ASSUMPTIONS

Ultra low sulfur diesel sulfur fuel percent: 0.005 percent

Assumed approximately 50% heat input efficiency for emergency generators

Assumed generators would need to meet roughly 10% of normal Project component energy demand (for emergency lights/etc.)

Assumed AP-42 emissions factors.

LADWP-owned in-basin generation capacity (all natural gas)
3,404 MW

PSLTRP Table 2-5

LADWP total in-basin generation capacity (unknown mix)
3,415 MW

PSLTRP p17

Assumed that outstanding 11 MW are likely also natural gas.

LADWP total network capacity
7,880 MW

Threshold // Standard (ug/m ³):	23,000	10,000	339	57	10.4	655	196	105	10.4	1.0
Maximum Total Concentration (ug/m ³):	3,223	1,970	264	27	1.1	41	28	13	3.2	0.8
Background (ug/m ³):	2,406	1,833	154	19	N/A ²	31	18	10	N/A ²	N/A ²
Peak Fine Grid Concentration (ug/m ³):	817	137	110	8	1.1	10	9	2	3.2	0.8
Peak Coarse Grid Concentration (ug/m ³):	590	136	110	6	1.1	10	9	2	2.8	0.6

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

3. Modeled concentrations for Nox NAAQS include the seasonal hour-of-day background

Threshold // Standard (ug/m ³):	23,000	10,000	339	57	10.4	655	196	105	10.4	1.0
Maximum Total Concentration (ug/m ³):	3,223	1,970	264	27	1.1	41	28	13	3.2	0.8
Background (ug/m ³):	2,406	1,833	154	19	N/A ²	31	18	10	N/A ²	N/A ²
Peak Fine Grid Concentration (ug/m ³):	817	137	110	8	1.1	10	9	2	3.2	0.8
Peak Coarse Grid Concentration (ug/m ³):	590	136	110	6	1.1	10	9	2	2.8	0.6

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

3. Modeled concentrations for Nox NAAQS include the seasonal hour-of-day background

Threshold // Standard (ug/m ³):	23,000	10,000	339	57	10.4	655	196	105	10.4	1.0
Maximum Total Concentration (ug/m ³):	3,223	1,970	264	27	1.1	41	28	13	3.2	0.8
Background (ug/m ³):	2,406	1,833	154	19	N/A ²	31	18	10	N/A ²	N/A ²
Peak Fine Grid Concentration (ug/m ³):	817	137	110	8	1.1	10	9	2	3.2	0.8
Peak Coarse Grid Concentration (ug/m ³):	590	136	110	6	1.1	10	9	2	2.8	0.6

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

3. Modeled concentrations for Nox NAAQS include the seasonal hour-of-day background

Peak Coarse Grid Concentration (ug/m ³):	590	136	110	6	1.1	10	9	2	2.8	0.6

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

3. Modeled concentrations for Nox NAAQS include the seasonal hour-of-day background

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.
2. Hour-of-Day-by-Season background concentrations included in increment concentration.
3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.

1. The concentration threshold for this pollutant's CAAQS is more stringent than the corresponding NAAQS for the pollutant and averaging period.

2. Hour-of-Day-by-Season background concentrations included in increment concentration.

3. The concentration thresholds for particulate matter have been developed by SCAQMD for construction or operational impacts associated only with the proposed Project.
