STATE CLEARINGHOUSE

DRAFT ENVIRONMENTAL IMPACT REPORT FOR NUSTAR MARINE OIL TERMINAL
ENGINEERING AND MAINTENANCE STANDARDS DEVELOPMENT AND VESSEL
SERVICE PROJECT – DATED DECEMBER 2019
(STATE CLEARINGHOUSE NUMBER: 2019060229)

Dear Mr. Cashman:

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report (EIR) for NuStar Marine Oil Terminal Engineering and Maintenance Standards Development and Vessel Service Project.

The proposed project involves upgrading the Port of Stockton's Dock 10/11 to Marine Oil Terminal Engineering and Maintenance Standards (MOTEMS) to support a new vessel service for renewable diesel imports. NuStar Terminals Operations Partnership LP. (NuStar) currently operates a tank farm at the Port. To accommodate the vessel service for renewable diesel imports, NuStar is proposing to upgrade the dock and install approximately 3,400 feet of underground 12-inch piping from the dock to its existing terminal. Improvements at the terminal would include installation of approximately 3,050 feet of piping for connections between tanks and the truck rack, new pumps, truck rack improvements, and a new rail unloading system.

DTSC recommends that the following issues be evaluated in the EIR, Hazards and Hazardous Materials section:

1. The EIR should acknowledge the potential for project site activities to result in the release of hazardous wastes/substances. In instances in which releases may occur, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.

2. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with DTSC's 2006 *Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers* (https://dtsc.ca.gov/wpcontent/uploads/sites/31/2018/09/Guidance_Lead_Contamination_050118.pdf).
3. If any projects initiated as part of the proposed project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to *DTSC's 2001 Information Advisory Clean Imported Fill Material* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/SMP_FS_Cleanfill-Schools.pdf).
4. If any sites included as part of the proposed project have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)* (<https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/Ag-Guidance-Rev-3-August-7-2008-2.pdf>).

DTSC appreciates the opportunity to review the EIR. Should you need any assistance with an environmental investigation, please submit a request for Lead Agency Oversight Application, which can be found at: https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/VCP_App-1460.doc. Additional information regarding voluntary agreements with DTSC can be found at: <https://dtsc.ca.gov/brownfields/>.
