TRANSPORTATION IMPACT ANALYSIS  
220 N. QUINCE STREET SENIOR  
HOUSING PROJECT

Escondido, California  
June 3, 2019

## 1.0 INTRODUCTION

Linscott, Law and Greenspan, Engineers (LLG) has prepared this transportation impact analysis to assess the impacts to the street system as a result of the Quince Street Senior Center project (“project”), located within the City of Escondido. The Project proposes the development of 147 senior residential dwelling units along with ancillary uses on a 1.49-acre site. The project site is located on the northeast corner of W. Valley Parkway and N. Quince Street.

The traffic analysis presented in this report includes the following:

- Project Description
- Existing Conditions
- Analysis Approach and Methodology
- Significance Criteria
- Analysis of Existing Conditions
- Project Trip Generation/Distribution/Assignment
- Cumulative Projects Discussion
- Analysis of Near-Term Scenarios
- Access Discussion
- Summary of Significant Impacts and Mitigation Measures

## 2.0 PROJECT DESCRIPTION

The 220 N. Quince Street Senior Housing project site is located in the City of Escondido, east of Interstate 15 (I-15) at the northeast corner of W. Valley Parkway and N. Quince Street. The 1.49-acre project site is developed with three approximately 10,000-square-foot (sf) warehouse buildings and one approximately 2,000-sf building formerly used as a maintenance and repair facility for a moving and storage company. A small paved and striped parking area, as well as driveways and other parking areas formerly utilized for outdoor storage are located within the site.

The project proposes to construct a five-story affordable senior housing development with ground-floor parking and four stories of residences above. The project would construct 147 residential units (98.6 units/acre density) and provide 147 parking spaces. Two courtyards would be provided at the podium (second) level and would be open to the northeastern edge of the property. An overlook plaza would be provided in the southwest corner of the podium level, facing the intersection of N. Quince Street and W. Valley Parkway. A leasing area and a 4,800-sf community room with a kitchen, office, and laundry facilities also would be provided at the podium level. New curbs, gutters, sidewalks, and street trees would be provided along the project's western and southern frontages along N. Quince Street and W. Valley Parkway, respectively. The driveway entry into the ground-level parking would be located at the northwestern corner of the project from N. Quince Street.

**Figure 2-1** shows the Project vicinity and **Figure 2-2** illustrates, in more detail, the site location. **Figure 2-3** shows the project's site plan.

**Site Plan**

## 3.0 EXISTING CONDITIONS

Effective evaluation of the traffic impacts associated with the proposed project requires an understanding of the existing transportation system within the project area. Figure 3–1 shows an existing conditions diagram, including signalized/un-signalized intersections and lane configurations.

### 3.1 Existing Transportation Conditions

The facilities analyzed in this report fall under the jurisdiction of the City of Escondido. The following is a brief description of the streets in the project area:

**W. Valley Parkway** is classified as a 4-lane One-Way Collector within the study area. W. Valley Parkway currently provides four westbound lanes of travel with sidewalks, curbs, and gutters provided. On-street parking and bike lanes are not provided and the posted speed limit is 35 mph.

**N. Quince Street** is classified as an undivided 4-lane Collector (w/ Intermittent Turn Lanes) within the study area. N. Quince Street currently provides two lanes of travel per direction with sidewalks, curbs, and gutters provided. On-street parking and bike lanes are not provided and the posted speed limit is 35 mph.

**Centre City Parkway** is classified as a divided 4-Lane Super Major Road within the study area. Centre City Parkway currently provides two lanes of travel per direction with sidewalks, curbs, gutters, and bike lanes provided.

**W. Washington Avenue** is classified as an undivided 4-lane Collector (w/ Intermittent Turn Lanes) within the study area. W. Washington Avenue currently provides two lanes of travel per direction with sidewalks, curbs, and gutters provided. On-street parking and bike lanes are not provided and the posted speed limit is 35 mph.

### 3.2 Existing Traffic Volumes

**Table 3–1** is a summary of the most recent available average daily traffic volumes (ADTs) from LLG counts conducted by Accurate Video Counts in July 2017. Peak hour counts at the study area intersections were also conducted in July 2017 since that is when the study began. Based on a review of historical counts which showed non-summer counts about 5% higher than summer counts. A conservative 10% growth factor was applied to all existing traffic counts.

**Figure 3–2** shows the Existing Traffic Volumes. **Appendix A** contains the count sheets.

**TABLE 3-1**  
**EXISTING TRAFFIC VOLUMES**

<b>Street Segment</b>	<b>ADT<sup>a</sup></b>
<b>N. Quince Street</b>	
W. Washington Avenue to W. Valley Parkway	10,370
South of W. Valley Parkway	9,780
<b>W. Valley Parkway</b>	
Centre City Parkway to N. Quince Street	18,020
West of Quince Street	18,670

***Footnotes:***

- a. Average Daily Traffic Volume counts conducted in July 2017 by LLG Engineers. A 10% growth was applied to the existing ADTs to account for summertime conditions.

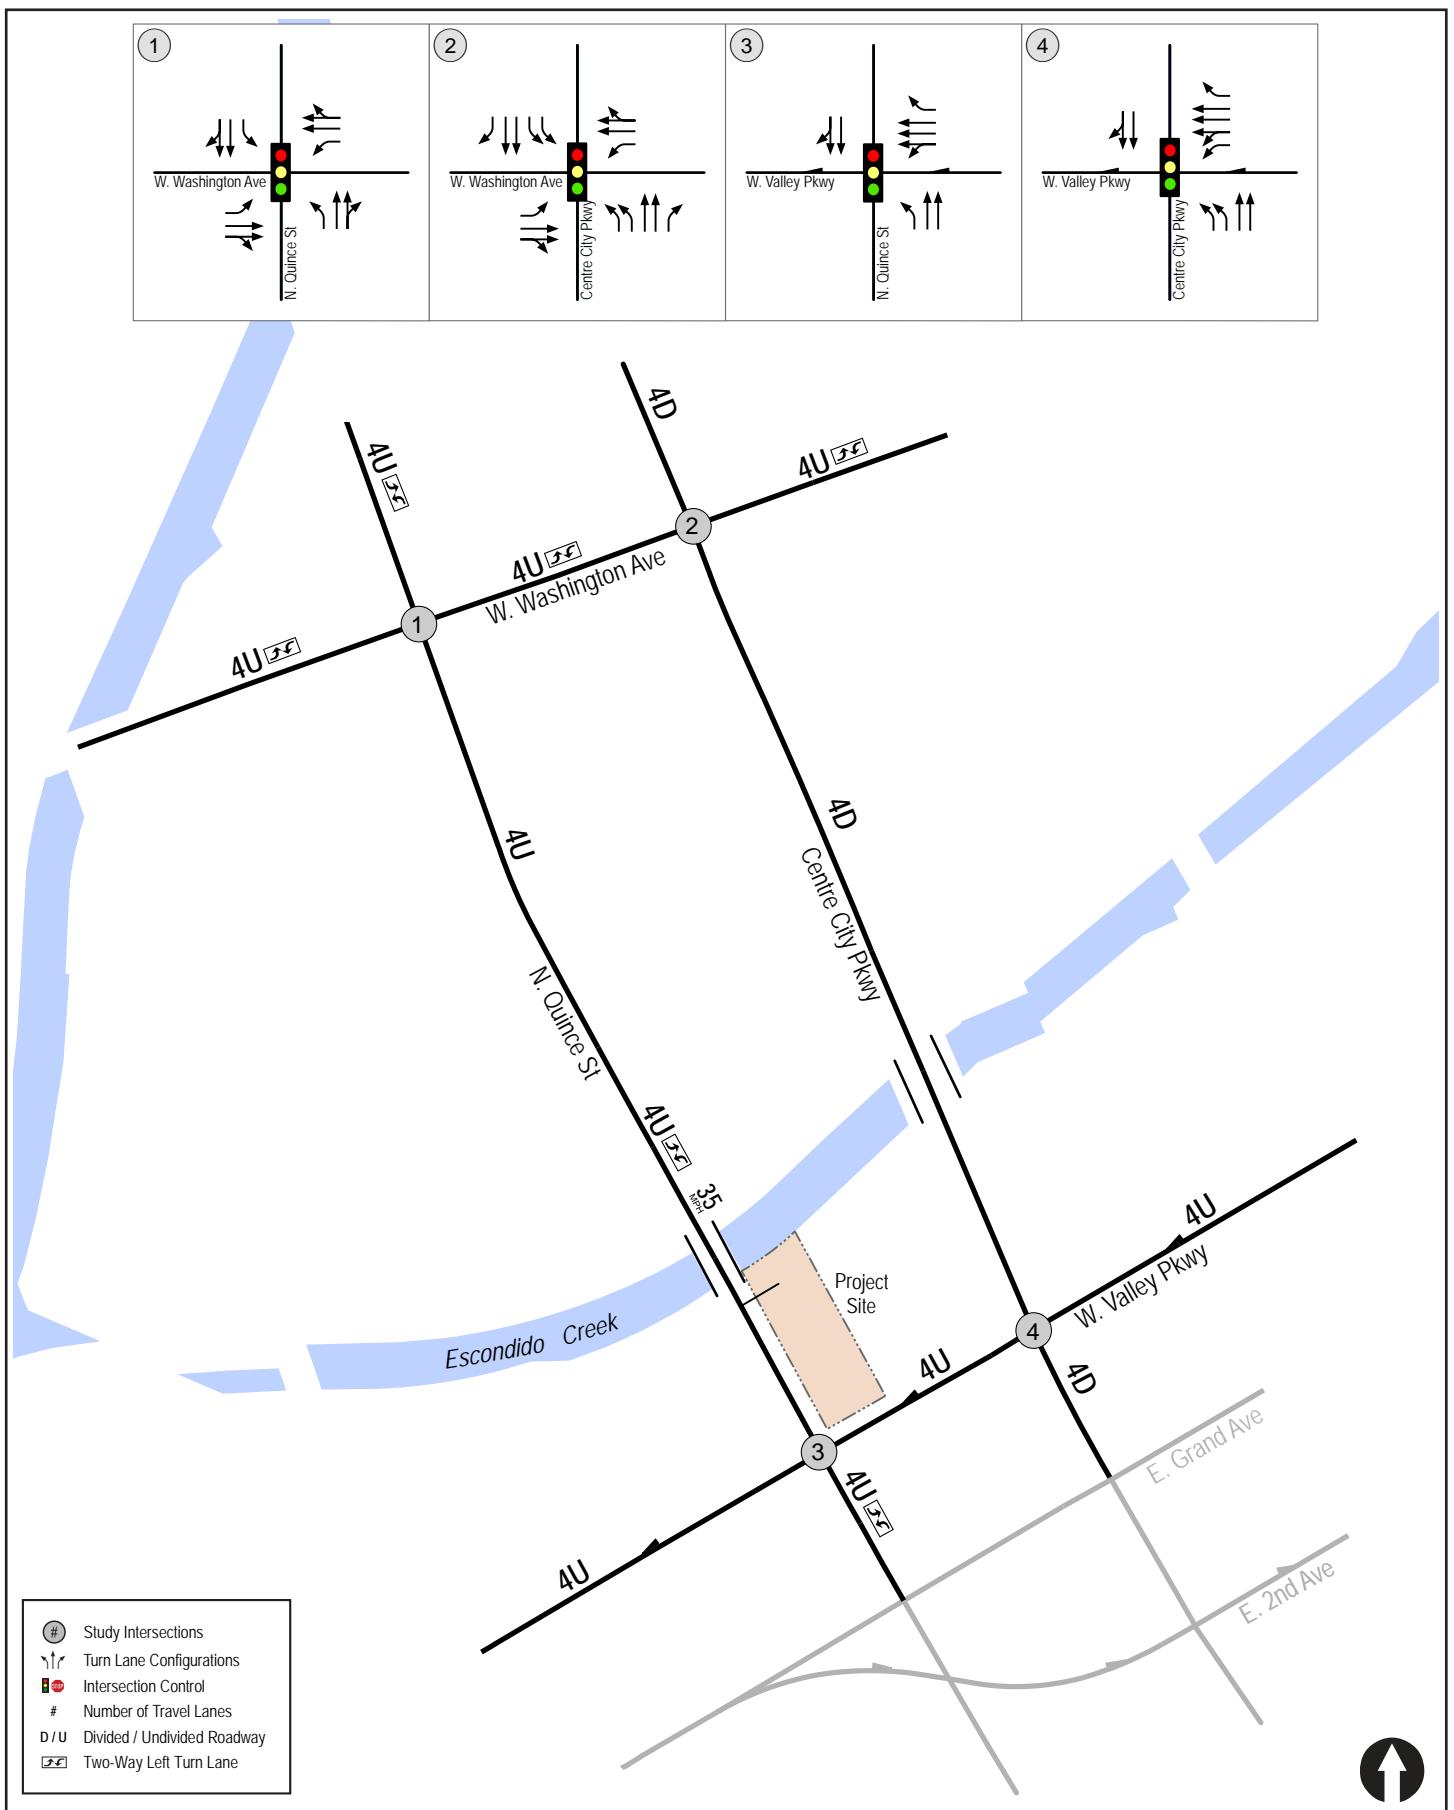

Figure 3-1

## Existing Conditions Diagram

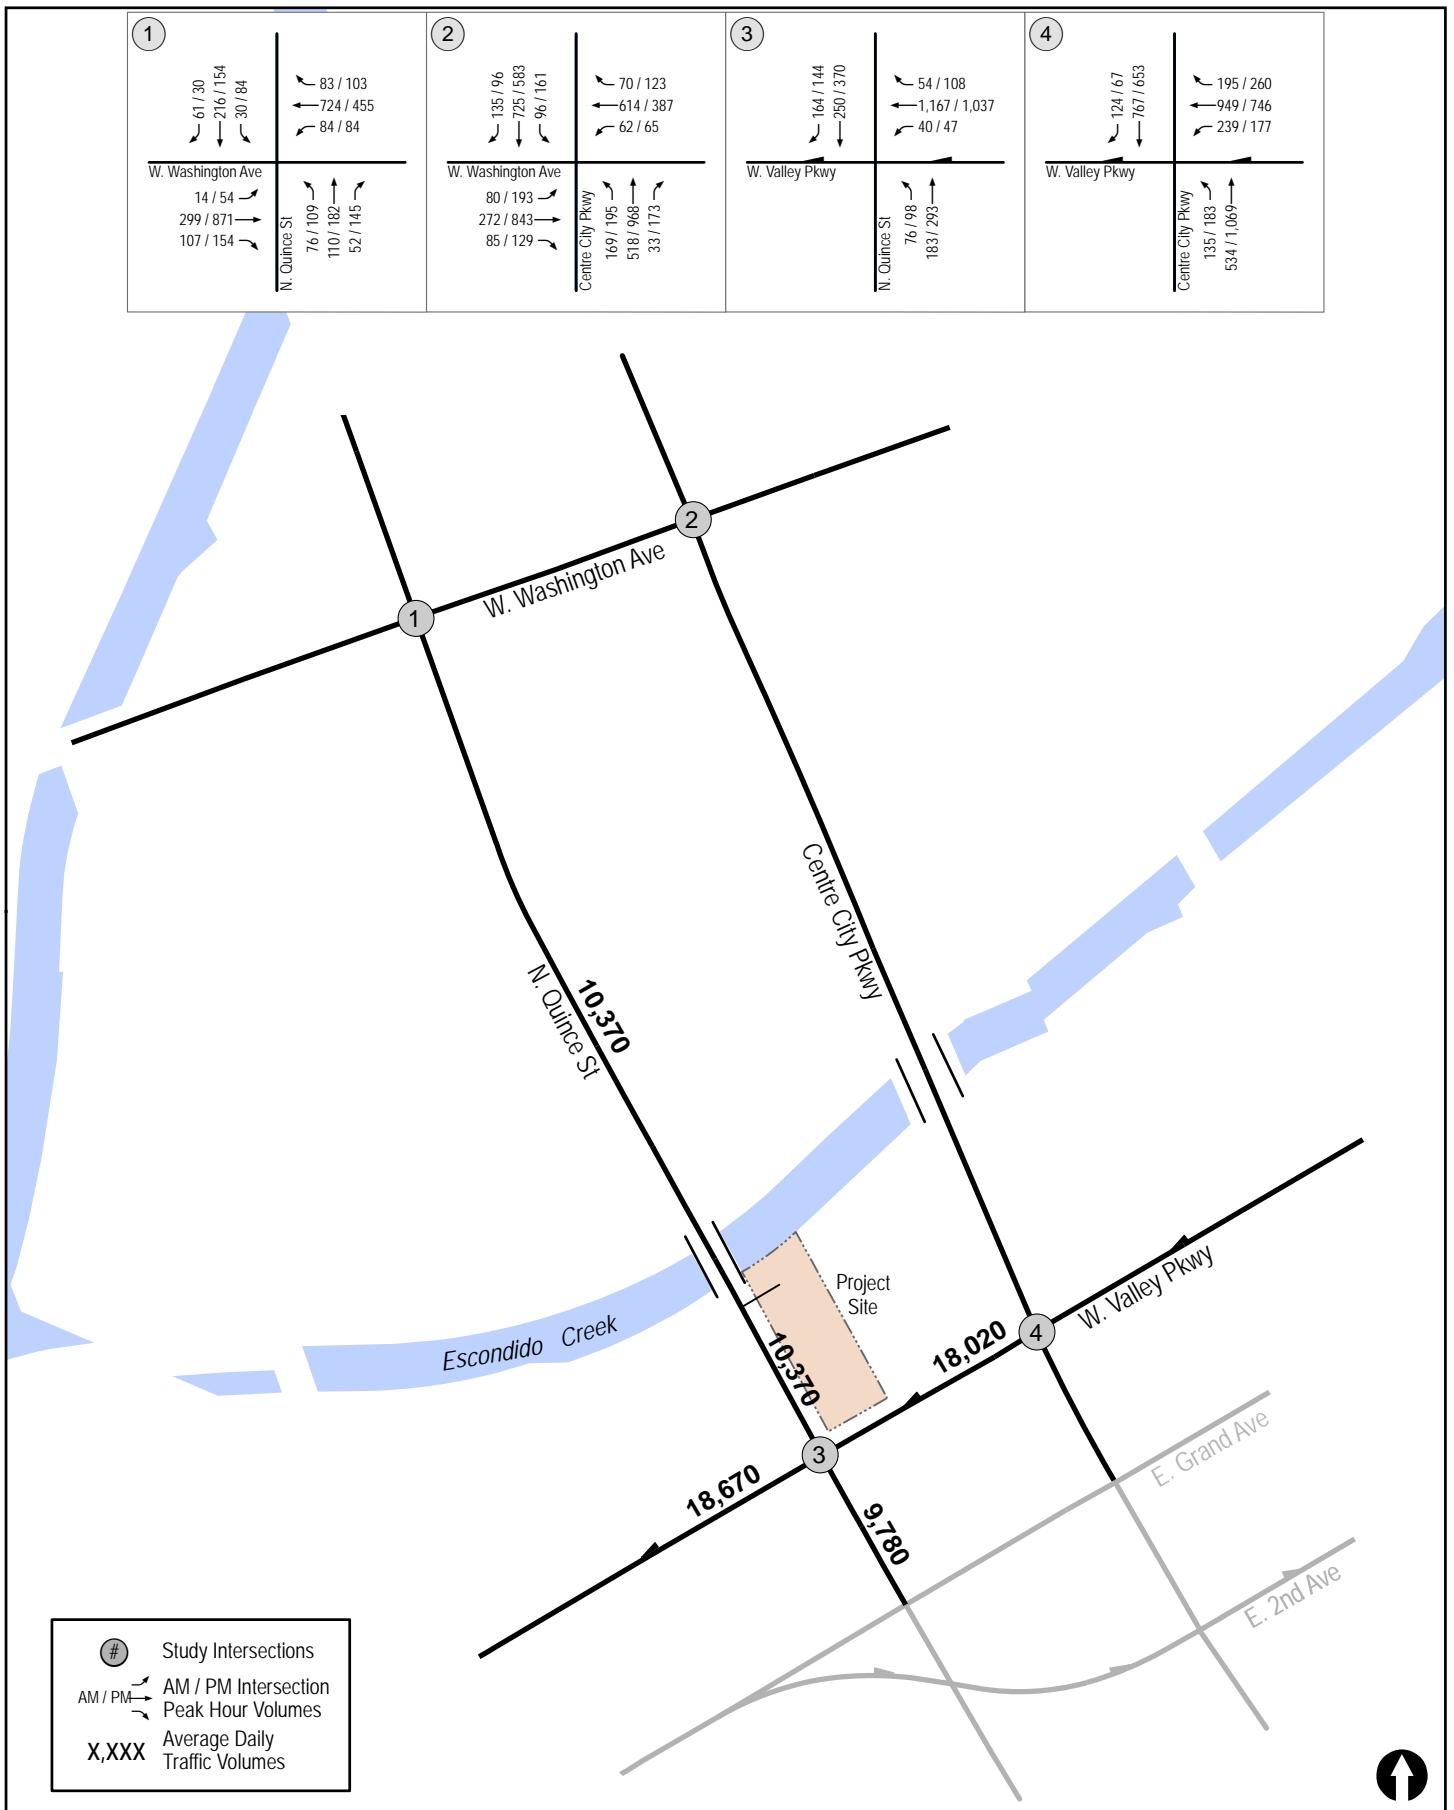

Figure 3-2

## Existing Traffic Volumes

## 4.0 ANALYSIS APPROACH AND METHODOLOGY

### 4.1 Analysis Approach

Since the project is within the City of Escondido, the traffic study was conducted using City of Escondido guidelines. The City of Escondido's recently published Traffic Impact Analysis Guidelines provide the following direction on report approach and methodology:

1. The traffic study should utilize the *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (April 2002) published by SANDAG, to determine the project traffic volume.
2. The traffic study should utilize the following scenarios to determine project traffic impacts at intersections and along roadway segments.
  - a. Existing Condition (based on new traffic counts)
  - b. Existing + Project Traffic Condition
  - c. Existing + Cumulative Projects Traffic Condition
  - d. Existing + Cumulative Projects + Project Traffic Condition
3. Highway Capacity Manual (Year 2010) should be utilized to determine level of service for intersections.
4. The study area should include at least all major intersections (signalized and un-signalized) adjacent to the site. The tables below contain the trigger-points to identify if a roadway segment or intersection should be included in the Traffic Impact Analysis. **Table 4-1** below contains the trigger-points for roadway segments within the City of Escondido for different street classifications based on ADT added to the segment. **Table 4-2** below contains the trigger-points for intersections based on peak hour volumes.

**TABLE 4-1**  
**TRAFFIC IMPACT ANALYSIS ADT THRESHOLDS FOR ROADWAY SEGMENTS**

Street Classification	Lanes	Cross Sections (ft.)	TIA Trigger-Points (ADT generation)
Prime Arterial	(8 lanes)	116/136 (NP)	900
	(6 lanes)	106/126 (NP)	800
Major Road	(6 lanes)	90/110 (NP)	700
	(4 lanes)	82/102 (NP)	500
Collector	(4 lanes)	64/84 (NP)	500
	(4 lanes)	(WP)	250
Local Collector and all other	(2 lanes)	42/66 (NP)	200
		(WP)	

*General Notes:*

1. NP = No parking on street
2. WP = With parking on street

**TABLE 4-2**  
**TRAFFIC IMPACT ANALYSIS ADT THRESHOLDS FOR INTERSECTIONS**

<b>Intersection Classification (Minor leg of the intersection)</b>	<b>TIA Trigger-Points (AM or PM peak hour trips added to any leg)</b>
Prime Arterial	50
Major Road	40
Collector	30
Local Collector	20

## 4.2 Methodology

The City of Escondido utilizes the following methodology for evaluating traffic operations.

Level of service (LOS) is the term used to denote the different operating conditions which occur on a given roadway segment under various traffic volume loads. It is a qualitative measure used to describe a quantitative analysis taking into account factors such as roadway geometries, signal phasing, speed, travel delay, freedom to maneuver, and safety. Level of service provides an index to the operational qualities of a roadway segment or an intersection. Level of service designations range from A to F, with LOS A representing the best operating conditions and LOS F representing the worst operating conditions. Level of service designation is reported differently for signalized intersections and roadway segments.

The analysis conducted in this report utilized the published Highway Capacity Manual (HCM) methodology for evaluating signalized intersections. They also utilize LOS criteria for circulation element roadways based on published capacity tables. The following is a discussion of the both methodologies:

**Signalized intersections** were analyzed under AM and PM peak hour conditions. Average vehicle delay was determined utilizing the methodology found in Chapter 18 of the *2010 Highway Capacity Manual (HCM)*, with the assistance of the *Synchro* (version 9) computer software. The delay values (represented in seconds) were qualified with a corresponding intersection Level of Service (LOS). Signalized intersection calculation worksheets are attached in *Appendix B*.

**Street segment** analysis is based upon the comparison of daily traffic volumes (ADTs) to the City of Escondido *Roadway Classification, Level of Service, and ADT Table*. This table provides segment capacities for different street classifications, based on traffic volumes and roadway characteristics. This table is provided in *Appendix C*.

## 5.0 SIGNIFICANCE CRITERIA

The City of Escondido Engineering Staff utilizes the following Significance Criteria:

In accordance with “SANTEC/ITE Guidelines for Traffic Impact Studies in the San Diego Region”, the following thresholds shall be used to identify if a project is of significant traffic impact under any scenario. Based on SANTEC/ITE guidelines, if now or in the future, the project’s traffic impact causes the values in **Table 5-1** below to be exceeded in a roadway segment or an intersection that is operating at LOS D or worse, it is determined to be a significant impact and the project shall identify mitigation measures.

**TABLE 5-1**  
**CITY OF ESCONDIDO TRAFFIC IMPACT SIGNIFICANCE THRESHOLDS**

Level of Service With Project	Allowable Change due to Project Impact		
	Roadway Segments		Intersections
	V/C	Speed Reduction (mph)	Delay (sec.)
D, E, or F	0.02	1	2

## 6.0 ANALYSIS OF EXISTING CONDITIONS

### 6.1 Peak Hour Intersection Operations

**Table 6-1** summarizes the existing peak hour intersection operations. As shown, all the study area intersections are calculated to currently operate at LOS D or better during both the AM and PM peak hours.

### 6.2 Daily Street Segment Operations

**Table 6-2** summarizes the existing segment operations along the key study area roadways. As shown, all roadway segments are calculated to currently operate LOS C or better on a daily basis.

TABLE 6-1  
EXISTING INTERSECTION OPERATIONS

Intersection	Control Type	Peak Hour	Delay <sup>a</sup>	LOS <sup>b</sup>
1. W. Washington Ave / N. Quince St	Signal	AM	14.5	B
		PM	13.8	B
2. W. Washington Ave / Centre City Pkwy	Signal	AM	26.6	C
		PM	37.8	D
3. W. Valley Pkwy / N. Quince St	Signal	AM	20.9	C
		PM	22.8	C
4. W. Valley Pkwy / Centre City Pkwy	Signal	AM	19.7	B
		PM	17.7	B

**Footnotes:**

- c. Level of Service.
- d. Volume to Capacity.

## 7.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

The following is a discussion of the project trip generation calculations and the project traffic distribution and assignment through the local network. It should be noted that no credit was taken or applied for the existing land uses currently on-site.

### 7.1 Trip Generation

The project proposes to develop 147 senior residential dwelling units on a 1.49-acre site.

The project traffic generation calculations were conducted using the trip generation rates published in SANDAG's *Not so Brief Guide of Vehicular Traffic Generation Rates for San Diego Region (April 2002)*. Based on the project description, LLG utilized the *Retirement Community* category, which SANDAG specifies trip rates of 4 ADT/unit.

**Table 7-1** shows a summary of the project traffic generation. As tabulated the proposed project is calculated to generate 590 daily trips with 30 trips (12 inbound/18 outbound) in AM peak hour and 41 trips (25 inbound/16 outbound) during PM peak hour.

### 7.2 Trip Distribution/Assignment

The project traffic distributions were based on the site location, neighborhood commercial centers, and access to other potential destinations. It should be noted that project trip assignments were distributed to account for W. Valley Parkway a westbound (one-way) only roadway.

**Figure 7-1** shows the project trip distribution percentages. **Figure 7-2** shows the project traffic volumes. **Figure 7-3** shows Existing + Project traffic volumes.

**TABLE 7-1**  
**PROJECT TRIP GENERATION**

Land Use	Size	Daily Trip Ends (ADTs)		AM Peak Hour						PM Peak Hour						
		Rate <sup>a</sup>	Volume	% of ADT	In:Out Split	Volume			In	Out	Total	% of ADT	In:Out Split	Volume		
						In	Out	Total						In	Out	Total
Senior Housing	147 DU	4/DU	590	5%	40:60	12	18	30	7%	60:40	25	16	41			

***Footnotes:***

- a. Rates based on SANDAG's (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002 (Retirement Community category utilized).

## 8.0 CUMULATIVE PROJECTS DISCUSSION

Cumulative projects are other projects in the study area that will add traffic to the local circulation system in the near future. LLG researched potential cumulative projects within the City of Escondido to identify if any potential discretionary projects could be included for analysis. Based on the research and discussions with City staff, 9 cumulative projects were included in this study. Following are brief descriptions of each of them:

1. **Centerpoint 78 Commercial Project** includes a 43,500 SF supermarket and 3,200 SF of fast food restaurants located at 990 N. Broadway.
2. **Latitude II** includes 112 condominiums units located at the northeast quadrant of E. Washington Avenue and Centre City Parkway.
3. **Escondido Gateway Mixed-Use** includes 126 apartment homes and a 1,000 SF convenience market located at 700 W. Grand Avenue.
4. **City Plaza** includes 55 apartment homes, 5,200 SF of specialty retail, and 4,158 SF of office space located at 328 S. Escondido Boulevard.
5. **Hotel La Terraza** includes a 105-room hotel located at 300 La Terraza Boulevard.
6. **La Terraza Office** includes 36,614 SF of office space located at 300 La Terraza Boulevard.
7. **Centre City Shopping Center** includes 7,300 SF of fast food restaurants, 4,500 SF of specialty retail, and a 4,300 SF automatic car wash, all located on the southeast quadrant of Centre City Parkway and Mission Avenue.
8. **Touchstone Project** includes 201 total residential units, 4,800 SF of specialty retail located at 137 W. Valley Parkway and a portion of the residential units (95) would be located at 343 E. 2<sup>nd</sup> Avenue.
9. **Starbucks Drive-Through** includes 1,900 SF fast food restaurant with drive-thru located at 350 W. Valley Parkway inside the Signature Pavilion shopping center.

*Appendix D* contains the cumulative projects traffic data.

**Figure 8-1** shows the Cumulative Projects traffic volumes. **Figure 8-2** shows the Existing + Cumulative Projects traffic volumes. **Figure 8-3** shows the Existing + Cumulative Projects + Project traffic volumes.

## 9.0 ANALYSIS OF NEAR-TERM SCENARIOS

The following is a summary of the operational analyses for the various street-system components for the near-term traffic scenarios.

### 9.1 Existing + Project Conditions

#### 9.1.1 Peak Hour Intersection Operations

**Table 9–1** summarizes the peak hour intersection operations with the addition of project traffic. **Table 9–1** shows that all the study area intersections are calculated to continue to operate at LOS C or better during both the AM and PM peak hours.

#### 9.1.2 Daily Street Segment Operations

**Table 9–2** summarizes the roadway segment operations with the addition of project traffic. **Table 9–2** shows that all the study area street segments are calculated to operate at LOS C or better conditions on a daily basis.

### 9.2 Existing + Cumulative Projects Conditions

#### 9.2.1 Peak Hour Intersection Analysis

**Table 9–1** summarizes the peak hour intersection operations with the addition of cumulative projects traffic to the existing condition. **Table 9–1** shows that all the study area intersections are calculated to continue to operate at LOS C or better conditions during both the AM and PM peak hours with the exception of W. Washington Avenue and Centre City Parkway intersection, which is calculated to operate at LOS D during the PM peak hour.

#### 9.2.2 Daily Street Segment Operations

**Table 9–2** summarizes the roadway segment operations with the addition of cumulative project traffic. **Table 9–2** shows that all the study area street segments are calculated to continue to operate at LOS C or better conditions on a daily basis.

### 9.3 Existing + Cumulative Projects + Project Conditions

#### 9.3.1 Peak Hour Intersection Operations

**Table 9–1** summarizes the peak hour intersection operations for Existing + Cumulative Projects + Project conditions. **Table 9–1** shows that all the study area intersections are calculated to continue to operate at LOS C or better conditions during both the AM and PM peak hours, with the exception of W. Washington Avenue and Centre City Parkway intersection, which is calculated to continue to operate at LOS D during the PM peak hour.

#### 9.3.2 Daily Street Segment Operations

**Table 9–2** summarizes the roadway segment operations for Existing + Cumulative Projects + Project conditions. **Table 9–2** shows that all the study area street segments are calculated to continue to operate at LOS C or better conditions on a daily basis.

**TABLE 9-1**  
**NEAR-TERM INTERSECTION OPERATIONS**

Intersection	Control Type	Peak Hour	Existing		Existing + Project			Existing + Cumulative Projects		Existing + Cumulative Projects + Project			Sig?
			Delay <sup>a</sup>	LOS <sup>b</sup>	Delay	LOS	Δ <sup>c</sup>	Delay	LOS	Delay	LOS	Δ <sup>c</sup>	
1. W. Washington Ave / N. Quince St	Signal	AM	14.5	B	14.5	B	0.0	14.6	B	14.6	B	0.0	No
		PM	13.8	B	13.8	B	0.0	13.9	B	14.0	B	0.1

**Footnotes:**

- a. Capacities based on the City of Escondido Roadway Classification Table.
- b. Average Daily Traffic Volumes.
- c. Level of Service.
- d. Volume to Capacity.
- e. “Δ” denotes the Project-induced increase in V/C.

## **10.0 ACCESS**

### **10.1 Project Access**

The driveway entry into the ground-level parking would be located along the northwestern portion of the site along N. Quince Street. This is a desirable location since it is as far as possible from the N. Quince Street and W. Valley Parkway intersection. A two-way left-turn lane (TWLTL) is provided within N. Quince Street at the project driveway. This would allow inbound and outbound project traffic to turn left into and out of the project outside the N. Quince Street through lanes. The access is therefore expected to operate well.

### **10.2 Pedestrian Network**

Sidewalks are provided along the both sides of Quince Street, W. Valley Parkway as well as along adjacent streets within the project vicinity.

### **10.3 Bicycle Network**

There are no existing dedicated bicycle lanes on N. Quince Street within the project study area. However, Class II bike lanes are planned in the near future along N. Quince Street and the project's loading zone area was designed to accommodate this bike lane. The project should provide the bike lane along the project frontage assuming the balance of the bike lane is built.

Class II bike lanes are also provided along Centre City Parkway. A new traffic signal will be installed at the bike trail crossing just south of the channel on N. Quince Street the will enhance pedestrian movement in the area.

### **10.4 Transit Conditions**

Public transit is available throughout the study area. The City of Escondido's transit center is located on the northwest corner of N. Quince Street and W. Valley Parkway. The Escondido Transit Center is a bus and train station located in Downtown Escondido, California. It serves as the current eastern terminus of the North County Transit District's SPRINTER light rail line. Currently, multiple transit services via NCTD Breeze, NCTD, and MTS bus transit lines are provided.

## **11.0 SIGNIFICANCE OF IMPACTS AND MITIGATION MEASURES**

Based on the established significance criteria, no significant impacts are calculated for the N. Quince Street Senior Housing project. Therefore, mitigation measures are not required.

## APPENDIX C

### CITY OF ESCONDIDO ROADWAY CLASSIFICATION TABLE

Table

CITY OF ESCONDIDO PROPOSED LEVEL OF SERVICE STANDARDS  
STREET SEGMENT AVERAGE DAILY VEHICLE TRIP THRESHOLDS

Street Classification	Lanes	Cross Sections	Level of Service				
			A	B	C	D	E
Prime Arterial	(8lanes)	116/136 (NP)	23,800	37,800	51,800	62,300	70,000
	(6lanes)	106/126 (NP)	20,400	32,400	44,400	53,400	60,000
Major Road	(6lanes)	90/110 (NP)	17,000	27,000	37,000	44,500	50,000
	(4lanes)	82/102 (NP)	12,600	20,000	27,400	32,900	37,000
Collector	(4lanes)	64/84 (NP)	11,600	18,500	25,300	30,400	34,200
	(4lanes)	(WP)	6,800	10,800	14,800	17,800	20,000
Local Collector	(2lanes)	42/66 (NP)	5,100	8,100	11,100	13,400	15,000
	(2lanes)	(WP)	3,400	5,400	7,400	8,900	10,000
Rural collector	(2lanes)						

(NP) No Parking

(WP) With Parking

The following V/C Ratios were utilized for determining Existing and Future Level of Service.

Level of Service	Volume/Capacity (V/C) Ratio
------------------	-----------------------------

A-	Less than or Equal to	0.00	to	0.34
B-	Less than or Equal to	0.35	to	0.54
C-	Less than or Equal to	0.55	to	0.74
D-	Less than or Equal to	0.75	to	0.89
E-	Less than or Equal to	0.90	to	1.00

V/C 0.74

## **APPENDIX D**

### **CUMULATIVE PROJECTS TRAFFIC DATA**

## Jose Nunez

**From:** Miriam Jim <[mjim@escondido.org](mailto:mjim@escondido.org)>

**Subject:** RE: Quince Street Senior Center Project

Hi Jose,

Here is the cumulative project list:

Cumulative Project List					
	Project	Location	Land Use	Size	Unit
1	Centerpoint 78 Commercial Project	990 N Broadway	Supermarket	43.5	TSF
			Fast-Food Restaurant	3.2	TSF
2	Latitude II	Northeast quad. Of Washington/CCP	Condominiums	112	DU
			Apartments	126	DU
3	Escondido Gateway Mixed-Use	700 W. Grand Ave	Convenience Market	1	TSF
			Apartments	55	DU
4	City Plaza	328 S. Escondido Blvd	Specialty Retail	5.198	TSF
			Office	4.158	TSF
5	Hotel La Terraza	300 La Terraza Blvd	Hotel	105	rooms
6	La Terraza Office	300 La Terraza Blvd	Office	36.614	TSF
7	Centre City Shopping Center	Southeast quad. of Centre City Pkwy/Mission Ave	Fast-Food With Drive-Thru	4.878	TSF
			Fast-Food Without Drive-Thru	2.4	TSF
			Specialty Retail	4.5	TSF
			Automatic Car Wash	4.308	TSF
8	TouchStone Project	137 West Valley Pkwy	Residential	106	DU
			Specialty Retail	4.8	TSF
		343 East 2nd Ave	Residential	95	DU
9	Starbucks Drive-through	Signature Pavilion 350 W. Valley Pkwy	Fast-Food With Drive-Thru	1.9	TSF

Thanks,  
Miriam

**Subject:** FW: Quince Street Senior Center Project

Miriam,

Just wanted to follow up with you on our Quince Street Senior Project and if we could obtain any Cumulative Project traffic data from you by tomorrow, Friday July 27th.

acoustical engineering • parking studies

December 9, 2013

Mr. Homi Namdari  
CITY OF ESCONDIDO  
201 North Broadway  
Escondido, CA 92025-2798

**Subject: SCOPING AGREEMENT FOR TRAFFIC IMPACT ANALYSIS (Revised 12/9/13)**

Dear Mr. Namdari:

RK ENGINEERING GROUP, INC. (RK) is pleased to provide the following Scoping Agreement for the Centerpointe 78 Traffic Impact Analysis. Please review and sign this document to indicate your approval of the scope of work.

**1. Project Overview**

- Project Name: Centerpointe 78
- Project Address: 990 North Broadway, City of Escondido (SWC of North Broadway and Lincoln Avenue)
- Project Description: 43,500 sq. ft. Supermarket and 3,200 sq. ft. Fast Food Restaurant With Drive-Thru

**2. Project Trip Generation**

- SANDAG (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region
- SANDAG suggested Pass-By for [undiverted and diverted < 1 miles] trip reductions only during PM peak period.

Vehicular Traffic Generation Rates				
Land Use	Quantity	Driveway Vehicle Trip Rate	Peak Hour Ratios	
			AM (in:out)	PM (in:out)
Supermarket	43,500	150 Trips/TSF	4% (7:3)	10% (5:5)
Fast Food Restaurant (With Drive-Thru)	3,200	650 Trips/TSF	7% (5:5)	7% (5:5)

Pass-By Reductions <sup>3</sup>	
Supermarket	40%
Fast Food Restaurant	40%

Project Trip Generation													
Land Use	Qty.	Units	Peak Hour						Daily				
			AM			PM							
			In	Out	Total	In	Out	Total					
1	Supermarket	43.500	TSF	183	78	261	326	327	653	6,525			
	40% Pass-By Trip Reduction <sup>2</sup>			n/a	n/a	n/a	-130	-131	-261	n/a			
	Net Total Supermarket			183	78	261	196	196	392	6,525			
2	Fast Food Restaurant (With Drive-Thru)	3.200	TSF	73	73	146	73	73	146	2,080			
	40% Pass-By Trip Reduction <sup>2</sup>			n/a	n/a	n/a	-29	-29	-58	n/a			
	Net Total Fast Food			73	73	146	44	44	88	6,525			
Full Project Trip Generation				256	151	407	399	400	799	8,605			
Net Total (With Pass-By Trip Reduction)				256	151	407	240	240	480	8,605			

### 3. Trip Distribution and Assignment

- SANDAG Series 12 Select Zone Assignment
- Project traffic will be determined based on the Select Zone Assignment percent distribution and the project trip generation for the AM Peak Hour, PM Peak Hour and Daily conditions.

#### **4. Study Area**

The following study area is based on the latest City of Escondido Traffic Impact Analysis Requirement Guidelines.

- 23 Study Area Roadway Segments (see attached Table)
- 16 Study Area Intersections (see attached Table)
- 2 Caltrans Mainline Freeway Segments (see attached Table)

#### **5. Traffic Counts**

Please see the attached table for a detailed list of count locations and times. All traffic counts are taken during normal non-holiday weekday conditions (Tuesday – Thursday) during clear weather and while schools are in regular session.

- 24 Hour 2-Way ADT counts will be taken at the 23 study area roadway segments.
  - Thirteen (13) roadway segment ADTs will be used from data collected on June 6, 2013.
  - Ten (10) additional roadway segment ADTs will be collected.
- Morning (7AM to 9AM) and Evening (4PM to 6PM) peak hour turning movement counts will be taken at all 16 study area intersections.
  - Twelve (12) intersection morning and evening counts will be used from data collected on June 6, 2013
  - Four (4) additional intersection morning and evening counts will be collected.
- Mid-Day intersection turning movement counts will be taken at all study area intersections.
  - Eight (8) new intersection mid-day (2PM-4PM) counts will be collected.
  - Eight (8) new intersection mid-day (12PM-2PM) counts will be collected at all other intersection locations.
- Pedestrian Counts (7AM-9AM, 12:30PM-2:30PM/2PM-4PM and 4PM-6PM) will be taken at nine (9) locations.
  - Four (4) pedestrian morning and evening count locations will be used from data collected on June 6, 2013
  - Five (5) additional pedestrian morning and evening count locations will be collected.
  - Eight (8) new pedestrian mid-day count locations will be collected.
  - One (1) mid-block pedestrian count will be used from June 6, 2013.

## **6. Analysis Scenarios**

- Existing: (AM, Mid-Day, PM, Daily)
- Existing + Project: (AM, Mid-Day, PM, Daily)
- Project Opening Year (2016) + Cumulative Projects; (AM, Mid-Day, PM, Daily)
- Project Opening Year (2016) + Cumulative Projects + Project (AM, Mid-Day, PM, Daily)
- Horizon Year (2035): (AM, PM, Daily)
- Horizon Year (2035) + Project: (AM, PM, Daily)

To assess Project Opening Year (2016) conditions, a 1% per year compound annual growth rate will be added to existing traffic volumes plus added traffic from cumulative projects. For Mid-Day analysis, the worst case PM peak hour project trip generation will be used.

Cumulative projects should be provided by the City of Escondido and would include all approved or reasonably foreseeable pending projects that are expected to influence the study area. Copies of traffic studies for the cumulative projects should be provided. If data is not available for near-term projects, an ambient growth factor should be agreed upon by the City.

## **7. Level of Service Standards and Significant Impact Criteria**

- City of Escondido Traffic Impact Analysis Requirement Guidelines (October 10, 2013)

## **8. Analysis Methodology**

- Highway Capacity Manual 2010 (HCM) for intersections and freeway segments
- Volume to Capacity (V/C) ratio analysis will be used for roadway segments

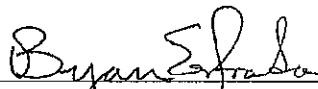

## **9. Additional Items to be Addressed**

- Review project access with regards to sight distance and circulation, and determine the need for any special turn lanes that might be required to serve the project.
- Review internal circulation and drive-thru queuing.
- Develop mitigation measures (i.e. traffic signals, additional lanes, etc.) that may be required to accommodate the project.
- The traffic impact study will be reviewed and signed by a California Registered Traffic Engineer.

Page 5 of 5  
City of Escondido  
Traffic Impact Analysis Scoping Agreement

Please find attached a location map and table of the study area roadway segments and intersections. Please sign and return a copy of this scoping agreement upon your approval. If you have any questions please call us at (949)474-0809.
