ARCHITECTURAL REVIEW 19-07 AND USE PERMIT 19-02

ARCO AM/PM

INITIAL STUDY - Project Description

The project involves several land use entitlements including, a use permit and architectural review applications.

The proposed development would be limited to only the easterly portion of the site ("the site") identified as Parcel 1 on the approved parcel map; no construction is proposed on the westerly portion of the site (Parcel 2). The proposal consists of an approximately 3,800 square foot (sq ft) AM/PM convenience store, nine Arco pump stations under an approximately 5,500 sq ft canopy, and an approximately 1,200 sq ft car wash (see Figure 3 - Site Plan). Also included in the proposed development are two underground storage tanks, parking facilities, trash enclosure, landscaping, site lighting, illuminated signage and solar panels on the roof of the convenience store, pump station canopy and parking stalls.

Access to the site would be via two 35-ft driveways along Bruce Road. The convenience store would be situated to the far northerly portion of the site, being the closest component of the project to the Bruce Road and SR 32 intersection. The car wash is to be located on the southerly portion of the site with the pump stations and associated canopy situated in the middle. Vehicles would be able to exit the site from the proposed driveways with the northerly driveway right turn only and the southerly driveway by way of left and right turns. Currently, the California Department of Transportation (Caltrans) and the City's Public Works Department are designing the Bruce Road and SR 32 intersection and have provided the proposed right-of-way that would accommodate the possible intersection designs.

Per CMC §19.60.030, the Parcel Map designates a 25-ft setback from the top of the bank of DHS. No buildings or site improvements will be constructed within this designated setback. The project would incorporate appropriate design standards, bank modifications and vegetation management practices to avoid impacting, or being impacted by, DHS.

The project also involves the abandonment and relocation of an existing 115 kilovolt transmission power pole present within the existing Meriam Park conservation preserve and the abandonment and relocation of two poles within the project parcel. One existing pole is located within a vernal pool and will be relocated at least 15 feet in-line with the existing pole on the project parcel, outside of the boundary of the vernal pool. The new steel pole will be approximately 75 feet tall with an arm length of 14 feet set approximately 12.5 feet into the ground and will facilitate spanning to the project parcel. The existing pole will be abandoned and remain as to not disturb the biologically sensitive area. The new span length will be approximately 234 feet to a new pole on the east side of Bruce Road. This new wooden pole will be located in the southern portion of the project parcel, it will be approximately 80 feet tall and set approximately eight feet into the ground. From there the wire will span approximately 238 feet to another new wooden pole at the western edge of the parcel. This new pole will be approximately 75 feet tall and will be set approximately 9.5 feet into the ground. Finally, the line will span 292 feet to a new 90-foot wooden pole set nine feet deep in the same hole as the existing pole at the southwest corner of Bruce Road and State Route 32. The two existing poles within the project parcel will be removed to facilitate construction.

As per City policy, the project would connect to the sanitary sewer system. There are no known septic tanks currently on the project site. A curb and gutter catch basin system would be engineered for the collection of storm water runoff. Storm water would subsequently be detained, allowing sediment to settle, or be filtered, prior to discharge into the City's storm water drainage system.
