably equivalent usefulness and location.

This requirement applies to all parks and other sites that have been the subject of LWCF Act grants of any type, and includes acquisition of park land and development or rehabilitation of park facilities. If a transportation project would have an effect upon a park or site that has received LWCF Act funds, the requirements of Section 6(f)(3) would apply.[60]

3.16.2.2 State

Quimby Act of 1965

The Quimby Act was established by the California State Legislature in 1965 and codified as California Government Code Section 66477. The Quimby Act allows the legislative body of a city or county, by ordinance, to require the dedication of land or impose a requirement of the payment of fees in lieu thereof, or a combination of both, for park or recreational purposes as a condition to the approval of a tentative tract map or parcel map. Under the Quimby Act, requirements for parkland dedications are not to exceed three acres of parkland per 1,000 persons residing within a subdivision, and in-lieu fee payments shall not exceed the proportionate amount necessary to provide three acres of parkland, unless the amount of existing neighborhood and community parkland exceeds that limit.[61]

California Public Park Preservation Act of 1971

The primary instrument for protecting and preserving parkland is the State Public Park Preservation Act of 1971 (Pub. Resources Code, §§ 5400–5409). Under the Act, cities and counties may not acquire any real property that is in use as a public park for any non-park use unless compensation or land, or both, are provided to replace the parkland acquired. This provides no net loss of parkland and facilities.[62]

California Recreational Trails Plan of 2002

The California Department of State Parks (California State Parks) is a trustee agency that owns and operates all state parks and participates in land use planning that affects state parklands. Pursuant to

61 California Legislative Information. *AB-1191 Quimby Act.*

62 California Legislative Information. 1971. *Chapter 2.5. Preservation of Public Parks [5400-5409].*

California Public Resources Code Section 5070, the California Recreational Trails Act, California State Parks has prepared the California Recreational Trails Plan in 1978, which was updated in 2002, with reports highlighting progress on the plan that are submitted to the State Legislature every two years.[63] The California Recreational Trails Plan establishes 12 designated trail corridors that pass through the SCAG region with the intent of forming a statewide trail system that links mountain, valley, and coastal communities to recreational, cultural, and natural resources throughout the state.[64]

State Open Space Standards

State planning law (Government Code Section 65560) provides a structure for the preservation of open space by requiring every city and county in the State to prepare, adopt, and submit to the Secretary of the Resources Agency a "local open-space plan for the comprehensive and long-range preservation and conservation of open space land within its jurisdiction." The following open space categories are identified for preservation:[65]

- **Open space for public health and safety**, including, but not limited to, areas that require special management or regulation due to hazardous or special conditions.
- **Open space for the preservation of natural resources**, including, but not limited to, natural vegetation, fish and wildlife, and water resources.
- **Open space for resource management and production**, including, but not limited to, agricultural and mineral resources, forests, rangeland, and areas required for the recharge of groundwater basins.
- **Open space for outdoor recreation,** including, but not limited to, parks and recreational facilities, areas that serve as links between major recreation and open space reservations (such as trails, easements, and scenic roadways), and areas of outstanding scenic and cultural value.
- **Open space for the protection of Native American sites**, including, but not limited to, places, features, and objects of historical, cultural, or sacred significance such as Native American sanctified

cemeteries, places of worship, religious or ceremonial sites, or sacred shrines located on public property (further defined in California Public Resources Code Sections 5097.9[66] and 5097.993[67]).

Mitigation Fee Act

The California Mitigation Fee Act, Government Code sections 66000, *et seq.*, allows cities to establish fees to be imposed on development projects for the purpose of mitigating the impact of development on a city's ability to provide specified public facilities. In order to comply with the Mitigation Fee Act a City must follow the following primary requirements: (1) Make certain determinations regarding the purpose and use of a fee and establish a nexus or connection between a development project or class of project and the public improvement being financed with the fee; (2) Segregate fee revenue from the General Fund in order to avoid commingling of capital facilities fees and general funds; (3) For fees that have been in the possession of a City for five years or more and for which the dollars have not been spent or committed to a project, the City must make findings each fiscal year.[68]

3.16.2.3 Local

Los Angeles County Significant Ecological Areas (SEAs)[69]

The Hillside Management and Significant Ecological Areas Ordinance was originally adopted in 1982 and most recently amended in 2019. Significant Ecological Areas (or SEAs) in LA County are designated as such due to their biological resources. These areas include undisturbed (or lightly disturbed) habitat of threatened or valuable species, or areas that support species movement, and are appropriately sized to support sustainable populations of the local species. The program is designed to conserve the diversity of biological resources in LA County through conservation and more stringent development rules. The SEA Ordinance outlines the review process and development standards for these areas to ensure biodiversity and ecosystems will not be negatively impacted by development. There are 21 SEAs in LA County per the 2035 General Plan published in 2015.

Orange County Transportation Association Measure M2[70]

Also known as "OC Go," Measure M2 is a voter-approved sales tax extension of Measure M, which was approved in 1990. This program is the funding source for county transportation projects as well as the Freeway Environmental Mitigation Program in Orange County. The Freeway Environmental Mitigation Program funds natural lands acquisitions and in turn, qualifying transportation projects undergo a streamlined California Environmental Quality Act (CEQA) review process. Thirty million dollars for approximately 1,300 acres of land and $10 million on 350 acres of habitat restorations have been funded through Measure M2.

Ventura County Habitat Connectivity and Wildlife Corridor Ordinance

Formally adopted in May 2019, this ordinance establishes regulations for development on lands where animals travel between the Santa Monica Mountains National Recreation Area and the Los Padres National Forest. The ordinance includes restrictions on elements detrimental to species movement, such as fencing, certain types of lighting and development in riparian areas. To provide flexibility for compliance, exemptions are allowed for agricultural activities.

Ventura County Save Open Space and Agricultural Resources (SOAR)[71]

SOAR is a collection of voter initiatives to create City Urban Restriction Boundaries (CURB) in eight of the county's cities. With these initiatives, re-zoning natural or agricultural lands for development outside of a city's sphere of influence requires a majority vote approval from residents. In 2016, voters approved all of the initiatives for renewal, which extends the expiration date until 2050.

County and City General Plans

The most comprehensive land use planning, including that for recreational facilities, in the SCAG region is provided by county and city general plans, which local governments are required by state law to prepare as a guide for future development. The SCAG region spans six counties and 191 cities, all of which have general plans containing policies related to provision of recreational resources. Open space and recreation resources are normally addressed in two mandatory elements of the general plan: land use and open space. The land use element normally focuses on the distribution of recreation facilities and

programs and an inventory of open space land, including those lands that provide opportunities for recreational activities. In contrast, the open space element focuses on open space for outdoor recreation including, but not limited to:

- Areas of outstanding scenic, historical, and cultural value
- Areas particularly suited for park and recreational purposes, including access to lakeshores, beaches, and rivers and streams
- Areas that serve as links between major recreational and open-space reservations, including utility easements, banks of rivers and streams, trails, and scenic highway corridors

The six county general plans address the majority of the regional open space, beyond that provided by the national forest, national parks, and wildlife refuges:

- **Imperial County:** Parks and Recreation Element[72] and Conservation and Open Space Element[73] of County General Plan
- **Los Angeles County:** Chapter 9: Conservation and Natural Resources Element[74] and Chapter 10: Parks and Recreation Element[75] of County General Plan
- **Orange County:** Chapter VI. Resources Element[76] and Chapter VII. Recreation Element[77] of County General Plan
- **Riverside County:** Chapter 5: Multipurpose Open Space Element and Chapter 10: Healthy Communities Element[78] of County General Plan

- **Ventura County:** Resources Appendix[80] and Public Services and Facilities Appendix[81] of County General Plan

Each city in the SCAG region has its own respective general plan that helps provide guidance for the growth and development of the city and contains measures to maintain and/or enhance open space within each of the city's jurisdictions. Each city's general plan varies in level of detail and necessary measures to preserve open space. Although city general plans are not required to contain parks and recreation sections, cities often choose to include this section to provide measures to maintain and/or enhance city parks and recreation areas.

Additional plans and ordinances at the master plan level, city-level, and specific plan level may also apply within the SCAG region.

Zoning

City and county zoning codes provide the set of detailed requirements that implement general plan policies at the level of the individual parcel. Zoning codes present standards for different uses and identifies which uses are allowed in the various zoning districts of the jurisdiction. Since 1971, state law has required the city or county zoning code to be consistent with the jurisdiction's general plan.[82]

3.16.3 ENVIRONMENTAL IMPACTS

3.16.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that the adoption and/or implementation of the Plan could result in significant adverse impacts to recreational resources, if the Plan would be considered to have the potential for significant impacts if it would:

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated;
- Result in substantial adverse physical impacts associated with the provision of new or physically altered park facilities, need for new or physically altered park facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, or other performance objectives;
- Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

3.16.3.2 Methodology

The Plan lists transportation projects and includes strategies for integrating land use development patterns with transportation investments that emphasize system preservation and enhancement, active transportation, mode choices, accessibility, and mobility. These land use distribution patterns are designed to accommodate the region's demographic growth projections. Although population growth and development are anticipated to occur even without Connect SoCal, this Plan includes regional transportation and land use strategies that may influence growth throughout the region. To address this, the analysis in this PEIR covers overall region-wide impacts of major transportation projects listed in the Plan as well as transportation and land use strategies described in the Plan.[83]

The need for or deficiency in adequate park facilities or library facilities to serve residents in the SCAG region is not in and of itself a CEQA impact, but a social or economic impact (*City of Hayward v. B'd of Trustees* (2015) 242 Cal.App. 4th 833, 843). However, pursuant to Appendix G of the *State CEQA Guidelines,* the determination of whether there is a significant impact related to parks or other recreational facilities is based on whether a significant impact could result from the construction and subsequent

83 Major transportation projects include but are not limited to projects that involve ground disturbing activities and projects outside of existing rights-of-way such as projects that require new rights-of-way, adding traffic lanes, and grade separation.

operation of new or altered parks and/or recreational facilities or where existing park and recreational facilities would be substantially physically deteriorated as a result of the implementation of the Plan.

The methodology for determining the significance of recreation impacts compares the existing conditions to future (2045) conditions, as required in CEQA Section 15126.2(a). To assess potential impacts to recreation within the SCAG region, geographic information system (GIS) was used to analyze whether major highway, transit, and freight rail projects documented in the Plan would directly impact existing recreation resources. Baseline conditions were established for the acreage of local and regional parkland per 1,000 population in each county to determine existing park level of service, and the 2045 anticipated population growth forecast was used to calculate the quantity of parkland needed to meet future recreation needs.

The results of the GIS analysis determine whether major transportation projects included in the Plan could directly affect existing local and regional parkland in the SCAG region. Indirect impacts were evaluated based on the land development patterns after a review of the Plan's transportation and land use strategies, as well as the assumptions that protected recreational areas (such as national forests) would remain protected and new development would be encouraged away from natural habitat areas to be concentrated in existing urbanized areas such as high-quality transit areas (HQTAs) (near transit). .

The mitigation measures in the PEIR are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.16.3.3 Impacts and Mitigation Measures

Impact REC-1 **Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.**

Significant and Unavoidable Impact – Mitigation Required.

Transportation projects and growth under the Plan would have the potential to increase use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration would occur, constituting a potentially significant impact. The Plan's transportation improvements aim to accommodate the anticipated population increase of approximately 3.2 million persons over the lifetime of the Plan. The Plan may influence new growth, primarily within urbanized areas such as HQTAs and other livable corridors and centers. Therefore, it is possible that existing neighborhood parks and other recreational facilities would see an increase in usage, which, in turn, may result in substantial physical deterioration of facilities. It is also possible that as population in urban centers increases, there may be more demand for parks outside of HQTAs, particularly if HQTAs are not well served. As such, the Plan's overall improvement of the transportation network could also result in increased accessibility and demand on regional parks.

Park accessibility is defined in the Plan as the share of the population within a one- and two-mile travel buffer from a regional park or school; also the share of park acreage that can be reached within 30 minutes by automobile or 45 minutes by bus or all transit modes during the evening peak period. As demonstrated in **Figure 3.16-1 Regional Recreation and Open Space Areas within a 45-Mile Radius of 2045 HQTAs** and **Table 3.16-2 Acres of Regional Recreation and Open Space Areas within a 45-Mile Radius of HQTAs in 2045,** based on the assumption that a 45-minute drive would provide access to regional parks within a 30-mile radius around HQTAs, most of the SCAG region would be adequately served by regional parks in 2045.

Table 3.16-2
Acres of Regional Recreation and Open Space Areas within a 45-Mile Radius of HQTAs in 2045

	Imperial County[1]	Los Angeles County[2]	Orange County[3]	Riverside County[4]	San Bernardino County[5]	Ventura County[6]
Regional parkland standard (acres per 1,000 population)	n/a	6	6	n/a	2.5	n/a
2045 population[7]	281,200	11,677,200	3,534,600	3,251,700	2,815,000	947,500
Acres of Regional parkland/open space within 45-mile radius of 2045 HQTAs[8]	1,194,653.53	911,711.94	181,505.98	1,659,657.76	2,641,955.40	1,063,942.04
Acres regional parkland/ open space per 1,000 population within 45-mile radius of 2045 HQTAs	4,248.81	78.08	51.35	510.37	938.49	1,122.78
Regional parkland surplus/deficiency within 45-mileradius of 2045 HQTAs	**n/a**	**72.08 acre surplus**	**45.35 acre surplus**	**n/a**	**935.99 acre surplus**	**n/a**

Local parks and urban areas are often overburdened in part because they are smaller and serve populated areas. As the land use strategies in the Plan emphasize compact development, it is possible that local parks could become overburdened. Accessibility to parks is also a public health concern and is addressed under Environmental Justice in the Plan. Urbanized areas, such as the low-income communities of Westlake and Southeast Los Angeles in the City of Los Angeles, are significantly park poor, with less than half an acre of park space per 1,000 residents.[84] Construction of transportation projects, as well as development in underutilized urban (opportunity) areas, as a result of land use strategies in the Plan would have the potential to impact recreational facilities both directly (through the acquisition of land)

84 Los Angeles Department of City Planning. March 2015. *Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan*. Available at: http://planning.lacity.org/cwd/gnlpln/PlanforHealthyLA.pdf, accessed June 24, 2019.

and indirectly (through development of transportation projects, urban uses, and increasing use of existing parks).

There may be sufficient parkland available in 2045 in some areas, while other areas may see a substantial increase in population and/or existing parks/recreational facilities may be transformed into development. As a result, by 2045 some areas and parks could have a lower LOS as a result of increasing population with no associated increase in park area, and some communities could have fewer parks. These impacts are expected to disproportionately affect urban centers where land prices are high. All of which is expected to result in existing parks and recreational facilities experiencing increased use and associated physical deterioration or accelerated physical deterioration.

Many of the transportation projects included in the Plan are located in urbanized areas, and therefore, are not likely to result in direct significant impacts to undisturbed lands or large tracts of land designated as open space. Additionally, as described in the regulatory framework, designated parklands are well protected at the local, state, and federal level.

Land use strategies described in the Plan would target growth in urbanized areas such as HQTAs that provide walkable, bikeable, and/or transit-oriented land patterns. Although HQTAs account for only 3 percent of total land areas, they are projected to accommodate 48 percent of the region's future households and 59 percent of the future jobs in 2045 under the Plan.[85] While land use strategies included in the Plan encourage additional parks and other regional and local biking and walking amenities, many of the areas where density would be expected to increase are areas without sufficient park space, resulting in increased use and the accelerated deterioration of existing neighborhood parks and recreational facilities.

The Plan includes strategies for active transportation, including expansion of the regional greenway network, regional and local bikeway network, and short-trip strategies to improve sidewalk quality and use of complete streets when making roadway improvements. These strategies are integrated with land use patterns such as HQTAs, livable corridors, neighborhood mobility areas, as well as with innovative technologies such as neighborhood electric micro-mobility vehicles through scooter and bike share programs. While the Plan has the potential to result in a significant impact on existing neighborhood and regional parks or other recreational facilities, implementation of such strategies can facilitate the creation of new neighborhood and regional recreational facilities and opportunities.

Overall, implementation of transportation projects as well as the transportation and land use strategies in the Plan would have the potential to increase the use of existing neighborhood and regional parks and

85 SCAG SPM Model Output, September 13, 2019

other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated, resulting in a significant impact requiring mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

See **SMM USWS-1.**

SMM REC-1: SCAG shall continue the commitment to analyze public health outcomes as part of the Regional Transportation Plan/Sustainable Communities Strategy (Plan). As part of the public health analysis for the Plan, SCAG shall continue to analyze resident access to parks and recreational facilities from a county level to help local jurisdictions to improve resident access to parks. SCAG shall communicate the impacts of the Plan through its Public Health Working group, and continue to support policy changes at the city and county level through educational programs.

Project Level Mitigation Measures

PMM REC-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on the use of existing neighborhood and regional parks or other recreational facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, consider increasing the accessibility to natural areas and lands for outdoor recreation from the proposed project area, in coordination with local and regional open space planning and/or responsible management agencies.

b) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, encourage patterns of urban development and land use which reduce costs on infrastructure and make better use of existing facilities, using strategies such as:

   i. Increasing the accessibility to natural areas for outdoor recreation

   ii. Utilizing "green" development techniques

iii. Promoting water-efficient land use and development

iv. Encouraging multiple uses, such as the joint use of schools

v. Including trail systems and trail segments in General Plan recreation standards

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts to existing park facilities could be significant and unavoidable even with implementation of mitigation.

Impact REC-2 **Result in substantial adverse physical impacts associated with the provision of new or physically altered park facilities, need for new or physically altered park facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, or other performance objectives.**

Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Significant and Unavoidable Impact – Mitigation Required.

Implementation of the Plan would result in additional linear recreation facilities, including a regional greenway network, a regional bikeway network, and local bikeway networks, the construction of which might have an adverse physical effect on the environment. Furthermore, the Plan encourages increased residential and commercial development in HQTAs that may necessitate the construction or expansion of recreation facilities within or in nearby accessible locations to the HQTAs, which are typically urban areas. Development of recreation facilities benefits the community socially, economically and environmentally. Recreational facilities and programs can also promote public health. For example, San Bernardino County enacted the Vision 2B Active program to promote health and wellness in the county

by encouraging residents to increase their physical activity and connecting them to existing recreational programs, amenities, and activities.[86],[87]

As discussed in **Section 3.14, Population and Housing**, the total population in the SCAG region is expected to increase by approximately 3.2 million people by 2045, independent of the Plan. The land use framework of the Plan assumes an increase in small-lot, single- and multi-family housing that is expected to mainly occur in infill locations near transit infrastructure (HQTAs and transit priority areas [TPAs]), and transit-oriented communities. This increased density in urban areas will increase demand for parks and recreational facilities in these areas. Larger parks become increasingly difficult to provide as space is limited and land is expensive. When park development and expansion in urban areas occurs, it is beneficial but can also result in environmental impacts associated with construction and operation. Park construction, including the linear recreational facilities considered in the Plan, can result in noise and air quality impacts and park and recreational facility operation can also result in long-term noise and night lighting impacts. See **Section 3.3, Air Quality,** and **Section 3.13, Noise,** for a discussion of air quality and noise impacts from construction and mitigation to reduce these impacts. Therefore, this PEIR finds that potential construction and/or expansion of recreational facilities that may result from implementation of the Plan has the potential to result in a significant adverse impact, and mitigation measures are required.

Mitigation Measures

SCAG Mitigation Measure

See **SMM REC-1.**

Project Level Mitigation Measures

See **PMM REC-1, PMM AQ-2,** and **PMM NOISE-1.**

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include

86 SCAG. 2019. *Public Health Draft Technical Report*.

87 National Recreation and Park Association. *Why Parks and Recreation are Essential Public Services.* Available online at: https://www.nrpa.org/uploadedFiles/nrpa.org/Advocacy/Resources/Parks-Recreation-Essential-Public-Services-January-2010.pdf

project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts resulting from the construction and operation of parks could be significant and unavoidable even with implementation of mitigation.

3.17 TRANSPORTATION, TRAFFIC, AND SAFETY

This section of the Program Environmental Impact Report (PEIR) describes the existing traffic and transportation networks within the SCAG region, identifies the regulatory framework with respect to laws and regulations that address transportation, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal" or "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.17.1 ENVIRONMENTAL SETTING

Southern California's extensive roadway network facilitates the constant movement of people and goods throughout the area. The region's complex intermodal network facilitates transportation via highways, transit, passenger and freight rail, airports, and seaports. The regional roadway system consists of an interconnected network of interstates, freeways, highway, toll roads, arterial streets, and local streets. This roadway network allows for the operation and movement of private vehicles, commercial vehicles, private and public buses, and heavy-duty trucks. Active transportation modes, such as biking and walking use non-motorized transportation facilities, including bikeways and walkways that often share spaces with roadway facilities. As traffic worsens and pressure to act on climate change mounts, local jurisdictions have placed an emphasis on the importance of the integration of active transportation modes in transportation planning.

The regional public transit system includes local shuttles, municipal and area-wide bus operations, light rail transit operations, regional commuter rail services, and interregional passenger rail service. The freight railroad network includes an extensive system of private railroads and several publicly owned freight rail lines serving industrial cargo and goods. The airport system consists of commercial, general, and military aviation facilities serving passenger, freight, business, recreational, and defense needs. The region's seaports support substantial international and interregional freight movement and tourist travel. Intermodal terminals, consisting of freight processing facilities, transfer, store, and distribute goods across the region and the globe.

3.17.1.1 Definitions

Terms and criteria used in the assessment of traffic, transportation, and safety are described below.

California Transportation Plan (CTP): This is a statewide, long-range transportation plan to meet future mobility needs and reduce greenhouse gas emissions.[1] The CTP defines performance-based goals, policies, and strategies to achieve the collective vision for California's future, statewide, integrated, multimodal transportation system.

Congestion Management Plan (CMP): This is a state-mandated program enacted by the legislature to address the increasing concern that urban congestion is affecting economic vitality and diminishing quality of life in some communities. The CMP provides the analytical basis for transportation decisions through the State Transportation Improvement Program (STIP).

Congestion Management Agency (CMA): A CMA is a county-wide body comprised of local elected officials. The CMA administers the CMP to keep traffic levels manageable. In the past, state gas tax revenue had historically been used to fund road and highways. With the passage of Proposition 111 in the 1990s, state gas tax and directed revenue are provided to fund road, bicycle, pedestrian, and public transit projects in addition to highways to help manage congestion for multi-modal purposes. CMA is charged with coordinating land use, air quality, and transportation planning among the local jurisdictions, including monitoring the levels of congestion on major roads and analyzing the impacts that a proposed development will have on future traffic congestion.

Complete Streets: Planned, designed, operated and maintained for safe, convenient, and comfortable travel and access for users of all ages and abilities, will support people who are walking, bicycling, and using micro-mobility devices.

Complete Streets is a transportation policy and design approach that requires streets to be planned, designed, operated, and maintained to enable safe, convenient and comfortable travel and access for users of all ages and abilities regardless of their mode of transportation

Goods Movement: Refers to the transportation of for-sale products from the location of their manufacture or harvest to their final retail destination.

Level of Service (LOS): In the context of traffic analysis, this is a measure used to relate the quality of traffic service. LOS is used to analyze highways by categorizing traffic flow and assigning quality levels of traffic based on performance measures such as speed and density.

Million Annual Passengers (MAP): Number of people taking public transit, airline flight, bus, or train calculated expressed in the unit of 100,000 in terms of boarding counts.

---

1 California Department of Transportation. 2013. *California Transportation Plan 2040: Fact Sheet*. April.

Peak Hour: The part of the day during which traffic congestion on roads and crowding on public transport is at its highest.

Safety: Protection of persons and property from unintentional damage or destruction caused by accidental or natural events.

Transportation Demand Management (TDM): Strategies and actions directed at influencing the mode, frequency, time, route, or length of travel in order to maximize the efficiency and sustainable use of transportation facilities. TDM strategies typically include providing information on travel choices; managing parking, marketing and communications, financial incentives, and disincentives; providing and operating facilities that make the use of non-solo driving more attractive; and encouraging telework and flexible work strategies.

Transportation System Management (TSM): Transportation system management refers to a set of strategies that largely aim to reduce greenhouse gas (GHG) emissions by reducing congestion, primarily by improving transportation system capacity and efficiency. TSM strategies may also address a wide range of other externalities associated with driving such as pedestrian/driver safety, efficiency, congestion, travel time, and driver satisfaction. Some TSM strategies are designed to reduce total and systemic congestion and improve system-wide efficiency, while other strategies target particularly problematic areas where improvements could greatly affect congestion, safety, efficiency, and GHG emissions.

Vehicle Miles Traveled (VMT): The number of VMT provides an indicator of the travel levels of the roadway system by motor vehicles in a given time period. This number is estimated based upon traffic volume counts and roadway length.

Vehicle Hours of Delay (VHD): The number of VHD provides an indicator of congestion levels of a roadway.

3.17.1.2 Circulation System

Commute Patterns and Travel Characteristics

The existing transportation network serving the SCAG region supports the movement of people and goods. On a typical weekday in the six-county region, the transportation network supports over 460 million vehicle miles of travel (VMT) and nearly 13 million vehicle hours of travel (VHT). Of this total, over half occur in Los Angeles County and less in Orange, San Bernardino, Riverside, Ventura, and

Imperial Counties, respectively (**Table 3.17-1, Summary of Existing Daily Vehicle Miles and Percentage Vehicle Hours of Travel**).

Much of the existing travel in the SCAG region takes place during periods of congestion, particularly during the morning (6:00 AM to 9:00 AM) and evening peak periods (3:00 PM to 7:00 PM). Congestion can be quantified as the amount of travel that takes place in delay (vehicle hours of delay or VHD) and, alternately, as the percentage of all travel time that occurs in delay (defined as the travel time spent on the highway due to congestion, which is the difference between VHT at free-flow speeds and VHT at congested speeds). Existing travel delays and percent of regional VHT in delay ranges from a low of 1 percent delay in Imperial County on freeways and arterials to 56 percent in Los Angeles County, with an average of approximately 17 percent in the SCAG region (see **Table 3.17-2, Summary of Existing Delay and Work Trip Length**; **Figure 3.17-1, 2019 AM Peak Period Congestion Delay on the Regional Freeway System**; **Figure 3.17-2, 2045 AM Peak Period Congestion Delay on the Regional Freeway System**; **Figure 3.17-3, 2019 PM Peak Period Congestion Delay on the Regional Freeway System**; and **Figure 3.17-4, Plan 2045 PM Peak Period Congestion Delay on the Regional Freeway System**). There is variation in average travel distance from home to work, from approximately 11 miles in Imperial County, to approximately 21 miles in Riverside and San Bernardino Counties, the difference in average travel time during the peak hours ranges from a low of approximately 15 minutes in the a.m. peak hour in Imperial County to a high of approximately 33 minutes in Riverside County (**Table 3.17-2**). Home-to-work trip duration and distance are both greater for the inland counties of Riverside and San Bernardino, reflecting regional housing and employment distribution patterns.

The characteristics of home-to-work trip and all daily trips vary widely among counties (**Table 3.17-3, Existing Travel Mode Split [Percentage of County Total]**). On average, vehicular trips account for approximately 93 percent of home to work/university trips, including 69.62 percent in single occupancy trips, 9.41 percent in two-person carpools, 6.7 percent in three-person carpools, and 7.64 percent in auto passenger trips. When accounting for all daily trips, on average vehicular trips account for approximately 88 percent of all daily trips, including 36.77 percent in single occupancy trips, 13.89 percent in two-person carpools, 8 percent in three-person carpools, and 29.39 percent in auto passenger trips. Public transit in all forms (including school buses) carries approximately 3.67 percent of all trips in the SCAG region. Of these, the greatest number of travelers is carried by buses, with lesser patronage on Metro Rail, paratransit, commuter rail, and other forms of public transit services. Trips made via public transit account for 3.9 percent of all home-to-work trips in the region and 3.67 percent of all daily trips (**Table 3.17-3**). Non-motorized trips account for 2.73 percent of all home-to-work trips in the region and 8.27 percent of all daily trips (**Table 3.17-3**).

Regional Freeway, Highway, and Arterial System

The regional freeway, highway, and arterial system is the primary means of person and freight movement for the region (**Table 3.17-4, Existing Regional Freeway Route Miles and Lane Miles by County [2019]**). This system provides for direct auto, bus and truck access to employment, services and goods. The network of freeways, interstates, and highways serves as the backbone of the system, offering very high capacity limited-access travel and the primary heavy-duty truck route system. Deferred maintenance on roadways within the SCAG region has contributed significantly to the poor condition of many roadways and many need costly repairs to improve security and efficiency. The Plan will focus on preserving the existing transportation network, including preservation of roads, highways, bridges, railways, bicycle and pedestrian facilities, and transit infrastructures that lead to maintain mobility and provide cost-efficiency without increasing capacity.

Table 3.17-4
Existing Regional Freeway Route Miles and Lane Miles by County (2019)

County	Freeway Route Miles	Freeway Lane Miles
Imperial	95	380
Los Angeles	656	4687
Orange	227	1661
Riverside	319	1821
San Bernardino	471	2558
Ventura	94	536
Total	**1,863**	**11,642**

Source: SCAG Modeling, 2019

Arterial Street System

The local street system provides access for local businesses and residents. Principal arterials account for more about 79 percent of the arterial (principal and minor) network (**Table 3.17-5, Existing Regional Arterial Lane Miles by County [2019]**) and carry a high percentage of total traffic. In many cases arterials serve as alternate parallel routes to congested freeway corridors. Peak period congestion on the arterial street system occurs generally in the vicinity of activity centers, at bottleneck intersections and near many freeway interchanges.

Regional High-Occupancy Vehicle (HOV) System and Park and Ride System

The regional HOV system consists of exclusive lanes on freeways and arterials, as well as busways and exclusive rights-of-way dedicated to the use of high-occupancy vehicles (HOVs). As described in **Table 3.17-6, Existing Regional High-Occupancy Vehicle Lane Miles by County (2019)**, the HOV system includes lanes on freeways, ramps and freeway-to-freeway connectors. The regional HOV system is designed to maximize the person-carrying capacity of the freeway system through the encouragement of shared-ride travel modes. HOV lanes operate at a minimum occupancy threshold of either two or three persons. Many include on-line and off-line park and ride facilities, and several HOV lanes are full "transitways" including on-line and off-line stations for buses to board passengers.

Park and ride facilities are generally located at the urban fringe along heavily traveled freeway and transit corridors and support shared-ride trips, either by transit or by carpool or vanpool. Most rail transit stations have park and ride lots nearby. Park and ride lots in the SCAG region include: 106 in Los

Angeles County, 25 in Orange County, 26 in Riverside County, 18 in San Bernardino County, and 20 in Ventura County.[2]

3.17.1.3 Public Transit

In Southern California public transit service is comprised of local and express buses, transitways, Rapid Bus, bus rapid transit (BRT), urban rail, including subway and light rail principally centered in the core of Los Angeles County, commuter rail that spans five counties and shuttles/circulators that feed all transportation modes and activity centers (**Table 3.17-7, SCAG Region Annual Fixed Route Transit Ridership**). Transit service is provided by approximately 67 separate public agencies. Twelve of these agencies provide 91 percent of the existing public bus transit service. Local service is supplemented by municipal lines and shuttle services while additional regional service is offered via private bus companies.

Many people depend on reliable transit service to participate in the economic, cultural, and social benefits of Southern California, and transit use is growing in the SCAG region (**Table 3.17-8, Statistics for Major Transit Operators for 2017**). According to data reported to the National Transit Database (NTD), transit agencies in the SCAG region experienced 655 million annual boardings and invested $2.91 billion in operations and maintenance (O&M) in FY 2015–16. These services were operated by over 100 agencies, involving a wide variety of bus and rail transit modes.[3]

Metro Rail System

Existing urban rail lines (Metro Rail) are located in Los Angeles County and are operated by Metro. They include the Metro Blue Line from Long Beach to Downtown Los Angeles, the Metro Green Line from Redondo Beach to Norwalk, the Metro Expo Line from Downtown Los Angeles to Santa Monica, and the Metro Red Line subway from Union Station to North Hollywood. The Metro Purple Line subway follows the Red Line from Union Station to Wilshire and Vermont but branches off to Western Avenue, and the Metro Gold Line that runs from East Los Angeles (Atlantic station) to Azusa via Union Station (shown in **Figure 2.0-3, Existing Transit Network [2018]**). The Metro Rail system is operated seven days a week. A system total of 98 route miles serves a total of 93 stations. Ridership on the Metro Rail system is approximately 359,000 boardings every day.

Commuter Rail and Intercity Passenger Rail

Commuter rail service is operated by the Southern California Regional Rail Authority (SCRRA). In October of 1992, the SCRRA began initial operation of the Metrolink commuter rail system on three lines. Service on the initial system was greatly expanded after the 1994 Northridge earthquake. Currently SCRRA operates seven routes including five from Downtown Los Angeles to Ventura, Lancaster, San Bernardino, Riverside, and Oceanside, from San Bernardino to Oceanside, and from Riverside via Fullerton or City of Industry to Downtown Los Angeles. As of Q3 2018-19, the system operated 173 trains on weekdays, 48 on Saturdays, and 42 on Sundays to 62 stations on 538 route miles. Average weekday ridership is approximately 38,436 passengers.[4]

Amtrak provides significant regional and interregional service on the Los Angeles–San Diego–San Luis Obispo (LOSSAN) Corridor (also known as Amtrak's Pacific Surfliner corridor) operating 12 daily round-trip services, with service to Los Angeles Union Station (**Figure 3.17-5, Amtrak Railways**). Additionally, Amtrak operates four interstate routes within the region (Coast Starlight, Sunset Limited, Southwest Chief and Texas Eagle) that on average have one daily trip.[5]

Shuttles and Demand-Responsive Services

One component of the region's public transit system consists of publicly operated or funded demand-response taxis and dial-a-ride services; some open to the general public, others limited to elderly and disabled use. It also includes locally operated or funded shuttle buses (e.g., Los Angeles DASH, Pasadena

4 Southern California Regional Rail Authority. 2018. *Facts and Numbers.* Available online at: https://www.metrolinktrains.com/about/agency/facts--numbers/, accessed September 24, 2019.

ARTS, Glendale Beeline, Cerritos on Wheels, El Monte Transit, Riverside Orange Blossom, etc.). Access Paratransit, the largest provider of transportation services for the disabled in the region, operates in the vicinity of fixed-route bus and rail lines in Los Angeles County and extends into portions of the surrounding counties of San Bernardino, Orange and Ventura. These systems serve as local shuttles, internal circulators, connectors to other public transit, or as shoppers' shuttles. Service on these systems is usually limited to a prescribed geographic area.[6]

3.17.1.4 Active Transportation and Non-Motorized Transport

The California Active Transportation Program (ATP) was created to ensure all active modes of transportation, such as biking and walking, was accounted to meet the development of active transportation plans in disadvantaged communities as well as the implementation of non-infrastructure projects (i.e. education, enforcement activities). The use of bicycle as a means of transportation has several appealing aspects for an increasing share of travelers.

Bicycle and Pedestrian Facilities

Biking and walking primarily constitute non-motorized transportation. Non-motorized transportation plays a bigger role in the densely-populated, mixed-land-use areas of the region. Bicycling has positive air quality, economic, and health impacts, and can reduce automobile-related congestion and energy use. Similar to bicycle use, walking can also reduce auto emissions of both criteria pollutants and greenhouse gases from auto trips. Health in communities improve when there are options to increase physical outcome of activities, lower body weight, lower rates of traffic injuries, lower air pollution, and improve mobility for nondrivers. Currently, 32 percent of all walking trips are less than half a mile, and 59 percent of walking trips are less than a mile. The average bicycle trip is 3.1 miles (the majority of bicycle trips are discretionary). Walking trips made up 3.4 percent of all commute trips and 8 percent of all trips for the SCAG region. Bicycles make up 1.3 percent of all trips and 0.8 percent of commute trips for the SCAG region.[7]

The region's bikeways encourage non-motorized travel, serve as recreational facilities, and provide inexpensive, environmentally friendly transportation opportunities. Some of the strategies to encourage active transportation currently being considered are focused on addressing concerns related to equity and public health, refining models to account for recent changes in shared mobility, improving first-last mile

6 Access Services. *About Us*. Available online at: https://accessla.org/about_us/overview.html, accessed September 24, 2019.

7 Southern California Association of Governments. November 2019. SCAG Active Transportation Technical Report.

infrastructure, and improving compact community development through targeted High Quality Transit Areas (HQTA). The bikeways are also designated to provide for allowable use and to encourage active use. Class I bikeways are separate shared-use paths also used by pedestrians, Class II bikeways are striped lanes in streets, and Class III bikeways are signed routes. There are approximately 5,075 bikeway miles in the region, with the majority in Los Angeles County, followed by Riverside and Orange County. Bike rack, locker, and station programs are ongoing in a number of cities and transit operators. In addition, transit operators are integrating bicycle transportation with transit via bus bike racks, bike-on-train programs and bicycle lockers at transit centers. **Figure 3.17-6, Existing Regional Bikeways,** and **Figure 3.17-7, Existing and Proposed Regional Bikeways (2045)**, show the existing and proposed bikeways in the SCAG region.

Pedestrian access at and near public transit, in most major commercial areas, and many residential areas is facilitated by sidewalks, a number of pedestrian malls, and in some cases local jogging and pedestrian trails or paths.

Micro-transit

Micro-transit is more flexible than traditional bus service in that it either utilizes dynamic routing, smaller vehicles or on-demand service that allows greater efficiency and convenience. Some micro-transit services exist in Southern California, but it can and must expand in order to meet riders' shifting needs and expectations. While accommodations should be made for those who do not possess smartphones or other technology to hail a ride or research a route, most transit riders could benefit from micro-transit.

Los Angeles Metro and Orange County Transportation Authority have partnered with private companies to pilot micro-transit services in their respective counties. These are projects that could change the way people ride transit, giving riders more options.

Micro-mobility

Micro-mobility strategies provide shared technology infrastructure and regulation frameworks to ensure that new technologies (e.g. app-based e-scooters and e-bikes) can be used safely and responsibly. These strategies range from incentives for the purchase of e-bikes, to the distribution of private micro-mobility devices that help ensure access for low-income communities. While it is expected that many of these devices will be provided through the private sector, they will still use public streets and will likely increase demand for separated facilities that are safe for all ages and abilities. Local cities will likely be tasked with the regulation of these devices and will likely need to manage the locations where parking is allowed and where they can be ridden.

3.17.1.5 Goods Movement

Goods movement generally refers to the movement of raw, semi-finished, and finished materials and products used by businesses and residents across the transportation system. These goods move in myriad ways and through complex systems, often using multiple modes of transportation (e.g., ships, trucks, trains, planes, etc.). Products can be produced within the U.S. or another country, and make their way to a business, retail store, or directly to consumers versus traditional purchases by consumers at physical retail outlets. The efficient movement of these goods are critical to maintain a strong economy and ensure improvements in the quality of life of regional residents.

Goods movement supports industries and activities that provide jobs, tax revenue, and resources that bolster innovation, creativity, and access to local and world markets through trade. This movement depends directly on the infrastructure that comprises the transportation network such as highways, rail lines, ports, and networks of warehousing and other distribution facilities. Maintaining and improving existing infrastructure, and expanding infrastructure capacity where appropriate, is key to ensuring the competitiveness of a growing economy. However, goods movement also has negative impacts and externalities. Growing trade and increased volumes of goods moving across the transportation system have contributed to greater congestion, safety concerns, harmful emissions of dangerous pollutants, wear-and-tear on roadways and impacts on local neighborhoods. As the Metropolitan Planning Organization (MPO) for the region, SCAG has adopted a vision for the region's goods movement system.

Federal law (23 U.S.C. §§ 134-135) mandates that MPOs encourage and promote the safe and efficient management, operation, and development of surface transportation systems that will serve the mobility needs of people and freight and foster economic growth and development within and between States and urbanized areas. Specifically, MPOs should consider projects and strategies that will increase the accessibility and mobility of people and for freight and enhance the integration and connectivity of the transportation system, across and between modes, for people and freight.[8]

At the state level, MPOS are required to perform regional transportation planning to prepare and provide for the region's mobility in a fiscally and environmentally responsible manner, consistent with the needs, preferences, and sensibilities of the community. This coincides with California Government Code 65041.1 (Cal Civ. Code § 65041.1) and identifies planning considerations for freight that are consistent with federal requirements.

8 United States Code. 2019. *§134. Metropolitan transportation planning*. Available online at: https://www.govregs.com/uscode/title23_chapter1_section134, accessed September 16, 2019.

Wholesale and retail trade, transportation, and manufacturing support over approximately 6 million jobs in the SCAG region according to statistics provided by the State's Employment Development Department.[9]

Heavy-Duty Trucks

Figure 3.17-8, Existing Regional Goods Movement System displays the regional goods movement system. One of the key components of the region's goods movement system is the fleet of heavy-duty trucks, defined as cargo-carrying vehicles with a gross weight rating in excess of 8,500 pounds. Trucks provide a vital link in the distribution of all types of goods between the region's ports (sea and air), railroads, warehouses, factories, farms, construction sites and stores. The size and weight of heavy-duty trucks gives them unique operating characteristics; that is, they accelerate and decelerate more slowly than lighter vehicles and require more road space to maneuver. Dedicated truck lanes currently exist at two major freeway interchanges: the junction of Interstate 5 (I-5) with the I-210 and State Route 14 (SR-14) and at the junction of the I-405 with the I-110. In addition, truck climbing lanes are located on northbound I-5 in northern Los Angeles County.

The trucking industry, including common carrier, private carrier, contract carrier, drayage and owner-operator services, handles both line-haul and pick-up and delivery. The industry uses the public highway system for over-the-road and local service. However, it is also served by a considerable infrastructure of its own. This infrastructure includes truck terminals, warehousing, consolidation and trans-loading facilities, freight forwarders, truck stops and maintenance facilities. These various facilities are especially prevalent in the South Bay and Gateway Cities areas, including Wilmington and Carson and extending generally between Los Angeles International Airport (LAX) and the San Pedro Bay Ports, along the I-710 Corridor north to Vernon, Commerce, and Downtown Los Angeles, east through the San Gabriel Valley to Industry, Pomona, and Ontario and then to the Inland Empire in Fontana and Rialto as well as in Glendale and Burbank. Specialized facilities for trucking that provide air cargo ground transport are located around regional airport facilities, notably LAX and LA/Ontario International Airport.

Railroads

The SCAG region is served by two main line commercial freight railroads—the Burlington Northern/Santa Fe Railway Co. (BNSF) and the Union Pacific Railroad (UP). These railroads link Southern California with other United States regions, Mexico, and Canada either directly or via their

9 State of California Employment Development Department. 2019. *Employment by Industry Data*. January. Available online at: https://www.labormarketinfo.edd.ca.gov/data/employment-by-industry.html, accessed January 30, 2019.

connections with other railroads. They also provide freight rail service within California. In 2017, railroads moved approximately 162.3 million tons of cargo throughout California.[10]

The SCAG region is also served by three short line or switching railroads:

The Pacific Harbor Line (formerly the Harbor Belt Railroad), which handles all rail coordination involving the Ports of Los Angeles and Long Beach, including dispatching and local switching in the harbor area;

- Los Angeles Junction Railway Company, owned by BNSF, which provides switching service in the Vernon area for both the BNSF and UP;
- The Ventura County Railroad, owned by Rail America, Inc., which serves the Port of Hueneme and connects with the UP in Oxnard.

These railroads perform specific local functions and serve as feeder lines to the trunk line railroads for moving goods to and from Southern California.

The two main line railroads also maintain and serve major facilities in the SCAG region. Intermodal facilities in Commerce (BNSF-Hobart), East Los Angeles (UP), San Bernardino (BNSF), and Carson near the San Pedro Bay Ports (UP-ICTF), the Los Angeles Transportation Center (UP-LATC), and the UP-City of Industry yards serve on-dock rail capacity at the Ports of Los Angeles (UP/BNSF) and Long Beach (UP/BNSF).

All major rail freight corridors in the region have some degree of grade separation, but most still have a substantial number of at-grade crossings on major streets with high volumes of vehicular traffic. These crossings cause both safety and reliability problems for the railroads and for those in motor vehicles at the affected crossings. Trespassing on railroad rights of way by pedestrians is another safety issue affecting both freight and commuter railroads.

3.17.1.6 Regional Aviation System

The SCAG region supports the nation's largest regional airport system in terms of number of airports and aircraft operations, operating in a very complex airspace environment. The SCAG region contains seven commercial airports with scheduled passenger service, seven government/military air fields, and over 30 reliever and general aviation airports. The existing active commercial service airports handle the majority

10 Association of American Railroads. 2018. *U.S. Freight Railroad Industry Snapshot: California*. Available online at: https://www.aar.org/data-center/railroads-states/#state/CA, accessed January 30, 2019.

of passenger air traffic (see **Figure 3.9-1, Airports in the SCAG Region**, in **Section 3.9, Hazards and Hazardous Materials**).

- Los Angeles International Airport (LAX)
- Ontario International Airport (ONT)
- John Wayne/Orange County Airport (SNA)
- Hollywood Burbank Airport (BUR)
- Imperial County Airport (limited commercial service) (IPL)
- Long Beach Airport (LGB)
- Palm Springs International Airport (PSP)

In all, approximately 110.2 million annual passengers (MAP) were served in the region in 2017, a 28 percent increase over 2012. The level of regional aviation demand forecasts related to MAP has been decreasing, with approximately 165.3 MAP by 2035 in the 2008 RTP, 145.9 MAP by 2035 in the 2012 RTP/SCS, and 136.2 MAP by 2040 in the 2016 RTP/SCS.[11] In 2017, Los Angeles International Airport (LAX) led the largest share of air passengers with approximately 77%, followed by John Wayne Airport at 10%, Hollywood Burbank Airport at 4%, and Ontario International Airport at 4%.[12] The SCAG region is forecast to have 197.1 MAP by 2045. In 2017, the SCAG region was one of the most active and fastest growing regions for air passenger traffic in the United States, second only to the New York/New Jersey region for air passenger traffic. Moreover, the growth rate of 5.12 percent for the SCAG region from 2012 to 2017 was second only to the Bay Area. LAX accounts for the largest proportion of passenger volume, cargo, and annual operations. A brief discussion of the location, major access routes, and facilities at seven major airports is provided below.

Hollywood Burbank/Bob Hope Airport (BUR)

Located in the San Fernando Valley northwest of downtown Burbank, the Hollywood Burbank Airport (also known as Bob Hope Airport) is a publicly owned airport operated by the Burbank-Glendale-Pasadena Airport Authority. Major vehicular access is provided by I-5, Hollywood Way, San Fernando Road, and Vanowen Street. Burbank Airport is currently in the project planning process for a new, relocated terminal, which would enable faster processing while maintaining existing capacity. Burbank Airport has dedicated transit and rail facilities for passengers coming to and from the airport and is the only airport in the SCAG region with a direct rail connection to Downtown Los Angeles via Amtrak and Metrolink. Burbank Airport averages 354 aircraft operations per day, including 38 percent commercial and 29 percent transient general aviation. Burbank Airport served 4.7 MAP in 2017, a 20 percent increase over 2015.

11 Southern California Association of Governments. November 2019. Aviation Technical Report.

12 Ibid.

Imperial County Airport (IPL)

Imperial County Airport is located in the City of Imperial, approximately 12 miles north of the California-Mexico border. The airport provides limited scheduled air service and serves the general aviation needs of the surrounding communities. It is part of the Essential Air Service (EAS) program through the US Department of Transportation, providing residents of Imperial County a connection to the national aviation system by subsidizing air service to eligible small community airports. Currently, only one scheduled passenger airline operates out of IPL, carrying passengers to LAX or BUR. IPL averages 38 aircraft operations per day, including 43 percent general aviation and 25 percent military. IPL served 11,812 passengers in 2017, down from a peak of approximately 30,000 passengers in 2001.

Long Beach Airport/Daugherty Field (LGB)

Long Beach Airport is located approximately four miles northeast of downtown Long Beach. Built in 1941, the Long Beach Airport terminal is a Cultural Historic Landmark. In 2017, a new concourse was opened, and a new ground transportation center is currently being constructed. The arrival of low-cost carrier JetBlue in 2001 led to a rapid increase in air traffic and solidified the airport as an alternative to LAX for east coast destinations. The airport primarily serves general aviation aircraft. LGB averages 811 aircraft operations per day, including 51 percent local general aviation and 34 percent transient general aviation. LGB served 3.8 MAP in 2017 and averages approximately 25,000 tons of cargo per year.

Los Angeles International Airport (LAX)

Located 18 miles southwest of Downtown Los Angeles, LAX is the publicly owned primary airport serving the Greater Los Angeles Area. As the largest airport in the region and the fourth busiest in the world for passenger traffic, LAX plays a critical role in the movement of people and cargo throughout the region. When factoring out connecting flights, LAX is the busiest origin and destination airport in the world for passenger traffic. LAX is also the 13th busiest cargo airport in the world by tonnage. LAX is currently undergoing a major renovation known as the Landside Access Modernization Program, which will include an elevated Automated People Mover; two Intermodal Transportation Facilities with drop-off areas; a Consolidated Rental Car Facility; and a comprehensive series of roadway improvements. In addition, Metro's Crenshaw/LAX Line is set to open in summer 2020, providing a light rail connection from the Automated People Mover to destinations throughout South Los Angeles, ultimately connecting to the Expo and Green Lines. LAX averages 1,603 aircraft operations per day, including 92 percent commercial aviation. Passenger traffic at LAX has steadily increased since the 2008 Recession, from 59 MAP in 2010 to 84.6 MAP in 2017. LAX accommodates over 70 percent of the air passenger travel in the SCAG region.

Ontario International Airport (ONT)

Ontario International Airport is located in the City of Ontario in San Bernardino County. It is accessed primarily via I-10 and SR-60. Southwest Airlines is the largest carrier operating at the airport, and ONT is also a major cargo hub for UPS, due to its long runways and relatively limited noise restrictions. Ontario Airport averages 267 aircraft operations per day, including 63 percent commercial and 18 percent air taxi. Currently, ONT averages approximately 4 MAP, though at one point in the early 2000s, that number went as high as 7 MAP.

Palm Springs International Airport (PSP)

Palm Springs International Airport is located in the desert resort city of Palm Springs in the Coachella Valley of Riverside County. The airport primarily caters to seasonal leisure travelers visiting during the winter. PSP averages 142 aircraft operations per day, including 37 percent commercial and 34 percent transient general aviation. Peak travel occurs during the fall, and the airport served 2.1 MAP in 2017.

John Wayne Airport (SNA)

John Wayne Airport is owned and operated by the County of Orange and is not located in an incorporated city. However, it is surrounded by the cities of Santa Ana, Irvine, Newport Beach, and Costa Mesa and accessible by the I-405 and SR-73 freeways. SNA is 503 acres with 20 gates for commercial airlines and two commuter terminals, and general aviation outnumbers commercial operations. Strict noise regulations impact when flights can fly in and out of John Wayne Airport. Commercial departures between 10 PM and 7 AM (8 AM on Sundays) and arrivals between 11:00 PM and 7 AM (8 AM on Sundays) are prohibited. Additionally, special takeoff procedures for most aircraft require a steep climb followed by an abrupt power reduction at approximately 500 feet for quiet passage over Newport Beach. SNA served 10.4 MAP in 2017, making it the second busiest airport in the SCAG region.

3.17.1.7 Maritime Ports

Southern California is served by three major deep-water seaports. These ports—Hueneme, Long Beach, and Los Angeles—handle Asia–North America trade and are served by the two major railroads and numerous trucking companies in Southern California. The Port of Hueneme, with its recent expansion, ranks as one of the premier automobile and agricultural product-handling facilities in California. The Ports of Long Beach and Los Angeles are full-service ports with facilities for containers, autos and various

bulk cargoes. With an extensive landside transportation network, the three ports moved more than 370 million metric tons of cargo in 2017.[13,14,15]

In particular, the San Pedro Bay Ports (Long Beach and Los Angeles) dominate the container trade in the Americas by shipping and receiving nearly 17 million 20-foot Equivalent Units (TEUs) of containers in 2018.[16,17] Together these two ports rank third in the world, behind Rotterdam and Hong Kong, as the busiest maritime ports.

3.17.1.8 Transportation Hazards

Based on average accident rates provided by Caltrans, transportation-related fatalities in 2015 occurred at an overall rate of 1.01 fatalities per 100 million vehicle miles traveled, taking into account the varying accident rates on different facility types (freeway, arterials) and travel modes (bus transit, rail transit).[18] In 2015, the most recent date for which data is available, more than 1,700 people died and nearly 160,000 were injured on roadways throughout the SCAG region (**Table 3.17-9, Total Vehicle Fatalities and Injuries in the SCAG Region (2016)**). On any given day in Southern California, six people are killed by a car or truck. In 2016, in the SCAG region, more than 1,700 people died including more than 70 cyclists and nearly 500 pedestrians. The problem is getting worse: the number of pedestrians killed in crashes grew 50 percent between 2011 and 2016.The leading cause of serious injuries and fatalities in collisions is unsafe speed. [19]

Safety, Security and Emergency Access

Southern California is home to significant natural disasters, including earthquakes, wildfires, flooding, and mudslides (discussed in **Section 3.7, Geology and Soils,** and **Section 3.20, Wildfire**). Although natural disasters, such as earthquakes and hurricanes, have produced significant regional casualties and property damage, none had the serious disruption to national travel and the national economy as the September 11, 2001, terrorist attacks. The 9/11 attacks created a new awareness of the vulnerabilities of transportation fleets and facilities. As concern about the threat of terrorism and consequences of natural disasters has grown, government (at all levels) has taken new measures to secure the welfare of its citizens. Transportation and transit agencies throughout the United States are taking increasing steps to protect their facilities against the threats of crime, terrorist activity, and natural disasters.

A large-scale evacuation would be difficult in the SCAG region. The region already has severe traffic congestion and mobility issues. The region encompasses 38,000 square miles with a diverse geography, ranging from dense urban areas, to mountain ranges, to vast deserts. The interdependency of the jurisdictions and organizations makes regional cooperation and coordination essential to security and emergency preparedness. Typically, no single agency is responsible for transportation security. At the local level, especially within transit agencies, safety may be handled within one office. However, it is far less likely that the security of a surface transportation mode is managed by one entity and that this entity is even controlled by the transportation organization. For example, highways and transit networks traverse multiple police jurisdictions, local fire departments generally fill the incident command role after terrorist events, regional command and control centers respond to both natural and intentional disasters,

and federal agencies intervene as needed and based on specific guidelines such as the crossing of state boundaries.

The complexity of the SCAG region, with a range of potential terrorism targets, presents significant challenges in coordinating and implementing effective homeland security programs. The unexpected and complex nature of these natural and human-caused incidents require extensive coordination, collaboration and flexibility among agencies and organizations involved in planning, mitigation, response and recovery.

As described above, the SCAG region has an extensive transportation system, with more than 73,800 miles of freeway and arterial lanes and 5,000 miles of bikeways. As of 2019, the region had 15.8 million licensed drivers and 12.7 million registered vehicles.[20] As of 2016 (most recent year data was available), 1,711 people died and 157,895 were injured in traffic collisions in the region. Therefore, safeguarding the Southern California transportation safety to minimize accidents on-road for vehicles and pedestrians is an important focus of the region.

The Transportation Research Board has classified emergency events that affect transportation agencies into several categories (**Table 3.17-10, Transportation Security Vulnerabilities**).

Table 3.17-10
Transportation Security Vulnerabilities

Roadways and Freeway	
Freeway Lanes Miles (excluding carpool)	11,642 miles
Carpool Lane Miles	935 miles
Road Lane Miles	135,578 miles
Public Transit	
Buses	5,851 vehicles
Metro Rail	98 miles and 93 stations
Metrolink	538 miles and 62 stations
Aviation/Ports	
Commercial/General Aviation Airports	56
Regional Airport Activity Levels	110.2 MAP to 200 nonstop destinations
Long Beach/Los Angeles rank among world container ports	9th
Share of United States Maritime Trade	40 percent

Rail and Mass Transit

The dispersed nature and the daily volume of passengers using public transportation services, which include intercity passenger rail, commuter rail, subway systems, and bus transportation, make it an attractive target for terrorists and criminals. **Table 3.17-10, Transportation Security Vulnerabilities,** provides a summary of the regional transit system.

- 105 miles of heavy and light rail
- 534 miles of commuter rail (Metrolink)
- 9,000 miles of bus routes
- 5,075 miles of bikeways
- 135,578 total lane miles of roadways
- 94 miles of express lanes

The numbers of customers using public transportation every day creates ongoing challenges for enhancing security within transit environments. Plans have been implemented to provide for basic protection. In the early 1990s, the California Public Utilities Commission required that transit agencies operating rail systems prepare a comprehensive System Safety Program Plan (SSPP) that also included a security component. Since 2004, all transit agencies are required to include a security and emergency management plan, which details how the agency would coordinate with first responder (law enforcement and fire) agencies, their respective County Office of Emergency Services and the Statewide Standardized Emergency Management System (SSEMS).

International Border Crossings

Within the SCAG region, there are three international ports of entry along the Mexico–Imperial County border: two at Calexico (Calexico and Calexico-East); and, one at Andrade (near Yuma, Arizona). Traffic from these ports enters California on the I-8 corridor. U.S. Customs and the Border Protection Agency within the Department of Homeland Security (DHS) are charged with the management and control of the official ports of entry. Security planning includes local emergency services, as well as the CHP.

Caltrans District 11 has developed the California–Baja California Border Master Plan, which establishes a process to institutionalize dialogue among local, state and federal stakeholders in the United States and Mexico. A key objective was to develop criteria that can be used in future studies to coordinate and prioritize projects related to existing and new Ports of Entry (POEs), as well as roads leading to the

California Mexico POEs. Security was a major consideration in the development of the Border Master Plan.

Security at Seaports

The DHS has designated the seaports of Long Beach, Los Angeles, and Port Hueneme as at risk for potential terrorist actions.[21] Security at the ports is the joint responsibility of the U.S. Coast Guard, the U.S. Customs and Border Protection Agency, federal and State Homeland Security offices, Port police agencies, Harbor Patrols and emergency service agencies. The U.S. Coast Guard leads the local Area Maritime Security Commission, which coordinates activities and resources for all port stakeholders.

The Port of Los Angeles has a dedicated police force, the Los Angeles Port Police, to patrol the area within the jurisdiction of the Port of Los Angeles. The Port Police enforce federal, state, and local public safety statutes, as well as environmental and maritime safety regulations, in order to maintain the free flow of commerce and produce a safe, secure environment that promotes uninterrupted Port operations. In addition, the Port Police partner with other law enforcement agencies, such as the Los Angeles Police Department, CHP, and Customs and Border Protection in the Cargo Theft Interdiction Program (CTIP), which investigates cargo theft, and the High Intensity Drug Trafficking Area, which targets drug trafficking at the Ports of Los Angeles and Long Beach. Furthermore, per the Maritime Transportation Security Act of 2002, the Port of Los Angeles works with the Coast Guard to develop security plans for facilities at the port.

Similar to the Port of Los Angeles, security at the Port of Long Beach entails physical security enhancements, police patrols, coordination with federal, State, and local agencies to develop security plans for the port area and investigate suspicious incidents and obtaining federal funding to pay for these enhancements. As with the Port of Los Angeles, the Port of Long Beach works with the Coast Guard to develop security plans for facilities at the port. In contrast to the Port of Los Angeles, however, the Port of Long Beach does not have its own dedicated police force. Instead, the Long Beach Police Department is responsible for patrolling the port area. In doing so, the Port reimburses the Long Beach Police and Fire Departments for their port-related activities and expenses. The Port also funds its own Harbor Patrol to supplement law enforcement work conducted by other agencies such as the Coast Guard.

In addition to the above, several programs are in place to effectively monitor and screen seaport cargo. They include:

21 Maritime Logistics Professional. 2017. *Security and the Ports*. September. Available online at: https://www.maritimeprofessional.com/blogs/post/security-and-the-ports-of-los-angeles-and-long-beach-15234, accessed January 30, 2019.

Investigations

The federal Container Security Initiative (CSI) directs Customs agents, working with host governments, to inspect and examine all cargo containers deemed high-risk before they are loaded on U.S.-bound vessels. The CSI contains four core elements: identifying high-risk containers, pre-screening containers before they reach U.S. ports of entry, using technology to prescreen high-risk containers and developing and using smart and secure containers.

Inspections

The 24-hour rule requires manifest information on cargo containers to be delivered to U.S. Customs 24 hours before the container is loaded onto a vessel in a foreign port. Customs has the right to stop any container from being loaded, for any reason, while the container is still overseas.

Partnerships

Most of the largest U.S. importers and their trading partners participate in the Customs-Trade Partnership Against Terrorism (C-TPAT), a public-private partnership designed to improve security standards throughout the cargo supply chain.

Technology

U.S. Customs uses X-ray, gamma ray and radiation-detection devices to screen incoming cargo at U.S. ports.

3.17.2 REGULATORY FRAMEWORK

This regulatory framework focuses on the federal, state, and local statutes and regulations where the primary objective is improvement of transportation systems, standards, and travel demand measures. However, there are other regulations that are focused on increased energy efficiency and reduction of greenhouse gas emissions, that if accomplished would be expected to contribute to improvement in traffic levels. Those regulations have been addressed respectively in **Section 3.6, Energy,** and **Section 3.8, Greenhouse Gases.**

3.17.2.1 Federal

Federal Clean Air Act (CAA) Transportation Conformity

Congress passed the first major CAA (42 U.S. Code [USC] § 7506(c)) in the 1970s which gives EPA primary responsibility to regulate mobile and stationary sources of emissions and direct states to develop

SIPs and required conformity determinations for areas designated nonattainment against the NAAQS, which included all six counties in the SCAG region. Conformity analysis and determination can be done at a regional level. SCAG provides a regional transportation conformity analysis in the Plan to address all nonattainment areas within the six county- region. The regional conformity determination is updated every four years with the RTP and associated FTIP and is done as a part of the project-level conformity process for regionally significant projects as they occur. A hot spot analysis is provided to confirm that the project will not cause or worsen a localized violation of the standard for carbon monoxide (CO) or particulate matter (PM10 and/or PM2.5) in the existing nonattainment area. For more information, refer to Section 3.3 Air Quality.

Metropolitan Transportation Planning

The provisions of Title 23 USC Section 134 *et seq.* provides direct authority for Metropolitan Planning Organizations (MPOs) such as SCAG to act as a regional transportation planning organization with direct responsibility for carrying out the Regional Transportation Plan (RTP). SCAG is tasked with carrying out the transportation planning process and adopting long-range transportation plans. Collaborating with state and public transportation operators, SCAG undertakes a performance-driven, outcome-based approach to planning for the six county regions. SCAG must prepare a transportation plan to be updated every four years, including identification of transportation facilities and factors for each mode of non-motorized transport to major roadways, transit, multimodal and intermodal facilities, and connectors that should function as an integrated system serving regional transportation functions. The scope of transportation planning process is to provide consideration of projects and strategies that will achieve the following objectives (23 U.S.C. § 134(g)(3)(A)):[22]

- Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity and efficiency;
- Increase the safety of the transportation system for motorized and non-motorized users;
- Increase the security of the transportation system for motorized and non-motorized users;
- Increase the accessibility and mobility of people and for freight;
- Protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and State and local planned growth and

22 U.S. Code. *23 USC 134: Metropolitan transportation planning*.

economic development patterns; Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;

- Promote efficient system management and operation;
- Emphasize the preservation of the existing transportation system;
- Improve the resiliency of and reliability of the transportation system, and reduce stormwater impacts of surface transportation; and
- Enhance travel and tourism

Fixing America's Surface Transportation Act (FAST)

The Fixing America's Surface Transportation (FAST) Act (Pub. L. No. 114-94), enacted in 2015, builds on the changes to federal transportation planning law made by MAP-21.[23] It was the first long-term surface transportation authorization enacted in a decade that provides long-term funding certainty for surface transportation.[24] The FAST Act authorizes $305 billion over fiscal years 2016 through 2020 for highway improvements, highway and motor vehicle safety, public transportation, motor carrier safety, hazardous materials safety, rail, and research, technology, and statistics programs. The FAST Act maintains the focus on safety, keeps intact the established structure of the various highway-related programs, continues efforts to streamline project delivery, and provides a dedicated source of federal dollars for freight projects.

Under the FAST Act and its predecessors, MPOs such as SCAG must prepare long-range transportation plans and update them every four years if they are in areas designated as "nonattainment" or "maintenance" for federal air quality standards. Per federal requirements, long-range transportation plans must:[25]

- be developed through an open and inclusive process, that ensures public input; seeks out and considers the needs of those traditionally underserved by existing transportation systems;
- consults with resource agencies to ensure potential problems are discovered early in the planning process;

---

23 The Moving Ahead for Progress in the 21st Century Act (MAP-21) was enacted in 2012 (PL 112-141).

24 Federal Highway Administration. *Fixing America's Surface Transportation Act*. Available at: https://www.fhwa.dot.gov/fastact/, accessed December 18, 2018.

25 Government Publishing Office. *Fixing America's Surface Transportation Act*. Available online at: https://www.govinfo.gov/content/pkg/PLAW-114publ94/pdf/PLAW-114publ94.pdf, accessed August 29, 2019.

- be developed for a period of not less than 20 years into the future; long-range transportation plans must reflect the most recent assumptions for population, travel, land use, congestion, employment and economic activity;
- have a financially-constrained element, transportation revenue assumptions must be reasonable, and the long range financial estimate must take into account construction-related inflation costs;
- include a description of the performance measures and performance targets used in assessing the performance of the transportation system;
- include a system performance report evaluating the condition and performance of the system with respect to performance targets adopted by the state that detail progress over time;
- include multiple scenarios for consideration and evaluation relative to the state performance targets as well as locally-developed measures;
- conform to the applicable federal air quality plan, called the State Implementation Plan, for ozone and other pollutants for which an area is not in attainment; and
- consider planning factors and strategies in the local context.

Congestion Management Process (23 USC § 134(k))

A congestion management process (CMP) is a systematic and regionally-accepted approach for managing congestion that provides accurate, up-to-date information on transportation system performance and assesses alternative strategies for congestion management that meet state and local needs. A CMP is required in metropolitan areas with a population exceeding 200,000, known as Transportation Management Areas (TMAs). Federal requirements state that in all TMAs the CMP must be developed and implemented as an integrated part of the metropolitan transportation planning process. [26]

Federal Highway Administration Congestion Management Process

23 CFR § 450.320 requires transportation management agencies like SCAG to address congestion management through a process that provides for safe and effective integrated management and operation of the multimodal transportation system, based on a cooperatively developed and implemented metropolitan-wide strategy, of new and existing transportation facilities through the use of travel demand reduction and operational management strategies. Federal guidance recommends use of

26 U.S. Code. *23 USC 134: Metropolitan transportation planning*.

performance measures that includes vehicle-to-capacity ratios and level of service on a selected network of significant routes in a region.[27]

3.17.2.2 State

Regional Transportation Plan Requirements

MPOs are required to prepare RTPs that also meet state requirements. Pursuant to Government Code sections 65080 *et seq.* each MPO must prepare and adopt a regional transportation plan directed at achieving a coordinated and balanced regional transportation system, including, but not limited to, mass transportation, highway, railroad, maritime, bicycle, pedestrian, goods movement, and aviation facilities and services. The plan must be action-oriented and pragmatic, considering both the short-term and long-term future, and shall present clear, concise policy guidance to local and state officials.[28]

Under California Code Section 14522, the California Transportation Commission (CTC) is authorized to prepare guidelines to assist in the preparation of RTPs. The CTC's RTP guidelines identify state and federal requirements for the development of RTPs, and methods to achieve these requirements. The guidelines suggest that projections used in the development of an RTP should be based upon available data (such as from the Bureau of the Census), use acceptable forecasting methodologies, and be consistent with the Department of Finance baseline projections for the region. The guidelines further state that the RTP should identify and discuss any differences between the agency projections and those of the Department of Finance. The RTP guidelines include provisions for complying with Senate Bill 375 (see below), as well as guidelines for regional travel demand modeling.[29]

Sustainable Communities and Climate Protection Act of 2008 (Senate Bill 375)

The Sustainable Communities and Climate Protection Act of 2008 (Senate Bill [SB] 375, Chapter 728, Statutes of 2008) requires MPOs to prepare a Sustainable Communities Strategy (SCS) that demonstrates how the region will meet its GHG reduction targets through integrated land use, housing, and transportation planning. Specifically, the SCS must identify a transportation network that is integrated with the forecasted development pattern for the plan area and will reduce GHG emissions from automobiles and light duty trucks in accordance with targets set by the California Air Resources Board (California Govt. Code Section 65080(b)(2)(B)). The targets accepted by CARB for GHG quantification for

---

27 Government Publishing Office. *§450.320*.

28 California Legislative Information. *Chapter 2.5. Transportation Planning and Programming [65080-65086.5].* Available online at:

29 California Transportation Commission. *Regional Transportation Plan (RTP) Guideline*. Available online at: https://catc.ca.gov/programs/transportation-planning, accessed August 29, 2019.

SCAG are an 8 percent reduction in per capita GHG emissions by 2020, and a 19 percent per capita reduction by 2035, in both cases with 2005 as a base year.[30]

While increasing the SB 375 targets, CARB also noted that the increase fell short of what was needed to fully achieve state goals on GHG emissions reduction and climate change mitigation. In combination, the staff report and presentation materials to the CARB Board show that in total, the revised SB 375 GHG emissions reduction targets for all of the state's MPOs would result in a statewide reduction of 19 percent (compared to 18 percent from the prior SCS achievement), but that a 25 percent reduction was needed to fully meet the GHG emissions reduction goals of the Scoping Plan. The difference between the 19 percent resulting from CARB's updated SB 375 targets and the 25 percent identified need is referred to in other various CARB documents as the "gap."

In the SB 375 target resetting, CARB recognized that additional state action was needed to close this gap. "The recommended targets also recognize that additional State policy and funding tools are being developed to support further VMT reduction that will both help the State overall in achieving needed emission reductions and support MPOs in their ability to achieve higher targets by 2035." The categories of state action to accomplish this, with help of MPOs and other organizations, were: funding mechanisms to incentivize infill development; improved performance analysis to assist agencies in funding supportive transportation projects; expanding investment in transit and active transportation; and pricing policies and programs. All focus on VMT reduction.

Two additional state documents provide context for understanding how these GHG emissions reduction targets relate to the transportation issues discussed in this section. One is the Scoping Plan itself, which also recognizes that statewide collaboration is needed to address the gap; and further, that the gap in GHG emissions reductions would be closed through VMT reduction strategies:

> *Discussions among a broad suite of stakeholders from transportation, the building community, financial institutions, housing advocates, environmental organizations, and community groups are needed to begin the process to pursue and develop the needed set of strategies to ensure that we can achieve necessary VMT reductions, and that the associated benefits are shared by all Californians.*

30 California Air Resources Board. *SB 375 Regional Plan Climate Targets*. Available online at: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets, accessed December 18, 2018.

The second document, published by CARB in January 2019, provided additional detail on the scope of the challenge, and its relationship to CEQA:

> *An RTP/SCS that meets the applicable SB 375 targets alone will not produce the GHG emissions reductions necessary to meet state climate goals in 2030 nor in 2050. This means that SB 375 targets are not stand-alone CEQA thresholds for GHG or transportation impact analysis (though SCS compliance may nonetheless entitle projects to certain CEQA exemptions or streamlining procedures pursuant to statute). In other words, a project that is consistent with an SCS may be eligible for certain exemptions, but compliance does not necessarily more broadly imply consistency with state climate goals nor with science based GHG reduction targets, in CARB staff's non-binding view. Some land use development projects contemplated in an SCS that will be operational in 2030 and 2050 will be consistent with state climate goals, and SB 375 defines project circumstances under which CEQA streamlining is available to qualified projects consistent with an SCS. Other projects may need to consider additional mitigation measures to further reduce per capita light-duty transportation-related GHG emissions to levels that would not conflict with state climate goals. Likewise, certain transportation infrastructure projects that will be operational in 2030 and 2050 that substantially increase VMT may conflict with state climate goals, even if they are included in an SCS that meets the applicable SB 375 targets.*

CARB focused on the VMT reductions needed over current conditions (2015-2018) to meet the state's 2030 and 2050 climate goals. CARB concluded (using assumptions a cleaner fuels and technologies scenario) that a 14.3 percent reduction in daily VMT per capita and a 16.8 percent reduction in light-duty VMT per capita was needed to meet these goals (see also discussion in **Section 3.8 Greenhouse Gases**).

Senate Bill 743

SB 743 (Steinberg) was signed into law by Governor Jerry Brown on September 27, 2013, and encourages development of mixed-use, transit-oriented infill projects by: (1) establishing new CEQA exemptions for transit-oriented developments located in Transit Priority Areas (TPAs) that are consistent with an adopted Specific Plan; (2) eliminating the requirement to evaluate aesthetic and parking impacts in those targeted development areas; and (3) directing the OPR to develop an alternative metric to evaluate transportation-related impacts under CEQA. [31]

SB 743 exempts from CEQA, a residential, employment center, or mixed-use development project, including any subdivision, or any zoning, change that meets all of the following criteria:

1) The project is proposed within a transit priority area.

2) The project is undertaken to implement and is consistent with a specific plan for which an environmental impact report has been certified.

---

31 California Legislative Information. 2013. *Senate Bill No. 743*..

3) The project is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy accepted by the State Air Resources Board.[32]

Furthermore, "[a]esthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment."[33] However, the exemption for aesthetic impacts does not include impacts to historic or cultural resources. Local governments retain their ability to regulate a project's transportation, aesthetics, and parking impacts outside of the CEQA process pursuant to local design review ordinances or other discretionary powers.

A Transit Priority Area (TPA) is an area that is located within one-half mile of an existing or planned major transit stop. A "major transit stop" refers to a site containing an existing rail transit station or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. To qualify as a TPA, a planned major transit stop needs to be scheduled for completion within the planning horizon included in the adopted FTIP or RTP. A TPA is a subset of the High Quality Transit Areas (HQTA) described in the Plan, excluding the one-half-mile buffer area along the high-quality transit corridors (which are corridors with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours).

For infill development, including transit-oriented development (TODs), SB 743 provides a rationale for the development of a new metric to evaluate CEQA transportation impacts. Prior to SB 743, CEQA transportation impacts were primarily assessed (at least at the project level) through "Level of Service" (LOS) and other congestion or delay-based analyses, which focused exclusively on motor vehicle delay. This often penalizes infill and active transportation projects. SB 743 establishes that the new transportation impact analysis methodology should appropriately balance the needs of congestion management with statewide goals related to transit-oriented mixed-use infill development, promotion of public health through active transportation, and reduction of GHG emissions. These principles complement the goals and policies of the SCAG Plan outlined in **Section 2.0, Project Description**, of this PEIR.

SB 743 directed OPR to identify appropriate criteria for the evaluation of transportation impacts. OPR selected VMT as the preferred transportation impact metric and applied their discretion to require its use statewide. SB 743 also established that aesthetic and parking effects of a residential, mixed-use residential,

---

32 See Pub. Res. Code § 21155.4.

33 Pub. Res. Code § 21099(d).

or employment center projects on an infill site within a TPA are not significant impacts on the environment. The revised *CEQA Guidelines* that implement SB 743 became effective on December 28, 2018, and indicate that VMT is the basis for evaluation of transportation impacts.[34] Vehicle LOS and similar measures related to delay are not identified as appropriate metrics for determining the significance of transportation impacts under CEQA, although they may still be appropriate for evaluation of projects as part of the planning process.

CEQA Guidelines section 15064.3(c) indicates that each jurisdiction throughout the state has until July 1, 2020, this requirement to adopt VMT as the metric for evaluation of transportation impacts shall apply statewide, but that until that date, lead agencies may elect to use VMT and/or LOS to analyze transportation impacts (although CEQA has already been revised to indicate VMT as the appropriate metric for evaluation of transportation impacts).

The following state guidance has been produced:

- Technical Advisory on Evaluating Transportation Impacts in CEQA (OPR 2018); [35]
- The 2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals (CARB 2019);[36]
- Caltrans Strategic Management Plan (2015 – 2020); [37] and
- Local Development – Intergovernmental Review Program Interim Guidance, Implementing Caltrans Strategic Management Plan 2015-2020 Consistent with SB 743 (Caltrans 2016). [38]

With respect to identifying what represents an appropriate threshold of significance for VMT impacts, the California Air Resources Board (CARB) published the *2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals* (CARB Report)[39] which includes non-binding technical information on

---

38 Caltrans. 2016. Local Development – Intergovernmental Review Program Interim Guidance, Implementing Caltrans Strategic Management Plan 2015 – 2020 Consistent with SB 743

39 California Air Resources Board 2017 Scoping Plan-Identified VMT Reductions And Relationship To State Climate Goals, January 2019 https://ww2.arb.ca.gov/sites/default/files/2019-01/2017_sp_vmt_reductions_jan19.pdf

what level of statewide VMT reduction, in the judgment of CARB staff, would promote achievement of statewide GHG emission reduction targets. CARB asserts that the currently adopted SCSs throughout the state "would achieve in aggregate, a nearly 18 percent reduction in statewide per capita on-road light-duty transportation-related GHG emissions relative to 2005 by 2035, if those SCSs were successfully implemented." However, in order to meet the state goals, the full reduction needed is a 25 percent reduction in statewide per capita on-road light-duty transportation-related GHG emissions, however, CARB has "determined that those targets would be infeasible for MPOs to achieve with currently available resources."

The CARB Report is based on modeling that incorporates cleaner technologies and fuels (CTF) assumptions consistent with the 2017 Scoping Plan Update and the 2016 Mobile Source Strategy (as discussed below and in **Section 3.8, Greenhouse Gases**) and provides an "alternate assessment tool for jurisdictions that choose to use them to complete analyses directed by the *CEQA Guidelines*." The CARB Report finds that:

> *Certain land use development projects located in areas that would produce rates of **total** VMT per capita that are approximately 14.3 percent lower than existing conditions, or rates of **light-duty** VMT per capita that are approximately 16.8 percent lower than existing conditions (either lower than the regional average or other appropriate planning context) could be, by virtue of their location and land use context, interpreted to be consistent with the transportation assumptions embedded in the 2017 Scoping Plan and with 2050 State climate goals. (Emphasis in original).*[40]

However, CARB notes that the modeling used for the CTF forecast identifies ratios of total statewide VMT to population and that the suggested per capita reductions are not household generated VMT and that values are not directly comparable to output from a local or regional travel demand model.

The *Technical Advisory on Evaluating Transportation Impacts in CEQA* (OPR Technical Advisory) also provides non-binding recommendations regarding assessment of VMT, thresholds of significance, and mitigation measures. OPR cites to the CARB Report to reiterate that "at present, consistency with RTP/SCSs does not necessarily lead to a less-than-significant VMT impact."[41] OPR finds:

> *Based on OPR's extensive review of the applicable research, and in light of an assessment by the California Air Resources Board quantifying the need for VMT reduction in order to meet the State's long-term climate goals, OPR recommends that a per capita [residential] or per employee*

40 CARB Report at p. 11.

41 OPR Technical Advisory at p. 11.

> *[office] VMT that is fifteen percent below that of existing [2017] development may be a reasonable threshold.*[42]

OPR further recommends a net increase in total retail VMT compared to existing (2017) may indicate a significant transportation impact.[43]

OPR goes on to indicate that:

> *Lead agencies can evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included (e.g., residential and retail). Alternatively, a lead agency may consider only the project's dominant use. In the analysis of each use, a project should take credit for internal capture. Combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment.*[44]

Since the SCAG Regional Travel Demand Model generates VMT from all uses within the region, the estimated VMT cannot be compared to OPRs targets because it is not possible to separate out the land uses.

For roadway capacity projects, OPR also recommends developing a project-level threshold based on VMT levels required to achieve legally mandated GHG emission reduction targets as set forth in the CARB Scoping Plan and 2016 Mobile Source Strategy by applying the following approach:

1. Propose a fair-share allocation of those budgets to their jurisdiction (e.g., by population);

2. Determine the amount of VMT growth likely to result from background population growth, and subtract that from their "budget";

3. Allocate their jurisdiction's share between their various VMT-increasing transportation projects, using whatever criteria the lead agency prefers. [45]

OPR also provides guidance on how to estimate VMT impacts from roadway expansion projects and suggests the following general mitigation and alternatives:

- Tolling new lanes to encourage carpools and fund transit improvements

- Converting existing general purpose lanes to HOV or HOT lanes

---

42 *Id*. at p.10.

43 *Id*. at p. 16

44 *Id*. at p. 17

45 *Id*. at p. 22-23.

- Implementing or funding off-site travel demand management
- Implementing Intelligent Transportation Systems (ITS) strategies to improve passenger throughput on existing lanes[46]

Additional project-level mitigation measures including in lieu mitigation fees to reduce VMTs are also provided.

CEQA Streamlining for Infill Projects Senate Bill (SB) 226

The CEQA Streamlining for Infill Projects (SB 226) sets forth a streamlined review process for infill projects and includes performance standards that will be used to determine an infill project's eligibility for streamlined review. The purpose of SB 226 and updated *CEQA Guidelines* Section 15183.3 is to streamline the environmental review process by "limiting the topics subject to review at the project level where the effects of infill development have been addressed in a planning level decision or by uniformly applicable development policies." Residential, commercial and retail, public office buildings, transit stations, and schools are eligible for this streamlining provided they meet the following requirements: (1) are located in an urban area on a site that has been previously developed or adjoins existing qualified urban uses on at least 75 percent of the site's perimeter; (2) satisfy the performance standards provided in Appendix M [of CEQA]; and, (3) are consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, with some exceptions. [47]

Under SB 226, some development and transportation projects assumed as a part of the proposed Plan may be eligible to use a streamlined version of the environmental review process.

California Transportation Plan (CTP)

The CTP (SB 64; Chapter 711 Section 14536 amended 65073.1) is prepared by the California Department of Transportation every 5 years to provide a long-range policy framework to meet our future mobility needs and reduce greenhouse gas emissions. The CTP defines goals, performance-based policies, and strategies to achieve our collective vision for California's future statewide, integrated, multimodal transportation system by envisioning a sustainable system that improves mobility and enhances our quality of life. The CTP is developed in collaboration with transportation stakeholders such as SCAG. Through ongoing engagement, the CTP is intended to provide goals and visions to support a fully integrated, multimodal,

---

46 *Id.* at p.25.

47 California Natural Resources Agency. *Streamlined Review for Infill Projects (SB 226).* Available online at: http://resources.ca.gov/ceqa/guidelines-sb226/, accessed August 29, 2019.

sustainable transportation system that supports the quality of life: prosperous economy, human and environmental health, and social equity. The CTP fulfills the state's goal to meet the Federal Transportation Improvement Program.[48]

Senate Bill 391

Senate Bill 391 was signed into law in October 2009 by Governor Schwarzenegger and requires the CTP to support 80 percent reduction in GHGs below 1990 levels by 2050. The bill also requires Caltrans to update the CTP every five years and provide an assessment of how the implementation of sustainable communities strategies will influence the configuration of the statewide multimodal transportation system. The bill requires Caltrans to consult with and coordinate its planning activities with specified entities and to provide an opportunity for public input.

Assembly Bill 1358

AB 1358, also known as the Complete Streets Act of 2008, amended the California Government Code Section 65302 to require that any substantive revisions to a city or county's Circulation Element include provisions for accommodations of all roadway users, including bicyclists and pedestrians.[49]

2016 Mobile Source Strategy

On May 16, 2016, the Air Resources Board (ARB or Board) released the updated Mobile Source Strategy that demonstrates how the State can simultaneously meet air quality standards, achieve greenhouse gas emission reduction targets, decrease health risk from transportation emissions, and reduce petroleum consumption over the next fifteen years. The Mobile Source Strategy aims to deliver environmental and public health benefits as well as updates to transportation infrastructure, enhancements of systemwide efficiency, and clean growth in the mobile sector. The estimated benefits of the strategy in reducing emissions from mobile sources includes an 80 percent reduction of smog-forming emissions and a 45 percent reduction in diesel particulate matter from today's levels in the South Coast. CARB estimates statewide, the Mobile Source Strategy would also result in a 45 percent reduction in greenhouse gas emissions, and a 50 percent reduction in the consumption of petroleum-based fuels.

California Congestion Management Program

The Congestion Management Program (CMP) is the State mandated program (Government Code 65089) aimed at reducing congestion on highways and roads in California. The CMP establishes a designated

48 California Legislative Information. *Senate Bill No. 64*.

49 *Assembly Bill No. 1358*.

roadway network of regional significance, roadway service standards, multi-modal performance standards and a land use analysis element to identify and mitigate multijurisdictional transportation impacts resulting from local land use decisions. Federal, State and local transportation funding is contingent upon local agency compliance with the CMP. [50]

California Vehicle Code (CVC)

The CVC provides requirements for ensuring emergency vehicle access regardless of traffic conditions. CVC sections 21806(a)(1), 21806(a)(2), and 21806(c) define how motorists and pedestrians are required to yield the right-of-way to emergency vehicles.[51]

Executive Order (EO) B-16-2012 on Zero Emission Vehicles

EO B-16-2-12 was signed by Governor Brown on March 23, 2012, to encourage development of the zero emission vehicles (ZEVs) to protect the environment, stimulate the economy, and improve the quality of life in the region. The goals that are promulgated include setting aggressive targets to meet goals in 2015, 2020, and 2025, supporting the rapid commercialization of clean vehicles, and pursuing policies to promote private sector investment and made-in California technologies. Executive Order B-16-2012 also sets a target for 2050 of a reduction of greenhouse gas emissions from the transportation sector equaling 80 percent less than 1990 levels. [52]

In February 2013, an interagency working group developed the ZEV Action Plan which identifies specific strategies and actions that state agencies will take to meet the milestones of the Executive Order. The ZEV Action Plan states:[53]

> *ZEVs are crucial to achieving the state's 2050 greenhouse gas goal of 80 percent emission reductions below 1990 levels, as well as meeting federal air quality standards. Achieving 1.5 million ZEVs by 2025 is essential to advance the market and put the state on a path to meet these requirements.*

The ZEV Action Plan was updated in 2016, and highlights the following priorities for ZEVs:

- Raising consumer awareness and education about ZEVs;

53 Government Office of Planning and Research (OPR). *2013 ZEV Action Plan: A Roadmap toward 1.5 million zero-emissions vehicles on California roadways by 2025*. Available online at: http://opr.ca.gov/docs/Governors_Office_ZEV_Action_Plan_(02-13).pdf, accessed August 29, 2019.

- Ensuring ZEVs are accessible to a broad range of Californians;
- Making ZEV technologies commercially viable in targeted applications the medium-duty, heavy-duty and freight sectors; and
- Aiding ZEV market growth beyond California.

The 2016 ZEV Action Plan introduces new actions to meet these priorities and build California's ZEV market, remove barriers to future market growth and ensure this transition benefits the state and its residents. The intent is to clearly communicate what state government will do to advance ZEVs and serve as a "to-do" list for the Governor's Office and state agencies to enhance interagency coordination.[54]

EO B-32-15 Integrated Action Plan to Improve California's Freight System

On July 16, 2015, Governor Brown issued EO B-32-15, which orders the Secretary of the California State Transportation Agency, the Secretary of the California Environmental Protection Agency, and the Secretary of the Natural Resources Agency to lead other relevant state departments including the California Air Resources Board, the California Department of Transportation, the California Energy Commission, and the Governor's Office of Business and Economic Development to develop an integrated action plan by July 2016 that establishes clear targets to improve freight efficiency, transition to zero-emission technologies, and increase competitiveness of California's freight system. The action plan shall identify state policies, programs, and investments to achieve these targets, and be informed by existing state agency strategies, including the California Freight Mobility Plan, Sustainable Freight Pathways to Zero and Near-Zero Emissions, Integrated Energy Policy Report, as well as broad stakeholder input. The California Sustainable Freight Action Plan was adopted in July 2016.[55]

Caltrans Strategic Management Plan, 2015 - 2020

The most recent Caltrans Strategic Management Plan[56] redefines the Caltrans mission statement and provides a vision statement. The Caltrans mission statement is: *Provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability*. The Caltrans vision is: *A performance-driven, transparent, and account- able organization that values its people, resources, and partners and meets new challenges through leadership, innovation, and teamwork.* The document identifies five goals: 1)

54 California Fuel Cell Partnership. *2016 ZEV Action Plan from the State of California*. Available online at: https://cafcp.org/blog/2016-zev-action-plan-state-california, accessed August 29, 2019.

55 Office of Governor, Edmund G. Brown Jr. 2015. *Executive Order B-32-15.* Available online at: https://www.ca.gov/archive/gov39/2015/07/17/news19046/index.html, accessed August 29, 2019.

56 Caltrans. *Strategic Management Plan 2015-2020*. Available online at: https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/caltrans-strategic-mgmt-plan-033015-a11y.pdf, accessed November 15, 2019.

Safety and Health, 2) Stewardship and Efficiency, 3) Sustainability, Livability and Economy, 4) System Performance, and 5 Organizational Excellence. The document identifies numerous performance measures and targets including the following target with respect to Sustainability, Livability and Economy: to increase non-auto modes (triple bicycles, double pedestrian and double transit (2010 – 12 California Household Travel survey is the baseline), achieve a 15 percent reduction in per capita VMT (3 percent per year) reported by each District relative to 2010 by 2020, 85 percent reduction in diesel particulate matter (relative to 2000), 80 percent reduction in NOx in the South Coast Air Basin by 2023 (from 2010).[57]

Local Development – Intergovernmental Review Program Interim Guidance, Implementing Caltrans Strategic Management Plan 2015 – 2020 Consistent with SB 743[58]

Caltrans developed this guidance for Caltrans use in providing comments to local jurisdictions through the Intergovernmental Review process. This guidance document supports the implementation of the Strategic Management Plan including achieving the identified targets.

3.17.2.3 Regional

California Transportation Commission Active Transportation Program Guidelines

Under Senate Bill (SB) 99 (Chapter 359, Statutes 2013) and AB 101 (Chapter 354, Statutes of 2013), the CTC is authorized to prepare guidelines to assist in the preparation of Active Transportation Plans (ATPs). An ATP includes bicycle, pedestrian, safe-routes to-school, and other comprehensive criteria to be included in the circulation element of its general plan in compliance with Complete Streets Act. The CTC's RTP guidelines suggest that all projects within the SCAG region must be selected through a competitive process that meets the federal aid goals. These goals are included in the environmental, design, right-of-way, and construction phases of the infrastructure and non-infrastructure projects. All projects that are selected in the ATP are required to include a discussion of the estimated bicycle and pedestrian trips, facilities report, proposed land use and bicycle transportation facilities, and policies related to parking and ADA compliance.[59]

---

57 This document does not provide a detailed comparison to these targets because year 2000 and year 2010 comparable data is not available, and Caltrans VMT data for districts in the SCAG region is not available.

59 California Transportation Commission. *Active Transportation Program (ATP)*. Available online at: https://catc.ca.gov/programs/active-transportation-program, accessed August 29, 2019.

Transit Development Plans

A Transportation Development Plan (TDP) updates a municipal or county operated transit system's goals and objectives, develops service alternatives, provides funding estimates, and produces a plan to implement recommended service improvements for a five-year period. A number of agencies within the SCAG have TDPs.

Plans and Policies Related to Complete Street Act of 2008 (AB 1358; S. 2686)

The Complete Streets Act of 2008 (AB 1358) required cities and counties to incorporate Complete Streets in their general plan updates to ensure that transportation plans meet the needs of all users, including pedestrians, bicyclists, and transit users as well as children, older individuals, and individuals with disabilities, to travel safely and conveniently on streets and highways. In the SCAG region, all six of the counties have developed their own bicycle and pedestrian plans. Majority of these bicycle pathways are part of existing Class II path which provides on-street bike lanes, although a few are in Class I category, which mean that the path is separate from automobile traffic, and some are categorized as Class III pathways with on-street bike lanes further designated by signs.[60]

3.17.2.4 Local

County General Plans Circulation Element

Each of the six counties within the SCAG region has prepared a Transportation or Circulation Element, as a required component of the General Plan. The Transportation or Circulation Element provides a summary of the existing conditions in the planning area, major issues, goals, and policies, as well as pertinent action programs related to traffic and circulation related to a variety of transportation systems (highway and local road networks, bus, rail, high speed rail, aviation network, harbors, bicycles, pedestrians, and rideshare). The Transportation or Circulation Element describes the major locations and corridors for existing and future travel based on land use patterns in order to develop a comprehensive, coordinated, and continuing transportation system for the region. Relevant policies include encouraging provision of transit service at a reasonable cost to the users and the community, encouraging the efficient use and conservation of energy and ease congestion, and, where the land use would support, providing for development of a mass transportation system that will provide a viable alternative to the automobile, and support a balance in transportation modes with public transit system that provides accessible service, particularly to the transit dependent. A transportation system will operate at regional, countywide,

60 California Legislative Information. *Assembly Bill No. 1358*.

community, and neighborhood scales to provide connectivity between communities and mobility between jobs, residences, and recreational opportunities.

County General Plans Safety Element

Each of the six counties in the SCAG region prepared a Safety Element as a required component of the General Plan. The Safety Element generally discusses measures to abate the impacts in case of catastrophe for maintenance of the transportation infrastructure. The Traffic and Transportation Division under each county is responsible for developing plans and guidelines for the maintenance of traffic control devices, emergency travel routes in the event of an emergency, placement of barricades, and control of traffic and coordination with other departments to promote integrated disaster planning, response and mitigation efforts. Included in the Safety Element discussion are strategies for continuation of adequate critical infrastructure systems and services to assure adequate circulation, communications, and transportation services for emergency response in the event of disaster related systems disruptions.

Orange County Bikeways Strategic Plan

The 2009 Orange County Commuter Bikeways Strategic Plan was developed "to encourage the enhancement of Orange County's regional bikeways network, in order to make bicycle commuting a more viable and attractive travel option."[61] The plan identifies approximately 116 miles of priority bikeway projects. In 2012, the Orange County Transportation Authority provides an addendum to the existing Plan with a Commuter Bikeways Strategic Plan (CBSP) that refines the regional bikeway networks and specified which bikeways are connected to priority locations including major transit investment areas, employment centers, stations, colleges, and universities.[62]

Riverside County Active Transportation Plans

The Western Riverside Council of Governments (WRCOG) and the Coachella Valley Association of Governments (CVAG) have developed Active Transportation Plans for their respective jurisdictions covering most of Riverside County. The Western Riverside County Active Transportation Plan builds on the Western Riverside County Non-Motorized Transportation Plan (NMTP), published in June 2010, by "updating active transportation network improvement projects, implementation strategies, and funding

61 Orange County Transportation Authority. *2009 OCTA Commuter Bikeways Strategic Plan*. Available at: http://www.octa.net/pdf/bikeways09.pdf, accessed December 18, 2018.

62 Orange County Transportation Authority. *Addendum 2009 OCTA Commuter Bikeways Strategic Plan*. Available at: http://www.octa.net/pdf/2009CommuterBikewaysStrategicPlanAddendum.pdf, accessed December 18, 2018.

opportunities found in that plan."[63] The CVAG Active Transportation Plan recognizes the "value of providing opportunities for local residents and visitors to bicycle for transportation and recreation and to have attractive opportunities to walk to transit stops, as well as to encourage people to use neighborhood electric vehicles (NEVs)."[64]

San Bernardino County Non-Motorized Transportation Plan

The Revised 2018 San Bernardino County Non-Motorized Transportation Plan's goals include: (1) Increased bicycle and pedestrian access; (2) Increased travel by cycling and walking; (3) Routine accommodation in transportation and land use planning; and (4) Improved bicycle and pedestrian safety.[65]

Ventura County Bicycle Master Plan

The 2007 Ventura County Bicycle Master Plan "provides a broad vision, strategies and actions for the improvement of bicycling" by maximizing funding sources for implementation; improving safety and encouraging cycling; expanding the network and support facilities; and enhancing the quality of life in and overall environmental benefits. Within the County of Ventura, many jurisdictions and municipalities also has a bicycle plan to encourage non-motorized commutes.

Active Transportation Plans/Mobility Plans

In addition to county plans, many local jurisdictions have developed their own active transportation plans or include active transportation components in the Circulation Element of their General Plan. Many street enhancement projects or capital improvement projects include active transportation elements as well. For example, many street improvement projects may include the striping of bikeways or new developments may include sidewalk enhancements.

Imperial County Bicycle Master Plan

In 2011, Imperial County updated a Bicycle Master Plan,[66] which was originally created in 2003. The guiding vision of the plan is to "encourage and promote bicycling as a safe and convenient form of transportation and recreation." The Plan will implement 253.5 miles of bikeways with intent to replace vehicular trips with bicycle trips. Providing transportation options to reduce Vehicle Miles Traveled is an important feature of this plan that is supportive of SCAG's overall goals and visions for limiting source pollution control such as carbon dioxide, nitrogen oxides, and hydrocarbon releases and an important component of decreasing greenhouse gas emissions and improving air quality.

Los Angeles County Bicycle Master Plan

Metro developed a Bicycle Transportation Strategic Plan (BTSP) in 2006[67] to be used by "the cities, the County of Los Angeles and transit agencies in planning bicycle facilities around transit and setting priorities that contribute to regional improvements. The goal is to integrate bicycle use in transportation projects." In addition, Metro also created a Bicycle Transportation Account Compliance Document (BTA Document) to provide an "inventory and mapping of existing and proposed facilities, and an estimate of past and future expenditures for bicycle facilities." In 2013, SCAG and Metro developed the Bike County Data Clearinghouse to assist LA County conduct bicycle counts. The Los Angeles County Department of Public Works adopted a Countywide Bicycle Master Plan in 2012, which was developed with the over-arching goal of increasing "bicycling throughout the County of Los Angeles through the development and implementation of bicycle-friendly policies, programs, and infrastructure." The plan recommends the development of an interconnected network of bicycle corridors, with approximately 695 miles of bikeway facilities. This plan looks at the ridership and air quality benefits from cycling and also includes a list of existing and proposed bikeways in LA County.[68]

3.17.3 ENVIRONMENTAL IMPACTS

3.17.3.1 Thresholds of Significance

The impacts related to transportation, traffic and safety resulting from the implementation of the proposed project would be considered significant if they would exceed the following significance criteria, in accordance with Appendix G of the *State CEQA Guidelines*:

- Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.
- Conflict or be inconsistent with *CEQA Guidelines* section 15064.3(b).
- Substantially increase hazards due to geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
- Result in inadequate emergency access.

In addition, the following criterion from **Section 3.20, Wildfire,** is addressed along with emergency access:

- Substantially impair an adopted emergency response plan or emergency evacuation plan.

As discussed above, CARB and OPR have recommended VMT thresholds of significance in their guidance documents, however these thresholds are meant to apply at the project-level. CARB notes that the modeling used for the CTF forecast identifies ratios of total statewide VMT to population and that the suggested per capita reductions are not household generated VMT and that values are not directly comparable to output from a local or regional travel demand model. OPR notes that with respect to their recommended thresholds "combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment." Since SCAGs model generates trips form a variety of land uses and trips from each land use cannot be separated, comparison of SCAG VMT data to OPR thresholds is not recommended.

The objective of these thresholds is to meet statewide GHG emissions targets through VMT reductions from the transportation sector. Both CARB and OPR acknowledge that MPO's are tasked with meeting SB 375 GHG emissions targets, and while CARB has determined that meeting these targets will not be sufficient to attain state climate goals, more can be done at the project level. At the project level, lead agencies may consider CARB, OPR and other recommended thresholds of significance and determine which ones are appropriate and feasible for the particular project, or apply alternative thresholds, consistent with *CEQA Guidelines* Section 15064.3 which states "A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to

express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled and may revise those estimates to reflect professional judgment based on substantial evidence." See also **Section 3.8, Greenhouse Gases,** for additional discussion on the connection between GHG and VMT and SCAG's ability to meet SB 375 and consistency with SB 743 guidance and suggested targets as well as statewide climate goals.

3.17.3.2 Methodology

Transportation-related impacts were evaluated in accordance with Appendix G of the 2019 *CEQA Guidelines*. Transportation-related impacts within the SCAG region were evaluated at a programmatic level of detail, in relation to the General Plans of the six counties and the 191 cities within the SCAG region review of general information characterizing transportation and review of published and unpublished literature germane to the SCAG region.

The methodology for determining the significance of impacts on transportation, traffic, and safety impacts compares current regional transportation conditions to expected future 2045 conditions with the Plan, as required by *State CEQA Guidelines*. SCAG utilized the Regional Travel Demand Model (RTDM) to compare the existing conditions to the Plan's 2045 condition. SCAG's role as the MPO for the region and as the preparer of the regional transportation plan is to evaluate the regional network. The most appropriate metric for such regional analysis is VMT which measures overall network efficiency, rather than LOS which is generally used to evaluate local (i.e., intersection level) impacts. Total daily VMT is used as a measure of overall utilization of roadways which relates to vehicle emissions, traffic congestion, and the effectiveness of land use patterns and alternate mode options in reducing the need for vehicular travel. Vehicle hours of delay (VHD) measures the congestion level of the roadway. Other measures such as transportation system accident rates measure the effect of other modal choices from vehicles to active transportation. Performance measures for the Plan's horizon year 2045 were compared to the existing regional conditions for each significance criterion to determine the significance of impacts. The 2045 transportation model output provides a regional and cumulative level of analysis for the impacts of the Plan on transportation, traffic, and safety.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743, or SB 226 (as described in **Section 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However,

SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.17.3.3 Impacts and Mitigation Measures

Impact TRA-1 Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

Less than Significant Impact.

The region provides a large and growing amount of transit service. In 2017, the region supplied 22.5 million hours of service, or roughly 1.18 hours for every resident. However, transit ridership has declined significantly over the last 10 years, even as service levels have grown. Between 2006 and 2017, total passenger trips declined by 125 million, or 17 percent. This works out to a decline of almost 10 trips per person, or just under 23 percent. This trend impacts agencies' ability to continue to provide these levels of service, as declining fare revenues will eventually lead to budgetary challenges.

The Plan calls for a substantial expansion of transit facilities and service over the next 25 years. While these capital projects would provide the SCAG region with a much more mature public transportation system, operational improvements and new transit programs and policies would also contribute to attracting more trips to transit and away from single-occupant vehicle travel. Expanding HOV and express lane networks calls for the development of an extensive express bus point-to-point network. In addition, transit oriented and land use strategies call for increasing the frequency and quality of fixed-route bus service by virtue of adding new bus rapid transit service, limited-stop service, increased frequencies along targeted corridors, and the introduction of local community circulators to provide residents of smart growth developments with the option of taking transit over using a car to make short, local trips.

Many of Metro's Measure R projects have made significant construction progress since the adoption of the 2016 RTP/SCS, including the Crenshaw/LAX Transit Corridor, the Regional Connector and the Purple Line Extension Phase 1. Additionally, work concluded on the Exposition Transit Corridor Phase 2 to Santa Monica and the Metro Gold Line Foothill Extension Phase 2A. Both of those projects entered revenue service in 2016.[69]

On the November 2016 ballot, Los Angeles County voters approved Measure M, a fourth Local Option Sales Tax to fund both capital and operations within Los Angeles County. The tax was part of a forty-one-

69 Metro, *Measure R.* Available online at: https://www.metro.net/projects/measurer/, accessed November 1, 2019.

year, $120 billion plan to expand upon Measure R, adding new transit projects and expediting others previously approved under Measure R. The plan, known as Measure M, would be paid for by an additional permanent half-cent sales tax increase. Measure M passed with 70.15 percent of the vote, clearing the two-thirds majority required. The combined expenditure plan provides $432.29 billion for transit operations, $41.86 billion for capital construction of corridor improvements and facilities and $2.39 billion for capital replacement to achieve a state of good repair. Additionally, the expenditure plan programs $19.13 billion in local return funds, which are often used to fund transit operations.[70] **Table 3.17-11, Major Transit Capital Projects**, provides a summary of major transit projects included in the Plan. A map of the 2045 Transit Network is provided in **Figure 2.0-14, 2045 Plan Transit Network,** in **Chapter 2.0, Project Description.**

Table 3.17-11
Major Transit Capital Projects

County	Project	Connect SoCal Completion Year
Los Angeles	Crenshaw/LAX Transit Corridor	2020

70 Metro, *Measure M Ordinance.* Available online at: https://theplan.metro.net/wp-content/uploads/2016/09/measurem_ordinance_16-01.pdf, accessed November 1, 2019

In Los Angeles County, three key efforts are likely to substantially impact the implementation of Connect SoCal. The first of these is Metro's NextGen Bus Study.[71] This study seeks to design a new bus network that is more relevant, reflective of and attractive to the residents of Los Angeles County. Specific objectives of the study include:

- Understand transit market demand in LA County
- Study the agency's current bus system and how well it serves current and potential customers
- Recommend how best to reimagine the system to be more relevant to what people need today

If implemented, this study may result in major changes to Metro's bus service. All aspects of Metro bus service are on the table for study, including speed, distance, frequency, time of day, reliability as well as quality of service, and safety. The study may also result in major changes to the Metro bus network's routes. Metro has compiled and processed data to help prepare the Regional Service Concept, which is guiding the development of the Draft NextGen Bus Service Plan, expected to be released in early 2020.

The second effort is the Twenty-Eight by '28 Initiative which highlights 28 Metro projects for potential completion by the 2028 Summer Olympic and Paralympic Games to be held in Los Angeles and surrounding areas. The Metro Board approved a list of projects, which includes projects already slated for completion by 2028, as well as projects with later delivery dates with potential for acceleration. Project acceleration would be considered on a case-by-case basis according to the adopted Early Project Delivery strategy. Not all Measure M investments scheduled for completion by 2028 are included in the Twenty-Eight by '28 list, and the list does not replace commitments made in the Measure M Ordinance. Metro reports quarterly on project delivery and funding status of the Twenty-Eight by '28 list.

The third planning effort is the City of Los Angeles's Mobility Plan 2035: An Element of the General Plan.[72] This document provides the policy foundation for achieving a transportation system that balances the needs of all road users. As an update to the City's General Plan Transportation Element (last adopted in 1999), Mobility Plan 2035 incorporates "complete streets" principles and lays the policy foundation for how future generations of residents interact with their streets. This plan includes the Transit-Enhanced Network (TEN), a series of transit and active transportation investments on key corridors throughout the City of Los Angeles, including peak hour bus lanes, all day bus lanes and mixed flow lanes with

Total (Transit)	2,423,540	3,116,887	5,144,528

Source: SCAG, 2019

Connect SoCal proposes a variety of active transportation investments to improve conditions for people who walk, bike, and use micro-mobility (See **Chapter 2.0, Project Description**). Current rates of funding and the speed of implementation will need to be accelerated to complete the proposed projects within the Plan. This will require additional community engagement to build support for changes to roadway networks such as active mobility lanes and other safety improvements. SCAG has identified a number of implementation actions that an agency can pursue toward active transportation goals. These actions will serve as broad direction for the agency to support equity, short and regional trips, safety, and complete streets. Overall, cost estimates to implement active transportation goals of the Plan would total $22.5 billion.

The Plan calls for a substantial expansion of transit facilities and service to attract trips to transit and away from single-occupancy vehicle travel. Transit-oriented land use strategies would increase the frequency and quality of fixed-route bus service by adding new rapid service, express service, and community circulators for short trips.

The proposed Active Transportation plan would increase the mode share of transit and active transportation in the SCAG region, from 10.6 percent in 2019 to 12.9 percent in 2045 **(Table 3.17-13).**

Table 3.17-13
Percentage of Mode Share on Transit and Active Transportation

Mode Share	2019	2045 No Project	2045 Plan
Walk	7.0	6.7	7.1
Bike	1.3	1.4	1.7
Transit	2.3	2.6	4.1
Total	**10.6**	**10.7**	**12.9**

Source: SCAG modeling, 2019.

In 2016 SCAG completed an Active Transportation Health and Economic Impact Study, which showed that the investments in the 2016 RTP/SCS would result in an additional $113 billion in economic outcome for the region over the life of the plan, 70 percent of which would be from reduced health care costs and improved worker productivity. SCAG conducted a similar analysis as part of Connect SoCal and found that the Plan, including active transportation and nonactive transportation investments, would provide $352 million in health care savings. Additional information on the physical activity rates and benefits of Connect SoCal is outlined in the Public Health Technical Report. Each RTP/SCS cycle, SCAG has expanded and improved its analysis of active transportation planning processes to better integrate people walking and bicycling into the regional transportation network.

Since 2016, county transportation commissions and councils of governments within SCAG's region have also completed notable active transportation planning initiatives including countywide pedestrian plans, multi-jurisdictional bicycle master plans, comprehensive Safe Routes to School plans, active transportation plans, and first-last mile policies and plans. Through grant sources such as the Active Transportation Program, SCAG's Sustainable Communities Program and Caltrans Sustainability Planning Grants, 68% of cities within SCAG's region have adopted bicycle master plans. The number of cities with Safe Routes to School and pedestrian master plans have doubled since 2016.

SCAG's analytic approach for its active transportation plans included a combination of outreach processes and data gathering efforts, including but not limited to SCAG's local input process with cities, county agencies, councils of governments, working groups, and technical advisory committees that review active transportation projects and programs, input collected through the scenario development process from agency partners, health departments, community based organizations and members of the public, input gathered through SCAG's Go Human events.

As described within the Environmental Setting, there are numerous plans and polices that address the circulation system. At the transit agency level, it is unlikely that conflicts would occur, as SCAG incorporates local transit plans into the RTP through regular amendments to the Plan. With regard to bicycle and pedestrian plans, as described above, SCAG has done extensive outreach and coordination across numerous groups to capture local input. Further, SCAG regularly assists local jurisdiction in planning for these types of projects through grant funding.

SCAG and the six Counties have worked towards the development of a metropolitan-wide strategy for new and existing transportation facilities eligible for funding under Title 23 U.S.C, and Title 49 U.S.C., to optimize the transportation system for safety and improve effectiveness. This strategy includes the development of a coherent and integrated regional goods movement system. Strategies include a Regional Freight Corridor System which would create a system of truck-only lanes for major freeway systems that are affected by haul trucks used for the goods movement; a Truck Bottleneck Relief Strategy which would mitigate top-priority truck bottlenecks; a Rail Strategy which would allow shippers the ability to move over long distances at lower costs, utilizing efficient rail strategies to include expansion and modernization of intermodal facilities; a Good Movement Environmental Strategy which would focus on a two-pronged approach for achieving an efficient, safe and economically sound freight system that reduces environmental impacts.

In order to meet federal certification requirements, SCAG and county CMAs, specifically LA County Metro, OCTA, RCTC, SANBAG, and VCTC are developing means to monitor and maintain the existing roadway infrastructure through demand reduction techniques, land-use and operation management strategies, and strategic capacity enhancement strategies. Additional strategies include supporting land use policies aimed to focus growth in HQTAs with enhanced opportunities for Southern California residents to access destinations without the use of an automobile.

SCAG has also worked with local Congestion Management Agencies (CMA) to support strategies for diversifying mode choices by encouraging public transit use and non-motorized forms of commute such as walking and other active transportation in the Plan. While the actual benefits of these alternative and active transportation modes are modest, SCAG transportation modeling indicates a potential to overall improvement in peak period work trips completed within 45 minutes by personal vehicle or by other transit with implementation of the Plan. In order to determine these findings, PM peak period work trips were used to assess impacts to work commute as PM trips are prone to the greatest amount of vehicle delay.

Lastly, the Plan includes land use strategies to focus development in HQTAs and High Quality Transit Corridors (HQTCs). Planned HQTCs are future improvements that are expected to be implemented by

transit agencies by 2045. These are assumed by definition to meet the statutory requirements of HQTC. The strategies of the SCS that focus development in these transit rich areas allow transit and land use to work together. CARB's 2016 Mobile Source Strategy recognizes that coordinated regional planning can improve California's land use patterns and transportation policy in a way that reduces transportation-related emissions by reducing growth in VMT. The SCS is one mechanism to pursue these reductions. The Plan includes policies to incentivize land use changes and promote communities that are designed to foster use of ZEVs and new modes of personal mobility consistent with the Mobile Source Strategy. [73]

As such, the Plan would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant.

Impact TRA-2 Conflict or be inconsistent with *CEQA Guidelines* section 15064.3(b).

Significant and Unavoidable Impact – Mitigation Required.

CEQA Guidelines Section 15064.3(b) is intended to be applied at the project level; therefore, the myriad transportation and development projects that will occur under the Connect SoCal Plan will be required to address the specific requirements, as follows:

> *(b) Criteria for Analyzing Transportation Impacts.*
>
> *(1) Land Use Projects. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be considered to have a less than significant transportation impact.*
>
> *(2) Transportation Projects. Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, a lead agency may tier from that analysis as provided in Section 15152.*
>
> *(3) Qualitative Analysis. If existing models or methods are not available to estimate the vehicle miles traveled for the particular project being considered, a lead agency may analyze the project's vehicle miles traveled*

73 Air Resources Board, Mobile Source Strategy 2016, https://ww3.arb.ca.gov/planning/sip/2016sip/2016mobsrc.pdf

qualitatively. Such a qualitative analysis would evaluate factors such as the availability of transit, proximity to other destinations, etc. For many projects, a qualitative analysis of construction traffic may be appropriate.

(4) Methodology. A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.

Connect SoCal is based on a regional employment and population forecast and accommodates this growth through the implementation of transportation projects and land use strategies. The Plan includes strategies to accommodate projected growth in a manner that increases transportation system efficiency and reduces VMT. Metrics such as VMT, VHT, and VHD have been used throughout the history of the Plan as a measure of the performance of the region's transportation system. SCAG has traditionally used VMT to assess transportation impacts as it is a more useful tool to evaluate impacts at the regional-scale than delay-based metrics for roadways such as LOS. In addition, the regional models used by SCAG do not include the LOS metric.

Traditionally project-level analysis of transportation impacts focused on local-level congestion and delay-based impacts (e.g., intersection and roadway LOS). The analysis of the Connect SoCal Plan is at the regional level and evaluates total regional VMT (including consideration of per capita data) and overall efficiency of the network.

CEQA Guidelines section 15064.3(b) provides that local jurisdictions have the ability to select the most appropriate methodology for their jurisdiction or project. As discussed above, methodologies and thresholds have been identified by OPR and CARB, as well as local jurisdictions. SCAG has discussed each of the thresholds in this PEIR and identified metrics at the regional scale (changes in total VMT and VMT per capita) over the Plan horizon.

CARB notes that their modeling assumes cleaner technology and fuels and identifies target ratios of total statewide VMT to population and that the suggested per capita reductions (i.e., 14.3 percent) are **not** household generated VMT and that values are **not** directly comparable to output from a local or regional travel demand model. Discussion of CARBs CTF modeling and suggested VMT thresholds under SB 743 is further discussed in **Section 3.8, Greenhouse Gases**.

OPR notes that with respect to their suggested thresholds (a reduction of 15 percent as compared to existing conditions [2017] for residential and office uses and a net increase for retail uses) combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment.

Each jurisdiction may select the appropriate methodology and threshold for their jurisdiction and projects as long as the methodology is consistent with *CEQA Guidelines* Section 15064.3(b)(4). Jurisdictions may make use of regional SCAG data as appropriate and applicable in establishing thresholds.

As shown in **Table 3.17-14, Total VMT 2019 and 2045 By County,** total daily VMT in 2045 would increase when compared to current daily VMT, despite the reductions in per capita VMT. Total VMT is expected to grow from 461 million in 2019 to 518 million in 2045. This change constitutes a 12.3 percent increase and includes light, medium, and heavy-duty vehicle VMT in all six counties. The Plan is expected to reduce VMT per capita in Los Angeles, Orange and Ventura County and would increase VMT per capita in Imperial, Riverside, and San Bernardino County.[74]

Studies have found that by adding roadway capacity in congested areas, network-wide VMT is increased by a nearly equivalent proportion within a few years, which results in reducing the initial congestion relief.[75] This increase in VMT is called "induced travel." The long-term induced travel resulting from the Plan in 2035, which is calculated by analyzing roadway lane miles increase between 2016 and 2035 by 3 classes (interstate highway, other freeways and expressways, and other principal arterials), is 1.3 percent of total VMT in 2035.

Emerging technologies vary widely when it comes to their effect on VMT, and therefore GHG emissions. Some of these technologies, such as alternative fuel vehicles, micro-mobility, bikesharing and microtransit, have a mitigating influence on GHG emissions. Others, such as ride-hailing and automated vehicles, are expected to increase VMT and GHG emissions if their business models do not adapt.

74 Connect SoCal Performance Results, 2019. Reductions are from a 2016 base year.

75 National Center for Sustainable Transportation. Induced Travel Calculator. Accessed at https://blinktag.com/induced-travel-calculator/about.html on October 25, 2019.

Table 3.17-14
Total VMT 2019 and 2045 by County

County	In Thousands		
	2019	2045 No Project	2045 Plan
Imperial	7,000	11,000	11,000
Los Angeles	231,000	255,000	243,000
Orange	80,000	86,000	83,000
Riverside	61,000	80,000	78,000
San Bernardino	63,000	85,000	83,000
Ventura	19,000	21,000	20,000
SCAG Region	461,000	538,000	518,000

Note: Numbers are rounded to nearest thousand.
Source: SCAG modeling, 2019.

Table 3.17-15, Population and Daily VMT (2019 and 2045), presents information related to population, daily VMT and VMT per capita for the years 2019 and 2045.

Table 3.17-15
Population and VMT (2019 and 2045)

	2019	2045	2045 vs 2019
Total Population	19,339,700	22,507,200	14.1%
Total VMT	460,153,316	517,631,374	11.1%
VMT Per Capita Light Duty Vehicles	22.09	20.67	-6.4%
VMT Per Capita All Vehicles	23.79	22.89	-3.8%

Source: SCAG modeling, 2019.

By 2045 public transit boardings are projected to more than double in absolute numbers, and transit's mode share will also rise. The share of trips by bicycle and walking will rise and such active modes as well as transit will represent 12.9 percent of all trips. The share of trips by single-occupancy vehicles will fall from 69.62 percent to 65 percent of home-to-work trips for the region. The combined effect of these transportation mode shifts and the SCS land use pattern will result in a reduction in VMT per capita by 2045. Overall VMT per capita will decline by 3.8 percent for all vehicles and 6.4 percent for light, medium duty vehicles.

Table 3.17-16
VMT Per Capita by County

County	Total VMT per Capita			
	Light/Medium Duty Vehicles		All Vehicles	
	2019	2045	2019	2045
Imperial	28.43	31.24	33.57	39.70
Los Angeles	21.13	19.24	22.40	20.84
Orange	23.24	21.93	24.37	23.43
Riverside	22.01	20.56	24.61	23.83
San Bernardino	24.85	24.47	28.27	29.42
Ventura	21.02	19.47	22.15	21.05
Regional Average	22.09	20.67	23.79	23.00

Source: SCAG modeling, 2019.

As shown in **Table 3.17-16, VMT Per Capita by County**, Los Angeles County will experience the largest decline in per capita VMT in 2045, while Imperial County will experience the largest increase. In addition, as shown in **Table 3.17-17, Total Daily Vehicle Hours of Delay**, total delay in the region will decrease in Orange and Ventura Counties. Los Angeles, San Bernardino, Riverside and Imperial would all experience increases in delay.

Table 3.17-17
Total Daily Vehicle Hours of Delay

County	2019	2045 No Project	2045 Plan
Imperial	9,631	38,986	26,573
Los Angeles	1,686,548	2,097,088	1,742,303
Orange	431,378	553,724	381,522
Riverside	172,164	376,959	252,415
San Bernardino	152,870	326,859	221,484
Ventura	55,099	77,029	43,932
Regional	2,507,690	3,470,645	2,668,229

Source: SCAG modeling, 2019.

Table 3.17-18 shows percent of work trips completed within 45 minutes. As shown in this table, by 2045 there would be an increase of PM work trips by single-occupancy vehicles that take 45 minutes or less (from 79.78 percent to 82.62 percent). HOV PM trips within 45 minutes would increase from 83.27 percent to 84.39 percent and transit trips completed within 45 minutes would decline from 53.51 to 52.22 percent. Despite the decline for transit trips, this indicates that the Plan's strategies are improving overall congestion.

Table 3.17-18
Percent of PM Work Trips Completed within 45 Minutes

County	2019	2045 No Project	2045 Plan
Autos –Single Occupancy Vehicles			
Imperial	94.06%	92.42%	92.45%
Los Angeles	79.26%	79.70%	81.55%
Orange	84.30%	85.59%	86.79%
Riverside	74.69%	75.91%	79.41%
San Bernardino	76.81%	78.04%	81.17%
Ventura	82.41%	84.55%	85.91%
Region	79.78%	80.56%	82.62%
Autos – High Occupancy Vehicles			
Imperial	94.87%	92.99%	91.61%
Los Angeles	81.93%	81.34%	82.57%
Orange	88.14%	87.46%	89.59%
Riverside	79.00%	79.78%	81.04%
San Bernardino	81.68%	81.09%	83.28%

Riverside	30.49%	29.76%	30.79%
San Bernardino	42.51%	39.05%	44.44%
Ventura	46.21%	44.11%	45.24%
Region	53.51%	51.74%	52.22%

Note: Numbers are rounded to nearest thousand.
Source: SCAG modeling, 2019.

The VMT per-capita decline indicates that transportation projects, as well anticipated growth patterns under the Plan, if implemented, would effectively work together to improve system efficiency and minimize increases in VMT. This is because the Plan includes a more compact development pattern. Compact land uses are more efficiently served by transit, support potentially higher rates of walking and biking, and generate less vehicle travel. The Plan also places an emphasis on transit service and complete streets near transit, walk, and bicycle supportive land uses with higher density and a mix of uses most likely to generate a mix of travel modes. Road and highway projects concentrate on alleviating major bottlenecks and congestion points, while other programs and transportation systems management strategies, including technology and demand management programs, allow for greater optimization of existing transportation infrastructure. Other factors affecting future VMT are aging of the population and forecasted increases in auto operating costs.

As discussed above, the Plan is projected to increase total VMT in the SCAG region between 2019 to 2045 by approximately 12.36 percent, constituting a significant impact. Furthermore, the Plan is projected to increase total daily hours of delay from 2.50 million to 2.66 million hours between 2019 and 2045 **(Table 3.17-17, Total Daily Vehicle Hours of Delay)**.

Connect SoCal commits more than $37 billion for various highway improvements, including mixed-flow and interchange improvements, HOV/Express lanes, and transportation system management. For example, in Orange County, a $1.9 billion project would add one mixed-flow lane in each direction, convert an HOV lane to HOT lane, and add an additional HOT lane on I-405. This project is scheduled for completion in 2026. In addition, numerous projects are scheduled for completion that would result in an Express Lane on I-405 from its northern terminus to the Los Angeles/Orange County border.

Policies that aim to charge drivers user fees to cover the costs of services they use can be effective in lowering emission and delays from increased VMTs. For example, Connect SoCal includes a local road charge program in the form of mileage-based user fees regionally, which can be adjusted by time-of-day at major activity centers. SCAG assumed congestion pricing during peak periods along with increases in parking pricing at major job centers in Los Angeles. The implementation of user-fees and pricing strategies can be structured to increase equity and mobility while reducing environmental impacts.[76]

Potential development projects anticipated to occur under the Plan should consider the CEQA guidance regarding VMT. In general, as stated in *CEQA Guidelines* Section 15064.3(b)(1), projects located within HQTAs would likely have less than significant transportation impacts. For those projects located outside of HQTAs, transportation impacts would be determined based on the project's ability to reduce VMT.

---

76 SCAG, Connect SoCal Technical Report, *Congestion Management.* November 2019.

For transportation projects under the Plan, those projects that reduce VMT, such as most transit and bike projects, the assumption is impacts will be less than significant. However, consistency with the RTP/SCS does not necessarily lead to a less than significant impacts. Further, OPR's technical guidance on SB 743 states "building new roadways, adding roadway capacity in congested areas, or adding roadway capacity to areas where congestion is expected in the future, typically induces additional vehicle travel. For the types of projects previously indicated as likely to lead to additional vehicle travel, an estimate should be made of the change in vehicle travel resulting from the project."

Ultimately, the determination of VMT impacts will be made at the project level. As discussed above and elsewhere in this PEIR (see **Section 3.8, Greenhouse Gases),** lead agencies have the discretion to determine the appropriate methodology and level of analysis. As described, there are multiple potential VMT targets, CARB has identified 14.3 percent reductions in total VMT from 2015 to 2050 (based on specific modeling assumptions and ratios that are not directly comparable to data from regional travel demand models , see discussion in **Section 3.8 Greenhouse Gases**) and OPR has identified 15 percent lower per capita residential and office VMT and no net increase in residential VMT (OPR recommends that these reductions be calculated separately for each land use).

In CARB's January 2019 report,[77] CARB identifies a statewide population increase of 10 million people (an increase of 24 percent) between 2015 and 2050, growth in the SCAG region would account for nearly one third of that increase. If California were to meet its climate goals for 2050, CARB estimates (using specific CTF assumptions and population to VMT ratios that are not directly comparable to regional travel demand modeling) a 14.3 reduction in total VMT would be necessary.[78] **See Section 3.8 Greenhouse Gases,** for additional discussion of SB 743 and the CARB guidance.

OPR generally recommends a threshold of 15 percent below existing VMT per capita for residential and office with a no net increase for retail projects. OPR indicates that "land use projects, residential projects, office and retail projects tend to have the greatest influence on VMT." OPR suggests that lead agencies with more specific location information may develop their own more specific thresholds. OPR indicates

77 California Air Resources Board, *2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals*, 2019

78 According to CARB: "Total VMT per capita is calculated as a ratio of total statewide VMT to forecast population from the California Department of Finance. This is not household-generated VMT, and the values are not directly comparable to output from a local or regional travel demand model. This estimate is merely meant to show the extent of per capita VMT reduction needed relative to existing conditions in order to show consistency with the State's climate goals."

that combining different land uses and applying one threshold to those land uses may result in an inaccurate impact assessment.[79]

At the regional level, CARB has set a regional target for SCAG of a 19 percent reduction in per capita on-road light duty transportation-related GHG emissions by 2035 relative to 2005. While SCAG meets this target, CARB has indicated that additional reductions are needed beyond targets set for the MPOs and has identified a "gap" between the regional target and the emissions/VMT reductions necessary to meet the state's climate action goals. Currently adopted SCSs would achieve in the aggregate, a nearly 18 percent reduction in statewide per capita transportation-related GHG emissions in aggregate. However, in order to meet the statewide goals, the full reduction needed, according to CARB, is a 25 percent reduction by 2035.[80] Although the region is making progress in per capita VMT reductions, and is making significant strides in the development of new initiatives, projects, and programs in the Plan, and is not directly interfering with the statewide VMT reductions required to meet the state's climate goals, the Plan does not clearly achieve the necessary level of VMT reductions now forecast by the state to meet AB 32 and SB 32 (as well as associated SB 743 guidance) GHG reduction goals. As discussed above and in **Section 3.8, Greenhouse Gases**, there is a "gap" between the current MPO emissions reductions targets and the emissions/VMT reductions necessary to meet the state's climate action goals.

While CARB acknowledges that SCAG and other MPOs cannot meet this need without the collaboration and help of the state itself (i.e., through stricter regulation), as well as local partners, at the time of writing this PEIR it is unknown how CARB and other state agencies, through statewide programs or in coordination with local and regional governments, would meet the identified higher VMT reductions. It is expected that individual projects will need to review their projects in light of CARB and OPR guidance regarding VMT reduction targets to determine the appropriate levels of reductions. In some cases, it could be CARB's suggested 14.3 target, or OPRs 15 percent (for residential and office uses) reduction. Neither the agencies, nor the courts have provided any clear guidance yet as to the appropriate methodology, and it is expected that there will not be a "one size fits all" approach. Each project will need to be evaluated in light of its particular components.

Despite the benefits shown by implementing the Plan, the transportation projects and growth under the Plan would substantially increase VMT, which would be inconsistent with *CEQA Guidelines* section 15064.3(b) and may not support achievement of the state's VMT goals as identified in the 2017 Scoping Plan, constituting a significant impact requiring the consideration of mitigation measures.

---

79 The SCAG region includes a wide variety of project types, and as such, a generic 15 percent reduction would not be expected to accurately reflect the specific details of the region.

80 California Air Resources Board, *2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals*, 2019

Mitigation Measures

SCAG Mitigation Measures

SMM TRA-1: SCAG shall facilitate minimizing VMT and related vehicular delay by minimizing impacts to circulation and access, improve mobility, and encourage transit and Active Transportation via workshops (i.e., Mobility 21 workshop and Regional Transportation Workgroups) and web-based planning tools for local governments, forums with policy makers, and County Transportation Planning Agencies, member cities, and state partners.

SMM TRA-2: SCAG shall identify further reduction in VMT, and fuel consumption that could be obtained through land-use strategies, additional car-sharing programs with linkage to public transportation, additional vanpools, additional bicycle sharing and parking programs, and implementation of a universal employee transit access pass (TAP) program.

SMM TRA-3: SCAG shall initiate and facilitate an SB 743 implementation program. The grant-funded project, co-sponsored by SCAG and LADOT, seeks to provide technical and mitigation strategy development guidance to local jurisdictions in the six-county SCAG region to facilitate implementation of the VMT-based CEQA transportation impact analysis provisions of SB 743. This coordinated program of technical guidance, evaluation of options, and cooperative engagement with local communities will serve to smooth the transition to the new VMT-reducing development paradigm, helping to ensure a successful region-wide implementation of SB 743 and attainment of the associated GHG reduction goals. Some of the primary features of the scope of work include:

- Evaluate the feasibility of various alternative VMT mitigation options, including local and regional VMT exchange and banking programs.
- Establish CEQA nexus to reduce VMT through a VMT mitigation exchange or banking program alternative.
- Substantiate the legal basis of a VMT exchange program for satisfying CEQA mitigation requirements.
- Collaborate with other communities and jurisdictions to reduce VMT through implementation of a VMT mitigation exchange or bank program.

- Improve the dissemination of transportation project VMT mitigation options.
- Support a variety of TDM strategies for Transportation Management Organization (TMO) membership agencies.
- Provide guidance to facilitate establishment of VMT mitigation exchange or bank programs throughout the region and state

SMM TRA-4: SCAG shall continue to analyze and develop potential implementation strategies for a regional, market-based system to price or charge for auto trips during peak hours.

SMM TRA-5: SCAG shall develop a vanpool program for SCAG employees' commute trips.

SMM TRA-6: SCAG shall encourage new developments to incorporate both local and regional transit measures into the project design that promote the use of alternative modes of transportation.

Project Level Mitigation Measures

PMM-TRA-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to transportation-related impacts. Such measures may include the following or other comparable measures identified by the Lead Agency:

- Transportation demand management (TDM) strategies should be incorporated into individual land use and transportation projects and plans, as part of the planning process. Local agencies should incorporate strategies identified in the Federal Highway Administration's publication: Integrating Demand Management into the Transportation Planning Process: A Desk Reference (August 2012) into the planning process (FHWA 2012). For example, the following strategies may be included to encourage use of transit and non-motorized modes of transportation and reduce vehicle miles traveled on the region's roadways:
  - include TDM mitigation requirements for new developments;
  - incorporate supporting infrastructure for non-motorized modes, such as, bike lanes, secure bike parking, sidewalks, and crosswalks;

- provide incentives to use alternative modes and reduce driving, such as, universal transit passes, road and parking pricing;
- implement parking management programs, such as parking cash-out, priority parking for carpools and vanpools;
- develop TDM-specific performance measures to evaluate project-specific and system-wide performance;
- incorporate TDM performance measures in the decision-making process for identifying transportation investments;
- implement data collection programs for TDM to determine the effectiveness of certain strategies and to measure success over time; and
- set aside funding for TDM initiatives.
- The increase in per capita VMT on facilities experiencing LOS F represents a significant impact compared to existing conditions. To assess whether implementation of these specific mitigation strategies would result in measurable traffic congestion reductions, implementing actions may need to be further refined within the overall parameters of the proposed Plan and matched to local conditions in any subsequent project-level environmental analysis.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis, the increase in total VMT and SCAG's lack of authority to require project-level mitigation measures, this PEIR finds impacts related to VMT to be significant and unavoidable.

Impact TRA-3 **Substantially increase hazards due to geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).**

Less than Significant Impact.

SCAG adopted its 2020 Regional Safety targets in February 2019 and aims to reduce fatalities by 3 percent and serious injuries by 1.5 percent annually by 2050 to reach the goal of Towards Zero Death (TZD). Connect SoCal prioritizes ensuring the safety and mobility of the region's residents, including drivers and passengers, transit riders, pedestrians, and bicyclists. The Plan's Safety and Security Technical report provides a framework largely grounded in the State's Strategic Highway Safety Plan, that can help member agencies interested in pursuing safety initiatives and strategies at the local level. The Plan also aims to address actionable strategies in which SCAG can support local jurisdictions.

In 2018, SCAG initiated a comprehensive update of its multi-county Regional Intelligent Transportation System (ITS) Architecture. Expected to be the completed in 2019, the Regional ITS will make use of advanced detection, communications, and computing technology to improve transportation safety. ITS allows surveillance technologies to collect data about the status of highways, traffic signals, transit vehicles, and rideshare vehicles to improve the efficiency of the system. In addition to this framework, SCAG supports the efforts of local jurisdictions to improve transportation safety through a safe systems approach which utilizes systems thinking to design transportation systems with no deaths or serious injuries. A safe systems approach includes programs such as Vision Zero, which aims to eliminate traffic fatalities and severe injuries by promoting roadway design and policy that recognizes human error and prevents severe injury incidents. Connect SoCal land use strategies aim to focus growth in HQTAs, which are generally located away from high-speed transportation facilities where potential hazards due to design features tend to be high (e.g., mountain roads). Moreover, development in HQTAs would increase the number of SCAG region residents in proximity to transit and in areas with good opportunities for active transportation, making it imperative to design facilities with bike racks, improved sidewalks with shade, bikeways, and welcoming transit stations to promote an active streetscape.

Bicycling has continued to become a more popular activity across the SCAG region. Fatalities and serious injuries between motor vehicles and bicycles have steadily increased throughout the years and remain high. SCAG recommends strategies for local jurisdictions to improve safety for bicyclists, including connecting bicycle facilities, implementing active transportation plans, complete streets policies and intersection control for bicyclists.

The Plan identifies three major findings related to collisions in the SCAG region: fatalities and injuries are mostly occurring on a subset of streets, are increasing and are disproportionately impacting people walking and bicycling, and are occurring mostly in areas with high concentrations of low income residents and/or people of color. Between 2012 and 2016, 68 percent of fatalities and serious injuries have occurred on local streets and 65 percent of fatalities and serious injuries have occurred on less than 1.5

percent of the roadway network, and 66 percent of the High Injury Network is in disadvantaged communities (See **Table 3.17-19, Active Transportation Serious Injuries and Fatalities [2006-2016])**.[81]

Table 3.17-19
Active Transportation Serious Injuries and Fatalities (2006-2016)

Year	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016

Source:
SCAG Active Transportation, 2019.

The Plan includes strategies to encourage a complete streets approach to roadway improvements which would include design of facilities to enhance the safety of riders, bicyclists, and pedestrians and minimize hazards. These enhancements would also reduce hazards for drivers. Comprehensive road education, safe pedestrian routes to schools, and other safety campaigns would also occur. The Plan includes 392 safety projects, comprising 19 percent of the total budget, or slightly more than $5.4 billion in programmed investments (See **Table 3.17-20, 2016 RTP/SCS Safety Projects by County**).

Table 3.17-20
2016 RTP/SCS Safety Projects by County – FTIP (*Thousands)

County	Total Safety Projects	* Safety Projects Programming	* All Projects Programming	Total Projects	% of Total
Imperial	12	$11,287	$60,193	73	16

81 SCAG Safety and Security Technical Report, 2019.

In accordance with the provisions governing hazard designs from the Southern California Regional Intelligent Transpiration System (ITS), the Plan would not result in an overall increase in hazards due to geometric design features or increase conflicts between incompatible uses, and impacts would be less than significant. Impacts from increased hazards due to geometric design features or incompatible attributes are less than significant.

Impact TRA-4 **Result in inadequate emergency access.**

Impact WF-1 **Substantially impair an adopted emergency response plan or emergency evacuation plan.**

Significant and Unavoidable Impact – Mitigation Required.

See also analysis of Impact HAZ-6 Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan," in **Section 3.9, Hazards and Hazardous Materials**.

Natural or manmade disasters can have devastating impacts on our region's livelihood and infrastructure. It is critically important to protect our region's infrastructure in the form of transportation, utilities, communications, fuel, and water to provide the residents of this region with the quality of life they deserve. In addition, transportation infrastructure is critical to preserving life as it allows residents and goods to reach necessary destinations. Compromised infrastructure as a result of disaster may have impacts beyond the immediate SCAG region. Additionally, failure of multiple infrastructure components may result in a catastrophic impact to the mobility needs of the region.

Numerous agencies participate in the response to incidents and assist with hazard preparedness for individual jurisdictions. Collaboration occurs between many of these agencies. The Federal Emergency Management Agency (FEMA) oversees coordination. However, FEMA defines metropolitan areas and coordination different than the US Department of Transportation, limiting SCAG's ability to participate at an agency level. SCAG aims to use its strengths and organization to assist planners, first responders and recovery teams in a supporting role.

Mitigating hazards before the occurrence of a disaster is the primary step in preparing for emergencies, rather than the final step of recovery. The goal of hazard mitigation plans is to guide implementation activities in order to achieve the greatest reduction of vulnerability, which will result in saved lives, reduced injuries, reduced property damage, and greater protection of the environment. FEMA requires state and local governments to develop hazard mitigation plans and update them every three years. The Disaster Mitigation Act of 2000 (DMA 2000), Section 322 (a-d) requires that local governments, as a

condition of receiving federal disaster mitigation funds, have a mitigation plan that describes the process for identifying hazards, risks and vulnerabilities; identifies and prioritizes mitigation actions; encourages the development of local mitigation; and provides technical support for those efforts. "Local Governments" are defined in the DMA 2000 to typically include counties, local municipalities, and tribal governments; but can also include other local agencies and organizations, including Councils of Governments, schools and other special districts.

California updated its State of California Multi-Hazard Mitigation Plan in 2018. The state is required to adopt a federally approved State Multi- Hazard Mitigation Plan to be eligible for certain disaster assistance and mitigation funding. The Plan is an evaluation of the hazards California faces and the strategies, goals and activities the state will pursue to address these hazards. All six counties and a number of cities within the SCAG region have complete Hazard Mitigation Plans.

While the Plan would impact traffic and delay in the region, California state law requires drivers to yield the right-of-way to emergency vehicles and even permits emergency vehicles to use opposing lane of travel, the center turn lanes, or bus-only lanes. In some instances, roadway reconfigurations with the implementation of transportation improvements could improve emergency access. For example, a roadway reconfiguration could improve emergency access where a bus-only lane or a contiguous center left-turn lane is introduced where it did not previously exist. Emergency vehicles are permitted to use bus-only lanes for local access to emergency destinations. People traveling by bicycle are required to pull to the side of the road to yield access to emergency providers regardless if they are traveling in a bus-only lane or in a standard travel lane. It is more likely that when in route to an emergency incident, general traffic will be expected to merge into the bus-only lane, permitting the emergency vehicle to pass in the through lane to the left. Emergency responders also routinely use the center left-turn lanes, or even travel in opposing travel lanes if needed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. The Plan includes strategies to improve emergency response services. These include using ITS to improve response times to and from collision sites and the development of guidance documents to share with EMS responders to increase crash scene safety.

Depending on the timing, location, and duration of construction activities, several of the proposed transportation projects (including grade crossings, arterials, interchanges, and auxiliary lanes), would result in delayed emergency vehicle response times or otherwise disrupt delivery of emergency response services, could occur. For example, closing off one or more lanes of a roadway, emergency routes would be impaired. The closure of these lanes could potentially cause traffic delays and ultimately prevent access to calls for service. Construction of development projects may also interfere with the use of existing transportation facilities (such as roadways) by potentially blocking travel lanes with construction

equipment and through increasing congestion as a result. Coordination with local jurisdictions is generally required by local jurisdictions in order to maintain adequate emergency access for ambulance and emergency services.

Land use strategies in the Plan encourage more compact development. As discussed in **Section 3.15.1, Public Services – Fire,** and **Section 3.15.2, Public Services - Police**, compact land uses are generally more efficient at serving the public for emergency response. This is often because urban areas tend to be well served with these facilities and also because the more compact land use pattern better facilitates access to specific sites.

However, while regulations (especially in urban areas) generally ameliorate potential impacts with respect to emergency access, due to potential increased traffic congestion associated with construction of transportation projects and development projects anticipated to occur in the region , there is the potential for the Plan to result in interference with emergency access. Therefore, the Plan would have the potential to result in inadequate emergency access, constituting a significant impact requiring mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

SMM TRA-7: SCAG shall, in cooperation with local and state agencies, identify critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities. In addition, SCAG shall establish transportation infrastructure practices that promote and enhance security.

SMM TRA-8: SCAG shall provide the means for collaboration in planning, communication, and information sharing before, during, or after a regional emergency. This will be accomplished by the following:

- SCAG shall develop and incorporate strategies and actions pertaining to response and prevention of security incidents and events as part of the on-going regional planning activities.
- SCAG shall offer a regional repository of GIS data for use by local agencies in emergency planning, and response, in a standardized format.
- SCAG shall enter into mutual aid agreements with other MPOs (as feasible) to provide this data, in coordination with the California OES in the event that an event disrupts SCAG's ability to function.

Project Level Mitigation Measures

PMM TRA-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects which may substantially impair implementation of an adopted emergency response plan or emergency evacuation plan, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

- Prior to construction, project implementation agencies can and should ensure that all necessary local and state road and railroad encroachment permits are obtained. The project implementation agency can and should also comply with all applicable conditions of approval. As deemed necessary by the governing jurisdiction, the road encroachment permits may require the contractor to prepare a traffic control plan in accordance with professional engineering standards prior to construction. Traffic control plans can and should include the following requirements:
  - Identification of all roadway locations where special construction techniques (e.g., directional drilling or night construction) would be used to minimize impacts to traffic flow.
  - Development of circulation and detour plans to minimize impacts to local street circulation. This may include the use of signing and flagging to guide vehicles through and/or around the construction zone.
  - Scheduling of truck trips outside of peak morning and evening commute hours.
  - Limiting of lane closures during peak hours to the extent possible.
  - Usage of haul routes minimizing truck traffic on local roadways to the extent possible.
  - Inclusion of detours for bicycles and pedestrians in all areas potentially affected by project construction.
  - Installation of traffic control devices as specified in the California Department of Transportation Manual of Traffic Controls for Construction and Maintenance Work Zones.

- Development and implementation of access plans for highly sensitive land uses such as police and fire stations, transit stations, hospitals, and schools. The access plans would be developed with the facility owner or administrator. To minimize disruption of emergency vehicle access, affected jurisdictions can and should be asked to identify detours for emergency vehicles, which will then be posted by the contractor. Notify in advance the facility owner or operator of the timing, location, and duration of construction activities and the locations of detours and lane closures.

- Storage of construction materials only in designated areas.

- Coordination with local transit agencies for temporary relocation of routes or bus stops in work zones, as necessary.

- Ensure the rapid repair of transportation infrastructure in the event of an emergency through cooperation among public agencies and by identifying critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities.

- Enhance emergency preparedness awareness among public agencies and with the public at large.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this EIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis, potential increases in traffic and construction-related impediments to emergency access and SCAG's lack of authority to require project-level mitigation measures, this PEIR finds impacts related to emergency access to be significant and unavoidable.

3.18 TRIBAL CULTURAL RESOURCES

This section of the Program Environmental Impact Report (PEIR) describes the tribal cultural resources in the SCAG region, identifies the regulatory framework with respect to laws and regulations that govern tribal cultural resources, and evaluates and discusses the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.18.1 ENVIRONMENTAL SETTING

3.18.1.1 Definitions

California Historical Resources Information System (CHRIS): The California Historical Resources Information System (CHRIS) consists of the California Office of Historic Preservation (OHP), nine Information Centers (ICs), and the State Historical Resources Commission (SHRC). The OHP administers and coordinates the CHRIS and presents proposed CHRIS policies to the SHRC, which approves these polices in public meetings. The CHRIS Inventory includes the State Historic Resources Inventory maintained by the OHP as defined in California Public Resources Code [PRC] § 5020.1(p), and the larger number of resource records and research reports managed under contract by the nine ICs.

Tribal Cultural Resources: Pursuant to Assembly Bill (AB) 52, a site feature, place, cultural landscape, sacred place or object, which is of cultural value to a Tribe and is either on or eligible for the California Historic Register or a local historic register, or such a resource that the lead agency, at its discretion, chooses to treat the resource as a Tribal Cultural Resources (see PRCPRC §§ 21074 (a)(1)(A)-(B)). A tribal cultural resource may also include a unique archaeological resource (see PRC § 21083.2(g)) or a "nonunique archaeological resource" (see PRC § 21083.2(h), subject to the provisions of PRC § 21074 (a)) may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

Unique archeological resource: Pursuant to Section 21083.2 of the PRC, a unique archaeological resource includes artifacts or sites that meet any one or all of the following criteria:[1]

- It has made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States;
- It is associated with the lives of persons important to California's past;

1 California Legislative Information. 1972. *Chapter 2.6. General [21080-21098], Section 21083.2*.

- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; and/or
- It has yielded, or may be likely to yield, information important to the prehistory or history of California.

Unique geologic feature: An important and irreplaceable geological formation. Such features may have scientific and/or cultural values.

3.18.1.2 Existing Conditions

Detailed information regarding the prehistoric occupation is presented in **Section 3.5, Cultural Resources**, of this PEIR. As noted in **Section 3.5,** the SCAG region once was the home to at least 11 distinct Native American groups. These include the Cahuilla, Chumash, Gabrielino, Halchidhoma, Kitanemuk, Luiseno, Mohave, Quechan, Serrano, Southern Paiute, Tataviam, and Tipai. The territorial boundaries of the Native Americans who were residing in Southern California at the time of first European contact do not coincide with today's political boundaries. Moreover, many tribal boundaries overlapped and most groups migrated within their general boundaries throughout the years.

The federal government established reservations in Southern California between 1875 and 1891. This includes the Martinez, Fort Yuma, and Colorado River reservations in Imperial County. In Riverside County are Torres, Cabazon, Augustine, Santa Rosa, Ramona, Pechanga, Soboba, Agua Caliente, Mission Creek, and Morongo. The reservations in San Bernardino County are the San Manuel, Chemehuevi, Fort Mojave, Twentynine Palms reservations. No reservations were established in Los Angeles, Ventura, or Orange Counties. It was believed that the local Native American groups in those counties had become extinct.[2]

As of July 2019, over 109,000 archaeological resource locations have been identified in the SCAG region (**Table 3.18-1, Archeological Resources Listed in the CHRIS**). In order to protect these archaeological sites, and the artifacts contained within their boundaries, from scavenging and looting, their locations are confidential. Under state law, detailed information about these sites, especially their location, is considered confidential.

Archeological Resources Listed in the CHRIS

County	Archeological Resources	Archeological Resources Listed in CHRIS
Imperial*	12,398	16,500 (approx.)
Los Angeles	4,886	18,599
Orange	1,775	5,498
Riverside**	20,200 (approx.)	28,612
San Bernardino	8,236	36,924
Ventura	1,864	3,226
SCAG Region Total	**49,359**	**109,359**

Source:
SWCA Environmental Consultants, Inc. (2019).
** The SCIC database is currently being revised and the count of total resources is an approximation based on current listings. The number of resources with archaeological components is taken from the 2016 General Plan, Open Space & Conservation Element. The total number of resources was approximated by SCIC staff and provided to SWCA via email on July 1, 2019.*
*** The EIC database is not currently configured to distinguish historic-period archaeological resources from non-archaeological historic resources (i.e., buildings, structures, etc.). Instead, the EIC provided tallies of resources with components dating to the respective periods as follows: 13,993 Prehistoric archaeological sites; 1 Protohistoric archaeological site; 15,313 Historic period cultural resources (archaeological sites and historic resources); 202 sites of unknown cultural or temporal affiliation. Because an individual resource may have components that fall into multiple periods, the sum of all resources listed for each period is greater than the total number of resources. The total number of archaeological sites was estimated for Riverside County to allow for comparison with other counties across the SCAG region. This was done for Riverside County by taking the 13,994 archaeological sites listed as Prehistoric and Protohistoric (because these resources can only be archaeological sites) and adding an estimated fraction of those listed as Historic and Unknown Period, which could consist of historic resources (i.e., non-archaeological). The estimate provided here assumes 40 percent of those resources listed as Historic or Unknown Period have archaeological components that are not multi-component resources (and already tallied as Prehistoric or Protohistoric).*

Native American Sacred Sites

Within the SCAG region there are 16 federally recognized tribes (84 Fed. Reg. § 1200) with lands administered as federal Indian reservations, also known as pueblos, rancherias, missions, villages, communities, etc.:[3]

- Agua Caliente Band of Cahuilla Indians
- Augustine Band of Mission Indians
- Cabazon Band of Mission Indians
- Cahuilla Band of Indians
- Chemehuevi Indian Tribe

3 Federal Register. *Indian Entities Recognized by and Eligible To Receive Services From the United States Bureau of Indian Affairs*. Updated 02/01/2019. Available at: https://www.federalregister.gov/d/2019-00897, accessed September 13, 2019.

- Colorado River Indian Tribe
- Fort Mojave
- Morongo Band of Mission Indians
- Quechan Indian Tribe
- Pechanga Band of Luiseño Indians
- Ramona Band of Cahuilla Mission Indians
- San Manuel Band of Mission Indians
- Santa Rosa Band of Cahuilla Indians
- Soboba Band of Luiseno Indians
- Torres-Martinez Desert Cahuilla Indians
- Twenty-Nine Palms Band of Mission Indians

Recognizing that tribal groups may have expertise with regard to their tribal history and practices that others may not, Assembly Bill 52 (AB 52) (as will be discussed in more detail below) requires lead agencies to provide notice to all tribal groups that are traditionally, culturally, and historically affiliated with the geographic area of a proposed project if they have requested such notice. Some of these groups are not federally recognized, have had their federal recognition revoked, or are in the processes of requesting federal recognition. The Native American Heritage Commission (NAHC) maintains the list of tribes that are traditionally and culturally affiliated within a specified geographic area.

Native American sacred sites reflect the evolution of the Southern California landscape, reflecting the rich cultural heritage of Native American cultures that predate and continued beyond European contact. Native American sacred sites may be related to a range of topics, including origins of the universe, the shifting of tectonic plates, and an evolving array of plants and animals that give Southern California its unique features today. Some sites are associated with the migration of humans into the region, where they settled, and how they lived. These sites document the view of Native American cultures of their own history and way of life.

The NAHC is charged with identifying, cataloging, and protecting Native American cultural resources and sacred sites, which is maintained as the SLF. **Table 3.18-2, Sacred Lands Recorded by the NAHC in the SCAG Region**, shows the total number of listings within each county. The nature and precise location of these resources is confidential.

Table 3.18-2

Tribal Consultation

SWCA Environmental Consultants (SWCA) led the AB 52 process undertaken by SCAG. SWCA contacted the NAHC on behalf of SCAG on December 5, 2018 to request a Sacred Lands File Search and CEQA Tribal Consultation List under AB 52. The NAHC responded in a letter dated December 18, 2018 and indicated that the SLF search yielded positive results; the letter also included a list of 61 contacts for tribal consultation. SCAG sent letters to all 61 of these contacts via certified mail on January 8, 2019. SCAG's letter described the Plan and PEIR, and invited tribal parties to consult under AB 52. On behalf of SCAG, SWCA subsequently followed up by email on March 13, 2019 with those contacts who had not responded. In total, seven parties responded to SCAG's outreach effort. Two of these, the Pala Band of Mission Indians and the Big Pine Paiute Tribe of the Owens Valley, declined consultation. Five parties – the Agua Caliente Band of Cahuilla Indians, the Fernandeño Band of Mission Indians, the Gabrieleno Band of Mission Indians – Kizh Nation, the Juaneño Band of Mission Indians Acjachemen Nation, and the San Manuel Band of Mission Indians – requested consultation and additional details, including the cultural resources technical study, once completed. SCAG replied to the five parties who requested consultation and provided a timeline for the cultural resources technical study, which it anticipates sharing in late 2019. SCAG also invited the interested tribes to attend project scoping meetings.

3.18.2 REGULATORY FRAMEWORK

3.18.2.1 Federal Regulations

Antiquities Act of 1906

The Antiquities Act of 1906 (16 U.S. Code [U.S.C.] §§ 431–433), which aimed to protect important historic and archaeological sites, initiated historic preservation legislation. It established a system of permits for conducting archaeological studies on federal land, as well as setting penalties for noncompliance. This permit process controls the disturbances that may be caused to archaeological sites.[4] New permits are currently issued under the Archaeological Resources Protection Act (ARPA) of 1979. The purpose of ARPA is to enhance preservation and protection of archaeological resources on public and Native American lands.[5]

Historic Sites Act of 1935

The Historic Sites Act (16 U.S.C. §§ 461–467) became law on August 21, 1935, and declared that it is national policy to "Preserve for public use historic sites, buildings, and objects of national significance."[6] The National Historic Preservation Act (NHPA) expanded the scope to include important state and local resources. Provisions of NHPA established the National Register maintained by the National Park Service, advisory councils on Historic Preservation, State Historic Preservation Offices, and grants-in-aid programs. Section 106 of the NHPA requires all federal agencies to consult the Advisory Council before continuing any activity affecting a property listed on or eligible for listing on the National Register.[7] The Advisory Council has developed regulations for Section 106 to encourage coordination of agency cultural resource compliance requirements (Executive Order 11593).[8]

National Register of Historic Places (National Register)

The National Register recognizes properties that are significant at the national, state, and/or local levels. Although administered by the National Park Service, the federal regulations explicitly provide that

8 Federal Register. *Executive Order 11593 – Protection and enhancement of the cultural environment*. Available online at: https://www.archives.gov/federal-register/codification/executive-order/11593.html, accessed August 27, 2019.

National Register listing of private property "does not prohibit under federal law or regulation any actions which may otherwise be taken by the property owner with respect to the property." Listing in the National Register assists in preservation of historic properties through: recognition that a property is of significance to the nation, the state, or the community; consideration in the planning for federal or federally-assisted projects; eligibility for federal tax benefits; consideration in the decision to issue a surface coal mining permit; and qualification for federal assistance for historic preservation, when funds are available. In addition, for projects that receive federal funding, a clearance process must be completed in accordance with Section 106 of the NHPA. Furthermore, state and local regulations may apply to properties listed in the National Register.[9]

The criteria for listing in the National Register follow the standards for determining if properties, sites, districts, structures, or landscapes of potential significance are eligible for nomination. In addition to meeting any or all of the following criteria, properties nominated must also possess integrity of location, design, setting, feeling, workmanship, association, and materials that:[10] A property is eligible for the NRHP if it is significant under one or more of the following criteria:

Criterion A: It is associated with events that have made a significant contribution to the broad patterns of our history;

Criterion B: It is associated with the lives of persons who are significant in our past;

Criterion C: It embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction; and/or

Criterion D: It has yielded, or may be likely to yield, information important in prehistory or history.

Ordinarily cemeteries, birthplaces, or graves of historic figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, and properties that are primarily commemorative in nature, are not considered eligible for the NRHP, unless they satisfy certain conditions. In general, a resource must be 50 years of age to be considered for the NRHP, unless it satisfies a standard of exceptional importance.

In addition to meeting these criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (NPS 1990). In order

9 Government Publishing Office. 2019. *Title 36: Parks, Forests, and Public Property, Part 60 – National Register of Historic Places*.

10 Ibid.

to assess integrity, the NPS recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities, which are defined in the following manner in National Register Bulletin 15:

Location: the place where the historic property was constructed or the place where the historic event occurred;

Design: the combination of elements that create the form, plan, space, structure, and style of a property;

Setting: the physical environment of a historic property;

Materials: the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

Workmanship: the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

Feeling: a property's expression of the aesthetic or historic sense of a particular period of time;

Association: the direct link between an important historic event or person and a historic property.

Procedures for listing a property in the NRHP are outlined in Procedures for State, Tribal, and Local Government Historic Preservation Programs (36 C.F.R. § 61) and in Determinations of Eligibility for Inclusion in the National Register (36 C.F.R. § 63). The Secretary of the Interior's Professional Qualifications Standards for who is allowed to conduct cultural resources studies and evaluations are outlined in 36 C.F.R. § 61.

Procedures for artifact curation are noted in Curation of Federally Owned and Administered Archeological Collections (36 C.F.R. § 79) for artifacts recovered under the authority of the Antiquities Act (16 U.S.C. §§ 431- 433), the Reservoir Salvage Act (16 U.S.C. §§ 469-469c), Section 110 of the NHPA (16 U.S.C. § 470h-2), or the ARPA (16 U.S.C. §§ 470aa-mm).

National Historic Preservation Act of 1966 (NHPA)

The NHPA, as amended (54 U.S.C. § 470 *et seq*.), established guidelines to "preserve important historic, cultural, and natural aspects of our national heritage, and to maintain, wherever possible, an environment that supports diversity and a variety of individual choice." The NHPA includes requirements (Section 106) which pertain to all projects that are funded, permitted, or approved by any federal agency and which have the potential to affect cultural resources. Under the Section 106

consultation process (36 C.F.R. § 800 *et seq.*), federal agencies taking such actions are required to consult with the Advisory Council on Historic Preservation (ACHP), State Historic Preservation Officer (SHPO), local agencies, and Indian tribes, and avoid or mitigate adverse effects on National Register-listed or -eligible properties. Provisions of NHPA establish a National Register of Historic Places (National Register); see above for details.[11]

Archaeological and Historic Preservation Act of 1974

Passed and signed into law in 1974, The Archaeological and Historic Preservation Act of 1974 (AHPA), 16 U.S.C. § 469 *et seq.*) amended and expanded the Reservoir Salvage Act of 1960. The AHPA as amended requires that federal agencies provide for the preservation of historical and archaeological data (including relics and specimens) which might otherwise be irreparably lost or destroyed as the result of any alteration of the terrain caused by any federal construction project or federally-licensed activity or program.[12]

Archaeological Resources Protection Act of 1979

The ARPA (16 U.S.C.§ 470aa *et seq.*) applies when a project may involve archaeological resources located on federal or tribal land. ARPA requires that a permit be obtained before excavation of an archaeological resource on such land can take place.[13]

The American Indian Religious Freedom Act of 1978

The American Indian Religious Freedom Act of 1978 (AIRFA) (42 U.S.C. § 1996) proclaims that the US Government will respect and protect the rights of Indian tribes to the free exercise of their traditional religions; the courts have interpreted this as requiring agencies to consider the effects of their actions on traditional religious practices.

Native American Graves Protection and Repatriation Act of 1990

The Native American Graves Protection and Repatriation Act of 1990 (NAGPRA) (25 U.S.C. § 3001 *et seq.*) also applies if human remains of Native American origin are discovered on federal or tribal land. NAGPRA requires federal agencies and federally-assisted museums to return "Native American cultural

---

11 National Park Service. *National Historic Preservation Act of 1966 as amended through 1992*. Available online at: https://www.nps.gov/history/local-law/nhpa1966.htm, accessed August 27, 2019.

12 National Park Service. *Archeological and Historic Preservation Act as Amended*. Available online at: https://www.nps.gov/history/local-law/FHPL_ArchHistPres.pdf, accessed August 27, 2019.

items" to the federally recognized Indian tribes or Native Hawaiian groups with which they are associated. Regulations (43 C.F.R. Part 10) stipulate the following procedures be followed. If Native American human remains are discovered, the following provisions would be followed to comply with regulations:

- Notify, in writing, the responsible federal agency;
- Cease activity in the area of discovery and protect the human remains;
- Certify receipt of the notification;
- Take steps to secure and protect the remains;
- Notify the Native American tribes or tribes likely to be culturally affiliated with the discovered human remains within one working day; and
- Initiate consultation with the Native American tribe or tribes in accordance with regulations described in 43 C.F.R., Part 10, Subpart B, Section 10.5.

Archaeology and Historic Preservation; Secretary of the Interior's Standards and Guidelines

Offers non-regulatory technical advice about the identification, evaluation, documentation, study, and other treatment of cultural resources. Notable in these Guidelines are the Standards for Archaeological Documentation, Professional Qualifications Standards for Archaeology, and Standards for the Treatment of Historic Properties.

3.18.2.2 State

Office of Historic Preservation

As an office of the California Department of Parks and Recreation, the Office of Historic Preservation (OHP) implements the policies of the NHPA on a statewide level. The OHP also carries out the duties set forth in the Public Resources Code and maintains the California Historic Resources Inventory.

The State Historic Preservation Officer (SHPO) is an appointed official who implements historic preservation programs within the state's jurisdiction.

California Register of Historical Resources (California Register)

The California Register is "an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate

which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[14] The criteria for eligibility for the California Register are based upon National Register criteria. These criteria are:

- Criterion 1 – Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California of the United States;
- Criterion 2 – Associated with the lives of persons important to local, California or national history;
- Criterion 3 – Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values; and
- Criterion 4 – Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed in the National Register of Historic Places (Category 1 in the State Inventory of Historical Resources) and those formally Determined Eligible for listing in the National Register of Historic Places (Category 2 in the State Inventory);
- California Registered Historical Landmarks from No. 0770 onward; and
- Those California Points of Historical Interest that have been evaluated by the Office of Historic Preservation (OHP) and have been recommended to the State Historical Resources Commission for inclusion in the California Register.

Other resources which may be nominated for listing in the California Register include:

- Historical resources with a significance rating of Categories 3 through 5 in the State Inventory. (Categories 3 and 4 refer to potential eligibility for the National Register, while Category 5 indicates a property with local significance);
- Individual historical resources;
- Historical resources contributing to historic districts; and

14 Public Resources Code Section 50241 (e)

- Historical resources designated or listed as a local landmark.

Additionally, a historic resource eligible for listing in the California Register must meet one or more of the criteria of significance described above and retain enough of its historic character or appearance to be recognizable as a historic resource and to convey the reasons for its significance. Historical resources that have been rehabilitated or restored may be evaluated for listing.

California Public Resources Code, Sections 5097.5, 5097.9, 5097.98–99, and 50907.9

Section 5097.5 of the PRC defines as a misdemeanor the unauthorized disturbance or removal of archaeological, historical, or paleontological resources located on public lands. This Section also prohibits the knowing destruction of objects of antiquity without a permit (expressed permission) on public lands, and provides for criminal sanctions. In 1987, the Code was amended to require consultation with the California Native American Heritage Commission whenever Native American graves are found. It also established that violations for taking or possessing remains or artifacts are felonies.

PRC Section 5097.9 establishes the California Native American Heritage Commission to make recommendations to encourage private property owners to protect and preserve sacred places in a natural state and to allow appropriate access to Native Americans for ceremonial or spiritual activities. The Commission is authorized to assist Native Americans in obtaining appropriate access to sacred places on public lands, and to aid state agencies in any negotiations with federal agencies for the protection of Native American sacred places on federally-administered lands in California.

PRC sections 5097.98 through 5097.99 require that the Governor's California Native American Heritage Commission be consulted whenever Native American graves are found. According to these sections, it is illegal to take or possess remains or artifacts taken from Native American graves; however, it does not apply to materials taken before 1984. Violations occurring after January 1, 1988 are felonies.

PRC Section 50907.9 (Section 7050 of the Health and Safety Code) authorizes the NAHC to regulate Native American concerns regarding the excavation and disposition of Native American cultural resources. Among its duties, the Commission is authorized to resolve disputes relating to the treatment and disposition of Native American human remains and items associated with burials. Upon notification of the discovery of human remains by a county coroner, the Commission notifies the Native American group or individual most likely descended from the deceased. PRC 5097.98(b) requires that landowners ensure that the immediate vicinity (according to generally accepted cultural or archaeological standards of practices) are not damaged or disturbed by further development until the landowner has discussed and conferred with most likely descendants.

AB 52 and Tribal Cultural Resources

Approved by Governor Brown on September 25, 2014, AB 52 establishes a formal notification and, when requested, consultation process for California Native American Tribes to identify significant impacts to Tribal Cultural Resources (TCRs), as defined in PRC section 21074, as part of CEQA. Tribal cultural resources are defined in PRC section 21074, subdivision (a), as either: (1) sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are included or determined to be eligible for inclusion in the California Register of Historical Resources, or included in a local register of historical resources (as defined by statute); or (2) resources determined by the lead agency, and supported by substantial evidence, to be significant pursuant to subdivision (c) of Section 5024.1. If the following resources meet the requirements of subdivision (a), the they also be considered "tribal cultural resources": (1) a cultural landscape that is geographically defined in terms of the size and scope of the landscape; or (2) a historical resource described in Section 21084.1, or a unique archaeological resource defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2.

In the project planning stage, AB 52 requires the Lead Agency to consult with any California Native American tribe that requests consultation and is traditionally and culturally affiliated with the geographic area of the proposed project, prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report. If the Lead Agency has not been contacted by any tribal parties who wish to consult on projects, the Lead Agency may contact the NAHC to obtain a list of traditionally and culturally affiliated groups affiliated with the geographic area of the proposed project to contact.

Consultation may include discussion concerning the type of environmental review necessary, the significance of the project's impacts on the tribal cultural resources, and, if necessary, project alternatives or the appropriate measures for preservation and mitigation that the California Native American tribe may recommend to the lead agency. The consultation should be considered concluded when either the parties agree to measures to mitigate or avoid a significant effect, if one exists, on a tribal cultural resource; or a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached (PRC Section 21082.3.2[b]).

Pursuant to Government Code Sections 6254 and 6254.10, and PRC Section 21082.3(c), information submitted by a California Native American tribe during consultation under AB 52 should not be included in the environmental document or otherwise disclosed to the public by the lead agency, project applicant, or the project applicant's agent, unless written permission is given. Exemptions to the confidentiality provisions include any information already publicly available, in lawful possession of the project

applicant before being provided by the tribe, independently developed by the project applicant or the applicant's public agent, or lawfully obtained by a third party (PRC Section 21082.3[c]).

California Coastal Act

The California Coastal Act (CCA; PRC Sections 30000 et seq.) includes protection of archaeological resources into Land Conservation Plans that regulate land uses within the coastal zone.

California Health and Safety Code, Section 7050 and Sections 18950 through 18961

Consistent with the provisions of Section 50907.9 of the PRC, Section 7050 of the Health and Safety Code HSC) authorizes the NAHC to regulate Native American concerns regarding the excavation and disposition of Native American cultural resources. Among its duties, the Commission is authorized to resolve disputes relating to the treatment and disposition of Native American human remains and items associated with burials. Upon notification of the discovery of human remains by a county coroner, the Commission notifies the Native American group or individual most likely descended from the deceased.

The State Historic Building Code (HSC; Sections 18950–18961 provide alternative building regulations and building standards for the rehabilitation, preservation, restoration (including related reconstruction), or relocation of buildings or structures designated as historic buildings. Such alternative building standards and building regulations are intended to facilitate the restoration or change of occupancy so as to preserve their original or restored architectural elements and features, to encourage energy conservation and a cost-effective approach to preservation, and to provide for the safety of the building occupants.

California Penal Code Section 622 – Destruction of Historical Properties

This section of the California Penal Code makes it a misdemeanor for anyone (except the owner) to willfully injure or destroy anything of archaeological interest or value whether on private lands or within any public park or place. In addition, Penal Code Section 622.5 sets the penalties for the damage or removal of cultural resources.

Senate Bill 18 – Traditional Tribal Cultural Places

Senate Bill (SB) 18, enacted in 2004, requires local governments to consult with Native American groups at the earliest point in the local government land use planning process. The consultation intends to establish a meaningful dialogue regarding potential means to preserve Native American places of prehistoric, archaeological, cultural, spiritual, and ceremonial importance. It allows for tribes to hold conservation easements and for tribal cultural places to be included in open space planning.

Executive Order B-10-11

Executive Order B-10-11 states that it is the policy of the administration that every state agency and department subject to executive control is to encourage communication and consultation with California Native American tribes. It established the position of Governor's Tribal Advisor in the Office of the Governor of California. This position will serve as a direct link between the Governor's Office and tribal governments on matters including legislation, policy, and regulation.

3.18.2.3 Local

County General Plans

In addition to federal and state regulations, cities and counties in the SCAG region may also provide regulatory protection and advisement regarding cultural resources (**Table 3.18-3, County Policies and Ordinances Relevant to Tribal Cultural Resources in the SCAG Region**). California law requires that a general plan include seven elements (land use, open space, conservation, housing, circulation, noise, and safety). Many jurisdictions incorporate policies related to cultural and historical resources into the conservation element. Other jurisdictions choose to prepare a separate (optional) element dealing with cultural and/or historic preservation issues. Many jurisdictions also prepare ordinances addressing cultural resources and historic preservation.

Table 3.18-3
County Policies and Ordinances Relevant to Tribal Cultural Resources in the SCAG Region

County	County Policies and Ordinances
Imperial	Conservation and Open Space Element of General Plan
	Policy Numbers: Only one policy, Section IV.B.2
	Policies Specific to Archaeological Resources: Yes, brief
	Policies Specific to Paleontological Resources: No
	Policies Specific to Historic Resources: No
Los Angeles	Chapter 9: Conservation and Natural Resources Element of General Plan
	Policy Numbers: C/NR 14.1 – C/NR 14.6
	Policies Specific to Archaeological Resources: Yes, very brief
	Policies Specific to Paleontological Resources: Yes, very brief
	Policies Specific to Historic Resources: Yes, very brief
Orange	Chapter VI: Resources Element of General Plan
	Policy Numbers: Goals 1, 2 and 3, each with multiple policy numbers
	Policies Specific to Archaeological Resources: Yes, extensive
	Policies Specific to Paleontological Resources: Yes, extensive
	Policies Specific to Historic Resources: Yes, extensive
Riverside	Chapter 5: Multipurpose Open Space Element of General Plan
	Policy Numbers: 19.1 – 19.9
	Policies Specific to Archaeological Resources: Yes, brief
	Policies Specific to Paleontological Resources: Yes, brief
	Policies Specific to Historic Resources: Yes
San Bernardino	Conservation Element (Subchapter C2) of General Plan
	Policy Numbers: CO 3.1 – CO 3.18
	Policies Specific to Archaeological Resources: No – together with historic resources, extensive
	Policies Specific to Paleontological Resources: Yes, extensive
	Policies Specific to Historic Resources: No – together with archaeological resources, extensive
Ventura	Chapter 1: Resources (Subchapter 1.8) of General Plan
	Policy Numbers: 1 – 6
	Policies Specific to Archaeological Resources: Yes, Policies 1-3
	Policies Specific to Paleontological Resources: Yes, Policies 4 & 5
	Policies Specific to Historic Resources: Yes, Policy 6

City General Plans and Ordinances

In accordance with Sections 6530(c) and (d) of the California Government Code, like the six counties in the SCAG region, all cities are required to have a conservation element and an open space element, as mandatory elements of their general plans. Many city general plans have provisions for historic districts and protection of locally important cultural resources that may or may not meet the criteria for eligibility for listing in the NRHP or CRHR.

3.18.3 ENVIRONMENTAL IMPACTS

3.18.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that the Connect SoCal Plan could result in significant impacts to tribal cultural resources, if the project would cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- Listed or eligible for listing in the California Register of Historical Resources, or in the local register of historical resources as defined in Public Resources. Code Section 5020.1(k); or

- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

3.18.3.2 Methodology

The methodology for determining the significance of impacts to tribal cultural resources compares the existing conditions to the future (2045) Connect SoCal conditions, as required by *CEQA Guidelines* Section 15126.2(a). The known tribal cultural resources (i.e. historical or archeological), Native American sacred sites, and human remains located within the SCAG region were evaluated using criteria set forth by the OHP, the CRHR, and the State CEQA Guidelines. Native American sacred sites were analyzed using information provided by the NAHC from the SLF. The NAHC does not disclose the location or nature of the SLF listings, which limits the analysis to a count of resources within respective counties.

Nearly 50,000 archaeological resources have been identified in the SCAG region. Each of these sites is documented at an Archaeological Information Center, which holds location information on archaeological sites for each region in California. These known resources are limited to areas that have subject to various levels of research or investigation. Areas that have been subject to pedestrian surveys or sub-surface explorations represent only a fraction of the total area with the potential to yield such resources. Therefore, the analysis focuses on the potential for major transportation projects to necessitate ground-disturbing activities in areas where significant archeological resources have been previously recorded or require work in sediments that have not been previously investigated.

As described in **Section 3.18.2.1,** SWCA Environmental Consultants (SWCA) led the tribal consultation process undertaken by SCAG. SWCA contacted the NAHC to request a Sacred Lands File Search and CEQA Tribal Consultation List.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743, or SB 226 (as described in **Chapter 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.18.3.3 Impacts and Mitigation Measures

Impact TCR-1 **Cause a substantial adverse change in the significance of a tribal cultural resource defined in Public Resources Code section 21074 that is:**

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1.

Significant and Unavoidable - Mitigation Required.

Transportation projects and anticipated growth under the Plan have the potential to cause a substantial adverse change in the significance of tribal cultural resources in the SCAG region, defined in Public Resources Code section 21074, as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe.

To assist in this analysis, pursuant to AB 52, SCAG contacted NAHC and is currently consulting with five parties – the Agua Caliente Band of Cahuilla Indians, the Fernandeño Band of Mission Indians, the Gabrieleno Band of Mission Indians – Kizh Nation, the Juaneño Band of Mission Indians Acjachemen

Nation, and the San Manuel Band of Mission Indians – who requested consultation and additional details. SCAG will be providing the cultural resources technical study to these parties once it is completed and will incorporate any information received from the parties as appropriate in the Final EIR.

Direct permanent impacts to TCRs (resources either listed or eligible for listing in the California Register of Historical Resources, or local register of historical resources, or resources determined by the lead agency to be significant) may result from ground disturbance associated with construction, such as grading and excavation. The development of new transportation facilities, construction of additional lanes, or the projected land use pattern stemming from the Plan may have a relatively higher potential to directly impact TCRs, primarily by grading or excavation in previously undisturbed soil and by the disturbance of buried resources that have not been previously identified. The potential for direct impacts to TCRs may be comparatively less for improvements to existing facilities and modifications to existing rights-of-way since these areas have been previously disturbed. Regardless of prior disturbance, however, any excavation has the potential to directly impact undocumented TCRs of an archaeological nature.

Tribal cultural resources are likely to be encountered near areas of prior Native American occupation and activity, which includes areas both within and outside areas of current development. Surficial archaeological deposits that are TCRs are more likely to be heavily disturbed within urban areas and more intact in rural settings; however, this does not preclude the presence of buried archaeological resources that may be significant in urban settings. Archaeological sites that may meet the TCR definition that have been buried below grade have no surface manifestations, making accurate prediction of their location during project planning problematic.

Direct permanent impacts would be significant if TCRs cannot be avoided or preserved in place by project design or redesign and are destroyed or substantially altered. Disturbance of TCR features or places would compromise the traditional use of or the cultural character and integrity of the resource and may result in a significant impact if its contributing characteristics or the character of its physical setting is destroyed or substantially altered. Permanent direct impacts may be addressed by advance project planning and consulting with tribes that have requested consultation to ensure known TCRs are avoided and preserved in place, or to develop project alternatives that would minimize impacts to known TCRs. Permanent direct impacts to TCRs of an archaeological nature discovered inadvertently during project construction may be addressed by project redesign to avoid and preserve the TCR, and by requested tribal consultation focused at minimizing the impact.

Permanent indirect impacts from construction and operational improvements may result from potential access-related damage to TCRs when public accessibility is increased due to changes in land use or new

or improved transportation networks stemming from the Plan. The likelihood of unauthorized artifact collecting and destruction (intentional or unintentional) of TCRs of an archaeological nature, or of damage to or destruction (intentional or unintentional) of TCRs that are traditional places for gathering natural resources, cultural landscapes or sacred places, increases with ease of access. Recreational use, overland vehicle travel, and vandalism would degrade the integrity and traditional use of the TCRs. Ensuring appropriate measures that would minimize or reduce damage to TCRs are devised during project planning, coupled with requested tribal consultation, may reduce indirect access-related impact.

While there are state requirements in place to minimize adverse impacts to TCRs, there is still the potential for access-related damage associated with construction and operation of projects under the Plan. Therefore, the potential direct regional impacts on TCRs related to the transportation projects and growth under the Plan could result in substantial alteration or removal of a TCR. Indirect impacts from access-related damage from construction projects and ongoing operations resulting from the Plan are also considered significant requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

SMM TCR-1: Impacts to tribal cultural resources shall be minimized through cooperation, information sharing, and SCAG's ongoing regional planning efforts such as web-based planning tools for local governments including CA LOTS, and other GIS tools and data services, including, but not limiting to, Map Gallery, GIS library, and GIS applications; and direct technical assistance efforts and sharing of associated online Training materials. SCAG shall consult with the Native American Heritage Commission, as well as Native American tribes, to identify opportunities for early and effective consultation to identify tribal cultural resources to avoid such resources wherever practicable and feasible and reduce or mitigate for conflicts in compatible land use to the maximum extent practicable.

Project Level Mitigation Measures

See PMM CULT-1.

PMM TCR-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on tribal cultural resources. Such

measures may include the following or other comparable measures identified by the Lead Agency:

a) Avoidance and preservation of the resources in place, including, but not limited to, planning and construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria;

b) Treating the resource with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following: protecting the cultural character and integrity of the resource; protecting the traditional use of the resource; and protecting the confidentiality of the resource;

c) Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places; and protecting the resource.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce each of the impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and lack of project-specific detail, including project locations and locations of the unknown tribal cultural resources, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts to tribal cultural resources could be significant and unavoidable even with implementation of mitigation.

SWCA Environmental Consultants, Inc. 2019. DRAFT Cultural Resources Technical Report for the 2020–2045 Regional Transportation Plan and Sustainable Communities Strategy for the Southern California Association of Governments.

3.19 UTILITIES AND SERVICE SYSTEMS

This section of the Program Environmental Impact Report (PEIR) describes the existing utilities and service systems in the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect utilities and service systems, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible.

3.19.1 DEFINITIONS

To provide a context for analysis, definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for utilities and service systems are provided below.

Nonhazardous Municipal Solid Waste: More commonly known as trash or garbage—consists of everyday items that are used and then thrown away, such as product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, appliances, paint, and batteries. This comes from homes, schools, hospitals, and businesses.

Regional Water Quality Control Board (RWQCB): There are nine RWQCBs in California. The RWQCBs protect ground and surface water quality and are responsible for implementing Water Quality Control Plans.[1]

Sanitary Landfill: Sanitary landfills are sites where waste is isolated from the environment until it is safe. It is considered safe when it has completely degraded biologically, chemically and physically.

Septic Tank: An underground vessel for treating wastewater from a single dwelling or building by a combination of settling and anaerobic digestion. Effluent is usually disposed of through a dispersal system which consists of one or a combination of leach fields, seepage pits, and/or subsurface drip dispersal system. Settled solids in septic tank are pumped out periodically and hauled to a treatment facility for disposal.

Storm Water and Stormwater: In layman's terms, stormwater is defined as an abnormal amount of surface water due to a heavy rain or snowstorm. The term "stormwater," instead of "storm water," is used when employed by the cited source of information. In all other instances, "stormwater" is used,

1 Water Education Foundation. *Regional Water Quality Control Boards in California.* Available online at: https://www.watereducation.org/aquapedia/regional-water-quality-control-boards-california, accessed September 4, 2019.

consistent with the provision of Appendix G of the *CEQA Guidelines* and as defined by the U.S. EPA. Stormwater runoff is generated when precipitation from rain and snowmelt events flows over land or impervious surfaces and does not percolate into the ground. As the runoff flows over the land or impervious surfaces (paved streets, parking lots, and building rooftops), it accumulates debris, chemicals, sediment, or other pollutants that could adversely affect water quality if the runoff is discharged untreated.[2]

Tier 1 Onsite Wastewater Treatment System (OWTS): Low Risk New or Replacement OWTS (Policy Section 7 & 8) applies to new or replacement OWTS that comply with conservative siting and design standards describe in the OWTS Policy. Tier 1 applies when a Local Agency Management Program (LAMP) has not been approved by the Regional Water Board. Maximum flow rate is 3,500 gallons per day (gpd).[3]

Tier 2 Onsite Wastewater Treatment System (OWTS): Local Agency Management Program (LAMP) for New or Replacement OWTS (OWTS Policy Section 9) applies to new or replacement OWTS that comply with the siting and design standards in an approved LAMP. LAMPs are developed by Local Agencies based on local conditions; siting and design standards may differ from Tier 1 standards. Maximum flow rate is 10,000 gpd.[4]

Tier 3 Onsite Wastewater Treatment System: Advanced Protection Management Program (OWTS Policy Section 10). Applies to OWTS located near impaired surface water bodies that are subject to a Total Maximum Daily Load (TMDL) implementation plan, a special provision contained in a LAMP, or is located within 600 feet of a water body listed on OWTS Attachment 2. Supplemental treatment requirements may apply to a Tier 3 system. Maximum flow rate is 10,000 gpd.[5]

Water Supply System: A water supply system is a system for the collection, transmission, treatment, storage and distribution of water from source to consumers, for example, homes, commercial establishments, industry, irrigation facilities and public agencies for water-related activities (firefighting, street flushing, and so forth).

Wastewater: The spent or used water of a community or industry that contains dissolved and suspended matter.

3.19.1 SOLID WASTE

3.19.1.1 ENVIRONMENTAL SETTING

3.19.1.1.1 Existing Conditions

The majority of solid waste within the SCAG region is disposed of at landfills. Due to increased recycling and waste reduction initiatives, solid waste within the SCAG region has declined in recent years. CalRecycle's Solid Waste Information System (SWIS) tracks the total tonnage of solid waste disposed in 2018 (the most recent year for which data is available), by county. As shown below, in **Table 3.19.1-1, Solid Waste Tonnage within the SCAG Region (2018)**, the total amount of solid waste disposed of in the SCAG region was 19,550,712 tons in 2018.[1] This number includes waste trucked into the region from counties outside the SCAG boundaries.

Table 3.19.1-1
Solid Waste Tonnage within the SCAG Region (2018)

County	Total Tonnage
Imperial	305,522
Los Angeles	5,478,772
Orange	5,054,229
Riverside	4,899,025
San Bernardino	1,908,462
Ventura	1,908,462
Total	**19,550,712**

Solid Waste Management Departments

Landfills

A landfill is a waste management unit at which waste is discharged in or on land for disposal. Landfills do not include surface impoundment, waste pile, land treatment unit, injection well, or soil

1 This is approximately half the total solid waste disposed of in California in 2018.

amendments.[2] Landfills that receive solid waste in the SCAG region are listed in **Table 3.19.1-2** below.

Table 3.19.1-2
Active Solid Waste Landfills by SCAG County

County	Name
Imperial	Calexico Solid Waste Site
Imperial	Niland Solid Waste Site
Imperial	Salton City Solid Waste Site

Transfer Stations

Similar to the landfills, transfer stations accept trash for disposal. There are six county operated transfer stations. These stations accept waste of various types including general refuse and wood and green waste depending on size with flat and volume rates applying. These facilities collect material that is then "transferred" to be recycled or to the nearest landfill site. While not as all-inclusive as a landfill, transfer stations provide a broad collection opportunity for local residents.

Table 3.19.1-3, Active Transfer Stations by SCAG County, identifies active transfer stations within the region.

Waste Diversion and Recycling

The California Integrated Waste Management Act of 1989 (Chapter 1095, Statutes of 1989) requires every city and county, as part of the Countywide Integrated Waste Management Plan, to prepare a Source Reduction and Recycling Element that identifies how each jurisdiction would meet the mandatory state waste diversion goals of 50 percent of all solid waste through source reduction, recycling, and composting activities. The 50 percent diversion requirement is measured in terms of per-capita disposal expressed as pounds per person per day. CalRecycle calculates per-capita disposal for all counties and jurisdictions to monitor the success of program implementation, actual recycling, and other diversion programs.[3]

3.19.1.2 REGULATORY FRAMEWORK

3.19.1.2.1 Federal

Resource Conservation and Recovery Act of 1976

Subtitle D of the Resource Conservation and Recovery Act of 1976 (RCRA) (42 USC Section 6901 *et seq.*), focuses on state and local governments as the primary planning, regulating, and implementing entities for the management of non-hazardous solid waste, such as household garbage and nonhazardous industrial solid waste.[4] To promote the use of safer units for solid waste disposal, Subtitle D provides regulations for the generation, transportation, and treatment, storage, or disposal of hazardous wastes. EPA developed federal criteria for the proper design and operation of municipal solid waste landfills and other solid waste disposal facilities, but state and local governments are the primary planning, permitting, regulating, implementing, and enforcement agencies for management and disposal subject to approval by EPA.[5] EPA approved the State of California's program, a joint effort of the CIWMB, SWRCB, RWQCBs, and LEAs, on October 7, 1993.

3.19.1.2.2 State

California Integrated Waste Management Act

As many of the landfills in the state are approaching capacity and the siting of new landfills becomes increasingly difficult, the need for source reduction, recycling, and composting has become readily apparent. In response to this increasing solid waste problem, in September 1989 the state assembly passed Assembly Bill 939, known as the California Integrated Waste Management Act. This statute emphasizes conservation of natural resources through the reduction, recycling and reuse of solid waste. Assembly Bill 939 required cities and counties in the state to divert 25 percent of their solid waste stream from landfills by 1995 and 50 percent by year 2000, or face potential fines of millions of dollars per year. In 2008, the California Integrated Waste Management Act also requires that all cities conduct a Solid Waste Generation Study and prepare a Source Reduction Recycling Element.

AB 939 established CalRecycle. The purpose was to direct attention to the increasing waste stream and decreasing landfill capacity, and to mandate a reduction of waste being disposed. All jurisdictions were required to meet diversion goals of 25 percent by 1995 and 50 percent by the year 2000. A disposal reporting system was established with CalRecycle oversight, facility and program planning was required, and cities and counties began to address waste problems.[6]

AB 341 (Chapter 476, Statutes of 2011) established a statewide goal to reduce, recycle, or compost at least 75 percent of solid waste by 2020. AB 341 also requires local jurisdictions to implement commercial recycling programs to divert recyclable material away from landfills and required commercial generators and multi-family residences to arrange for recycling services starting in 2012.[7]

AB 2020 The California Bottle Bill

AB 2020 (Public Resources Code Section 14500 *et seq.*) took effect in 1987 as litter prevention legislation. At present, the minimum refund value established for each type of eligible beverage container is 5 cents for each container under 24 ounces and 10 cents for each container 24 ounces or greater.[8]

---

6 CalRecycle. 2018. *History of California Solid Waste Law, 1985-1989.* Available online at: https://www.calrecycle.ca.gov/laws/legislation/calhist/1985to1989, accessed August 28, 2019.

7 CalRecycle. 2019. *Mandatory Commercial Recycling.* Available online at: https://www.calrecycle.ca.gov/recycle/commercial, accessed August 28, 2019.

8 California Legislature. 2017. *An Overview of California's Beverage Container Recycling (Bottle Bill) Program*.

SB 20 Electronic Waste "E-Waste" Recycling

SB 20 (Public Resources Code Section 42460 *et seq.*) was signed in September of 2003; it establishes a system to recycle computers, TVs, and other video display devices (known as electronic waste) when they reach their end-of-life. Fees are collected from consumers at point of purchase to fund recycling programs.[9]

AB 2901 – Cell Phone Recycling

AB 2901 Public Resources Code Section 42490 *et seq.* was signed into law on September 29, 2004. It requires all cell phone retailers to take back used cell phones for recycling at no charge to the customer.[10]

AB 2449 and SB 270 - Plastic Bag Recycling

Adopted in 2006, AB 2449 (Chapter 845, Statutes of 2006) requires all California grocery stores to take back and recycle plastic grocery bags. The bill also requires retailers to provide consumers with a bag reuse opportunity by providing reusable bags which can be purchased and used in lieu of disposable ones.[11]

Many cities and counties have adopted plastic bag ordinances. SB 270 of 2014 (Chapter 850, Statutes of 2014) established a statewide prohibition on the sale or distribution of single-use carryout plastic bags in grocery stores and pharmacies, convenience food stores, and food marts. Retailers must charge customers at least 10 cents to buy a recycled paper bag or reusable grocery bag.[12] A referendum to repeal this law failed in the November 2016 election.

Solid Waste: Diversion Rule (AB 341)

Under commercial recycling law (Chapter 476, Statutes of 2011), Assembly Bill (AB) 341, directed CalRecycle to develop and adopt regulations for mandatory commercial recycling. The final regulation was approved by the Office of Administrative Law on May 7, 2012. AB 341 declared a policy goal of the state that not less than 75 percent of solid waste generated be source reduced, recycled, or composted by the year 2020.[13]

Assembly Bill 2675

Adopted in 2014, AB 2675 (Chapter 617, Statues of 2014) requires each state agency to ensure that at least 75% of reportable purchases are recycled products on and after January 1, 2020 with exception to paint, antifreeze, and tires.[14]

Assembly Bill 1045

Adopted in 2015, AB 1045 (Chapter 596, Statutes of 2015) requires the California Environmental Protection Agency (Cal EPA) in coordination with CalRecycle, the State Water Resources Control Board, CARB, and the Department of Food and Agriculture to develop and implement policies to aid in diverting organic waste from landfills with the goal of reducing at least 5 million metric tons of GHG emissions per year.[15]

Senate Bill 1383

Adopted in 2016, SB 1383 (Chapter 395, Statutes of 2016) requires the California Air Resources Board (CARB) to approve and implement a comprehensive strategy to reduce short-living GHG pollutants in organic waste landfills to achieve a 40% reduction in methane, 40% reduction in hydrofluorocarbon gases, and a 50% reduction in anthropogenic black carbon by 50% below 2013 levels by 2030. SB 1383 also requires CARB, in consultation with the Department of Food and Agriculture, to adopt regulations to reduce methane emissions from livestock and dairy manure management operations.[16]

In response to SB 1383, CalRecycle developed the Short-Lived Climate Pollutants: Organic Waste Reductions strategy, which proposes a series of strategies and requirements to reduce methane emissions from organic waste. Strategies include maintaining a list of food recovery organizations, public outreach, and specific bin requirements.[17]

Lead-Acid Battery Recycling Act of 2016 (AB 2153)

Adopted in 2016, AB 2153 (Chapter 666, Statues of 2016) updates the current law regarding the disposing of a lead-acid battery and creates numerous requirements related to lead-acid batteries. Some of these requirements include: starting April 2017, a $1 fee on both consumers and manufacturers of lead-acid

batteries; 2022, the fee to consumers will increase to $2 and the fee to manufacturers will be eliminated; creates the Lead-Acid Battery Clean-Up Fund; and require dealers to charge consumers a refundable deposit for new lead-acid batteries.[18]

Assembly Bill 1250

Adopted in 2016, AB 1250 (Chapter 861, Statues of 2016) requires plastic beverage containers subject to the California Redemption Value to report to CalRecycle the amount of virgin plastic and postconsumer recycled plastic used by the manufacturer for plastic CRV-eligible beverages solid within the state.[19]

Title 14, California Code of Regulations, Division 7

CalRecycle regulations pertaining to nonhazardous waste management in California include minimum standards for solid waste handling and disposal; regulatory requirements for composting operations; standards for handling and disposal of asbestos containing waste; resource conservation programs; enforcement of solid waste standards and administration of solid waste facility permits; permitting of waste tire facilities and waste tire hauler registration; special waste standards; used oil recycling program; electronic waste recovery and recycling; planning guidelines and procedures for preparing, revising, and amending countywide IWMP; and solid waste cleanup program.[20]

Title 27, California Code of Regulations, Environmental Protection, Division 2, Solid Waste

CalRecycle and the SWRCB jointly issue regulations pertaining to waste disposal on land, including criteria for all waste management units, facilities and disposal sites; documentation and reporting; enforcement, financial assurance; and special treatment, storage, and disposal units.[21]

2016 California Green Building Standard Code

The California Green Building Standards Code (California Code of Regulations, Title 24, Part 11), commonly referred to as the CALGreen Code, is a statewide mandatory construction code that was developed and adopted by the California Building Standards Commission and the California Department of Housing and Community Development in 2008. The purpose of this code is to improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of

building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices including recycling of construction (diversion of 50 percent) and other waste streams.[22]

The California Universal Waste Law

Special laws and regulations pertain to disposal of universal waste. (22 Cal. Code Regs. § 66260 *et seq.*) Examples of universal wastes are batteries, fluorescent tubes, and some electronic devices, that contain mercury, lead, cadmium, copper, and other substances hazardous to humans and the environment. Universal waste cannot be disposed in solid waste landfills. Rather, universal wastes can be recycled. Recycling requirements are less stringent than those of other hazardous wastes to encourage recycling and recovery of valuable metals.

California Solid Waste Reuse and Recycling Act

The California Solid Waste Reuse and Recycling Act of 1991 (Pub. Res. Code §§ 42900-42901) was enacted to assist local jurisdictions with accomplishing the goals of AB 939. In accordance with AB 2176, any development project that has submitted an application for a building permit must include adequate, accessible areas for the collection and loading of recyclable materials. Furthermore, the areas to be utilized must be adequate in capacity, number, and distribution to serve the proposed project. Moreover, the collection areas are to be located as close to existing exterior refuse collection areas as possible. [23]

3.19.1.2.3 Local

Countywide Integrated Waste Management Plan

Counties are required to prepare and submit to CalRecycle an integrated waste management plan which includes all Source Reduction and Recycling Element (SRREs), all Household Hazardous Waste Element (HHWEs), a Countywide Siting Element (CSE), all Non-Disposal Facility Elements (NDFEs), all applicable Regional SRREs, HHWEs. Public Resources Code Section 41751 requires that a countywide integrated waste management plan include a summary of significant waste management problems facing the county or city. The plan is required to provide an overview of the specific steps that will be taken by local agencies, acting independently and in concert, to achieve the purposes of this division. The plan is required to contain a statement of the goals and objectives set forth by the countywide task force.[24]

23 California Legislative Information. *Article 1. Short Title and Findings and Declarations [42900-42901].*

24 California Legislative Information. *Article 1. Plan Preparation [41750-41751], Section 41751.*

Source Reduction and Recycling Element

The SRRE consists of the following components: waste characterization, source reduction, recycling, composting, solid waste facility capacity, education and public information, funding, special waste and integration. Each city and county is required to prepare, adopt, and submit to the California Department of Resources Recycling and Recovery (CalRecycle) an SRRE, which includes a program for management of solid waste generated within the respective local jurisdiction. The SRREs must include an implementation schedule for the proposed implementation of source reduction, recycling, and composting programs. In addition, the plan identifies the amount of landfill and transformation capacity that will be needed for solid waste which cannot be reduced, recycled, or composted.[25]

Household Hazardous Waste Element

Cities and counties are required to prepare, adopt, and submit to CalRecycle, a HHWE that identifies a program for the safe collection, recycling, treatment, and disposal of hazardous wastes that are generated by households. The HHWE specifies how household hazardous wastes generated by households within the jurisdiction must be collected, treated, and disposed of.[26]

Non-Disposal Facility Element (NDFE)

Cities and counties are required to prepare, adopt and submit to CalRecycle, an NDFE that includes a description of new facilities and expansion of existing facilities, and all solid waste facility expansions (except disposal and transformation facilities) that recover for reuse at least 5 percent of the total volume. The NDFE are to be consistent with the implementation of a local jurisdiction's SRRE. Each jurisdiction must also describe transfer stations located within and outside of the jurisdiction, which recover less than 5 percent of the material received.[27]

Countywide Siting Element (CSE)

Counties are required to prepare a CSE that describes areas that may be used for developing new disposal facilities. The element also provides an estimate of the total permitted disposal capacity needed

---

for a 15-year period if counties determine that their existing disposal capacity will be exhausted within 15 years or if additional capacity is desired (PRC Sections 41700-41721.5).[28]

General Plans

Local policies related to utilities and service systems are established in each jurisdiction's general plan. In general, jurisdictions have policies in place that state that utility and service systems must be provided at the same time (or in advance of) need. In addition to these general policies, jurisdictions may have more specific policies tailored to performance objectives including solid waste services. For further guidance regarding solid waste, some jurisdictions also produce an Integrated Waste Management Plan.

3.19.1.3 ENVIRONMENTAL IMPACTS

3.19.1.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan could result in significant adverse impacts to utilities if the Plan would:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals;
- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

3.19.1.3.2 Methodology

The methodology for determining the significance of impacts utilities and service systems compares existing conditions to the expected future use of landfills with the Plan. Factors such as existing capacity and expected demand (based on population and land use patterns) are reviewed at the regional level. The criteria above were applied to compare current conditions to future 2045 Plan conditions.

Implementation of Connect SoCal would affect the use of utility and service systems in the SCAG region. The analysis of these impacts is programmatic at the regional level. With regard to solid waste, the Plan's potential to exceed capacity of local infrastructure as well as compliance with applicable statutes and regulations were analyzed to determine whether or not there will be a significant impact.

---

28 CalRecycle. 2018. *Countywide Siting Element Adequacy*. Available online at: https://www.calrecycle.ca.gov/LGCentral/Library/Policy/CIWMPEnforce/Part1/CSEAdq/, accessed August 28, 2019.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in **Section 1.0 Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.19.1.3.3 Impacts and Mitigation Measures

Impact USSW-1 **Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals**

Impact USSW-2 **Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.**

Significant and Unavoidable – Mitigation Required.

Many of the transportation projects within the Plan have the potential to generate a substantial amount of solid waste during construction through grading and excavation activities, as well as debris resulting from removal of structures. Construction of development projects anticipated to occur during implementation of the Plan, would generate similar debris. Construction debris could be recycled or used as fill at other projects (clean dirt) or transported to the nearest landfill site and disposed of appropriately.

Although there are 40 landfills that serve the SCAG region **(Table 3.19.1-2, Active Solid Waste Landfills by SCAG County)**, the lifetime of many of these landfills does not extend out 25 years. The total population is expected to grow by approximately 3.2 million across the SCAG region by 2045 resulting in substantial generation of solid waste (**Table 3.14-8, 2019-2045 Population, Households, and Employment Projections in the SCAG Region**). CalRecycle estimates that the average resident in California disposes of 5.2 pounds of trash per day and the average employee disposes of 11.9 pounds of trash per day, as of 2017. From 1989 to 2012, solid waste generation per employee and resident in California was reduced by approximately half in large part due to compliance with AB 939.[29] AB 341 requires 75 percent diversion

29 CalRecycle. 2019. California Statewide per Resident, per Employee, and Total Disposed Since 1989. http://www.calrecycle.ca.gov/lgcentral/goalmeasure/disposalrate/graphs/disposal.htm, accessed September 5, 2019.

by 2020 as compared to 2000.[30] Because 2017 solid waste generation already reflects some reductions from AB 341 (which was implemented in 2012), an 18 percent reduction from the 2017 number was assumed for future years. This equates to approximately 4.2 pounds of trash per day for residences and 9.7 pounds of trash per day for employees in 2045. Because people both live and work in the region, calculating waste for total residents and total employees likely overestimates waste generation.

These solid waste generation rates were used to calculate the solid waste generated in 2045. As discussed above, solid waste generation per capita had been decreasing steadily each year, until 2013 when they began to rise again. Despite recent increases, it is expected that solid waste generation will return to a decreasing trend in the future due to sustainable policies and practices. As shown in **Table 3.19.1-4, Solid Waste Generated in the SCAG Region,** assuming solid waste generation for both residents and employees according to the factors discussed above, the waste generated per day in the SCAG region under the Plan in 2045 could be up to 96,001 tons per day as compared to 89,014 tons per day in 2019.[31] However, as noted above, because the calculation is for residents and employees likely there is some double counting in the calculated numbers shown in the table.

30 AB 341 requires a 75% reduction by 2020.

31 In order to estimate the amount of waste generated by residents and employees in 2019 and 2045, it was assumed that an even percentage of waste has been reduced from 2012 to 2020 to meet the AB 341 requirement. Therefore, each year represents a reduction of 6.25% (50% / 8 years = 6.25%/year). Based on this assumption, 2017's estimated waste stream will have already met 31.25% of the required reduction (6.25%/year x 5 years = 31.25%). From 2017 to 2019, an additional 12.5% of waste would be reduced (6.25%/year x 2 years = 12.5%). As a result, 2017 residential and employment per capita waste generation is reduced by approximately 12.5%, resulting in a 2019 residential waste generation of 4.55 lbs/day and an employment waste generation of 10.4 lbs/day. From 2019 to 2020, an additional 6.25% of waste would be reduced (18.75% reduction from 2017), resulting in a 2020 residential waste generation of 4.2 lbs/day and an employment waste generation of 9.7 lbs/day.

Table 3.19.1-4
Solid Waste Generated in the SCAG Region

Year	Number of People	Solid Waste Generation Rate (lbs/day) [a]	Solid Waste Generated (tons/day)
Population			
2019	19,339,700	4.55	43,998
2045	22,507,200	4.2	47,265
Employment			
2019	8,657,000	10.4	45,016
2045	10,048,700	9.7	48,736
Population and Employment			
2019 Total			**89,014**
2045 Total			**96,001**

a California Statewide per Resident, per Employee, and Total Disposed 1989-2017. http://www.calrecycle.ca.gov/lgcentral/goalmeasure/disposalrate/graphs/disposal.htm, accessed September 5, 2019 Assumes an even reduction in solid waste from 2012 to 2020. This table overestimates waste generated as people both live and work within the region.

Source: SCAG modeling, 2019; Impact Sciences, 2019.

The maximum daily disposal for the 40 landfills in the SCAG region is calculated to be 152,155 tons/day as of 2019. However, only 18 of the landfills are currently anticipated to be operational in 2045 with a combined daily disposal of 61,459 tons/day.[32] Therefore, the anticipated solid waste generated could exceed the projected landfill capacity resulting in a significant impact. Mitigation is required.

Plan projects would be required to comply with federal, state, and local statues and regulations related to solid waste, including county and city general plans. Local jurisdictions also have goals and policies for recycling and diversion of solid waste to ensure compliance with the California Integrated Waste Management Act (AB 939), the California Solid Waste Reuse and Recycling Act, and the Solid Waste Diversion Rule (AB 341). Local governments submit an annual report to CalRecycle on the implementation of waste diversion plans to comply with their respective per capita disposal targets. CalRecycle reviews each local government's progress in implementing its unique diversion program and progress in sustaining or achieving compliance. CalRecycle may refer some local governments for a compliance evaluation review, although the number of local governments referred is generally less than 1 percent. If a more thorough analysis reveals a jurisdiction is not meeting the "good faith" standard for implementing its diversion programs or for reaching per capita disposal targets, CalRecycle will issue a

32 CalRecycle. 2019. SWIS Facility/Site Search. Available online at: https://www2.calrecycle.ca.gov/swfacilities/Directory/13-AA-0004/Index, accessed September 5, 2019.

compliance order. If the jurisdiction fails to fulfill its implementation plan to correct the program deficiencies, then the jurisdiction will be subject to penalties.

There are also multiple additional laws aimed at reducing solid waste in California including, AB 1826 which sought to greatly reduce the amount of organic material deposited into landfills by further mandating waste recycling services for organic material. At the beginning of 2016, local jurisdictions were required under AB 1826 to implement an organic waste recycling program and measure and monitor their efforts. Also, Section 5.408 "Construction Waste Reduction, Disposal and Recycling" of the 2016 California Green Building Standards code (CalGreen) requires all new construction and demolition projects to develop a Construction Waste Management Plan which recycles or salvages a minimum of 65% of non-hazardous construction and demolition waste.

Transportation projects contained in the Plan and development projects anticipated to occur under the Plan would be required to comply with AB 341, as well as the additional laws sited above which would further reduce anticipated solid waste generation. However, due to the volume of solid waste debris expected to be generated with implementation of the Plan and lack of identified landfill capacity, impacts would be significant requiring mitigation measures.

Mitigation Measures

SCAG Mitigation Measures

SMM USSW-1: During the planning, design, and project-level CEQA review process for individual development projects, SCAG shall coordinate with waste management agencies and the appropriate local and regional jurisdictions to facilitate the development of measures and to encourage diversion of solid waste such as recycling and composting programs, as needed. This includes discouraging siting of new landfills unless all other waste reduction and prevention actions have been fully explored to minimize impacts to neighborhoods.

SMM USSW-2: SCAG shall coordinate with waste management agencies, and the appropriate local and regional jurisdictions, measures to facilitate and encourage diversion of solid waste such as recycling and composting programs.

Project Level Mitigation Measures

PMM USSW-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce the generation of solid waste, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

Integrate green building measures consistent with CALGreen (California Building Code Title 24) into project design including, but not limited to the following:

a) Reuse and minimization of construction and demolition (C&D) debris and diversion of C&D waste from landfills to recycling facilities.

b) Inclusion of a waste management plan that promotes maximum C&D diversion.

c) Source reduction through (1) use of materials that are more durable and easier to repair and maintain, (2) design to generate less scrap material through dimensional planning, (3) increased recycled content, (4) use of reclaimed materials, and (5) use of structural materials in a dual role as finish material (e.g., stained concrete flooring, unfinished ceilings, etc.).

d) Reuse of existing structure and shell in renovation projects.

e) Development of indoor recycling program and space.

f) Discourage the siting of new landfills unless all other waste reduction and prevention actions have been fully explored. If landfill siting or expansion is necessary, site landfills with an adequate landfill-owned, undeveloped land buffer to minimize the potential adverse impacts of the landfill in neighboring communities.

g) Discourage exporting of locally generated waste outside of the SCAG region during the construction and implementation of a project. Encourage disposal within the county where the waste originates as much as possible. Promote green technologies for long-distance transport of waste (e.g., clean engines and clean locomotives or electric rail for waste-by-rail disposal systems) and consistency with SCAQMD and Connect SoCal policies can and should be required.

h) Encourage waste reduction goals and practices and look for opportunities for voluntary actions to exceed the 80 percent waste diversion target.

i) Encourage the development of local markets for waste prevention, reduction, and recycling practices by supporting recycled content and green procurement policies, as well as other waste prevention, reduction and recycling practices.

j) Develop ordinances that promote waste prevention and recycling activities such as: requiring waste prevention and recycling efforts at all large events and venues; implementing recycled content procurement programs; and developing opportunities to divert food waste away from landfills and toward food banks and composting facilities.

k) Develop and site composting, recycling, and conversion technology facilities that have minimum environmental and health impacts.

l) Integrate reuse and recycling into residential industrial, institutional and commercial projects.

m) Provide education and publicity about reducing waste and available recycling services.

n) Implement or expand city or county-wide recycling and composting programs for residents and businesses. This could include extending the types of recycling services offered (e.g., to include food and green waste recycling) and providing public education and publicity about recycling services.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to solid waste exceeding the capacity of local

infrastructure and consistency with plans could be significant and unavoidable even with implementation of mitigation.

3.19.2 WASTEWATER

3.19.2.1 EXISTING CONDITIONS

Wastewater is defined as water that contains wastes from residential, commercial, and industrial processes. Sewage, gray water, and industrially polluted discharges can all be categorized as wastewater. Within the SCAG region, wastewater is generally conveyed through the storm drain and sanitary sewer systems.

3.19.2.1.1 Wastewater Treatment Facilities

Wastewater treatment is generally performed in three stages: primary treatment, secondary treatment, and tertiary treatment. During primary treatment, materials sink to the bottom of tanks and then microbes eat the organic material and settle out in the secondary treatment tanks. Tertiary treatment occurs last, in which remaining pollutants are filtered out via sand and coal. Along with the additions of disinfectant chemicals like chlorine and careful testing and monitoring, this process treats water to an acceptable level to be returned into natural water bodies or recycled for irrigation, industrial, and agricultural uses. More recently, advanced treatment techniques have achieved level of cleanliness that allows highly purified recycled water to recharge underground aquifers.[1]

A majority of wastewater within the SCAG region is treated by one of the 67 major wastewater treatment facilities in the area. Such facilities are often located in densely populated areas and in close proximity to bodies of water for simple discharge of treated water. Within each SCAG county, various smaller municipal wastewater systems and agencies manage wastewater from cities on a smaller scale, and private on-site sewage disposal systems are also available to serve wastewater generators without access to a municipal system. **Table 3.19.2-1, Major Wastewater Treatment Facilities in the SCAG Region,** lists the 67 large-scale facilities managing wastewater within the region, which have a combined design flow of approximately 3,088 millions of gallons per day (mgd).

Wastewater Treatment Requirements

Created by the State Legislature in 1967, the SWRCB has jurisdiction throughout California, where it protects water quality by setting statewide policies.[2] The SCAG region incorporates five of the nine Regional Water Boards in the State:

- Region 4—Los Angeles Regional Water Quality Control Board: Los Angeles and Ventura Counties (and small portions of Kern and Santa Barbara Counties).
- Region 6—Lahontan Regional Water Quality Control Board: San Bernardino and Los Angeles (N/E corner) counties.
- Region 7—Colorado River Regional Water Quality Control Board: Imperial, San Bernardino, Riverside, and San Diego Counties.
- Region 8—Santa Ana Regional Water Quality Control Board: Orange, Riverside, and San Bernardino Counties.
- Region 9—San Diego Regional Water Quality Control Board: San Diego, Imperial, and Riverside Counties.

3.19.2.1.2 Storm Water Drainage Facilities

Each city and county within the SCAG region maintains a storm drain system. The systems vary by age, size, and type depending on the municipality, and may consist of day pipe, iron/steel pipe, very old brick collector sewers, and reinforced concrete pipe facilities.

2 California Water Boards. *Water Board Structure.* Available online at: https://www.waterboards.ca.gov/lahontan/about_us/water_boards_structure.html, accessed August 23, 2019.

California Water Board Districts 4, 6, 7, 8, and 9 are all within the SCAG region and manage their own storm water drainage facilities, utilizing NPDES program permits. Under a NPDES permit, operators must develop a storm water management program to prevent polluted storm water run-off from entering Municipal Separate Storm Sewer Systems (MS4s), which often discharge to local water bodies.

In April 2018, the State Water Resources Control Board released a storm water strategy called the Strategy to Optimize Resource Management of Storm Water, or STORMS. The report focuses on enhancing urban run-off capture and use by identifying barriers, providing incentives, and increasing pubic engagement. The STORMS report found that urban run-off can be a viable source of water and that hybrid strategies combining green and gray infrastructure will be imperative for future urban water management.[3]

3.19.2.2 REGULATORY FRAMEWORK

3.19.2.2.1 Federal

Clean Water Act/National Pollutant Discharge Elimination System Permits

The Clean Water Act (CWA) (33 USC Sections 1251 *et seq.*) was enacted by Congress in 1972 and has been amended several times since its adoption. It is the primary federal law regulating water quality in the U.S. Its objective is to reduce or eliminate water pollution in the nation's rivers, streams, lakes, and coastal waters. The CWA prescribes the basic federal laws for regulating discharges of pollutants and sets minimum water quality standards for all surface waters in the U.S. The CWA is administered by the U.S. Environmental Protection Agency (USEPA).[4]

In California, the State Water Resources Control Board (State Water Board) and the nine Regional Water Quality Control Boards (Regional Water Boards) implement many of the Clean Water Act's provisions. The Clean Water Act requires the State to adopt water quality standards and to submit those standards for approval by the U.S. Environmental Protection Agency (US EPA). For point source discharges to surface water, the Clean Water Act authorizes the U.S.EPA and/or approved states (such as California) to administer the National Pollutant Discharge Elimination System (NPDES) program. The NPDES program regulates the discharge of pollutants from point sources. Municipal point sources consist primarily of municipal wastewater treatment plant outfalls and stormwater conveyance system outfalls. The Clean

3 California State Water Resources Control Board. 2018. *Strategy to Optimize Resource Management of Storm Water (Storm Water Strategy, STORMS*). April. Available online at: https://www.waterboards.ca.gov/water_issues/programs/stormwater/storms/, accessed January 15, 2019.

4 U.S. Environmental Protection Agency. 2002. *Federal Water Pollution Control Act*. Available online at: https://www.epa.gov/sites/production/files/2017-08/documents/federal-water-pollution-control-act-508full.pdf, accessed August 23, 2019.

Water Act also establishes a loan program—the State Revolving Fund—for the implementation of water quality improvement projects.

MS4 Permit Guidance Provision C.3

On May 17, 1996, EPA published an Interpretive Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems, which provided guidance on permit application requirements for regulated MS4s. MS4 permits include requirements for post-construction control of stormwater runoff in what is known as Provision C.3. The goal of Provision C.3 is for the Permittees to use their planning authorities to include appropriate source control, site design, and stormwater treatment measures in new development and redevelopment projects to address both soluble and insoluble stormwater runoff pollutant discharges and prevent increases in runoff flows from new development and redevelopment projects. This goal is to be accomplished primarily through the implementation of low impact development (LID) techniques.[5]

3.19.2.2.2 State

Porter-Cologne Water Quality Control Act

The Porter-Cologne Act is the principal law governing water quality regulation in California. It establishes a comprehensive program to protect water quality and the beneficial uses of water. The Porter-Cologne Act applies to surface waters, wetlands, and ground water and to both point and nonpoint sources of pollution. Pursuant to the Porter-Cologne Act (California Water Code section 13000 *et seq.*), the policy of the State is as follows:

- That the quality of all the waters of the State shall be protected;
- That all activities and factors affecting the quality of water shall be regulated to attain the highest water quality within reason; and
- That the State must be prepared to exercise its full power and jurisdiction to protect the quality of water in the State from degradation.

The Porter-Cologne Act established nine Regional Water Boards (based on hydrogeologic barriers) and the State Water Board, which are charged with implementing its provisions and which have primary responsibility for protecting water quality in California. The State Water Board provides program

5 Government Publishing Office. 1996. *Environmental Protection Agency 40 CFR Part 122.* Available online at: https://www.govinfo.gov/content/pkg/FR-1996-08-09/pdf/96-20228.pdf, accessed August 23, 2019.

guidance and oversight, allocates funds, and reviews Regional Water Boards decisions. In addition, the State Water Board allocates rights to the use of surface water. The Regional Water Boards have primary responsibility for individual permitting, inspection, and enforcement actions within each of nine hydrologic regions. The State Water Board and Regional Water Boards have numerous NPS-related responsibilities, including monitoring and assessment, planning, financial assistance, and management.

The Regional Water Boards regulate discharges under the Porter-Cologne Act primarily through issuance of NPDES permits and waste discharge requirements (WDRs for point and nonpoint source discharges. Anyone discharging or proposing to discharge materials that could affect water quality (other than to a community sanitary sewer system regulated by an NPDES permit) must file a report of waste discharge.

The Porter-Cologne Act also implements many provisions of the Clean Water Act, such as NPDES permitting program. Section 401 of the Clean Water Act gives the State Water Board the authority to review any proposed federally permitted or federally licensed activity that may impact water quality and to certify, condition, or deny the activity if it does not comply with State water quality standards.

The Porter-Cologne Act also requires adoption of water quality control plans (basin plans) that contain the guiding policies of water pollution management in California. A number of statewide water quality control plans have been adopted by the State Water Board. In addition, regional basin plans have been adopted by each of the Regional Water Boards and get updated as needed. These plans identify the existing and potential beneficial uses of waters of the State and establish water quality objectives to protect these uses. The basin plans also contain implementation, surveillance, and monitoring plans. Statewide and regional water quality control plans include enforceable prohibitions against certain types of discharges, including those that may pertain to nonpoint sources. Portions of water quality control plans, the water quality objectives and beneficial use designations, are subject to review by U.S.EPA, when approved they become water quality standards under the Clean Water Act.[6]

California Ocean Plan

The California Ocean Plan establishes water quality objectives for California's ocean waters and provides the basis for regulation of wastes discharged into the state's coastal waters. The plan applies to point and nonpoint source discharges. Both the SWRCB and the six coastal RWQCBs implement and interpret the California Ocean Plan. The California Ocean Plan identifies the applicable beneficial uses of marine waters. These beneficial uses include preservation and enhancement of designated Areas of Special Biological Significance (ASBS), rare and endangered species, marine habitat, fish migration, fish

6 California State Water Resources Control Board. 2019. *Porter-Cologne Water Quality Control Act*. Available online at: https://www.waterboards.ca.gov/laws_regulations/docs/portercologne.pdf, accessed August 23, 2019.

spawning, shellfish harvesting, recreation, commercial and sport fishing, mariculture, industrial water supply, aesthetic enjoyment, and navigation.

The California Ocean Plan establishes a set of narrative and numerical water quality objectives to protect beneficial uses. These objectives are based on bacterial, physical, chemical, and biological characteristics as well as radioactivity. The water quality objectives in Table 1 (formerly Table B) of the California Ocean Plan apply to all receiving waters under the jurisdiction of the plan and are established for the protection of aquatic life and for the protection of human health from both carcinogens and noncarcinogens. Within Table 1 there are 21 objectives for protecting aquatic life, 20 for protecting human health from noncarcinogens, and 42 for protecting human health from exposure to carcinogens. The Ocean Plan also includes an implementation program for achieving water quality objectives. Effluent limitations are established for the protection of marine waters.[7]

Strategy to Optimize Resource Management of Storm Water (STORMS)

In April 2018, the California State Water Resources Control Board published the STORMS report to advance the ideology that storm water is a valuable resource. The report explores policies for collaborative watershed level storm water management and pollution prevention, obstacles to funding and barriers to development. It also describes the importance of integrating regulatory and non-regulatory interests and how raised awareness of the benefits of storm water management invokes participation and enthusiasm with regards to this little-explored resource.[8]

NPDES General Permits

Construction General Permit

The California Construction Stormwater Permit (Construction General Permit) 1 (also, known as Industrial General Permit), adopted by the State Water Resources Control Board (SWRCB), regulates construction activities that include clearing, grading, and excavation resulting in soil disturbance of at least one acre of total land area. The Construction General Permit authorizes the discharge of stormwater to surface waters from construction activities. It prohibits the discharge of materials other than stormwater and authorized non-stormwater discharges and all discharges that contain a hazardous

substance in excess of reportable quantities established in Title 40, Sections 117.3 or 302.4 of the CFR, unless a separate National Pollution Discharge Elimination System (NPDES) permit has been issued to regulate those discharges. The Construction General Permit requires that all developers of land where construction activities will occur over more than 1 acre do the following:

- Complete a risk assessment to determine pollution prevention requirements pursuant to the three risk levels established in the General Permit;
- Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the US;
- Develop and implement a Stormwater Pollution Prevention Plan (SWPPP), which specifies BMPs that will reduce pollution in stormwater discharges to the Best Available Technology Economically Achievable/ Best Conventional Pollutant Control Technology standards; and
- Perform inspections and maintenance of all BMPs.

To obtain coverage under the NPDES Construction General Permit, the Legally Responsible Person must electronically file all permit registration documents with the SWRCB before the start of construction. Permit registration documents must include:

- Notice of Intent,
- Risk Assessment,
- Site Map,
- SWPPP,
- Annual Fee, and
- Signed Certification Statement.

Typical BMPs contained in SWPPPs are designed to minimize erosion during construction, stabilize construction areas, control sediment, control pollutants from construction materials, and address post construction runoff quantity (volume) and quality (treatment). The SWPPP must also include a discussion of the program to inspect and maintain all BMPs.[9]

---

9 State Water Resources Control Board. *Construction General Permit Fact Sheet*. Available online at: https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/constpermits/wqo_2009_0009_complete.pdf, accessed August 27, 2019.

Industrial General Permit

The Statewide General Permit for Storm Water Discharges Associated with Industrial Activities, Order 2014-0057-DWQ (Industrial General Permit or IGP) implements the federally required storm water regulations in California for storm water associated with industrial activities discharging to waters of the United States.[10]

Municipal Stormwater Program

The Municipal Storm Water Program regulates storm water discharges from municipal separate storm sewer systems (MS4s) throughout California. Pursuant to the Federal Water Pollution Control Act (Clean Water Act) section 402(p), storm water permits are required for discharges from an MS4 serving a population of 100,000 or more. The Municipal Storm Water Program manages the Phase I Permit Program (serving municipalities over 100,000 people), the Phase II Permit Program (for municipalities less than 100,000), and the Statewide Storm Water Permit for the State of California Department of Transportation (Caltrans).[11]

Caltrans is responsible for the design, construction, management, and maintenance of the State highway system, including freeways, bridges, tunnels, Caltrans' facilities, and related properties, and is subject to the permitting requirements of CWA Section 402(p). Caltrans' discharges consist of storm water and non-storm water discharges from state-owned rights-of-way.

Before July 1999, discharges from Caltrans' MS4 were regulated by individual NPDES permits issued by the RWQCBs. On July 15, 1999, the SWRCB issued a statewide permit (Order No. 99-06-DWQ) that regulated all discharges from Caltrans MS4s, maintenance facilities, and construction activities.[12] On September 19, 2012, Caltrans' permit was reissued (Order No. 2012-0011-DWQ), and it became effective on July 1, 2013.[13]

13 California State Water Resources Control Board. *Order No. 2012-0011-DWQ NPDES No. CAS000003 National Pollutant Discharge Elimination System (NPDES) Statewide Storm Water Permit Waste Discharge Requirements (WDRS) for State of California Department of Transportation*. Available online at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2012/wqo2012_0011_dwq.pdf, accessed August 27, 2019.

The Caltrans permit requires development of a program for communication with local agencies, and coordination with other MS4 programs where those programs overlap geographically with Caltrans facilities. As part of the permit, Caltrans is required to create and annually update a Stormwater Management Plan (SWMP) that is used to outline the regulation of pollutant discharge caused by current and future construction and maintenance activities. SWMP requirements apply to discharges from Caltrans stormwater conveyances, including catch basins and drain inlets, curbs, gutters, ditches, channels, and storm drains. The SWMP applies to discharges consisting of stormwater and non-stormwater resulting from the following:

- maintenance and operation of state-owned highways, freeways, and roads;
- maintenance facilities;
- other facilities with activities that have the potential for discharging pollutants;
- permanent discharges from subsurface dewatering;
- temporary dewatering; and
- construction activities.

Caltrans' Storm Water Management Plan (SWMP) describes the procedures and practices used to reduce or eliminate the discharge of pollutants to storm drainage systems and receiving waters. The SWMP was most recently updated in July of 2016.[14]

California Department of Transportation NPDES Permit

The California Department of Transportation (Caltrans) was originally issued a statewide NPDES permit (Order 99-06-DWQ) in 1999, which requires Caltrans to regulate nonpoint source discharge from its properties, facilities, and activities. The Caltrans permit requires development of a program for communication with local agencies, and coordination with other MS4 programs where those programs overlap geographically with Caltrans facilities. As part of the permit, Caltrans is required to create and annually update a stormwater management plan (SWMP) that is used to outline the regulation of pollutant discharge caused by current and future construction and maintenance activities. SWMP requirements apply to discharges from Caltrans stormwater conveyances, including catch basins and drain inlets, curbs, gutters, ditches, channels, and storm drains. The SWMP applies to discharges consisting of stormwater and non-stormwater resulting from:

---

14 Caltrans. 2016. *Statewide Stormwater Management Plan*. Available online at: https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/caltrans/swmp/swmp_approved.pdf, accessed August 27, 2019.

- maintenance and operation of state-owned highways, freeways, and roads;
- maintenance facilities;
- other facilities with activities that have the potential for discharging pollutants;
- permanent discharges from subsurface dewatering;
- temporary dewatering; and
- construction activities.

The discharges addressed by the SWMP flow through municipal stormwater conveyance systems or flow directly to surface water bodies in the state. These surface water bodies include creeks, rivers, reservoirs, lakes, wetlands, lagoons, estuaries, bays, and the Pacific Ocean and tributaries.

This SWMP applies to the oversight of outside agencies' or non-Caltrans entities' (third parties) activities performed within Caltrans' MS4 to ensure compliance with stormwater regulations. Non-Caltrans activities include highway construction and road improvement projects, as well as residential use and business operations on leased property.

The SWMP must be approved by the SWRCB and, as specified in the permit, it is an enforceable document. Compliance with the permit is measured by implementation of the SWMP. Caltrans' policies, manuals, and other guidance related to storm water are intended to facilitate implementation of the SWMP. Caltrans also requires all contractors to prepare and implement a program to control water pollution effectively during the construction of all projects. In lieu of the more recently adopted General Construction Permit as described above, Caltrans continues to modify its current policies and procedures to be consistent with the new permit.[15]

California Administrative Code, Title 22

Under Title 22, the State Department of Health establishes State-wide effluent bacteriological and treatment reliability standards for recycled water uses. The standards are based on the potential for human contact with recycled water. The regional water quality control board (RWQCB) has established and enforces requirements for the application and use of recycled water. Permits are required from a RWQCB for any recycling operation. Applicants for a permit are required to demonstrate that the

---

15 U.S. Environmental Protection Agency. *Program Evaluation Report Statewide NPDES Storm Water Permit for the State of California, Department of Transportation Properties, Facilities, and Activities (District 5) (Order No. 99-06-DWQ).* Available online at: https://www3.epa.gov/region9/water/npdes/pdf/ms4/ca/021108-caltrans-report.pdf, accessed August 23, 2019.

proposed recycled water operation is in compliance with Title 22 and will not exceed the ground and surface water quality objectives in the regional basin management plan.[16]

3.19.2.2.3 Regional

The water quality control plans and groundwater protection responsibilities for the SCAG region are described in Section 3.10, *Hydrology and Water Quality*.

Urban Water Management Plans

Under California Water Code Division 6, Part 2.6, Section 10610-10656, the Urban Water Management Planning Act (UWMPA) requires urban water suppliers that supply more than 3,000 acre-feet of water annually, or serve more than 3,000 connections, to submit an Urban Water Management Plan (UWMP). [17] The UWMP is a public document prepared by water suppliers to support their long-term resource planning over a 20-year period and ensure adequate water supplies are available to meet existing and future water demands. The UWMP must be submitted to the DWR every 5 years, and must demonstrate progress toward reduction in 20 percent per capita urban water consumption by the year 2020, as required in the Water Conservation Bill of 2009, Senate Bill X7-7.[18, 19] There are 138 service districts in the SCAG region required to develop a UWMP, which is typically prepared and submitted to DWR within 30 days and reviewed 60 days prior to public hearing for plan adoption and implementation. The preparation of the plan includes guidebook, workshops, and programming for comprehensive strategies to conserve water.

3.19.2.2.4 Local

Utility Master Plans & Utility Capital Improvement Programs

Jurisdictions usually have utility master plans or other planning documents that identify and prioritize projects needed to maintain adequate levels of utility service in the jurisdiction.

19 California Department of Water Resources. SB X7-7. Available online at: https://water.ca.gov/Programs/Water-Use-And-Efficiency/SB-X7-7, accessed August 23, 2019.

General Plans

Local policies related to utilities and service systems are established in each jurisdiction's general plan. In general, jurisdictions have policies in place that state that utility and service systems must be provided at the same time (or in advance of) need. In addition to these general policies, jurisdictions may have more specific policies tailored to performance objectives including wastewater treatment services.

3.19.2.3 ENVIRONMENTAL IMPACTS

3.19.2.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of Connect SoCal could result in significant adverse impacts with regards to wastewater if the Plan would result in any of the following:

- Require or result in the relocation or construction of new or expanded wastewater treatment or storm drainage facilities, the construction or relocation of which could cause significant environmental effects;

- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments

3.19.2.3.2 Methodology

The methodology for determining the significance of impacts to utilities and service systems, compares existing conditions to the expected future use of potable water supplies, wastewater, storm water facilities, and landfills with the Plan. The criteria above were applied to compare current conditions to future 2045 Plan conditions. Consideration was given to existing capacity and expected growth as well as transportation projects.

Implementation of the Plan would affect the use of utility and service systems in the SCAG region. The analysis of these impacts is programmatic at the regional level. With regards to wastewater, the Plan's potential to exceed capacity of local infrastructure and require the relocation or construction of new or expanded facilities or result in a determination that projected demand in addition to current demand will be used to determine the significance of the projects effects.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the

Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.19.2.3.3 Impacts and Mitigation Measures

Impact USWW-1 **Require or result in the relocation or construction of new or expanded wastewater treatment or storm drainage facilities, the construction or relocation of which could cause significant environmental effects**

Significant and Unavoidable – Mitigation Required.

Implementation of some transportation projects and anticipated growth under the Plan would involve construction of new storm water drainage facilities and may require construction of new or expanded wastewater treatment facilities.

Projects that increase impervious surface area, including expanding roadways, and new development may increase urban runoff. This would result in greater quantities of contaminants to receiving waters that may currently be impaired and would require the construction of new storm water drainage facilities or expansion of existing ones. Construction activities related or identified in the Plan could increase pollutant loads carried by storm water runoff. For example, road cut erosion can increase long-term siltation in local receiving waters. The Los Angeles Basin includes approximately 100,000 acres of transportation related impervious surfaces.[20] According to the USGS, there is an inverse relationship between water quality as well as flooding and impervious area.[21] This relationship tends to become problematic when impervious surfaces within a watershed exceed 10 percent of land area. Where this percentage is greater than 25 percent, water quality is generally degraded and inhospitable for habitat or for recreation activities.[22] In addition, many of the pollutants in urban runoff are attributable to

landscape irrigation, highway runoff, and illicit dumping. Highway runoff is a component of urban runoff contributing oil and grease, sediment, nutrients, heavy metals, and toxic substances.

The Plan would increase impervious surfaces in the SCAG region through a combination of transportation projects and development, resulting in construction or expansion of storm water drainage facilities. As shown in **Table 3.19.2-2, Existing Lane Miles by County,** and **Table 3.19.2-3, 2045 Plan Lane Miles by County**, the Plan would increase total lane miles in the region, with the most increase in San Bernardino County (from 14,871 to 17,067 lane miles). Among all facilities toll has the most increase in lane miles from 453 in 2016 to 1,463 lane miles in 2045 with the Plan.

Municipal wastewater is related to water use. Most of the water that is not used in landscaping becomes wastewater. California residents used an estimated average 85 gallons of water per day in 2016.[23] However, water demand varies substantially by community and by land use type and therefore wastewater is anticipated to similarly vary substantially by community. The reuse and recycling of wastewater would reduce the amount of wastewater to be discharged to the ocean, although the total benefits from wastewater reduction would be limited.

Wastewater generation rates are closely tied to population growth. The total population is expected to grow by approximately 16 percent across the SCAG region by 2045, wastewater generation would proportionally increase by up to 16 percent (although this increase is likely to be unevenly spread across the region with some wastewater agencies may experience greater increases than others). In addition to increased demand for wastewater treatment facilities, increases in housing and population would increase wastewater flows in existing wastewater conveyance infrastructure (sewers). Individual development projects would either be accommodated by existing infrastructure, or project proponents and/or local jurisdictions would be required to make improvements to wastewater infrastructure (replacing sewers and upgrading wastewater treatment facilities). In less developed areas of the region,

23 Legislative Analyst's Office. *Residential Water Use Trends and Implications for Conservation Policy*. Available online at: https://lao.ca.gov/Publications/Report/3611, accessed September 11, 2019.

new housing and employment developments could require additional wastewater infrastructure (new sewers and possibly new treatment facilities).

Due to anticipated transportation projects and anticipated growth under the Plan, construction of new storm water drainage or wastewater treatment facilities or expansion of existing facilities may be needed, thereby potentially resulting in a significant impact, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

SMM-USWW-1: SCAG shall work with local jurisdictions and wastewater agencies to encourage regional-scale planning for improved wastewater and stormwater management. Future impacts to wastewater and stormwater facilities shall be avoided to the extent practical and feasible through cooperative planning, information sharing, and comprehensive pollution control measure development within the SCAG region. This cooperative planning shall occur as part of current and existing coordination, an integral part of SCAG's ongoing regional planning efforts.

Project Level Mitigation Measures

See **PMM-HYD-1.**

PMM-USWW-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on utilities and service systems, particularly for construction of wastewater facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

- During the design and CEQA review of individual future projects, implementing agencies and projects sponsors shall determine whether sufficient wastewater capacity exists for the proposed projects. There CEQA determinations must ensure that the proposed development can be served by its existing or planned treatment capacity. If adequate capacity does not exist, project sponsors shall coordinate with the relevant service provider to ensure that adequate public services and utilities could accommodate the increased demand, and if not, infrastructure improvements for the

appropriate public service or utility shall be identified in each project's CEQA documentation. The relevant public service provider or utility shall be responsible for undertaking project-level review as necessary to provide CEQA clearance for new facilities.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to wastewater and storm water facilities could be significant and unavoidable even with implementation of mitigation. l

Impact USWW-2 **Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.**

Significant and Unavoidable – Mitigation Required.

Implementation of the Plan could result in a determination by one or more of the wastewater treatment providers in the region that there is inadequate capacity to serve the future population demand in addition to the provider's existing commitments, resulting in a significant impact. Wastewater generation rates are closely tied to population growth, and the total population is expected to grow by approximately 3.2 million or 16 percent across the SCAG region by 2045 (although this increase is likely to be unevenly spread across the region with some wastewater agencies experiencing greater increases than others). Therefore, wastewater generation could increase by 16 percent as well. Implementation of transportation projects contained in the Plan as well as anticipated growth under the Plan may increase demand for wastewater treatment facilities. Development projects would either be accommodated by existing infrastructure, or project proponents and local jurisdictions would be required, to make improvements to wastewater infrastructure (sewers and treatment facilities). In less developed areas of the region, new housing and commercial developments could require additional wastewater infrastructure (new sewers and treatment facilities). The higher density development reflected in the Plan's land use strategies could also require construction of new and/or replacement wastewater infrastructure including sewers with greater conveyance capacity in urban and urbanizing areas. In

addition, additional wastewater entering the existing wastewater treatment facilities may overload the current capacity levels of some wastewater treatment facilities. Therefore, impacts would be significant, requiring the consideration of mitigation measures.

3.19.3 WATER SUPPLY

3.19.3.1 ENVIRONMENTAL SETTING

3.19.3.1.1 Water Supplies

California's water supply is a hotly debated topic, with limited water resources stretched tightly between the environment, agriculture, and residential uses. Severe weather patterns linked to climate change have exacerbated the water issue, resulting in record low snowpack in several recent years (although the 2018/2019 snowpack was high) and record high heat waves. Supply water includes natural, managed, and reclaimed water. Natural sources consist of surface water bodies like rivers and lake, and groundwater resources stored in underground aquifers. Manmade sources include run-off water that is captured, treated, and stored in reservoirs. Reclaimed water is wastewater, treated at a treatment plant and typically reused for uses like industrial operations and irrigation. As reclaimed water is often non-potable, it must be conveyed in a separate system to ensure no possibility of direct human consumption. Another source of potable freshwater that is being considered throughout regions of the world include desalination, which removes the dissolved salt in seawater.

Surface and groundwater within the SCAG region are insufficient to support the region's growing population. In the SCAG region, approximately three quarters of potable water comes from imported sources.[1] Restrictions on imported water as well as drought conditions have necessitated water conservation measures. These conservation measures have slightly lessened the use of potable water in many areas of the region. In addition, the demand for water is being partially fulfilled by the increasing use of reclaimed water for non-potable purposes such as greenbelt irrigation and industrial processing and servicing.

Counties within the SCAG region use groundwater and surface water to meet water demand. Integrated Regional Water Management Plans (IRWMPs) and Urban Water Management Plans (UWMPs), developed for cities and counties throughout the region, help guide water management and supply and demand projections. Water is imported by the Metropolitan Water District of Southern California (MWD) and the State Water Project (SWP), and groundwater is pumped from various local wells.

1 Southern California Association of Governments (SCAG). 2008. Regional Comprehensive Plan: Water. Available online at: http://www.scag.ca.gov/Documents/f2008RCP_Water.pdf, accessed September 26, 2019.

Watershed Management

Watershed management relates to sustaining watersheds at an acceptable level of quality, contributing to resource quality, and maintaining groundwater supplies. The watersheds in the SCAG region are shown in **Section 3.10, Hydrology** (**Figure 3.10-2, Watersheds in the SCAG Region)**. These large watersheds are further divided into smaller sections by internal surface water drainage areas and groundwater basins.

Colorado River

The Colorado River is a major source of water for Southern California, and is imported via the Colorado River Aqueduct, owned and operated by MWD.

Under water delivery contracts with the United States, California entities have enjoyed legal entitlements to Colorado River water, beginning with the 1922 Colorado River Compact.[2] California was entitled to 4.4 million-acre feet (af), as well as half on any surplus, as defined by the U.S. Department of the Interior. Typically, the river's surplus has allowed California entities to take an additional 800,000 af annually.

However, with increased urbanization in the Colorado River Basin states and limitation agreements between those states, surplus water for California was eliminated; the State will gradually return to its original allotment of 4.4 million af. Given these new terms, California water agencies are pursuing various strategies to offset this gradual, but certain loss of future water supply. Examples of these strategies include additional reservoir and storage agreements, new water transfers between agricultural and urban users, and more water conservation and recycling.[3]

The Colorado River Hydrologic Region (see discussion below) is of particular concern because it encompasses the Coachella Valley in the West Basin and the desert in the East Basin. Irrigation needs in the Coachella Valley are met almost exclusively by water imported from the Colorado River. Historical extraction of groundwater in the Coachella Valley has caused overdraft. Currently, an extensive groundwater recharge project is being undertaken by the Coachella Valley Water District that recharges Colorado River Water into spreading basins. Within the East Basin, irrigation and domestic water is provided by the Colorado River with only approximately 1 percent groundwater use and little direct reclamation. Agricultural runoff and some domestic wastewater do get returned to the Colorado River. Therefore, the water at the southern end of the watershed is a mixture of Colorado River water, agricultural runoff, and reclaimed water.

3 Metropolitan Water District of Southern California. 2016. *2015 Urban Water Management Plan*. Available online at: https://www.mwdoc.com/wp-content/uploads/2017/05/UWMP_May-2016-v2.pdf, accessed January 14, 2019.

State Water Project

The State Water Project supplies water to Southern California via the California Aqueduct, with delivery points in Los Angeles, San Bernardino, and Riverside Counties. SWP was constructed and is managed by the Department of Water Resources (DWR), and is the largest state-owned, multipurpose water project in the country. State Water Project has historically provided 25 to 50 percent of MWD's water, anywhere from 450,000 af to 1.75 million af annually.[4] In 2019, the State Water Project allocated 75 percent, or 3.1 million acre feet, of water to the state supply due to the previous winter's robust storms that resulted in above average snowpack and reservoir levels.[5] The State Water Project provides water to approximately 27 million people and irrigation water for roughly 750,000 acres of agricultural lands annually.

Los Angeles Aqueduct

The Los Angeles Aqueduct, originally built in 1913, carries water 233 miles south from Owens Valley to the City of Los Angeles. The original aqueduct project was extended in 1940 to the Mono Basin. The system was supplemented by a second project, parallel to the first, completed in 1970. Los Angeles Aqueduct deliveries from the Mono Basin and Owens Valley have ranged from a 2015 low of 36,000 af and a high of 467,000 af in 1998. Since 1990, average deliveries have been approximately 240,000 af per year. Due to environmental considerations, approximately half of the Los Angeles Aqueduct water supply has been reallocated to supply environmental mitigation and enhancement projects.[6]

Transfers

In an effort to diversify water sources and reduce reliance on specific water imports, water agencies have engaged in water transfer agreements. These contractual agreements, made with irrigation districts, reduce water use on agricultural lands either through agricultural conservation or fallowing land.[7] The water "freed" by these reductions is transferred to a municipal water district, where it may be used or

7 Some urban agencies also have the ability to enter "spot" water markets and to purchase water on an "as needed" basis.

stored in aquifers for future use, a practice called water banking. Water banking is also done during wet years, when rainwater is collected and directed toward recharge facilities for future use.

Water Suppliers

The SCAG region is served by many water suppliers, both retail and wholesale; the largest of these agencies is MWD. Created under state law in 1931, MWD serves the urbanized coastal plain from Ventura to the Mexican border in the west to parts of the rapidly urbanizing counties of San Bernardino and Riverside in the east. It provides water to about 90 percent of the urban population of Southern California. MWD is comprised of 26 member agencies, 12 of which supply wholesale water to retail agencies and other wholesalers, and 14 of which are individual cities which directly supply water to their residents.[8] The Imperial Irrigation District (IID), in Imperial County, is the fourth largest irrigation district in the country.[9]

3.19.3.1.2 Water Treatment Facilities

As identified below in **Table 3.19.3-1, Active Water Treatment Facilities in the SCAG Region,** there are 36 water treatment facilities that service the SCAG region. There are no water treatment facilities currently active in the County of the Imperial.

Source: Cal EPA. 2019. California Integrated Water Quality System Project (CIWQS)- Regulated Facility Report (Detail). https://ciwqs.waterboards.ca.gov/ciwqs/readOnly/CiwqsReportServlet?reportID=9009425&reportName=RegulatedFacilityDetail&inCommand=displayCriteria

California's water-related assets and services are provided by many interdependent systems that historically have been managed on a project-by-project basis. The gap between water supply and water demand decreased substantially between 2001 and 2010 (see **Table 3.19.3-2, California Hydrologic Summary**). This narrowing gap has been further exacerbated in the SCAG region by the 2012-2015 California drought. There are typically three sources of supply water: (1) natural sources, (2) manmade sources, and (3) reclamation. Natural water sources include rivers, lakes, streams, and groundwater stored in aquifers. Manmade sources include runoff water that is treated and stored in reservoirs and other catchment structures. Reclaimed water is wastewater that has been conveyed to a treatment plant and then treated enough that it may be used again for certain uses (such as irrigation). However, reclaimed water is not potable (drinkable) and must be conveyed in a separate system in order to ensure there is no possibility of direct human consumption. See **Table 3.19.3-2, California Hydrologic Summary (in Millions of Acre-Feet)**.

Table 3.19.3-2
California Hydrologic Summary (in Millions of Acre-Feet)

	Water Year									
	2007	**2008**	**2009**	**2010**	**2011**	**2012**	**2013**	**2014**	**2015**	**Average 1998-2015**

Total	**149**	**175**	**169**	**214**	**254.6**	**164.8**	**167.8**	**132.7**	**168.8**	**199.6**
Change in Supply										
Surface reservoirs	–8	–3.9	1.1	5.1	6.2	-7.4	-4.1	-5.1	-0.8	-0.6
Groundwater[b]	–11.5	–13.1	–13.1	–8	-5.9	-12.8	-15.8	-18.4	-19.0	-10.6
Total	**–19.5**	**–17**	**–12**	**–2.9**	**0.3**	**-20.2**	**-19.9**	**-23.5**	**-19.8**	**-11.2**

Note:

a Consumptive use is the amount of applied water used and no longer available as a source of supply. Applied water is greater than consumptive use because it includes consumptive use, reuse, and outflows.

b Change in Supply: Groundwater – The difference between water extracted from and water recharged into groundwater basins in a region. All regions and years were calculated using the following equation: change in supply: groundwater = intentional recharge + deep percolation of applied water + conveyance deep percolation and see page - withdrawals. This does not include unknown factors such as natural recharge and subsurface inflow and outflow.

California Department of Water Resources. 2019. California Water Plan Update 2018: Supporting Documentation for Water Portfolios. Available at: https://data.ca.gov/dataset/water-plan-water-balance-data/resource/3e5bdae2-6352-4d8f-9e37-018357100fdf.

Surface and groundwater resources are largely managed as separate resources, when they are, in fact, a highly interdependent system of watersheds and groundwater basins. Water quality, land use, and flood management are also integral to the effective management of these systems.[10]

Within the SCAG region, water supply comes from a variety of sources. While the Metropolitan Water District (MWD) imports water from Colorado River and State Water Project and provides wholesale water supply to its coverage area, many cities and some county areas rely on groundwater, especially those along the coast. San Bernardino and Riverside Counties, for example, rely on a mixture of groundwater and surface water.

Following are the descriptions of the two primary hydrologic regions (South Coast and Colorado River) as well as associated regional water budgets.

Water Supply and Use in the South Coast Hydrologic Region

The South Coast Hydrologic Region has a diverse mix of both local and imported water supply sources. Local water sources include water recycling, groundwater storage, and infrastructure enhancements. The region imports water through the State Water Project, the Colorado River Aqueduct, and the Los Angeles Aqueduct. These resources allow the region flexibility in managing supplies and resources in wet and dry years. The MWD wholesales the water to a consortium of 26 member agencies, including 14 cities, 11 municipal water districts, and one county authority that serve nearly 19 million people living in six counties stretching from Ventura to San Diego. MWD imported an average of 1 million af of water per year from the SWP from 1995 to 2010, and just under 1 million af per year from the CRA during the same time period. **Table 3.19.3-3, South Coast Region Water Balance,** shows the water balance of the South Coast Hydrologic Region from 2011 to 2015.

10 California Department of Water Resources. 2013. *California Water Plan, Volume 1 – The Strategic Plan*. Available online at: https://water.ca.gov/Programs/California-Water-Plan/Water-Plan-Updates, accessed September 16, 2019.

Water Supply and Use in the Colorado River Hydrologic Region

About 85 percent of the Colorado River Region's urban and agricultural water supply comes from surface water deliveries from the Colorado River. Water from the river is delivered to this region via the All American and Coachella canals, local diversions, and the Colorado River Aqueduct by means of an exchange for SWP water. The Colorado River is an interstate and international river whose use is apportioned among the seven Colorado River Basin states and Mexico by a complex body of statues, decrees, and court decisions known collectively as the "Law of the River." Local surface water, groundwater, and the SWP provide the reminder of water to the region. In addition, many of the alluvial valleys in the regions are underlain by groundwater aquifers that are the sole source of water for many local communities. However, some alluvial valleys contain groundwater of such poor quality it is not suitable for potable uses.

Other cities such as Banning, Coachella, Indio, Palm Desert, Hesperia, and Victorville, are solely dependent on groundwater; while other cities in the SCAG region have supplemented their groundwater supplies with water from the State Water Projects or local streams and reservoirs. **Table 3.19.3-4, Colorado River Region Water Balance,** shows the water balance for the Colorado River Hydrologic Region from 2011 to 2015.

Table 3.19.3-4
Colorado River Region Water Balance

Water Use	2011	2012	2013	2014	2015

Local Water Supply

Local sources of water account for approximately 30 percent of the total volume consumed annually in the SCAG region.[11] Local sources include surface water runoff, groundwater, and water reclamation. Some local agencies have led efforts to diversify water supply, such as South Coast Water District's Doheny Ocean Desalination Project and West Basin Municipal Water District's Ocean Water Desalination project.

Local Surface Water (within Each Hydrologic Unit [HU] Region)

The infiltration of surface runoff augments groundwater and surface water supplies. However, the regional water demand exceeds the current natural recharge of runoff water. The arid climate, summer drought, and increased impervious surface associated with urbanization contribute to this reduction in natural recharge. Urban and agricultural runoff often contains pollutants that decrease the quality of local water supplies. Runoff captured in storage reservoirs varies widely from year to year depending on the

11 California Department of Water Resources. Accessed 15 September 2015. *California Water Plan Update 2013.* Available at: http://www.waterplan.water.ca.gov/cwpu2013/final/index.cfm

amount of local precipitation. On average, precipitation contributes approximately 38,000 acre-feet per year (afy) within the MWD service area (not including San Diego County). Within the desert regions, the amount is considerably less, owing to climatic differences.

Local Groundwater

Groundwater represents most of the SCAG region's fresh water supply, making up approximately 34 percent of total water use, depending on precipitation levels.[12] The hydrologic regions vary in their dependence on groundwater for urban and agricultural uses (**Table 3.19.3-5, Groundwater Dependence in the SCAG Region**). The DWR estimates that the state has a groundwater overdraft of approximately 1 to 2 maf in average years.[13]

Table 3.19.3-5
Groundwater Dependence in the SCAG Region

Hydrologic Region	Percentage of Total Urban and Agricultural Water Supply Provided by Groundwater
Central Coast[a]	86%
South Coast[b]	34%
South Lahonton[c]	66%
Colorado River[d]	9%

Note:
a Includes part of Ventura County. The remainder is outside of the SCAG Region.
b Includes Orange County, most of San Diego and Los Angeles counties, parts of Riverside, San Bernardino, Ventura, Kern and Santa Barbara counties.
c Includes most of San Bernardino County, as well as Inyo, and parts of Mono, Kern and Los Angeles counties.
d Includes all of Imperial County, most of Riverside, and parts of San Bernardino and San Diego counties.

Recent efforts to store recycled water and surplus water in groundwater basins for use during drought periods have proven successful. MWD has 10 projects with various water agencies for groundwater storage, resulting in approximately 421,900 af of added capacity per year. A number of agencies within the region are also active in the recharge of surface water, including the Orange County Water District,

3.19.3.2 REGULATORY FRAMEWORK

3.19.3.2.1 Federal

Clean Water Act/National Pollutant Discharge Elimination System Permits

The Clean Water Act (CWA) (33 USC Sections 1251 *et seq.*) was enacted by Congress in 1972 and has been amended several times since its adoption. It is the primary federal law regulating water quality in the U.S. Its objective is to reduce or eliminate water pollution in the nation's rivers, streams, lakes, and coastal waters. The CWA prescribes the basic federal laws for regulating discharges of pollutants and sets minimum water quality standards for all surface waters in the U.S. The CWA is administered by the U.S. Environmental Protection Agency (USEPA).[14]

In California, the State Water Resources Control Board (State Water Board) and the nine Regional Water Quality Control Boards (Regional Water Boards) implement many of the Clean Water Act's provisions. The Clean Water Act requires the State to adopt water quality standards and to submit those standards for approval by the U.S. Environmental Protection Agency (US EPA). For point source discharges to surface water, the Clean Water Act authorizes the U.S.EPA and/or approved states (such as California) to administer the National Pollutant Discharge Elimination System (NPDES) program. The NPDES program regulates the discharge of pollutants from point sources. Municipal point sources consist primarily of municipal wastewater treatment plant outfalls and stormwater conveyance system outfalls. The Clean Water Act also establishes a loan program - the State Revolving Fund - for the implementation of water quality improvement projects.

Safe Drinking Water Act

Passed in 1974 and amended in 1986 and 1996, the Safe Drinking Water Act (SDWA) gives the EPA the authority to set drinking water standards. Drinking water standards apply to public water systems, which provide water for human consumption through at least 15 service connections, or regularly serve at least 25 individuals. There are two categories of drinking water standards, the National Primary

14 U.S. Environmental Protection Agency. *Clean Water Act, Section 402: National Pollutant Discharge Elimination System*. Available online at: https://www.epa.gov/cwa-404/clean-water-act-section-402-national-pollutant-discharge-elimination-system, accessed August 29, 2019.

Drinking Water Regulations (NPDWR) and the National Secondary Drinking Water Regulations. The NPDWR are legally enforceable standards that apply to public water systems. NPDWR standards protect drinking water quality by limiting the levels of specific contaminants that can adversely affect public health and are known or anticipated to occur in water.[15]

3.19.3.2.2 State

Porter-Cologne Water Quality Control Act

The Porter-Cologne Act is the principal law governing water quality regulation in California. It establishes a comprehensive program to protect water quality and the beneficial uses of water. The Porter-Cologne Act applies to surface waters, wetlands, and ground water and to both point and nonpoint sources of pollution. Pursuant to the Porter-Cologne Act (California Water Code section 13000 *et seq.*), the policy of the State is as follows:

- That the quality of all the waters of the State shall be protected;
- That all activities and factors affecting the quality of water shall be regulated to attain the highest water quality within reason; and
- That the State must be prepared to exercise its full power and jurisdiction to protect the quality of water in the State from degradation.

The Porter-Cologne Act established nine Regional Water Boards (based on hydrogeologic barriers) and the State Water Board, which are charged with implementing its provisions and which have primary responsibility for protecting water quality in California. The State Water Board provides program guidance and oversight, allocates funds, and reviews Regional Water Boards decisions. In addition, the State Water Board allocates rights to the use of surface water. The Regional Water Boards have primary responsibility for individual permitting, inspection, and enforcement actions within each of nine hydrologic regions. The State Water Board and Regional Water Boards have numerous NPS-related responsibilities, including monitoring and assessment, planning, financial assistance, and management.

The Regional Water Boards regulate discharges under the Porter-Cologne Act primarily through issuance of NPDES permits and waste discharge requirements (WDRs for point and nonpoint source discharges. Anyone discharging or proposing to discharge materials that could affect water quality (other than to a community sanitary sewer system regulated by an NPDES permit) must file a report of waste discharge.

---

15 U.S. Environmental Protection Agency. *Safe Drinking Water Act (SDWA).* Available online at: https://www.epa.gov/sdwa, accessed August 29, 2019.

The Porter-Cologne Act also implements many provisions of the Clean Water Act, such as NPDES permitting program. Section 401 of the Clean Water Act gives the State Water Board the authority to review any proposed federally permitted or federally licensed activity that may impact water quality and to certify, condition, or deny the activity if it does not comply with State water quality standards.

The Porter-Cologne Act also requires adoption of water quality control plans (Basin plans) that contain the guiding policies of water pollution management in California. A number of statewide water quality control plans have been adopted by the State Water Board. In addition, basin plans have been adopted by each of the Regional Water Boards and get updated as necessary and practical. These plans identify the existing and potential beneficial uses of waters of the State and establish water quality objectives to protect these uses. The basin plans also contain implementation, surveillance, and monitoring plans. Statewide and regional water quality control plans include enforceable prohibitions against certain types of discharges, including those that may pertain to nonpoint sources. Portions of water quality control plans, the water quality objectives and beneficial use designations, are subject to review by U.S.EPA, when approved they become water quality standards under the Clean Water Act.[16]

California Administrative Code

California Administrative Code Title 24 contains the California Building Standards, including the California Plumbing Code (Part 5), promotes water conservation. Title 20 addresses Public Utilities and Energy and includes appliance efficiency standards that promote water conservation. In addition, a number of State laws listed below require water-efficient plumbing fixtures in structures:

- Title 20, California Administrative Code, Section1604(g) establishes efficiency standards that give the maximum flow rate of all new showerheads, lavatory faucets, sink faucets, and tub spout diverters.
- Title 20 California Administrative Code Section1606 prohibits the sale of fixtures that do not comply with established efficiency regulations.
- Title 24, California Administrative Code, Sections 25352(i) and (j) address pipe insulation requirements, which can reduce water used before hot water reaches equipment or fixtures. Insulation of water-heating systems is also required.
- Health and Safety Code Section17921.3 requires low-flush toilets and urinals in virtually all buildings.

16 California Water Boards. 2019. *Porter-Cologne Water Quality Control Act*. Available online at: https://www.waterboards.ca.gov/laws_regulations/docs/portercologne.pdf, accessed August 29, 2019.

Under Title 22, the State Department of Health establishes State-wide effluent bacteriological and treatment reliability standards for recycled water uses. The standards are based on the potential for human contact with recycled water. The regional water quality control board (RWQCB) has established and enforces requirements for the application and use of recycled water. Permits are required from a RWQCB for any recycling operation. Applicants for a permit are required to demonstrate that the proposed recycled water operation is in compliance with Title 22 and will not exceed the ground and surface water quality objectives in the regional basin management plan.[17]

The Water Conservation Act of 2009

These sections of the Water Code, enacted as SB X7-7—The Water Conservation Act of 2009, set water conservation targets and efficiency improvements for urban and agricultural water suppliers, Sections 10608.16 and Sections 10608.48, respectively. The legislation establishes a State-wide target to reduce urban per capita water use by 20 percent by 2020. Urban retail water suppliers are required, individually or on a regional basis, to develop an urban water use target by December 31, 2010, to meet their target by 2020, and to meet an interim target (half of their 2020 target) by 2015. Urban water suppliers cannot impose conservation requirements on process water (water used in production of a product) and are required to employ two critical efficient water management practices—water measurement and pricing. Urban retail water suppliers must include in a water management plan, to be completed by July 2011, the baseline daily per capita water use, water use target, interim water use target, and compliance daily per capita water use.[18]

California Urban Water Management Planning Act

This part of the State Water Code (Section 10610) states that each urban water supplier that provides water to 3,000 or more customers, or that provides over 3,000 AF of water annually, should make every effort to ensure the appropriate level of reliability in its water service sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry years by preparing a UWMP and updating it every five years. The Act describes the contents of UWMPs and requires each agency's UWMP to assess the reliability of the agency's water resources over a 20-year planning horizon.[19]

California Senate Bill 610

Referred to as SB 610, the intent of this part of the State Water Code is to ensure that sufficient water supplies are available for growing communities. Water Code Section 10910 requires any project subject to CEQA of a specified minimum size to require a local public water provider with more than 3,000 service connections to prepare a water supply assessment (WSA) for the project. The WSA must document sources of water supply, quantify water demands, and compare future water supply and demand to show that sufficient water will be available to serve the development project. Water supply must be assessed for normal, single dry, and multiple dry water years during a 20-year forecast.[20] If supplies are found to be insufficient to serve the project, the WSA must include plans for acquiring sufficient supplies. The WSA must be included in the CEQA document for the project.[21]

California Senate Bill 221

SB 221 applies to subdivisions of more than 500 dwelling units (Water Code Section 10912). Like SB 610, it is intended to ensure an adequate water supply for new development. SB 221 requires that approval of a tentative map showing the design and improvement of a proposed subdivision shall include a requirement that a sufficient water supply is available.[22,23]

California Groundwater Management Act

The Groundwater Management Act (AB 3030, Water Code Sections 10750 et seq.) provides guidance for applicable local agencies to develop voluntary groundwater management plans (GMP) in State-designated groundwater basins. GMPs can allow agencies to raise revenue to pay for measures influencing the management of the basin, including extraction, recharge, conveyance, facilities' maintenance and water quality.[24]

California Model Water Efficient Landscape Ordinance

The California Model Water Efficient Landscape Ordinance (MWELO) sets restrictions on outdoor landscaping. Because the City of Lincoln is a "local agency" under the MWELO, it must require project applicants to prepare plans consistent with the requirements of the MWELO for review and approval by the City. The MWELO was most recently updated by the Department of Water Resources and approved by the California Water Commission on July 15, 2015. All provisions became effective on February 1, 2016. The revisions, which apply to new construction with a landscape area greater than 500 square feet, reduced the allowable coverage of high-water-use plants to 25 percent of the landscaped area. The MWELO also requires use of a dedicated landscape meter on landscape areas for residential landscape areas greater than 5,000 square feet or nonresidential landscape areas greater than 1,000 square feet, and requires weather-based irrigation controllers or soil-moisture based controllers or other self-adjusting irrigation controllers for irrigation scheduling in all irrigation systems.[25]

Governor's Executive Order B-29-15 issued on April 1, 2015

Key provisions of Executive Order B-29-15 included ordering the State Water Resources Control Board to impose restrictions to achieve a 25-percent reduction in potable urban water usage through February 28, 2016; directing DWR to lead a statewide initiative, in partnership with local agencies, to collectively replace 50 million square feet of lawns and ornamental turf with drought tolerant landscapes, and directing the California Energy Commission to implement a statewide appliance rebate program to provide monetary incentives for the replacement of inefficient household devices.[26]

3.19.3.2.3 Regional

The water quality control plans and groundwater protection responsibilities for the SCAG region are described in **Section 3.10, Hydrology and Water Quality.**

Urban Water Management Plans

Under California Water Code Division 6, Part 2.6, Section 10610-10656, the Urban Water Management Planning Act (UWMPA) requires urban water suppliers that supply more than 3,000 acre-feet of water annually, or serve more than 3,000 connections, to submit an Urban Water Management Plan (UWMP).

---

25 California Department of Water Resources. *Model Water Efficient Landscape Ordinance.* Available online at: https://water.ca.gov/LegacyFiles/wateruseefficiency/docs/MWELO09-10-09.pdf, accessed August 29, 2019.

26 California Water Boards. 2015. *Executive Order B-29-15 State of Emergency Due to Sever Drought Conditions.* Available online at: https://www.waterboards.ca.gov/waterrights/water_issues/programs/drought/docs/emergency_regulations/econ_analysis.pdf, accessed August 29, 2019.

The UWMP is a public document prepared by water suppliers to support their long-term resource planning over a 20-year period and ensure adequate water supplies are available to meet existing and future water demands. The UWMP must be submitted to the DWR every 5 years, and must demonstrate progress toward reduction in 20 percent per capita urban water consumption by the year 2020, as required in the Water Conservation Bill of 2009, Senate Bill X7-7. There are 138 service districts in the SCAG region required to develop a UWMP, which is typically prepared and submitted to DWR within 30 days and reviewed 60 days prior to public hearing for plan adoption and implementation. The preparation of the plan includes guidebook, workshops, and programming for comprehensive strategies to conserve water.[27]

3.19.3.2.4 Local

Utility Master Plans & Utility Capital Improvement Programs

Jurisdictions usually have utility master plans or other planning documents that identify and prioritize projects needed to maintain adequate levels of utility service in the jurisdiction.

General Plans

Local policies related to utilities and service systems are established in each jurisdiction's general plan. In general, jurisdictions have policies in place that state that utility and service systems must be provided at the same time (or in advance of) need. In addition to these general policies, jurisdictions may have more specific policies tailored to performance objectives including wastewater treatment services.

3.19.3.3 ENVIRONMENTAL IMPACTS

3.19.3.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of Connect SoCal could result in significant adverse impacts with regards to water supply if the Plan would result in any of the following:

- Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects;

---

27 California Department of Water Resources. *California Water Code Division 6 Part 2.6. Urban Water Management Planning*. Available online at: https://water.ca.gov/LegacyFiles/urbanwatermanagement/docs/water_code-10610-10656.pdf, accessed August 29, 2019.

- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.

3.19.3.3.2 Methodology

The methodology for determining the significance of impacts to utilities and service systems compares existing conditions to the expected future use of potable water supplies, wastewater, stormwater facilities, and landfills with the Plan. The criteria above were applied to compare current conditions to future 2045 Plan conditions.

Implementation of the Plan would affect the use of utility and service systems in the SCAG region. The analysis of these impacts is programmatic at the regional level. With regards to water supply, the Plan's potential to exceed capacity of local infrastructure and require the relocation or construction of new or expanded facilities or result in a determination that projected demand in addition to current demands is used to determine the significance of the projects effects.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in Section 1.0 Introduction), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by Lead Agencies and Project Sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.19.3.3.3 Impacts and Mitigation Measures

Impact USWS-1 **Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects.**

Significant and Unavoidable – Mitigation Required.

Population in the SCAG region is expected to increase by 3.2 million people by 2045 which may result in a significant impact to the existing water infrastructure in the region. In 2014, California passed Proposition 1 in order to guarantee approximately $7.12 billion for water infrastructure projects,

including $725 million for projects that treat wastewater or saltwater.[28] Moreover, the DWR announced in June 2019 that $14 million in grant funding will be appropriated for projects that increase water quality, supply, and infrastructure.[29] A number of desalination projects have been proposed or are under construction within the SCAG region, including the West Basin Desalination Project which could produce 20 million gallons per day (mgd) (with potential expansion to 60 million gallons per day),[30] the Doheny Ocean Desalination Project which could produce 5 million gallons per day (with potential expansion to 15 mgd),[31] and the Huntington Beach Desalination Plant which could produce 50 mgd.[32] Additionally, Los Angeles and Orange Counties will develop pilot projects to increase stormwater capture. Specifically, the Mayfair Park Capture Project and Caruthers Park Water Capture Project Los Angeles County will capture an estimated 710 and 780 acre-feet/year, respectively.[33] In Orange County, the San Juan Aquifer Recovery Project is in the preliminary design phases for a stormwater capture project in the San Juan Watershed.[34] In February 2019 the City of Los Angeles announced its commitment to 100 percent recycled water at the Hyperion, L.A. Glendale, Tillman, and Terminal Island water treatment facilities by 2035.[35]

Therefore, there is anticipated to be an increase in water supply within the SCAG region from recycling and desalination. California residents used an estimated average 85 gallons of water per day in 2016.[36] Assuming per capita water consumption remains consistent, the SCAG region could require approximately 312.4 million more gallons of water per day to meet the increase in population. In recent years, as a result of increased water conservation, urban water demand has remained relatively constant despite growing population. However, there may be a limit to how much water can be saved through

conservation and even with increases in water efficiency, increasing population could increase water demand. As a result, new water facilities will likely need to be constructed or expanded in order to meet this demand. Water facility projects vary in sizes and locations, but larger regional-scale facilities may be constructed in sensitive environments (e.g. desalination plants adjacent to the ocean). The construction of these larger-scale facilities could result in significant impacts because of their size, prominence and location.

Mitigation Measures

SCAG Mitigation Measure

SMM USWS-1: SCAG shall coordinate with local agencies as part of SCAG's Sustainability Program regarding the implementation of Urban Greening, Greenbelts and Community Separator land use strategies. Primary features of land use strategies address the following:

- Increased trail and greenway connectivity;
- Improved water quality, groundwater recharge and watershed health;
- Reduce urban runoff;
- Expand the urban forest;
- Provision of wildlife habitat and increased biodiversity;
- Expand recreation opportunities and beautification;
- Preserving agrarian economies;
- Restore severed wildlife corridors.

Project Level Mitigation Measures

PMM USWS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to ensure sufficient water supplies, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Reduce exterior consumptive uses of water in public areas, and should promote reductions in private homes and businesses, by shifting to drought-tolerant native

landscape plantings, using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives.

b) Promote the availability of drought-resistant landscaping options and provide information on where these can be purchased. Use of reclaimed water especially in median landscaping and hillside landscaping can and should be implemented where feasible.

c) Implement water conservation best practices such as low-flow toilets, water-efficient clothes washers, water system audits, and leak detection and repair.

d) For projects located in an area with existing reclaimed water conveyance infrastructure and excess reclaimed water capacity, use reclaimed water for non-potable uses, especially landscape irrigation. For projects in a location planned for future reclaimed water service, projects should install dual plumbing systems in anticipation of future use. Large developments could treat wastewater onsite to tertiary standards and use it for non-potable uses onsite.

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce demand for water which could result in reduced need to construct new water facilities, but construction of new large-scale water facilities is reasonably foreseeable given the expected population increase and anticipated demand for water. Therefore, given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and lack of project-specific detail, including project locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts with respect to new or expanded water facilities could be significant and unavoidable even with implementation of mitigation.

Impact USWS-2 Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.

Significant and Unavoidable – Mitigation Required.

The Plan could result in insufficient water supplies from existing entitlements and resources resulting in significant impacts. Transportation projects and development projects anticipated to occur under the Plan have the potential to result in water use that could exceed available water supply. Potential factors that would lead water supply capabilities being exceeded include vulnerability and uncertainty of water supply, in relation to climate variability, resulting from increased temperatures and wildlife fires, as well as regulatory or legislative decisions that could affect the availability of imported water.

Water agencies in the SCAG region produce Urban Water Management Plans (UWMPs) and other long-range planning studies to provide a system adequate to supply water demand. At current usage rates, existing water supplies and infrastructure would not be sufficient to meet demand in 2045. The volume of water and water delivery infrastructure available within the SCAG region may not be sufficient to meet the future multiple dry year or average year water demand in 2045 without substantial reduction in water demand. **Table 3.19.3-6, Metropolitan Water District's Local Supplies for Average and Dry Years,** shows the anticipated water supply for the MWD area, which makes up a portion of the SCAG region, for 2020, 2030, and 2040.

Table 3.19.3-6
Metropolitan Water District's Local Supplies for Average and Dry Years

	2020		2030		2040	
	Average Year	**Dry Year**	**Average Year**	**Dry Year**	**Average Year**	**Dry Year**
Local Groundwater						
From Natural Recharge	1,011,000	1,007,000	1,004,000	1,005,000	1,005,000	1,006,000

The Metropolitan Water District of Southern California. 2016. 2015 Urban Water Management District. Available online at: http://www.mwdh2o.com/PDF_About_Your_Water/2.4.2_Regional_Urban_Water_Management_Plan.pdf, accessed September 12, 2019.

Based on projected population growth under the Plan, the demand for municipal water would increase. Many agencies are implementing aggressive water conservation, recycling and planning strategies (water

transfer and water banking) to sustain the supply of water during wet and dry years. The City of Los Angeles for example has maintained relatively constant water demand over the past ten years as a result of water conservation despite increasing population. Additionally, the Plan's land use strategies encourage compact development and smaller single-family lots in urbanized areas such as HQTAs. Compact development tend to consume water more efficiently (lower per capita consumption). Nonetheless, when considering the Plan as a whole for the region, there is potential for demand in the region to exceed existing and reasonably foreseeable water supplies, due to increased population, drought conditions, and unreliable water supply in the region, constituting a significant impact.

Meeting future water demand is the responsibility of local and regional water agencies. Water supplies are either produced locally from groundwater and surface water sources or are imported via the Los Angeles Aqueduct, the California Aqueduct, the Colorado River Aqueduct, the All American Canal, or the Coachella Canal. Other means of providing water without increasing imported supplies include reclamation and recycling, conservation, water transfers, groundwater banking, developing brackish groundwater, and ocean desalination.

The Urban Water Management Plan Act of 1990 requires that local water agencies prepare plans showing projected water supplies and demands for average years and multiple dry years. These plans are updated every five years. As part of the statewide continued efforts on reducing water usage, the UWMP has been amended to further require urban water suppliers to include narrative descriptions of their water demand management measures in the UWMPs. The descriptions include discussions on progress on water demand management measures implemented over the last five year, and identify additional measures and water saving practices that will help suppliers achieve water use reduction targets. Additionally, the amended Act requires UWMPs to quantify distribution system water losses as a new category of past and current water use and allows water use projections to account for estimated water savings resulting from implementation of applicable codes, building design standards, ordinances, and transportation and land use plans.

The Metropolitan Water District of Southern California prepared the Integrated Water Resources Plan (IRP)[37] that provides a roadmap for maintaining regional water supply. The framework places an increased emphasis on regional collaboration. Earlier plans dating back to 1996 set a regional reliability goal of meeting full-service demands at the retail level under all foreseeable hydrologic conditions. This updated plan seeks to stabilize Metropolitan's traditional imported water supplies and to continue developing additional local resources.

---

37 Metropolitan Water District of Southern California. *Integrated Water Resources Plan*. Available online at: http://www.mwdh2o.com/PDF_About_Your_Water/2015%20IRP%20Update%20Report%20(web).pdf, accessed August 28, 2019.

Over 80 percent of the projected population in the SCAG region for the year 2045 is within the MWD service area.[38] It is anticipated that moderate density development in suburban areas, and compact development in urbanized areas, would reduce the need to extract and haul waters to distances outside of the urbanized and undeveloped areas. Supplying the water necessary to meet future demand and/or minimizing that demand based on anticipated land use distribution would mitigate anticipated impacts. Each water district develops its own policy for determining its planning horizon and for acquiring and building water facilities. Water districts would provide water for the growth planned and authorized by the appropriate land use authority. However, given the challenges to imported water supplies, meeting future demand is difficult. Therefore, impacts would be significant, requiring the consideration of mitigation measures.

Mitigation Measures

SCAG Mitigation Measure

See **SMM USWS-1**.

Project Level Mitigation Measures

See **PMM-USWS-1.**

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this PEIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to sufficient water supplies could be significant and unavoidable even with implementation of mitigation.

3.20 WILDFIRE

This section of the Program Environmental Impact Report (PEIR) describes existing wildfire conditions within the SCAG region, identifies the regulatory framework with respect to laws and regulations that affect wildfire, and analyzes the potential impacts of the Connect SoCal Plan ("Connect SoCal"; "Plan"). In addition, this PEIR provides regional-scale mitigation measures as well as project-level mitigation measures to be considered by lead agencies for subsequent, site-specific environmental review to reduce identified impacts as appropriate and feasible. Other fire protection considerations are addressed in **Public Services, Section 3.15.1, Fire Protection,** in addition emergency access is addressed in **Section 3.17, Transportation, Traffic, and Safety,** and emergency response and evacuation plans are addressed in **Section 3.9, Hazards and Hazardous Materials.**

3.20.1 ENVIRONMENTAL SETTING

3.20.1.1 Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for wildfire are provided.

CAL FIRE: California Department of Forestry and Fire Protection (abbreviated Cal Fire and styled CAL FIRE). CAL FIRE is the State of California's fire protection agency responsible for protection and stewardship of over 31 million acres of the state's privately-owned wildlands. CAL FIRE is an "all-risk" department, meaning its teams may respond to a car crash, medical incident, hazardous material spill, or natural disaster, not just fires. CAL FIRE is also responsible for managing 71,000 acres of Demonstration State Forests, overseeing enforcement of state forest management regulations, and operating training and certification course trainings.[1]

Clearance: Space cleared of vegetation as required by law, regulation, easement, etc. for the purpose of preventing fires.

Containment/Control: A fire is contained when it is completely surrounded by a boundary but is still burning and has the potential to jump a boundary line. The boundary may be a "fire line" which is a strip of area where the vegetation has been removed to deny the fire fuel, or a river, a freeway or some other barrier which is expected to stop the fire. Hose lines from fire engines may also contribute to a fire being

1 California Department of Forestry and Fire Protection. *About Us.* Available online at https://www.fire.ca.gov/about-us/, accessed September 10, 2019.

surrounded and contained. A fire is controlled when there is no further threat of it jumping a containment line. While crews continue to do mop-up work within the fire lines, the fire fight is over.

Contract Counties: Contract counties are counties where the local county fire department is contracted by CAL FIRE to protect a State Responsibility Area (SRA). Section 4133 of the Public Resources Code and Section 55607 of the Government Code permit the CAL FIRE Director to contract with counties for protection of SRAs. In California, six counties provide fire-prevention services in SRAs under contract with the state. These counties are Marin, Kern, Santa Barbara, Ventura, Los Angeles and Orange.

Damage Assessment: Amount of economic loss, including cost of fire suppression.

Defensible Space: An area either natural or manmade where material capable of causing a fire to spread unchecked has been treated, cleared, reduced or changed in order to act as barrier between the advancing wildfire and the loss to life, property, or resources. This concept is vital for firefighter safety and provides the single significant element of protection of individual property owners. California law requires homeowners to maintain 100 feet of defensible space around homes and structures.

Easement: A right to cross or otherwise use someone else's property for a specified purpose.

Fire Hazard: Dangerous accumulation of flammable fuels in wildland areas, usually referring to vegetation or the flammable materials that may be ignited by various fire risks or cause fires to increase in intensity or rate of spread.

Fire Hazard Zoning: A planning and regulatory activity (typically conducted by a local agency such as a city or county) which provides criteria for what kinds, how many and under what conditions development or other activities should be regulated in areas of various hazard classification.

Fire Season: In California fire season generally lasts for six to eight months, from summer to early fall. In recent years, fire season has extended into December.

Greenbelts: A facility or land use designed for a use other than fire protection, which will slow or resist the spread of a wildfire. Includes parking lots, irrigated or landscaped areas, golf courses, parks, playgrounds and maintained vineyards, orchards or annual crops that do not cure in the field.

Interface/ Wildland Interface: The meeting point of wildland and structures. At this interface, structures and vegetation are sufficiently close that a wildland fire could spread to structures or a structure fire ignites vegetation.

Intermix/ Wildland Intermix: Interspersing of developed land with wildland, where there are no easily discernible boundaries between the two systems. In this setting, there may be homes or other structures intermixed with wildland fuels, as opposed to a distinct area of wildland fuel adjacent to a developed area.

Local Responsibility Area (LRA): Areas where wildland fire protection is the responsibility of the local government. Local responsibility area fire protection is typically provided by city fire departments, fire protection districts, counties, and by CAL FIRE under contract to local governments.

Prescribed Burning: Controlled application of fire to wildland fuels, in either their natural or modified state, under conditions of weather, fuel moisture, soil moisture, etc., as to allow the fire to be confined to a predetermined area and at the same time to produce results to meet planned objectives of land management.

Santa Ana Winds: Santa Ana winds blow from the northeast toward the beaches as areas of strong high pressure build across the interior west. The wind speed can be magnified as air squeezes over mountain passes and rushes downhill, heating and drying as it descends in elevation. Severe Santa Ana Wind events pose a heightened wildfire risk.

State Responsibility Area (SRA): SRAs are areas in which the primary financial responsibility for preventing and suppressing fires is that of the state and is defined based on land ownership, population density and land use.[2] These include: lands covered wholly or in part by timber, brush, undergrowth or grass, whether of commercial value or not; lands which protect the soil from erosion, retard run-off of water or accelerated percolation; lands used principally for range or forage purposes; lands not owned by the Federal government; and lands not incorporated. By Board regulations, unless specific circumstances dictate otherwise, lands are removed from SRA when housing densities average more than 3 units per acre over an area of 250 acres. CAL FIRE has SRA responsibility for the protection of more than 31 million acres of California´s privately-owned wildlands.[3]

Wildland: Refers to unoccupied lands

Wildland Urban Interface: Refers to the geographical point where flammable vegetation meets man-made structures.

3.20.1.2 Existing Conditions

A wildfire is defined as a non-structural fire in undeveloped area with the potential to spread to an urban area. While wildfires are common across California, a variety of factors can affect the likelihood of a fire occurring and the severity of the burn. Unsurprisingly, locations with hot, dry, and windy conditions face a greater fire hazard than wetter and cooler locations, and communities near wildland areas are more endangered than those in cities and towns. Vegetation, topography, roadways, and management methods also contribute to an area's potential for fire hazards. Steep hillsides and varied topography may also increase the risk of wildland fires, and could affect natural resources, as well as life and property. Most fires in California occur during late summer and early fall, but recently the fire season is starting earlier and lasting longer in the year, affecting areas longer, and resulting in more extreme events due to climate change.

CalFire publishes Fire Hazard Severity Zone Maps for the entire State of California, which include fire hazard measurements, as well as the areas that are under State Responsibility Areas (SRA) lands or Local Responsibility Area (LRA) lands, for each county in the State. These maps place areas of the state into different fire hazard severity zones (FHSZ) based on a hazard scoring system using subjective criteria for fuels, fire history, terrain influences, housing density, and occurrence of severe fire weather where urban fire could result in catastrophic losses. As part of this mapping system, land where CAL FIRE is responsible for wildland fire protection and generally located in unincorporated areas is classified as a SRA. In addition to establishing local or state responsibility for wildfire protection in a specific area, CAL FIRE designates areas as very high fire hazard severity (VHFHSZ) zones or non-VHFHS zones.[4]

In 2017, and then again in 2018, California experienced record-breaking heat as a part of a global warming trend. The heat, coupled with years of drought and an increase of forest pests and disease linked to climate change, created perfect fire conditions that allowed for some of the most destructive and deadliest fires in the state's history. Wind direction and intensity, particularly for fires close to populated areas pose not only safety issues, but also air quality related health issues.

Fire Hazard Severity Zones

Wildland fire protection in California is the responsibility of either the local, state, or federal government. Public Resources Code Section 4201-5 (Chapter 806, Statues of 1982) requires CAL FIRE to evaluate fire hazard severity and map FHSZ for all SRA.[5] FHSZs are based on factors such as fuel, slope, and weather

---

4 CAL FIRE. 2007. *Fire Hazard Severity Zones in SRA*. Available online at: https://osfm.fire.ca.gov/media/6636/fhszs_map.pdf, accessed August 20, 2019.

5 California Legislative Information. 1982. *Article 9. Fire Hazards Severity Zones [4201-4204].*

and are designated as moderate, high, and very high. Zone classification is based on a combination of how a fire will behave and the probability of flames and embers threatening buildings. By identifying areas with the potential for more severe wildfire hazards, FHSZ maps allow for proper planning, prevention, and mitigation that reduce wildfire damages. As of 2018, CAL FIRE is in the planning stages of updating all FHSZ for SRA counties and upon completion, would make recommendations to LRAs.

After the Oakland Hills Fire of 1991, the "Bates Bill" (Senate Bill 337) was passed in 1992, calling on CAL FIRE to make recommendations to local jurisdictions where VHFHSZs exist. The bill provides direction for local jurisdictions to mitigate fire spread and reduce the intensity of uncontrolled blazes.

Fire hazard severity zone levels range from Moderate to Very High. Fire hazard severity zones are designated in three types of areas based on what level of government is financially responsible for preventing and suppressing wildfires:

- Federal Responsibility Areas (FRAs): The federal government is financially responsible for wildfire suppression. Within the District, the Angeles National Forest and federal land in the Santa Monica Mountains National Recreation Area are FRAs.

- State Responsibility Areas (SRAs): The state is financially responsible for wildfire suppression. Within the District, SRAs are in outlying areas such as the Santa Susana Mountains, foothills of the San Gabriel Mountains, and parts of the Santa Monica Mountains.

- Local Responsibility Areas (LRAs): Cities or the County are financially responsible for wildfire suppression. LRAs in Los Angeles County include foothills of the Santa Susana and San Gabriel Mountains, and in the Verdugo Mountains, Santa Monica Mountains, Hollywood Hills, San Rafael Hills, Puente Hills, and in other hills in the central Los Angeles area.

SCAG Region

Though wildland fires are a natural part of the ecological processes, in the past, it was presumed that all wildland fires should be extinguished promptly. This caused "protected" vegetation to grow denser, weakening vegetation in a struggle for living space and increasing destruction by pests and disease; and in turn, added fuel for future fire. In addition, the absence of fire can alter or disrupt the cycle of natural plant succession and the associated habitats that form. Recognizing this, land management agencies are now committed to finding ways, such as prescribed burning, to reintroduce fire into natural ecosystems. In addition, California has extended droughts, which increase dead and dying vegetation, dry fuel per acre volumes, and many days of low humidity. Furthermore, the majority of wildfires in the region are human caused by factors including but not limited to campfires and building fires. This remains true

even before accounting for the crisis of anthropogenic climate change, which exacerbates wildfires. Wildfire increases the potential for runoff and erosion, as fire removes ecological stabilizers such as vegetation and healthy soil. In coastal regions and other areas with steep slopes, scorched land left after a wildfire is particularly susceptible to debris flow and other hazards.

SRAs and LRAs have been mapped in every county in the SCAG region.[6] The majority of VHFHSZs are located where wildlands meet urbanized areas, usually near large recreation areas.

Los Angeles County

Northern and western Los Angeles County feature vast swaths of wildland areas. The County's largest wildland area is the Angeles National Forest, a 700,000-acre forest that stretches across northern Los Angeles County between Gorman and Mt. Baldy. Much of the forest is marked by dense chaparral shrubs and woodlands. The Santa Monica Mountains National Recreation Area, a 150,000-acre area in the western portion of Los Angeles County, is comprised of several contiguous open space areas, including Malibu Creek State Park, Topanga State Park, and Leo Carrillo State Park. The Woolsey Fire in November 2018 burned 88 percent of all National Park Service acres within the park boundary. Following the Woolsey Fire, a wet winter allowed black mustard plants to quickly establish a presence in the area. This non-native plant quickly dries and provides fuel for future fires.

In Los Angeles County, heavily urbanized areas in the northwest and southern parts of the County are largely excluded from VHFHSZ designations, whereas communities near Topanga State Park and Angeles National Forest are at a much higher risk of wildfire impacts. However, even densely populated areas may be designated as VHFHSZ depending on their proximity to wildlands, such as the highly urbanized area surrounding the Kenneth Hahn State Recreation Area in Los Angeles.[7]

Orange County

Orange County is highly urbanized with wildland areas located primarily in the east and southeast of the county. The largest wildland area is the Cleveland National Forest, a 460,000-acre forest partially located in Orange County along the boundary with Riverside County. The Cleveland National Forest is characterized by chaparral and a warm, dry Mediterranean climate. The South Coast Wilderness Area, located along the Orange County Coast between Newport Beach and Laguna Niguel, is comprised of

6 CAL FIRE. *Fire Hazard Severity Zones Maps*. Available online at: https://osfm.fire.ca.gov/divisions/wildfire-prevention-planning-engineering/wildland-hazards-building-codes/fire-hazard-severity-zones-maps/, accessed September 7, 2019.

7 CAL FIRE. 2007. *Los Angeles County: Fire Hazard Severity Zones in SRA*. Available online at: https://osfm.fire.ca.gov/media/6705/fhszs_map19.pdf, accessed August 20, 2019.

several contiguous open space areas, including Crystal Cove State Park, Laguna Coast Wilderness Park, and Aliso and Wood Canyons Wilderness Park.[8] These parks feature rugged coastal canyons, grasslands, and riparian woodlands. Wildfire increases the potential for runoff and erosion, as fire removes ecological stabilizers such as native vegetation and healthy soil and replaces them with invasive plants and debris. In addition, a portion of the 14,173-acre Chino Hills State Park is located in northern Orange County and features chaparral plant communities.

CAL FIRE marks portions of the following cities as VHFHSZs: Aliso Viejo, Anaheim, Brea, Dana Point, Fullerton, Irvine, La Habra, Laguna Beach, Laguna Niguel, Laguna Woods, Lake Forest, Mission Viejo, Newport Beach, Orange, Rancho Santa Margarita, San Clemente, San Juan Capistrano, Tustin, Villa Park, and Yorba Linda.

San Bernardino County

Most of San Bernardino County is in an FRA. Thus, fire protection is typically provided by city fire departments, fire protection districts, counties, and by CAL FIRE under contract to local government. The San Bernardino County Fire Protection District is one of the largest providers of fire protection services in these areas. Due to its dry, desert climate San Bernardino County has limited areas of very high FHSZ. The only very high FHSZs in the county are located in the southwest corner, stretching along the San Gabriel Mountains from the county's western border to Yucca Valley.[9] Most of the very high FHSZs in San Bernardino County are along its north and northeast edges at the foot of the San Bernardino and San Gabriel mountains; at its southeast margin in the north end of the San Timoteo Badlands; and in the southwest corner of the region in Chino Hills. Nearly the entire Mountain Region is mapped as very high FHSZ, while most of the desert regions are mapped outside of high or very high FHSZs. As of 2019, it is estimated that more than 34,000 residents in the unincorporated county live in very high fire hazard areas, and more than 63,000 live in high fire hazard areas.[10]

Imperial County

Imperial County is a predominantly agricultural area and approximately 50 percent of County lands are undeveloped and under federal jurisdiction. The potential for a major fire in the unincorporated areas of the County is generally low.

10 San Bernardino Countywide Plan Draft PEIR, June 2019

From the standpoint of fire safety, building and fire codes are the tool most commonly used by local jurisdictions. The County implements the Uniform Building Code (UBC) and the Uniform Fire Code (UFC).[11,12] The Imperial County Codified Zoning Ordinance also contains provisions which act to reduce fire hazards. The Imperial County Subdivision Ordinance is also used to reduce the risk of fire by securing, as a condition of subdivision of land, water systems of adequate size and pressure for firefighting, and adequate roadway widths for emergency service vehicle access including maneuverability of fire trucks.[13] Additionally, the County's Fire Prevention and Explosives Ordinance, contains provisions for the purpose of prescribing regulations governing conditions hazardous to life and property from fire or explosion. This program enables the public to be better prepared when an emergency fire situation occurs.

Imperial County's Fire Prevention Bureau runs the Imperial County Fire Prevention Program. The purpose of the Imperial County Fire Prevention Program is to assist in preventing injuries, deaths, business interruption and property damages resulting from fires and other emergencies. The Fire Prevention Bureau currently enforces the 2010 California Fire, Building, Electrical, County Ordinances, as amended by the County of Imperial Municipal Code, in addition to National Fire Protection Association standards; Title 19, of the California Public Safety Code; and, the California Health and Safety Code.[14]

Imperial County has virtually no VHFHSZ, with only extremely small areas located near the northwest and southwest corners of the county.[15] Similar to Imperial, the eastern half of Riverside County contains essentially no VHFHSZ.[16] The western half of Riverside County, however, is where a significant amount of the county's wildland interface occurs, and a majority of the land is designated VHFHSZ. Lands near the San Bernardino National Forest and the Santa Ana mountains are largely within SRA, while urban

communities near smaller portions of wildland, such as Terra Cotta and eastern Sun City, are under the jurisdiction of an LRA.[17]

Ventura County

Much of Ventura County is considered a VHFHSZ and is primarily located in a SRA. Specifically, the central and northern portions of the County are part of the Los Padres National Forest, accounting for 46 percent of the overall landmass. The forest features semi-arid, chaparral vegetation, which is prone to wildfire. The Fire Hazard Reduction Program is the cornerstone of Ventura County Fire Department's (VCFD) Wildland Fire Action Plan. In partnership with property owners and neighbors, VCFD recommends a 100-foot defensible space radius between structures and vegetation and places restrictions on certain types of vegetation.[18]

Several major freeways in Ventura County are located within VHFHSZs, including US-101 between Camarillo and Thousand Oaks, SR-33 between Ventura and Ojai, and SR-118 between Moorpark and Simi Valley. Much of the housing in these cities is located within an urban-wildland intermix area, and as such, wildfires and subsequent evacuations are a concern. In December 2017, the Thomas Fire burned through Ventura and Santa Barbara Counties and was the largest wildfire in California history at the time. The fire spread quickly, destroying hundreds of structures, prompting evacuations, and leading to deadly mudflows after a rainstorm the following month.

Riverside County

With development growing into outlying hill and grassland areas and an increasing number of people owning homes and businesses in Riverside County, wildfires are becoming a growing and catastrophic hazard in the County. As more and more people are moving into areas of wildland-urban interface, the danger for wildfire conditions from the mix of fuels, topography, and accessibility, are posing increasing risks to residents, as well as to fire protection service providers. In some parts of Riverside County, fire danger can be worsened by steep, rugged topography, which would allow wildland fire to spread quickly and make it more difficult to fight.

The Riverside County Hazard Reduction Office, a division within the Riverside County Fire Department, enforces the abatement of hazardous vegetation and abandoned or neglected orchards, groves, and vineyards. The County's Hazard Abatement Program requires property owners to maintain 100 feet of

---

17 CAL FIRE. 2007. *Western Riverside County: Fire Hazard Severity Zones in SRA.* Available online at: https://osfm.fire.ca.gov/media/6752/fhszs_map60.pdf, accessed August 20, 2019.

defensible space between structures and vegetation. Guidelines on horizontal and vertical spacing of plants and trees are also enforced.

CAL FIRE's recommendations on VHFHSZs for Riverside County bisect the county into an eastern and western portion. Eastern Riverside County is primarily comprised of dry, desert land and is sparsely populated. This region is designated as a Moderate Fire Hazard Severity Zone. Western Riverside County has a greater variety of climates, topography, and flora. The 800,000-acre San Bernardino National Forest is located in this half of Riverside County within a VHFHSZ. At the boundary with Orange County, the Cleveland National Forest is also a designated VHFHSZ. Additionally, several major freeways in Riverside County are located within VHFHSZs, including I-15 between Lake Elsinore and Temecula, I-215 between Sun City and Murrieta, and SR-60 between Moreno Valley and Beaumont.

Climate Change

In the last decade, California has experienced five of the state's 10 largest wildfires and seven of its 10 most destructive fires in its history. Between 2017 and 2018, the State spent over $1.5 billion on fire suppression, far more than any previous 2-year period. Over the past five decades, summertime forest fires have increased in size by roughly 800 percent. Though no single wildfire can be attributed solely to climate change, evidence shows that the increase in average temperatures statewide is creating conditions more prone to wildfires.[19] Southern California has warmed about three degrees Fahrenheit in the last century, and every additional increment of warming speeds up evaporation, dries out soil and vegetation, and increases the amount of fuel available for a wildfire.[20] In 2018, wildfires in California released approximately 68 million tons of carbon dioxide, or about 15 percent of the State's annual emissions.[21] Studies suggest that greenhouse gas emissions from wildfires create a positive feedback loop, wherein the emissions warm the planet further, leading to more wildfires and more emissions.

3.20.2 REGULATORY FRAMEWORK

3.20.2.1 Federal

Disaster Mitigation Act (DMA) of 2000

DMA 2000 (Public Law 106-390) provides the legal basis for FEMA mitigation planning requirements for state, local and tribal governments as a condition of mitigation grant assistance. DMA 2000 amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act by repealing the previous mitigation planning provisions and replacing them with a new set of requirements that emphasize the need for state, local, and tribal entities to closely coordinate mitigation planning and implementation efforts. The requirement for a state mitigation plan is continued as a condition of disaster assistance, adding incentives for increased coordination and integration of mitigation activities at the state level through the establishment of requirements for two different levels of state plans. DMA 2000 also established a new requirement for local mitigation plans and authorized up to 7 percent of Hazard Mitigation Grant Program (HMGP) funds available to a state for development of state, local, and tribal mitigation plans.[22]

Federal Response Plan

The Federal Response Plan of 1999 is a signed agreement among 27 federal departments and agencies, including the American Red Cross, that (1) provides the mechanism for coordinating delivery of federal assistance and resources to augment efforts of state and local governments overwhelmed by a major disaster or emergency; (2) supports implementation of the Robert T. Stafford Disaster Relief and Emergency Act, as well as individual agency statutory authorities; and (3) supplements other federal emergency operations plans developed to address specific hazards. The Federal Response Plan is implemented in anticipation of a significant event likely to result in a need for federal assistance or in response to an actual event requiring federal assistance under a Presidential declaration of a major disaster or emergency.[23]

Federal Emergency Management Agency (FEMA) Regulation

The primary mission of FEMA is to reduce the loss of life and property and protect the nation from all hazards, including natural disasters, acts of terrorism, and other human-made disasters, by leading and supporting the nation in a risk-based, comprehensive emergency management system of preparedness,

---

22 FEMA. *Disaster Mitigation Act of 2000*. Available online at: https://www.fema.gov/media-library/assets/documents/4596, accessed August 20, 2019.

protection, response, recovery, and mitigation.[24] SCAG is under the jurisdiction of FEMA Region 9, which covers Arizona, California, Hawaii, Nevada, Guam, American Samoa, Commonwealth of Northern Mariana Islands, Republic of Marshall Islands, Federated State of Micronesia, and more than 150 sovereign tribal entities. In Southern California, FEMA Region 9 specifically plans for hazards such as major earthquakes and wildfires.[25]

National Fire Plan

The Department of the Interior's National Fire Plan is intended to ensure an appropriate federal response to severe wildland fires, reduce fire impacts to rural communities, and ensure sufficient firefighting capacity in the future.[26] The Rural Fire Assistance program is funded to enhance the fire protection capabilities of rural fire districts and safe and effective fire suppression in the wildland/urban interface. The program promotes close coordination among local, state, tribal, and federal firefighting resources by conducting training, equipment purchase, and prevention activities on a cost-shared basis.[27]

3.20.2.2 State

Senate Bill 99

In November 2018, the Camp Fire devastated the town of Paradise, California, killing 86 people and destroying nearly 19,000 structures. One reason the Camp Fire was so deadly was the lack of adequate evacuation routes to simultaneously allow residents to leave and first responders to enter. Although modern developments require adequate ingress and egress routes, many existing developments, such as those in Paradise, predate these requirements. SB 99, signed into law on August 30, 2019, requires cities to identify in the safety element of their general plans any residential developments in any wildfire hazard areas that do not have at least two emergency evacuation routes.[28]

28 California Legislative Information. 2019. *Senate Bill No. 99.*

Senate Bill 901

After record-breaking drought in California from 2011 to 2017, perfect wildfire conditions allowed faulty PG&E utility lines to spark devastating fires that would scorch over 4,000 square miles of land across the state. In response to the deadly season, the California Legislature developed Senate Bill 901 (Utility Wildfire Management Plans) as the "centerpiece measure" in its attempt to rectify damages from the 2017 wildfires and prevent future wildfire disasters. SB 901 mandates all electric utilities to prepare and submit wildfire mitigation plans that describe the utilities' plan to prevent, combat, and respond to wildfires affecting their service territories. The California Public Utilities Commission (CPUC) will review and refine the plans before implementing and enforcing them. In the short-term, SB 901 allows PG&E to lean on its customers in paying for billions of dollars in fire-related damages. It also provides over $1 billion for vegetation management over five years.[29]

Assembly Bill 1054 (AB 1054)

AB 1054 was signed into law by Governor Gavin Newsom on July 12, 2019, creating a $21 billion fund to help California's investor-owned utilities cover liabilities caused by wildfires. Under the legislation, the state's investor-owned utilities will put a combined $5 billion toward improvements in their electrical grids to access the fund. Ratepayers will also contribute $10.5 billion by way of a 15-year extension of an existing rate increase. The bill also imposes several conditions on utilities, including $5 billion in safety investments and utility participation in a new annual safety certification process overseen by CPUC.[30] The legislation was passed in the wake of the Camp Fire, California's deadliest and most destructive wildfire in history. Pacific Gas & Electric (PG&E) Corp's equipment failure was responsible for the blaze. PG&E sought bankruptcy protection after the Camp Fire so it could reorganize its finances to pay $30 billion in liabilities from multiple wildfires.[31]

Senate Bill 1079 (SB 1079)

SB 1079 (Forest Resources: Fire Prevention Grant Fees) builds from existing laws establishing grants to private entities, Native American tribes, and public agencies to assist in the implementation and administration of projects and programs relating to improving forest health and reducing GHG emissions. SB 1079 authorizes CAL FIRE to make advance payments to grantees (such as fire safe

31 New York Times. *California Says PG&E Power Lines Caused Camp Fire That Killed 85.* Available online at: https://www.nytimes.com/2019/05/15/business/pge-fire.html, accessed September 18, 2019.

councils, Native American tribe, or special district), which receive funds from the healthy forest and local fire-prevention grant programs.[32]

Senate Bill 1241 (SB 1241)

In 2012, SB 1241 added Section 66474.02 to Title 7 Division 2 of the California Government Code, commonly known as the Subdivision Map Act. The statute prohibits subdivision of parcels designated very high fire hazard, or that are in a SRA, unless certain findings are made prior to approval of the tentative map. The statute requires that a city or county planning commission make three new findings regarding fire hazard safety before approving a subdivision proposal. The three findings are, in brief: (1) the design and location of the subdivision and its lots are consistent with defensible space regulations found in PRC Section 4290-91, (2) structural fire protection services will be available for the subdivision through a publicly funded entity, and (3) ingress and egress road standards for fire equipment are met per any applicable local ordinance and PRC Section 4290.The Occupational Safety and Health Act (29 Code of Federal Regulations [CFR] Parts 70 to 2400), which is implemented by the Federal Occupational Safety and Health Administration (OSHA), contains provisions with respect to hazardous materials handling. Federal OSHA requirements, as set forth in 29 CFR Section 1910 et seq., are designed to promote worker safety, worker training, and a worker's right–to-know. In California, OSHA has delegated the authority to administer OSHA regulations to the State of California.[33]

Assembly Bill 301

Assembly Bill 301 was enacted to amend Section 4213.1, and to add Section 4213.2 to the Public Resources Code elated to fire prevention. Section 4213.1 requires CAL FIRE to notify a property owner that the property's terms of sale could include a portion of the Fire Prevention Fee. Section 4213.2 allows a property owner to negotiate a portion of the fee as one of the terms of sale.[34]

Assembly Bill 38 (California Emergency Services Act)

This bill would require the Natural Resources Agency, by July 1, 2021, and in consultation with the State Fire Marshal and the Forest Management Task Force, to review the regional capacity of each county that contains a very high fire hazard severity zone to improve forest health, fire resilience, and safety, as specified. On or after July 1, 2021, the bill would require a seller of real property located in a high or very high fire hazard severity zone to provide specified documentation to the buyer that the real property is in

compliance with the wildfire protection measures or a local vegetation management ordinance, or enter into an agreement with the buyer pursuant to which the buyer will obtain documentation of compliance.[35]

Assembly Bill 2551

Approved in 2018, Assembly Bill 2551 Forestry and Fire Prevention: Joint Prescribed Burning Operation (AB 2551) authorizes CAL FIRE to collaborate with private landowners on controlled burns to reduce wildfire fuel. Mismanagement of the forests can lead to a build-up of forest underbrush that serves as a perfect fuel for wildfires. By allowing small, non-industrial landowners to choose to individually implement various fire prevention programs, such as prescribed burns, AB 2551 promotes good, local forest management in the state.[36]

State California Department of Forestry and Fire Protection

CAL FIRE protects the people of California from fires, responds to emergencies, and protects and enhances forest, range, and watershed values providing social, economic, and environmental benefits to rural and urban citizens. CAL FIRE's firefighters, fire engines, and aircraft respond to an average of more than 5,600 wildland fires each year. The Office of the State Fire Marshal supports CAL FIRE's mission by focusing on fire prevention. It provides support through a wide variety of fire safety responsibilities including regulating buildings in which people live, congregate, or are confined; controlling substances and products which may, in and of themselves, or by their misuse, cause injuries, death, and destruction by fire; providing statewide direction for fire prevention in wildland areas; regulating hazardous liquid pipelines; reviewing regulations and building standards; and providing training and education in fire protection methods and responsibilities.[37]

State Fire Regulations

Fire regulations for California are established in Sections 13000 et seq. of the California Health and Services Code and include regulations for structural standards (similar to those identified in the California Building Code); fire protection and public notification systems; fire protection devices such as extinguishers and smoke alarms; standards for high-rise structures and childcare facilities; and fire suppression training. The State Fire Marshal is responsible for enforcement of these established

regulations and building standards for all state-owned buildings, state-occupied buildings, and state institutions within California.[38]

California Governor's Office of Emergency Services (OES)

Cal OES is the Emergency Management authority for the State of California. The California Governor's Office of Emergency Services (Cal OES) began as the State War Council in 1943. With an increasing emphasis on emergency management, it officially became OES in 1970. On July 1, 2013, Governor Edmund G. Brown Jr.'s Reorganization Plan #2 eliminated the California Emergency Management Agency (Cal EMA); restored its powers, purposes, and responsibilities to Cal OES; and also merged it with the Office of Public Safety Communications. Cal OES' mission statement is the following: "Protect lives and property, build capabilities, and support our communities for a resilient California." OES goals include:[39]

- **Goal 1:** Anticipate and enhance prevention and detection capabilities to protect our State from all hazards and threats.
- **Goal 2:** Strengthen California's ability to plan, prepare for, and provide resources to mitigate the impacts of disasters, emergencies, crimes, and terrorist events.
- **Goal 3:** Effectively respond to and recover from both human-caused and natural disasters.
- **Goal 4:** Enhance the administration and delivery of all state and federal funding, and maintain fiscal and program integrity.
- **Goal 5:** Develop a united and innovative workforce that is trained, experienced, knowledgeable, and ready to adapt and respond.
- G**oal 6:** Strengthen capabilities in public safety

California Public Resources Code

Fire Hazard Severity Zones – Public Resources Code Sections 4201–4204 Public Resources Code (PRC) Sections 4201–4204 and Government Code Sections 51175–89 direct CAL FIRE to map areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. FHSZ define the application of various mitigation strategies to reduce risk associated with wildland fires.[40, 41]

California Fire Code

Part 9 of the 2019 California Building Standards Code (CBC) (Cal. Code Regs., Title 24) covers the California Fire Code (2019, Title 24, Part 9). The purpose of the California Fire Code is to establish the minimum requirements consistent with nationally recognized good practices to safeguard the public health, safety, and general welfare from the hazards of fire, explosion or dangerous conditions in new and existing buildings, structures, and premises.

The purpose of the California Fire Code is to establish the minimum requirements consistent with nationally recognized good practices to safeguard the public health, safety, and general welfare from the hazards of fire, explosion or dangerous conditions in new and existing buildings, structures, and premises. The Fire Code also establishes requirements intended to provide safety for and assistance to firefighters and emergency responders during emergency operations. The provisions of the Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout California. The Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems such as alarm and sprinkler systems, fire services features such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and wildland-urban interface areas. Several jurisdictions within the SCAG region have adopted the California Fire Code as part of their building regulations.[42]

California Fire Plan

The Fire Plan is a cooperative effort between the State Board of Forestry and Fire Protection and the California Department of Forestry and Fire Protection. By placing the emphasis on what needs to be done long before a fire starts, the Fire Plan looks to reduce firefighting costs and property losses, increase firefighter safety, and to contribute to ecosystem health. The current plan was adopted in 2018, which reflects CAL FIRE's goals of 1) fire prevention and suppression activities to protect lives, property, and ecosystem services, and 2) natural resource management to maintain the state's forests as a resilient carbon sink to meet California's climate change goals and to serve as important habitat for adaptation and mitigation.[43]

California Disaster Assistance Act (CDAA)

The California Disaster Assistance Act (CDAA; CCR Title 19, Chapter 6) authorizes the Director of the California Governor's Office of Emergency Services (Cal OES) to administer a disaster assistance program that provides financial assistance from the state for costs incurred by local governments as a result of a disaster event. Funding for the repair, restoration, or replacement of public real property damaged or destroyed by a disaster is made available when the Director concurs with a local emergency proclamation requesting state disaster assistance.[44]

Governor's Office of Planning and Research (OPR)

The Governor's Office of Planning and Research serves the Governor and his Cabinet as staff for long-range planning and research and constitutes the comprehensive state planning agency (Government Code Section 65040). OPR is empowered to draft *CEQA Guidelines* for adoption by the Secretary of Natural Resources in collaboration with the Natural Resources Agency. In January 2018, OPR transmitted its proposal for comprehensive updates to the *CEQA Guidelines* to the Natural Resources Agency, who finalized the updates in late 2018. The updated Guidelines became effective on December 28, 2018.

California Public Utilities Commission Fire Safety Rulemaking

In December 2017, CPUC issued Decision (D.) 17-12-024 adopting regulations to enhance fire safety in the High Fire Threat District (HFTD) and subsequently adopted CPUC's final fire threat map. This map, together with CAL FIRE's Tier 1 High Hazard Zones comprise the HFTD Map where stricter fire-safety regulations apply. These regulations include requiring utilities to prioritize safety hazards, maintain more stringent wire-to-wire clearances in certain areas, and prepare a fire prevention plan annually if they have overhead facilities in the HFTD. Further, electric utilities may disconnect service to customers who refuse to provide access to their property for the removal of trees that pose an immediate threat for contacting a power line.[45]

3.20.2.3 Local

County General Plans

In addition to federal and state requirements, general plans and municipal codes of counties and cities in the SCAG region may include safety elements that goals and policies related protecting people and property from risks from wildfires and associated hazards.

Los Angeles County General Plan

The Safety Element of the Los Angeles County General Plan 2035 Update, in conjunction with the All-Hazard Mitigation Plan prepared by the Chief Executive Office, Office of Emergency Management (CEO OEM), sets strategies for natural and man-made hazards in Los Angeles County.[46] The 2014 All-Hazard Mitigation Plan, which has been approved by FEMA and Cal OES, includes a compilation of known and projected hazards in Los Angeles County.[47] Specific applicable goals and policies related to fire hazards within the County of Los Angeles include, but are not limited to:

- Goal S: An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to fire hazards.
- Policy S 3.1: Discourage high density and intensity development in VHFHSZs.
- Policy S 3.2: Consider climate change implications in fire hazard reduction planning for FHSZs.
- Policy S 3.3 Ensure that the mitigation of fire related property damage and loss in FHSZs limits impacts to biological and other resources.
- Policy S 3.5: Encourage the use of low-volume and well-maintained vegetation that is compatible with the area's natural vegetative habitats.
- Policy S 3.8: Support the retrofitting of existing structures in FHSZs to help reduce the risk of structural and human loss due to wildfire.

San Bernardino County General Plan

The San Bernardino County General Plan contains a Hazards Element, which addresses wildfires. It mandates the development of Community Wildfire Protection Plans (CWPP) for mountain communities, compliance with the County's Tree Preservation Ordinance, improvements to public notification systems, and the continued monitoring of post-wildfire debris flow hazard evaluation and prediction methodologies. Specific applicable goals and policies related to fire hazards within the County of San Bernardino include, but are not limited to:[48]

- Goal HZ-1: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by natural environmental hazards and adaptation to potential changes in climate
- Policy HZ-1.2: All new development is required to be built outside of high or very high fire hazard severity zones. For any lot or parcel that does not have sufficient buildable area outside of such hazard areas, mitigation is required.
- Policy HZ-1.7: Underground utilities are required to be designed to withstand seismic forces, accommodate ground settlement, and be hardened to fire risk.

Imperial County General Plan

The Land Use Planning and Public Safety and Emergency Preparedness Elements of the Imperial County General Plan have established goals related to protection of public health and safety for consideration in the land use planning process. The specified goals and objectives are intended to minimize potential hazards to public health and safety and prevent the loss of life and damage to properties and rely heavily on ensuring conformance with established applicable state codes. However, the Plan does not include any goals or policies relating directly to wildfire at this time.[49]

Orange County General Plan

The Safety Element of the Orange County General Plan provides for the protection of people and property from risks associated with hazards, including those affiliated with wildfire, through the implementation of mitigation measures as outlined in the California Emergency Plan, the California Master Mutual Aid Agreement, the Orange County Emergency Plan, the Orange County Operational

Area Plan, S.O.N.G.S. Plan, County of Orange and Orange County Fire Authority Hazard Mitigation Plan, and other emergency management plans. The Safety Element of the Orange County General Plan focuses primarily upon the County's planned response to extraordinary emergency situations associated with natural disasters, technological incidents, intentional acts of terrorism and nuclear protection operations. To reduce the County's susceptibility and vulnerability to extraordinary emergency situations, the Safety Element recommends continued emphasis is placed on several coordinated efforts:[50]

- Mitigation
- Emergency planning
- Training of full-time, auxiliary, and reserve personnel
- Public awareness and education; and assuring the adequacy and availability of sufficient resources to cope with such emergencies

In November 2015, the Board of Supervisors adopted a new County of Orange and Orange County Fire Authority Hazard Mitigation Plan (HMP) in compliance with federal and state regulations.[51]

The County's Wildland Fire Defense Planning and Prevention oversees it's READY! SET! GO! program, which aims to reduce wildland fire risk through a formalized fuel modification inspection and enforcement program, and monitors wildland and vegetation conditions to identify potential hazards, ensuring communities in the wildland urban interface areas are better protected from the risk of wildland fire. Specific applicable goals and policies related to fire safety within the Safety Element of the Orange County General Plan are:

Goal 1: Provide a safe living environment, ensuring adequate fire protection facilities and resources to prevent and minimize the loss of life and property fire.

> Policy 1: To encourage periodic updating of fire hazard mapping and continue to analyze existing fire hazard data as it pertains to Orange County.
>
> Policy 13: To improve emergency response times for emergency responders through the use of computer-aided dispatch system and "preempt traffic signal control" system.

51 County of Orange, Orange County Fire Authority. 2015. *Local Hazard Mitigation Plan.* Available online at: https://www.smwd.com/DocumentCenter/View/2193/APPENDIX-H_OC-HMP-Final, accessed August 20, 2019.

Ventura County General Plan

The Safety Element of the Ventura County General Plan contains specific goals to minimize the risk of loss of life, injury, serious illness, damage to property, and economic and social dislocations resulting from fire hazards and wildfire. Additionally, the Plan identifies areas with high fire hazard severity zones and lists specific management practices to protect those who currently live within such a zone, and prepare appropriate development and management in the future. Specific policies related to fire hazards within Ventura County include, but are not limited to:[52]

- Minimize the risk of loss of life, injury, damage to structures, and economic and social dislocations resulting from fire hazards.
- Ensure that development in high fire hazard areas is designed and constructed in a manner that minimizes the risk from fire hazards.
- Require at least two means of access for emergency vehicles and resident evacuation for new residential subdivisions, except if otherwise permitted by County Fire Chief.

City General Plans

The SCAG region spans six counties and 191 cities, each of which has a general plan that contains policies related to hazards, including those related to fires. Additional plans and ordinances at the master plan level, city-level, and specific plan level may also apply within the SCAG region. Furthermore, fire departments and other agencies in the SCAG region have a variety of local laws that regulate reporting, storage, handling, and transporting hazardous substances and materials.

3.20.3 ENVIRONMENTAL IMPACTS

3.20.3.1 Thresholds of Significance

For the purposes of this PEIR, SCAG has determined that adoption and/or implementation of the Plan could result in significant adverse impacts related to wildfire risk, if transportation projects and anticipated development projects are located in or near SRAs or lands classified as very high hazard severity zones and would result in any of the following:

---

52 Ventura County. 2019. *2040 General Plan: Preliminary Public Review Draft*. Available online at: https://vc2040.org/images/2040_General_Plan_Files_-_May_2019/PPRD_2040_General_Plan_COMPLETE-compressed.pdf, accessed August 20, 2019.

- Substantially impair an adopted emergency response plan or emergency evacuation plan (this criterion is addressed in **Section 3.17, Transportation, Traffic, and Safety**);

- Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;

- Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or

- Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

In addition, the following criterion from **Section 3.9, Hazards and Hazardous Materials,** is addressed along with wildfire:

- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires

3.20.3.2 Methodology

The methodology for determining the significance of the Plan's impacts to wildfire response and related hazards and infrastructure compares the existing conditions to future (2045) conditions. Wildfire conditions and hazards within the SCAG region were evaluated at the programmatic level of detail, in relation to the general plans of the six counties and 191 cities within the SCAG region; the management plans for the four national forests in the SCAG region, Angeles National Forest, San Bernardino National Forest, Los Padres National Forest, and Cleveland National Forest; the California Department of Forestry and Fire Protection, and a review of related literature germane to the SCAG region.

The Plan includes transportation projects as well as regional transportation and land use strategies. Although land use development is anticipated to occur within the region even without the Plan, Connect SoCal includes regional land use strategies that could influence growth, including distribution patterns, throughout the region. This analysis considers the Plan's impacts on wildfire hazards, provides mitigation measures, where necessary, and addresses the environmental effects related to wildfire hazards. The potential for impacts related to wildfire was assessed by evaluating the location of existing and planned major transportation projects in relation to surrounding land uses and fire hazard severity zones. Because some transportation projects and growth under the Plan could be located in or near SRAs or lands classified as very high hazard severity zones, all potential wildfire impacts are analyzed below.

The mitigation measures in the PEIR are divided into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the Plan. For projects proposing to streamline environmental review pursuant to SB 375, SB 743 or SB 226 (as described in **Chapter 1.0, Introduction**), or for projects otherwise tiering off this PEIR, the project-level mitigation measures described below (or comparable measures) can and should be considered and implemented by lead agencies and project sponsors during the subsequent, project- or site-specific environmental reviews for transportation and development projects as applicable and feasible. However, SCAG cannot require implementing agencies to adopt mitigation, and it is ultimately the responsibility of the implementing agency to determine and adopt project-specific mitigation.

3.20.3.3 Impacts and Mitigation Measures

Impact WF-2 **Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.**

Impact HAZ-7 **Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.**

Significant and Unavoidable Impact - Mitigation Required.

The SCAG region is susceptible to wildfires particularly during the summer and fall seasons, especially during Santa Ana wind conditions. Examples of recent fires in the SCAG region include the October 2019 Getty Fire in Los Angeles which was sparked by a tree branch that broke off and landed on nearby powerlines, and the December 2017 Thomas Fire sparked by two power lines touching. Both fires were ignited during strong Santa Ana wind conditions.[53,54] Wildfires have the potential to occur not only in fire-prone undeveloped areas, but also in developed areas where existing transmission lines, lightning strikes, lawn equipment operated over dry grass, fireworks, and even arson may ignite a wildfire. While the urban and developed areas of Riverside, San Bernardino, Imperial, and Ventura counties, may include fire resistant and drought tolerant plants that offer some protection to existing structures, these counties also have more undeveloped areas susceptible to wildfire risks than Los Angeles and Orange counties. According to the Fire Hazard Severity Zones for the area, the rural areas in the SCAG region

53 Los Angeles Times. *DWP power liens hit by tree branch sparked Getty fire that destroyed homes.* Available online at: https://www.latimes.com/california/story/2019-10-29/getty-fire-arson-investigation, accessed October 30, 2019.

54 Los Angeles Times. *Southern California Edison power lines sparked deadly Thomas fire, investigators find.* Available online at: https://www.latimes.com/california/story/2019-10-29/getty-fire-arson-investigation, accessed October 30, 2019.

range from Moderate to Very High under the State's Wildfire Hazard Severity Zones.[55] Population in the SCAG region is expected to grow by 3.2 million people by 2045 and SCAG estimates that an additional 343,000 people and 154,300 dwelling units would be in areas at risk of wildfire (very high fire hazard severity zones). The Plan recognizes inherent constraints to expansive regional growth, and areas that are susceptible to natural hazards and a changing climate must be recognized. Because of this, Connect SoCal sets forth land use strategies that encourage conservation of farmland, resource areas and habitat corridors, and guide growth away from lands that are vulnerable to wildfire, flooding and near-term sea–level rise.

During peak wildfire season where high winds and low humidity may occur, electrical utilities may preemptively shut off power to customers in wildfire-prone areas as a precautionary measure. For example, Southern California Edison began this practice in 2017 and notifies customers two days in advance. At the direction of CPUC, customers who live in high fire risk areas, as defined by CPUC maps, are more likely to experience a power shutoff.[56]

The ongoing crisis of climate change has worsened wildfire conditions in California and the SCAG region. Since the early 1970s, California's annual wildfire extent increased fivefold, punctuated by extremely large and destructive wildfires in 2017 and 2018. This trend was mainly due to an eightfold increase in summertime forest-fire area and was very likely driven by drying of fuels promoted by human-induced warming.[57] Since climate change makes droughts more frequent and severe and makes temperatures warmer in California, the drying of fuels is likely to continue worsening conditions in wildfire-prone areas of the SCAG region.

Wildfires pose a significant public health risk due to their air quality impacts, particularly with regard to smoke and particulate matter exposure. This risk persists even after a wildfire is extinguished because particulate matter from fire ash can be picked up by winds. In addition, as discussed in **Section 3.8, Greenhouse Gases**, wildfires release substantial amounts of greenhouse gases.

Connect SoCal's land use strategies deemphasize development on agricultural lands in unincorporated counties, and in areas subject to future two–foot sea level rise. To further prioritize natural habitat areas

57 Williams, A. P., Abatzoglou, J. T., Gershunov, A., Guzman-Morales, J., Bishop, D. A., Balch, J. K., & Lettenmaier, D. P. (2019). Observed impacts of anthropogenic climate change on wildfire in California. Earth's Future, 7, 892–910. Available online at: https://doi.org/10.1029/2019EF001210, accessed September 10, 2019.

and avoid impacts to the environment, Connect SoCal's strategies seek to avoid growth in wetlands, wildlife corridors, biodiverse areas, wildfire prone areas and floodplains. The Plan includes greenbelts and community separators to serve as contiguous areas that support land conservation. Creating a sustainable, "green" region requires that the built environment and natural resource areas coexist in a well–balanced land use pattern that encourages mutual co–benefits. The quality and range of conservation, natural and agricultural areas present in the region can be reinforced and enhanced by a range of regional and local tools. Paired with an emphasis on compact development, Connect SoCal's conservation strategies promote the economic and ecological benefits of preserving natural areas and farmlands, while also maximizing their potential for greenhouse gas reduction. New housing and employment development is emphasized in Growth Priority Areas, such as Job Centers, TPAs, HQTAs and NMAs, and away from natural and farm lands on the edges of urban and suburban areas, to incentivize infill development and the concentration of varied land uses. This emphasis on concentrated, compact growth makes it easier to travel shorter distances, which reduces per–capita greenhouse gas emissions. In addition, natural areas and farmlands have the capacity to absorb and store atmospheric carbon dioxide, preventing additional contributions of GHG emissions. Natural lands conservation has the co-benefit of protecting communities from major hazards caused or exacerbated by climate change, such as wildfires and flooding.

Furthermore, wildfire-prone areas tend to pose accessibility challenges for vehicular access points due to topography. These roads could face more gridlock in the event of a sudden emergency evacuation than flat, urbanized areas may experience. Such circumstances could expose vehicle occupants to active flames and potential death, as was seen in the recent Camp Fire in Paradise and the Woolsey Fire in Malibu in 2018.[58] Transportation projects and anticipated development projects may be located in wildfire-prone areas which could potentially exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from wildfires or the uncontrolled spread of wildfires, particularly those populations living down wind of the fire. As such, impacts would be significant and unavoidable. Mitigation is required.

Mitigation Measures/

SCAG Mitigation Measures

SMM WF-1: SCAG shall facilitate minimizing future impacts to fire protection services through information sharing regarding Fire-wise Land Management (vegetation data, fire-resistant building materials, locations where development is vulnerable to wildfire, and best

58 New York Times, *Forced Out by Deadly Fires, Then Trapped in Traffic.* Available online at: https://www.nytimes.com/2018/11/11/us/california-fire-paradise.html, accessed September 18, 2019.

practices for safe land management) with county and city planning departments. Furthermore, SCAG shall examine wildfire risk management strategies in areas where at-risk critical electrical infrastructure is located based on CPUC and CAL FIRE maps.

SMM WF-2: SCAG, in partnership with technical experts and stakeholders shall launch or continue existing initiatives to help local cities and counties to protect Southern California communities and economies from the disruption of wildfire occurrences. Initiatives could include but not be limited to seminars that review the risk of wildfire and approaches for preparation, including strengthening of infrastructure, emergency services, emergency evacuation plans and reviewing building safety codes.

SMM WF-3: SCAG shall develop a regional resilience program and identify specific strategies to reduce vulnerabilities from natural disasters related to land based or atmospheric hazards, climate change, wildfire and other extreme weather events.

Project Level Mitigation Measures

PMM WF-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to wildfire risk, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) Launch fire prevention education for local cities and counties such that local fire agencies, homeowners, as well as commercial and industrial businesses are aware of potential sources of fire ignition and the related procedures to curb or lessen any activities that might initiate fire ignition.

b) Ensure structures in high fire risk areas are built to current state and federal standards which serve to greatly increase the chances the structure will survive a wildfire and also allow for people to shelter-in-place.

c) Improve road access for emergency response and evacuation so people can evacuate safely and timely when necessary.

d) Improve, and educate regarding, local emergency communications and notifications with residents and businesses.

e) Enforce defensible space regulations to keep overgrown and unmanaged vegetation,

accumulations of trash and other flammable material away from structures.

f) Provide public education about wildfire risk and fire prevention measures, and safety procedures and practices to allow for safe evacuation and/or options to shelter-in-place

Level of Significance after Mitigation

As discussed above, regulations and polices would reduce impacts but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this EIR identifies project-level mitigation measures consistent with applicable regulations and polices designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and lack of project-specific detail, including project locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to exacerbating wildfire risk and exposure of residents to pollutants could be significant and unavoidable even with implementation of mitigation.

Impact WF-3 **Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risks or that may result in temporary or ongoing impacts to the environment.**

Significant and Unavoidable Impact - Mitigation Required.

The SCAG region is a mix of urban and rural communities, natural woodland areas, as well as semi-desert areas. Future development and/or re-development in these areas has the potential to require the installation of new roadways or infrastructure facilities such that there is an increased risk of new ignition sources generating the spread of wildfires. Areas with dry vegetation have the potential to exacerbate wildfire risk due to future development activities that could generate flammable debris piles. This is particularly true in the rural and underdeveloped parts of the SCAG region. Future roadway and development construction in such areas, while likely to be less in the future, may still occur, such development has the potential to result in significant impacts as a result of construction equipment generating sparks or oil spill and other combustible materials leading to the start and spread of wildfires. Newer electrical equipment providing power to any new homes developed in fire prone areas is anticipated to be fitted with fire-safe devices, but hazards may remain as a result of electricity infrastructure as well as common fire hazards associated with human habitation.

The Plan includes land use strategies that encourage further development in urban areas. As discussed above, natural lands conservation has the co-benefit of protecting communities from major hazards caused or exacerbated by climate change, such as wildfires and flooding.

Nonetheless, it is expected that new development will also occur in rural or suburban areas which may have a greater wildfire risk. Increased development, in combination with a push for more electrical infrastructure (e.g., SB 100), may result in increased wildfire risk due to power lines. SCE maintains a policy to shut off power to its lines during high wildfire probability events (i.e., when conditions are such that wildfire is a high probability) which would help to reduce potential impacts.[59] In addition, many local jurisdictions and plans require undergrounding of electrical infrastructure which also helps to reduce risk of wildfire. Due to the anticipated number of greenfield areas that would be converted to other land uses under the Plan, development may continue to occur in urban/wildlands interface areas which would necessitate infrastructure such as power poles that could result in wildfire risk. As such, significant impacts would occur and mitigation measures are required.

Mitigation Measures

SCAG Mitigation Measures

See **SMM-WF-1, SMM WF-2, SMM AG-4,** and **SMM BIO-3.**

Project Mitigation Measures

See **PMM HAZ-4**.

PMM WF-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to wildfire risk, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

a) New development or infrastructure activity within very high hazard severity zones or SRAs shall be required to

1) Submit a fire protection plan including the designation of fire watch staff;

2) Maintain water and other fire suppression equipment designated solely for firefighting on site for any construction and maintenance activities;

59 Southern California Edison. *Public Safety Power Shutoff.* Available online at: https://www.sce.com/safety/wildfire/psps, accessed October 30, 2019.

3) Locate construction and maintenance equipment in designated "safe areas" such that they do not discharge combustible materials; and

4) Designate trained fire watch staff during project construction to reduce risk of fire hazards.

Level of Significance after Mitigation

As discussed above, regulations and policies would reduce impacts, but given the regional scale of the analysis in this PEIR, it is not possible to determine if all impacts would be fully mitigated by existing regulations and policies. Therefore, this EIR identifies project-level mitigation measures consistent with applicable regulations and policies designed to reduce impacts. Lead Agencies may choose to include project-level mitigation measures in environmental documents as they determine to be appropriate and feasible. However, because of the regional nature of the analysis and the lack of project specific-detail, including project components and locations, and SCAG's lack of authority to impose project-level mitigation measures, this PEIR finds impacts related to installation of infrastructure that could exacerbate fire risks could be significant and unavoidable even with implementation of mitigation.

Impact WF-4 **Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope stability, or drainage changes.**

Significant and Unavoidable Impact - Mitigation Required.

Wildfires are becoming more and more common and intense in all areas within the SCAG region. While the Plan focuses development in urban and compact areas, SCAG recognizes there will continue to be development towards, and through natural wildland areas. The Plan estimates consumption of 41,546 greenfield acres and identifies and additional 154,300 housing units in very high fires hazard zones by 2045, These potential fire-prone spaces have created situations where people and property could be impacted by wildfire and associated subsequent hazards (flooding, landslides, etc.). As discussed **in Section 3.10, Hydrology and Water Quality**, in Southern California, intense rainfall may occur during the winter months, creating natural flooding events when the ground in saturated and water levels are high. This has the potential for flooding issues, and fire hazards may exacerbate such flooding and debris flows along waterways. Since debris flows may occur quickly and without warning, such flows can damage structures, block drainage or even sweep away vegetation resulting in tenuous post-fire slope stability. Fast moving debris flows can be one of the most dangerous post-fire hazards. Due to the loss of vegetation and potential resulting soil erosion, debris flows may cause a risk to life and physical property, destroy or strip vegetation, block existing drainage patterns, and impact roadways and other

infrastructure. If this were to occur within the 100-year floodplain areas, existing flow conditions may be altered, or new sources of flooding may be created. This has the potential to alter peak flow conditions and affect upstream, as well as downstream areas. Typically, debris flow from fire damaged areas may be a result of excessive rainfall runoff and surface erosion, since previously-burned slopes repel water and generate higher runoff rates. This can be especially true in the higher elevation areas, with steep slopes and limited drainage basins. Post-fire debris flows are typically triggered by heavy rainfall in areas already damaged by recent wildfire events, and susceptible to soil erosion.

Debris flows could affect both the transportation network, utilities, and new development. In December 2018, the Thomas Fire burned through Ventura and Santa Barbara Counties, leading to loss of vegetation and soil erosion along sloped hillsides. Subsequently, a strong storm poured five inches of rain onto charred hillsides over a short period of time on January 9, 2019. The storm resulted in deadly mudslides, caused extensive property damage, and caused the closure of US-101 for nearly two weeks.[60,61] A similar incident occurred in Malibu as a result of a mudslide following the Woolsey Fire, which forced the closure of a 13-mile stretch of Pacific Coast Highway.[62] Furthermore, mudflows could expose people to hazards posed by ruptured methane gas pipelines, as occurred in Burbank in January 2018 following the La Tuna Fire of September 2017.[63] Development of homes and infrastructure is anticipated to continue to occur in areas of the region that are subject to wildfire hazards, despite the Plan's focus on adding development to existing urban areas. Due to the anticipated increased consumption of greenfields under the Plan, development may continue to occur in urban/wildlands interface areas which would result in significant risks for people and structures. Therefore, the impacts would be significant and unavoidable, requiring mitigation.

3.21 CUMULATIVE IMPACTS

Section 15130 of the *State CEQA Guidelines* requires that an EIR evaluate potential environmental impacts that are individually limited but cumulatively significant. CEQA defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts" (*State CEQA Guidelines* § 15355). "'Cumulatively considerable' means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (*State CEQA Guidelines* § 15065(a)(3)).

The purpose of a cumulative analysis is to determine if several projects when evaluated together could result in a significant "cumulative" impact that would otherwise not be considered significant when projects are evaluated one at a time. If several projects considered together have the potential to result in a significant cumulative impact (that is not already identified as a significant project impact), the question becomes whether the project being analyzed would result in a "considerable" contribution to such a significant cumulative impact. Therefore, if a project results in a significant impact by itself, then its contribution to a cumulative impact is considerable. Mitigation measures that reduce project impacts would similarly reduce a project's contribution to cumulative impacts.

Connect SoCal is a planning project that is comprised of multiple other planning projects as well as transportation and development projects. Therefore, the analysis of the Plan is cumulative in nature. At this regional-scale, cumulative projects that are considered cumulative to and similar to the proposed Plan are other regional-scale projects primarily consisting of RTPs/SCSs for adjacent jurisdictions and AQMPs.

The proposed Plan includes transportation projects throughout the SCAG region and land use development patterns to accommodate projected regional growth through 2045. The Plan also includes land use and transportation strategies that complement the projects and vice versa. As such, the impacts of Connect SoCal is cumulative on a regional scale. Therefore, the environmental analysis included in each issue area of this PEIR is, in essence, a cumulative analysis of the potential impacts of the transportation projects and growth anticipated to occur under the Plan. Furthermore, this PEIR considers other regional-scale projects that have similar regional-scale impacts that could overlap with impacts of the Plan, for identified CEQA impact areas. Such regional scale cumulative projects include RTPs and similar regional-scale plans for neighboring jurisdictions (Santa Barbara, Kern and San Diego counties) as well as Air Quality Managements Plans within the SCAG region and neighboring jurisdictions.

CEQA allows for analysis of cumulative impacts based on a list of cumulative projects or projections of growth. This PEIR uses a combination of approaches. The analysis of cumulative impacts is qualitative and based on anticipated growth in adjacent jurisdictions assuming that each jurisdiction will adopt an RTP and AQMP as applicable and that growth will be consistent with Department of Finance (DOF) forecasts.

Cumulative impacts occur in one of two ways: 1) impacts from one project overlap with impacts from another project, so for example with respect to the Plan, traffic from within the SCAG region could overlap with traffic from an adjacent county to impact the same transportation facilities (the SCAG Regional Travel Demand Model accounts for travel from adjacent jurisdictions); 2) the other way that cumulative impacts occur is when a resource is of value to a broader community than just the immediate project vicinity, for example, impacts to a cultural or biological resource that has more than local significance, for example state or even national significance, impacts to such a resource would be cumulative with impacts to other resources of similar significance wherever they occur in the state or across the entire US.

The geographic area for evaluation of cumulative impacts is the area within which impacts of the proposed Plan could overlap with impacts of other regional-scale projects. In general, the areas that could experience overlapping impacts are on the periphery of the region where growth from the Plan and growth in accordance with other plans could occur and result in overlapping impacts.

The potential for cumulative or overlapping impacts is contemplated at four basic geographies, the SCAG region, adjacent jurisdictions, the state, and global (see **Table 3.21-1, Cumulative Impact Analysis Geographies**). Although there is some potential for categories to overlap, for example, recreational impacts may occur at the SCAG regional geography as well as the adjacent county and state level.

For purposes of the cumulative analysis, the qualitative discussion identifies how impacts could overlap; **Table 3.21-1** provides an approximate guide of the primary focus of the cumulative analysis and is not intended to limit the geography of a particular cumulative analysis where impacts may overlap at a number of levels.

Table 3.21-1
Cumulative Impact Analysis Geographies

SCAG Region	Adjacent Jurisdictions (San Diego, Santa Barbara, Kern)	State of California	Global
Air Quality -- Localized Impacts	Air Quality – Regional Impacts	Agriculture and Forestry Resources	Greenhouse Gases
Biological Resources	Biological Resources	Public Services – Park and Recreation (Regional Facilities)	Paleontological
Cultural Resources	Cultural Resources	Solid Waste Wastewater	
	Transportation and Traffic	Water Supply	
Noise	Public Services – Fire, Police, Schools, Libraries, Parks and Recreation (Local Facilities)	Energy	
	Aesthetics	Mineral Resources	
	Noise	Tribal Cultural Resources	
	Hazards and Hazardous Materials	Biological Resources	
	Hydrology and water quality	Paleontological	
	Population and Housing	Transportation	
	Land Use and Planning		
	Mineral Resources		
	Wildfire		

Source, Impact Sciences, 2019

3.21.1 AESTHETICS

Connect SoCal includes transportation projects and land use strategies that would shape the region over the next 25 years. As discussed in **Section 3.1, Aesthetics,** these changes include the extension of transportation and related infrastructure and expansion of urbanized areas that would impact scenic resources. Transportation projects could facilitate access not only within SCAG boundaries but also to areas outside the region. In addition, Plan projects would connect with projects outside the region facilitating and potentially inducing construction of transportation infrastructure and development outside the region. Some of these changes would be expected on the fringe of the region (e.g. projects along the border of Los Angeles and Kern Counties). Urbanization or loss of these visual resources could also affect areas outside the region as many of these scenic areas extend beyond SCAG borders. As a result, the Plan could indirectly cause changes to the visual character or to scenic areas outside the region. Therefore, the Plan would contribute to cumulative impacts to scenic resources and visual character. Implementation of **Mitigation Measures SMM AES-1** and **PMM AES-1** through **PMM AES-2** would

reduce potential impacts to aesthetic resources. However, even with the implementation of mitigation measures, impacts are considered significant and could add to such impacts from cumulative projects (for example other RTPs for surrounding jurisdictions) outside the region.

3.21.2 AGRICULTURE AND FORESTRY

Under the Connect SoCal Plan, consumption of farmland is anticipated. These impacts would be the direct result of either implementation of transportation projects or development anticipated to occur due to projected growth under the Plan. As discussed in **Section 3.2**, **Agriculture and Forestry Resources**, impacts to agricultural and forestry resources from the Plan are considered significant and unavoidable. Loss of farmland would worsen the conversion of agricultural lands due to urbanization throughout the state. The 2015 California Farmland Conversion Report ranks the Southern California region at the top in net acres converted to urban land, with Riverside County ranked second at the county level.[1] The Southern California and San Joaquin Valley regions accounted for the largest urban growth in terms of acreage.[2] Implementation of **Mitigation Measures SMM AG-1,** through **SMM AG-4** and **PMM AG-1** would reduce impacts, but as other California regions continue to urbanize, agricultural land in the state may continue to be lost due to land use conversion, contributing to cumulative statewide significant impacts.

The Plan has the potential to conflict with Williamson Act lands or existing zoning for agricultural use. **Mitigation Measures SMM AG-1** through **SMM AG-2** and **PMM AG-1** through **PMM AG-2** would reduce impacts, but they are still considered significant. As noted above, through the increasing urbanization, other regions adjacent to SCAG boundaries may also convert agricultural lands to urban uses and conflict with existing zoning.

The Plan would have a significant impact regarding forest lands. Transportation projects included in the Plan that would result impact to forest lands include highway expansion, highway widening projects, and potential connectors. Projects in adjacent regions could convert forestry resources and forest lands due to development, resulting in cumulative impacts.

The Plan would involve other changes in the environment which, due to their location or nature, could convert Farmland to non-agricultural use or conversion of forest land to non-forest use. Implementation of **Mitigation Measures SMM AG-1** through **SMM AG-2** as well as **SMM GHG-1** through **SMM GHG-**

---

1 California Department of Conservation. 2015. *California Farmland Conversion Report 2015*. Available at: https://www.conservation.ca.gov/dlrp/fmmp/Documents/fmmp/pubs/2010-2012/FCR/FCR%202015_complete.pdf, accessed November 5, 2019.

2 Ibid.

5 and **PMM AG-2** as well as **PMM GHG-2** would reduce impacts, but they are still considered significant. As development pressure from conversion of Farmland to urban uses increases, lands adjacent to SCAG boundaries may feel the same indirect pressure to develop and convert lands. Therefore, there would be a significant cumulative impact.

3.21.3 AIR QUALITY

Connect SoCal is a regional plan that integrates transportation investments with land use strategies for the SCAG region. As such, the analysis of air quality impacts presented is inherently cumulative. As discussed in **Section 3.3, Air Quality**, the Plan would result in significant impacts as a result of short-term emissions of criteria pollutants and as a result of sensitive receptors being in proximity to sources of TACs (**Impact AQ-4**). However, the Plan could also contribute to air quality impacts outside the SCAG region itself. The cumulative analysis impact area for air quality consists of air basins that extend beyond the SCAG boundaries, such as the Mojave Desert Air Basin that extends into Kern County. Implementation of the Connect SoCal Plan combined with cumulative development outside of the SCAG region would add to the significant air quality impacts of the Plan.

Implementation of **Mitigation Measures SMM AQ-1** through **SMM AQ-3** and **PMM AQ-1** through **PMM AQ-3** would reduce the contribution to cumulative air quality impacts; however, the Plan's impacts would remain significant and would add to the impacts of other RTPs in surrounding jurisdictions.

3.21.4 BIOLOGICAL RESOURCES

As discussed in **Section 3.4**, **Biological Resources,** Connect SoCal would result in impacts to sensitive species as well as habitat fragmentation and loss and disturbance. Implementation of **Mitigation Measures SMM BIO-1** through **SMM BIO-2 and PMM BIO-1** through **PMM BIO-6** would reduce impacts to biological resources but impacts would remain significant. Many of these impacts would be the direct result of either transportation improvements or development. Impacts to sensitive species, as well as loss of habitat and habitat fragmentation would contribute to similar statewide impacts. Many important habitat corridors cross the SCAG region's boundaries. As a result, the loss of an important corridor, or fragmentation of habitat could limit the movement of wildlife species resulting in additional cumulative impacts. Similarly, fragmentation could reduce the viability of a species beyond the plan area. Therefore, the significant impacts to biological resources anticipated to result from transportation and development projects occurring under the Plan would contribute to cumulative biological resources impacts outside of just the SCAG region, including effects throughout California.

3.21.5 CULTURAL RESOURCES

The Plan includes transportation projects and land use strategies that will shape the region over the next 25 years. As discussed in **Section 3.5**, **Cultural Resources,** these changes include the extension of transportation and related infrastructure that would impact cultural resources through activities such as demolition of historical resources or indirect impacts such as changing the historic context of the resource. In addition, Plan projects will connect with projects outside the region, thereby facilitating and potentially inducing construction of transportation infrastructure outside the region. This additional infrastructure could lead to additional development, both inside and outside the region. Plan impacts would add to cultural resource impacts of cumulative projects (transportation projects and development in accordance with RTP plans of adjacent jurisdictions). Implementation of **Mitigation Measures SMM CULT-1** and **PMM CULT-1** and **PMM CULT-2**, would reduce the contribution to cumulative impacts to cultural resources. However, the Plan would still result in significant impacts to historical resources as well as archaeological resources and would contribute to significant cumulative impacts. Although in general cultural and historical impacts are specific to a smaller area (region), there is the potential for the project to contribute to impacts in adjacent counties.

3.21.6 ENERGY

Impacts to energy related to implementation of the Plan are analyzed in **Section 3.6, Energy.** The increase in energy demand that is anticipated to occur as population increases in the SCAG region would contribute cumulatively to state increases in energy consumption. The state population is anticipated to continue to grow throughout the implementation period of the Connect SoCal Plan, reaching over 47 million by 2045.[3] Inland areas within the state will grow at higher rates, as the Inland Empire, San Joaquin Valley, and the Sacramento region experience faster growth.[4] The population growth reflects California's increasing energy demand, with the lowest 2030 estimates indicating an annual consumption demand of 326,026 GWh.[5] Transportation energy demand will see significant changes in response to increasing vehicle electrification, higher vehicle fuel economy, and hydrogen fuel demand. Although California's population and economy are expected to grow, gasoline consumption is projected to decline by 2030.[6] Diesel demand and demand for hydrogen fuel will continue to rise during same period.[7] The

4 Public Policy Institute of California. 2016. *California's Future*. Available at: https://www.ppic.org/content/pubs/report/R_116HJ3R.pdf, accessed November 6, 2019.

5 California Energy Commission. 2018. *California Energy Demand 2018-2030 Revised Forecast*. Available at: https://ww2.energy.ca.gov/2017_energypolicy/documents/, accessed November 6, 2019.

6 California Energy Commission. 2017. *Transportation Energy Demand Forecast, 2018-2030*.

various counties and cities within the SCAG region, in accordance with state law, will require the implementation a variety of energy efficiency measures to decrease energy consumption as a means to reduce GHG emissions. The Plan aims to reduce energy consumption and GHG emissions, and would comply with the state's goals, as adjacent counties' regional plans would also comply with state goals. Energy impacts would be less than significant. Therefore, the Plan would not cumulatively contribute to wasteful, inefficient, or unnecessary consumption of energy resources.

3.21.7 GEOLOGY AND SOILS

Impacts to geology and soils related to implementation of the Plan are analyzed in **Section 3.7, Geology and Soils**. The SCAG region extends primarily over four California geomorphic provinces: the Mojave Desert, the Transverse Ranges, the Peninsular Ranges, and the Colorado Desert.[8] These geomorphic provinces include several active faults, and they extend beyond SCAG's boundaries to neighboring counties. However, geologic effects occur independently of one another and are related to site-specific and project-specific characteristics and conditions. In addition, existing regulations specify mandatory actions that must occur during project development, which would adequately address the potential for effects from construction or operation of projects related to exposure to seismic hazards. Since the implementation of the Plan would not exacerbate existing geologic hazards including fault rupture, in addition to the fact that there are already numerous regulations in place to reduce such risks to any planned development or transportation project, geologic impacts would be less than significant and the Plan would not result in a considerable contribution to cumulative impacts.

The paleontology of the SCAG region is as equally diverse as the geologic diversity. The Plan's ground disturbing activities would potentially impact paleontological resources. Ground-disturbing activities such as excavation for building foundations and bridges, trenching for utility lines, tunneling, and grading, could damage or destroy sensitive paleontological resources on or near the surface or at depth. Implementation of **Mitigation Measures SMM-GEO-3** and **PMM-GEO-1** would reduce the level of impacts but would still be considered significant. Paleontological resources, and important paleontological finds may still occur. For example, in 2005 a Mammoth was discovered in the City of Moorpark. The fossils were dated as between 400,000 and 1.8 million years old Such finds, while locally important, provide important contextual information to the state's history and beyond. The loss of such resources would be cumulatively considerable.

3.21.8 GREENHOUSE GASES

In general, GHG emissions analyses are by nature cumulative as impacts from GHG emissions are global, and there is currently no method to tie local impacts to specific sources. Emissions from any single project mix in the atmosphere and contribute to local, regional, and global impacts over long periods of time. Consequently, any project specific GHG analysis is inherently a cumulative analysis. The analysis presented in **Section 3.8, Greenhouse Gases,** is also a cumulative analysis in that it considers the entire SCAG region as the project site, includes all growth in residential and commercial space as well as region-wide vehicle traffic, and compares these impacts to statewide plans and regulations. In this way, it includes all projects of a similar nature and compares the total impact to regional thresholds. Adjacent jurisdictions in preparing their RTPs will similarly evaluate GHG emissions; in addition, air quality management districts will evaluate emissions associated with stationary and other non-mobile sources and local jurisdictions will more precisely quantify emissions associated with individual projects. Consequently, the analysis presented in **Section 3.8** of this PEIR is a cumulative analysis, and no separate assessment of cumulative effects is needed.

3.21.9 HAZARDS AND HAZARDOUS MATERIALS

Impacts associated with hazards and hazardous materials related to implementation of the proposed Plan are analyzed in **Section 3.9, Hazards and Hazardous Materials**. Hazards and hazardous materials impacts may be related to the transport, use, or disposal of hazardous materials, create a significant hazard through upset or accident conditions involving release of hazardous materials, hazardous materials within one-quarter mile of an existing or proposed school, location on a known hazardous materials site, airport-related hazards, and conflict with an emergency response plan. These effects occur independently of one another, related to site-specific and project-specific characteristics and conditions. However, the analysis in **Section 3.9** concluded there would be significant and unavoidable effects regarding impacts to transport of hazardous materials, release of hazardous materials, hazardous materials within one-quarter mile of a school, location on a known hazardous materials site, and conflict with an emergency response plan. Implementation of **Mitigation Measures SMM HAZ-1** through **SMM HAZ-5** as well as **SMM TRA-5** and **PMM HAZ-1** through **PMM HAZ-1** through **PMM HAZ-5** as well as **PMM TRA-5** would reduce the Plan's impacts, but they would remain significant. These impacts have the potential, due to transportation projects and land use strategies, to have effects beyond SCAG boundaries, particularly to adjacent jurisdictions. Therefore, implementation of the Plan would have significant cumulative impacts.

3.21.10 HYDROLOGY AND WATER QUALITY

As discussed in **Section 3.10, Hydrology and Water Quality,** the Plan would result in significant impacts related to water quality, groundwater recharge, flood hazards and water supply. The land use strategies included in the Plan would result in a more compact development pattern that would be more water efficient. The water providers within the SCAG region that serve the population would need to coordinate water supply with nearby jurisdictions. Given the unreliability of water supply in the region, the increase of approximately 3.2 million people would result in a significant impact to water supply that would add to the impacts of development in surrounding jurisdictions. The Plan could also facilitate access to other areas of the state by increasing infrastructure which could ultimately influence growth (and associated impermeable surfaces) in areas outside SCAG boundaries. **Mitigation Measures SMM HYD-1** through **SMM HYD-2** and **PMM HYD-1** through **PMM HYD-2** would reduce impacts, but they would remain significant. This could result in greater impacts to water quality and could affect water in areas outside the SCAG region. Therefore, the Plan would result in significant cumulative impacts.

3.21.11 LAND USE AND PLANNING

As discussed in **Section 3.11, Land Use and Planning,** implementation of the Connect SoCal Plan has the potential to physically divide an established community and to conflict with existing land use plans. The Plan would result in an increase in density and land use development. Improved accessibility from the Plan could help facilitate urbanization to areas outside the region. Furthermore, changes in land use patterns in the region (i.e. increased urbanization) could affect areas outside the region, resulting in increased urbanization in adjacent jurisdictions. Implementation of **Mitigation Measures SMM LU-1** through **SMM LU-4** and **PMM LU-1** through **PMM LU-2** would reduce impacts, but they would remain significant. Therefore, the Plan would result in significant cumulative land use impacts.

3.21.12 MINERAL RESOURCES

Impacts to mineral resources related to implementation of the Plan are analyzed in **Section 3.12**. The analysis concluded that there would be a significant and unavoidable impact regarding the loss of known mineral resources occurring from transportation projects and land use strategies in the Plan. Aggregate resources used in construction activities throughout the SCAG region would potentially be reduced due to the Plan's transportation projects and anticipated development under the Plan. The Plan could worsen depletion of aggregate supply which would impact surrounding areas and the state. **Mitigation Measures SMM MIN-1** and **PMM MIN-1** would reduce impacts, but they would remain significant. Therefore, the Plan would have significant cumulative impact on mineral resources adding to the impact from development of areas outside the SCAG region.

3.21.13 NOISE

As discussed in **Section 3.13, Noise,** the Plan would result in significant impacts related to increases in noise. Changes resulting from the Plan include the extension of transportation and related infrastructure that would result in new noise sources as well as increased noise from some existing sources. Implementation of **Mitigation Measures SMM NOISE-1** and **PMM NOISE-1** would reduce noise and vibration impacts, however they would remain significant. Many of the transportation projects could facilitate access not only within SCAG boundaries but also areas outside the region to adjacent jurisdictions. In addition, Plan projects will connect with projects outside the region, facilitating and potentially inducing construction of transportation infrastructure outside the region. Construction noise and vibration impacts are generally site specific, but to the extent that the Plan might influence growth outside the region, it could result in construction noise outside the region. As population in the region continues to increase, the Plan could also contribute to a cumulatively considerable temporary or permanent increase in noise and vibration outside the region as a result of increased travel. This activity would include railroads, as well as freeway, arterial and transit noise. As a result, there would be a significant cumulative impact.

3.21.14 POPULATION AND HOUSING

As discussed in **Section 3.14, Population and Housing,** implementation of the Connect SoCal Plan could facilitate an increase in population, housing, and employment (although the same increases are anticipated whether or not the Plan is adopted). It is possible that the improved accessibility gained by transportation investments and key land use strategies could result in an increase in population in areas outside the region (as people find it easier to move from outside the region to employment centers within the region). If population increases in areas outside the SCAG region were in excess of forecasts and plans, it could add to cumulative impacts in other jurisdictions. Impacts would be reduced by **Mitigation Measures SMM POP-1** through **SMM POP-4** and **PMM POP-1** would reduce impacts, but they would remain significant. Therefore, the significant impacts of the Plan could contribute to population and displacement impacts of other Plans in neighboring jurisdictions, resulting in a significant cumulative impact.

3.21.15 PUBLIC SERVICES

Fire Protection

As discussed in **Section 3.15.1, Fire Protection,** the Plan would result in significant impacts related to the need for new facilities, the construction of which could cause physical impacts. In general impacts to fire services would be confined to the region and would result from transportation projects and anticipated

growth. It is possible that developments that occur near the region's boundary could result in the need for new or expanded fire protection facilities outside the region. This impact would be cumulatively considerable. In addition, wildfire impacts would be significant. Large fires can extend across regional boundaries requiring firefighters from adjacent regions and beyond to assist on a case-by-case basis. To the extent that the Plan would increase urban uses along the wildland interface and increase fire risk, the chance of a fire requiring multi-regional support also increases. **Mitigation Measures SMM PSF-1** through **SMM PSF-3** and **PMM PSF-1** would reduce impacts but they would remain significant. As a result, the Plan would have a significant cumulative impact.

Police Protection

As discussed in **Section 3.15.2, Police Protection,** the Plan would result in significant impacts related to the need for new facilities. Impacts would be reduced by **Mitigation Measures SMM PSP-1** through **SMM PSP-4** and **PMM PSP-1** would reduce impacts but they would remain significant. In general, impacts as a result of construction of new police facilities would be confined to the immediate area of the construction of each facility. However, as with fire protection, where development and transportation projects are located on the boundary of the region, it is possible that new or expanded facilities would be necessary outside the region. If the construction of such facilities results in a significant impact, the Plan's impact would be cumulatively considerable.

Schools

As discussed in **Section 3.15.3, Schools,** the Plan would result in significant impacts related to the need for new school facilities. **Mitigation Measure SMM PSS-1** would reduce impacts, but they would remain significant. In general, impacts as a result of construction of new schools would be confined to the immediate area of each school. However, if development and transportation projects occur on the boundary of the region, it is possible that new or expanded school facilities would be necessary. If the construction of such facilities results in significant impacts, the Plan's impact would be cumulatively considerable.

Library Services

As discussed in **Section 3.15.4,** the Plan would result in significant impacts related to the need for new facilities. **Mitigation Measure PMM PSL-1** would reduce impacts, but they would remain significant. In general, impacts as a result of construction of new library facilities would be confined to the immediate area of each library. However, if development and transportation projects occur on the boundary of the region, it is possible that new or expanded library facilities would be necessary. If the construction of such facilities results in significant impacts, the Plan's impact would be cumulatively considerable.

3.21.16 PARKS AND RECREATION

To the extent that development may occur on the periphery of the SCAG region, it could increase demand for recreation facilities in surrounding jurisdictions as discussed in **Section 3.16, Parks and Recreation**. Similarly, development on the periphery of these other regions, such as adjacent counties, would result in demand for recreational facilities within the SCAG region. In addition, given the natural resources in the SCAG region, any development in other counties would tend to increase demand for recreation facilities with statewide appeal that are within the SCAG region. Improved transportation infrastructure would facilitate access to these recreational facilities. Impacts would be reduced by **Mitigation Measures SMM REC-1** and **PMM REC-1, PMM AQ-2(b),** and **PMM NOISE-1(b)** but would remain significant. Therefore, the significant impacts of the Plan on existing facilities of statewide appeal would add to similar impacts anticipated to result from RTPs in other jurisdictions, resulting in a significant cumulative impact.

3.21.17 TRANSPORTATION, TRAFFIC, AND SAFETY

As discussed in **Section 3.17, Transportation, Traffic and Safety,** the Plan would result in increases in total VMT and vehicle hours of delay but reductions in per capita VMT and vehicle hours of delay. Implementation of the Connect SoCal Plan would result in an increase in density and land use development over the life of the Plan. Transportation and traffic related impacts would be reduced by **Mitigation Measures SMM TRA-1** through **SMM TRA-8** and **PMM TRA-1** through **PMM TRA-2** but they would remain significant. Implementation of the Plan, combined with growth outside the region, has the potential to conflict with congestion management programs outside SCAG boundaries. Congestion and delay from RTPs in adjacent counties would add to these significant impacts, which would result in a significant cumulative impact. Further, as discussed in Section 3.17 Transportation, the per capita VMT reductions may not be enough to meet the state goals established by CARB. This, combined with other MPO's not achieving reductions in VMT beyond those identified by CARB, would result in a cumulative statewide impact.

3.21.18 TRIBAL CULTURAL RESOURCES

Plan projects will facilitate access to areas outside the region. In addition, Plan projects will connect with projects outside the region, thereby facilitating and potentially inducing construction of transportation infrastructure outside SCAG boundaries. As discussed in **Section 3.18,** implementation of the Plan would result in significant impacts to tribal cultural resources. **Mitigation Measures SMM TCR-1** and **PMM TCR-1** would reduce impacts but they would remain significant. Therefore, the impacts would contribute

to significant cumulative impacts to tribal cultural resources throughout the state as resources are impacted by new development and land is disturbed.

3.21.19 UTILITIES AND SERVICE SYSTEMS

Solid Waste

The Plan would result in significant impacts related to solid waste generation in the region, as discussed in **Section 3.19.1, Solid Waste**. Implementation of **Mitigation Measures SMM USW-1** through **SMM USW-2** and **PMM USW-1** would reduce impacts but they would remain significant. As population increases across the state, it is expected that additional demands will be placed on landfills with remaining capacity both from inside the SCAG region and from nearby areas such as adjacent counties. The increased demand on landfill capacity could result in the need to truck waste long distances, including to sites outside the region which could result in localized impacts outside the region (noise, air quality, traffic). Further, landfill capacity is finite and by reducing landfill capacity outside the region, there would be less capacity available for areas outside the region. As a result, the Plan would add to impacts on available landfill capacity and result in a cumulatively considerable impact.

Wastewater

The Plan would result in a significant impact related to wastewater capacity and the need for new facilities, as discussed in **Section 3.19.2, Wastewater**. Impacts would be reduced by **Mitigation Measures SMM HYD-1** through **SMM HYD-3** and **PMM UWW-1** but impacts would remain significant. Connect SoCal includes transportation projects and regional land use strategies, targeting growth in urban areas. However, due to planned transportation projects and anticipated development, there would be potential for construction of new stormwater drainage facilities or expansion of existing facilities would be needed. The need for new or expanded facilities for Plan projects in combination with other large projects outside the region, such as wastewater projects in adjacent counties or transportation projects that connect with projects to outside areas could result in significant impacts. As such the Plan would result in a cumulatively considerable impact.

Water Supply

The Plan would result in significant impacts related to water supply, as discussed in **Section 3.19.3, Water Supply**. Impacts would be reduced by **Mitigation Measures SMM USS-2** and **PMM USS-1** but impacts would remain significant. The water providers within the SCAG region that serve the population would need to coordinate water supply with nearby jurisdictions. Given the unreliability of water supply in the region, additional population growth would result in a significant impact to water supply that would add

to the impacts of development in surrounding jurisdictions. Water supply projects that serve the SCAG region include infrastructure that extends beyond the boundaries of the SCAG region. For example, the California Aqueduct conveys water from the Sierra Nevada Mountains and the Colorado River Aqueduct conveys water from the Colorado River to Southern California. Increases in population could require or result in the relocation or construction of new or expanded water facilities outside of the region. As such, the Plan would result in a cumulatively considerable impact.

3.21.20 WILDFIRE

The Plan would result in significant wildfire risk impacts. Impacts associated with wildfire hazards related to implementation of the Plan are analyzed in **Section 3.20**. Impacts would be reduced by **Mitigation Measures SMM WF-1** through **SMM WF-2** and **PMM WF-1** but impacts would remain significant. Wildfire impacts may be related to impairing an emergency response or evacuation plan, exposing occupants to wildfire risks and pollutant concentrations from wildfire, and exposing people or structures to post-fire slope instability. Wildfires pose a significant public health risk due to their air quality impacts. Furthermore, as wildfire-prone areas tend to have fewer vehicular access points than flat, urbanized areas, these roads could face gridlock in the event of a sudden emergency evacuation. Such circumstances could expose vehicle occupants to active flames and potential death. Development of transportation or housing projects in wildfire-prone areas would cause an increase in population exposed to wildfire risk and exacerbate exposure of those populations to pollutant concentrations from wildfires, particularly populations living downwind of the fire. Plan projects, in combination with other projects outside the region, specifically, potential development projects in wildfire areas, could result in additional impacts. Therefore, the project would result in a cumulative considerable impact.

4.0 ALTERNATIVES

The California Environmental Quality Act (CEQA) requires an Environmental Impact Report (EIR) to describe a range of reasonable alternatives to the project or to the location of the project that could feasibly avoid or substantially lessen significant environmental impacts while attaining most of the project objectives.[1] This chapter sets forth potential alternatives to the Plan and provides a combination of quantitative and qualitative analysis of each alternative and a comparison of each alternative to the Plan. Plan alternatives are evaluated as to how well they achieve the goals, policies, and objectives, the extent of their environmental impacts compared to the Plan, and whether or not they reduce or eliminate significant impacts caused by the Plan.

4.1 RATIONAL FOR ALTERNATIVES SELECTION

Key provisions of the *State CEQA Guidelines* pertaining to the alternatives analysis are summarized below.[2]

- The discussion of alternatives shall focus on alternatives to the project, including alternative locations that are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

- The EIR shall include a brief discussion of the rationale for selecting alternatives to be discussed and should identify any alternatives that were considered but were rejected as infeasible during the scoping process and briefly explain the reason underlying the lead agency's decision. Among others, the following factors may be used to eliminate alternatives from detailed consideration in an EIR: (1) failure to meet most of the basic project objectives; (2) infeasibility, or (3) inability to avoid significant environmental impacts.

- The No Project Alternative shall be evaluated along with its impacts. The No Project Alternative analysis shall discuss the existing conditions at the time the notice of preparation is published, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. When the project involves an update to an existing land use or regulatory plan, the "no project" alternative will be a continuation of the existing plan, policy or operation into the future.

1 *CEQA Guidelines* § 15126.6. 2005

2 *CEQA Guidelines* § 15126.6, 2005

The projected impacts of the plan are compared to the impacts from the continuation of the existing plan.

- The range of alternatives required in an EIR is governed by a "rule of reason." Therefore, the EIR must evaluate only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the proposed project.

- An EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote and speculative.

- The evaluation of alternatives should include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the proposed project.

The range of feasible alternatives is selected and discussed in a manner intended to foster meaningful public participation and informed decision making. Among the factors that may be taken into account when addressing the feasibility of alternatives (as described in *State CEQA Guidelines* Section 15126.6(f)(1)) are environmental impacts, site suitability, economic viability, availability of infrastructure, general plan consistency, regulatory limitations, jurisdictional boundaries, and whether the proponent could reasonably acquire, control, or otherwise have access to the alternative site.

An EIR must briefly describe the rationale for selection and rejection of alternatives. The lead agency may make an initial determination as to which alternatives are feasible, and, therefore, merit in-depth consideration.[3] Alternatives may be eliminated from detailed consideration in the EIR if they fail to meet project objectives, are infeasible, or do not avoid any significant environmental effects.[4]

Project Objectives

Pursuant to Section 15126.6(a) of the *State CEQA Guidelines*, the PEIR must consider "alternatives … which would feasibly attain most of the basic objectives of the project but would avoid or substantially

3 CEQA Guidelines §15126.6(f)(3).

4 CEQA Guidelines §15126.6(c).

lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." SCAG has established ten goals and seven guiding principles to serve as project objectives:

Connect SoCal Goals:

1. Encourage regional economic prosperity and global competitiveness
2. Improve mobility, accessibility, reliability, and travel safety for people and goods
3. Enhance the preservation, security, and resilience of the regional transportation system
4. Increase person and goods movement and travel choices within the transportation system
5. Reduce greenhouse gas emissions and improve air quality
6. Support healthy and equitable communities
7. Adapt to a changing climate and support an integrated regional development pattern and transportation network
8. Leverage new transportation technologies and data-driven solutions that result in more efficient travel
9. Encourage development of diverse housing types in areas that are supported by multiple transportation options
10. Promote conservation of natural and agricultural lands and restoration of critical habitats

Connect SoCal Guiding Principles:

1. Base transportation investments on adopted regional performance indicators and MAP-21/FAST Act regional targets
2. Place high priority for transportation funding in the region on projects and programs that improve mobility, accessibility, reliability and safety, and that preserve the existing transportation system
3. Assure that land use and growth strategies recognize local input, promote sustainable transportation options, and support equitable and adaptable communities

4. Encourage RTP/SCS investments and strategies that collectively result in reduced non-recurrent congestion and demand for single occupancy vehicle use, by leveraging new transportation technologies and expanding travel choices

5. Encourage transportation investments that will result in improved air quality and public health, and reduced greenhouse gas emissions

6. Monitor progress on all aspects of the Plan, including the timely implementation of projects, programs and strategies

7. Regionally, transportation investments should reflect best-known science regarding climate change vulnerability, in order to design for long term resilience.

Limits of SCAG Authority

While SCAG is required to prepare an SCS as part of the RTP, SCAG lacks the legal authority to require the decision makers of cities and counties to adopt or amend their respective land use policies, such as general plan and zoning code amendments that would implement the land use patterns included in the SCS component of the Plan. Furthermore, SCAG lacks the legal authority to implement land use designations in the SCS component of the Plan or the alternatives. While this PEIR analyses one land use scenario for the proposed Plan and other scenarios in the alternatives analyses below, there are nearly an infinite variety of specific land use scenarios at the local level that could achieve Plan objectives to a similar extent. Pursuant to CEQA, the range of alternatives considered in this PEIR illustrates the different environmental consequences of potential distinct regional-level alternatives to the Plan.

SCAG also does not have any ability or authority to control population and employment levels in the region. The accuracy of growth projections at the regional scale, over both the short and long term, are inherently estimates that are subject to a wide variety of factors outside of the control of SCAG or any of its member counties and cities. Accordingly, all alternatives assume the same forecasted regional growth in population and employment. Estimating the environmental consequences of regional growth within the SCAG region is also subject to a wide variety of uncertainties that are outside of the control of SCAG, and for many topical areas are outside the control of SCAG's member counties and cities.

4.2 ALTERNATIVES TO THE PROPOSED PROJECT

SCAG developed three alternatives for analysis in the PEIR. Each alternative consists of a transportation network element and a land use pattern element and is aligned in part with the scenarios for developing

the Plan (See **Chapter 2.0, Project Description** for further details). The following alternatives are evaluated:

1. No Project Alternative

2. Existing Plans-Local Input Alternative

3. Intensified Land Use Alternative

SCAG did not identify additional alternatives that were rejected. As such, three alternatives were identified for comparative analysis: The No Project Alternative and two other potentially feasible RTP/SCS alternatives, one that increases greenfield development (Existing Plans-Local Input Alternative) and one that places additional emphasis on infill development and transit (Intensified Land Use Alternative).

The No Project alternative, required to be analyzed under CEQA, assumes the projected land use pattern and planned transportation improvements would be consistent with those set forth in the 2016 RTP/SCS and that investments would cease beyond what is currently programmed. The two other alternatives allow for analysis variation in projected land use pattern and planned transportation improvements that could realistically be expected to occur over the Plan horizon. The alternatives reflect different growth patterns and different investment decisions for the transportation system. All three alternatives assume the same regional employment, population, and housing growth projections and roughly the same overall transportation budget. Land use and transportation assumptions vary in the following ways:

Land Use Variables:

- The amount of compact or infill development, which is measured in terms of housing product mix (the mix of high- and low-density housing units) and amount of development occurring in existing developed versus undeveloped areas. Compact development has been shown to be more effectively served by transit, to support potentially higher rates of walking and biking, and to generate less vehicle travel.

- The amount of development in high-quality transit areas, where residents are more likely to use available transit.

- The amount of mixed-use development, which supports shorter vehicle trips and higher rates of non-motorized travel.

Transportation Variables:

- The location, intensity, and type of transit service, based on the extent of transit-supportive land uses in corridors. Higher density, mixed-use corridors provide greater opportunities for higher capacity transit, such as light rail.

- The level of investment in transportation systems management (TSM) strategies, including technology and travel demand management (TDM) programs that allow for greater optimization of existing transportation infrastructure. More compact and mixed-use development patterns can allow some shifts in investment priorities away from road extensions and expansions to improving the function of existing roads for multi-modal travel.

- System pricing strategies, such as cordon pricing as a tool for managing congestion.

Generally, the alternatives represent a progression of land use and transportation investments, such that Existing-Plans Alternative includes the most dispersed land use and fewest transportation investments and Intensified Land Use Alternative represents the most compact land use pattern but maintains the same transportation investments as the Plan. Connect SoCal falls in between the two alternatives. As stated above, all alternatives analyzed accommodate the same amount of regional growth: 3,167,500 new people, 1,391,700 new jobs, and 1,426,700 new housing units.

A more detailed description of each of these alternatives is provided below, followed by a comparative analysis of how well the alternative would achieve the project objectives and the relative level of environmental impact associated with each alternative as compared to implementation of Connect SoCal. For each resource area evaluated in this PEIR the text summarizes whether the impacts of the alternative would generally result in greater or lesser impacts than those Connect SoCal**. Table 4.0-1, Comparison of Connect SoCal and Alternatives,** provides an "at a glance" comparison of the three alternatives and Connect SoCal.

Table 4.0-1
Comparison of Connect SoCal and Alternatives

Elements	Proposed Project: Connect SoCal	Alternative 1: No Project Alternative	Alternative 2: Existing Plans- Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Greenfield Land Consumption	41,546 acres	64,608 acres	54,679 acres	32,247 acres
Natural Land	21,561,361 acres	21,559,568 acres	21,553,029 acres	21,563,157 acres
Agricultural Land (total)	892,477 acres	887,706 acres	882,069 acres	890,603 acres
Total Area Converted from Agriculture to Urban from the existing	6,732 acres	10,101 acres	14,861 acres	8,563 acres
Agriculture Production Value	$3,561,365,881	$3,543,507,241	$3,522,366,445	$3,556,648,245
Acres of Habitat Improved from the existing (Threatened and Endangered Species)	311 acres	29 acres	481 acres	126 acres
Acres of Habitat Improved from the existing (Species Vulnerable to Climate Change – Except Birds)	354 acres	44 acres	735 acres	220 acres
Acres of Habitat Improved from the existing (Species Vulnerable to Climate Change - Birds)	1,525 acres	1,265 acres	3,125 acres	1,216 acres
Acres of Habitat Degraded from the existing (Threatened and Endangered Species)	7,899 acres	8,365 acres	12,274 acres	7,115 acres
Acres of Habitat Degraded from the existing (Species Vulnerable to Climate Change – Except Birds)	9,621 acres	10,456 acres	14,967 acres	8,728 acres
Acres of Habitat Degraded from the existing (Species Vulnerable to Climate Change - Birds)	12,778 acres	15,231 acres	19,862 acres	11,666 acres
High Species Movement Potential	22,210,114 acres	22,211,576 acres	22,191,944 acres	22,211,104 acres
Total Carbon Stock	73,707,960 metric tons	73,726,660 metric tons	73,571,245 metric tons	73,809,796 metric tons

Elements	Proposed Project: Connect SoCal	Alternative 1: No Project Alternative	Alternative 2: Existing Plans- Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Total non-Transportation GHG Emissions (MMT), annual	34.2 MMT	35.0 MMT	34.7 MMT	34.2 MMT
Housing Mix	42% Multifamily 8% Townhome 23% Single Family small lot 27% Single Family large lot	37% Multifamily 7% Townhome 27% Single Family small lot 29% Single Family large lot	40% Multifamily 7% Townhome 25% Single Family small lot 28% Single Family large lot	44% Multifamily 8% Townhome 22% Single Family small lot 26% Single Family large lot
Development Location (Growth Priority Areas)	60% Homes 73% Jobs	58% Homes 70% Jobs	57% Homes 70% Jobs	60% Homes 73% Jobs
Land Pattern Focus (New Housing)	21% Urban (infill) 63% Compact (walkable) 16% Standard (suburban)	9% Urban (infill) 18% Compact (walkable) 73% Standard (suburban)	4% Urban (infill) 69% Compact (walkable) 27% Standard (suburban)	16% Urban (infill) 57% Compact (walkable) 27% Standard (suburban)
Land Pattern Focus (New Jobs)	23% Urban (infill) 62% Compact (walkable) 15% Standard (suburban)	8% Urban (infill) 9% Compact (walkable) 84% Standard (suburban)	4% Urban (infill) 61% Compact (walkable) 36% Standard (suburban)	20% Urban (infill) 52% Compact (walkable) 27% Standard (suburban)
Cumulative Residential and Commercial Building Energy Consumed and Energy Costs	15,464 trillion Btu $670 billion	15,670 trillion Btu $678 billion	15,592 trillion Btu $675 billion	15,381 trillion Btu $666 billion
Cumulative Residential and Commercial Building Water Use and Water Costs	84,676,019 acre-feet $116 billion	85,689,515 acre-feet $117 billion	85,215,252 acre-feet $116 billion	85,038,413 acre-feet $116 billion
Per Household Total Cost (driving + utilities)	$13,225	$13,758	$13,523	$13,172

Alternative 1: No Project Alternative

The No Project Alternative is required by Section 15126.6I(2) of the *CEQA Guidelines* and assumes that the Plan would not be implemented. The No Project Alternative allows decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The No Project Alternative evaluates "what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services" (*CEQA Guidelines* Section 15126.6€(2)). The No Project Alternative is aligned with the Trend/Baseline Scenario[5] and includes transportation projects that are in place at the time of

5 Connect SoCal – Sustainable Communities Strategy Technical Report.

preparation of the Connect SoCal Plan and that are included in the first two years of the previously conforming transportation plan and/or federal transportation improvement program (FTIP). "Exempt projects" include safety projects and certain mass transit projects, transportation control measures ("TCMs") that are approved by the State Implementation Plan, and project phases that were authorized by the FHWA/FTA prior to expiration of SCAG's conformity finding for the adopted 2016 RTP/SCS. These exempt projects would also be included in the No Project Alternative since they could move forward in the absence of an adopted Connect SoCal Plan.[6]

The land use strategies included in the No Project Alternative are based on the trending socioeconomic growth projection to the future (2045) updated with the same jurisdictional local input population, household and employment data as those in the Connect SoCal Plan to reflect the most recent local input growth estimates in the region.

Alternative 2: Existing Plan–s - Local Input Alternative

The Existing Plans - Local Input Alternative is aligned with the Existing Plans – Local Input Scenario in the Plan.[7] This alternative incorporates local general plans and land use information to reflect the Plan's population, household and employment growth estimates in the region. The Plan's transportation and land use strategies are not included in this alternative. The transportation network analyzed under this alternative are the transportation projects planned by each County Transportation Commission (CTC) in the region. In general, this alternative represents a more dispersed land use pattern as compared to Connect SoCal.

Alternative 3: Intensified Land Use Alternative

This Intensified Land Use Alternative is based off the Plan's transportation network and strategies. This alternative analyzes more aggressive densities and land use patterns than included in the Accelerated Tomorrow Scenario.[8] The land use pattern builds on the land use strategies as described in the Connect SoCal Plan and beyond. Specifically, it increases densities and intensifies land use patterns of the Plan, especially around HQTAs in an effort to maximize transit opportunities. The growth pattern associated with this alternative optimizes urban areas and suburban town centers, transit-oriented developments (TODs), HQTAs, livable corridors, and neighborhood mobility areas. It also includes a greater

7 Connect SoCal – Sustainable Communities Strategy Technical Report.

8 Connect SoCal – Sustainable Communities Strategy Technical Report.

progressive job-housing distribution optimized for TODs and infill in HQTAs. It includes the same transportation investments as the Plan. This alternative considers the basis of the Plan with enhancements to accelerate the SB 375 GHG emissions reduction trend into 2045 and beyond, and includes related improvements for air quality, livability, public health, active transportation opportunities, and affordability.

4.3 COMPARATIVE ANALYSIS OF IMPACTS

Consistent with the requirements of Section 15126.6(d) of the *State CEQA Guidelines*, this section of the analysis provides information for the alternatives, including the No Project Alternative, to allow meaningful evaluation, analysis, and comparison with the Project, inclusive of direct, indirect, and cumulative impacts (**Table 4.0-2, Comparison of Alternatives to Connect SoCal).** The evaluation demonstrates if the alternative can avoid or reduce the significant and unavoidable effects of the Project.

Alternative 1: No Project Alternative

Aesthetics

Impacts to scenic vistas from transportation projects in the No Project would be less than Connect SoCal because the No Project Alternative would result in fewer transportation projects overall and therefore fewer opportunities to obstruct a scenic vista. Impacts from the land use pattern could be greater than Connect SoCal as the overall land use pattern would be more dispersed resulting in more opportunities to obstruct a scenic vista, however, projects would also generally be of a lower scale than with Connect SoCal. However, with fewer projects, impacts would likely be less than the Plan but still significant.

The No Project Alternative would also result in fewer opportunities to create visually contrasting elements due to the reduced number of transportation and land use projects as well as the lower scale of projects overall. The No Project Alternative would not include any transportation projects that could affect any State Scenic Highways or vista points. However, views of green space from these areas could be impacted by land use development. Impacts would still be significant but less than the Plan.

Connect SoCal includes strategies to focus growth in HQTAs, which would help reduce the consumption and disturbance of natural lands and reduce resultant impacts on aesthetics and views. Under the No Project Alternative, these land use patterns may not occur and therefore greater areas of greenfield would be impacted resulting in greater impacts to visual character (although individual jurisdictions may still seek to reduce the urban footprint through their general plans). The No Project Alternative's impacts would result in the consumption of more greenfield land (91 square miles, as opposed to 51 square miles under the Plan) potentially resulting in loss of scenic resources and changes in visual character. Impacts

to visual character in urbanized areas would be similar to Connect SoCal because existing zoning and other regulations governing visual quality are mandatory and would be equally enforced under this alternative. Regarding light and glare, the greater amount of land consumed under this alternative, could introduce more lighting into undeveloped areas resulting in potential impacts greater than the Plan.

Agriculture and Forestry Resources

Conversion of agricultural land (including Prime Farmland, Unique Farmland, and Farmland of Statewide Importance), forest land, timberland, and timberland zoned Timberland Production to non-agricultural, non-forest, or non-timber uses under this alternative would be greater than under Connect SoCal because the projected land use pattern of the No Project Alternative would be less compact and would convert 3,369 more acres of agricultural land to urban use. However, the planned transportation improvements of this alternative would include 5,308 fewer lane miles of new or expanded roadway and highways relative to Connect SoCal. The additional land disturbance associated with the less compact land use pattern would occur in areas with agricultural land.

Because the No Project Alternative would not include projects with the potential to impact forest lands, impacts under this alternative would be reduced compared to the Plan. Impacts related to forest land under the No Project would be less than significant.

The potential for conflicts with zoning, land use designations, Williamson Act contracts, and/or other applicable regulations that protect agricultural and forestry resources and timberlands would also be greater because additional agricultural lands would be converted to non agricultural uses. Similarly, the potential for other changes that could result in the conversion of agricultural land to developed land uses would be greater due to increases in urbanization in rural areas under this alternative as compared to Connect SoCal.

Air Quality

Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. As a result, fewer transportation projects would be built than under the Plan resulting in less construction emissions compared to the Plan. However, construction emissions in the region as a whole would still exceed the significance thresholds established in the *CEQA Guidelines* (these thresholds were developed for use in analyzing individual development projects) and applied by the local air districts (SCAQMD, VCAPCD, MDAQMD, and AVPCD). Similar to the Plan, the cumulative construction emissions in the region would result in a significant impact, which would be short-term for each individual project but overall the region would experience on-going air quality impacts.

Projected long-term emissions are cumulatively significant if they are not consistent with the local air quality management plans and state implementation plans. Unlike the Plan, the No Project Alternative may not conform to the local air quality management plans. The No Project Alternative is anticipated to have higher levels of VMT than the Plan (**Table 4.0-3, Plan Compared to Alternative 1: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk)** resulting in a higher level of particulate matter and ozone precursors, pollutants for which the area is designated as non-attainment. As a result, the No Project Alternative could have a significant cumulative impact.

With respect to cancer risk and impact to public health, the No Project Alternative would result in more emissions as compared to the Plan due to the increase in VMT (**Table 4.0-3**). Due to differences in VMT (light and medium duty vehicles and heavy-duty truck traffic) in some cases, for some segments the No Project Alternative would have slightly less risk than under the Plan. As for the Plan, future emissions would be substantially less than existing conditions.

Table 4.0-3
Plan Compared to No Project Alternative: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk

Segment No.	Transportation Segment	County/Region	No Project Alternative (risk in a million)	Connect SoCal Plan (risk in a million)
1	IMP I-8	Imperial/El Centro	14.2	14.5
2	IMP SR-78	Imperial/Westmoreland	37.1	18.9
3	LA I-110	Los Angeles/Carson	24.8	23.5
4	LA I-710	Los Angeles/Compton	29.9	30.9
5	LA SR-60 DB	Los Angeles/Diamond Bar	31.1	29.7
6	LA SR-60 SEM	Los Angeles/ South El Monte	18.4	16.3
7	ORA I-5	Orange/ Orange	5.36	5.49
8	ORA I-405	Orange/ Seal Beach	12.2	11.8
9	RIV I-10	Riverside/ Banning	4.97	4.83
10	RIV SR-15	Riverside/ Temecula	9.65	9.52
11	RIV SR-91	Riverside/ Corona	8.4	8.41
12	SB I-15 ONT	San Bernardino/Ontario	10.4	10.5
13	SB I-15 VIC	San Bernardino/ Victorville	40.6	41.3
14	SB SR-60	San Bernardino/ Ontario	19.1	18.8
15	VEN US-101 SB	Ventura/ San Buenaventura	4.93	4.85
16	VEN US-101 TO	Ventura/ Thousand Oaks	19.6	21.9

Source: Impact Sciences, 2019.
Note: Segments 7, 11, 12. 13, and 16 under No Project Alternative will have a higher health risk than under the Plan.

Health risk associated with construction activities would be similar to the Plan and potentially significant adjacent to extended intense construction activities.

Objectionable odors are expected to be similar to the Plan, there would be fewer construction projects causing these odors but also higher VMT, causing more diesel emission odors.

Overall impacts to air quality would be greater when compared to Connect SoCal due to the more dispersed growth pattern and greater VMT.

Biological Resources

The No Project Alternative would result in greater impacts to biological resources when compared with the implementation of the Plan. Under this alternative there would be 57 percent more standard (single family) suburban residential development and an additional 1,793 acres of natural lands developed. As such, more sensitive biological resources would be expected to be affected under the No Project Alternative. The No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas, nor would it encourage additional greenways. As a result, development would be more scattered through the region when compared to the Plan, and native habitat conversion and fragmentation would increase.

The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation, and agricultural lands. This compact development pattern would focus population in urban areas. Without the Plan land use strategies, impacts to biological resources would be more widespread throughout the region. Additionally, habitat degradation would be higher under the No Project Alternative (8,365 acres) than under the Plan (7,899 acres). Impacts to biological resources are directly linked to the amount of native habitat conversion in non-urban areas. As such, impacts would be greater under the No Project Alternative.

Cultural Resources

Impacts to cultural resources (historic built environments, archeological, and human remains, and important examples of major periods of California history or prehistory) under this alterative would be greater than under Connect SoCal because this alternative's projected land use pattern would be less compact and include an additional 23,062 of greenfield development. The additional land disturbance, such as grading and excavation, resulting from the projected land use pattern of this alternative would result in greater likelihood of encountering unknown surface or subsurface archaeological resources, or human remains; it would also result in greater impacts to the character of settings that contribute to the

significance of historic built environments. However, this alternative would result in fewer lane miles constructed which would reduce transportation related impacts compared to Connect SoCal (as discussed below). Overall, impacts to cultural resources would be greater when compared to Connect SoCal.

Energy

The No Project Alternative would likely result in increased use of energy because the No Project Alternative assumes more large lot development, resulting in a larger share of individual detached structures. These individual structures require more energy for materials, more materials overall, and more fuel to build (e.g., additional equipment and vehicle use for site development, grading, and excavation) than would be needed for attached structures.

Per-capita energy consumption under this alternative would be greater than under Connect SoCal due to the less compact land use pattern. The No Project Alternative also includes a housing mix with a greater proportion of large-lot single-family homes (73 percent standard suburban) as compared to the Plan (16 percent standard suburban). Because the No Project Alternative would include more large-lot single-family homes, which require more energy use per capita as compared to attached and multi-family homes, this alternative would result in more energy use per capita as compared to the Plan. The less compact land use pattern also leads to higher VMT, and more inefficient consumption of transportation energy than under the Plan. While it would be likely that, compared to baseline conditions (2019), per capita energy consumption would go down under this alternative (as the trajectory of per capita energy is on a downward trend overall), per capita energy consumption would be higher than under the Plan. Therefore, although impacts would be less than significant, the No Project Alternative would result in greater impacts related to the wasteful, inefficient, or unnecessary consumption of energy during construction activities and long-term operations.

This alternative is likely to have similar impacts on state and local plans for renewable energy or energy efficiency as compared to the Plan. Use of some renewable energy sources could be facilitated, while the use of other renewable energy sources could be hindered by this alternative. Implementation of the California Energy Code and State goals for increasing the percentage of electricity from renewable and zero-carbon sources under this alternative would be the same as under the Plan.

Geology and Soils

While implementation of the Connect SoCal Plan would result in a greater number of transportation projects than the No Project Alternative, the No Project Alternative would result in similar impacts associated with risk as a result of surface fault rupture, ground-shaking liquefaction, landslides, and

other risks associated with seismic events. The anticipated population growth would remain constant over all alternatives and the Project, and the entire region is subject to the same seismic risk. Existing state and local building code requirements addressing substantial adverse effects due to earthquakes and seismic activity would apply to the projected land use pattern and planned transportation improvements of the Plan.

Impacts related to soil erosion would be significant and would be greater under this alternative as there would be an increase in land consumed which could result in more soils exposed. Impacts related to unstable soil, expansive soil, and septic systems would also be less than significant and similar to the Plan as projects would continue to comply with existing regulations.

Impacts to unique geologic features would be greater under this alternative than under the Plan because the projected land use pattern of this alternative is less compact. The additional land disturbance resulting from the projected land use pattern under this alternative would result in greater impacts to unique geologic features.

Greenhouse Gas Emissions

The greenhouse gas (GHG) emissions for building energy would be higher under the No Project Alternative (32.4 MMTCO_2e/year) than under the Plan (31.3 MMTCO_2e/year), a difference of 3 percent (**Table 3.8-9, Greenhouse Gas Emissions for the SCAG Region from Three Primary Sources [CO2e]**). The water-energy GHG emissions under the No Project Alternative (2.6 MMTCO2e/year) would be higher than under the Plan (2.5 MMT CO_2e/year) (see **Table 3.8-9**). For transportation, the GHG emissions with the No Project Alternative (74.6 MMT CO_2e/year) would also be greater compared to the Plan (64 MMT CO_2e/year) (see **Table 3.8-9**). The more disbursed development pattern of the No Project Alternative would result in increased building energy use (as multi-family buildings are more efficient than single-family homes) and more VMT. The Plan would improve regional GHG emissions compared to the No Project Alternative.

Senate Bill (SB) 375 requires CARB to develop regional CO_2 emission reduction targets, compared to 2005 emissions, for cars and light trucks only for 2020 and 2035 for each of the state's MPOs. Unlike the Plan, the No Project Alternative would not achieve SB 375 targets due to the inability to complete the transportation investments and increase density of development in HQTAs that are required to achieve the GHG emission reductions made possible by the Plan. Since the GHG emissions from transportation sources would be higher with the No Project Alternative than under the Plan, this alternative would not meet the regional GHG reduction targets for cars and light-duty trucks, would not be sufficient to meet

the state's overall GHG reduction goals, and would conflict with AB 32 and SB 32 even more than the Plan. As such, the No Project Alternative would have a greater impact on GHG emissions than the Plan.

Hazards and Hazardous Materials

Hazardous materials impacts to the public or the environment associated with construction activities and operation under this alternative would be the same as the impacts under the Plan. This is because of the numerous federal, state, and local requirements and regulations that minimize the creation of significant hazards to the public or the environment through the routine transport, use, or disposal of hazardous materials; through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment and through handling of hazardous materials, substances, and waste within 0.25 mile of an existing or proposed school. These existing requirements and regulations would apply equally to the different projected land use patterns and planned transportation network improvements of this alternative and the proposed Plan, so impacts would be the same. The same is true for existing requirements and regulations addressing potential safety hazards and excessive noise within an airport land use plan or within two miles of a public or public use airport, so airport-related safety and noise impacts to people residing or working in the plan area would be the same under this alternative.

The more dispersed land use pattern under this alternative would be more automobile-oriented than the Plan and could complicate emergency evacuation plans that rely in part on public transit. Therefore, the less compact land use pattern of this alternative would result in greater impacts associated with impairing the implementation of adopted emergency response and emergency evacuation plans.

Hydrology and Water Quality

Under the No Project Alternative, fewer areas would be impacted by excavation and construction activities related to transportation projects as compared to the Plan. While the No Project Alternative would reduce the number of transportation projects built in the SCAG region, it would result in greater vacant land consumption that would, in turn, increase impervious surface. The additional land area permanently converted to impervious surfaces would increase the potential volume and decrease the water quality of stormwater flows. Additional impervious surface also would interfere with groundwater recharge and alter drainage patterns in a manner that would increase the potential for substantial erosion, siltation, and flooding relative to the Plan. This alternative would require greater storm drainage system capacity than the Plan because of its conversion of additional land area to impervious surface area. In addition, the housing mix of this alternative would include a larger share of large-lot single-family homes, which would result in more managed landscaping areas and associated pollutants such as

nutrients, herbicides, and irrigated runoff, which in turn could adversely affect surface and groundwater quality.

With fewer transportation projects than the Plan, impacts of the No Project Alternative would be reduced when compared with the Plan. As the currently planned projects included in the No Project alternative are built, the impacts resulting from increased roadway runoff and drainage patterns would remain significant. Likewise, the impacts to groundwater infiltration caused by the increased impervious surfaces of roadway projects, and to increased flooding hazards, would remain significant.

Similar to the Plan, this alternative could conflict with or obstruct the implementation of a water quality control plan or sustainable groundwater management plan, impacts would be similar to the Plan.

Land Use Planning

Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. As a result, fewer transportation projects would be built than under the Plan and new growth would occur consistent with local general plans, although it would be more dispersed than contemplated under the Plan. The less compact land use pattern of this alternative provides less connectivity within existing communities because of its more dispersed allocation of future growth, but it would not physically divide any existing communities. This impact would be the same as under the Plan. The transportation projects in this alternative would add 5,308 fewer lane miles compared to the Plan. With fewer lane miles, the planned transportation improvements of this alternative would result in less impact from physically dividing existing communities. Impacts would be less than the Plan, however would remain significant.

The No Project Alternative would result in fewer impacts with regard to conflicts with any applicable land use plan, policy, or regulation for the purpose of avoiding or mitigating an environmental effect due to there being fewer transportation projects. The Plan's land use strategies would be implemented to the extent they have already been built into existing local jurisdiction's plans and therefore there would be less opportunity for land use policy conflicts as compared to the Plan.

Mineral Resources

The No Project Alternative would result in fewer lane miles compared to the Plan which would require less aggregate. Further, the No Project Alternative could result in greater loss of availability of known mineral resources that would be of value to the region and the residents of the state, as well as locally important mineral resources, due to the greater amount of land that would be converted to urban land

potentially covering more mineral resource extraction opportunities. However, overall impacts would be less than the Plan but still significant.

Noise

The No Project Alternative would result in reduced impacts from noise when compared with Connect SoCal. Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed; and land use development would be more distributed than under the Plan. Therefore, the No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas, would not result in construction or operation of new transportation infrastructure, and would not develop new HQTAs. As a result, fewer transportation projects would be built than under the Plan, however a greater area would be affected by construction noise associated with land use development.

Construction noise in urban areas is generally expected and considered less than significant. Construction noise on individual sites could still exceed significance thresholds in some jurisdictions. Construction-related noise impacts would be similar, although possibly fewer sensitive receptors would be impacted under this alternative due less urban locations that would be subject to disturbance during construction activities. This would increase the number of separate construction sites, which would increase overall noise levels associated with construction activities. However, impacts overall would be similar as the Plan and still significant.

The projected land use pattern of this alternative, while less compact than the Plan, would not result in land use types that would result in meaningfully different levels of vibration or groundborne noise. The planned transportation improvements of this alternative would include limited roadway and highway improvements which also would not result in meaningfully different levels of vibration or groundborne noise relative to the planned transportation improvements identified in the Plan. This impact is the same under this alternative.

Regarding aviation noise, the No Project Alternative would result in similar impacts to the Plan, as there would be no change in air traffic patterns or airport operations under this alternative.

Population and Housing

Impacts related to population and housing should be similar under all alternatives, because the same number of people, housing units and jobs are assumed. The less compact land use pattern of this alternative could still result in displacement of substantial numbers of people or existing housing that

necessitates the construction of replacement housing elsewhere. This impact is the same as the Plan and would remain significant.

Public Services

This alternative is anticipated to result in public service impacts similar to those that would be generated under the Plan, because the same total population, housing, and employment are assumed, and public service impacts are generally population driven. However, this alternative could worsen the ability to achieve local levels of service due to a more dispersed land use pattern that makes it more difficult to efficiently serve the population. This impact is greater than the Plan. The planned transportation improvements of this alternative would have the same public services impacts as the Plan, although congestion (VHD) would increase compared to the Plan which could affect police and fire services in some areas.

Regarding schools and libraries, the population would be the same under each of the alternatives. While there could be less demand in urban areas (due to the more dispersed land use pattern) there could be greater impacts in less developed areas. Given the increased growth in suburban areas, this alternative could contribute to substantial adverse physical impacts associated with the construction and subsequent operation of new or physically altered school and library facilities in order to maintain acceptable service ratios. Impacts would be significant and similar to the Plan.

Parks and Recreation

This alternative could worsen the ability to achieve local levels of service due to a more dispersed land use pattern that makes it more difficult to efficiently serve the population. This impact is greater than the Plan. Although there would be less demand on urban parks (which are often overburdened) there could be more demand on large regional parks due to a more dispersed land use pattern and the need to travel to parks. As the regional is well-served with regional parks, this impact would be less than the Plan but still significant.

Transportation, Traffic, and Safety

The No Project Alternative would result in greater VMT per capita (23.80 VMT/per capita) than under the Plan (22.89 VMT/per capita), in part because of the less compact land use pattern. This alternative would also locate fewer homes and jobs near HQTAs. According to CARB much greater VMT reductions (beyond those achieved by the Plan) will be required to meet the state's long-term climate goals. Therefore, the VMT impact of this alternative is greater than under the Plan. For the reasons provided above, this alternative would also result in lower levels of transit ridership (by two million boardings) as

well as walking, and biking for commute trips and all trips and it would be less complementary to existing and planned bicycle and pedestrian facilities.

The No Project Alternative would also result in higher VHD by 802,416 (total). The compact development pattern included in the Plan would concentrate population in urban areas and encourage alternative modes of travel other than automobiles. Without the Plan development patterns, vehicle miles traveled, vehicle hours of delay, worker commute trips, and accident rates would be higher than under the Plan resulting in greater impacts.

Under the No Project Alternative, impacts related to design hazards would also be greater (although still less than significant) as fewer transportation improvements would be constructed and the Plan's focus on safety would not be implemented. Emergency access would be greater because the land use pattern of large lot homes would be less efficient and there would be fewer transportation improvements constructed.

Tribal Cultural Resources

The No Project Alternative would result in greater impacts to tribal cultural resources when compared with the Plan. Under the No Project Alternative, there would be an additional 23,062 acres of greenfield land consumed, which would have the potential to impact previously undiscovered tribal cultural resources, such as archaeological resources, sacred sites, or human remains. However, the transportation network in this alternative would include fewer lane miles and could reduce the potential to impact previously undiscovered tribal cultural resources as compared to the Plan. Due to the less compact land use pattern and the increase in greenfield consumed, impacts would be greater under the No Project Alternative and would be significant.

Utilities and Service Systems

This alternative is anticipated to result in impacts to utilities and service systems similar to those that would be generated under the proposed Plan and would be significant because the same total population, housing, and employment numbers are assumed, and utilities impacts are generally population driven. The larger share of single-family homes under this alternative would likely increase the demand for surface and groundwater supplies because such housing units have higher demand for water, for example through increased irrigation demand for landscaping areas and additional appliances and fixtures that use potable water (e.g., sinks, toilets, showers). As a result, this alternative could exceed the capacity of existing water storage, conveyance, distribution, and treatment facilities to a greater degree than the Plan and result in construction of new, expanded, or relocated facilities. These impacts of this alternative are greater than under the Plan and would be significant.

In addition, this alternative could adversely affect the capacity of the necessary utility conveyance and distribution systems (e.g. wastewater, storm drain,) due to a more dispersed land use pattern that makes it more difficult to efficiently serve the population. All of the alternatives would be required to follow the same federal, state, and local statutes and regulations related to solid waste. This alternative would have the same impact related to solid waste generation and conflicts with solid waste management and reduction statutes and regulations.

Wildfire

Under the No Project Alternative, impacts would increase with regards to increased development along the wildland interface that may exacerbate fire risks. The No Project Alternative would result in an additional 43,692 housing units at risk for wildfire as compared to the Plan, resulting in greater potential wildfire risk. Areas with dry vegetation have the potential to exacerbate wildfire risk due to future development activities that could generate flammable debris piles. This is particularly true in the currently rural and underdeveloped parts of the SCAG region. Future roadway and development construction in such areas has the potential to result in significant impacts as a result of construction equipment generating sparks or oil spill and other combustible materials leading to the start and spread of wildfires. This impact would be greater under the No Project Alternative and would be significant.

Alternative 2: Existing Plans - Local Input Alternative

Aesthetics

Impacts to scenic vistas from the land use pattern under this alternative would be less than the Plan, because this alternative assumes lower density development. Structures are likely to be shorter and more dispersed, with less likelihood of blocking or impeding scenic vistas. However, with more development in non-urbanized areas, there could be greater potential for conflicts with scenic vistas which would be a greater impact than the Plan. The transportation network would result in the same number of lane miles as the Plan and therefore potential transportation related impacts would be similar. With a land use pattern that is more dispersed - combined with the same number of capacity-enhancing planned transportation improvements as the Plan, this alternative would have greater impacts to scenic resources along official or eligible state scenic highways.

Conversion of greenfield to development would be more dispersed, as the Existing Plans-Local Input Alternative would consume 54,679 acres compared to the Plan's consumption of 41,546 acres. Because population growth would be less concentrated in existing open areas than the Plan, there would be greater overall impacts to visual character and quality. In urban areas, with regard to conflicts with applicable zoning or regulations regarding scenic quality, there would be similar effects under this

alternative as the Plan since there would be a similar number or transportation projects. The potential for substantial degradation of visual character or quality of public views of sites and their surroundings in non-urbanized areas would be greater under this alternative as compared to the Plan because this alternative would locate more housing within non-urbanized areas. With a more dispersed land use pattern combined with capacity-enhancing planned transportation improvements in non-urbanized areas, this alternative would result in greater impacts to visual quality compared to the Plan and impacts would be significant.

Agriculture and Forestry Resources

Conversion of agricultural land (including Prime Farmland, Unique Farmland, and Farmland of Statewide Importance), forest land, timberland, and timberland zoned Timberland Production to non-agricultural, non-forest, or non-timber uses under this alternative would be greater than under the Plan because the projected land use pattern of the Existing Plans-Local Input Alternative would be less compact and would result in the direct loss of an additional 8,129 acres of agricultural land converted to urban use compared to the Plan. The potential for conflicts with zoning, land use designations, Williamson Act contracts, and/or other applicable regulations that protect agricultural resources would also be greater for the same reasons and because the same projects are included in the transportation network that have the potential to conflict with or convert forest lands. Similarly, the potential for other changes that could result in the conversion of agricultural land to developed land uses would be greater due to the overall increase in greenfield consumption under this alternative as compared to the Plan.

Air Quality

The Existing Plans-Local Input Alternative would have the same population, housing, and employment as the Plan, but would result in an incrementally less dense land use pattern. Similar to the No Project Alternative, construction emissions would still likely exceed the significance thresholds established in the *CEQA Guideline*s and result in a significant short-term impact. However, in the long term, the Existing Plans-Local Input Alternative would likely have a similar less than significant impact to the AQMPs since development under this alternative would focus the majority of new housing on compact (walkable) locations (although less than under the Plan) and result in a lower VMT than under No Project Alternative. However, the Existing Plan-Local Input Alternative would not implement the same land use strategies as Connect SoCal, therefore the alternative would have higher VMT than the Plan. Thus, while this alternative would reduce particulate matter and ozone precursor emissions compared to the No Project Alternative, emissions would not be reduced to the same level as under the Plan.

As with the Plan, under the Existing Plans-Local Input Alternative, reductions in cancer risk levels associated with diesel particulate matter occur as a result of on-going emission controls. The cancer risk and impact to public health for this alternative would be similar compared to the Plan since the transportation network is the same as the Plan (**Table 4.0-4 Connect SoCal Compared to Alternative Existing Plans-Local Input Alternative: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk**). There are incremental differences in risk among segments due to differing traffic volumes, however, as for the Plan risk would be reduced substantially as compared to existing conditions.

Table 4.0-4
Connect SoCal Compared to Existing Plans-Local Input Alternative: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk

Segment No.	Transportation Segment	County/Region	Existing Plans-Local Input Alternative (risk in a million)	Connect SoCal (risk in a million)
1	IMP I-8	Imperial/El Centro	14.6	14.5
2	IMP SR-78	Imperial/Westmoreland	20.8	18.9
3	LA I-110	Los Angeles/Carson	24	23.7
4	LA I-710	Los Angeles/Compton	31.1	30.9
5	LA SR-60 DB	Los Angeles/Diamond Bar	29.1	29.7
6	LA SR-60 SEM	Los Angeles/ South El Monte	16.4	16.3
7	ORA I-5	Orange/ Orange	5.51	5.49
8	ORA I-405	Orange/ Seal Beach	11.9	11.8
9	RIV I-10	Riverside/ Banning	4.99	4.83
10	RIV SR-15	Riverside/ Temecula	9.57	9.52
11	RIV SR-91	Riverside/ Corona	8.49	8.41
12	SB I-15 ONT	San Bernardino/Ontario	11.1	10.5
13	SB I-15 VIC	San Bernardino/ Victorville	40.7	41.3
14	SB SR-60	San Bernardino/ Ontario	18.5	18.8
15	VEN US-101 SB	Ventura/ San Buenaventura	4.82	4.85
16	VEN US-101 TO	Ventura/ Thousand Oaks	22	21.9

Source: Impact Sciences, 2019.
Note: Segments 5, 12, 12. 14, and 15 under Existing Plans-Local Input Alternative will have a higher health risk than under the Plan.

Health risk associated with construction activities would be similar to the Plan and potentially significant adjacent to extended intense construction activities.

Objectionable odors are expected to be similar, although more dispersed since the same amount of construction will occur but over a more distributed area. Overall impacts to air quality could be incrementally greater when compared to Connect SoCal due to the greater VMT.

Biological Resources

Impacts to candidate, sensitive, or special status species (including plants, wildlife, and fish) under this alterative would be greater than under the Plan, because this alternative's projected land use pattern would be less compact and would result in 12,274 acres of habitat degraded compared to 7,899 acres of habitat degraded under the Plan. While this alternative includes the same total population as the Plan and captures HQTA strategies, this alternative has a slightly less compact housing mix (57 percent homes and 70 percent jobs in growth priority areas) than the Plan (60 percent homes and 73 jobs percent, respectively) and includes a land use pattern that includes 4 percent of new housing in urban infill areas and 27 percent of new housing in standard suburban housing (compared to 21 percent urban infill and 16 percent standard suburban with the Plan). Further this alternative would have lower high species movement potential by 18,170 acres compared to the Plan.

Impacts to biological resources are directly linked to the amount of land disturbance and habitat conversion in non-urban areas. The land use pattern of this alternative would therefore result in additional conversion in natural habitats and greater impacts to biological resources. Without a more compact land use development pattern as included in the Plan, impacts to biological resources would be more widespread throughout the region and would be greater than the Plan.

Cultural Resources

Impacts to cultural resources (historic built environments, archeological and human remains, and important examples of major periods of California history or prehistory) under this alterative would be greater than under the Plan because this alternative's projected land use pattern would be less compact and include nearly 13,133 additional acres of development (greenfield). The additional land disturbance, such as grading and excavation, resulting from the projected land use pattern and planned transportation improvements of this alternative would result in greater likelihood of encountering unknown surface or subsurface archaeological or human remains; it would also result in greater impacts to the character of settings that contribute to the significance of historic built environments. Construction activities under this alternative would also have greater impacts to historic built environments, archaeological, human remains, and important examples of major periods of California history or prehistory for the reasons provided above.

Energy

The Existing Plans-Local Input Alternative would have greater impacts on the residential energy consumption than the Plan because of the less compact growth pattern (multi-family development is more energy and water efficient than single-family development). Total residential and commercial energy consumption under This alternative would result in an additional 28 trillion Btu, compared to the Plan. Residential and commercial building water use would be 539,233-acre feet higher than the Plan. VMT for this alternative would also increase by more than 11 million VMT. Overall, per-capita energy consumption under this alternative would be greater than under the Plan because this alternative would result in less compact development. Because this alternative includes more single-family homes, which require more energy per capita as compared to attached and multi-family homes, it would likely result in more energy use per capita as compared to the Plan. While compared to existing conditions, per capita energy consumption would go down under this alternative, however 2045 per capita energy consumption would be higher than under the Plan. Therefore, this alternative would result in greater impacts related to the wasteful, inefficient, or unnecessary consumption of energy during construction activities and long-term operations.

This alternative is likely to have a similar impact on state and local plans for renewable energy or energy efficiency as compared to the Plan. Use of some renewable energy sources could be facilitated, while the use of other renewable energy sources could be hindered by this alternative. Implementation of the California Energy Code and State goals for increasing the percentage of electricity from renewable and zero-carbon sources under this alternative would be the same as under the Plan.

Geology and Soils

Under this alternative, the following impacts associated with earthquakes and seismic activity would be the same as the Plan: rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; and landslides. Existing state and local building code requirements addressing substantial adverse effects due to earthquakes and seismic activity would apply to the projected land use pattern and planned transportation improvements of the Plan. The following operational and construction impacts of this alternative would be greater than the Plan because this alternative includes a less compact land use pattern that would develop nearly 13,133 additional acres: soil erosion and loss of topsoil; on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse; development on expansive soil; and inadequate soils for alternative wastewater systems. The more compact land use pattern of the Plan would be expected to result in less land development within areas subject to adverse impacts from the geologic and soils conditions.

Impacts to unique geologic features and paleontological features would be greater under this alternative than under the Plan because the projected land use pattern of this alternative is less compact and would develop nearly 13,133 additional acres. The additional land disturbance resulting from the projected land use pattern combined with planned transportation improvements under this alternative would result in greater impacts to unique geologic features.

Greenhouse Gas Emissions

The GHG emissions for building energy and water-related energy are expected to be slightly greater under the Existing Plans-Local Input Alternative when compared to the Plan as it would develop less infill land use projects which tend to be more efficient than standard development. For transportation, the GHG emissions are projected to be greater under this alternative when compared to the Plan because of increased VMT. The Existing Plans-Local Input alternative would result in greater GHG emissions when compared to the Plan.

Per capita emissions would decrease under this alternative due to the land use strategies being implemented from the 2016 RTP/SCS . However, unlike the Plan, this alternative would not achieve SB 375 targets for 2035 as it would only achieve a 17 percent reduction and would not meet the 19 percent reduction target. The transportation network and land use pattern under this alternative would not achieve the same GHG emissions reductions as the Plan because the Plan includes more integrated transportation and land use strategies. SCAG has no control over many future emissions factors (e.g., energy and water demand), SCAG made extremely conservative assumptions regarding these factors.

Since meeting the regional reduction goals from cars and light-duty trucks would not be sufficient to meet the state's overall GHG reduction goals and the Existing Plans-Local Input Alternative would not meet the SB 375 targets, this alternative would conflict even more with AB 32 and SB 32. As such, this alternative would have a greater impact on GHG emissions than the Plan.

Hazards and Hazardous Materials

Hazardous materials impacts to the public or the environment associated with construction activities and operations under this alternative would be the same as the impacts under the Plan. This is because of the numerous federal, state, and local requirements and regulations that minimize the creation of significant hazards to the public or the environment through the routine transport, use, or disposal of hazardous materials; through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment and through handling of hazardous materials, substances, and waste within 0.25 mile of an existing or proposed school. These existing requirements and regulations would apply equally to the different projected land use patterns and planned transportation network

improvements of this alternative and the Plan, so impacts would be the same. The same is true for existing requirements and regulations addressing potential safety hazards and excessive noise within an airport land use plan or within two miles of a public or public use airport, so airport-related safety and noise impacts to people residing or working in the plan area would be the same under this alternative.

The more dispersed land use pattern would be more automobile-oriented than the Plan and could complicate emergency evacuation plans that rely in part on public transit. Therefore, the less compact land use pattern of this alternative would result in greater impacts associated with impairing the implementation of adopted emergency response and emergency evacuation plans.

Hydrology and Water Quality

Impacts associated with hydrology and water quality under this alternative would be greater than under the Plan because its significantly less compact land use pattern would result in disturbance to a larger land area during construction activities and would permanently convert a greater amount of land to impervious surfaces, such as parking lots, buildings, roadways, highways, and other paved areas, as compared to the Plan. The additional land area subject to construction disturbance would increase potential for short-term discharge of pollutants from construction sites into surface or groundwater. Construction impacts to hydrology and water quality would be greater under this alternative.

The Existing Plans – Local Input Alternative encourages a housing mix that is slightly less compact (40 percent multifamily and 28 percent single family large lot) than the Plan (42 percent and 27 percent, respectively). This alternative also includes 27 percent of new development as standard suburban compared to 16 percent standard suburban under the Plan. Additional impervious surfaces would interfere with groundwater recharge and alter drainage patterns in a manner that would increase the potential for substantial erosion, siltation, and flooding relative to the Plan. This alternative would require greater storm drainage system capacity than the Plan because of its conversion of additional land area to impervious surface area. In addition, the housing mix of this alternative would include a larger number of large-lot single-family homes which would result in more managed landscaping areas and associated pollutants such as nutrients, herbicides, and irrigated runoff, which in turn could adversely affect surface and groundwater quality, resulting in greater impacts than the Plan.

The projected land use pattern and planned transportation improvements of this alternative would have the same potential as the Plan to conflict with or obstruct the implementation of a water quality control plan or sustainable groundwater management plan due to the same total, anticipated population growth.

Land Use and Planning

The Existing Plans–Local Input Alternative has a similar transportation network as the Plan. New growth would occur consistent with local general plans as a result of the local input process and would overall be more dispersed compared to the Plan. The less compact land use pattern of this alternative provides less connectivity within existing communities because of its more dispersed allocation of future growth, but it would not physically divide any existing communities. This impact is the same as under the Plan. New roadway or highway improvements can physically divide existing communities by providing physical barriers where none previously existing. Expansion of existing roadways and highways also can physically divide existing communities to the extent that wider facilities with additional lanes represent greater physical barriers than narrower facilities. The planned transportation improvements of this alternative would be generally the same as the Plan and would result in similar land use impacts.

Because this alternative is largely based on local plan, conflict with plans could be reduced compared to the Plan. However, most general plans are not updated to reflect the year 2045, as such there is the potential for conflict with Plans that have not been updated to the Plan's horizon. This impact would therefore be similar and would be significant.

Mineral Resources

The Existing Plans-Local Input Alternative could result in greater loss of availability of known mineral resources that would be of value to the region and the residents of the state, as well as locally important mineral resources, due to the greater amount of land that would be converted to urban land potentially covering more mineral resource extraction opportunities. Transportation network improvements would occur similar to the Plan, requiring a comparable amount of aggregate resources to be used for the construction of the transportation network improvements. However, overall impacts related to aggregate would be greater than the Plan.

Noise

The Existing Plans-Local Input Alternative would generate noise levels generally similar to those that would be generated under the Plan because the same total population, housing, and employment are assumed. However, the less compact land use pattern of this alternative would direct more housing to non-urbanized areas, increasing localized operational noise levels in these areas that tend to have lower existing noise levels than more developed communities. Noise thresholds could be exceeded in these communities. The roadway and highway improvements under this alternative would be similar to the Plan and therefore impacts would be similar.

There would similar, but potentially greater construction-related noise impacts under this alternative due to the nearly 13,133 acres of additional land area (greenfield) that would be subject to disturbance during construction activities associated with the less compact land use pattern. This would increase the number of separate construction sites, which would exacerbate overall noise levels associated with construction activities. However, fewer sensitive receptors may be impacted due to construction occurring in less urban locations.

The projected land use pattern of this alternative, while less compact than the Plan, would not result in land use types that would result in different levels of vibration or groundborne noise. The planned transportation improvements would be the same as the Plan, this would also not result in significantly different levels of vibration or groundborne noise. This impact is the same under this alternative and would be significant.

Regarding aviation noise, this alternative would have similar impacts as the Plan. Neither the Plan, nor the alternatives affect airport operations or capacity. While different land use patterns could result in more or less housing in flight paths as compared to the Plan, there are a nearly infinite number of variables that could occur (flight path, housing location, zone changes, etc.). Overall, it is expected aviation noise impacts under this alternative would be largely similar to the Plan.

Population and Housing

Impacts related to population and housing should be similar under all alternatives, because the same number of people and dwelling units are assumed. The less compact land use pattern of this alternative have the potential to result in displacement of substantial numbers of people or existing housing that necessitates the construction of replacement housing elsewhere. Under this alternative, the same number of transportation investments would be made to the transportation network as in the Plan. As a result, impacts related to population growth, population displacement, and the need to construct replacement housing would be similar to the Plan and would be significant.

Public Services

This alternative is anticipated to result in public service impacts similar to those that would be generated under the Plan, because the same total population, housing, and employment are assumed and public service impacts are generally population driven. However, this alternative could worsen the ability to achieve local levels of service due to the more dispersed land use pattern that makes it more difficult to efficiently serve the population. This impact is greater than the Plan. The planned transportation improvements of this alternative would have the same public services impacts as the Plan.

Similarly, with regard to the need for additional schools and libraries, impacts would be similar to the Plan. This is because each alternative would result in the same population totals. While it is possible there could be less demand in urban areas and more demand in suburban areas, overall impacts would be similar to the Plan. Given the increased growth in suburban areas, this alternative could contribute to substantial adverse physical impacts associated with the construction and subsequent operation of new or physically altered school and library facilities in order to maintain acceptable service ratios. Impacts would be significant and similar to the Plan.

Recreation

This alternative is anticipated to result in recreation impacts less than those that would be generated under the Plan. Although the same total population, housing and employment are assumed, with no concentration of growth, the park usage would be more dispersed in urban and suburban areas leading to a reduced need for expansion or construction of recreation facilities, and place additional demand on larger regional parks; however as the region is well-served with regional parks, impacts would be reduced compared to the Plan. Impacts related to the construction of new parks would be similar to the Plan as the types of park construction impacts that would occur would be the same.

Transportation, Traffic, and Safety

The Existing Plans-Local Input Alternative would result in more miles traveled, more vehicle hours traveled, and more delay than the Plan. In 2045, this alternative would result in 23.41 VMT per capita and 14,539,787 VHT. Implementation of the Plan would reduce vehicle miles traveled by approximately 2 percent to 22.89 VMT per capita, reduce VHT by 3 percent to 14,130,874 VHT. VHD per capita would remain the same at 0.12; however total VHT would be reduced by 155,568.

The effects of growth and other external factors are included in the Regional Travel Demand Model that produces the results reported above. Because these external factors are modeled, the cumulative effects of regional growth are captured in the VMT, VHT, and VHD data under this alternative.

This compact development pattern included in the Plan would concentrate population in urban areas and encourage alternative modes of travel other than automobiles. While this alternative captures the HQTAs-focus based on local plans, it encourages a land use pattern and housing mix that is slightly less urban, less compact, and more suburban compared to the Plan. Also, this Alternative has slightly less compact land use and transit coordination in HQTAs (46% homes and 55% jobs) than that for the Plan (48% homes and 59% jobs). Vehicle miles traveled, vehicle hours of delay, worker commute trips, and accident rates would be higher than under the Plan resulting in a less efficient transportation system

overall. Further, this alternative would not achieve VMT reductions necessary to meet the state's climate goals.

Tribal Cultural Resources

This alternative would result in greater impacts to tribal cultural resources when compared with the Plan. Under this alternative, there would be an additional 13,133 acres of greenfield land consumed, which would have the potential to impact previously undiscovered tribal cultural resources, such as archaeological resources, sacred sites, or human remains. Due to the less compact land use pattern and the increase in greenfield consumed, impacts would be greater under this alternative and would be significant.

Utilities and Service Systems

This alternative is anticipated to result in similar impacts to utilities and service systems to those that would be generated under the Plan because the same total population, housing, and employment are assumed, and these areas are generally population driven. The larger share of single-family homes under this alternative would likely increase the demand for surface and groundwater supplies because such housing units have higher demand for water, for example due to increased irrigation demand for landscaping areas and additional appliances and fixtures that use potable water (e.g., sinks, toilets, showers). As a result, this alternative could exceed the capacity of existing water storage, conveyance, distribution, and treatment facilities to a greater degree than the Plan and result in construction of new, expanded, or relocated facilities.

The population assumed in alternative is the same as under the Plan, thereby resulting in similar need for solid waste disposal and transfer facilities to accommodate the population.

In addition, this alternative could adversely affect the capacity of the necessary utility conveyance and distribution systems (e.g. wastewater and storm drain) due to a more dispersed projected land use pattern that makes it more difficult to efficiently serve the population. All of the alternatives would be required to follow the same federal, state, and local statutes and regulations related to solid waste. This alternative would have the same impact related to solid waste generation and conflicts with solid waste management and reduction statutes and regulations.

Wildfire

The Existing Plans-Local Input Alternative would result in greater wildfire threat than the Plan. This alternative consumes 13,133 more greenfield acres than the Plan and would result in an additional 43,692

housing units in wildfire risk areas compared to the Plan. Additionally, it includes the same transportation investments as the Plan. However, the more dispersed pattern of development would result in a greater wildfire risk than the Plan. Impacts would be significant.

Alternative 3: Intensified Land Use Alternative

Aesthetics

The Intensified Land Use Alternative has the highest percentage of new housing as urban infill (16 percent) and the smallest development footprint among the alternatives and the Plan. Impacts to scenic resources from the land use pattern under this alternative in urban areas would be greater than under the Plan because this alternative assumes higher density and intensity of development; however, the impact would be less in suburban and rural areas as less development would occur in these locations. New structures would be taller and more concentrated, with greater likelihood of blocking or impeding scenic vistas. Impacts from transportation projects to scenic vistas would be the same as the Plan since the transportation network would be the same as the Plan.

The potential for substantial degradation of visual character or quality of public views of sites and their surroundings in non-urbanized areas would be less under this alternative as compared to the Plan because under this alternative a smaller share of the projected land use pattern would be located within existing non-urbanized areas. Impacts to visual quality in urbanized areas would similar to the Plan because existing zoning and other regulations typically address visual quality and would be equally enforced under this alternative. With development focused in urban areas there would be less potential for light and glare impacts as light and glare is already occurring in urban areas, and impacts would be less than the Plan, but would remain significant.

Agriculture and Forestry Resources

Conversion of agricultural land (including Prime Farmland, Unique Farmland, and Farmland of Statewide Importance), forest land, timberland, and timberland zoned Timberland Production to non-agricultural, non-forest, or non-timber uses under this alternative would be greater than under Plan because the projected land use pattern under the Intensified Land Use Alternative convert 1,831more acres of agricultural land to urban use, although the transportation network would be generally the same. The more compact land use pattern would reduce the amount of land disturbance overall (less greenfield developed). Under this alternative, there would be 9,299 fewer greenfield acres converted to other uses compared to the Plan. The improved land use and transit coordination would require less acreage to accommodate future growth and a higher concentration of development in urban areas will reduce the

conversion of agricultural uses. However, the loss of agricultural land would still be significant and would be greater than with the Plan.

The potential for conflicts with zoning, land use designations, Williamson Act contracts, and/or other applicable regulations that protect agricultural would also be greater for the same reasons. However, the potential for conflicts with agricultural lands would still be significant. Regarding forest land, impacts would be similar to the Plan due to the similar transportation networks and would remain significant.

Air Quality

The Intensified Land Use Alternative would have the same population, housing, and employment as the Plan, but would result in a denser land use pattern. Similar to the Plan, construction emissions would likely exceed the significance thresholds established in the *CEQA Guidelines* and result in a significant short-term impact especially considering multiple projects occurring in a condensed area. In the long term, Alternative 3 would have a similar impact to the local AQMPs and a reduced cumulative impact since development projects would be more efficient than the Plan, resulting in fewer emissions.

As with the Plan, under this alternative results in substantial reductions in cancer risk levels associated with diesel particulate matter would occur as compared to existing conditions. The cancer risk and impact to public health for this alternative would be similar compared to the Plan since the transportation network is the same as the Plan with minor adjustments for land use and transit coordination strategies (**Table 4.0-5, Connect SoCal Compared to Intensified Land Use Alternative: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk**).

Table 4.0-5
Connect SoCal Compared to Intensified Land Use Alternative: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk

Segment No.	Transportation Segment	County/Region	Intensified Land Use Alternative (risk in a million)	Connect SoCal Plan (risk in a million)
1	IMP I-8	Imperial/El Centro	14.2	14.5
2	IMP SR-78	Imperial/Westmoreland	19.6	18.9
3	LA I-110	Los Angeles/Carson	23.7	23.5
4	LA I-710	Los Angeles/Compton	31.3	30.9
5	LA SR-60 DB	Los Angeles/Diamond Bar	29.2	29.7
6	LA SR-60 SEM	Los Angeles/ South El Monte	16.9	16.3
7	ORA I-5	Orange/ Orange	5.59	5.49
8	ORA I-405	Orange/ Seal Beach	11.9	11.8
9	RIV I-10	Riverside/ Banning	4.83	4.83
10	RIV SR-15	Riverside/ Temecula	9.54	9.52
11	RIV SR-91	Riverside/ Corona	8.38	8.41
12	SB I-15 ONT	San Bernardino/Ontario	10.9	10.5
13	SB I-15 VIC	San Bernardino/ Victorville	41	41.3
14	SB SR-60	San Bernardino/ Ontario	18.5	18.8
15	VEN US-101 SB	Ventura/ San Buenaventura	4.84	4.85
16	VEN US-101 TO	Ventura/ Thousand Oaks	22	21.9

Source: Impact Sciences, 2019.
Note: Segments 2-4, 6-8, 10, 12, and 16 under Alternative 3 would have higher health risks than the Plan.

Health risk associated with construction activities would be similar to the Plan and potentially significant adjacent to extended intense construction activities.

Objectionable odors are expected to be similar as well since construction impacts will be similar to the Plan.

Overall impacts to air quality could be incrementally less when compared to Connect SoCal due to the more compact growth pattern and reduced VMT.

Biological Resources

Impacts on candidate, sensitive, or special status species (including plants, wildlife, and fish) under the Intensified Land Use Alternative would be less than under the Plan because this alternative's projected land use pattern would be more compact and include approximately 9,299 fewer acres of greenfield development, this alternative would result in incrementally less impact related to biological resources

when compared with the implementation of the Plan. Impacts to biological resources are directly linked to the amount of native habitat conversion in non-urban areas a potential project proposes. Under this alternative, there would be an additional 990 acres of high species movement potential maintained compared to the Plan. While this alternative would affect fewer acres of natural lands, impacts to biological resources in and near the urban areas would remain significant because impacts to sensitive species could still occur.

Cultural Resources

Impacts to cultural resources (historic built environments, archeological, and human remains, and important examples of major periods of California history or prehistory) under this alterative would be less than under the Plan because this alternative's projected land use pattern would be more compact and include approximately 9,299 fewer acres of greenfield development in the same transportation network. The reduced land disturbance, such as grading and excavation, resulting from the projected land use pattern of this alternative would result in lower likelihood of encountering unknown surface or subsurface archaeological, or human remains. However, increased development in urban areas, where historic buildings tend to be located could result in greater impacts to the character of settings that contribute to the significance of historic built environments, as pressure to redevelop historic buildings increases. Construction activities under this alternative would also have less impacts to historic built environments, archaeological, human remains, and important examples of major periods of California history or prehistory for the reasons provided above.

Energy

The Intensified Land Use Alternative contains more infill development to accommodate a higher proportion of growth in more energy-efficient housing types like townhomes, apartments, and smaller single-family homes, as well as more compact commercial building types. As a result, residential energy consumption, building energy consumption, and water consumption would incrementally decrease compared to the Plan because there would be a higher percentage of multi-family units and higher density in the land use. Individual detached structures require more energy for materials, more materials overall, and more fuels to build than would be needed for attached structures. This alternative also includes a housing mix with fewer single-family homes (48 percent) and more townhome or multifamily homes (8 and 44 percent) as compared to the proposed Plan (48 percent single family and 8 and 42 percent multi-family, respectively). As a result, this alternative would likely result in lower energy use per capita because attached homes require less energy per capita as compared to large-lot single-family homes. At 335 trillion Btu, this alternative's residential energy would result in similar but somewhat lower consumptive energy use than the Plan (338 trillion Btu). Per-capita energy consumption under this

alternative would be lower than under the Plan because this alternative would result in a more compact land use pattern. This alternative would result in less impacts related to the wasteful, inefficient, or unnecessary consumption of energy during construction activities and long-term operations. Impacts would continue to be less than significant.

This alternative is likely to have less impact on state and local plans for renewable energy or energy efficiency as compared to the Plan as it would be overall more energy efficient. Implementation of the California Energy Code and State goals for increasing the percentage of electricity from renewable and zero-carbon sources under this alternative would be the same as under the Plan.

Geology and Soils

The following impacts associated with earthquakes and seismic activity under this alternative would be the same as the Plan: rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; and landslides. Existing state and local building code requirements addressing substantial adverse effects due to earthquakes and seismic activity would apply to the land use pattern and planned transportation improvements of the Plan. The following operational and construction impacts of this alternative would be less than the Plan because this alternative includes a more compact land use pattern that would develop approximately 9,299 fewer acres: soil erosion and loss of topsoil; on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse; development on expansive soil; and inadequate soils for alternative wastewater systems.

Impacts to unique geologic features would be less under this alternative than under the Plan because the land use pattern of this alternative is more compact and would develop fewer acres in the same transportation network. The decreased land disturbance resulting from the projected land use pattern and planned transportation improvements under this alternative would result in less impacts to unique geologic features.

Greenhouse Gas Emissions and Climate Change

The GHG emissions for building energy and water-related energy are expected to be less with the Intensified Land Use Alternative compared to the Plan as this alternative would develop a more intense land use pattern with increased infill and compact development which tends to be more efficient than large lot development. For transportation, the GHG emissions are projected to be less under this alternative compared to the Plan because of decreased VMT. This alternative would improve regional GHG emissions compared to the Plan.

As with the Plan, this alternative would reduce per capita GHG emissions from cars and light-duty trucks compared to the 2005 baseline so it would achieve both the 8 percent target set for 2020 and exceed the 19 percent set for 2035, set pursuant to SB 375.

Since meeting the regional reduction goals from cars and light-duty trucks would not be sufficient to meet the state's overall GHG reduction goals this alternative would conflict with AB 32 and SB 32. The Plan would have the same impact as this alternative.

Hazards and Hazardous Materials

Hazardous materials impacts to the public or the environment associated with construction activities and operation under this alternative would be the same as the impacts under the Plan. This is because of the numerous federal, state, and local requirements and regulations that minimize the creation of significant hazards to the public or the environment through the routine transport, use, or disposal of hazardous materials; through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment and through handling of hazardous materials, substances, and waste within 0.25 mile of an existing or proposed school. These existing requirements and regulations would apply equally to the different projected land use patterns and planned transportation network improvements of this alternative and Plan, so impacts would be the same. The same is true for existing requirements and regulations addressing potential safety hazards and excessive noise within an airport land use plan or within two miles of a public or public use airport, so airport-related safety and noise impacts to people residing or working in the plan area would be the same under this alternative.

The more compact land use pattern under this alternative would be more transit-oriented than the Plan and could complement emergency evacuation plans that rely in part on public transit to a greater degree. Therefore, this alternative would result in less impacts associated with impairing the implementation of adopted emergency response and emergency evacuation plans.

Hydrology and Water Quality

Impacts associated with hydrology and water quality under this alternative would be less than under the Plan because its more compact land use would result in disturbance to a smaller land area during construction activities and would permanently convert a smaller amount of land to impervious surfaces, such as parking lots, buildings, roadways, highways, and other paved areas, as compared to the Plan. The decreased land area subject to construction disturbance would decrease potential for short-term discharge of pollutants from construction sites into surface or groundwater.

The decreased land area permanently converted to impervious surfaces would decrease the potential volume and increase the water quality of stormwater flows relative to the Plan. Less impervious surface also would reduce interference with groundwater recharge and result in less alteration of drainage patterns in a manner that would increase the potential for substantial erosion, siltation, and flooding. This alternative would require less storm drainage system capacity than the Plan because of its conversion of reduced land area to impervious surface area. In addition, the housing mix of this alternative would include a smaller share of single-family homes, which would result in less managed landscaping areas and associated pollutants such as nutrients, herbicides, and irrigated runoff, which in turn could adversely affect surface and groundwater quality. Impacts to groundwater recharge, erosion, siltation and flooding would be less than the Plan but would remain significant.

Land Use and Planning

The more compact land use pattern of this alternative provides more connectivity within existing communities, so it would not physically divide any existing communities. This impact is the same as under the Plan. New roadway or highway improvements can physically divide existing communities by providing physical barriers where none previously existing. Expansion of existing roadways and highways also can physically divide existing communities to the extent that wider facilities with additional lanes represent greater physical barriers than narrower facilities. The planned transportation improvements of this alternative would be generally the same as the Plan network, which means it would result in similar impacts from physically dividing existing communities.

Because this alternative would include a more compact land use that would result in decreased land disturbance relative to the Plan, it would have less impacts to resources within the region including agriculture, biological resources, and recreational land. Alternative 3 would result in similar impacts with regard to physically dividing an established community due to the similar scale and number of transportation projects being constructed. This alternative would have greater potential to conflict with local land use plans as the greater amount of infill projected may be beyond what is currently considered in some local land use plans. This impact would be greater than the Plan and would be significant.

Mineral Resources

Alternative 3 could result in less loss of availability of known mineral resources that would be of value to the region and the residents of the state, as well as locally important mineral resources, due to the reduction in land that would be converted to urban land potentially covering more mineral resource extraction opportunities. Transportation network improvements would occur similar to the Plan, requiring a comparable amount of aggregate resources to be used for the construction of the

transportation network improvements. Although transportation network impacts would be similar under this alternative, overall impacts would be less than the Plan and would remain significant.

Noise

This alternative would generate noise levels generally similar to those that would be generated under the Plan because the same total population, housing, and employment are assumed. However, the more compact land use pattern of this alternative would direct less housing growth to in non-urbanized areas, decreasing construction and operational noise levels relative the Plan in areas that tend to have lower existing noise levels than more developed communities. Noise thresholds would be less likely to be exceeded.

The projected land use pattern of this alternative, while more compact than the Plan, would not result in land use types that would result in different levels of vibration or groundborne noise. There would potentially be less construction-related noise impacts under this alternative due to the approximately 9,299 fewer acres of land area that would be subject to disturbance during construction activities associated with the less compact land use pattern. This would decrease the number of separate construction sites, which would decrease overall noise levels associated with construction activities relative to the Plan.

The planned transportation improvements of this alternative would include the same lane miles of roadway and highway improvements, and this would also not result in significantly different levels of vibration or groundborne noise relative to the planned transportation improvements identified in the proposed Plan. This impact is the same under this alternative and would remain significant. With regard to aviation noise, impacts would be similar to the Plan as this alternative would not affect airport capacity.

Population and Housing

Impacts related to population and housing would be similar under all alternatives, because the same number of people and dwelling units are assumed. The more compact land use pattern of this alternative combined with the same lane miles of roadway and highway improvements would not result in displacement of substantial numbers of people or existing housing that necessitates the construction of replacement housing elsewhere. This impact is the same as the Plan and would remain significant.

Public Services

This alternative is anticipated to result in public service impacts similar to those that would be generated under the Plan, because the same total population, housing, and employment are assumed. However, this alternative could result in less demand on the ability to achieve local levels of service due to the more compact land use pattern that makes it more efficient to serve the population. This impact is less than the Plan. The planned transportation improvements of this alternative would have the same public services impacts as the Plan. It is possible that denser development in urban areas, although more efficient from a service perspective, could result in the need for more police and fire services from a demand perspective resulting in a need for new facilities to maintain service ratios. Nonetheless, due to the more efficient land use pattern, this impact would be less than the Plan. Similarly, the more compact land use pattern would more efficiently serve the population for schools and libraries. However, there still could be need for new facilities resulting in physical impacts. As such this impact would be significant, but less than the Plan.

Recreation

With the same population growth across all alternatives impacts would be expected to be similar. However, with more compact development, there could be increased pressure on urban parks which are currently overburdened. With higher population density, there would more use of the same parks, leading to greater deterioration of existing recreational facilities in urban areas. As such, impacts could be greater than the Plan.

Transportation, Traffic, and Safety

The Intensified Land Use Alternative would result in greater transportation impacts than the Plan. Alternative 3 would result in slightly lower VMT (total and per capita), less VHD and less VHT. In 2045 Alternative 3 would result in 22.83 VMT per capita, 14,074,675 VHT and 2,619,980 VHD. Comparing these number to the Plan (22.89 VMT per capita, 14,130,874 VHT and 2,668,229 VHD. Despite the overall reduction in VMT and VHD as compared to the Plan, this alternative does not maximize mobility and accessibility for all people and goods in the region to the extent of the Plan because it results in more severe localized traffic congestion conditions with adverse mobility and reliability consequences for goods and people (increased vehicle and truck delay). The effects of growth and other external factors are included in the Regional Travel Demand Model that produces the results reported above. Because these external factors are modeled, the cumulative effects of regional growth are captured in the VMT, VHT and VHD data for this alternative. This alternative could increase localized congestion and compromise accessibility to destinations which would result in more adverse effects related to safety considerations for pedestrians, cyclists, and motorists. Hence, this Alternative could have somewhat more adverse

impacts than the Plan related to design hazards. Regarding emergency access, the more dense land use patterns of this alternative could result in more efficient emergency access. Impacts would be less than the Plan.

Tribal Cultural Resources

This alternative would result in less impacts to tribal cultural resources when compared with the Plan. Under this alternative, there would be 9,299 fewer acres of greenfield land consumed, which would reduce the potential to impact previously undiscovered tribal cultural resources, such as archaeological resources, sacred sites, or human remains. Due to the more compact land use pattern and the reduction in greenfield consumed, impacts would be less under this alternative.

Utilities and Service Systems

This alternative is anticipated to result in impacts to utilities and service systems similar to those that would be generated under the Plan because the same total population, housing, and employment are assumed. With less single-family homes, this alternative could decrease demand for surface and groundwater supplies because such housing units have higher demand for water. Single family homes typically required additional water due to increased irrigation demand for landscaping areas and additional appliances and fixtures that use potable water (e.g., sinks, toilets, showers). As a result, this alternative could exceed the capacity of existing water storage, conveyance, distribution, and treatment facilities to a lesser degree than the Plan. These impacts of this alternative are less than under the Plan but would remain significant.

This alternative could result in greater impacts related to adversely affecting the capacity of the necessary utility conveyance and distribution systems (e.g. wastewater, storm drain,) due to the more compact land use pattern that, although more efficient, in many urban areas is aging and may not be capable of supporting increased loads. Overall the alternative would demand less water and energy during construction compared to the Plan. All alternatives would be required to follow the same federal, state, and local statutes and regulations related to solid waste. This alternative would have the same impact related to solid waste generation and conflicts with solid waste management and reduction statutes and regulations

Wildfire

The Intensified Land Use Alternative would result in fewer impacts related to wildfires than the Plan. This alternative would result in fewer housing units in wildfire zones compared to the Plan. Therefore,

fewer people and structures would be placed within proximity to wildfire-prone areas at urban-wildland interfaces. Impacts would be less than the Plan.

4.4 ABILITY OF ALTERNATIVES TO MEET THE PROJECT OBJECTIVES

The effectiveness of each of the alternatives to achieve the basic objectives of the Plan has been evaluated in relation to the statement of goals and guiding principles described above. Although the No Project Alternative is not capable of meeting most of the goals of the Project, it has been analyzed, as required by CEQA.

The Existing Plans – Local Input Alternative, meets some but not all the project goals. Specifically, it is less effective than the Plan in meeting Plan goals:

1. Encourage regional economic prosperity and global competitiveness. The Existing Plans – Local Input Alternative would not include the strategies in the Plan (for example, strategies related to job centers and goods movement) that will enhance regional prosperity.

2. Improve mobility, accessibility, reliability, and travel safety for people and goods. As demonstrated above, the Existing Plans – Local Input Alternative would not reduce VMT to the same extent as the Plan and would not achieve the GHG reduction goals set by CARB.

3. Enhance the preservation, security, and resilience of the regional transportation system. The Existing Plans – Local Input Alternative does not include the Plan's safety and resilience strategies and therefore would not achieve this goal.

4. Increase person and goods movement and travel choices within the transportation system. The Existing Plans – Local Input Alternative does not include the goods movement strategies aimed at increasing person and freight mobility, including critical access projects.

5. Reduce greenhouse gas emissions and improve air quality. The Existing Plans – Local Input Alternative would not reduce greenhouse gas emissions or improve air quality to the same extent as the Plan.

6. Support healthy and equitable communities. The Existing Plans – Local Input Alternative would not include the regional strategies for complete streets and jobs/housing balance and planning for trips that reduce dependence on solo car trips.

7. Adapt to a changing climate and support an integrated regional development pattern and transportation network. The Existing Plans – Local Input Alternative would not include the "green

region" strategies such as supporting climate action plans, renewable energy production, and integrated food production.

8. Leverage new transportation technologies and data-driven solutions that result in more efficient travel. The Existing Plans – Local Input Alternative would not include strategies such as promoting low emissions technologies, shared rides, car and bike sharing and scooters, as well as improving access to services through technology.

9. Encourage development of diverse housing types in areas that are supported by multiple transportation options. The Existing Plans – Local Input Alternative would not include the Plan's strategies to focus growth near destinations and mobility options.

10. Promote conservation of natural and agricultural lands and restoration of critical habitats. The Existing Plans – Local Input Alternative would result in the consumption of more natural lands and habitat lands as compared to the Plan.

The Intensified Land Use Alternative is capable of meeting most of the goals of the Plan. However, because it would place a large portion of growth in existing communities it may conflict with local plans or place a burden on some community facilities such as parks and other services to a greater extent than the Plan. Therefore, it is less effective in meeting the following goal:

6. Support healthy and equitable communities. The Intensified Land Use Alternative would not achieve this goal to the same extent as the Plan due to its focus on compact development beyond what is currently contemplated under the Plan. The emphasis on development in urban communities may result in overuse of parks and other services (police, fire, schools, library) which has the potential to result in quality of life impacts in urban areas.

As further described below, consideration of alternatives requires careful examination of the multiple facets of each alternative. For example, while urban development may preserve farmland or other natural resources, it could place a burden on urban parks, schools, police and fire services, and aging infrastructure.

4.5 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

Section 15126.6 of the *State CEQA Guidelines* requires that an "environmentally superior" alternative be selected among the alternatives that are evaluated in the EIR. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No

Project alternative is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

For purposes of this PEIR, the impacts associated with reducing global GHG emissions and regional air pollutants must be examined alongside the other adverse impacts that are caused by increasing the density and intensity of the region's development patterns and, for example, bringing people closer to sources of air pollutants such as transit corridors and freeways (even though these sources would have fewer emissions in the future, despite increasing traffic, due to emission controls). The tension between CEQA's mandate to reduce all types of impacts to the maximum extent feasible, and the statutory mandates of reducing GHG emissions under AB 32, SB 32 and SB 375, is a well-recognized CEQA compliance challenge.[9] CEQA does not provide any legal mechanism for "weighting" environmental impacts, and scoring some categories of impacts as "more important" and others as "less important." Instead, CEQA is structured to require the disclosure of all impacts for each alternative and the Plan, to foster informed decision making and to disclose the inherent trade-offs between different types and magnitudes of impacts associated with different alternatives.

As indicated by the comparative analysis, the Plan and each Alternative result in many impacts that are "significant and unavoidable" under CEQA. Alternative 3, the Intensified Land Use Alternative, would result in somewhat less adverse impacts for nine of the 20 environmental issues that were analyzed. The anticipated increases in the density and intensity of development within the region's established communities under Alternative 3 would result in more localized impacts that are greater than the Plan in four areas (land use; noise; public services and recreation). This alternative would also consume more agricultural land.

Of the three alternatives, the Intensified Land Use Alternative would be considered the environmentally superior alternative due to fewer impacts to reduced VMT and GHG emissions, and because it would substantially restrict the use of land for single-family development, in a manner that differs from the adopted general plans of the six counties and 191 member cities in the SCAG region. This alternative concentrates development in existing urban centers. and near transit stations and activity centers. As such, the Intensified Land Use has less impact on rural and undeveloped areas, specifically greenfields. However, the Intensified Land Use Alternative would have more severe impacts on the built environment (i.e., seven CEQA impact categories: land use; noise and vibration, public services, traffic delay, and overtaxed recreation facilities in the vicinity of HQTAs).

---

9 Adams, Tom (California League of Conservation Voters), and Amanda Eaken and Anne Nothoff (Natural Resources Defense Council). 2010. Tackling California's Global Warming Challenge: A Guide to SB 375, by Tom Adams (California League of Conservation Voters), p. 24.

While the Intensified Land Use Alternative would be considered the environmentally superior alternative because of the more compact land use patterns fewer emissions and reduced VMT, this alternative requires implementation of the same mitigation measures required for the Connect SoCal Plan and would not resolve any of the significant and unavoidable impacts of the Plan. However, the more intensified and compact land use development pattern would result in somewhat less adverse impacts to energy, land, and water resources due to the denser pattern of development. The Intensified Land Use Alternative would also achieve greater overall reductions in criteria air pollutants and greenhouse gas emissions, as a result of the more compact pattern of land use development. The level of impact for the Existing Plan – Local Input Alternative and the Intensified Land Use Alternative varies in relation to the land use development pattern, but neither is capable of avoiding any of the significant and unavoidable impacts of the Plan, because those impacts are primarily associated with net increase in population anticipated for the SCAG region. Therefore, the comparative impacts between the alternatives and the Plan are primarily related to the level of severity of the impacts.

Similarly, the No Project Alternative does not avoid the significant and unavoidable impacts of the Plan, and in several instances the impacts would be more adverse due to the failure to achieve reductions in the consumptive use of land, energy, and water resources achieved through the policies and program embedded in the Plan that facilitate a more efficient use of these resources.

As discussed throughout this PEIR, SCAG has no land use authority; rather it sets regional land use policy. SB 375 addresses the land use component (in the context of transportation planning) of statewide efforts to achieve AB 32 GHG reduction goals that include all sectors of the economy. In order to meet the SB 375 targets for statewide GHG reductions, CARB identified that SCAG must plan to reduce GHG emissions by 19 percent by 2035. SCAG has developed the SCS (the regional land use policy component of Connect SoCal) which sets forth land use strategies to meet these GHG emissions reduction targets. Actual implementation of the SCS will be undertaken by local jurisdictions through general plans and specific plans and through actions on individual projects.

While the Intensified Land Use is one potential generalized land use scenario that results in achieving CARB GHG targets (as well as reducing impacts on open space and agricultural lands), the Intensified Land Use Alternative would have other impacts. For example, the Intensified Land Use Alternative would result in more development in urban areas potentially overloading infrastructure in some areas. The jurisdiction that is anticipated to receive most of the infill development under this alternative is the City of Los Angeles. It is possible, that the zoning in the City of Los Angeles would be sufficiently flexible to accommodate the additional units by 2045, but it is not certain that it would. This scenario assumes that very little development would be approved outside urban areas, which could require zoning

changes or land use interventions beyond those currently in place. In addition, as urban areas become denser (more units per acre), urban infrastructure is used more:

- Water and sewer lines are required to carry more, greater than the current capacity, which could result in the need to construct additional capacity in the older infill areas at significant cost.
- Demand for police and fire services increases requiring expansion of existing stations and service personnel (although significant environmental impacts are not anticipated from such construction).
- Parks are used more, resulting in potential crowding and/or over use, with facilities becoming worn and substandard (grass becomes over used and dies, equipment breaks, etc.) and/or the need to construct more parks and recreational facilities.

Passenger vehicle transportation infrastructure cannot accommodate peak period volumes creating increased congestion, noise and air emission impacts. Increasing population in the infill core areas could also reduce mobility for goods movement which cannot use alternative modes during peak periods, resulting in more trucks in stop and go traffic, impacting air quality, and noise. While development outside urban areas would likely require the construction of new infrastructure, it would occur in less populated areas and would expose fewer people to construction impacts. Also, in general infrastructure in less urban areas has greater available capacity since infrastructure is generally sized for capacities that can accommodate substantially more than the current densities (parks, police stations, water lines, etc. have minimum sizes that can generally accommodate more than rural level density). New development on the periphery is often closer to higher capacity sewer trunk lines, treatment plants and water wells, lowering infrastructure costs compared to retrofitting older existing urban areas.

Furthermore, as more people are located in the same area, urban impacts increase. Congestion increases, noise and air emissions in proximity to sensitive receptors (residences, schools, hospitals, etc.) also increase.

Each community must determine what level of population it can support – balancing infrastructure capacity and population density. In developing the Plan, SCAG has satisfied its obligation under SB 375 to identify a policy and growth pattern that meets desired GHG reduction goals.

The Plan provides general guidance on location of development. The Plan does not impose specific land use controls. This EIR evaluates a number of potential scenarios. It will be up to each jurisdiction to interpret the Connect SoCal land use strategies and through ongoing monitoring of key performance measures (in cooperation with SCAG), monitor GHG reductions. Through ongoing monitoring SCAG

will adjust regional policy as needed (in the next RTP/SCS or in interim amendments if needed) to ensure that the region complies with applicable State law including AB 32 and SB 375.

SCAG is not rejecting the Intensified Land Use Alternative or any alternative with increased density and/or greater percentage of high-density housing that might fall between the Intensified Land Use Alternative and the Plan as a possible land use scenario for 2045. Rather, SCAG is rejecting the inclusion of policies in the Plan that would impose extensive land use intervention (to mandate specific land use densities and/or specific locations) with local jurisdictions because SCAG has no land use authority and no mechanism exists to impose detailed land use changes.

5.0 OTHER CEQA CONSIDERATIONS

Section 15126 of the *California Environmental Quality Act (CEQA) Guidelines* states that an Environmental Impact Report (EIR) must include a discussion of the following topics:

- growth-inducing effects of the proposed project
- significant environmental effects which cannot be avoided if the proposed project is implemented
- significant irreversible environmental changes which would be involved in the proposed project should it be implemented; and

In addition, Section 15128 of the *State CEQA Guidelines* requires a brief statement of the reasons that various possible effects of a project have been determined not to be significant and, therefore, are not discussed in detail in the EIR. This PEIR analyzed all potential effects of the project as described in Appendix G of the *State CEQA Guidelines*, therefore, there is no listing of effects determined not to be significant.

5.1 SIGNIFICANT ENVIRONMENTAL EFFECTS OF THE PROJECT THAT CANNOT BE AVOIDED IF THE PROPOSED PROJECT IS IMPLEMENTED

An EIR must identify significant impacts associated with a proposed agency action that could not be mitigated to a less than significant level. Many of the impacts that are determined to be significant and unavoidable could be mitigated to less than significant at the project level. However, this PEIR evaluates impacts at a programmatic level, and detailed site plans and project descriptions are not available. Therefore, without the ability to evaluate each project that could occur as a result of the Plan, these impacts were determined to be significant and unavoidable.

Table ES-5, Summary of Project Impacts, Mitigation Measures, and Residual Impacts, which is contained in the **Executive Summary** of this PEIR, and **Sections 3.1** through **3.21** of this PEIR provide a comprehensive identification of the environmental effects of the SCAG's proposed Connect SoCal Plan, including the level of significance both before and after mitigation.

Section 15126.2(c) of the *CEQA Guidelines* requires that an EIR (including a PEIR) describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. Implementation of the Plan would result in significant and unavoidable project-related and/or cumulative impacts in the following areas:

- **Aesthetics:** Implementation of transportation projects contained in the Plan and development projects anticipated to occur under the Plan may result in the conversion of open space or vacant lands to new uses. Areas potentially affected include designated open space visible from USFS, Caltrans, county, and city designated scenic vistas. The Plan would also have the potential to impact rock outcroppings or other scenic elements such as historic resources within eligible state scenic highways. Many of the transportation projects and the HQTAs are in areas with designated scenic resources including historic buildings and scenic rock outcroppings. Therefore, there is potential for the Plan to affect these resources. Implementation of transportation projects contained in the Plan and development anticipated to occur under the Plan has the potential to degrade the visual character of project sites, constituting a significant impact. Implementation of transportation projects contained in the Plan and development anticipated to occur under the Plan has the potential to create new substantial sources of light or glare, constituting a significant impact.

- **Agriculture and Forestry Resources:** Implementation of transportation projects as well as growth anticipated under the Plan would have the potential to convert the following to non-agricultural use: Prime Farmland, Farmland of Statewide Importance, Unique Farmland and Farmland of Local Importance. Implementation of the transportation projects and growth anticipated under the Plan would have the potential to conflict with land managed pursuant to Williamson Act contracts constituting a significant impact. Implementation of the transportation projects and anticipated growth under the Plan has the potential to conflict with existing zoning for forest land, timberland, or timberland zoned Timberland Production. Implementation of transportation projects and anticipated growth under the Plan would result in significant impacts with regards to the loss of forest land or conversion of forest land to non-forest use. Implementation of transportation projects and anticipated growth under the Plan would result in significant impacts with regards to the conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use.

- **Air Quality:** At the regional level, criteria pollutant emissions would be mostly reduced compared to existing conditions and the region would meet air quality standards. In 2045, when compared to existing conditions, on-road mobile-source PM2.5 would increase in Imperial, Riverside, and San Bernardino Counties and mobile-source PM10 would increase in Imperial, Orange, Riverside, and San Bernardino Counties due to increasing traffic. On-road mobile-source particulate matter emissions would remain the same or decrease from existing conditions in the other counties. Within the SCAB (which is likely indicative of the region as a whole), SCAQMD indicates that total pollutant emissions are being reduced through at least 2031, except for small increases in SOx and PM2.5. Individual project emissions may result in significant construction and/or operational emissions as compared to thresholds of significance identified by each air district which would result in a

cumulative impact. Over the lifetime of the Plan numerous transportation projects and land use development projects would be implemented. The construction of these projects could expose sensitive receptors to substantial pollutant concentrations.

- **Biological Resources:** Implementation of transportation projects identified in the Plan and development projects anticipated to occur under the Plan would affect biological resources. Direct impacts that could occur during construction of some projects include direct loss of sensitive plant and/or wildlife species resulting from injury, death, or disturbance of these species. Direct impacts may also occur through direct habitat loss and fragmentation during construction, displacement of sensitive species due to construction noise or during operation, accidental introduction of non-native plants by construction equipment or during maintenance and general operation, introduction of new lighting sources, and dust and noise during construction and operation. Implementation of transportation projects identified in the Plan and development projects anticipated to occur under the Plan would have a substantial adverse effect on riparian habitats and other sensitive natural communities. Implementation of transportation projects identified in the Plan and development projects anticipated to occur under the Plan would have a substantial adverse effect on wetlands. Implementation of transportation projects identified in the Plan and development projects anticipated to occur under the Plan would interfere substantially with the movement of native resident or migratory fish, or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites directly, as a result of habitat conversion to accommodate transportation projects and growth under the Plan, or indirectly through interruption of movement or migratory corridors caused by construction and operation of infrastructure for transportation projects and adjacent projects that may result from improved transportation access. Implementation of transportation projects as well as land use and transportation strategies identified in the Plan have the potential to conflict with local policies and ordinances related to biological resources. Implementation of transportation projects identified in the Plan and development projects anticipated to occur under the Plan would have a potential to result in conflicts with the provisions of applicable adopted HCPs and NCCPs because some planned major transportation projects and development projects may occur in or adjacent to lands protected under these plans, constituting a significant impact.

- **Cultural Resources:** The Plan has the potential to effect historical resources in the SCAG region, including sites listed in the NRHP. Transportation projects and anticipated growth under the Plan have the potential to cause a substantial adverse change in the significance of archaeological resources in the SCAG Region, pursuant to *CEQA Guidelines* Section 15064.5, constituting a significant impact. The Plan includes transportation projects that have the potential to disturb human remains

interred outside of formal cemeteries or those interred in Native American sacred sites, constituting a significant impact.

- **Geology and Soils:** Implementation of transportation projects included in the Plan as well as growth under the Plan, particularly projects involving large-scale ground disturbance during construction such as grade separation projects, mixed flow lane projects, and rail projects may result in significant impacts from soil erosion or the loss of topsoil. The potential direct impacts on paleontological resources related to implementation of transportation projects and development projects anticipated to occur under the Plan, could result in substantial alteration or removal of a significant paleontological resource from construction activities, and is considered significant.

- **Greenhouse Gas Emissions:** Implementation of the Plan could conflict with CARB's 2017 Scoping Plan or any applicable plan, policy or regulation adopted for the purpose of reducing emissions of GHGs. Furthermore, while GHG emissions are anticipated to decrease compared to existing conditions, they are not anticipated to be reduced sufficiently to meet the targets established for California.

- **Hazards and Hazardous Materials:** Implementation of the Plan would increase the risk of significant hazards to the public or the environment through the routine transport, use, or disposal of hazardous materials as well as through reasonably foreseeable upset conditions. Transportation projects and land use strategies included in the Plan may increase the risk of emitting hazardous materials within one-quarter mile of a school. Furthermore, the Plan may cause transportation projects and development to be located on sites included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. The Plan would not in itself result in a safety hazard; however, increased population growth that would occur by 2045 would result in increased air traffic in major commercial airports in Southern California which could result in significant safety impacts. The Plan would result in significant impacts in regards to impairing implementation of or physically interfering with an adopted emergency response plan or emergency evacuation plan.

- **Hydrology and Water Quality:** Grading, excavation, and other construction activities associated with implementation of transportation projects and development projects anticipated to occur under the Plan, could impact water quality due to erosion resulting from exposed soils that may be transported in stormwater runoff. Given that most of the groundwater basins in the Plan area are already in a state of overdraft, future development may result in a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of preexisting nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted). Implementation of transportation projects as well as anticipated development under the

Plan would occur within watersheds that have impaired water bodies. Many of the impaired water bodies are located near a freeway, transit, or rail projects included in the Plan. Several projects may impact water bodies by placing fill material within a stream channel. The Plan has the potential to change existing drainage patterns. Transportation projects such as lane widening projects, new highways, as well as bridges/tunnels, and transportation facilities projects that could cross existing creeks, water crossings, rivers or be expanded into wetland areas may impact water bodies by placing fill material within a stream channel. the Plan has the potential to alter existing drainage patterns. Implementation of the Plan's transportation projects as well as land use strategies may increase impervious surfaces, which in turn could increase urban runoff if not regulated, resulting in the transport of greater volumes of polluted water into storm drain systems. With regard to flooding, implementation of transportation projects and development projects anticipated to occur under the Plan built in low-lying areas or in proximity to waterways and/or dam inundation zones may be subject to flood hazards. An increase in impervious surfaces would increase water runoff and potentially affect groundwater recharge rates and water quality in the basins. Therefore, the Plan may conflict with or obstruct the implementation of a water quality control plan or sustainable groundwater management plan and mitigation measures are required.

- **Land Use:** Physical division of an established community could occur as a result of real or perceived barriers to pedestrians, bicyclists, and motorists. Short-term construction related impacts could result from disturbances due to construction equipment; these impacts are discussed under other impact categories (e.g., Noise, Aesthetics, and Air Quality). Long-term impacts could result from the completion of new or expanded roadways or transit facilities in existing communities. , since the Plan's planning horizon year is beyond the timeline of many of the most recent general plans, implementation of the Plan's transportation projects and land use strategies could potentially result in changes in the land use patterns in the region that may facilitate land use changes in some areas. Therefore, there is potential for inconsistencies with general plans as well as regional conservation plans.

- **Mineral Resources:** Transportation projects contained in the Plan and development projects anticipated to occur under the Plan would require substantial amounts of aggregate resources for construction purposes, constituting a significant impact. Transportation projects contained in the Plan and development projects anticipated to occur under the Plan have the potential to impact availability of mineral resources if they are constructed in mineral resource zones.

- **Noise:** Implementation of transportation projects and development projects anticipated to occur under the Plan would likely result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other

agencies, constituting a significant impact. Implementation of the transportation projects and the construction of land use development projects anticipated to occur under the Plan would generate varying levels of vibration and groundborne noise. Implementation of transportation projects and development anticipated to occur under the Plan may result in exposure of persons to or generation of significant noise levels from aircrafts and other airport activity (including ground transportation) constituting a significant impact.

- **Population and Housing:** Due to the Plan's land use strategies that focus on compact development, there is potential to induce growth in some areas of the region although overall the Plan accommodates anticipated growth rather than inducing growth**.** The construction of transportation projects that require expansion of existing or designation of new ROWs have the potential to result in the displacement of existing people and housing, necessitating the construction of replacement housing, thereby constituting a potentially significant impact.

- **Public Services:** Implementation of Connect SoCal could affect the need for construction of new or physically altered fire protection and emergency response facilities in order to maintain acceptable service ratios. Although the location and size of such facilities is not yet known, impacts could occur, requiring the consideration of mitigation measures. The Plan could contribute to the need for construction of new or physically altered police facilities in order to maintain acceptable service ratios. The Plan could contribute to substantial adverse physical impacts associated with the construction and subsequent operation of new or physically altered school facilities in order to maintain acceptable service ratios. The Plan could contribute to substantial adverse physical impacts associated with the construction of library facilities in order to maintain acceptable service ratios.

- **Parks and Recreation:** Transportation projects and growth under the Plan would have the potential to increase use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration would occur, constituting a potentially significant impact.. Implementation of the Plan would result in additional linear recreation facilities, including a regional greenway network, a regional bikeway network, and local bikeway networks, the construction of which might have an adverse physical effect on the environment.

- **Transportation and Traffic:** The Plan could conflict with or be inconsistent with *CEQA Guidelines* section 15064.3(b). The Plan also has the potential to result in inadequate emergency access, or to substantially impair an adopted emergency response plan.

- **Tribal Cultural Resources:** Transportation projects and anticipated growth under the Plan have the potential to cause a substantial adverse change in the significance of tribal cultural resources in the

SCAG region, defined in Public Resources Code section 21074, as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe.

- **Utilities and Service Systems:** Many of the transportation projects within the Plan have the potential to generate a substantial amount of solid waste during construction through grading and excavation activities, as well as debris resulting from removal of structures, due to the volume of solid waste debris expected to be generated with implementation of the Plan and lack of identified landfill capacity, impacts would be significant. Implementation of some transportation projects and anticipated growth under the Plan would involve construction of new storm water drainage facilities and may require construction of new or expanded wastewater treatment facilities. Implementation of the Plan could result in a determination by one or more of the wastewater treatment providers in the region that there is inadequate capacity to serve the future population demand in addition to the provider's existing commitments, resulting in a significant impact. Implementation of the Plan, could require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects. The Plan could result in insufficient water supplies from existing entitlements and resources resulting in significant impacts.

- **Wildfire:** Transportation projects and anticipated development projects may be located in wildfire-prone areas which could potentially exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from wildfires or the uncontrolled spread of wildfires, particularly those populations living down wind of the fire. Development may continue to occur in urban/wildlands interface areas which would necessitate infrastructure such as power poles that could result in wildfire risk. Due to the anticipated increased consumption of greenfields under the Plan, development may continue to occur in urban/wildlands interface areas which would result in significant risks for people and structures

All other environmental impacts (project-specific and cumulative) are either less than significant or can be mitigated to a less than significant level.

5.2 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Section 15126.2(d) of the *State CEQA Guidelines* states that an EIR must include a discussion of any significant irreversible environmental changes that would be caused by a proposed project. Specifically, Section 15126.2(d) states:

> *Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter*

> *unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified*

For purposes of this analysis, the Plan would result in significant irreversible environmental changes if it:

- involves a large commitment of nonrenewable resources that would commit future generations;
- results in irreversible damage from environmental accidents; or
- irretrievable commitments of nonrenewable resources to justify current consumption.

5.2.1 Large Commitment of Nonrenewable Resources that would commit future generations

The Plan would result in the irreversible consumption of nonrenewable resources. The irreversible commitment of limited resources is inherent in any development project or, in the case of the Plan, combined transportation and development projects. Resources anticipated to be irreversibly committed over the timespan of the construction activities related to the Plan include, but are not limited to, lumber and other related forest products; sand, gravel, and concrete; petrochemicals; construction materials; steel, copper, lead, and other metals; and water.

Growth and land use changes that would result from implementation of the Plan would likely commit future generations to those uses. Once established, land use patterns can be difficult to change and/or significantly influence without considerable political, social, and economic cost. The development pattern reflected in the Plan represents a commitment of these areas to those uses for the foreseeable future. The Plan emphasizes a compact land use pattern, the result is more efficient use of urban land as well as land at the urban edges or in undeveloped areas of the region. As a secondary result, per capita use of many nonrenewable resources decreases under this Plan. These include: lower per capita use of energy and fuels; less conversion of agricultural, open space, and habitat lands; lower per-capita emissions of air pollutants, including GHGs; resulting in slower climate change effects over time.

However, construction activities related to the proposed project would nevertheless result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobile and construction equipment and aggregate supply used in construction.

With respect to operation activities, compliance with all applicable building codes, as well as project mitigation measures or project requirements, would help ensure that natural resources are conserved or recycled as feasible. It is also possible that new technologies or systems will emerge, or will become more cost-effective or user-friendly, that will further reduce the region's reliance upon nonrenewable natural resources; however, even with implementation of conservation measures consumption of natural resources would generally increase with implementation of the Plan.

Furthermore, growth generally results in long-term increase in the demand for electricity and natural gas supplies and distribution. However, the Plan and other federal and state energy efficiency standards will result in lower per-capita demand by encouraging development in urban areas; encouraging energy conservation in new construction and existing buildings; and reducing the infrastructure energy demands by encouraging alternative transportation such as bicycling, walking, and public transit. Furthermore, the Plan will result in lower per-capita VMT through the horizon year.

The region also has multiple nonrenewable resources including agricultural lands, open space, habitat areas, and mineral resources areas that contain aggregate, oil, and natural gas. Increased levels of development outside of already developed areas could result in permanent loss or other adverse impacts to these resource areas.

The Plan would result in the conversion of 41,546 acres of greenfield to urbanized uses, however, this area of potential impact is much smaller that would otherwise occur without regional efforts to encourage more compact growth. By increasing density in urban areas and decreasing the footprint of growth, pressures to convert agricultural and natural lands outside areas planned for growth are decreased.

5.2.2 Irreversible Damage from Environmental Accidents

Any growth in the region includes the potential for irreversible damage from environmental accidents. For example, greater densities expose more people in the same area to unexpected environmental events such as fire, flood, and/or earthquake which could lead to irreversible damage. In addition, irreversible changes to the physical environment could occur from the accidental release of hazardous materials associated with transport on roadways as more hazardous materials are transported through the region and more people are located in closer proximity to hazardous materials threats.

However, this exposure would exist under any growth scenario. Federal and state regulations require the Plan to accommodate expected growth in the region based on market-based forecasts. The SCS minimizes the footprint of that growth. Implementation of the Plan does not, in and of itself, result in greater potential of irreversible damage from an environmental accident.

5.2.3 Irretrievable Commitments of Nonrenewable Resources to Justify Current Consumption

The region has multiple nonrenewable resources including agricultural lands, open space, habitat areas, and mineral resources areas that contain aggregates and natural gas. Increased levels of development outside of already developed areas could result in permanent loss or other adverse impacts to these resource areas. In addition, increased levels of development throughout the region could result in greater use of nonrenewable resources during construction, including nonrenewable aggregates, or increased use of glass, plastic, and other petroleum products.

While approximately 41,546 acres of undeveloped land would be converted to urban land uses as a result of implementation of the Plan, this area of potential impact is much smaller than would otherwise occur without regional efforts to encourage more compact growth following "smart growth" principles and to direct as much growth as possible to existing developed areas. By increasing the density of development, and decreasing the footprint of growth, pressures to convert agricultural and open space lands outside areas planned for growth are decreased.

New growth generally results in additional demand for electricity, natural gas, and propane supplies and distribution. However, the Plan, and other federal and state efforts, will result in lower per-capita demand by encouraging compact development; encouraging energy conservation in new construction and existing buildings; and reducing the infrastructure energy demands by encouraging alternative transportation such as bicycling, walking, and public transit. Furthermore, the Plan will result in lower per-capita VMT through the horizon year (2045). **Section 3.8, Greenhouse Gas Emissions,** of the PEIR further addresses VMT.

Any growth in the region will result in significant irreversible resource commitments. In evaluating the significance of a project's irreversible resource commitments, CEQA requires a lead agency to consider whether such commitments are "justified" (*CEQA Guidelines* Section 15126.2(c)). As discussed above, and consistent with the project objectives for the Plan (See **Chapter 2.0, Project Description**), the Plan is designed to minimize irreversible resource commitments, thus maximizing opportunities for future generations. While the Plan will result in irreversible resource commitments, by encouraging higher density, less-consumptive development, as compared to the environmental baseline and forecasted conditions, the commitments are justified and beneficial. Therefore, these commitments are considered less than significant.

5.3 GROWTH-INDUCING IMPACTS

Section 15126.2(e) of the *State CEQA Guidelines* requires that growth inducing impacts of a proposed project be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly create economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Growth can be induced in a number of ways, including the elimination of obstacles to growth, or by encouraging and/or facilitating other activities that could induce growth. Examples of projects likely to have growth inducing impacts include extensions or expansions of infrastructure systems beyond what is needed to serve project-specific demand, and development of new residential subdivisions or office complexes in areas that are currently only sparsely developed or are undeveloped. In addition, as set forth in the *CEQA Guidelines*, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The *CEQA Guidelines* also state that it must not be assumed that growth in an area is necessarily beneficial, detrimental or of little significance to the environment. Induced growth is considered a significant impact only if it directly or indirectly affects the ability of agencies to provide needed public services or if it can be demonstrated that the potential growth significantly affects the environment, that is, that it would result in construction that would adversely affect the environment.

As discussed in **Section 3.14, Population and Housing**, the Plan includes transportation and land use strategies that guide new population growth within existing urbanized areas, HQTAs, underutilized urban areas, and existing suburban town centers. The Plan would strategically target growth near jobs and transit .However, the improved accessibility from the Plan's transportation projects and strategies could also facilitate population and economic growth in areas of the region that are currently not developed, despite policies designed to limit such development. It should be noted that the Plan would result in an overall increase in total VMT which would be expected due to the large increase in regional population, but the more efficient land use patterns and strategies included in the Plan would result in a decrease in per capita VMT compared to the No Project.

Because several variables influence growth, it is difficult to determine how the Plan alone would affect growth. As described in Chapter 3.0, the Plan would affect each environmental issue area directly through transportation projects and strategies and indirectly through land use and strategies that would create a more compact development pattern than if no Plan were in place. Factors that would potentially induce population growth include roads, highways, freeways, rail, and other transportation improvements that provide access to previously undeveloped areas. HOV projects would not be expected to induce growth as they are adding to an existing freeway instead of creating a new freeway. The availability of adequate water supplies, the availability of sewage treatment facilities, the availability of

developable land, the types and availability of employment opportunities, housing supply and costs, commuting distances, cultural and recreational amenities, climate, and local government growth policies contained in general plans and zoning ordinances would also induce population growth. These are contributing factors to consider when evaluating whether the Plan would, in and of itself, induce population growth, but are not necessarily an indication that the Plan is growth inducing.

As discussed above, total population is expected to remain the same with or without the Plan. Generally, the Plan accommodates growth in a manner substantially consistent with local general plans, regional values and visions, and state and federal laws. The Plan would provide greater access to more of the region than the No Project Alternative due to transportation projects and strategies; however, targeting growth in the HQTAs would limit the geographic spread of growth.. Therefore, in general, the Plan could influence and possibly induce growth into specific parts of the region (including areas that are partially urbanized already) by providing new or expanded access. Overall, the Plan would accommodate and facilitate growth in the region.

6.0 LIST OF EIR PREPARERS

Impact Sciences, Inc, has prepared this environmental document under contract to the Southern California Association of Governments. Persons directly involved in the review and preparation of this report include:

6.1 LEAD AGENCY

Southern California Association of Governments
900 Wilshire Boulevard, Suite 1700
Los Angeles, CA 90017

Executive Management
Kome Ajise, Executive Director
Debbie Dillon, Chief Strategy Officer
Darin Chidsey, Chief Operating Officer
Basil Panas, Chief Financial Officer
Joann Africa, Chief Counsel
Julie Loats Shroyer, Chief Information Officer
Sarah Jepson, Acting Director of Planning & Programs
Art Yoon, Director of Policy & Public Affairs

Project Team
Ping Chang, Manager of Compliance and Monitoring
Roland Ok, Senior Regional Planner
Karen Calderon, Associate Regional Planner
Anita Au, Associate Regional Planner
Justine Block, Deputy Legal Counsel

6.2 EIR PREPARER

NOTICE OF PREPARATION

TO: **Interested Agencies, Organizations and Individuals**

SUBJECT: **Notice of Preparation of a Program Environmental Impact Report for Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy)**

DATE: **January 23, 2019**

LEAD AGENCY: **Southern California Association of Governments**
900 Wilshire Blvd, Suite 1700
Los Angeles, California 90017

The Southern California Association of Governments (SCAG), as Lead Agency, is publishing this Notice of Preparation (NOP) to prepare a Program Environmental Impact Report (PEIR) in accordance with the California Environmental Quality Act (CEQA) for Connect SoCal (also referred to herein as "2020 Regional Transportation Plan and Sustainable Communities Strategy" or "2020 RTP/SCS" or "Plan"). SCAG is preparing Connect SoCal pursuant to federal and state metropolitan planning and air quality requirements including the federal surface transportation reauthorization, Fixing America's Surface Transportation (FAST) Act, the Transportation Conformity in the Air Quality Attainment Plan per 40 CFR Part 51 and 40 CFR Part 93, and Section 65080 et seq., of Chapter 2.5 of the California Government Code, The Global Warming Solutions Act of 2006 (Senate Bill 32), The Sustainable Communities and Climate Protection Act of 2008 (Senate Bill 375), California Global Warming Solutions Act of 2006 (Assembly Bill 32),and corresponding regulations.

Two (2) Scoping meetings for the Plan, each providing the same information, will be held at SCAG's Main office – Room Policy Committee A (see address above) on **Wednesday, February 13, 2019 from 3:00 PM to 5:00 PM and 6:30 PM to 8:30 PM**. Webcasting and videoconferencing will be available from SCAG's regional offices (see last page for addresses).

To ensure full consideration of environmental issues with potential significant impacts in the Draft PEIR, **all comments must be received within thirty (30) days of the start of the 30-day public comment period, which begins January 23, 2019 and ends February 22, 2019**. If you wish to be placed on the mailing list to receive notices regarding the PEIR for the Plan, or have any questions or need additional information, please contact the person identified below.

Please send your response to Roland Ok, Senior Regional Planner, either electronically to: 2020PEIR@scag.ca.gov, via the web at: https://connectsocal.org; or at the mailing address shown above. Please include a return address and the name of a contact person in your agency/organization.

Introduction

CEQA and its implementing regulations (*State CEQA Guidelines*) require SCAG as the Lead Agency to prepare an EIR for any discretionary government action, including programs and plans that may cause significant environmental effects. Connect SoCal is a regional planning document updated every four years (see further discussion below) and will update the 2016 RTP/SCS. Given the regional level of analysis provided in a RTP/SCS, a Program EIR (PEIR) is the appropriate CEQA document. A PEIR is a "first-tier" CEQA document designed to consider "broad policy alternatives and program wide mitigation measures" (*State CEQA Guidelines* Sec. 15168). The programmatic environmental analysis for the Connect SoCal PEIR will evaluate potential environmental effects consisting of direct and indirect effects, growth-inducing impacts, and cumulative impacts resulting from the Plan, and will include mitigation measures to offset any identified potentially significant adverse environmental effects. As a first-tier document, the PEIR may serve as a foundation for subsequent, site-specific environmental review documents (including Addendums, Supplemental EIRs, Subsequent EIRs) for individual transportation and development projects in the region (*State CEQA Guidelines* Sec. 15385).

This NOP is intended to alert responsible agencies, interested agencies, organizations, and individuals of the preparation of the PEIR. Comments regarding the scope of the PEIR received during the 30-day NOP review period will be used to refine the scope and content of the PEIR, as appropriate.

PROJECT LOCATION AND BACKGROUND

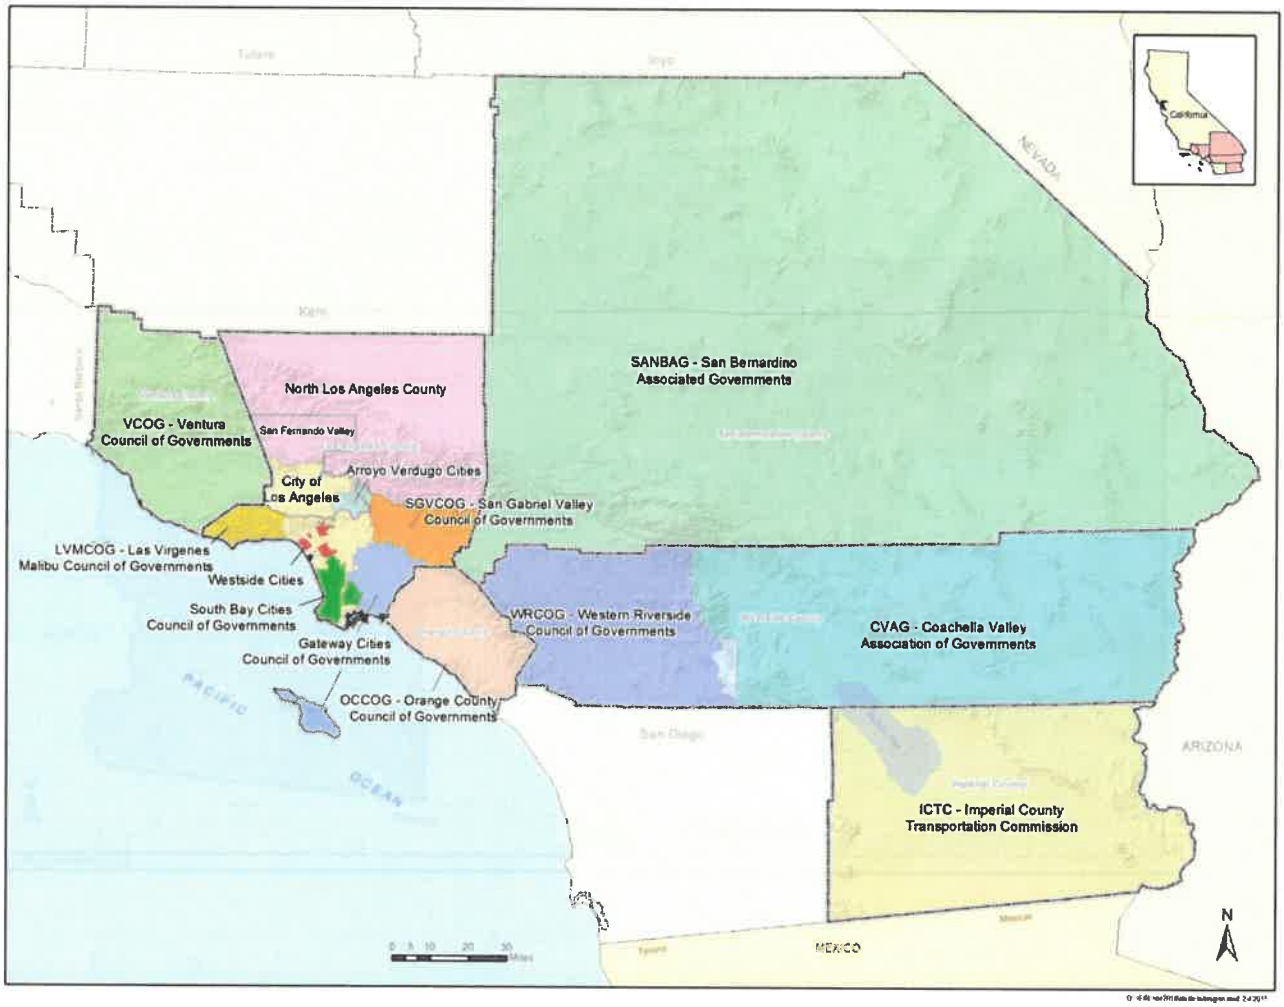
Project Location

SCAG is the federally designated Metropolitan Planning Organization ("MPO") under Title 23, United States Code (U.S.C.) 134(d)(1). The SCAG region consists of six counties (Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura), and 191 cities (Figure 1, *SCAG Region*). To the north of the SCAG region are the counties of Kern and Inyo; to the east is State of Nevada and State of Arizona; to the south is the county of San Diego; and to the northwest is the Pacific Ocean. The SCAG region also consists of 15 subregional entities that serve as partners in the regional planning process. (Figure 2, *SCAG Subregions*).

SCAG is one of 18 MPOs in the State of California. The total area of the SCAG region is approximately 38,000 square miles. The region includes the county with the largest land area in the nation, San Bernardino County, as well as the county with the highest population in the nation, Los Angeles County. The SCAG region is home to approximately 20 million people, or 49 percent of California's population, representing the largest and most diverse region in the country.

Figure 1: SCAG Region

Figure 2: SCAG Subregions



SCAG Roles and Responsibilities

In addition to federal designation as a MPO, SCAG is designated under California state law as the Multicounty Designated Transportation Planning Agency and Council of Governments (COG) for the six-county region. Founded in 1965, SCAG is a Joint Powers Authority, established as a voluntary association of local governments and agencies.

SCAG serves as the regional forum for cooperative decision making by local government elected officials and its primary responsibilities in fulfillment of federal and state requirements include the development of the Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS); the Federal Transportation Improvement Program (FTIP); the annual Overall Work Program; and transportation-related portions of local air quality management plans. SCAG's other major functions include determining the regional transportation plans and programs are in conformity with state air quality plans; preparation of a Regional Housing Needs Assessment (RHNA); and intergovernmental review of regionally significant projects.

PROJECT DESCRIPTION

2020 Regional Transportation Plan/Sustainable Communities Strategy

Pursuant to federal and state planning requirements, SCAG updates and adopts a long-range regional transportation plan every four years. SCAG's last Plan was adopted in 2016 and an updated Plan is required to be adopted by April 2020.

Connect SoCal will outline the region's goals and policies for meeting current and future mobility needs, provide a foundation for transportation decisions by local, regional and state officials that are ultimately aimed at achieving a coordinated and balanced transportation system. Connect SoCal will also identify the region's transportation needs and issues, recommended actions, programs, and a list of projects to address the needs consistent with adopted regional policies and goals, and documents the financial resources needed to implement Connect SoCal. It is important to note that SCAG does not implement individual projects in the RTP, as they will be implemented by local and state jurisdictions, and other agencies. SCAG has already initiated the development of Connect SoCal and is working closely with County Transportation Commissions (CTCs) to compile a regional project list that will build upon the list identified in the 2016 RTP.

In accordance with the Sustainable Communities and Climate Protection Act of 2008, or Senate Bill (SB) 375 (Steinberg) and codified in California Government Code §65080(b)(2)(B), the Plan will include a SCS which details land use, housing and transportation strategies to reduce greenhouse gas (GHG) emissions from passenger vehicles (automobiles and light-duty trucks).

Pursuant to SB 375, SCAG's SCS is required to meet reduction targets for greenhouse gas (GHG) emissions of 8 percent per capita by 2020 and 19 percent per capita by 2035 compared to 2005 emission levels, as set by the California Air Resources Board (ARB). According to Section 65080(b)(2)(B) of the California Government Code, the SCS must:

- Identify existing land use;
- Identify areas to accommodate long-term population growth;
- Identify areas to accommodate an eight-year projection of regional housing needs;
- Identify transportation needs and the planned transportation network,
- Consider resource areas and farmland;
- Consider state housing goals and objectives;
- Set forth a forecasted growth and development pattern; and
- Comply with federal law for developing an RTP.

Additionally, if the combination of measures in the SCS would not meet the regional targets, the MPO must prepare a separate "Alternative Planning Strategy" (APS) to meet the targets.

Scenario Planning Process

As part of the planning process, SCAG is developing several transportation and land use scenarios for public consideration. These scenarios focus on transportation and land use related inputs that are modified to vary across the scenarios. These scenarios will provide the analytical technique for policy choices to be considered as the Plan is being developed, while the Plan goals, guiding policies and performance measures will underpin scenario designs.

SCAG will use scenario planning tools to illustrate the impact of distinctive policy and investment choices that will then be compared to business as usual scenario (No Project) in order for the Regional Council and Policy Committees to evaluate the merits of regional decisions for the Plan.

SCAG will seek input for scenario development through stakeholder outreach. These scenarios would then be presented to the general public in late Spring/summer of 2019 in a series of public workshops.

Bottom-up Local Growth and Land Use Input Process

A critical component to developing a successful Plan is the participation and cooperation of SCAG's local government partners and stakeholders within the SCAG region. To this end, SCAG uses a bottom-up local input process by which all local governments are informed of the planning process for Connect SoCal and have clear and adequate opportunities to provide input. Growth forecasts and land use updates for development of the Plan will be developed through this bottom-up local input process.

SCAG's Public Participation Plan and Process

Another key aspect of Plan development is public participation. To provide early and meaningful public participation in the Plan's development and decision-making processes, SCAG has developed and adopted a Public Participation Plan ("PPP").[1] The adoption of the PPP demonstrates SCAG's commitment in increasing awareness and involvement of interested persons in SCAG's governmental processes and regional transportation and land use planning. SCAG will provide information and timely public notice, ensuring full public access to key decisions, and supporting early and continuing public involvement in the development of the Plan. To this end, SCAG will continue to engage a wide range of stakeholder groups, elected officials, special interest groups, the general public, and other interested parties through a series of workshops and public meetings, as well as SCAG's policy committees, task forces, and subcommittee structure during the development of the Plan and its associated PEIR.

SCOPE OF ENVIRONMENTAL ANALYSIS IN THE PEIR

Environmental Factors Considered

The PEIR is a programmatic document that will analyze potential effects of the Plan on the environment. Although Connect SoCal will include some individual transportation projects, the PEIR does not specifically analyze environmental effects of any individual transportation or development project. Project-level environmental analyses will be prepared by implementing agencies on a project-by-project basis as projects proceed through the design and decision-making process.

The potential scope of environmental effects that warrant analysis in the Connect SoCal PEIR are as follows:

- Aesthetics and Views
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources and Open Space
- Cultural Resources
- Energy
- Hazards and Hazardous Materials
- Hydrology and Water Resources
- Land Use and Planning
- Noise
- Population and Housing
- Recreation

- Geology, Soils and Mineral Resources
- Greenhouse Gas Emissions and Climate Change
- Tribal Cultural Resources
- Transportation/Traffic
- Public Services and Utilities
- Wildfire

CEQA Streamlining

SB 375 contains CEQA incentives, or streamlining provisions, to encourage coordinated land use and transportation planning. Certain types of development projects (i.e., transit priority projects or residential/mixed use residential projects, as defined by the statute) may qualify for CEQA streamlining as long as the requisite criteria are met. Consistency will be determined by the local jurisdiction that is the lead agency for each project to be streamlined. SCAG's primary role is to include appropriate information in the SCS, such as land use information as required by SB 375 and/or guidance to aid in interpreting land use information that will allow a jurisdiction to make a consistency determination with respect to appropriate streamlining options on a project-by- project basis.

Additionally, the PEIR will support other CEQA streamlining options that do not fall into the categories under SB 375 (i.e., SB 743, SB 226 and the State CEQA Guidelines).

Preliminary 2020 RTP/SCS Alternatives

The development of alternatives in a PEIR is focused on avoiding or reducing potentially significant impacts of the Plan while achieving most of the project objectives. It is anticipated that the PEIR will evaluate at least three potential alternatives to Plan as follows:[2] (1) No Project; (2) 2020 Local Input Alternative; and (3) Intensified Land Use Alternative. Each Alternative, except the No Project Alternative, will vary in terms of policies and projects including, but not limited to, variations in land use development patterns or transportation network.

SCAG has the discretion to select more than one alternative as long as they are within the range of impacts identified.

No Project Alternative

The No Project Alternative is required by Section 15126.6(e)(2) of the CEQA Guidelines and assumes that the Plan would not be implemented. The No Project Alternative will consider continued implementation of the goals and polices of the adopted 2016 RTP/SCS and will be based on 2016 RTP/SCS regional population, housing, and employment. The No Project Alternative includes those transportation projects that are included in the first year of the previously conforming FTIP (i.e., 2018). The growth scenario included in the No Project Alternative, and all alternatives, will include the same regional totals for population, housing and employment.

2020 Local Input Alternative

This Alternative will incorporate jurisdictional general plans and land use information to reflect the most recent growth estimates and land use development patterns in the region. This alternative would include policies and strategies included in the 2016 RTP/SCS to the extent that they have been incorporated into local jurisdictional plans. This alternative does not include additional land use strategies described in the

[2] It is important to note that these are preliminary alternatives and may change during the planning process.

2020 Plan that go beyond current local policy and strategies described in the intensified land use alternative, that help meet additional objectives.

Intensified Land Use Alternative

An Intensified Land Use Alternative would be based on a transportation network for Connect SoCal with aggressive land use development patterns. Land use development patterns in this alternative would build on land use strategies as described in the Plan by maximizing growth around high quality transit areas (HQTAs). Potential growth patterns associated with this alternative would optimize urban areas and suburban town centers, transit oriented development patterns (TODs), livable corridors, and neighborhood mobility areas (NMAs).

SCAG is seeking input on these preliminary alternatives through the scoping process, changes to the alternatives as a result of the scoping process could result in modifications to the number, content and scope of alternatives analyzed in the PEIR. Furthermore, the PEIR will identify alternatives that were initially considered, but rejected for reasons including infeasibility or inability of a particular alternative to meet the project objectives or reduce environmental impacts beyond that of the project.

SCOPING MEETINGS

As mentioned previously, SCAG will host two (2) Scoping meetings for the Plan, each providing the same information, at SCAG's Main office – Policy Committee A Room (see address above) on **February 13, 2019 from 3:00 to 5:00 PM and 6:30 to 8:30 PM.** For each of the two scoping meetings videoconferencing will be available at SCAG's regional offices listed below.[3]

SCAG Imperial County Regional Office
1503 N. Imperial Avenue, Suite 104
Imperial, CA 92243
(760) 353-7800

SCAG Orange County Regional Office
OCTA Building
600 South Main Street, Suite 906
Orange, CA 92868

Notice of Preparation

January 28, 2019

To: Reviewing Agencies

Re: Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy)
SCH# 2019011061

Attached for your review and comment is the Notice of Preparation (NOP) for the Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy) draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Ping Chang
Southern California Association of Governments
900 Wilshire Blvd, Suite 1700
Los Angeles, CA 90017

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

RE: CEQA Principles to Combat Lawsuit Abuses

On behalf of more than 180 business organizations that represent 400,000 employers with over 3.5 million employees in LA County we are commenorating our tenth anniversary with a mission to lift one million people out of poverty in the next decade. One of the many opportunities to lift and prevent poverty are providing solutions that end litigation abuse of the California Environmental Quality Act (CEQA).

These lawsuits drive up the costs of building new housing or transportation infrastructure exacerbating our housing crisis, where the production of new housing in the region has been significantly reduced. Coupling this reduction with the cost of litigation further drives up the cost of housing which prohibits public service and private sector occupations and professionals the ability to afford owning a home, which is essential for building generational wealth, incubating a stronger, vibrant and more resilient economy.

Since 2013, the Los Angeles region accounts for;

- 38% of all CEQA lawsuits statewide.
- 40% of these lawsuits dealt with residential development and transportation infrastructure.
- Over 70% these CEQA lawsuits are targeted at stopping infill, multi-family, transit-oriented housing the very housing needed according to CARB that we need to invest in to support our environmental goals
- Nearly 80% of these lawsuits are targeted in wealthier and healthier parts of the State,

BizFed solutions fall under four themes that create the necessary reforms needed to improve compliance with CEQA and streamline the process;
(1) Prohibit anonymous CEQA lawsuits allowing petitioners to conceal their identities and economic interests;
(2) Prohibit duplicative CEQA lawsuits allowing parties to repeatedly sue over the same plan, or projects implementing a plan, for which CEQA compliance has already been completed;
(3) E**stablish a "mend it, not end it" approach of directing corrections to any defici**ent environmental study rather than vacating project approvals; and
(4) Prohibit CEQA lawsuits against voter-approved infrastructure projects, and against projects receiving voter-approved approved funding (e.g., for homeless housing).

Abuse of CEQA for non-environmental purposes by business competitors, NIMBYs opposed to change, and certain construction trade unions, has been well documented, and includes both threatened and filed CEQA lawsuits. CEQA fundamentally is biased in favor of stopping changes to the status quo. CEQA's status quo preservation bias has a disparate effect on minority communities, as well as younger Californians such as millennials, who are most urgently in need of more housing and transportation, infrastructure.

These CEQA modifications are necessary to comply with law, and to address the housing and poverty crisis, and expedite completion of transportation and other critical infrastructure projects that have already had at least one completed round of CEQA compliance as well as voter and initial agency approvals. No state agency should hide within a silo of vague legalese to promote increased litigation risks and delays and do further harm to hard working minority and millennial families suffering from California's housing, poverty and transportation crises. In contrast, during the last session we witnessed bipartisan support for CEQA exemptions to construct new sports and entertainment facilities which are good projects to stimulating jobs creation by reducing lawsuit abuse, we believe such exemptions for development are consistent with the solutions we have provided in this letter.

Business is what makes our economy work and CEQA guidelines should reward instead of impede that progress to help our economy and our environment thrive. Litigation abuse is one of the unattended consequences that negatively affects our economy because it introduces uncertainty with CEQA instead of compliance.

SUBJECT: "Connect SoCal" Scoping Phase Comments

On behalf of BizFed, a grassroots alliance of more than 180 business organizations that represent 400,000 employers with over 3.5 million employees in LA County, we have strong concerns of CARB's statutory over reach by imposing flawed Vehicle Miles Travelled (VMT) reduction targets as a strategy for greenhouse gas (GHG) reduction. This would ignore the local input of many stakeholders in previous Regional Transportation Plan (RTP)/Sustainable Community Strategies (SCS) as we start the EIR for the 2020-2045 RTP/SCS.

CARB has no statutory authority to impose a VMT reduction target in an SCS and doing so violates the SB 375 requirement that an SCS must provide for a robust economy and growing population. In SCAG's two prior RTP/SCS in 2012 and 2016, SCAG met required GHG reduction targets based on local input for land use planning and full respect for voter-approved and funded transportation projects and transportation infrastructure required by longstanding laws requiring efficient transportation and goods movement.

These voter approved transportation projects are usually funded in the form of sales taxes which can be volatile to outside triggers such as an arbitrary GHG reduction target based on VMT reduction assumptions that cannot be delivered in the real world. If these assumptions are to be delivered, we may see a dramatic reduction in goods movement infrastructure critical to the state's economy. BizFed wants to ensure that sales tax revenues remain strong for the successful delivery of these voter supported and approved projects. This nexus is vital to the five of the six counties in the SCAG region who are delivering critical transportation infrastructure projects through sales taxes. Imposing GHG reductions through poor VMT metrics without prioritizing the value of certain trips to our economy could be devastating.

The most aggressive GHG reduction based on VMT reductions in the SCAG region called for a 10% decrease in overall regional VMT, which the region has not met and shows no indication of being able to meet. While we support California's climate leadership, the state emits less than 1% of global GHG. In contrast, California ranks top in the United States for poverty and homelessness – both of which are attributable directly to the housing supply shortage, high housing prices that are nearly three times above the national average and longer commutes where working families are "driving until they qualify" for housing that they can rent or buy.

Given the realities of the current economic conditions, we believe CARB staff's current target of reducing VMT by 19.5% is unattainable. SCAG should not continue to spend taxpayer dollars on infeasible plans, when there has been zero progress made in achieving key reforms that prior SCS plans identified as being necessary to even be able to achieve prior lower GHG reduction targets that the business community has been actively advocated for such as redevelopment funding and CEQA reforms against lawsuit abuses.

We very much respect and appreciate the major efforts of SCAG to assure that SB 375 can be implemented consistent with its statutory protections for a healthy economy and growing population.

We urge SCAG to reject CARB staff's decision to unilaterally reject its own Board vote, and the Legislature's repeated refusal to impose a VMT reduction target as part of its climate or air quality statutes or regulations.

Sincerely,

Steve Bullock

RE: Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Community Strategy Comments on Notice of Preparation of Environmental Impact Report (SCH # 2019011061)

Dear Mr. Chang:

The above referenced Notice of Preparation of an Environmental Impact Report (EIR) for a four year update to the Regional Transportation Plan and Sustainable Communities Strategy (Plan) for the Southern California Association of Governments planning area was received by Coastal Commission staff on via the State Clearinghouse on January 30, 2019. We appreciate the opportunity to comment on the environmental review process for the Regional Plan update. One of the primary tenets of the Coastal Act is to protect and enhance coastal resources and public access to the coast, which requires well-planned residential, commercial, and public infrastructure and an interconnected public transportation system. Several of the policy objective categories of the Plan, including Biological Resources and Open Space Preservation, Hydrology and Water Resources, Recreation, and Population and Housing, create an opportunity to enhance Southern California's transportation system, provide housing and jobs within urban areas well served by the transportation system, and protect coastal resources in a manner that is supportive of the Coastal Act. This update provides an opportunity to enhance those sections of the Plan, considering current infrastructure, planned future infrastructure, and environmental conditions including sea level rise. Given the Coastal Commission's mandate to protect coastal resources through planning and regulation of the use of land and water within the Coastal Zone, staff are providing the following comments and topics that should be analyzed in the EIR.

1) Coastal Transportation Corridor Improvements. Major transportation corridors within the Coastal Zone are Interstate 5 from the southern Orange County line to San Clemente, Pacific Coast Highway (SR 1) from San Clemente to Oxnard, and US 101 through Ventura County. These coastal transportation corridors bisect or are located directly adjacent to sensitive marine resources including coastal lagoon systems, maritime chaparral and coastal sage scrub, and the Pacific Ocean. Impacts to these resources are restricted by Coastal Act policies. Except for specific instances, fill of a wetland or other coastal waters is prohibited (Section 30233), and marine resources (Section 30230), water quality (Section 30231), and environmentally sensitive habitat areas (Section 3024) often associated with the coastal environment are protected. Many of these coastal systems and habitat areas have already significantly deteriorated due to historical transportation infrastructure and residential development. Future transportation improvements in the Coastal Zone (e.g. the regional projects list in the Plan) should seek to upgrade existing infrastructure and reduce impacts to the natural environment. Strategies include development of new highways and bridges with less fill of coastal waters and less coverage of natural habitat than current infrastructure, relocation of highways and other public infrastructure that are threatened by erosion and storm damage, and habitat restoration in areas which have previously been degraded by transportation

infrastructure (e.g. lagoon systems adjacent to Pacific Coast Highway). Please analyze the Plan scenarios for their capacity to avoid adverse impacts to coastal resources and restore and enhance the natural environment.

2) Sea Level Rise. Coastal Act Section 30253 requires that new development minimize risks to life and property from hazards and to assure stability and structural integrity without the use of a shoreline protective device. Thus, understanding the potential impacts of climate change and sea level rise is of critical importance when beginning long-range planning efforts so as to ensure that land use decisions and development projects are not designed in a way that will put investments at risk from coastal hazards. Given the proximity of significant portions of the County's key regional infrastructure to the coast (e.g. highways, airports, power plants), it is imperative that transportation and land use plans carefully anticipate the effects of sea level rise and associated hazards. Ensuring that new coastal infrastructure is designed to adapt to the effects of sea level rise throughout the expected life of the infrastructure is a principal concern of the Coastal Commission. Please review the Commission's Sea Level Rise Policy Guidance (https://www.coastal.ca.gov/climate/slrguidance.html), which was based on two reports – the Ocean Protection Council's April 2017 *Rising Seas in California: An Update of Sea-Level Rise Science* and its 2018 *State Sea-Level Rise Guidance*. The 2016 RTP/SCS references climate change and sea level rise (e.g. the 2012 National Research Council Report, *Sea Level Rise for the Coasts of California, Oregon, and Washington*), but 2016 RTP/SCS does not make clear that sea level rise conditions must be modeled for the entirety of the expected life of new infrastructure projects, which in the case of rail and highway bridges is considered to be 100 years. The updated Plan should include policies requiring regional sea level rise planning and coordination. The Plan should also include regional maps showing various sea level rise scenarios (including a severe scenario) and policies requiring new projects in the Coastal Zone undergo specific sea level rise analysis of tidal and fluvial hydraulics as applied to the local area and in the context of storm surge, wave run-up, erosion, and other variables.

If the Plan references key pieces of existing and planned infrastructure that may be temporarily flooded or perpetually inundated by water in the next 75 to 100 years, then the EIR should analyze potential adaptation measures that minimize adverse impacts to coastal resources and enhance public access to the coast. The EIR should analyze whether existing and planned infrastructure will need to be protected from coastal hazards, such as flooding and erosion. Such protection often includes seawalls and revetments, which adversely affect public access because they block access to the beach, accelerate erosion, and result in the loss of public recreational areas. The Plan should anticipate such impacts and prioritize projects which avoid the impacts (e.g. relocation or elevation of vulnerable segments of highways and rail). Additionally, the EIR should analyze options for relocation of vulnerable infrastructure away from hazardous conditions.

3) Public Access and Recreation. A fundamental pillar of the Coastal Act is the protection and provision of public access to and along the coast. Coastal Act sections 30210 and 30212 require that maximum opportunities for public access and recreation be provided in new development projects, consistent with public safety, private property rights, and natural resource protection. Additionally, Section 30252 dictates that new development should maintain and enhance public access through such actions as facilitating transit service, providing non-automobile options, and providing adequate parking.

Accordingly, the EIR should evaluate the Plan scenarios for consistency with the above-mentioned policies. In particular, there should be an analysis of how the Plan would maximize access to the coast (including beaches, parks, and open spaces), including options for public transit, non-motorized vehicles, and pedestrian routes throughout the region. This analysis should identify options to facilitate access to beaches and coastal areas from the inland portions of the region, as well as options for enhancing connections to public transit, the California Coastal Trail, and other visitor-serving recreational opportunities. Improvements to coastal access routes may be planned as coordinated projects which enhance vehicle flow and safety, increase bicycle capacity, increase pedestrian capacity, and restore the natural environment. One area where such a coordinated approach should be analyzed is along Pacific Coast Highway in Orange County and Los Angeles County – this corridor is already heavily utilized by coastal visitors and portions of the corridor are likely to be part of the California Coastal Trail. Bicycle and pedestrian facilities are particularly lacking along Pacific Coast Highway in Northern Los Angeles County, Malibu, and Southern Ventura County.

Importantly, the EIR should also analyze the potential negative impacts to public access and recreation that could arise from the various transportation and land use scenarios identified in the Plan. Scenarios that would lead to additional traffic along critical coastal highways should be analyzed for their potential impacts to public access and recreation, and potential impacts to the natural environment. A transportation capacity analysis of existing and planned transportation infrastructure should be performed for not only peak commuter periods (e.g. morning rush hour) but for peak recreational periods (e.g. a summer weekend with high demand by beach users). Transportation projects which increase capacity to reach the coast by modes other than private automobiles should be prioritized.

4) Concentration of Development. Coastal Act Section 30250 generally requires that new development within the Coastal Zone be located within, contiguous with, or in close proximity to existing developed areas. Coastal Act Section 30253 requires new development to be sited in a manner that will minimize energy consumption and vehicle miles travelled. In this way, the Coastal Act encourages smart growth patterns that recognize a strong urban-rural boundary to ensure protection of coastal resources. Accordingly, the EIR should analyze the extent to which various Plan scenarios, as well as the broader goals of the Sustainable Communities Strategy, would be consistent with Coastal Act goal to concentrate development and reduce vehicle miles travelled. Based on the summary in the scoping notice, the Intensified Land Use Alternative appears to be consistent with Coastal Act policies, to the extent that it prioritizes development in urban areas and around high quality transit corridors, rather than in rural and exurban areas which tends to adversely impact natural habitat and increase vehicle miles travelled.

Finally, the Plan's greenhouse gas emissions targets must be consistent with the Executive Order B-30-15 goal of reducing California's GHG emissions to 40 percent below 1990 levels by 2030 and the Executive Order S-3-05 goal of reducing California's GHG emissions to 80 percent below 1990 levels by 2050. While the 2016 RTP/SCS prioritized investment in transit and active transportation more than any previous RTP, it does not appear to have reduced vehicle miles traveled consistent with Coastal Act Section 30253. The EIR for the Plan update should include additional analysis of transportation and land use scenarios which are most protective of sensitive coastal and environmental resources while at the same time achieving the Plan objectives of improving the transportation system, increasing housing and allowing people to live closer to where they work and play. While there may be existing constraints that

make the Intensified Land Use scenario difficult to implement today, the RTP/SCS is a long-range planning document and there will likely be changes in policy and funding for transit and housing within its planning horizon – especially if SCAG advocates for such changes. As such, SCAG should place a greater emphasis on the prioritization of public transit and active transportation projects, with increased housing density around such high quality transit areas, and include analysis of such projects in the EIR.

Thank you for the opportunity to comment on the environmental review for the update to the Regional Transportation Plan and Sustainable Communities Strategy. We look forward to future collaboration on improvements to the transportation system and land use synchronization within Southern California, and appreciate the commitment within the current (2016) RTP/SCS to preserve and enhance coastal resources. Coastal Commission staff request notification of any future activity associated with this project or related projects. Please contact me at (562) 590-5071 with any questions.

Sincerely,

Zach Rehm

DOC#: 12-MULTIPLE-2019-00099

Dear Mr. Ok,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Regional Transportation Plan (RTP) for the proposed Connect SoCal 2020 Regional Transportation Plan/Sustainable Communities Strategy (SCS) Update. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability.

Connect SoCal is Southern California's Association of Government's (SCAG) 2020 update to their long-range visioning plan. This long-range plan is a collective vision for the region's future needs with input from multiple stakeholders. This plan balances future mobility and housing needs with economic, environmental and equity goals. The long-range plan spans the Southern California region, including Ventura, Los Angeles, Orange, San Bernardino, Riverside, and Imperial Counties. Caltrans is a responsible agency and has the following comments:

Transportation Planning:

1. The RTP/SCS should draw from the California Transportation Plan (CTP) 2040 and be consistent with the goals set in the CTP as it provides safety, economic, accessibility, and environmental objectives for the California Transportation System. The CTP integrates a number of long-range transportation plans including the California Freight Mobility Plan, State Rail Plan, Transit Strategic Plan, etc. The CTP would be an important resource and framework for the RTP/SCS.

2. The criteria for project selection into the RTP/SCS should be consistent for all projects and agencies independent of funding status, in order to address the region's transportation needs and issues.

3. Climate change possesses an immediate concern and threat to the State's transportation network. California Senate Bill 379 requires all cities and counties to include climate adaptation and resiliency strategies to be included into their general plans. Multiple local and regional agencies have adopted Climate Action Plans (CAP) to address SB 379. Caltrans has conducted a Statewide Vulnerability Assessment in order to identify areas and communities of immediate concern. The RTP/SCS should review local and regional

CAPs and the Vulnerability Assessment for Orange County and coordinate with Caltrans to implement improvements against climate change.

4. Caltrans recognizes the drawbacks of an auto-centric transportation system and has pushed to support multimodal transportation. As such, Caltrans has implemented Complete Streets aspects in all appropriate Caltrans projects. Complete Streets incorporate design features that provide safe mobility for all users of the road including: pedestrians, bicyclists, transit users, freight, and motorists. Implementation of Complete Streets throughout the region would improve safety, air quality, and congestion reduction.

5. In commitment to a multimodal transportation system, Caltrans provides support to local agencies in their active transportation program from the early project planning and development phase through construction and maintenance. The RTP/SCS should include policies that coordinate with Caltrans and other partners to foster growth of bicycle networks and improvement of safety of pedestrians and bicyclists, such as Vision Zero.

6. Transportation needs are closely integrated to land use. Caltrans, in coordination with the US Environmental Protection Agency, the Governor's Office of Planning and Research (OPR), and the California Department of Housing and Community Development developed the Smart Mobility Framework in order to bridge transportation and land use. The framework provides guidance on how well plans, programs, and projects meet a definition of "smart mobility". It can be used by both Caltrans and partner agencies to transform transportation decisions.

7. The RTP should prioritize system and service improvements that serve places with good regional accessibility, higher densities of population and jobs, and mixed land uses, or improvements that support evolution of these characteristics. The RTP/SCS should advocate for the creation of secure funding sources for both transit capital improvements and operations in these areas, considering the extremely significant role of transit in the future, to increase the number of High-Quality Transportation Areas. This would coincide with the goals set by SB 743, which focuses on the creation of transit-oriented infill projects.

8. The California Air Resources Board's (ARB) SB 150 Report indicates that the RTP/SCS housing goals, particularly those for low income housing, are not being achieve. Developing and utilizing policies favorable to housing construction and coordination with local land-use authorities would work towards fixing the State's housing needs. The RTP/SCS should focus on a supply of housing and provide economic development in areas that allows people of all incomes and abilities to live within a reasonable distance of jobs, schools, shopping, and other important destinations, in order to reduce vehicle miles traveled (VMT).

9. California Natural Resources Agency recently adopted new CEQA Guidelines, which include SB 743. Caltrans will work with OPR, ARB, regional and local transportation entities and other interested parties to develop and implement the Department's method for implementing SB 743 in CEQA review of projects on the State Highway System. Under the directive of SB 743 Caltrans is moving forward to utilizing VMT as the primary metric to analyze traffic impacts, replacing LOS. The RTP/SCS should provide policies that include VMT reduction strategies. This would aid in meeting many of the State's air quality improvement and GHG reduction goals set by policies such as AB 32.

10. Caltrans District 12 have conducted multiple Managed Lanes studies as an option to mitigate future congestion and satisfy transportation needs. Please review and incorporate the Managed Lanes Feasibility Study and the Managed Lanes Network Study to the RTP/SCS update.

11. The RTP/SCS should also address how the SCAG region works to achieve an inter-regional network for longer-distance travel and freight movement. Connecting towns, cities, and regions to each other, business centers to major intermodal freight transfer points, and commuters to national and international destinations outside of the SCAG region in a sustainable and efficient manner, should be an important objective.

12. The RTP should discuss ease of access and possible improvements to municipal and regional airports as they are an integral part to the transportation network.

Please continue to keep us informed of this project and any future developments that could potentially impact State transportation facilities. If you have any questions or need to contact us, please do not hesitate to contact Scott Shelley at (657) 328-6164 or Scott.Shelley@dot.ca.gov.

Sincerely,

SCOTT SHELLEY
Branch Chief, Regional-IGR-Transit Planning
District 12

Re: Notice of Preparation of a Program Environmental Impact Report for Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (State Clearing House Number 2019011061)

Dear Mr. Ok:

These comments are submitted on behalf of the Center for Biological Diversity (the "Center") regarding the Notice of Preparation ("NOP") of a Program Environmental Impact Report ("PEIR") for Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("RTP/SCS"). The Center has reviewed the NOP closely and provides these comments for consideration by SCAG as it prepares the PEIR for the RTP/SCS.

As the NOP acknowledges, SCAG covers a large portion of the state and will impact approximately 49 percent of California's population. The RTP/SCS is intended to serve as a foundational document for land use planning across six counties (Imperial, Los Angeles, Orange, San Bernardino and Ventura) and impact approximately 20 million people. Additionally, Southern California is a biodiversity hotspot with many endemic species and unique habitats, and it is home to the most impacted mountain lion populations in California. The health of these populations and ecosystems are intertwined with human well-being. To truly "connect" SoCal and promote "sustainable" communities, land use policy needs to facilitate a more wholistic approach that addresses human transportation and development needs, the needs of wildlife and habitats that are fragmented by transportation infrastructure and development, and how we can make human and natural communities more resilient to climate change. Because of the broad scope and significant, long-range impact of the RTP/SCS, the Center urges SCAG to carefully and thoroughly consider the potential environmental impacts on the community and wildlife, including those raised in these comments, when preparing the PEIR and RTP/SCS.

The Center is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.4 million members and online activists throughout California and the

United States. The Center and its members have worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in Southern California.

I. SCAG Must Adopt an Ambitious, Aggressive RTP/SCS to Meet SB 375 GHG Emission Reduction Mandates and Reverse the Trend of Increasing Vehicle Travel

Over 10 years ago, the California Legislature adopted the Sustainable Communities and Climate Protection Action of 2008, known as SB 375, to integrate transportation, land use and housing decision-making to reduce overall greenhouse gas ("GHG") emissions. The California Air Resources Board (CARB) has repeatedly noted the important role SB 375 GHG emission reduction targets are to the state's overall strategy to meet its climate change targets. (See California Air Resources Board. November 2017. California's 2017 Climate Change Scoping Plan: The Strategy for Achieving California's 2030 Greenhouse Gas Target at 101 ["CARB 2017 Scoping Plan"].) While Metropolitan Planning Organizations ("MPO") like SCAG have adopted RTP/SCS in the subsequent decade, it is clear that previous RTP/SCS have not gone far enough to adequately address California's GHG emission reduction targets.

In a November 2018 report, CARB completed an in-depth analysis showing California is not on track to meet the greenhouse gas reductions under SB 375. (CARB, 2018 Progress Report: California's Sustainable Communities and Climate Protection Act [November 2018] ["CARB 2018 Progress Report"].) This is largely because emissions from passenger vehicle travel per capita are *increasing* under the state's regional SCSs and RTPs, rather than decreasing as SB 375 intended. (*Id.* at 4, 22-28.) Therefore, greater reductions in the transportation sector are essential to meet California's climate goals. ***The key takeaway from CARB's report is that more needs to be done and the Center hopes SCAG follows that message when preparing its PEIR and RTP/SCS.*** (*Id.* at 3-5.)

A. Climate Change is a Catastrophic and Pressing Threat to California

A strong, international scientific consensus has established that human-caused climate change is causing widespread harms to human society and natural systems, and climate change threats are becoming increasingly dangerous. In a 2018 *Special Report on Global Warming of 1.5°C* from the Intergovernmental Panel on Climate Change (IPCC), the leading international scientific body for the assessment of climate change describes the devastating harms that would occur at 2°C warming, highlighting the necessity of limiting warming to 1.5°C to avoid catastrophic impacts to people and life on Earth (IPCC 2018). The report provides overwhelming evidence that climate hazards are more urgent and more severe than previously thought, and that aggressive reductions in emissions within the next decade are essential to avoid the most devastating climate change harms.

The impacts of climate change will be felt by humans and wildlife. In addition to warming, many other aspects of global climate are changing, primarily in response to human activities. Thousands of studies conducted by researchers around the world have documented

changes in surface, atmospheric, and oceanic temperatures; melting glaciers; diminishing snow cover; shrinking sea ice; rising sea levels; ocean acidification; and increasing atmospheric water vapor (USGCRP 2017). In California, climate change will transform our climate, resulting in such impacts as increased temperatures and wildfires, and a reduction in snowpack and precipitation levels and water availability.

In response to inadequate action on the national level, California has taken steps through legislation and regulation to fight climate change and reduce statewide GHG emissions. Enforcement and compliance with these steps is essential to help stabilize the climate and avoid catastrophic impacts to our environment. California has a mandate under AB 32 to reach 1990 levels of GHG emissions by the year 2020, equivalent to approximately a 15 percent reduction from a business-as-usual projection. (Health & Saf. Code § 38550.) Based on the warning of the Intergovernmental panel on Climate Change and leading climate scientists, Governor Brown issued an executive order in April 2015 requiring GHG emission reduction 40 percent below 1990 levels by 2030. (Executive Order B-30-15 (2015).) The Executive Order is in line with a previous Executive Order mandating the state reduce emission levels to 80 percent below 1990 levels by 2050 in order to minimize significant climate change impacts. (Executive Order S-3-05 (2005).) That Executive Order's goal has now been incorporated into California's 2017 Scoping Plan update—its plan to achieve greenhouse gas emissions reductions. Thus, the 2017 Scoping Plan update set out strategies for putting the State on a path to toward the 2050 climate goal to reduce GHG emissions by 80 percent below 1990 levels. (See CARB 2017 Scoping Plan.) More recently, Governor Brown signed a new executive order to put California on the track to go carbon neutral by 2045. (Executive Order B-55-18 (2018).) The Legislature also passed S.B. 100 which requires renewables to account for 60 percent of electricity sales in 2030.

B. CARB's 2018 Progress Report Lays Out Clear Deficiencies in Previous RTP/SCS and Provides a Path Forward

As the NOP acknowledges, SCAG's RTP/SCS will provide detailed land use, housing and transportation strategies for the region. Those strategies can significant impacts on the community, as CARB noted in its 2018 Progress Report:

> *growth patterns have a profound impact on both the health of individuals and the environment. Where jobs are located and homes are built, and what roads, bike lanes, and transit connect them, create the fabric of life. How regions grow impacts where people can afford to live, how long it takes to get to work, how people travel, who has easy access to well-paying jobs and educational opportunities, the air people breathe, whether it is easy to spend time outdoors and with friends, social cohesion and civic engagement, and ultimately, how long people live.*

(CARB Progress Report 2018 at 6.) In the report, CARB goes on to note that "to meet the potential of SB 375 will require state, regional, and local agency staff and elected officials to make more significant changes across multiple systems that address the interconnected

relationship of land use, housing, economic and workforce development, transportation investments, and travel choices." (*Id*.) While SCAG, like other MPOs, has failed to meet this potential previous RTP/SCS, it has the opportunity to do so now. The Center urges SCAG to do all it can to review and adopt the best practices suggested by CARB when drafting its PEIR and RTP/SCS. This includes the following general principles:

- Providing viable travel alternatives to individual passenger vehicles
- Providing housing choices for all income levels in neighborhoods with access to sustainable transportation choices and economic opportunities
- Building self-sustaining neighborhood that are accessible to and near daily needs

C. SCAG Should Mandate A Robust Range of Mitigation Measures to Meet SB 375 GHG Emissions Reduction Targets

SCAG has made clear that it intends to use the PEIR as a first-tier CEQA document and provide "program wide mitigation measures" that adequately address and reduce GHG emissions from passenger vehicles resulting from land use, housing and transportation planning in the region. (NOP at 2, 7 [*citing* CEQA Guidelines Sec. 15168; SB 375 (2008)].) Therefore the PEIR and associated RTP/SCS must fully comply with CEQA's strict mandates for mitigation.

Mitigation of a project's environmental impacts is one of the "most important" functions of CEQA and it is the "policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures which will avoid or substantially lessen the significant environmental effects of such projects." (*Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d 30, 41; Pub. Res. Code § 21002.) As the California Attorney General has noted, programmatic plans to reduce GHG emissions pursuant to CEQA Guidelines section 15183.5 must "[i]dentify a set of specific, enforceable measures that, collectively, will achieve the emissions targets…." (California Attorney General's Office). Therefore, SCAG must include a robust range of mitigation measures that are concrete and fully enforceable as required by CEQA to address the likely significant GHG emissions that will result from the RTP/SCS. (*Lincoln Place Tenants Assn. v. City of Los Angeles* (2007) 155 Cal.App.4th 425, 445 ["A 'mitigation measure' is a suggestion or change that would reduce or minimize significant adverse impacts on the environment caused by the project as proposed."]); *Preserve Wild Santee v. City of Santee* (2012) 210 CA 4th 260, 281 [mitigation measures that are so undefined that their effectiveness is impossible to determine are legally inadequate].)

When feasible, SCAG should mandate adoption of on-site mitigation measures or avoid GHG emissions through changes in project design, as suggested by (Office of Planning and Research, Discussion Draft: CEQA and Climate Change (2018) at 16.) Only if on-site mitigation measures are infeasible, should SCAG consider local and regional mitigation measures. (*Id.* at 17.) Potential mitigation measures for SCAG to consider include but are not limited to:

- Electric vehicle charging facilities;
- Projects to facilitate and increase use of carpooling, vanpooling and ridesharing;

- Measures to increase use of public transit, increase public transit route and times of operation;
- Use of energy efficient lighting technology;
- Funding for purchase of alternative fuel buses;
- Use of less GHG-intensive construction materials than cement and asphalt;
- Measures to reduce idling time;
- Use of alternative fuel vehicles;
- Road dust reduction strategies;
- Availability for transit vouchers;
- Investment in bike path construction, improvement and storage facilities;

The Center hopes SCAG will, at a minimum, adopt these and other mitigation measures to meet its GHG emission reduction targets. However, just encouraging more zero-emission vehicles or taking small measures to encourage more public transit will not be enough. "CARB's 2030 Scoping Plan Update identifies additional VMT reduction beyond that included in the SB 375 targets as necessary to achieve a statewide target of 40 percent below 1990 level emissions by 2030. Even greater reductions will be needed to achieve the new carbon neutrality goal by 2045." (CARB 2018 Progress Report at 27, citing CARB 2017 Scoping Plan and Executive Order B-55-18. September 2018.) What is more, CARB points out that "[e]ven if the share of new car sales that are ZEVs grows nearly 10-fold from today, California would still need to reduce VMT per capita 25 percent to achieve the necessary reductions for 2030." (*Id*. at 28.)

Put simply, California will not achieve the necessary greenhouse gas emissions reductions to meet mandates for 2030 and beyond without significant changes to how communities and transportation systems are planned, funded and built. (CARB Progress Report 2018 at 27.) Instead fundamental changes in land use planning by local and regional land use agencies must occur. RTP/SCS by MPO's like SCAG have the potential to guide these fundamental changes in land use and transportation planning. Specifically, CARB discouraged the approval of large, exurban developments with limited public transit, jobs and commercial centers. As noted above, ***SCAG's RTP/SCS must prioritize infill, transit-oriented development while discouraging sprawl or greenfield development far from existing population and employment centers.*** The Center hopes will seize this opportunity when drafting its RTP/SCS to take one of the largest regions of California on a different, more sustainable path that truly addresses the climate crisis facing our state.

II. The Goals of the RTP/SCS Should Include Maintaining and Enhancing Wildlife Movement and Habitat Connectivity

In planning SCAG's long-range vision to balance future mobility and housing needs with economic, environmental, and public health goals, it is essential to consider the impacts of transportation infrastructure and development on the region's natural landscapes. While Southern California is a popular area for people to live and work, it is also a biodiversity hotspot with many endemic species and unique habitats, and it is home to the most impacted mountain lion populations in California. To truly forge sustainable communities resilient to climate change,

wildlife movement and habitat connectivity should be an integral factor in land use planning and policy. Impacts to these resources should be adequately assessed in the PEIR.

A. Avoidance and Minimization of Impacts to Wildlife Movement and Habitat Connectivity Must be Prioritized.

The PEIR should prioritize avoiding and minimizing impacts of the RTP/SCS on wildlife movement and habitat connectivity. Roads and traffic create barriers that lead to habitat loss and fragmentation, which harms wildlife and people. As barriers to wildlife movement and the cause of injuries and mortalities due to wildlife vehicle collisions, roads and traffic can affect an animal's behavior, movement patterns, reproductive success, and physiological state, which can lead to significant impacts on individual wildlife, populations, communities, and landscapes (Mitsch and Wilson 1996; Trombulak and Frissell 2000; van der Ree et al. 2011; Haddad et al. 2015; Marsh and Jaeger 2015; Ceia-Hasse et al. 2018). For example, habitat fragmentation from roads and traffic has been shown to cause mortalities and harmful genetic isolation in mountain lions in southern California (Riley et al. 2006, 2014, Vickers et al. 2015), increase local extinction risk in amphibians and reptiles (Cushman 2006; Brehme et al. 2018), cause high levels of avoidance behavior and mortality in birds and insects (Benítez-López et al. 2010; Loss et al. 2014; Kantola et al. 2019), and alter pollinator behavior and degrade habitats (Trombulak and Frissell 2000; Goverde et al. 2002; Aguilar et al. 2008). In addition, wildlife vehicle collisions pose a major public safety and economic threat. Over the last three years (2015-2017) it is estimated that 7,000 to 23,000 wildlife vehicle collisions (with large mammals) have occurred annually on California roads (Shilling et al. 2017; Shilling et al. 2018, State Farm Insurance Company 2016, 2018). These crashes result in human loss of life, injuries, emotional trauma, and property damages that can add up to $300-600 million per year. Thus, avoiding and minimizing impacts of transportation projects and development on wildlife movement and habitat connectivity would help preserve biodiversity and ecosystem health while protecting human health and safety.

B. The PEIR Should Adequately Assess the Impacts of the RTP/SCS on Functional Connectivity.

The PEIR should ensure that effective, functional wildlife corridors that support multiple species movement are preserved. These should include continuous, intact habitats (not fragmented by roads or other anthropogenic features) that are wide enough to overcome edge effects, dominated by native vegetation, and have equal or higher habitat quality than core habitat patches (Bennett et al. 1994; Brooker et al. 1999; Forman 1995; Tilman et al 1997; Hilty et al 2006). Negative edge effects from human activity, traffic, lighting, noise, domestic pets, pollutants, invasive weeds, and increased fire frequency have been found to be biologically significant up to 300 meters (~1000 feet) away from development in terrestrial systems (Environmental Law Institute 2003).

C. The RTP/SCS Should Consider the Impacts of Climate Change and Should Incorporate Climate Adaptation Strategies for Wildlife Movement and Habitat Connectivity

The PEIR should consider the impacts of climate change on wildlife movement and habitat connectivity in the design and implementation of projects and any mitigation. Climate change is increasing stress on species and ecosystems, causing changes in distribution, phenology, physiology, vital rates, genetics, ecosystem structure and processes, and increasing species extinction risk (Warren et al. 2011). A 2016 analysis found that climate-related local extinctions are already widespread and have occurred in hundreds of species, including almost half of the 976 species surveyed (Wiens 2016). A separate study estimated that nearly half of terrestrial non-flying threatened mammals and nearly one-quarter of threatened birds may have already been negatively impacted by climate change in at least part of their distribution (Pacifici et al. 2017). A 2016 meta-analysis reported that climate change is already impacting 82 percent of key ecological processes that form the foundation of healthy ecosystems and on which humans depend for basic needs (Scheffers et al. 2016). Genes are changing, species' physiology and physical features such as body size are changing, species are moving to try to keep pace with suitable climate space, species are shifting their timing of breeding and migration, and entire ecosystems are under stress (Parmesan and Yohe 2003; Root et al. 2003; Parmesan 2006; Chen et al. 2011; Maclean and Wilson 2011; Warren et al. 2011; Cahill et al. 2012).

As SCAG is aware, state agencies must take climate change into account in their planning and investment decisions, see Public Resources Code §§ 71150-55 (Climate Change and Climate Adaptation). The law specifically mandates that all state agencies "take into account the current and future impacts of climate change when planning, designing, building, operating, maintaining and investing in state infrastructure." Public Res. Code § 71155. Thus, the RTP/SCS must also climate change and adaptation into account. There are many tools available for incorporating climate adaptation in planning. In 2018, the California Natural Resources Agency updated the Climate Adaptation Strategy[1] which recognizes the critical role infrastructure and mitigation planning have in meeting climate adaptation goals. Indeed, several of the key principles relate directly to infrastructure planning and emphasize the need for coordination (California Natural Resources Agency 2018):

> −Principle 5: Prioritize natural infrastructure solutions build climate preparedness, reduce greenhouse gas emissions, and produce other multiple benefits.
> − Principle 6: Promote collaborative adaptation processes with federal, local and regional government partners.
> − Principle 7: Increase investment in climate change vulnerability assessments of critical built infrastructure systems.

[1]Information available at http://resources.ca.gov/climate/safeguarding/ and http://cal-adapt.org/

D. The PEIR Should Ensure the RTP/SCS Promotes Wildlife Corridor Redundancy to Improve Functional and Resilient Connectivity.

To minimize project impacts to wildlife connectivity, the RTP/SCS should incorporate wildlife corridor redundancy (*i.e*. the availability of alternative pathways for movement) in project plans and mitigation. Corridor redundancy is important in regional connectivity plans because it allows for improved functional connectivity and resilience. Compared to a single pathway, multiple connections between habitat patches increase the probability of movement across landscapes by a wider variety of species, and they provide more habitat for low-mobility species while still allowing for their dispersal (Olson and Burnett 2008; Pinto and Keitt 2008; Mcrae et al. 2012). In addition, corridor redundancy provides resilience to uncertainty, impacts of climate change, and extreme events, like flooding or wildfires, by providing alternate escape routes or refugia for animals seeking safety (Mcrae et al. 2008; Olson and Burnett 2008; Pinto and Keitt 2008; Mcrae et al. 2012; Cushman et al. 2013).

E. The PEIR Should Ensure Adequate Mitigation Measures for Impacts to Wildlife Movement and Habitat Connectivity.

If impacts to wildlife movement and habitat connectivity are unavoidable, the PEIR should ensure that impacts are mitigated using the best available science to maintain and/or enhance wildlife connectivity. When appropriately implemented, wildlife crossing infrastructure has been shown to improve wildlife permeability and reduce wildlife vehicle collisions (Dodd Jr et al. 2004; Bissonette and Rosa 2012; Dodd et al. 2012; Sawyer et al. 2012; Sawaya et al. 2014; Kintsch et al. 2018). Wildlife crossing infrastructure design and implementation should be prepared and conducted in consultation with the California Department of Fish and Wildlife (CDFW) and other stakeholders, including federal and state agencies, academic institutions, non-governmental agencies, local experts and the public. Local and regional wildlife movement, habitat connectivity, and wildlife vehicle collision data should be collected and analyzed in the project area before projects are approved and budgets are set (Lesbarrères and Fahrig 2012; Shilling et al. 2018). New and renovated roads and developments should be designed with wildlife connectivity in mind – it is easier to plan a new road to avoid or minimize impacts to wildlife connectivity than it is to retroactively build wildlife crossings.

To provide appropriate mitigation for habitat connectivity and wildlife movement, the effectiveness of wildlife crossing infrastructure planning, design, and strategies should be thoroughly and systematically evaluated to determine which strategies work better than others and how they can be improved. Any mitigation involving crossing infrastructure should include the long-term monitoring and maintenance of crossing infrastructure as well as the use of appropriate metrics that adequately reflect effectiveness, such as species passage rates and counts of wildlife vehicle collision occurrences. The data and evaluations should inform future mitigation strategies and be made available to the public.

Mitigation via conservation easements should be in-kind within the project area or as close as possible within an ecologically meaningful unit, such as a watershed. Easements should be established and appropriately funded in perpetuity.

III. The PEIR Should Adequately Assess the Impacts of the RTP/SCS on Public Health and the Economy

The PEIR should adequately assess how the RTP/SCS impacts public health and safety and the economy. According to Caltrans, Californians seek more opportunities for walking, biking, or using public transit (Caltrans 2016), yet most transportation infrastructure efforts are focused on building and expanding more roads to accommodate (and facilitate) more cars. According to a 2017 analysis by INRIX, Los Angeles is the most congested city in the US; residents spend over 100 hours a year stuck in traffic, which is estimated to cost the city's economy over $19 billion (Mccarthy 2018). Long commutes cause increased stress levels and leave little to no time to exercise or spend time with families or communities, which can lead to mental and physical health impacts, reduced quality of life, and shorter life spans (Ewing et al. 2003; Leyden 2003; Frumkin et al. 2004). In addition, emissions from road transportation contribute to poor air quality that can lead to serious health effects, including respiratory and cardiovascular disease, compromised birth outcomes, and premature death (Lin et al. 2002; Andersen et al. 2011; Caiazzo et al. 2013; Chen et al. 2017). A recent study found that emissions from road transportation cause 53,000 premature deaths annually in the US, and California has about 12,000 early deaths every year due to air pollution from road transportation and commercial/residential sources (Caiazzo et al. 2013). Thus, roads and other transportation infrastructure should be made safer for drivers and communities where there are roads. Major cities around the world are acknowledging the detrimental effects of roads and traffic on people, and they are shifting their land use design focus from cars to human health and well-being (Conniff 2018). By reducing the amount of new roads and promoting design oriented towards pedestrians, cyclists, and transit instead of cars, SCAG has the opportunity to facilitate the implementation of transportation infrastructure that improves public health and safety and preserves wildlife connectivity.

IV. The PEIR Should Use the Best Available Science to Identify Wildfire Risk and Impacts of More Frequent Fires Due to Human Activities and Land Use

The Center is encouraged to see that SCAG has added wildfire as an environmental factor within the scope of the environmental analysis to be considered in the PEIR. The PEIR should adequately assess the risk and impacts of increased wildfire ignitions on public health and safety as well as on biological resources. Wildfire is a natural and necessary part of California's ecosystems. Forests, shrublands, and grasslands are adapted to fire and need fire to rejuvenate, although different habitats rely on different fire frequencies. In addition, climate change is leading to hotter, drier conditions that make fires more likely to burn, and people are starting more fires in more places throughout the year. In Southern California, sprawl developments with low/intermediate densities extending into chaparral and sage scrub habitats that are prone to fire have led to more frequent wildfires caused by human ignitions, like arson, improperly disposed cigarette butts, debris burning, fireworks, campfires, or sparks from cars or equipment (Keeley et al. 1999; Keeley and Fotheringham 2003; Syphard et al. 2007; Syphard et al. 2012; Bistinas et al. 2013; Balch et al. 2017; Radeloff et al. 2018). Human-caused fires account for 97% of all fires in Mediterranean California, which includes the SCAG region (Balch et al. 2017), and homes filled with petroleum-based products, such as wood interiors, paint, and furniture, provide additional fuel for the fires to burn longer and spread farther.

Much of the SCAG region is dominated by chaparral and sage scrub, native California habitats that rely on wildfires to persist. These habitats are adapted to infrequent (every 30 to 150 years), large, high-intensity crown fire regimes (Keeley and Fotheringham 2001), and if these regimes are disrupted, the habitats become degraded (Keeley 2005; Keeley 2006; Syphard et al. 2018). When fires occur too frequently, type conversion occurs and the native shrublands are replaced by non-native grasses and forbs that burn more frequently and more easily, ultimately eliminating native habitats and biodiversity while increasing fire threat over time (Keeley 2005; Keeley 2006; Syphard et al. 2009; Safford and Van de Water 2014; Syphard et al. 2018). We can no longer dismiss California's natural fire regime and the direct relationship between urban sprawl, roads, and deadly wildfires. The devastating environmental, health, social, and economic costs of poorly-planned, leapfrog developments in high fire-prone areas cannot be sustained (see Yap 2018).

The Center urges SCAG to protect human lives, property, and native biodiversity, by reforming growth strategies to focus on avoiding the placement of developments and roads in high fire threat areas. After the deadly and destructive Camp and Woolsey Fires in 2018, retired Cal Fire Director Ken Pimlott recommended that home construction in high fire-prone areas should be banned, stating that "we owe it" to homeowners, firefighters, and communities to make better local land use planning decisions to keep people safe and make communities more resilient (Thompson 2018). Urban planning and design should focus on infill development in urban core areas, where wildfire threat is lower and people have access to jobs, public transit, and community.

Existing communities in fire-risk areas should be incentivized to complete retrofits with features that have been shown to reduce the risk of destruction due to wildfires, such as ember-resistant vents, fire-resistant roofs, 100 feet of surrounding defensible space, rain gutter guards, and external sprinklers with an independent water source (Quarles et al. 2010; Syphard et al. 2014; California Chaparral Institute 2018). However, although these fire-resistant structural features are important, fire safety education and enforcement for home and property owners are vital for these safety measures to be effective. Proper maintenance and upkeep of the structural fire-resistant features and the immediate surroundings (*e.g.*, removing leaf litter from gutters and roofing; removing flammable materials like wood fences, overhanging tree branches, or trash cans away from the home) are required to reduce the chances of the structures burning. In addition, education about how to prevent fire ignitions in existing communities in high fire-prone areas would further reduce fire risk.

V. Conclusion

Thank you for the opportunity to submit comments on the Notice of Preparation of a Program Environmental Impact Report for Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy). Please add the Center to your notice list for all future updates to the PEIR and RTP/SCS. We look forward to working with SCAG to foster land use policy and growth patterns that promote wildlife movement and habitat connectivity and move towards the State's climate change goals. Please do not hesitate to contact the Center with any questions at the number or email listed below.

Sincerely,

Aruna Prabhala

Subject: Comments on the Notice of Preparation of a Draft Programmatic Environmental Impact Report for the Connect SoCal Project; SCH# 2019011061; Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura Counties

Dear Mr. Chang:

The California Department of Fish and Wildlife (CDFW) has reviewed the above-referenced Notice of Preparation (NOP) for the Connect SoCal Draft Programmatic Environmental Impact Report (DPEIR) prepared by the Southern California Association of Governments (SCAG) pursuant to the California Environmental Quality Act (CEQA; Pub. Resources Code, § 21000 et. seq.)

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & Game Code, §§ 711.7, subdivision (a) & 1802; Public Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect state fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Public Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including Lake and Streambed Alteration (LSA) regulatory authority (Fish & Game Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" (see Fish & Game Code, § 2050) of any species protected under the California Endangered Species Act (CESA; Fish & Game Code, § 2050 et seq.) or the Native Plant Protection Act (NPPA; Fish & Game Code,

§1900 et seq.), CDFW recommends the project proponent obtain appropriate authorization under the Fish and Game Code.

Project Location: The Project will cover a six-county region including the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura.

Project Description/Objective: The Connect SoCal Project is also known as the 2020 Regional Transportation Plan and Sustainable Communities Strategy (Plan). This Plan is a regional planning document that is updated every four years pursuant to federal and state planning requirements (2016 version is now being updated). A DPEIR will be prepared and focus on the region's goals and policies for meeting current and future mobility needs, that will allow a coordinated transportation system. The DPEIR will identify needs and issues, recommended actions, and a list of projects needed to implement Connect SoCal.

There are three alternatives being looked at under the DPEIR:

1) A no project alternative;

2) 2020 Local Input Alternative. This alternative incorporates general plans to produce growth estimates and only uses policies and strategies incorporated into local jurisdictional plans; and,

3) Intensified Land Use Alternative. This alternative would use aggressive land use development patterns to maximize growth around high quality transit areas.

COMMENTS AND RECOMMENDATIONS

CDFW offers the following comments and recommendations to assist SCAG (Lead Agency) in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

CDFW also recommends that SCAG include in the DPEIR measures or revisions below in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring and reporting program (Public Resources Code, § 21081.6 and CEQA Guidelines, § 15097).

General Comments

1) Project Description and Alternatives: To enable CDFW to adequately review and comment on the proposed Project from the standpoint of the protection of plants, fish, and wildlife, we recommend the following information be included in the DPEIR:

   a) A complete discussion of the purpose and need for, and description of, the proposed Project, including all staging areas and access routes to the construction and staging areas; and,

   b) A range of feasible alternatives to Project component location and design features to ensure that alternatives to the proposed Project are fully considered and evaluated. The alternatives should avoid or otherwise minimize direct and indirect impacts to sensitive biological resources and wildlife movement areas.

2) LSA: As a Responsible Agency under CEQA, CDFW has authority over activities in streams and/or lakes that will divert or obstruct the natural flow; or change the bed, channel, or bank (including vegetation associated with the stream or lake) of a river or stream; or use material from a streambed. For any such activities, the project applicant (or "entity") must provide written notification to CDFW pursuant to section 1600 et seq. of the Fish and Game Code. Based on this notification and other information, CDFW determines whether a LSA Agreement (Agreement) with the applicant is required prior to conducting the proposed activities. CDFW's issuance of an Agreement for a project that is subject to CEQA will require related environmental compliance actions by CDFW as a Responsible Agency. As a Responsible Agency, CDFW may consider the CEQA document prepared by the local jurisdiction (Lead Agency) for the Project. To minimize additional requirements by CDFW pursuant to section 1600 *et seq.* and/or under CEQA, the DPEIR should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring and reporting commitments for issuance of the LSA.[1]

   a) The Project area supports aquatic, riparian, and wetland habitats; therefore, a preliminary jurisdictional delineation of the streams and their associated riparian habitats should be included in the DPEIR. The delineation should be conducted pursuant to the U. S. Fish and Wildlife Service (USFWS) wetland definition adopted by the CDFW.[2] Some wetland and riparian habitats subject to CDFW's authority may extend beyond the jurisdictional limits of the U.S. Army Corps of Engineers' section 404 permit and Regional Water Quality Control Board section 401 Certification.

   b) In areas of the Project site which may support ephemeral streams, herbaceous vegetation, woody vegetation, and woodlands also serve to protect the integrity of ephemeral channels and help maintain natural sedimentation processes; therefore, CDFW recommends effective setbacks be established to maintain appropriately-sized vegetated buffer areas adjoining ephemeral drainages.

   c) Project-related changes in drainage patterns, runoff, and sedimentation should be included and evaluated in the DPEIR.

3) Wetlands Resources: CDFW, as described in Fish & Game Code section 703(a), is guided by the Fish and Game Commission's policies. The Wetlands Resources policy (http://www.fgc.ca.gov/policy/) of the Fish and Game Commission "…seek[s] to provide for the protection, preservation, restoration, enhancement and expansion of wetland habitat in California. Further, it is the policy of the Fish and Game Commission to strongly discourage development in or conversion of wetlands. It opposes, consistent with its legal authority, any development or conversion that would result in a reduction of wetland acreage or wetland habitat values. To that end, the Commission opposes wetland development proposals unless, at a minimum, project mitigation assures there will be 'no net loss' of either wetland habitat values or acreage. The Commission strongly prefers mitigation which would achieve expansion of wetland acreage and enhancement of wetland habitat values."

   a) The Wetlands Resources policy provides a framework for maintaining wetland resources and establishes mitigation guidance. CDFW encourages avoidance of wetland resources

---

[1] A notification package for a LSA may be obtained by accessing the CDFW's web site at www.wildlife.ca.gov/habcon/1600.

[2] Cowardin, Lewis M., et al. 1970. Classification of Wetlands and Deepwater Habitats of the United States. U.S. Department of the Interior, Fish and Wildlife Service.

as a primary mitigation measure and discourages the development or type conversion of wetlands to uplands. CDFW encourages activities that would avoid the reduction of wetland acreage, function, or habitat values. Once avoidance and minimization measures have been exhausted, the Project must include mitigation measures to assure a "no net loss" of either wetland habitat values, or acreage, for unavoidable impacts to wetland resources. Conversions include, but are not limited to, conversion to subsurface drains, placement of fill or building of structures within the wetland, and channelization or removal of materials from the streambed. All wetlands and watercourses, whether ephemeral, intermittent, or perennial, should be retained and provided with substantial setbacks, which preserve the riparian and aquatic values and functions for the benefit to on-site and off-site wildlife populations. CDFW recommends mitigation measures to compensate for unavoidable impacts be included in the DPEIR and these measures should compensate for the loss of function and value.

b) The Fish and Game Commission's Water policy guides CDFW on the quantity and quality of the waters of this state that should be apportioned and maintained respectively so as to produce and sustain maximum numbers of fish and wildlife; to provide maximum protection and enhancement of fish and wildlife and their habitat; encourage and support programs to maintain or restore a high quality of the waters of this state; prevent the degradation thereof caused by pollution and contamination; and, endeavor to keep as much water as possible open and accessible to the public for the use and enjoyment of fish and wildlife. CDFW recommends avoidance of water practices and structures that use excessive amounts of water, and minimization of impacts that negatively affect water quality, to the extent feasible (Fish and G. Code, § 5650).

4) CESA: CDFW considers adverse impacts to a species protected by CESA to be significant without mitigation under CEQA. As to CESA, take of any endangered, threatened, candidate species, or State-listed rare plant species that results from the Project is prohibited, except as authorized by state law (Fish and Game Code, §§ 2080, 2085; Cal. Code Regs., tit. 14, §786.9). Consequently, if the Project, Project construction, or any Project-related activity during the life of the Project will result in take of a species designated as endangered or threatened, or a candidate for listing under CESA, CDFW recommends that the Project proponent seek appropriate take authorization under CESA prior to implementing the Project. Appropriate authorization from CDFW may include an Incidental Take Permit (ITP) or a consistency determination in certain circumstances, among other options [Fish and G. Code, §§ 2080.1, 2081, subds. (b) and (c)]. Early consultation is encouraged, as significant modification to a Project and mitigation measures may be required in order to obtain a CESA Permit. Revisions to the Fish and Game Code, effective January 1998, may require that CDFW issue a separate CEQA document for the issuance of an ITP unless the Project CEQA document addresses all Project impacts to CESA-listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of an ITP. For these reasons, biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA ITP.

5) Biological Baseline Assessment: To provide a complete assessment of the flora and fauna within and adjacent to the project area, with particular emphasis upon identifying endangered, threatened, sensitive, regionally and locally unique species, and sensitive habitats, the DPEIR should include the following information:

a) Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region [CEQA Guidelines, § 15125(c)];

b) A thorough, recent, floristic-based assessment of special status plants and natural communities, following CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities* (see http://www.dfg.ca.gov/habcon/plant/);

c) Floristic, alliance- and/or association-based mapping and vegetation impact assessments conducted at the Project site and within the neighboring vicinity. *The Manual of California Vegetation*, second edition, should also be used to inform this mapping and assessment[3]. Adjoining habitat areas should be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions;

d) A complete, recent, assessment of the biological resources associated with each habitat type on site and within adjacent areas that could also be affected by the project. CDFW's California Natural Diversity Data Base (CNDDB) in Sacramento should be contacted to obtain current information on any previously reported sensitive species and habitat. CDFW recommends that CNDDB Field Survey Forms be completed and submitted to CNDDB to document survey results. Online forms can be obtained and submitted at http://www.dfg.ca.gov/biogeodata/cnddb/submitting_data_to_cnddb.asp;

e) A complete, recent, assessment of rare, threatened, and endangered, and other sensitive species on site and within the area of potential effect, including California SSC and California Fully Protected Species (Fish and Game Code §§ 3511, 4700, 5050 and 5515). Species to be addressed should include all those which meet the CEQA definition of endangered, rare or threatened species (see CEQA Guidelines § 15380). Seasonal variations in use of the project area should also be addressed. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with CDFW and the USFWS; and,

f) A recent, wildlife and rare plant survey. CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed project may warrant periodic updated surveys for certain sensitive taxa, particularly if build out could occur over a protracted time frame, or in phases.

6) Biological Direct, Indirect, and Cumulative Impacts: To provide a thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts, the following should be addressed in the DPEIR:

---

[3]Sawyer, J. O., Keeler-Wolf, T., and Evens J.M. 2008. A manual of California Vegetation, 2nd ed. ISBN 978-0-943460-49-9.

a) A discussion of potential adverse impacts from lighting, noise, human activity, exotic species, and drainage. The latter subject should address Project-related changes on drainage patterns and downstream of the project site; the volume, velocity, and frequency of existing and post-Project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and, post-Project fate of runoff from the project site. The discussion should also address the proximity of the extraction activities to the water table, whether dewatering would be necessary and the potential resulting impacts on the habitat (if any) supported by the groundwater. Mitigation measures proposed to alleviate such Project impacts should be included;

b) A discussion regarding indirect Project impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands (e.g., preserve lands associated with a Natural Community Conservation Plan (NCCP, Fish and G .Code, § 2800 et. seq.). Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in adjacent areas, should be fully evaluated in the DPEIR;

c) An analysis of impacts from land use designations and zoning located nearby or adjacent to natural areas that may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the DPEIR; and,

d) A cumulative effects analysis, as described under CEQA Guidelines section 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.

7) Avoidance, Minimization, and Mitigation for Sensitive Plants: The DPEIR should include measures to fully avoid and otherwise protect sensitive plant communities from Project-related direct and indirect impacts. CDFW considers these communities to be imperiled habitats having both local and regional significance. Plant communities, alliances, and associations with a statewide ranking of S-1, S-2, S-3 and S-4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by querying the CNDDB and are included in *The Manual of California Vegetation*.

8) Compensatory Mitigation: The DPEIR should include mitigation measures for adverse Project-related impacts to sensitive plants, animals, and habitats. Mitigation measures should emphasize avoidance and reduction of Project impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site mitigation is not feasible or would not be biologically viable and therefore not adequately mitigate the loss of biological functions and values, off-site mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed. Areas proposed as mitigation lands should be protected in perpetuity with a conservation easement, financial assurance and dedicated to a qualified entity for long-term management and monitoring. Under Government Code section 65967, the lead agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.

9) Long-term Management of Mitigation Lands: For proposed preservation and/or restoration, the DPEIR should include measures to protect the targeted habitat values from direct and indirect negative impacts in perpetuity. The objective should be to offset the Project-induced qualitative and quantitative losses of wildlife habitat values. Issues that should be addressed include (but are not limited to) restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, and increased human intrusion. An appropriate non-wasting endowment should be set aside to provide for long-term management of mitigation lands.

10) Nesting Birds: CDFW recommends that measures be taken to avoid Project impacts to nesting birds. Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (Title 50, § 10.13, Code of Federal Regulations). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). Proposed Project activities including (but not limited to) staging and disturbances to native and nonnative vegetation, structures, and substrates should occur outside of the avian breeding season which generally runs from February 1 through September 1 (as early as January 1 for some raptors) to avoid take of birds or their eggs. If avoidance of the avian breeding season is not feasible, CDFW recommends surveys by a qualified biologist with experience in conducting breeding bird surveys to detect protected native birds occurring in suitable nesting habitat that is to be disturbed and (as access to adjacent areas allows) any other such habitat within 300-feet of the disturbance area (within 500-feet for raptors). Project personnel, including all contractors working on site, should be instructed on the sensitivity of the area. Reductions in the nest buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors.

11) Translocation/Salvage of Plants and Animal Species: Translocation and transplantation is the process of moving an individual from the Project site and permanently moving it to a new location. CDFW generally does not support the use of, translocation or transplantation as the primary mitigation strategy for unavoidable impacts to rare, threatened, or endangered plant or animal species. Studies have shown that these efforts are experimental and the outcome unreliable. CDFW has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving sensitive plants and animals and their habitats.

12) Moving out of Harm's Way: The proposed Project is anticipated to result in clearing of natural habitats that support many species of indigenous wildlife. To avoid direct mortality, we recommend that a qualified biological monitor approved by CDFW be on-site prior to and during ground and habitat disturbing activities to move out of harm's way special status species or other wildlife of low mobility that would be injured or killed by grubbing or Project-related construction activities. It should be noted that the temporary relocation of on-site wildlife does not constitute effective mitigation for the purposes of offsetting project impacts associated with habitat loss. If the project requires species to be removed, disturbed, or otherwise handled, we recommend that the DPEIR clearly identify that the designated entity shall obtain all appropriate state and federal permits.

13) Wildlife Movement and Connectivity: The project area supports significant biological resources and is located adjacent to a regional wildlife movement corridor. The project area contains habitat connections and supports movement across the broader landscape, sustaining both transitory and permanent wildlife populations. On-site features that

contribute to habitat connectivity should be evaluated and maintained. Aspects of the Project that could create physical barriers to wildlife movement, including direct or indirect project-related activities, should be identified and addressed in the DPEIR. Indirect impacts from lighting, noise, dust, and increased human activity may displace wildlife in the general Project area.

14) Revegetation/Restoration Plan: Plans for restoration and re-vegetation should be prepared by persons with expertise in southern California ecosystems and native plant restoration techniques. Plans should identify the assumptions used to develop the proposed restoration strategy. Each plan should include, at a minimum: (a) the location of restoration sites and assessment of appropriate reference sites; (b) the plant species to be used, sources of local propagules, container sizes, and seeding rates; (c) a schematic depicting the mitigation area; (d) a local seed and cuttings and planting schedule; (e) a description of the irrigation methodology; (f) measures to control exotic vegetation on site; (g) specific success criteria; (h) a detailed monitoring program; (i) contingency measures should the success criteria not be met; and (j) identification of the party responsible for meeting the success criteria and providing for conservation of the mitigation site in perpetuity. Monitoring of restoration areas should extend across a sufficient time frame to ensure that the new habitat is established, self-sustaining, and capable of surviving drought.

    a) CDFW recommends that local on-site propagules from the Project area and nearby vicinity be collected and used for restoration purposes. On-site seed collection should be initiated in the near future to accumulate sufficient propagule material for subsequent use in future years. On-site vegetation mapping at the alliance and/or association level should be used to develop appropriate restoration goals and local plant palettes. Reference areas should be identified to help guide restoration efforts. Specific restoration plans should be developed for various Project components as appropriate.

    b) Restoration objectives should include providing special habitat elements where feasible to benefit key wildlife species. These physical and biological features can include (for example) retention of woody material, logs, snags, rocks and brush piles (see Mayer and Laudenslayer, 1988[4]).

CONCLUSION

CDFW appreciates the opportunity to comment on the NOP for the Connect SoCal DPEIR. If you have any questions or comments regarding this letter, please contact Kelly Schmoker-Stanphill, Senior Environmental Scientist (Specialist), at (626) 335-9092 or by email at Kelly.schmoker@wildlife.ca.gov.

Sincerely,

FOR Erinn Wilson

RE: Response to the Notice of Preparation for Connect SoCal, the Southern California Association of Government's 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy

Dear Mr. Ok,

Thank you very much for the opportunity to provide scoping comments on the Southern California Association of Government's (SCAG) Programmatic Environmental Impact Report (PEIR) for Connect SoCal: the region's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.

The California Native Plant Society ("CNPS") is a non-profit environmental organization with 10,000 members in 35 Chapters across California and Baja California, Mexico. CNPS's mission is to protect California's native plant heritage and preserve it for future generations through the application of science, research, education, and conservation. CNPS works closely with decision-makers, scientists, and local planners to advocate for well-informed policies, regulations, and land management practices.

SCAG continues to play an important role in planning how and where development occurs in Southern California. SCAG is mandated by federal and state laws to produce an RTP/SCS, which dictates how the "region will address its transportation and land use challenges and opportunities in order to achieve its regional emissions standards and Greenhouse Gas (GHG) reduction targets."

At the scoping meetings on February 13, 2019, SCAG staff stated multiple times that the organization has no authority over the permitting/evaluation of individual projects, as this is under the purview of cities and counties. In this context, SCAG essentially claims to play no role in the implementation of a whole host of projects that are both damaging to the environment and local communities. We challenge

SCAG to be a little more creative, and not to downplay its role in guiding where future housing is built in Southern California. The multi-agency body that advises SCAG is intended to inform, advise, and otherwise assist in regional land use. The collective voice of these entities does in fact and by default empower SCAG in decision making. Local decision makers do ultimately have the final authority over projects under their jurisdiction. Nonetheless, many large development projects would not be possible without the building of new roads or the expansion of existing infrastructure. New highway construction, for example, often requires federal funding, and projects cannot receive this funding unless they appear on the project list in an RTP.

Likewise, as detailed in a recent report by the Air Resources Board[1], it will be challenging for California to meet its ambitious greenhouse gas (GHG) emission goals going forward. This is mostly because all of the low hanging fruit for GHG reduction has already been picked. In the coming decades, the state will fail to meet its goals if it does not curb the emissions that result from personal vehicle travel. Organizations like SCAG must exercise their authority and leadership to guide future growth in ways that do not obscure goals that are mandated by state laws including SB-32, AB-32, and SB-375.

As an organization, CNPS is not opposed to the construction of new housing. We favor policies and decisions that support the construction of new, affordable housing that is located close to mass transportation infrastructure, is respectful of existing communities, close to jobs, and that does not endanger precious and irreplaceable ecosystems.

With these thoughts in mind, we provide the following scoping comments to the forthcoming Connect SoCal PEIR:

1. The analysis of the Connect SoCal's impacts to biological resources should include all current data on sensitive biological resources. These data include, but are not limited to, the California Natural Diversity Database[2], CNPS Inventory of Rare, Threatened, or Endangered Plants[3], and the California Department of Fish and Wildlife's Sensitive Natural Communities List[4].

2. There are many areas that have been set aside for the conservation of plants, animals and habitats in Southern California. In many cases, these areas represent a significant investment public of the public's limited resources. In most cases, the conserved lands are intended to preserve and improve Southern California's natural heritage in perpetuity. These protected areas, and the public investment they represent, are not available as sites for transportation corridors, transportation infrastructure, and new development. The avoidance of impacts to these conservation lands should underlie all growth forecasts

[3] CNPS Inventory
[4] CDFW Natural Communities

and projects that are highlighted in Connect SoCal. Among other critical ecosystem services, they provide the watersheds and carbon sequestration lands that southern California requires to meet the challenges of the 21st Century.

All set aside lands must be subject to perpetual covenant of conservation easements that have funded monitoring and land management requirements. The holder of each easement must be an organization or agency, in long standing with the conservation community and capacity to effectively manage the property over decades.

3. Connect SoCal should be consistent with existing and ongoing plans that endeavor to balance development with conservation. These plans include, but are not limited to:

- Natural Community Conservation Plans[5]
- Habitat Conservation Plans[6]
- Region Conservation Investment Strategies[7] (e.g. Antelope Valley, San Bernardino County)
- Regional Conservation Assessments

4. CNPS is creating a statewide map of Important Plant Areas (IPAs)[8]. This data-driven effort identifies areas in California that should be prioritized for conservation actions. In Southern California, we have held workshops in the Mojave/Sonoran Desert and will be holding workshops covering the remainder of the region in the coming year. The data collected in these workshops will be incorporated into a model that will be used to delineate IPAs. Given that Connect SoCal will be produced in the same timeframe as our IPA map for the region we encourage SCAG to incorporate IPAs into the PEIR.

5. SCAG should reevaluate the assumptions underlying the growth models used in Connect SoCal, and confirm that these assumptions are reasonable. Based on this assessment changes should be incorporated into the growth models. Not doing this risks SCAG ending up a situation similar to conundrum that is being faced currently by the San Diego Association of Governments (SANDAG). SANDAG's director[9] recently had to admit that the organization cannot meet state GHG reduction goals given its current transportation plans. Consequently, SANDAG will have to scrap its current RTP/SCS and start over from scratch. This will delay the release of their RTP/SCS until 2022 or possibly later.

6. The baseline GHG reduction analysis should include a detailed accounting of carbon sequestration in natural habitats. The SCAG region both emits and sequesters greenhouse gases. The sequestration of carbon by existing vegetation is critical to the region's GHG reduction goals. Most of this carbon is

[9] Voice of San Diego, Climate Change and Transportation, February 14, 2019

sequestered in woody vegetation, particularly in montane forests. However, a not insignificant amount of carbon is also sequestered by other habitats including chaparral, desert scrub, grasslands, coastal sage scrub, riparian and wetland ecosystems, naturally-occurring water bodies, and soils. At the same time, carbon sequestration in these habitats may be eliminated by conversion to development and when vegetation is burned during wildfires. Much of the vegetation in the region has been mapped and quantified using Lidar. The PEIR should analyze how much carbon is currently stored in standing vegetation in the plan area. Additionally, the amount of carbon that is sequestered annually should be analyzed alongside the amount that will be lost to development under Connect SoCal's growth models.

All projects should incorporate green building standards, with associated environmental review analyzing GHG emissions potential for proposed construction, buildings, impervious surfaces prior to approval. Climate science indicates that 47-49% of carbon emissions is generated by the built environment and associated heating or cooling functions.

7. The PEIR should analyze assumptions about the water that will be available for future development to ensure that growth projections are in sync with water supplies. We are especially concerned about the potential impacts of the anticipated rationing of water from the Colorado River[10]. It is becoming increasingly likely that a drought emergency will be declared on this water supply in 2019 or 2020. The pending water rationing in Nevada and Arizona will undoubtedly affect the water supply in Southern California due to ongoing negotiations. This tenuous water supply will likely be relied upon by future development projects. Growth forecasts such as the ones used in SCAG models generally assume ample water will be available, as is often the case with "business as usual" models. The above example from the Colorado River illustrates that population growth forecasts should also prepare for a future in which water supplies are scarce.

8. The projects' mitigation funds should be pooled and used to purchase privately owned lands that have good natural values, and/or to help restore already-preserved lands. An example is Orange County's Measure M2. This Freeway Environmental Mitigation Program allocates funds to acquire land and fund habitat restoration projects in exchange for streamlined project approvals for 13 freeway improvement projects. Acquired properties are purchased and permanently preserved as open space. Funded restoration projects restore preserved open space lands to their native habitat and include the removal of invasive plant species[11].

9. Transportation corridors and similar infrastructure should be landscaped with plants native to Southern California. . Use of these commercially available materials host long-term benefits of water savings, lowered maintenance costs, no need for chemical inputs of fertilization and pest control, serve

[10] Voice of San Diego, Colorado River, January 14, 2019
[11] M2 Mitigation Program

as best source pollinators, and provide biotic continuity in the Wildland-Urban Interface. Since native plants are adapted to Southern California's climate, they need irrigation only during an initial 2-year establishment period. Little irrigation beyond natural rainfall is required once most native plants are established. Also, native plant landscaping often results in considerable cost savings over time, as a result of decreased water demands and lower maintenance costs. For more information on the benefits of native plant landscaping please see the ample information available from the CNPS Gardening Program[12].

10. We question some of the very fundamental assumptions about how growth should/will occur in Southern California, both location and type. While some strides have been made to locate new housing within urban boundaries, much of the housing growth in recent years has occurred on the periphery of existing urban areas. Some of these development projects threaten intact ecosystems. Still, other development projects (e.g. the Centennial[13] and Paradise Valley[14] Specific Plans) are located far from existing jobs and mass transportation infrastructure. In type, we question whether there is a single housing market. Rather, there appear to be multiple housing markets for luxury, median income, and affordable housing. While the development industry can readily produce profitable, high-end, single-family homes in subdivisions, these homes are so far out of the reach of most Californians and they do nothing to satisfy the demand for cheaper housing.[15]

In Connect SoCal, SCAG should study the true complexity of the housing markets in Southern California, exercise its leadership to encourage production of affordable housing and discourage leapfrog development and the production of surplus high end homes. Connect SoCal should find ways to incentivize builders to fulfill the demand for lower cost housing. One idea would be to exclude transportation projects from the PEIR if they fail to promote affordable housing and GHG reduction goals.

We could also like to point out that new home sales have decreased drastically in many Southern California markets[16]. We need to question the logic of lead agencies permitting construction of new cities when new homes are not even selling on the heels of ten years of economic growth. Is our current approach to building new housing consistent with the needs of the average Southern California resident? It is one thing to build a large number of new housing units, and an entirely different challenge to build housing where it is needed and at prices that average people can afford. In many ways, this will be the greatest challenge faced by Southern California counties and cities in the coming decades. We see Connect SoCal as an integral part of this solution.

[14] Article on Paradise Valley
[15] Shelterforce Housing Article, February 19, 2019
[16] LA Times Housing Article, January 29, 2019

Lastly, we are concerned about the role that SCAG continues to play in promoting poorly-planned and often destructive development projects in Southern California. A most striking example of this was a quote from SCAG's then-director, Hasan Ikharta, about Los Angeles County's Centennial Specific Plan that appeared the Los Angeles Times in August 2018. In this article[17], Ikharta essentially condones the construction of a new city 65 miles away from downtown Los Angeles with no planned mass transportation. He said "there will not be enough land and not enough cities around … to accommodate more than half of the growth within transit-quality areas." Ikharta even emphasized that "it's not only physically impossible, it's also politically impossible." With that statement coming from SCAG it is no wonder that Southern California continues to destroy native habitats while at the same time failing to meet GHG reduction goals. If the leadership necessary to effect change is not going to come from SCAG, where will it come from?

Thank you once again for the opportunity to provide scoping comments on Connect SoCal. Please feel free to contact me with any questions.

Sincerely,

RE: Notice of Preparation of a Program Environmental Impact Report for Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy)

Dear SCAG:

Friends of Harbors, Beaches, and Parks (FHBP) is a regional non-profit organization that works to protect the natural lands, waterways, and beaches of Orange County. We received the Southern California Association of Governments' (SCAG) Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for the next Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

FHBP has been engaged with land use, transportation, and housing issues and the associated impacts to natural lands (protected and unprotected) for last two RTP/SCS cycles. We appreciate the work done to date to advance conservation policies and look forward to continuing our role in this effort with this current iteration.

As it relates to biology and transportation and the impacts of the RTP/SCS, **we encourage a focus on advanced mitigation as a standard practice** or measure. The successes of the Orange County Transportation Authority (OCTA) and its comprehensive mitigation program show the extensive benefits that landscape-level mitigation programs could bring across the six-county-wide region. Notably, CalTrans has begun its own advanced mitigation effort on a statewide level to streamline permitting, reduce project costs, create better conservation outcomes, and reduce delays. We believe mitigation measures should focus on comprehensive programs with a net environmental benefit and improved project outcomes.

Additionally, as it relates to the land use analysis, FHBP participates regularly in the Natural and Farmlands Conservation Working Group under SCAG and **we encourage policies and mitigation measures that cover a wide spectrum of topics**. Too often a specific solution is offered in a geography that doesn't fit that model. For example, urban infill works in urban infill areas—not as easily or at all in suburban or rural areas. And, similarly, rural solutions may not work in suburban or urban areas. Ensuring a wide range of mitigation measures and policies that fit the spectrum of land uses and land areas is important.

P.O. Box 9256 • Newport Beach, CA 92658 • www.FHBP.org • (949) 274-9621

Finally, to comply with AB 32 (Global Warming Solutions Act of 2006) and SB 375 (Sustainable Communities Act of 2008), **we encourage a focus of city-centered, transit-oriented, sustainable mixed-use development**. With the rise of wildland fire occurrences and losses of both life and property locally and throughout the state, more thoughtful land use and public safety planning needs to be a priority to ensure safe communities. As a co-benefit, city-centered development increases the opportunities for transit, pedestrian/bike-friendly streets, and access to basic amenities (groceries, banks, day care, etc.). Increased access to amenities reduces vehicle miles travelled and greenhouse gas emissions, which helps meet the greenhouse gas reduction goals established by the California Air Resources Board. Meeting the goals of AB 32 and SB 375 with more sustainable planning in the land use, housing, and circulation analyses should be a primary focus of the environmental document.

We look forward to reviewing the RTP/SCS in detail and providing additional comments at that time.

Sincerely,

Michael Wellborn
President

Re: **Scoping Comments of the Draft Program Environmental Impact Report (PEIR) For Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("SCS")**

Dear Members of the Board, Executive Officers, and Staff:

We represent The 200, an accomplished group of civil rights leaders from all regions of California. The 200 believes minority home ownership is the cornerstone for creating multi-generational economic security, helping students to go to college and seniors to remain independent. The 200 believes that solving the housing crisis, and the housing-induced homelessness and poverty crisis, requires a Marshall Plan for building enough homes available for purchase by California's hard working minority families. The 200 supports public health and the environment, including protecting people from pollution and housing the poor, but these goals may only be equitably achieved if the all civil rights of minority communities are honored, including achieving the American (and California) dream that working families can own their own home.

Unfortunately, government agencies have for decades adopted and implemented racially discriminatory government policies and practices that harm minority home ownership. Four anti-housing measures in the California Air Resource Board's 2017 Scoping Plan are the latest additions to this Hall of Shame, and The 200 has filed a civil rights lawsuit against CARB challenging these discriminatory measures – including CARB's mandated reduction in Vehicles Miles Travelled ("VMT"). A copy of The 200 lawsuit petition is included as Attachment 1, and all arguments made therein against CARB's Scoping Plan mandate that VMT must be reduced even for an increasingly electric and efficient fleet, are hereby restated and submitted as comments on the required scope of the environmental and economic analysis that must be completed by SCAG for the SCS. As described in detail in the lawsuit, and in a followup letter recently submitted on behalf of The 200 to CARB and the California Transportation Commission

(Attachment 2), minority families are disproportionately harmed by the housing crisis, and are forced to "drive until they qualify" for housing they can afford to rent or buy. Poverty and homelessness rates also disproportionately plague minority communities.

We urge SCAG to fully and completely address, in its Program EIR ("PEIR") and accompanying economic analysis, both the feasibility and substantial and discriminatory adverse impacts caused by CARB's ever-more strident and infeasible VMT reduction demands. These are described in greater detail in Attachment 1, and include but are not limited to:

Notwithstanding billions of dollars in transit system expansions, traditional transit services such as fixed bus routes have continued to lose ridership – and fixed rail options that take 20 years to complete include stations proximate to only a small fraction of the homes and residences in the SCAG region. Emerging transit solutions that are growing in popularity and available for today's Californians, such as ride sharing and other app-based point-to-point public and private transit providers, do not reduce VMT. VMT is also a poor metric for greenhouse gas reductions, given California's past achievements and future legal mandates and policy commitments to electric vehicles, and low emission fleets. SCAG's air quality is far better now than it was with the far fewer cars, people, and VMT present in the region in the 1960's – and President Obama's EPA administration confirmed that today's cars are more than 98% cleaner than the pre-Clean Air Act fleet of the 1960's.

Unlike the Clean Air Act, however, which requires the systematic and transparent ranking of emission reduction measures by effectiveness and cost to consumers, CARB has at all times refused to engage in the same level of transparency and consumer accountability for its GHG reductions – and instead leaped to a VMT mandate that profoundly affects the health and welfare of the majority of Californians who now live in the SCAG region.

Again as cited in the lawsuit, poverty scholars from non-partisan organizations like the Brookings Institute have long affirmed that poor families with a car are better able to hold a job, keep their kids in school, and attain greater economic security than families forced to ride the bus. The 200 was supportive of efforts by SCAG staff and other regional transit agencies to dissuade CARB from mandating discriminatory VMT reductions in this next round of SCS targets, and instead establishing greenhouse gas ("GHG") reduction targets.

The 200 does not oppose California's commitment to be a climate leader. However, the entirety of the California economy – the fifth largest in the world – is responsible for less than 1% of global greenhouse gas emissions. As explained in the letter The 200 submitted to CARB and the California Transportation Commission (Attachment 2), this basic mathematical reality is critical to understand the level of increased housing, poverty and homelessness burdens that CARB is willing to inflict on Californians under the banner of addressing of global climate change:

- The only study, completed by a team at UC Berkeley, to quantify the expected benefits of confining all required new housing to existing urbanized areas acknowledged that it

would result in the demolition of "tens if not hundreds of thousands" of single family homes. The study assumed we needed only about two-thirds of the Governor's housing target of 3.5 million new homes, which under the study's methodology would result in the need to demolish hundreds of thousands of existing single family homes. The study also equates 2000 square foot homes with 800 square foot apartments, and assumes that new housing must be downsized from even traditional starter small homes into multi-family small units. SCAG's environmental and economic analysis must identify with specificity, and evaluate all economic and environmental impacts of, this radical demolition agenda – which if past is prologue, will follow the path of destruction by some redevelopment agencies in targeting minority neighborhoods for demolition.

- The displacement of minority communities in high density transit neighborhoods that are upzoned to high densities such as towers has been well-documented in both the SCAG and Bay Area regions. Only the wealthy (or foreign and institutional investors) can afford to buy these high rise condos costing more than $1 million, or rent high rise apartments costing more than $4000 per month. Units in mid- and high rise buildings cost 3-6 times more to construct than small starter homes and town homes: the building type itself is simply unaffordable for average working families. Even more perversely, people wealthy enough to move into these units are certainly wealthy enough to own – and drive – a car. Lower income working families displaced by this development typology are forced to move to more distant locations, where transit solutions are nonexistent and car ownership and use is absolutely required to timely get to jobs and other destinations. This displacement is not color blind: numerous studies now confirm that minority residents are far more likely to be displaced, and forced to more distant suburbs and even out of the region entirely, when high density housing for the wealthy overruns their neighborhood. Nor can this displacement be addressed by directing taxpayer funding to the "missing middle" of workforce housing: with the cost of producing even affordable low income units now surpassing $500,000 per unit in many SCAG markets, numerous experts from the public sector (e.g., the non-partisan) Legislative Analyst's Office and academics have shown that we cannot even make public dollars stretch far enough to address the housing needs of the homeless and very low income families, let alone build housing for the pre-school teachers, first responders, and scores of other occupations forced into 2+ hour commutes each day. The PEIR and accompanying economic analysis must match the affordability of housing to SCAG's growing population, and update the SCS to take into account the real prices, real costs, and real incomes of today.

- Poverty scholars have long confirmed that access to and use of a car is critical for low income families. It is entirely fanciful, if it wasn't so tragic and discriminatory, to accept CARB's doctrinal view that global climate change requires that parents take a two-bus ride with a fevered child to a doctor, or struggle with mid-day bus service gaps to pick up an injured child from school, or pay more than $3000 per month in rent for a tenth story new transit village apartment instead of spending the same amount on a mortgage for a

starter home that enhances family wealth, health and welfare. It is equally uncontested that homeowner households accrue family wealth between 37-45 times higher than rental households. Also uncontested: far less than 10% of jobs are accessible by SCAG commuters in less than 60 minutes on public transit, so even those who do live near an express bus stop are unlikely to be able to get to their job or school – let alone their doctor or grocer – on some later bus stop, which is why fixed bus routes in particular have shown collapsing ridership in the SCAG region and nationally. In the midst of a revolution in transportation services and technology, CARB is demanding that the non-wealthy among us spend hours extra each day away from our families reliant on 19th century transit technology.

- CARB's fixation on discriminatory VMT mandates is unmoored from both global climate change or GHG reductions. CARB has itself acknowledged that the entire California economy contributes less than 1% of global greenhouse gas emissions ("GHG"). CARB's VMT reduction mandate, as quantified by the same UCB study given CARB's refusal to show its own math, will result in less than 1% of CARB's unlegislated goal of reducing GHG in California 80% by 2050. This VMT reduction mandate is absolutely not required, as the CARB Scoping Plan itself shows, to achieve California's legislated target of reducing GHG 40% by 2030. CARB's discriminatory fixation on VMT deprives minority Californians of home ownership and vehicular access that wealthy Californians have long taken for granted is not just bad policy, it is illegal discrimination. We urge SCAG to not collude with CARB in this illegal discrimination. There are scores of alternative measures that can easily result in greater GHG reductions in California that do not discriminate against California's minority communities, from reducing forest fires and increasing renewable energy produced from dead and dying trees, to regulating GHG emissions from imported luxury goods. SB 375 did not give CARB legal authority to mandate reductions in VMT, and all legislative proposals to mandate VMT reductions have been derailed by the Legislature. Given the proven infeasibility of VMT reductions in a growing population and economy, the CARB Board decided in March of 2017 (with support from The 200) to not mandate VMT reductions in the upcoming round of SCS updates. In a breathtaking and arrogant rejection of its own Board decision, CARB staff in December 2018 decreed that staff would solely credit SCAG and other transit authorities with GHG reductions caused by VMT reductions, and not count any other form of GHG reduction achieved in the region. This staff decree is the equivalent of the VMT reduction mandate that the CARB Board rejected, and is simply and completely unlawful.

In addition to the foregoing comments, and the many more detailed comments about the adverse and discriminatory environmental and economic impacts of CARB's VMT and other anti-housing Scoping Plan measures described in the two Attachments, we offer the following comments that are specific to the SCS PEIR and accompanying economic impact analysis:

- The California Environmental Quality Act ("CEQA") Guidelines define "feasible" as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account **economic**, environmental, **legal, social**, **and** technical factors." (emphasis added). Neither the original or current SCS have resulted in adequate housing supplies that are affordable to hard working minority families, nor has it resulted in adequate transportation solutions for the SCAG population. In fact, the trajectory of VMT remains upward, in alignment with population and economic growth. Under CEQA, the PEIR must identify a reasonable range of "feasible" alternatives. Even the existing SCS, let alone an alternative that relies even more on unaffordable high density housing types that have already failed to make a dent in the region's housing crisis, fails as a CEQA alternative because substantial evidence shows that it is in fact not "feasible."

- Similarly, the SCS has been added to – and is linked for CEQA purposes to – the Regional Transportation Plan ("RTP"). SCAG has independent legal obligations under numerous other federal and state transportation and air quality laws to deliver transportation solutions for the region that actually work in practice. After 10 years of SB 375 implementation, and billions of dollars invested in conventional transit modes (bus and rail), ridership on these transit modes continues to decline in the midst of a revolution in transit modes and services. Greenhouse gas emission reductions – the legislated environmental objective of SB 375 – are not dependent on VMT reductions, especially as vehicular fleets are electrified and improved. Again, even the existing SCS, yet alone any higher density and anti-car alternative CARB would like to mandate pursuant to its December 2018 decree, have not in fact produced the level of transportation functionality demanded by SCAG's other legal compliance obligations and are thus legally infeasible.

- Apart from the current list of alternatives failing to meet the CEQA criteria for feasibility, it is critical that the impacts analysis for all topics required to be addressed by CEQA – not just GHG – be given equal and full consideration in the PEIR. CEQA further requires that mitigation measures proposed to lessen or avoid significant adverse impacts, such as the scores of significant unavoidable adverse impacts that even the prior SCS PEIR acknowledged would result from SCS implementation, be "feasible" and meet legal criteria for effectiveness and enforceability. Illusory mitigation through reliance on unenforceable policies, unfunded aspirations, or legally unauthorized future commitments, are not lawful. For example, in some of the more recent discussions of imposing new CEQA mitigation mandates on project-level VMT impacts, it was suggested that new housing units be required to annually fund, in perpetuity, bus passes in perpetuity to offset VMT impacts. Examples provided, such as paying for LAUSD student bus passes, were estimated to cost in excess of $6000 per unit of new housing per year – to be assessed for both rental and homeownership products. Given the overwhelming housing shortage and affordability crisis, as well as worst-in-nation poverty and homeless populations, ANY new mitigation obligations that even indirectly get passed along as new cost burdens to SCAG residents must be honestly described,

quantified, and assessed for feasibility given that more than 40% of today's California households cannot even afford to meet existing expense burdens.

In conclusion, we know that SCAG staff and Board members have been committed to a thorough and honest SCS process, and we commend SCAG for its leadership in attempting to work with CARB and, for example, dissuading the CARB Board from imposing VMT reduction mandates on the SCS. CARB staff, however, has not gotten the message – and while the rest of state and local governments are mobilized to solve the housing crisis and restore equity and economic mobility to all residents, CARB staff pursue the single silo goal of reducing GHG produced in California (and counting Californians who move to higher per capita GHG states like Texas and Nevada as a GHG "reduction" for California GHG accounting purposes) to extremes such as the 80% reduction by 2050 and VMT reduction mandates that have been expressly rejected by the Legislature.

The lawful foundation of this PEIR must begin with "feasible" alternatives, including the "no action" alternative – and be informed by the region's growing population, diverse and robust economy, and "feasible" housing and transportation options that can "feasibly" be implemented based on economic, legal and technical constraints. We are confident that adherence to these core legal mandates of CEQA (and NEPA) will require substantial revisions to the two "No Project" alternatives currently under consideration, and re-scoping of the PEIR with revised alternatives.

Please do not hesitate to contact us if you would like any further clarification on these issues. Also, please include us in stakeholder meetings and notices for the duration of this process.

Thank you for your time and consideration, and for your excellent work on behalf of the region.

Very truly yours,

HOLLAND & KNIGHT LLP

PRAYER FOR RELIEF 126

I. INTRODUCTION AND SUMMARY OF REQUESTED RELIEF

A. California's Greenhouse Gas Policies and Housing-Induced Poverty Crisis

1. California's reputation as a global climate leader is built on the state's dual claims of substantially reducing greenhouse gas ("GHG") emissions while simultaneously enjoying a thriving economy. Neither claim is true.

2. California has made far less progress in reducing GHG emissions than other states. Since the effective date of California's landmark GHG reduction law, the Global Warming Solutions Act,[2] 41 states have reduced per capita GHG emissions by more than California

3. California's lead climate agency, the California Air Resources Board ("CARB"), has ignored California's modest scale of GHG reductions, as well as the highly regressive costs imposed on current state residents by CARB's climate programs.

4. Others have been more forthcoming. Governor Jerry Brown acknowledged in 2017 that the state's lauded cap-and-trade program, which the non-partisan state Legislative Analysist's Office ("LAO") concluded would cost consumers between 24 cents and 73 cents more per gallon of gasoline by 2031,[3] actually "is not that important [for greenhouse gas reduction]. I know that. I'm Mr. 'It Ain't That Much.' It isn't that much. Everybody here [in a European climate change conference] is hype, hype to the skies."[4]

5. Governor Brown's acknowledgement was prompted by a report from Mother Jones—not CARB—that high rainfall had resulted in more hydroelectric power generation from

---

[2] The Global Warming Solutions Act of 2006 ("GWSA") is codified at Health and Safety Code ("H&S Code") § 38500 *et seq.* and became effective in 2007. The Act is often referred to as "AB 32", the assembly bill number assigned to the legislation. AB 32 required California to reduce GHG emissions from a "business as usual" scenario in 2020 to the state's 1990 GHG emission level. AB 32 was amended in 2017 by Senate Bill 32 by the same author. SB 32 established a new GHG reduction mandate of 40% below California's 1990 GHG levels by 2030.

existing dams than had occurred during the drought, and that this weather pattern resulted in a 5% decrease in California's GHG emissions.[5]

6. GHG emissions data from California's wildfires are also telling. As reported by the *San Francisco Chronicle* (again not CARB), GHG emissions from all California regulatory efforts "inched down" statewide by 1.5 million metric tons (from total estimated emissions of 440 million metric tons),[6] while just one wildfire near Fresno County (the Rough Fire) produced 6.8 million metric tons of GHGs, and other fires on just federally managed forest lands in California emitted 16 million metric tons of GHGs.[7]

7. Reliance on statewide economic data for the false idea that California's economy is thriving conflates the remarkable stock market profits of San Francisco Bay Area technology companies with disparate economic harms and losses suffered by Latino and African American Californians statewide, and by white and Asian American Californians outside the Bay Area.

8. Since 2007, which included both the global recession and current sustained period of economic recovery, California has had the highest poverty rate in the country—over 8 million people living below the U.S. Census Bureau poverty line when housing costs are taken into account.[8] By another authoritative poverty methodology developed by the United Way of California, which counts housing as well as other basic necessities like transportation and medical costs (and then offsets these with state welfare and related poverty assistance programs), about 40% of Californians "do not have sufficient income to meet their basic cost of living."[9] The

Public Policy Institute of California used a methodology that also accounts for the cost of living and independently concluded that about 40% of Californians live in poverty.[10]

9. Poverty is just one of several indicators of the deep economic distress affecting California. California also has the highest homeless population, and the highest homelessness rate, in the nation. According to the U.S. Department of Housing and Urban Development, about 25% of the nation's homeless, or about 135,000 individuals, are in California.[11]

10. National homeownership rates have been recovering since the recession levels, but California's rate has plunged to the second lowest in the country—with homeownership losses steepest and most sustained for California's Latinos and African Americans.[12]

11. As shown in Figure 1, with the exception of white and Asian populations in the five-county Bay Area, elsewhere in California—and for Latino and African American residents statewide—incomes are comparable to national averages.

12. However, Californians pay far higher costs for basic necessities. A national survey of housing, food, medical and other costs conducted by the Council for Community & Economic Research showed that in 2017, California was the second most expensive state in the nation (after Hawaii), and had a cost of living index that was 41% higher than the national average.[14] The LAO reported that "California's home prices and rents are higher than just about anywhere else," with average home prices 2.5 times more than the national average and rents 50% higher than the national average.[15] Californians also pay 58% more in average electricity cost per KWh hour (2016 annual average)[16] and about $0.80 cents more per gallon of gas than the national average.[17]

[14] The 2017 survey by the Council for Community & Economic Research was published by the Missouri Economic Research and Information Center, https://www.missourieconomy.org/indicators/cost_of_living/index.stm.

[17] American Automobile Association, Regular Gas Prices, http://gasprices.aaa.com/state-gas-price-averages/, last visited April 25, 2018.

13. These high costs for two basic living expenses—electricity and transportation—are highest for those who live in the state's inland areas (and need more heating and cooling than the temperate coast), and drive farthest to jobs due to the acute housing crisis the LAO has concluded is worst in the coastal urban job centers like the San Francisco Bay Area and Los Angeles.[18]

14. An estimated 138,000 commuters enter and exit the nine-county Bay Area megaregion each day.[19] These are workers who are forced to "drive until they qualify" for housing they can afford to buy or rent.

15. San Joaquin County housing prices in cities nearest the Bay Area, such as Stockton, are about one-third lower, even though commute times to San Jose are 77 minutes each direction (80 miles and 2.5 hour daily commutes), and to San Francisco are 80 minutes (82 miles and 3 hour daily commutes).[20] The median housing price in Stockton is about $286,000—still double the national average of $140,000—while the median housing price in San Jose is over $1,076,000 and in San Francisco is over $1,341,000.[21]

16. California's poverty, housing, transportation and homeless crisis have created a perfect storm of economic hardship that has, in the words of the civil rights group Urban Habitat, resulted in the "resegregation" of the Bay Area.[22] Between 2000 and 2014, substantial African American and Latino populations shifted from central cities on and near the Bay, like San Francisco, Oakland, Richmond and San Jose, to eastern outer suburbs like Antioch, and Central Valley communities like Stockton and Suisun City.[23] As reported:

[23] *Id.* p. 10-11, Maps 5 and 6.

> Low income communities of color are increasingly living at the expanding edges of our region. . . . Those who do live closer to the regional core find themselves unable to afford skyrocketing rents and other necessities; many families are doubling or tripling up in homes, or facing housing instability and homelessness.[24]

17. Los Angeles (#1) and the Bay Area (#3) are already ranked the worst in the nation for traffic congestion, flanking Washington DC (#2).[25] Yet California's climate leaders have decided to intentionally increase traffic congestion—to lengthen commute times and encourage gridlock—to try to get more people to ride buses or take other form of public transit.[26] This climate strategy has already failed, with public transit ridership—particularly by bus—continuing to fall even as California has invested billions in public transit systems.[27]

18. Vehicle miles travelled ("VMT") by Californians forced to drive ever-greater distances to homes they can afford have also increased by 15% between 2000 and 2015.[28] Serious

(Handy and Boarnet, "DRAFT Policy Brief on Highway Capacity and Induced Travel," (April 2014).) This is because the new roadway capacity may allow increased speeds on the roadway, which then allows people to access more distant locations in a shorter amount of time. Thus, the new roadway capacity may cause people to make trips that they would otherwise avoid because of congestion, or may make driving a more attractive mode of travel"). In subsequent CEQA regulatory proposals, and in pertinent parts of the 2017 Scoping Plan, text supportive of traffic congestion was deleted but the substantive policy direction remains unchanged. Further, the gas tax approved by the Legislature in 2017 was structured to limit money for addressing congestion to $250 million (less than 1% of the $2.88 billion anticipated to be generated by the new taxes). See Jim Miller, *California's gas tax increase is now law. What it costs you and what it fixes.* Sacramento Bee (April 28, 2017), http://www.sacbee.com/news/politics-government/capitol-alert/article147437054.html.

adverse health impacts to individual commuters,[29] as well as adverse economic impacts to drivers and the California economy,[30] from excessive commutes have also worsened.

19. In 2016 and 2017, the combination of increased congestion and more VMT reversed decades of air quality improvements in California, and caused increased emissions of both GHG and other traditional air pollutants that cause smog and other adverse health effects,[31] for which reductions have long been mandated under federal and state clean air laws.

20. In short, in the vast majority of California, and for the whole of its Latino and African American populations, the story of California's "thriving" economy is built on CARB's reliance on misleading statewide averages, which are distorted by the unprecedented concentration of stock market wealth created by the Bay Area technology industry.

21. For most Californians, especially those who lost their home in the Great Recession (with foreclosures disproportionately affecting minority homeowners),[32] or who never owned a home and are struggling with college loans or struggling to find a steady job that pays enough to cover California's extraordinary living costs, CARB's assertion that California is a booming, "clean and green" economy is a distant fiction.

B. California's Historical Use of Environmental and Zoning Laws and Regulations to Oppress and Marginalize Minority Communities

22. The current plight of minority communities in California is the product of many decades of institutional racism, perpetuated by school bureaucrats of the 1940's who defended the "separate but equal" system, highway bureaucrats of the 1950's who targeted minority neighborhoods for demolition to make way for freeway routes, urban planning bureaucrats in the

1960's who destroyed minority communities in pursuit of redevelopment, and those who enabled decades of "redlining" practices by insurance and banking bureaucrats aimed at denying minorities equal access to mortgages and home insurance.[33]

23. Environmental regulators are no less susceptible to racism and bias than other regulators. Members of The Two Hundred had to intervene when environmental regulators threatened to block construction of the UC Merced campus, which is the only UC campus in the Central Valley and serves the highest percentage of Latino students of any UC campus.[34]

24. Members of The Two Hundred also had to intervene to require environmental regulators to establish clear standards for the cleanup of contaminated property that blighted many minority neighborhoods, where cleanup and redevelopment could not be financed without the standards that virtually all other states had already adopted.[35]

25. Racial bias in environmental advocacy organizations, including those that heavily lobbied CARB in 2017 Scoping Plan proceedings, was also confirmed in an influential study funded by major foundations that contribute to such organizations.[36]

[33] See Richard Rothstein, Color of Law: A Forgotten History of How Our Government Segregated America (2017).

[34] UC Merced's Latino undergraduates comprise 53% of the student population, compared to the 21% rate of Latino undergraduate enrollment for the UC system as a whole. 26. Additional studies have confirmed racial bias in environmental organizations, and in media reports on environmental issues.[37] As the newest President of the Sierra Club Board of Directors, African American Aaron Mair recently confirmed: "White privilege and racism within the broader environmental movement is existent and pervasive."[38]

27. The simple fact is that vast areas of California, and disproportionately high numbers of Latino and African American Californians, have fallen into poverty or out of homeownership, and California's climate policies guarantee that housing, transportation and electricity prices will continue to rise while "gateway" jobs to the middle class for those without college degrees, such as manufacturing and logistics, will continue to locate in other states.

C. Four New GHG Housing Measures in CARB's 2017 Scoping Plan Are Unlawful, Unconstitutional, and Would Exacerbate the Housing-Induced Poverty Crisis

28. Defendant/Respondent CARB is the state agency directed by the Legislature to implement SB 32, which requires the State to set a target to reduce its GHG emissions to forty percent below 1990 levels by 2030 ("2030 Target").

29. CARB adopts a "Scoping Plan" every five years, as described in the GWSA. The most recent Scoping Plan sets out the GHG reduction measures that CARB finds will be required to achieve the 2030 Target ("2017 Scoping Plan"). The 2017 Scoping Plan was approved in December 2017.

30. The most staggering, unlawful, and racist components of the 2017 Scoping Plan target new housing. The Plan includes four measures, challenged in this action, that increase the cost and litigation risks of building housing, intentionally worsen congestion (including commute

---

times and vehicular emissions) for workers who already spend more than two hours on the road instead of with their families, and further increase the cost of transportation fuels and electricity.

31. These newly-adopted measures (herein the "GHG Housing Measures") are: (A) The new VMT mandate; (B) The new "net zero" CEQA threshold; (C) The new CO2 per capita targets for local climate action plans for 2030 and 2050; and (D) The "Vibrant Communities" policies in Appendix C to the 2017 Scoping Plan, to the extent they incorporate the VMT, net zero and new CO2 per capita targets.[39]

32. The presumptive "net zero" GHG threshold requires offsetting GHG emissions for all new projects including housing under CEQA, the "Vibrant Communities" measures include limiting new housing to the boundaries of existing developed communities, and a mandate to substantially reduce VMT even for electric vehicles by (among other means) intentionally increasing congestion to induce greater reliance on buses and other transit modes.

33. The development of, and the measures included in, the 2017 Scoping Plan was required to be informed by an environmental analysis ("EA") pursuant to the California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*) ("CEQA"), and an economic fiscal analysis ("FA") as mandated by both the GWSA and the Administrative Procedure Act, Gov. Code § 11346 *et seq.* ("APA").

34. However, in one of many examples of the lack of analysis in the 2017 Scoping Plan and related documents, CARB does not disclose the GHG emission reductions it expects from the GHG Housing Measures. The Scoping Plan also omits any economic analysis that accounts for the cost of these measures on today's Californians, and omits any environmental analysis of the Plan's effects on existing California communities and infrastructure.

35. CARB concluded that in 2017 California's entire economy will emit 440 million metric tons of GHGs per year, and that California will need to reduce emissions by 181.8 million

[39] While CARB styled the GHG Housing Measures as "guidelines", they are self-implementing and unlawful underground regulations. All other components of the 2017 Scoping Plan will be implemented as regulations, such as the Cap and Trade program and low carbon fuel standard, and thus will undergo a formal rulemaking process. However, CARB refused to undertake the same legislatively-mandated public process for the four GHG Housing Measures.

metric tons to meet the 2030 Target. Notwithstanding widespread reports, and public and agency concern about the housing crisis, the homelessness crisis, the housing-induced poverty crisis, and the transportation crisis (collectively referred to herein as the "housing crisis"), neither the 2017 Scoping Plan, nor the environmental or economic analyses, disclose how much of this 181.8 million metric ton GHG reduction must or even may be achieved by constructing the at least three million new homes that experts,[40] and all candidates for Governor,[41] agree California must produce to resolve the current housing shortfall.

36. The core elements of the Scoping Plan related to housing call for new housing in California's existing communities (which comprise 4% of California's lands), with smaller multi-family units instead of single family homes located near public transit to reduce VMT. The 2017 Scoping Plan does not contemplate the need for any new regulations to implement this housing regime. Instead, it includes expert agency conclusions about how CEQA, a 1970 environmental law, must be implemented to achieve California's statutory climate change mandates as well as the unlegislated 2050 GHG reduction goal (80% reduction from 1990 GHG emissions by 2050) included in various Executive Orders from California Governors.

37. The best available data on the actual GHG reductions that will be achieved by the Scoping Plan's GHG Housing Measures is the "Right Type, Right Place" report, prepared by a multi-disciplinary team of housing and environmental law experts at the University of California, Berkeley, that examined some of the consequences from the housing crisis solution embedded in the 2017 Scoping Plan's GHG Housing Measures ("UCB Study").[42]

Berkeley Terner Center for Housing Innovation and Center for Law, Energy and the Environment (Mar. 2017), https://ternercenter.berkeley.edu/right-type-right-place.

38. The UCB Study anticipates constructing only 1.9 million new homes, less than two-thirds of California's 3.5 million shortfall identified by other experts. The Study examines the continuation of existing housing production, which is dominated by single family homes with fewer than 1% of Californians living in high rise structures, and compares this with a changed housing pattern that would confine new housing to the boundaries of existing cities and towns and replace traditional single family homes with smaller apartments or condos (thereby equating 2,000 square foot homes with 800 square foot apartments).

39. The UCB Study concludes that high rise and even mid-rise (e.g., six story) buildings are far more costly to build on a per unit basis than single family homes—three to five time higher—and are thus infeasible in most markets for most Californians. The Study thus recommends focusing on less costly housing units such as quadplexes (four units in two-story buildings) and stacked flats (one or two units per floor, generally limited to four stories)—which are still approximately 30% more costly than single family homes on a per unit basis.

40. The UCB Study then concludes that it would be possible for California to build all 1.9 million new homes in existing communities with these small multi-family structures, but to confine all new units to the 4% of California that is already urbanized would require the demolition of "tens, if not hundreds of thousands, of single family homes." The Study does not quantify the GHG emissions from such massive demolition activities, nor does it identify any funding source or assess any non-GHG environmental, public service, infrastructure, historic structure, school, traffic, or other impact associated with this new housing vision.

41. Unlike CARB's 2017 Scoping Plan, the UCB Study does quantify the GHG reductions to be achieved by remaking California's existing communities and housing all Californians harmed by the current housing crisis in small apartments. With this new housing future, California will reduce annual GHG emissions by 1.79 million metric tons per year, less than 1% of the 181.8 million metric tons required to meet the 2030 Target in SB 32.

42. The Scoping Plan's new CEQA provisions, which have already been cited as CEQA legal mandates by opponents to a Los Angeles County housing project called

"Northlake,"[43] would increase still further the cost of new housing (and thereby make it even less affordable to California's minority and other families). Since new housing—especially infill housing—is already the top target of CEQA lawsuits statewide,[44] the GHG Housing Measures will encourage even more anti-housing lawsuits, with attendant increases in project litigation costs and construction delays, as well as vehement opposition from existing residents.

43. CEQA lawsuits also disproportionately target multi-family housing such as apartments in existing urbanized "infill" locations. In a recent 3-year study of all CEQA lawsuits filed statewide, the approximately 14,000 housing units challenged in the six county region comprising the Southern California Association of Governments ("SCAG"), which includes Los Angeles, Orange, San Bernadino, Ventura, Imperial, and Riverside counties and all cities within those counties, SCAG determined that 98% of the challenged housing units were located in existing urbanized areas, 70% were within areas designated for transit-oriented high density development, and 78% were located in the whiter, wealthier and healthier areas of the region (outside the portions of the regions with higher minority populations, poverty rates, pollution, and health problems associated with adverse environmental conditions such as asthma).[45]

44. CEQA lawsuit petitioners also have an unusually high success rate against the cities and other government agencies responsible for CEQA compliance. A metastudy of administrative agency challenges nationally showed that agencies win approximately 70% of such cases. In contrast, three different law firm studies of CEQA reported appellate court opinions showed that CEQA petitioners prevailed in almost 50% of such cases.[46]

[45] Jennifer Hernandez, David Friedman, Stephanie DeHerrera, In the Name of the Environment Update: CEQA Litigation Update for SCAG Region (2013-2015) (Jul. 2016), p. 31-34, https://www.hklaw.com/files/UPloads/Documents/Alerts/Environment/InfillHousingCEQALawsuits.pdf.

[46] Jennifer Hernandez, Spencer Potter, Dan Golub, Joanna Meldrum, CEQA Judicial Outcomes: Fifteen Years of Reported California Appellate and Supreme Court Decisions (2015), p. 3-4, 10, https://www.hklaw.com/files/Uploads/Documents/Articles/0504FINALCEQA.pdf.

45. As noted by senior CEQA practitioner William Fulton, "CEQA provides a way for anybody who wants anything out of a public agency to get some leverage over the situation – whether that's unions, environmentalists, businesses, developers, and even local governments themselves."[47]

46. As the founder of California's first law firm focused on filing CEQA lawsuit petitions, E. Clement Shute, recently reported when accepting a lifetime environmental law firm award from the California State Bar Environmental Section:

> Moving to the bad and ugly side of CEQA, projects with merit that serve valid public purposes and not be harmful to the environment can be killed just by the passage of the time it takes to litigate a CEQA case.
>
> In the same vein, often just filing a CEQA lawsuit is the equivalent of an injunction because lenders will not provide funding where there is pending litigation. This is fundamentally unfair. There is no need to show a high probability of success to secure an injunction and no application of a bond requirement to offset damage to the developer should he or she prevail.
>
> CEQA has also been misused by people whose move is not environmental protection but using the law as leverage for other purposes. I have seen this happen where a party argues directly to argue lack of CEQA compliance or where a party funds an unrelated group to carry the fight. These, in my opinion, go to the bad or ugly side of CEQA's impact.[48]

47. African American radio host and MBA, Eric L. Frazier, called this climate-based CEQA housing regime "environmental apartheid" since whiter, wealthier and older homeowners were less likely to be affected, while aspiring minority homeowners were likely to be denied housing even longer based on community opposition to widespread density increases and destruction of single family homes, bear even higher housing costs given the absence of funding

[47] William Fulton, Insight: Everyone wants to keep leverage under CEQA, California Planning & Development Report (Sept. 30, 2014), http://www.cp-dr.com/node/3585.

[48] E. Clement Shute, Jr., Reprise of Fireside Chat, Yosemite Environmental Law Conference, 25 Envtl Law News, 3 (2016).

sources to expand and replace undersized infrastructure and public services, and never be within reach of purchasing a family home.[49]

48. CARB's 2017 Scoping Plan, and its required CEQA analysis, also provide no assessment of alternatives for achieving the only 1% reduction in GHG emissions that the new housing future will accomplish from other sectors or sources, which could avoid adverse impacts to California's minority communities, avoid increased housing costs and CEQA litigation risks, and avoid impacting existing California communities by—for example—allowing urbanization of even 1% more of California's land.

49. CARB also ignores a history of success in reducing traditional pollutants from cars, as required by the federal and state Clean Air Acts, while preserving the transportation mobility of people and goods. U.S. Environmental Protection Agency ("EPA") reported in 2016 that most auto tailpipe pollutants had declined by 98-99% in comparison to 1960's cars, gasoline got cleaner with the elimination of lead and reduction in sulfur, and even though it had not been directly regulated, the primary GHG from cars (carbon dioxide) has risen nationally by less than 20% even as VMT nationally more than doubled as a co-benefit of mandatory reductions of traditional pollutants.[50]

50. In contrast to this success, CARB's VMT reduction scheme and its ongoing efforts to intentionally increase congestion are an assault on the transportation mobility of people, which disparately harm minority workers who have been forced by the housing crisis to drive ever greater distances to work.

51. CARB staff's response to The Two Hundred's December 2017 comment letter on the 2017 Scoping Plan is plain evidence of the intentional concealment and willful omission of the true impacts of the 2017 Scoping Plan and the GHG Housing Measures on California. CARB

[49] Eric L. Frazier, The Power is Now, Facebook Live Broadcast (Feb. 28, 2018), https://thepowerisnow.com/events/event/jennifer-hernandez/.

[50] U.S. EPA, Historic Success of the Clean Air Act (2016), https://www.epa.gov/air-pollution-transportation/accomplishments-and-success-air-pollution-transportation.

staff said that GHG Housing Measures were in a separate chapter and thus not part of the 2017 Scoping Plan after all.[51]

52. California's climate change policies, and specifically those policies that increase the cost and delay or reduce the availability of housing, that increase the cost of transportation fuels and intentionally worsen highway congestion to lengthen commute times, and further increase electricity costs, have caused and will cause unconstitutional and unlawful disparate impacts to California's minority populations, which now comprise a plurality of the state's population. These impacts also disproportionately affect younger Californians including millennials (the majority of whom are minorities), as well as workers without college degrees.

53. In short, in the midst of California's unprecedented housing, homeless, poverty and transportation crisis, CARB adopted a 2017 Scoping Plan which imposes still higher housing, transportation and electricity costs on Californians. CARB did so without disclosing or assessing the economic consequences or the significant adverse environmental consequences of its GHG Housing Measures on California residents.

54. In doing so, CARB again affirmed its now-wanton and flagrant pattern of violating CEQA—a pattern consistent with what an appellate court termed "ARB's lack of good faith" in correcting earlier CEQA violations as ordered by the courts.

55. The GHG Housing Measures have a demonstrably disproportionate adverse impact on already-marginalized minority communities and individuals, including but not limited to Petitioners LETICIA RODRIGUEZ, TERESA MURILLO and EUGENIA PEREZ, who are Latina residents of Fresno County that are personally, directly and disproportionately adversely affected by the affordable housing shortage and the future exacerbation of that shortage if the GHG Housing Measures are allowed to remain in effect.

56. The Legislature has recognized the equal right to access to housing, *inter alia*, in the California Fair Employment and Housing Act (Gov. Code § 12900 *et seq.*) ("FEHA"). FEHA

[51] Supplemental Responses to Comments on the Environmental Analysis Prepared for the Proposed Strategy for Achieving California's 2030 Greenhouse Gas Target (Dec. 14, 2017), p. 14-16, https://www.arb.ca.gov/cc/scopingplan/final-supplemental-rtc.pdf.

§ 12921(b) provides that: "The opportunity to seek, obtain, and hold housing without discrimination because of race, color, . . . source of income . . . or any other basis prohibited by Section 51 of the Civil Code is hereby recognized and declared to be a civil right."

57. California's housing crisis is particularly acute, and has long-lasting adverse impacts. As the Director of the California Department of Housing and Community Development, Ben Metcalf, recently reported: "Research has been unequivocal in supporting two undeniable conclusions: Low-income households paying more than half their income in rent have profoundly reduced expenditures on food, retirement, health care, and education compared with non–rent-burdened households. And children growing up in neighborhoods of concentrated poverty are more likely to have psychological distress and health problems."[52]

58. The 2017 Scoping Plan is also violative of the due process and equal protection clauses of the California and U.S. Constitutions (Cal. Const. Art. I, § 7, U.S. Const., Amd. 14, § 1). Accordingly, Petitioners in this action seek declaratory and injunctive relief from these violations pursuant to 42 U.S.C. § 1983. The GHG Housing Measures are thus unconstitutional on their face and as applied to Petitioners.

59. While the unlawful and unconstitutional disparate impact of the GHG Housing Measures on minority communities, including Petitioners, is the most egregious feature of the regulations, there are numerous other flaws, *each* of which is fatal to the 2017 Scoping Plan and the GHG Housing Measures. As detailed herein, these include violations of CEQA, the APA, the GWSA, the California Health and Safety Code, including the California Clean Air Act (H&S Code § 39607 *et seq.*) ("CCAA"), and the California Congestion Management Act (Gov. Code § 65088 *et seq.*). Moreover, CARB has acted in excess of its statutory authority (ultra vires).

60. The GHG Housing Measures are unlawful both procedurally (because they were adopted in violation of numerous statutory requirements, including but not limited to CEQA) and substantively (because they frustrate and violate a wide range of state and federal laws and regulations prohibiting housing regulations that have an unjustified discriminatory effect).

---

[52] Donna Kimura, Pop Quiz with Ben Metcalf, Affordable Housing Finance (July 8, 2016), http://www.housingfinance.com/news/pop-quiz-with-ben-metcalf_o.

61. California's commitment to climate leadership does not require or allow CARB to violate the civil rights of California's minority communities, or constitutional and statutory mandates for clean air, fair housing, historic preservation, consumer protection, transportation mobility, CEQA, or administrative rulemaking.

62. With climate change repeatedly described as a "catastrophe" that could destroy civilizations, perhaps it is necessary for CARB to plunge more of California's minority residents into poverty and homelessness. If so—if climate change requires that the state ignore civil rights, federal and state clean air, fair housing, transportation and consumer protection mandates, and ignore the administrative law checks and balances that require a thorough environmental and economic assessment of regulatory proposals—then this is a conclusion that may only be implemented by the Legislature, to the extent it can do so consistent with the California and federal Constitutions.

63. For this reason, this action seeks declaratory and injunctive relief setting aside the four GHG Housing Measures, each of which places a disproportionate burden on California's minority community members, including Petitioners, and for the court to direct CARB to complete a thorough economic and environmental analysis prior to adopting any new regulations or taking other actions to implement the 2017 Scoping Plan, and to return to this court with a revised Scoping Plan that complies with state and federal law.

II. JURISDICTION AND VENUE

64. This Court has jurisdiction over this proceeding pursuant to California Code of Civil Procedure ("CCP") §§ 410.10, 1085, 1094.5, 526, *et seq.* and 1060. Defendants are subject to personal jurisdiction because their new GHG Housing Measures would, if allowed to remain in effect, pertain to Petitioners and others located within the County of Fresno. Defendants may be properly be served here, and jurisdiction and venue are proper here under CCP § 401, because Defendants are being sued in their official capacities as members of an agency of the State of California, and the Attorney General maintains an office in Fresno, California and the GHG regulations complained of herein have an effect in, and apply in, the County of Fresno, California.

III. PARTIES

65. Petitioners/Plaintiffs THE TWO HUNDRED are a California-based unincorporated association of community leaders, opinion makers and advocates working in California (including in Fresno County) and elsewhere on behalf of low income minorities who are, and have been, affected by California's housing crisis and increasing wealth gap.[53]

66. The Two Hundred is committed to increasing the supply of housing, to reducing the cost of housing to levels that are affordable to California's hard working families, and to restoring and enhancing home ownership by minorities so that minority communities can also benefit from the family stability, enhanced educational attainment over multiple generations, and improved family and individual health outcomes, that white homeowners have long taken for granted. The Two Hundred includes civil rights advocates who each have four or more decades of experience in protecting the civil rights of our communities against unlawful conduct by government agencies as well as businesses.

67. The Two Hundred supports the quality of the California environment, and the need to protect and improve public health in our communities.

68. The Two Hundred have for many decades watched with dismay decisions by government bureaucrats that discriminate against and disproportionately harm minority communities. The Two Hundred have battled against this discrimination for entire careers, which for some members means working to combat discrimination for more than 50 years. In litigation and political action, The Two Hundred have worked to force two government bureaucrats to reform policies and programs that included blatant racial discrimination—by for example denying minority veterans college and home loans and benefits that were available to white veterans, and promoting housing segregation as well as preferentially demolishing homes in minority communities.

69. The Two Hundred sued and lobbied and legislated to force federal and state agencies to end redlining practices that denied loans and insurance to aspiring minority home

[53] See www.the200leaders.org.

buyers and small businesses. The Two Hundred sued and lobbied to force regulators and private companies to recognize their own civil rights violations, and end discriminatory services and practices, in the banking, telecommunication, electricity, and insurance industries.

70. The Two Hundred have learned, the hard way, that California's purportedly liberal, progressive environmental regulators and environmental advocacy group lobbyists are as oblivious to the needs of minority communities, and are as supportive of ongoing racial discrimination in their policies and practices, as many of their banking, utility and insurance bureaucratic peers.

71. Several years ago, The Two Hundred waged a three year battle in Sacramento to successfully overcome state environmental agency and environmental advocacy group opposition to establishing clear rules for the cleanup of the polluted properties in communities of The Two Hundred, and experienced first-hand the harm caused to those communities by the relationships between regulators and environmentalists who financially benefited from cleanup delays and disputes instead of creating the clear, understandable, financeable, insurable, and equitable rules for the cleanup and redevelopment of the polluted properties that blighted these communities.

72. THE TWO HUNDRED's members include, but are not limited to, members of and advocates for minority communities in California, including the following:

- Joe Coto- Joe Coto is Chair of THE TWO HUNDRED. Mr. Coto is an American educator, city council member, and Democratic politician. From 2004-2010, he was a member of the California State Assembly, representing the 23rd Assembly District. He served as Chair of the Assembly's Insurance committee, and held positions on the Elections and Redistricting, Governmental Organization, and Revenue and Taxation committees. He also served on the Special committee on Urban Education. Coto served as Chair of the 26 member Latino Legislative Caucus for a 2-year term, and as Vice Chair for a 2-year term..
- John Gamboa – John Gamboa is Vice-Chair of THE TWO HUNDRED. Mr. Gamboa is the former Executive Director of the Greenlining Institute and has experience in academia, the private sector and the non-profit sector. Prior to the

Greenlining Institute, he was Executive Director of Latino Issues Forum, Communications Manager at U.C. Berkeley, Executive Director of Project Participar, a citizenship program, and Marketing and Advertising Manager at Pacific Bell. At the Greenlining Institute, Mr. Gamboa focuses on public policy issues that promote economic development in urban and low-income areas, and in developing future leaders within the country's minority youth. He has been active in combating redlining and in providing a voice for the poor and underserved in insurance, philanthropy, banking, housing, energy, higher education and telecommunications. He has served on numerous boards and commissions.

- Cruz Reynoso – Cruz Reynoso, now retired, formerly served as Legal Counsel for THE TWO HUNDRED. Mr. Reynoso has dedicated his life to public service championing civil rights, immigration and refugee policy, government reform, and legal services for the poor. Mr. Reynoso began his career in private practice then moved to public service as the assistant director of the California Fair Employment Practices Commission, the associate general counsel of the Equal Employment Opportunity Commission, and head of the California Rural Legal Assistance (CRLA). Mr. Reynoso was a faculty member at the University of New Mexico School of Law and in 1976, he was appointed associate justice of the California Courts of Appeal. In 1982, he became the first Latino to be appointed an associate justice of the California Supreme Court. Mr. Reynoso later returned to private practice, and resumed his teaching career by joining the UCLA School of Law and then the UC Davis School of Law. Mr. Reynoso has served as Vice Chair of the U.S. Commission on Civil Rights, was a member of the Select Commission on Immigration and Human Rights, and received the Presidential Medal of Freedom.
- José Antonio Ramirez – José Antonio Ramirez is a Council Member of THE TWO HUNDRED. He has dedicated his life to public service, especially for the residents

of the Central Valley, seeking to improve economic vitality, strengthen community life, and increase educational opportunities and housing affordability for all Californians, including disadvantaged members of the Latino community. He currently serves as President of Community Development Inc. and as City Manager for the City of Livingston. He was previously Program Manager, International Affairs Coordinator and Security Engineer and Emergency Management Coordinator for the U.S. Bureau of Reclamation. He served on the San Joaquin River Resource Management board, the Valley Water Alliance Board and as Chairman of the Technical Review Boards for Merced and Fresno County.

- Herman Gallegos – Herman Gallegos is a Council Member of THE TWO HUNDRED. He has provided active leadership in a wide variety of community, corporate and philanthropic affairs spanning local, national and international interests. As a pioneer civil rights activist in the early 1950s, Gallegos was a leader in the formation of the Community Service Organization, a civil rights-advocacy group organized to promote the empowerment and well-being of Latinos in California. In 1965, while serving as a Consultant to the Ford Foundation's National Affairs Program, Gallegos, with Dr. Julian Samora and Dr. Ernesto Galarza, made an assessment with recommendations on how the foundation might initiate support to address the critical needs of the rapidly growing Latino population in the U.S.. As a result, he was asked to organize a new conduit for such funds—the Southwest Council of La Raza, now the National Council of La Raza. Gallegos went on to become the council's founding executive director. Gallegos also served as CEO of several business firms, including the U. S. Human Resources Corporation and Gallegos Institutional Investors Corporation. He became one of the first Latinos elected to the boards of publicly traded corporations and the boards of preeminent private and publicly supported philanthropic organizations, such as the Rockefeller Foundation, The San Francisco Foundation, The Poverello Fund and the California Endowment.

- Hyepin Im – Hyepin Im is a Council Member of THE TWO HUNDRED. She currently serves as the Founder and President of Korean Churches for Community Development (KCCD) whose mission is to help churches build capacity to do economic development work. Under Ms. Im's leadership, KCCD has implemented a historic homeownership fair in the Korean community, a Home Buyer Center Initiative with Freddie Mac, a national database and research study on Korean American churches, and ongoing training programs. Previously, Ms. Im was a venture capitalist for Renaissance Capital Partners, Sponsorship and Community Gifts Manager for California Science Center, a Vice President with GTA Consulting Company, and a Consultant and Auditor with Ernst & Young LLP. Ms. Im serves on the Steering Committee of Churches United for Economic Development, as Chair for the Asian Faith Commission for Assemblymember Herb Wesson, and has served as the President of the Korean American Coalition, is a member of the Pacific Council, was selected to be a German Marshall Fund American Memorial Marshall Fellow, and most recently, was selected to take part in the Harvard Divinity School Summer Leadership Institute.
- Don Perata – Don Perata is a Council Member of THE TWO HUNDRED. Mr. Perata began his career in public service as a schoolteacher. He went on to serve on the Alameda County Board of Supervisors (1986-1994) and the California State Assembly (1996-1998). In 1998, he was elected to the California State Senate and served as president pro tem of the Senate from 2004-2008. As president pro tem, Mr. Perata oversaw the passage of AB 32, California's cap and trade regulatory scheme to reduce greenhouse gases. Mr. Perata has guided major legislation in health care, in-home services, water development and conservation and cancer, biomedical and renewable energy. Mr. Perata has broad experience in water, infrastructure, energy, and environmental policies, both as an elected official and a consultant. He is versed in the State Water Project, Bay Delta restoration,

renewable energy, imported water and water transfers, recycling, conservation, groundwater regulation, local initiative, storage and desalination.

- Steven Figueroa – Steven Figueroa is a Council Member of THE TWO HUNDRED. He was born in East L. A., with a long history in California. Working on his first political campaign at age nine he learned that if you want change you have to be involved. As an adult he was involved in the labor movement through the California School Employees Association and later as a union shop steward at the U.S.P.S. A father of three, Steven has been advocating for children with disabilities for 30 years, beginning in 1985, for his own son, who is autistic. He took the Hesperia School District to court for violating his disabled son's rights and prevailed. He advocates for disabled children throughout the United States, focusing on California. Currently, he serves as president of the Inland Empire Latino Coalition and sits on the advisory boards of California Hispanic Chambers of Commerce, the National Latina Business Women Association Inland Empire the Disability Rights and Legal Center Inland Empire, and as Executive Director for Latin PBS. He previously served as the vice president of the Mexican American Political Association Voter Registration & Education Corp.
- Sunne Wright McPeak – Sunne McPeak is a Council Member of THE TWO HUNDRED. She is the President and CEO of the California Emerging Technology Fund, a statewide non-profit whose mission is to close the Digital Divide by accelerating the deployment and adoption of broadband. She previously served for three years as Secretary of the California Business, Transportation and Housing Agency where she oversaw the largest state Agency and was responsible for more than 42,000 employees and a budget in excess of $11 billion. Prior to that she served for seven years as President and CEO of the Bay Area Council, as the President and CEO of the Bay Area Economic Forum, and for fifteen years as a member of the Contra Costa County Board of Supervisors. She has led numerous statewide initiatives on a variety of issues ranging from water, to housing, to child

care, and served as President of the California State Association of Counties in 1984. She was named by the San Francisco League of Women Voters as "A Woman Who Could Be President." She also served on the Boards of Directors of First Nationwide Bank and Simpson Manufacturing Company.

- George Dean – George Dean is a Council Member of THE TWO HUNDRED. Mr. Dean has been President and Chief Executive Officer of the Greater Phoenix Urban League since 1992. As such, he has brought a troubled affiliate back to community visibility, responsiveness and sound fiscal accountability. Mr. Dean, a former CEO of the Sacramento, California and Omaha, Nebraska affiliates boasts more than 25 years as an Urban League staff member. His leadership focuses on advocacy toward issues affecting the African-American and minority community, education, training, job placement and economic development. Mr. Dean annually raises more than 3 million dollars from major corporations, local municipalities and state agencies for the advancement of minority enterprises, individuals, families and non-profits. Mr. Dean is nationally recognized in the field of minority issues and advancement, and affordable housing.
- Joey Quinto – Joey Quinto is a Council Member of THE TWO HUNDRED. Mr. Quinto's has made many contributions to the advancement of the API community. He began his professional career as a mortgage banker. As a publisher, his weekly newspaper advances the interests of the API community and addresses local, consumer and business news, and community events. He is a member of several organizations including the Los Angeles Minority Business Opportunity Committee and The Greenlining Coalition. Mr. Quinto is the recipient of the Award for Excellence in Journalism during the Fourth Annual Asian Pacific Islander Heritage Awards in celebration of the Asian Pacific Islander American Heritage Month. He was also listed among the Star Suppliers of the Year of the Southern California Regional Purchasing Council, received the Minority Media

Award from the U.S. Small Business Administration, and earned a leadership award from the Filipino American Chamber of Commerce based in Los Angeles.

- Bruce Quan, Jr. – Bruce Quan is a Council Member of THE TWO HUNDRED. Mr. Quan is a fifth generation Californian whose great grandfather, Lew Hing founded the Pacific Coast Canning Company in West Oakland in 1905, then one of the largest employers in Oakland. Bruce attended Oakland schools, UC Berkeley, and Boalt Hall School of Law. At Berkeley, he was a community activist for social justice, participated in the Free Speech Movement and the Vietnam Day Committee and was elected student body president. In 1973, he was chosen as one of three students to clerk for the Senate Watergate Committee and later returned to Washington to draft the "Cover-up" and "Break-in" sections of the committee's final report. He worked in the Alameda's City Attorney office, his own law practice advising Oakland's Mayor Lionel Wilson on economic development issues in Chinatown and serving Mayor Art Agnos as General Counsel for the San Francisco-Shanghai Sister City Committee and the San Francisco-Taipei Sister City Committee. In 2000, he moved to Beijing, continued his law practice, worked as a professor with Peking Law School, and became senior of counsel with Allbright Law Offices. Now in Oakland, he has reengaged in issues affecting the Chinese community and on issues of social justice, public safety and economic development in Oakland.
- Robert J. Apodaca – Robert Apodaca is a Council Member of THE TWO HUNDRED. He is a Founder of ZeZeN Advisors, Inc., a boutique financial services firm that connects institutional capital with developers and real estate owners. He has a 45-year career that spans private and public sectors. He was Chairman and Trustee of Alameda County Retirement Board (pension fund) and then joined Kennedy Associates, an institutional investor for pension funds as Senior Vice President & Partner. He represented Kennedy Companies on Barings Private Equity's "Mexico Fund" board of directors. He later joined McLarand

Vasquez Emsiek & Partners, a leading international architectural and planning firm, as Senior Vice President of Business Development. He currently serves on numerous board of directors including Jobs and Housing Coalition, Greenlining Institute, California Community Builders and California Infill Federation.

- Ortensia Lopez – Ortensia Lopez is a Council Member of THE TWO HUNDRED. She is a nationally recognized leader in creating coalitions, collaboratives and partnerships, resulting in innovative initiatives that ensure participation for low-income communities. Ms. Lopez has worked in the non-profit sector for over forty-one years in executive management positions. She is the second of 11 children born to parents from Mexico and the first to graduate from college. She currently serves on the California Public Utilities Commission's Low-Income Oversight Board, as Co-Chairperson and founding member of the Greenlining Institute, as Vice-President Chicana/Latina Foundation, as Director of Comerica Advisory Board, and on PG&E's Community Renewables Program Advisory Group. Ms. Lopez has earned numerous awards, including Hispanic Magazine's "Hispanic Achievement Award", San Francisco's "ADELITA Award", the prestigious "Simon Bolivar Leadership Award", the League of Women Voters of San Francisco "Woman Who Could Be President" award, California Latino Civil Rights Network award, and the Greenlining Lifetime Achievement.
- Frank Williams – Frank Williams is a Council Member of THE TWO HUNDRED. He is an established leader in the mortgage banking industry, with over 25 years of experience, and is an unwavering advocate for creating wealth through homeownership for underrepresented communities. Frank began his real estate finance career in 1990, emphasizing Wholesale Mortgage Banking. He founded Capital Direct Funding, Inc. in 2009. Today, as Co-founder and Divisional Manager, Mr. Williams has made Capital Direct Funding into California's premier private lending firm. Capital Direct Funding's foundations are built on giving back to the community by supporting several non-profits. He

currently serves as President of East LA Classic Theater, a non-profit that works with underserved school districts in California. Frank was also Past President for Los Angeles' National Association of Hispanic Real Estate Professionals.

- Leticia Rodriguez - Leticia Rodriguez is a resident of Fresno County, California. She is a low-income single mother and Latina who suffers ongoing personal harm from the severe shortage of housing that is affordable to working-class families. Within the last three years, she has spent more than 30% of her income on rent. She has been forced to move into her parents' home because she cannot afford a decent apartment for herself and her family.
- Teresa Murillo – Teresa Murillo is a resident of the City of Parlier in Fresno County, California. She is a young Latina with a low income. In recent years, she has spent approximately 30% of her income on housing. She currently is unable to afford a decent apartment and has been forced to move back in with her parents.
- Eugenia Perez – Eugenia Perez is a resident of Fresno County, California. She is a Latina grandmother. The majority of her income goes to pay rent. She currently is renting a room on E. Fremont Avenue in Fresno. She struggles to pay rent and lives in fear of becoming homeless if housing prices and rent continue to increase.

73. Defendant CALIFORNIA AIR RESOURCES BOARD is an agency of the State of California. On information and belief, current members of the CALIFORNIA AIR RESOURCES BOARD are: Mary D. Nichols, Sandra Berg, John R. Balmes, Hector De La Torre, John Eisenhut, Dean Flores, Eduardo Garcia, John Gioia, Ricardo Lara, Judy Mitchell, Barbara Riordan, Ron Roberts, Phil Serna, Alexander Sherriffs, Daniel Sperling, and Diane Takvorian.

74. Defendant RICHARD COREY, sued herein in his official capacity, is Executive Officer of the CALIFORNIA AIR RESOURCES BOARD.

75. Petitioners are ignorant of the true names or capacities of the defendants sued herein under the fictitious names DOES 1 through 20 inclusive. When their true names and capacities are ascertained, Petitioners will amend this Petition/Complaint to show such true names and capacities. Petitioners are informed and believe, and thereon allege, that DOES 1 through 20,

inclusive, and each of them, are agents or employees of one or more of the named Defendants responsible, in one way or another, for the promulgation and prospective enforcement of the GHG Housing Measures sought to be invalidated and set aside herein.

IV. GENERAL ALLEGATIONS

A. California's Statutory Scheme To Reduce Greenhouse Gas Emissions and Avoid Disparate Impacts

76. As part of developing solutions to global warming, the California Legislature adopted the California Global Warming Solutions Act of 2006 (otherwise known as "AB 32" or the "GWSA") and established the first comprehensive greenhouse gas regulatory program in the United States. H&S Code § 38500 *et seq.*

77. Under AB 32, CARB is the state agency charged with regulating and reducing the sources of emissions of GHGs that cause global warming. H&S Code § 38510.

78. AB 32 required CARB to set a statewide GHG emissions limit equivalent to California's 1990 GHG emissions to be achieved by 2020. H&S Code § 38550.

79. AB 32 also required CARB to prepare, approve, and periodically update a scoping plan detailing how it would achieve the maximum technologically feasible and cost-effective GHG emissions reductions by 2020. H&S Code § 38561(a). The scoping plan is required to identify and make recommendations on direct emissions reductions measures, alternative compliance mechanisms, market-based compliance mechanisms, and potential monetary and nonmonetary incentives for sources to achieve reductions of GHGs by 2020. H&S Code § 38561(b). The scoping plan must be updated at least every five years. H&S Code § 38561(h).

80. In adopting a scoping plan, CARB must evaluate the total potential costs and total potential benefits of the plan to California's economy, environment, and public health. H&S Code § 38561(d).

81. Each scoping plan update also must identify, for each emissions reduction measure, the range of projected GHG emissions reductions that result from the measure, the range of projected air pollution reductions that result from the measure, and the cost-effectiveness, including avoided social costs, of the measure. H&S Code § 38562.7.

82. The initial scoping plan[54] was discussed in public hearings on or about December 11, 2008. The initial scoping plan was adopted by CARB on or about May 7, 2009.

83. On or about December 23, 2009, the initial scoping plan was challenged in the Superior Court for the City and County of San Francisco for failing to meet the statutory requirements of AB 32, the APA, and CEQA. The superior court accepted the challenge in part and the appeal was thereafter resolved after a further environmental document was filed.[55]

84. The Low Carbon Fuel Standard ("LCFS") was an early action item under AB 32. The LCFS was adopted on or about November 25, 2009 by CARB's executive officer. CARB's action to adopt the LCFS also was challenged for CEQA and APA violations. On or about November 2011, the Superior Court of Fresno County found that CARB had not violated the APA or CEQA. On or about July 15, 2013 the Fifth District Court of Appeal reversed the superior court's judgment and ordered it to issue a preemptory writ of mandate ordering CARB to revise and recertify its environmental assessment to meet CEQA's standards.[56]

85. The first update to the scoping plan[57] was adopted on or about May 22, 2014.

86. Thereafter, on or about May 30, 2017, the Fifth District Court of Appeal again found that CARB had violated CEQA and the APA, and that it had not acted in good faith in responding to certain of the Court's prior orders.[58] Specifically, the court found that CARB violated CEQA in deferring its analysis and mitigation of potential increases in nitrogen oxide emissions resulting from impacts of the LCFS regulations.

[55] *Ass'n. of Irritated Residents v. Cal. Air Res. Bd.*, 2011 WL 8897315 (Cal. Super. May 20, 2011) (approving challenges to alternatives analysis and improper "pre-approval" under CEQA) and *Ass'n. of Irritated Residents v. Cal. Air Res. Bd.* (2012) 206 Cal.App.4th 1487.

[56] *POET, LLC v. California Air Resources Board* (2013) 217 Cal.App.4th 1214 (holding that CARB prematurely approved the LCFS and improperly deferred analysis and mitigation of potential NOx emissions increased by the rule).

[57] California Air Resources Board, First Update to the Climate Change Scoping Plan (May 2014), https://www.arb.ca.gov/cc/scopingplan/2013_update/first_update_climate_change_scoping_plan.pdf.

[58] *POET, LLC v. State Air Resources Board* (2017) 12 Cal.App. 5th 52.

87. In 2016, the California Legislature adopted SB 32, which required CARB to ensure that rules and regulations adopted pursuant to the GWSA would target California's GHG emissions for reductions of 40% below 1990 levels by 2030. H&S Code § 38566.

88. AB 32 requires CARB to update the scoping plan at least every five years. CARB superseded its 2014 Scoping Plan with the current 2017 Scoping Plan adopted on December 14, 2017. The 2017 Scoping Plan contains the new GHG Housing Measures complained of herein.[59]

89. Between December, 2017 and mid-April, 2018, Petitioners, through counsel, sought to persuade CARB to eliminate or materially modify the four new GHG Housing Measures complained of herein, without success. During this time, the parties entered into a series of written tolling agreements that were continuously operative until April 30, 2018.

B. The 2017 Scoping Plan

90. Throughout 2016 and 2017, CARB prepared the 2017 Scoping Plan. CARB held meetings on or about January 27, 2017, February 16-17, 2017 and December 14, 2017 to accept public comment on the proposed 2017 Scoping Plan.

91. Because the Scoping Plan is both sweeping and vague, and because it was not preceded by a notice of proposed rulemaking, Petitioners THE TWO HUNDRED, *et al.* did not initially appreciate the significance of the new GHG regulations and standards embedded in the 2017 Scoping Plan by CARB staff.

92. Petitioners submitted a detailed letter commenting on the 2017 Scoping Plan on December 11, 2017, in advance of CARB's meeting to vote on the 2017 Scoping Plan.[60] The letter included extensive citations to documents and publications analyzing California's ongoing housing crisis and the disproportionate impact of the worsening housing shortage on marginalized minority communities.

---

[59] California Air Resources Board, The 2017 Climate Change Scoping Plan Update (Jan. 20, 2017), https://www.arb.ca.gov/cc/scopingplan/2030sp_pp_final.pdf.

[60] The Two Hundred Comment Letter dated Dec. 11, 2017, can be found in the Supplemental Responses to Comments on the Environmental Analysis Prepared for the Proposed Strategy for Achieving California's 2030 Greenhouse Gas Target (Dec. 14, 2017), p. 74, https://www.arb.ca.gov/cc/scopingplan/final-supplemental-rtc.pdf

93. On December 14, 2017, CARB adopted the 2017 Scoping Plan.

94. While the 2017 Scoping Plan is replete with protestations to the effect that it is only providing "guidance" rather than a "directive or mandate to local governments" (see, e.g., Scoping Plan, p. 99), it is plain that CARB's pronouncements on the GHG Housing Measures, by their nature, will be given the force and effect of law. Numerous courts have stated that when an agency has specific expertise in an area and/or acts as lead or responsible agency under CEQA, and publishes guidance, that guidance must be taken into consideration and will be given heavy weight.

95. In *California Building Industry Assn. v. Bay Area Air Quality Mgmt. Dist.* (2016) 2 Cal.App.5th 1067, 1088, the court rejected the notion that the District's CEQA guidelines were a nonbinding, advisory document. The court stated that the guidelines suggested a routine analysis of air quality in CEQA review and were promulgated by an air district that acts as either lead or responsible agency on projects within its jurisdictional boundaries.

96. In addition, in *Center for Biological Diversity v. Cal. Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 229, the court recognized the value of "performance based standards" as CEQA thresholds, as outlined in the Scoping Plan or other authoritative body of regulations.

97. Further, in *Cleveland Nat. Forest Foundation, et al v. San Diego Assoc. of Governments* (2017) 3 Cal.5th 497, 515, the court held that even though the 2050 Executive Order was not an adopted GHG reduction plan and there was no legal requirement to use it as a threshold of significance, that was not dispositive of the issue. Although lead agencies have discretion in designing an Environmental Impact Report ("EIR") under CEQA, the court stated that the exercise of that discretion must be "based to the extent possible on scientific and factual data" and thus the scientific basis for the Executive Order's and CARB's emission reduction goals must be considered in a CEQA analysis.

98. Thus, because CEQA documents must take a long term view of GHG compliance and because of the deference and weight other agencies are required to give to CARB guidance, the measures alleged to be "guidance" are in reality self-implementing regulations having an immediate "as applied" effect.

99. The LAO also has recognized that CARB's Scoping Plans include "a wide variety of regulations intended to help the state meet its GHG goal…"[61]

C. CARB's Improper "Cumulative Gap" Reduction Requirement

100. In AB 32, the Legislature directed CARB to reduce statewide GHG emissions to 1990 levels by 2020 via measures in the first Scoping Plan. This legislative mandate is simple and uncontested. CARB concluded that California's GHG emissions were 431 million metric tons of carbon dioxide equivalent ("$MMTCO_2e$") in 1990.

101. SB 32 established the more stringent mandate of reducing GHG emissions to 40% below 1990 levels by 2030, even though California's population and economic activities are expected to continue to increase during this period. The 2030 Target is simple math: 40% below 431 $MMTCO_2e$ equals 258.6 $MMTCO_2e$.[62] Thus, the 2017 Scoping Plan created measures to reduce statewide emissions to 260 MMTCO2e by 2030.

102. The 2017 Scoping Plan first evaluates the "Reference Scenario", which is the emissions expected in 2030 by continuing "Business as Usual" and considering existing legal mandates to reduce GHG emissions that have been implemented, but without adopting any new GHG reduction measures. The Scoping Plan concludes that in this scenario California's GHG .emissions will fall to 389 MMTCO2e by 2030.

103. Because numerous GHG reduction mandates are being phased in over time, CARB also evaluated a "Known Commitments Scenario" (which CARB confusingly named the "Scoping Plan Scenario") which estimates GHG emissions in 2030 based on compliance with all legally required GHG reduction measures, including those that have not yet been fully implemented. Under the "Known Commitments Scenario" the 2017 Scoping Plan concludes that California's GHG emissions will fall to 320 MMTCO2e by 2030.

[61] LAO, Cap-and-Trade Revenues: Strategies to Promote Legislative Priorities (Jan. 21, 2016), http://www.lao.ca.gov/reports/2016/3328/cap-trade-revenues-012116.pdf, at p. 5-6.

[62] CARB generally rounds this to 260 MMTCO2e.

104. Given that SB 32 required a reduction to 260 MMTCO2e, this left a gap of 60 MMTCO2e for which CARB was required to identify measures in the 2017 Scoping Plan in the "Known Commitments Scenario" and 129 MMTCO2e in the "Reference Scenario".

105. CARB declined to comply with this legislated mandate, and instead invented a different "cumulative gap" reduction requirement which requires far more GHG emission reductions.

106. Neither the Scoping Plan nor any of its appendices explain how this "cumulative gap" reduction requirement was derived, and the methodology and assumptions CARB used can only be located in one of several modeling spreadsheets generally referenced in the plan.

107. CARB's unlegislated "cumulative gap" requirement is based on the unsupportable assumption that state emissions must decline in a fixed trajectory from 431 $MMTCO_2e$ in 2020 to 258.6 MMTCO2e in 2030 despite the fact that SB 32 does not require that the state reach the 2030 Target in any specific way. CARB arbitrarily created the "cumulative gap" requirement by summing the annual emissions that would occur from 2021-2030 if emissions declined in a straight line trajectory, which totaled 3,362 MMTCO2e, as follows:

	Annual emissions based on a straight line trajectory from 2020 to 2030 ($MMTCO_2e$)
2020	431.0
2021	413.8
2022	396.5
2023	379.3
2024	362.0
2025	344.8
2026	327.6
2027	310.3
2028	293.1
2029	275.8
2030	258.6
2021-2030 Cumulative Emissions	3,362

108. CARB then summed the annual emissions projected to occur from 2021-2030 under the "Reference Scenario" without the implementation of the measures included in the "Known Commitments Scenario," as 3,982 MMTCO2e.

109. CARB then subtracted the cumulative "Reference Scenario" emissions (3,982 $MMTCO_2e$) from the cumulative emissions based on the straight line trajectory (3,362 $MMTCO_2e$) and illegally used the difference, 621 $MMTCO_2e$, as a new, unlegislated GHG "cumulative gap" reduction requirement.

Year	"Reference Scenario" Annual Emissions ($MMTCO_2e$)
2020	415.8
2021	411.0
2022	405.5
2023	400.3
2024	397.6
2025	398.7
2026	396.8
2027	395.5
2028	394.4
2029	393.9
2030	388.9
2021-2030 Cumulative Emissions	3,982
Difference from Straight Line Cumulative Emissions Total	621

110. Scoping Plan Figure 7, for example, is titled "Scoping Plan Scenario – Estimated Cumulative GHG Reductions by Measure (2021–2030)." The identified measures show the amount of reductions required to "close" the 621 $MMTCO_2e$ GHG "cumulative gap" CARB invented from the difference in cumulative emissions from 2021-2030 between a hypothetical straight line trajectory to the 2030 Target and the "Reference Scenario" projections.

111. Figure 8 of the Scoping Plan and associated text provide an "uncertainty analysis to examine the range of outcomes that could occur under the Scoping Plan policies and measures" which is entirely based on the 621 $MMTCO_2e$ GHG "cumulative gap" metric.[63]

112. CARB also calculated that the cumulative annual emissions projected to occur under the "Known Commitments Scenario" from 2021-2030 would be 3,586 MMTCO2e and subtracted this amount from the cumulative emissions generated by the straight line trajectory (3,362 $MMTCO_2e$). The difference is 224 $MMTCO_2e$, which is incorrectly shown as 236 $MMTCO_2e$ in Table 3 of the Scoping Plan and in the text following Table 3. CARB illegally characterized the 224 $MMTCO_2$ difference as the "cumulative emissions reduction gap" in the "Known Commitments Scenario" in the Scoping Plan and evaluated the need for additional measures on the basis of "closing" this unlegislated and unlawful "cumulative gap".

Year	"Known Commitments Scenario" Annual Emissions ($MMTCO_2e$)
2020	405.5
2021	396.8
2022	387.1
2023	377.6
2024	367.4
2025	362.7
2026	354.4
2027	347.1
2028	340.4
2029	331.8
2030	320.4
2021-2030 Cumulative Annual Emissions	3,586
Difference from Straight Line Cumulative Emissions Total	224

[63] The analysis discussion references Scoping Plan Appendix E for more details.

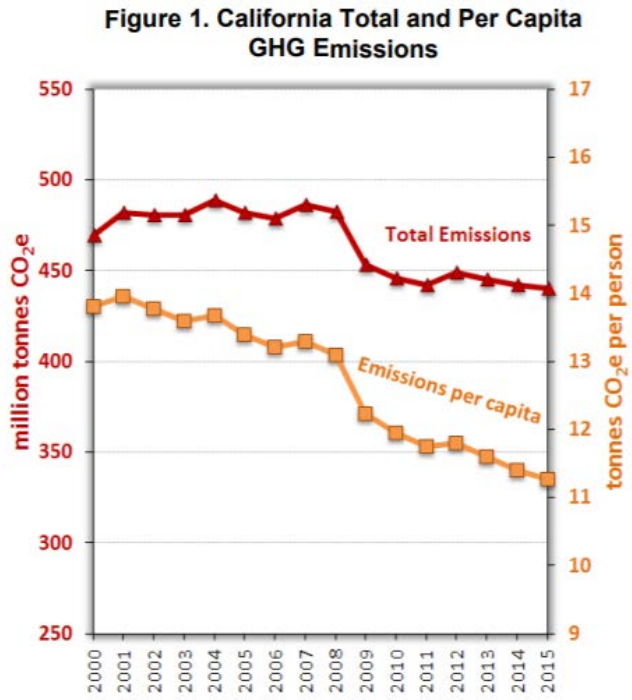
113. The California legislature in no way authorized CARB to invent a "cumulative gap" methodology based on an unreasonable and arbitrary straight line trajectory from 2020 to the 2030 Target, which counted each year's shortfall against the 2030 Target and then added all such shortfalls to inflate reduction needed from the 129 and 60 $MMTCO_2e$ (depending on scenario) required by the 2030 Target to the 621 and 224 $MMTCO_2e$ "cumulative gap" requirements.

114. SB 32 does not regulate cumulative emissions and only requires that the 2030 Target of 260 MMTCO2e be achieved by 2030. CARB's own analysis shows that existing legal requirements will reduce emissions to 320 $MMTCO_2e$ in 2030. At most, CARB was authorized to identify measures in the Scoping Plan that would further reduce emissions by 60 $MMTCO_2e$ in 2030 under the "Known Commitments Scenario". CARB instead illegally created new, and much larger "cumulative gap" reduction requirements of 224 $MMTCO_2e$ and 621 $MMTCO_2e$.

115. CARB arbitrarily determined that the straight line trajectory to the 2030 Target was the only way to reach the mandate of 260 MMTCO2e by 2030 when there are numerous potential paths that California's GHG emission reductions could take between 2021 and 2030.

116. For example, as shown in Figure 1 below, in reaching the 2020 Target, California's GHG emissions reductions have not followed a straight line trajectory, but have gone up and down based on the economy and other factors.[64]

[64] Figure 1 is from the California Air Resources Board's 2017 Edition of California's GHG Emission Inventory (June 6, 2017), p. 2, https://www.arb.ca.gov/cc/inventory/pubs/reports/2000_2015/ghg_inventory_trends_00-15.pdf.



117. CARB's arbitrary and capricious requirement that reductions must meet a cumulative GHG reduction total, rather than take any path feasible that gets the state to the 2030 Target is unlawful.

118. Both AB 32 (and earlier Scoping Plans) and SB 32 contemplated a "step down" of GHG emissions to the quantity established for the target year, with the "step down" increments occurring as new technologies, regulations, and other measures took effect. This step down approach has been part of air pollution control law for decades.

119. Under the federal Clean Air Act ("CAA"), the EPA sets National Ambient Air Quality Standards ("NAAQS") that set air quality levels in certain years for specific pollutants (*e.g.*, the 2015 NAAQS for ozone is 70 ppb and it must be achieved as expeditiously as possible). States then create and adopt State Implementation Plans ("SIPs") which include control measures to indicate how the state will meet the NAAQS standard. The reductions that the SIPs must achieve via their control measures to reach the NAAQS are always interpreted as being applicable to the target year, *i.e.,* how much reduction will need to occur in one year to reduce emissions from business as usual to the NAAQS level? The SIPs do not plan for emission reduction measures that must reduce emissions cumulatively over time (from the time of adoption of the

2015 ozone NAAQS until the year it is reached), such that not meeting the NAAQS in earlier years means that those excess emissions must be added to future years to create the required emissions reductions to balloon over time as the NAAQS goes unmet.

120. In addition, criteria air pollutants regulated by EPA, CARB, and California's local air districts are always regulated under a cost/ton disclosure metric in which the expected cost to reduce emissions must be not only explained in rulemaking documents, but taken into consideration in deciding whether to adopt any rule controlling emissions. This system has worked to reduce tailpipe emissions of criteria pollutants from passenger cars by 99% over time.

121. Given this clear and consistent pattern of EPA and CARB interpretation of the legal status of air quality levels to be achieved by a certain time, it was arbitrary and capricious for CARB to create this "deficit accounting" metric in the cumulative gap analysis rather than merely creating measures which would meet the 2030 Target by 2030.

122. CARB also used the unlawful "cumulative gap" reduction metric to identify the nature and extent of Scoping Plan reduction measures, including the GHG Housing Measures, address uncertainties in achieving these reductions, and to complete the legally mandated FA and EA for the 2017 Scoping Plan.

123. CARB's unilateral creation and use of the "cumulative gap" reduction requirement instead of the statutory SB 32 2030 Target is unlawful, and imposes new cost burdens, including on housing, that will further exacerbate the housing-induced poverty crisis.

D. The Four New, Unlawful GHG Housing Measures the 2017 Scoping Plan Authorizes

1. Unlawful VMT Reduction Requirement

124. Among the new regulations and standards added to CARB's 2017 Scoping Plan—which were not in any of its earlier scoping plans—is a requirement to reduce VMT. This requirement is part of the Scoping Plan Scenario presented in Chapter 2 in the "Mobile Source Strategy."[65]

[65] See Scoping Plan, p. 25 Table 1: Scoping Plan Scenario (listing Mobile Source Strategy (Cleaner Technology and Fuels [CTF] Scenario)).

125. The "Mobile Source Strategy" includes a requirement to reduce VMT. This allegedly would be achieved by continued implementation of SB 375, regional Sustainable Communities Strategies, statewide implementation of SB 743, and potential additional VMT reduction strategies included in Appendix C ("Potential VMT Reduction Strategies for Discussion"). Scoping Plan, p. 25.

126. The 2017 Scoping Plan states that "VMT reductions will be needed to achieve the 2030 target" and to meet the 2050 GHG emission reduction goal set in Executive Order S-3-05. Scoping Plan, p. 75.

127. CARB states that VMT reductions of 7 percent below projected VMT are necessary by 2030 and 15 percent below projected VMT by 2050. Scoping Plan, p. 101.

128. The "Mobile Source Strategy" measure requires a 15 percent reduction in total light-duty VMT from the business as usual scenario by 2050. Scoping Plan, p. 78. It also requires CARB to work with regions to update SB 375 targets to reduce VMT to reach the 2050 goal and to implement VMT as the CEQA metric for assessing transportation impacts. ***Id.***

129. The "Mobile Source Strategy" as a whole is estimated to result in cumulative GHG emission reductions of 64 $MMTCO_2e$ per year. Scoping Plan, p. 28.

130. These VMT reduction requirements are included in the 2017 Scoping Plan without appropriate recognition of the counterproductive effects of such a fixation on reducing VMT in the context of affordable housing proximate to job centers.

131. The 2017 Scoping Plan notes that promoting stronger boundaries to suburban growth, such as urban growth boundaries, will reduce VMT. Scoping Plan, p. 78. This also raises housing prices within the urban growth boundary and pushes low-income Californians, including minorities, to unacceptable housing locations with long drive times to job centers.

132. Other VMT reduction measures in the 2017 Scoping Plan, such as road user and/or VMT-based pricing mechanisms, congestion pricing, and parking pricing, further disadvantage low-income and minority residents who must drive farther through more congested roads.

133. The VMT reductions called for in Chapters 2 and 5 of the Scoping Plan make no distinction for miles driven by electric vehicles with zero GHG emissions or for miles driven by

hybrid vehicles when using only electric power. Instead, they would advance a suite of new burdens, including charging individual drivers for each vehicle mile travelled, and intentionally increasing overall roadway congestion to induce more workers to use public transit.

134. CARB's new VMT requirements, which purport to encourage public transit, essentially ignore the fact that far fewer than 10% of Californians can get from their home to their jobs in less than one hour on public transit, and that public transit ridership has fallen nationally and in California.[66] CARB's new VMT requirements fail to rationally address the reality that VMT continues to increase rather than decrease in California due to increasing population and employment levels.[67]

135. CARB's answer to reducing VMT by increasing bicycling, walking, and transit use is a laughable solution for low-income Californians, such as those living in the San Joaquin Valley and commuting to jobs in the San Francisco Bay Area.[68]

136. The burden of CARB's VMT reduction measures falls disproportionately on minority workers already forced by the housing crisis to endure long and even "mega" commutes lasting more than three hours per day.[69] The vast majority of middle and lower-income jobs (disproportionately performed by minority workers) require those workers to be physically present at their job sites to be paid. Affected job categories include teachers, nurses, emergency

responders, courtroom and municipal service workers, construction workers, day care and home health care workers, retail clerks, and food service workers.[70]

137. In addition to being ill-conceived, CARB's new VMT measures are not statutorily authorized. The Legislature has repeatedly rejected proposed legislation to mandate that Californians reduce their use of cars and light duty trucks (e.g., personal pickup trucks), including most recently in 2017 (Senate Bill 150, Allen).

138. Only a different agency, the Office of Planning and Research ("OPR"), has legislative authority to regulate VMT. It has not done so. In Senate Bill 743 (2013), the Legislature authorized OPR to consider adopting VMT as a new threshold for assessing the significance of transportation impacts under CEQA, but only after OPR completed a rulemaking process and amended the regulatory requirements implementing CEQA, *i.e.*, the CEQA Guidelines (14 C.C.R. § 15000 *et seq.*) ("CEQA Guidelines"). OPR has commenced but not completed the process for amending the CEQA Guidelines as authorized by SB 743.

139. Instead of regulating VMT, CARB's role under SB 375 is to encourage higher density housing and public transit and thereby reduce GHGs. In this context, CARB has included VMT reduction metrics for helping achieve GHG reduction goals in current SB 375 targets.

140. In the past, when CARB proposed to establish standalone VMT reduction targets (independent of GHG emission reduction targets) it has been swamped with objections and concerns, including challenges to its legal authority to attempt to impose fees and restrictions on driving as a standalone mandate independent of regional GHG reduction targets.

141. Until its adoption of the 2017 Scoping Plan, CARB had rightly stopped short of purporting to set out standalone VMT reduction targets and methods. At the same meeting that CARB approved the 2017 Scoping Plan, CARB agreed to indefinitely postpone establishing regional VMT reduction targets for a variety of reasons (including but not limited to the fact that notwithstanding current efforts, VMT is actually increasing).

[70] Adam Nagourney and Conor Dougherty, *The Cost of a Hot Economy in California: A Severe Housing Crisis,* N.Y. Times (July 17, 2017), https://www.nytimes.com/2017/07/17/us/california-housing-crisis.html.

142. Immediately following its determination to indefinitely postpone its proposal to adopt standalone VMT reduction targets, CARB nevertheless voted to approve the 2017 Scoping Plan's VMT reduction mandate, which includes in pertinent part a GHG measure requiring additional VMT reductions beyond the reductions achieved via SB 743 and SB 375. See Scoping Plan p. 25, Table 1, p. 101.

143. The inherent contradiction between the morning CARB agenda discussion indefinitely postponing establishing SB 375 VMT reduction targets, and CARB's afternoon agenda item approving the 2017 Scoping Plan, going above and beyond the VMT reductions CARB elected not to set a few hours earlier, caused widespread confusion. Even the CARB Board chair reported that she was "confused" – but CARB's unlawful action to mandate reduced driving by individual Californians was nevertheless unanimously approved in the 2017 Scoping Plan that CARB has now adopted.

144. In order to achieve these newly-mandated reductions in VMT, CARB intends to intentionally increase congestion to induce transit use. OPR's proposal for updating the CEQA Guidelines to include VMT as a metric for analyzing transportation impacts states that adding new roadway capacity increases VMT.[71] The OPR proposal further states that "[r]educing roadway capacity (i.e. a "road diet") will generally reduce VMT and therefore is presumed to cause a less than significant impact on transportation. Building new roadways, adding roadway capacity in congested areas, or adding roadway capacity to areas where congestion is expected in the future, typically induces additional vehicle travel." *Id.* at p. III:32.

145. Attempting to reduce VMT by purposefully increasing congestion by reducing roadway capacity will not lead to GHG emission reductions. Instead, increasing congestion will cause greater GHG emissions due to idling, not to mention increased criteria air pollutant[72] and

[71] OPR, Revised Proposal on Updates to the CEQA Guidelines Evaluating Transportation Impacts in CEQA (Jan. 20, 2016), p. I:4, http://www.opr.ca.gov/docs/Revised_VMT_CEQA_Guidelines_Proposal_January_20_2016.pdf.

[72] The six criteria air pollutants designated by the Environmental Protection Agency ("EPA") are particulate matter ("PM"), ozone, nitrogen dioxide ("NO_2" or "NOx"), carbon monoxide ("CO"), sulfur dioxide ("SO_2"), and lead.

toxic air contaminant[73] emissions. CARB has no authority to impose a VMT limit and any VMT limit imposed by an agency must be approved in a formal rulemaking process.

146. As implemented, CARB's VMT reduction measure will not achieve the GHG reductions ascribed to it in the 2017 Scoping Plan and has no rational basis. In fact, it will increase air quality and climate related environmental impacts, something not analyzed in the EA for the 2017 Scoping Plan.

147. In addition, CARB has recently undergone an update of regional GHG emission reduction targets under SB 375 in which CARB stated that: "In terms of tons, CARB staff's proposed [SB 375] targets would result in an estimated additional reduction of approximately 8 million metric tons of CO2 per year in 2035 compared to the existing targets. The estimated remaining GHG emissions reductions needed would be approximately 10 million metric tons CO2 per year in 2035 based on the Scoping Plan Update scenario. These remaining GHG emissions reductions are attributed to new State-initiated VMT reduction strategies described in the Scoping Plan Update."[74]

148. Thus, CARB's only stated support for needing the VMT reduction mandates in the 2017 Scoping Plan is to close a gap to the Scoping Plan Update Scenario that the SB 375 targets will not meet. However, all of the allegedly "necessary" reductions in the Scoping Plan Update Scenario are based on CARB's unlawful "cumulative gap" reduction requirement, which, as described above, improperly ballooned the GHG reductions required from 60 to 224 $MMTCO_2e$ based on the "Known Commitments Scenario" and from 129 to 621 $MMTCO_2e$ based on the "Reference Case Scenario."

149. Because of CARB's unlawful "cumulative gap" calculation, CARB now argues that the VMT reduction mandates are necessary, but the only reason they are necessary is to meet the unlawful "cumulative gap" reduction requirements.

---

[73] Toxic air contaminants, or TACs, include benzene, hexavalent chrome, cadmium, chloroform, vinyl chloride, formaldehyde, and numerous other chemicals.

[74] California Air Resources Board, Updated Final Staff Report, Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets (Feb. 2018), p. 35, https://www.arb.ca.gov/cc/sb375/sb375_target_update_final_staff_report_feb2018.pdf.

150. There is also no evidence that CARB's estimated 10 MMTCO2e per year reductions based on the VMT reduction mandate is in any way achievable. The Right Type, Right Place report[75] estimates only 1.79 MMTCO2e per year will be reduced from both lower VMT and smaller unit size houses using less energy and thus creating lower operational emissions.

151. The Staff Report for SB 375 acknowledges that VMT has increased, that the results of new technologies are at best mixed in early reports as to VMT reductions, and that the correlation between VMT and GHG is declining.[76] There is no evidence that the 10 MMTCO2e per year reductions based on the VMT reduction mandate in the 2017 Scoping Plan is in any way something other than a number created solely based on the fundamental miscalculation about the 2030 target demonstrated by the "cumulative gap" methodology in the 2017 Scoping Plan.

2. Unlawful CEQA Net Zero GHG Threshold

152. The 2017 Scoping Plan also sets a net zero GHG threshold for all projects subject to CEQA review, asserting that "[a]chieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development". Scoping Plan, p. 101-102.

153. The Scoping Plan directs that this new CEQA "zero molecule" GHG threshold be presumptively imposed by all public agencies when making all new discretionary decisions to approve or fund projects in all of California, where under CEQA "project" is an exceptionally broad legal term encompassing everything from transit projects to recycled water plants, from the renovation of school playgrounds to building six units of affordable housing, from the adoption of General Plans applicable to entire cities and counties to the adoption of a single rule or regulation.

154. This is an unauthorized, unworkable and counterproductive standard as applied to new housing projects. CEQA applies to the "whole of a project", which includes construction

Berkeley Terner Center for Housing Innovation and Center for Law, Energy and the Environment (Mar. 2017), https://ternercenter.berkeley.edu/right-type-right-place.

[76] California Air Resources Board, Updated Final Staff Report, Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets (Feb. 2018), p. 19, https://www.arb.ca.gov/cc/sb375/sb375_target_update_final_staff_report_feb2018.pdf.

activities, operation of new buildings, offsite electricity generation, waste management, transportation fuel use, and a myriad of other activities. Meeting a net zero threshold for these activities is not possible. While there have been examples of "net zero" buildings—which are more expensive than other housing[77]—none of these examples included the other components of a "project" as required by CEQA.

155. The Scoping Plan's "net zero" CEQA provisions also would raise housing and homeowner transportation costs and further delay completion of critically needed housing by increasing CEQA litigation risks—thereby exacerbating California's acute housing and poverty crisis.[78]

156. Despite CARB's claim that this "net zero" threshold is "guidance", CARB's status as the expert state agency on GHG emissions means that all lead agencies or project proponents will have to accept this standard in CEQA review unless they can prove by substantial evidence that a project cannot meet the standard.

157. The threshold has immediate evidentiary weight as the expert conclusion of the state's expert GHG agency. An agency's failure to use the 2017 Scoping Plan's CEQA threshold has already been cited as legal error in the comment letter preceding the expected lawsuit against the Northlake housing project in Los Angeles.[79]

158. A "net zero" GHG threshold is inconsistent with current California precedent affirming that compliance with law is generally an acceptable CEQA standard. See, e.g., *Center for Biological Diversity v. Dept. of Fish and Wildlife* (2016) 62 Cal.4th 204, 229 ("*Newhall"*) (a lead agency can assess consistency with AB 32 goal by looking to compliance with regulatory programs). This includes, but is not limited to, using compliance with the cap-and-trade program as appropriate CEQA mitigation for GHG and transportation impacts.

[79] Center for Biological Diversity, Letter to Los Angeles County (April 16, 2018), http://planning.lacounty.gov/assets/upl/case/tr073336_correspondence-20180418.pdf.

159. The Scoping Plan's expansive new "net zero" GHG CEQA threshold is directly at odds with, and is dramatically more stringent than, the existing CEQA regulatory threshold for GHG emissions. This existing threshold was adopted by OPR pursuant to specific authorization and direction from the Legislature in SB 97. In the SB 97 rulemaking context, OPR, in its Statement of Reasons, expressly rejected a "zero molecule" or "no net increase" GHG threshold (now adopted by CARB without Legislative authority) as being inconsistent with, and not supported by, CEQA's statutory provisions or applicable judicial precedent. OPR stated that "[n]otably, section 15064.4(b)(1) is not intended to imply a zero net emissions threshold of significance. As case law makes clear, there is no "one molecule rule" in CEQA."[80]

160. In January of 2017, OPR commenced a formal rulemaking process for what it describes as a "comprehensive" set of regulatory amendments to the CEQA Guidelines. After adoption of the 2017 Scoping Plan, OPR has not proposed to change the existing GHG thresholds in the Guidelines to conform with CARB's unauthorized new "net zero" GHG threshold. Instead, OPR has expressly criticized reliance on a numerical project-specific assessment of GHGs.

161. In short, CARB's "net zero" GHG threshold is inconsistent with OPR's legal conclusion that CEQA cannot be interpreted to impose a "net zero" standard.[81]

162. In addition to being Legislatively unauthorized and unlawful, the "net zero" GHG threshold would operate unconstitutionally so as to disproportionately disadvantage low income minorities in need of affordable housing relative to wealthier, whiter homeowners who currently occupy the limited existing housing stock.[82] This disadvantage arises because of the use of CEQA

---

[80] OPR, Final Statement of Reasons for Regulatory Action, Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (Dec. 2009), p. 25, http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf.

[82] See Richard Rothstein, Color of Law: A Forgotten History of How Our Government Segregated America (2017) for a historical review of how zoning and land use laws were designed to promote discrimination against African Americans and other communities of color, patterns that, in many instances, have been maintained to this day; see also Housing Development Toolkit, The White House (Sept. 2016), https://www.whitehouse.gov/sites/whitehouse.gov/files/images/Housing_Development_Toolkit%20f.2.pdf.

litigation by current homeowners to block new housing for others, including especially low income housing for minorities.[83]

163. Under CEQA, once an impact is considered "significant", it must be "mitigated" by avoidance or reduction measures "to the extent feasible." Pub. Res. Code §§ 21002, 21002.1; 14 C.C.R. § 15020(a)(2). By imposing a presumptive "net zero" GHG threshold on all new projects pursuant to CEQA, CARB has instantly and unilaterally increased the GHG CEQA mitigation mandate to "net zero" unless a later agency applying CEQA can affirmatively demonstrate, through "substantial evidence", that this threshold is not "feasible" as that term is defined in the CEQA Guidelines.

164. Under CEQA, any party—even an anonymous litigant—can file a CEQA lawsuit challenging the sufficiency of a project's analysis and mitigation for scores of "impacts," including GHG emissions. *See Save the Plastic Bag Coalition v. City of Manhattan Beach* (2011) 52 Cal.4th 155.

165. Anonymous use of CEQA lawsuits, as well as reliance on CEQA lawsuits to advance economic objectives such as fast cash settlements, union wage agreements, and competitive advantage, has been repeatedly documented—but Governor Brown has been unable

[83] See Jennifer L. Hernandez, California Environmental Quality Act Lawsuits and California's Housing Crisis, 24 Hastings Envtl. L.J. (2018), https://www.hklaw.com/files/Uploads/Documents/Articles/121317_HELJ_Jennifer_Hernandez.pdf; see also Jennifer Hernandez, David Friedman, and Stephanie DeHerrera, In the Name of the Environment Update: CEQA Litigation Update for SCAG Region (2013-2015) (Jul. 2016), https://www.hklaw.com/files/UPloads/Documents/Alerts/Environment/InfillHousingCEQALawsuits.pdf; Jennifer Hernandez, David Friedman, and Stephanie DeHerrera, In the Name of the Environment: Litigation Abuse Under CEQA (August 2015), https://www.hklaw.com/publications/in-the-name-of-the-environment-litigation-abuse-under-ceqa-august-2015/.

to secure the Legislature's support for CEQA because, as he explains, unions use CEQA to leverage labor agreements.[84]

166. Using CEQA to advance economic rather than environmental objectives, and allowing anonymous lawsuits to mask more nefarious motives including racism and extortion, has established CEQA litigation (and litigation threats) as among the top reasons why adequate housing supplies have not been built near coastal jobs centers.[85]

167. The "net zero" threshold, as applied to new housing projects in California, adds significantly to the risk and CEQA litigation outcome uncertainty faced by persons who wish to build such housing.[86] Not even the California Supreme Court, in *Newhall, supra,* 62 Cal.4th 204, could decide how CEQA should apply to a global condition like climate change in the context of considering the GHG impacts of any particular project. Instead, the Supreme Court identified four "potential pathways" for CEQA compliance. Notably, none of these was the "net zero" threshold adopted by CARB in its 2017 Scoping Plan.

168. The California Supreme Court has declined to mandate, under CEQA, a non-statutory GHG threshold. Instead, the California Supreme Court has recognized that this area remains in the province of the Legislature, which has acted through directives such as SB 375. *Cleveland National Forest Foundation v. San Diego Assn. of Gov'ts* (2017) 3 Cal.5th 497 ("*SANDAG"*).

169. As explained in The Two Hundred's comment letter, and referenced academic and other studies in that letter, the top litigation targets of CEQA lawsuits statewide are projects that

---

[84] See Jennifer Hernandez, David Friedman, and Stephanie DeHerrera, In the Name of the Environment Update: CEQA Litigation Update for SCAG Region (2013-2015) (Jul. 2016), https://www.hklaw.com/files/UPloads/Documents/Alerts/Environment/InfillHousingCEQALawsuits.pdf, p. 10-12 (stating Governor Brown's 2016 conclusion that CEQA litigation reform was politically impossible because labor unions use litigation threats to "hammer" project sponsors into agreeing to enter into union labor agreements, and Building Trades Council lobbyist Caesar Diaz testimony in "strong opposition" to legislative proposal to require disclosure of the identity and interests of those filing CEQA lawsuits at the time CEQA lawsuits are filed, rather than at the end of the litigation process when seeking attorneys' fees, wherein Mr. Diaz concluded that requiring such disclosure would "dismantle" CEQA).

[85] Legislative Analyst's Office, California's High Housing Costs: Causes and Consequences, May 17, 2015, http://www.lao.ca.gov/reports/2015/finance/housing-costs/housing-costs.aspx.

[86] See *Id.*

include housing.[87] Over a three year period in the SCAG region, nearly 14,000 housing units were challenged in CEQA lawsuits, even though 98% of these units were located in already developed existing communities and 70% were located within a short distance of frequent transit and other existing infrastructure and public services. This and a referenced prior study also showed that the vast majority of CEQA lawsuits filed statewide are against projects providing housing, infrastructure and other public services and employment uses within existing communities.[88]

170. Thus, the same minority families victimized by the housing-induced poverty crisis, and forced to drive ever longer distances to qualify for housing they can afford to rent or buy are disproportionately affected by CEQA lawsuits attacking housing projects that are proximate to jobs.

171. Expanding CEQA to require only future occupants of acutely needed housing units to double- and triple-pay to get to and from work with a CEQA mitigation obligation to purchase GHG offsets to satisfy a "net zero" threshold unlawfully and unfairly discriminates against new occupants in violation of equal protection and due process.

172. Finally, CARB's "net zero" threshold fails to address the likelihood that it will actually be counterproductive because of "leakage" of California residents driven out to other states because of unaffordable housing prices.[89] Including this measure in the 2017 Scoping Plan bypasses statutory requirements to discourage and minimize "leakage"—movement of

---

(2018), https://www.hklaw.com/files/Uploads/Documents/Articles/121317_HELJ_Jennifer_Hernandez.pdf; see also Jennifer Hernandez, David Friedman, and Stephanie DeHerrera, In the Name of the Environment Update: CEQA Litigation Update for SCAG Region (2013-2015) (Jul. 2016), https://www.hklaw.com/files/UPloads/Documents/Alerts/Environment/InfillHousingCEQALawsuits.pdf; Jennifer Hernandez, David Friedman, and Stephanie DeHerrera, In the Name of the Environment: Litigation Abuse Under CEQA (August 2015), https://www.hklaw.com/publications/in-the-name-of-the-environment-litigation-abuse-under-ceqa-august-2015/

[88] *Ibid.*

[89] California experienced a net loss of 556,710 former residents to other states during 2010 to 2017. U.S. Census Bureau, Table 4. Cumulative Estimates of the Components of Resident Population Change for the United States, Regions, States, and Puerto Rico: April 1, 2010 to July 1, 2017 (NST-EST2017-04) (Dec. 2017), https://www.census.gov/data/datasets/2017/demo/popest/nation-total.html.

economically productive activities to other states or countries that have much higher GHG emissions on a per capita basis than California. Imposing "net zero" standards that end up shutting down or blocking economic activities in California results in a global increase in GHGs when those activities move to other states or countries with higher per capita GHG emissions.[90]

173. It is noteworthy that the GWSA and SB 32 "count" only GHG emissions produced within the state, and from the generation of out-of-state electricity consumed in the state. When a family moves from California to states such as Texas (nearly three times higher per capita GHG emissions) or Nevada (more than double California's per capita GHG emissions), *global* GHG emissions increase even though California's GHG emissions decrease.

174. The housing crisis has resulted in a significant emigration of families that cannot afford California housing prices, and this emigration increases global GHG emissions—precisely the type of "cumulative" contribution to GHGs that OPR explains should be evaluated under CEQA, rather than CARB's net zero GHG threshold which numerically-focuses on project-level GHG emissions and mitigation.[91]

175. The Scoping Plan's CEQA threshold is appropriately justiciable, and should be vacated for the reasons set forth herein.

3. Unlawful Per Capita GHG Targets for Local Climate Action Plans

176. California's per capita GHG emissions are already far lower than all but two states. The only state with low per capita GHG emissions that is comparable to California is New York, which has a lower per capita GHG emission level but also six nuclear power plants

[91] Philip Reese, *California Exports Its Poor to Texas, Other States, While Wealthier People Move In*, The Sacramento Bee (Mar. 5, 2017), http://www.sacbee.com/news/state/california/article136478098.html; Drew Lynch, *Californians Consider Moving Due to Rising Housing Costs, Poll Finds*, Cal Watchdog (Sept. 21, 2017), https://calwatchdog.com/2017/09/21/californians-consider-moving-due-rising-housing-costs-poll-finds/; U.S. Energy Information Agency, State Carbon Dioxide Emissions Data, October 2017, https://www.eia.gov/environment/emissions/state/.

(compared to California's one) as well as more reliable hydropower from large dams that are less affected by the cyclical drought cycles affecting West Coast rivers.[92]

177. California's current very low per capita GHG emissions are approximately 11 MMTCO2e.

178. The existing CEQA Guidelines include a provision that allows projects that comply with locally-adopted "climate action plans" ("CAPs") to conclude that project-related GHG emissions are less than significant, and thus require no further mitigation that would add to the cost of new housing projects.

179. In *Newhall*, *supra,* 62 Cal.4th at 230, the California Supreme Court endorsed CAPs, and wrote that a project's compliance with an approved CAP could be an appropriate "pathway" for CEQA compliance. No local jurisdiction is required by law to adopt a CAP, but if a CAP is adopted, then the Supreme Court has held that it must have enforceable measures to actually achieve the CAP's GHG reduction target. *SANDAG, supra,* 3 Cal.5th 497.

180. The CAP compliance pathway through CEQA was upheld in *Mission Bay Alliance v. Office of Community Invest. & Infrastructure* (2016) 6 Cal.App.5th 160. This compliance pathway provides a more streamlined, predictable, and generally cost-effective pathway for housing and other projects covered by the local CAP.

181. In stark contrast, CARB's unlawful new per capita GHG requirements effectively direct local governments—cities and counties—to adopt CAPs that reduce per capita GHG emissions from eleven to six MMTCO2e per capita by 2030, and to two MMTCO2e per capita by 2050. This mandate is unlawful.

182. First, CARB has no statutory authority to impose any 2050 GHG reduction measure in CAPs or otherwise since the Legislature has repeatedly declined to adopt a 2050 GHG target (including by rejecting earlier versions of SB 32 that included such a 2050 target), and the California Supreme Court has declined to interpret CEQA to mandate a 2050 target based on an Executive Order. *SANDAG, supra,* 3 Cal.5th at 509; *Newhall, supra,* 62 Cal.4th at 223.

[92] U.S. Energy Information Agency, State Carbon Dioxide Emissions Data, October 2017, https://www.eia.gov/environment/emissions/state/.

183. Second, the Scoping Plan attributes the vast majority of state GHG emissions to transportation, energy, and stationary source sectors over which local governments have little or no legal jurisdiction or control. A local government cannot prohibit the sale or use of gasoline or diesel-powered private vehicles, for example—nor can a local government regulate and redesign the state's power grid, or invent and mandate battery storage technology to capture intermittent electricity produced from solar and wind farms for use during evening hours and cloudy days.

184. The limited types of GHG measures that local governments can mandate (such as installation of rooftop solar, water conservation, and public transit investments) have very small—or no—measurable quantitative effect on GHG emission reductions. The 2017 Scoping Plan Appendix recommending local government action does not identify any measure that would contribute more than a tiny fraction toward reducing a community's per capita GHG emissions to six metric tons or two metric tons, respectively.

185. Additionally, under state law, local governments' authority to require more aggressive GHG reductions in buildings is subject to a cost-effectiveness test decided by the California Building Standards Commission ("CBSC")—the same CBSC that has already determined that "net zero", even for single family homes and even for just the electricity used in such homes, is *not* yet feasible or cost-effective to impose.[93]

186. Third, it is important to consider the per capita metrics that the 2017 Scoping Plan wants local governments to achieve in their localized climate action plans in a real world context. Since most of the world's energy is still produced from fossil fuels, energy consumption is still highly correlated to economic productivity and per capita incomes and other wealth-related metrics such as educational attainment and public health.[94] The suggested very low per capita

[93] California Energy Commission, 2019 Building Energy Efficiency Standards PreRulemaking Presentation - Proposed 2019 Building Energy Efficiency Standards ZNE Strategy (Aug. 24, 2017), http://docketpublic.energy.ca.gov/PublicDocuments/17-BSTD-01/TN220876_20170824T105443_82217_ZNE_Strategy_Presentation.pdf.

[94] See Mengpin Ge, Johannes Friedrich, and Thomas Damassa, 6 Graphs Explain the World's Top 10 Emitters, World Resources Institute (Nov. 25, 2014), https://wri.org/blog/2014/11/6-graphs-explain-world%E2%80%99s-top-10-emitters (see tables entitled "Per Capita Emissions for Top 10 Emitters" and "Emissions Intensity of Top 10 Emitters" showing that emissions are generally linked to GDP).

metrics in the 2017 Scoping Plan are currently only achieved by countries with struggling economies, minimal manufacturing and other higher wage middle income jobs, and extremely high global poverty rates.

187. Growing economies such as China and India bargained for, and received, permission to substantially increase their GHG emissions under the Paris Accord precisely because economic prosperity remains linked to energy use.[95] This is not news: even in the 1940's, the then-Sierra Club President confirmed that inexpensive energy was critical to economic prosperity AND environmental protection.

188. Nor has CARB provided the required economic or environmental analysis that would be required to try to justify its irrational and impractical new per capita GHG target requirements. As with CARB's project-level "net zero" CEQA threshold, the per capita CEQA expansion for CAPs does not quantify the GHG emission reductions to be achieved by this measure.

189. Finally, these targets effectively create CEQA thresholds as compliance with a CAP is recognized by the California Supreme Court as a presumptively valid CEQA compliance pathway. *Newhall, supra,* 62 Cal.4th at 230 (stating that local governments can use climate action plans as a basis to tier or streamline project-level CEQA analysis). The targets clearly establish CARB's position on what would (or would not) be consistent with the 2017 Scoping Plan and the State's long-term goals. Courts have stated that GHG determinations under CEQA must be consistent with the statewide CARB Scoping Plan goals, and that CEQA documents taking a goal-consistency approach to significance need to consider a project's effects on meeting the State's longer term post-2020 goals. Thus, these per capita targets are essentially self-implementing CEQA requirements that lead and responsible agencies will be required to use.

190. The CAP measure thus effectively eliminates the one predictable CEQA GHG compliance pathway that has been upheld by the courts, compliance with an adopted CAP. The

[95] Marianne Lavelle, *China, India to Reach Climate Goals Years Early, as U.S. Likely to Fall Far Short,* Inside Climate News (May 16, 2017), https://insideclimatenews.org/news/15052017/china-india-paris-climate-goals-emissions-coal-renewable-energy.

pathway that CARB's per capita GHG targets would unlawfully displace is fully consistent with the existing CEQA Guidelines adopted pursuant to full rulemaking procedures based on express Legislative direction.

191. In short, the 2017 Scoping Plan directs local governments to adopt CAPs—which the Supreme Court has explained must then be enforced—with per capita numeric GHG reduction mandates in sectors that local governments have no legal or practical capacity to meet, without any regard for the consequential losses to middle income jobs in manufacturing and other business enterprises, or to the loss of tax revenues and services from such lost jobs and businesses,[96] or to the highly disparate impact that such anti-jobs measures would have on minority populations already struggling to get out of poverty and afford housing.

192. While the 2017 Scoping Plan acknowledges that some local governments may have difficulty achieving the per capita targets if their communities have inherently higher GHG economic activities, such as agriculture or manufacturing, such communities are required to explain why they cannot meet the numeric targets—and withstand potential CEQA lawsuit challenges from anyone who can file a CEQA lawsuit.

193. As with CARB's project-level "net zero" CEQA threshold, CARB's new per capita GHG targets are entirely infeasible, unlawful, and disparately affect those in most need of homes they can afford with jobs that continue to exist in manufacturing, transportation, and other sectors having GHG emissions that are outside the jurisdiction and control of local governments.

[96] Just four states—Ohio, Pennsylvania, Georgia and Indiana—collectively have a population and economy comparable with California. With a combined gross product of $2.25 trillion in 2016, these four states would be the 8th largest economy in the world if considered a nation. Yet despite achieving five times more GHG emission reductions than California since 2007, in 2016 these four states had 560,000 fewer people in poverty and 871,000 more manufacturing jobs (including 200,000 new jobs from 2009 to 2017 compared with just 53,000 in California). U.S. Bureau of Labor Statistics, Monthly Total Nonfarm Employment, Seasonally Adjusted, https://www.bls.gov/data/; U.S. Bureau of Economic Analysis, Table 3. Current-Dollar Gross Domestic Product (GDP) by State, 2016:Q1-2017:Q3, https://www.bea.gov/newsreleases/regional/gdp_state/qgdpstate_newsrelease.htm; Liana Fox, The Supplemental Poverty Measure: 2016, U.S. Census Bureau Report Number: P60-261 (Sept. 21, 2017), https://www.census.gov/library/publications/2017/demo/p60-261.html; U.S. Census Bureau, 2016 American Community Survey 1-Year Estimates, Table B15001, Sex by age by educational attainment for the population 18 years and over, https://factfinder.census.gov/.

They are also inconsistent with current standards and common sense and result in unjustifiable disproportionate adverse impacts on California minorities, including Petitioners.

4. Appendix C "Vibrant Communities" Policies Incorporating Unlawful VMT, "Net Zero" and CO2 Per Capita Standards

194. Chapter 5 of CARB's 2017 Scoping Plan explains that notwithstanding the other GHG Housing Measures (*e.g.*, the VMT reduction mandated in Chapter 2), California must do "more" to achieve the 2030 Target. With this in mind, CARB purports to empower eight new state agencies—including itself—with a new, non-legislated role in the plan and project approval process for local cities and counties. This hodgepodge of unlegislated, and in many cases Legislatively-rejected, new "climate" measures is included in what the Scoping Plan calls a "Vibrant Communities" appendix.

195. Cities and counties have constitutional and statutory authority to plan and regulate land use, and related community-scale health and welfare ordinances. Cities and counties are also expressly required to plan for adequate housing supplies, and in response to the housing crisis and resulting poverty and homeless crisis, in 2017 the Legislature enacted 15 new bills designed to produce more housing of all types more quickly. These include: Senate Bills ("SB") 2, SB 3, SB 35, SB 166, SB 167, SB 540, SB 897, and Assembly Bills ("AB") 72, AB 73, AB 571, AB 678, AB 1397, AB 1505, AB 1515, and AB 1521.

196. The Legislature has periodically, and expressly, imposed new statutory obligations on how local agencies plan for and approve land use projects. For example, in recent years, the Legislature required a greater level of certainty regarding the adequacy of water supplies as well as expressly required new updates to General Plans, which serve as the "constitution" of local land use authority, to expressly address environmental justice issues such as the extent to which poor minority neighborhoods are exposed to disproportionately higher pollution than wealthier and whiter neighborhoods.

197. Local government's role in regulating land uses, starting with the Constitution and then shaped by scores of statutes, is where the "rubber hits the road" on housing: without local

government approval of housing, along with the public services and infrastructure required to support new residents and homes, new housing simply cannot get built.

198. The Legislature has repeatedly authorized and/or directed specific agencies to have specific roles in land use decisionmaking.

199. The Legislature also is routinely asked to impose limits on local land use controls that have been rejected during the legislative process, such as the VMT reduction mandates described above. The Vibrant Communities Scoping Plan appendix is a litany of new policies, many of which were previously considered and rejected by the Legislature, directing eight state agencies to become enmeshed in directing the local land use decisions that under current law remain within the control of cities and counties (and their voting residents) and not within any role or authority delegated by the Legislature.

200. Just a few examples of Vibrant Community Scoping Plan measures adopted by CARB that have been expressly considered and rejected by the Legislature or are not legal include:

(A) **Establishing mandatory development area boundaries (urban growth boundaries) around existing cities,** that cannot be changed even if approved by local voters as well as the city and county, to encourage higher density development (*e.g.*, multi-story apartments and condominiums) and to promote greater transit use and reduce VMT. An authoritative study that CARB funded, as well as other peer reviewed academic studies, show that there is no substantial VMT reduction from these high density urban housing patterns—although there is ample confirmation of "gentrification" (displacement of lower income, disproportionately minority) occupants from higher density transit neighborhoods to distant suburbs and exurbs where workers are forced to drive greater distances to their jobs.[97] Mandatory urban growth boundaries have been routinely rejected in the Legislature. See AB 721 (Matthews, 2003)

[97] UCLA Department of Urban and Regional Planning, Oriented For Whom? The Impacts of TOD on Six Los Angeles Neighborhoods (June 2, 2015), http://www.urbandisplacement.org/sites/default/files/images/spring_2015_tod.pdf.

(proposing the addition of mandatory urban growth boundaries in the land use element of municipalities' general plans).

(B) **Charging new fees for cities and counties to pay for "eco-system services"** such as carbon sequestration from preserved vegetation on open space forests, deserts, agricultural and rangelands. Taxes or fees could not be imposed on residents of Fresno or Los Angeles to pay for preservation of forests in Mendocino or watersheds around Mount Lassen unless authorized by votes of the people or the Legislature—*except* that payment of fees has become a widespread "mitigation measure" for various "impacts" under CEQA. The 2017 Scoping Plan's express approval of the "Vibrant Communities" Appendix creates a massive CEQA mitigation measure work-around that can be imposed in tandem with agency approvals of local land use plans and policies that entirely bypasses the normal constitutional and statutory requirements applicable to new fees and taxes. Since CEQA applies only to new agency approvals, this unlawful and unauthorized framework effectively guarantees that residents of newly-approved homes will be required to shoulder the economic costs of the additional "mitigation" measures. This idea of taxation has been rejected by voter initiatives such as Proposition 13 (which limits ad valorem tax on real property to 1 percent and requires a 2/3 vote in both houses to increase state tax rates or impose local special taxes) and Proposition 218 (requiring that all taxes and most charges on property owners are subject to voter approval).

(C) **Intentionally worsening roadway congestion**, even for voter-funded and CARB-approved highway and roadway projects, to "induce" people to rely more on walking, biking, and public transit, and reduce VMT. Efficient goods movement, and avoidance of congestion, on California's highways and roads is required under both federal and state transportation and air quality laws. This component of "Vibrant Communities" is another example of a VMT reduction mandate, but is even more flatly inconsistent with applicable laws and common sense. Voters have routinely approved funding for new carpool lanes and other congestion relief projects. The goods movement industry—which is linked to almost 40% of all economic activity in Southern California and is critical to agricultural and other product-based business sectors throughout

California—cannot function under policies that intentionally increase congestion.[98] CARB has itself approved hundreds of highway improvement projects pursuant to the Legislative mandates in SB 375—yet the "Vibrant Communities" appendix unilaterally rejects this by telling Californians not to expect any relief from gridlock, ever again. The Legislature and state agencies have also consistently rejected VMT reduction mandates. See SB 150 (Allen, 2017) (initially requiring regional transportation plans to meet VMT reductions but modified before passage); SB 375 (Steinberg, 2008) (early version stating bill would require regional transportation plan to include preferred growth scenario designed to achieve reductions in VMT but modified before passage).

(D) **Mileage-based road pricing strategies which charge a fee per miles driven.** These types of "pay as you drive" fees are barred by current California law, which prohibits local agencies from "imposing a tax, permit fee or other charge" in ways that would create congestion pricing programs. Vehicle Code § 9400.8. Yet CARB attempts to override a Legislative mandate via the 2017 Scoping Plan and its "Vibrant Communities" strategies.

201. Through the Vibrant Communities strategies, CARB attempts to give state agencies expansive authority and involvement in city and county decisionmaking. The 2017 Scoping Plan asserts that the Vibrant Communities strategies will reduce GHG emissions by an amount that is "necessary" to achieving California's 2030 Target. However, no effort is made by CARB to quantify the reductions it anticipates would result from injecting these agencies into local decisionmaking processes. Instead, CARB merely states that the "Vibrant Communities" appendix is a supposedly-necessary step to meet the 2030 Target.

202. The eight named state agencies CARB attempts to give unauthorized authority over local actions are:[99]

---

[98] Edward Humes, *Four Easy Fixes for L.A. Traffic*, L.A. Times (Apr. 10, 2016), http://www.latimes.com/opinion/livable-city/la-oe-humes-why-cant-trucks-and-cars-just-get-along-20160410-story.html; Eleanor Lamb, *California Eyes Future Projects to Relieve Freight Congestion,* Transport Topics (Mar. 26, 2018), http://www.ttnews.com/articles/california-eyes-future-projects-relieve-freight-congestion.

[99] Several of the eight named agencies are parent agencies, each of which has several subordinate agencies and departments. If these are counted, they collectively elevate the number of state agencies being coopted to join in CARB's local land use power grab to nearly twenty.

(1) **Business, Consumer Services and Housing Agency**, which among other subordinate agencies includes the Department of Housing and Community Development (HCD), which alone among these agencies has direct statutory responsibility for designating housing production and corresponding land use planning requirements for cities and counties;

(2) **California Environmental Protection Agency**, which is the parent agency for CARB as well as several other agencies and departments;

(3) **California Natural Resources Agency**, another parent agency of subordinate agencies and departments;

(4) **California State Transportation Agency**, most notably **Caltrans** – which the Scoping Plan would redirect from implementing their statutory responsibilities to reduce congestion and facilitate transportation on the state's highways to instead advancing CARB's "road diet" policy of intentionally increasing congestion to satisfy CARB's desire to induce more public transit ridership;

(5) **California Health and Human Services Agency**, which among other duties administers health and welfare assistance programs;

(6) **California Department of Food and Agriculture**, which among other duties regulates food cultivation and production activities;

(7) **Strategic Growth Council**, formed in 2008 by SB 732, which is tasked with "coordinating" activities of state agencies to achieve a broad range of goals but has no independent statutory authority to regulate housing or local land use plans and projects; and

(8) **Governor's Office of Planning and Research**, which has statutory responsibility to issue the CEQA Guidelines as well as "advisory" guidelines for local agency preparation of General Plans pursuant to Gov. Code § 65040.

203. The "Vibrant Communities" Appendix includes provisions that conflict with applicable law and/or have been rejected by the Legislature and cannot now be imposed by CARB through the 2017 Scoping Plan given California's comprehensive scheme of agency-allocated land use obligations (certain agencies—such as California Department of Fish and

Game, the Regional Water Quality Control Boards, and the Coastal Commission—already possess land use authority or obligations based on statutory or voter-approved schemes).

204. If CARB intends that other agencies be imbued with similar land use authority, it should ask the Legislature for such authority for those agencies, not its own Board. The "Vibrant Communities" Appendix should be struck from the 2017 Scoping Plan for this reason.

205. Less housing that is more expensive (urban growth boundary)[100], increased housing cost (CEQA mitigation measure fees), and ever-worsening gridlock resulting in ever-lengthier commutes with ever-increasing vehicular emissions and ever-reduced time at home with children, is the dystopian "necessity" built into the "Vibrant Communities" appendix.

206. Bureaucrats and tech workers in the "keyboard" economy who can work remotely, with better wages, benefits and job security that remove the economic insecurity of lifetime renter status, should be just fine. They can live in small apartments in dense cities filled with coffee shops and restaurants, rely on home delivery of internet-acquired meals and other goods, and enjoy "flextime" jobs that avoid the drudgery of the five-day work week model.

207. But for the rest of the California populace—including particularly the people (disproportionately minorities) staffing those restaurants and coffee shops, delivering those goods, providing home healthcare and building and repairing our buildings and infrastructure, and those Californians that are actually producing food and manufacturing products that are consumed in California and around the world—"Vibrant Communities" is where they can't afford to live, where they sleep in their cars during the week, where they fall into homelessness for missing rental payments because of an illness or injury to themselves or a family member.[101] For these folks, "Vibrant Communities" amounts to an increase in poverty, homelessness, and premature "despair deaths" as well as permanent drop outs from the work force.

---

[101] Alastair Gee, *Low-income workers who live in RVs are being 'chased out' of Silicon Valley streets,* The Guardian (June 29 2017), https://www.theguardian.com/us-news/2017/jun/29/low-income-workers-rvs-palo-alto-california-homeless.

208. For the foregoing reasons, the "Vibrant Communities" appendix is an unlawful and unconstitutional attempt by CARB to supplant existing local land use law and policy processes with a top-down regime that is both counterproductive and discriminatory against already-disadvantaged minority Californians, including but not limited to Petitioners.

E. CARB's Inadequate Environmental Analysis and Adverse Environmental Effects of the 2017 Scoping Plan

209. Along with the 2017 Scoping Plan, CARB prepared an EA purporting to comply with CEQA requirements.[102]

210. Under its certified regulatory program, CARB need not comply with requirements for preparing initial studies, negative declarations, or environmental impact reports. CARB's actions, however, remain subject to other provisions of CEQA. CEQA Guidelines § 15250.

211. CARB's regulatory program is contained in 17 C.C.R. §§ 60005, 60006, and 60007. These provisions require the preparation of a staff report at least 45 days before the public hearing on a proposed regulation, which report is required to be available for public review and comment. It is also CARB's policy "to prepare staff reports in a manner consistent with the environmental protection purposes of [ARB's] regulatory program and with the goals and policies of [CEQA]." The provisions of the regulatory program also address environmental alternatives and responses to comments on the EA.

212. For purposes of its CEQA review, CARB defined the project as the Proposed Strategy for Achieving California's 2030 Greenhouse Gas Target (Scoping Plan) and the recommended measures in the 2017 Plan (Chapter 2).

213. The Draft EA was released on or about January 20, 2017 for an 80-day public review period that concluded on or about April 10, 2017.

214. On or about November 17, 2017, CARB released the Final EA. CARB did not modify the Draft EA to bring it into compliance with CEQA's requirements.

[102] CARB has a regulatory program certified under Pub. Res. Code § 21080.5 and pursuant to this program CARB conducts environmental analyses to meet the requirements of CEQA.

215. The Final EA provides a programmatic analysis of the potential for adverse environmental impacts associated with implementation of the 2017 Scoping Plan. It also describes feasible mitigation measures for identified significant impacts.

216. The Final EA states that, although the 2017 Scoping Plan is a State-level planning document that recommends measures to reduce GHG emissions to achieve the 2030 target, and its approval does not directly lead to any adverse impacts on the environment, implementation of the measures in the Plan may indirectly lead to adverse environmental impacts as a result of reasonably foreseeable compliance responses.

217. The Final EA also states that CARB expects that many of the identified potentially significant impacts can be feasibly avoided or mitigated to a less-than-significant level either when the specific measures are designed and evaluated (e.g., during the rulemaking process) or through any project-specific approval or entitlement process related to compliance responses, which typically requires a project-specific environmental review.

218. The EA violated CEQA by failing to comply with its requirements in numerous ways, as described below.

1. Deficient Project Description

219. The EA's Project description was deficient because CARB did not assess the "whole of the project" as required by CEQA. The GHG Housing Measures are included in the 2017 Scoping Plan (in Chapters 2 and 5) and thus the "project" for CEQA purposes should have been defined to include potential direct and indirect impacts on the environment from the four GHG Housing Measures. Instead, CARB described the Project for CEQA purposes as the measures only in Chapter 2 of the 2017 Scoping Plan.

220. CARB has acknowledged that Chapter 5 of the 2017 Scoping Plan (which sets out the new GHG Housing Measures) was not part of what it analyzed in issuing the Scoping Plan. In CARB's words, "These recommendations in the 'Enabling Local Action' subchapter of the

Scoping Plan are not part of the proposed 'project' for purposes of CEQA review."[103] Thus, CARB admits that it did not even pretend to analyze the consequences of the provisions of Chapter 5 of the Scoping Plan.

221. The VMT reduction requirement is part of the Scoping Plan Scenario presented in Chapter 2 in the "Mobile Source Strategy".[104] Chapter 2 is included in the description of the Project in the EA but Chapter 5 is not, despite the fact that the VMT reduction mandate is found in both chapters.

222. For this reason, CARB applied an unreasonable and unlawful "project" definition and undermined CEQA's informational and decision-making purposes.

2. Improper Project Objectives

223. The Project objectives in the EA are also improperly defined in relation to the 2017 Scoping Plan, the unlawful GHG Housing Measures, and the goals explained in the 2017 Scoping Plan.[105] The EA states that the primary objectives of the 2017 Scoping Plan are:

- Update the Scoping Plan for achieving the maximum technologically feasible and cost-effective reductions in GHG emissions to reflect the 2030 target;
- Pursue measures that implement reduction strategies covering the State's GHG emissions in furtherance of executive and statutory direction to reduce GHG emissions to at least 40 percent below 1990 levels by 2030;
- Increase electricity derived from renewable sources from one-third to 50 percent;
- Double efficiency savings achieved at existing buildings and make heating fuels cleaner;
- Reduce the release of methane and other short-lived climate pollutants;

[103] Supplemental Responses to Comments on the Environmental Analysis Prepared for the Proposed Strategy for Achieving California's 2030 Greenhouse Gas Target (Dec. 14, 2017), p. 14-16, https://www.arb.ca.gov/cc/scopingplan/final-supplemental-rtc.pdf.

[104] Scoping Plan, p. 25 Table 1: Scoping Plan Scenario (listing Mobile Source Strategy (Cleaner Technology and Fuels [CTF] Scenario)).

[105] Appendix F to 2017 Scoping Plan, Final Environmental Analysis for the Strategy for Achieving California's 2030 Greenhouse Gas Target, p. 10-11, https://www.arb.ca.gov/cc/scopingplan/2030sp_appf_finalea.pdf.

- Pursue emission reductions that are real, permanent, quantifiable, verifiable and enforceable;
- Achieve the maximum technologically feasible and cost-effective reductions in GHG emissions, in furtherance of reaching the statewide GHG emissions limit;
- Minimize, to the extent feasible, leakage of emissions outside of the State;
- Ensure, to the extent feasible, that activities undertaken to comply with the measures do not disproportionately impact low-income communities;
- Ensure, to the extent feasible, that activities undertaken pursuant to the measures complement, and do not interfere with, efforts to achieve and maintain the NAAQS and CAAQS and reduce toxic air contaminant ("TAC") emissions;
- Consider overall societal benefits, including reductions in other air pollutants, diversification of energy sources, and other benefits to the economy, environment, and public health;
- Minimize, to the extent feasible, the administrative burden of implementing and complying with the measure;
- Consider, to the extent feasible, the contribution of each source or category of sources to statewide emissions of GHGs;
- Maximize, to the extent feasible, additional environmental and economic benefits for California, as appropriate;
- Ensure that electricity and natural gas providers are not required to meet duplicative or inconsistent regulatory requirements.

224. Because CARB used the unlawful "cumulative gap" methodology to calculate the emission reductions that it was required to achieve by 2030, the 2017 Scoping Plan does not meet the project objectives as described in the EA, *i.e.*, to meet the 2030 Target.

225. As explained throughout this Petition, CARB's 2017 Scoping Plan and the unlawful GHG Housing Measures are not cost-effective, are contrary to law, are not equitable to all Californians, and will increase criteria and TAC emissions preventing attainment of the NAAQS and CAAQS

226. For this reason, other alternatives to the 2017 Scoping Plan, including an alternative without the GHG Housing Measures, should have been assessed in the EA.

3. Illegal Piecemealing

227. CEQA requires an environmental analysis to consider the whole of the project and not divide a project into two or more pieces to improperly downplay the potential environmental impacts of the project on the environment.

228. CARB improperly piecemealed its 2017 Scoping Plan and the GHG Housing Measures within it from its similar and contemporaneous SB 375 GHG target update.[106] Both projects address mandated GHG reductions based on VMT and thus should have been addressed as one project for CEQA purposes.

229. In separately issuing the 2017 Scoping Plan and the SB 375 GHG target update, CARB improperly piecemealed a project under CEQA and thus the EA is inadequate as a matter of law.

4. Inadequate Impact Analysis

230. The analysis in the EA also was deficient because the EA did not analyze impacts from implementing the four GHG Housing Measures in Chapter 5, including, but not limited to, the CEQA net zero threshold, the VMT limits, and per capita GHG CAP targets, and the suite of Vibrant Communities measures.

231. Potential environmental impacts from these GHG Housing Measures overlap substantially with similar high density, transit-oriented, automobile use reduction measures included in regional plans to reduce GHGs from the land use and transportation sectors under SB 375. CARB has reviewed and approved more than a dozen SB 375 regional plans, each of which is informed by its own "programmatic environmental impact report ("PEIR").

232. Each PEIR for each regional plan has identified multiple significant adverse environmental impacts which cannot be avoided or further reduced with feasible mitigation

[106] California Air Resources Board, Updated Final Staff Report, Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets (Feb. 2018), https://www.arb.ca.gov/cc/sb375/sb375.htm.

measures or alternatives.[107] In the first regional plan adopted for the SCAG region, California's most-populous region, the PEIR compared the impacts of developing all new housing within previously-developed areas in relation to developing half of such new housing in such areas, and the other half in previously-undeveloped areas near existing major infrastructure like freeways.

233. The SCAG 2012 PEIR concluded that the all-infill plan caused substantially more unavoidable significant adverse environmental impacts in relation to the preferred plan which divided new development equally between infill and greenfield locations.[108]

234. Following public comments and refinement of the PEIR (inclusive of the addition and modification of various mitigation measures to further reduce significant adverse environmental impacts), SCAG approved the mixed infill/greenfield plan instead of the all-infill alternative. CARB then approved SCAG's plan—first in 2012 and then again in 2016—as meeting California's applicable statutory GHG reduction mandates.[109]

235. The Scoping Plan's GHG Housing Measures now direct an infill only (or mostly infill) outcome, which SCAG's 2012 PEIR assessed and concluded caused far worse environmental impacts, even though it would result in fewer GHG emissions. In other words, SCAG's PEIR—and the other regional land use and transportation plan PEIRs prepared under SB 375—all disclosed a panoply of adverse non-GHG environmental impacts of changing California's land use patterns, and shaped both their respective housing plans and a broad suite of mitigation measures to achieve California's GHG reduction mandates while minimizing other adverse environmental impacts to California.

---

[107] See SB 375 "Sustainable Communities Strategies" review page at https://www.arb.ca.gov/cc/sb375/sb375.htm, which includes links to the regional land use and transportation plans for multiple areas (which then further link to the PEIRs).

[108] SCAG, Final PEIR for the 2012-2035 RTP/SCS (April 2012), http://rtpscs.scag.ca.gov/Pages/Final-2012-PEIR.aspx.

[109] CARB Executive Order accepted the SCAG determination that its regional plan that balanced infill and greenfield housing development, and increased transit investments to encourage greater transit use without any VMT reduction mandate, would meet the GHG reduction targets mandated by law. See generally https://www.arb.ca.gov/cc/sb375/sb375.htm.

236. CARB's willful refusal to acknowledge, let alone analyze, the numerous non-GHG environmental impacts of its GHG Housing Measures in the 2017 Scoping Plan EA is an egregious CEQA violation.

237. Based on the greater specificity and the significant unavoidable adverse non-GHG environmental impacts identified in regional SB 375 plan PEIRs, the EA here clearly did not fully analyze the potential adverse environmental impacts from creating high-density, transit-oriented development that will result from the measures in the 2017 Scoping Plan, such as:

- Aesthetic impacts such as changes to public or private views and character of existing communities based on increased building intensities and population densities;
- Air quality impacts from increases in GHG, criteria pollutants, and toxic air contaminant emissions due to longer commutes and forced congestion that will occur from the implementation of the VMT limits in the 2017 Scoping Plan;
- Biological impacts from increased usage intensities in urban parks from substantial infill population increases;
- Cultural impacts including adverse changes to historic buildings and districts from increased building and population densities, and changes to culturally and religiously significant resources within urbanized areas from increased building and population densities;
- Urban agriculture impacts from the conversion of low intensity urban agricultural uses to high intensity, higher density uses from increasing populations in urban areas, including increasing the urban heat island GHG effect;
- Geology/soils impacts from building more structures and exposing more people to earthquake fault lines and other geologic/soils hazards by intensifying land use in urban areas;
- Hazards and hazardous materials impacts by locating more intense/dense housing and other sensitive uses such as schools and senior care facilities near freeways, ports, and stationary sources in urbanized areas;

- Hydrology and water quality impacts from increasing volumes and pollutant loads from stormwater runoff from higher density/intensity uses in transit-served areas as allowed by current stormwater standards;
- Noise impacts from substantial ongoing increases in construction noise from increasing density and intensity of development in existing communities and ongoing operational noise from more intensive uses of community amenities such as extended nighttime hours for parks and fields;
- Population and housing impacts from substantially increasing both the population and housing units in existing communities;
- Recreation and park impacts from increasing the population using natural preserve and open space areas as well as recreational parks;
- Transportation/traffic impacts from substantial total increases in VMT in higher density communities, increased VMT from rideshare/carshare services and future predicted VMT increases from automated vehicles, notwithstanding predicted future decrease in private car ownership;
- Traffic-gridlock related impacts and multi-modal congestion impacts including noise increases and adverse transportation safety hazards in areas of dense multi-modal activities;
- Public safety impacts due to impacts on first responders such as fire, police, and paramedic services from congested and gridlocked urban streets; and
- Public utility and public service impacts from substantial increases in population and housing/employment uses and demands on existing water, wastewater, electricity, natural gas, emergency services, libraries and schools.

238. CARB failed to complete a comprehensive CEQA evaluation of these and related reasonably foreseeable impacts from forcing all or most development into higher densities within existing urban area footprints, intentionally increasing congestions and prohibiting driving, and implementing each of the many measures described in the "Vibrant Communities" appendix. The

EA failed to identify, assess, and prescribe feasible mitigation measures for each of the significant unavoidable impacts identified above.

F. CARB's Insufficient Fiscal Analysis and Failure To Comply with the APA's Cost-Benefit Analysis Requirements

239. The APA sets out detailed requirements applicable to state agencies proposing to "adopt, amend or repeal any administrative regulation." Gov. Code § 11346.3.

240. CARB is a state agency with a statutory duty to comply with the rulemaking laws and procedures set out in the APA.

241. The APA requires that CARB, "prior to submitting a proposal to adopt, amend, or repeal a regulation to the office [of Administrative Law], shall consider the proposal's impact on business, with consideration of industries affected including the ability of California businesses to compete with businesses in other states. For purposes of evaluating the impact on the ability of California businesses to compete with businesses in other states, an agency shall consider, but not be limited to, information supplied by interested parties." Gov. Code § 11346.3(a) (2).

242. The APA further requires that "[a]n economic assessment prepared pursuant to this subdivision for a major regulation proposed on or after November 1, 2013, shall be prepared in accordance with subdivision (c), and shall be included in the initial statement of reasons as required by Section 11346.2." Gov. Code § 11346.3(a)(3).

243. CARB's new GHG Housing Measures will have an economic impact on California business enterprises and individuals in an amount exceeding fifty million dollars ($50,000,000) and therefore constitute a "major regulation" within the meaning of the APA and the California Department of Finance regulations incorporated therein. Gov. Code § 11346.3(c); 1 C.C.R. § 2000(g).

244. In adopting its 2017 Scoping Plan, CARB has failed to comply with these and other economic impact analysis requirements of the APA.

245. The 2017 Scoping Plan continues CARB's use of highly aggregated macroeconomic models that provide almost no useful information about potential costs and

impacts in industries and households. The LAO, an independent state agency, has consistently pointed out the flaws in CARB's approach since the first Scoping Plan was developed in 2008.

246. CARB's disregard of the APA's economic impact analysis requirements in issuing the 2017 Scoping Plan is only the latest example of a repeated flouting of the APA's requirements in pursuit of its pre-determined regulatory goals. The inadequacy of CARB's compliance with APA requirements has been documented in multiple LAO documents, including the following:

- In a November 17, 2008 letter to Assembly Member Roger Niello,[110] the LAO found that "ARB's economic analysis raises a number of questions relating to (1) how implementation of AB 32 was compared to doing BAU, (2) the incompleteness of the ARB analysis, (3) how specific GHG reduction measures are deemed to be cost-effective, (4) weak assumptions relating to the low-carbon fuel standard, (5) a lack of analytical rigor in the macroeconomic modeling, (6) the failure of the plan to lay out an investment pathway, and (7) the failure by ARB to use economic analysis to shape the choice of and reliance on GHG reduction measures."
- In a March 4, 2010 letter to State Senator Dave Cogdill,[111] the LAO stated that while large macroeconomic models used by CARB in updated Scoping Plan assessments can "capture some interactions among broad economic sectors, industries, consumer groupings, and labor markets," the ability of these models to "adequately capture behavioral responses of households and firms to policy changes is more limited. Additionally, because the data in such models are highly aggregated, they capture at best the behavioral responses of hypothetical "average" households and firms and do not score well in capturing and predicting the range of behavioral responses to policy changes that can occur for individual or subgroupings of households or firms. As a result, for example, the adverse jobs impacts—including job losses associated with those firms that are especially negatively impacted by the Scoping Plan—can

[110] LAO, http://www.lao.ca.gov/2008/rsrc/ab32/AB32_scoping_plan_112108.pdf.

[111] LAO, http://www.lao.ca.gov/reports/2010/rsrc/ab32_impact/ab32_impact_030410.aspx.

be hard to identify since they are obscured within the average outcome." The letter further noted multiple ways that the SP could affect jobs.

- Similarly, in a June 16, 2010 letter to Assembly Member Dan Logue,[112] the LAO found that CARB's revision to CARB's 2008 Scoping Plan analysis "still exhibits a number of significant problems and deficiencies that limit its reliability. These include shortcomings in a variety of areas including modeling techniques, identification of the relative marginal costs of different SP measures, sensitivity and scenario analyses, treatment of economic and emissions leakages, identification of the market failures used to justify the need for the regulations selected, analysis of specific individual regulations to implement certain Scoping Plan measures, and various data limitations." As a result, the LAO concluded that, contrary to CARB's statutory mandates, "The SP May Not Be Cost-Efficient." Given these and other issues, it is unclear whether the current mix and relative importance of different measures in the Scoping Plan will achieve AB 32's targeted emissions reductions in a cost-efficient manner as required."
- In a June 2017 presentation to the Joint Committee on Climate Change Policies, *Overview of California Climate Goals and Policies,*[113] and after the draft 2017 Scoping Plan had been released for public review, the LAO concluded that "To date, there have been no robust evaluations of the overall statewide effects—including on GHG reductions, costs, and co-pollutants—of most of the state's major climate policies and spending programs that have been implemented."

247. CARB's persistent failure to address the APA's economic analysis requirements, and its penchant for "jumping the gun" by taking actions without first complying with CEQA and other rulemaking requirements, also has drawn criticism from the courts.

[112] LAO, http://www.lao.ca.gov/reports/2010/rsrc/ab32_logue_061610/ab32_logue_061610.pdf.

[113] LAO, http://lao.ca.gov/handouts/resources/2017/Overview-California-Climate-Goals-Policies-061417.pdf.

248. In *Lawson v. State Air Resources Board* (2018) 20 Cal.App.5th 77, 98, 110-116 ("*Lawson*"), the Fifth District Court of Appeal, in upholding Judge Snauffer's judgment, found both that CARB "violated CEQA by approving a project too early" and that it also violated the APA. The Court explained the economic impact assessment requirements of the APA "granularly" to provide guidance to CARB for future actions and underscored that "an agency's decision to include non-APA compliant interpretations of legal principles in its regulations will not result in additional deference to the agency", because to give weight or deference to an improperly-adopted regulation "would permit an agency to flout the APA by penalizing those who were entitled to notice and opportunity to be heard but received neither." *Id.* at 113. Despite these recent warnings, CARB has chosen to proceed without complying with CEQA or the APA.

249. CARB's use of the improper "cumulative gap" methodology to determine the GHG reductions it claims are necessary for the 2017 Scoping Plan to meet the 2030 Target means that the inputs for the CARB FA were improper. The FA, which is supposed to inform policymakers and the public about the cost-effectiveness and equity of the Scoping Plan measures, is based on meeting the 621 $MMTCO_2e$ GHG "cumulative gap" reduction requirement invented by CARB.

250. In fact, the final FA adopted by CARB indicates that an earlier version was based on the asserted "need" to fill an even larger "cumulative gap" of 680 $MMTCO_2e$. This improper analysis renders the FA and the cost analysis required under the APA invalid.

G. The Blatantly Discriminatory Impacts of CARB's 2017 Scoping Plan

251. CARB has recognized that "[i]t is critical that communities of color, low-income communities, or both, receive the benefits of the cleaner economy growing in California, including its environmental and economic benefits." Scoping Plan, p. 15.

252. The GWSA specifically provides, at H&S Code § 38565, that: "The state board shall ensure that the greenhouse gas emission reduction rules, regulations, programs, mechanisms, and incentives under its jurisdiction, where applicable and to the extent feasible, direct public and private investment toward the most disadvantaged communities in California and provide an opportunity for small businesses, schools, affordable housing associations, and other community

institutions to participate in and benefit from statewide efforts to reduce greenhouse gas emissions."

253. CARB's standards, rules, and regulations also must, by statute, be consistent with the state goal of providing a decent home and suitable living environment for every Californian. H&S Code § 39601(c). This includes affordable housing near jobs for hard working, low-income minority families.

254. California produces less than one percent of global GHG emissions, and has lower per capita GHG emissions than any other large state except New York, which unlike California still has multiple operating nuclear power plants to reduce its GHG emissions.[114]

255. As Governor Brown and many others have recognized, California's climate change leadership depends not on further mass reductions of the one percent of global GHG emissions generated within California, but instead on having other states and nations persuaded to follow the example already set by California.

256. In any event, as recently demonstrated in a joint study completed by scholars from the University of California at Berkeley and regulators at the Bay Area Air Quality Management District ("BAAQMD")[115], high wealth households cause far more global GHG emissions than middle-class and poor households. The Scoping Plan ignores this undisputed scientific fact and unfairly, and unlawfully, seeks to burden California's minority and middle-class households in need of affordable housing with new regulatory costs and burdens that do not affect existing, wealthier homeowners who "already have theirs".

257. California has the nation's highest poverty rate, highest housing prices, greatest housing shortage, highest homeless population—and highest number of billionaires.[116] While it is

not the function of the courts to address economic inequalities, the federal and state Constitutions prohibit the State from enacting regulatory provisions that have the inevitable effect of unnecessarily and disproportionately disadvantaging minority groups by depriving them of access to affordable housing that would be available in greater quantity but for CARB's new GHG Housing Measures.

258. Members of hard working minority families, in contrast to wealthier white elites, currently are forced to "drive until they qualify" for housing they can afford to own, or even rent.[117] As a result, long-commute minority workers and their families then suffer a cascading series of adverse health, educational and financial consequences.[118]

259. It is well-documented and undisputed, in the record that the current housing shortage—which CARB's regulations would unnecessarily exacerbate—falls disproportionately on minorities. As stated in a United Way Study, "Struggling to Get By: The Real Cost Measure in California 2015" [119]: "Households led by people of color, particularly Latinos, disproportionately are likely to have inadequate incomes. Half (51%) of Latino households have incomes below the Real Cost Measure,[120] the highest among all racial groups. Two in five (40%) of African American households have insufficient incomes, followed by other races/ethnicities (35%), Asian Americans (28%) and white households (20%)." Put simply, approximately 80% of the poorest households in the State are non-white families.

[119] Betsy Block et al, Struggling to Get By: The Real Cost Measure in California 2015 (2016), p. 10, https://www.norcalunitedway.org/sites/norcalunitedway.org/files/Struggling_to_Get_By_3.pdf.

[120] The United Way study uses the "Real Cost Measure" to take account of a family budget to meet basic needs, composed of "costs all families must address such as food, housing, transportation, child care, out-of-pocket health expenses, and taxes." *Id.*, p. 8.

260. As noted in the same report: "Housing costs can consume almost all of a struggling household's income. According to Census Bureau data, housing (rent, mortgage, gas/electric) makes up 41% of household expenses in California. . . . Households living above the Federal Poverty Level but below the Real Cost Measure spend almost half of their income on rent (and more in many areas), and households below the Federal Poverty Level, however, report spending 80% of their income on housing, a staggering amount that leaves precious little room for food, clothing and other basics of life." *Id.*, p. 65.[121]

261. As further documented in the United Way report presented to CARB: "Recognizing that households of all kinds throughout the state are struggling should not obscure one basic fact: race matters. Throughout Struggling to Get By, we observe that people of Latino or African American backgrounds (and to a lesser extent Asian American ones) are less likely to meet the Real Cost Measure than are white households, even when the families compared share levels of education, employment backgrounds, or family structures. While all families face challenges in making ends meet, these numbers indicate that families of color face more obstacles in attempting to achieve economic security."[122]

262. Against this background, CARB's new GHG Housing Measures, which disproportionately harm housing-deprived minorities while not materially advancing the cause of GHG reductions, cannot be justified. CARB's new GHG Housing Measures, facially and as applied to the housing sector in particular, are not supported by sound scientific analysis and are in fact counterproductive. CARB's new GHG Housing Measures establish presumptive legal standards under CEQA that currently impose, as a matter of law, costly new mitigation obligations that apply only to housing projects proposed now and in the future to meet

---

[121] In addition, family wealth of homeowners has increased in relation to family wealth of renters over time and a homeowners' net worth is 36 times greater than a renters' net worth. Jesse Bricker, et al., Changes in US Family Finances from 2010 to 2013: Evidence from the Survey of Consumer Finances, 100 Fed. Reg. Bull. 4 (Sept. 2014), https://www.federalreserve.gov/pubs/bulletin/2014/articles/scf/scf.htm.

[122] *Id.* p. 75. Studies predict that the 2014-2016 dataset will show a wealth differential between homeowners and renters of 45 times. Lawrence Yun, *How Do Homeowners Accumulate Weath?*, Forbes (Oct. 14, 2015), https://www.forbes.com/sites/lawrenceyun/2015/10/14/how-do-homeowners-accumulate-wealth/#7eabbecd1e4b.

California's current shortfall of more than three million homes that experts and the Governor-elect agree are needed to meet current housing needs. Two specific examples are provided below.

263. By establishing a new "net zero" GHG CEQA significance threshold for all new projects, CARB has created a new legal obligation for such new projects to "mitigate" to a "less than significant" level all such GHG impacts. The California Air Pollution Control Officers Association ("CAPCOA"), which consists of the top executives of all of the local and regional air districts in California, has developed a well-established model for calculating GHG emissions from such new projects called The California Emissions Estimator Model ("CalEEMod").[123] This model is in widespread use throughout the state, and has been determined by the California Supreme Court to be a valid basis for estimating GHG emissions from residential projects for purposes of CEQA. *Newhall,* supra, 62 Cal.4th at 217-218.

264. CalEEMod calculates GHG emissions for 63 different types of development projects, including multiple types of residential projects. The scientific and legal framework of CalEEMod is the foundational assumption that all GHG project emissions are "new" and would not occur if the proposed project was not approved or built.

265. Within this overall framework, CalEEMod identifies GHG emissions that occur during construction (e.g., from construction vehicles and construction worker vehicular trips to and from the project site), and during ongoing project occupancy by new residents. GHG occupancy or "operational" emissions include GHG emissions from offsite electricity produced to serve the project, from onsite emissions of GHG from natural gas appliances, from on- and off-site GHG emissions associated with providing drinking water and sewage treatment services to the project, from vegetation removal and planting, and from vehicular use by project occupants on an ongoing basis. *See, e.g.*, Appendix A of CalEEMod[124]; South Coast Air Quality Management District User's Guide to CalEEMod[125].

---

[123] Available at: http://www.caleemod.com/.

[124] CalEEMod Appendix A: Calculation Details for CalEEMOd, available at: http://www.aqmd.gov/docs/default-source/caleemod/caleemod-appendixa.pdf.

[125] CalEEMod User's Guide, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4.

266. Under the CalEEMod CEQA compliance framework, if the project does not occur then the GHG emissions do not occur—notwithstanding the practical and obvious fact that people who cannot live in new housing they can afford must still live somewhere, where they will still engage in basic activities like consuming electricity, drinking water, and driving cars.

267. Under CEQA, a "significant" environmental impact is required to be "mitigated" by measures that avoid or reduce the significance of that impact by all "feasible" means. Pub. Res. Code § 21102. The CEQA Guidelines define "feasible" as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal , social and technological factors." 14 C.C.R. § 15364.

268. The first of two examples of immediate and ongoing harm relates to the increased cost of housing caused by the "net zero" threshold. Before the 2017 Scoping Plan was approved, no agency or court had ever required a "net zero" GHG threshold. The only example of a residential project that met this target involved a voluntary commitment by the project applicant to a "net zero" project, in which 49% of the project's GHG emissions were "offset" by GHG reductions to be achieved elsewhere (e.g., funding the purchase of cleaner cook stoves in Africa) and paid for by higher project costs.

269. There is no dispute that funding these types of GHG reduction measures somewhere on Earth is "feasible" taking into account three of CEQA's five "feasibility" factors (environmental, social and technological). With housing costs already nearly three times higher in California than other states, home ownership rates far lower, and housing-induced poverty rates the highest in the nation, it remains possible – in theory – to demonstrate that in the context of a given housing project, adding $15,000-$30,000 more to the price of a home to fund the purchase of cleaner cook stoves in Africa, for example, would not be "legally" or "economically" feasible.

270. This theoretical possibility of demonstrating that any particular mitigation cost results in "economic infeasibility" has not succeeded, however, for any housing project in the nearly-50 year history of CEQA. A lead agency decision that a mitigation measure is infeasible must be supported by substantial evidence in the record—effectively the burden is placed on the project applicant to prove this latest "net zero" increment of mitigation costs is simply too

expensive and will make the project "infeasible." No court has found that a housing project has met this burden. *See, e.g.*, *Uphold our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587. Further, this infeasibility evaluation applies to the applicant for the housing project, not prospective future residents—simply raising housing prices affordable only to wealthier buyers.

271. The CEQA mitigation criterion of legal infeasibility is likewise illusory when applied to the GHG mitigation measures required to achieve a "net zero" significance threshold. Although there is some judicial precedent recognizing that lead agencies cannot impose CEQA mitigation obligations outside their jurisdictional boundaries (e.g, in adjacent local jurisdictions), this precedent—like OPR's definitive regulatory conclusion that CEQA cannot be used to impose a "net zero" threshold even and specifically within the context of GHG—is directly challenged by the 2017 Scoping Plan, which cited with approval the one "net zero" GHG residential project that relied in part on offsite (off-continent) GHG reduction measures.

272. This "legal infeasibility" burden of proof also is extremely high under CEQA. For example, the California Supreme Court considered in *City of San Diego, et al. v. Board of Trustees of California State University* (2015) 61 Cal.4th 945, the University's "economic infeasibility" argument in relation to making very substantial transfer payments to local government to help fund local highway and transit infrastructure, which would be used in part by the growing student, faculty and staff for the San Diego campus. Although the Court acknowledged that the Trustees had expressly requested, and been denied, funding by the Legislature to help pay for these local transportation projects, the Court did not agree this was adequate to establish economic infeasibility under CEQA since the Trustees could have sought alumni donations or funding from other sources, or elected to stop accommodating new students in San Diego and instead grown other campuses with potentially lower costs. When CARB's "net zero" GHG measures are coupled with the "legal infeasibility" burden of proof, the result is a legal morass that frustrates the efforts of local governments to implement the Legislature's pro-housing laws and policies, to the detriment of under-housed minorities, including Petitioners.

273. The second example of immediate and ongoing harm is CARB's direct intervention in projects already in CEQA litigation by opining on the acceptable CEQA

mitigation for GHG emissions from fuel use, which typically create the majority of GHG emissions from new housing projects. In a long series of evolving regulations including most recently the 2018 adoption of new residential Building Code standards[126], and in compliance with the consumer protection and cost-effectiveness standards required for imposing new residential Building Code requirements established by the Legislature (Pub. Resources Code §§ 25402(b)(3), (c)(1); 25943(c)(5)(B)), California law requires new residences to be better insulated, use less electricity, install the most efficient appliances, use far less water (especially for outdoor irrigation), generate electricity (from rooftop solar or an acceptable alternative), and transition to future electric vehicles. These and similar measures have substantially reduced the GHG emissions from ongoing occupancy of new housing.

274. Under the CalEEMod methodology, however, gasoline and hybrid cars used by new residents are also counted as "new" GHG emissions attributed to that housing project – and these vehicular GHG emissions now account for the vast majority of a typical housing project's GHG emissions.[127]

275. In 2017, the Legislature expanded its landmark "Cap and Trade" program establishing a comprehensive approach for transitioning from fossil fuels to electric or other zero GHG emission technologies, which already includes a "wells to wheels" program for taxing oil and natural gas extraction, refinement, and ultimate consumer use.[128] CARB has explained that the Cap and Trade Program requires fuel suppliers to reduce GHG emissions by supplying low

---

[126] See California Building Standards Commission, 2018 Triennial Code Adoption Cycle, available at: http://www.bsc.ca.gov/Rulemaking/adoptcycle/2018TriennialCodeAdoptionCycle.aspx. *See also* California Energy Code, California Code of Regulations, Title 24, Part 6; Building Energy Efficiency Standards (2019 update).

[127] In the Northlake project challenged in a comment letter citing noncompliance with the 2017 Scoping Plan discussed *supra* ¶ 42, for example, total project GHG emissions after mitigation were 56,722 metric tons, of which mobile sources from vehicles comprised 53,863 metric tons. Los Angeles County, Draft Supplemental EIR (May 2017), Table 5.7-3 (p. 5.7-26), available at https://scvhistory.com/scvhistory/files/northlakehills_deir_0517/northlakehills_deir_0517.pdf

[128] A.B. 398, 2017 (California Global Warming Solutions Act of 2006: market-based compliance mechanisms: fire prevention fees: sales and use tax manufacturing exemption).

carbon fuels or purchasing allowances to cover the GHG emissions produced when the conventional petroleum-based fuels they supply are burned.

276. Specifically, as part of the formal rulemaking process for the Cap and Trade Legislation, CARB staff explained in its *Initial Statement of Reasons for the Proposed Regulation to Implement the California Cap and Trade Program*, that:

> To cover the emissions from transportation fuel combustion and that of other fuels by residential, commercial, and small industrial sources, staff proposes to regulate fuel suppliers based on the quantifies of fuel consumed by their customers. … Fuel suppliers are responsible for the emissions resulting from the fuel they supply. In this way, a fuel supplier is acting on behalf of its customers who are emitting the GHGs … Suppliers of transportation fuels will have a compliance obligation for the combustion of emissions from fuel that they sell, distribute, or otherwise transfer for consumption in California. … [B]ecause transportation fuels and use of natural gas by residential and commercial users is a significant portion of California's overall GHG emissions, ***the emissions from these sources are covered indirectly through the inclusion of fuel distributers [in the Cap and Trade program]***."(emphasis added).[129]

277. CARB's express recognition of the fact that the Cap and Trade program "covers" emissions from the consumption of fossil fuels in the Cap and Trade regulatory approval process, in marked contrast with the challenged Housing Measures in the 2017 Scoping Plan, was subject to its own comprehensive environmental and economic analysis – which in no way disclosed, analyzed, or assessed the impacts of forcing residents of new housing to pay for GHG emission reductions from their fossil fuel uses at the pump (and in electricity bills) like their already-housed neighbors, and then paying *again – double-paying* – in the form extra GHG mitigation measures for the *same emissions*, resulting in higher housing costs.

278. The 2017 Scoping Plan likewise entirely omitted any analysis of the double-charging of residents of new homes for GHG emissions from the three million new homes the state needs to build to solve the housing crisis. Simply put, CARB should not now be permitted to use what purports to be only an "advisory" 2017 Scoping Plan to disavow and undermine its

---

[129] CARB. October 2011. California's Cap-And-Trade Program Final Statement of Reasons, p. 2: https://www.arb.ca.gov/regact/2010/capandtrade10/fsor.pdf; (incorporating by reference CARB. October 28, 2010. Staff Report: *Initial Statement of Reasons for the Proposed Regulation to Implement the California Cap-and-Trade Program Part 1, Vol. 1,* pp. II-10, II-20, II-21, 11-53: https://www.arb.ca.gov/regact/2010/capandtrade10/capisor.pdf)

formal rulemaking statement for the Cap and Trade regulations, nor can CARB use this asserted "advisory" document to invent the new CEQA GHG mitigation mandates (and preclude use of Cap and Trade as CEQA mitigation) without going through a new regulatory process to amend its Cap and Trade program.

279. Whether compliance with Cap and Trade for fossil fuels used to generate electricity or power cars used by a particular project is an adequate mitigation measure for GHG under CEQA has been hotly contested in past and pending CEQA lawsuits. In *Newhall*, *supra*, 62 Cal.4th 204, one of the approved GHG compliance pathways for CEQA identified by the Court was compliance with applicable laws and regulations. That case was extensively briefed by numerous advocates (*see* Opening Brief on the Merits, *Center for Biological Diversity v. California Department of Fish and Game* (2015) 62 Cal.4th 204 (No. 5-S217763), and Consolidated Reply Brief, *Center for Biological Diversity v. California Department of Fish and Game*, (2015) 62 Cal.4th 204 (No. 9-S217763), which urged the Court to conclude as a matter of law that CEQA requires "additive" mitigation beyond what is otherwise required to comply with applicable environmental, health and safety laws.

280. Neither the appellate courts nor Supreme Court have imposed this novel interpretation of the GHG mandates imposed by CEQA as a newly discovered legal requirement lurking within this 1970 statute. As noted above, the Supreme Court declined to do so by expressly recognizing that compliance with law was one of several compliance "pathways" for addressing GHG impacts under CEQA. (*Newhall, supra,* 62 Cal.4th at 229). (*See also, Center for Biological Diversity et al. v. Department of Fish and Game* (2014) 224 Cal.App.4th 1105.)[130]

281. Consistent with this Supreme Court directive, and informed by both the Legislative history of the Cap and Trade program and by CARB's contemporaneous explanation that compliance with Cap and Trade is indeed the sole GHG mitigation required for fossil fuel use, several projects have mitigated GHG emissions from fossil fuel by relying on the legislated,

[130] This appellate court decision, which was reversed and remanded by the Supreme Court decision in the same case, is cited as evidence for the proposition that what constitutes adequate mitigation for GHG impacts under CEQA has been hotly contested in the courts.

and regulated, Cap and Trade program and similar legislative as well as regulatory mandates to reduce GHG emissions from fossil fuel. This has been accomplished through measures such as the Low Carbon Fuel Standards, which collectively and comprehensively mandate prescribed reductions in GHG emissions from fossil fuel use.

282. This approach has been expressly upheld by the Fifth District Court of Appeal in *Association of Irritated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708 ("*AIR"*). Although the project at issue was a refinery source that was itself clearly included within the category of industrial operations directly regulated by the Cap and Trade Program, opponents challenged that project's reliance on the Cap and Trade program for non-refining GHG emissions such as GHG emissions produced offsite by the electricity producers that provided power to the consumer power grid, and by vehicles used by contractors and employees engaged in refinery construction and operational activities. *See, e.g*., Appellants' Opening Brief, *AIR*, *5th Dist. Case No. F073892 (December 9, 2016) at 29 (arguing that "[c]ap-and-trade does not apply to greenhouse gas emissions from trains, trucks, and building construction . . . .") and at 34-35 (arguing that participation in the cap and trade program is inadequate mitigation for project emissions). The CEQA lead agency and respondent project applicant argued that reliance on Cap and Trade as CEQA mitigation was lawful and sufficient under CEQA. *See* Joint Respondents' Brief, *AIR*, 5th Dist. Case No. F073892 (March 10, 2017), at 52-56 (arguing that "The EIR Properly Incorporated GHG Emission Reductions Resulting From Cap-and-Trade In The Environmental Analysis").

283. The Fifth District concluded that compliance with the Cap and Trade program for the challenged project were adequate CEQA GHG mitigation. That case was then unsuccessfully challenged, and unsuccessfully petitioned for depublication, by numerous advocates that continued to assert that CEQA imposes an "additive" GHG mitigation obligation that could not be met by paying the higher fuel costs imposed by the Cap and Trade program.[131]

[131] *See* Letter from CARB to City of Moreno Valley regarding Final Environmental Impact Report for World Logistics Center, available at: https://www.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf.

284. California already has the highest gasoline prices of any state other than Hawaii. CARB has consistently declined to disclose how much gasoline and diesel prices would increase under the 2017 Cap and Trade legislation. The non-partisan LAO completed an independent analysis of this question, and in 2017 concluded that under some scenarios, gasoline would increase by about 15¢ per gallon – and in others by about 73¢ per gallon. The LAO also noted that these estimated increases in gasoline prices "are an intentional design feature of the program."[132]

285. By using CEQA mitigation mandates created by the Scoping Plan to require only the disproportionately minority occupants of critically needed future housing to double-pay (both at the pump and in the form of higher housing costs imposed as a result of CEQA mitigation for the same fuel consumption), CARB has established a disparate new financial burden that is entirely avoided by those generally whiter, wealthier, and older Californians who have the good fortune of already occupying a home.

286. Both CARB and the Attorney General have acted in bad faith, and unlawfully, in their public description of and subsequent conduct regarding the immediate effectiveness and enforcement of the 2017 Scoping Plan.

287. First, in a written staff report distributed at the December 17, 2017 hearing at which the CARB Board approved the Scoping Plan, CARB staff misled the public and its Board by pretending that the challenged Housing Measures are simply not part of the Scoping Plan at all, and thus need not be considered as part of the environmental or economic study CARB was required to complete as part of the Scoping Plan approval process. This assertion flatly contradicted an earlier description of the immediately-implementing status of these Housing Measures made in a public presentation by a senior CARB executive.

288. Next, the Attorney General repeatedly advised this Court that the challenged Housing Measures were merely "advisory" and explained "the expectation that new measures proposed in the [Scoping] plan would be implemented through subsequent legislation or

[132] LAO, https://lao.ca.gov/letters/2017/fong-fuels-cap-and-trade.pdf.

regulations." (Memorandum of Points and Authorities in Support of Demurrer to Plaintiff's Verified Petition for Writ of Mandate, Case No. 18-CECG-01494 (August 31, 2018), p. 8:18-19 ("AG Memo")). The AG Memo argued that the disparate harms caused by such measures are not ripe because such subsequent implementing legislative or regulatory actions "have yet to be taken" (Reply Memorandum in Support of Defendants California Air Resources Board and Richard Corey's Demurrer to Plaintiffs' Verified Petition for Writ of Mandate *etc.*, Case No. 18-CECG-01494(October 16, 2018), p. 2:6-7 ("AG Reply Memo"), and that Petitioners' assertions that the challenged Housing Measures would result in litigation disputes aimed at stopping or increasing the cost of housing was "wildly speculative" (AG Memo, p. 10:7). Further the Attorney General argued that the 2017 Scoping Plan "cannot be reasonably viewed as providing a valid basis for filing suit under CEQA." (AG Memo, p. 14:15) The same arguments were advanced in this Court's hearing on October 26, 2018.

289. Meanwhile, however, and virtually simultaneously with making contrary assertions to this Court, both the Attorney General and CARB were filing comment letters (precedent to CEQA lawsuits), and the Attorney General filed an amicus brief in a CEQA lawsuit, to challenge the legality of a CEQA lead agency's mitigation measure (in one case) and proposed General Plan element approval (in another case) *based on alleged failure to comply with applicable Housing Measures in the Scoping Plan.*

290. CARB's (and the Attorney General's) claims that the 2017 Scoping Plan is merely "advisory" and that its future effects are merely "speculative" (as well as its express denial at the December 2017 hearing on the 2017 Scoping Plan that the four challenged GHG Housing Measures are even part of the Plan), have been belied by the actual use of the 2017 Scoping Plan by CARB and the Attorney General themselves, as well as by third party agencies and anti-housing project CEQA litigants. Among the recent examples of the use of the Scoping Plan are the following:

A. **CARB September 7, 2018 Comment Letter:** Before even completing its Demurrer briefing to this Court, on September 7, 2018, CARB filed a comment letter criticizing the revised Final Environmental Impact Report for the World

Logistics Center project. A copy of this letter can be found at https://www.arb.ca.gov/toxics/ttdceqalist/logisticsfeir.pdf. CARB's comment letter opines that as an absolute and unambiguous matter of law, compliance with the Cap and Trade program is not a permissible mitigation under CEQA. CARB's comment dismisses as "novel" the contention that compliance with laws and regulations requiring reductions in GHG can be, and is in fact, a permissible and legally sufficient mitigation measure under CEQA. Strikingly, CARB's letter simply ignores the *Newhall* decision. As for the Fifth District's on-point decision in *AIR*, CARB's letter states (at p. 11, note 23) that, "*[i]n CARB's view this case was wrongly decided as to the Cap-and-Trade issue* . . . ." Thus, CARB in its public comments is urging permitting agencies to *disregard* court decisions on GHG issues and instead to follow CARB's supposedly "advisory" Scoping Plan policies, which it cites extensively . This type of CEQA "expert agency" letter can be used by the agency itself, if it chooses to file a lawsuit against an agency approving a project in alleged noncompliance with CEQA, or it can be used for its evidentiary value (and expert agency opinions are presumptively entitled to greater deference) by any other third party filing a CEQA lawsuit against that project, or even in another lawsuit raising similar issues provided that the CARB comment letter is submitted in the agency proceeding that is targeted by such second and subsequent lawsuits.

B. **Attorney General's September 7, 2018 Comment Letter:** Also on September 7, 2018, the Attorney General ("AG") joined CARB in criticizing the World Logistics Project's GHG analysis in a comment letter that prominently featured the 2017 Scoping Plan. A copy of this letter can be found at https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/comments-revised-sections-feir.pdf. Like CARB, the AG relied on the Scoping Plan to measure the adequacy of GHG measures under CEQA. Also like CARB, the AG sought to sidestep the Fifth District's *AIR* decision, but did so "[w]ithout commenting on

whether or not that case was rightly decided" in the AG's opinion (p. 6). The Attorney General's comment letter relies on the 2017 Scoping Plan in opining that "CEQA requires" the CEQA lead agency to "evaluate the consistency of the Project's substantial increases in GHG emissions with state and regional plans and policies calling for a dramatic reduction in GHG emissions" The AG goes on to conclude that the lead agency engaged in a "failure to properly mitigate" impacts as required by CEQA because the project's "increase in GHG emissions conflicts with the downward trajectory for GHG emissions necessary to achieve state climate goals." The AG again cites the 2017 Scoping Plan text in explaining that, unless they mandate CEQA GHG mitigation measures that go beyond compliance with applicable GHG reduction laws and regulations, "local governments would . . . not be doing their part to help the State reach its ambitious, yet necessary, climate goals." [AG letter at p. 7-11]

C. **Attorney General's November 8, 2018 Amicus Filing:** A third example is provided by the AG's November 8, 2018 filing of an "Ex Parte Application of People of the State of California for Leave to File Amicus Curiae Brief in Support of Petitioners" in *Sierra Club, et al. v. County of San Diego* (Nov. 8, 2018) No. 37-2018-00014081-CU-TT-CTL (San Diego Superior Court). A true copy of this Ex Parte Application and accompanying AG memorandum is attached hereto as **Exhibit 1**. A copy of the underlying Sierra Club petition, into which the AG has sought to inject the Scoping Plan, is attached hereto as **Exhibit 2**. In the amicus filing (Exhibit 1), the Attorney General asserts that he "has a special role in ensuring compliance with CEQA", and that he "has actively participated in CEQA matters raising issues of greenhouse gas ("GHG") emissions and climate change." (Application at 3:16, 24-25.) The challenged San Diego County Climate Action Plan actually includes and requires implementation of the 2017 Scoping Plan's "recommended" Net Zero GHG CEQA threshold for new projects, but was nevertheless challenged in this lawsuit the grounds that it did not also mandate a

reduction in Vehicle Miles Traveled because it allowed the County to approve new housing projects that fully mitigated ("Net Zero GHG") all GHG emissions but still resulted in an increase in VMT from residents living in this critically needed new housing. Petitioners in the consolidated proceedings in this case have claimed that based on the state's climate laws including the 2017 Scoping Plan, the County could not lawfully approve any amendment to its General Plan to accommodate any of the state's three million home shortfall unless such housing was higher density (e.g., apartments) and located inside or immediately adjacent to existing urban areas served by transit, because only that type of housing and location could result in the required reduction in VMT. Petitioners in these cases further identified the pending housing projects they believed could not be approved by the County. Petitioners sought (and obtained) injunctive relief to prevent such housing projects from relying on this "Net Zero" GHG Climate Action Plan as allowed by one of the CEQA compliance pathways identified by the Supreme Court in its *Newhall* decision, and identified by the Legislature itself in CEQA compliance provisions set forth in SB 375. In his amicus brief, the Attorney General repeatedly cites CARB's 2017 Scoping Plan as the legal basis for a new mandate that allegedly prohibits San Diego County (and all other counties) from meeting any part of the housing shortfall with more traditional homes (e.g., small "starter" homes and duplexes, which cost less than a third to build than higher density apartment units), or from locating these new homes anywhere other than an existing developed city or unincorporated community. The Attorney General also falsely argues that VMT reductions are mandated by other state laws; however, no law enacted by the California Legislature mandates any VMT reduction, and the Legislature has repeatedly rejected enacting such a mandate.[133]

[133] The Attorney General further argues that VMT reductions are required by SB 375, which is designed to reduce GHG (not VMT) with land use and transportation plans, even though SB 375 specifically directs CARB to develop compliance metrics and CARB has

291. CARB cannot have it both ways: it cannot coyly claim that the 2017 Scoping Plan is merely "advisory" and then fire into the end of a second round of CEQA documentation for a single project a new legal conclusion that upends the published judicial precedents of our courts. The AG similarly cannot assure this Court that it is "wildly speculative" for a CEQA lawsuit to be filed in reliance on the challenged measures in the 2017 Scoping Plan, and then six days later file an amicus in a CEQA lawsuit that does just that. If CARB wants to change Cap and Trade laws and regulations, and other GHG reduction laws and regulations applicable to fossil fuels, to make those not already fortunate enough to have housing pay both at the pump, and in their down-payment/mortgage and rent check, for "additive" GHG reductions above and beyond what their more fortunate, generally whiter, wealthier and older well-housed residents have to pay, then that is first and foremost a new mandate that can only be imposed by the Legislature given direct court precedent on this issue.

292. If such a mandate were proposed by the Legislature, a full and transparent debate about the disparate harms such a proposal would confirm that those most affected by the housing crisis, including disproportionately our minority communities, would suffer the equivalent of yet another gasoline tax on those least able to pay, and most in need of new housing. Petitioners are confident that the Legislature would not approve such a proposal.

293. Even these few examples of direct CARB and Attorney General implementation actions of the 2017 Scoping Plan to require more mitigation or block new housing demonstrate the immediate and ongoing harm of the 2017 Scoping Plan's challenged Housing Measures, which CARB and the Attorney General have opined impose higher CEQA "mitigation" costs on housing under a "net zero" GHG mitigation framework, and block otherwise lawful new housing altogether under the Scoping Plan's "VMT reduction" framework. The harms caused by these Housing Measures is not "wildly speculative"— they are already underway. They already disproportionately affect California minority communities not already blessed with wealth and

---

itself repeatedly declined to require VMT reduction compliance metrics under SB 37 as late as December of 2017 and March of 2018.

homeownership, and they are already the subject of both administrative and judicial proceedings. They are properly and timely before this Court. The following paragraphs provide additional evidence of ripeness in the context of the three other challenged Housing Measures, beyond the "Net Zero" GHG threshold and corresponding mitigation mandates described above.

294. The 2017 Scoping Plan's new numeric thresholds for local climate action plans present similarly immediate and ongoing harms to Petitioner/Plaintiffs. In its *Newhall* decision, the California Supreme Court concluded that one of the "pathways" for CEQA compliance was designing projects that complied with a local Climate Action Plan ("CAP") having the then-applicable GHG statutory reduction mandate of reducing GHG emissions to 1990 levels by 2020.

295. Housing projects that complied with a local CAP had been duly approved by the same local governments responsible for planning and approving adequate housing for our minority communities. This provided a judicially streamlined pathway for GHG CEQA compliance for housing. Local CAPs include community-scale GHG reduction strategies such as pedestrian, bicycle and transit improvements that are beyond the ability of any single housing project to invent or fully fund, and thus CAP compliance is a known and legally-defensible CEQA GHG compliance pathway. The Scoping Plan destroyed that pathway, and accordingly caused and is causing immediate harm to new housing projects that could otherwise rely on the CAP compliance pathway for CEQA.

296. There is no statutory obligation for a city or county to adopt a CAP, nor are there any regulations prescribing the required contents of a CAP; instead, a CAP's primary legal relevance to proposed new housing projects occurs within the CEQA compliance context.

297. There has been a flurry of unresolved and ongoing CEQA interpretative issues with respect to CAPs that have been and remain pending in courtrooms throughout California. For example, in the City of San Diego and the County of Sonoma, multi-year lawsuits have resulted in two judicial decisions that make clear that any jurisdiction electing to voluntarily approve a CAP must assure that the CAP has clear, adequate and enforceable measures to achieve the GHG reduction metric included in the CAP. *See Sierra Club v. County of San Diego* (2014) 231 Cal.App.4th 1152; *California Riverwatch v. County of Sonoma* (July 20, 2017) Case No.

SCV-259242 (Superior Court for the County of Sonoma)[134]; *see also Mission Bay Alliance, et. al. v. Office of Community Investment and Infrastructure, et. al.* (2016) 6 Cal.App.5th 160 (upholding the adequacy of a CAP as CEQA compliance for a new professional sports facility).

298. The new numeric GHG per capita metric that the 2017 Scoping Plan prescribes as the presumptively correct GHG reduction target for CAPs places the entire burden of achieving the state's legislated 40% reduction target by 2030, and the unlegislated 80% reduction target by 2050, on local governments, with for example a numeric GHG reduction target of 2 tons per person per year by 2050. However, as the 2017 Scoping Plan itself makes clear, the vast majority of GHG emissions derive from electric power generation, transportation, manufacturing, and other sectors governed by legal standards, technologies, and economic drivers that fall well beyond the land use jurisdiction and control of any local government. The Scoping Plan does not even quantify the GHG reductions to be achieved by local governments, in their voluntary caps or otherwise: it seeks to define and achieve the state's GHG reduction mandates with measures aimed at specific GHG emission sectors.

299. The 2018 San Diego County CAP, adopted after the County lost its first CEQA lawsuit, adopts both CARB's numeric GHG targets—and the mandate that new housing projects entirely absorb the additional cost of fully offsetting GHG emissions in compliance with the "net zero" standard by paying money to fund GHG reduction projects somewhere on earth. The San Diego CAP both proves the immediacy of the disparate mitigation cost harms of the Scoping Plan's imposition of even higher costs to housing critically needed by California's minority communities, and provides a case study in the anti-housing legal morass created by the 2017 Scoping Plan's ambiguous—and unexamined from an equity, environmental, economic disclosure or public review process—new CEQA "net zero" threshold and CAP per capita numeric standards.

[134] The trial court order in *California Riverwatch v. County of Sonoma* is cited herein as evidence for the existence of CEQA litigation challenges to local climate action plans and not as legal precedent. The order is available at: http://transitionsonomavalley.org/wp-content/uploads/2017/07/Order-Granting-Writ-7-20-17.pdf.

300. San Diego County faces its third round of CAP litigation (with the prior two rounds still ongoing in various stages of judicial remand and review) in a lawsuit filed in 2018, in which the same group of petitioners allege that the County again failed to include sufficient mandatory measures to achieve the 2017 Scoping Plan per capita GHG reduction metric because it continued to allow new housing to be built if offsetting GHG reductions were funded by the housing project in or outside the County. A copy of one such lawsuit (consolidated with others) is attached for reference as Exhibit 2. This lawsuit seeks a blanket, County-wide writ of mandate that would block "processing of permits for development projects on unincorporated County lands" unless these new housing-blocking measures are included. (See Exhibit 2 at p. 17:3-7.) The petitioners in these consolidated cases against San Diego County have further made clear that their ongoing objections to the County's CAP were so severe that they had also been compelled to file CEQA lawsuits *against individual housing projects*, and in their lawsuit, they have included a list of nearly a dozen pending housing projects that in their judgment should not be allowed to proceed. As described above, the Attorney General filed a request for leave to file an amicus brief in this case, accompanied by an amicus brief. See Exhibit 1. Based on CARB's 2017 Scoping Plan, the AG has sought to bolster to the petitioners' anti-housing CEQA lawsuits, including their claims that designated housing projects in unincorporated San Diego County cannot lawfully be approved or built based on VMT impacts, even if all GHG impacts are mitigated to "net zero."

301. This CEQA morass of extraordinary GHG reduction costs imposed only on residents of newly constructed housing, with still pending and unresolved CEQA lawsuit challenges against the CAP and specific housing projects, for GHG reductions that are not even quantified, let alone critical to California's climate leadership, is itself an ample demonstration of the disparate harms of CARB's poorly-conceived and discriminatory GHG Housing Measures.

302. The Scoping Plan's VMT reduction measure is likewise causing immediate, ongoing, and disparate harm to California's minority communities who are forced to drive ever-greater distances to find housing they can afford to buy or rent. As in the case of local climate action plans, there is no statewide statutory or regulatory mandate for reducing VMT. The

Legislature considered and rejected imposing a VMT reduction mandate, and CARB considered and rejected imposing a VMT reduction mandate as part of the regional land use and transportation planning mandated under SB 375 (first postponing its decision in December of 2017, at the same hearing CARB approved the Scoping Plan – and then definitively rejecting it in March of 2018).

303. At these hearings, CARB was informed that VMT had increased in California while transit utilization had fallen dramatically notwithstanding billions of dollars in new transit system investments. VMT reduction thus could not appropriately be included as SB 375 compliance metrics and with increases in electric and high efficiency hybrid vehicles, the correlation between VMT and GHG emissions is increasingly weak.

304. Even more than CARB's other GHG Housing Measures, the VMT reduction mandate is uniquely targeted to discriminate against minority workers. The American Community Survey ("ACS") is a project of the U.S. Census Bureau and tracks a wide range of data over time—including the ethnicity, transportation mode, and times of California commuters. The ACS data demonstrate that in the 10 year period between 2007 and 2016, 1,117,273 *more* Latino workers drove to their jobs, 377,615 *more* Asian workers drove to their jobs, and 18,590 *more* African American workers drove to their jobs.[135] During the same period, 447,063 *fewer* white workers drove to their jobs. Transit utilization increased for white and Asian workers, but fell for Latino and African American workers. During the same period, commute times lengthened substantially as more people—again disproportionately minorities—were forced to commute longer distances to housing they could afford.

305. By 2016, about 445,000 people in the Bay Area were commuting more than an hour each direction—an increase of 75% over the 2006 count of long distance Bay Area commuters. Anyone driving between the Bay Area and Central Valley during commute times vividly experiences the gridlock conditions, adverse personal health (e.g., stress, high blood

[135] David Friedman, Jennifer Hernandez, California, Greenhouse Gas Regulation, and Climate Change, Holland & Knight, Chapman University Press (2018), Table 3.7, p. 84, https://www.chapman.edu/wilkinson/_files/ghg-fn.pdf.

pressure, back pain), and adverse family welfare (e.g., missed dinners, homework assistance, and exhaustion) consequences of these commutes.

306. CARB (and the Attorney General) also have no support for their argument disputing the fact that the challenged Housing Measures disproportionately affect minority community members. As early as 2014, CARB received a comprehensive report from NextGen, a firm closely aligned with the strongest supporters of California's climate leadership, urging CARB to restructure its electric car subsidy program, which was found to be disproportionately benefitting those in Marin County and other wealthier and whiter areas that could afford to purchase costly new electric vehicles. In "No Californian Left Behind," Next Gen noted the obvious: "the overwhelming majority of Californians still use cars to get to work," including 77% who commute alone and 12% who carpool. Further, "[i]n less densely developed and rural areas like California's San Joaquin Valley, commuters often have long distances to drive between home, school, work and shopping; as a result, car ownership is often not a choice, but a necessity." Even more specifically, the report found that in Fresno County, even for workers earning less than $25,000, fewer than 3 percent of commuters take public transportation to work; in Madera County, only 0.3% of low-income workers took transit, and the results were comparable in in the rest of the San Joaquin Valley. Next Generation, *No Californian Left Behind: Clean and Affordable Transportation Options for all through Vehicle Replacement*, *http://www.thenextgeneration.org/files/No_Californian_Left_Behind_1.pdf (February 27, 2014) at p. 9. NextGen advocated a restructured vehicle program designed to equitably retire and replace the oldest most polluting cars, and to shift subsidy and incentive programs to help those who are either low income or need rural transport to obtain cleaner, lower-GHG emitting cars. (*Id.* p. 5) NextGext noted:

> "California is already a leader in advanced and high tech transportation and transit solutions. It is time we also became a leader in pragmatic solutions for a population that is sometimes left behind in these discussions: non-urban, low-income, car-dependent households."

The VMT reduction mandate in the 2017 Scoping Plan was specifically identified as CARB was fully on notice of the disparate harms caused to minority communities by its approach. In a report submitted to CARB by the climate advocacy group NextGen in February 2014, CARB was informed that Central Valley Latinos drive longer distances than any other ethnic group in any other part of California—and live in communities and households with the highest poverty rates.

307. Notwithstanding CARB's express acknowledgement in March of 2018 (and preview in December of 2017) that even the regional transportation and housing plans required by SB 375 cannot attain a VMT reduction target, CARB and its fellow "Vibrant Communities Appendix" agencies, remain committed to using CEQA to require new projects—including housing that is affordable and critically needed for California's minority communities—to pay higher costs to fund VMT reductions through CEQA.

308. As with the "net zero" GHG mitigation mandate, the immediate and ongoing effect of this VMT reduction measure is to increase housing costs to even less affordable and attainable levels for California's minority communities.

309. Even before enactment of the 2017 Scoping Plan, OPR (the Vibrant Communities agency that has the responsibility for adopting regulatory updates to CEQA) had been proposing to regulate the act of driving a car (even an electric vehicle or carpool) one mile (one VMT) as a new CEQA "impact" requiring "mitigation"— independent of whether the mile that was driven actually caused any air quality, noise, GHG, safety, or other impacts to the physical environment.

310. This expansion of CEQA was prompted in 2013, when OPR was directed by the Legislature in SB 743 to adopt a metric other than congestion-related traffic delay in transit-served "infill" areas as the appropriate transportation impact required to be evaluated and mitigated under CEQA, since these neighborhoods were intentionally being planned for higher density, transit/bike/pedestrian rather than automobile-dependent, neighborhoods. Pub. Res. Code § 21099(b).

311. In SB 743, the Legislature authorized but did not require the state Office of Planning and Research (OPR) to use VMT as the replacement metric for transit-served areas, and authorized but did not require OPR to apply an alternate transportation impact metric outside

designated urban infill transit neighborhoods. OPR responded with three separate rounds of regulatory proposals, each of which proposed expanding CEQA by making VMT a new CEQA impact, and requiring new mitigation to the extent a VMT impact was "significant." OPR further proposed a series of VMT significance thresholds, analytical methodologies, and potential mitigation measures, which varied over time but included a "road diet" and measures to discourage reducing congestion, on the theory that such congestion could somehow "induce" transit use and VMT reductions.

312. Under all three sets of OPR proposals, projects would be required to do more mitigation to reduce significant VMT impacts—by reducing VMT (i.e., reducing GHG or other air pollutants is not a valid CEQA mitigation approach for a new VMT impact). OPR received scores of comments objecting to expanding CEQA by making driving a mile a new "impact" requiring "mitigation," particularly given the disparate impact such a metric has on minority communities and the many adverse impacts to the environment, and public health and welfare, caused by the housing crisis and the state's worst-in-the-nation commutes.

313. OPR, again and repeatedly citing to the asserted need to reduce VMT to meet California's GHG reduction and climate leadership commitments, held a recent round of workshops on VMT mitigation strategies, working in close coordination with CARB's earlier and since-abandoned proposal to include VMT reductions as a required SB 375 regional transportation plan compliance measures.

314. At these workshops, OPR and its outside experts from an Oregon university conceded that VMT could likely not be "mitigated" by reducing miles driven by the future residents of any particular housing project (e.g., by adding secure bike racks or charging extra for parking), since whether people drive a mile or call an Uber—or hop on a bike or bus—is a function of available, cost- and time-effective transportation modes as well as the incomes and planned destinations of future residents. Agency workshop participants expressly acknowledged that VMT had increased 6% over 2011 levels, even though California's primary climate statutes (including many programs designed to promote transit and higher density development, and many

billions of dollars in completed transit systems improvements) were in effect during this same period.

315. These experts also conceded that with the success of on-demand ride services like Uber and Lyft, including the increasing cost-effectiveness and popularity of voucher-based on-demand rides by transit agencies in lieu of operating fixed route buses with low and still-declining utilization levels, there was *no evidence* that VMT could be substantially reduced by a particular project in a particular location as part of the CEQA review process for that project.

316. Instead, the VMT mitigation proposals shared during the workshops required that new housing pay others to operate school buses, bikeshare, and make improvements to bike and pedestrian pathways to the extent these measures could be demonstrated to reduce VMT. The suggested VMT mitigation measures had in common the payment of substantial fees (with some options suggested requiring annual payments, in perpetuity, of $5000 per apartment or home).

317. A recent academic study of VMT mitigation under CEQA likewise concedes the difficulty of a particular project achieving VMT reductions, and endorses the concept of adding to housing and other project costs payments to VMT "banks" or "exchanges" to fund third party VMT reductions – VMT reductions that occur somewhere, by someone.

318. This OPR VMT saga, like CARB's ultimate decision not to require a VMT compliance metric under SB 375, further demonstrates that the 2017 Scoping Plan's VMT reduction mandate measure – which CARB's senior executive expressly acknowledged was intended to be "self-executing" - is a fundamentally flawed "throw-away" measure that was neither acknowledged nor given an equity, environmental, or economic evaluation before being included in CARB's 2017 Scoping Plan.

319. The last of the challenged GHG Housing Measures is the Vibrant Communities Appendix, in which eight state agencies (including OPR) join with CARB in committing to undertake a series of actions to implement the approved Scoping Plan. Some of these agencies already have begun implementing the Scoping Plan, to the immediate and ongoing harm of California minority communities who are already disproportionately suffering from the housing crisis.

320. The Vibrant Communities appendix is an "interagency vision for land use, **and** for discussion" (emphasis added) of "State-Level Strategies to Advance Sustainable, Equitable Communities and Reduce Vehicles Miles of Travel (VMT)." 2017 Scoping Plan Appendix C, p. 1.

321. **First,** all of disparate and unlawful current and ongoing harms described in connection with the Scoping Plan's VMT Reduction measure apply equally to the actions of other State agencies based on the Vibrant Communities appendix measures. None have a rational basis for claiming any actual success in reducing VMT through their respective direct regulatory activities.

322. **Second,** there is no constraint in the "Vibrant Communities Appendix" preventing any of the eight state agency signatories from taking immediate steps to directly enforce these "land use" policies, while claiming to "work together to achieve this shared vision and to encourage land use and transportation decisions that minimize GHG emissions." 2017 Scoping Plan Appendix C, p. 2.

323. OPR's VMT expansion of CEQA, discussed above, is an example of an agency action to reduce VMT and GHG that is at least subject to formal rulemaking procedures and is thus not yet being "implemented."

324. In contrast, in June of 2018, a combination of four Vibrant Communities Appendix implementing agencies joined by one other agency[136] announced that they would henceforth implement – without benefit of any further Legislative or regulatory action –the "December 2017 Scoping Plan directive". This announcement was made at the San Francisco Bay Area Regional Meeting announcing the "California's 2030 Natural and Working Lands Climate Change Implementation Plan." Consistent with the anti-housing bias built into CARB's GHG Housing Measures, these agencies collectively promised to avoid "conversion of land for development."

[136] The five agencies are: the California Environmental Protection Agency, the California Natural Resources Agency, CARB, the California Department of Food and Agriculture, and the Coastal Conservancy.

325. These five agencies made no exception for developing housing, even for housing that CARB has already concluded as part of the SB 375 regional plan process meets California's legislated GHG emission reduction requirements. These agencies likewise made no exception for transportation or other critical infrastructure, even if consistent with local and regional plans, even if approved by federal or state agencies other than this five-agency consortium, even if within an approved city limit, and even if approved by voters. *Simply put, these agencies – which have combinations of funding, permitting, planning and enforcement obligations – have signaled that they are not going to approve new development on land that is not already developed.*

326. The sole reed upon which this vast new legal prohibition rests is the 2017 Scoping Plan, and more specifically the Vibrant Communities Appendix. See SF Bay Area Regional Meeting, *California's 2020 Natural and Working Lands Climate Change Implementation Plan*, available at http://resources.ca.gov/wp-content/uploads/2018/08/SF-Bay-Area-NWL-meeting-presentation-6.18.pdf.

327. Less than 6% of California is urbanized, and each city and county is charged by state law with adopting a General Plan that must accommodate the housing, transportation, and infrastructure needs of its existing and planned future residents. Under SB 375, these local land use plans are effectively consolidated into regional transportation and land use plans that must accommodate future population and economic growth as well as meet CARB targets for reducing GHG from the land use sector. Every regional Sustainable Communities Strategy ("SCS") plan includes some combination of housing, infrastructure (including transportation improvements), schools and other land uses that are carefully and deliberatively sited within each jurisdiction's boundaries – and adopted only after each local government first complies with CEQA and completes an extensive public notice, comment, and hearing process before appointed and elected officials.

328. The decision of the California Department of Fish & Wildlife ("CDFW") to simply stop issuing permits for housing and related infrastructure projects that have already been approved by local elected officials, after community input, in compliance with all applicable laws—and have further already been approved by CARB, as part of the SB 375 regional plan

approval process—is a blatant example an announced harm being committed against housing by a state agency in furtherance of CARB's 2017 Scoping Plan.

329. **Third**, consistent with normal practice for lawsuits that include a claim that the respondent agency has failed to comply with CEQA, Petitioners elected to prepare the administrative record that is relevant to the disposition of this CEQA cause of action. The Legislature has specifically prescribed the content of the CEQA administrative record, which includes in part: "Any other written materials relevant to the respondent public agency's compliance with this division or to its decision on the merits of the project" and "all . . . internal agency communications, including staff notes and memoranda relating to the project." Pub. Res. Code § 21167.6(c)(10).

330. Petitioners timely sought the administrative record from CARB, and in another normal practice for CEQA lawsuits submitted requests filed under the California Public Records Act ("CPRA") to each of the Vibrant Communities Appendix agencies in relation to each agency's Scoping Plan and Vibrant Communities Appendix, and VMT or other Scoping Plan documents.

331. Many months later, only incomplete responses have been provided by CARB (which sought to limit the administrative record in this case to select excerpts from its Scoping Plan docket).

332. Several of the Vibrant Communities Appendix agencies, including CDFW, OPR, parent and affiliated agencies of each (Natural Resources Agency and Strategic Growth Council), and CalSTA, responded with minimal documents and instead asserted that the requested documents were exempt from disclosure under the CPRA because they could result in public "controversy."

333. One of these partially-responsive agencies admitted that the withheld documents involved the highest level of state government, and included legislative proposals. All of these partially-responsive agencies declined a second letter request to disclose the withheld documents, or provide a privilege log describing each withheld document and the reason for its concealment.

334. There is no centralized or otherwise public repository of Vibrant Communities Appendix agency documents that disclose to the public their current, planned, or future activities with respect to implementing the Scoping Plan. There is likewise no centralized or otherwise public repository of which implementing activities are being (or will be) directly undertaken, and which will not be undertaken without future rulemaking or authorizing legislation.

335. From just the "direct" implementation activities noted above—and in particular CARB's intervention in an ongoing CEQA project-level review to opine on GHG mitigation requirements in a manner that is contrary to published judicial opinions, and CDFW's announced intention to cease authorizing activities that would convert land to development with no exception for new housing or related infrastructure that is already included in approved General Plans, infrastructure plans, voter-approved bonds, or CARB-approved Sustainable Communities Strategies implementing SB 375, is ample evidence of the immediate and ongoing new costs and regulatory obstacles already being imposed by these agency Scoping Plan implementing actions.

336. CARB's GHG reduction compliance metric is arbitrary, not supported by science, has no rational basis, and is racially discriminatory. In California's GHG and climate leadership laws, the Legislature did not prescribe any specific measurement methodology or compliance metric for meeting California's GHG reduction goals. The methodology and metrics that CARB has chosen completely ignore massive GHG emissions that occur when California's forests burn, as has tragically occurred at a large scale for several of the past years, notwithstanding estimates that just one major forest fire wipes out an entire year of GHG reductions achieved by CARB's regulatory actions.[137]

337. Similarly, CARB does not count—or require reductions of—GHG emissions associated with imported foods or other goods, or with a multitude of other activities such as airplane trips. However, every time a California resident (or job) leaves California, CARB counts that as a GHG reduction—even though the top destinations for the hundreds of thousands of

[137] David Friedman, Jennifer Hernandez, California, Greenhouse Gas Regulation, and Climate Change, Holland & Knight, Chapman University Press (2017), p. 60-61, https://www.chapman.edu/wilkinson/_files/ghg-fn.pdf.

Californians who have migrated to lower cost states in recent years, notably including Texas, Arizona and Nevada—have per capita GHG emissions that are more than double the emissions those same individuals would have if they remained in California.

338. Climate change and GHG emissions are a global challenge, and nearly tripling the GHG emissions of a California family that needs to move to Texas or Nevada to find housing they can afford to rent or buy, increases global GHG.

339. It may be that there are other environmental priorities favored by CARB and its allies that justify policies that are in fact resulting in the displacement and relocation of California's minority communities, that reduce the state's population, and that eliminate higher energy production jobs like manufacturing that traditionally provided a middle class income (and home ownership) to a hard worker without a college degree. These discriminatory anti-minority policies cannot, however, be scientifically, politically, or legally justified in the name of global reductions of GHG.

340. CARB's International Policy Director on climate, former Obama administration senior climate team Lauren Sanchez, admitted that the GHG reduction metrics used by CARB – that simply and completely ignores the increased global GHG emissions from forcing Californians to live in high GHG states to find housing they can afford to buy with commute times that did not damage driver health, family welfare, and the environment - were "flawed" at the recent (October 2018) Environmental Law Conference in Yosemite. This admission rebuts the politically shocking and legally invalid assertion that it is constitutional for CARB to implement racially discriminatory measures (because CARB's discriminatory objective is merely to force minority Californians to either try to live in housing they cannot afford located nowhere near their job, or migrate to another state).

341. The 2017 Scoping Plan is required to reduce California's share of *global* GHG emissions, but it completely ignores massive emission sources that are controversial within the environmental community (e.g. managing California's massive wildfire risks which result in GHG emissions that dwarf CARB's regulatory GHG reductions, based on what the non-partisan

Little Hoover Commission reported in February 2018 as a century of forest mismanagement including clashes between environmental agencies). [138]

342. The 2017 Scoping Plan also completely ignores other massive GHG emissions attributed to the behavior of wealthier Californians (e.g., airplane rides, and consumption of costly imported consumer products).[139] Instead, as summarized a Chapman University Research Brief, CARB has administered California's climate laws with actions such as the 2017 Scoping Plan that drive up the fundamental costs of living for ordinary Californians—housing, electricity, transportation—and thereby drive more people (and disproportionately minorities) into poverty, and out of the state.[140]

343. The 2017 Scoping Plan fails even the most rudimentary "rational basis" constitutional test, and it is being implemented today by organizations and agencies including CARB that are driving up housing costs and blocking housing projects today. To cause this much pain and hardship to this many people, and to place the greatest burdens on those already disparately harmed by the housing crisis, is unconscionable. It is also ongoing, illegal, and unambiguously intentional, for CARB to impose these "flawed" GHG reduction metrics that cause disparate harms to racial minorities living in California.

344. The foregoing paragraphs describe agency actions that are exacerbating the State's extreme poverty, homelessness and housing crisis while *increasing* global GHG emissions by driving Californians to higher per capita GHG states.[141]

345. CARB's new GHG Housing Measures, individually and collectively, on their face and as applied, deprive Petitioners, including but not limited to RODRIGUEZ, MURILLO and PEREZ, and other historically-disadvantaged minorities, of the fundamental right to live in communities that are free from arbitrary, government-imposed standards whose inevitable effect is to perpetuate their exclusion from participation in the housing markets in or near the communities in which they work. CARB's new GHG Housing Measures, individually and collectively, on their face and as applied, have a disparate adverse impact on Petitioners, including but not limited to RODRIGUEZ, MURILLO and PEREZ, and other historically-disadvantaged minorities, as compared to similarly-situated non-minorities who currently enjoy affordable access to housing near their workplaces.

346. CARB's new GHG Housing Measures, on their face and as applied to the sorely-needed development of new, affordable housing, are arbitrary and not rationally related to the furtherance of their purported regulatory goal of reducing overall GHG emissions.

H. CARB'S GHG Housing Measures Are "Underground Regulations" and Ultra Vires

347. A regulation is defined as "every rule, regulation, order, or standard of general application or the amendment, supplement, or revision of any rule, regulation, order, or standard adopted by any state agency to implement, interpret, or make specific the law enforced or administered by it, or to govern its procedure." Gov. Code § 11342.600.

348. State agencies are required to adopt regulations following the procedures established in the APA and are prohibited from issuing and enforcing underground regulations. Gov. Code § 11340.5. Under the APA, an underground regulation is void.

349. Each of CARB's new GHG Housing Measures are being implemented by CARB, and other state and local agencies, without further rulemaking or compliance with the APA. The GHG Housing Measures are underground regulations requiring APA compliance, and cannot be

---

housing-costs-poll-finds/; U.S. Energy Information Agency, State Carbon Dioxide Emissions Data, October 2017, available at https://www.eia.gov/environment/emissions/state/.

lawfully implemented absent authorizing Legislation or formal rulemaking (inclusive of environmental and economic review as required by the APA).

350. CARB's new GHG Housing Measures infringe on areas reserved for other State agencies in two ways:

A. Senate Bill ("SB") 97 directs OPR to develop CEQA significance thresholds via the CEQA Guidelines. OPR's update does not include the Scoping Plan's presumptive CEQA GHG threshold. CARB was expressly allowed by the Legislature in SB 97 to adopt a CEQA significance threshold only in the context of updates to the CEQA Guidelines, which must undergo a rigorous rulemaking process. CARB has acted *ultra vires* and contrary to the express command of the Legislature in adopting its recommended CEQA significance threshold in the Scoping Plan.

B. California has adopted new building standards, which are designed to assure that new building code requirements are cost effective (with payback to the consumer). "Net zero" new home building standards were not included. CARB has no Legislative authority to bypass and frustrate this consumer protection law by using CEQA as a workaround to require "net zero".[142]

351. In articulating and publishing its new GHG Housing Measures, CARB has not complied with the APA's rulemaking procedures and requirements. As a consequence, CARB's new GHG Housing Measures are unlawful underground regulations, and should be held to be void and of no effect.

FIRST CAUSE OF ACTION

(Fair Employment and Housing Act, Gov. Code § 12955 *et seq.*)

352. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-351 above, as well as in paragraphs 358-458.

[142] See generally California Department of Housing and Community Development, State Housing Law Program Laws and Regulations, http://www.hcd.ca.gov/building-standards/state-housing-law/state-housing-laws-regulations.shtml.

353. The Fair Employment and Housing Act (Gov. Code , § 12955 *et seq.*) ("FEHA") provides, *inter alia*, that: "It shall be unlawful . . . (l) To discriminate through public or private land use practices, decisions, and authorizations, because of race, color, . . national origin, source of income or ancestry."

354. CARB's new GHG Housing Measures, on their face and as applied, constitute public land use practices decisions and/or policies subject to the FEHA.

355. CARB's new GHG Housing Measures actually and predictably have a disparate negative impact on minority communities and are discriminatory against minority communities and their members, including but not limited to Petitioners RODRIGUEZ, MURILLO, and PEREZ.

356. CARB's new GHG Housing Measures and their discriminatory effect have no legally sufficient justification. They are not necessary to achieve (nor do they actually tend to achieve) any substantial, legitimate, nondiscriminatory interest of the State, and in any event such interests can be served by other, properly-enacted standards and regulations having a less discriminatory effect.

357. Because of their unjustified disparate negative impact on members of minority communities, including Petitioners, CARB's new GHG Housing Measures violate the FEHA, and should be declared unlawful and enjoined.

SECOND CAUSE OF ACTION

(Federal Housing Act and HUD Regulations, 42 U.S.C. § 3601 *et seq.*; 24 C.F.R. Part 100)

358. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-357 above, as well as paragraphs 368-458.

359. The Federal Housing Act (42 U.S.C. § 3601 *et seq.*) ("FHA") was enacted in 1968 to combat and prevent segregation and discrimination in housing. The FHA's language prohibiting discrimination in housing is broad and inclusive, and the purpose of its reach is to replace segregated neighborhoods with truly integrated and balanced living patterns.

360. In formal adjudications of charges of discrimination under the FHA over the past 20-25 years, the U.S. Department of Housing and Urban Development ("HUD") has consistently

concluded that the FHA is violated by facially neutral practices that have an unjustified discriminatory effect on the basis of a protected characteristic, regardless of intent.

361. Pursuant to its authority under the FHA, HUD has duly promulgated and published nationally-applicable federal regulations implementing the FHA's Discriminatory Effects Standard at 24 C.F.R. Part 100 (*see* 78 Fed.Reg. 11460-01 (February 15, 2013)) ("HUD Regulations"). These HUD Regulations continue to apply, and have the force and effect of law.

362. HUD Regulations provide, *inter alia*, that liability under the FHA may be established "based on a practice's discriminatory effect . . . even if the practice was not motivated by a discriminatory intent." 24 C.F.R. § 100.500.

363. HUD Regulations further provide that: "A practice has a discriminatory effect where it actually or predictably results in a disparate impact on a group of persons or perpetuates segregated housing patterns because of race, color, . . . or national origin."

364. CARB's GHG Housing Measures actually and predictably result in a disparate impact on members of minority communities, including but not limited to Petitioners, and perpetuates segregated housing patterns because of race, color, and/or national origin within the meaning of the FHA and HUD Regulations.

365. Because of the discriminatory effect of CARB's GHG Housing Measures, CARB has the burden of proving that these GHG Housing Measures do not violate the FHA as interpreted and implemented through the HUD Regulations.

366. CARB has not met, and cannot meet, its burden of trying to justify the discriminatory effect of its challenged GHG Housing Measures, which are not necessary to achieve the stated goals, which could and should be pursued through other measures having a less discriminatory effect.

367. Because CARB's GHG Housing Measures have an unjustified discriminatory effect on members of minority communities, including Petitioners, they violate the FHA as implemented though HUD Regulations. Consequently, CARB's GHG Housing Measures should be declared unlawful and enjoined, and Petitioners are entitled to other and further relief pursuant to 42 U.S.C. § 1983.

THIRD CAUSE OF ACTION

(Denial of Due Process, Cal. Const. Art. I, § 7; U.S. Const. Amd. 14, § 1)

368. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-367 above, as well as paragraphs 373-448.

369. Petitioners have a right to be free of arbitrary State regulations that are imposed without having first been presented to the public through duly-authorized rulemaking processes by Legislatively-authorized State agencies.

370. CARB's new GHG Housing Measures, individually and collectively, will inevitably cause serious harm to the ability of Petitioners and other members of disadvantaged minority communities to gain access to affordable housing, and have a disproportionate adverse impact on them.

371. CARB's new GHG Housing Measures are not rationally calculated to further the State's legitimate interest in reducing GHG emissions, on their face or as applied to housing projects in California. Instead, CARB's new GHG Housing Measures are both arbitrary and counterproductive in terms of actually achieving their purported goals of GHG emission reductions.

372. For these reasons, CARB's GHG Housing Measures have been issued in violation of, and constitute substantive violations of, the Due Process Clauses of the California and United States Constitutions. (Cal. Const. Art. 1, § 7; U.S. Const. Amd. 14, § 1,)

FOURTH CAUSE OF ACTION

(Denial of Equal Protection, Cal. Const. Art. I, § 7, Art. IV § 16; U.S. Const. Amd. 14, § 1)

373. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-372 above, as well as 382-458.

374. Non-discriminatory access to housing is a fundamental interest for purposes of evaluating regulations under the equal protection provisions of the California Constitution. Art. I, § 7 and Art. IV, § 16.

375. Non-discriminatory access to housing is a fundamental interest for purposes of evaluating regulations under the equal protection clause of the United States Constitution. U.S. Const. Amd. 14, § 1.

376. CARB's GHG Housing Measures disproportionately affect members of minority communities, including Petitioners RODRIGUEZ, MURILLO and PEREZ, by making affordable housing unavailable to them, as compared with non-minority homeowners unaffected by the new GHG regulations, while imposing arbitrary, counter-productive State regulations and standards.

377. Race and ethnicity are suspect classes for purposes of evaluating regulations under the equal protection provisions of the California Constitution. Art. I, § 7 and Art. IV, § 16.

378. Race and ethnicity are suspect classes for purposes of evaluating regulations under the equal protection clause of the United States Constitution. U.S. Const. Amd. 14, § 1.

379. Petitioners warned CARB about the racially discriminatory aspects of the Scoping Plan prior to CARB's finalizing and issuing the Scoping Plan. Despite Petitioners' warning, CARB disregarded these impacts and issued the Scoping Plan without changes. On information and belief, CARB did so with the intent to disproportionately cause harm to racial minorities, including minority communities of which Petitioners are members.

380. CARB's GHG Housing Measures violate the equal protection provisions of the California Constitution because they make access to new, affordable housing a function of race.

381. CARB's GHG Housing Measures violate the equal protection clause of the United States Constitution because they make access to new, affordable housing a function of race.

FIFTH CAUSE OF ACTION

(Violations of CEQA, Pub. Res. Code § 21000 *et seq.* and CEQA Guidelines, 14 C.C.R. § 15000 *et seq.*)

382. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-381 above, as well as paragraphs 395-458.

383. CARB violated CEQA by approving the 2017 Scoping Plan in violation of the Act's requirements and by certifying a legally deficient environmental analysis.

384. CARB did not write its Final EA in plain language so that members of the public could readily understand the document.

385. CARB did not assess the "whole of the project" as required by CEQA. The GHG Housing Measures are included in the 2017 Scoping Plan and thus the "project" for CEQA purposes should have included potential direct and indirect impacts on the environment from the four GHG Housing Measures. CARB did not include an analysis of the four GHG Housing Measures in the EA.

386. CARB did not base its Final EA on an accurate, stable, and finite project description. The EA did not include the four GHG Housing Measures in its project description. For this reason CARB applied an unreasonable and unlawful "project" definition and undermined CEQA's informational and decision-making purposes. The project description was misleading, incomplete, and impermissibly vague.

387. CARB did not properly identify the Project objectives in its EA.

388. CARB's unlawful use of the "cumulative gap" methodology created multiple legal deficiencies in the EA, including in the project description, project objectives, and impact analysis. Had CARB used the appropriate project objective—reducing GHG 40% below the 1990 California GHG inventory by 2030—the estimated 1% of GHG reductions (1.79 tons per year) achieved by the GHG Housing Measures would have been entirely unnecessary, and all disparate and unlawful adverse civil rights, environmental, housing, homelessness, poverty, and transportation consequences of the GHG Housing Measures could have been avoided.

389. At most, CARB could have clearly identified its "cumulative gap" methodology as an alternative to the project that would have further reduced GHG emissions beyond the SB 32 statutory mandate, to further inform the public and decisionmakers of the comparative impacts and consequences of SB 32's legislated GHG reduction mandate, and the more substantial GHG reductions sought by CARB staff. CARB's failure to use the SB 32 statutory mandate of achieving 40% GHG reduction from 1990 levels as of 2030 is a fatal legal flaw.

390. CARB also failed to adequately evaluate the direct, indirect, and cumulative environmental impacts of the 2017 Scoping Plan in its Final EA, even after commenters identified

numerous review gaps in their comments on the Draft EA. As discussed above, CARB was fully on notice of the scale and nature of the impacts associated with the GHG Housing Measures based on CARB's review and approval of more than a dozen regional plans to intensify housing densities near transit, and improve public transit, from all of California's most significant population centers; each of these regional plans identified multiple unavoidable significant adverse environmental impacts from implementation of current plans. The deficiencies in the Final EA include but are not limited to the following:

- Aesthetic impacts such as changes to public or private views and character of existing communities based on increased building intensities and population densities;
- Air quality impacts from increases in GHG, criteria pollutants, and toxic air contaminant emissions due to longer commutes and forced congestion that will occur from the implementation of the VMT limits in the 2017 Scoping Plan;
- Biological impacts from increased usage intensities in urban parks from substantial infill population increases;
- Cultural impacts including adverse changes to historic buildings and districts from increased building and population densities, and changes to culturally and religiously significant resources within urbanized areas from increased building and population densities;
- Urban agriculture impacts from the conversion of low intensity urban agricultural uses to high intensity, higher density uses from increasing populations in urban areas, including increasing the urban heat island GHG effect;
- Geology/soils impacts from building more structures and exposing more people to earthquake fault lines and other geologic/soils hazards by intensifying land use in urban areas;
- Hazards and hazardous materials impacts by locating more intense/dense housing and other sensitive uses such as schools and senior care facilities near freeways, ports, and stationary sources in urbanized areas;

- Hydrology and water quality impacts from increasing volumes and pollutant loads from stormwater runoff from higher density/intensity uses in transit-served areas as allowed by current stormwater standards;
- Noise impacts from substantial ongoing increases in construction noise from increasing density and intensity of development in existing communities and ongoing operational noise from more intensive uses of community amenities such as extended nighttime hours for parks and fields;
- Population and housing impacts from substantially increasing both the population and housing units in existing communities;
- Recreation and park impacts from increasing the population using natural preserve and open space areas as well as recreational parks;
- Transportation/traffic impacts from substantial total increases in VMT in higher density communities, increased VMT from rideshare/carshare services and future predicted VMT increases from automated vehicles, notwithstanding predicted future decrease in private car ownership;
- Traffic-gridlock related impacts and multi-modal congestion impacts including noise increases and adverse transportation safety hazards in areas of dense multi-modal activities;
- Public safety impacts due to impacts on first responders such as fire, police, and paramedic services from congested and gridlocked urban streets; and
- Public utility and public service impacts from substantial increases in population and housing/employment uses and demands on existing water, wastewater, electricity, natural gas, emergency services, libraries and schools.

391. As stated above, although the Scoping Plan's CEQA threshold is not binding on a lead agency, it nevertheless has immediate evidentiary weight as the expert conclusion of the state's expert GHG agency. Thus, the Scoping Plan's CEQA threshold is appropriately justiciable, and should be vacated for the reasons set forth herein.

392. As a result of these defects in the Final EA, CARB prejudicially abused its discretion by certifying an EIR that does not comply with CEQA and by failing to proceed in the manner required by law.

393. Petitioners objected to CARB's approvals of the GHG Housing Measures prior to the close of the final public hearings on CARB's 2017 Scoping Plan and raised each of the legal deficiencies asserted in this Petition.

394. Petitioners have performed all conditions precedent to the filing of this Petition, including complying with the requirements of Pub. Res. Code section 21167.5 by serving notice of the commencement of this action prior to filing it with this Court.

SIXTH CAUSE OF ACTION

(Violations of APA, Gov. Code § 11346 *et seq.*)

395. Petitioners hereby re-allege and re-incorporate herein by reference the allegations of paragraphs 1-394 above, as well as paragraphs 405-458.

396. Under the APA and other applicable law, CARB is required to comply with regulations issued by the Department of Finance ("DOF") before issuing a "major regulation." Specifically, the APA (Gov. Code § 11346.3(c)) requires that CARB prepare a standardized regulatory impact assessment ("SRIA") in a form, and with content, that meets requirements set by the DOF in its separate regulations (1 C.C.R. § 2000 *et seq.*).

397. CARB's GHG Housing Measures constitute a major regulation subject to the APA's requirement that such regulations be promulgated in compliance with DOF regulations.

398. Section 2003 of DOF regulations (1 C.C.R. § 2003(a)) ("Methodology for Making Estimates") provides that, "[i]n conducting the SRIA required by Section 11346.3", CARB "shall use an economic impact method and approach that has all of the following capabilities:

(1) Can estimate the total economic effects of changes due to regulatory policies over a multi-year time period.

(2) Can generate California economic variable estimates such as personal income, employment by economic sector, exports and imports, and gross state product, based on inter-

industry relationships that are equivalent in structure to the Regional Industry Modeling System published by the Bureau of Economic Analysis.

(3) Can produce (to the extent possible) quantitative estimates of economic variables that address or facilitate the quantitative or qualitative estimation of the following.

(A) The creation or elimination of jobs within the state;

(B) The creation of new businesses or the elimination of existing businesses within the state;

(C) The competitive advantages or disadvantages for businesses currently doing business within the state;

(D) The increase or decrease of investment in the state;

(E) The incentives for innovation in products, materials, or processes; and

(F) The benefits of the regulations, including but not limited to benefits to the health, safety, and welfare of California residents, worker safety, and the state's environment and quality of life, among any other benefits identified by the agency."

399. DOF regulations require that DOF's "most current publicly available economic and demographic projections, which may be found on the department's website, shall be used unless the department approves the agency's written request to use a different projection for a specific proposed major regulation." 1 C.C.R. § 2003(b).

400. DOF regulations also provide that: "An analysis of estimated changes in behavior by businesses and/or individuals in response to the proposed major regulation shall be conducted and, if feasible, an estimate made of the extent to which costs or benefits are retained within the business and/or by individuals or passed on to others, including customers, employees, suppliers and owners." 1 C.C.R. § 2003(f).

401. In grafting its new GHG Housing Measures onto the 2017 Scoping Plan, CARB has failed to comply with the APA, including DOF regulations applicable to CARB.

402. More significantly, and consistent with the LAO's repeated findings that the CARB analysis methodology fails to provide sufficiently detailed information about impacts to individuals, households and businesses, CARB's 2017 Scoping Plan completely ignores the fact

that California has the greatest inequality in the United States, and that energy costs, loss of energy-intensive jobs and housing costs related to Scoping Plan policies play a major role in that unwanted outcome. To fulfill its statutory mandates, CARB must start by recognizing that, as meticulously documented in a United Way Study, more than 30% of all California households lack sufficient means to meet the real cost of living in the state.

403. In addition, as described above, by using the unlawful "cumulative gap" methodology to calculate the GHG reductions it claims are needed in the 2017 Scoping Plan, CARB improperly created inputs for the FA that render the entire document invalid.

404. In its present form, the Scoping Plan embodies multiple violations of the APA and should be set aside as unlawful and void.

SEVENTH CAUSE OF ACTION

(Violations of the California Global Warming Solutions Act, Health & Safety Code § 38500 *et seq.*)

405. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-404 above, as well as paragraphs 413-458.

406. The GWSA provides in pertinent part that, in promulgating GHG regulations, CARB "shall do all of the following:

(1) Design the regulations, including distribution of emissions allowances where appropriate, in a manner that is equitable, seeks to minimize costs and maximize the total benefits to California, and encourages early action to reduce greenhouse gas emissions.

(2) Ensure that activities undertaken to comply with the regulations do not disproportionately impact low-income communities.

(3) Ensure that entities that have voluntarily reduced their greenhouse gas emissions prior to the implementation of this section receive appropriate credit for early voluntary reductions.

(4) Ensure that activities undertaken pursuant to the regulations complement, and do not interfere with, efforts to achieve and maintain federal and state ambient air quality standards and to reduce toxic air contaminant emissions.

(5) Consider cost-effectiveness of these regulations.

(6) Consider overall societal benefits, including reductions in other air pollutants, diversification of energy sources, and other benefits to the economy, environment, and public health."

407. In responses to Petitioners' comments on the 2017 Scoping Plan, CARB has acknowledged that Chapter 5 of the Scoping Plan (which sets out the new GHG Housing Measures) was not part of what it analyzed in issuing the Scoping Plan. In CARB's words, "These recommendations in the 'Enabling Local Action' subchapter of the Scoping Plan are not part of the proposed 'project' for purposes of CEQA review."[143] Thus, CARB admits that it did not even pretend to analyze the consequences of the provisions of Chapter 5 of the Scoping Plan.

408. CARB's assertion that the new GHG Housing Measures set out in Chapter 5 of the Scoping Plan do not constitute "major regulations" is belied by their content and the legal and regulatory setting in which they were issued, as described above.

409. Each scoping plan update must also identify for each emissions reduction measure, the range of projected GHG emission reductions that result from the measure, the range of projected air pollution reductions that result from the measure, and the cost-effectiveness, including avoided social costs, of the measure. H&S Code § 38562.7.

410. The 2017 Scoping Plan contains no such analysis for CARB's new GHG Housing Measures. The Plan lists potential emission reductions from the "Mobile Source Strategy" which includes the VMT reduction requirements, but does not analyze proposed emission reductions, projected air pollution reductions, or cost-effectiveness of the other measures.

411. CARB's new GHG Housing Measures, as set out in its 2017 Scoping Plan, were issued in violation of some or all of the specific statutory requirements set out in the GWSA, as described above.

[143] Supplemental Responses to Comments on the Environmental Analysis Prepared for the Proposed Strategy for Achieving California's 2030 Greenhouse Gas Target (Dec. 14, 2017), p. 14-16, https://www.arb.ca.gov/cc/scopingplan/final-supplemental-rtc.pdf.

412. As a consequence, CARB's new GHG Housing Measures were adopted in a manner that is contrary to law, and should be set aside.

EIGHTH CAUSE OF ACTION

(Violations of the Health & Safety Code, § 39000 *et seq.*, including the California Clean Air Act, Stats. 1988, ch. 1568 (AB 2595))

413. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-412 above, as well as paragraphs 437-458.

414. California has ambient air quality standards ("CAAQS") which set the maximum amount of a pollutant (averaged over a specified period of time) that can be present in outdoor air without any harmful effects on people or the environment.

415. CAAQS are established for particulate matter ("PM"), ozone, nitrogen dioxide ("NO_2"), sulfate, carbon monoxide ("CO"), sulfur dioxide ("SO_2"), visibility-reducing particles, lead, hydrogen sulfide ("H_2S"), and vinyl chloride.

416. In California, local and regional authorities have the primary responsibility for control of air pollution from all sources other than motor vehicles. H&S Code § 39002.

417. Under the California Clean Air Act ("CCAA"), air districts must endeavor to achieve and maintain the CAAQS for ozone, carbon monoxide, sulfur dioxide, and nitrogen dioxide by the earliest practicable date. H&S Code § 40910. Air districts must develop attainment plans and regulations to achieve this objective. *Id.*; H&S Code § 40911.

418. Each plan must be designed to achieve a reduction in districtwide emissions of five percent or more per year for each nonattainment pollutant or its precursors. H&S Code § 40914(a). CARB reviews and approves district plans to attain the CAAQS (H&S Code § 40923; 41503) and must ensure that every reasonable action is taken to achieve the CAAQS at the earliest practicable date (H&S Code § 41503.5).

419. If a local district is not effectively working to achieve the CAAQS, CARB may establish a program or rules or regulations to enable the district to achieve and maintain the CAAQS. H&S Code § 41504. CARB may also exercise all the powers of a district if it finds the

district is not taking reasonable efforts to achieve and maintain ambient air quality standards. H&S Code § 41505.

420. Fresno County is part of the San Joaquin Valley Air Pollution Control District ("SJVAPCD"). The SJVAPCD is currently nonattainment/severe for the CAAQS for ozone and nonattainment for PM.

421. The vast majority of California is designated nonattainment for the CAAQS for ozone and PM.

422. Nitrogen oxides, including NO_2, CO, and volatile organic compounds ("VOCs") are precursor pollutants for ozone, meaning they react in the atmosphere in the presence of sunlight to form ozone.

423. PM is a complex mixture of extremely small particles and liquid droplets found in the air which can cause serious health effects when inhaled, including asthma and other lung issues and heart problems. Some particles are large enough to see while others are so small that they can get into the bloodstream. PM is made up of PM_{10} (inhalable particles with diameters 10 micrometers and smaller) and $PM_{2.5}$ (fine inhalable particles with diameters 2.5 micrometers and smaller).

424. PM emissions in California and in the SJVAPCD increased in 2016 as compared to prior years.

425. As detailed above, the VMT reduction requirements in the 2017 Scoping Plan will result in increased congestion in California.

426. Increasing congestion increases emissions of multiple pollutants including NO_x, CO, and PM. This would increase ozone and inhibit California's ability to meet the CAAQS for ozone, NO_2, and PM, among others.

427. Because CARB intends to achieve the VMT reduction standard by intentionally increasing congestion, which will increase emissions of criteria pollutants such as NO_2 and PM, CARB is violating its statutory duty to ensure that every reasonable action is taken to expeditiously achieve attainment of the CAAQS.

428. In addition to a responsibility under the CCAA to meet the CAAQS, CARB has a statutory duty under the Health & Safety Code to ensure that California meets the National Ambient Air Quality Standards ("NAAQS") set by the EPA.

429. Like the CAAQS, the NAAQS are limits on criteria pollutant emissions which each air district must attain and maintain. EPA has set NAAQS for CO, lead, NO_2, ozone, PM, and SO_2.

430. CARB is designated the air pollution control agency for all purposes set forth in federal law. H&S Code § 39602. CARB is responsible for preparation of the state implementation plan ("SIP") required by the federal Clean Air Act ("CAA") to show how California will attain the NAAQS. CARB approves SIPs and sends them to EPA for approval under the CAA. H&S Code § 40923.

431. While the local air districts have primary authority over nonmobile sources of air emissions, adopt rules and regulations to achieve emissions reductions, and develop the SIPs to attain the NAAQS (H&S Code § 39602.5), CARB is charged with coordinating efforts to attain and maintain ambient air quality standards (H&S Code § 39003) and to comply with the CAA (H&S Code § 39602).

432. CARB also must adopt rules and regulations to achieve the NAAQS required by the CAA by the applicable attainment date and maintain the standards thereafter. H&S Code § 39602.5. CARB is thus responsible for ensuring that California meets the NAAQS.

433. SJVAPCD is nonattainment/extreme for the ozone NAAQS and nonattainment for $PM_{2.5.}$

434. The vast majority of California is nonattainment for the ozone NAAQS and much of California is nonattainment for PM_{10}.

435. It is unlawful for CARB to intentionally undermine California's efforts to attain and maintain the NAAQS by adopting measures in the 2017 Scoping Plan that will increase NOx and PM by intentionally increasing congestion in an attempt to lower VMT to purportedly achieve GHG emission reductions.

436. In adopting the VMT reduction requirements in the 2017 Scoping Plan, CARB is violating its statutorily mandated duty in the Health & Safety Code to attain and maintain the NAAQS, and preventing the local air districts from adequately discharging their duties under law to do everything possible to attain and maintain the NAAQS.

NINTH CAUSE OF ACTION

(Violations of the APA - Underground Regulations, Gov. Code § 11340 – 11365)

437. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-436 above, as well as paragraphs 442-458.

438. As explained above, the GHG Housing Measures are standards of general application for state agencies and standards to implement and interpret the 2017 Scoping Plan and the reductions in GHG emissions it is designed to achieve.

439. The four GHG Housing Measures in CARB's 2017 Scoping Plan are underground regulations in violation of APA standards requiring formal rulemaking.

440. As to the CEQA net zero GHG threshold specifically, the Legislature directed OPR to adopt CEQA guidelines as regulations and CEQA itself requires that public agencies that adopt thresholds of significance for general use must do so through ordinance, resolution, rule, or regulations developed through a public review process. CEQA Guidelines § 15064.7(b). Thus, any state agency that purports to adopt CEQA guidelines must do so via regulations, following the full formal rulemaking process in the APA.[144]

441. CARB has not adopted the GHG Housing Measures through a public review process and thus it violates the APA.

[144] *California Building Industry Ass'n v. Bay Area Air Quality Mgmt. Dist.* (2016) 2 Cal.App. 5th 1067 (stating that air district adoption of CEQA guidelines, including GHG thresholds of significance, must be adopted as regulations, including with public notice and comment, and are not mere advisory expert agency opinion).

TENTH CAUSE OF ACTION

(Ultra Vires Agency Action, Code of Civil Proc. §1085)

442. Petitioners hereby re-allege and incorporate herein by reference the allegations contained in paragraphs 1-441 above.

443. In adopting the 2017 Scoping Plan, including the GHG Housing Measures, CARB has acted beyond its statutorily delegated authority and contrary to law.

CEQA Net Zero GHG Threshold

444. The 2017 Scoping Plan would apply a CEQA net zero GHG emissions threshold to all CEQA projects. CEQA applies to the "whole of a project", which includes construction activities, operation of new buildings, offsite electricity generation, waste management, transportation fuel use, and a myriad of other activities.

445. This threshold is unlawful under *Newhall, supra,* 62 Cal.4th 204, and other current California precedent affirming that compliance with law is generally an acceptable CEQA standard. This includes, but is not limited to, using compliance with the cap-and-trade program as appropriate CEQA mitigation for GHG and transportation impacts. *Association of Irritated Residents v. Kern County Bd. of Supervisors* (2017) 17 Cal.App.5th 708.

446. This threshold is also unlawful under OPR's GHG CEQA rulemaking package which stated that there was not a CEQA threshold requiring no net increase in GHG emissions (i.e., no one molecule rule). *See* "Final Statement of Reasons for Regulatory Action", Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97, Dec. 2009, p. 25 ([n]otably, section 15064.4(b)(1) is not intended to imply a zero net emissions threshold of significance. As case law makes clear, there is no "one molecule rule" in CEQA. (CBE, *supra,* 103 Cal.App.4th 120)").

Regulating In An Attempt to Achieve the 2050 GHG Emission Reduction Goal

447. CARB also acted ultra vires by attempting to mandate GHG Housing Measures that purportedly would help California achieve the 2050 GHG reduction goal in Executive Order S-3-05.

448. CARB has no Legislative authority to regulate towards achieving the 2050 goal, a GHG emission reduction target which has not been codified and which the Legislature has repeatedly refused to adopt. Mandating actions in an attempt to reach the 2050 goal is outside CARB's statutory authority under the GWSA which only contains GHG emission reduction standards for 2020 and 2030.

449. The Legislative Analyst's Office has stated that, based on discussions with Legislative Counsel, it is unlikely that CARB has authority to adopt and enforce regulations to achieve more stringent GHG targets. LAO report, p. 7.

VMT Reduction Requirements

450. In addition, the VMT reduction standards mandated in the Scoping Plan are ultra vires and beyond CARB's statutory authority.

451. The Legislature rejected legislation as recently as 2017 requiring VMT reductions/standards.

452. The only agency authorized to consider VMT under CEQA is OPR under SB 743. OPR's proposed SB 743 regulations are going through a formal rulemaking process now and CARB cannot jump the gun and, with zero statutory authority, adopt VMT regulations in the 2017 Scoping Plan.

SB 97 and OPR Promulgation of CEQA Guidelines

453. Similarly, the only method by which the Legislature authorized OPR (with CARB's permissive but not mandatory cooperation) to adopt new CEQA significance thresholds is via updates to the CEQA Guidelines.

454. OPR has not included CARB's new GHG Housing Measures in its proposed new Guidelines, and CARB has no authority to make an "end run" around the rulemaking process established by the Legislature.

New Building Code Requirements

455. The Legislature has enacted new consumer protection requirements, including new building standards, designed to assure that new building code requirements are cost effective.

CARB's "net zero" new home building standard was not included in these new building standards.

456. CARB has no Legislative authority to impose new "net zero" building standards.

457. CARB's new "net zero" building standards are contrary to, and will substantially frustrate, the Legislature's purpose in adopting new building code requirements.

458. CARB's decision to adopt the 2017 Scoping Plan and the GHG Housing Measures within it was also fraught with procedural defects, including violations of the APA, CEQA, and GWSA, as explained above. These procedural defects are further actions that are *ultra vires* and were taken contrary to law.

PRAYER FOR RELIEF

WHEREFORE Petitioners THE TWO HUNDRED, including LETICIA RODRIGUEZ, TERESA MURILLO and EUGENIA PEREZ, request relief from this Court as follows:

A. For a declaration, pursuant to Code of Civil Procedure § 1060, that the following GHG regulations and standards, as set out in CARB's Scoping Plan, are unlawful, void, and of no force or effect:

- The Vehicle Miles Traveled ("VMT") mandate.
- The Net Zero CEQA threshold
- The CO2 per capita targets for local climate action plans for 2030 and 2050

//

//

//

//

//

- The "Vibrant Communities" policies in Appendix C.

B. For a writ of mandate or peremptory writ issued under the seal of this Court pursuant to Code of Civil Procedure § 1094.5 or in the alternative § 1085, directing Respondents to set aside the foregoing provisions of the Scoping Plan and to refrain from issuing any further GHG standards or regulations that address the issues described in subsection A. above until such time as CARB has complied with the requirements of the APA, CEQA, and the requirements of the Due Process and Equal Protection clauses of the California and United States Constitutions;

C. For permanent injunctions restraining Respondents from issuing any further GHG standards or regulations that address the issues described in subsection A. above until such time as CARB has complied with the requirements of the APA, CEQA, and the requirements of the Due Process and Equal Protection clauses of the California and United States Constitutions;

D. For an award of their fees and costs, including reasonably attorneys' fees and expert costs, as authorized by Code of Civil Procedure § 1021.5, and 42 U.S. Code section 1988.

E. That this Court retain continuing jurisdiction over this matter until such time as the Court has determined that CARB has fully and properly complied with its Orders.

F. For such other and further relief as may be just and appropriate.

Dated November 21, 2018

Respectfully submitted,

HOLLAND & KNIGHT LLP

Attorneys for Plaintiffs/Petitioners
THE TWO HUNDRED, LETICIA RODRIGUEZ, TERESA MURILLO, GINA PEREZ, *et al.*

VERIFICATION

I, Jennifer L. Hernandez, am one of the attorneys for, and am a member of, THE TWO HUNDRED, an unincorporated association, Plaintiffs/Petitioners in this action. I am authorized to make this verification on behalf of THE TWO HUNDRED and its members named herein. I have read the foregoing FIRST AMENDED VERIFIED PETITION FOR WRIT OF MANDATE; COMPLAINT FOR DECLARATORY AND INJUNCTIVE RELIEF and know the contents thereof. I am informed and believe and on that ground allege that the matters stated therein are true. I verify the foregoing Petition and Complaint for the reason that Plaintiffs/Petitioners named in the Petition/Complaint are not present in the county where my office is located.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 21st day of November, 2018, at San Francisco, California.

CHAIRWOMEN INMAN AND NICHOLS, AND MEMBERS OF THE CALIFORNIA TRANSPORTATION COMMISSION AND CALIFORNIA AIR RESOURCES BOARD

Re: CARB 2018 Progress Report on California's Sustainable Communities and Climate Protection Act

Dear Chairwomen and Members:

We are honored to represent The 200, a distinguished group of California's civil rights leaders who have spent their entire careers – with some careers spanning more than 50 years – fighting racial discrimination by public agencies blind to the disparate harm to minority communities caused by the policy preferences advanced by the political elite of their day.

The 200 formed to respond to California's extreme poverty, homelessness, and housing crisis with a simple objective: homeownership must be attainable for California's minority workers and families. Homeownership has been recognized as the most effective means of entering and remaining in the middle class, but for decades minority communities were "redlined" – by discriminatory lending, insurance, zoning, and other government-imposed or sanctioned barriers – and denied access to the better health, education, economic security, and welfare benefits that derive from home ownership.

The California Air Resources Board (CARB) is the latest in a long line of public agencies to use purportedly race-neutral goals to unlawfully discriminate against California's minority communities. The 200 has filed a civil rights lawsuit against four anti-housing measures in CARB's 2017 Scoping Plan, including its expansion of CEQA, its mandated reduction in vehicle miles travelled (VMT), and its "Vibrant Communities Appendix C" which includes multiple new barriers to building housing that California's minority workers can actually afford to buy. A copy of that lawsuit, which includes a detailed description of CARB's discriminatory conduct, is included as Attachment A to this letter. That lawsuit seeks to compel CARB to rescind the four challenged housing measures, and to halt implementation of any Scoping Plan action not expressly required by legislation or existing regulations until a comprehensive environmental and economic assessment is completing that documents the cost and environmental consequences of Scoping Plan measures on existing Californians.

The 200 filed a second lawsuit against several of the other state agencies that comprise the "Vibrant Communities" implementing agencies (referenced in Footnote 9 of the above-referenced CARB report) declined to disclose documents responsive to our Public Records Act request, claiming that such documents would be too "controversial" and should thus be concealed under the deliberative process privilege, to compel disclosure of the withheld documents. A copy of this lawsuit is included as Attachment B to this letter.

CARB has distorted and mismanaged California's climate mandates into a regressive regime that has and will continue to worsen the state's poverty, homelessness, and housing crises. More than 1,000,000 Californians have moved out of California because of high housing costs, and most of them – our children, our grandchildren, and our treasured teachers and valued craftsmen – move to states like Texas, Nevada and Arizona, all of which have much higher per capita greenhouse gas emissions than California. With its unique brand of math and metrics, CARB has managed to achieve the twin objectives of harming our young minority workforce while actually increasing global GHG emissions. A one-page summary of the GHG "math" behind CARB's proposed agenda to engage in still more study of how and where to build critically needed housing and mandate reductions in VMT is included as Attachment C, and a detailed study of California's GHG reduction programs in relation to the GHG reduction progress made by other countries and states, as well as a focused examination on the disparate racial and regional impacts of CARB's GHG reduction programs, is included as Attachment D.

Because this is a joint meeting of the California Transportation Commission and the California Air Resources Board, we address our comments to each agency below:

California Transportation Commission.

We first take this opportunity to commend the staff of the California Transportation Commission, which timely and completely responded to our California Public Records Act (CPRA) request. We have not named CTC as a party to our CPRA lawsuit, but regret to report that CalSTA is a party based on that agency's decision to conceal responsive documents, including the fact that these issues were considered at the highest level of state government and consideration of potential legislation. Neither of these reasons is a lawful basis for concealing public records.

We next want to commend CTC for its work in managing California's complex transportation systems in compliance with your agency's statutory obligations, including support for voter-approved transportation projects and funding priorities, and for your tradition of working collaboratively with and respecting the legal obligations of the state's regional transportation authorities, as well as cities and counties.

California Air Resources Board.

First, CARB's 2018 Progress Report is a wish list of power over local land use generally, and mandating reductions in VMT in particular, that CARB sought, but did not receive, from the Legislature.

Second, the Report also demonstrates CARB's ongoing and intentional discrimination against California's minority communities.

The detailed reasons for both of these conclusions are set forth in the attachments to this letter, such as The 200's lawsuit against CARB, and are not repeated here.

Four points warrant highlighting for the combined attention of CTC/CARB.

1. CARB Has Zero Legal Authority to Mandate Reductions In Vehicle Miles Travelled (VMT), and Its Efforts to Do So Are Both Unlawful and Discriminatory

CARB and its environmental (open space and species protection, and more recently climate) allies have long sought legislative authority to mandate reductions in VMT. There is zero evidence, available anywhere in the world and anywhere in history, that a growing population with more jobs can ever be accommodated while reducing VMT. On the contrary, there is ample evidence, including in reports submitted to CARB by climate advocacy organizations like NextGen, that for lower income and rural workers – who are disproportionately minorities – public transit is not a practicable option, and cleaner automobiles – electric and fuel efficient cars, and equitable replacement of the state's oldest and most polluting cars – is the "right" climate solution for California's majority-minority workforce.

In sharp contrast to CARB's invented VMT reduction mandate "metric" dominating this SB 150 report, the Legislature has repeatedly, and expressly, rejected imposing a VMT mandate on California communities:

- The earliest versions of SB 375 included a VMT reduction mandate, which was quickly deleted in subsequent versions of that bill. SB 375 requires GHG reductions, not VMT reductions.

- The first versions of SB 743 also included a VMT reduction mandate, which was likewise deleted. Through the CEQA Guidelines, a different state agency was directed to develop a metric other than traffic delay in high quality transit-served areas – and one such possible metric was VMT. The CEQA Guidelines have in fact not been amended, and the Legislature did not direct that separate agency to adopt a VMT at all, or any alternative metric, outside such transit-served areas.

- The first version of SB 150, the Legislation directing CARB to develop this report, likewise started with a mandated VMT reduction that was separate and apart from CARB's GHG reduction mandate. VMT was again rejected in the enacted version of SB 150.

- In fact, SB 1014 is only Legislation requiring consideration of VMT, and it establishes a framework for evaluating GHG per VMT (with electric and more fuel-efficient cars having lower GHG per VMT), for app-based ride companies like Uber and Lyft. Neither this bill, nor any other, authorizes any California agency to mandate reductions in VMT.

- Similarly, the Legislature has repeatedly rebuffed "Vibrant Communities" top-down state land use mandates like imposing statewide urban growth boundaries, or directing one or more state agencies (other than the Coastal Commission) to assume responsibility for permitting local land use and transportation plans statewide. CARB does have an assigned role in reviewing regional Sustainable Communities Strategies under SB 375, and has as part of that statutory role itself declined to impose a VMT reduction target that is independent of a GHG reduction target just a few months ago, in March of 2018 – four months after approving the 2017 Scoping Plan CARB now cites as the basis for requiring a VMT reduction mandate. The SB 375 Target Update process included extensive and collaborative studies that showed, among other conclusions, why VMT was not a reliable or necessary metric for achieving GHG reduction targets. The SB 375 Target Update also included numerous studies, and scores of comments from stakeholders, explaining why VMT reductions were not feasible with a growing population and jobs base. (The 200 spoke in support of the updated GHG reduction SB 375 targets at the CARB meeting approving these standards, in March of 2018.)

It is not surprising that the Legislature has declined to mandate VMT reductions, or otherwise enshrine CARB or any other state agency as a new statewide Coastal Commission in charge of local land use and transportation approvals in California's complex and diverse communities.

Simply put, those who drive the farthest are priced out of more proximate homes, and are disproportionately minorities. Many live in poverty or near-poverty, and have – as NextGen reported to CARB – no option to driving to their jobs. NextGen urged CARB to reorient its electric car incentives that had disproportionately favored wealthy Tessla buyers in Marin and other coastal enclaves, who live closer to work – and in any event are wealthy enough to have food delivered and children shuttled by drivers who aren't part of their household. NextGen advocated incentives for getting more electric cars and infrastructure into lower income areas, and for accelerating equitable retirement/replacement of the oldest and most polluting vehicles on the road. CARB has made some progress toward achieving these goals, but is insisting on ever-escalating VMT reductions in a concealed math exercise that defies common sense given our emphasis on electric vehicle fleets. This "CARB Math" is discussed further in Part 4 below.

2. CARB's Transportation Vision is Infeasible, and Discriminatory

CARB's fixation on reducing VMT makes the act of being in a car for a mile – even in an electric car or a carpool – an assault on California's climate leadership. CARB wants to achieve its VMT reduction mandate by making people walk or bike, or ride a bus (or for a tiny fraction of California commuters, ride a ferry or rail).

CARB's Report shows that transit ridership is generally down in California regions, and transportation mode shifts continue to rapidly evolve. Electric scooters and bikes have become a viable business model in some of California's densest communities, while app-based and on-demand carpooling, rideshare, and driver options have emerged as a popular and effective (for at least some trips, some of the time) transportation option. None of these transportation options existed or had been deployed at scale when SB 375 was enacted and therein decreed that quality transit service meant four buses, operating at 15 minute intervals, on fixed routes during peak hours (with similar prescriptive mandates for weekend bus service).

Deployment of partially and eventually more fully automated vehicles, technology improvements that lower costs and increase ranges for electric vehicles, public private partnerships between transit agencies and hundreds of new transportation service and technology companies, and other evolutions in transportation, continue at a remarkable pace. Hostile to all VMT, however, CARB is attempting to lock in land use and transportation patterns for the next century with technology that existed two centuries ago – fixed-route buses, trains and boats.

Fixed route bus lines – especially the four-bus (and typically six or more bus driver shifts) routes required to provide the required SB 375 frequency of bus ridership – cost transit agencies (and taxpayers) millions of dollars to maintain. On-demand ride services, including carpool and other multi-passenger systems, provide more nimble, fast, and far less costly transportation options for those who cannot "walk or bike" between home and work. Transit agencies have begun using these evolving transportation services, including both agency-run services and public-private partnership voucher-based systems, with often excellent, effective, and equitable transportation service results; however, this actual and cost-effective transportation mode does not equate to a VMT reduction and has been openly and repeatedly scorned by CARB staff.

Rail (light and heavy) and ferry service have also expanded, but California's notoriously burdensome procedural requirements have typically resulted in a 20-year delay (and hundreds of millions of cost increases) in actually delivering substantial new transportation infrastructure. CARB's Report enthusiastically endorses yet another "study" of the daily transportation catastrophe suffered by our increasingly (and disproportionately minority) number of "supercommuters," while doing absolutely nothing to expedite the time or reduce the cost in delivering effective transportation solutions to today's suffering workers.

California's existing land use patterns, with or without evolving into greater density, also make fixed route transit systems exceptionally burdensome and impractical. Again as CARB well

knows, several studies have confirmed that riding transit takes nearly twice as long as a point-to-point car trip (single occupancy, carpool, or app-based car service). This is not to deny the critical role buses, and fixed rail and ferry service, play as effective transit solutions for some jobs for some residents some of the time. However, 6,000 times more jobs are accessible in a 30-minute commute by car than bus in the LA region, and that existing land use dispersal is a reality, and in a region with a growing population and jobs base that means more VMT.

CARB is a state air quality agency: it is not responsible for making transportation, housing, or employment solutions work for any people anywhere in California. CARB is clearly blind to the needs of working Californians in minority communities, although it periodically gives a nod to the poor and homeless with offers of modest direct funding for limited programs.

CARB ignores, however, the role that the automobile plays for working Californians. As noted by the University of Southern California's most experienced land use law professor, George Lefcoe, "Automobiles are the survival mechanism for low-income people." Numerous other studies, including poverty and housing segregation studies completed by the Obama administration and non-partisan think tanks like the Brookings Institute, confirm that families with a car have a much better future: cars make it easier to hold a job that pays for housing and other needs, cars make it easier to keep kids in school and get medical attention, and this housing, employment, health and educational security means a level of financial stability that families without cars simply cannot match – not in California, and not nationally.

If the Legislature wants to mandate VMT reductions, then it can sort through scores of racial, class, job type, regional, and transportation alternative considerations. Nearly 40% of our economy is linked to Port-related trade and transportation: is this sector slashed even if electric trucks become viable? A Stanford study confirmed that construction workers spend the highest percentage of their incomes on transportation: driving trucks to and from construction job sites, to and from locations and during work hours and with equipment that is simply not consistent with fixed route public transit – so are construction workers uniquely harmed, or do they get a total pass, from CARB's VMT reduction mandate? For urgently needed housing projects, CARB and other agencies have suggested imposing substantial and in-perpetuity new "VMT mitigation" fees – thousands of dollars per unit of housing, to be paid by new renters or homeowners every year, to help subsidize school buses and bike path construction as new CEQA mitigation mandates. Those without housing – disproportionately minorities – will pay even more for housing along with these remarkable new annual, in perpetuity new housing fees – conferring yet another fiscal windfall for the state's generally whiter, wealthier and older homeowners and piling on more housing fees for housing on top of the country club initiation equivalent of $150,000 per new housing unit already charged by some California agencies. Imposing extortionate fees and regulatory obstacles on housing is a proven winner for those seeking to block housing based on class or race: is inventing new VMT fees to impose on California's 3 million missing homes a policy choice made by our elected officials (or voters)?

CARB cannot, based on undisclosed math, impose a VMT reduction – or a disguised VMT reduction in the form of a VMT fee as noted in the Vibrant Communities Appendix - on any California agency, project or person based on any statutory authority granted to CARB by the Legislature. CARB's repeated attempts to do so, with failed legislation and its own abandoned effort to impose a VMT reduction mandate in the SB 375 Target Updates finally approved without that mandate in March of 2018, are unlawful and discriminatory.

3. CARB's Housing Vision is Infeasible, and Discriminatory

The Report also notes that most regions have fallen behind in housing production, and is particularly critical of the continued construction of single family homes – anywhere. However, just as CARB pretends that its VMT reduction mandate is based on non-existent legal authority, CARB pretends its housing vision is based on a high density housing economic fantasy.

As one of CARB's own advisors have documented, and has been well documented in numerous other studies, high density housing units cost 300-500% more to build than small-lot single family, duplex, quadplex and townhome housing units. California's new high density transit-oriented housing units cost far in excess of what middle income families can afford to rent or buy. Even 100% affordable housing units, built in the less costly mid-density (4-6 stories) rather than most costly high density (above 6 stories) range, cost in excess of $500,000 per unit in Los Angeles, and $700,000 per unit in San Francisco. As experts from the non-partisan Legislative Analyst Office and others have repeatedly noted, there is no way that public funding will pay for a 3 million home shortage where 40% of Californians need to make a monthly choice between paying for food and medicine. There is no option – none – to reducing the cost of housing to levels that are actually affordable to middle income families if California is serious about solving our housing crisis.

CARB also knows from its own experts that lower density housing – smaller single family homes, duplexes/quadplexes and townhomes – is the only available type of housing that has the level of substantially lower production costs that make this housing affordable.

In the most comprehensive examination of what it would take to build just under 2 million new homes entirely within existing urban areas that are actually affordable (e.g., small single family/duplex/quad/townhomes) to those earning normal salaries, scholars at UC Berkeley (one of whom was on the Report's advisory group) concluded that "tens if not hundreds of thousands" of single family homes would need to be demolished. Given our current shortfall of 3 million homes, CARB's infill-only, transit vision of California's climate future will require razing thousands of single family homes.

CARB's demand for the most costly form of urban housing - high density transit oriented housing units - isn't just infeasible for California's aspiring minority homeowners (and renters). Other studies have demonstrated that these high cost, dense new housing projects can displace low and middle income families (especially renters) who actually use transit but are forced to

relocate to more distant locations with less costly housing, where public transit is not as viable as it was from their more centrally-located original neighborhoods. Simply put, new residents of chic new high density housing urban projects near transit, who are able to afford $1 million condos or pay $5000 per month in rent, don't take the bus. In the Bay Area, and as documented in yet another comprehensive new study, the housing crisis has resulted in a racial diaspora, as African American and Latino populations have shrunk – substantially – in the region's wealthiest five counties closest to jobs, while these minority populations have grown substantially in the Central Valley and more distant East Bay counties. About 190,000 daily commuters enter the Bay Area from outside the 9-county region, and over 210,000 commute from the East Bay to Silicon Valley or San Francisco. CARB's prescription – to require even higher densities in costly urbanized areas, and prohibit lower density small "starter" homes and townhomes – could not be more perfectly tailored to worsen the housing options for our hard working minority families.

There is not a single Legislator who voted to approve CARB's new land use vision, or the related proposal in "Vibrant Communities" to impose a new "ecosystem services" tax on urban residents to pay for the open space lands they do not use or inhabit.

There is not a single Legislator who has proposed or voted to spend at least $500,000 per apartment to build 40% of the needed 3 million new housing units for the lower income Californians that United Way describes as unable to meet normal monthly expenses (1,200,000 new homes at $500,000 per home is $600,000,000,000 – that's billion.

There is not a single Legislator who has proposed or voted to end home ownership as a pathway to the middle class for Californians who work hard to earn median and above-median incomes.

Instead, the Legislature enacted SB 375 to ask each region to reduce GHG from the land use and transportation sectors – and directed CARB to establish GHG (not VMT) reduction targets. Regions, informed by cities and counties, have in turn spent tens of millions of dollars doing two (mostly completed) rounds of SB 375 plans, which CARB has in turn reviewed and approved.

Under SB 375, each regional transportation agency has carefully weighed density and transportation choices, and disclosed the substantial environmental impact tradeoffs between density and to make lower density and more financially feasible housing within the footprint of existing communities our only housing solution. Each Sustainable Communities Strategy, prepared by each region and approved by CARB, endorses far more transit and supports more density – but also documents scores of significant unavoidable impacts to the existing environment in affected communities that has created political and voter backlash against new housing. If CARB wants to pronounce SB 375 a failure, as indicated in the Report, then it's time to rethink practical housing and transportation solutions for actual Californians – but as a state air quality agency, CARB has not been charged – and is clearly not qualified – to lead this complex undertaking.

Instead, CARB's proposed solution to today's urgent poverty, homeless and housing crisis can only be invented by bureaucrats with secure employment, and special interest advocates paid to participate in endless "process" instead of actual "progress." The Report's prescription is to develop yet another "plan" – even though CARB the latest round of SB 375 targets in March of 2018!

CARB completely ignores the simple and ongoing, but politically inconvenient truths, of what experts from around the state agreed would be required to make SB 375 successful:

- More public funding would be needed, especially for housing and infrastructure. Instead, Governor Brown eliminated redevelopment, which was by far the most effective financing tool then in existence – and itself not sufficient – to make SB 375 work. CARB proposes no financing solutions.

- CEQA reform would be needed, especially for existing communities where the vast majority of CEQA lawsuits are filed and threatened. The top target statewide of CEQA lawsuits is high density infill housing, and abuse for non-environmental objectives – sometimes for openly racist NIMBY "redlining" of the type long ago recognized as illegal and immoral – is likewise ignored by CARB, which has instead decided to impose even higher housing costs with its recommended expansions of CEQA. Governor Brown took office championing CEQA reform, only to throw in the towel a few years later because "unions use CEQA to leverage project labor agreements." Even housing that complies with every single local, regional, and state law, ordinance, and mandate, can get stalled out for years by CEQA studies prepared in defense of threatened lawsuits – and then held up for even longer by CEQA lawsuits.

- Land use reform would be needed, to reduce the time and cost required to get new projects approved and contain runaway fees that in some communities have now hit $150,000 per single unit of housing (even a small apartment!). Here Governor Brown made a try with "by right" housing requiring only ministerial (non-CEQA) approvals, which failed to be endorsed by a single Legislator. The "housing package" approved in 2017 was important in recognizing and making incremental improvements, but all Legislators and the Governor conceded that far more was necessary to solve the housing crisis – and 2018 was effectively a time-out for the election. CARB in its Report at least acknowledges this problem, but its clear preference is a state agency takeover of land use approvals – a statewide equivalent of the Coastal Commission – with a leading role by, of course, CARB itself.

CARB's report demonstrates its total amnesia about what it would take for SB 375 to succeed, and its call for yet another "plan" with still more jargon about "action items" for future consideration, along with an ever-expanding mission creep of other policy preferences dear to some of CARB's allies (e.g., avoiding urban conversion of agricultural lands even within existing city limits, notwithstanding estimates that more than 500,000 acres of agricultural land

must be taken out of production to meet groundwater sustainability mandates), is yet another demonstration of the fundamental mismatch between an air agency and its environmentalist allies, and the housing and transportation needs of California's minority communities.

CARB did not, and should not, get legal authorization to forward its proposed "MAP" plan. This is an unlawful distraction from the urgent housing and transportation needs of the state, and the state's minority communities in particular.

4. CARB Climate Math

In these highly partisan times, too often those challenging anything CARB proposes have been pilloried as climate denier – or worse, Trumpites! However, enforcing hard-won civil rights protections, including equal access to housing and homeownership, have nothing to do with denying climate change – or criticizing California's commitment to climate leadership. But like other powerful bureaucrats in other times, CARB and its allies are advancing their own version of climate policies which are blind to the needs of our communities, while intentionally concealing its own inconvenient truths.

For example, one of CARB's most vexing habits is its refusal to "show its work" on math. Even third graders are trained that getting the answer right isn't enough: in math, you must show your work.

Scores of commenters have – for many years, and in many different proceedings - asked CARB, "How much GHG reduction do you need to get from VMT reductions to meet the AB 32 (and now SB 32) GHG reduction target?" CARB has adamantly and repeatedly declined to answer this question, and instead insisted that high density housing and reliance on public transit is absolutely necessary for California to meet its GHG reduction target. Even the most basic examination of CARB's math demonstrates that this is patently false, and a land use power grab that harms those most hurt by California's housing and poverty crisis.

From the earliest days of AB 32, CARB's own scientists questioned how much GHG reduction could be achieved from the land use sector, given how established land uses and transit modes established patterns that would take decades to change – if they could be changed at all. Lowering fossil fuel emissions from power plants and other manufacturing/refining facilities, increasing renewable power production, and reducing emissions from vehicles, were clear GHG "big" reduction opportunities. When pressed, CARB's scientists – and the Legislature – agreed that retrofitting older buildings with energy and water conservation features (e.g., LED lighting, insulation, more efficient HVAC systems, modern appliances, etc.) would result in the biggest GHG reductions from this sector. Ignoring science and the Legislature, CARB has never prioritized or committed meaningful funding levels needed to retrofit the vast majority of California's built environment – preferring instead to weigh in on sexier decisions about where new housing should be located that already must meet the most GHG efficient standards in the United States.

The revolution in transportation technology and services has also not been allowed to interfere with CARB's anti-VMT agenda, even as huge strides are made with electric and other clean transportation modes like electric bikes and scooters, and even with the advent of carshare and app-based ride services that reduce reliance on owned – and mostly parked – private cars. CARB does not even have an established methodology for calculating how many trips (or how much VMT) does not occur based on the exploding use of these new transportation technologies or services. These types of trips are not even counted in CARB-approved models – yet CARB remains adamant that VMT reductions are required.

Why does CARB refuse to convert its VMT reduction demand into GHG? Simply put, CARB refuses to accept that there very likely are far less intrusive, far less costly, and far less damaging to minority communities, ways to reduce GHG than mandating reductions in VMT.

CARB knows very well how to "rank" potential emission reduction strategies, and this transparent approach has a remarkably successful track record in the Clean Air Act. If CARB needs to get 10 tons, or 10,000 tons, of GHG reductions from VMT reductions, then other potential GHG reduction sources can be evaluated on the basis of relative environmental, equity, and economic consequences. As the Obama administration documented, tailpipe emissions from 1960's-era cars were reduced by nearly 99% as of 2016 – a remarkable regulatory success under the Clean Air Act that required a careful combination of technology-forcing regulations, accompanied by technical and economic analyses, that preserved the functionality and affordability of cars with technological advances in engines and fuels that were not conceivable when this regulatory effort began in the early 1970's.

CARB is clearly no fan of this Clean Air Act regulatory model, or the transparency and accountability that comes with "showing its math." In fact, there is not a single location, in either the Report or in the 2017 Scoping Plan, where CARB "shows its math" by explaining how much GHG this desired new VMT reduction mandate will achieve.

Attachment 3 to this letter "shows the math" – which, shockingly – shows that building even two-thirds of the needed housing units will require the demolition of "tens if not hundreds of thousands" of single family homes, must be done in far less dense housing types (e.g., duplexes/quadplexes) than the high densities demanded by CARB because of the exceptionally high cost of high density housing, will mean that average new housing units will be about 800 square feet instead of about 2100 square feet (and will of course have no private back yard), and then – ready the drumroll – GHG from VMT will be reduced by less than 2 million metric tons per year, which is itself less than 1% of CARB's Scoping Plan target of reducing GHG by 260 tons per year by 2030. Since CARB agrees that the California economy produces about 1% of the world's GHG, CARB's VMT reduction/high density housing agenda will result in reducing GHG by less than 1% of what CARB believes is needed - which will have statistically zero effect in reducing the GHG emissions worldwide for this global pollutant.

To worsen California's housing and poverty crisis, and disparately harm California's minority communities, chasing 1% of 1% of global GHG is quite simply an outrageous regulatory abuse of the sincere support that Californians have for leading the world on climate change.

There are a myriad suite of options to get 1% - less than 2 MMT - of GHG out of the California GHG inventory. CARB can do what its scientists and the Legislature told it to do and retrofit existing buildings (and save struggling residents money on power and water bills), or it can reduce what the Little Hoover Commission called "catastrophic" conditions in the 33% of California that is forested to avoid even a single forest fire, and generate stable levels of electricity from dead forest vegetation when it is dark and not windy (England's base load replacement for coal as a carbon neutral power production source), or it can equitably retire the oldest and dirtiest cars that have the highest GHG and other emissions in California's vehicle (which are most often owned and absolutely relied on by low income workers and their families), or it can choose to "lead the world" in developing and deploying new production methods that produce consumer products with less GHG and avoid GHG emissions from ocean-crossing exporters (and provide middle income job opportunities to Californians). These are all "win-win" strategies that reduce GHG and achieve other very important goals for California, and actually help rather than harm California's minority communities. Instead, CARB and its Vibrant Community state agency allies appear intent on using climate to make California look like and be as expensive and exclusive as Manhattan in NYC.

We urge CTC and all other California agencies and stakeholders to demand "math transparency" by CARB.

Stop CARB's Voter Disenfranchisement

Finally, we note that CARB missed its statutory deadline of September 2018 for publishing this report – thereby conveniently avoiding accountability to the majority of California voters who dutifully supported the state leaders by rejecting Measure 6 and paying higher fuel taxes to repair and maintain existing roadway infrastructure, while directing substantial future spending on transit instead of road expansions. CARB, now free of voter oversight or accountability, attacks our transportation agencies for spending money on road maintenance – by far the biggest existing transportation system infrastructure – even while voters have decided that the vast majority of new transportation projects funded by the gasoline tax will be transit and pedestrian/bicycle projects. CARB's conflation of maintenance funding with new project funding intentionally distorts California's commitment to direct most new money away from roads, and is another example of "CARB math."

CARB also provided less than 7 days, inclusive of a weekend and right after the Thanksgiving holiday, and with zero advance notice, for review and comment on this remarkable new Report. If there was a more effective way to suppress input from other state, regional and local agencies – and virtually every other California person and enterprise since all of us are dependent on

either housing or transportation – we would need to travel to a totalitarian country or dictatorship rather than a democracy to find it. This is, however, typical of CARB: for example, its "Vibrant Communities" appendix was released after the Legislative session without notice and with only a few days for comments, and the resulting hailstorm of criticism was entirely ignored by CARB and its aligned agencies. It is also the case that CARB will intone that its desired next step – it's "MAP Plan" for taking over housing and transportation decisionmaking – assuming the CARB Board allows staff to further squander taxpayer dollars and obstruct progress in solving the housing crisis or spending voter-approved housing and transportation dollars in the current housing emergency, was merely the inevitable outcome of this Report – which was, after all, the subject of a public notice and comment, and Board hearing, process.

CARB is an air agency, and it has been directed to reduce GHG. It should do so based on the tried and true transparency requirements of the Clean Air Act. There is no question that the CARB Board, and a properly managed staff, can find other opportunities achieving 1% of California's SB 32 GHG reduction goal.

In conclusion, we strongly oppose CARB's continued planning and work to mandate VMT reductions unaffordable-by-design high density housing. Global climate change creates no excuse for violating the civil rights of Californians.

Sincerely yours,

HOLLAND & KNIGHT LLP

Subject: **Comments on the Notice of Preparation of a Program Environmental Impact Report for Connect SoCal (Southern California Association of Governments 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy)**

Dear Mr. Ok:

The City of Irvine appreciates the opportunity to provide comments on the Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for Connect SoCal, the Southern California Association of Governments' 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

The City of Irvine respectfully requests the following clarifications and considerations during the preparation of the PEIR.

1. Alternative Planning Strategy: Page 5 of the NOP identifies the year 2020 and year 2035 regional greenhouse gas emission reductions targets that the SCAG Sustainable Communities Strategy (SCS) must achieve through a combination of land use, housing, and transportation strategies. The NOP further states that if the SCS is not capable of meeting the regional targets, SCAG must then prepare a separate "Alternative Planning Strategy" (APS) that is capable of meeting the regional greenhouse gas emission reduction targets.

   The City of Irvine recommends language in the PEIR that clearly identifies that an Alternative Planning Strategy, if developed, is statutorily not subject to CEQA provisions (as clarified by SCAG staff at the January 17, 2019 SCAG Technical Working Group meeting), and would therefore not be addressed or analyzed in the Connect SoCal Program EIR.

2. Comparative Analysis of the Connect SoCal Preferred Plan and the PEIR Alternatives: To enable the reader to clearly understand the distinct differences in strategy and policy between the Preferred Plan and the PEIR Alternatives, the City of Irvine recommends that the PEIR include a comparative table matrix that highlights the key similarities and differences between the components of the Preferred Plan and PEIR Alternatives. The matrix should also include the amount of greenhouse gas emission reductions achieved by the Preferred Plan and the PEIR Alternatives. Examples of the comparative components could include:

    - Land Use
    - Growth Scenario
    - Open Space Conservation
    - Transportation Network
    - Public Transit
    - Non-Motorized Transportation
    - Local/Regional Pricing
    - Transportation Demand Management
    - Vehicle Technology/Innovation
    - Greenhouse Gas Emission Reduction (automobiles and light-duty trucks)

    Within the land use component, the PEIR matrix (as recommended above) should specify if the Preferred Plan and each of the PEIR Alternatives:
    - Does or does not maintain each jurisdiction's control totals for population, housing, and employment;
    - Does or does not maintain individual county control totals for population, housing, and employment;
    - Does or does not maintain the regional control totals for population, housing, and employment.

3. Additional New PEIR Alternative: The NOP states on page 7 that the growth scenario included in the No Project Alternative and all the PEIR alternatives would include the same **regional** totals for population, housing, and employment. However, while regional totals for population, housing, and employment are maintained, there could be alternatives that redistribute growth in a manner where a jurisdictional total could be greater than the original input provided by the local jurisdictions.

    The City of Irvine recommends that an additional PEIR Alternative be developed and analyzed that maintains local jurisdictional control totals in

population, housing, and employment, but shifted in intensity or location within the jurisdiction. This new PEIR Alternative would provide local jurisdictions and stakeholders with an assessment of the degree to which local growth would need to be intensified or relocated within its jurisdiction to strive to achieve the State required regional greenhouse gas emissions reduction targets and allow local jurisdictions the opportunity to assess the degree to which such an alternative meets community goals and objectives. The addition of the proposed new PEIR Alternative would also allow for the PEIR to include an assessment of the environmental impacts of this Alternative, if the full range of impacts exceeds that of the Intensified Land Use Alternative.

4. Local Jurisdiction Review of TAZ-Level Population, Housing, and Employment Datasets: As all PEIR Alternatives are developed, there could be distinct differences in growth forecast numbers for population, housing, and employment at the local jurisdiction level and traffic analysis zone level, from that submitted by local jurisdictions as part of the Connect SoCal Local Input process.

   The City of Irvine recommends that any shifts in growth that differ from Local Input, are actively coordinated and communicated between SCAG and the applicable local jurisdictions, to ensure that any proposed redistribution of growth are, in fact, reasonable, achievable, and do not require any General Plan or zoning amendments.

Sincerely,

Pete Carmichael

Subject: **City of Mission Viejo Comments: SCAG Notice of Preparation of a Program Environmental Impact Report for Connect SoCal (2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy)**

Dear Mr. Ok,

The City of Mission Viejo appreciates the opportunity to provide comments on the Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for SCAG's 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), referred to as Connect SoCal, or the Plan.

The City of Mission Viejo respectfully requests the following clarifications and considerations, to enable the Connect SoCal PEIR to provide a clear and full consideration of environmental factors that have the potential to generate significant impacts.

The City of Mission Viejo comments are as follows:

1) Alternative Planning Strategy: Page 5 of the NOP identifies the Year 2020 and Year 2035 regional greenhouse gas emissions reduction targets that the SCAG Sustainable Communities Strategy (SCS) must achieve, through a combination of land use, housing and transportation strategies. The NOP further states that if the SCS is not capable of meeting the regional targets, that SCAG must then prepare a separate "Alternative Planning Strategy" that is capable of meeting the regional greenhouse gas emission reduction targets.

   The City of Mission Viejo recommends language in the PEIR that clearly identifies that an Alternative Planning Strategy, if developed, is statutorily not subject to CEQA provisions (as clarified by SCAG staff at the January 17, 2019 SCAG Technical Working Group meeting), and would therefore not be addressed nor analyzed in the Connect SoCal Program EIR.

200 Civic Center • Mission Viejo, California 92691
http://www.cityofmissionviejo.org

949/470-3051
FAX 949/859-1386

2) Comparative Analysis of the Connect SoCal Preferred Plan and the PEIR Alternatives: To enable the reader to clearly understand the distinct differences in strategy and policy between the Preferred Plan and the PEIR Alternatives, the City of Mission Viejo recommends that the PEIR include a comparative table matrix that highlights the key similarities and differences among the components of the Preferred Plan and PEIR Alternatives, and the amount of greenhouse gas emissions reductions that the Preferred Plan and each of the PEIR Alternatives would achieve. Examples of the comparative components could include:

- Land Use
- Growth Scenario
- Open Space Conservation
- Transportation Network
- Public Transit
- Non-Motorized Transportation
- Local/Regional Pricing
- TDM
- TSM
- Vehicle Technology/Innovation
- Greenhouse Gas Emissions Reduction (automobiles and light-duty trucks)

Within the land use component, the PEIR matrix (as recommended above) should specify if the Preferred Plan and each of the PEIR Alternatives:

- does or does not maintain each jurisdiction's control totals for population, housing and employment;
- does or does not maintain individual county control totals for population, housing and employment;
- does or does not maintains the regional control totals for population, housing and employment.

3. Additional New PEIR Alternative: The NOP (page 7) states that the growth scenario included in the No Project Alternative and all the PEIR alternatives, would include the same **regional** totals for population, housing and employment. However, while regional totals for population, housing and employment are maintained, there could be alternatives where the growth scenario re-distributes growth such that jurisdictional totals could be greater than the original input provided by the local jurisdictions.

The City of Mission Viejo recommends that an additional PEIR Alternative be developed -- above and beyond the No Project, Local Input, and Intensified Land Use Alternatives -- if the 2020 Local Input Alternative is quantified to not be capable of achieving the region's greenhouse gas emissions reduction target, and if the Preferred Plan and the PEIR Intensified Land Use Alternative both shift land use growth away from county unincorporated areas and instead re-directs some of the unincorporated county growth into individual local jurisdiction growth priority areas, and through such shifts, causes an

increase in growth above and beyond the jurisdictional totals in population, housing and employment and correspondingly reduces unincorporated county totals in population, housing and employment, in order to maintain countywide control totals.

The proposed new PEIR Alternative would analyze the degree to which local jurisdictional control totals in population, housing and employment could be maintained, but be shifted in intensity or location within the jurisdiction. This new PEIR Alternative would provide local jurisdictions and stakeholders with an assessment of the degree to which local growth would need to be intensified or re-located, to strive to achieve regional greenhouse gas emissions reductions targets, and allow local jurisdictions the opportunity to assess the degree to which such an alternative meets community goals and objectives. The addition of the proposed new PEIR Alternative would also allow for the PEIR to include an assessment of the environmental impacts of this Alternative, if the full range of impacts exceeds that of the Intensified Land Use Alternative.

4. Local Jurisdiction Review of TAZ-Level Population, Housing and Employment Datasets: As all PEIR Alternatives are developed, there could be distinct differences in growth forecast numbers for population, housing and employment at the local jurisdiction level and traffic analysis zone level, from that submitted by local jurisdictions as part of the 2020 RTP/SCS Local Input process.

   The City of Mission Viejo recommends that any shifts in growth that differ from Local Input, are actively coordinated and communicated between SCAG and applicable local jurisdictions, to ensure that any proposed re-distributions of growth are, in fact, reasonable, achievable and do not require any General Plan or zoning amendments, to effect.

Respectfully,

RE: SCH#2019011061 Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy), Ventura, Los Angeles, Orange, San Bernardino, Riverside and Imperial Counties.

Dear Mr. Chang:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
   a. A brief description of the project.
   b. The lead agency contact information.
   c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
   d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
   a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
   a. Alternatives to the project.
   b. Recommended mitigation measures.
   c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
   a. Type of environmental review necessary.
   b. Significance of the tribal cultural resources.
   c. Significance of the project's impacts on tribal cultural resources.
   d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
   a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
   b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
    a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
    b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
    a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
    b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
    c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

RE: CEQA Principles to Combat Lawsuit Abuses

On behalf of more than 180 business organizations that represent 400,000 employers with over 3.5 million employees in LA County we are commenorating our tenth anniversary with a mission to lift one million people out of poverty in the next decade. One of the many opportunities to lift and prevent poverty are providing solutions that end litigation abuse of the California Environmental Quality Act (CEQA).

These lawsuits drive up the costs of building new housing or transportation infrastructure exacerbating our housing crisis, where the production of new housing in the region has been significantly reduced. Coupling this reduction with the cost of litigation further drives up the cost of housing which prohibits public service and private sector occupations and professionals the ability to afford owning a home, which is essential for building generational wealth, incubating a stronger, vibrant and more resilient economy.

Since 2013, the Los Angeles region accounts for;

- 38% of all CEQA lawsuits statewide.
- 40% of these lawsuits dealt with residential development and transportation infrastructure.
- Over 70% these CEQA lawsuits are targeted at stopping infill, multi-family, transit-oriented housing the very housing needed according to CARB that we need to invest in to support our environmental goals
- Nearly 80% of these lawsuits are targeted in wealthier and healthier parts of the State,

BizFed solutions fall under four themes that create the necessary reforms needed to improve compliance with CEQA and streamline the process;
(1) Prohibit anonymous CEQA lawsuits allowing petitioners to conceal their identities and economic interests;
(2) Prohibit duplicative CEQA lawsuits allowing parties to repeatedly sue over the same plan, or projects implementing a plan, for which CEQA compliance has already been completed;
(3) E**stablish a "mend it, not end it" approach of directing corrections to any defici**ent environmental study rather than vacating project approvals; and
(4) Prohibit CEQA lawsuits against voter-approved infrastructure projects, and against projects receiving voter-approved approved funding (e.g., for homeless housing).

Abuse of CEQA for non-environmental purposes by business competitors, NIMBYs opposed to change, and certain construction trade unions, has been well documented, and includes both threatened and filed CEQA lawsuits. CEQA fundamentally is biased in favor of stopping changes to the status quo. CEQA's status quo preservation bias has a disparate effect on minority communities, as well as younger Californians such as millennials, who are most urgently in need of more housing and transportation, infrastructure.

These CEQA modifications are necessary to comply with law, and to address the housing and poverty crisis, and expedite completion of transportation and other critical infrastructure projects that have already had at least one completed round of CEQA compliance as well as voter and initial agency approvals. No state agency should hide within a silo of vague legalese to promote increased litigation risks and delays and do further harm to hard working minority and millennial families suffering from California's housing, poverty and transportation crises. In contrast, during the last session we witnessed bipartisan support for CEQA exemptions to construct new sports and entertainment facilities which are good projects to stimulating jobs creation by reducing lawsuit abuse, we believe such exemptions for development are consistent with the solutions we have provided in this letter.

Business is what makes our economy work and CEQA guidelines should reward instead of impede that progress to help our economy and our environment thrive. Litigation abuse is one of the unattended consequences that negatively affects our economy because it introduces uncertainty with CEQA instead of compliance.

SUBJECT: "Connect SoCal" Scoping Phase Comments

On behalf of BizFed, a grassroots alliance of more than 180 business organizations that represent 400,000 employers with over 3.5 million employees in LA County, we have strong concerns of CARB's statutory over reach by imposing flawed Vehicle Miles Travelled (VMT) reduction targets as a strategy for greenhouse gas (GHG) reduction. This would ignore the local input of many stakeholders in previous Regional Transportation Plan (RTP)/Sustainable Community Strategies (SCS) as we start the EIR for the 2020-2045 RTP/SCS.

CARB has no statutory authority to impose a VMT reduction target in an SCS and doing so violates the SB 375 requirement that an SCS must provide for a robust economy and growing population. In SCAG's two prior RTP/SCS in 2012 and 2016, SCAG met required GHG reduction targets based on local input for land use planning and full respect for voter-approved and funded transportation projects and transportation infrastructure required by longstanding laws requiring efficient transportation and goods movement.

These voter approved transportation projects are usually funded in the form of sales taxes which can be volatile to outside triggers such as an arbitrary GHG reduction target based on VMT reduction assumptions that cannot be delivered in the real world. If these assumptions are to be delivered, we may see a dramatic reduction in goods movement infrastructure critical to the state's economy. BizFed wants to ensure that sales tax revenues remain strong for the successful delivery of these voter supported and approved projects. This nexus is vital to the five of the six counties in the SCAG region who are delivering critical transportation infrastructure projects through sales taxes. Imposing GHG reductions through poor VMT metrics without prioritizing the value of certain trips to our economy could be devastating.

The most aggressive GHG reduction based on VMT reductions in the SCAG region called for a 10% decrease in overall regional VMT, which the region has not met and shows no indication of being able to meet. While we support California's climate leadership, the state emits less than 1% of global GHG. In contrast, California ranks top in the United States for poverty and homelessness – both of which are attributable directly to the housing supply shortage, high housing prices that are nearly three times above the national average and longer commutes where working families are "driving until they qualify" for housing that they can rent or buy.

Given the realities of the current economic conditions, we believe CARB staff's current target of reducing VMT by 19.5% is unattainable. SCAG should not continue to spend taxpayer dollars on infeasible plans, when there has been zero progress made in achieving key reforms that prior SCS plans identified as being necessary to even be able to achieve prior lower GHG reduction targets that the business community has been actively advocated for such as redevelopment funding and CEQA reforms against lawsuit abuses.

We very much respect and appreciate the major efforts of SCAG to assure that SB 375 can be implemented consistent with its statutory protections for a healthy economy and growing population.

We urge SCAG to reject CARB staff's decision to unilaterally reject its own Board vote, and the Legislature's repeated refusal to impose a VMT reduction target as part of its climate or air quality statutes or regulations.

Sincerely,

Steve Bullock
