The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-42248-1

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-42248-1

Comments
No additional comments.

Receipt
The samples were received on 10/28/2020 12:32 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2.1

Job ID: 570-42248-1

Client Sample ID: Effluent_20201028 — Lab Sample ID: 570-42248-1

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	2.1		2.0		ppb v/v	1		TO-15	Total/NA
Chloromethane	0.97		0.50		ppb v/v	1		TO-15	Total/NA

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	5.0		4.8		ug/m3	1		TO-15	Total/NA
Chloromethane	2.0		1.0		ug/m3	1		TO-15	Total/NA

Client Sample ID: Influent_20201028 — Lab Sample ID: 570-42248-2

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	240		200		ppb v/v	100		TO-15	Total/NA
Trichloroethene	130		50		ppb v/v	100		TO-15	Total/NA
Tetrachloroethene - DL	17000		160		ppb v/v	320		TO-15	Total/NA

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	560		480		ug/m3	100		TO-15	Total/NA
Trichloroethene	700		270		ug/m3	100		TO-15	Total/NA
Tetrachloroethene - DL	120000		1100		ug/m3	320		TO-15	Total/NA

This Detection Summary does not include radiochemical test results.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2.1

Job No.: 570-42248-1

Lab Sample ID	Canister Volume (L)	Presampling Pressure ("Hg)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initials
570-42248-1	1	-29.5	-0.4	0.99	0.99	-0.196462	0.99	0.99		1.00	1.00	AIR MG-4	10/29/20 18:12	WMI4
570-42248-2	1	-29.5	-4.2	0.86	0.86	-2.06285	0.86	0.86		1.00	1.00	AIR MG-4	10/29/20 18:12	WMI4

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg
Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-44777-1

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-44777-1

Comments
No additional comments.

Receipt
The samples were received on 11/25/2020 12:52 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-46953-1

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-46953-1

Comments
No additional comments.

Receipt
The samples were received on 12/23/2020 11:38 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2 1

Job ID: 570-46953-1

Client Sample ID: Effluent_20201223 — Lab Sample ID: 570-46953-1

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	4.2		2.0		ppb v/v	1		TO-15	Total/NA
Chloromethane	0.64		0.50		ppb v/v	1		TO-15	Total/NA
Dichlorodifluoromethane	0.52		0.50		ppb v/v	1		TO-15	Total/NA

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	10		4.8		ug/m3	1		TO-15	Total/NA
Chloromethane	1.3		1.0		ug/m3	1		TO-15	Total/NA
Dichlorodifluoromethane	2.6		2.5		ug/m3	1		TO-15	Total/NA

Client Sample ID: Influent_20201223 — Lab Sample ID: 570-46953-2

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Trichloroethene	150		31		ppb v/v	62		TO-15	Total/NA
Tetrachloroethene - DL	19000		310		ppb v/v	620		TO-15	Total/NA

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Trichloroethene	820		170		ug/m3	62		TO-15	Total/NA
Tetrachloroethene - DL	130000		2100		ug/m3	620		TO-15	Total/NA

This Detection Summary does not include radiochemical test results.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2 1

Job No.: 570-46953-1

Lab Sample ID	Canister Volume (L)	Presampling Pressure ("Hg)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initials
570-46953-1	1	-29.5	-4.4	0.85	0.85	-2.16108	0.85	0.85		1.00	1.00	AIR MG-4	12/28/20 16:22	V2NZ
570-46953-2	1	-29.5	-4.0	0.87	0.87	-1.96462	0.87	0.87		1.00	1.00	AIR MG-4	12/28/20 16:21	V2NZ
570-46953-2	1	-29.5	-4.0	0.87	0.87	5.0	1.34	1.34		1.55	1.55	AIR MG-4	12/28/20 16:21	V2NZ

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg
Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 1/26/2021 12:22 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Receipt Exceptions

The container label for the following samples did not match the information listed on the Chain-of-Custody (COC): Effluent_ 20210126 (570-49365-1) and Influent_20210126 (570-49365-2). The container labels list 1/26/2021, while the COC lists 9/23/2020.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-51995-1

Comments
No additional comments.

Receipt
The samples were received on 2/24/2021 11:27 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
Method TO-15: The continuing calibration verification (CCV) associated with batch 570-132581 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method TO-15: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-132581 recovered outside control limits for the following analytes: Isopropyl Alcohol.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2.1

Job No.: 570-51995-1

Lab Sample ID	Canister Volume (L)	Presampling Pressure ("Hg)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initials
570-51995-1	1	-29.5	-11	0.63	0.63	0.2	1.01	1.01		1.60	1.60	AIR MG-4	02/28/21 20:50	UX77

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg
Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-53981-1

Comments
No additional comments.

Receipt
The samples were received on 3/16/2021 2:12 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
Method TO-15: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-139219 recovered outside control limits for the following analytes:Isopropanol.

Method TO-15: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-139383 recovered outside control limits for the following analytes: Vinyl acetate.

Method TO-15: The continuing calibration verification (CCV) associated with batch 570-139643 recovered above the upper control limit for Trichlofluoroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Login Sample Receipt Checklist

Client: CDM Smith, Inc.

Job Number: 570-53981-1

Login Number: 53981
List Number: 1
Creator: Cruise, Noel

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Summa Canister Dilution Worksheet

Client: CDM Smith, Inc.
Project/Site: Anadite

Job No.: 570-53981-1

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg
Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that these analyses and resulting report(s) were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly analyze all samples and accurately report the results. I certify that all analyses were performed in accordance with methods approved for WASTEWATER under the latest revision to 40 CFR Part 136. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for analyzing the wastewater samples and generating the report(s), the analyses, report, and information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-54734-1

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-54734-1

Comments
No additional comments.

Receipt
The samples were received on 3/24/2021 11:50 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2.1

Job ID: 570-54734-1

Client Sample ID: Effluent_ 20210324 — Lab Sample ID: 570-54734-1

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Acetone	9.4		2.0		ppb v/v	1		TO-15	Total/NA
Chloromethane	0.56		0.50		ppb v/v	1		TO-15	Total/NA

List Number: 1
Creator: Liao, Gineyau

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: CDM Smith, Inc.
Project/Site: Anadite 96891-T2.1

Job No.: 570-54734-1

Lab Sample ID	Canister Volume (L)	Presampling Pressure ("Hg)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initials
570-54734-1	1	-29.5	-2.6	0.91	0.91	-1.277	0.91	0.91		1.00	1.00	AIR MG-4	03/25/21 15:56	USQD
570-54734-2	1	-29.5	-4.6	0.85	0.85	-2.25931	0.85	0.85		1.00	1.00	AIR MG-4	03/25/21 15:57	USQD

Formulae:

Preadjusted Volume (L) = (Preadjusted Pressure ("Hg) + 29.92 "Hg * Vol L) / 29.92 "Hg
Adjusted Volume (L) = (Adjusted Pressure (psig) + 14.7 psig * Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

Notes:

PCE = Tetrachloroethene; TCE = Trichloroethene; TCA = Trichloroethane; DCA = Dichloroethane; DCE = Dichloroethene; CMT = Chloromethane; CBN = Chlorobenzene; DCB = Dichlorobenzene; TCB = Trichlorobenzene; CFM = Chloroform; MCL = Methylene chloride; CCL = Carbon tetrachloride; DCPA = Dichloropropane; BEN = Benzene; TOL = Toluene; EBN = Ethylbenzene; TMB = Trimethylbenzene; MTBE = Methyl tert-butyl ether; ET = Ethyltoluene; and THF = Tetrahydrofuran; 13B = 1,3-Dichlorobenzene; HXN = Hexane; IPA = Isopropyl alcohol.

Samples analyzed by EPA Method TO-15 or TO-14.
All concentrations are reported in ppb (v/v).
Only the most frequently detected compounds reported in the vapor extraction well samples are listed.
If blank, compound was not reported.
U = Not detected at a concentration greater than the reporting limit shown.
"--" = Not Analyzed

Subject: Additional Site Assessment and Remedial Action Report
Rancho Los Amigos South Campus
7600 Amigos Avenue, Downey
Los Angeles County, California
RWQCB Case No. 902420016

INTRODUCTION

Leighton Consulting, Inc. (Leighton Consulting) is pleased to present this report summarizing additional site assessment and remedial action activities completed at the Rancho Los Amigos South Campus located at 7600 Amigos Avenue, in the City of Downey, Los Angeles County, California (Site – Figure 1). Leighton Consulting assessed the lateral and vertical extent of light non-aqueous phase liquids (LNAPL) on groundwater and in soil and dissolved-phase contamination in groundwater and conducted six, 8-hour, high flow and high vacuum, dual-phase extraction (DPE) remedial events.

OBJECTIVE

The purposes of the LNAPL and dissolved-phase site assessment were to better define the limits of the LNAPL plume so that the volume of impacted soil and groundwater could be more accurately estimated, and to define the lateral extent of the dissolved contaminant plume in groundwater.

17781 Cowan ▪ Irvine, CA 92614-6009
949.250.1421 ▪ 949.250.1114 Fax

The purposes of the DPE remedial events were to effectively remove LNAPL to the maximum practical extent from groundwater monitoring wells MW-1, MW-2, and MW-3 and impede dispersion of contaminants from soil to groundwater by removing contaminant mass trapped within the vadose zone.

The activities described below were conducted in accordance with Leighton Consulting's, *Work Plan for Additional Assessment and Remedial Activities*, dated January 21, 2015, and the Los Angeles Regional Water Quality Control Board's approval letter dated March 4, 2015.

SCOPE OF WORK

Our scope of work included the following:

- Conduct a geophysical survey;
- Advancement of nine soil borings (HP1 through HP9) to 48 feet below ground surface (bgs);
- Collection of soil samples at 5-foot intervals from each boring for chemical analysis;
- Collection of one grab groundwater sample from each boring for chemical analysis;
- Conduct six, 8-hour DPE events utilizing monitoring wells MW-1, MW-2, and MW-3; and
- Preparation of this report summarizing our findings and conclusions, including tables, illustrations, and appendices.

SITE DESCRIPTION

The Rancho Los Amigos – South Campus is located 7600 Amigos Avenue, Downey, California ("Site") (Figure 1). Specifically, the Site is located southwest of the intersection of Descanso Street and Juniper Street within the South Campus facility boundaries. The Site is currently not in use.

PRE-FIELD ACTIVITIES

Health and Safety Plan

In accordance with standard environmental procedures, Leighton Consulting updated the existing Site Specific Health and Safety Plan (HSP) to describe safety aspects of the work to be performed at the Site. The HSP was prepared in general compliance with the Occupational Safety and Health Administration (OSHA) Regulation 29 CFR 1910.120. The HSP was onsite with Leighton Consulting personnel at all times. This HSP outlined Site procedures, potential hazards, and contains a hospital location map. All onsite personnel signed the HSP acknowledging acceptance.

Utility Clearance

Leighton Consulting contacted Underground Service Alert (USA) at least 48 hours prior to the commencement of subsurface field activities as required by law. Each proposed boring location was clearly marked in white paint by Leighton Consulting prior to contacting USA.

In addition, a private utility locating subcontractor delineated detectable underground utilities in the area of each proposed borehole at the Site. See below, *Geophysical Survey,* for additional details. A copy of the geophysical survey report is included in Appendix B.

Permits

Prior to commencement of field activities, Leighton Consulting applied for and secured a permit for the advancement of soil borings into groundwater from the Los Angeles County Department of Public Health. A copy of the permit is included in Appendix C.

FIELD ACTIVITIES

Geophysical Survey

Leighton Consulting observed the completion of a geophysical survey of the Site by SubSurface Surveys & Associates, Inc., a licensed geophysical surveyor. The purpose of the geophysical survey was to assess the Site for the presence of underground utilities, piping, or USTs that may be contributing to the LNAPL plume or providing preferential pathways for contaminant migration. The survey also cleared proposed

boring locations in preparation for the planned subsurface investigation. Multiple methods were utilized during the geophysical investigation because each instrument senses different material properties of the ground and buried objects.

Electro-magnetic (EM) data was collected using an EM-61 and Fischer TW-6 M-Scope, which highlighted buried metallic objects, such as pipelines, USTs, rebar-reinforced concrete foundations, etc. A 95- by 95-foot grid was established over the existing Key Shop building and adjacent parking lot to guide data acquisition in search of possible buried anomalies. Additionally, systematic traversing with the instrument within accessible areas was conducted. When anomalous conditions were detected, the instruments were traversed in multiple orientations over the anomalies to determine the object's details such as its approximate dimensions and orientation.

Ground penetrating radar (GPR) was traversed in multiple orientations over the grid. GPR was the main instrument applied for the detection of buried nonmetallic debris piles, backfilled excavations, trenches, and nonmetallic pipelines and utilities. GPR was used for detailing anomalies detected with other geophysical instruments.

Lastly, a line tracer was used in both passive and active modes. Active mode included impressing a unique radio frequency (RF) signal upon pipelines, accessible risers, and tracer wires with the transmitter and then tracing out the surface projection of the pipelines containing the unique RF signal with the receiver. Passive mode included the detection of 60 hertz (Hz) electrical signals and other common RF signals found in active electrical and communication lines. The geophysical survey report is included as Appendix B.

Additional Assessment

Nine soil borings were advanced to groundwater (approximately 45 feet bgs) in locations shown on Figure 2. The borings were advanced using direct push drilling equipment operated by Millennium Environmental, Inc., a State of California licensed drilling contractor. Soil samples were collected from each boring at 5-foot intervals for lithologic description and potential chemical analysis. Each soil sample was field screened using a photoionization detector (PID) to evaluate the soil sample for the presence of volatile organic vapors. PID readings collected from soil samples during boring advancement ranged from 0.0 parts per million (ppm) to 15,000 ppm. Elevated PID readings were only encountered in soil from borings HP7 through HP9 at depths ranging from 20 to 45 feet bgs. PID readings are shown on the boring logs included in Appendix D and Table 1.

Soil samples were retained in 6-inch acetate sleeves, capped with Teflon® sheets and plastic end caps, placed in an ice-cooled chest for temporary storage, and transported to Eurofins Calscience, Inc., (Eurofins) a National Environmental Laboratory Accreditation Program (NELAP) Certified laboratory for chemical analysis. Soil samples intended to be analyzed for volatile organic compounds (VOCs) were collected using EPA Method 5035 preparation procedures. Soil sub-cores were pulled directly from the sleeve using a laboratory-supplied disposable syringe. The soil sub-cores of appropriate mass were then transferred into laboratory-supplied 40-millileter glass vials preserved with methanol and sodium bisulfate and properly capped, forming an airtight seal.

Once groundwater was encountered, drilling activities ceased and a grab groundwater sample was collected utilizing a Hydropunch® sampling device. The Hydropunch® sampling tool consisted of an approximately 2-inch diameter hollow steel rod equipped with an inner 4-foot long, 0.010-inch screened, steel rod. The sampler was fitted with an expendable drive point at the bottom. The Hydropunch® sampling tool was advanced into the water-bearing unit and the outer hollow steel rod was withdrawn 4 feet to expose the screen. Approximately ½-inch outer diameter polyethylene tubing equipped with a check valve (Waterra) was lowered through the hollow steel rods to bring the groundwater samples to the surface. The groundwater samples were retained in laboratory supplied containers, placed in an ice-cooled chest for temporary storage, and transported to Eurofins for chemical analysis.

Laboratory Analysis

Four soil samples per boring were analyzed for total petroleum hydrocarbons (TPH) as diesel (TPH-d) and as gasoline (TPH-g) by EPA Method 8015M based on field observations and PID readings. The four soil samples from borings HP7, HP8, and HP9 with the highest concentration of TPH-g, as well as the highest PID readings, were further analyzed for VOCs, including fuel oxygenates, by EPA Method 8260B.

The grab groundwater samples (one per boring) were analyzed for TPH-d and TPH-g by EPA Method 8015M and VOCs, including fuel oxygenates, by EPA Method 8260B.

Laboratory reports are included as Appendix E.

Decontamination

Non-dedicated sampling equipment was decontaminated between borings and before and after each sample was collected using a three stage wash of phosphate-free laboratory grade detergent and water, a potable water rinse, and distilled water rinse.

Any soil cuttings and decontamination water produced was collected in 55-gallon drums and temporarily stored onsite pending analysis for offsite disposal.

Dual-Phase Extraction Events

Six 8-Hour DPE Events

Six, 8-hour DPE events were completed over the duration of three months (two per month) between April 14 and June 13, 2015.

Leighton Consulting connected a mobile DPE system capable of high flow rates and vacuum pressures to existing wells MW-1, MW-2, and MW-3. The system consisted of a self-contained trailer-mounted DPE system with a variable speed drive, high vacuum capacity, and rotary positive blower. The supplemental fuel for the oxidizer was propane. Electrical power for the mobile DPE system was supplied by the on-board propane-powered generator.

During the DPE events the following data were collected:

- VOC removal rate and total removal (mass and volume);
- Flow rates;
- Extraction well vacuum pressures;
- Off-gas concentrations (influent and effluent); and
- Groundwater/free product levels.

Groundwater was extracted to expose soil currently beneath the static groundwater level to allow for soil vapor extraction in the smear zone or the zone of soil impacted by contamination due to changes in groundwater levels over time. The groundwater was extracted from the subsurface and temporarily stored within a vacuum truck prior to being transported to an approved facility for disposal. Groundwater was transported to the disposal facility at the end of each 8-hour event.

Laboratory Analysis

System influent vapor samples were collected immediately following system start-up and at four hour intervals throughout the entirety of each DPE event (middle and end of 8-hour event). System influent vapor samples were immediately sealed, labeled, and placed into an enclosed cooler. The cooler was kept at ambient room temperature until delivery to a Eurofins. One system effluent sample was collected during each 8-hour event. The samples were analyzed for VOCs and fuel oxygenates by EPA Method TO-15M and TPH-g by EPA Method TO-3M. A copy of the laboratory reports is included in Appendix E.

RESULTS

Geology and Hydrogeology

The Site is located within the Coastal Plain of the Los Angeles Basin, a great structural depression separated by the Transverse Ranges Province to the north and by the Peninsular Range Provinces to the southeast. The Los Angeles Basin is bounded on the north by the Santa Monica Mountains and the Elysian, Repetto, and Puente Hills and on the east and southeast by the Santa Ana Mountains and San Joaquin Hills. Strata in the basin primarily derive from marine origin, and date from late Cretaceous to recent Quaternary deposits.

The Site is located in the west-central portion of the Central Hydrologic Subarea Split, of the Coastal Plain Hydrologic Area of the Los Angeles-San Gabriel Hydrologic Unit (CRWQCB, 1995). Designated beneficial uses include municipal supply, industrial supply, process industrial supply, and agricultural supply. Groundwater flow direction beneath the Site is to the southeast, and the hydraulic gradient is approximately 0.010 feet per foot, as determined from the May 2015 groundwater monitoring event.

Based on Leighton Consulting's subsurface investigation, the lithology encountered beneath the Site is generally comprised of heterogeneous interbedded silty sands, clayey silts, and poorly graded sands from the surface to 48 feet bgs, the maximum exploration depth. Groundwater was encountered during this investigation at a depth of approximately 45 feet bgs.

Geophysical Survey

The results of the geophysical survey did not indicate the present of any USTs in the area surveyed; however, a backfilled excavation was identified with GPR near monitoring wells MW-1 and MW-2. Images suggest that aggressive digging has occurred in this area and that foreign backfill was placed in this area. Additionally, a section of pipe was found nearby, which ran from the Key Shop building towards the backfilled excavation where it abruptly terminated. The backfilled excavation is located approximately 10 feet north of the Key Shop building, adjacent to monitoring well MW-1, and is consistent with the mapped location of UST Site #14 described in the *Background* of this report. Photographs and the location of the excavation are included in the geophysical survey report (Appendix B).

Additional Assessment

Soil Sample Laboratory Analysis

The results of laboratory analysis of the soil samples collected on April 9 and 10, 2015, are summarized in Table 1. TPH-d, TPH-g, benzene, ethylbenzene, toluene, and total xylenes laboratory results for the soil samples are plotted on Figure 3. TPH-d, TPH-g and 14 VOCs were detected in soil samples collected with maximum concentrations as follows:

Constituent	Maximum Concentration	Boring Location	Depth
TPH-d	62 mg/kg	HP7	25 feet bgs
TPH-g	2,700 mg/kg	HP7	25 feet bgs
n-butylbenzene	12,000 µg/kg	HP7	25 feet bgs
sec-butylbenzene	4,900 µg/kg	HP7	25 feet bgs
Benzene	33,000 µg/kg	HP8	30 feet bgs
Ethylbenzene	65,000 µg/kg	HP7	25 feet bgs
Diisopropyl Ether	1,100 µg/kg	HP8	30 feet bgs
Isopropylbenzene	11,000 µg/kg	HP7	25 feet bgs
p-Isopropyltoluene	9,900 µg/kg	HP7	25 feet bgs
Naphthalene	18,000 µg/kg	HP7	25 feet bgs
n-Propylbenzene	20,000 µg/kg	HP7	25 feet bgs
Toluene	190,000 µg/kg	HP7	25 feet bgs
1,2,4-Trimethylbenzene	110,000 µg/kg	HP7	25 feet bgs
1,3,5-Trimethylbenzene	35,000 µg/kg	HP7	25 feet bgs
m/p-Xylene	240,000 µg/kg	HP7	25 feet bgs
o-Xylene	96,000 µg/kg	HP7	25 feet bgs

Notes: µg/kg = micrograms per kilogram; mg/kg = milligrams per kilogram

Groundwater Sample Laboratory Analyses

The results of laboratory analysis of the grab groundwater samples collected on April 9 and 10, 2015 are summarized in Table 2. TPH-d, TPH-g, benzene, ethylbenzene, toluene, and total xylenes laboratory results for the groundwater samples collected on April 9 and 10, 2015, are plotted on Figure 4. In addition, iso-concentration contour maps showing the approximate extent of the TPH-d, TPH-g, and benzene in groundwater are included as Figures 5, 6, and 7, respectively. TPH-d, TPH-g and 19 VOCs were detected in groundwater samples collected with maximum concentrations as follows:

Constituent	Maximum Concentration	Boring Location
TPH-d	3.1 mg/L	HP7
TPH-g	28 mg/L	HP7
Acetone	82 µg/L	HP9
Benzene	76 µg/L	HP8
Bromoform	2.2 µg/L	HP3
n-butylbenzene	200 µg/L	HP7
sec-butylbenzene	45 µg/L	HP7
Dibromomethane	1.4 µg/L	HP5
1,2-Dichloroethane	20 µg/L	HP8
Diisopropyl Ether	110 µg/L	HP8
Ethylbenzene	1,300 µg/L	HP7
Isopropylbenzene	160 µg/L	HP7
p-Isopropyltoluene	55 µg/L	HP7
Naphthalene	400 µg/L	HP7
n-Propylbenzene	450 µg/L	HP7
Toluene	1,400 µg/L	HP7
1,2,4-Trimethylbenzene	900 µg/L	HP7
1,3,5-Trimethylbenzene	780 µg/L	HP7
Tert-Butyl Alcohol	20 µg/L	HP8
m/p-Xylene	3,000 µg/L	HP7
o-Xylene	1,300 µg/L	HP7

Notes: µg/L = micrograms per liter; mg/L = milligrams per liter

Dual-Phase Extraction Events

Six 8-Hour DPE Events

Six 8-hour DPE events were conducted on April 14, April 28, May 12, May 26, June 9, and June 23, 2015. The mobile DPE system extracted from wells MW-1, MW-2, and MW-3. The applied vacuum during the events ranged between 18 and 21.5 inches of mercury (in. Hg) and the system flow rate ranged between 52 and 58 cubic feet per minute (cfm). The following LNAPL thicknesses, influent hydrocarbon vapor concentrations, approximate pounds of hydrocarbons removed, and gallons of purged water generated during each event are as follows:

Event Date	LNAPL Thickness (Start of Event)	Influent Hydrocarbon Vapor Concentrations	Pounds of Hydrocarbon Removed	Gallons Purged
4/14/2015	MW-1 = 1.96 MW-2 = 2.28 MW-3 = None	Start-up = 9,999 ppmv End = 5,847 ppmv	73.6 lbs	1,295 gals
4/28/2015	MW-1 = 1.86 MW-2 = 1.22 MW-3 = None	Start-up = 9,999 ppmv End = 1,336 ppmv	55.1 lbs	1,500 gals
5/12/2015	MW-1 = 1.71 MW-2 = 1.61 MW-3 = None	Start-up = 5,833 ppmv End = 1,726 ppmv	15.5 lbs	1,930 gals
5/26/2015	MW-1 = 1.70 MW-2 = 2.09 MW-3 = None	Start-up = 7,822 ppmv End = 1,054 ppmv	11.5 lbs	2,000 gals
6/9/2015	MW-1 = 1.78 MW-2 = 2.07 MW-3 = 0.02	Start-up = 8,643 ppmv End = 4,451 ppmv	223.7 lbs	2,000 gals
6/23/2015	MW-1 = 1.73 MW-2 = 2.11 MW-3 = 1.67	Start-up = 9,999 ppmv End = 9,999 ppmv	245.4 lbs	1,800 gals

Notes: ppmv = parts per million by volume

A total of 624.9 pounds of hydrocarbons were removed and destroyed based on laboratory data during the six DPE events from April 14 through June 23, 2015. DPE removal rates are illustrated on Figure 8. A total of 10,525 gallons of groundwater were generated and disposed offsite at Demenno Kerdoon in Compton, California via vacuum truck. Copies of the non-hazardous waste manifests are included in Appendix F. Laboratory reports are included in Appendix E. A summary of the DPE operational data is presented in Table 3. A summary of the DPE laboratory vapor analytical data for the six 8-hour events is presented in Table 4. Maximum concentrations for system influent samples were detected as follows:

- TPHg at 54,000 ppmv (End: 6/23/15)
- Benzene at 48,000 ppmv (End: 6/9/15)
- Di-isopropyl Ether at 96 ppmv (End: 5/26/15)
- 1,2-Dichloroethane at 100 ppmv (End: 5/26/15)

- Ethylbenzene at 12,000 ppmv (End: 6/23/15)
- 4-Ethyltoluene at 2,500 ppmv (End: 6/23/15)
- Toluene at 54,000 ppmv (End: 6/23/15)
- Total Xylenes at 77,000 ppmv (End: 6/23/15)
- 1,2,4-Trimethylbenzene at 4,800 ppmv (End: 6/23/15)
- 1,3,5-Trimethylbenzene at 3,400 ppmv (End: 6/23/15)

CONCLUSIONS AND RECOMMENDATIONS

Elevated concentrations of petroleum hydrocarbons were identified in soil samples collected from borings HP7 through HP9. Based on this investigation and previous investigations, the lateral and vertical extent of hydrocarbon impacted soil in the area surrounding monitoring wells MW-1, MW-2, and MW-3 has been adequately defined and further assessment is not warranted at this time. The majority of petroleum hydrocarbons remaining in the soil at the Site were encountered at depths between 25 and 35 feet bgs, with maximum concentrations detected between 25 and 30 feet bgs, corresponding to tighter clayey silt and silty sand lenses observed at these depths. Additionally, field observations indicated staining and the presence of LNAPL at these depths in boring HP7. Groundwater was encountered at approximately 45 feet bgs during drilling activities.

Elevated concentrations of dissolved phase petroleum hydrocarbons were identified in groundwater samples from borings HP4 and HP6 through HP9. Based on this investigation and previous investigations, the lateral extent of hydrocarbon impacted groundwater at the Site, related to the release associated with UST Site #14, has been adequately defined and further assessment is not warranted at this time. The elevated concentrations of dissolved phase petroleum hydrocarbons identified in the groundwater sample HP4 do not appear to be related to the release associated with UST Site #14. The maximum dissolved phase hydrocarbon concentrations were detected in the groundwater sample collected from HP7, located between monitoring wells MW-1 and MW-5, adjacent to the northwest of the backfilled excavation of UST Site #14. Based on the elevated hydrocarbon concentrations detected in soil samples collected from HP-7, it is likely that LNAPL exists on the groundwater table in this location.

Between April 14 and June 23, 2015, six, 8-hour DPE events were completed at the Site. The purpose of the DPE events was to remove LNAPL to the extent practical from wells MW-1, MW-2, and MW-3 and reduce dissolved phase hydrocarbons in

groundwater beneath the Site. A total of 624.9 pounds of hydrocarbons were removed and destroyed based on laboratory data analyzed from the six DPE events. A total of 10,525 gallons of groundwater were generated and disposed offsite at Demenno Kerdoon in Compton, California via vacuum truck. LNAPL thicknesses remained stable in wells MW-1 and MW-2 between the first and last DPE events; however, LNAPL was not observed in well MW-3 during the first four DPE events and was measured at a thickness of 0.02 feet and 1.67 feet during the last two DPE events, respectively. Leighton Consulting concludes the reason for this increase of LNAPL in well MW-3 is attributed to the release of hydrocarbons trapped within the vadose zone as a result of the vacuum applied during the first four DPE events. During the most recent groundwater monitoring event (November 2015), LNAPL continued to be detected in wells MW-1, MW-2, and MW-3 at thicknesses of 2.35, 2.44, and 3.18 feet, respectively.

Based on the continued presence of LNAPL in monitoring wells MW1, MW-2, and MW-3, and the recent recovery of LNAPL thicknesses within these wells, mobile DPE is not likely to be the most effective approach to remove the LNAPL. Leighton Consulting recommends an analysis of alternative remedial methods. The approximate extent of LNAPL and soil containing high concentrations of TPH-g/TPH-d are shown on Figure 9.

If you have any questions regarding this report, please do not hesitate to contact the undersigned at 949-681-4287. We appreciate the opportunity to be of service.

Notes:

TPH-d = Total Petroleum Hydrocarbons as Diesel
TPH-g = Total Petroleum Hydrocarbons as Gasoline
RSL = USEPA Region 9 Regional Screening Level for Soil in a Residential Setting (January 2015)
SSL = Maximum Soil Screening Level for TPH Above Drinking Water Aquifer (<20 feet), Los Angeles Regional Water Quality Control Board Guidebook (May 1996)
PID = Photoionization detector
ug/kg = Micrograms per kilogram
mg/kg = Milligrams per kilogram
= Shaded area indicates the concentration exceeds regulatory screening levels

Re: Geophysical Investigation Report, Rancho Los Amigos-South Campus, 7600 Amigos Ave, Downey, California

This report is to present the results of our geophysical survey carried out over portions of the Rancho Los Amigos South Campus, located at the general address of 7600 Amigos Avenue in Downey, California (Figure 1). The survey was performed on April 9, 2015, and its primary purpose was to detect and delineate, insofar as possible, any pipes, conduits, utilities, and buried underground objects or obstructions in the immediate vicinity of nine (9) proposed boreholes. A secondary purpose of the survey was to detect and delineate, insofar as possible, a possible underground fuel storage tank (UST), a backfilled excavation resulting from a former UST's removal, and any remaining UST-related pipes, conduits, or substructures still in place.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were utilized for this project. Utility locators with line tracing capabilities were also used where applicable.

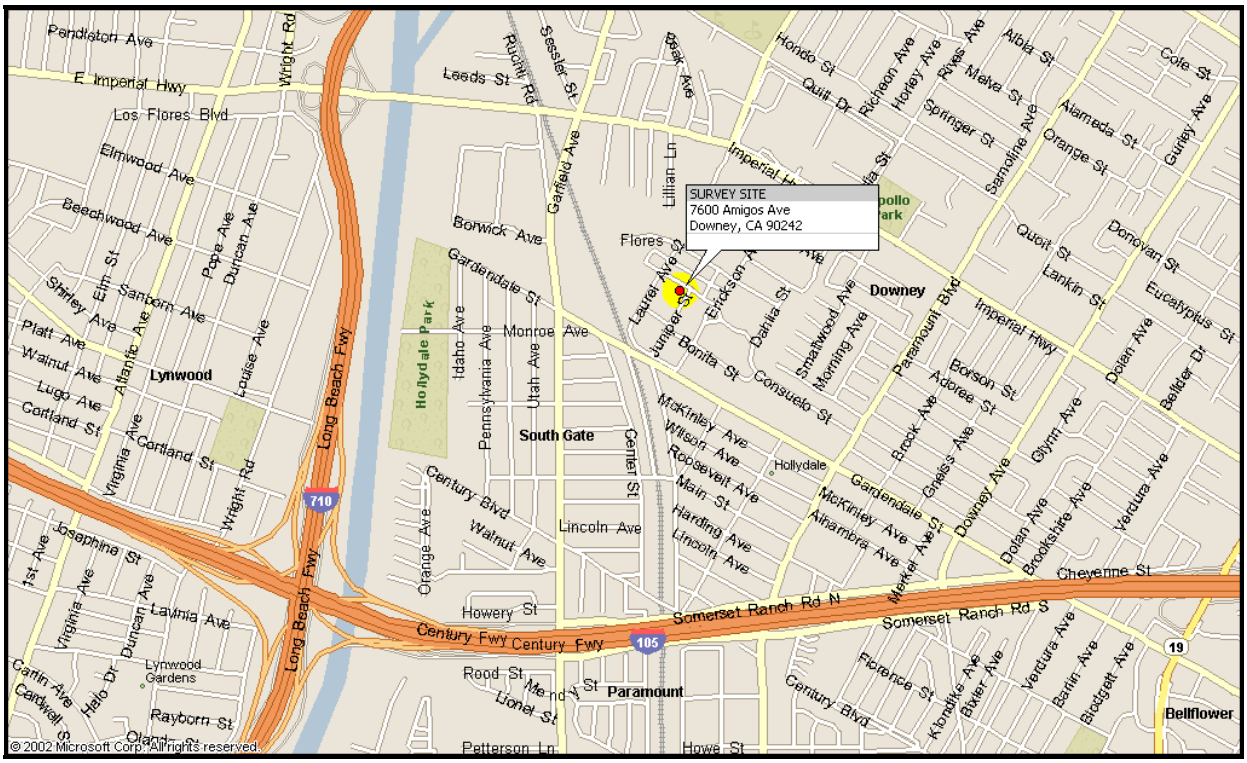

FIGURE 1. Site location map.

Survey Design – The general area of investigation was within the South Campus of the Rancho Los Amigos complex and was southeast of Laurel Street, northwest of Juniper Street, and immediately southwest of Descanso Street. This "block" included various asphalt parking lots and multiple abandoned buildings, and the nine proposed boreholes were generally dispersed evenly throughout them. A small building existed within this "block's" very east-northeast corner and around all sides of this building a search for a possible UST was conducted.

For the geophysical survey around the nine proposed boreholes the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (an example being nearby chain-link fencing and reinforced concrete parking stops). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of true anomalous objects and facilitates the opportunity to investigate them further despite the obstructions. Where space was available, and depending on location, the EM devices, magnetic gradiometer, and GPR were traversed systematically within the immediate vicinity of the boreholes in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

In searching for the possible UST a grid was established surrounding the small building and extending far enough on all sides so as to provide complete coverage of the client's entire area of concern. The grid was 95 x 95 feet in dimension, over which EM61 data was collected every 0.66 feet along northwest-southeast oriented survey lines spaced 5 feet apart. This data was later downloaded, processed, and contoured so as to show in the subsurface where anomalous metallic objects might be located.

A Geonic's model EM61 was used in both gridded data collection mode and free-traversing while a Fischer TW-6 M-Scope was used for secondary EM sampling, also in free-traversing mode. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61MK2 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in microseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

Standard magnetic surveying employs a small, portable magnetometer to measure changes in the Earth's total magnetic field intensity, and can detect variations as minute as 0.1 nanoTeslas (nT). Non-native buried ferrous objects will distort the Earth's magnetic field immediately around the object resulting in sudden spatial variations that deviate suddenly and unexpectedly from the Earth's normal background levels; and the location of these sudden distortions generally correspond to the location of the anomalous object. Note that metallic pipelines generally produce robust anomalies with amplitudes deviating up to 2000 nT above background and are thus relatively easy to locate with this geophysical method.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed and later refined after the EM61 data was processed, contoured, and reviewed. All findings regarding the UST search are documented with a site interpretation map showing superimposed EM61 data (Figure 2). Site photographs of all investigated boreholes are shown in Figures 3-11. Lastly, site photographs and representative GPR images of unusual findings are shown in Figures 13-16. Note that the proposed borehole in each photograph is labeled 1-9 according to Leighton's borehole designation numbering scheme.

All items detected on site are indicated in the site utility map and site photographs using red for electric, blue for water, green for sewer or wastewater drain, yellow for gas, white for confirmed pipes of unknown utility type, and pink for likely UST-related junk pipes. Additionally, orange was used to mark out the edges of a deep backfilled excavation and yellow was used to mark the edges of shallow, minor soil disturbances.

All proposed boreholes were either clear as where originally placed by the client or were moved slightly so as to better avoid detected obstructions. In their final locations they was marked in pink with a yellow "SSS" to indicated that each had been checked by company personnel. Please review the accompanying photographs for the locations of the boreholes and the locations and orientations of all nearby detected piping (Figures 3-11).

As indicated by the contoured EM61 data shown in Figure 2, and additionally confirmed with follow free-traversing with other instruments, no UST was detected anywhere within the designated survey area surrounding the small building. Furthermore, no unusual or otherwise unaccounted-for metallic anomaly was detected either that might be even remotely suggestive of a tank of any size or nature. If one or more USTs were reportedly in this area, this data indirectly suggests that they have since been removed.

Additional evidence that a UST in this area might have been removed was found on the northeast side of the small building in the area shown in Figure 13. Here, a distinctive and well-defined backfilled excavation was detected with GPR for which several example radar images are shown in Figures 15 and 16. These radar images clearly suggest that deep aggressive digging has occurred here and that the soil that exists here now is clearly foreign backfill that is not native to this particular environment. No anomalous objects were detected within the backfill but a junk pipe was found nearby, which ran from the building towards the backfill where it abruptly terminated at the anomaly's edge in the manner shown in Figure 13.

A second area of shallow, minor soil disturbance was found on the southwest side of the small building in the area shown in Figure 14. All geophysical data suggests that only very shallow digging has occurred here, likely less than 12 inches below ground, and possibly consistent with the demolition of a small concrete pad. Note that a detected pipe was found to begin at the soil disturbance anomaly and head southeast towards Juniper Street. This line, however, has geophysical characteristics more akin to a narrow diameter water line or electric line. No other foreign objects were detected within the soil disturbance anomaly was we suggest that it is not UST related.

Please review the site interpretation map in Figure 2 for the locations and orientations of all other items that were detected within the designated survey area surrounding the small building. These included only various utility piping, in addition to the several anomalies already discussed.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we

recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

7600 Amigos Ave Downey 90242 Work Plan Approval

TO BE COMPLETED BY APPLICANT:

WORK SITE ADDRESS		ZIP	EMAIL ADDRESS FOR WELL PERMIT APPROVAL
7600 Amigos Avenue	Downey	90242	bmcculloch@leightongroup.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- ALL FIELD WORK MUST BE CONDUCTED UNDER THE DIRECT SUPERVISION OF A PROFESSIONAL GEOLOGIST LICENSED IN THE STATE OF CALIFORNIA.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.

ONCE APPROVED NOTIFY VINCENT GALLEGOS AT vgallegos@ph.lacounty.gov PREFERABLY 4 BUSINESS DAYS BEFORE WORK IS SCHEDULED TO BEGIN.

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X WORK PLAN APPROVED: 9 Soil Borings DATE: March 31, 2015

ADDITIONAL APPROVAL CONDITIONS:

- Please provide/ verify project dates and time via my email listed above this comment box
- Assure backfill & within 72 hours after sampling for the soil boring.

ACCREDITED IN ACCORDANCE WITH nelac

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-04-0869 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/10/15. They were assigned to Work Order 15-04-0869.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-04-0869 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-04-0869 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/10/15. They were assigned to Work Order 15-04-0869.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-04-0869 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

For this round of sampling, we're going to do the full scan VOCs + oxys, same as the groundwater samples in this report.

Thanks for double checking! =]

Hi Brynn,

We've done BTEX + Oxygenates in the past on this site. Do you want full list VOCs (including Oxygenates) or just the shorter BTEX?

Thanks,

Amanda Porter

ACCREDITED IN ACCORDANCE WITH nelac

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-04-1032 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/14/15. They were assigned to Work Order 15-04-1032.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-04-1032 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-04-2089 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/28/15. They were assigned to Work Order 15-04-2089.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-04-2089 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-05-0821 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 05/12/15. They were assigned to Work Order 15-05-0821.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-05-0821 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-05-1953 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 05/26/15. They were assigned to Work Order 15-05-1953.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-05-1953 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

WORK ORDER NUMBER: 15-05- 1953

SAMPLE RECEIPT CHECKLIST

COOLER 0 OF 0

CLIENT: LEIGHTON

DATE: 05 / 26 / 2015

TEMPERATURE: (Criteria: 0.0°C – 6.0°C, not frozen except sediment/tissue)

Thermometer ID: SC2 (CF:-0.3°C); Temperature (w/o CF): _____°C (w/ CF): _____°C; ☐ Blank ☐ Sample

☐ Sample(s) outside temperature criteria (PM/APM contacted by: _____)

☐ Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling

☐ Sample(s) received at ambient temperature; placed on ice for transport by courier

Ambient Temperature: ☑ Air ☐ Filter Checked by: 804

CUSTODY SEAL:

Cooler ☐ Present and Intact ☐ Present but Not Intact ☐ Not Present ☑ N/A Checked by: 804

Sample(s) ☐ Present and Intact ☐ Present but Not Intact ☑ Not Present ☐ N/A Checked by: SW

SAMPLE CONDITION:	Yes	No	N/A
Chain-of-Custody (COC) document(s) received with samples	☑	☐	☐
COC document(s) received complete	☑	☐	☐
☐ Sampling date ☐ Sampling time ☐ Matrix ☐ Number of containers			
☐ No analysis requested ☐ Not relinquished ☐ No relinquished date ☐ No relinquished time			
Sampler's name indicated on COC	☑	☐	☐
Sample container label(s) consistent with COC	☑	☐	☐
Sample container(s) intact and in good condition	☑	☐	☐
Proper containers for analyses requested	☑	☐	☐
Sufficient volume/mass for analyses requested	☑	☐	☐
Samples received within holding time	☑	☐	☐
Aqueous samples for certain analyses received within 15-minute holding time			
☐ pH ☐ Residual Chlorine ☐ Dissolved Sulfide ☐ Dissolved Oxygen	☐	☐	☑
Proper preservation chemical(s) noted on COC and/or sample container	☐	☐	☑
Unpreserved aqueous sample(s) received for certain analyses			
☐ Volatile Organics ☐ Total Metals ☐ Dissolved Metals			
Container(s) for certain analysis free of headspace	☐	☐	☑
☐ Volatile Organics ☐ Dissolved Gases (RSK-175) ☐ Dissolved Oxygen (SM 4500)			
☐ Carbon Dioxide (SM 4500) ☐ Ferrous Iron (SM 3500) ☐ Hydrogen Sulfide (Hach)

ACCREDITED IN ACCORDANCE WITH nelac

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-06-0758 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/09/15. They were assigned to Work Order 15-06-0758.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-06-0758 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE RECEIPT CHECKLIST

COOLER 6 OF 0

CLIENT: LEIGHTON

DATE: 06 / 09 / 2015

TEMPERATURE: (Criteria: 0.0°C – 6.0°C, not frozen except sediment/tissue)

Thermometer ID: SC2 (CF:-0.3°C); Temperature (w/o CF): _____°C (w/ CF): _____°C; ☐ Blank ☐ Sample

☐ Sample(s) outside temperature criteria (PM/APM contacted by: _____)

☐ Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling

☐ Sample(s) received at ambient temperature; placed on ice for transport by courier

Ambient Temperature: ☑ Air ☐ Filter Checked by: JDY

CUSTODY SEAL:

Cooler ☐ Present and Intact ☐ Present but Not Intact ☐ Not Present ☑ N/A Checked by: JDY

Sample(s) ☐ Present and Intact ☐ Present but Not Intact ☑ Not Present ☐ N/A Checked by: JDY

SAMPLE CONDITION:	Yes	No	N/A
Chain-of-Custody (COC) document(s) received with samples	☑	☐	☐
COC document(s) received complete	☑	☐	☐
☐ Sampling date ☐ Sampling time ☐ Matrix ☐ Number of containers			
☐ No analysis requested ☐ Not relinquished ☐ No relinquished date ☐ No relinquished time			
Sampler's name indicated on COC	☑	☐	☐
Sample container label(s) consistent with COC	☑	☐	☐
Sample container(s) intact and in good condition	☑	☐	☐
Proper containers for analyses requested	☑	☐	☐
Sufficient volume/mass for analyses requested	☑	☐	☐
Samples received within holding time	☑	☐	☐
Aqueous samples for certain analyses received within 15-minute holding time			
☐ pH ☐ Residual Chlorine ☐ Dissolved Sulfide ☐ Dissolved Oxygen	☐	☐	☑
Proper preservation chemical(s) noted on COC and/or sample container	☐	☐	☑
Unpreserved aqueous sample(s) received for certain analyses			
☐ Volatile Organics ☐ Total Metals ☐ Dissolved Metals			
Container(s) for certain analysis free of headspace	☐	☐	☑
