## EXECUTIVE SUMMARY

This executive summary is a synopsis of findings based on our Phase I ESA. For detailed information regarding the findings, please refer to the text of our report.

Mr. Riyadh Kassab (Mr. Kassab) engaged GeoRox Engineering (GeoRox) to perform a Phase I Environmental Subject Property Assessment (ESA) for the vacant property located at 29301 Riverside Drive, Lake Elsinore, Riverside County, California (Subject Property).

The Subject Property is located in a mixed undeveloped and commercial area in the city of Lake Elsinore, California. The Subject Property consists of two parcels (APN 378030007 and 378030009) approximately 2.95 acres in size. The rectangular-shaped Subject Property is bounded to the northwest by undeveloped land followed by commercial/industrial development and Collier Avenue to the northeast, to the south by Riverside Drive, and to the east Collier Avenue/Riverside Drive Intersection, and to the west by undeveloped land.

According to aerial photographs, the Subject Property was historically developed with a water reservoir as early as 1938 to at least 1978, an unknown structure from as early as 1978 to at least 1985, and was undeveloped from at least 1989 to present.

The Subject Property did not appear on current regulatory database lists that were reviewed during this assessment.

EZ Products, 17999 Collier Avenue, is located approximately 200 to the northwest of the Subject Property and is presumed to be higher elevation (hydrologically up/cross gradient). EZ Products is an active manufacturer of bolt, nut, screw, rivet, and washers. According to the regulatory database, this facility is listed as a RCRA-SQG, FINDS and ECHO site. Online research from the California DTSC Hazardous Waste Tracking System revealed evidence of tetrachloroethylene (PERC) on site for the years 1999 (1.48 tons), 2000 (0.34 tons), and 2001 (2.13 tons). According to the EPA ECHO website and the regulatory database, this facility specified a three-year period of no violations. Based on the inferred direction groundwater flow, the amount (over two tons) of PERC onsite for three years, and close proximity to the Subject Property, this facility represents an environmental issue. Based on the amount of PERC onsite (3.95 tons), inferred direction of groundwater flow, and relative distance from the Subject Property, this facility represents an environmental issue. Based on the lack of documented release, this site is not expected to represent an environmental concern to the Subject Property, at this time.

In our opinion, based on the information obtained during this assessment, additional subsurface soil sampling at the Subject Property (Phase-II ESA) is not recommended.

## 1.0 INTRODUCTION

Mr. Riyadh Kassab (Mr. Kassab) engaged GeoRox Engineering (GeoRox) to perform a Phase I Environmental Site Assessment (ESA) for the vacant property located at 29301 Riverside Drive, Lake Elsinore, Riverside County, California (Subject Property).

### 1.1 PURPOSE

The purpose of the Phase I ESA was to identify certain obvious environmental concerns arising from activities on the Subject Property or nearby properties. Activities of concern are those that may have contaminated, or have the potential to contaminate, the Subject Property's soil or ground water. The purpose of this assessment was not to determine the actual presence, degree, or extent of contamination, if any, on the Subject Property. Such a determination would require additional exploratory work.

The scope of services was performed in general accordance with ASTM Designation E 1527-13 *Standard Practice for Environmental Subject Property Assessments: Phase I Environmental Subject Property Assessment Process*. Any deviations to the ASTM E 1527-13 Standard can be found in Section 11.0. No significant assumptions were made during the assessment.

### 1.2 DETAILED SCOPE-OF-SERVICES

A Phase I ESA is intended to be a general characterization of selected environmental concerns. The characterization is based on readily ascertainable information and Subject Property observations. The assessment included the following services:

#### Geology/Hydrogeology

We reviewed selected available references regarding the local geology and hydrogeology to assist in assessing potential pathways of contaminant migration. We relied on sources such as United States Geological Survey topographic maps, ground-water reports, soils surveys, and geologic reports.

#### Subject Property and Area Reconnaissance

The objective of this reconnaissance was to identify obvious sources of contamination (actual and potential) at the Subject Property that could become environmental liabilities. We looked for signs of disturbances, stained soil, stressed vegetation, and other similar, obvious surficial evidence of potential contamination. The purpose of this work was not to determine the presence, degree, or extent of contamination at the Subject Property. This would require additional assessment including sampling and chemical analyses.

During the Subject Property reconnaissance, we looked for fluid-containing major electrical devices (e.g., transformers or capacitor banks) likely to contain polychlorinated biphenyls

(PCBs). The PCB status of these devices was noted based on labeling, and we made note of the general conditions of these devices, including evidence of leakage. We did not assess minor suspect PCB items such as fluorescent light fixture ballasts, or sample or test dielectric fluids.

During the Subject Property reconnaissance, we also looked for evidence of aboveground storage tanks (ASTs) and underground storage tanks (USTs) such as vent pipes, fill pipes, fuel dispensers, and other obvious evidence of ASTs and USTs.

We also conducted an area reconnaissance to assist in assessing if adjacent or nearby land uses may have contaminated the Subject Property. The area reconnaissance was conducted by touring the area by automobile and viewing particular businesses from public rights-of-way. Off-Subject Property properties were not entered.

### Historical Review

We consulted selected references to infer past land uses on or near the Subject Property that might have contributed to soil or ground-water contamination at the Subject Property. We used the following types of references and information (depending on availability):

- Aerial photographs
- City directories
- Sanborn fire insurance maps
- Building permits
- Interviews with property management
- Information you provide
- Oil well maps, ground-water maps, and water well data

The period of concern is from the present, back to the Subject Property's first developed use (e.g., residential, commercial, or industrial), or back to any available time, whichever is earlier.

### Regulatory Status Review

We reviewed excerpts of federal and state environmental regulatory agency lists for records regarding possible hazardous waste generation, transportation, treatment, storage, disposal, and release at the Subject Property or in the vicinity that may potentially threaten the Subject Property. The databases we reviewed include those indicated in the ASTM E 1527-05 standard, as well as selected local databases, as appropriate.

### 1.3 LIMITATIONS

The findings and opinions in this report are relevant to the dates of our Subject Property work and should not be relied on to represent conditions at substantially later dates. This report is prepared for the exclusive use of Mr. Kassab. Use of this report by any person or entity other than Mr. Kassab is expressly forbidden unless such other person or entity obtains written authorization from both Mr. Kassab and Georox. Use of this report by such other person or entity without the written authorization of Mr. Kassab and Georox will be at such other person's or entity's sole risk, and will be without legal exposure to Georox.

Our professional services have been performed using that degree of care and skill ordinarily exercised under similar circumstances by reputable environmental consultants practicing in this or similar locations. This warranty is in lieu of all other warranties, expressed or implied.

The opinions included herein are based on information obtained during the study and our experience. If additional information becomes available, which might impact our environmental conclusions, we request the opportunity to review the information, reassess the potential concerns, and modify our opinion, if warranted. If this assessment included a review of reports prepared by other consultants, it must be recognized that Georox has no responsibility for the accuracy of information contained therein.

Although this assessment has attempted to identify the potential for contamination of the Subject Property, potential sources of contamination may have escaped detection due to: (1) the limited scope of this assessment, (2) the inaccuracy of public records, and (3) the presence of undetected and unreported environmental accidents.

## **2.0 SUBJECT PROPERTY DESCRIPTION**

### **2.1 SUBJECT PROPERTY LOCATION**

The Subject Property is located at 29301 Riverside Drive, Lake Elsinore, Riverside County, California (Subject Property). The Subject Property is depicted as developed with a water reservoir on the U.S. Geological Survey (USGS) Topographic Map *Lake Elsinore, California* Quadrangle (1988).

### **2.2 CURRENT USE OF THE SUBJECT PROPERTY**

The subject property is currently a vacant, undeveloped land.

### **2.3 SUBJECT PROPERTY AND VICINITY CHARACTERISTICS**

The Subject Property is located in a mixed undeveloped and commercial area in the city of Lake Elsinore, California. The Subject Property consists of two parcels (APN 378030007 and 378030009) approximately 2.95 acres in size. The rectangular-shaped Subject Property is bounded to the northwest by undeveloped land followed by commercial/industrial development and Collier Avenue to the northeast, to the south by Riverside Drive, and to the east Collier Avenue/Riverside Drive Intersection, and to the west by undeveloped land.

### **3.0 PHYSICAL SETTING**

#### **3.1 SURFACE DRAINAGE/FLOOD MAP**

The Subject Property is situated at an elevation of approximately 1,268 feet above mean sea level (msl). Surface drainage (precipitation that does not infiltrate into the subsurface soils) follows the topographical gradient which is generally toward the south/southwest towards Lake Elsinore.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property.

No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons were observed on the subject property. No drywells were observed on the subject property.

GEOROX performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 2028 of 3805 and Map Number 0605C2028G, dated August 28, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

#### **3.2 GEOLOGY**

The Elsinore quadrangle is located in the northern part of the Peninsular Ranges Province and includes parts of two structural blocks, or structural subdivisions of the province. The active Elsinore Fault Zone diagonally crosses the southwest corner of the quadrangle, and is a major element of the right-lateral strike-slip San Andreas Fault system. The Elsinore Fault Zone separates the Santa Ana Mountains block west of the fault zone from the Perris block to the east. Internally both blocks are relatively stable and within the quadrangle are characterized by the presence of widespread erosional surfaces of low relief. Within the quadrangle the Santa Ana Mountains block is underlain by undifferentiated granitic rocks of the Cretaceous Peninsular Ranges batholith, but to the west, includes widespread pre-batholithic Mesozoic rocks.

The Perris block is underlain by a combination of batholithic and prebatholithic rocks, the latter consisting of metasedimentary rocks of low metamorphic grade; sub-greenschist grade. The most abundant lithology is phyllite but includes locally thick sections of impure quartzite. Minor sills, dikes, and small elongate plutons of fine-grained hornblende gabbro intrude the phyllite. Thin layers of tremolite-bearing marble occur locally. Also local are thin layers of manganese-bearing rocks. Both rhodonite and manganese oxides occur in these layers. The phyllite has a regular northwest strike throughout the main body of metamorphic rock giving rise to a homoclinal section over 25,000 feet thick. The layering-schistosity of these rocks is transposed bedding and is not stratigraphic thickness.

In the northwest corner of the quadrangle is a series of Cretaceous volcanic and associated sedimentary rocks in the northwest corner of the quadrangle contain widespread primary sedimentary structures and appear to post date the metamorphism of the phyllite. The volcanic rocks are part of the Estelle Mountain volcanics of primarily rhyolitic composition. The sedimentary rocks are well indurated, perhaps incipiently metamorphosed, siliceous rocks containing local conglomerate beds.

The Elsinore Groundwater Basin contains alluvial fan, floodplain, and lacustrine deposits, which are underlain by alluvium of the Pauba Formation. Alluvial fan deposits of gravel, sand, silt, and clay are found near the western and northeastern edges of the basin emanating from the adjacent crystalline mountains. The interior of the valley contains floodplain deposits that reach a thickness of about 200 feet and contain stringers of sand and gravel in finer silt and clay. In the zone of inundation of Lake Elsinore, finegrained lacustrine deposits of sand, silt, and clay reach 800 feet in thickness. The Pleistocene age Pauba Formation is a composed of alluvial sandstone and conglomerate members (Morton and others 1999) that reach a maximum thickness of about 2,200 feet beneath lake Elsinore (DWR 1981). This is the principal water-bearing unit of the basin, with the most productive wells extracting from alluvial sand and gravel bodies that occur as stringers within less pervious silt- and clay-rich deposits. In general, sediments are coarser near the margins of the basin and become finer toward Lake Elsinore.

### **3.3 GROUNDWATER**

The Elsinore Groundwater Basin underlies the Elsinore Valley in western Riverside County. The basin is bounded on the southwest by the Santa Ana and Elsinore Mountains along the Willard fault, a splay of the active Elsinore fault zone. The basin adjoins the Temecula Valley Groundwater Basin on the southeast at a low surface drainage divide. The basin is bounded on the northwest by the Temescal Subbasin of the Upper Santa Ana River Valley Groundwater Basin at a constriction in Temescal Wash. The basin is bounded on the northeast by nonwater-bearing rocks of the Peninsular Ranges along the Glen Ivy fault. Average annual precipitation ranges from 12 to 14 inches. Lake Elsinore lies in a closed basin formed between strands of the active Elsinore fault zone.

Fluctuations of the groundwater table, localized zones of perched water, and rise in soil moisture content should be anticipated during the rainy season. Irrigation of landscaped areas can also lead to an increase in soil moisture content and fluctuations of intermittent shallow perched groundwater levels. According to data from Geotracker website, a nearby gas station reported groundwater at 30 ft bgs and flows towards the south.

### **3.4 OIL AND GAS WELLS**

Oil and gas wells are potential concerns when they seep oil or gas, are not abandoned to current regulations, or have associated surface contamination. They may also be associated with methane hazards. This section discusses the oil wells reported on the records we reviewed. Unreported “wildcat” oil wells could be on or near the Subject Property.

The Subject Property is not located within an Oilfield.

#### **4.0 REVIEW OF PREVIOUS ENVIRONMENTAL REPORTS**

Previous reports were not supplied to GeoRox from Mr. Kassab.

## **5.0 SUBJECT PROPERTY AND AREA RECONNAISSANCE**

### **5.1 METHODOLOGY AND LIMITING CONDITIONS**

In performing the Subject Property and area reconnaissance, our assessor describes the Subject Property and looks for obvious signs of items that may be a source of environmental concern, such as aboveground storage tanks (ASTs); underground storage tanks (USTs), hazardous materials, and hazardous wastes.

Some of the items or activities we observe on the Subject Property may be associated with environmental concerns. Certain businesses or occupations may typically use hazardous substances or create hazardous waste. Storage tanks may leak and contaminate soil and ground water. Other signs of potential environmental concerns include unusual odors, pools of liquids, drums, unidentified containers, items that may contain polychlorinated biphenyls (PCBs), stains or corrosion, and drains or sumps.

Mr. Alex Shirazi performed the Subject Property visit and reconnaissance on March 5, 2016.

### **5.2 SUBJECT PROPERTY RECONNAISSANCE**

The Subject Property is located in a mixed undeveloped and commercial area in the city of Lake Elsinore, California. The Subject Property consists of two parcels (APN 378030007 and 378030009) approximately 2.95 acres in size. The rectangular-shaped Subject Property is bounded to the northwest by undeveloped land followed by commercial/industrial development and Collier Avenue to the northeast, to the south by Riverside Drive, and to the east Collier Avenue/Riverside Drive Intersection, and to the west by undeveloped land.

#### **5.2.1 Interior Observations**

The Subject Property is a vacant, undeveloped lot.

#### **5.2.2 Aboveground and Underground Storage Tanks**

No indications of USTs were observed during the Subject Property visit.

#### **5.2.3 Hazardous Substances and Petroleum Products**

No hazardous substances and/or petroleum products were observed on the Subject Property.

#### **5.2.4 Solid Waste**

No hazardous substances and/or petroleum products were observed on the Subject Property.

#### **5.2.5 Electrical Transformers**

Pad mounted and pole mounted transformers were observed on the Subject Property.

#### **5.2.6 Wetlands**

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property.

No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons were observed on the subject property. No drywells were observed on the subject property.

#### **5.2.7 Wells and Mine Shafts**

No mine shafts were observed on the Subject Property during the reconnaissance.

#### **5.2.8 Pits, Ponds and Lagoons**

Evidence of ponds, pits and lagoons were not observed on the Subject Property during the reconnaissance. Historic aerials and topographic maps indicate the Subject Property was improved with a water reservoir.

#### **5.2.9 Effluent Discharge**

Evidence of septic systems was not observed on the Subject Property.

#### **5.2.10 Asbestos**

The Subject Property is a vacant land.

#### **5.2.11 Lead-Based Paint**

The Subject Property is a vacant land.

#### **5.2.12 Radon**

According to EDR report and Radon Map of California, the site is located in Zone 2 of the USEPA's radon designation categories. Zone 2 indicates the expected radon concentration of the site is above 2.0 picoCuries per Liter (pCi/L) and less than 4.0 pCi/L. The EPA action level for radon is 4.0 pCi/L. Based on the future development (commercial nature) of the subject property, radon is not a concern.

#### **5.2.13 Mold**

The Subject Property is a vacant, undeveloped land.

#### **5.2.14 Dry Cleaning**

The Subject Property is a vacant, undeveloped land. No dry cleaners are located adjacent to the Subject Property.

#### **5.2.15 Others**

Other items that might be considered (RECs) relative to the Subject Property were not observed during the Subject Property reconnaissance.

### **5.3 AREA RECONNAISSANCE**

The area reconnaissance helps us evaluate whether adjacent or nearby property uses may have contaminated the Subject Property. Our assessor conducted the reconnaissance by touring the area by automobile and viewing particular businesses from public rights of way, but did not enter off Subject Property properties. The findings of our area reconnaissance are discussed according to their direction from the Subject Property: north, east, south, and west.

#### **5.3.1 North**

The Subject Property is bound to the northwest by undeveloped land followed by a commercial/industrial warehouse (EZ Products) and Collier Avenue to the northeast.

#### **5.3.2 South**

The Subject Property is bound to the south by Riverside Drive and recently graded land beyond.

### **5.3.3 East**

The Subject Property is bound to the east by Collier Avenue/Riverside Drive Intersection.

### **5.3.4 West**

The Subject Property is bound by undeveloped land.

### **5.3.5 Summary of Area Reconnaissance**

No environmentally sensitive tenants were located adjacent to the subject property.

## **6.0 INTERVIEWS**

### **6.1 INTERVIEW WITH CURRENT SUBJECT PROPERTY TENANT**

The Subject Property owner not available for interview.

## **7.0 HISTORICAL RECORDS REVIEW**

As part of the historical review, we reviewed information on the past uses of the Subject Property and nearby properties. We assessed whether these uses may have contaminated the Subject Property's soil or ground water. The earliest historical references we typically consult date from 1940 or from the first developed use of the Subject Property or nearby properties. Information sources we commonly use include aerial photographs, fire insurance maps, and USGS topographic maps.

The historical review results in two histories, based on the information reviewed: a history of the past use of the Subject Property and a history of the past use of the adjacent properties.

### **7.1 HISTORICAL RESEARCH**

#### **7.1.1 Aerial Photographs**

We reviewed available aerial photographs dated 1938, 1949, 1953, 1961, 1967, 1978, 1985, 1989, 1990, 1994, 2002, 2005, 2009, 2010, and 2012.

From 1938 to 1978, the Subject Property appears to be a water reservoir. However, from from at least 1978 to at least 1985, the Subject Property appears to be developed with an unknown square structure. From 1989 to 2012, the Subject Property appears to be native vegetation (undeveloped). The surrounding properties historically were utilized for agricultural purposes. In the mid 1980's the general area to the northwest and northeast appeared to be developed for commercial/industrial development. The properties to the west and south remain undeveloped in recent aerials.

#### **7.1.2 Sanborn Maps**

The Subject Property was un-impalpable according to the Sanborn fire insurance maps provided by EDR.

#### **7.1.3 Topographic Maps**

The United States Geological Survey (USGS) *Lake Elsinore, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the 1988 topographic map, the subject property is located at approximately 1268 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south/southwest. The subject property is depicted as developed with a water reservoir.

An online review of historic topographic maps was conducted. The Subject Property appears to be developed with a water reservoir in 1953, 1954, 1970, 1975, 1982, 1985, and 1988.

#### **7.1.4 City Directory**

The EDR City Directory includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximate five year intervals.

Business directories including city, cross reference and telephone directories were reviewed at Sherman Library and Gardens, Newport Beach, California, for the years spanning 1985 through 2010.

The Subject Property address was not listed in the City Directory. The surrounding adjacent properties were not identified as sensitive environmental tenants.

#### **7.2 AGENCIES CONTACTS**

- City of Lake Elsinore: Building Department, Planning Division, Fire Department, Online GIS mapping
- County of Riverside, Online Assessor Database
- Riverside County Health Department, Records Request: response has yet to be received.
- South Coast Air Quality Management District, Online records search: no records on file for the Subject Property
- California Department of Toxic Substances and Control, Envirostor Online Database: no records on file for the Subject Property.
- California State Water Board, Geotracker Online Database, no records on file for the Subject Property.

## 8.0 REGULATORY AGENCY INFORMATION

We reviewed excerpts of federal, state, and local environmental regulatory agency lists for those properties which were within the search ranges as noted in the excerpts that were prepared by EDR, an environmental data search firm. EDR revises their lists periodically when they receive updates from the agencies. The date of the latest revision is shown on their report, which is appended to this report as Appendix B. The EDR with Geotcheck report also summarizes the origin and purpose of each list.

Please note that regulatory listings are limited and include only those sites that are known to the regulatory agencies at the time of publication to be contaminated or in the process of evaluation for potential contamination. Our scope of services did not include an on-site review of agency files.

Three sites (nine listings total) are listed within 1-mile radius of the Subject Property. Two of the sites are not considered an environmental concern to the Subject Property based on the nature of the listings, inferred direction of groundwater flow and relative distance. The adjacent site is detailed below:

- EZ Products, 17999 Collier Avenue, is located approximately 200 to the northwest of the Subject Property and is presumed to be higher elevation (hydrogically up/cross gradient). EZ Products is an active manufacturer of bolt, nut, screw, rivet, and washers. According to the regulatory database, this facility is listed as a RCRA-SQG, FINDS and ECHO site. Online research from the California DTSC Hazardous Waste Tracking System revealed evidence of tetrachloroethylene (PERC) on site for the years 1999 (1.48 tons), 2000 (0.34 tons), and 2001 (2.13 tons). According to the EPA

Based on the inferred direction groundwater flow, the amount (over two tons) of PERC onsite for three years, and close proximity to the Subject Property, this facility represents an environmental issue. Based on the amount of PERC onsite, Inferred direction of groundwater flow, and relative distance from the Subject Property, this facility represents an environmental issue. Based on the lack of documented release, this site is not expected to represent an environmental concern to the Subject Property, at this time.

## **9.0 USER PROVIDED INFORMATION**

### **9.1 OWNER, PROPERTY MANAGER, AND OCCUPANT**

A Representative of the Subject Property Owner completed the Phase I ESA User Questionnaire. No environmentally sensitive information related to the subject property was identified. The completed questionnaire is attached in Appendix D.

The property is currently represented by DSGS and C. and M. Smyrniotos.

### **9.2 REASON FOR PERFORMING *PHASE I***

This Phase I Environmental Subject Property Assessment was performed as part of the due diligence process associated with the proposed commercial development of the Subject Property.

## **10.0 DEVIATIONS**

### **10.1 DATA GAPS**

No data gaps were identified during this assessment.

## 11.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

A *recognized environmental condition* (REC) refers to the presence or likely presence of any hazardous substance or petroleum product on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions that do not present a threat to human health and/or the environment and that would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies. The following was identified during the course of this assessment:

- GeoRox did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition* (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- GeoRox did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition* (HREC) refers to an environmental condition which would have been considered a REC in the past, but which is no longer considered a REC based on subsequent assessment or regulatory closure. The following was identified during the course of this assessment:

- GeoRox did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by GeoRox, which do not qualify as RECs; however, require discussion. The following was identified during the course of this assessment:

GeoRox did identify one *environmental issues* during the course of this assessment and is detailed below:

- EZ Products, 17999 Collier Avenue, is located approximately 200 to the northwest of the Subject Property and is presumed to be higher elevation (hydrologically up/cross gradient). EZ Products is an active manufacturer of bolt, nut, screw, rivet, and washers. According to the regulatory database, this facility is listed as a RCRA-SQG, FINDS and ECHO site. Online research from the California DTSC Hazardous Waste Tracking System revealed evidence of tetrachloroethylene (PERC) on site for the years 1999 (1.48 tons), 2000 (0.34 tons), and 2001 (2.13 tons). According to the EPA ECHO website and the regulatory

database, this facility specified a three-year period of no violations. Based on the inferred direction groundwater flow, the amount (over two tons) of PERC onsite for three years, and close proximity to the Subject Property, this facility represents an environmental issue. Based on the amount of PERC onsite (3.95 tons), inferred direction of groundwater flow, and relative distance from the Subject Property, this facility represents an environmental issue. Based on the lack of documented release, this site is not expected to represent an environmental concern to the Subject Property, at this time.

In our opinion, based on the information obtained during this assessment, additional subsurface soil sampling at the Subject Property (Phase-II ESA) is not recommended.

## **12.0 LIMITATIONS AND EXCEPTIONS**

The findings and opinions in this report are relevant to the dates of our Subject Property work. They should not be relied upon to represent conditions at later dates.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the professional advice included in this report.

The opinions included in this report are based on information obtained during the study and on our experience. If additional information becomes available that might affect our conclusions, we request the opportunity to review the information, reassess the potential environmental concerns, and modify our opinion, if warranted.

Although this assessment has attempted to identify the potential for Subject Property contamination, potential sources of contamination may have escaped detection. They may have been overlooked because of the limited scope of this assessment, the inaccuracy of public records, or the presence of undetected and unreported environmental concerns.

### **12.1 SIGNIFICANT ASSUMPTIONS**

We assume the purpose of the Phase I ESA is to provide appropriate inquiry into the previous/current ownership and use of the Subject Property so that Mr. Kassab may qualify for CERCLA liability protection. Additionally, we assume that the information gathered and reviewed during this assessment is accurate.

#### **12.1.1 Special Terms and Conditions**

No special terms or conditions were made during the assessment.

#### **12.1.2 User Reliance**

This report has been prepared for Mr. Kassab to be used solely in evaluating potential environmental implications at the Subject Property. The report has not been prepared for use by other parties, and may not contain sufficient information for purposes of other parties or other uses. If other parties wish to rely on this report, a secondary Mr. Kassab agreement must be signed.

### 13.0 SIGNATURE(S) OF ENVIRONMENTAL PROFESSIONAL(S)

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312.

Alex Shirazi, P.E.  
Principal Engineer

We have the specific qualifications based on education, training, and experience to assess a property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Geo Rox Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

### **EDR HIGH RISK HISTORICAL RECORDS**

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### **DEED: Deed Restriction Listing**

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### USGS TOPOGRAPHIC MAP

Target Property Map:	5636473 LAKE ELSINORE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

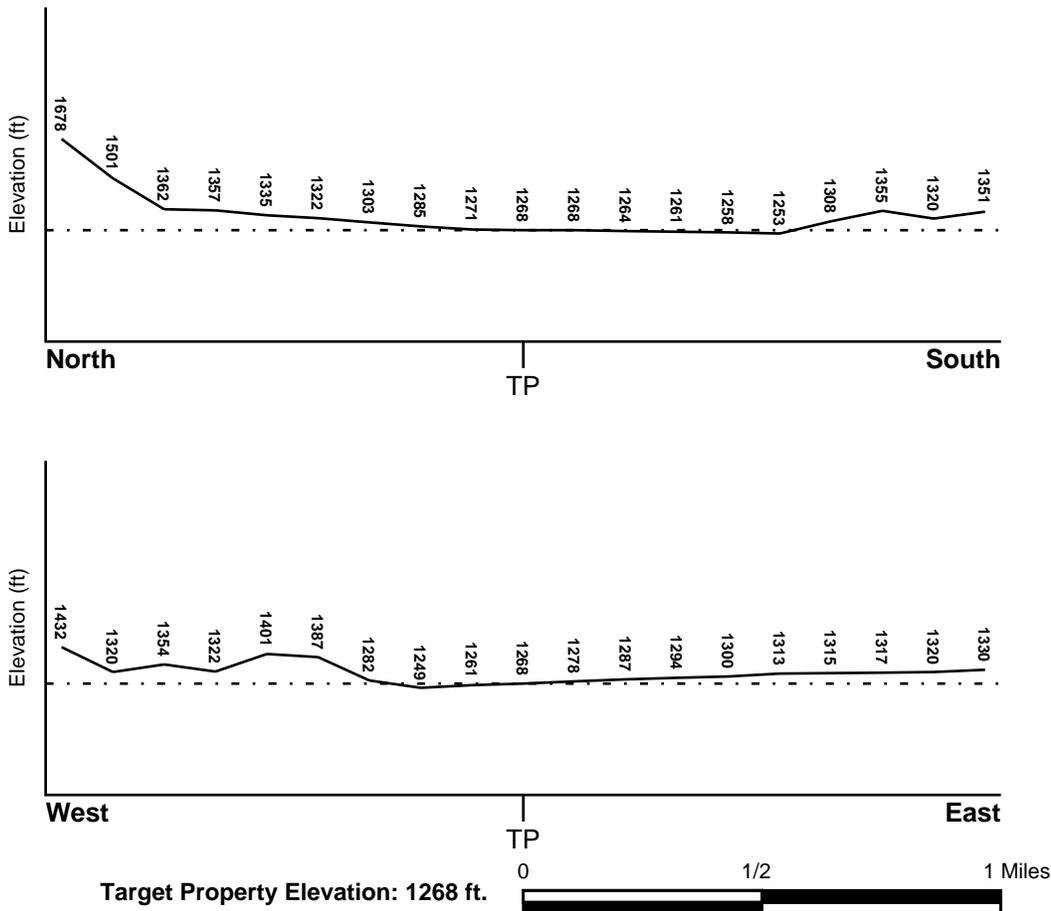

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: GARRETSON

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EDR PUR-IQ<sup>®</sup> Report

*"the intelligent way to conduct historical research"*

for  
E-1604 Lake Elsinore  
Collier Avenue  
Lake Elsinore, CA 92530  
Lat./Long. 33.69492 / 117.346894  
EDR Inquiry # 4552616.2s

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports<sup>®</sup> comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

**Potential for EDR Historical (Prior Use) Coverage** - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

- 1. City Directory:** Coverage may exist for portions of Riverside County, CA.
- 2. Fire Insurance Map:** When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.
- 3. Aerial Photograph:** Coverage exists for portions of Riverside County for the following decades: 1930s, 1980s, 1960s, 1950s, 1990s Shipping time 3-5 business days.
- 4. Topographic Map:** The USGS 7.5 min. quad topo sheet(s) associated with this site:  
Historical: Coverage exists for RIVERSIDE County  
Current: Target Property: TP | 2012 | 5636473 Lake Elsinore, CA

**5. Flood Insurance Rate Maps (FEMA) :** Coverage is available for RIVERSIDE county.

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs, flood maps and historical topographic map resources available for Lake Elsinore, CA. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

## Elsinore Groundwater Basin

- Groundwater Basin Number: 8-4
- County: Riverside
- Surface Area: 25,700 acres (40.2 square miles)

### Basin Boundaries and Hydrology

The Elsinore Groundwater Basin underlies the Elsinore Valley in western Riverside County. The basin is bounded on the southwest by the Santa Ana and Elsinore Mountains along the Willard fault, a splay of the active Elsinore fault zone. The basin adjoins the Temecula Valley Groundwater Basin on the southeast at a low surface drainage divide. The basin is bounded on the northwest by the Temescal Subbasin of the Upper Santa Ana River Valley Groundwater Basin at a constriction in Temescal Wash. The basin is bounded on the northeast by nonwater-bearing rocks of the Peninsular Ranges along the Glen Ivy fault. Average annual precipitation ranges from 12 to 14 inches. Lake Elsinore lies in a closed basin formed between strands of the active Elsinore fault zone.

### Hydrogeologic Information

#### *Water Bearing Formations*

The Elsinore Groundwater Basin contains alluvial fan, floodplain, and lacustrine deposits, which are underlain by alluvium of the Pauba Formation (DWR 1981). The maximum thickness of sedimentary deposits reaches 2,300 feet beneath Lake Elsinore (DWR 1981). Specific yield for the basin ranges from about 6 to 16 percent and averages about 7.6 percent (SWRB 1956).

**Alluvial Fan, Floodplain, and Lacustrine Deposits.** These deposits are Late Pleistocene to Holocene in age and form the surficial materials of the basin. Alluvial fan deposits of gravel, sand, silt, and clay are found near the western and northeastern edges of the basin emanating from the adjacent crystalline mountains. The interior of the valley contains floodplain deposits that reach a thickness of about 200 feet and contain stringers of sand and gravel in finer silt and clay. In the zone of inundation of Lake Elsinore, fine-grained lacustrine deposits of sand, silt, and clay reach 800 feet in thickness (DWR 1981). The lake deposits have a specific yield of about 6 percent, whereas the floodplain deposits range from 9 to 12 percent (DWR 1981).

**Pauba Formation.** The Pleistocene age Pauba Formation is a composed of alluvial sandstone and fanglomerate members (Morton and others 1999) that reach a maximum thickness of about 2,200 feet beneath lake Elsinore (DWR 1981). This is the principal water-bearing unit of the basin, with the most productive wells extracting from alluvial sand and gravel bodies that occur as stringers within less pervious silt- and clay-rich deposits. In general, sediments are coarser near the margins of the basin and become finer toward Lake Elsinore. Specific yield for the Pauba Formation averages about 9 percent (DWR 1981).

### ***Restrictive Structures***

Groundwater movement in the basin is strongly influenced by faults cutting the alluvial and lacustrine sediments in Elsinore Groundwater Basin. Differences in groundwater elevation are found across the Wildomar, Willard, and Glen Ivy faults, indicating that they are barriers to groundwater flow (DWR 1953, SWRB 1956; DWR 1981). As many as 8 separate fault bounded blocks are interpreted in the basin and there appears to be little groundwater movement across these bounding faults (DWR 1981).

### ***Recharge Areas***

The principal recharge of the basin is from infiltration of stream flow through alluvial fan deposits near the edges of the basin and through gravel deposits along the course of the San Jacinto River. Other contributing sources include infiltration from unlined channels overlying the basin, underflow from saturated alluvium and fractures within the surrounding bedrock mountains and hills, and spreading of water in recharge basins (WE 2000).

### ***Groundwater Level Trends***

Groundwater levels within Elsinore Groundwater Basin declined more than 100 feet between 1927 and 1950 (DWR 1953). A hydrograph from one well shows that water level declined about 110 feet in the southern part of the basin from 1967 through 1985. However, a hydrograph from a well in the northern part of the basin shows a rise in water level of about 65 feet from 1963 through 1980. Under natural conditions, groundwater should flow generally toward Lake Elsinore; however, because faults cutting the sediments impede groundwater movement, groundwater flow is dominantly contained within fault blocks in the basin.

### ***Groundwater Storage***

**Groundwater Storage Capacity.** Total storage capacity is estimated to be about 27,000 af (SWRB 1956, DWR 1975), 1,840,000 af (DWR 1981), and 1,400,000 af (EVMWD 2001).

**Groundwater in Storage.** Groundwater in storage in 1964 and 1975 was estimated to be about 1,000,000 af (DWR 1981). About 245,000 af of available dry storage in 1999 (EVMWD 2001) suggests that about 1,155,000 af of groundwater in storage was available.

### ***Groundwater Budget (Type C)***

Mean subsurface inflow is estimated to be about 800 af/yr (SWRB 1956). Total extraction for 1978 is estimated to have been 8,081 af (DWR 1981).

### ***Groundwater Quality***

**Characterization.** Groundwater northeast of Lake Elsinore is calcium sulfate character, whereas groundwater southeast of the lake is calcium bicarbonate (SWRB 1956). Groundwater in the central part of the basin has sodium sulfate-bicarbonate character (DWR 1981). Springs and wells near the town of Elsinore yield water of sodium sulfate character (DWR 1981). The range of TDS content for 17 public wells is 290 to 680 mg/L and the average TDS content is 460 mg/L.

**Impairments.** Fluoride content exceeding recommended levels has been found in groundwater near the town of Elsinore (DWR 1953; SWRB 1967).

## Demographic Profile

### Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

Radius of Area:	3	Land Area:	87%	Households in Area:	10,570
Center latitude:	33.69529	Water Area:	13%	Housing Units in Area:	11,668
