- - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.
```

```
  --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   493 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:    493 Source(s);       1 Source Group(s); and     554
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    493 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
```

Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 367.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.8 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Fontana_Sierra Casa Grande.err

**File for Summary of Results: Fontana_Sierra Casa Grande.sum

MEMORANDUM

To:	Kari Cano
From:	Ryan Chiene
	Kimley-Horn and Associates, Inc.
Date:	June 2, 2020
Subject:	Palmetto Replacement Site: Proposed Sierra Casa Grande Warehouse Residential Replacement Site - Health Risk Assessment

---

Purpose

The purpose of this Health Risk Assessment (HRA) is to evaluate potential health risks associated with Toxic Air Contaminants (TAC) including Diesel Particulate Matter (DPM) resulting from the implementation of the proposed residential replacement site located on the northeast corner of Palmetto Avenue and Valencia Avenue (Palmetto Replacement Site) in the City of Fontana. This HRA was prepared in accordance with the requirements of the South Coast Air Quality Management District (SCAQMD) requirements, and pursuant to Office of Environmental Health Hazard Assessment (OEHHA) guidelines, this HRA was prepared to determine if Project implementation is likely to result in health risks. Specifically, this analysis addresses the air quality impacts referenced in State CEQA Guidelines Section 15332(d).

Project Description

The project is proposing residential replacement sites for the development of residential dwelling units at two project sites within the City of Fontana in efforts to account for the potential residential dwelling units lost with the development of the proposed Sierra Avenue at Casa Grande Drive Warehouse. The two replacement sites are proposed within the City of Fontana and are shown on Exhibit 1. One replacement site is located on the northeast corner of the intersection of Palmetto Avenue at Valencia Avenue. The site is currently 3.58 acres and occupied by 8 existing residential dwelling units and a church building. The other replacement site, located on the northwest corner of the intersection of Mango Avenue at Malaga Street (Mango Replacement site), is mentioned in this memorandum yet analyzed in a separate document.

The replacement of residential land uses due to the development of the Sierra Avenue at Casa Grande Drive Warehouse would result in the development of a maximum of 219 new residential dwelling units, in addition to the existing units on each site. The 219 dwelling units would be split proportionally between the two replacement sites as follows:

- **Palmetto Avenue/Arrow Boulevard Site**: 24 new dwelling units
    - 8 existing dwelling units
    - 32 onsite total dwelling units
    - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

- **Malaga Street/Mango Avenue Site**: 195 new dwelling units
    - 14 existing dwelling units
    - 209 onsite total dwelling units
    - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

Environmental Setting

The California Air Resources Board (CARB) divides the State into 15 air basins that share similar meteorological and topographical features. The Project site lies within the central portion of the South Coast Air Basin (Basin). The Basin is a 6,600-square mile area bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Gorgonio Pass area in Riverside County. The Basin's terrain and geographical location (i.e., a coastal plain with connecting broad valleys and low hills) determine its distinctive climate.

Climate

The general region lies in the semi-permanent high-pressure zone of the eastern Pacific. The climate is mild and tempered by cool sea breezes. The usually mild climatological pattern is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds. The extent and severity of the air pollution problem in the Basin is a function of the area's natural physical characteristics (weather and topography), as well as man-made influences (development patterns and lifestyle). Factors such as wind, sunlight, temperature, humidity, rainfall, and topography all affect the accumulation and/or dispersion of pollutants throughout the Basin. These factors along with applicable regulations are discussed below.

The average annual temperature varies little throughout the Basin, averaging 75 degrees Fahrenheit (°F). However, with a less-pronounced oceanic influence, the eastern inland portions of the Basin show greater variability in annual minimum and maximum temperatures. All portions of the Basin have had recorded temperatures over 100°F in recent years.

Meteorology

Although the Basin has a semi-arid climate, the air near the surface is moist due to the presence of a shallow marine layer. Except for infrequent periods when dry, continental air is brought into the Basin by offshore winds, the ocean effect is dominant. Periods with heavy fog are frequent, and low stratus

clouds, occasionally referred to as “high fog,” are a characteristic climate feature. Annual average relative humidity is 70 percent at the coast and 57 percent in the eastern part of the Basin. Precipitation in the Basin is typically nine to 14 inches annually and is rarely in the form of snow or hail due to typically warm weather. The frequency and amount of rainfall is greater in the coastal areas of the Basin.

A temperature inversion is defined as an increase in temperature with height, or to the layer within which such an increase occurs. The height of the inversion is important in determining pollutant concentration. When the inversion is approximately 2,500 feet above sea level, the sea breezes carry the pollutants inland to escape over the mountain slopes or through the passes. At a height of 1,200 feet, the terrain prevents the pollutants from entering the upper atmosphere, resulting in a settlement in the foothill communities. Below 1,200 feet, the inversion puts a tight lid on pollutants, concentrating them in a shallow layer over the entire coastal basin. Usually, inversions are lower before sunrise than during the day. Mixing heights for inversions are lower in the summer and more persistent, being partly responsible for the high levels of ozone (O_3) observed during summer months in the Basin. Smog in southern California is generally the result of these temperature inversions combining with coastal day winds and local mountains to contain the pollutants for long periods of time, allowing them to form secondary pollutants by reacting with sunlight. The Basin has a limited ability to disperse these pollutants due to typically low wind speeds.

The area in which the Project is located offers clear skies and sunshine, yet is still susceptible to air inversions. These inversions trap a layer of stagnant air near the ground, where it is then further loaded with pollutants. These inversions cause haziness, which is caused by moisture, suspended dust, and a variety of chemical aerosols emitted by trucks, automobiles, furnaces, and other sources.

Toxic Air Contaminants

Toxic Air Contaminants (TACs) are airborne substances capable of causing short-term (acute) and long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. They may be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and painting operations. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

Hazardous Air Pollutants (HAP) is a term used by the Federal Clean Air Act (FCAA) that includes a variety of pollutants generated or emitted by industrial production activities. Identified as TACs under the California Clean Air Act (CCAA), have been singled out through ambient air quality data as being the most substantial health risk in California. Direct exposure to these pollutants has been shown to cause cancer, birth defects, damage to the brain and nervous system, and respiratory disorders. The California Air Resources Board (CARB) provides emission inventories for only the larger air basins.

Industrial facilities and mobile sources are significant sources of TACs. In addition to industrial sources, various common urban facilities also produce TAC emissions, such as gasoline stations (benzene), hospitals (ethylene oxide), and dry cleaners (perchloroethylene). Automobile exhaust also contains

TACs such as benzene and 1,3-butadiene. Diesel particulate matter (DPM) was identified as a TAC by CARB in 1998. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. BAAQMD research indicates that mobile-source emissions of DPM, benzene, and 1,3-butadiene represent a substantial portion of the ambient background risk from TACs in the SFBAAB.

TACs do not have ambient air quality standards because no safe levels of TACs can be determined. Instead, TAC impacts are evaluated by calculating the health risks associated with a given exposure. The requirements of the Air Toxic "Hot Spots" Information and Assessment Act (Assembly Bill [AB] 2588) apply to facilities that use, produce, or emit toxic chemicals. Facilities subject to the toxic emission inventory requirements of the act must prepare and submit toxic emission inventory plans and reports, and periodically update those reports.

Toxic contaminants often result from fugitive emissions during fuel storage and transfer activities, and from leaking valves and pipes. For example, the electronics industry, including semiconductor manufacturing, uses highly toxic chlorinated solvents in semiconductor production processes. Sources of air toxics go beyond industry, however. Automobile exhaust also contains toxic air pollutants such as benzene and 1,3-butadiene.

In California, on-road diesel-fueled engines contribute approximately 24 percent of the statewide total DPM emissions, with an additional 71 percent attributed to other mobile sources such as construction and mining equipment, agricultural equipment, and transport refrigeration units. Stationary sources contribute about 5 percent of total DPM. CARB has developed several plans and programs to reduce diesel emissions such as the Diesel Risk Reduction Plan (DRRP), the Statewide Portable Equipment Registration Program (PERP), and the Diesel Off-Road Reporting System (DOORS). The PERP and DOORS programs allow owners or operators of portable engines and certain other types of equipment to register their units to operate their equipment throughout California without having to obtain individual permits from local air districts.

As stated above, diesel exhaust and many individual substances contained in it (including arsenic, benzene, formaldehyde, and nickel) have the potential to contribute to mutations in cells that can lead to cancer. Long-term exposure to diesel exhaust particles poses the highest cancer risk of any TAC evaluated by the OEHHA. CARB estimates that about 70 percent of the cancer risk that the average Californian faces from breathing toxic air pollutants stems from diesel exhaust particles.

Exposure to diesel exhaust can have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks.

Diesel engines are a major source of fine particulate pollution. The elderly and people with emphysema, asthma, and chronic heart and lung disease are especially sensitive to fine-particle pollution. Numerous studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems. Because children's lungs and respiratory systems are still developing, they are also more susceptible than healthy adults to fine particles. Exposure to fine particles is associated with increased frequency of childhood illnesses and can also reduce lung function in children. California has identified diesel exhaust particles as a carcinogen.

Regulatory Setting

Federal

Federal Clean Air Act

The Federal Clean Air Act (FCAA) was amended in 1990 to address a large number of air pollutants that are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects. 188 specific pollutants and chemical groups were initially identified as HAPs, and the list has been modified over time. The FCAA Amendments included new regulatory programs to control acid deposition and for the issuance of stationary source operating permits.

In 2001, the U.S. Environmental Protection Agency (EPA) issued its first Mobile Source Air Toxics Rule, which identified 21 mobile source air toxic (MSAT) compounds as being HAPs that required regulation. A subset of six of these MSAT compounds were identified as having the greatest influence on health and included benzene, 1,3-butadiene, formaldehyde, acrolein, acetaldehyde, and DPM. More recently, the EPA issued a second MSAT Rule in February 2007, which generally supported the findings in the first rule and provided additional recommendations of compounds having the greatest impact on health. The rule also identified several engine emission certification standards that must be implemented. Unlike the criteria pollutants, toxics do not have National Ambient Air Quality Standards (NAAQS) making evaluation of their impacts more subjective.

National Emissions Standards for Hazardous Air Pollutants (NESHAPs) were incorporated into a greatly expanded program for controlling toxic air pollutants. The provisions for attainment and maintenance of the NAAQS were substantially modified and expanded. Other revisions included provisions regarding stratospheric ozone protection, increased enforcement authority, and expanded research programs.

Section 112 of the FCAA Amendments governs the federal control program for HAPs. NESHAPs are issued to limit the release of specified HAPs from specific industrial sectors. These standards are technology-based, meaning that they represent the best available control technology an industrial sector could afford. The level of emissions controls required by NESHAPs are not based on health risk considerations because allowable releases and resulting concentrations have not been determined to be safe for the general public. The FCAA does not establish air quality standards for HAPs that define legally acceptable concentrations of these pollutants in ambient air.

State of California

California Air Resources Board

CARB's statewide comprehensive air toxics program was established in 1983 with AB 1807 the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an airborne toxics control measure (ATCM) for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology (T-BACT) to minimize emissions.

CARB also administers the state's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a health risk assessment and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the "Hot Spots" Act was amended by Senate Bill (SB) 1731 which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

Diesel Risk Reduction Plan. The identification of DPM as a TAC in 1998 led CARB to adopt the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles (Risk Reduction Plan) in October 2000. The Risk Reduction Plan's goals include an 85 percent reduction in DPM by 2020 from the 2000 baseline.[1] The Risk Reduction Plan includes regulations to establish cleaner new diesel engines, cleaner in-use diesel engines (retrofits), and cleaner diesel fuel.

Truck and Bus Regulation Reducing Emissions from Existing Diesel Vehicles. On December 12, 2008, CARB approved the Truck and Bus Regulation to significantly reduce particulate matter (PM) and oxides of nitrogen (NO_X) emissions from existing diesel vehicles operating in California. The regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Heavier trucks must be retrofitted with PM filters beginning January 1, 2012, and older trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses would need to have 2010 model year engines or equivalent.

The regulation applies to nearly all privately and federally-owned diesel fueled trucks and buses and to privately and publicly owned school buses with a gross vehicle weight rating (GVWR) greater than 14,000 pounds. Small fleets with three or fewer diesel trucks can delay compliance for heavier trucks by reporting and there are a number of extensions for low-mileage construction trucks, early PM filter

[1] California Air Resources Board, *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles*, October 2000.

retrofits, adding cleaner vehicles, and other situations. Privately and publicly owned school buses have different requirements.

Heavy-Duty Vehicle Idling Emission Reduction Program. The purpose of the CARB Air Toxic Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling is to reduce public exposure to diesel particulate matter and criteria pollutants by limiting the idling of diesel-fueled commercial vehicles. The driver of any vehicle subject to this ATCM is prohibited from idling the vehicle's primary diesel engine for greater than five minutes at any location and is prohibited from idling a diesel-fueled auxiliary power system (APS) for more than five minutes to power a heater, air conditioner, or any ancillary equipment on the vehicle if it has a sleeper berth and the truck is located within 100 feet of a restricted area (homes and schools).

CARB Final Regulation Order, Requirements to Reduce Idling Emissions from New and In-Use Trucks, beginning in 2008, would require that new 2008 and subsequent model-year heavy-duty diesel engines be equipped with an engine shutdown system that automatically shuts down the engine after 300 seconds of continuous idling operation once the vehicle is stopped, the transmission is set to "neutral" or "park", and the parking brake is engaged.

South Coast Air Quality Management District

The California Clean Air Act (CCAA) provides the South Coast Air Quality Management District (SCAQMD) with the authority to manage transportation activities at indirect sources and regulate stationary source emissions. Indirect sources of pollution are generated when minor sources collectively emit a substantial amount of pollution. An example of this would be the motor vehicles at an intersection, a mall, and on highways. As a State agency, CARB regulates motor vehicles and fuels for their emissions.

The Air Toxics Control Plan (March 2000, revised March 26, 2004) is a planning document designed to examine the overall direction of the SCAQMD's air toxics control program. It includes development and implementation of strategic initiatives to monitor and control air toxics emissions. Control strategies that are deemed viable and are within the SCAQMD's jurisdiction will each be brought to the SCAQMD Board for further consideration through the normal public review process. Strategies that are to be implemented by other agencies will be developed in a cooperative effort, and the progress will be reported back to the Board periodically.

The SCAQMD has conducted an in-depth analysis of the toxic air contaminants and their resulting health risks for all of Southern California. This study, the Multiple Air Toxics Exposure Study in the South Coast Air Basin, MATES IV," shows that cancer risk has decreased more than 50 percent between MATES III (2008) and MATES IV (2015).

MATES IV is the most comprehensive dataset documenting the ambient air toxic levels and health risks associated with the South Coast Air Basin emissions. Therefore, MATES IV study represents the baseline health risk for a cumulative analysis. MATES IV estimates the average excess cancer risk level from exposure to TACs is less than 400 in one million basin-wide. These model estimates were based

on monitoring data collected at ten fixed sites within the South Coast Air Basin. None of the fixed monitoring sites are within the local area of the Project site. However, MATES IV has extrapolated the excess cancer risk levels throughout the basin by modeling the specific grids. MATES IV modeling predicted an excess cancer risk of 427 in one million for the Project area. DPM is included in this cancer risk along with all other TAC sources. DPM accounts for 68 percent of the total risk shown in MATES IV. The SCAQMD is currently preparing MATES V, which will be the latest comprehensive study of levels of toxic air pollutants the region. MATES V will include an advanced monitoring component with a focus on refinery emissions.

Significance Criteria and Methodology

Health Risk Analysis Thresholds

Project health risks are determined by examining the types and levels of air toxics generated and the associated impacts on factors that affect air quality. While the final determination of significance thresholds is within the purview of the lead agency pursuant to the State CEQA Guidelines, the SCAQMD recommends that the following air pollution thresholds be used by lead agencies in determining whether the proposed Project is significant. If the lead agency finds that the proposed Project has the potential to exceed the air pollution thresholds, the Project should be considered significant. The thresholds for air toxic emissions are as follows.

- Cancer Risk: Emit carcinogenic or toxic contaminants that exceed the maximum individual cancer risk of 10 in one million.

- Non-Cancer Risk: Emit toxic contaminants that exceed the maximum hazard quotient of 1 in one million.

Cancer risk is expressed in terms of expected incremental incidence per million population. The SCAQMD has established an incidence rate of 10 persons per million as the maximum acceptable incremental cancer risk due to DPM exposure. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulative impact. The 10 in one million standard is a health-protective significance threshold. A risk level of 10 in one million implies a likelihood that up to 10 persons, out of one million equally exposed people would contract cancer if exposed to toxic air contaminants over a specified duration of time. This risk would be an excess cancer that is in addition to any cancer risk borne by a person not exposed to these air toxics. To put this risk in perspective, the risk of dying from accidental drowning is 1,000 in a million which is 100 times more than the SCAQMD's threshold of 10 in one million.

The SCAQMD has also established non-carcinogenic risk parameters for use in health risk assessments (HRAs). Noncarcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at or below which health effects are not likely to occur. A hazard index less of than one (1.0) means that adverse health effects are not expected. Within this analysis, non-carcinogenic exposures of less than 1.0 are considered less than significant.

Methodology

The air dispersion modeling for the HRA was performed using the EPA AERMOD dispersion model. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources (not a factor in the Project's case). AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. The SCAQMD provides surface and upper air meteorological data. Surface and upper air meteorological data from the Pico Rivera Meteorological Station was selected as being the most representative for meteorology based on proximity to the Project site.

The Project is located approximately 785 feet north of the Metrolink San Bernardino line railway. According to Metrolink's *Q3 '18-19 Fact Sheet*,[2] 38 Metrolink trains pass through the City of Fontana each day on this rail line. As such, locomotive diesel engine emissions during Metrolink pass-bys could result in pollutant concentrations at the Project site. Train emissions along the Metrolink rail line were calculated using line-haul emissions factors from the U.S. EPA *Emissions Factors for Locomotives*[3] report and daily train information from Metrolink's *Q3 '18-19 Fact Sheet*. A DPM emission rate for PM_{10} (particulate matter 10 microns in diameter or less) was calculated using data obtained from these sources; refer to Appendix A.

The model's emissions are from line volume sources (comprised of smaller adjacent volume sources) along the Metrolink San Bernardino line railway. Locomotive train emissions were assigned a release height of 15 feet (4.5 meters), which is consistent with previous analyses completed under the jurisdiction of the SCAQMD. Locomotive emissions were also assigned a plume height of 20 feet (6.2 meters), which is based on EPA guidance for vehicle volume sources.

AERMOD was run to obtain the peak 1-hour and annual average concentration in micrograms per cubic meter ($\mu g/m^3$) of PM_{10} at the proposed Project's future sensitive receptors (i.e., residents). According to the SCAQMD's Supplemental Guidelines for Preparing Risk Assessments for AB 2588, air dispersion modeling is required to estimate annual average concentrations to calculate the Maximum Individual Cancer Risk (MICR), the maximum chronic HI, the impact zones, and excess cancer burden, as well as peak hourly concentrations to calculate the health impact from substances with acute non-cancer health effects. To achieve these goals, a receptor grid was placed over the Project site to cover the impact zone. According to the SCAQMD, in order "to identify the maximum impacted receptors (i.e. peak cancer risk and peak hazard indices) a grid spacing of 100 meters or less must be used" (SCAQMD's Supplemental Guidelines page 16). Given the Project site's size, on-site receptors were conservatively modeled with a 15-meter grid spacing. In addition, National Elevation Dataset (NED)

[2] Metrolink, *Q3 '18-19 Fact Sheet*, https://metrolinktrains.com/globalassets/about/agency/facts-and-numbers/quarterly-fact-sheet-q3-fact-sheet-2018-2019.pdf, accessed May 11, 2020.
[3] U.S. EPA, *Emission Factors for Locomotives*, April 2009.

terrain data was imported into AERMOD for the Project. The modeling and analysis was prepared in accordance with the SCAQMD Modeling Guidance for AERMOD.[4]

Note that the concentration estimate developed using this methodology is conservative and is not a specific prediction of the actual concentrations that would occur at the Project site any one point in time. Actual 1-hour and annual average concentrations are dependent on many variables, particularly the number and type of vehicles and equipment operating at specific distances during time periods of adverse meteorology. A health risk computation was performed to determine the risk of developing an excess cancer risk calculated on these worst-case exposure duration scenarios. The chronic and carcinogenic health risk calculations are based on the standardized equations contained in the OEHHA Guidance Manual. Only the risk associated with the worst-case location of the Project was assessed.

Potential Health Risk Impacts

CARB identified DPM as a TAC in 1998. Mobile sources (including trucks, buses, automobiles, trains, ships, and farm equipment) are by far the largest source of diesel emissions. The exhaust from diesel engines includes hundreds of different gaseous and particulate components, many of which are toxic. Diesel exhaust is composed of two phases, either gas or particulate – both contribute to the risk. The gas phase is composed of many of the urban TACs, such as acetaldehyde, acrolein, benzene, 1,3-butadiene, formaldehyde, and polycyclic aromatic hydrocarbons. The particulate phase has many different types that can be classified by size or composition. The sizes of diesel particulates of greatest health concern are fine and ultrafine particles. These particles may be composed of elemental carbon with adsorbed compounds such as organics, sulfates, nitrates, metals, and other trace elements. Diesel exhaust is emitted from a broad range of on- and off-road diesel engines.

Carcinogenic Risk

DPM emissions from train Metrolink locomotives were estimated using line-haul emission factors for PM_{10} from the U.S. EPA *Emissions Factors for Locomotives* report, and information derived from the Metrolink *Q3 '18-19 Fact Sheet* for San Bernardino line railway operations.

The U.S. EPA has established emission standards for oxides of nitrogen (NOx), hydrocarbons (HC), carbon monoxide (CO), particulate matter (PM) and smoke for newly manufactured and remanufactured locomotives. These standards, which are codified at 40 CFR part 1033, include several sets of emission standards with applicability dependent on the date a locomotive is first manufactured. The first set of standards (Tier 0) applies to most locomotives originally manufactured before 2001. The most stringent set of standards (Tier 4) applies to locomotives originally manufactured in 2015 and later. For this Project, annual average PM_{10} emission factors were

[4] South Coast Air Quality Management District, *SCAQMD Modeling Guidance for AERMOD*, https://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance, October 2019.

calculated based on the speed, horsepower, travel length and time, number of train pass-bys (38 daily), and a line-haul emissions factor of 0.02 g/bhp-hr for Tier 4 locomotive engines.[5]

Based on the AERMOD outputs, the highest expected hourly average diesel PM_{10} emission concentrations from Metrolink train pass-bys along the San Bernardino railway line near sensitive receptors would be 0.026 µg/m^3. The highest expected annual average diesel PM_{10} emission concentrations near sensitive receptors would be 0.0095 µg/m^3. The calculations conservatively assume no cleaner technology with lower emissions in future years. As shown in **Table 1: Risk Assessment Results**, the highest calculated carcinogenic risk resulting from the Project is 8.25 per million residents. As shown, impacts related to cancer risk would be less than significant at on-site residential uses.

Table 1: Risk Assessment Results

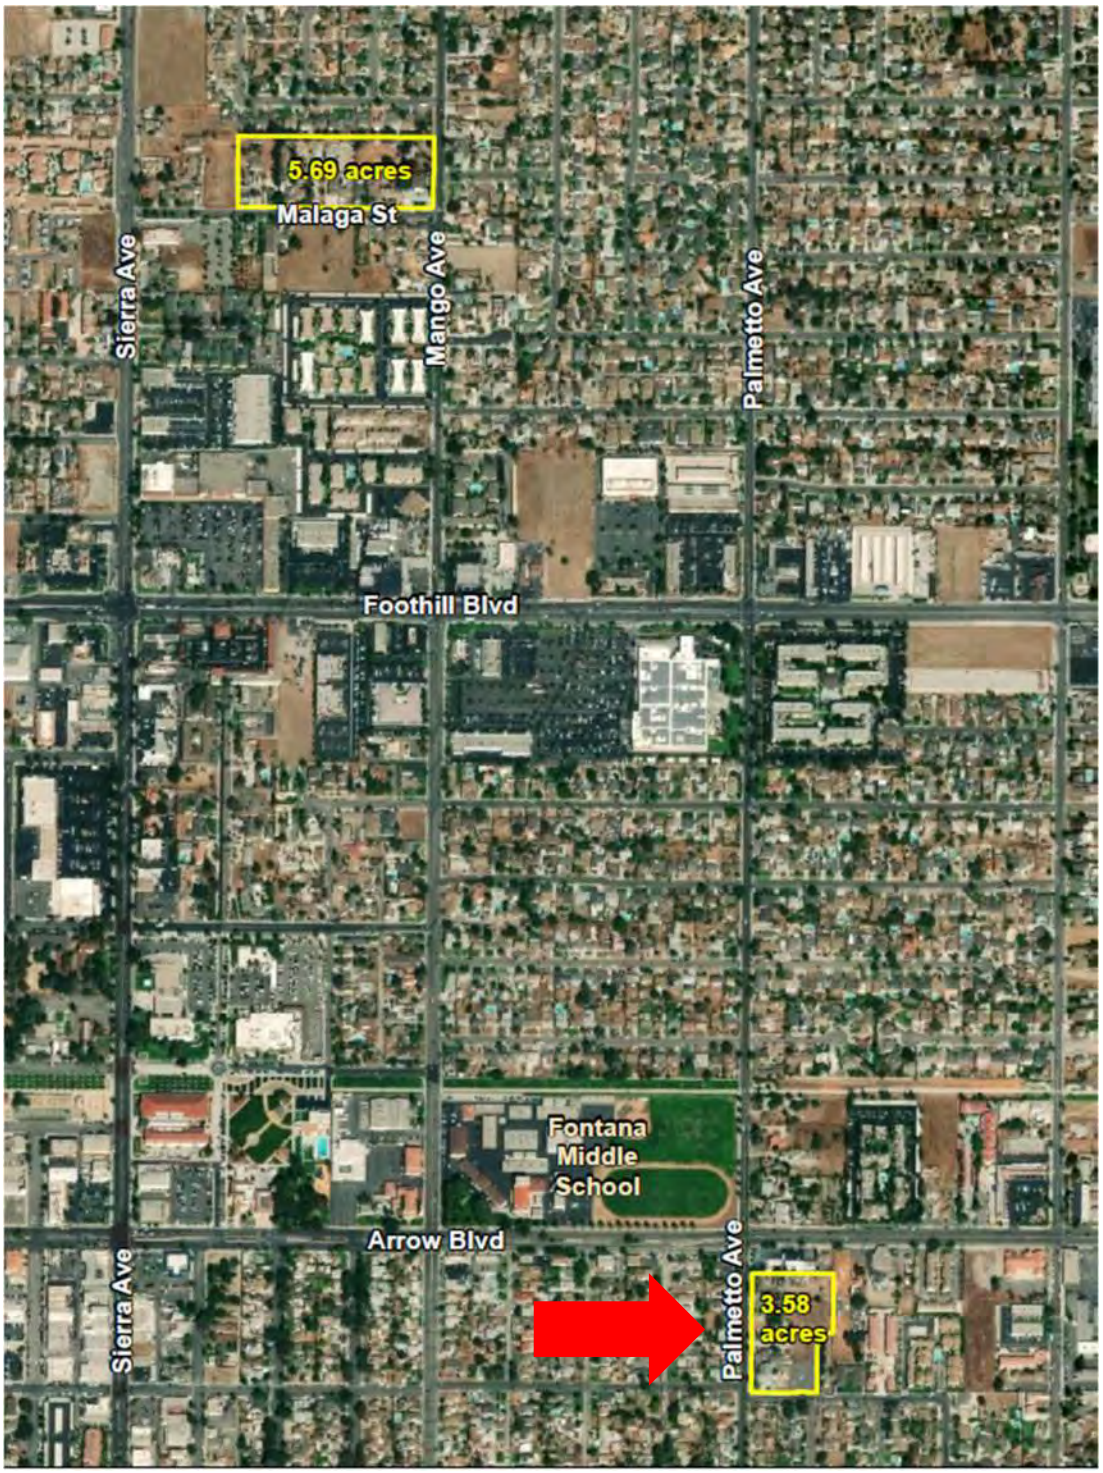
Exposure Scenario	Maximum Cancer Risk (Risk per Million)[1, 2]	Significance Threshold (Risk per Million)	Exceeds Significance Threshold?
Residents	8.25	10	No

1. Refer to Appendix A.
2. The maximum cancer risk would be experienced at the southeastern corner of the Palmetto Replacement site based on worst-case exposure durations for the Project, 95th percentile breathing rates, and 30-year averaging time.

Non-Carcinogenic Hazards

The significance thresholds for TAC exposure also require an evaluation of non-cancer risk stated in terms of a hazard index. Non-cancer chronic impacts are calculated by dividing the annual average concentration by the Reference Exposure Level (REL) for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. The potential for acute non-cancer hazards is evaluated by comparing the maximum short-term exposure level to an acute REL. RELs are designed to protect sensitive individuals within the population. The calculation of acute non-cancer impacts is similar to the procedure for chronic non-cancer impacts.

An acute or chronic hazard index of 1.0 is considered individually significant. The hazard index is calculated by dividing the acute or chronic exposure by the reference exposure level. The highest maximum chronic and acute hazard index associated with both DPM and acrolein emissions from the Project would be 0.002 and 0.01, respectively. Therefore, non-carcinogenic hazards are calculated to be within acceptable limits and a less than significant impact would occur.



[5] Metrolink upgraded its locomotive fleet to Tier 4 engines in 2018: https://metrolinktrains.com/news/metrolink-news/metrolinks-new-tier-4-clean-locomotives-in-service-today/.

Conclusion

As described above, impacts related to cancer risk would be less than significant. Additionally, non-carcinogenic hazards are calculated to be within acceptable limits. It should be noted that the impacts assess the Project's incremental contribution to health risk impacts, consistent with the SCAQMD guidance and methodology. Therefore, impacts related to health risk from the Project would be less than significant.

 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
```

```
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for  2306 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:   2306 Source(s);       1 Source Group(s); and      46
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   2306 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
```

Palmetto Replacement Site.ADO
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 367.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.5 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Palmetto Replacement Site.err

**File for Summary of Results: Palmetto Replacement Site.sum

RE: Biological Resources Assessment and Jurisdictional Delineation
Casa Grande EIR- Southeast corner of Sierra Avenue and Casa Grande Avenue
City of Fontana, CA

Dear Kari:

Jericho Systems, Inc. (Jericho) is pleased to provide this letter report that details the results of a general Biological Resources Assessment (BRA) that includes habitat suitability assessments for nesting birds, Burrowing owl (*Athene cunicularia*) [BUOW], California gnatcatcher (*Polioptila californica*) [CAGN], raptors, small mammals such as the San Bernardino Kangaroo Rat (*Dipodomys merriami parvus*) [SBKR] and Los Angeles Pocket mouse (*Perognathus longimembris brevinasus*) [LAPM] and a Jurisdictional Waters Delineation (JD) for the proposed parcels in the northwest corner of the intersection of Casa Grande Drive and Sierra Avenue in the city of Fontana, CA.

This report is designed to address potential effects of any development to designated Critical Habitats and/or any species currently listed or formally proposed for listing as endangered or threatened under the federal Endangered Species Act (ESA) and the California Endangered Species Act (CESA), or species designated as sensitive by the California Department of Fish and Wildlife (CDFW), or the California Native Plant Society (CNPS). Attention was focused sensitive species known to occur locally. This report also addresses resources protected under the Migratory Bird Treaty Act, federal Clean Water Act (CWA) regulated by the U.S. Army Corps of Engineers (USACE) and Regional Water Quality Control Board (RWQCB) respectively; and Section 1602 of the California Fish and Game Code (FCG) administered by the CDFW.

SITE LOCATION

The Project site is in northeastern Fontana, in San Bernardino County, approximately 1.3-miles north of the Foothill (SR-210) Freeway and approximately 1.3 miles southeast of the Ontario (I-15) Freeway. Approximately 300 feet to the east is the adjoining City of Rialto. The Project site is a vacant and unimproved rectangular-shaped site on the east side of Sierra Avenue, immediately north of the future westerly projection of West Casa Grande Drive. On the east end of the parcel, an access road exists to service maintenance for existing active power lines.

ENVIRONMENTAL SETTING

The site is rectangular shape of vacant and unimproved land on approximately 17-acres (APNs: 0239-151-22, 34 & 40). The site's irregular shape is the result of it being bounded by a Southern California Edison (SCE) high voltage transmission corridor that runs north-south, parallel to, but east of Sierra Avenue, before angling across Sierra Avenue and continuing west. The site and the contiguous properties are undeveloped; however, there is a residential area to the northeast and commercial properties to the south and east.

The surrounding local area sits at the base of the Cajon Pass, where high winds are common meteorological events within the region. The local is characterized as Mediterranean an average annual rainfall of approximately 17 inches. Hydrologically, the Project site is within the Colton Hydrologic Sub-Area (HSA 801.44) which comprises a 17,765-acre drainage area within the larger Middle Santa Ana River Watershed (HUC 180702030804). The subject parcel is situated in a developing area of the Inland Valleys ecoregion.

METHODS

As stated above, the objective of this document is to determine whether the Project area supports special status or otherwise sensitive species and/ or their habitat, and to address the potential effects associated with the Proposed project on those resources. The species and habitats addressed in this document are based on database information and field investigation.

Prior to conducting the field study, species and habitat information was gathered from the reports related to the specific project and relevant databases for the *Devore* USGS quadrangle to determine which species and/or habitats would be expected to occur on site. These sources include:

- U.S. Fish and Wildlife (USFWS) threatened and endangered species occurrence GIS overlay;
- USFWS Information for Planning and Consultation System (IPaC);
- California Natural Diversity Database (CNDDB) *Rarefind 5*;
- CNDDB Biogeographic Information and Observation System (BIOS);
- California Native Plant Society Electronic Inventory (CNPSEI) database;
- Calflora Database;
- USDA Natural Resources Conservation Service (NRCS) Web Soil Survey;
- USFWS National Wetland Inventory;
- Environmental Protection Agency (EPA) Water Program "My Waters" data layers
- USFWS Designated Critical Habitat Maps

We also reviewed other available technical information on the biological resources of the site, including previous trapping surveys and discussed recent findings with researchers in the field.

Jericho biologist Christian Nordal conducted a general biological resources assessment on July 11, 2019, with an emphasis on special-status species known to occur in the area. Mr. Nordal has advanced degrees and multiple years of experience surveying biological resources within Southern California. Mr. Nordal conducted the systematic and comprehensive survey during calm weather, between the hours of 6 a.m. and 7:30 a.m. Weather conditions during the survey consisted of clear skies with temperatures ranging from 70 degrees Fahrenheit (° F) to 80° F and no wind.

On July 13, 2019, Jericho ecologist Shay Lawrey performed a site assessment to evaluate the potential to for sensitive birds and small mammals to occur on site, specifically the federally endangered SBKR and

State species of special concern LAPM and federally threatened CAGN. Ms. Lawrey has advanced degrees in biology, is permitted to trap and handle SBKR and has two decades of experience with surveying for sensitive small mammals and birds.

Wildlife species were detected during field surveys by sight, calls, tracks, scat, or other sign. In addition to species observed, expected wildlife usage of the site was determined per known habitat preferences of regional wildlife species and knowledge of their relative distributions in the area. The focus of the faunal species surveys was to identify potential habitat for special status wildlife within the project area. Disturbance characteristics and all animal sign encountered on the site are recorded in the results section.

The site was also evaluated for the presence of jurisdictional waters, i.e. waters of the U.S. as regulated by the USACE and RWQCB, and/or streambed and associated riparian habitat as regulated by the CDFW. Evaluation of potential federal jurisdiction followed the regulations set forth in 33CFR part 328 and the USACE guidance documents and evaluation of potential State jurisdiction followed guidance in the Fish and Game Code and A Review of Stream Processes and Forms in Dryland Watersheds (CDFW, 2010).

RESULTS

The database searches identified 32 sensitive species (12 plant, 19 animal, 1 invertebrate) and 3 sensitive habitats within the *Devore* USGS 7.5-minute series quadrangle (Attachment B: Figure 4 and Figure 5). A full summary of these results is outlined in Attachment A. The database searches indicated the presence of State- and/or federally listed threatened or endangered species in the immediate vicinity of the project site and USFWS-designated Critical Habitat for SBKR on the Project site.

Habitat on site consists of coastal sage scrub and chamise chaparral mixed with dense non-native grasses and native annuals and perennials. Native species on site include California buckwheat (*Eriogonum fasciculatum),* chamise (*Adenostoma fasciculatum*), deerweed (*Lotus scoparius*), *Lupinus bicolor, Phacelia distans, Heterotheca grandiflora, Cryptantha intermedia*, *Camissoniopsis bistorta,* and *Amsinckia menziesii*. The non-native vegetation present within the project area consists (e.g. red brome *Bromus rubens,* ripgut brome *Bromus diandrus*), wild oat (*Avena barbata*) with redstem filaree (*Erodium cicutarium*) and mustard (*Barssica incana*).

Wildlife species observed or otherwise detected on site during the surveys included: mourning dove, black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), California towhee (*Melozone fusca*), spotted towhee (*Pipilo maculatus*), house finch (*Haemorhous mexicanus*), Say's phoebe (*Sayornis saya*), western kingbird (*Tyrannus melancholicus*), Cassin's kingbird (*Tyrannus vociferans*), northern mockingbird (*Mimus polyglottos*), and coyote (*Canis latrans*). Small mammal burrows were found throughout the site.

Due to the dense grass load on the Project site, there is a low potential for occurrence of BUOW. This species is not typically associated with dense habitat structure including dense grasses, such as are the conditions found on site. The Project site however, is potentially suitable for CAGN, SBKR and LAPM.

San Bernardino Kangaroo Rat (SBKR)

The SBKR is one of several kangaroo rat species in its range. The Dulzura kangaroo rat (*Dipodomys simulans*), the Pacific kangaroo rat (*D. agilis*) and the Stephens kangaroo rat (*D. stephensi*) can occur in areas occupied by the SBKR, but these other species have a wider habitat range.

The habitat of the SBKR is confined to primary and secondary alluvial fan scrub habitats, with sandy soils deposited by fluvial (water) rather than aeolian (wind) processes. Burrows are dug in loose soil, usually near or beneath shrubs. SBKR, are confined to inland valley scrub communities, and more particularly, to scrub communities occurring along rivers, streams and drainage. Most of these drainages have been historically altered as a result of flood control efforts and the resulting increased use of river resources, including mining, off-road vehicle uses and road and housing development. This increased use of river resources has resulted in a reduction in both the amount and quality of habitat available for the SBKR. The past habitat losses and potential future losses prompted the emergency listing of the SBKR as an endangered species.

In general, the Project site contains the habitat elements typically associated with SBKR, but the understory is choked with non-native grasses. The grass component onsite site makes it less suitable for SBKR, but the site is considered potentially suitable for SBKR. Further, there are several documented occurrences of SBKR in the immediate vicinity of the Project site and Critical Habitat for SBKR is mapped on the Project site. For these reasons' absence cannot be determined without a focused presence/absence survey..

Los Angeles Pocket Mouse (LAPM)

The LAPM is one of two pocket mice found in this area of San Bernardino County. Both the LAPM and the San Diego pocket mouse occupy similar habitats, but the San Diego pocket mouse has a wider range extending south into San Diego County. The habitat of the LAPM is confined to lower elevation grasslands and coast sage scrub habitats, in areas with soils composed of fine sands. The present known distribution of this species extends from Rancho Cucamonga east to Morongo and south to the San Diego County border. LAPM forages in open ground and underneath shrubs. Pocket mice in general dig burrows in loose soil, although this has not been completely documented for this subspecies. The LAPM is listed as a Critical Species of Concern by the CDFW.

The Project site contains marginally suitable habitat for LAPM and there are several documented occurrences of LAPM to the north and south of the Project site. No protocol surveys were conducted as part of this assessment, therefore presence or absence of LAPM was not determined, only their potential to occur. Potential of occurrence for LAPM is moderate. Presence or absence of LAPM cannot be presumed without a focused presence/absence survey..

California gnatcatcher(CAGN)

CAGN is a federally listed Threatened Species year-round residents of the CSS vegetative community in southern California. It is a small thrush-like songbird approximately 4 to 5 inches in length with dark, blue-gray plumage above and gray-white plumage below. Nest building begins during the second or third week of March. The range and distribution of the CAGN is closely aligned with coastal scrub vegetation. This vegetation is typified by low 3 feet, shrub and sub-shrub species that are often drought deciduous. The coastal scrub plant communities that overlap the range of the gnatcatcher include Venturan, Diegan, and Riversidean coastal sage scrub communities, and Martirian and Vizcainan coastal succulent scrub communities. The density of CAGN is highest in high-quality habitat and decreased as habitat quality decreased.

As late as the mid-1940s the CAGN was considered locally common and by the mid-1960s, a noticeable decline had begun. The CAGN was listed as Threatened in 1992. According to the "Final Critical Habitat mapping Unit #12" for San Bernardino County, this site is not located within designated critical habitat for the CAGN.

The site contains habitat potentially suitable for CAGN and absence cannot be determined without survey.

Burrowing owl (BUOW)

BUOW are known to occur locally within suitable habitat areas. BUOW is a ground-dwelling owl typically found in arid prairies, fields, and open areas where vegetation is sparse and low to the ground. The BUOW depends on the presence of mammal burrows, i.e. ground squirrel burrows to provide shelter from predators, inclement weather and to provide a nesting place. They are also known to make use of human-created structures, such as cement culverts and pipes, for burrows. They feed primarily on insects but will also take small rodents, birds, and reptiles. They are active during the day and night, generally observed in the early morning hours or at twilight. The breeding season for BUOW is February 1 through August 31. The BUOW is not listed under the State or Federal Endangered Species Act but is considered both a State and federal SSC. The BUOW is a protected by the international treaty under the Migratory Bird Treaty Act of 1918 and by State law under the California Fish and Game Code (CDFG Code #3513 & #3503.5).

Per the definition provided in the *2012 CDFG Staff Report on Burrowing Owl Mitigation*, "Burrowing owl habitat generally includes, but is not limited to, short or sparse vegetation (at least at some time of year), presence of burrows, burrow surrogates or presence of fossorial mammal dens, well-drained soils, and abundant and available prey." Therefore, the project site and immediate vicinity does not contain suitable habitat for this species for the following reasons:

- *Vegetation is not sparse or low to the ground*
- *Burrows on site are small mammal burrows that are not of the appropriate size shape or aspect for BUOW. No ground squirrel burrows were present.*
- *Presence of predators (coyote)*

No evidence of BUOW was found in the survey area. No burrows of appropriate shape size or aspect for BUOW or BUOW pellets, feathers or whitewash were found on site. No BUOW individuals were observed. Therefore, BUOW are considered absent from the site at the time of surveys.

Nesting Birds and Raptors

The site is suitable for use by raptors for foraging purposes. The project site and immediate surrounding areas do contain habitat suitable for nesting birds in general, including the shrubs on site.

Nesting birds are protected under the MBTA which provides protection for nesting birds that are both residents and migrants whether they are considered sensitive by resource agencies. The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed under 50 CFR 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). The direct injury or death of a migratory bird, due to construction activities or other construction-related disturbance that causes nest abandonment, nestling abandonment, or forced fledging would be considered take under federal law. The USFWS, in coordination with the CDFW administers the MBTA. CDFW's authoritative nexus to MBTA is provided in FGC Sections 3503.5 which protects all birds of prey and their nests and FGC Section 3800 which protects all non-game birds that occur naturally in the State.

Jurisdiction Waters

There are no drainages on site. No aspect of the site presents any evidence of jurisdictional waters. None of the following indicators are present on site: riparian vegetation, facultative, facultative wet or obligate wet vegetation, harrow marks, sand bars shaped by water, racking, rilling, destruction of vegetation, defined bed and bank, distinct line between vegetation types, clear natural scour line, meander bars, mud cracks, staining, silt deposits, litter- organic debris. No jurisdictional waters occur on site.

CONCLUSIONS AND RECOMMENDATIONS

BUOW

There is very low potential for BUOW due to the lack of suitable habitat. Further investigation is not recommended or warranted.

CAGN

Habitat conditions on site are potentially suitable for CAGN. Here presence or absence cannot determine without focused survey. Prior to ground disturbing activities, focused protocol surveys for CAGN shall be conducted for by a qualified biologist presence/absence.

Surveys for CAGN will follow USFWS protocol by permitted biologists. The protocol should be followed for all surveys unless otherwise authorized by the USFWS writing. The permittee shall notify the USFWS in writing, at least ten (10) working days prior to the anticipated start date of survey work and receive approval prior to beginning work. The permittee shall provide a report to the USFWS within 45 days following the field surveys.

For breeding season:

From March 15 through June 30, a minimum of six (6) surveys shall be conducted at least one week apart. The protocol for the breeding season was designed to provide a 95% confidence level of detecting CAGN at a site when they are present.

For nonbreeding season:

From July 1 through March 14, a minimum of nine (9) surveys shall be conducted at least two weeks apart. Prevailing site conditions and professional judgment must be applied to determine appropriate survey rates and acreage covered per day. These factors may dictate that the maximum daily coverage specified below is not prudent under certain conditions. No more than 80 acres (32 ha) shall be surveyed per biologist per day.

SBKR/LAPM

The Project site is mapped in Critical Habitat for SBKR and several occurrences of SBKR are documented in the immediate vicinity of the Project site. Habitat conditions on site are marginal but suitable for SBKR. Presence or absence can only be by focused survey.

Habitat conditions on site are also potentially suitable for LAPM and presence or absence cannot determine without focused survey.

Prior to ground disturbing activities, focused small mammal surveys shall be conducted for by a qualified biologist.

Surveys for SBKR/LAPM will follow USFWS protocol for live mammal trapping by permitted biologists. Live trapping will be conducted over five (5) consecutive nights if no target species are captured. Trapping shall be terminated if a target species is trapped prior to the fifth night. Trapping will be conducted under mild weather conditions, with a minimum temperatures greater than 50° Fahrenheit and atmospheric conditions relatively dry, and calm. Trapping shall not be conducted in extended periods of wind, rain or fog that may jeopardize the lives of the target species. Following the survey, the biologist shall submit all a report and associated information required by their USFWS federal Section 10(a) permit.

If none of these species are found during surveys, no further action would be required.

However, if LAPM, SBKR and/or CAGN are found during these surveys, the following mitigation would apply according to the federal Endangered Species Act, California Fish and Game Code and City of Fontana's North Fontana Conservation Program requirements:

> Both the CAGN and SBKR are federally listed species and incidental take permits would be required from the USFWS. Occupied portions of the site would not be able to be developed until the appropriate "take" authority is acquired from the USFWS. According to the North Fontana Conservation Program, areas occupied by either SBKR or CAGN, shall be mitigated at a 5:1 ratio (i.e., an applicant will pay five times the per acre mitigation fee for developing the project site or portion of the property). At this time, costs per acre for occupied habitat have not been determined. The determined fee however, for suitable habitat is $6,210.00 per acre. Therefore, $6,210.00 per acre would be the benchmark costs per/acre to mitigate for GAGN and/or SBKR.
>
> LAPM is a State Species of Special Concern and coordination with the CDFW would be required to determine the mitigation ratios under their jurisdictions. At a minimum, occupied habitat for LAPM would be mitigated at a 1:1 ratio in accordance with the fee structure set forth in the North Fontana Conservation Program.

Nesting Birds

The vegetation on site does have a potential to support nesting birds and foraging raptors such as red-tailed hawks. Therefore, to reduce the potential impacts to nesting birds, the following is recommended:

> Bird nesting season generally extends from February 1 through September 15 in southern California and specifically, April 15 through August 31 for migratory passerine birds. To avoid impacts to nesting birds (common and special status) during the nesting season, a qualified Avian Biologist will conduct pre-construction Nesting Bird Surveys (NBS) prior to project-related disturbance to nestable vegetation to identify any active nests. If no active nests are found, no further action will be required.
>
> If an active nest is found, the biologist will set appropriate no-work buffers around the nest which will be based upon the nesting species, its sensitivity to disturbance, nesting stage and expected types, intensity and duration of disturbance. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved no-work buffer zone shall be clearly marked in the field, within which no disturbance activity shall commence until the qualified biologist has determined the young birds have successfully fledged and the nest is inactive.

Please do not hesitate to contact me at 909-915-5900 should you have any questions or require further information.

Sincerely,

Shay Lawrey, President
Ecologist/Regulatory Specialist

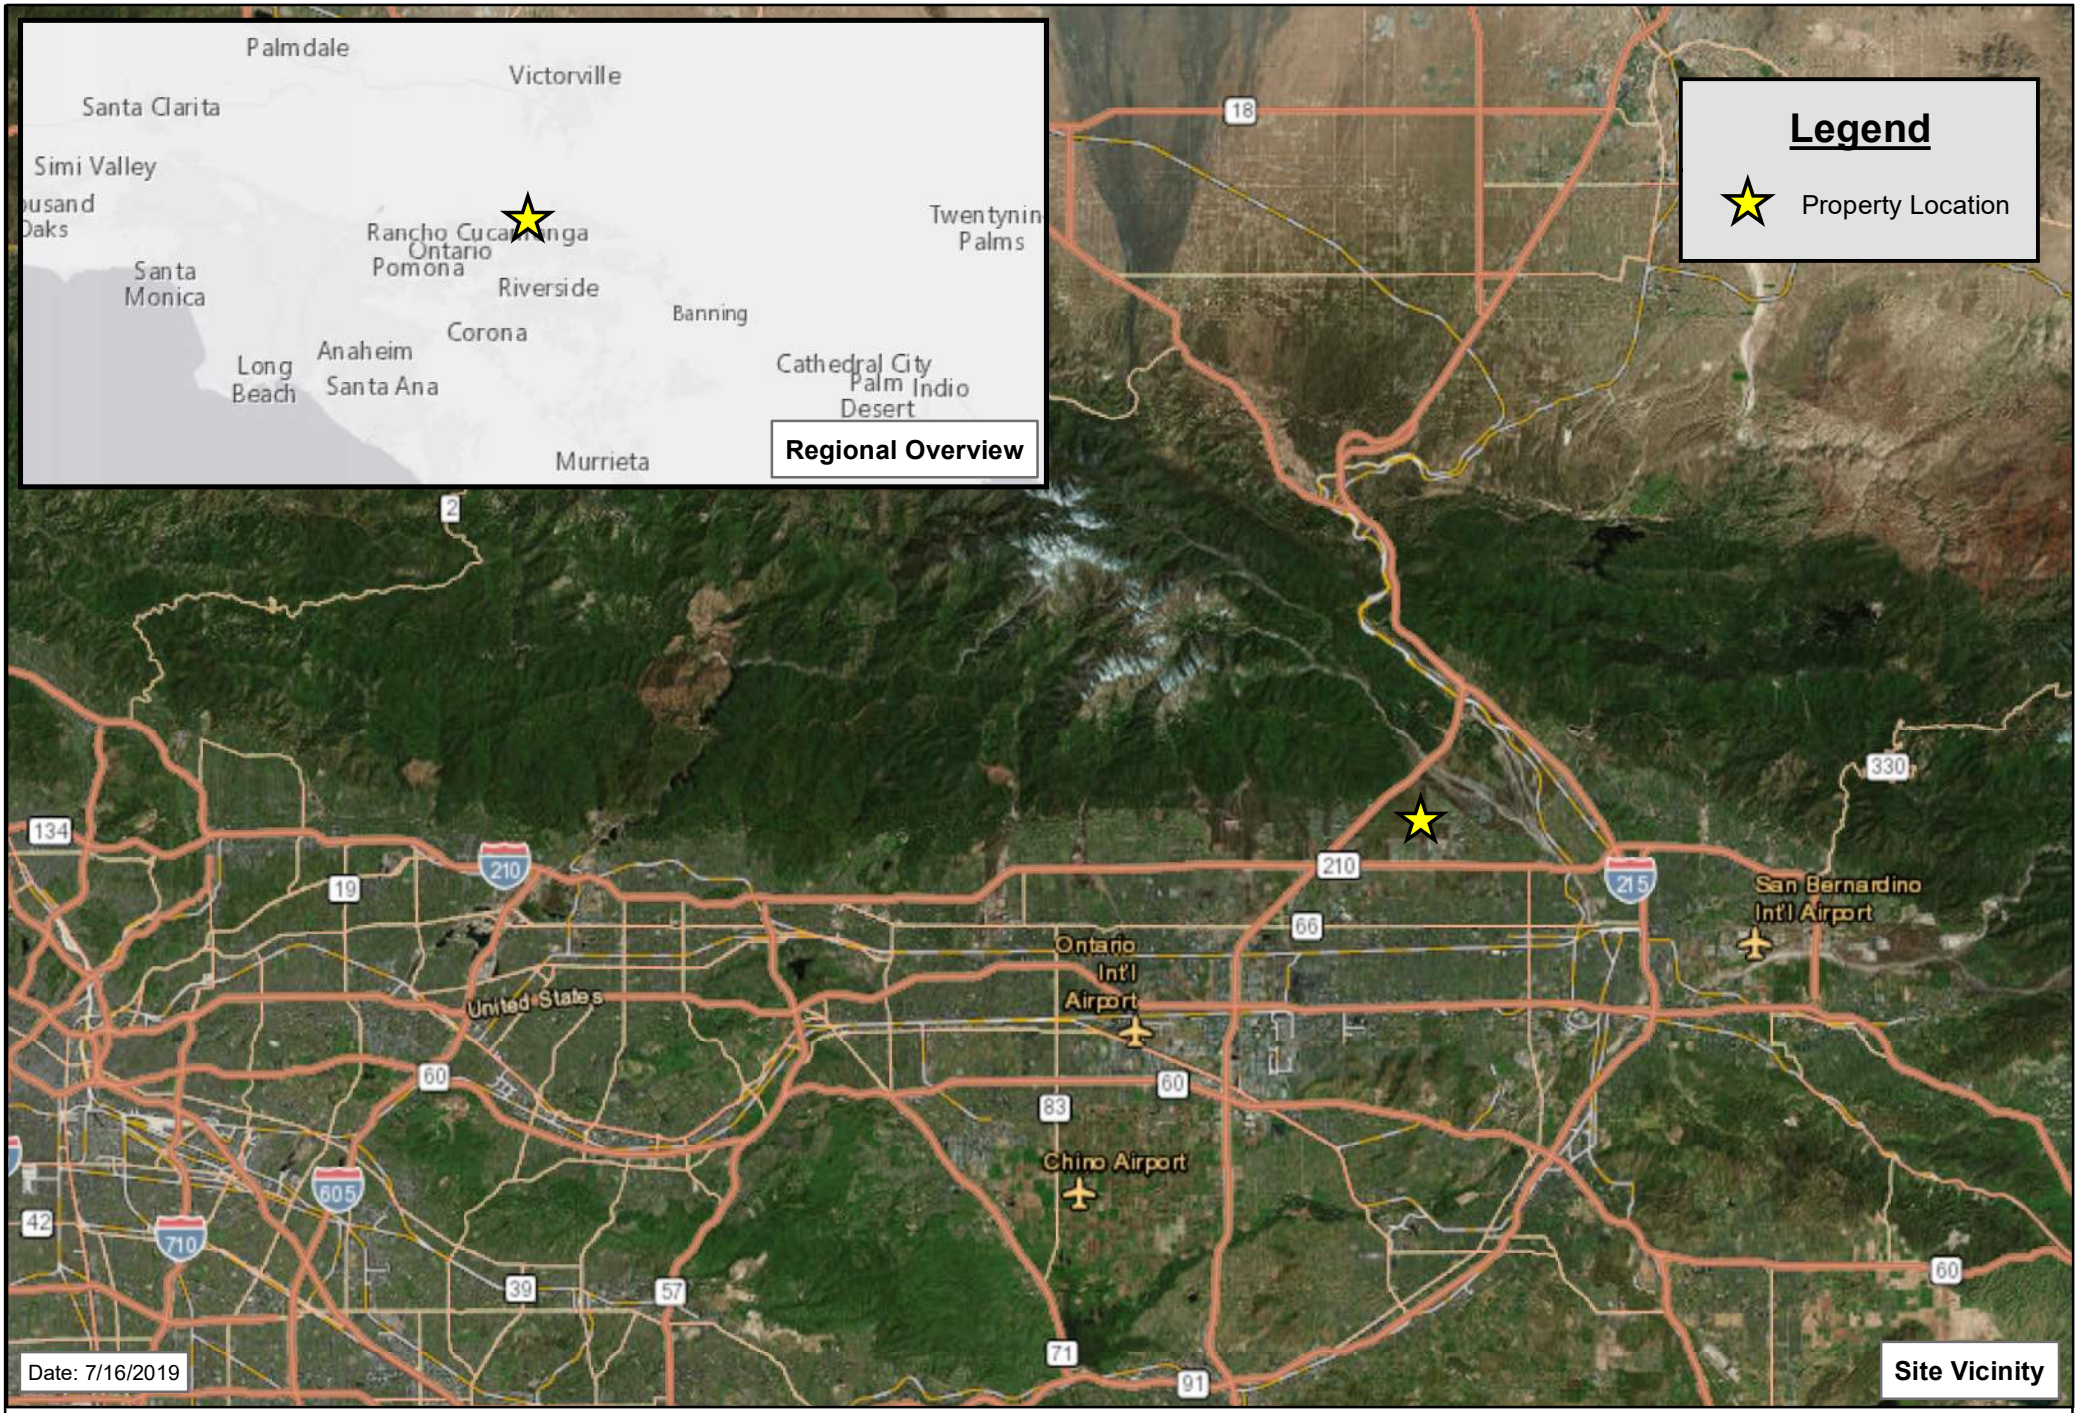
ATTACHMENT A – TABLE OF DOCUMENTED OCCURRENCES

Attachment A – Table of Database Queries (CNDDB, IPAC, CNPSEI)



Scientific Name	Common Name	Federal/State Ranking	Habitat	Potential to Occur
Ambrosia monogyra	singlewhorl burrowbrush	Endangered/none	Chaparral, Sonoran desert scrub	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Anaxyrus californicus	arroyo toad	Endangered/Endangered	Sandy washes with terraces, quiet pools free from predators	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Anniella stebbinsi	southern California legless lizard	none/none	Coastal sand dunes, sandy washes, alluvial fans	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Arizona elegans occidentalis	California glossy snake	none/none	Arid scrub, rocky washes, grasslands, chaparral	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Artemisiospiza belli	Bell's sage sparrow	none/none	Sagebrush flats, alkaline flats with saltbush, semi-arid shrublands in the lowlands	The shrub component on site is potentially suitable for this species. Potential to occur is moderate.
Athene cunicularia	burrowing owl	none/none	Open areas with little vegetation and existing burrows	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low..
Batrachoseps gabrieli	San Gabriel slender salamander	none/none	Rock piles/outcroppings near water	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Bombus crotchii	Crotch bumble bee	none/none	Grasslands and shrublands with abandoned small mammal burrows	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Calochortus plummerae	Plummer's mariposa lily	none/none	Chaparral, Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Valley and foothill grassland in granite/rocky soils	The shrub component on site is potentially suitable for this species. Potential to occur is moderate.

Scientific Name	Common Name	Federal/State Ranking	Habitat	Potential to Occur
Chaetodipus fallax	northwestern San Diego pocket mouse	none/none	chaparral, grasslands, scrub forests and deserts; rarely found in cities. Requires low growing vegetation or rocky outcroppings and sandy soil for burrows.	The shrub component on site is potentially suitable for this species. Potential to occur is moderate.
Chaetodipus fallax pallidus	pallid San Diego pocket mouse	none/none	Low-growing vegetation with rocky outcroppings and sandy soil	The shrub component on site is potentially suitable for this species. Potential to occur is moderate.
Chorizanthe parryi var. *parryi*	Parry's spineflower	none/none	Chaparral, cismontane woodland, coastal scrub, valley foothill grassland	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Chorizanthe xanti var. *leucotheca*	white-bracted spineflower	none/none	Coastal scrub (alluvial fans), Mojavean desert scrub, Pinyon and juniper woodland	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Dipodomys merriami parvus	San Bernardino kangaroo rat	Endangered/ none	Alluvial fan chaparral and sage scrub with sandy loam substrates.	The shrub component on site is potentially suitable for this species. Potential to occur is moderate.
Dodecahema leptoceras	slender-horned spineflower	Endangered/ Endangered	Chaparral, cismontane woodland, coastal scrub (alluvial fan)	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Empidonax traillii extimus	Southwestern Willow Flycatcher	Endangered/Endangered	Riparian woodland with multiple canopy layers	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Eriastrum densifolium ssp. *sanctorum*	Santa Ana River woollystar	Endangered/Endangered	Chaparral, Coastal scrub (alluvial fan)	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Gymnohyps californianus	California condor	Endangered/Endangered	Arid, remote areas in mountains with large, old growth trees for nesting	This species does not occur in San Bernardino County. The Project site is outside of the species range. Occurrence potential is none.
Horkelia cuneata var. *puberula*	mesa horkelia	none/none	Sandy or gravelly soils in chaparral, coastal scrub, or cismontane woodland	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.

Scientific Name	Common Name	Federal/State Ranking	Habitat	Potential to Occur
Lepus californicus bennettii	San Diego black-tailed jackrabbit	none/none	Variety of habitats with mixed grasses and shrub	Habitat on site is suitable. Species has potential to occur is high
lilium parryi	lemon lily	none/none	Lower montane coniferous forest, Meadows and seeps, Riparian forest, Upper montane coniferous forest	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Lycium parishii	Parish's desert-thorn	none/none	Creosote bush scrub	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Malacothamnus parishii	Parish's bush-mallow	none/none	Chaparral, coastal sage scrub	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Nyctinomops femorosaccus	pocketed free-tailed bat	none/none	Semi-arid habitats, roosting in mines, tunnels, caves, and rock crevices	Habitat on site includes a very dense layer of non-native grasses which, renders the habitat unsuitable for this species. Potential to occur is low.
Opuntia basilaris var. *brachyclada*	short-joint beavertail	none/none	Chaparral, Joshua tree woodland, Mojavean desert scrub, Pinyon and juniper woodland	Habitat on site is primarily invasive grasses. Potential to occur is low.
Perognathus longimembris brevinasus	Los Angeles pocket mouse	none/none	Coastal sage scrub, chaparral	The shrub component and soils on site are potentially suitable for this species. Potential to occur is moderate.
Phrynosoma blainvillii	coast horned lizard	none/none	Open areas of sandy soil and low vegetation in valleys, foothills, and semiarid mountains	Habitat on site is primarily invasive grasses. Potential to occur is low.
Polioptila californica	coastal California gnatcatcher	Threatened/none	Sage scrub	The shrub component and on site is potentially suitable for this species. Potential to occur is moderate.
Rana muscosa	southern mountain yellow-legged frog	Endangered/Endangered	Rocky, high altitude streams	No habitat on site for this species. Potential to occur is none.
Rhinichthys osculus ssp. *3*	Santa Ana speckled dace	none/none	Variety of aquatic habitats	No habitat on site for this species. Potential to occur is none.
	Riversidian Alluvial Fan Sage Scrub	none/none		Present
	Southern Riparian Forest	none/none		Absent

Scientific Name	Common Name	Federal/State Ranking	Habitat	Potential to Occur
	Southern Sycamore Alder Riparian Woodland	none/none		Absent
Streptanthus bernardinus	Laguna Mountains jewelflower	none/none	Coniferous forest and chaparral	Habitat on site is primarily invasive grasses. Potential to occur is low.
Vireo bellii pusillus	least Bell's vireo	Endangered/Endangered	Riparian scrub and riparian woodland	No habitat on site for this species. Potential to occur is none.

RE: Biological Screening Memo
Sierra/Casa Grande Replacement Sites
Fontana, CA

Dear Ms. Cano,

Jericho Systems, Inc. (Jericho) is pleased to provide this Screening Memo for the Sierra/Casa Grande Replacement Sites (Project) located in the City of Fontana, San Bernardino County, California. This memo provides the results of our literature review and general biological resources assessment (BRA) and Jurisdictional Waters Delineation (JD) of the Project sites.

This report is designed to address potential effects of the proposed Project to designated Critical Habitats and/or any species currently listed or formally proposed for listing as endangered or threatened under the federal Endangered Species Act (ESA) and the California Endangered Species Act (CESA), or species designated as sensitive by the California Department of Fish and Wildlife (CDFW), or the California Native Plant Society (CNPS). Attention was focused on sensitive biological resources known to occur locally (within a 3-mile radius of the Project area boundaries). This report also addresses resources protected under the Migratory Bird Treaty Act.

PROJECT LOCATION

Site 1 - NE of Palmetto Avenue and Valencia Avenue

This project site encompasses approximately 3.5 acres of various parcels within northeast corner of Palmetto Avenue and Valencia Avenue, just south of Arrow Boulevard (south of Foothill Boulevard). This group of four parcels includes Assessor's parcel numbers (APNs) 0192-221-32 (0.8 ac), 0192-221-44 (0.8 ac), 0192-221-06 (0.99 ac) and 0192-221-06 (0.99 ac). Most of the parcels are primarily developed as rural residential or rural industrial, except for 0192-221-32 which is fully developed as a church. The Project site is generally located south of State Route 210, east of Interstate 15 and south of Foothill boulevard in the City of Fontana, San Bernardino County California. It is bordered by Valencia Avenue to the south, Palmetto Avenue to the west and small businesses along Arrow Boulevard to the north and east. The Project site is depicted on the U.S. Geological Survey (USGS) *Fontana* 7.5-minute topographic map series, within the southeast one-quarter of Section 08, Township 1 South, Range 5 West, San Bernardino Base and Meridian, in the County of San Bernardino, State of California Figures 1a-3a)

Site 2 - NW of Malaga Street and Mango Avenue

This site encompasses Approximately 5.6 acres of various parcels along the north side of Malaga Avenue, immediately west of Mango Avenue, approximately 0.3 mile north of Foothill Boulevard. This group of 14 parcels includes Assessor's parcel numbers (APNs): 0190-181-09 through 0190-181-14 (six parcels); 0190-181-23 through 0190-181-29 (seven parcels); and 0190-181-16. These sites are mainly developed as rural residential. The site is bordered by single family homes to the north on Fairfax Street, Mango Avenue to the east, Malaga Street to the south and an undeveloped parcel to the west. The Project site is depicted on the U.S. Geological Survey (USGS) *Fontana* 7.5-minute topographic map series within the southwest one-quarter of Section 05, Township 1 South, Range 5 West, San Bernardino Base and Meridian, in the County of San Bernardino, State of California (Figures 1b-3b).

PROJECT DESCRIPTION

The City is processing an application for the development of the above-referenced sites as regional mixed use and warehouse/distribution. The final project will occur on one of two areas. The areas have been identified as groups of parcels, known as Site 1 and Site 2. All of the parcels within each of the site groups and their surroundings are mostly developed with rural residential and/or light industrial uses (such as wrecking yards).

SPECIAL STATUS SPECIES AND HABITAT

As stated above, the objective of this document is to determine whether Site 1 and/or Site 2 support special status or otherwise sensitive species and/ or their habitat, and to address the potential effects associated with the Proposed project on those resources. The species and habitats addressed in this document are based on database information and field investigation.

LITERATURE REVIEW

Prior to conducting the field survey, a literature review and records search was conducted for special-status biological resources potentially occurring on or within the vicinity both sites. Previously recorded occurrences of special-status plant and wildlife species and their proximity to the project site were determined through a query of the following for the *Fontana* USGS quadrangle:

- U.S. Fish and Wildlife (USFWS) threatened and endangered species occurrence GIS overlay;
- USFWS Information for Planning and Consultation System (IPaC);
- California Natural Diversity Database (CNDDB) *Rarefind 5*);
- CNDDB Biogeographic Information and Observation System (BIOS);
- California Native Plant Society Electronic Inventory (CNPSEI) database;
- Calflora Database;
- USDA Natural Resources Conservation Service (NRCS) Web Soil Survey;
- USFWS National Wetland Inventory;
- Environmental Protection Agency (EPA) Water Program "My Waters" data layers

The literature review provided a baseline from which to inventory the biological resources potentially occurring within the project site. Additional recorded occurrences of those species found on or near the project site were derived from database queries. The CNDDB database

was used, in conjunction with ArcGIS software, to locate the occurrence records and determine the distance from the project site (Figure 4a and 4b).

DATABASE RESULTS

According to the database queries, 32 sensitive species been documented to occur in the *Fontana* USGS 7.5-minute series quadrangle. Of the 32 sensitive species identified, 12 are State and/or federally listed as threatened, endangered, candidate endangered. Table 1 located in the back of the document represents a compiled list of results from IPaC, CNDDB and CNPS databases of listed species which have been documented within this quad and provides a potential to occur assessment based on the field investigation of the Project area and surveyor's knowledge of the species and local ecology (See attached database results)

CRITICAL HABITAT

The Project area is not located within or directly adjacent to any designated Critical Habitat.

FIELD INVESTIGATION

On February 21, 2020, Jericho Principle Ecologist, Shay Lawrey conducted a field survey of booth sites with focus on potential habitat for listed species, sensitive species and migratory birds. Ms. Lawrey is a qualified biologist with advanced degrees in Biology and 25 years of experience surveying for the sensitive species known to in California. Ms. Lawrey surveyed the Project site on a calm weather, overcast day, during peak animal activity, between 9:30 a.m. and 11:30 am.

General wildlife species were detected during field surveys by sight, calls, tracks, scat, or other signs. In addition to species observed, expected wildlife usage of the site was determined according to known habitat preferences of regional wildlife species and knowledge of their relative distributions in the area. Mr. Lawrey assessed each site for habitat type structure, species composition/association, condition and human disturbances. The main focus of the survey was to identify sensitive species and habitat including jurisdictional waters and to evaluate the potential for sensitive species to occur within the either site and the surrounding vicinity.

EXISTING CONDITION – AFFECTED ENVIRONMENT

Prior development activities on both sites have altered the environment such that native plants have been completely removed. The climate here is arid.

Site 1 - NE of Palmetto Avenue and Valencia Avenue

Site 1 is an existing rural residential community that consists of ornamental vegetation (shrubs, trees and potted plants), and a few open areas consisting of non-native grasses and ruderal vegetation. This site is an active residential community with many dogs and cats. There is no natural, native habitat on this site or in the surrounding area. There are no areas that could potentially support listed-species, or any sensitive species known to occur locally. No sensitive species or listed species were observed during survey and none are expected to occur. No aquatic resources occur on site and as a result there are no fisheries issues to address. No drainages or indications of wetlands, hydric soils, naturally occurring indicator plant species were observed during the field survey nor are any expected to occur.

Site 2 - NW of Malaga Street and Mango Avenue

Site 2 is also an existing rural residential community that consists of ornamental vegetation (shrubs, trees and potted plants), and a few open areas consisting of non-native grasses and ruderal vegetation. This site is an active residential community with many dogs and cats. There is no natural, native habitat on this site or in the surrounding area. There are no areas that could potentially support listed-species, or any sensitive species known to occur locally. No sensitive species or listed species were observed during survey and none are expected to occur. No aquatic resources occur on site and as a result there are no fisheries issues to address. No drainages or indications of wetlands, hydric soils, naturally occurring indicator plant species were observed during the field survey nor are any expected to occur.

EFFECTS ANALYSIS

Federal Endangered Species Act (ESA)

The USFWS administers the federal ESA of 1973. The ESA provides a legal mechanism for listing species as either threatened or endangered, and a process of protection for those species listed. Section 9 of the ESA prohibits "take" of threatened or endangered species. The term "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in such conduct. "Take" can include adverse modification of habitats used by a threatened or endangered species during any portion of its life history. Under the regulations of the ESA, the USFWS may authorize "take" when it is incidental to, but not the purpose of, an otherwise lawful act. Take authorization can be obtained under Section 7 or Section 10 of the act.

No suitable habitat for any federally listed species exists within or adjacent to the Project area. No adverse Project-related direct or indirect impacts will not result to federally protected species.

California Endangered Species Act (CESA)

The CDFW administers the State CESA. The State of California considers an endangered species one whose prospects of survival and reproduction are in immediate jeopardy. A threatened species is one present in such small numbers throughout its range that it is likely to become an endangered species soon, in the absence of special protection or management. And a rare species is one present in such small numbers throughout its range that it may become endangered if its present environment worsens. Rare species applies to California native plants. Further, all raptors and their nests are protected under Section 3503.5 of the California Fish and Game Code (FGC). Species of Special Concern (SSC) is an informal designation used by CDFW for some declining wildlife species that are not proposed for listing as threatened or endangered. This designation does not provide legal protection but signifies that these species are recognized as sensitive by CDFW.

No suitable habitat for State-listed species exists within or adjacent to the Project area. No adverse Project-related direct or indirect impacts will not result to State protected species.

Migratory Bird Treaty Act (MBTA)

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C 703-711) provides protection for nesting birds that are both residents and migrants whether or not they are considered sensitive by resource agencies. The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed under 50 CFR 10, including feathers or other parts, nests, eggs, or products, except as allowed by

implementing regulations (50 CFR 21). The direct injury or death of a migratory bird, due to construction activities or other construction-related disturbance that causes nest abandonment, nestling abandonment, or forced fledging would be considered take under federal law. The USFWS, in coordination with the CDFW administers the MBTA. CDFW's authoritative nexus to MBTA is provided in FGC Sections 3503.5 which protects all birds of prey and their nests and FGC Section 3800 which protects all non-game birds that occur naturally in the State.

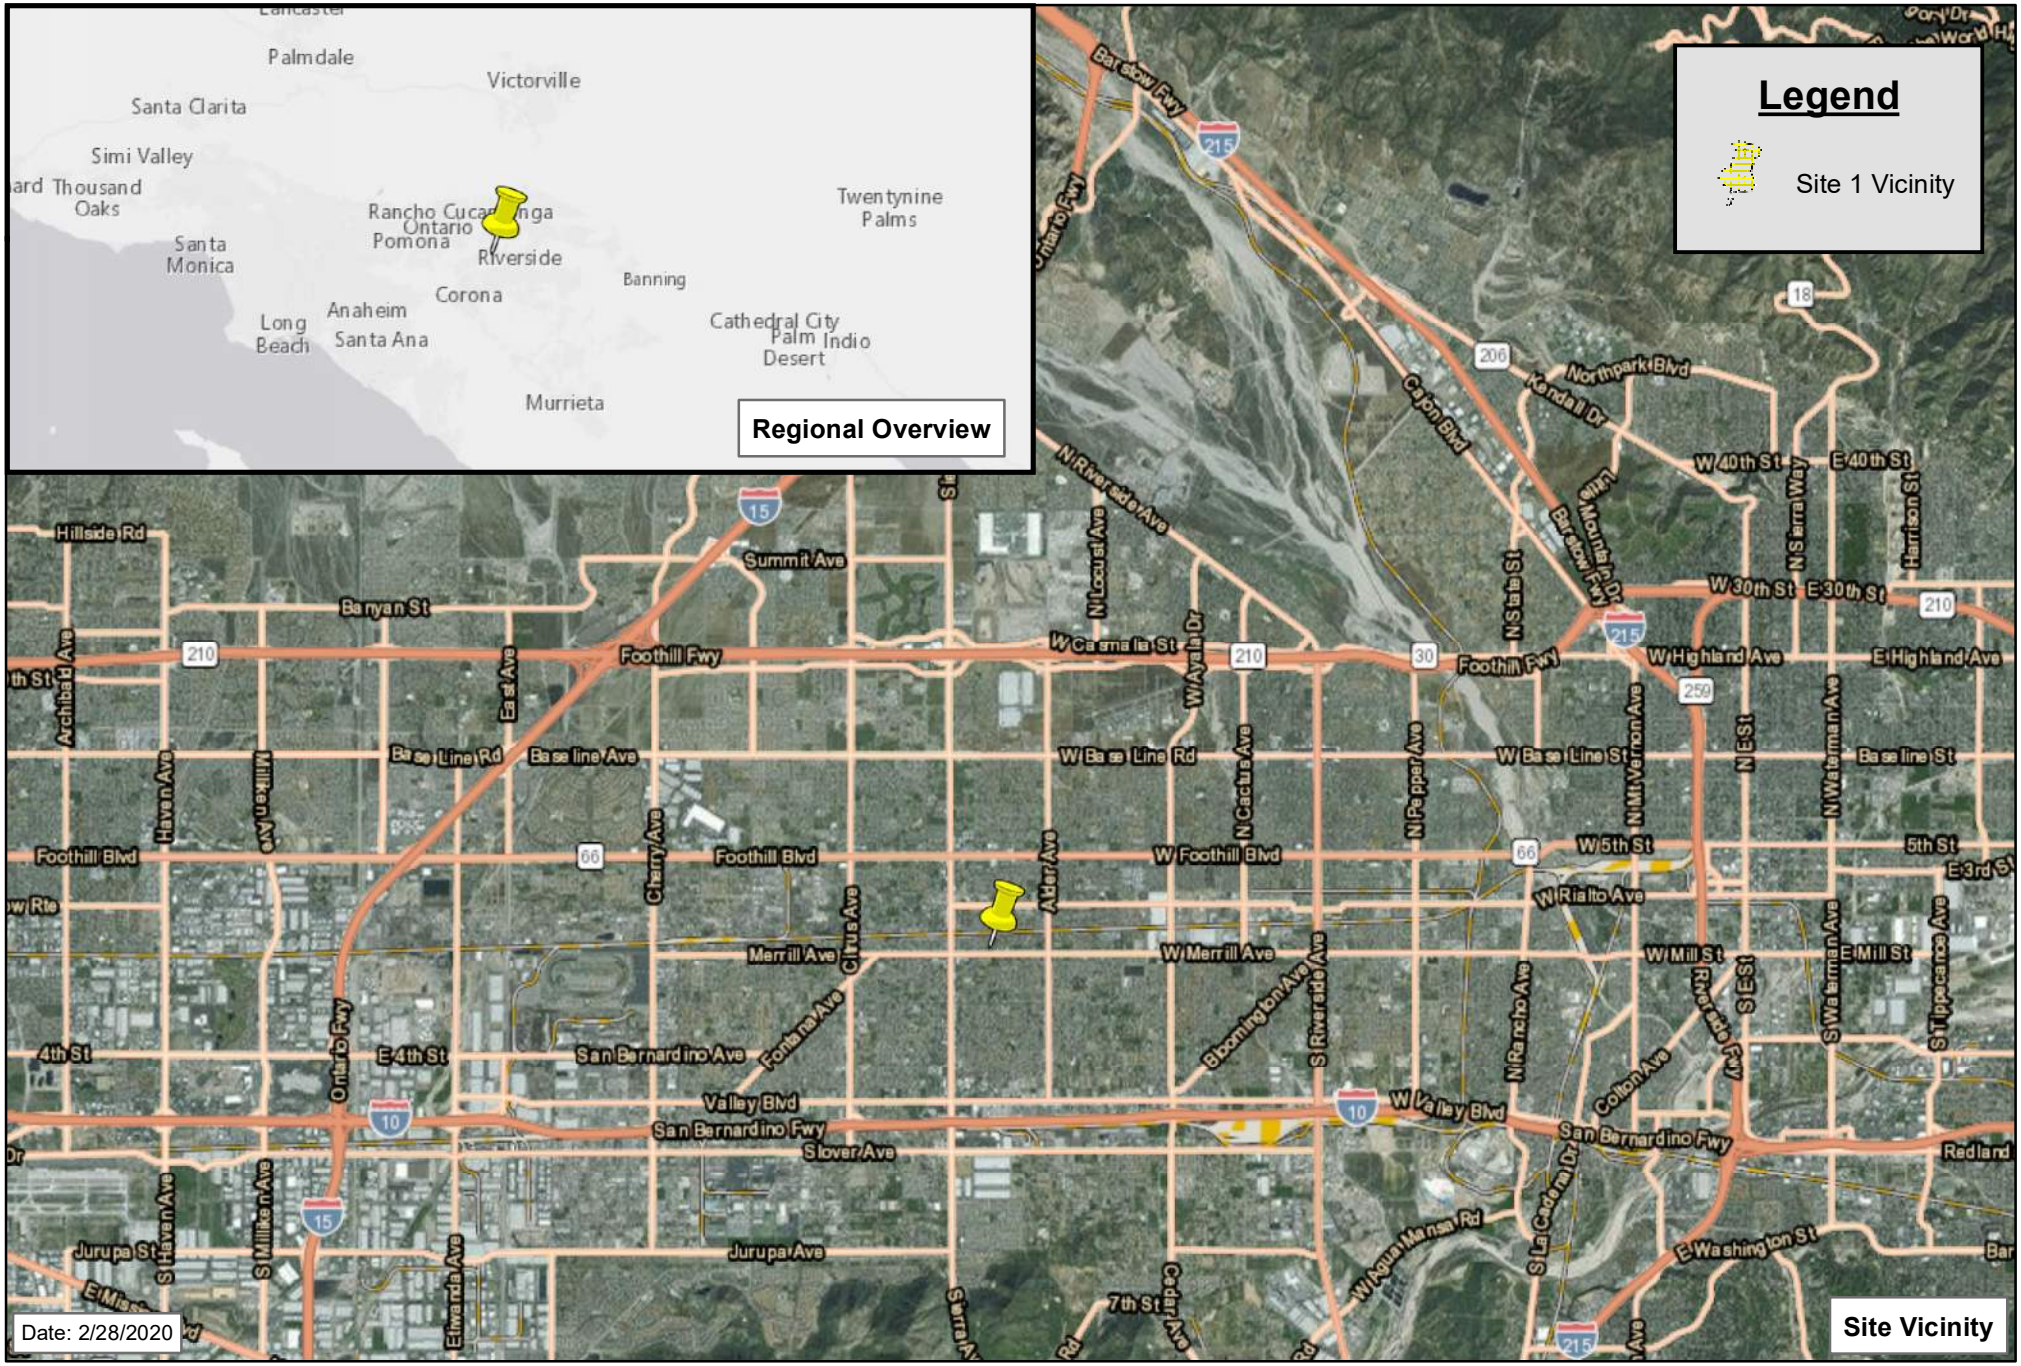
Both sites contain ornamental vegetation that provides suitable nesting opportunities for birds in general. As discussed, most birds are protected by the MBTA. Impacts to all bird species (common and special status) can be avoided by conducting work outside of the nesting season, which is generally January/February to August/September. However, if all work cannot be conducted outside of nesting season, preconstruction Nesting Bird Surveys are recommended prior to the commencement of any Project activities that may will result in vegetation disturbances within the nesting season (February to September).

CONCLUSION

The proposed Project will not adversely affect Critical Habitat as none exists within the either site. Further, the Project will not impact federal or state listed species either directly or indirectly. No habitat capable of supporting listed or sensitive species exist on either site. There will be no affect to listed species or to species considered sensitive.

Thank you for asking us to assist you with this project. If you have any questions or need any clarifications, contact me at (909) 915-5900 or at shay@jericho-systems.com.

Sincerely,



Shay Lawrey, President
Ecologist/Regulatory Specialist

Figure 5 - Site 2 Critical Habitat

Casa Grande Replacement Sites

Table 1:
Occurrence Potential Of Federally and/or State Listed Species or Otherwise Sensitive Species

Scientific Name	Common Name	Federal Status State Status	Habitat	Potential To Occur
Arenaria paludicola	marsh sandwort	Endangered Endangered	Marshes and swamps. Growing up through dense mats of Typha, Juncus, Scirpus, etc. in freshwater marsh. Sandy soil. 3-170 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Berberis nevinii	Nevin's barberry	Endangered Endangered	Chaparral, Cismontane woodland, Coastal scrub, Riparian scrub sandy or gravelly soils. 70-825 m	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Calochortus plummerae	Plummer's mariposa-lily	None None	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest. Occurs on rocky and sandy sites, usually of granitic or alluvial material. Can be very common after fire. 60-2500 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Chloropyron maritimum ssp. maritimum	salt marsh bird's-beak	Endangered Endangered	Marshes and swamps, coastal dunes. Limited to the higher zones of salt marsh habitat. 0-10 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Chorizanthe parryi var. parryi	Parry's spineflower	None None	Coastal scrub, chaparral, cismontane woodland, valley and foothill grassland. Dry slopes and flats; sometimes at interface of 2 vegetation types, such as chaparral and oak woodland. Dry, sandy soils. 90-1220 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Deinandra paniculata	paniculate tarplant	None None	Coastal scrub, Valley and foothill grassland, Vernal pools usually vernally mesic, sometimes sandy. 25-940 m	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Eriastrum densifolium ssp. sanctorum	Santa Ana River woollystar	Endangered Endangered	Coastal scrub, chaparral. In sandy soils on river floodplains or terraced fluvial deposits. 180-705 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Horkelia cuneata var. puberula	mesa horkelia	None None	Chaparral, cismontane woodland, coastal scrub. Sandy or gravelly sites. 15-1645 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	None None	Chaparral, coastal scrub. Dry soils, shrubland. 4-1435 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal

Scientific Name	Common Name	Federal Status State Status	Habitat	Potential To Occur
				vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Lycium parishii	Parish's desert-thorn	None None	Coastal scrub, Sonoran desert scrub. -3-570 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Malacothamnus parishii	Parish's bush-mallow	None None	Chaparral, coastal sage scrub. In a wash. 305-455 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Monardella pringlei	Pringle's monardella	None None	Coastal scrub. Sandy hills. 300-400 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Senecio aphanactis	chaparral ragwort	None None	Chaparral, cismontane woodland, coastal scrub. Drying alkaline flats. 20-1020 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Sphenopholis obtusata	prairie wedge grass	None None	Cismontane woodland, meadows and seeps. Open moist sites, along rivers and springs, alkaline desert seeps. 15-2625 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Symphyotrichum defoliatum	San Bernardino aster	None None	Valley & foothill grassland Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland. Vernally mesic grassland or near ditches, streams and springs; disturbed areas. 3-2045 m.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Agelaius tricolor	tricolored blackbird	None Threatened	Highly colonial species, most numerous in Central Valley & vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Athene cunicularia	burrowing owl	None None	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.

Scientific Name	Common Name	Federal Status State Status	Habitat	Potential To Occur
			Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	
Polioptila californica californica	coastal California gnatcatcher	Threatened None	Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California. Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Vireo bellii pusillus	least Bell's vireo	Endangered Endangered	Riparian forest | Riparian scrub | Riparian woodland Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None None	Coastal scrub, chaparral, grasslands, sagebrush, etc. in western San Diego County. Sandy, herbaceous areas, usually in association with rocks or coarse gravel.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Dipodomys merriami parvus	San Bernardino kangaroo rat	Endangered Candidate Endangered	Coastal scrub Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains. Needs early to intermediate seral stages.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Lasiurus xanthinus	western yellow bat	None None	Deert wash Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees, particularly palms. Forages over water and among trees.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None None	Coastal scrub Intermediate canopy stages of shrub habitats & open shrub / herbaceous & tree / herbaceous edges. Coastal sage scrub habitats in Southern California.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Nyctinomops femorosaccus	pocketed free-tailed bat	None None	Joshua tree woodland | Pinon & juniper woodlands | Riparian scrub | Sonoran desert scrub	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.

Scientific Name	Common Name	Federal Status State Status	Habitat	Potential To Occur
			Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc. Rocky areas with high cliffs.	
Anniella stebbinsi	southern California legless lizard	None None	Broadleaved upland forest | Chaparral | Coastal dunes | Coastal scrub Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County. Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Arizona elegans occidentalis	California glossy snake	None None	Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California. Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Phrynosoma blainvillii	coast horned lizard	None None	Chaparral | Cismontane woodland | Coastal bluff scrub | Coastal scrub | Desert wash | Pinon & juniper woodlands | Riparian scrub | Riparian woodland | Valley & foothill grassland Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Catostomus santaanae	Santa Ana sucker	Threatened None	Aquatic | South coast flowing waters Endemic to Los Angeles Basin south coastal streams. Habitat generalists, but prefer sand-rubble-boulder bottoms, cool, clear water, and algae.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Gila orcuttii	arroyo chub	None None	Aquatic | South coast flowing waters Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave & San Diego river basins.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.

Scientific Name	Common Name	Federal Status State Status	Habitat	Potential To Occur
			Slow water stream sections with mud or sand bottoms. Feeds heavily on aquatic vegetation and associated invertebrates.	
Oncorhynchus mykiss irideus pop. 10	steelhead - southern California DPS	Endangered None	Aquatic | South coast flowing waters Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County). Southern steelhead likely have greater physiological tolerances to warmer water and more variable conditions.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Bombus crotchii	Crotch bumble bee	None Candidate Endangered	Coastal California east to the Sierra-Cascade crest and south into Mexico. Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Cicindela tranquebarica viridissima	greenest tiger beetle	None None	Riparian woodland Inhabits the woodlands adjacent to the Santa Ana River basin. Usually found in open spots between trees.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	Endangered None	Interior dunes Found only in areas of the Delhi Sands formation in southwestern San Bernardino & northwestern Riverside counties. Requires fine, sandy soils, often with wholly or partly consolidated dunes & sparse vegetation. Oviposition req. shade.	Conditions on site consist of ornamental vegetation, non-native grasses or ruderal vegetation. The habitat for this species is not present on site. Occurrence potential is **low**.
Riversidian Alluvial Fan Sage Scrub		None		The habitat is not present on site.

Coding and Terms

E = Endangered T = Threatened C = Candidate FP = Fully Protected SSC = Species of Special Concern R = Rare

State Species of Special Concern: An administrative designation given to vertebrate species that appear to be vulnerable to extinction because of declining populations, limited acreages, and/or continuing threats. Raptor and owls are protected under section 3502.5 of the California Fish and Game code: "It is unlawful to take, possess or destroy any birds in the orders Falconiformes or Strigiformes or to take, possess or destroy the nest or eggs of any such bird."

Global Rankings (Species or Natural Community Level):

G1 = Critically Imperiled – At very high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.
G2 = Imperiled – At high risk of extinction due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors.
G3 = Vulnerable – At moderate risk of extinction due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors.
G4 = Apparently Secure – Uncommon but not rare; some cause for long-term concern due to declines or other factors.
G5 = Secure – Common; widespread and abundant.

Subspecies Level: Taxa which are subspecies or varieties receive a taxon rank (T-rank**)** attached to their G-rank. Where the G-rank reflects the condition of the entire species, the T-rank reflects the global situation of just the subspecies. For example: the Point Reyes mountain beaver, *Aplodontia rufa* ssp. *phaea* is ranked G5T2. The G-rank refers to the whole species range i.e., *Aplodontia rufa.* The T-rank refers only to the global condition of ssp. *phaea*.

State Ranking:

S1 = Critically Imperiled – Critically imperiled in the State because of extreme rarity (often 5 or fewer populations) or because of factor(s) such as very steep declines making it especially vulnerable to extirpation from the State.
S2 = Imperiled – Imperiled in the State because of rarity due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors making it very vulnerable to extirpation from the State.
S3 = Vulnerable – Vulnerable in the State due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors making it vulnerable to extirpation from the State.
S4 = Apparently Secure – Uncommon but not rare in the State; some cause for long-term concern due to declines or other factors.
S5 = Secure – Common, widespread, and abundant in the State.

California Rare Plant Rankings (CNPS List):

1A = Plants presumed extirpated in California and either rare or extinct elsewhere.
1B = Plants rare, threatened, or endangered in California and elsewhere.
2A = Plants presumed extirpated in California, but common elsewhere.
2B = Plants rare, threatened, or endangered in California, but more common elsewhere.
3 = Plants about which more information is needed; a review list.
4 = Plants of limited distribution; a watch list.

Threat Ranks:

.1 = Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat)
.2 = Moderately threatened in California (20-80% occurrences threatened / moderate degree and immediacy of threat)
.3 = Not very threatened in California (less than 20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, and proposed species, designated critical habitat, and candidate species that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

MANAGEMENT SUMMARY

BCR Consulting LLC (BCR Consulting) is under contract to Kimley Horn to conduct a Cultural Resources Assessment of the proposed Sierra and Casa Grande General Plan and Zone Change Project (the project) located in the City of Fontana (City), San Bernardino County, California. Tasks completed for the scope of work include a cultural resources records search, reconnaissance-level pedestrian cultural resources survey, Sacred Lands File search with the Native American Heritage Commission, and a paleontological resources overview. These tasks were performed pursuant to the California Environmental Quality Act (CEQA).

Data from the SCCIC revealed that 34 cultural resource studies have taken place resulting in the recording of 15 cultural resources (all historic-period) within a one-mile radius of the project site. None of the previous studies have assessed the project site for cultural resources. Several historic-period roads are located near the project site, although none have been identified within its boundaries. The inferred boundaries of the Grapeland Homestead and Waterworks (designated P-36-015376/California Point of Historical Interest [CPHI]-SBR-116) encompass a large portion of Fontana that includes the project site, however no cultural resources in the project site boundaries can be associated with P-36-015376. During the field survey, BCR Consulting archaeologists identified the remnants of a post-World War II residential complex, consisting of several concrete foundations and footings. It is temporarily designated KIM1908-H-1 and has been documented on Department of Park and Recreation (DPR) 523 forms. It is not recommended eligible for listing in the California Register of Historical Resources, and as such is not recommended a "historical resource" under CEQA. BCR Consulting recommends that no additional cultural resources work or monitoring is necessary during proposed project activities. However, if previously undocumented cultural resources are identified during earthmoving activities, a qualified archaeologist should be contacted to assess the nature and significance of the find, diverting construction excavation if necessary.

If human remains are encountered during the undertaking, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

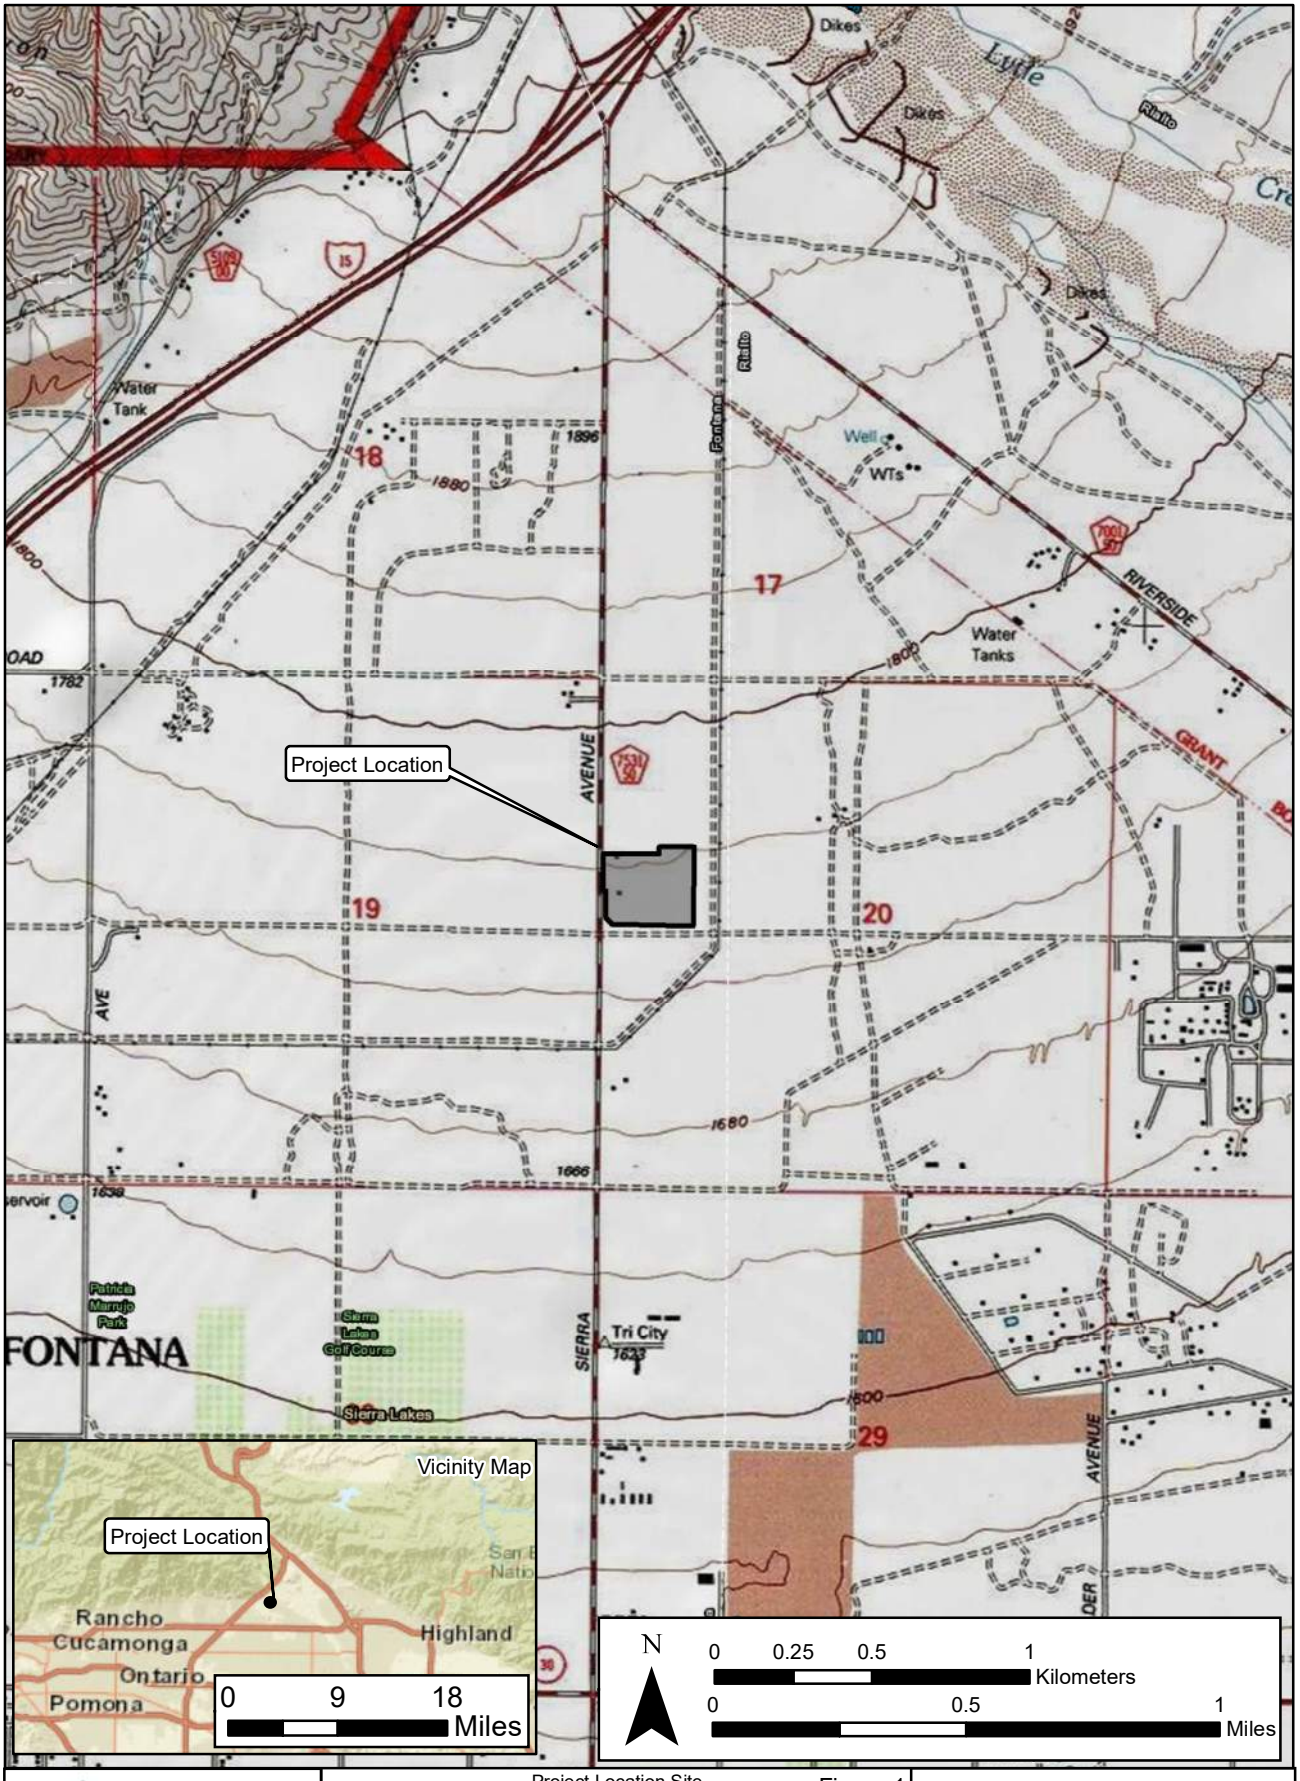
INTRODUCTION

BCR Consulting LLC (BCR Consulting) is under contract to Kimley Horn to conduct a Cultural Resources Assessment of the proposed Sierra and Casa Grande General Plan and Zone Change Project (the project) located in the City of Fontana (City), San Bernardino County, California. The project site is located in Section 20 of Township 1 North, Range 5 West, San Bernardino Baseline and Meridian, in the City of Fontana. It is depicted on the United States Geological Survey (USGS) *Devore, California* (1988) 7.5-minute topographic quadrangle (Figure 1).

NATURAL SETTING



The elevation of the project site is approximately 1750 feet above mean sea level (AMSL). The property has been subject to disturbances related to surface erosion, weed abatement, and excavation for building construction and adjacent roads. The project site is covered with alluvial-fan deposits (Qyf 5) derived from the San Gabriel Mountains (Morton and Matti 2001). The current study has not yielded any evidence that such sediments have locally produced raw materials used in prehistoric tool manufacture. Local rainfall ranges from 5 to 15 inches annually (Jaeger and Smith 1971:36-37). The project site is flat, although the general slope conveys local water from northwest to southeast (USGS 1980).

Although recent and historic-period impacts have decimated local vegetation, remnants of a formerly dominant coastal sage scrub vegetation community have been sporadically observed in the area. Signature plant species include black sage (*Salvia mellifera*), California brittlebush (*Encelia californica*), California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemesia californica*), deerweed (*Lotus scoparius*), golden yarrow (*Eriophyllum confertiflorum*), laurel sumac (*Malosma laurina*), lemonadeberry (*Rhus integrifolia*), poison oak (*Toxicodendron diverilobum*), purple sage (*Salvia leucophyla*), sticky monkeyflower (*Mimulus aurantiacus*), sugar bush (*Rhus ovate*), toyon (*Heteromeles arbutifolia*), white sage (*Salvia apiana*), coastal century plant (*Agave shawii*), coastal cholla (*Opuntia prolifera*), Laguna Beach liveforever (*Dudleya stolonifera*), many-stemmed liveforever (*Dudleya multicaulis*), our Lord's candle (*Yucca whipplei*), prickly pear cactus (*Opuntia sp.*) (Williams et al. 2008:118-119). Signature animal species within Coastal Sage Scrub habitat include the kangaroo rat (*Dipodomys sp.*), California horned lizard (*Phrynosoma coronatum frontale*), orange throated whiptail (*Cnemidophorus hyperthrus*), San Diego horned lizard (*Phrynosoma coronatum blainvillii*), brown-headed cowbird (*Molothrus ater*), California gnatcatcher (*Polioptila californica californica*), California quail (*Callipepla californica*), and San Diego cactus wren (*Campylorhynchus brunnecapillus sandiegensis*) (Williams et al. 2008:118-120). Local native groups made use of many of these species (see Lightfoot and Parrish 2009).

CULTURAL SETTING

Prehistoric Context

The local prehistoric cultural setting has been organized into many chronological frameworks (see Warren and Crabtree 1986; Bettinger and Taylor 1974; Lanning 1963; Hunt 1960; Wallace 1958, 1962, 1978; Campbell and Campbell 1935), although there is no definitive sequence for the region. The difficulties in establishing cultural chronologies for western San Bernardino County are a function of its enormous size and the small amount of archaeological excavations conducted there. Moreover, throughout prehistory many groups have occupied the area and their territories often overlap spatially and chronologically

Figure 1

Kimley-Horn

resulting in mixed artifact deposits. Due to dry climate and capricious geological processes, these artifacts rarely become integrated in-situ. Lacking a milieu hospitable to the preservation of cultural midden, local chronologies have relied upon temporally diagnostic artifacts, such as projectile points, or upon the presence/absence of other temporal indicators, such as groundstone. Such methods are instructive, but can be limited by prehistoric occupants' concurrent use of different artifact styles, or by artifact re-use or re-sharpening, as well as researchers' mistaken diagnosis, and other factors (see Flenniken 1985; Flenniken and Raymond 1986; Flenniken and Wilke 1989). Recognizing the shortcomings of comparative temporal indicators, this study recommends review of Warren and Crabree (1986), who have drawn upon this method to produce a commonly cited and relatively comprehensive chronology.

Ethnography

Although no prehistoric sites have been locally recorded, in general the project site is situated at an ethnographic nexus peripherally occupied by the Gabrielino and Serrano. Each group consisted of semi-nomadic hunter-gatherers who spoke a variation of the Takic language subfamily. Individual ethnographic summaries are provided below.

Gabrielino. The Gabrielino probably first encountered Europeans when Spanish explorers reached California's southern coast during the 15th and 16th centuries (Bean and Smith 1978; Kroeber 1925). The first documented encounter, however, occurred in 1769 when Gaspar de Portola's expedition crossed Gabrielino territory (Bean and Smith 1978). Other brief encounters took place over the years, and are documented in McCawley 1996 (citing numerous sources). The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel, and refers to a subset of people sharing speech and customs with other Cupan speakers (such as the Juaneño/Luiseño/Ajachemem) from the greater Takic branch of the Uto-Aztecan language family (Bean and Smith 1978). Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations (Bean and Smith 1978:540-546). Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals (Boscana 1933, Heizer 1968, Johnston 1962, McCawley 1996). Dog, coyote, bear, tree squirrel, pigeon, dove, mud hen, eagle, buzzard, raven, lizards, frogs, and turtles were specifically not utilized as a food source (Kroeber 1925:652).

Serrano. The Uto-Aztecan "Serrano" people occupied the western Mojave Desert periphery. Kroeber (1925) applied the generic term "Serrano" to four groups, each with distinct territories: the Kitanemuk, Tataviam, Vanyume, and Serrano. Only one group, in the San Bernardino Mountains and West-Central Mojave Desert, ethnically claims the term Serrano. "The Serrano resided in an area that extended east of the Cajon Pass, located in the San Bernardino Mountains, to Twenty-nine Palms, the north foothills of the San Bernardino Mountains and south to include portions of the Yucaipa Valley" (Bean and Smith 1978:570). Both the Serrano and Cahuilla utilized the western Mojave region seasonally.

Evidence for longer term/permanent Serrano settlement in the western Mojave most notably includes the Serrano-named village of Guapiabit in Summit Valley (de Barros 2004). Access to water determined where the Serrano built their settlements/villages (Bean and Smith 1978). Most of the villages were located within the Sonoran life zone (Scrub Oak [*Quercus* sp.] and sagebrush [*Salvia* sp.]), or forest transition zone, (Ponderosa pine [*Pinus ponderosa*]) (Bean and Smith 1978; Kroeber 1925).

Like many neighboring tribes, the Serrano and Cahuilla were Takic (Uto-Aztecan language family) speakers (Lightfoot and Parrish 2009:341). Serrano traded with their neighbors and actively participated in a shell bead exchange economy with the Cahuilla, Luiseno, and Gabrielino (McCawley 1996). Occasionally, villages were located in the desert, adjacent to permanent water sources. Structures for families were usually circular domes, constructed of willow frames and tule thatching. Individual family homes were used primarily for sleeping and storage. Families conducted many of their daily routines outside of their house or under a ramada. A ramada consisted of a thatched roof supported by vertical poles in the ground, which provided a shaded work area (Lightfoot and Parrish 2009:344). Other village structures included a ceremonial house, granaries and sweathouses. Subsistence strategies focused on hunting and gathering, occasionally supplemented by fishing. Food preparation varied and included a variety of cooking techniques. These ranged from baking in earth ovens to parching. Food processing utilities included scrapers, bowls, baskets, mortars, and metates (Bean and Smith 1978). A lineage leader, or kika, administered laws and ceremonies from a large ceremonial house centrally located in most villages. The size of lineages is a matter of some dispute, but most probably numbered between 70 and 120 individuals (Lightfoot and Parrish 2009). Serrano people were organized into clans affiliated with one of two exogamous moieties. Clans were led by a hereditary chief who occupied the village “big house” where ceremonies took place and shamans were initiated (Bean and Smith 1978:572; Strong 1929).

History

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The first European to pass through the area is thought to be a Spaniard called Father Francisco Garces. Having become familiar with the area, Garces acted as a guide to Juan Bautista de Anza, who had been commissioned to lead a group across the desert from a Spanish outpost in Arizona to set up quarters at the Mission San Gabriel in 1771 near what today is Pasadena (Beck and Haase 1974). Garces was followed by Alta California Governor Pedro Fages, who briefly explored the region in 1772. Searching for San Diego Presidio deserters, Fages had traveled through Riverside to San Bernardino, crossed over the mountains into the Mojave Desert, and then journeyed westward to the San Joaquin Valley (Beck and Haase 1974).

Mexican Period. In 1821, Mexico overthrew Spanish rule and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions, reorganized as parish churches, lost their vast land holdings, and released their neophytes (Beattie and Beattie 1974).

American Period. The American Period, 1848–Present, began with the Treaty of Guadalupe Hidalgo. In 1850, California was accepted into the Union of the United States primarily due to the population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that have continued to proliferate to this day (Beattie and Beattie 1974; Cleland 1941).

Local Sequence (see McKenna and Brunzell 2001:4-7). During the early 19th century, Anglo trader Michael White traveled across southern California with explorer Jedediah Smith. Having befriended the Lugo family of Rancho San Bernardino, White settled in California by 1840. As an accepted member of the local Mexican community he became known as Miguel Blanco and was granted Rancho de Muscupiabe (northeast of the project site) by California Governor Manuel Micheltoreno in 1843 (Avina 1932:74). After California became a state, Anglo settlement continued to increase. By the late 1850s Mormon pioneers from Salt Lake City had purchased Rancho San Bernardino and began to settle at Rancho de Muscupiabe (Beck and Haase 1974:38). By the 1860s large tracts owned by the U.S. Government became available for homesteading.

Due to various population pressures, the Mormon pioneers began to recede to Salt Lake City in the 1870s. In the wake of the Mormon exodos, Greenberry Ferdinand Rubidoux Benton (GFRB) Perdew and his family settled near the present-day intersection of Summit Avenue and Citrus. Perdew's developments included a local school and post office, which attracted other members of the Perdew family, as well as the Scofield family, the Myers family, and the Ousterhout family. These people formed the settlement of Grapeland, which was named for grape and raisin vines planted locally between the 1860s and 1890s. Grapeland owed its early viability to these enterprising individuals, and to the entry of the Southern Pacific and the Santa Fe Railroads, locally established in 1875 and 1887 respectively.

In spite of burgeoning agricultural developments, water was difficult to come by and D.G. Scofield began to develop a local reservoir and canal system. Water rights were eventually acquired for Lytle Creek and the Grapeland Irrigation District was formed in an attempt to eliminate the need for marginally productive dry farming. While the district did construct reservoirs, canals, and ditches during the 1890s, shortages could not be overcome to the satisfaction of potential recipients, and by 1901 the Grapeland Irrigation District lost its rights to Lytle Creek. Those rights were eventually sold to the Fontana Development Company, signifying the end of Grapeland as an independent entity (McKenna and Brunzell 2001:5-6).

Significant development of the area did not resume until the Fontana Development Company surveyed and laid out a small community along the Santa Fe railroad. American rancher and entrepreneur Azariel Blanchard (A.B.) Miller purchased 17,000 acres locally and was largely responsible for transforming the area into a profitable center for citrus,

poultry, and livestock. A.B. Miller is credited with founding the community of Fontana in 1913 (Fontana Unified School District 2008). Like much of southern California, the success of railroads and agriculture during the early 20th century set the stage for expansion of agricultural and real estate development in the teens and twenties. After the slowdown of the depression years, demands related to World War II punctuated an economic revival. Expansion was particularly spurred on by the entry of Kaiser Steel into the area. Kaiser's local steel mill was constructed to supply wartime shipyards (Center for Land Use Interpretation 2013), which helped form the municipal and residential developments that persist in Fontana to this day.

PERSONNEL

David Brunzell, M.A., RPA acted as the Project Manager and Principal Investigator for the current study and compiled the technical report with contributions from BCR Consulting Staff Archaeologist Nicholas Shepetuk. Mr. Shepetuk completed the cultural resources records search at the South Central Coastal Information Center (SCCIC) and completed the pedestrian field survey.

RESEARCH DESIGN

This work was completed pursuant to CEQA, the Public Resources Code (PRC) Chapter 2.6, Section 21083.2, and California Code of Regulations (CCR) Title 14, Chapter 3, Article 5, Section 15064.5. The pedestrian cultural resources survey was intended to locate and document previously recorded and new cultural resources, including archaeological sites, features, isolates, and historic buildings, that exceed 45 years in age within defined project boundaries. The project site was examined using systematic pedestrian field survey methods. The study is intended to determine whether cultural resources are located within the project boundaries, whether any cultural resources are significant pursuant to the above-referenced regulations and standards, and to develop specific mitigation measures that will address potential impacts to existing or potential resources. Tasks pursued to achieve that end include:

- Cultural resources records search to review any studies conducted and the resulting cultural resources recorded within a one-mile radius of the project boundaries
- Additional research through various local and regional resources
- Systematic pedestrian survey of the project site
- Evaluation of California Register of Historical Resources (California Register) eligibility for any cultural resources discovered
- Development of recommendations for cultural resources documented within the project boundaries, following CEQA guidelines
- Completion of Department of Park and Recreation (DPR) 523 forms for any discovered cultural resources
- Vertebrate paleontology resources report through Dr. Samuel McLeod of the Los Angeles County Natural History Museum.

METHODS

Records Search

Prior to fieldwork, an archaeological records search was conducted at the SCCIC. This included a review of all recorded historic and prehistoric cultural resources, as well as a review of known cultural resources, and survey and excavation reports generated from projects completed within one mile of the project site. In addition, a review was conducted of the National Register of Historic Places (National Register), the California Register of Historical Resources (California Register), and documents and inventories from the California Office of Historic Preservation including the lists of California Historical Landmarks, California Points of Historical Interest, Listing of National Register Properties, and the Inventory of Historic Structures.

Additional Research. Additional land use history research was conducted through the San Bernardino County Assessor-Recorder-County Clerk, records of the General Land Office managed by the Bureau of Land Management, and various internet resources.

Field Survey

An archaeological pedestrian field survey of the project site was conducted on June 24, 2019. The survey was conducted by walking parallel transects spaced approximately 15 meters apart across 100 percent of the project site. Soil exposures, including natural and artificial clearings were carefully inspected for evidence of cultural resources. Vegetation was cleared by hand at regular intervals to maximize surface visibility.

RESULTS

Records Search

Data from the SCCIC revealed that 34 cultural resource studies have taken place resulting in the recording of 15 cultural resources (all historic-period) within a one-mile radius of the project site. None of the previous studies has assessed the project site for cultural resources. Several historic-period roads are located near the project site, although none have been identified within its boundaries. The inferred boundaries of the Grapeland Homestead and Waterworks (designated P-36-015376/California Point of Historical Interest [CPHI]-SBR-116) encompass a large portion of Fontana that includes the project site, however no cultural resources in the project site boundaries have been associated with P-36-015376 by the current study. The records search is summarized as follows:

Table A. Cultural Resources and Reports Located Within One Mile of the Project Site

USGS Quad.	Cultural Resources Within One Mile of Project Site	Studies Within 1 Mile
Devore, Calif. (1988)	P-36-6112: historic-period homestead (1/2 mile NE) P-36-6589: Grapeland Irrigation District Canal (1/2 mile W) P-36-8697: historic-period farm/ranch complex (1/4 mile E) P-36-8698: historic-period dirt road (adjacent E) P-36-10878: historic-period stone trough (3/4 mile N) P-36-11506: historic-period bldg. footing (1/2 mile W) P-36-11507: historic-period refuse (1/2 mile SW) P-36-11508: historic-period road (1/2 mile W) P-36-11509: historic-period road (1/4 mile SW) P-36-11510: historic-period road (1/4 mile W)	SB-106-1407, 1501, 1611, 1737, 1751, 1781, 1847, 1983, 2064, 2096, 2621, 3049, 3538, 3634, 4012, 4013, 4016, 4017, 4020, 4021, 4022, 4552, 4555, 5088, 5691, 5766, 6982, 6984, 6986, 7517, 7582, 7783, 7813, 8104

USGS Quad.	Cultural Resources Within One Mile of Project Site	Studies Within 1 Mile
	P-36-11511: historic-period road (adjacent SW) P-36-11512: historic-period road (1/2 mile S) P-36-11513: historic-period road (Adjacent W) P-36-15376: Grapeland Homestead (Encompasses Project Site) P-36-21495: historic-period cobble debris (1/4 mile SE)	

Additional Research. The project site was first privately owned by Albert G Pier as part of a land patent that encompassed the northwest quarter of section 20, Township 1 North, Range 5 West (General Land Office 1892). One residential building was constructed on the project site between 1942 and 1959 (U.S. Army Corps of Engineers 1942; United States Department of Agriculture 1959) and was demolished between 1980 and 1994 (United States Department of Agriculture 1980, 1994). Research did not reveal names of any builders or residents, until 1975 when Lloyd P. Remy, of Los Angeles owned the property (see https://www.sbcounty.gov/ assessor/pims).

Field Survey

During the field survey, BCR Consulting staff carefully inspected the project site, and identified one historic-period site within its boundaries. Surface visibility was approximately 50 percent within the project site. Ground disturbances were severe and resulted from a variety of natural and artificial factors, including surface erosion and excavation related to adjacent roads, weed abatement, and building construction. Sediments included silty sand with a high concentration of granitic cobbles that covered the project site.

KIM1908-H-1. This site consists of the remnants of a residential complex built between 1942 and 1959 (US Army Corps of Engineers 1942; United States Department of Agriculture 1959). One concrete building foundation, two concrete structure footings, and the foundation of a pumphouse were identified within the site boundaries. No diagnostic artifacts were identified on the surface and a lack of soil accumulation indicates negligible potential for significant buried resources.

SIGNIFICANCE EVALUATION

During the field survey, one historic-period resource was identified. CEQA (PRC Chapter 2.6, Section 21083.2 and CCR Title 145, Chapter 3, Article 5, Section 15064.5) calls for the evaluation and recordation of historic and archaeological resources. The criteria for determining the significance of impacts to cultural resources are based on Section 15064.5 of the *CEQA Guidelines* and Guidelines for the Nomination of Properties to the California Register. Properties eligible for listing in the California Register and subject to review under CEQA are those meeting the criteria for listing in the California Register, National Register, or designation under a local ordinance.

Significance Criteria

California Register of Historical Resources. The California Register criteria are based on National Register criteria. For a property to be eligible for inclusion on the California Register, one or more of the following criteria must be met:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
2. It is associated with the lives of persons important to local, California, or U.S. history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of a master, possesses high artistic values; and/or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resources." (CCR 4852 [d][2]). The California Register also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

California Register Evaluation

The project site occupies a portion of the Grapeland Irrigation District. However, the features recorded post-date that resource considerably and could not be associated with the district or indeed with any specific regional historic context or important events. It is therefore not eligible for the California Register under Criterion 1. Criterion 2: Extensive research has failed to connect the project site with the lives of persons important to local, California, or U.S. history. Criterion 3: The project site and its constituent historic-period features do not represent the work of an important creative individual or possess high artistic values. Criterion 4: The features identified have not and are not likely to yield information important in prehistory or history and are therefore not eligible for listing under Criterion 4. The subject property and its historic-age features are therefore recommended not eligible under any of the four criteria for listing in the California Register, and as such are not recommended historical resources under CEQA.

City Designation Evaluation

Research has not indicated that any of these resources have been previously designated as, or meet criteria for, City Historical Designation (City of Fontana 2018).

RECOMMENDATIONS

BCR Consulting conducted a Cultural Resources Assessment of the proposed project, pursuant to CEQA. BCR Consulting archaeologists identified the remnants of a post-World War II residential complex, consisting of several concrete foundations and footings. It is temporarily designated KIM1908-H-1 and has been documented on Department of Park and Recreation (DPR) 523 forms. It is not recommended eligible for listing in the California Register of Historical Resources, and as such is not recommended a "historical resource" under CEQA. Therefore, no significant impacts related to archaeological or historical resources is anticipated and no further investigations or monitoring are recommended for the proposed project unless:

- the proposed project is changed to include areas not subject to this study;

- the proposed project is changed to include the construction of additional facilities;
- cultural materials are encountered during project activities.

Although the current study has not indicated sensitivity for cultural resources within the project boundaries, ground disturbing activities always have the potential to reveal buried deposits not observed on the surface during previous surveys. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a cultural resources professional that meets the U.S. Secretary of the Interior Professional Qualification Standards for Archaeology (qualified archaeologist) should be retained to assess the significance of the find. The qualified archaeologist would have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing in the California Register of Historical Resources or the National Register of Historic Places, plans for the treatment, evaluation, and mitigation of impacts to the find would be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- historic artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;
- historic structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- groundstone artifacts, including mortars, pestles, and grinding slabs;
- dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks.

If human remains are encountered during the undertaking, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

RE: Sierra and Casa Grande General Plan and Zone Change Project, San Bernardino County

Dear Mr. Shepetuk:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Associate Governmental Program Analyst

re: Paleontological resources for the Vertebrate Paleontology Records Search for the proposed Sierra and Casa Grande General Plan and Zone Change Project, in the City of Fontana, San Bernardino County, project area

Dear Nicholas:

I have conducted a thorough check of our paleontology collection records for the locality and specimen data for the proposed Sierra and Casa Grande General Plan and Zone Change Project, in the City of Fontana, San Bernardino County, project area as outlined on the portion of the Devore USGS topographic quadrangle map that you sent to me via e-mail on 24 June 2019. We do not have any vertebrate fossil localities that lie directly within the proposed project area boundaries, but we do have localities farther afield that occur in sedimentary deposits similar to those that may occur at depth in the proposed project area.

In the entire proposed project area the surficial sediments are composed of younger Quaternary Alluvium, derived broadly as alluvial fan deposits from the San Gabriel Mountains to the north via Lytle Creek that currently flows to the north and east. These deposits typically do not contain significant vertebrate fossils, at least in the uppermost layers, but they may contain pockets of finer-grained sediments, particularly at depth, that may well contain significant vertebrate fossil remains. Our closest vertebrate fossil locality from somewhat similar basin deposits is LACM 7811, quite to the south-southwest of the proposed project area in the Jurupa Valley north of Norco, that produced a fossil specimen of whipsnake, *Masticophis*, at a depth of 9 to 11 feet below the surface. Our next closest fossil vertebrate locality from somewhat similar

Quaternary deposits is LACM 1207, south-southwest of the proposed project area between Corona and Norco, that produced a fossil specimen of deer, *Odocoileus*.

Shallow excavations in the younger Quaternary alluvial fan deposits exposed throughout the proposed project area are unlikely to encounter significant vertebrate fossils. Deeper excavations in the proposed project area that extend down into older finer-grained Quaternary deposits, however, may well encounter significant remains of fossil vertebrates. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains while not impeding development. Sediment samples should also be collected from the finer-grained deposits in the proposed project area and processed to determine their small fossil potential. Any fossils collected should be placed in an accredited scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

Samuel A. McLeod

Subject: Cultural Resources Investigation of the Sierra/Casa Grande Project, Fontana, San Bernardino County, California (BCR Consulting Project KIM2001)

Dear Kari:

BCR Consulting LLC (BCR Consulting) was retained by Kimley-Horn to complete a cultural resources investigation of the Sierra-Casa Grande Project (project) located in the City of Fontana, San Bernardino County, California. The project consists of two properties located in Sections 5 and 8 of Township 1 South, Range 5 West, San Bernardino Baseline and Meridian, in the City of Fontana. They are depicted on the Sierra/Casa Grande Exhibit 1: Replacement Sites (Attachment B). The purpose of this study is to illustrate potential for development constraints associated with the presence of and/or potential for cultural resources within the project boundaries. It is not intended to provide regulatory compliance.

Cultural Resources Records Search

BCR Consulting Archaeological Crew Chief Joseph Orozco, M.A., RPA conducted the cultural resources records search at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton. The records search included a review of all recorded historic and prehistoric archaeological sites, as well as built environment resources within one mile of the project sites. The research also reviewed known cultural resource reports completed in the vicinity. The research revealed that 17 cultural resource studies have taken place resulting in 17 cultural resources recorded within one mile of the project sites. The project sites have not been subject to previous cultural resource assessments. The records search results are summarized in Table A.

Table A. Records Search Results (One-Mile Radius)

BCR Consulting Staff Historian Dylan Williams reviewed San Bernardino County assessor records and aerial photos (www.historicaerials.com) to identify any historic-period (i.e. over 45 years old) buildings located the project sites. A total of 21 parcels contain buildings. Fifteen (15) historic-period residences were identified within 14 of the parcels, and the remaining seven parcels contain buildings that are not historic-period. The results of this review are summarized in Table B.

Table B. Buildings within Project Site

Assessor Parcel Number and Address	Status of Building(s) and Construction Date

APN: 019222132 – 8587 Palmetto Ave	1 Church building; SB County build date: 1958

SFR=Single Family Residence
MFR=Multiple Family Residence
SB=San Bernardino

Pedestrian Field Survey

BCR Consulting Staff Historian Dylan Williams conducted a reconnaissance mixed windshield and pedestrian inventory of the project sites on April 8, 2020. The windshield survey involved inspection of developed and landscaped portions of the project sites by vehicle. Where exposed soils were visible and access was permissible, the project site was inspected on foot at fifteen-meter transect intervals. All exposed soils were carefully inspected for cultural remains. 16982 Malaga Street, 17022 Malaga Street, 7808 Mango Avenue, and 8571 Palmetto Avenue were inaccessible and therefore not subject to pedestrian inventory. The remaining properties containing buildings were photographed (see Attachment B). The project site is highly disturbed by modern residential developments and landscaping.

Summary and Recommendations

As noted above, the project sites have not been subject to previous cultural resources assessment/inventory, and 15 historic-period architectural resources have been identified. Based on these results, for any proposed project that requires compliance with the California Environmental Quality Act (CEQA), BCR Consulting recommends a full cultural resource assessment, including a summary of the current records search, additional archival research, a cultural resources pedestrian inventory, Native American Consultation (as required by the lead agency), and completion of a cultural resources technical report. The assessment should be performed under the supervision of a cultural resource professional that meets the Secretary of the Interior's Professional Qualification Standards for Archaeology and for Architectural History. Historic-period buildings would require eligibility evaluations for listing in the California Register of Historical Resources (i.e. significance under CEQA). The following elements are required in historical evaluations:

- Site visit with photography of all exterior elevations and setting

- Location map (unless the property is on a small parcel easily located by address)
- Detailed property description including architectural description of building/s
- Land-use history of property (to uncover potential associations with historic events or persons)
- Local historic context (to provide a framework for evaluation)
- Evaluation of the property under California Register Significance criteria
- Integrity assessment

The Department of Park and Recreation (DPR) 523 form is the basic tool for CEQA evaluation as established by the California Office of Historic Preservation (OHP) March 1995 "Instructions for Recording Historical Resources." The minimum level of documentation for inclusion in the OHP archive is the Primary Record (first page of the DPR 523 form) and a location map. The Primary Record merely provides recordation without evaluation; a resource evaluation requires the Primary Record; Building, Structure, and Object Record; and Continuation Sheets.

If human remains are encountered during activities associated with the proposed project, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

Please contact me by phone at 909/525-7078 or e-mail at david.brunzell@yahoo.com with any questions or comments.

Sincerely,

David Brunzell, M.A./RPA
Principal Investigator/Archaeologist

Gabrieleno Band of Mission Indians – Kizh Nation

Protection of Tribal Cultural Resources (TCRs)

Most Important Things for Agencies to Know About AB52:

- An EIR, MND, or ND can not be certified until AB-52 tribal consultation has concluded.
- Agreed mitigation measures with the tribe, MUST be recommended for inclusion in the environmental document.
- Signature confirming acceptance of these mitigation measures recommended by our Tribal Government is required within 14 days of receipt to conclude AB52 consultation.

Tribal Cultural Resources Mitigation Measures within Kizh Nation Tribal Territory:

Note: To avoid compliance issues with the following laws, all Native American Monitoring shall be conducted by a documented lineal descendant from the ancestral Tribe of the project area (NAGPRA Law 10.14)

- The Native American Graves Protection and Repatriation Act (NAGPRA), Public Law-101-601, 25 U.S.C. 3001 et seq., 104 Stat. 3048.
- CEQA Guidelines Section15064.5, PRC 5097.98 (d)(1).
- The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

If you are receiving these measures, The Gabrieleño Band of Mission Indians Kizh -Nation are the direct lineal descendants of your project area. The Kizh Nation ONLY responds and consults on projects within their ANCESTRAL tribal territory. Therefore, to remain in compliance with above referenced laws and to enable our Tribe with the ability to protect and preserve our last remaining and irreplaceable Tribal Cultural Resources, it is recommended that the project applicant retain a qualified professional tribal monitor/consultant from the Gabrieleño Band of Mission Indians Kizh -Nation. The Kizh Nation possesses Tribal archives including documented historical information as well as multiple members who possess unique knowledge derived from oral tradition passed down through generations of the Tribe in order to provide the expertise needed to identify whether a project is located within a culturally sensitive area given its proximity to village areas, commerce areas, recreation areas, ceremonial areas, and burial locations.

Native American Heritage Commission (NAHC) Guidelines for Native American Monitors/Consultants (approved 9/13/05): By acting as a liaison between Native American, archaeologist, developers, contactors and public agency, a Native American monitor/consultant can ensure that cultural features are treated appropriately from the Native American point of view. This can help others involved in a project to coordinate mitigation measures. These guidelines are intended to provide prospective monitors/consultants, and people who hire monitors/consultants, with an understanding of the scope and extant of knowledge that should be expected.

Mitigation Guidelines for Tribal Cultural Resources (TCRs): CEQA now defines TCRs as an independent element separate from archaeological resources. Environmental documents shall address a separate Tribal Cultural Resources section that includes a thorough analysis of the impacts to only TCRs and includes separate and independent mitigation measures created with tribal input under AB-52 consultations. Therefore, all agreements, mitigation, and conditions of approval regarding TCRs shall be handled solely with the Tribal Government and conversely all agreements, mitigation, and conditions of approval regarding Archaeological Resources shall be handled by an Archaeological resource company.

MITIGATION MEASURES

Retain a Native American Monitor/Consultant: The Project Applicant shall be required to retain and compensate for the services of a Tribal monitor/consultant who is both approved by the Gabrieleño Band of Mission Indians-Kizh Nation Tribal Government and is listed under the NAHC's Tribal Contact list for the area of the project location. This list is provided by the NAHC. The monitor/consultant will only be present on-site during the construction phases that involve ground disturbing activities. Ground disturbing activities are defined by the Gabrieleño Band of Mission Indians-Kizh Nation as activities that may include, but are not limited to, pavement removal, pot-holing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor/consultant will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the Tribal Representatives and monitor/consultant have indicated that the site has a low potential for impacting Tribal Cultural Resources.

Unanticipated Discovery of Tribal Cultural and Archaeological Resources: Upon discovery of any archaeological resources, cease construction activities in the immediate vicinity of the find until the find can be assessed. All archaeological resources unearthed by project construction activities shall be evaluated by the qualified archaeologist and tribal monitor/consultant approved by the Gabrieleño Band of Mission Indians-Kizh Nation. If the resources are Native American in origin, the Gabrieleño Band of Mission Indians-Kizh Nation shall coordinate with the landowner regarding treatment and curation of these resources. Typically, the Tribe will request reburial or preservation for educational purposes. Work may continue on other parts of the project while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section15064.5 [f]). If a resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource", time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and

Public Resources Code Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be offered to a local school or historical society in the area for educational purposes.

Unanticipated Discovery of Human Remains and Associated Funerary Objects:
Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC 5097.98, are also to be treated according to this statute. Health and Safety Code 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and excavation halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC) and PRC 5097.98 shall be followed.

Resource Assessment & Continuation of Work Protocol:

Upon discovery, the tribal and/or archaeological monitor/consultant/consultant will immediately divert work at minimum of 150 feet and place an exclusion zone around the burial. The monitor/consultant(s) will then notify the Tribe, the qualified lead archaeologist, and the construction manager who will call the coroner. Work will continue to be diverted while the coroner determines whether the remains are Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC as mandated by state law who will then appoint a Most Likely Descendent (MLD).

Kizh-Gabrieleno Procedures for burials and funerary remains:

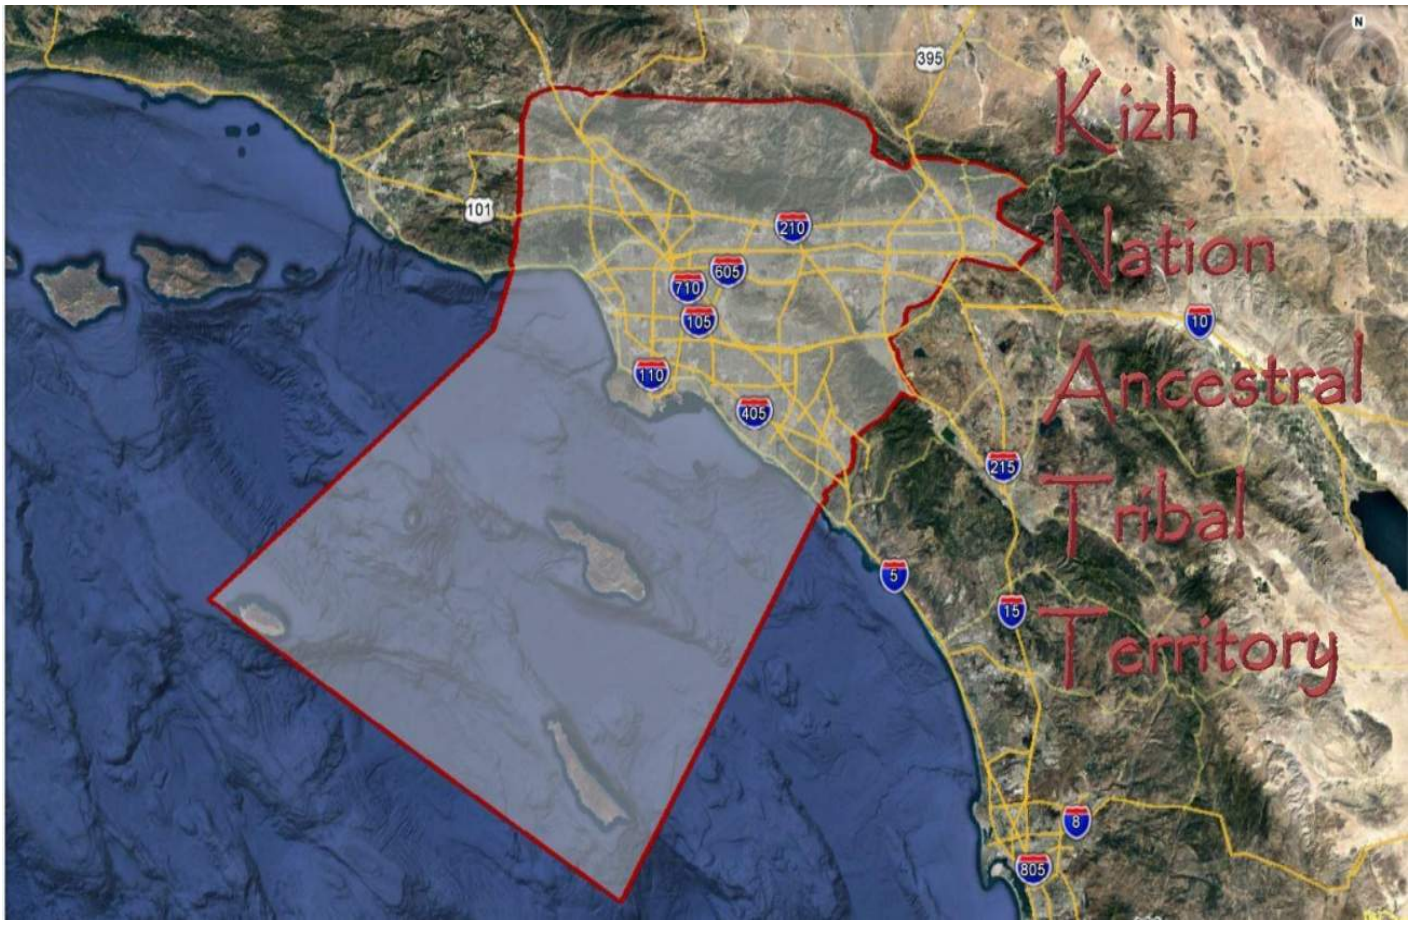
If the Gabrieleno Band of Mission Indians – Kizh Nation is designated MLD, the following treatment measures shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. These remains are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects.

Treatment Measures:

Prior to the continuation of ground disturbing activities, the land owner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. The Tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be taken which includes at a minimum detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes four or more burials, the location is considered a cemetery and a separate treatment plan shall be created. Once complete, a final report of all activities is to be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive diagnostics on human remains.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

Professional Standards: Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken. Principal personnel must meet the Secretary of Interior standards for archaeology and have a minimum of 10 years of experience as a principal investigator working with Native American archaeological sites in southern California. The Qualified Archaeologist shall ensure that all other personnel are appropriately trained and qualified.



Acceptance of Tribal Government Recommended Mitigation Measures:

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Sierra Avenue, Fontana, CA
Vacant Land (APNs: 023915134 and 023915109)
Fontana, California 92336

Report Date: March 2, 2015
Partner Project No. 15-132494.2

Prepared for:

McDonald Property Group
450 Newport Center Drive, Suite 625
Newport Beach, California 92660

PARTNER
Engineering and Science, Inc.

March 2, 2015

Mr. Bruce McDonald
McDonald Property Group
450 Newport Center Drive, Suite 625
Newport Beach, California 92660

Subject: Phase I Environmental Site Assessment
Sierra Avenue, Fontana, CA
Vacant Land (0239-151-34-0000 and 0239-151-09-0000)
Fontana, California 92336
Partner Project No. 15-132494.2

Dear Mr. McDonald:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (619) 757-1119 or MLambson@partneresi.com.

Sincerely,

Mark Lambson
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by McDonald Property Group for the Sierra Avenue property (0239-151-34-0000 and 0239-151-09-0000) located on the east side of Sierra Avenue in the City of Fontana, San Bernardino, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide McDonald Property Group with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the east side of Sierra Avenue within a mixed undeveloped and residential area of San Bernardino County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	None (0239-151-34-0000); 5187 Sierra Avenue, Fontana, California 92336 (0239-151-09-0000)
Property Use:	Vacant land (0239-151-34-0000); single-family residence (0239-151-09-0000)
Land Acreage (Ac):	10.95 acres (0239-151-34-0000); 1.11 acres (0239-151-09-0000)
Number of Buildings:	None (0) (0239-151-34-0000); One (1) (0239-151-09-0000)
Number of Floors:	Not applicable (0239-151-34-0000); One (1) (0239-151-09-0000)
Gross Building Area (SF):	Not applicable (0239-151-34-0000); 1,157 SF (0239-151-09-0000)
Date of Construction:	Not applicable (0239-151-34-0000); 1959 (0239-151-09-0000)
Assessor's Parcel Numbers (APN):	0239-151-34-0000 (vacant land); 0239-151-09-0000 (single-family residence)
Type of Construction:	Wood-framed construction on a concrete slab on-grade foundation
Current Tenants:	Single-family residence
Site Assessment Performed By:	Nasim Ahmed of Partner
Site Assessment Conducted On:	February 24, 2015

The northwest corner of the subject property is currently occupied by a single-family residence, while the remaining portion of the subject property is currently undeveloped land covered with natural vegetation. The single-family residence at the subject property was not accessible by Partner during the site visit; therefore, Partner was not able to observe the interior of the building and conducted an exterior-only site reconnaissance.

According to available historical sources, the subject property was undeveloped as early as 1896 until circa 1959. The northwest corner of the subject property has been developed with a single-family residence from 1959 to the present.

The immediately surrounding properties consist of undeveloped land to the north, east, and south; and undeveloped land to the west across Sierra Avenue.

According to the Water Quality Monitoring report for Mid Valley Sanitary Landfill, located approximately 3,000 feet to the southeast of the subject property, groundwater in the vicinity of the subject property is present at approximately 300 to 400 feet below ground surface (bgs) and flow is toward the southeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner observed several piles of dirt on the northeastern portion of the subject property. In addition, Partner observed a pile of concrete blocks, used automotive tires, and miscellaneous materials on the northeastern portion of the subject property. No staining and/or concerns were noted in the vicinity of these dirt, concrete block, abandoned automotive tire, and miscellaneous material piles. Based on the observed conditions, the concrete blocks, abandoned automotive tires, and miscellaneous materials are not expected to represent a significant environmental concern.

- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Sierra Avenue property (0239-151-34-0000 and 0239-151-09-0000) located on the east side of Sierra Avenue in the City of Fontana, San Bernardino, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Partner recommends the removal and disposal of the piles of concrete blocks, abandoned automotive tires, and miscellaneous materials on the property's northeast portion in accordance with local environmental regulations.
- Should the subject property be redeveloped, pre-demolition ACM and LBP surveys should be conducted.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the Sierra Avenue property (0239-151-34-0000 and 0239-151-09-0000) located on the east side of Sierra Avenue in the City of Fontana, San Bernardino, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

McDonald Property Group engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of McDonald Property Group. Either

verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at http://www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators, and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted a Freedom of Information Act (FOIA) request to the San Bernardino County Fire Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- The single-family residence at the subject property was not accessible by Partner during the site visit; therefore, Partner was not able to observe the interior of the building and conducted an exterior-only site reconnaissance.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property is located the east side of Sierra Avenue. According to the San Bernardino County Assessor, subject property ownership is currently vested in Sierra Avenue LLC since 2014 (0239-151-34-0000) and Donald and Kimber Lance since 1989 (0239-151-09-0000).

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The northwest corner of the subject property is currently occupied by a single-family residence, while the remaining portion of the subject property is currently undeveloped land covered with natural vegetation.

The subject property is zoned R-5 and R-MU for single-family residential and regional-mixed use commercial development by the City of Fontana, respectively.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed undeveloped and residential area of San Bernardino County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Undeveloped land
South: Undeveloped land
East: Undeveloped land
West: Sierra Avenue, beyond which is undeveloped land

No adjacent properties were identified in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Devore, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 1,760 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south and southeast. No structures are depicted on the subject property on the 2012 map.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

The nearest surface water in the vicinity of the subject property is Lytle Creek, located approximately 2 miles to the northeast of the subject property. No settling ponds, lagoons, surface impoundments,

wetlands, or natural catch basins were observed at the subject property during this assessment. According to available information, a public water system operated by the Fontana Water Company serves the subject property vicinity. The sources of public water for the Fontana Water Company are Lytle Creek and wells in the Lytle Basin, Rialto Basin, Chino Basin, and another ground water basin known as No Man's Land. A portion of the water supply is purchased from Cucamonga Valley Water District. Water from the State Water Project is purchased from the Inland Empire Utilities Agency and San Bernardino Valley Municipal Water District.

According to the Water Quality Monitoring report for Mid Valley Sanitary Landfill, located approximately 3,000 feet to the southeast of the subject property, groundwater in the vicinity of the subject property is present at approximately 300 to 400 feet below ground surface (bgs) and flow is toward the southeast.

2.4.3 Geology/Soils

The subject property is located in the Upper Santa Ana Valley, which is a broad down-warped area encompassing approximately 500 square miles. The Valley is bounded on the north by Transverse Ranges, on the south by the Jurupa Mountains and other ranges of the Perris Block and on the east and west by the San Jacinto Fault and the Chino Fault, respectively. Alluvium was deposited on the valley floor from the surrounding mountains. The alluvium in the Upper Santa Ana Valley consists of unconsolidated and semi-unconsolidated sediments that have been divided into Terrace Deposits and Older Alluvium of Late Pleistocene age and Younger Alluvium of Recent or Holocene age. The maximum thickness of the alluvium in the basin is approximately 1,400 feet. The Site occupies a position near the lower reaches of the alluvial fans that border the mountain front of the San Gabriel Range. Shallow underlying sediment has been deposited by stream issuing from the east Etiwanda, San Sevaine and Day Canyons, and by the smaller drainages that exist between them. These adjacent fans have coalesced and are referred to as an alluvial slope. The sediments, deeper in the subsurface, reflect deposition by fluvial processes, attributed to the ancestral Santa Ana River. Based on available data, the alluvium contains alternating sequences of coarse to fine-grained layers, which range in thickness from a dew feet to tens of feet. Thick intervals of fine-grained sand occur in the unsaturated zone and are intermixed with thin, probably discontinuous layers of silt or gravel. The saturated zone sediments are similar in character size to those found in the unsaturated zone with no widespread clay layers.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06071C7920H, dated August 26, 2008, the subject property appears to be located in Unshaded Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1896-1959	Aerial Photographs, Topographic Maps	Undeveloped
1959-Present	Aerial Photographs, Onsite Observations, Topographic Maps	Residential; Undeveloped

No potential environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR). The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1938	*Scale: 1'=500"*
Subject Property:	Undeveloped
North:	Undeveloped
South:	Undeveloped
East:	Undeveloped
West:	Undeveloped across Sierra Avenue

Date: 1953	*Scale: 1'=500"*
Subject Property:	No significant changes noted
North:	No significant changes noted
South:	Developed with single-family residences
East:	No significant changes noted
West:	No significant changes noted

Date: 1966, 1975	*Scale: 1'=500"*
Subject Property:	The northwest corner appears to be developed with single-family residences while the remaining portion appears to be undeveloped land
North:	No significant changes noted
South:	Developed with a single family residence
East:	No significant changes noted
West:	No significant changes noted

Date: 1985, 1989	*Scale: 1'=500"*
Subject Property:	The northwest corner appears to be developed with a single-family residence while the remaining portion appears to be undeveloped land
North:	No significant changes noted

Date:	*1985, 1989*	*Scale:*	*1'=500"*
South:	No significant changes noted		
East:	No significant changes noted		
West:	No significant changes noted		

Date:	*1995*	*Scale:*	*1'=500"*
Subject Property:	No significant changes noted		
North:	No significant changes noted		
South:	No significant changes noted		
East:	Undeveloped land, followed by single-family residences		
West:	No significant changes noted		

Date:	*2005, 2009, 2010, 2012*	*Scale:*	*1'=500"*
Subject Property:	No significant changes noted		
North:	No significant changes noted		
South:	The previous single-family residence appears to have been removed; undeveloped land		
East:	No significant changes noted		
West:	No significant changes noted		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR). Sanborn map coverage was not available for the subject property.

3.3 City Directories

City Directories were not searched due to the residential and undeveloped nature of the subject property.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from NETR Online. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date:	*1896, 1898, 1901, 1905, 1909, 1913, 1926, 1929, 1938, 1946*
Subject Property:	Undeveloped
North:	Undeveloped
South:	Undeveloped

Date:	***1896, 1898, 1901, 1905, 1909, 1913, 1926, 1929, 1938, 1946***
East:	Undeveloped
West:	Undeveloped across Sierra Avenue

Date:	***1955, 1959, 1960, 1965***
Subject Property:	Undeveloped desert land
North:	Undeveloped desert land
South:	Developed with a small structure
East:	Undeveloped desert land
West:	Undeveloped desert land across Sierra Avenue

Date:	***1968, 1974, 1980, 1988, 1999***
Subject Property:	The northwest corner of the property is depicted as developed with a small structure while the remaining portion of the property is depicted as undeveloped
North:	Undeveloped
South:	No significant changes depicted
East:	Undeveloped
West:	Undeveloped across Sierra Avenue

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	San Bernardino County Fire Department (SBCFD)
Point of Contact:	Ms. Maria [surname not given]
Agency Address:	620 South E Street, San Bernardino, CA 92415
Agency Phone Number:	(909) 385-8401
Date of Contact:	February 16, 2015
Method of Communication:	Faxed Request
Summary of Communication:	As of the date of this report, Partner has not received a response from the SBCFD for inclusion in this report.

4.1.2 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	Air Quality Management District (AQMD)
Point of Contact:	Not applicable
Agency Address:	21865 Copley Drive, Diamond Bar, CA 91765
Agency Phone Number:	(909) 396-3700
Date of Contact:	February 23, 2015
Method of Communication:	Online
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property with the AQMD.

4.1.3 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	Not applicable
Agency Address:	3737 Main Street, Riverside, CA 92501
Agency Phone Number:	(951) 782-4499
Date of Contact:	February 23, 2015
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the RWQCB.

4.1.4 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	Not applicable
Agency Address:	5796 Corporate Avenue, Cypress, CA 90630
Agency Phone Number:	(714) 484-5300

Regulatory Agency Data	
Date of Contact:	February 23, 2015
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the DTSC.

4.1.5 Building Department

Regulatory Agency Data	
Name of Agency:	Building & Safety Division, Fontana Community Development Department
Point of Contact:	Administrative Assistant
Agency Address:	8353 Sierra Avenue, Fontana, CA 92335
Agency Phone Number:	(909) 350-7640
Date of Contact:	February 24, 2015
Method of Communication:	In Person
Summary of Communication:	According to the records, the northwest portion of the subject property was developed with current single-family residence in 1959.

4.1.6 Planning Department

Regulatory Agency Data	
Name of Agency:	Planning Division, Fontana Community Development Department
Point of Contact:	Administrative Assistant
Agency Address:	8353 Sierra Avenue, Fontana, CA 92335
Agency Phone Number:	(909) 350-7640
Date of Contact:	February 24, 2015
Method of Communication:	In Person
Summary of Communication:	According to records reviewed, the subject property is zoned for residential (R5) and regional-mixed used (RMU) commercial development by the City of Fontana.

4.1.7 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas, and Geothermal Resources (DOGGR)
Point of Contact:	Not applicable
Agency Address:	5816 Corporate Avenue, Cypress, CA 90630
Agency Phone Number:	(714) 816-6847
Date of Contact:	February 23, 2015
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.8 Assessor's Office

Regulatory Agency Data	
Name of Agency:	San Bernardino County Assessor (SBCA)

Regulatory Agency Data	
Point of Contact:	Administrative Assistant
Agency Address:	172 W Third Street, San Bernardino, CA 92415
Agency Phone Number:	(909) 387-8307
Date of Contact:	February 23, 2015
Method of Communication:	Telephone and Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Numbers (APNs) 0239-151-34-0000 and 0239-151-09-0000 and is currently owned by Sierra Avenue LLC since 2014 (0239-151-34-0000) and Donald and Kimber Lance since 1989 (0239-151-09-0000.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	-	-
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
SLIC	0.50	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent properties are not identified in the regulatory database report.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan listings are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from McDonald Property Group (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

A key site manager was not provided to be interviewed at the time of this assessment.

5.1.4 Interviews with Past Owners, Operators, and Occupants

Interviews with past owners, operators, and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Nasim Ahmed
Site Assessment Conducted On:	February 24, 2015

Partner was unaccompanied during the site reconnaissance. The single-family residence at the subject property was not accessible by Partner during the site visit; therefore, Partner was not able to observe the interior of the building and conducted an exterior-only site reconnaissance. No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

No solid waste is currently generated or collected on the subject property.

Partner observed several piles of dirt on the northeastern portion of the subject property. In addition, Partner observed a pile of concrete blocks, used automotive tires, and miscellaneous materials on the northeastern portion of the subject property. No staining and/or concerns were noted in the vicinity of these dirt, concrete block, abandoned automotive tire, and miscellaneous material piles. Based on the observed conditions, the concrete blocks, abandoned automotive tires, and miscellaneous materials are not expected to represent a significant environmental concern. Partner recommends the removal and disposal of these dumped items in accordance with local environmental regulations.

6.1.2 Sewage Discharge and Disposal

Partner was not granted access to the interior of the single family residence and therefore assessment for sewage discharge was not performed.

6.1.3 Surface Water Drainage

Storm water runoff from the subject property percolates into the surface through natural attenuation.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Partner was not granted access to the interior of the single-family residence and therefore assessment for heating and cooling systems were not performed.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

Partner was not granted access to the interior of the single family residence and therefore assessment for septic system was not performed.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. At least three pole-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Partner contacted a customer service representative of Southern California Edison, who confirmed that Southern California Edison maintains ownership and operational responsibility for the transformers and that the units do not contain PCBs. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps, and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1959. Partner was not granted access to the interior of the single family residence and therefore assessment for suspect asbestos containing materials was not performed.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint

should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property building was constructed in 1959. Partner was not granted access to the interior of the single family residence and therefore assessment for lead-based paint was not performed.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Fontana Water Company serves the subject property vicinity. The sources of public water for the Fontana Water Company are Lytle Creek surface flow, and from wells in the Lytle Basin, Rialto Basin, Chino Basin, and another ground water basin known as No Man's Land. A portion of the water supply is purchased from Cucamonga Valley Water District. Water from the State Water Project is purchased from the Inland Empire Utilities Agency and San Bernardino Valley Municipal Water District. According to the 2013 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

Partner was not granted access to the interior of the single family residence and therefore assessment for mold was not performed.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *REC* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *CREC* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *HREC* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner observed several piles of dirt on the northeastern portion of the subject property. In addition, Partner observed a pile of concrete blocks, used automotive tires, and miscellaneous materials on the northeastern portion of the subject property. No staining and/or concerns were noted in the vicinity of these dirt, concrete block, abandoned automotive tire, and miscellaneous material piles. Based on the observed conditions, the concrete blocks, abandoned automotive tires, and miscellaneous materials are not expected to represent a significant environmental concern.
- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of Sierra Avenue property (0239-151-34-0000 and 0239-151-09-

0000) located on the east side of Sierra Avenue in the City of Fontana, San Bernardino, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Partner recommends the removal and disposal of the piles of concrete blocks, abandoned automotive tires, and miscellaneous materials on the property's northeast portion in accordance with local environmental regulations.
- Should the subject property be redeveloped, pre-demolition ACM and LBP surveys should be conducted.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the Sierra Avenue property (0239-151-34-0000 and 0239-151-09-0000) located on the east side of Sierra Avenue in the City of Fontana, San Bernardino, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

SIERRA AVENUE
SAN BERNARDINO County, CA 92377

COORDINATES

Latitude (North):	34.1595000 - 34° 9' 34.20''
Longitude (West):	117.4355000 - 117° 26' 7.80''

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

RGA LUST---------- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
B.F. GOODRICH	***3196 NORTH LOCUST AVENU***	***E 1/2 - 1 (0.788 mi.)***	***0***	***8***

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 06/06/2014 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RIALTO AMMUNITION STORAGE POIT		ESE 1/2 - 1 (0.947 mi.)	4	20

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
B.F. GOODRICH	***3196 NORTH LOCUST AVENU***	***E 1/2 - 1 (0.788 mi.)***	***0***	***8***

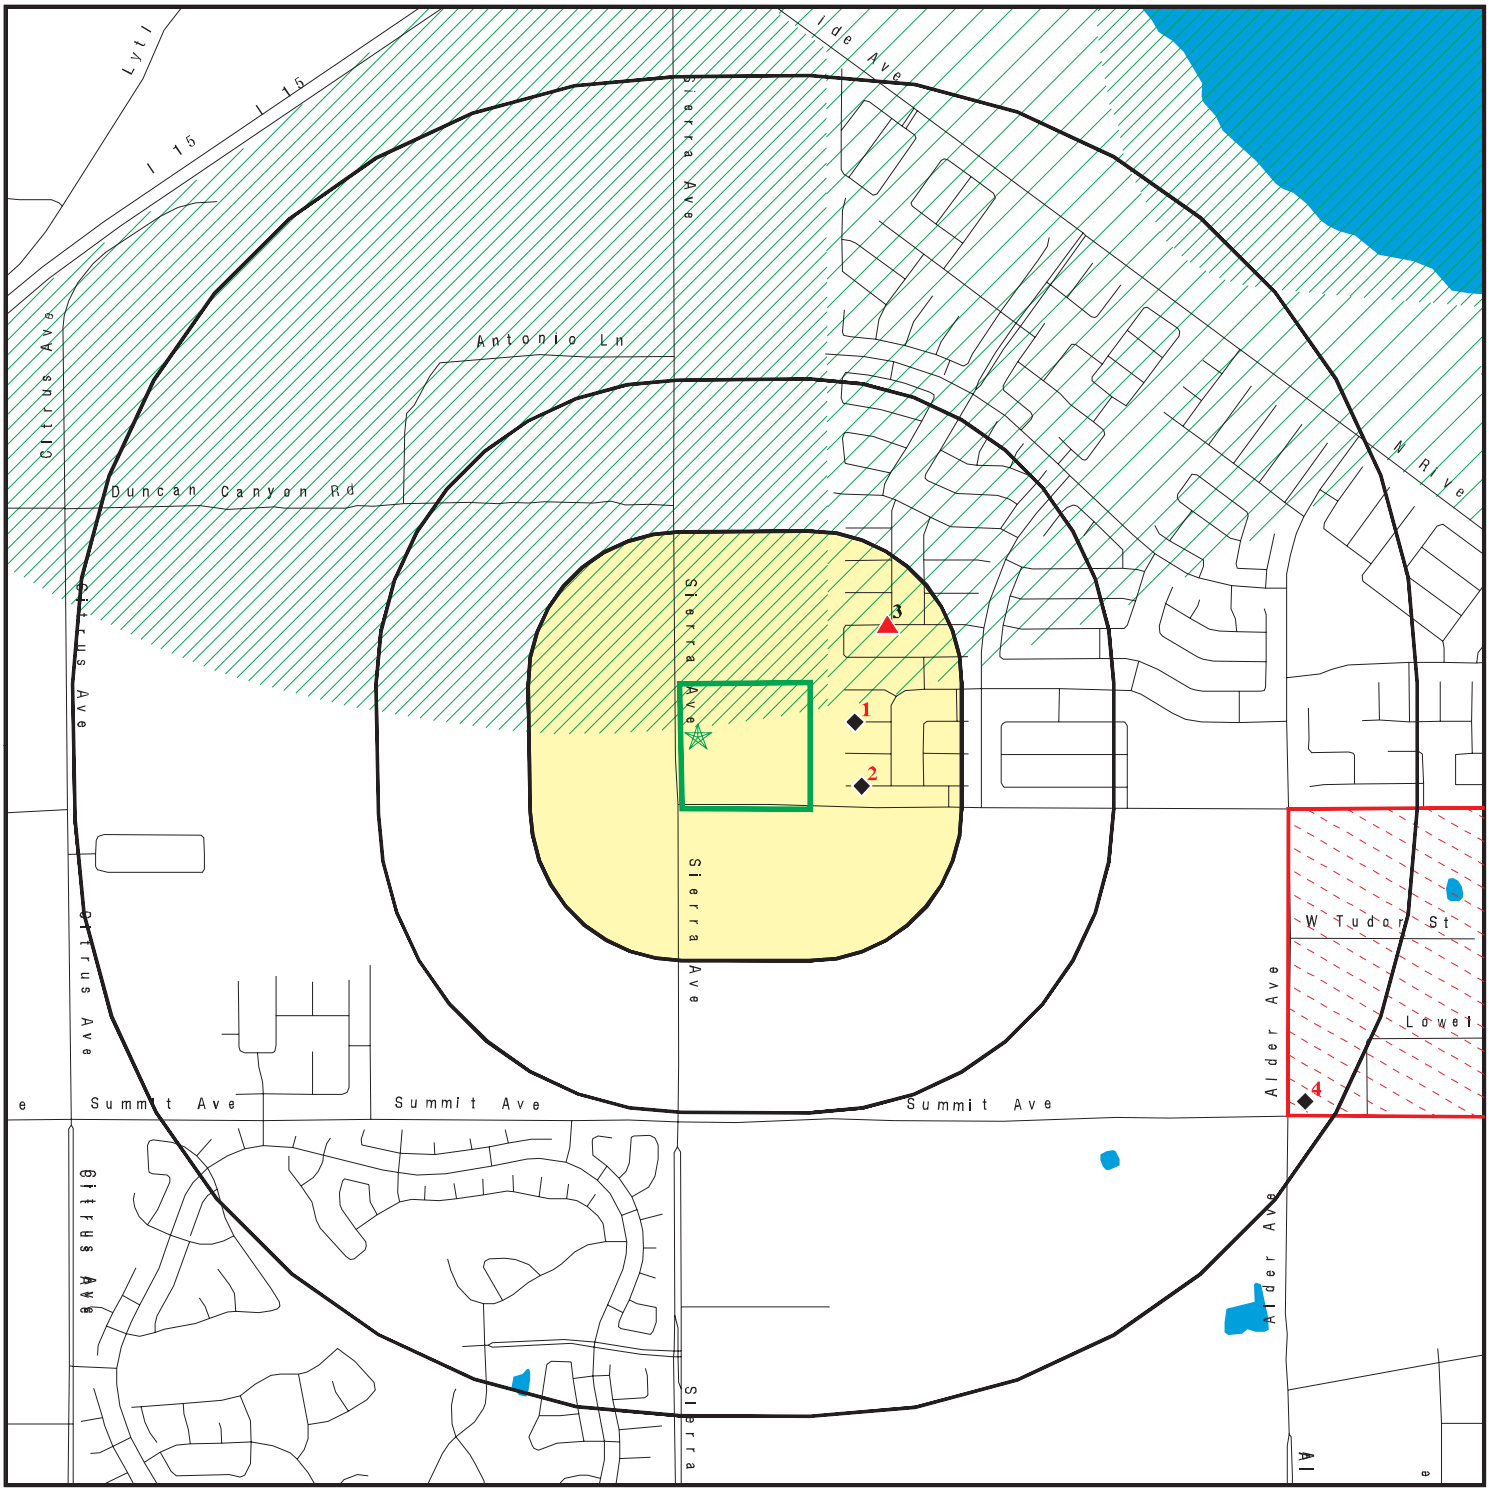
EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 3 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
Not reported	2854 W BUENA VISTA DR	ENE 1/8 - 1/4 (0.160 mi.)	3	20



Lower Elevation	Address	Direction / Distance	Map ID	Page
Not reported	2879 W DAWNVIEW DR	E 0 - 1/8 (0.074 mi.)	1	19
Not reported	2875 W FAIRVIEW DR	ESE 0 - 1/8 (0.086 mi.)	2	20

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 3 records.

Alias Comments: SITE RENAMEDNOW A CHILD SITE
Site Description: The B.F. Goodrich Superfund Site includes soil and groundwater contaminated with perchlorate, trichloroethene, and other chemicals in an industrial area in Rialto, California known as the 160-acre area. The Site, located about 60 miles east of the city of Los Angeles, also includes contaminated groundwater that has spread from the 160-acre area. Land use in the area overlying the contaminated groundwater is largely industrial, commercial, and residential, and a limited amount of open space. EPA's CERCLIS ID No. for the Site is: CAN000905945. From 2002 until about 2008, the California Regional Water Quality Control Board, Santa Ana Region (Water Board) led investigation and cleanup efforts at the Site. EPA added the Site to the Superfund National Priorities List (NPL) in September 2009 and is now the lead agency for the Site. The Water Board is the primary state agency supporting EPA's efforts. The California Department of Toxic Substances Control (DTSC) is also involved at the Site. DTSC's primary responsibility is the investigation and remediation of an operation on the 160-acre area associated with a former treatment, storage, and disposal facility (a TSD facility). The groundwater at or near the Site is a vital resource for residents of the cities of Rialto and Colton. The Rialto-Colton groundwater basin (RCB), in which some or all of the Site is located, has in recent years supplied more than 8 million gallons of drinking water per day, enough water to meet the needs of tens of thousands of area residents. The contamination has forced the closure of many drinking water supply wells in the basin. EPA's response activities at the Site have been conducted primarily under the authority established in the federal Superfund law, the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. Remedial investigation work at and near the Site has been

B.F. GOODRICH (Continued) **1006371515**

completed by EPA, Potentially Responsible Parties, local water utilities, the County of San Bernardino, the U.S. Geological Survey, and others. Since about 2005, the U.S. Department of Defense (DOD) has spent or committed approximately $20 million in public funds to the Rialto area, primarily to demonstrate and evaluate water treatment technologies capable of removing perchlorate from contaminated water supply wells. Some of water treatment systems installed with DOD funding are now operated by local water utilities. The water treatment systems have been installed on wells some distance from the 160- acre area; not in the areas targeted by the Source Area Operable Unit (SA OU). The State of California has also provided or committed approximately $19 million in funds to pay for water treatment systems at and near the Site. The SA OU is not intended to address an area of groundwater contamination to the south and west of the 160-acre area, which originates, at least in part, in an area where earthen-covered concrete storage igloos were constructed by the U.S. Army in the 1940s. Most of the igloos were demolished in 1998 after the County of San Bernardino purchased the property for expansion of the Mid- Valley Sanitary Landfill (MVSL). In 1942, the U.S. Army acquired 2,822 acres of mostly undeveloped land for use as the Rialto Ammunition Backup Storage Point (RASP). The U.S. Army subsequently developed and operated on approximately 740 of the 2,822 acres. The 740-acre area includes most or all of the 160-acre area. The RASP included a network of rail spurs to store rail cars, bunkers adjacent to the rail spurs, approximately 20 earthen-covered concrete storage igloos, approximately four magazines used to store ammunition, and assorted buildings. The RASP was an inspection, consolidation, and storage facility for railcars transporting bombs, ammunition, and other ordnance to the Port of Los Angeles, California. The materials handled at the RASP are likely to have included flares and other pyrotechnics containing perchlorate salts. In 1946, after World War II ended, the United States government sold the RASP property. Since then, portions of the former RASP property have been used by a variety of defense contractors, fireworks manufacturers, and others who used perchlorate salts and other chemicals in their manufacturing processes or in their products. From about 1952 to 1957, the West Coast Loading Corporation tested and manufactured pyrotechnic devices onsite. West Coast Loading Corporation manufactured photoflash flares and ground-burst simulators, both containing potassium perchlorate, used its facility in 1957 to dry a large amount of ammonium perchlorate, and disposed of wastes onsite. From about 1957 to 1962, B.F. Goodrich Corporation (Goodrich) conducted research, development, testing, and production of solid-fuel rocket propellant and solid-fuel missile and rocket motors containing ammonium perchlorate, used chlorinated solvents in its operations, and disposed of wastes in one or more onsite pits. From about 1968 to 1987, Pyrotronics (including its Apollo, Red Devil, and California Display Fireworks divisions) manufactured, tested, and distributed pyrotechnics containing potassium perchlorate, and disposed of wastes onsite. Since 1979, Pyro Spectaculars Inc. (PSI), a public display fireworks operator, wholesaler, and importer and exporter of fireworks, has operated on the 160-acre area. PSI has tested fireworks, burned waste materials, and disposed of wastes onsite. Since about 1989, American Promotional Events - West (APE-West) has operated on the 160- acre area. APE-West has tested and stored fireworks containing potassium perchlorate and burned defective and off-spec fireworks onsite. Enforcement efforts by the State of California began in about 2002, when the Water Board directed multiple parties to investigate the extent of soil and/or groundwater contamination at and near the Site. Between 2002 and 2008, the Water Board issued approximately 23 directives to current and past property owners and tenants pursuant to state authority, requiring submittal of information, soil testing, and/or groundwater testing. Since 2005, the California Department of Toxic Substances Control (DTSC) has also directed and overseen soil testing on a portion of the

B.F. GOODRICH (Continued) **1006371515**

Site. EPA enforcement efforts have included the issuance of a Unilateral Administrative Order for Remedial Investigation (RI) work (2003), notifications to three companies that operated at the Site (or their corporate successors) and two current property owners that may be responsible for the contamination (2008), an Administrative Order on Consent for RI work (2009), and a complaint filed by the U.S. Department of Justice (DOJ) on EPA's behalf pursuant to CERCLA and the Resource Conservation and Recovery Act (RCRA) seeking reimbursement of costs and performance of response actions by the defendants to the lawsuit (2010). EPA added the Site to the Superfund National Priorities List (NPL) in September 2009. The RCB is an important source of drinking water for the cities of Rialto, Colton, and Fontana. Between 1997 and 2007, the RCB supplied approximately 7.5 to 16 million gallons per day (MGD) to residents and businesses in the region. There are four water utilities responsible for the majority of the groundwater pumping in the RCB: the City of Rialto, West Valley Water District (WVWD), the City of Colton, and Fontana Water Company (FWC). A 1961 decree entered in San Bernardino County Superior Court restricts pumping of groundwater from the RCB. The decree allows unlimited pumping from the basin by parties to the decree if the average of the spring-high water levels at three wells specified in the decree (the index wells) exceeds 1,002.3 feet above mean sea level (MSL). When the level is between 969.7 and 1,002.3 feet above MSL, a party's entitlement is the sum of the amounts specified in the decree. If the average spring-high water level drops below 969.7 feet above MSL, the entitlement is reduced by 1 percent for every foot the average is below 969.7 feet above MSL, but not by more than 50 percent. There is a dispute among the parties to the Decree over the time period that restrictions, if in effect, apply. Designated existing or potential beneficial uses for the RCB in the 2008 State of California Water Quality Control Plan are municipal and domestic supply, agricultural supply, industrial service supply, and industrial process supply. Because the selected remedy only addresses groundwater, current and reasonably anticipated future land uses have limited relevance to the selected remedy. The primary relevance is in the selection of locations for the water treatment equipment and other facilities to be constructed as part of the remedy. These decisions will be made post-ROD, during the remedial design phase. Land use at the Site is a mix of residential, industrial, and commercial uses, with limited open space. A Record of Decision (ROD) for OU01 (Source Area Groundwater) of the B.F. Goodrich Superfund Site was signed in September 2010.

Acreage: Not reported
Description: The site is located on 2,821.75 acres 7 miles northwest of San Bernardino, California. In 1942, the Department of War acquired 2,814.55 acres by fee through deed and declaration of taking and a 7.6-acre railroad easement for a total acquisition of 2,822.15 acres. The site was known as the Los Angeles Backup Storage Facility. This name was later changed to Rialto Ammunition Storage Point. The Rialto Ammunition Storage Point is located in San Bernardino County approximately 5 miles north of the City of Rialto and 10 miles northeast of the City of Fontana, California. The property is now used for both industrial (including a municipal landfill owned and operated

RIALTO AMMUNITION STORAGE POIT (Continued) **1007212209**

by the County of San Bernardino) and residential purposes.

History: The site was developed for use as depot, including construction of a complete storage facility. A building area was also established east of the storage area with buildings used for administration, kitchen, barracks, vehicle storage and maintenance, shops, and a fire station. Additionally, a gas station, shelters, sewage plant, and water supply were constructed. The Army leased out approximately 2,000 acres for crop cultivation and grazing. Rialto Ammunition Storage Point remained active until late 1945. On 13 November 1945, the Army reported 2814.55 acres fee and 7.60 acres leased as excess to the War Assets Administration. Custody was assumed by the Farm Credit Administration on 9 July 1946. This acreage was then subdivided over a number of years and sold. Most of the property is currently zoned industrial and occupied by a municipal landfill and various companies, including pyrotechnics companies. Some portions of the property, including portions of the building area, have been developed into residential use. Military improvements that have been beneficially used include the water well, and concrete storage bunkers.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 11/10/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SIERRA AVENUE, FONTANA, CA SAN BERNARDINO COUNTY
SIERRA AVENUE
RIALTO, CA 92377

TARGET PROPERTY COORDINATES

Latitude (North):	34.1595 - 34° 9' 34.20''
Longitude (West):	117.4355 - 117° 26' 7.80''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	459856.8
UTM Y (Meters):	3779732.0
Elevation:	1762 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	34117-B4 DEVORE, CA
Most Recent Revision:	1988

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

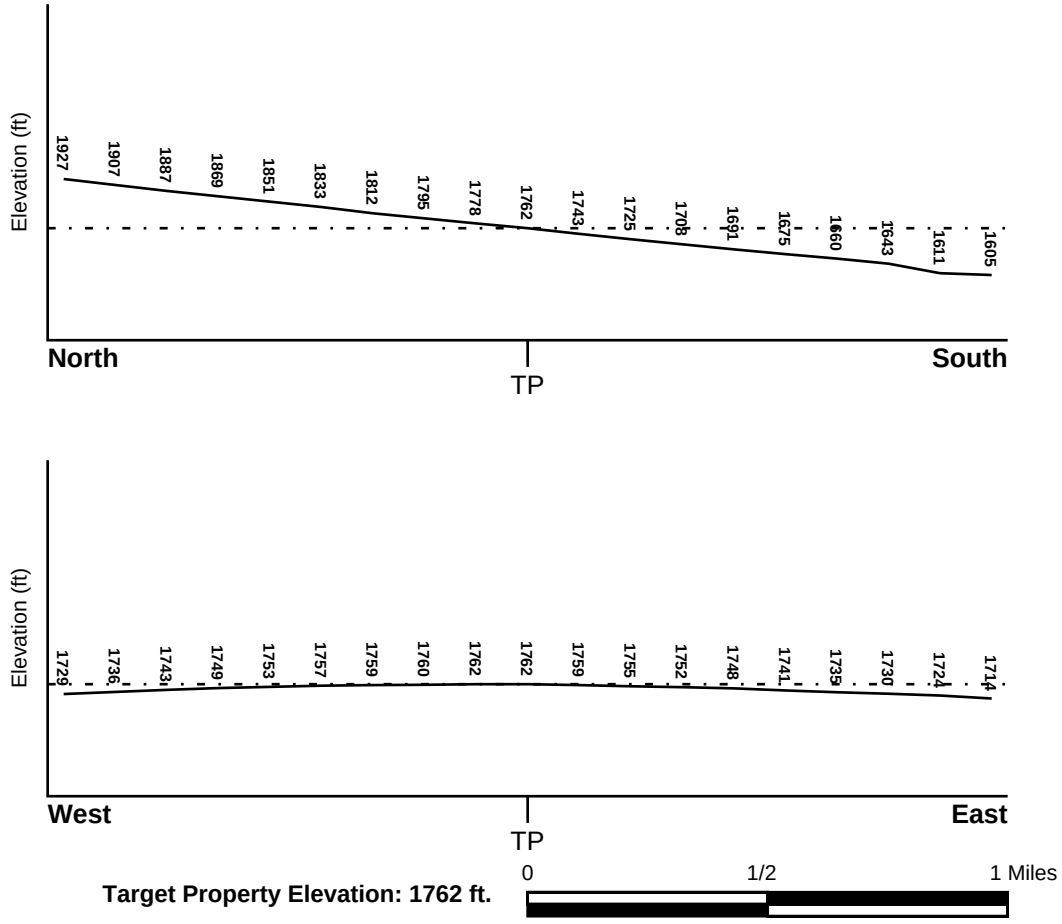
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN BERNARDINO, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06071C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Soboba

Soil Surface Texture: very stony loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	very stony loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.1 Min: 5.6
2	9 inches	59 inches	very stony sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 141	Max: 7.8 Min: 6.6

Soil Map ID: 2

Soil Component Name: SOBOBA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	11 inches	35 inches	very gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
3	35 inches	59 inches	very stony sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 141	Max: 7.3 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

APPENDIX D: QUALIFICATIONS/INSURANCE

PARTNER

Nasim Ahmed, REA

Partner Associate

Education

Master of Science, Chemical Engineering - University of Southern California
Bachelor of Science, Chemical Engineering - BUET, Bangladesh

Registrations

California Registered Environmental Assessor (REA I- 08051)

Summary of Professional Experience

Mr. Ahmed has over 13 years experience in the environmental service industry. He is familiar with all aspects of Due Diligence Property Assessments and the needs and requirements of varied number of reporting standards, including the ASTM standard, EPA's All Appropriate Inquiry (AAI), and customized client formats. Mr. Ahmed is a certified AHERA Asbestos Building Inspector with experience developing and implementing asbestos, lead-based paint, PCB, and radon Operations & Maintenance (O&M) Programs. Mr. Ahmed has also performed Phase II Subsurface Investigations, Regulatory Compliance Assessments, and Limited Property Condition Assessments.

Mr. Ahmed has performed over 1,000 Phase I Environmental Site Assessments and Environmental Transaction Screens. He has provided daily client support and management of environmental, engineering and associated projects in the due diligence process. Some of his other client management duties have included assessment of current and potential collateral properties for applicable due diligence requirements, with "cradle to grave" client support of projects through loan closing (including addressing client concerns, comments and revisions). He has performed Phase I ESAs, Phase II Subsurface Investigations, and Regulatory Compliance Assessments on numerous multi-acre, multi-tenant industrial, commercial office, retail and multi-regional retail mall complexes, such as the Glendale Fashion Center, Howard Johnson Hotel and Rite Aid. He also has developed and implemented asbestos, lead-based paint, lead in water, and radon Operations and Maintenance (O&M) Programs.

Finally, Mr. Nasim's diversity across residential, industrial, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the Southwest region of the United States.

Shawn Askew
Staff Professional II

Education
Civil Engineering Technology Major, Southern Polytechnic State University

Training & Registrations
ASTM E1527 Phase I Environmental Site Assessment Course, 2003

Asbestos Inspector: EPA-Model Accredited Asbestos in Buildings: Inspection & Assessment Course (with current refreshers), from 2004

Lead-Based Paint Inspector: EPA-Target Housing & Child-Occupied Facilities Course (with current refreshers), from 2004

Mold Assessment and Remediation in Buildings Course, 2007

OSHA 40-Hour Hazardous Waste Operations Emergency Response (HAZWOPER) Course (with current refreshers), from 2008

Environmental Review Procedures for Responsible Entities Course, U.S. Dept. of Housing & Urban Development Region IV, 2008

Level 1B Erosion & Sediment Control Advanced Fundamentals, Georgia Soil & Water Conservation Commission, #0000058439, from 2009

Summary of Professional Experience
Mr. Askew has eight (8) years of experience in the environmental and engineering service industries. He has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Askew has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Phase II Subsurface Investigations, Remediation Design projects, Property Condition Assessments (PCAs), Small Loan PCAs, Construction Progress Monitoring, Asbestos Surveys, Lead-based Paint Surveys, Radon Studies, Mold Assessments, and Lead-in-water sampling and analysis. Mr. Askew has performed over 250 Phase I Environmental Site Assessments in twenty-four (24) states.

Mr. Askew served as a project manager on large industrial sites involved with Brownfield initiatives for transfer, sale, and redevelopment of several closed industrial facilities in the state of Alabama. Duties included strategy and planning of future redevelopment of property based on current environmental conditions and determination of proper remedies required based on future use or conceptual development and construction scenarios. Duties also included working with legal counsel to review sale agreements to assure conditions of sale matched the selected

remedies at the sites as well as technical management during the assessment, remediation design, and remedial implementation activities at the sites.

Mr. Askew has been involved with conceptual design, feasibility studies, treatability studies, construction design, and implementation of construction activities associated with several remediation projects including soil and groundwater treatment systems, surface water sediment removal and stabilization, and design and inspection of construction and demolition site storm water best management practices (BMP).

Mr. Askew has also served as a project manager on several municipal separate storm sewer system (MS4) inventories in the state of Georgia. Duties included direction and advice for field surveying crews, oversight of GIS cartography, inspection of highly visible pollutant sources, determination of municipal maintenance priorities, and compilation of annual municipal National Pollutant Discharge Elimination System (NPDES) reports to the Georgia Environmental Protection Division (EPD).

Finally, Mr. Askew's diversity across residential, industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's team in the Southeast region of the United States.

Mark Lambson
Principal

Education
Bachelor of Arts Degree, Public Administration and Economics.
San Diego State University

Affiliations
National Association of Real Estate Investment Trusts (NAREIT)
International Council of Shopping Centers (ICSC)
U.S Green Building Council (USGBC)
San Diego Habitat Conservancy, Board of Directors

Summary of Professional Experience
Mr. Lambson is a true veteran of the commercial real estate services industry. He has over 16 years of experience managing and performing environmental and engineering consulting projects on a national level. Mr. Lambson serves as a Principal for Partner - and is located in Partner's San Diego office. Mr. Lambson currently provides client management and consulting to a nationwide client base - and specializes in advising "equity" clients during the acquisition phase of commercial property transactions in the U.S., Mexico, and Canada.

Mr. Lambson has assisted clients on over 9,000 commercial real estate transactions throughout his career. His due diligence résumé includes experience at all levels, and includes advising REITs, developers, property managers, retail companies, commercial brokers, mortgage brokers, attorneys, lenders, and real estate investment groups with the following nationwide services:

- Property Condition Assessments (PCAs)
- Individual Building System Inspections for Roof, Mechanical Electrical Plumbing (MEP), Elevator, Structural, Façade, and ADA
- Phase I Environmental Site Assessments (ESAs)
- Phase II Subsurface Investigations (Soil and groundwater sampling and analysis)
- Phase III Remediation Services
- Asbestos, Lead, Radon, Mold Sampling
- Environmental Transaction Screens
- Seismic Assessments (PMLs)
- Energy Audits, Benchmarking, and LEED-related services
- Fannie Mae / Freddie Mac / HUD Due Diligence
- Geotechnical
- Zoning Reports
- ALTA Surveys

Project Experience

Building Sciences

- Property Condition Assessment, MEP Report, Roof Report, Elevator Report, Structural and Seismic Assessment for a high-profile Class A office campus acquisition in the Bay Area
- ADA Compliance Review for a 400-unit apartment complex in Southern California
- Fannie Mae Property Condition / Physical Needs Assessment services for a 5400-unit multifamily portfolio in Nevada

Environmental Assessments

- Phase I and Phase II Environmental Assessments for a 75-acre aerospace facility in the Northwest United States
- Over 500 Phase I Environmental Site Assessments for a national fast-food chain
- Environmental consulting for over 1 million acres of desert land in California, Nevada, and Arizona

Land Surveys

- ALTA Surveys for 2400-unit apartment portfolio in the Midwest

Multi-Site Portfolios

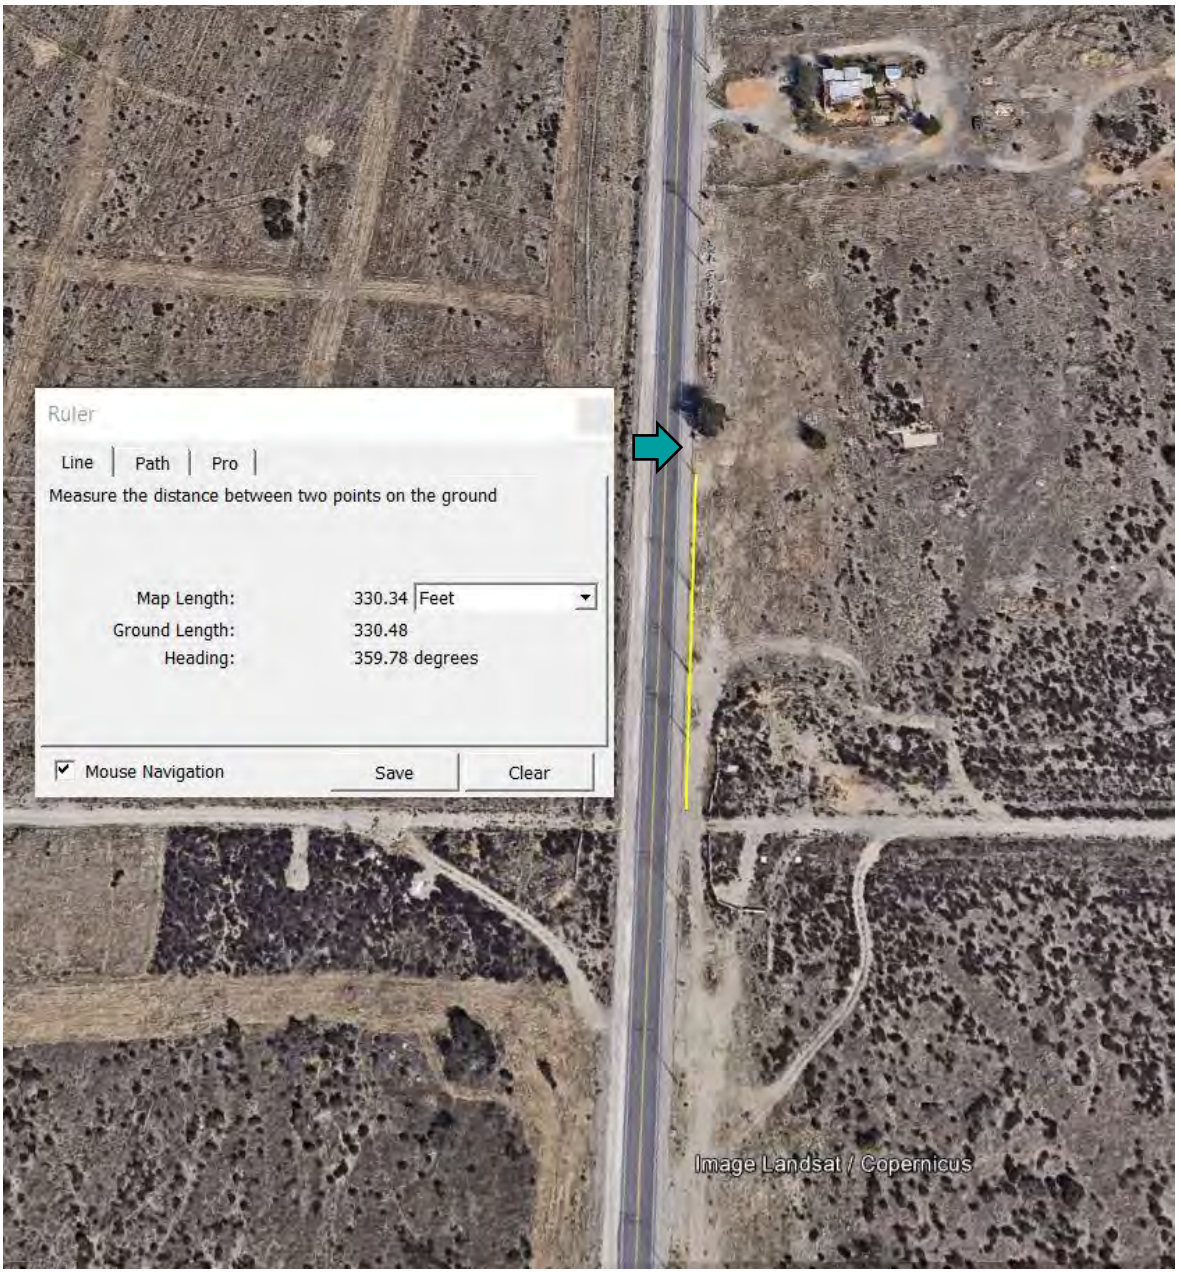
- 113-site office portfolio acquisition for a national REIT
- 122-site hotel portfolio for a national lending institution
- 55-site hotel portfolio acquisition for a private investment group
- 68-site healthcare portfolio acquisition for a national REIT

Energy and Water Efficiency

- Energy & Water consulting for a national property owner that operates and manages 30 retail and office centers on the West Coast and Texas

International

- International experience performing acquisition due diligence projects in all 50 states, Mexico and Canada



In addition to conducting many types of transactions, Mr. Lambson has provided services on many types of property, including, but not limited to:

- Multifamily
- Student Housing
- Condominiums
- Office
- Retail
- Health Care
- Medical Office Buildings
- Restaurant
- Convenience Stores
- Hotel
- Industrial
- Flex/Warehouse
- Distribution Centers
- Manufacturing
- Life Sciences
- Aerospace
- Vacant Land
- Golf Courses
- Country Clubs
- Self Storage
- Day Care Facilities
- Religious
- Solar and Wind Energy
- Telecommunication Towers
- Schools and Universities
- Government Buildings and Property

Mr. Lambson takes pride in his work, and is always available to be of assistance to his clients. Being responsive, thorough, and detail-oriented helps Mr. Lambson to maintain longstanding professional relationships with his local and nationwide clientele.

1.0 INTRODUCTION

This report presents the results of our Phase I Environmental Site Assessment performed on the subject property known as 330 Feet North of NE Corner N Sierra Avenue and W. Casa Grande Drive in the City of Fontana in San Bernardino County, California. There were no Special Conditions for this Report. The User is the addressee above.

The site inspection was performed on Thursday November 16, 2017.

A Preliminary Title Report was provided by the Client to review for Environmental Liens. None were identified in that report.

This report relies in part upon a study done of base closures prepared by Science Applications International Corporation for the U.S. Army Corps of Engineers Los Angeles District in 2004. A map from that report with the former storage area superimposed is in 12.3 Topographic Map in the Appendix and shows the subject property and adjoining and adjacent properties north, south and directly east outside the area of concern.

The subject property was on the western edge of the Rialto Ammunition Back-Up Storage Point (Rialto Military Reservation) from 1941 until 1945 when the Rialto Military Reservation was declared excess and sold off over the next couple of years. The first mention of the subject property according to the title report is in 1947 when it was quit claimed by the United States to Paul Kenda and Theresa Kenda, his wife, dated April 26, 1947. It is shown as a residential property in 1953 and remained as such until recent years when the residential structure was demolished and the land became vacant land with concrete foundation only for the former residence. There appears to have been ancillary buildings such as a garage which are no longer physically evident.

Based upon all that was learned during the research, no Environmental Liens are expected.

Current State of California & Federal Agency Web Data Reviewed For This Report

*	Cal-EPA	Envirostor
*	Regional Water Quality Control Board	Geotracker
*	Dept of Conservation (DOGGR)	Div of Oil & Gas
*	SCAQMD	Finds

No *Significant Data Gaps* were identified. Greatest reliance was on Building Records with the San Bernardino County Assessors Office, Base Closure Report and Historical Aerials.

Cross Streets Directories were not reviewed for known occupancies due to the known occupancies of the subject property.

Sanborn Fire Insurance Maps were not available for the completion of this report as they were discontinued before property development. (See appendix)

An Underground Tank Research Request was not submitted due to the known activities on the subject property since the early 1900's and lack of any indicators for underground storage tanks in operations.

De Minimis Environmental Conditions include environmental concerns identified by S&S that warrant discussion but do not qualify as RECs, as defined by the ASTM Standard Practice E1527-13. S&S's assessment did not reveal any significant De Minimis environmental conditions associated with the subject property or nearby properties.

S&S's Assessment includes a review of as built drawings and specifications printed on the drawings and permits used in the construction of the buildings as available. This review and site inspection related to Scope Considerations and Non-Scope Considerations or De Minimis Environmental Conditions associated with the subject property or nearby properties including asbestos containing materials, radon, lead-based paint, lead in drinking water, mold, flood plain and unsatisfactory indoor air quality that were further inspected with the results in 2.0 Principal Findings.

Stormwater is the responsibility of the County of San Bernardino. Stormwater soaks into or runs off the subject property then into the County of San Bernardino stormwater system.

This report is intended to satisfy the requirements of a Phase I Environmental Site Audit as outlined in the ASTM E-1527 2013, ASTM 2600 -15 Standards, the EPA "*All Appropriate Inquiries"* November 2006 ruling, and the SBA May 1, 2015 Requirements.

Report Organization

This report is divided into sections which discuss the field investigation, government records search, regulatory agency contacts and recommendations. Appendices follow the text

1.1 Purpose and Scope of Work

The purpose of a Phase I Environmental Site Assessment is to discover any past or present environmentally-related events which may negatively impact the subject property. This includes a search of all available records concerning the property and the performance of an on-site inspection. Procedures followed in the performance of a Phase I Environmental Site Assessment include executing a government records search, researching permits for the site where prudent, interviewing the tenants of the subject property or neighbors in close proximity, studying aerial photographs, interviewing personnel at the appropriate regulatory agencies and conducting a physical survey of the subject property.

1.2 Involved Parties/Information Sources

This ***S & S Commercial Environmental Services, Inc.***, Phase I Environmental Site Assessment is produced through the efforts of an Environmental Professional EPA CFR Title 40 Section 312.22, working in conjunction with Federal, State and county regulatory agencies. *Environmental Research Records* maintains a comprehensive, computerized data base of pertinent, environmentally-related records, known as an *ERS Report*, which is updated on a regular basis. This data base is researched for Category I, II, III and IV sites within a mile of the subject property and a report is generated based upon the available regulatory records. The report is reviewed for sites that might impact subject property. Inquiry is directed toward sites within a 2,000 foot hazardous waste disclosure zone.

The field investigation includes a site assessment, observations of the neighboring facilities and verification of permits and building records, as necessary.

A Google search was the only Other Historical Source used (ASTM §8.3.4.9) due to the nature of the former parcel and the other information available to determine history of use.

The 2006 EPA "All Appropriate Inquires" provides for a determination by the Environmental Professional CFR Title 40 Section 312.22 as to what records are necessary to understand a subject property history and the potential for Environmental Problems. The ASTM 1527 2013 Standard provides a list of possible sources of information for the Environmental Professional to use to determine that history.

Property tax records (ASTM §8.3.4.3) and Zoning/Land use records (ASTM §8.3.4.8) were not considered significant sources for information due to the known history of the individual parcel making up the subject property, the known current and former occupants and the building permit history. (ASTM §8.3.4.7)

Recorded land title records (ASTM §8.3.4.4) are part of a Title Report which was requested as part of the contract and is the Clients Responsibility per ASTM 1527- 2013 Standard. The new standard states in summary that in order to satisfy AAI, a user must conduct a search for the existence of environmental liens or AULs that are filed or recorded against the property.

While not provided, a Full Title Report was not deemed necessary by this Environmental Professional to evaluate the environmental status of the property based upon the information identified in the research for this report.

Definitions modified and added in the ASTM-1527 2013 Revision as approved by the EPA include:

a. Simplified Recognized Environmental Condition (REC) definition to "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

b. Stated a Limitation on the definition of an HREC (historical REC) to closed RECs that have been completely resolved ("clean closure") with no restrictions. Those undergoing continued maintenance or monitoring should be discussed.

Also for HREC's, if there has been a change in the regulatory criteria and if the Environmental Professional (EP) considers this past release to now be an REC at the time the Phase I ESA investigation is conducted,"... the condition shall be included in the conclusions section of the report as a REC."

c. Review of Title and Judicial Records for Environmental Liens or Activity and Use Limitations (AULs) continues to be a User (Client) requirement that is to be conducted by a Title professional, not the EP or Phase I Professional. Buyer or Lender needs to ensure that Title companies are searching judicial records.

d. (VES) Vapor Encroachment Screening under E2600-15 is a referenced document in E1527 2013 under Section 2.1. Under this Standard Vapor migration should be treated no differently than the way contaminated groundwater migration is considered in a Phase I ESA and should be discussed using the CERCLA definition of "release" and "environment" which includes vapor.

Section 2.1 of ASTM E1527 Standard - Vapor Encroachment Screening - 42 U.S.C. § 9601(22) defines a "release" as "any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discharging of barrels, containers, and other closed receptacles containing any hazardous substances or pollutant or contaminant" This includes solid, liquid and the ensuing migration of vapor into soil and water or from water upwards through soil occupied areas.

There were no Vapor Encroachment Issues Identified on within a significant distance to the subject property. The former ammunition storage area to the east was found to be a secondary source of storage of ordnance with no work an minimal off loading prior to shipment to the port.

2.0 PRINCIPAL FINDINGS

2.1 Summary of Operations and Environmental Discrepancies

General Historical Operations

The subject property was agricultural or vacant land until 1941 when it became part of the Rialto Ammunition Back-Up Storage Point (Rialto Military Reservation).

The subject property was located on the west side of the Rialto Military Reservation west of the ammunition dump according to Final Report of Operational History 1941-195 - Rialto Ammunition Back-Up Storage Point RIALTO, CALIFORNIA Prepared for U.S. Army Corps of Engineers Los Angeles District in 2004 by Science Applications International Corporation.

The Rialto Military Reservation was subdivided over the next few years with the first notice in the preliminary title report... ”Quitclaim Deed from the United States of America, to Paul Kenda and Theresa Kenda, his wife, dated April 26, 1947 and recorded May 3, 1947 in Book 2050 Page 217 official records recites.

"Subject to easements and rights of way now existing or reserved; and subject, also, to a reservation of all structures, fences, railways, trackage, electrical and telephone systems, and other improvements constructed or erected by the United States, together with the right to remove such structures, fences, railway trackage, electrical and telephone systems, and other such improvements."

The easement across the subject property is as follows: “An easement for the purpose shown below and rights incidental thereto as set forth in a document: Purpose: pole lines Recorded: in Book 3024 and Page 253, of Official Records. Affects: described as follows: Beginning at a point on the East line of Sierra Avenue, as the same now exists, distant 370 feet North of the South line of the Southwest 1/4 of the Northwest 1/4 of said Section 20, thence East parallel with the South line of the Northwest 1/4 of said Section 20, 357 feet.”

The 1953 Historical Aerial Photograph in the appendix shows a house on the subject property with vacant land around the subject property and a second residence further north. No other operations were noted.

Current Operations

The subject property is a vacant parcel with a concrete foundation for the former house only and a few piles of debris and a couple of old asphalt roofing shingles. There are no regulated materials used or generated on site.

Neighboring Properties
North is a vacant parcel then a single family home.

East is vacant land.
Former Operations To The East Of The Subject Property (1941 - 1945)
The subject property was on the western border of the "...Rialto Ammunition Back-Up Storage Point [which] served as an inspection and storage facility for ordnance-loaded railcars until they were dispatched to Victory Pier at the Los Angeles Port of Embarkation, where ordnance was loaded onto ships sailing for the China-Burma-India Theater of War (83). Storage of ordnance-loaded railcars at the Rialto Ammunition Back-Up Storage Point enabled the number of ordnance-loaded railcars at Victory Pier to be kept to a minimum..".

West is N. Sierra Avenue then vacant land.

South is vacant land.

There were no operations indicated currently on or off-site which would be related to environmental discrepancies.

2.2 Summary of Building Materials and Environmental Discrepancies

Building Materials - The subject property was constructed as a residential home in the late 1940's with the superstructure having been removed leaving only a concrete pad.

The following section regarding asbestos and Pcb describes the current status of asbestos and Pcb for any future construction.

2.2.1 Asbestos

Background - Asbestos is a natural occurring mineral fiber utilized in a multitude of building material products due to its high tensile strength and excellent fire resistant properties. The *EPA* has defined asbestos-containing materials as being either *friable* or *non-friable* materials. *Friable* material is defined as being easily broken or crushed by hand pressure (e.g., soft acoustical ceilings or blown-on fireproofing).

Non-friable asbestos is generally found in pre-manufactured products that bind the asbestos in an adhesive material, such as roofing felts, floor tile, transite pipe and mastics. This is significant, due to the ability to create a fiber release and cause human exposure during normal activities. The *EPA* currently does not require the removal of asbestos-containing materials that do not present a problem for human exposure. Most *friable* asbestos-containing materials were banned in building materials by 1978 with stocks on shelves allowed to be sold until 1980.
In October 1995, a new *FED-OSHA* ruling became effective which redefined building materials perceived as asbestos-containing into four classes of work and modified the ay in which these asbestos-containing materials are handled.

Under this ruling, "thermal system insulation and sprayed-on or troweled on or otherwise applied surfacing materials installed before 1980 are considered PACM (presumed asbestos-containing material)" unless sampled and identified by a certified individual as to asbestos content. These materials are considered high risk for abatement and their removal is classified under Class I removal activities.

Other building materials such as "floor or ceiling tiles, siding, roofing, transite panels [floor sheeting, floor or roof mastics] are also considered PACM (presumed asbestos-containing material)" unless sampled and identified by a certified individual as to asbestos content but are considered low risk materials for abatement and their removal is classified under Class II, III and IV removal and repair and maintenance operations.

Significant under these new regulations is the deletion of the category of "Small Scale Short Term Duration" removal activities which regularly allowed Class I, II, III and IV activities to proceed with less regulatory oversight.

In July 1996, *CAL-OSHA* adopted the *FED-OSHA* guidelines as part of California law subject to some of the more stringent requirements pre-existing in California under Prop 65, the Conelly Bill and various other requirements or legislation passed by the California legislature.

Under the *NESHAPS* laws of 1976 and as later amended, asbestos does not have to be removed from a facility until such time as it undergoes major renovations or is demolished. Until that time, the present emphasis by the *EPA* is to recommend repair of any damaged areas and management of the asbestos-containing materials.

Prior to any renovation work being done involving asbestos-containing materials of 260 linear feet or 160 square feet in area, the local branch of the *EPA* must be notified.

Prior to the demolition of any building or house, mandatory bulk sampling must be accomplished and, if asbestos is present, notification must be made to the local branch of the *EPA* and *Air Quality Management District*.

In California, for the removal of any asbestos-containing materials greater than 0.1% by weight, notifications must also be made to *CAL-OSHA* and a licensed contractor with an asbestos certification is required for any work which exceeds 100 square feet.

2.2.2 Building Materials Presumed to Contain Friable Asbestos

Friable asbestos-containing building materials were banned for manufacture and sale in the United States in 1978 and all stocks remaining on the shelves are presumed to have been used up by 1980. There are no buildings and no friable asbestos on the subject property.

2.2.1.2 Building Materials Presumed to Contain Non-Friable Asbestos
Asbestos was never banned from use in building materials such as floor tile, cement-based products and roofing materials, as these materials were considered *non-friable* by the *EPA* and not potentially a great hazard. After *friable* asbestos was banned, significant labeling requirements went into effect for the *non-friable* asbestos-containing materials and many substitutes became available. Asbestos-containing flooring materials and mastic were used less and less in construction after 1978 and, by 1984, their use in buildings constructed in the United States was nearly non-existent due to the labeling requirements and potential liability to both the manufacturer and real estate developer. Building materials presumed to contain *non-friable* asbestos are as follows:

Floor Tiles - There are no floor tiles on the subject property which are presumed to contain *non-friable* asbestos.

Roofing Material - There is no roof and no presumed *non-friable* asbestos.

2.2.2 Radon
The real property at 330 Feet N of the Northeast Corner of N Sierra Avenue and Casa Grande Drive Fontana, CA in a Radon Zone "2" and no Radon Exposure Issues are expected.

EPA Radon Zone: 2 (Predicted avg for county: 2 to 4 pCi/L)

(Predicted avg for county: 2 to 4 pCi/L)For zip code 92336:
Number of tests per zip code: 3
Number of tests where radon is > 4 pCi/L: 0
Percentage of test where radon is > 4 pCi/L: 0.00%

2.2.3. Lead Paint
Paint containing more than 0.06% (by weight of dried product) lead was banned for residential use in the United States in 1978 by the U.S. Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303).

There are no structure and no lead paint is expected.

2.2.4. PCB Poly Chlorinated Bi Phenyl
Pursuant to 40 CFR 761.2(a)(2), mineral oil-filled transformers which were manufactured prior to July 2. 1979, whose PCB concentration is unknown, and mineral oil-filled transformers whose date of manufacture is unknown, must be assumed to be PCB contaminated containing > 50 ppm PCBs, but < 500 ppm PCBs.

All pole-top and pad mounted distribution transformers manufactured before July 2. 1979, must be assumed to be mineral-oil filled containing Pcb. Pcb was outlawed for use in Transformers and Florescent Light

Fixture ballasts in 1978/79. There are no florescent light fixtures on the subject property and no pcb.

.

Southern California Edison supplies power to Fontana, CA. SCE has replaced any pcb in existing transformers in their system or never specified their use.

2.2.5. Lead In Drinking Water

A prohibition on lead in plumbing materials has been in effect since 1986. As there are no buildings, lead in valves is not suspected on the subject property.

2.2.6. Mold

Mold results from rainwater intrusion and from leaking plumbing pipes. Mold was not seen and is not an issue.

2.2.7 Flood Plain

Panel: 06071C7920H, Effective Date: 8/28/2008
Zone X - Area of minimal flood hazard, usually depicted on FIRMs as above the 500- year flood level.

2.2.8. Wetlands

The subject property is not part of any National Wetlands Inventory and no Wetlands were noted on the subject property during the site inspection.

2.2.9. Indoor Air Quality - Subjective

No unsatisfactory indoor air quality was identified via Olfaction (smell) in occupied areas and areas of ceiling damage. There were no areas identified in this research of concern for Unsatisfactory Indoor Air Quality from chemicals, gases or regulated materials being used on or off site, present from past activities or building materials used in construction of the building complex.

2.2.10 Condition of Onsite & Surrounding Vegetation

The onsite and surrounding vegetation were brown from lack of water only and not stressed by corrosive chemicals or chemicals.

2.2.11 Underground Tanks

There were no underground tanks or vessels noted on or adjoining the subject property or in a significant distance of the subject property.

22. 12 (VES) Vapor Encroachment Screening

Vapor Encroachment Screening did not identify any potential sources of vapor contamination on the subject property or in the EPA 100 foot Vapor Encroachment Zone. See Appendix Section 12.9.

3.0 SITE OVERVIEW

3.1 Location

The subject property is located on the east side of N. Sierra Avenue north of West Casa Grande Drive, the 210 Foothill Freeway and east of Citrus Avenue in the City of Fontana located in San Bernardino County California.

The land use in the general area is commercial, recreational and residential.

3.2 Adjacent Properties

North is vacant land then a residential home.

East is vacant land then single family homes.

South is vacant land.

West is N Sierra Avenue then vacant land.

There were no operations indicated currently on or off-site which would be related to environmental discrepancies for the subject property.

There were no current emissions noted from any of the adjacent or adjoining properties during the site inspection which would be of concern for the subject property.

3.3 Site Description

The subject property is an rectangular shaped property approximately 21,120 Sq ft in area with a concrete foundation for a former small house on the subject property. There are two trees on the west side of the property which appear to have been part of a former entry to the subject property. There was one asphalt shingle noted, a few piles of debris consisting mostly of rocks and dirt and an old domestic sprinkler hose.

There was nothing of significance environmentally.

4.0 SITE HISTORY AND OPERATIONS

4.1 Building Permit History

No building permits were identified for the subject property.

4.2 Operations

Former Operations - The subject property was vacant then vacant land on the south western edge of a military reservation from 1941 to 1945 then residential from 1947 until the past few years.

The history of the Rialto Military Reservation from the Science Applications International Corporation 2004 Report are as follows:

- 31 December 1941-9 February 1942: acquisition of2814.55 acres of land near Rialto (southwestern edge N. Sierra Avenue and location of subject property)
- February 1942, onwards: improvements made to construct the igloo storage area, classification yard, and administration buildings.
- 16 November 1942: Rialto Ammunition Back-Up Storage Point is activated.
- 2 December 1942: operations begin with the first railcar received.
- January to August 1943: storage of small arms ammunition in the igloos for DTC operations in the Mojave Desert.
- May 1944: 220 railcar holding area constructed.
- 30 November 1944: 7 .6 acres acquired as a no-fee easement for railroad spur.
- September 1945: operations cease.

- 16 October 1945: Rialto Ammunition Back-Up Storage Point put on "caretaker" status.

- 13 November 1945: Rialto Ammunition Back-Up Storage Point declared surplus by the Army Service Forces and transferred to the War Assets Administration for disposal.

- 9 July 1946: the Farm Credit Administration assumed custody and responsibility for disposal of the land and improvements.

April 28, 1947 the subject property is quit claimed to Paul Kenda and Theresa Kenda who built a residence.

The property is expected to have been on a septic system with seepage field. There was no indication that waste other than domestic waste was discharged into the private sewer.

Current Operations - The property is currently vacant There were no uses identified using regulated materials.

4.3 Operational Permits, Manifests and Material Safety Data Sheets (MSDS)

EPA ID Number - An *EPA* ID number identifies a facility to the State and Federal governments as a hazardous waste generator. There is no record of waste being removed from the subject property and no RCRA numbers.

Hazardous Waste Manifests - A hazardous waste manifest file is maintained when hazardous materials are transported and disposed of from a site. There are no regulated materials being used on the subject property and no manifests for this report.

Air Emissions - The *South Coast Air Quality Management District* issues permits for sites that are emitting hazardous waste into the atmosphere from their operations. According to Find there is no record of permits for the subject property.

Material Safety Data Sheets (MSDS) - Material Safety Data Sheets are required for chemicals and products being used in businesses which may be of a hazardous nature. There are no regulated materials being used on the on the subject property and no MSDS for this report.

5.0 ENVIRONMENTAL SETTING

5.1 Regional Physiographic -

The subject property is at an elevation of around 1754 feet above sea level, according to the Devore 7.5 minute US Geological Survey Map section in the appendix.

The surficial alluvium underlying the site is composed of alluvial fan deposits derived from basement rocks of the San Gabriel Mountains. The thinner upper layer (200+ feet) consists of undifferentiated younger alluvium, overlying a thicker sequence (1,100+ feet) of older semi-consolidated sediments (*DWR*, 1970).

The site is located in a seismically active region with active faults within 30 miles: San Andreas, San Jacinto, Cucamonga, Glen Helen and Whittier-Elsinore fault zones. The San Jacinto fault and Cucamonga fault zones are within three miles of the site. No active or potentially active faults have been identified on the site

Rocks beneath the surficial alluvium are comprised of semi-consolidated terrace deposits, underlain by a thick sequence (2,000+ feet) of folded and faulted sedimentary rocks known as the San Timoteo beds. Beneath the San Timoteo formation is a series of well-stratified beds of marine sandstones, shales, conglomerates and lava flows that reach a thickness of 24,000 feet in the extreme western portion of the Chino Basin. The basement rocks underlying the basin structure are a complex of crystalline metamorphic and plutonic rocks of granitic composition (*DWR*, 1970).

Hydrogeology -

The hydrogeology of the site is complex and incompletely characterized. Depth to groundwater at the site is about 300 feet below ground surface, and flow is to the south and southeast. The site lies within the Upper Santa Ana River Watershed in the Rialto-Colton groundwater basin. Horizontal groundwater flow from the basin is impeded by the San Jacinto Fault which separates the basin on the northeast from the Lytle and Bunker Hill Basins, and on the northwest, southeast, and southwest by groundwater barriers which have been identified from large groundwater elevation differences historically measured in groundwater production wells.

5.2 Soil Conditions

Soil at the site is typical of alluvial fans and terraces with surface soil and subsoil mostly sandy silty clay, with gravel washed from Lytle Creek with no significant uses identified in the property history. There are no wetland issues.

There were no contours, mounds or anomalous conditions to indicate the disposal of regulated materials on-site.

There were no operations noted on the subject property past or present which would indicate contamination.

Soil Type: (USDA Soil Survey Geographic Database) (SSURGO)
Soboba gravelly loamy sand, 0 to 9 percent slopes
Map Unit Type: Consociation, Hydric: No
Drainage Class: Excessively drained
General Information: Sandy-skeletal, mixed, thermic Typic Xerofluvents

5.3 Groundwater Conditions

Groundwater is expected around 300 feet. No groundwater testing was included in this report. There does not appear to have been any operations on or adjacent to the subject property which would indicate problems.

6.0 RESULTS OF INVESTIGATION

6.1 Site Inspection Observations

The subject property is a vacant parcel with sand, gravel, some vegetation and dirt. There was nothing significant environmentally to indicate problems with the subject or surrounding properties.

6.2 Regulatory Agency Contacts

6.2.1 Fontana Water Company

The Fontana Water Company was previously contacted concerning the water depth and supply in the area. It was found that the first potable water is at about 600 feet, the first depth from which they draw water from their wells. Mr. Carlos Simbres of the Fontana Water Company said that the water to be supplied to the subject property comes primarily from three different areas: Lake Silverwood via the California Aqueduct, groundwater wells and canyon water sources. He said that this water is blended with Metropolitan Water District water due to the high nitrate content.

Mr. Simbres stated that the Fontana Water Company tests all wells on a regular basis to assure conformance with Title 22 regulations to make sure that all water supplied to end users meets the State of California's drinking water quality standards.

6.2.2 California Department of Conservation, Div of Mines and Geology

The *California Department of Conservation, Division of Mines and Geology*, was contacted regarding the proximity of active earthquake faults. The subject property

is not part of any special studies zone pursuant to the Alquist-Priolo Earthquake Fault Zones Act of 1972, which mandated studies of active faults in California. An active fault zone is described by the *State Mining and Geology Board* "as one which had surface displacement within the Holocene time (about the last 11,000 years)."

6.2.3 California Division of Oil and Gas

A review of the *State of California Division of Oil and Gas* Maps did not indicate that oil wells were drilled within a mile of the subject property. It does not appear that any wells were surface-drilled into the subject property. (See DOGGR map section in appendix)

6.2.4 Southern California Edison Company

Mr. Don Garza, Service Planner, was previously contacted concerning Pcb oil in pole and pad-mounted transformers in the area. He said that it is unlikely that any Pcb are present in the transformers, as they were never specified. He stated that *Southern California Edison* would be happy to test any transformers for a fee.

6.2.5 South Coast Air Quality Management District (SCAQMD)

Find was researched regarding air emission permits on the property. There were no permits or applications identified for the subject property.

6.2.6 Department of Health Services, State Department of Radon

Mr. David Quinton, Environmental Health Specialist with the *State Department of Radon*, was contacted regarding the presence of radon in the area. He said that the most recent studies done predicted less than 2.4% of homes and less than 0.04% of the schools in the State of California would be over the *EPA's* action level of four picocuries/liter. He stated that this study was performed in existing homes and that there was no effective methodology of correlating soil samples to houses. Mr. Quinton explained that much is dependant upon the soil under a residence and the type of foundation a house is built upon. Additionally, the standard is based upon exposure of 18 hours per day for 70 years, which would not correlate to a business exposure. Mr. Quinton said that, with the exception of Madera County in Northern California, the *State of California* has nearly concluded all radon testing in the State and has found that there is little likelihood of a significant radon exposure in California.

Mr. Quinton said that business exposures had not been within the parameters of any of these studies due to the limited time most business people are in one location. He also said that the State does not plan to study businesses based upon the previous studies and that there is no standard for a commercial enterprise being conducted outside of a home.

EPA Radon Zone: 2
(Predicted avg for county: 2 to 4 pCi/L).

6.2.5 San Bernardino County Assessor Records, Orange Coast Title

According to the preliminary title report the subject property was re-surveyed in 1975. The subject property was transferred to DELEON, ANDREW J; DELEON, SYLVIA De Leon in 1986 and to the City of Fontana in 2004.

No problems were identified for the subject property as to former users or operators of the subject property.

6.2.6 Fontana Building Department

No records of residential properties in the 1940's are available.

6.3 Personal Interviews, Site Records Review

6.3.1 Personal Interviews

The subject property is vacant and no interviews were deemed necessary based upon the research.

6.3.2 Site Records Review

The subject property is vacant. There were no records to review.

6.4 Historical Aerial Photograph Review & Sanborn Fire Insurance Map

Available Sanborn Fire Insurance Maps and Aerial photographs and topographic map from 1938, 1959, 1966, 1995, 2003, 200, 2007, 2012, 2014 and 2016 along with a 1966 USGS Aerial Topo were reviewed. Photographs, Sanborn Fire Insurance Maps and topographic maps in an aerial review are specifically examined for evidence of hazardous materials, as well as on and off-site features that may affect the environmental quality of the property. These features include sumps, pits, ponds, lagoons, aboveground tanks, landfills, outside storage of hazardous materials and general land use. None of those items appeared to be on or immediately adjacent to the subject property in a manner which would be of long term concern for the subject property.

Sanborn Fire Insurance Maps - There were no Sanborn Fire Insurance Maps for this report.

Photo Dated 1938 - The parcel is vacant land with agricultural land to the west, east north and south. There is a large structure on the west side of N Sierra Avenue further northwest.

Photo Dated 1959 - There is now a house on the property and a house further north. There are no other significant changes around the subject property.

Photo Dated 1966 - There are no significant changes to the subject property or surrounding properties.

Photo Dated 1995 - There are no significant changes to the subject property or surrounding properties. Residential properties are being constructed further east.

Photo Dated 2003 - There are no significant changes to the subject or surrounding properties. Residential properties are being constructed further east.

Photo Dated 2006 - The building appears to be gone from the subject property leaving only a foundation. There are no other significant changes in the area.

Photo Dated 2007 - There are no changes to the subject property. There are no other significant changes in the area.

Photo Dated 2012 - There are no changes to the subject property. There are no other significant changes in the area.

Photo Dated 2014 - There are no significant other changes to the subject property or surrounding properties.

Photo Dated 2016 - There are no significant changes to the subject property or surrounding properties.

Copies of sections of selected historical aerial photographs along with a topographic map are in the Appendix.

6.5 Synopsis of Previous Environmental Investigations

There were no prior Environmental Investigations identified or provided by the client.

CAL- EPA online information regarding possible problem properties in the area of the subject property was reviewed. No problems were identified for the subject property. (See appendix)

6.6 Summary of Government Records Search (Refer to Government Lists)

NOTE: This government records summary is based, in part, on investigating critical, or "border zone", properties near the subject property. The *State of California, Department of Health Services,* has defined these sites as being within 2,000 feet (or approximately 0.4 mile) of the subject property. Other sites more distant in proximity may be listed but not considered critical and, therefore, not further investigated.

The following is a summarized form of the detail provided in the Environmental Records Search (ERS) Report in the Appendix.

CATEGORY ONE: NPL, SPL, RCRA-TSD, RCRA-CORRACTS, SWLF, SCL, CERCLIS/NFRAP, TRIBAL LAND SITES

This category is composed of lists compiled by the *US Environmental Protection Agency* and the State of California Equivalency lists. This category includes National Priority List sites, RCRA Corrective Actions by the *EPA* and *USEPA* permitted treatment, permitted solid waste landfills, incinerator sites or transfer stations, storage and disposal facilities within a one mile radius of the subject

property. This includes sites for designation under the Federal SUPERFUND Program an the State Bond Program for sites representing an environmental concern for the discharge of hazardous wastes.

There is one Category One site listed as being within one mile of the subject property as of the date of this report. That site is nearly a mile northeast and not considered a problem for the subject property.

CATEGORY TWO:(½ mile) **LUST, DEED RSTR, TOXIC PITS, CORTESE**
The sites within this category include sites selected for possible placement on the Federal NPL list or the State risks to human health and the environment. This category also includes leaking underground tank sites from both the *Regional Water Quality Control Board* and the State mandated CORTESE lists of properties with hazardous wastes, sites with DEED restrictions and Toxic Pits Cleanup facilities. Sites within this category are provided on this list within a one-half mile as of the date of this report, with other DEED restrictions and Toxic Pits sites from 1994 and 1995.

There are no Category Two site listed involved with leaking underground tanks.

CATEGORY THREE: (1/4 mile) **RCRA VIOL, TRIS, UST/AST**
Sites in this list are the result of RCRA enforcement actions, the Toxic release inventory base, registered aboveground or underground tanks and the result of searches of any unique county data bases. The data bases range from 1994 information for underground tanks to the date of this report for information for RCRA actions and registered aboveground storage tanks.

There are no Category Three sites listed within a one-quarter mile radius of the subject property.

CATEGORY FOUR: (1/8 mile) **ERNS, GNRTR, SPILLS**
Sites in this category include ERNS, which is a national database retrieval system of Incident-Notification information as initially reported by any party regarding incidents of reported releases of oil and hazardous substances. The information in this report combines data from the *United States Coast Guard National Response Center* data base with data from the 10 *EPA* regions.

ERNS/SPILLS - ERNS/SPILLS supports the release notification requirements of Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), as amended; Section 311 of the Clean Water Act; and Sections 300.51 and 300.65 of the National Oil and Hazardous Substances Contingency Plan. There are no ERNS/SPILLS sites listed within one-eighth mile of the subject property as of the date of this report.

RCRA - Sites which generate regulated hazardous waste above a certain quantity are required to use *EPA* identification numbers and are called RCRA sites. An *EPA* identification number does not indicate a problem with a site, but merely that

they use or dispose of a minimum quantity of a hazardous waste. There are no RCRA sites listed within a one-eighth mile radius of the subject property as of the date of this report. The subject property is not an RCRA site.

7.0 DISCUSSION OF INVESTIGATION

Asbestos 1527-13 Section 13.1.5.1 **De Minimis Condition**
Building Materials Presumed to Contain Friable Asbestos
None.

Building Materials Presumed to Contain Non-Friable Asbestos
None.

Pcb 1527-13 Section 9.4.1.10 Poly-Chlorinated Biphenyl (Pcb) - **De Minimis Condition**
There should not be any pcb in any of the utility transformers on or near the site, according to *Southern California Edison* the electrical supplier to the area.

There are no suspected PCB-containing florescent light ballasts.

Aboveground Storage Tanks 1527-13 - The physical site survey did not evidence the existence of aboveground storage tanks currently or formerly on the subject.

Underground Storage Tanks 1527-13 Section 9.4.1.3 9.4.1.4 & .5 - The physical site survey did not evidence current or former underground tanks.

Air Emissions - There are no regulated air emissions from the subject property.

Water Supplies 1527-13 Section 9.4.1.9 - Former discussions with the Fontana Water Company and a review of their web site evidenced a water supply to the area which meets all of California's drinking water requirements.

Wastewater 1527-13 Section 9.4.1.10 & 9.4.4.7 - The subject property is expected to have had a septic tank and seepage system with only domestic waste disposed of. No problems are expected.

Waste Generation, Storage and Disposal 1527-13 Section 9.4.1.4.4 & .5 & .6 & .7 - The physical site survey did not evidence the current or former generation, storage or disposal of regulated hazardous waste on the subject property.

Pesticides, Herbicides, Stressed Vegetation 1527 9.4.4.3 - There was no current use of herbicides or pesticides noted beyond the normal residential and commercial insect and pest control.

Wells - Oil, Water, Injection, Irrigation, Abandoned 1527-13- 9.4.4.6 - There were no wells of any type seen on site nor were any identified adjoining the subject property

Radon - Radon comes from the natural breakdown (radioactive decay) of uranium. The *Environmental Protection Agency* (*EPA*) estimates that the average soil in the United States contains only about one part per million of uranium. Uranium is found in about 150 minerals including granite, phosphate and shale. Granite is a major concern for the presence of radon, as some deposits have been found to contain extremely high levels of uranium. The area of the subject property does not indicate any large deposits of granite material which would be of concern to test for the presence of radon. Phosphorous is an essential ingredient in chemical fertilizers and comes from phosphate rock. There does not appear to ever have been much fertilizer used around the subject property. According to Mr. David Quinton of the *State Department of Radon*, the chance of radon being a hazard in the State of California is very low. Actual testing for radon content was not conducted and is not included in the scope of this report.

Lead-Based Paint - Specific testing is required to determine if paint or other materials used in the construction of the building on the site contains significant levels of lead. These tests are not within the scope of work for this report and no investigation for lead content was, or will be, performed unless agreed to by the property owner as an additional service, incurring additional costs. There are no structures and no lead paint issues.

Vapor ASTM 2600 Section 10 - There were no sources of vapor from soil or groundwater identified. (See 12.10) Tier I Vapor Encroachment Screening (VES)

Regulatory Actions - There were no regulatory actions noted in the records reviewed regarding the subject property.

Known Site Problems - There are no known site problems.

Regional or Adjacent Problems - There are no regional problems known beyond the dry cleaner being remediated to the northwest which is not a concern due to distance and status.

8.0 CONCLUSIONS

8.1 Areas of No Apparent Concern

There are no areas of concern regarding the current or former operations on-site. The subject property was on the western edge of the Rialto Military Reservation and there was no temporary storage of munitions or ordnance on site noted in the research.

8.2 Areas of Further Concern

The record research and physical site survey did not identify any areas of further concern regarding Recognized Environmental Concerns for the subject property.

9.0 RECOMMENDATIONS

9.1 Areas of No Action

There are no recommended areas of action at this time.

9.2 Further Investigation

In this Environmental Professional's Opinion, the likelihood of contamination is so remote that no further investigation is recommended.

9.3 Performance Statement 1527 13 12.8.1- We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 - 2013 of APN 023915122 - 330 Feet North of NE Corner N Sierra Avenue and W Casa Grande Drive Fontana, CA 92336. Any exceptions to, or deletions from, this practice are described in Section 1 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

10.0 LIMITATIONS

This report is intended to satisfy the requirements of a Preliminary Phase I Environmental Site Audit as outlined in the ASTM-1527 2013 Guidelines and the 2006 EPA All Appropriate Inquiries" Standard. These standards are intended to define the scope of due diligence necessary in a real estate transaction to provide for the "innocent buyer's defense" under the SARA amendments to CERCLA.

The findings set forth in this Phase I Environmental Site Assessment are strictly limited in time and scope to the date of evaluation(s). Government records searched are limited to the accuracy of the agency prepared lists. The conclusions presented in the report are based solely on the services described therein and not on scientific tasks or procedures beyond the scope of the agreed upon Phase I Environmental Site Assessment. It is hereby acknowledged that, within the scope of this survey, no level of assessment can ensure the real property is completely free of chemicals or toxic substances.

This public records search was conducted with available Federal, State, County and City agency departments, according to recognized procedures and current availability of records. Conclusions resulting from these searches are solely a result of the same. ***S & S Commercial Environmental Services, Inc.,*** assumes no responsibility for events that are not part of these public records. This report is intended for those in privity of contract and any current lender. This report is not transferrable without written authorization. This report is not intended to be used by any other person or entity now or in the future.

All Appropriate Inquiries Final Rule

WHAT IS "ALL APPROPRIATE INQUIRIES?"
"All appropriate inquiries" is the process of evaluating a property's environmental conditions and assessing potential liability for any contamination.

WHY IS EPA ESTABLISHING STANDARDS FOR CONDUCTING ALL APPROPRIATE INQUIRIES?
The 2002 Brownfields Amendments to CERCLA require EPA to promulgate regulations establishing standards and practices for conducting all appropriate inquiries.

SCHEDULE B

At the date hereof, Exceptions to coverage, in addition to the printed Exception and Exclusions contained in said policy form would be as follows:

1. General and Special City and/or County taxes, including any personal property taxes and any assessments collected with taxes, for the fiscal year 2017 - 2018:

1st Installment:	$219.55Open	
Penalty:	$21.97	if not paid by December 11, 2017
2nd Installment:	$219.54	Open
Penalty:	$31.96	if not paid by April 10, 2018
Exemption:	Not Set Out	
Code Area:	010078	
Assessment No.	0239-151-22-0-000	

2. Assessments, if any, for community facility districts affecting said land which may exist by virtue of assessment maps or notices filed by said districts. Said assessments are collected with the County Taxes.

3. The lien of supplemental taxes, if any, assessed pursuant to the provisions of Chapter 3.5 (commencing with Section 75) of the revenue and taxation code of the State of California.

4. Water rights, claims or title to water in or under said land, whether or not shown by the public records.

5. Quitclaim Deed from the United States of America, to Paul Kenda and Theresa Kenda, his wife, dated April 26, 1947 and recorded May 3, 1947 in Book 2050 Page 217 official records recites.

   "Subject to easements and rights of way now existing or reserved; and subject, also, to a reservation of all structures, fences, railways, trackage, electrical and telephone systems, and other improvements constructed or erected by the United States, together with the right to remove such structures, fences, railway trackage, electrical and telephone systems, and other such improvements."

6. An easement for the purpose shown below and rights incidental thereto as set forth in a document:
   Purpose: pole lines
   Recorded: in Book 3024 and Page 253, of Official Records.
   Affects: described as follows:

   Beginning at a point on the East line of Sierra Avenue, as the same now exists, distant 370 feet North of the South line of the Southwest 1/4 of the Northwest 1/4 of said Section 20, thence East parallel with the South line of the Northwest 1/4 of said Section 20, 357 feet.

7. Note: Said property is also shown on licensed land surveyor's map, recorded December 10, 1975 in map Book 31, Page 57, of records op survey.

8. The terms and provisions contained in the document entitled Grant Deed
   Recorded: May 6, 2004 as Instrument Number 20040316894, of official records.

9. We find no open Deeds of Trust of record. Please verify by inquiry of escrow personnel and/or agents whether or not we have overlooked something and advise the title department accordingly prior to close of escrow.

RE: PCB's

Ballasts are used in fluorescent fixtures in business, commercial and industrial establishments, as well as in schools. One of the devices used in these ballasts is called a capacitor, which makes the ballasts operate more efficiently. These capacitors, used in ballasts made by every manufacturer in the industry, including Universal, used PCBs in small amounts until 1978, when a change was made to another liquid. Universal ballasts manufactured since January 1979 do not contain PCBs and the label of all these ballasts contain the statement "No PCB's".

The capacitor is a hermetically sealed device, which entirely isolates the PCB from human contact. The typical fluorescent ballast contained about 0.05 lbs. of 100% PCB liquid. That represents 1-2 liquid ounces. The weight of PCB used in relationship to the total capacitor weight, was approximately 15%. In relationship to the total ballast weight it varied from 0.6% (Slimline ballasts) to 1.5% (2 lamp, 40 watt ballasts). The degree of chlorination was 42%.

For HID ballasts where larger capacitors were used, it may have been as much as 5-6 ounces of liquid. In all cases the amount of "free PCBs" (the quantity that could leak if the can ruptured), was much less because most of the liquid was absorbed by the blotter-like dielectric material.

Ballasts occasionally fail in service and sometimes the asphalt (tar) with which they are filled melts and leaks out. On very rare occasions, the capacitor will also rupture and its contents mix with the tar. If a leak occurs, it should be cleaned up with any petroleum-based solvent.

Such a leak does not represent any significant immediate or long-term hazard. The United States Environmental Protection Agency has recognized the existence of PCBs in ballasts, has carefully evaluated the situation and in the regulations controlling the use and disposal of PCBs has concluded that continued use in existing lighting installations is acceptable; also that the occasional ballasts which becomes defective in service may be disposed of in compliance with 40 CFR* Part 761 or check with your local State Environmental Protection Agency for instruction.

Should you have any questions regarding this matter, please do not hesitate to call me at your convenience.

Very truly yours,

MagneTek Universal Manufacturing

Robert E. Babcock
Manager, Marketing Engineering

12.12 Certification

ENVIRONMENTAL PROFESSIONAL CERTIFICATION

I, Stephen A. Quartararo declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in Section 312.10 of this part [40CFR Part 312].

I have the specific qualifications based upon education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

12.13 Resume

RESUME

STEPHEN A. QUARTARARO http://www.phase1reports.com
Environmental Professional, CFR Title 40 Code of Federal Regulations Section 312.22
ASTM 1527-2013, CA 2010 CHHSLs, CA HERO 2015, HUD 2015 and SBA May 1, 2015.

Owner S&S Commercial Environmental Services, Inc. since formation 1997. General Engineering Contractor A, Hazardous Materials Certified, General Building Contractor B, Insulation and Acoustical C-2, Asbestos Certified, Water Well Drilling Contractor C-57. Real Estate Brokers License, Life & Health Insurance License.

Phase I Site Surveys, Phase II Soil and Groundwater Investigations, Phase III Remediation of Soil and Groundwater leading to No Further Action or Closure by Local, County, State and Federal Agencies. Environmental Hazard Assessment, Project Cost to Cure Physical Deterioration, Construction Management, Environmental Site Appraisals. Storm and Irrigation Water Conservation, Re-use.

RECENT PROJECTS
December 2016 - Facilitator with LA County Fire Department Site Mitigation Unit and General Engineering Contractor for Closure of 3.5 acre industrial property in Carson, CA over a five year period. Removal of PCE Vapor in three major areas to 45 feet. Removal and off haul of 30 = twenty-four ton truckloads of gasoline and diesel, pce and tce contaminated waste under over site of LA County Fire Department Site Mitigation Unit in a final remediation of source. Closure of minimally contaminated groundwater at 58 feet as non-beneficial water attenuating naturally.

March 2016 - No Further Action (NFA) Closure Letter for Soil, Soil Vapor and Groundwater for large light industrial property in Carson, CA - Proved liability for further quarterly monitoring and remediation of groundwater under NFA property was responsibility of Owner of an off site VOC contaminant source being remediated by Others. Coordinator for Oil Well Re-abandonment at Signal Hill Site 2009, Valencia 2006.

EXPERIENCE
6,000 plus Phase I site assessments in CA, AL, AZ, AR, NV, NY and TN.
100's of Phase II and Phase III site investigations and closures in CA.

39 years as asbestos and environmental consultant and abatement contractor direct and subcontract. 20 of those years as owner of an Environmental Company, 19 as a General Engineering Contractor with Hazardous Certification and 3 of those years with related storm and irrigation water conservation related companies.

Professional cost estimation, third party verification of sampling activities, underground tank removal monitoring and property assessment consultant for soil and groundwater.

Coordinator of design and construction in two Los Angeles high rise office buildings for fire safety retrofit under the City of Los Angeles fire life safety ordinance.

Develop and Design of Affordable Housing, including site selection, negotiation, planning and permit process and funding sourcing.

MAJOR CONTRACTS

UC Santa Barbara (1979) - HVAC system cleaning of five-story Chemistry and Physical Sciences buildings on campus**.**

VA Medical Center LA Jolla (1980) **-** After-fire decontamination of Surgery Floor HVAC.

TRW (1983) - Bulk materials sampling for asbestos in 65-building facility, Redondo Beach, CA.

UC Chancellors Office, UC San Francisco Medical Center (1984) - Survey design, field work completion, report design, report completion for UC Chancellor's office's funding request to State Assembly funding for asbestos abatement and management - 103 buildings - hospital, classrooms, administrative offices.

California Hospital Medical Center (1983) - Contract and specification design and completion of asbestos abatement projects.

County of Los Angeles (1984) - Approval of specifications, third party monitoring of contractor during Building 5 Asbestos Abatement Project at Rancho Los Amigos Medical Center.

JMB Property Management (1985) - Coordination as part of Pacific Abatement Group with building management and Med Tox abatement and hygiene personnel on 3 stories of asbestos containment project in 25 story high rise office building, Century City, CA.

UC Riverside (1985) - *Asbestos management and control in utility tunnels under campus.*

Tishman Construction (1985) - Area containment for electrical work adjacent to occupied areas in asbestos affected Bank of America offices at ARCO Towers, Los Angeles, CA.

Equitable Real Estate Investment Management (1986) - Asbestos abatement and containment projects, including elevator lobby doors, full floor abatement and after-fire decontamination projects in former First Interstate Bank and Union Bank buildings, Los Angeles, CA.

Baxter Pharmaceutical (1988) - Building materials sampling for asbestos and reports for 14 buildings in seven Midwest States.

Fremont Indemnity (1991) - Independent owner's agent for fire protection citation response to LAFD and construction of tenant improvements for asbestos abatement and fire life safety rehabilitation of 11-story office building in midtown Los Angeles. Included removal of underground diesel tank.

Redlands Federal Savings (1990) - Phase I Environmental Assessments of raw land in Inland Empire and San Diego areas of Southern California.

SPS Technologies (1993) - **"Qualified Risk Assessment"(QRA)** for sale of existing 20-acre site in Costa Mesa, CA: Work involved review of commercial appraisals, Environmental Site Remediation work completed, further remediation cost proposals, interviews with responsible government agencies, interviews with banking authorities, preparation of report detailing current conditions and value of property less expected remediation costs, results of interviews with regulatory agencies and financial authorities, four scenarios under which the property might be sold and the anticipated financial return and liability concerns of each scenario.

Money Store Investment Corporation (from 1992 until sold) - Related - 400+ Phase I Environmental Assessments of commercial property as collateral for SBA backed commercial loans in California.

First Union/Wachovia - Successors to Money Story Investment Corporation, Then Wells Fargo

Coast Federal Savings (Former- early 1990's) - 300+ Phase I Environmental Assessments and Asbestos Inspections of residential apartment buildings, commercial shopping centers and other commercial buildings from San Diego to San Francisco and Sacramento to New York State.

Chevron Real Estate Services (1991) - Coordination and management of gasoline contaminated soil remediation project in Blythe, CA; work included shoring to 30 feet along the western perimeter of project to protect adjacent restaurant, removal and bio-remediation of 3,500 cubic feet of contaminated soil, removal of 5,000 gallons of contaminated water, placement of filter

over local groundwater, back filling of excavation with remediated soil.

Carlsberg Management Company (1989-1995) - Independent owner's agent for fire protection citation response to LAFD and construction of tenant improvements for asbestos abatement and fire life safety rehabilitation of 10-story office building in West Los Angeles.
Owner's representative: work included selection and coordination of architect, mechanical, electrical, fire sprinkler, asbestos abatement/containment and industrial hygiene contractors and interface with the City of Los Angeles Building, Electrical and Structural Departments and Inspectors over a five year period under occupied and vacant building conditions.
California Federal Bank (1993) - Phase I Environmental Assessments and Asbestos Inspections of commercial and residential buildings in Northern and Southern California.
Folger & Levin, Law Firm (1995) - "Environmental Risk Assessment" (ERA) for 3-acre parcel in West Los Angeles. Review of six environmental soil and groundwater studies, practical expansion of research and coordinated explanation of real environmental issues for use by commercial property appraiser.
State Farm Insurance Company (1995) - Asbestos expert for client negotiations.
Berger, Kahn, Shafton, Moss, Figler, Simon & Gladstone (1996/1997) - Asbestos expert witness.
Prestholt, Kleeger, Fidone & Villasenor (1996) - Asbestos expert witness.
S&S Commercial Environmental Services (1997 - Present) - Phase I Site Assessments and Miscellaneous Independent Project Management and General Engineering Contractor for soil and groundwater sampling and remediation leading to site closure letter from County and City Fire Departments, Health Departments and CA Regional Water Boards ranging from thousands to hundreds of thousands of dollars. Oil Well Re-abandonment.
Bank of America - Related - Phase I Environmental Assessments Southern California.
Wells Fargo Bank - Phase I Environmental Assessments and Asbestos Inspections in California for Standard and SBA backed RE property loans. *(Successor To Wachovia Bank - SBA Division)*
Chase Bank - Phase I Site Assessments
First Foundation Bank - Phase I Environmental Site Assessments & Phase I Reviews, Phase II Site Investigations. California and Nevada
Standard Life Insurance Company - Phase I Site Assessments
Metropolitan Life Insurance Company - Phase I Site Assessments
Textron Financial - Heritage Golf Group - 127 Acre Golf Course Santa Clarita - Phase I
Blue Green Preservation - Phase I and Phase II Site Assessments HUD Senior Housing California, Alabama, Tennessee, Arkansas
Miscellaneous Independent Cost Estimation for required remediation of contaminated sites with commercial and industrial property appraisers.

EDUCATION
B.S. Urban Environmental Management; Cal State University Dominguez Hills
J.D. Candidate Classes in Torts, Contracts, Criminal Law, Legal Writing; Western State University, Southern California College of Law
Major Emphasis - Tort Theory and the implications to modern environmental contamination and clean-up problems.
"Low Risk Closure Guidelines" - California Regional Water Quality Board - Los Angeles Region Seminar June 1996.
Miscellaneous Classes provided by State Agencies in past twenty years and job site discussion regarding water quality standards and remediation with Regulators for Closure.

California Storm Water Association (CASQA - Member and participation as vendor representing OSORB as Absorb Concentrate & Eliminate (AC&E San Diego August 2012. Member and participation as vendor representing ASRE (Advanced Stormwater Recovery & Engineering Garden Grove September 2014.

1-MILE RADIUS STREET MAP W/OCCURRENCES (MAP1)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. **Occurrences are shown in three colors** to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

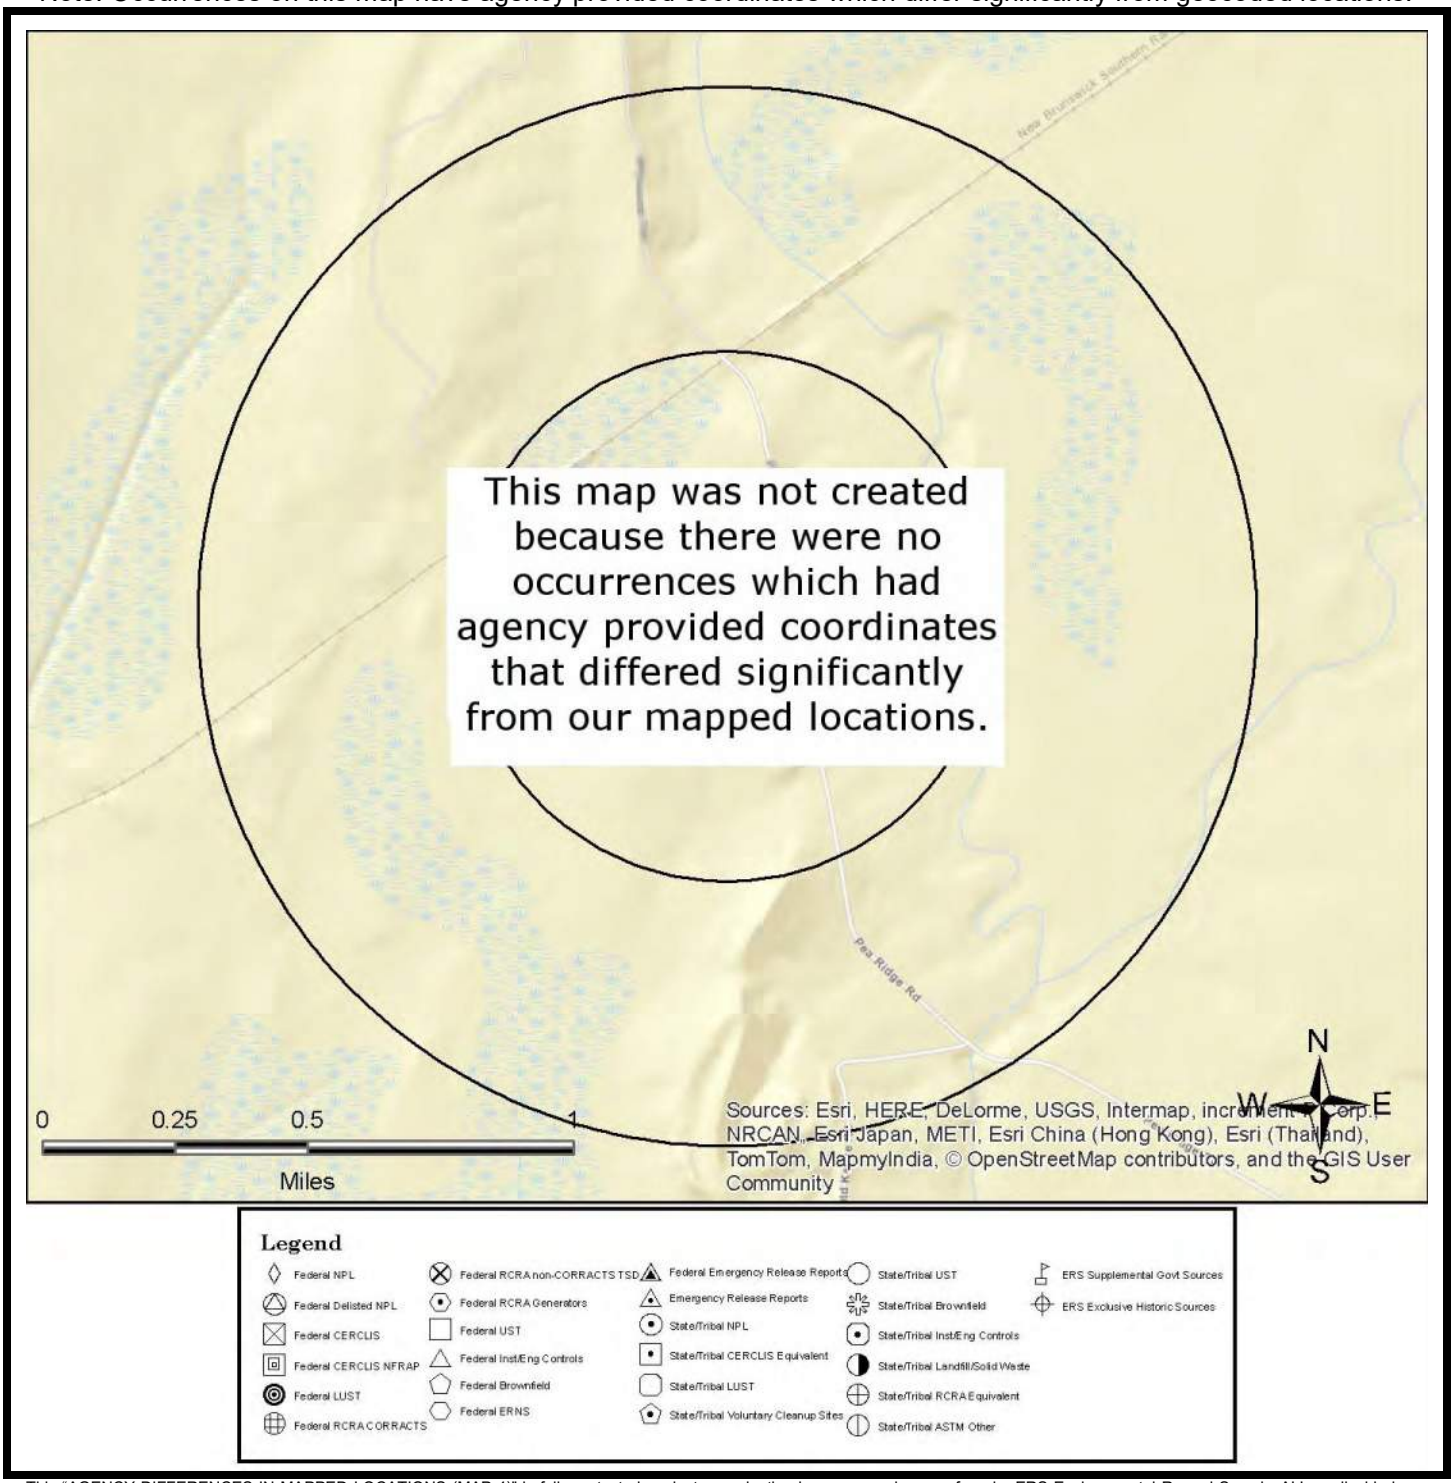
1-MILE TOPOGRAPHIC MAP W/OCCURRENCES (MAP3)



All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. **Occurrences are shown in three colors** to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP5)

Note: Occurrences on this map are reported in Air Quality databases. Potential air plumes are drawn in the direction of the prevailing wind.
No air quality occurrences were identified in the search raddius

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency/source. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Potential air dispersion plumes are depicted to graphically show the direction contaminates may travel based on prevailing wind data and provide a visual screening tool only. Actual direction will vary especially by season. Depending on the actual contaminate, amount released, and other variables, the distance from the source the contaminate may travel can and will vary. Interpretation and review of all the actual relevant data by an environmental professional is recommended before making any decisions, conclusions or otherwise based on the map depictions, air data, and potential air dispersion plumes.

This "MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP 5)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

BF-MOA-CA
Brownfield MOA Sites (aka Considered Brownfield Sites, SWRCB MOA, Brownfield Memorandum of Agreement)
Category: State/Tribal Brownfield
Description: In order to improve coordination of oversight activities at brownfields sites in California, DTSC, the Water Board, and the RWQCBs agreed to a Brownfield Memorandum of Agreement (MOA). The MOA limits oversight of a brownfields site to one agency, establishes procedures and guidelines for identifying the lead agency, calls for a single uniform site assessment procedure, requires all cleanups to address the requirements of the agencies, defines roles and responsibilities, provides for ample opportunity for public involvement, commits agencies to review timeframes, and commits agencies to coordinate and communicate on brownfields issues. This database contains facilities that fall under the MOA as reported by the State Water Resource Controls Board.

CERS-CA
California Environmental Reporting System (CERS)
Category: State/Tribal ASTM Other
Description: The California Environmental Reporting System (CERS) is a statewide web-based system to support California Unified Program Agencies (CUPAs) and Participating Agencies (PAs) in electronically collecting and reporting various hazardous materials-related data as mandated by the California Health and Safety Code and new 2008 legislation (AB 2286). Under oversight by Cal/EPA, CUPAs implement Unified Program mandates that streamline and provide consistent regulatory activities. Cal/EPA does not provide phone support. Your primary contact should always be your CUPA or PA. The database includes the following counties:

Controls-CA
California sites with Deed Restrictions or other Controls
Category: State/Tribal Inst/Eng Controls

Copyright 2017 Environmental Record Search (ERS) All Rights Reserved

Description: A deed restricted site is a property where DTSC has placed limits or requirements on future use of the property due to varying levels of cleanup possible, practical, or necessary at the site. The DTSC Site Mitigation and Brownfield's Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. Not all deed restrictions are available at this time.

EPA-Watch-List-US
EPA Watch List
Category: ERS Supplemental Govt Sources
Description: This database contains facilities listed on the Clean Air Act, Clean Water Act, and RCRA Watch List. These reports are now considered archived and will no longer be updated. Being on the Watch List may not mean that the facility has actually violated the law only that an evaluation or investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. The Watch List does not identify which alleged violations of environmental laws may pose the greatest risk to public health or the environment. It is an automated report based on data from the Air Facility System
(AFS), which is used by federal, state and local agencies to track environmental enforcement and compliance information.

Eval-Hist-CA
EnviroStor Evaluation History Sites
Category: State/Tribal Voluntary Cleanup Sites
Description: EnviroStor is the Department of Toxic Substances Control's data management system for tracking cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further. The subset of cases included in this database is Historical Sites. Historical Sites are identified sites from an older database where no site type was identified. Most of these sites have a status of Referred or No Further Action. DTSC is working to clean up this data by identifying an appropriate site type for each Historic Site.

FUDS-US
Formerly Used Defense Sites
Category: ERS Supplemental Govt Sources
Description: The Department of Defense (DoD) is responsible for environmental restoration of properties that were formerly owned by, leased to or otherwise possessed by the United States and under the jurisdiction of the Secretary of Defense. Such properties are known as Formerly Used Defense Sites (FUDS). The Army is the executive agent for the program and the U.S. Army Corps of Engineers manages and directs the program's administration. The scope and magnitude of the FUDS program are significant, with more than 9,900 properties identified for potential inclusion in the program. Information about the origin and extent of contamination, land transfer issues, past and present property ownership, and program policies must be evaluated before DoD considers a property eligible for Defense Environment Restoration Account (DERA) funding under the FUDS program. Environmental cleanup procedures at FUDS are similar to those at active DoD installations.

Hist-CA
Previously Listed California Sites
Category: ERS Supplemental Govt Sources
Description: ERS has compiled records that have been previously listed in other agency databases. When ERS updates an agency database, if there is a record that was in the older version but the record is not found in the newer version, it is put into this database. The site may have been completely removed, or there was a significant change in the record such as Name, ID, or Address. The information from the old listing is preserved in this database along with which database it was originally in, It is also possible that it was moved from one database to another such as a LUST Open site receiving closure and now being listed in the LUST Closed database.

Hist-US
Previously Listed Federal Sites
Category: ERS Supplemental Govt Sources
Description: ERS has compiled records that have been previously listed in other agency databases. When ERS updates an agency database, if there is a record that was in the older version but the record is not found in the newer version, it is put into this database. The site may have been completely removed, or there was a significant change in the record such as Name, ID, or Address. The information from the old listing is preserved in this database along with which database it was originally in, It is also possible that it was moved from one database to another such as a LUST Open site receiving closure and now being listed in the LUST Closed database.

SLIC-Closed-CA
Geotracker - The Spills, Leaks, Investigation & Cleanup (SLIC), Closed Cases
Category: Emergency Release Reports
Description: GeoTracker is the California State Water Resources Control Board's data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. The system is used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. The Spills, Leaks, Investigation & Cleanup (SLIC) Program deals with site investigation and corrective action involving sites not overseen by the Underground Tank Program and the Well Investigation Program. These particular sites have had all remediation completed and are now considered closed by the agency.

State-Response-Active-CA
EnviroStor State Response Active Sites
Category: State/Tribal NPL
Description: EnviroStor is the Department of Toxic Substances Control's data management system for tracking cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further. The subset of cases included in this database is State Response Active sites. These sites are confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high priority and high potential risk.

TOMS-CA
Topographically Occurring Mine Symbols
Category: ERS Supplemental Govt Sources
Description: In 1998, the Office of Mine Reclamation began inventorying abandoned mined lands as part of a program to produce a report describing the "scope and magnitude" of abandoned mine issues in California. To support this effort, the Office began digitizing mining features from scanned USGS topographic quadrangles. Each of the 7.5-minute USGS topographic quadrangles was examined and all mining features were digitized and annotated with information derived from the map. Positional accuracy was reliant on the accuracy of the original source maps. Human digitization of the mining symbols has likely added slight deviations from the original source map, though no formal method has been undertaken to quantify this additional error. In 2001, we completed the digitizing process for all 7.5-minute topographic quadrangles covering the state.

UST-Closed-CA
UST Case Closure Review Denials and Approved Orders (aka Closure of Underground Storage Tank (UST) Cases)
Category: State/Tribal UST

Copyright 2017 Environmental Record Search (ERS) All Rights Reserved

Description: The Underground Storage Tank Cleanup Fund provides a means for petroleum UST owners and operators to meet the federal and state requirements of maintaining financial responsibility to pay for any damages arising from their tank operations. The Fund assists a large number of small businesses and individuals by providing reimbursement for expenses associated with the cleanup of leaking USTs. The Fund also provides money to the Regional Water Boards and local regulatory agencies to abate emergency situations or to cleanup abandoned sites that pose a threat to human health, safety, and the environment, as a result of a UST petroleum release. This database contains UST tanks that have been closed under the Underground Storage Tank Cleanup Fund as reported by the California State Water Resource Control Board.

DISCLAIMER, LIMITS AND LIABILITIES

All of the data presented in this report was garnered from public information maintained by governmental agencies. ***Environmental Record Search (ERS)*** cannot ensure that the data, which has been entered and maintained by others, is complete and/or accurate. Any, and all omissions, errors, negligence, accidentally or otherwise within the data received by ***ERS*** is assumed to be caused by others and ***ERS*** cannot and does not assume, take, or acknowledge any liability whatsoever for their respective data. The extrapolation of the mapped locations is based solely on the accuracy of the data provided by others. Prior to relying completely on any mapped location within this report, its accuracy should be verified using other means such as further documentation or a field visit. ***ERS*** makes no representation, warranty or guaranty, express or implied regarding the accuracy of the data entered and maintained by others or the suitability of the data received from others in this report for a certain task or interpretation.

The data presented in this report should only be interpreted by an experienced environmental professional, as per EPA definition, that completely understands the potential inaccuracy of the data derived from others, the possible existence of contaminated occurrences that have not been listed, and the possibility that the governmental database misrepresents the actual status of an occurrence or listing. Prior to relying completely on any of the data within this report, an environmental professional should verify the accuracy of the information presented unless one of ERS's Environmental Professionals has interpreted the data and/or report.

It is important that the reader and/or end user of this information realize that the data gathered has not been verified for its accuracy or completeness in any way by ***ERS***. With billions of records, this is an impossible task for any Company. As much as possible, the data is presented unchanged and unaltered to represent the actual data produced by these agencies. This insures the integrity of the data for the end user.

ERS does however stand behind its representation of the data, any manually plotted occurrences, any risk determinations and all other items directly under its control. This report does comply (as far as the data is reasonably ascertainable as outlined in both the following standards) with section 8.2.1 of ASTM 1527-13 – Standard Environmental Record Sources and EPA's 40 CFR Part 312, All Appropriate Inquiries. ***ERS*** does ensure that the data is accurately reproduced from the original source. ***ERS*** backs the reporting of the data with $3,000,000 of General and Environmental Professional Liability (errors and omissions) Insurance!

1.0 INTRODUCTION

This report presents the results of our Phase I Environmental Site Assessment performed on the subject property known as the NE Corner N Sierra Avenue and W. Casa Grande Drive in the City of Fontana in San Bernardino County, California. There were no Special Conditions for this Report. The User is the addressee above.

The site inspection was performed on Thursday January 4, 2018.

A Preliminary Title Report was provided by the Client to review for Environmental Liens. None were identified in that report.

This report relies in part upon a study done of base closures prepared by Science Applications International Corporation for the U.S. Army Corps of Engineers Los Angeles District in 2004. A map from that report with the former storage area superimposed is in 12.3 Topographic Map in the Appendix and shows the subject property and adjoining and adjacent properties north, south and directly east outside the area of concern.

The subject property was on the southwestern edge of the Rialto Ammunition Back-Up Storage Point (Rialto Military Reservation) from 1941 until 1945 when the Rialto Military Reservation was declared excess and sold off over the next couple of years. The first mention of the subject property was found in the San Bernardino Property Records Search in 1975 when the subject property parcel was separated from a larger parcel. In 1982 the subject property became part of a larger Fontana Redevelopment Agency North Fontana Redevelopment Project.

A residential home and garage is shown in the 1959 and 1966 aerial photographs.

A party named Dunlop appears to have been the first owner as residential with the property being granted to Steven Riddle in 1987 by both the Dunlop Family Trust and Bello Construction. Cecilia Bello was granted the property in 1995. In 2002 and 2004 the property again changed hands inter family as Hopper is added to the ownership as a spousal name.

The west side of the subject property was residential for a number of years between the 1940's to 1980's but was shown as vacant in 1995. Adjoining and adjacent properties have included a single family home to the north which is now gone, the SCE high voltage power line to the east, an SCE easement on the south and vacant land to the west across N Sierra Avenue.

According to the City of Fontana Planning Records the subject property is now across N. Sierra Avenue adjacent to the Fontana City Arboretum Specific Plan for a planned residential community.

Based upon all that was learned during the research, no Environmental Liens are expected.

Current State of California & Federal Agency Web Data Reviewed For This Report

*	Cal-EPA	Envirostor
*	Regional Water Quality Control Board	Geotracker
*	Dept of Conservation (DOGGR)	Div of Oil & Gas
*	SCAQMD	Finds

No *Significant Data Gaps* were identified. Greatest reliance was on Building Records with the San Bernardino County Assessors Office, Base Closure Report and Historical Aerials.

Cross Streets Directories were not reviewed for known occupancies due to the known occupancies of the subject property.

Sanborn Fire Insurance Maps were not available for the completion of this report as they were discontinued before property development. (See appendix)

An Underground Tank Research Request was not submitted due to the known activities on the subject property since the early 1900's and lack of any indicators for underground storage tanks in operations.

De Minimis Environmental Conditions include environmental concerns identified by S&S that warrant discussion but do not qualify as RECs, as defined by the ASTM Standard Practice E1527-13. S&S's assessment did not reveal any significant De Minimis environmental conditions associated with the subject property or nearby properties.

S&S's Assessment includes a review of as built drawings and specifications printed on the drawings and permits used in the construction of the buildings as available. This review and site inspection related to Scope Considerations and Non-Scope Considerations or De Minimis Environmental Conditions associated with the subject property or nearby properties including asbestos containing materials, radon, lead-based paint, lead in drinking water, mold, flood plain and unsatisfactory indoor air quality that were further inspected with the results in 2.0 Principal Findings.

Stormwater is the responsibility of the County of San Bernardino. Stormwater soaks into or runs off the subject property then into the County of San Bernardino stormwater system.

This report is intended to satisfy the requirements of a Phase I Environmental Site Audit as outlined in the ASTM E-1527 2013, ASTM 2600 -15 Standards, the EPA *"All Appropriate Inquiries"* November 2006 ruling, and the SBA May 1, 2015 Requirements.

Report Organization

This report is divided into sections which discuss the field investigation, government records search, regulatory agency contacts and recommendations. Appendices follow the text

1.1 Purpose and Scope of Work

The purpose of a Phase I Environmental Site Assessment is to discover any past or present environmentally-related events which may negatively impact the subject property. This includes a search of all available records concerning the property and the performance of an on-site inspection. Procedures followed in the performance of a Phase I Environmental Site Assessment include executing a government records search, researching permits for the site where prudent, interviewing the tenants of the subject property or neighbors in close proximity, studying aerial photographs, interviewing personnel at the appropriate regulatory agencies and conducting a physical survey of the subject property.

1.2 Involved Parties/Information Sources

This ***S & S Commercial Environmental Services, Inc.***, Phase I Environmental Site Assessment is produced through the efforts of an Environmental Professional EPA CFR Title 40 Section 312.22, working in conjunction with Federal, State and county regulatory agencies. *Environmental Research Records* maintains a comprehensive, computerized data base of pertinent, environmentally-related records, known as an *ERS Report*, which is updated on a regular basis. This data base is researched for Category I, II, III and IV sites within a mile of the subject property and a report is generated based upon the available regulatory records. The report is reviewed for sites that might impact subject property. Inquiry is directed toward sites within a 2,000 foot hazardous waste disclosure zone.

The field investigation includes a site assessment, observations of the neighboring facilities and verification of permits and building records, as necessary.

A Google search was the only Other Historical Source used (ASTM §8.3.4.9) due to the nature of the former parcel and the other information available to determine history of use.

The 2006 EPA "All Appropriate Inquires" provides for a determination by the Environmental Professional CFR Title 40 Section 312.22 as to what records are necessary to understand a subject property history and the potential for Environmental Problems. The ASTM 1527 2013 Standard provides a list of

possible sources of information for the Environmental Professional to use to determine that history.

Property tax records (ASTM §8.3.4.3) and Zoning/Land use records (ASTM §8.3.4.8) were not considered significant sources for information due to the known history of the individual parcel making up the subject property, the known current and former occupants and the building permit history. (ASTM §8.3.4.7)

Recorded land title records (ASTM §8.3.4.4) are part of a Title Report which was requested as part of the contract and is the Clients Responsibility per ASTM 1527- 2013 Standard. The new standard states in summary that in order to satisfy AAI, a user must conduct a search for the existence of environmental liens or AULs that are filed or recorded against the property.

While not provided, a Full Title Report was not deemed necessary by this Environmental Professional to evaluate the environmental status of the property based upon the information identified in the research for this report.

Definitions modified and added in the ASTM-1527 2013 Revision as approved by the EPA include:

a. Simplified Recognized Environmental Condition (REC) definition to "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

b. Stated a Limitation on the definition of an HREC (historical REC) to closed RECs that have been completely resolved ("clean closure") with no restrictions. Those undergoing continued maintenance or monitoring should be discussed.

Also for HREC's, if there has been a change in the regulatory criteria and if the Environmental Professional (EP) considers this past release to now be an REC at the time the Phase I ESA investigation is conducted,"... the condition shall be included in the conclusions section of the report as a REC."

c. Review of Title and Judicial Records for Environmental Liens or Activity and Use Limitations (AULs) continues to be a User (Client) requirement that is to be conducted by a Title professional, not the EP or Phase I Professional. Buyer or Lender needs to ensure that Title companies are searching judicial records.

d. (VES) Vapor Encroachment Screening under E2600-15 is a referenced document in E1527 2013 under Section 2.1. Under this Standard Vapor migration should be treated no differently than the way contaminated groundwater migration is considered in a Phase I ESA and should be discussed using the CERCLA definition of "release" and "environment" which includes vapor.

Section 2.1 of ASTM E1527 Standard - Vapor Encroachment Screening - 42 U.S.C. § 9601(22) defines a "release" as "any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discharging of barrels, containers, and other closed receptacles containing any hazardous substances or pollutant or contaminant" This includes solid, liquid and the ensuing migration of vapor into soil and water or from water upwards through soil occupied areas.

There were no Vapor Encroachment Issues Identified on within a significant distance to the subject property. The former ammunition storage area to the east was found to be a secondary source of storage of ordnance with no work involving solvents on site and minimal off loading and loading prior to shipment to the port.

2.0 PRINCIPAL FINDINGS

2.1 Summary of Operations and Environmental Discrepancies

General Historical Operations

The subject property was agricultural or vacant land until 1941 when it became part of the Rialto Ammunition Back-Up Storage Point (Rialto Military Reservation).

The subject property was located on the southwest side of the Rialto Military Reservation west of the ammunition dump according to Final Report of Operational History 1941-195 - Rialto Ammunition Back-Up Storage Point RIALTO, CALIFORNIA Prepared for U.S. Army Corps of Engineers Los Angeles District in 2004 by Science Applications International Corporation.

The Rialto Military Reservation was subdivided over the next few years. Quitclaim Deeds from the United States of America, to buyers "Subject to easements and rights of way now existing or reserved; and subject, also, to a reservation of all structures, fences, railways, trackage, electrical and telephone systems, and other improvements constructed or erected by the United States, together with the right to remove such structures, fences, railway trackage, electrical and telephone systems, and other such improvements."

The 1953 Historical Aerial Photograph in the appendix shows a house to the north of the southwest side of the subject property with vacant land around the subject property and a second residence further north. No other operations were noted.

Current Operations

The subject property is a vacant parcel with a few piles of construction and domestic debris. There are no regulated materials used or generated on site.

Neighboring Properties
North is a vacant parcel with concrete pad from a former single family home and then a single family home.

East is open land with high voltage SCE Electrical Towers running north to south.

Former Operations To The East Of The Subject Property (1941 - 1945)
The subject property was on the western border of the "...Rialto Ammunition Back-Up Storage Point [which] served as an inspection and storage facility for ordnance-loaded railcars until they were dispatched to Victory Pier at the Los Angeles Port of Embarkation, where ordnance was loaded onto ships sailing for the China-Burma-India Theater of War (83). Storage of ordnance-loaded railcars at the Rialto Ammunition Back-Up Storage Point enabled the number of ordnance-loaded railcars at Victory Pier to be kept to a minimum..".

West is N. Sierra Avenue then vacant land.

South is vacant land.

There were no operations indicated currently on or off-site which would be related to environmental discrepancies.

2.2 Summary of Building Materials and Environmental Discrepancies

Building Materials - The subject property has always been vacant undeveloped land.

The following section regarding asbestos and Pcb describes the current status of asbestos and Pcb for any future construction.

2.2.1 Asbestos

Background - Asbestos is a natural occurring mineral fiber utilized in a multitude of building material products due to its high tensile strength and excellent fire resistant properties. The *EPA* has defined asbestos-containing materials as being either *friable* or *non-friable* materials. *Friable* material is defined as being easily broken or crushed by hand pressure (e.g., soft acoustical ceilings or blown-on fireproofing).

Non-friable asbestos is generally found in pre-manufactured products that bind the asbestos in an adhesive material, such as roofing felts, floor tile, transite pipe and mastics. This is significant, due to the ability to create a fiber release and cause human exposure during normal activities. The *EPA* currently does not require the removal of asbestos-containing materials that do not present a problem for human exposure. Most *friable* asbestos-containing materials were banned in building materials by 1978 with stocks on shelves allowed to be sold until 1980.
In October 1995, a new *FED-OSHA* ruling became effective which redefined building materials perceived as asbestos-containing into four classes of work and modified the ay in which these asbestos-containing materials are handled.

Under this ruling, "thermal system insulation and sprayed-on or troweled on or otherwise applied surfacing materials installed before 1980 are considered PACM (presumed asbestos-containing material)" unless sampled and identified by a certified individual as to asbestos content. These materials are considered high risk for abatement and their removal is classified under Class I removal activities.

Other building materials such as "floor or ceiling tiles, siding, roofing, transite panels [floor sheeting, floor or roof mastics] are also considered PACM (presumed asbestos-containing material)" unless sampled and identified by a certified individual as to asbestos content but are considered low risk materials for abatement and their removal is classified under Class II, III and IV removal and repair and maintenance operations.

Significant under these new regulations is the deletion of the category of "Small Scale Short Term Duration" removal activities which regularly allowed Class I, II, III and IV activities to proceed with less regulatory oversight.

In July 1996, *CAL-OSHA* adopted the *FED-OSHA* guidelines as part of California law subject to some of the more stringent requirements pre-existing in California under Prop 65, the Conelly Bill and various other requirements or legislation passed by the California legislature.

Under the *NESHAPS* laws of 1976 and as later amended, asbestos does not have to be removed from a facility until such time as it undergoes major renovations or is demolished. Until that time, the present emphasis by the *EPA* is to recommend repair of any damaged areas and management of the asbestos-containing materials.

Prior to any renovation work being done involving asbestos-containing materials of 260 linear feet or 160 square feet in area, the local branch of the *EPA* must be notified.

Prior to the demolition of any building or house, mandatory bulk sampling must be accomplished and, if asbestos is present, notification must be made to the local branch of the *EPA* and *Air Quality Management District*.

In California, for the removal of any asbestos-containing materials greater than 0.1% by weight, notifications must also be made to *CAL-OSHA* and a licensed contractor with an asbestos certification is required for any work which exceeds 100 square feet.

2.2.2 Building Materials Presumed to Contain Friable Asbestos

Friable asbestos-containing building materials were banned for manufacture and sale in the United States in 1978 and all stocks remaining on the shelves are presumed to have been used up by 1980. There are no buildings and no friable asbestos on the subject property.

2.2.1.2 Building Materials Presumed to Contain Non-Friable Asbestos
Asbestos was never banned from use in building materials such as floor tile, cement-based products and roofing materials, as these materials were considered *non-friable* by the *EPA* and not potentially a great hazard. After *friable* asbestos was banned, significant labeling requirements went into effect for the *non-friable* asbestos-containing materials and many substitutes became available. Asbestos-containing flooring materials and mastic were used less and less in construction after 1978 and, by 1984, their use in buildings constructed in the United States was nearly non-existent due to the labeling requirements and potential liability to both the manufacturer and real estate developer. Building materials presumed to contain *non-friable* asbestos are as follows:

Floor Tiles - There are no floor tiles on the subject property presumed to contain *non-friable* asbestos.

Roofing Material - There is no roof and no presumed *non-friable* asbestos.

2.2.2 Radon
The real property at the Northeast Corner of N Sierra Avenue and W Casa Grande Drive Fontana, CA in a Radon Zone "2" and no Radon Exposure Issues are expected.

EPA Radon Zone: 2 (Predicted avg for county: 2 to 4 pCi/L)

(Predicted avg for county: 2 to 4 pCi/L)For zip code 92336:
Number of tests per zip code: 3
Number of tests where radon is > 4 pCi/L: 0
Percentage of test where radon is > 4 pCi/L: 0.00%

2.2.3. Lead Paint
Paint containing more than 0.06% (by weight of dried product) lead was banned for residential use in the United States in 1978 by the U.S. Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303).

There are no structure and no lead paint is expected.

2.2.4. PCB Poly Chlorinated Bi Phenyl
Pursuant to 40 CFR 761.2(a)(2), mineral oil-filled transformers which were manufactured prior to July 2. 1979, whose PCB concentration is unknown, and mineral oil-filled transformers whose date of manufacture is unknown, must be assumed to be PCB contaminated containing > 50 ppm PCBs, but < 500 ppm PCBs.

All pole-top and pad mounted distribution transformers manufactured before July 2. 1979, must be assumed to be mineral-oil filled containing Pcb. Pcb was outlawed for use in Transformers and Florescent Light

Fixture ballasts in 1978/79. There are no florescent light fixtures on the subject property and no pcb.

.

Southern California Edison (SCE) supplies power to Fontana, CA. SCE has replaced any pcb in existing transformers in their system or never specified their use.

2.2.5. Lead In Drinking Water

A prohibition on lead in plumbing materials has been in effect since 1986. As there are no buildings, lead in valves is not suspected on the subject property.

2.2.6. Mold

Mold results from rainwater intrusion and from leaking plumbing pipes. Mold was not seen and is not an issue.

2.2.7 Flood Plain

Panel: 06071C7920H, Effective Date: 8/28/2008
Zone X - Area of minimal flood hazard, usually depicted on FIRMs as above the 500- year flood level.

2.2.8. Wetlands

The subject property is not part of any National Wetlands Inventory and no Wetlands were noted on the subject property during the site inspection.

2.2.9. Indoor Air Quality - Subjective

No unsatisfactory indoor air quality was identified via Olfaction (smell) in occupied areas and areas of ceiling damage. There were no areas identified in this research of concern for Unsatisfactory Indoor Air Quality from chemicals, gases or regulated materials being used on or off site, present from past activities or building materials used in construction of the building complex.

2.2.10 Condition of Onsite & Surrounding Vegetation

The onsite and surrounding vegetation were brown from lack of water only and not stressed by corrosive chemicals or chemicals.

2.2.11 Underground Tanks

There were no underground tanks or vessels noted on or adjoining the subject property or in a significant distance of the subject property.

22. 12 (VES) Vapor Encroachment Screening

Vapor Encroachment Screening did not identify any potential sources of vapor contamination on the subject property or in the EPA 100 foot Vapor Encroachment Zone. See Appendix Section 12.9.

3.0 SITE OVERVIEW

3.1 Location

The subject property is located on the northeast corner of N. Sierra Avenue and West Casa Grande Drive, north of the 210 Foothill Freeway and east of Citrus Avenue in the City of Fontana located in San Bernardino County California.

The land use in the general area is Vacant land, commercial, recreational and residential.

3.2 Adjacent Properties

North is vacant land which was the site of a former residential home, vacant land and then an occupied residential home.

East is vacant land owned by SCE then single family homes.

South is vacant land then light industrial and distribution.

West is N Sierra Avenue then vacant land.

There were no operations indicated currently on or off-site which would be related to environmental discrepancies for the subject property.

There were no current emissions noted from any of the adjacent or adjoining properties during the site inspection which would be of concern for the subject property.

3.3 Site Description

The subject property is a rectangular shaped property approximately 5.5 acres in area stretching from N. Sierra Avenue on the west to an SCE High Voltage Tower property strip on the east.

There are a few surveyor stakes, some piles of rock, asphalt and construction and domestic debris in a few areas. Most of the property is rock and dirt with some scrub brush. The property is accessible on the south and east sides as dirt roads operated by SCE for access to their High Voltage Towers.

There was nothing of significance environmentally.

4.0 SITE HISTORY AND OPERATIONS

4.1 Building Permit History

No building permits were identified for the subject property.

4.2 Operations

Former Operations - The subject property was vacant then vacant land on the south western edge of a military reservation from 1941 to 1945 then vacant land.

The history of the Rialto Military Reservation from the Science Applications International Corporation 2004 Report are as follows:

- 31 December 1941-9 February 1942: acquisition of2814.55 acres of land near Rialto (southwestern edge N. Sierra Avenue and location of subject property)
- February 1942, onwards: improvements made to construct the igloo storage area, classification yard, and administration buildings.
- 16 November 1942: Rialto Ammunition Back-Up Storage Point is activated.
- 2 December 1942: operations begin with the first railcar received.
- January to August 1943: storage of small arms ammunition in the igloos for DTC operations in the Mojave Desert.
- May 1944: 220 railcar holding area constructed.
- 30 November 1944: 7 .6 acres acquired as a no-fee easement for railroad spur.
- September 1945: operations cease.
- 16 October 1945: Rialto Ammunition Back-Up Storage Point put on "caretaker" status.
- 13 November 1945: Rialto Ammunition Back-Up Storage Point declared surplus by the Army Service Forces and transferred to the War Assets Administration for disposal.
- 9 July 1946: the Farm Credit Administration assumed custody and responsibility for disposal of the land and improvements.

There was no indication that any waste was discharged into a private sewer.

Current Operations - The property remains vacant undeveloped property. There were no uses identified using regulated materials.

4.3 Operational Permits, Manifests and Material Safety Data Sheets (MSDS)

EPA ID Number - An *EPA* ID number identifies a facility to the State and Federal governments as a hazardous waste generator. There is no record of waste being removed from the subject property and no RCRA numbers.

Hazardous Waste Manifests - A hazardous waste manifest file is maintained when hazardous materials are transported and disposed of from a site. There are no regulated materials being used on the subject property and no manifests for this report.

Air Emissions - The *South Coast Air Quality Management District* issues permits for sites that are emitting hazardous waste into the atmosphere from their operations. According to Find there is no record of permits for the subject property.

Material Safety Data Sheets (MSDS) - Material Safety Data Sheets are required for chemicals and products being used in businesses which may be of a hazardous nature. There are no regulated materials being used on the on the subject property and no MSDS for this report.

5.0 ENVIRONMENTAL SETTING

5.1 Regional Physiographic -

The subject property is at an elevation of around 1754 feet above sea level, according to the Devore 7.5 minute US Geological Survey Map section in the appendix.

The surficial alluvium underlying the site is composed of alluvial fan deposits derived from basement rocks of the San Gabriel Mountains. The thinner upper layer (200+ feet) consists of undifferentiated younger alluvium, overlying a thicker sequence (1,100+ feet) of older semi-consolidated sediments (*DWR*, 1970).

The site is located in a seismically active region with active faults within 30 miles: San Andreas, San Jacinto, Cucamonga, Glen Helen and Whittier-Elsinore fault zones. The San Jacinto fault and Cucamonga fault zones are within three miles of the site. No active or potentially active faults have been identified on the site

Rocks beneath the surficial alluvium are comprised of semi-consolidated terrace deposits, underlain by a thick sequence (2,000+ feet) of folded and faulted sedimentary rocks known as the San Timoteo beds. Beneath the San Timoteo formation is a series of well-stratified beds of marine sandstones, shales, conglomerates and lava flows that reach a thickness of 24,000 feet in the extreme western portion of the Chino Basin. The basement rocks underlying the basin structure are a complex of crystalline metamorphic and plutonic rocks of granitic composition (*DWR*, 1970).

Hydrogeology -

The hydrogeology of the site is complex and incompletely characterized. Depth to groundwater at the site is about 300 feet below ground surface, and flow is to the south and southeast. The site lies within the Upper Santa Ana River Watershed in the Rialto-Colton groundwater basin. Horizontal groundwater flow from the basin is impeded by the San Jacinto Fault which separates the basin on the northeast from the Lytle and Bunker Hill Basins, and on the northwest, southeast, and southwest by groundwater barriers which have been identified from large groundwater elevation differences historically measured in groundwater production wells.

5.2 Soil Conditions

Soil at the site is typical of alluvial fans and terraces with surface soil and subsoil mostly sandy silty clay, with gravel washed from Lytle Creek with no significant uses identified in the property history. There are no wetland issues.

There were no contours, mounds or anomalous conditions to indicate the disposal of regulated materials on-site.

There were no operations noted on the subject property past or present which would indicate contamination.

Soil Type: (USDA Soil Survey Geographic Database) (SSURGO)
Soboba gravelly loamy sand, 0 to 9 percent slopes
Map Unit Type: Consociation, Hydric: No
Drainage Class: Excessively drained
General Information: Sandy-skeletal, mixed, thermic Typic Xerofluvents

5.3 Groundwater Conditions

Groundwater is expected around 300 feet. No groundwater testing was included in this report. There does not appear to have been any operations on or adjacent to the subject property which would indicate problems.

6.0 RESULTS OF INVESTIGATION

6.1 Site Inspection Observations

The subject property is a vacant parcel with sand, gravel, some vegetation and dirt. There was nothing significant environmentally to indicate problems with the subject or surrounding properties.

6.2 Regulatory Agency Contacts

6.2.1 Fontana Water Company

The Fontana Water Company was previously contacted concerning the water depth and supply in the area. It was found that the first potable water is at about 600 feet, the first depth from which they draw water from their wells. Mr. Carlos Simbres of the Fontana Water Company said that the water to be supplied to the subject property comes primarily from three different areas: Lake Silverwood via the California Aqueduct, groundwater wells and canyon water sources. He said that this water is blended with Metropolitan Water District water due to the high nitrate content.

Mr. Simbres stated that the Fontana Water Company tests all wells on a regular basis to assure conformance with Title 22 regulations to make sure that all water supplied to end users meets the State of California's drinking water quality standards.

6.2.2 California Department of Conservation, Div of Mines and Geology

The *California Department of Conservation, Division of Mines and Geology,* was contacted regarding the proximity of active earthquake faults. The subject property is not part of any special studies zone pursuant to the Alquist-Priolo Earthquake Fault Zones Act of 1972, which mandated studies of active faults in California. An active fault zone is described by the *State Mining and Geology Board* "as one which had surface displacement within the Holocene time (about the last 11,000 years)."

6.2.3 California Division of Oil and Gas

A review of the *State of California Division of Oil and Gas* Maps did not indicate that oil wells were drilled within a mile of the subject property. It does not appear that any wells were surface-drilled into the subject property. (See DOGGR map section in appendix)

6.2.4 Southern California Edison Company

Mr. Don Garza, Service Planner, was previously contacted concerning Pcb oil in pole and pad-mounted transformers in the area. He said that it is unlikely that any Pcb are present in the transformers, as they were never specified. He stated that *Southern California Edison* would be happy to test any transformers for a fee.

6.2.5 South Coast Air Quality Management District (SCAQMD)

Find was researched regarding air emission permits on the property. There were no permits or applications identified for the subject property.

6.2.6 Department of Health Services, State Department of Radon

Mr. David Quinton, Environmental Health Specialist with the *State Department of Radon*, was contacted regarding the presence of radon in the area. He said that the most recent studies done predicted less than 2.4% of homes and less than 0.04% of the schools in the State of California would be over the *EPA's* action level of four picocuries/liter. He stated that this study was performed in existing homes and that there was no effective methodology of correlating soil samples to houses. Mr. Quinton explained that much is dependant upon the soil under a residence and the type of foundation a house is built upon. Additionally, the standard is based upon exposure of 18 hours per day for 70 years, which would not correlate to a business exposure. Mr. Quinton said that, with the exception of Madera County in Northern California, the *State of California* has nearly concluded all radon testing in the State and has found that there is little likelihood of a significant radon exposure in California.

Mr. Quinton said that business exposures had not been within the parameters of any of these studies due to the limited time most business people are in one location. He also said that the State does not plan to study businesses based upon the previous studies and that there is no standard for a commercial enterprise being conducted outside of a home.

EPA Radon Zone: 2

(Predicted avg for county: 2 to 4 pCi/L).

6.2.5 San Bernardino County Assessor Records, Orange Coast Title

The subject property was re-surveyed in 1975 and divided into separate parcels. The subject property was transferred to Bello Construction sometime in the 1980's from what appeared to be Steven E. Riddle. Bello Construction transferred property to Cecilia Bello in 1995 and ownership continued under different spousal trusts.

No problems were identified for the subject property as to former users or operators of the subject property.

6.2.6 Fontana Building Department

No records of residential properties in the 1940's or 1950's are available.

6.3 Personal Interviews, Site Records Review

6.3.1 Personal Interviews

The subject property is vacant and no interviews were deemed necessary based upon the research.

6.3.2 Site Records Review

The subject property is vacant. There were no records to review.

6.4 Historical Aerial Photograph Review & Sanborn Fire Insurance Map

Available Sanborn Fire Insurance Maps and Aerial photographs and topographic map from 1938, 1959, 1966, 1995, 2003, 200, 2007, 2012, 2014 and 2016 along with a 1966 USGS Aerial Topo were reviewed. Photographs, Sanborn Fire Insurance Maps and topographic maps in an aerial review are specifically examined for evidence of hazardous materials, as well as on and off-site features that may affect the environmental quality of the property. These features include sumps, pits, ponds, lagoons, aboveground tanks, landfills, outside storage of hazardous materials and general land use. None of those items appeared to be on or immediately adjacent to the subject property in a manner which would be of long term concern for the subject property.

Sanborn Fire Insurance Maps - There were no Sanborn Fire Insurance Maps for this report.

Photo Dated 1938 - The parcel is vacant land with agricultural land to the west, east north and south. There is a large structure on the west side of N Sierra Avenue further northwest.

Photo Dated 1959 - There is now a house on the property, a house on the north and a house further north. There are no other significant changes around the subject property.

Photo Dated 1966 - There are no significant changes to the subject property or surrounding properties.

Photo Dated 1995 - The structures are gone from the subject property. There are no significant changes to the surrounding properties. Residential properties are being constructed further east.

Photo Dated 2003 - There are no significant changes to the subject or surrounding properties. Residential properties are being constructed further east.

Photo Dated 2006 - The building appears to be gone from the property north of the subject property leaving only a foundation. There are no other significant changes in the area.

Photo Dated 2007 - There are no changes to the subject property. There are no other significant changes in the area.

Photo Dated 2012 - There are no changes to the subject property. There are no other significant changes in the area.

Photo Dated 2013 - There are no significant other changes to the subject property or surrounding properties.

Photo Dated 2016 - There are no significant changes to the subject property or surrounding properties.

Copies of sections of selected historical aerial photographs along with a topographic map are in the Appendix.

6.5 Synopsis of Previous Environmental Investigations

There were no prior Environmental Investigations identified or provided by the client.

CAL- EPA online information regarding possible problem properties in the area of the subject property was reviewed. No problems were identified for the subject property. (See appendix)

6.6 Summary of Government Records Search (Refer to Government Lists)

NOTE: This government records summary is based, in part, on investigating critical, or "border zone", properties near the subject property. The *State of California, Department of Health Services*, has defined these sites as being within 2,000 feet (or approximately 0.4 mile) of the subject property. Other sites more distant in proximity may be listed but not considered critical and, therefore, not further investigated.

The following is a summarized form of the detail provided in the Environmental Records Search (ERS) Report in the Appendix.

CATEGORY ONE: NPL, SPL, RCRA-TSD, RCRA-CORRACTS, SWLF, SCL, CERCLIS/NFRAP, TRIBAL LAND SITES

This category is composed of lists compiled by the *US Environmental Protection Agency* and the State of California Equivalency lists. This category includes National Priority List sites, RCRA Corrective Actions by the *EPA* and *USEPA* permitted treatment, permitted solid waste landfills, incinerator sites or transfer stations, storage and disposal facilities within a one mile radius of the subject property. This includes sites for designation under the Federal SUPERFUND Program an the State Bond Program for sites representing an environmental

concern for the discharge of hazardous wastes.

There is one Category One site listed as being within one mile of the subject property as of the date of this report. That site is nearly a mile northeast and not considered a problem for the subject property.

CATEGORY TWO:(½ mile) **LUST, DEED RSTR, TOXIC PITS, CORTESE**
The sites within this category include sites selected for possible placement on the Federal NPL list or the State risks to human health and the environment. This category also includes leaking underground tank sites from both the *Regional Water Quality Control Board* and the State mandated CORTESE lists of properties with hazardous wastes, sites with DEED restrictions and Toxic Pits Cleanup facilities. Sites within this category are provided on this list within a one-half mile as of the date of this report, with other DEED restrictions and Toxic Pits sites from 1994 and 1995.

There are no Category Two site listed involved with leaking underground tanks.

CATEGORY THREE: (1/4 mile) **RCRA VIOL, TRIS, UST/AST**
Sites in this list are the result of RCRA enforcement actions, the Toxic release inventory base, registered aboveground or underground tanks and the result of searches of any unique county data bases. The data bases range from 1994 information for underground tanks to the date of this report for information for RCRA actions and registered aboveground storage tanks.

There are no Category Three sites listed within a one-quarter mile radius of the subject property.

CATEGORY FOUR: (1/8 mile) **ERNS, GNRTR, SPILLS**
Sites in this category include ERNS, which is a national database retrieval system of Incident-Notification information as initially reported by any party regarding incidents of reported releases of oil and hazardous substances. The information in this report combines data from the *United States Coast Guard National Response Center* data base with data from the 10 *EPA* regions.

ERNS/SPILLS - ERNS/SPILLS supports the release notification requirements of Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), as amended; Section 311 of the Clean Water Act; and Sections 300.51 and 300.65 of the National Oil and Hazardous Substances Contingency Plan. There are no ERNS/SPILLS sites listed within one-eighth mile of the subject property as of the date of this report.

RCRA - Sites which generate regulated hazardous waste above a certain quantity are required to use *EPA* identification numbers and are called RCRA sites. An *EPA* identification number does not indicate a problem with a site, but merely that they use or dispose of a minimum quantity of a hazardous waste.

There are no RCRA sites listed within a one-eighth mile radius of the subject property as of the date of this report. The subject property is not an RCRA site.

7.0 DISCUSSION OF INVESTIGATION

Asbestos 1527-13 Section 13.1.5.1 **De Minimis Condition**
Building Materials Presumed to Contain Friable Asbestos
None.

Building Materials Presumed to Contain Non-Friable Asbestos
None.

Pcb 1527-13 Section 9.4.1.10 Poly-Chlorinated Biphenyl (Pcb) - **De Minimis Condition**
There should not be any pcb in any of the utility transformers on or near the site, according to *Southern California Edison* the electrical supplier to the area.

There are no suspected PCB-containing florescent light ballasts.

Aboveground Storage Tanks 1527-13 - The physical site survey did not evidence the existence of aboveground storage tanks currently or formerly on the subject.

Underground Storage Tanks 1527-13 Section 9.4.1.3 9.4.1.4 & .5 - The physical site survey did not evidence current or former underground tanks.

Air Emissions - There are no regulated air emissions from the subject property.

Water Supplies 1527-13 Section 9.4.1.9 - Former discussions with the Fontana Water Company and a review of their web site evidenced a water supply to the area which meets all of California's drinking water requirements.

Wastewater 1527-13 Section 9.4.1.10 & 9.4.4.7 - The subject property is expected to have had a septic tank and seepage system with only domestic waste disposed of. No problems are expected.

Waste Generation, Storage and Disposal 1527-13 Section 9.4.1.4.4 & .5 & .6 & .7 - The physical site survey did not evidence the current or former generation, storage or disposal of regulated hazardous waste on the subject property.

Pesticides, Herbicides, Stressed Vegetation 1527 9.4.4.3 - There was no current use of herbicides or pesticides noted beyond the normal residential and commercial insect and pest control.

Wells - Oil, Water, Injection, Irrigation, Abandoned 1527-13- 9.4.4.6 - There were no wells of any type seen on site nor were any identified adjoining the subject property

Radon - Radon comes from the natural breakdown (radioactive decay) of uranium. The *Environmental Protection Agency* (*EPA*) estimates that the average soil in the United States contains only about one part per million of uranium. Uranium is found in about 150

minerals including granite, phosphate and shale. Granite is a major concern for the presence of radon, as some deposits have been found to contain extremely high levels of uranium. The area of the subject property does not indicate any large deposits of granite material which would be of concern to test for the presence of radon. Phosphorous is an essential ingredient in chemical fertilizers and comes from phosphate rock. There does not appear to ever have been much fertilizer used around the subject property. According to Mr. David Quinton of the *State Department of Radon*, the chance of radon being a hazard in the State of California is very low. Actual testing for radon content was not conducted and is not included in the scope of this report.

Lead-Based Paint - Specific testing is required to determine if paint or other materials used in the construction of the building on the site contains significant levels of lead. These tests are not within the scope of work for this report and no investigation for lead content was, or will be, performed unless agreed to by the property owner as an additional service, incurring additional costs. There are no structures and no lead paint issues.

Vapor ASTM 2600 Section 10 - There were no sources of vapor from soil or groundwater identified. (See 12.10) Tier I Vapor Encroachment Screening (VES)

Regulatory Actions - There were no regulatory actions noted in the records reviewed regarding the subject property.

Known Site Problems - There are no known site problems.

Regional or Adjacent Problems - There are no regional problems.

8.0 CONCLUSIONS

8.1 Areas of No Apparent Concern

There are no areas of concern regarding the current or former operations on-site. The subject property was on the western edge of the Rialto Military Reservation and there was no temporary storage of munitions or ordnance on site noted in the research.

8.2 Areas of Further Concern

The record research and physical site survey did not identify any areas of further concern regarding Recognized Environmental Concerns for the subject property.

9.0 RECOMMENDATIONS

9.1 Areas of No Action

There are no recommended areas of action at this time.

9.2 Further Investigation

In this Environmental Professional's Opinion, the likelihood of contamination is so remote that no further investigation is recommended.

9.3 **Performance Statement 1527 13 12.8.1**- We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 - 2013 of APN 0239 -151- 40 on the Northeast Corner of N Sierra Avenue and W Casa Grande Drive Fontana, CA 92336. Any exceptions to, or deletions from, this practice are described in Section 1 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

10.0 LIMITATIONS

This report is intended to satisfy the requirements of a Preliminary Phase I Environmental Site Audit as outlined in the ASTM-1527 2013 Guidelines and the 2006 EPA All Appropriate Inquiries" Standard. These standards are intended to define the scope of due diligence necessary in a real estate transaction to provide for the "innocent buyer's defense" under the SARA amendments to CERCLA.

The findings set forth in this Phase I Environmental Site Assessment are strictly limited in time and scope to the date of evaluation(s). Government records searched are limited to the accuracy of the agency prepared lists. The conclusions presented in the report are based solely on the services described therein and not on scientific tasks or procedures beyond the scope of the agreed upon Phase I Environmental Site Assessment. It is hereby acknowledged that, within the scope of this survey, no level of assessment can ensure the real property is completely free of chemicals or toxic substances.

This public records search was conducted with available Federal, State, County and City agency departments, according to recognized procedures and current availability of records. Conclusions resulting from these searches are solely a result of the same. ***S & S Commercial Environmental Services, Inc.,*** assumes no responsibility for events that are not part of these public records. This report is intended for those in privity of contract and any current lender. This report is not transferrable without written authorization. This report is not intended to be used by any other person or entity now or in the future.

All Appropriate Inquiries Final Rule

WHAT IS "ALL APPROPRIATE INQUIRIES?"
"All appropriate inquiries" is the process of evaluating a property's environmental conditions and assessing potential liability for any contamination.

WHY IS EPA ESTABLISHING STANDARDS FOR CONDUCTING ALL APPROPRIATE INQUIRIES?
The 2002 Brownfields Amendments to CERCLA require EPA to promulgate regulations establishing standards and practices for conducting all appropriate inquiries.

RE: PCB's

Ballasts are used in fluorescent fixtures in business, commercial and industrial establishments, as well as in schools. One of the devices used in these ballasts is called a capacitor, which makes the ballasts operate more efficiently. These capacitors, used in ballasts made by every manufacturer in the industry, including Universal, used PCBs in small amounts until 1978, when a change was made to another liquid. Universal ballasts manufactured since January 1979 do not contain PCBs and the label of all these ballasts contain the statement "No PCB's".

The capacitor is a hermetically sealed device, which entirely isolates the PCB from human contact. The typical fluorescent ballast contained about 0.05 lbs. of 100% PCB liquid. That represents 1-2 liquid ounces. The weight of PCB used in relationship to the total capacitor weight, was approximately 15%. In relationship to the total ballast weight it varied from 0.6% (Slimline ballasts) to 1.5% (2 lamp, 40 watt ballasts). The degree of chlorination was 42%.

For HID ballasts where larger capacitors were used, it may have been as much as 5-6 ounces of liquid. In all cases the amount of "free PCBs" (the quantity that could leak if the can ruptured), was much less because most of the liquid was absorbed by the blotter-like dielectric material.

Ballasts occasionally fail in service and sometimes the asphalt (tar) with which they are filled melts and leaks out. On very rare occasions, the capacitor will also rupture and its contents mix with the tar. If a leak occurs, it should be cleaned up with any petroleum-based solvent.

Such a leak does not represent any significant immediate or long-term hazard. The United States Environmental Protection Agency has recognized the existence of PCBs in ballasts, has carefully evaluated the situation and in the regulations controlling the use and disposal of PCBs has concluded that continued use in existing lighting installations is acceptable; also that the occasional ballasts which becomes defective in service may be disposed of in compliance with 40 CFR* Part 761 or check with your local State Environmental Protection Agency for instruction.

Should you have any questions regarding this matter, please do not hesitate to call me at your convenience.

Very truly yours,

MagneTek Universal Manufacturing

Robert E. Babcock
Manager, Marketing Engineering

12.12 Certification

ENVIRONMENTAL PROFESSIONAL CERTIFICATION

I, Stephen A. Quartararo declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in Section 312.10 of this part [40CFR Part 312].

I have the specific qualifications based upon education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

12.13 Resume

RESUME

STEPHEN A. QUARTARARO http://www.phase1reports.com
Environmental Professional, CFR Title 40 Code of Federal Regulations Section 312.22
ASTM 1527-2013, CA 2010 CHHSLs, CA HERO 2015, HUD 2015 and SBA May 1, 2015.

Owner S&S Commercial Environmental Services, Inc. since formation 1997. General Engineering Contractor A, Hazardous Materials Certified, General Building Contractor B, Insulation and Acoustical C-2, Asbestos Certified, Water Well Drilling Contractor C-57. Real Estate Brokers License, Life & Health Insurance License.

Phase I Site Surveys, Phase II Soil and Groundwater Investigations, Phase III Remediation of Soil and Groundwater leading to No Further Action or Closure by Local, County, State and Federal Agencies. Environmental Hazard Assessment, Project Cost to Cure Physical Deterioration, Construction Management, Environmental Site Appraisals. Storm and Irrigation Water Conservation, Re-use.

RECENT PROJECTS
December 2016 - Facilitator with LA County Fire Department Site Mitigation Unit and General Engineering Contractor for Closure of 3.5 acre industrial property in Carson, CA over a five year period. Removal of PCE Vapor in three major areas to 45 feet. Removal and off haul of 30 = twenty-four ton truckloads of gasoline and diesel, pce and tce contaminated waste under over site of LA County Fire Department Site Mitigation Unit in a final remediation of source. Closure of minimally contaminated groundwater at 58 feet as non-beneficial water attenuating naturally.

March 2016 - No Further Action (NFA) Closure Letter for Soil, Soil Vapor and Groundwater for large light industrial property in Carson, CA - Proved liability for further quarterly monitoring and remediation of groundwater under NFA property was responsibility of Owner of an off site VOC contaminant source being remediated by Others. Coordinator for Oil Well Re-abandonment at Signal Hill Site 2009, Valencia 2006.

EXPERIENCE
6,000 plus Phase I site assessments in CA, AL, AZ, AR, NV, NY and TN.
100's of Phase II and Phase III site investigations and closures in CA.

39 years as asbestos and environmental consultant and abatement contractor direct and subcontract. 20 of those years as owner of an Environmental Company, 19 as a General Engineering Contractor with Hazardous Certification and 3 of those years with related storm and irrigation water conservation related companies.

Professional cost estimation, third party verification of sampling activities, underground tank removal monitoring and property assessment consultant for soil and groundwater.

Coordinator of design and construction in two Los Angeles high rise office buildings for fire safety retrofit under the City of Los Angeles fire life safety ordinance.

Develop and Design of Affordable Housing, including site selection, negotiation, planning and permit process and funding sourcing.

MAJOR CONTRACTS

UC Santa Barbara (1979) - HVAC system cleaning of five-story Chemistry and Physical Sciences buildings on campus**.**

VA Medical Center LA Jolla (1980) **-** After-fire decontamination of Surgery Floor HVAC.

TRW (1983) - Bulk materials sampling for asbestos in 65-building facility, Redondo Beach, CA.

UC Chancellors Office, UC San Francisco Medical Center (1984) - Survey design, field work completion, report design, report completion for UC Chancellor's office's funding request to State Assembly funding for asbestos abatement and management - 103 buildings - hospital, classrooms, administrative offices.

California Hospital Medical Center (1983) - Contract and specification design and completion of asbestos abatement projects.

County of Los Angeles (1984) - Approval of specifications, third party monitoring of contractor during Building 5 Asbestos Abatement Project at Rancho Los Amigos Medical Center.

JMB Property Management (1985) - Coordination as part of Pacific Abatement Group with building management and Med Tox abatement and hygiene personnel on 3 stories of asbestos containment project in 25 story high rise office building, Century City, CA.

UC Riverside (1985) - *Asbestos management and control in utility tunnels under campus.*

Tishman Construction (1985) - Area containment for electrical work adjacent to occupied areas in asbestos affected Bank of America offices at ARCO Towers, Los Angeles, CA.

Equitable Real Estate Investment Management (1986) - Asbestos abatement and containment projects, including elevator lobby doors, full floor abatement and after-fire decontamination projects in former First Interstate Bank and Union Bank buildings, Los Angeles, CA.

Baxter Pharmaceutical (1988) - Building materials sampling for asbestos and reports for 14 buildings in seven Midwest States.

Fremont Indemnity (1991) - Independent owner's agent for fire protection citation response to LAFD and construction of tenant improvements for asbestos abatement and fire life safety rehabilitation of 11-story office building in midtown Los Angeles. Included removal of underground diesel tank.

Redlands Federal Savings (1990) - Phase I Environmental Assessments of raw land in Inland Empire and San Diego areas of Southern California.

SPS Technologies (1993) - **"Qualified Risk Assessment"(QRA)** for sale of existing 20-acre site in Costa Mesa, CA: Work involved review of commercial appraisals, Environmental Site Remediation work completed, further remediation cost proposals, interviews with responsible government agencies, interviews with banking authorities, preparation of report detailing current conditions and value of property less expected remediation costs, results of interviews with regulatory agencies and financial authorities, four scenarios under which the property might be sold and the anticipated financial return and liability concerns of each scenario.

Money Store Investment Corporation (from 1992 until sold) - Related - 400+ Phase I Environmental Assessments of commercial property as collateral for SBA backed commercial loans in California.

First Union/Wachovia - Successors to Money Story Investment Corporation, Then Wells Fargo

Coast Federal Savings (Former- early 1990's) - 300+ Phase I Environmental Assessments and Asbestos Inspections of residential apartment buildings, commercial shopping centers and other commercial buildings from San Diego to San Francisco and Sacramento to New York State.

Chevron Real Estate Services (1991) - Coordination and management of gasoline contaminated soil remediation project in Blythe, CA; work included shoring to 30 feet along the western perimeter of project to protect adjacent restaurant, removal and bio-remediation of 3,500 cubic feet of contaminated soil, removal of 5,000 gallons of contaminated water, placement of filter

over local groundwater, back filling of excavation with remediated soil.

Carlsberg Management Company (1989-1995) - Independent owner's agent for fire protection citation response to LAFD and construction of tenant improvements for asbestos abatement and fire life safety rehabilitation of 10-story office building in West Los Angeles.
Owner's representative: work included selection and coordination of architect, mechanical, electrical, fire sprinkler, asbestos abatement/containment and industrial hygiene contractors and interface with the City of Los Angeles Building, Electrical and Structural Departments and Inspectors over a five year period under occupied and vacant building conditions.
California Federal Bank (1993) - Phase I Environmental Assessments and Asbestos Inspections of commercial and residential buildings in Northern and Southern California.
Folger & Levin, Law Firm (1995) - "Environmental Risk Assessment" (ERA) for 3-acre parcel in West Los Angeles. Review of six environmental soil and groundwater studies, practical expansion of research and coordinated explanation of real environmental issues for use by commercial property appraiser.
State Farm Insurance Company (1995) - Asbestos expert for client negotiations.
Berger, Kahn, Shafton, Moss, Figler, Simon & Gladstone (1996/1997) - Asbestos expert witness.
Prestholt, Kleeger, Fidone & Villasenor (1996) - Asbestos expert witness.
S&S Commercial Environmental Services (1997 - Present) - Phase I Site Assessments and Miscellaneous Independent Project Management and General Engineering Contractor for soil and groundwater sampling and remediation leading to site closure letter from County and City Fire Departments, Health Departments and CA Regional Water Boards ranging from thousands to hundreds of thousands of dollars. Oil Well Re-abandonment.
Bank of America - Related - Phase I Environmental Assessments Southern California.
Wells Fargo Bank - Phase I Environmental Assessments and Asbestos Inspections in California for Standard and SBA backed RE property loans. *(Successor To Wachovia Bank - SBA Division)*
Chase Bank - Phase I Site Assessments
First Foundation Bank - Phase I Environmental Site Assessments & Phase I Reviews, Phase II Site Investigations. California and Nevada
Standard Life Insurance Company - Phase I Site Assessments
Metropolitan Life Insurance Company - Phase I Site Assessments
Textron Financial - Heritage Golf Group - 127 Acre Golf Course Santa Clarita - Phase I
Blue Green Preservation - Phase I and Phase II Site Assessments HUD Senior Housing California, Alabama, Tennessee, Arkansas
Miscellaneous Independent Cost Estimation for required remediation of contaminated sites with commercial and industrial property appraisers.

EDUCATION
B.S. Urban Environmental Management; Cal State University Dominguez Hills
J.D. Candidate Classes in Torts, Contracts, Criminal Law, Legal Writing; Western State University, Southern California College of Law
Major Emphasis - Tort Theory and the implications to modern environmental contamination and clean-up problems.
"Low Risk Closure Guidelines" - California Regional Water Quality Board - Los Angeles Region Seminar June 1996.
Miscellaneous Classes provided by State Agencies in past twenty years and job site discussion regarding water quality standards and remediation with Regulators for Closure.

California Storm Water Association (CASQA - Member and participation as vendor representing OSORB as Absorb Concentrate & Eliminate (AC&E San Diego August 2012. Member and participation as vendor representing ASRE (Advanced Stormwater Recovery & Engineering Garden Grove September 2014.

1-MILE RADIUS STREET MAP W/OCCURRENCES (MAP1)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. **Occurrences are shown in three colors** to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

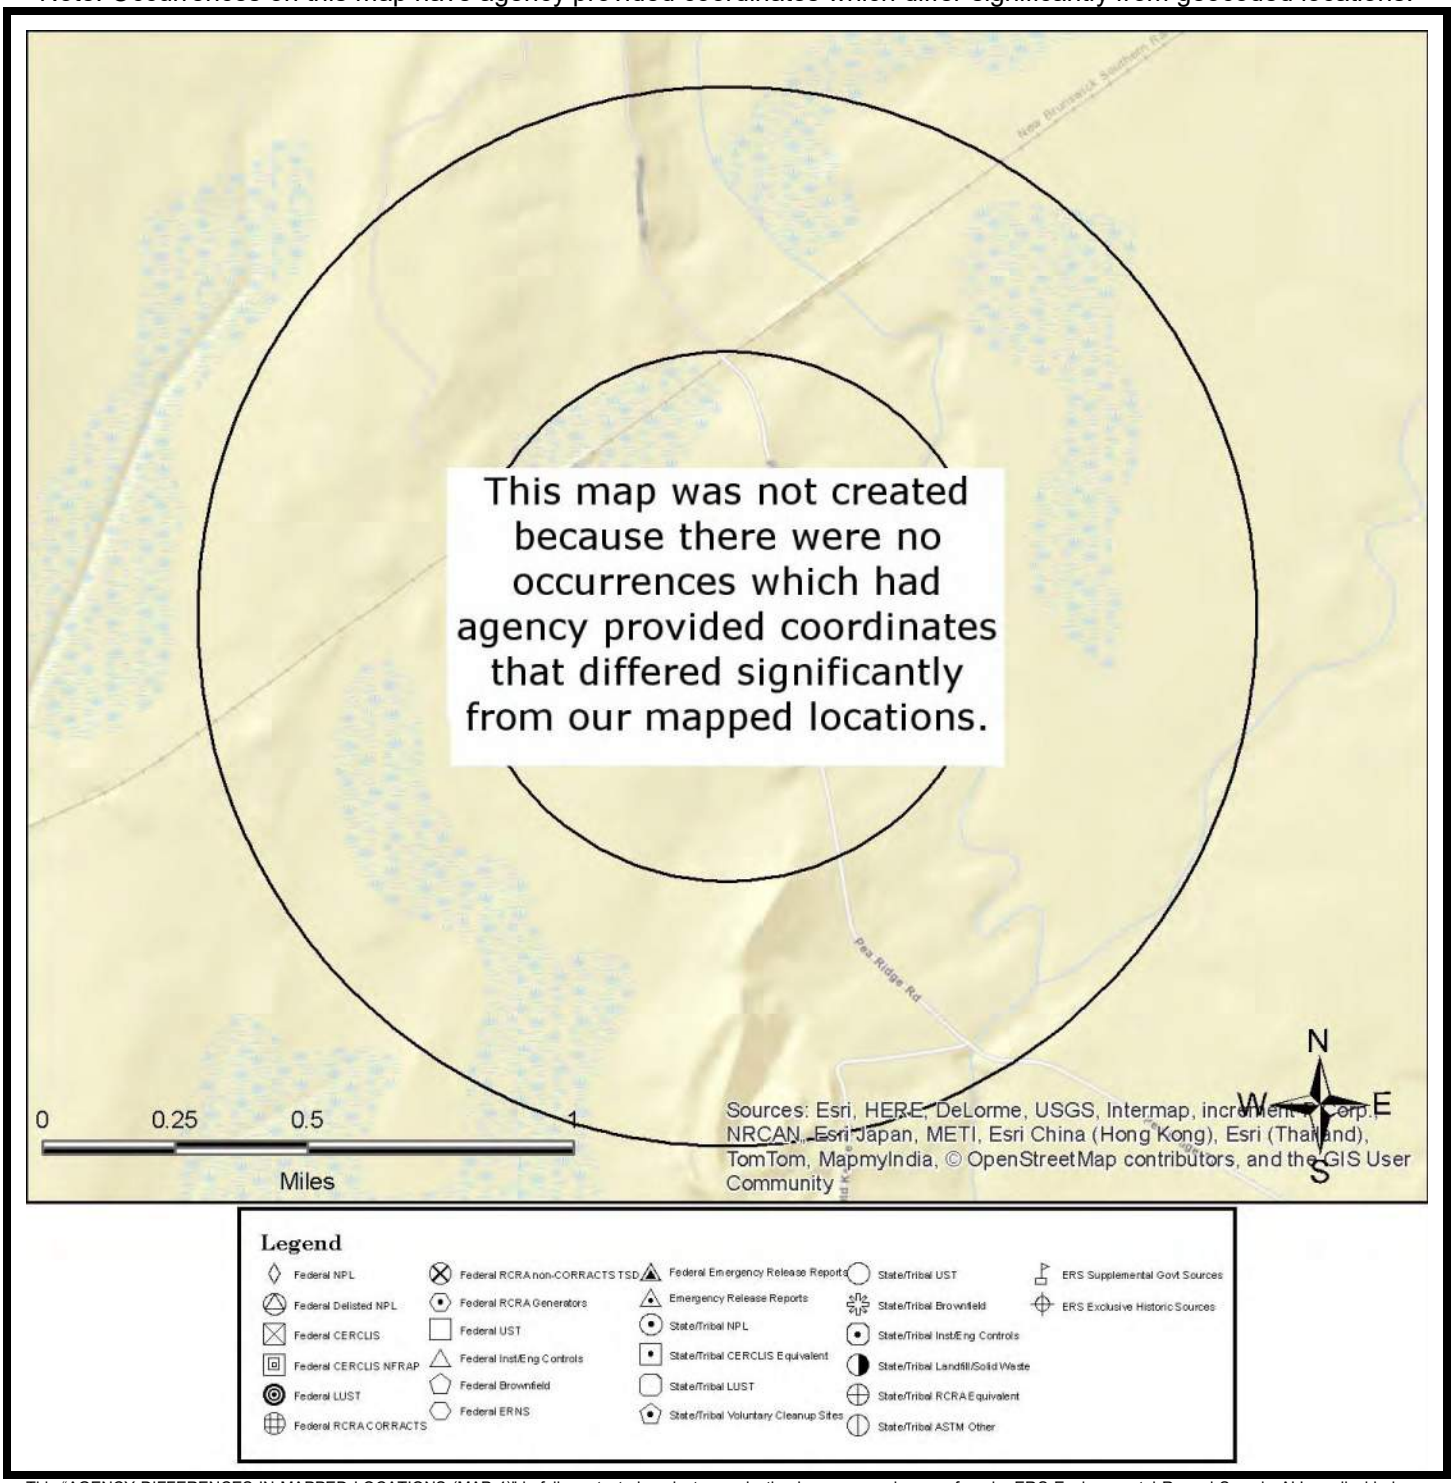
1-MILE TOPOGRAPHIC MAP W/OCCURRENCES (MAP3)



All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. **Occurrences are shown in three colors** to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP4)

Note: Occurrences on this map have agency provided coordinates which differ significantly from geocoded locations.

This "AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP 4)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP5)

Note: Occurrences on this map are reported in Air Quality databases. Potential air plumes are drawn in the direction of the prevailing wind.
No air quality occurrences were identified in the search raddius

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency/source. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Potential air dispersion plumes are depicted to graphically show the direction contaminates may travel based on prevailing wind data and provide a visual screening tool only. Actual direction will vary especially by season. Depending on the actual contaminate, amount released, and other variables, the distance from the source the contaminate may travel can and will vary. Interpretation and review of all the actual relevant data by an environmental professional is recommended before making any decisions, conclusions or otherwise based on the map depictions, air data, and potential air dispersion plumes.

This "MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP 5)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

POTENTIAL AREAS OF CONCERN/CONTAMINATION (MAP6)

Note: Locations shown may represent site boundaries, contamination plumes, or other information. See descriptions in the Listed Occurrence Details for more information.

Copyright 2018 Environmental Record Search (ERS) All Rights Reserved

US FISH & WILDLIFE SERVICE, CRITICAL HABITATS

All plotted polygons represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc.

UN-MAPPABLE OCCURRENCES

The following occurrences were not mapped primarily due to incomplete or inaccurate address information. All of the following occurrences were determined to share the same zip code as the area searched. General status information is given with each occurrence along with any address information entered by the agency responsible for the list.

ID	Facility Name	Address	Database	Status

Preparation Date: 09/27/2019
Approval Date:_____

Project Owner's Certification

This Water Quality Management Plan (WQMP) has been prepared for CalAtlantic Homes Inc. by Allard Engineering. The WQMP is intended to comply with the requirements of the City of Fontana and the NPDES Area wide Stormwater Program requiring the preparation of a WQMP. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with San Bernardino County's Municipal Storm Water Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Section 1 Discretionary Permit(s)

Form 1-1 Project Information

Project Name	Sierra / Casa Grande Warehouse				
Project Owner Contact Name:	Dennis Rice				
Mailing Address:	2211 Michelson Drive, #650 Irvine, CA 92612	E-mail Address:		Telephone:	951-751-5700
Permit/Application Number(s):	MCN : WQMP :		Tract/Parcel Map Number(s):	APN (s): 0235-211-03-000, 0235-211-04-000 (Parcel-1) 0235-211-10-0-000 (Parcel-2)	
Additional Information/ Comments:	N/A,				
Description of Project:	The project is proposing 15.23 acres of commercial used warehouse development. The project consist of warehouse building, dock areas, trailer parking stalls, driveways, side walks, landscaping/planter area and associated offsite street improvements on Sierra Avenue & Casa Grade Drive. The project is located in the City of Fontana, bounded by Casa Grande Drive to the south, Sierra Avenue to the west, SCE right of way to the east, and un-developed vacant lots to the north. The project is also proposing frontage parkway improvements that include sidewalk, planters and curb & gutter being approximately 1,675-ft. The proposed site drainage area divided into two drainage management areas (DMA-1, DMA-2) based on the flow pattern onsite. DMA-1 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. Basin-1 is proposed to be connected with Basin-2 via equalization drain. Once Basin-1 reach it capacity, it will drain to to basin-2 for water quality treatment. DMA-2 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. For storms larger than the water quality, the water will overflow the Basin-2, once Basin-1,2 reach their capacity and will drain into the proposed storm drain system within the site and will finally discharge to the 66" RCP master strom drain in Sierra Avenue at the south-west corner of the site.. The proposed parkway frontage improvements are approximately 1,675-ft which is less than the minimum required length of ½ mile (2,640-ft) and are exempt from water quality treatment per the San Bernardino County Transportation Project Total Guidance Document (TGD).				

Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	One Drainage Area: DA1 with two Drainage Management Areas (DMA-1, DMQA-2) On site drainage area divided into two drainage management areas (DMA-1, DMA-2) based on the flow pattern onsite. DMA-1 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. Basin-1 is proposed to be connected with Basin-2 via equalization drain. Once Basin-1 reach it capacity, it will drain to to basin-2 for water quality treatment. DMA-2 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. For storms larger than the water quality, the water will overflow the Basin-2, once the Basin-1,2 reach their capacity and will drain into the proposed storm drain system within the site and will finally discharge to the 66" RCP master strom drain in Sierra Avenue at the south-west corner of the site.

Section 2 Project Description

2.1 Project Information

This section of the WQMP should provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein. The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

Form 2.1-1 Description of Proposed Project

[1] Development Category (Select all that apply):

☐ Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☒ New development involving the creation of 10,000 ft² or more of impervious surface collectively over entire site	☐ Automotive repair shops with standard industrial classification (SIC) codes 5013, 5014, 5541, 7532- 7534, 7536-7539	☐ Restaurants (with SIC code 5812) where the land area of development is 5,000 ft² or more
☐ Hillside developments of 5,000 ft² or more which are located on areas with known erosive soil conditions or where the natural slope is 25 percent or more	☐ Developments of 2,500 ft² of impervious surface or more adjacent to (within 200 ft) or discharging directly into environmentally sensitive areas or waterbodies listed on the CWA Section 303(d) list of impaired waters.	☒ Parking lots of 5,000 ft² or more exposed to storm water	☐ Retail gasoline outlets that are either 5,000 ft² or more, or have a projected average daily traffic of 100 or more vehicles per day

☐ Non-Priority / Non-Category Project *May require source control LID BMPs and other LIP requirements. Please consult with local jurisdiction on specific requirements*.

[2] Project Area (ft2):	663,419 sf	[3] Number of Dwelling Units:	n/a	[4] SIC Code:	4225

[5] Is Project going to be phased? Yes ☐ No ☒ *If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.*

6 Does Project include roads? Yes ☒ No ☐ *If yes, ensure that applicable requirements for transportation projects are addressed (see Appendix A of TGD for WQMP)*

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term of WQMP stormwater facilities:

Ridge Development Company, L.L.C. will be responsible to build the site and the maintenance of the post-developed BMPs.

Address:

2211 Michelson Drive, #650

Irvine, CA 92612

Phone Number:

951-751-5700

2.3 Potential Stormwater Pollutants

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-3 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern			
Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☐	N ☒	
Phosphorous	E ☒	N ☐	
Nitrogen	E ☒	N ☐	
Sediment	E ☒	N ☐	
Metals	E ☒	N ☐	
Oil and Grease	E ☒	N ☐	
Trash/Debris	E ☒	N ☐	
Pesticides / Herbicides	E ☒	N ☐	
Organic Compounds	E ☒	N ☐	
Other: Nutrients	E ☒	N ☐	
Other: Oxygen Demanding Compounds	E ☒	N ☐	
Other:	E ☐	N ☐	

2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

Form 2.4-1 Water Quality Credits

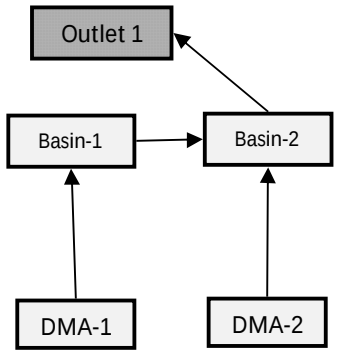
[1] Project Types that Qualify for Water Quality Credits: *Select all that apply*

☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [20%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☐ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ In-fill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]

[2] Total Credit % 0 *(Total all credit percentages up to a maximum allowable credit of 50 percent)*

Description of Water Quality Credit Eligibility (if applicable)	N/A

Section 3 Site and Watershed Description



Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. *If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet.*

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34.15901° N	Longitude 117.43418° W	Thomas Bros Map page PAGE ___ GRID _ _

[1] San Bernardino County climatic region: ☒ Valley ☐ Mountain

[2] Does the site have more than one drainage area (DA): Yes☐ No☒ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached*

Conveyance	
DA-1 TO Outlet 1	One Drainage Area: DA1 with two Drainage Management Areas (DMA-1, DMQA-2) On site drainage area divided into two drainage management areas (DMA-1, DMA-2) based on the flow pattern onsite. DMA-1 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. Basin-1 is proposed to be connected with Basin-2 via equalization drain. Once Basin-1 reach it capacity, it will drain to to basin-2 for water quality

	treatment. DMA-2 include an Infltration Basin-1 for water quality volume, a network of storm drain pipe/conveyance system including grate inlet with ADS Flexstorm Filter Inserts and a trench drain with Oldcastle FloGard Filter Insert for pre-treatment. For storms larger than the water quality, the water will overflow the Basin-2, once the Basin-1,2 reach their capacity and will drain into the proposed storm drain system within the site and will finally discharge to the 66" RCP master strom drain in Sierra Avenue at the south-west corner of the site.

Form 3-2 Existing Hydrologic Characteristics for Drainage Areas (DA-1)				
For Drainage Areas 1-3 sub-watershed DMA, provide the following characteristics	DMA-1+DMA-2			
1 DMA drainage area (ft^2)	663,419 sf			
2 Existing site impervious area (ft^2)	0 sf			
3 Antecedent moisture condition *For desert areas, use* *http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	III			
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://sbcounty.permitrack.com/WAP*	A			
5 Longest flowpath length (ft)	1,175			
6 Longest flowpath slope (ft/ft)	1.9%			
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Undeveloped-Open Brush			
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*	50%			

Form 3-3 Watershed Description for Drainage Area(s) DA1	
Receiving waters *Refer to Watershed Mapping Tool -* *http://sbcounty.permitrack.com/WAP* *See 'Drainage Facilities" link at this website*	Site Drains to 66" Master SD (RCB) in Sierra Avenue San Sevaine Basins San Sevaine Channel Etiwanda Creek Channel Santa Ana River Reach 3 Predo Dam

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	Practical education materials will be provided to property owner and Summit at Rosena Maintenance staffs covering various water quality issues that will need to be addressed on their specific site. These materials will include general practices that contribute to the protection of storm water quality and BMP's that eliminate or reduce pollution during property improvements. The developer will request these materials in writing at least 30 days prior to intended distribution and will then be responsible for publication and distribution.
N2	Activity Restrictions	☒	☐	Restrictions may be developed by property owner or other mechanisms. Pesticide applications will be performed by an applicator certified by the California Department of Pesticide Regulation. Vehicle washing will be prohibited.
N3	Landscape Management BMPs	☒	☐	According to the California Stormwater Quality Associations Stormwater Best Management Practice Handbook, landscape planning is implemented to reduce groundwater and storm water contamination. This will be accomplished through an infiltration basins, and landscape areas.
N4	BMP Maintenance	☒	☐	See section 5, Table 5.1 for details on BMP maintenance
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	Not applicable
N6	Local Water Quality Ordinances	☐	☒	Not applicable
N7	Spill Contingency Plan	☒	☐	The spill contingency plan shall be provided in accordance with Section 6.95 of the California Health and Safety Code.
N8	Underground Storage Tank Compliance	☐	☒	No underground storage tank on the site.

Form 4.1-1 Non-Structural Source Control BMPs				
N9	Hazardous Materials Disclosure Compliance	☐	☒	No hazardous materials in the site.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☐	☒	No hazardous materials in the site.
N11	Litter/Debris Control Program	☒	☐	Will be responsible by landscaper contractor assigned by Community Facilities Districts (CFD). Litter/debris control a minimum of once every two weeks.
N12	Employee Training	☒	☐	All employees will be trained administered by Community Facilities Districts (CFD) once in a year.
N13	Housekeeping of Loading Docks	☐	☒	Housekeeping of Loading Docks will be maintained by the owner.
N14	Catch Basin Inspection Program	☒	☐	Catch basins will be inspected a minimum of once every three months during the dry season and a minimum of once every two months during the rainy season.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	Parking lot and onsite pavement will be maintained by the owner.
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	Not applicable
N17	Comply with all other applicable NPDES permits	☒	☐	Yes, if necessary.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	Signs will be placed above storm drain inlets to warn the public of prohibitions against waste disposal
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	No material storages areas in the project
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Trash enclosures, containment structures will be provided and will be maintained by Community Facilities District (CFD) or CFD assigned operator.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	Rain sensors will be incorporated into the onsite sprinkler system so that no unnecessary watering of landscaped areas occurs after storm events.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	New landscaped areas will be constructed at a minimum of 1 inch below existing paved areas
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☐	☒	No Slopes and Channel, Not applicable
S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	Not Applicable
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	No Maintenance Bays, Not applicable
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No carwash areas , Not applicable
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	No outdoor Processing, Not applicable

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No equipment wash areas, Not applicable
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	No Fueling Areas, Not applicable
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	No Hillside Landscaping, Not applicable
S14	Wash water control for food preparation areas	☐	☒	No food Preparation, Not applicable
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	No Community Car Wash, Not applicable

4.1.2 Preventative LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventative LID Site Design Practices Checklist
Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☒ No ☐ Explanation: We will build multiple planter areas in addition to an infiltration basin.
Maximize natural infiltration capacity: Yes ☒ No ☐ Explanation: Part of Runoff from impervious surfaces will be conveyed through landscaped areas so that infiltration is maximized. Runoff will also be intercepted by an contech infiltration chamber system
Preserve existing drainage patterns and time of concentration: Yes ☒ No ☐ Explanation: The site currently drains South. Post developed flow will also drain south this is consistent with existing and Master Planned flow patterns.
Disconnect impervious areas: Yes ☒ No ☐ Explanation: Part of impervious/roof areas will drain into landscaped areas.
Protect existing vegetation and sensitive areas: Yes ☐ No ☒ Explanation: There are no environmentally sensitive portions onsite and existing vegetation will be kept as much as possible.
Re-vegetate disturbed areas: Yes ☒ No ☐ Explanation: Part of disturbed areas will be revegeated, see landscape plan.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☒ No ☐ Explanation: No compaction will be performed within the area where the infiltration chamber systems are proposed.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: Yes ☐ No ☒ Explanation: Runoff will also be intercepted by the infiltration chamber system and multiple landscaped areas.
Stake off areas that will be used for landscaping to minimize compaction during construction : Yes ☒ No ☐ Explanation: No compaction will be performed within the area where landscape areas are proposed.

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. *If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.*

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P_6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi^2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DMA-1) See attached summary table and calculation sheets for DCV

1 Project area DMA-1 (ft^2): 502,247	2 Imperviousness after applying preventative site design practices (Imp%): 89.5% .	3 Runoff Coefficient (Rc): 0.72 *$R_c = 0.76\ (Imp\%)^{\wedge 3} - 0.78(Imp\%)^{\wedge 2} + 0.774(Imp\%) + 0.04$* Varies for each DMAs. See provided Calculation Sheets in the following pages.
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): - http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html 0.762 inches.		
5 Compute P_6, Mean 6-hr Precipitation (inches): 1.285 for all DMAs. See provided Calculation Sheets in the following pages. *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 67,040 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DMA-) See attached summary table and calculation sheets for DCV

1 Project area DMA-2 (ft^2): 161,172	2 Imperviousness after applying preventative site design practices (Imp%): 76.5% .	3 Runoff Coefficient (Rc): 0.56 *$R_c = 0.76 (Imp\%)^3-0.78(Imp\%)^2+0.774(Imp\%)+0.04$* Varies for each DMAs. See provided Calculation Sheets in the following pages.
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr-1hr}$ (in): - *http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html* 0.762 inches.		
5 Compute P_6, Mean 6-hr Precipitation (inches): 1.285 for all DMAs. See provided Calculation Sheets in the following pages. *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 16,655 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

DCV from Entire Site (DA-1): 83,695 cu-ft

Refer to the attached design capture volume calculations for drainage management area DMA-1 & DMA-2 below:

Target Captured Volume
Watershed DMA 1

1) Calculate the "Watershed Imperviousness Ratio", I which is equal to the percent of impervious area in the BMP Drainage Area divided by 100

Imperviousness(i)= **0.895**

Total Acreage(A) = **11.53** 502247 sf

2) Calculate the composite Runoff Coefficient C_{bmp} for the drainage area

$C_{bmp} = 0.858i^3-0.78i^2+0.774i+0.04$

C_{bmp} = 0.72

3) Determine which Regression Coefficient to use by region the project is located in

Valley	1.481
Mountain	1.909
Desert	1.237

Regression coefficient for this project is: 1.481

4) Determine the area averaged "6 hour Mean Storm Rainfall" , P_6

2 yr 1 Hr Rainfall Depth per NOAA Atlas 14= **0.762** inches

P_6 = 2 yr 1 hr Rainfall x Regression coefficient

P_6 = 1.1285 inches

5) Determine Regression Constant (a) for 48 hour drawdown

a for 24 hour = 1.582
a for 48 hour = 1.963

a = 1.963

6) Calculate the Maximized Detention Volume, P_0

$P_0 = C \times a \times P6$

Po(inches) = 1.6018

7) Calculate the Target Capture Volume, V_0, in acre feet

$V_0 = (P_0 * A)/12$

V_0 = 1.54 acre-feet
V_0 = 67,040 CF

DMA-1 Imperviousness Calculation
Watershed DMA 1

DMA-1 area	502,247 sf
Pervious Area (Landscape/Planters, Inf. Basin)	52,770 sf
Impervious Area (Roof, Driveway, Parking Lot)	449,477 sf
Percent Imperviousness:	89.493217 ~ 89.5%

Target Captured Volume
Watershed DMA 2

1) Calculate the "Watershed Imperviousness Ratio", I which is equal to the percent of impervious area in the BMP Drainage Area divided by 100

Imperviousness(i)= **0.765**

Total Acreage(A) = **3.70** 161172 sf

2) Calculate the composite Runoff Coefficient C_{bmp} for the drainage area

$C_{bmp} = 0.858i^3-0.78i^2+0.774i+0.04$

C_{bmp} = 0.56

3) Determine which Regression Coefficient to use by region the project is located in

Valley	1.481
Mountain	1.909
Desert	1.237

Regression coefficient for this project is: 1.481

4) Determine the area averaged "6 hour Mean Storm Rainfall" , P_6

2 yr 1 Hr Rainfall Depth per NOAA Atlas 14= **0.762** inches

P_6 = 2 yr 1 hr Rainfall x Regression coefficient

P_6 = 1.1285 inches

5) Determine Regression Constant (a) for 48 hour drawdown

a for 24 hour = 1.582
a for 48 hour = 1.963

a = 1.963

6) Calculate the Maximized Detention Volume, P_0

P_0 = C x a x P6

Po(inches) = 1.2400

7) Calculate the Target Capture Volume, V_0, in acre feet

$V_0 = (P_0 * A)/12$

V_0 = 0.38 acre-feet
V_0 = 16,655 CF

Infiltration Basin-2 Capacity Calculation:

Surface Area	9348	SF	Avg Area of inf. Surface
Rock Depth	0	FT	at mid water surface
Surface Depth	2	FT	
Infiltration	*0.8125*	*FT*	Inf. In 3 hr during basin filling [3* (3.25/12)]
Volume Provided	26291	CF	
Volume Needed	*20,923*	*CF*	
Difference	5,368	CF	

Treated volume is 106.7% of the volume needed.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

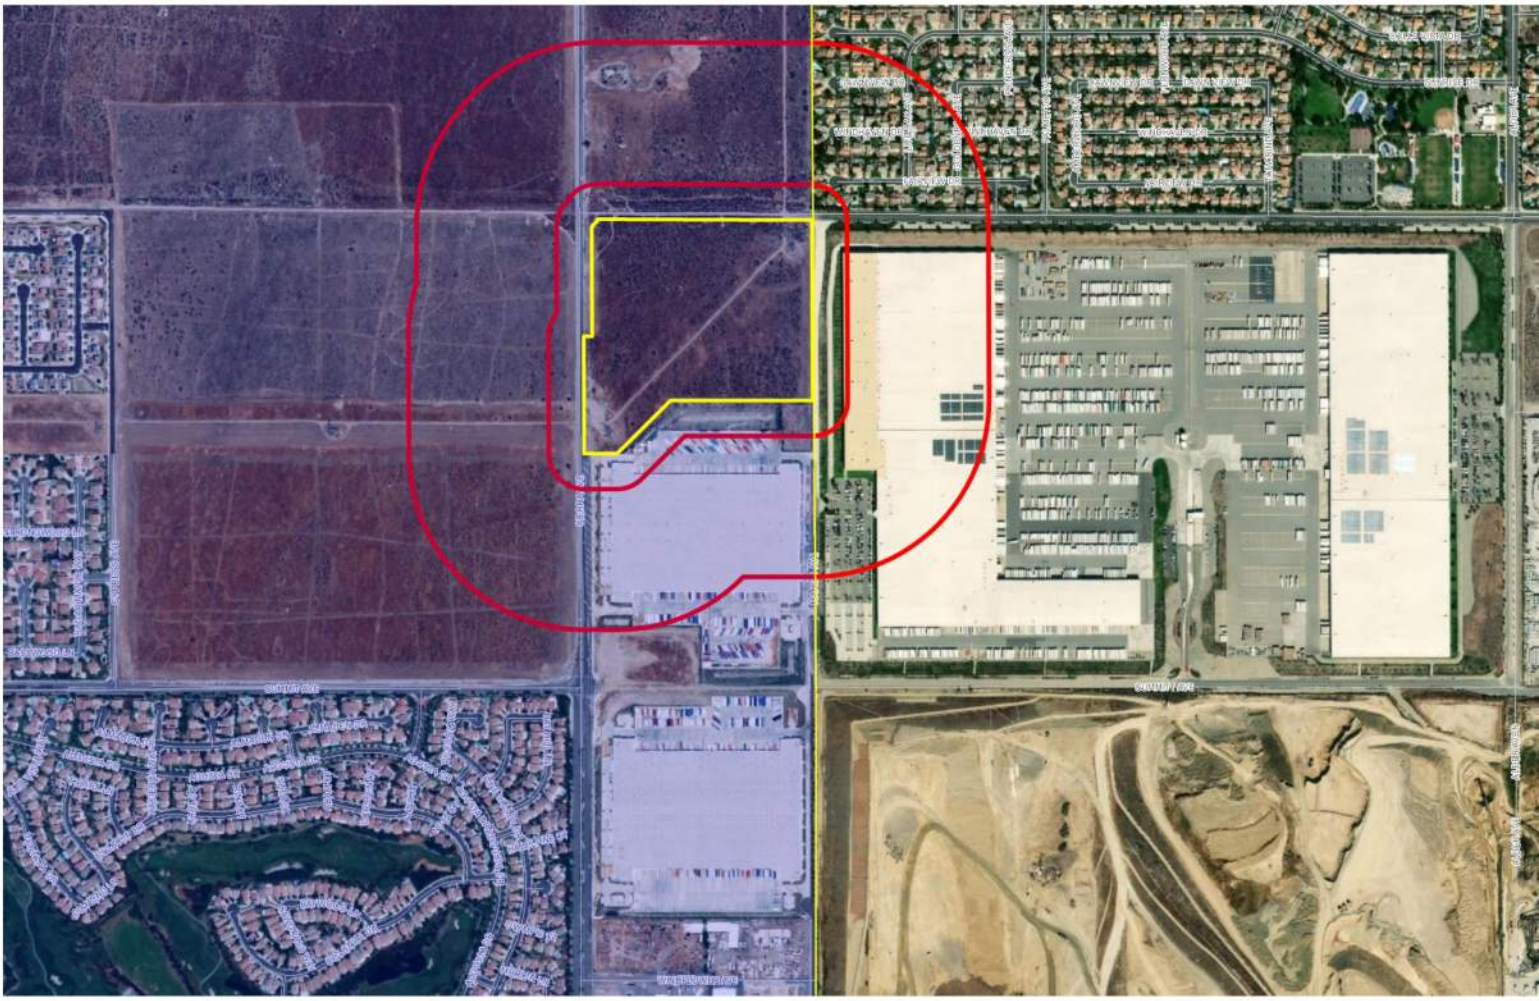
Form 4.2-2 Summary of HCOC Assessment

Does project have the potential to cause or contribute to an HCOC in a downstream channel: Yes ☐ No ☒

Go to: http://sbcounty.permitrack.com/WAP



If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below

(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)
Pre-developed	1 *Form 4.2-3 Item 12*	2 *Form 4.2-4 Item 13*	3 *Form 4.2-5 Item 10*
Post-developed	4 *Form 4.2-3 Item 13*	5 *Form 4.2-4 Item 14*	6 *Form 4.2-5 Item 14*
Difference	7 *Item 4 – Item 1*	8 *Item 5 – Item 2*	9 *Item 6 – Item 3*
Difference (as % of pre-developed)	10 % *Item 7 / Item 1*	11 % *Item 8 / Item 2*	12 % *Item 9 / Item 3*

Project site located within HCOC Exempt Area per San Bernardino County WAP. Also the project in developed condition will discharge to the Master Storm Drain System for up to 100-yr storm event.

WQMP Project Report

County of San Bernardino Stormwater Program

Santa Ana River Watershed Geodatabase

Friday, June 21, 2019

Note: The information provided in this report and on the Stormwater Geodatabase for the County of San Bernardino Stormwater Program is intended to provide basic guidance in the preparation of the applicant's Water Quality Management Plan (WQMP) and should not be relied upon without independent verification.

Project Site Parcel Number(s):	023916141, 023916138, 023916129, 023916144, 023916147
Project Site Acreage:	32.153
HCOC Exempt Area:	Yes. Verify that the project is completely with the HCOC exemption area.
Closest Receiving Waters: (Applicant to verify based on local drainage facilities and topography.)	**System Number** - 205 **Facility Name** - Riverside Groin #4, COE **Owner** - SBCFCD
Closest channel segment's susceptibility to Hydromodification:	EHM
Highest downstream hydromodification susceptibility:	High
Is this drainage segment subject to TMDLs?	No
Are there downstream drainage segments subject to TMDLs?	No
Is this drainage segment a 303d listed stream?	No
Are there 303d listed streams downstream?	Yes
Are there unlined downstream waterbodies?	No
Project Site Onsite Soil Group(s):	A
Environmentally Sensitive Areas within 200':	SAN BERNARDINO KANGAROO RAT,Riversidian Alluvial Sage Scru
Groundwater Depth (FT):	-204
Parcels with potential septic tanks within 1000':	No

Form 4.2-3 HCOC Assessment for Runoff Volume

Weighted Curve Number Determination for: Pre-developed DA								
1a Land Cover type								
2a Hydrologic Soil Group (HSG)								
3a DMA Area, ft^2 *sum of areas of DMA should equal area of DA*								
4a Curve Number (CN) *use Items 1 and 2 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								
Weighted Curve Number Determination for: Post-developed DA			DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1b Land Cover type								
2b Hydrologic Soil Group (HSG)								
3b DMA Area, ft^2 *sum of areas of DMA should equal area of DA*								
4b Curve Number (CN) *use Items 5 and 6 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								

5 Pre-Developed area-weighted CN:	7 Pre-developed soil storage capacity, S (in *S = (1000 / Item 5) – 10*	9 Initial abstraction, I_a (in): *I_a = 0.2 * Item 7*
6 Post-Developed area-weighted CN:	8 Post-developed soil storage capacity, S (in) *S = (1000 / Item 6) – 10*	10 Initial abstraction, I_a (in): *I_a = 0.2 * Item 8*

11 Precipitation for 2 yr, 24 hr storm (in):
Go to: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

12 Pre-developed Volume (ft^3):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 9)^2 / ((Item 11 – Item 9 + Item 7)*

13 Post-developed Volume (ft^3):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 10)^2 / ((Item 11 – Item 10 + Item 8)*

14 Volume Reduction needed to meet HCOC Requirement, (ft^3):
*V_{HCOC} = (Item 13 * 0.95) – Item 12*

Form 4.2-4 HCOC Assessment for Time of Concentration

Compute time of concentration for pre and post developed conditions for each DA *(For projects using the Hydrology Manual complete the form below)*

Variables	Pre-developed DA1 *Use additional forms if there are more than 4 DMA*				Post-developed DA1 *Use additional forms if there are more than 4 DMA*			
	DA 1	DMA B	DMA C	DMA D	DA 1	DMA B	DMA C	DMA D
1 Length of flowpath (ft) *Use Form 3-2 Item 5 for pre-developed condition*								
2 Change in elevation (ft)								
3 Slope (ft/ft), S_o = *Item 2 / Item 1*								
4 Land cover								
5 Initial DMA Time of Concentration (min) *Appendix C-1 of the TGD for WQMP*								
6 Length of conveyance from DMA outlet to project site outlet (ft) *May be zero if DMA outlet is at project site outlet*								
7 Cross-sectional area of channel (ft^2)								
8 Wetted perimeter of channel (ft)								
9 Manning's roughness of channel (n)								
10 Channel flow velocity (ft/sec) V_{fps} = *(1.49 / Item 9) * (Item 7/Item 8)^0.67 * (Item 3)^0.5*								
11 Travel time to outlet (min) T_t = *Item 6 / (Item 10 * 60)*								
12 Total time of concentration (min) T_c = *Item 5 + Item 11*								
13 Pre-developed time of concentration (min):								
14 Post-developed time of concentration (min):								
15 Additional time of concentration needed to meet HCOC requirement (min):								

Form 4.2-5 HCOC Assessment for Peak Runoff

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA*)			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA*)		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration *I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.6 LOG Form 4.2-4 Item 5 /60)*							
2 Drainage Area of each DMA (ft^2) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C-3 of the TGD for WQMP*							
5 Maximum loss rate (in/hr) *F_m = Item 3 * Item 4* *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
6 Peak Flow from DMA (cfs) *Q_p =Item 2 * 0.9 * (Item 1 - Item 5)*							
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*			*n/a*		
	DMA B		*n/a*			*n/a*	
	DMA C			*n/a*			*n/a*

8 Pre-developed Q_p at T_c for DMA A: *Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]*	9 Pre-developed Q_p at T_c for DMA B: *Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]*	10 Pre-developed Q_p at T_c for DMA C: *Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]*
10 Peak runoff from pre-developed condition confluence analysis (cfs):	*Maximum of Item 8, 9, and 10 (including additional forms as needed)*	
11 Post-developed Q_p at T_c for DMA A: *Same as Item 8 for post-developed values*	12 Post-developed Q_p at T_c for DMA B: *Same as Item 9 for post-developed values*	13 Post-developed Q_p at T_c for DMA C: *Same as Item 10 for post-developed values*
14 Peak runoff from post-developed condition confluence analysis (cfs):	*Maximum of Item 11, 12, and 13 (including additional forms as needed)*	
15 Peak runoff reduction needed to meet HCOC Requirement (cfs):	*$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10*	

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)

Feasibility Criterion – Complete evaluation for each DA on the Project Site

1 Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒

Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

2 Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒

(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

3 Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

4 Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils?

Yes ☐ No ☒

If Yes, Provide basis: (attach)

5 Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

6 Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒

See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

7 Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒

If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 9 below.

8 Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒

If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP. If no, then proceed to Item 9, below.

9 All answers to Item 1 through Item 6 are "No":

Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP. Proceed to Form 4.3-2, Hydrologic Source Control BMP.

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA 1)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)			
3 Ratio of pervious area receiving runoff to impervious area			
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*			
5 Sum of retention volume achieved from impervious area dispersion (ft^3): *$V_{retention}$ =Sum of Item 4 for all BMPs*			
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): Yes ☐ No ☒ *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
7 Ponding surface area (ft^2)			
8 Ponding depth (ft)			
9 Surface area of amended soil/gravel (ft^2)			
10 Average depth of amended soil/gravel (ft)			
11 Average porosity of amended soil/gravel			
12 Retention volume achieved from on-lot infiltration (ft^3) *$V_{retention}$ = (Item 7 *Item 8) + (Item 9 * Item 10 * Item 11)*			
13 Runoff volume retention from on-lot infiltration (ft^3): *$V_{retention}$ =Sum of Item 12 for all BMPs*			

Form 4.3-2 cont. Site Design Hydrologic Source Control BMPs (DA 1)

14 Implementation of evapotranspiration BMP (green, brown, or blue roofs): Yes ☐ No ☒ *If yes, complete Items 15-20. If no, proceed to Item 21*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
15 Rooftop area planned for ET BMP (ft^2)			
16 Average wet season ET demand (in/day) *Use local values, typical ~ 0.1*			
17 Daily ET demand (ft^3/day) *Item 15 * (Item 16 / 12)*			
18 Drawdown time (hrs) *Copy Item 6 in Form 4.2-1*			
19 Retention Volume (ft^3) *$V_{retention}$ = Item 17 * (Item 18 / 24)*			
20 Runoff volume retention from evapotranspiration BMPs (ft^3): 0 ft^3 *$V_{retention}$ =Sum of Item 19 for all BMPs*			
21 Implementation of Street Trees: Yes ☐ No ☒ *If yes, complete Items 20-2. If no, proceed to Item 24*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
22 Number of Street Trees			
23 Average canopy cover over impervious area (ft^2)			
24 Runoff volume retention from street trees (ft^3) *$V_{retention}$ = Item 22 * Item 23 * (0.05/12) assume runoff retention of 0.05 inches*			
25 Runoff volume retention from street tree BMPs (ft^3): 0 ft^3 *$V_{retention}$ = Sum of Item 24 for all BMPs*			
26 Implementation of residential rain barrels/cisterns: Yes ☐ No ☒ *If yes, complete Items 27-28; If no, proceed to Item 29*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
27 Number of rain barrels/cisterns			
28 Runoff volume retention from rain barrels/cisterns (ft^3) *$V_{retention}$ = Item 27 * 3*			
29 Runoff volume retention from residential rain barrels/Cisterns (ft3): 0 ft^3 *$V_{retention}$ =Sum of Item 28 for all BMPs*			
30 Total Retention Volume from Site Design Hydrologic Source Control BMPs: 0 ft^3 *Sum of Items 5, 13, 20, 25 and 29*			

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

Form 4.3-3 Infiltration LID BMP – Infiltration Basin (Basin-1, 2)

1 Remaining LID DCV not met by site design HSC BMP (ft^3): 83,695 ft^3 *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30*			
BMP Type *Use columns to the right to compute runoff volume retention from proposed infiltration BMP (select BMP from Table 5-4 in TGD for WQMP) - Use additional forms for more BMPs*	DMA-1 BMP Type Inf. Basin-1	DMA-2 BMP Type Inf. Basin-2	DA DMA BMP Type
2 Infiltration rate of underlying soils (in/hr) *See Section 5.4.2 and Appendix D of the TGD for WQMP for minimum requirements for assessment methods*	12.995	12.995	
3 Infiltration safety factor *See TGD Section 5.4.2 and Appendix D*	4	4	
4 Design percolation rate (in/hr) *P_{design} = Item 2 / Item 3*	3.25	3.25	
5 Ponded water drawdown time (hr) *Copy Item 6 in Form 4.2-1*	48	48	
6 Maximum ponding depth (ft) *BMP specific, see Table 5-4 of the TGD for WQMP for BMP design details*	8.0 ft	8.0 ft	
7 Ponding Depth (ft) *d_{BMP} = Minimum of (1/12*Item 4*Item 5) or Item 6*	2.0 ft	2.0 ft

12 Gravel porosity	0.4	0.4	
13 Duration of storm as basin is filling (hrs) *Typical ~ 3hrs*	3	3	
14 Above Ground Retention Volume (ft^3) *$V_{retention}$ = Item 8 * [Item7 + (Item 9 * Item 10) + (Item 11 * Item 12) + (Item 13 * (Item 4 / 12))]*	62,772	26,291	
15 Underground Retention Volume (ft^3) *Volume determined using manufacturer's specifications and calculations*	0 ft^3	0 ft^3	
16 Total Retention Volume from LID Infiltration BMPs: 89,063 ft^3 *(Sum of Items 14 and 15 for all infiltration BMP included in plan)*			
17 Fraction of DCV achieved with infiltration BMP: 106.4 % *Retention% = Item 16 / Form 4.2-1 Item 7*			
18 Is full LID DCV retained on-site with combination of hydrologic source control and LID retention and infiltration BMPs? Yes ☒ No ☐ *If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.*			

Please refer below for Infiltration BAsin-1,2 Capacity Calculation

Infiltration Basin-1 Capacity Calculation:

Surface Area	22,319	SF	Avg Area of inf. Surface
Rock Depth	0	FT	at mid water surface
Surface Depth	2	FT	
Infiltration	*0.8125*	*FT*	Inf. In 3 hr during basin filling [3* (3.25/12)]
Volume Provided	62772	CF	
Volume Needed	*67,040*	*CF*	
Difference	4,268	CF	

Infiltration Basin-2 Capacity Calculation:

Surface Area	9348	SF	Avg Area of inf. Surface
Rock Depth	0	FT	at mid water surface
Surface Depth	2	FT	
Infiltration	*0.8125*	*FT*	Inf. In 3 hr during basin filling [3* (3.25/12)]
Volume Provided	26291	CF	
Volume Needed	*20,923*	*CF*	
Difference	5,368	CF	

Treated volume is 106.7% of the volume needed.

Infiltration Drawdown Time Calculation:

Infiltration Surface Area Provided:	31,667	SF	
Infiltration Rate per Soil Report	12.995	in/hr	(Average Infiltration Rate Per WebSoil Report)
	1.08	ft/hr	
Facor of Safety	4		
Design Infiltration Rate	0.271	ft/hr	
Volume needed to be Infiltrated	83,695	cu.ft	
Infiltration Volume per hour	8573.18	cu.ft/hr	(31,667 sft * 0.271 ft/hr)
Infiltration Draw Down Time	9.76	Hours	(83,695 cu.ft / 8573.18 cu.ft/hr)
			< 48 hr draw down time. OK

San Bernardino County Southwestern Part, California

SpC—Soboba stony loamy sand, 2 to 9 percent slopes

Map Unit Setting

National map unit symbol: hckv
Elevation: 960 to 3,690 feet
Mean annual precipitation: 12 to 39 inches
Mean annual air temperature: 60 to 65 degrees F
Frost-free period: 260 to 365 days
Farmland classification: Not prime farmland

Map Unit Composition

Soboba and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Soboba

Setting

Landform: Alluvial fans
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

Ap - 0 to 10 inches: stony loamy sand
C1 - 10 to 24 inches: very stony loamy sand
C2 - 24 to 60 inches: very stony sand

Properties and qualities

Slope: 2 to 9 percent
Percent of area covered with surface fragments: 0.1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Excessively drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (6.00 to 19.99 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.0 to 1.0 mmhos/cm)
Available water storage in profile: Low (about 3.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Hanford

Percent of map unit: 5 percent
Landform: Alluvial fans
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Tujunga, gravelly loamy sand

Percent of map unit: 5 percent
Landform: Alluvial fans
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Ramona

Percent of map unit: 5 percent
Landform: Fan remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Data Source Information

Soil Survey Area: San Bernardino County Southwestern Part, California
Survey Area Data: Version 10, Sep 12, 2018

Worksheet H: Factor of Safety and Design Infiltration Rate and Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	3	0.75
		Predominant soil texture	0.25	2	0.50
		Site soil variability	0.25	2	0.50
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			2.00
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.00
Combined Safety Factor, $S_{TOT} = S_A \times S_B$ = 2.0 x 2.0					4.00
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					12.995
Design Infiltration Rate, in/hr, $K_{DESIGN} = S_{TOT} \times K_M$					3.25 "/hr

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

Avg. Perc Rate = $\frac{(6+19.99)}{2}$ = 12.995 "/hr
Perc Rate extracted From USDA Web soil survey.
Will Revise Actual Perc. Rate with the Final WQMP.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

4.3.3 Harvest and Use BMP

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs – Not used

1 Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3): *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16*			
BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Describe cistern or runoff detention facility			
3 Storage volume for proposed detention type (ft^3) *Volume of cistern*			
4 Landscaped area planned for use of harvested stormwater (ft^2)			
5 Average wet season daily irrigation demand (in/day) Use local values, typical ~ 0.1 in/day			
6 Daily water demand (ft^3/day) *Item 4 * (Item 5 / 12)*			
7 Drawdown time (hrs) *Copy Item 6 from Form 4.2-1*			
8 Retention Volume (ft^3) *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			
9 Total Retention Volume (ft^3) from Harvest and Use BMP *Sum of Item 8 for all harvest and use BMP included in plan*			
10 Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest and use BMPs? Yes ☐ No ☐ *If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.*			

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV w. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-5 Selection and Evaluation of Biotreatment BMP - Not used

1 Remaining LID DCV not met by site design HSC, infiltration, or harvest and use BMP for potential biotreatment (ft^3): 0 *Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16- Form 4.3-4 Item 9*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-6 and 4.3-7 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-8 to compute treated volume*
	☐ Bioretention with underdrain ☐ Planter box with underdrain ☐ Constructed wetlands ☐ Wet extended detention ☐ Dry extended detention	☐ Vegetated swale ☐ Vegetated filter strip ☐ Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft^3): 0 *Form 4.3-6 Item 15 + Form 4.3-7 Item 13* Full DCV achieved by using Retention/Infiltration BMPs. Volume based Biotreatment BMPs not used in this project.	4 Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft^3): *Item 1 – Item 3*	5 Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: ☐ *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*		

Form 4.3-6 Volume Based Biotreatment– Not used
Bioretention and Planter Boxes with Underdrains

Biotreatment BMP Type *(Bioretention w/underdrain, planter box w/underdrain, other comparable BMP)*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
1 Pollutants addressed with BMP *List all pollutant of concern that will be effectively reduced through specific Unit Operations and Processes described in Table 5-5 of the TGD for WQMP*

11 Water surface area at water quality flow depth (ft^2) *SA_{top} = (Item 5 + (2 * Item 2 * Item 6)) * Item 10*			

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)

1 Total LID DCV for the Project DA-1 (ft^3): 83,695 ft^3 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): 0 ft^3 *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): 89,063 ft^3 *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): 0 ft^3 *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): 0 ft^3 *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): 0 ft^3 *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- § On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs

1 Volume reduction needed for HCOC performance criteria (ft^3): *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	2 On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3): *Sum of Form 4.3-9 Items 2, 3, and 4 Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
3 Remaining volume for HCOC volume capture (ft^3): *Item 1 – Item 2*	4 Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3): *Existing downstream BMP may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

5 If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification ☐ *Attach in-stream control BMP selection and evaluation to this WQMP*

6 Is Form 4.2-2 Item 11 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP ☐
  BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the addition time of concentration requirement in Form 4.2-4 Item 15)
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities ☐
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

7 Form 4.2-2 Item 12 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs ☐
  BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)

BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
Infiltration Basin-1,2	Ridge Development Company, L.L.C..	Remove accumulated trash and debris in the basin at the start and end of the wet season. Inspect for standing water at the end of the wet season. Trim vegetation at the beginning and end of the wet season to prevent establishment of woody vegetation and for aesthetic and vector reasons. Remove accumulated sediment and regrade when the accumulated sediment volume exceeds 10% of the basin. If erosion is occurring within the basin, re-vegetate immediately and stabilize with an erosion control mulch or mat until vegetation cover is established	2 times a year at the beginning and end of the rainy season (October to March)

Education of Property Owners, Tenants and Occupants on Stormwater BMPs	Ridge Development Company, L.L.C.. .	Practical education materials will be provided to property owners covering various water quality issues that will need to be addressed on their specific site. These materials will include general good house keeping practices that contribute to the protection of storm water quality and BMP's that eliminate or reduce pollution during property improvements.	At Property sale/transfer
Landscape maintenance	Ridge Development Company, L.L.C..	All inlet will have visual inspection and cleaning of any Debris	Monthly
BMP maintenance	. Ridge Development Company, L.L.C..	See BMP fact sheets and Table 5-1 details hereon	At construction
Spill contingency plan	Ridge Development Company, L.L.C..	The spill contingency plan shall be provided in accordance with Section 6.95 of the California Health and Safety Code.	At construction. Ongoing with every visit
Litter debris control program	Ridge Development Company, L.L.C..	Litter debris control program may be developed by City of Fontana	By weekly
Employee training	Ridge Development Company, L.L.C..	Employee training may be developed by City of Fontana	Ongoing
Catch basin inspection program	Ridge Development Company, L.L.C..	Catch basins will be inspected a minimum of once every three months during the dry season and a minimum of once every two months during the rainy season.	Inspect once a year
Provide storm drain system stencilling and signage	Ridge Development Company, L.L.C..	Signs will be placed above storm drain inlets to warn the public of prohibitions against waste disposal	Once a year or according to Manufacturer Manuals

Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	Ridge Development Company, L.L.C.. .	Rain sensors will be incorporated into the onsite sprinkler system so that no unnecessary watering of landscaped areas occurs after storm events. Landscape planning is implemented to reduce groundwater and storm water contamination. This will be accomplished through an infiltration basin, and landscape areas.	Once a year or according to Manufacturer Manuals Bi Monthly
Street sweeping and Vaccuming	Ridge Development Company, L.L.C..	Street sweeping and vaccuming schedule will be per the Vity of Fontana Community Facilities District.	

Section 6 WQMP Attachments

6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their local Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction – C, C&R's & Lease Agreements

Section 6

WQMP Certification

6.1 Certification

"This Water Quality Management Plan has been prepared for RIDGE DEVELOPMENT COMPANY, L.L.C. by Allard Engineering. It is intended to comply with the requirements of the County of San Bernardino for Rancho Palma Project requiring the preparation of a Water Quality Management Plan (WQMP). The undersigned is aware that Best Management Practices (BMPs) are enforceable pursuant to the City's Water Quality Ordinance. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with San Bernardino County's Municipal Stormwater Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity. "

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Memorandum of Agreement for Water Quality Management Plan and Storm Water BMP Transfer, Access and Maintenance

OWNER/APPLICANT NAME: _____
PROPERTY ADDRESS: _____

_____

APN: _____

THIS Memorandum of Agreement hereinafter referred to as "Agreement" is made and entered on this _____ day of _____, _____ by the undersigned herein after referred to as "Owner" and the City of Fontana, a municipal corporation, located in the County of San Bernardino, State of California hereinafter referred to as "CITY";

WHEREAS, the Owner owns real property ("Property") in the City of Fontana, County of San Bernardino, State of California, more specifically described in Exhibit "A" and depicted in Exhibit "B", each of which exhibits is attached hereto and incorporated herein by this reference;

WHEREAS, at the time of initial approval of development project within the Property described above, the City required the project to employ Best Management Practices, hereinafter referred to as "BMPs," to minimize pollutants in urban runoff;

WHEREAS, the Owner has chosen to install and/or implement BMPs as described in the Water Quality Management Plan as described in Exhibit "C" and on file with the City, hereinafter referred to as "WQMP", to minimize pollutants in urban runoff and to minimize other adverse impacts of urban runoff;

WHEREAS, said WQMP has been certified by the Owner and reviewed and approved by the City;

WHEREAS, said BMPs, with installation and/or implementation on private property and draining only private property, are part of a private facility with all maintenance or replacement, therefore, the sole responsibility of the Owner;

WHEREAS, the Owner is aware that periodic and continuous maintenance, including, but not necessarily limited to, filter material replacement and sediment removal, is required to assure peak performance of all BMPs in the WQMP and that, furthermore, such maintenance activity will require compliance with all Local, State, or Federal laws and regulations, including those pertaining to confined space and waste disposal methods, in effect at the time such maintenance occurs;

NOW THEREFORE, it is hereby agreed by the Owner as follows:

1. Owner hereby provides the City of City's designee complete access, of any duration, to the BMPs and their immediate vicinity at any time, upon reasonable notice, or in the event of emergency, as determined by City's Director of Public Works no advance notice, for the purpose of inspection, sampling, testing of the Device, and in case of emergency, to undertake all necessary repairs or other preventative measures at owner's expense as provided in paragraph 3 below. City shall make every effort at all times to minimize or avoid interference with Owner's use of the Property.

2. Owner shall use its best efforts diligently to maintain all BMPs in a manner assuring peak performance at all times. All reasonable precautions shall be exercised by Owner and Owner's representative or contractor in the removal and extraction of any material(s) from the BMPs and the ultimate disposal of the material(s) in a manner consistent with all relevant laws and regulations in effect at the time. As may be requested from time to time by the City, the Owner shall provide the City with documentation identifying the material(s) removed, the quantity, and disposal destination.

3. In the event Owner, or its successors or assigns, fails to accomplish the necessary maintenance contemplated by this Agreement, within five (5) days of being given written notice by the City, the City is hereby authorized to cause any maintenance necessary to be done and charge the entire cost and expense to the Owner or Owner's successors or assigns, including administrative costs, attorneys fees and interest thereon at the maximum rate authorized by the Civil Code from the date of the notice of expense until paid in full.

4. the Owner agrees to hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage, or injury, in law or equity, to property or persons, arising from the imposition of the plan by the City;

5. The City may require the owner to post security in form and for a time period satisfactory to the city to guarantee the performance of the obligations state herein. Should the Owner fail to perform the obligations under the Agreement, the City may, in the case of a cash bond, act for the Owner using the proceeds from it, or in the case of a surety bond, require the sureties to perform the obligations of the Agreement. As an additional remedy, the Director may withdraw any previous storm water-related approval with respect to the property on which BMPs have been installed and/or implemented until such time as Owner repays to City its reasonable costs incurred in accordance with paragraph 3 above.

6. This agreement shall be recorded in the Office of the Recorder of San Bernardino County, California, at the expense of the Owner and shall constitute notice to all successors and assigns of the title to said Property of the obligation herein set forth, and also a lien in such amount as will fully reimburse the City, including interest as herein above set forth, subject to foreclosure in event of default in payment.

7. In event of legal action occasioned by any default or action of the Owner, or its successors or assigns, then the Owner and its successors or assigns agree(s) to pay all costs incurred by the City in enforcing the terms of this Agreement, including reasonable attorney's fees and costs, and that the same shall become a part of the lien against said Property.

8. It is the intent of the parties hereto that burdens and benefits herein undertaken shall constitute covenants that run with said Property and constitute a lien there against.

9. The obligations herein undertaken shall be binding upon the heirs, successors, executors, administrators and assigns of the parties hereto. The term "Owner" shall include not only the present Owner, but also its heirs, successors, executors, administrators, and assigns. Owner shall notify any successor to title of all or part of the Property about the existence of this Agreement. Owner shall provide such notice prior to such successor obtaining an interest in all or part of the Property. Owner shall provide a copy of such notice to the City at the same time such notice is provided to the successor.

10. This Agreement shall not be amended, modified or terminated without the prior written consent of the City, which consent to be effective, shall be contained in a document executed by the City and recorded against the Real Property.

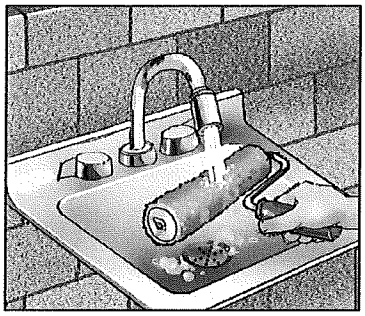
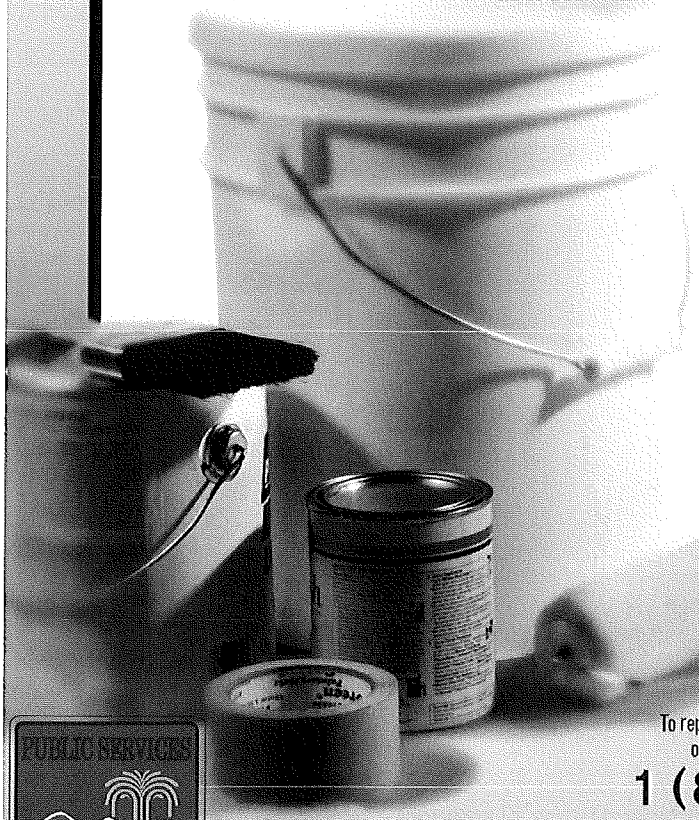
STORMWATER Pollution Prevention

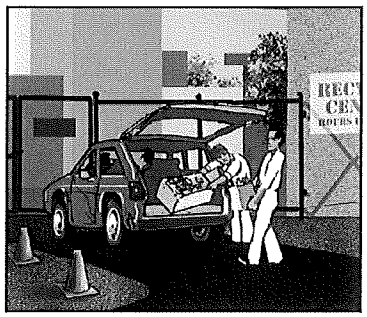
PAINTING



Paints, solvents, adhesives and other toxic chemicals used in painting often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect our health.



Water-Based Paints
Use water-based paints whenever possible. They are less toxic than oil-based paints and easier to clean up. Look for products labeled "latex" or "cleans with water."



Paint Removal
Sweep up paint stripping residue, chips and dust instead of hosing into the street and dispose of them safely at a household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.

Painting Cleanup
Never clean brushes or rinse paint containers in the street, gutter or near a storm drain. Clean water-based paints in the sink. Clean oil-based paints with thinner, which can be reused by putting it in a jar to settle out the paint particles and then pouring off the clear liquid for future use. Wrap dried paint residue in newspaper and dispose of it in the trash.

Exterior Paint Removal
When stripping or cleaning building exteriors with high-pressure water, block nearby storm drains and divert washwater onto a designated dirt area. Ask your local wastewater treatment authority if you can collect building cleaning water and discharge it to the sewer.

Recycling Paint
Recycle leftover paint at a household hazardous waste collection facility, save it for touch ups or give it to someone who can use it, like a theatre group, school, city or community organization.

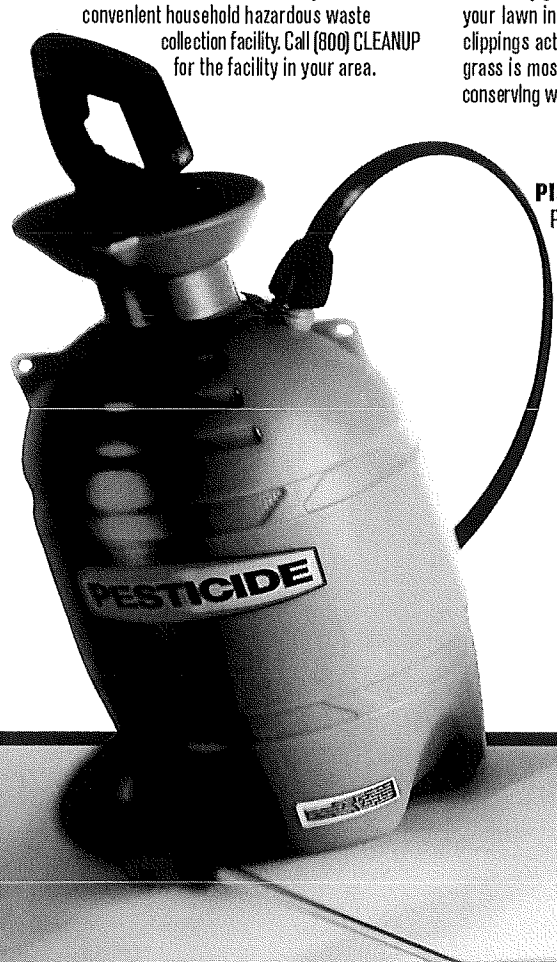
San Bernardino County STORMWATER PROGRAM

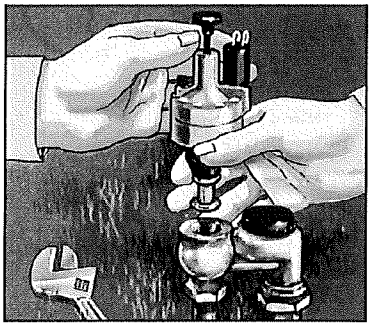
STORMWATER Pollution Prevention

HOME & GARDEN

Yard waste and household toxics like paints and pesticides often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health.



Recycle Household Hazardous Waste
Household products like paint, pesticides, solvents and cleaners are too dangerous to dump and too toxic to trash. Take them to be recycled at a convenient household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.



Disposing of Yard Waste
Recycle leaves, grass clippings and other yard waste, instead of blowing, sweeping or hosing into the street. Try grasscycling, leaving grass clippings on your lawn instead of using a grass catcher. The clippings act as a natural fertilizer, and because grass is mostly water, it also irrigates your lawn, conserving water.

Use Fertilizers & Pesticides Safely
Fertilizers and pesticides are often carried into the storm drain system by sprinkler runoff. Try using organic or non-toxic alternatives. If you use chemical fertilizers or pesticides, avoid applying near curbs and driveways and never apply before a rain.

Planting in the Yard
Produce less yard waste and save water by planting low maintenance, drought-tolerant trees and shrubs. Using drip irrigation, soaker hoses or micro-spray systems for flower beds and vegetation can also help reduce your water bill and prevent runoff.

Use Water Wisely
Cut your water costs and prevent runoff by controlling the amount of water and direction of sprinklers. The average lawn needs about an inch of water a week, including rainfall, or 10 to 20 minutes of watering. A half-inch per week is enough for fall and spring. Sprinklers should be on long enough to allow water to soak into the ground but not so long as to cause runoff.

San Bernardino County STORMWATER PROGRAM

Fertilizer Tips to Prevent Pollution

Water that runs off your lawn and garden can carry excess fertilizer into the San Bernardino County storm drain system, and it does not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health:

- Read the product label and follow the directions carefully, using only as directed.
- Avoid applying near driveways or gutters.
- Never apply fertilizer before a rain.
- Store fertilizers and chemicals in a covered area and in sealed, waterproof containers.
- Take unwanted lawn or garden chemicals to a household hazardous waste collection facility. Call (800) 253-2687.
- Use non-toxic products for your garden and lawn whenever possible.

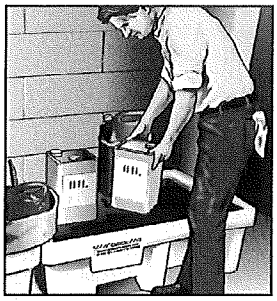
STORMWATER Pollution Prevention



AUTO MAINTENANCE

Oil, grease, anti-freeze and other toxic automotive fluids often make their way into the San Bernardino County storm drain system, and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Cleaning Auto Parts

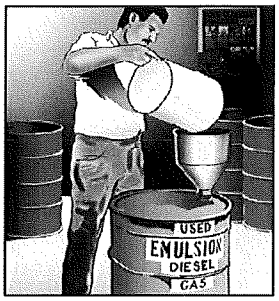
Scrape parts with a wire brush or use a bake oven rather than liquid cleaners. Arrange drip pans, drying racks and drain boards so that fluids are directed back into the parts washer or the fluid holding tank. Do not wash parts or equipment in a shop sink, parking lot, driveway or street.

Storing Hazardous Waste

Keep your liquid waste segregated. Many fluids can be recycled via hazardous waste disposal companies if they are not mixed. Store all materials under cover with spill containment or inside to prevent contamination of rainwater runoff.

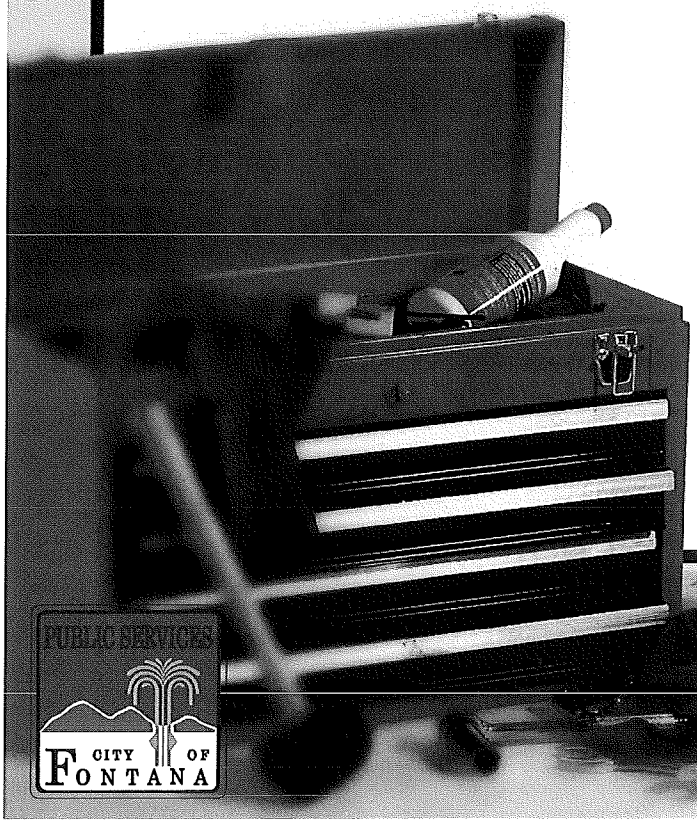
Metal Grinding and Polishing

Keep a bin under your lathe or grinder to capture metal filings. Send uncontaminated filings to a scrap metal recycler for reclamation. Store metal filings in a covered container or indoors.



Preventing Leaks and Spills

Place drip pans underneath to capture fluids. Use absorbent cleaning agents instead of water to clean work areas.



Cleaning Spills

Use dry methods for spill cleanup (sweeping, absorbent materials). Follow your hazardous materials response plan, as filed with your local fire department or other hazardous materials authority. Be sure that all employees are aware of the plan and are capable of implementing each phase. To report serious toxic spills, call 911.

Proper Disposal of Hazardous Waste

Recycle used motor oil and oil filters, anti-freeze and other hazardous automotive fluids, batteries, tires and metal filings collected from grinding or polishing auto parts. Contact a licensed hazardous waste hauler. For more recycling information, call (909) 386-8401.

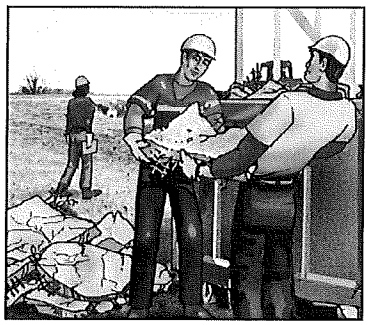
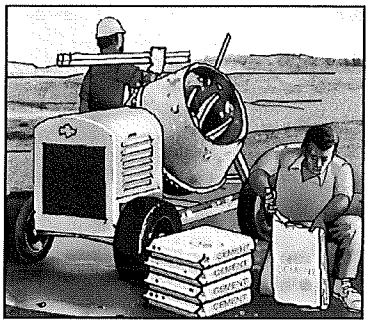
STORMWATER Pollution Prevention



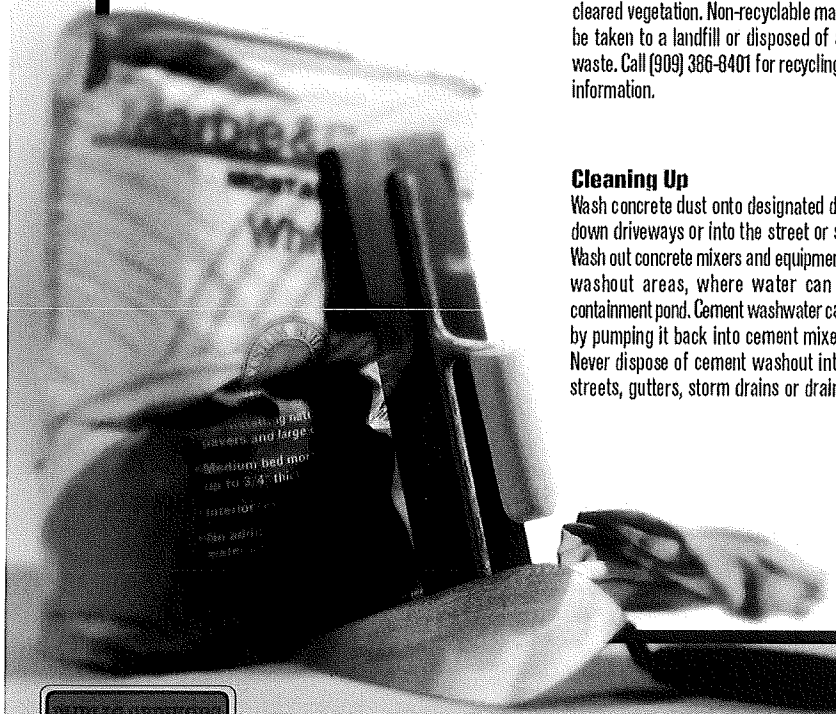
FRESH CONCRETE & MORTAR APPLICATION

Cement wash, sediment, vehicle fluids, dust and hazardous debris from construction sites often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.



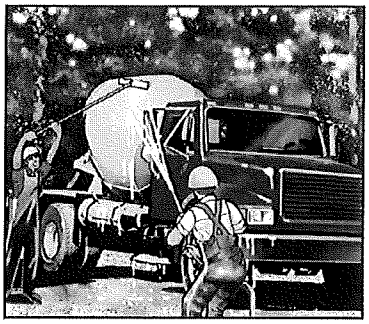
Storing Materials

Keep construction materials and debris away from the street, gutter and storm drains. Secure open bags of cement and cover exposed stockpiles of soil, sand or gravel and excavated material with plastic sheeting, protected from rain, wind and runoff.



Ordering Materials & Recycling Waste

Reduce waste by ordering only tbe amounts of materials needed for the job. Use recycled or recyclable materials whenever possible. When breaking up paving, recycle the pieces at a crushing company. You can also recycle broken asphalt, concrete, wood, and cleared vegetation. Non-recyclable materials should be taken to a landfill or disposed of as hazardous waste. Call (909) 386-8401 for recycling and disposal information.



During Construction

Schedule excavation and grading during dry weather. Prevent mortar and cement from entering the street and storm drains by placing erosion controls. Setup small mixers on tarps or drop cloths, for easy cleanup of debris. Never bury waste material. Recycle or dispose of it as hazardous waste.

Cleaning Up

Wash concrete dust onto designated dirt areas, not down driveways or into the street or storm drains. Wash out concrete mixers and equipment in specified washout areas, where water can flow into a containment pond. Cement washwater can be recycled by pumping it back into cement mixers for reuse. Never dispose of cement washout into driveways, streets, gutters, storm drains or drainage ditches.

PUBLIC SERVICES
CITY OF FONTANA

San Bernardino County STORMWATER PROGRAM

STORMWATER Pollution Prevention

HOME REPAIR & REMODELING

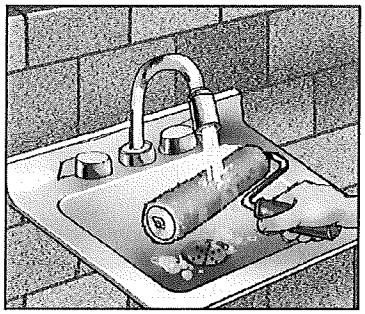
Paints, solvents, adhesives and other toxic substances used in home repair and remodeling often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health.

Construction Projects

Keep construction debris away from the street, gutter and storm drains. Schedule grading and excavation projects for dry weather. Cover excavated material and stockpiles of soil, sand or gravel, protected from rain, wind and runoff. Prevent erosion by planting fast-growing annual and perennial grass, which can shield and bind soil.

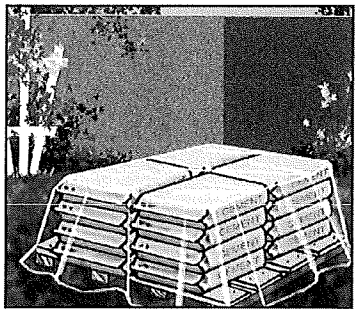
Recycle Household Hazardous Waste

Household cleaners, paint and other home improvement products like wallpaper and tile adhesives are too toxic to trash. Recycle them instead, at a convenient household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.



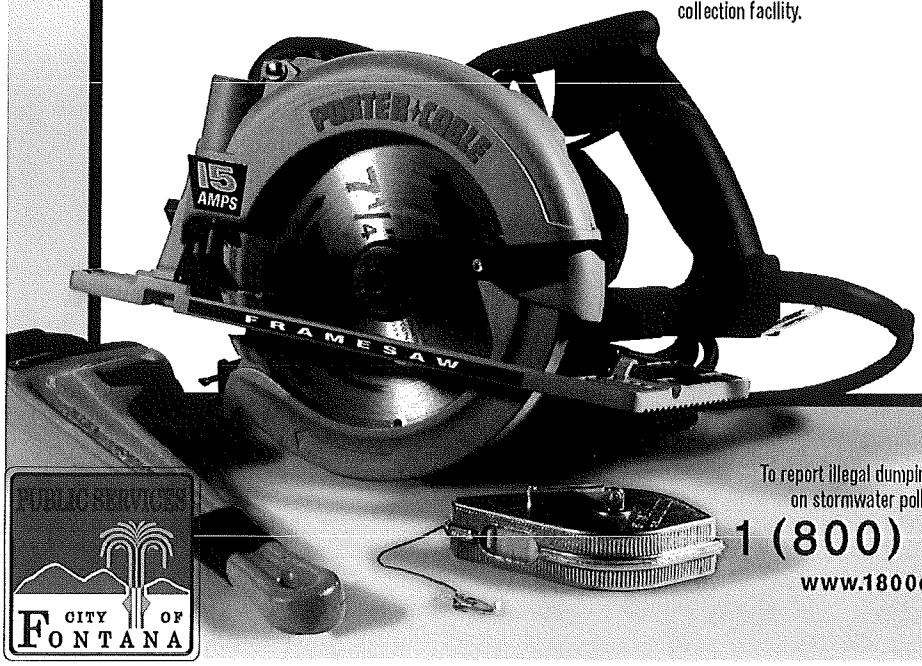
Landscaping & Gardening

Avoid applying fertilizers or pesticide near curbs and driveways, and store covered, protected from rain, wind and runoff. Try using organic or non-toxic alternatives. Reduce runoff and lower your water bill by using drip irrigation, soaker hoses or micro-spray systems. Recycle leaves instead of blowing, sweeping or raking them into the street, gutter or storm drain.



Paint Removal

Paint stripping residue, chips and dust from marine paints and paints containing lead or tributyl tin are hazardous wastes. Sweep them up instead of hosing into the street and dispose of them safely at a household hazardous waste collection facility.



Painting Cleanup

Avoid cleaning brushes or rinsing paint containers in the street, gutter or near a storm drain. Clean water-based paints in the sink. Clean oil-based paints with thinner, which you can filter and reuse. Recycle leftover paint at a household hazardous waste collection facility, save it for touch ups or give it to someone who can use it, like a theatre group, school, city or community organization.

Concrete and Masonry

Store bags of cement and plaster away from gutters and storm drains, and cover them to protect against rain, wind and runoff. Sweep or scoop up cement washout or concrete dust instead of hosing into driveways, streets, gutters or storm drains.

BMP Fact Sheets

FLEXSTORM® INLET FILTERS CATCH-IT®

ADS

FLEXSTORM® CATCH-IT® REUSABLE INLET PROTECTION

SPECIFY WITH CONFIDENCE

State DOTs and Municipalities across the country now have a universal structural BMP to address the issue of storm sewer inlet protection: FLEXSTORM CATCH-IT Inlet Filters–the temporary *and* reusable solution.

The FLEXSTORM CATCH-IT system is the preferred choice for temporary inlet protection and storm water runoff control. FLEXSTORM CATCH-IT Inlet Filters will fit any drainage structure and are equipped with high-efficiency filter bags. Whether you're the specifier or the user, it's clear to see how FLEXSTORM CATCH-IT Inlet Filters outperform the competition.

APPLICATIONS:

DOT	Road Construction
Commercial	Parking Lots
Industrial	Maintenance
Residential Developments	

FEATURES:

- **Configurable:** steel frames configured and guaranteed to fit ANY storm drainage structure
- **Adjustable:** although shipped to fit your inlet, rectangular framing may be field adjusted in 1/2" increments if necessary
- **Reusable:** galvanized framing will last year after year in harsh conditions, while geotextile filter bags are easily replaced after several years of use
- **Effective:** works below grade; overflow feature allows streets to drain with full bag; third party testing results of the FX filter bag show 82% Filtration Efficiency
- **Affordable:** low per-unit cost; installs in seconds; easily maintained with Universal Removal Tool (no machinery required)

BENEFITS:

- Reduce jobsite flooding and keep projects running
- Minimize residential complaints with cleaner, dryer streets during all construction phases
- Prevent hazardous road icing conditions by eliminating ponding at curb inlets
- Significantly reduce cleanup costs
- Prevent siltation and pollution of rivers, lakes, and ponds
- Helps prevent fines; NPDES PHASE II Compliant
- Lowest cost alternative for the highest level of Inlet Protection
- Available through 5,000 ADS distributors nationwide
- Ships within 48 hours

ADS Service:
ADS representatives are committed to providing you with the answers to all your questions, including selecting the proper filter, specifications, installation and more. Also try the ADS FLEXSTORM Online Product Configurator at www.inletfilters.com

*The Most **Advanced** Name in Drainage Systems®*

FLEXSTORM CATCH-IT INLET FILTERS SPECIFICATION

IDENTIFICATION

The installer shall inspect the plans and/or worksite to determine the quantity of each drainage structure casting type. The foundry casting number, exact grate size and clear opening size, or other information will be necessary to finalize the FLEXSTORM part number and dimensions. The units are shipped to the field configured precisely to fit the identified drainage structure.

MATERIAL AND PERFORMANCE

The FLEXSTORM Inlet Filter system is comprised of a corrosion resistant steel frame and a replaceable geotextile filter bag attached to the frame with a stainless steel locking band. The filter bag hangs suspended at a distance below the grate that shall allow full water flow into the drainage structure if the bag is completely filled with sediment. The standard Woven Polypropylene FX filter bags are rated for 200 gpm/sqft with a removal efficiency of 82% when filtering a USDA Sandy Loam sediment load. The Post Construction PC filter bags are rated for 137 gpm/sqft and have been 3rd party tested at 99% TSS removal to 110 micron and 97% TPH removal of used motor oil hydrocarbon mix.

INSTALLATION

Remove the grate from the casting or concrete drainage structure. Clean the ledge (lip) of the casting frame or drain- age structure to ensure it is free of stone and dirt. Drop in the FLEXSTORM Inlet Filter through the clear opening and be sure the suspension hangers rest firmly on the inside ledge (lip) of the casting. Replace the grate and confirm it is elevated no more than 1/8", which is the thickness of the steel hangers. For wall mount units, follow instructions for attaching the stainless steel mounting brackets using the provided concrete fasteners.

INSPECTION FREQUENCY

Construction site inspection should occur following each 1/2" or more rain event. Post Construction inspections should occur three times per year (every four months) in areas with mild year round rainfall and four times per year (every three months Feb-Nov) in areas with summer rains before and after the winter snowfall season. Industrial application site inspections (loading ramps, wash racks, maintenance facilities) should occur on a regularly scheduled basis no less than three times per year.

MAINTENANCE GUIDELINES

Empty the filter bag if more than half filled with sediment and debris, or as directed by the Engineer. Remove the grate, engage the lifting bars or handles with the FLEXSTORM Removal Tool, and lift from the drainage structure. Dispose of the sediment or debris as directed by the Engineer or Maintenance Contract in accordance with EPA guidelines.

As an alternative, an industrial vacuum may be used to collect the accumulated sediment. Remove any caked on silt from the sediment bag and reverse flush the bag with medium spray for optimal filtration. Replace the bag if torn or punctured to 1/2" diameter or greater on the lower half of the bag.

FILTER BAG REPLACEMENT

Remove the bag by loosening or cutting off the clamping band. Take the new filter bag, which is equipped with a stainless steel worm drive clamping band, and use a screw driver to tighten the bag around the frame channel. Ensure the bag is secure and that there is no slack around the perimeter of the band.

Lift Handles ease installation and maintenance

Replaceable Sediment Bag

1/8" thick steel hangers& channels; precision stampings **configured to fit each individual casting**

NOTES:

1. Filter insert shall have a high flow bypass feature.
2. Filter outlet adapter shall be constructed from stainless steel Type 304.
   Alternate outlet adaptor for shallow installations shall be PVC SCH-40. See detail B, sheet 2 of 2.
3. Filter medium shall be *Fossil Rock* ™, installed and maintained in accordance with manufacturer specifications.
4. Storage capacity reflects 80% of maximum solids collection prior to impeding filtering bypass.
5. For alternate outlet adapter configurations used for extremely shallow trench drains contact Oldcastle Stormwater Solutions for engineering assistance.
6. Filter element should be a minimum of one half the length of trench. Confirm flow rate upon order.

Description

An infiltration basin is a shallow impoundment that is designed to infiltrate stormwater. Infiltration basins use the natural filtering ability of the soil to remove pollutants in stormwater runoff. Infiltration facilities store runoff until it gradually exfiltrates through the soil and eventually into the water table. This practice has high pollutant removal efficiency and can also help recharge groundwater, thus helping to maintain low flows in stream systems. Infiltration basins can be challenging to apply on many sites, however, because of soils requirements. In addition, some studies have shown relatively high failure rates compared with other management practices.

California Experience

Infiltration basins have a long history of use in California, especially in the Central Valley. Basins located in Fresno were among those initially evaluated in the National Urban Runoff Program and were found to be effective at reducing the volume of runoff, while posing little long-term threat to groundwater quality (EPA, 1983; Schroeder, 1995). Proper siting of these devices is crucial as underscored by the experience of Caltrans in siting two basins in Southern California. The basin with marginal separation from groundwater and soil permeability failed immediately and could never be rehabilitated.

Advantages

- Provides 100% reduction in the load discharged to surface waters.
- The principal benefit of infiltration basins is the approximation of pre-development hydrology during which a

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

significant portion of the average annual rainfall runoff is infiltrated and evaporated rather than flushed directly to creeks.

- If the water quality volume is adequately sized, infiltration basins can be useful for providing control of channel forming (erosion) and high frequency (generally less than the 2-year) flood events.

Limitations

- May not be appropriate for industrial sites or locations where spills may occur.
- Infiltration basins require a minimum soil infiltration rate of 0.5 inches/hour, not appropriate at sites with Hydrologic Soil Types C and D.
- If infiltration rates exceed 2.4 inches/hour, then the runoff should be fully treated prior to infiltration to protect groundwater quality.
- Not suitable on fill sites or steep slopes.
- Risk of groundwater contamination in very coarse soils.
- Upstream drainage area must be completely stabilized before construction.
- Difficult to restore functioning of infiltration basins once clogged.

Design and Sizing Guidelines

- Water quality volume determined by local requirements or sized so that 85% of the annual runoff volume is captured.
- Basin sized so that the entire water quality volume is infiltrated within 48 hours.
- Vegetation establishment on the basin floor may help reduce the clogging rate.

Construction/Inspection Considerations

- Before construction begins, stabilize the entire area draining to the facility. If impossible, place a diversion berm around the perimeter of the infiltration site to prevent sediment entrance during construction or remove the top 2 inches of soil after the site is stabililized. Stabilize the entire contributing drainage area, including the side slopes, before allowing any runoff to enter once construction is complete.
- Place excavated material such that it can not be washed back into the basin if a storm occurs during construction of the facility.
- Build the basin without driving heavy equipment over the infiltration surface. Any equipment driven on the surface should have extra-wide ("low pressure") tires. Prior to any construction, rope off the infiltration area to stop entrance by unwanted equipment.
- After final grading, till the infiltration surface deeply.
- Use appropriate erosion control seed mix for the specific project and location.

Performance

As water migrates through porous soil and rock, pollutant attenuation mechanisms include precipitation, sorption, physical filtration, and bacterial degradation. If functioning properly, this approach is presumed to have high removal efficiencies for particulate pollutants and moderate removal of soluble pollutants. Actual pollutant removal in the subsurface would be expected to vary depending upon site-specific soil types. This technology eliminates discharge to surface waters except for the very largest storms; consequently, complete removal of all stormwater constituents can be assumed.

There remain some concerns about the potential for groundwater contamination despite the findings of the NURP and Nightingale (1975; 1987a,b,c; 1989). For instance, a report by Pitt et al. (1994) highlighted the potential for groundwater contamination from intentional and unintentional stormwater infiltration. That report recommends that infiltration facilities not be sited in areas where high concentrations are present or where there is a potential for spills of toxic material. Conversely, Schroeder (1995) reported that there was no evidence of groundwater impacts from an infiltration basin serving a large industrial catchment in Fresno, CA.

Siting Criteria

The key element in siting infiltration basins is identifying sites with appropriate soil and hydrogeologic properties, which is critical for long term performance. In one study conducted in Prince George's County, Maryland (Galli, 1992), all of the infiltration basins investigated clogged within 2 years. It is believed that these failures were for the most part due to allowing infiltration at sites with rates of less than 0.5 in/hr, basing siting on soil type rather than field infiltration tests, and poor construction practices that resulted in soil compaction of the basin invert.

A study of 23 infiltration basins in the Pacific Northwest showed better long-term performance in an area with highly permeable soils (Hilding, 1996). In this study, few of the infiltration basins had failed after 10 years. Consequently, the following guidelines for identifying appropriate soil and subsurface conditions should be rigorously adhered to.

- Determine soil type (consider RCS soil type 'A, B or C' only) from mapping and consult USDA soil survey tables to review other parameters such as the amount of silt and clay, presence of a restrictive layer or seasonal high water table, and estimated permeability. The soil should not have more than 30% clay or more than 40% of clay and silt combined. Eliminate sites that are clearly unsuitable for infiltration.

- Groundwater separation should be at least 3 m from the basin invert to the measured ground water elevation. There is concern at the state and regional levels of the impact on groundwater quality from infiltrated runoff, especially when the separation between groundwater and the surface is small.

- Location away from buildings, slopes and highway pavement (greater than 6 m) and wells and bridge structures (greater than 30 m). Sites constructed of fill, having a base flow or with a slope greater than 15% should not be considered.

- Ensure that adequate head is available to operate flow splitter structures (to allow the basin to be offline) without ponding in the splitter structure or creating backwater upstream of the splitter.

- Base flow should not be present in the tributary watershed.

Secondary Screening Based on Site Geotechnical Investigation

- At least three in-hole conductivity tests shall be performed using USBR 7300-89 or Bouwer-Rice procedures (the latter if groundwater is encountered within the boring), two tests at different locations within the proposed basin and the third down gradient by no more than approximately 10 m. The tests shall measure permeability in the side slopes and the bed within a depth of 3 m of the invert.

- The minimum acceptable hydraulic conductivity as measured in any of the three required test holes is 13 mm/hr. If any test hole shows less than the minimum value, the site should be disqualified from further consideration.

- Exclude from consideration sites constructed in fill or partially in fill unless no silts or clays are present in the soil boring. Fill tends to be compacted, with clays in a dispersed rather than flocculated state, greatly reducing permeability.

- The geotechnical investigation should be such that a good understanding is gained as to how the stormwater runoff will move in the soil (horizontally or vertically) and if there are any geological conditions that could inhibit the movement of water.

Additional Design Guidelines

(1) Basin Sizing - The required water quality volume is determined by local regulations or sufficient to capture 85% of the annual runoff.

(2) Provide pretreatment if sediment loading is a maintenance concern for the basin.

(3) Include energy dissipation in the inlet design for the basins. Avoid designs that include a permanent pool to reduce opportunity for standing water and associated vector problems.

(4) Basin invert area should be determined by the equation:

$$A = \frac{WQV}{kt}$$

where A = Basin invert area (m^2)

WQV = water quality volume (m^3)

k = 0.5 times the lowest field-measured hydraulic conductivity (m/hr)

t = drawdown time (48 hr)

(5) The use of vertical piping, either for distribution or infiltration enhancement shall not be allowed to avoid device classification as a Class V injection well per 40 CFR146.5(e)(4).

Maintenance

Regular maintenance is critical to the successful operation of infiltration basins. Recommended operation and maintenance guidelines include:

- Inspections and maintenance to ensure that water infiltrates into the subsurface completely (recommended infiltration rate of 72 hours or less) and that vegetation is carefully managed to prevent creating mosquito and other vector habitats.
- Observe drain time for the design storm after completion or modification of the facility to confirm that the desired drain time has been obtained.
- Schedule semiannual inspections for beginning and end of the wet season to identify potential problems such as erosion of the basin side slopes and invert, standing water, trash and debris, and sediment accumulation.
- Remove accumulated trash and debris in the basin at the start and end of the wet season.
- Inspect for standing water at the end of the wet season.
- Trim vegetation at the beginning and end of the wet season to prevent establishment of woody vegetation and for aesthetic and vector reasons.
- Remove accumulated sediment and regrade when the accumulated sediment volume exceeds 10% of the basin.
- If erosion is occurring within the basin, revegetate immediately and stabilize with an erosion control mulch or mat until vegetation cover is established.
- To avoid reversing soil development, scarification or other disturbance should only be performed when there are actual signs of clogging, rather than on a routine basis. Always remove deposited sediments before scarification, and use a hand-guided rotary tiller, if possible, or a disc harrow pulled by a very light tractor.

Cost

Infiltration basins are relatively cost-effective practices because little infrastructure is needed when constructing them. One study estimated the total construction cost at about $2 per ft (adjusted for inflation) of storage for a 0.25-acre basin (SWRPC, 1991). As with other BMPs, these published cost estimates may deviate greatly from what might be incurred at a specific site. For instance, Caltrans spent about $18/ft^3 for the two infiltration basins constructed in southern California, each of which had a water quality volume of about 0.34 ac.-ft. Much of the higher cost can be attributed to changes in the storm drain system necessary to route the runoff to the basin locations.

Infiltration basins typically consume about 2 to 3% of the site draining to them, which is relatively small. Additional space may be required for buffer, landscaping, access road, and fencing. Maintenance costs are estimated at 5 to 10% of construction costs.

One cost concern associated with infiltration practices is the maintenance burden and longevity. If improperly maintained, infiltration basins have a high failure rate. Thus, it may be necessary to replace the basin with a different technology after a relatively short period of time.

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include "NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Vehicle Washing Areas SD-33

Photo Credit: Geoff Brosseau

Design Objectives

- ☑ Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- ☑ Collect and Convey

Description

Vehicle washing, equipment washing, and steam cleaning may contribute high concentrations of metals, oil and grease, solvents, phosphates, and suspended solids to wash waters that drain to stormwater conveyance systems.

Approach

Project plans should include appropriately designed area(s) for washing-steam cleaning of vehicles and equipment. Depending on the size and other parameters of the wastewater facility, wash water may be conveyed to a sewer, an infiltration system, recycling system or other alternative. Pretreatment may be required for conveyance to a sanitary sewer.

Suitable Applications

Appropriate applications include commercial developments, restaurants, retail gasoline outlets, automotive repair shops and others.

Design Considerations

Design requirements for vehicle maintenance are governed by Building and Fire Codes, and by current local agency ordinances, and zoning requirements. Design criteria described in this fact sheet are meant to enhance and be consistent with these code requirements.

Designing New Installations

Areas for washing/steam cleaning should incorporate one of the following features:

- Be self-contained and/or covered with a roof or overhang
- Be equipped with a clarifier or other pretreatment facility
- Have a proper connection to a sanitary sewer

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Include other features which are comparable and equally effective

CAR WASH AREAS - Some jurisdictions' stormwater management plans include vehicle-cleaning area source control design requirements for community car wash racks in complexes with a large number of dwelling units. In these cases, wash water from the areas may be directed to the sanitary sewer, to an engineered infiltration system, or to an equally effective alternative. Pre-treatment may also be required.

Depending on the jurisdiction, developers may be directed to divert surface water runoff away from the exposed area around the wash pad (parking lot, storage areas), and wash pad itself to alternatives other than the sanitary sewer. Roofing may be required for exposed wash pads.

It is generally advisable to cover areas used for regular washing of vehicles, trucks, or equipment, surround them with a perimeter berm, and clearly mark them as a designated washing area. Sumps or drain lines can be installed to collect wash water, which may be treated for reuse or recycling, or for discharge to the sanitary sewer. Jurisdictions may require some form of pretreatment, such as a trap, for these areas.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment.

Additional Information

Maintenance Considerations

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permit.

Outdoor Material Storage Areas SD-34

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutant
- Collect and Convey

Description

Proper design of outdoor storage areas for materials reduces opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the stormwater conveyance system. Materials may be in the form of raw products, by-products, finished products, and waste products. The type of pollutants associated with the materials will vary depending on the type of commercial or industrial activity.

Approach

Outdoor storage areas require a drainage approach different from the typical infiltration/detention strategy. In outdoor storage areas, infiltration is discouraged. Containment is encouraged. Preventative measures include enclosures, secondary containment structures and impervious surfaces.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Some materials are more of a concern than others. Toxic and hazardous materials must be prevented from coming in contact with stormwater. Non-toxic or non-hazardous materials do not have to be prevented from stormwater contact. However, these materials may have toxic effects on receiving waters if allowed to be discharged with stormwater in significant quantities. Accumulated material on an impervious surface could result in significant impact on the rivers or streams that receive the runoff.

Material may be stored in a variety of ways, including bulk piles, containers, shelving, stacking, and tanks. Stormwater contamination may be prevented by eliminating the possibility of stormwater contact with the material storage areas either through diversion, cover, or capture of the stormwater. Control measures may also include minimizing the storage area. Design

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

requirements for material storage areas are governed by Building and Fire Codes, and by current City or County ordinances and zoning requirements. Control measures are site specific, and must meet local agency requirements.

Designing New Installations

Where proposed project plans include outdoor areas for storage of materials that may contribute pollutants to the stormwater conveyance system, the following structural or treatment BMPS should be considered:

- Materials with the potential to contaminate stormwater should be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the stormwater conveyance system, or (2) protected by secondary containment structures such as berms, dikes, or curbs.
- The storage area should be paved and sufficiently impervious to contain leaks and spills.
- The storage area should slope towards a dead-end sump to contain spills and direct runoff from downspouts/roofs should be directed away from storage areas.
- The storage area should have a roof or awning that extends beyond the storage area to minimize collection of stormwater within the secondary containment area. A manufactured storage shed may be used for small containers.

Note that the location(s) of installations of where these preventative measures will be employed must be included on the map or plans identifying BMPs.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permits.

Infiltration Test Report

San Bernardino County Southwestern Part, California

SpC—Soboba stony loamy sand, 2 to 9 percent slopes

Map Unit Setting

National map unit symbol: hckv
Elevation: 960 to 3,690 feet
Mean annual precipitation: 12 to 39 inches
Mean annual air temperature: 60 to 65 degrees F
Frost-free period: 260 to 365 days
Farmland classification: Not prime farmland

Map Unit Composition

Soboba and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Soboba

Setting

Landform: Alluvial fans
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

Ap - 0 to 10 inches: stony loamy sand
C1 - 10 to 24 inches: very stony loamy sand
C2 - 24 to 60 inches: very stony sand

Properties and qualities

Slope: 2 to 9 percent
Percent of area covered with surface fragments: 0.1 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Excessively drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (6.00 to 19.99 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.0 to 1.0 mmhos/cm)
Available water storage in profile: Low (about 3.8 inches)

Interpretive groups

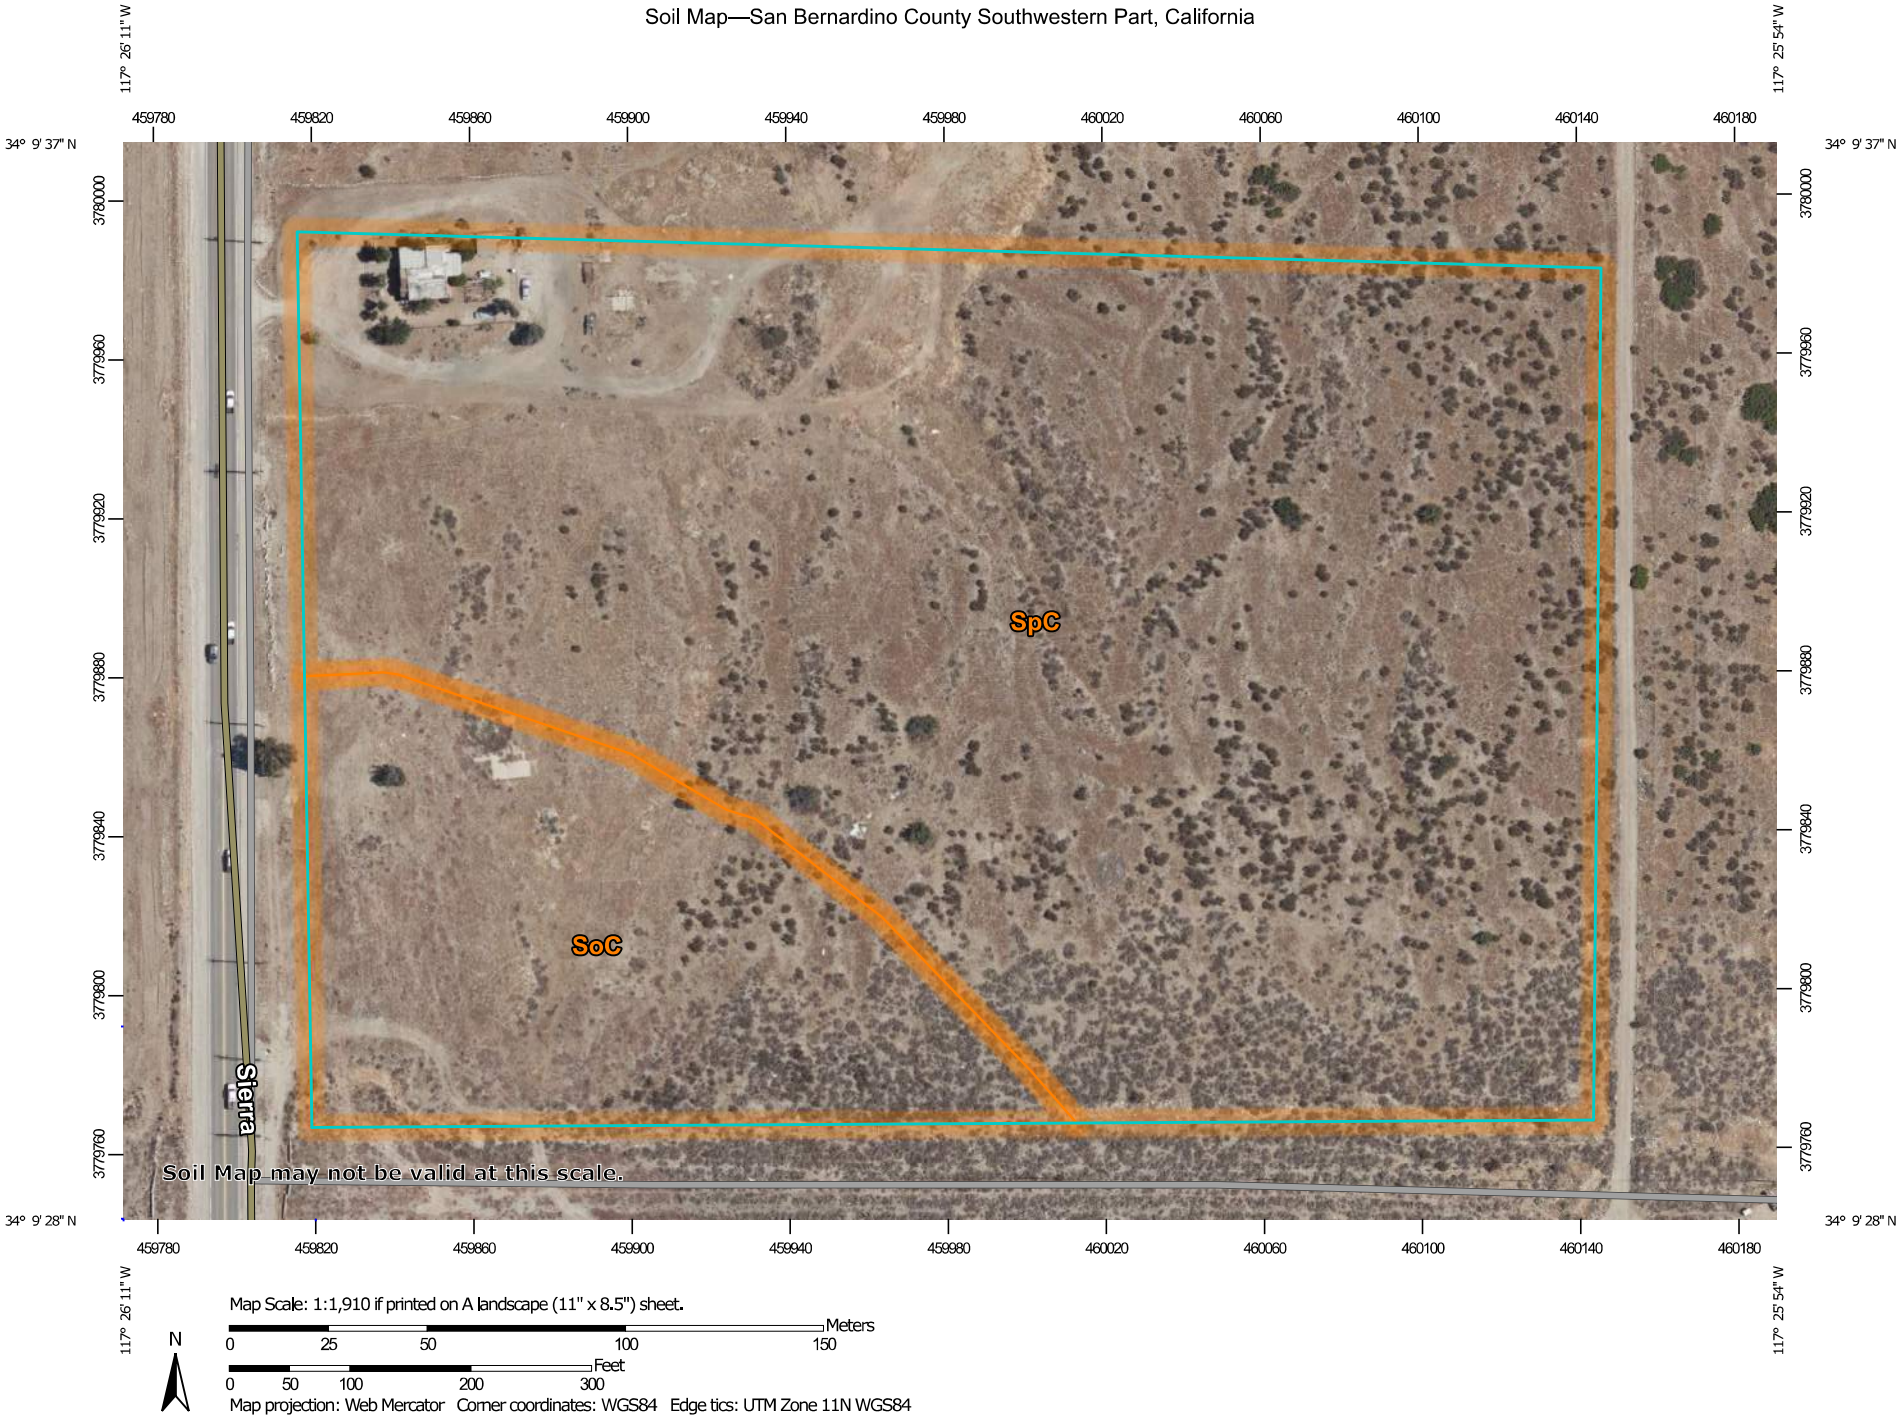
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Hanford

Percent of map unit: 5 percent
Landform: Alluvial fans
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Tujunga, gravelly loamy sand



Percent of map unit: 5 percent
Landform: Alluvial fans

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

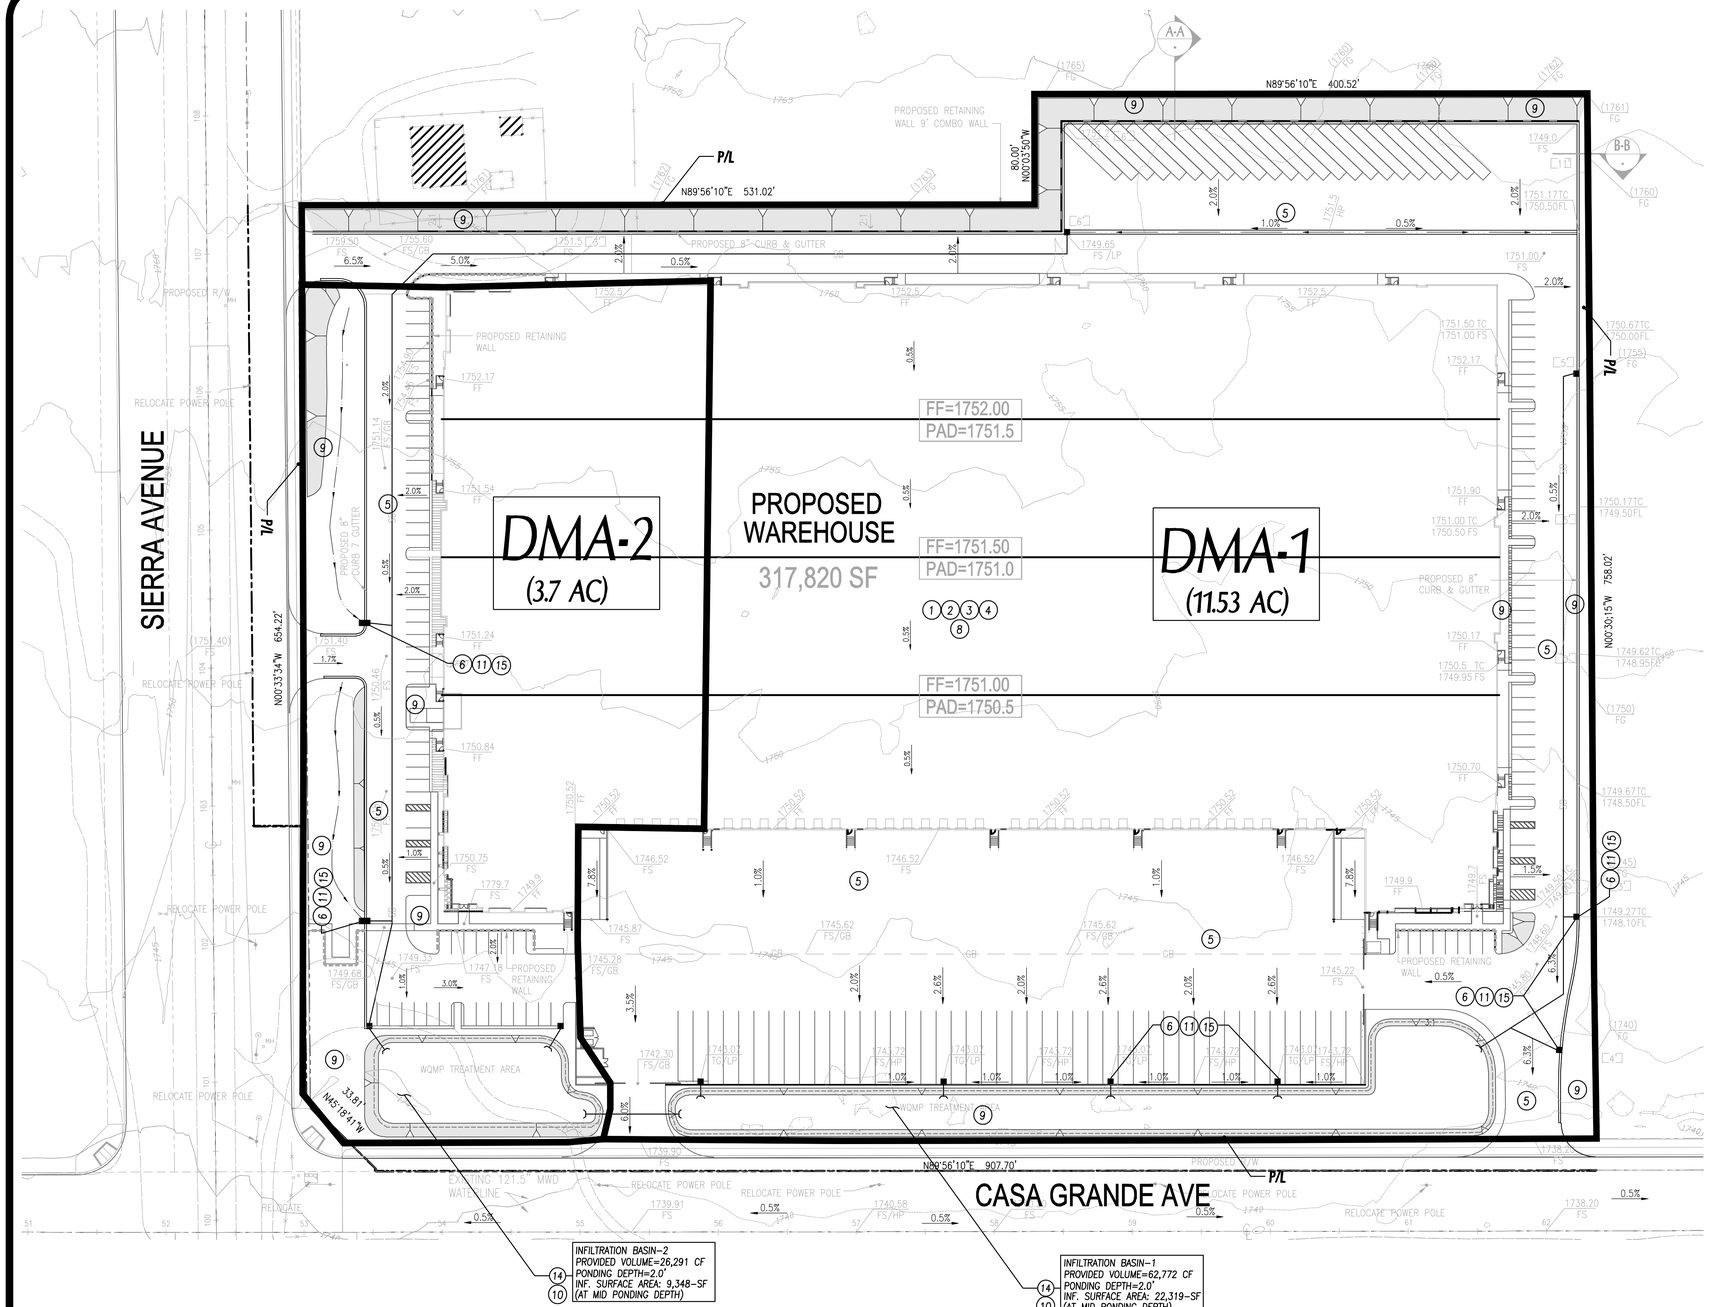
Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Bernardino County Southwestern Part, California
Survey Area Data: Version 10, Sep 12, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 1, 2018—Jun 30, 2018



The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the Sierra Avenue and Casa Grande Warehouse Project ("Project" or "Proposed Project"). The purpose of this Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have on the environment.

1.1 Project Location and Setting

The propose warehouse site is located in the northeastern portion of the City of Fontana (City); approximately 330 feet west of the City border as shown in Exhibit 1: *Regional Vicinity*. The warehouse site consists of three connected parcels on the northeast corner of the Sierra Avenue and Casa Grande Drive intersection; refer to Exhibit 2: *Local Vicinity*. Regional access would be available to the site via transportation routes including State Route 210 and Interstate Highway I-15. The State Route 210 entrance and exit is located approximately 1.5 miles south of the proposed Project via Sierra Avenue. The Interstate Highway I-15 entrance and exit is located approximately 1.6 miles north of the proposed Project via Sierra Avenue.

The warehouse site is a rectangular lot, mostly vacant, and unimproved site on approximately 16.5-gross acres (15.34-net acres) or approximately 661,561-square feet; refer to Exhibit 2**.** The northwest corner of the property is occupied by a single-family residence, while the remaining portion of the property is undeveloped land covered with natural vegetation, including two trees on the west side of the site. A concrete foundation from a former house remains on the site. Additionally, there is debris consisting of mostly rocks, dirt, tires, and an old domestic sprinkler hose. The property is zoned R-5 and R-MU for single-family residential and regional-mixed use commercial development by the City of Fontana, respectively.

1.2 Project Description

The proposed Project involves the development of a 332,996-square feet distribution warehouse building within the approximate 16.5-gross acre (15.34-net acre) warehouse site. The warehouse would have associated facilities and improvements such as a guard booth, mezzanine (5,000-square feet), vehicle parking, loading dock doors, trailer parking, onsite and off-site landscaping, and onsite and off-site improvements; Refer to Exhibit 3**:** *Conceptual Site Plan*.

Landscaping

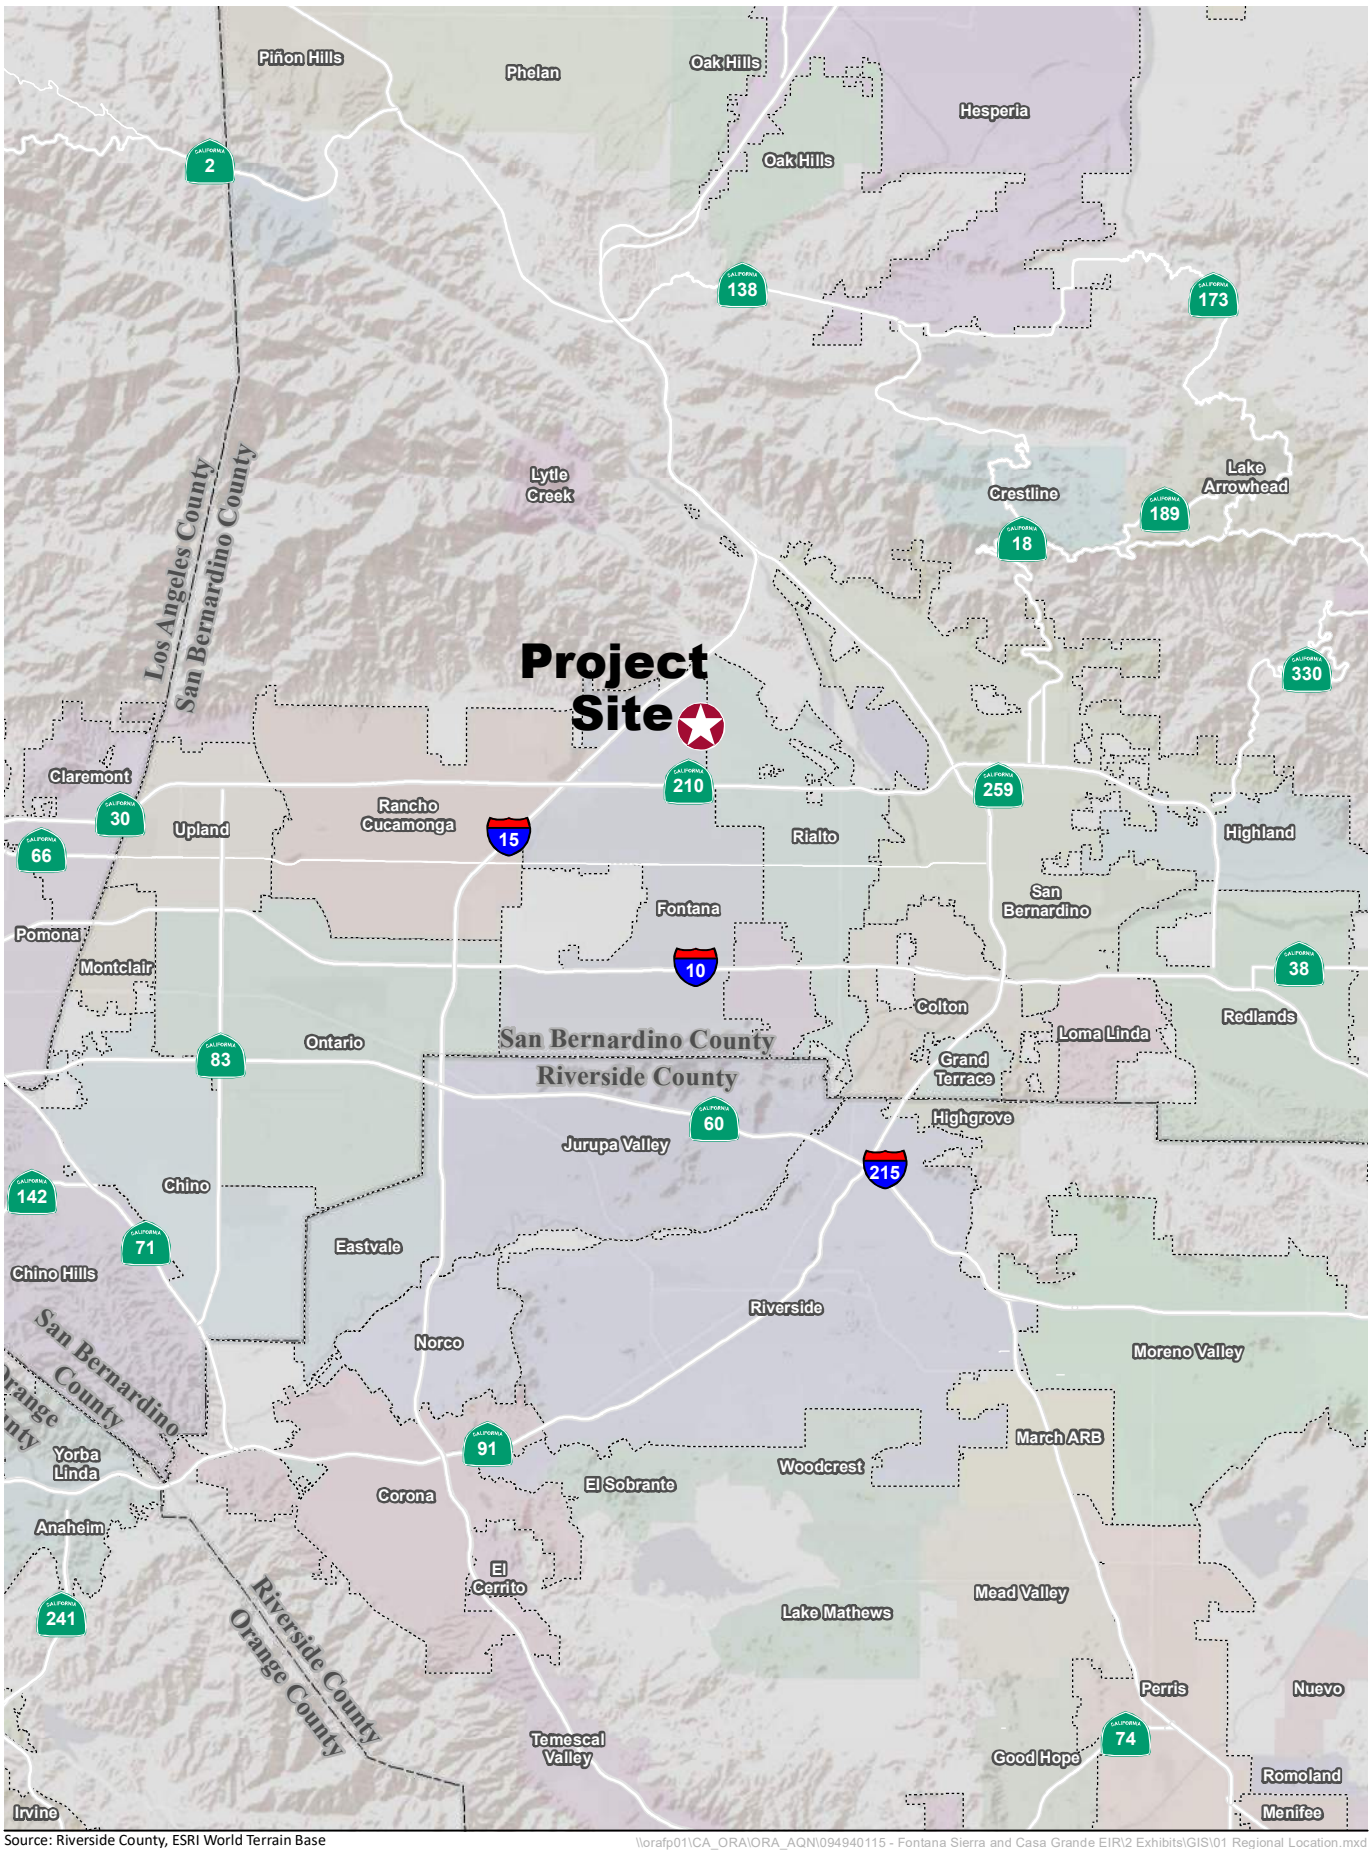
Onsite landscaping would be provided on the Project site. Approximately twenty-five to sixty-foot-wide landscaped buffers would be provided along the south and west boundaries and a thirty-foot-wide buffer along the northern boundary.

Project Circulation

Regional Project access would be from Interstate 215 (I-215) and State Route 210 (SR-210) via the officially designated local truck route[1] Sierra Avenue. Local access would be provided via Casa Grande Drive. Project site ingress and egress would be via four driveways; two approximately thirty-foot driveways on Sierra Avenue and two approximately forty-foot driveways on Casa Grande Drive.

Parking

The Project would provide 134 parking stalls, 67 trailers stalls, and 35 dock doors.



Project Phasing and Construction

The Project is anticipated to be developed in one phase. Should the Project be approved, construction is anticipated to occur over a duration of approximately 15 months, commencing in the second half of 2020; the facility would be operational in late 2021.

Offsite Improvements

The Project will be responsible for approximately eighteen feet beyond the property line on Casa Grande Drive. Additionally, the Project would improve Sierra Avenue and Casa Grande Drive with approved curb, gutter, and lighting.

2 ACOUSTIC FUNDAMENTALS

2.1 Sound and Environmental Noise

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g. air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. In acoustics, the fundamental model consists of a noise source, a receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of a base of steady background noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 1: Typical Noise Levels provides typical noise levels.

Table 1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The equivalent noise level (L_{eq}) is the average noise level averaged over the measurement period, while the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Most commonly, environmental sounds are described in terms of L_{eq} that has the same acoustical energy as the summation of all the time-varying events. Each is applicable to this analysis and defined in Table 2: Definitions of Acoustical Terms.

Table 2: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascals is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Exceeded Noise Levels (L_{01}, L_{10}, L_{50}, L_{90})	The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average L_{eq} with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source.

A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions. Under the dB scale, three sources of equal loudness together would produce an increase of 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics. No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the

percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance.[2]

2.2 Groundborne Vibration

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g. factory machinery) or transient (e.g. explosions). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Peak Particle Velocity (in/sec)	Approximate Vibration Velocity Level (VdB)	Human Reaction	Effect on Buildings
0.006-0.019	64-74	Range of threshold of perception	Vibrations unlikely to cause damage of any type
0.08	87	Vibrations readily perceptible	Recommended upper level to which ruins and ancient monuments should be subjected
0.1	92	Level at which continuous vibrations may begin to annoy people, particularly those involved in vibration sensitive activities	Virtually no risk of architectural damage to normal buildings
0.2	94	Vibrations may begin to annoy people in buildings	Threshold at which there is a risk of architectural damage to normal dwellings
0.4-0.6	98-104	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Architectural damage and possibly minor structural damage

Source: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2013.

[2] Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

3.1 State of California

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new multi-family residential buildings, the acceptable interior noise limit for new construction is 45 dBA CNEL.

3.2 Local

City of Fontana General Plan

Adopted on November 13, 2018, the Fontana Forward General Plan Update 2015-2035 (Fontana General Plan) identifies noise standards that are used as guidelines to evaluate transportation noise level impacts. These standards are also used to assess the long-term traffic noise impacts on specific land uses. According to the Fontana General Plan, land uses such as residences have acceptable exterior noise levels of up to 65 dBA CNEL. Based on the guidelines in the Fontana General Plan, an exterior noise level of 65 dBA CNEL is generally considered the maximum exterior noise level for sensitive receptors.

Land uses near these significant noise-producers can incorporate buffers and noise control techniques including setbacks, landscaping, building transitions, site design, and building construction techniques to reduce the impact of excessive noise. Selection of the appropriate noise control technique would vary depending on the level of noise that needs to be reduced as well as the location and intended land use.

The City has adopted the Noise and Safety Element as a part of the updated Fontana General Plan. The Noise and Safety Element specifies the maximum allowable unmitigated exterior noise levels for new developments impacted by transportation noise sources. Additionally, the Noise and Safety Element identifies transportation noise policies designed to protect, create, and maintain an environment free of harmful noise that could impact the health and welfare of sensitive receptors. The following Fontana General Plan goals, policies, and actions for addressing noise are applicable to the Project:

Goal 8: The City of Fontana protects sensitive land uses from excessive noise by diligent planning through 2035.

Policy 8.2: Noise-tolerant land uses shall be guided into areas irrevocably committed to land uses that are noise-producing, such as transportation corridors.

Policy 8.4: Noise spillover or encroachment from commercial, industrial and educational land uses shall be minimized into adjoining residential neighborhoods or noise-sensitive uses.

Action C: The State of California Office of Planning and Research General Plan Guidelines shall be followed with respect to acoustical study requirements.

Goal 9: The City of Fontana provides a diverse and efficiently operated ground transportation system that generates the minimum feasible noise on its residents through 2035.

Policy 9.1: All noise sections of the State Motor Vehicle Code shall be enforced.

Policy 9.2: Roads shall be maintained such that the paving is in good condition and free of cracks, bumps, and potholes.

Action A: On-road trucking activities shall continue to be regulated in the City to ensure noise impacts are minimized, including the implementation of truck-routes based on traffic studies.

Action B: Development that generates increased traffic and subsequent increases in the ambient noise level adjacent to noise-sensitive land uses shall provide appropriate mitigation measures.

Action D: Explore the use of “quiet pavement” materials for street improvements.

Goal 10: Fontana’s residents are protected from the negative effects of “spillover” noise.

Policy 10.1: Residential land uses and areas identified as noise-sensitive shall be protected from excessive noise from non-transportation sources including industrial, commercial, and residential activities and equipment.

Action A: Projects located in commercial areas shall not exceed stationary-source noise standards at the property line of proximate residential or commercial uses.

Action B: Industrial uses shall not exceed commercial or residential stationary source noise standards at the most proximate land uses.

Action C: Non-transportation noise shall be considered in land use planning decisions.

Action D: Construction shall be performed as quietly as feasible when performed in proximity to residential or other noise sensitive land uses.

City of Fontana Municipal Code

Standards established under the City of Fontana Municipal Code (Municipal Code) are used to analyze noise impacts originating from the Project. Operational noise impacts are typically governed by Fontana Municipal Code Sections 18-61 through 18-67. However, the City currently relies on delineated general industrial areas. According to the General Plan Noise and Safety section, these areas are buffered from residential uses through land use zoning that places either light industrial or commercial uses between the major manufacturers involved in heavy industrial uses and local residents. This separation of land uses meaning noise intrusion on conforming land uses is not a problem at this time.

Guidelines for non-transportation and stationary noise source impacts from operations at private properties are found in the Zoning and Development Code in Chapter 30 of the Fontana Municipal Code. Applicable guidelines indicate that no person shall create or cause any sound exceeding the City's stated noise performance standards measured at the property line of any residentially zoned property. Per Fontana Municipal Code Section 30-543(A), the performance standards for exterior noise emanating from industrial uses are 65 dBA between the hours of 7:00 a.m. and 10:00 p.m. and 70 dBA during the noise-sensitive hours of 10:00 p.m. to 7:00 a.m. at residential uses. However, the nighttime performance standard in Section 30-543(A) should actually reference 65 dBA instead of the 70 dBA that is listed. For this analysis, a 65-dBA nighttime noise level standard is conservatively used to analyze potential noise impacts at off-site residential receptors within the City of Fontana.

The City has also set restrictions to control noise impacts from construction activities. Section 18-63(b)(7) states that the erection (including excavation), demolition, alteration, or repair of any structure shall only occur between the hours of 7:00 a.m. and 6:00 p.m. on weekdays and between the hours of 8:00 a.m. and 5:00 p.m. on Saturdays, except in the case of urgent necessity or otherwise approved by the City of Fontana. Although the Fontana Municipal Code limits the hours of construction, it does not provide specific noise level performance standards for construction.

4 EXISTING CONDITIONS

4.1 Existing Noise Sources

The City is impacted by various noise sources. Mobile sources of noise, especially cars, trucks, and trains are the most common and significant sources of noise. Other noise sources are the various land uses (i.e. residential, commercial, institutional, and recreational and parks activities) throughout the City that generate stationary-source noise.

Mobile Sources

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes from the *Traffic Impact Study for the Proposed Sierra and Casa Grande Warehouse*, prepared by Kimley-Horn (December 2019) (Traffic Impact Study). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments in proximity to the Project site are included in Table 4: Existing Traffic Noise Levels. As shown in Table 4, existing traffic noise levels in the Project vicinity range between 67.2 dBA CNEL and 72.2 dBA CNEL.

Table 4: Existing Traffic Noise Levels

Roadway Segment	ADT	dBA CNEL[1]
Sierra Avenue		
North of Casa Grande Avenue	9,756	67.2
Between Casa Grande Drive and SR-210 WB Ramps	21,528	71.0
Between SR-210 WB Ramps and EB Ramps	25,283	71.7
South of SR-210 Eastbound Ramps	28,770	72.2

ADT = average daily trips; dBA = A-weighted decibels; CNEL= Community Equivalent Noise Level
1. Traffic noise levels are at 100 feet from the roadway centerline.
Source: Based on traffic data provided by Kimley-Horn and Associates, Inc., May 2020. Refer to Appendix A for traffic noise modeling results.

Stationary Sources

The primary sources of stationary noise in the Project vicinity are those associated with the operations of adjacent warehouse uses to the south and southeast of the Project. The noise associated with these sources may represent a single-event noise occurrence or short-term noise. Other noises include mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment), dogs barking, idling vehicles, and residents talking.

4.2 Noise Measurements

The Project site is currently vacant and unoccupied. To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted three short-term noise measurements on February 20, 2020; see Appendix A: Noise Data. The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the Project site. The 10-minute measurements were taken between 12:30 p.m. and 2:00 p.m. near potential sensitive receptors. Short-term L_{eq} measurements are considered representative of the noise levels throughout the day. The average noise levels and sources of noise measured at each location are listed in Table 5: Existing Noise Measurements and shown on Exhibit 4: Noise Measurement Locations.

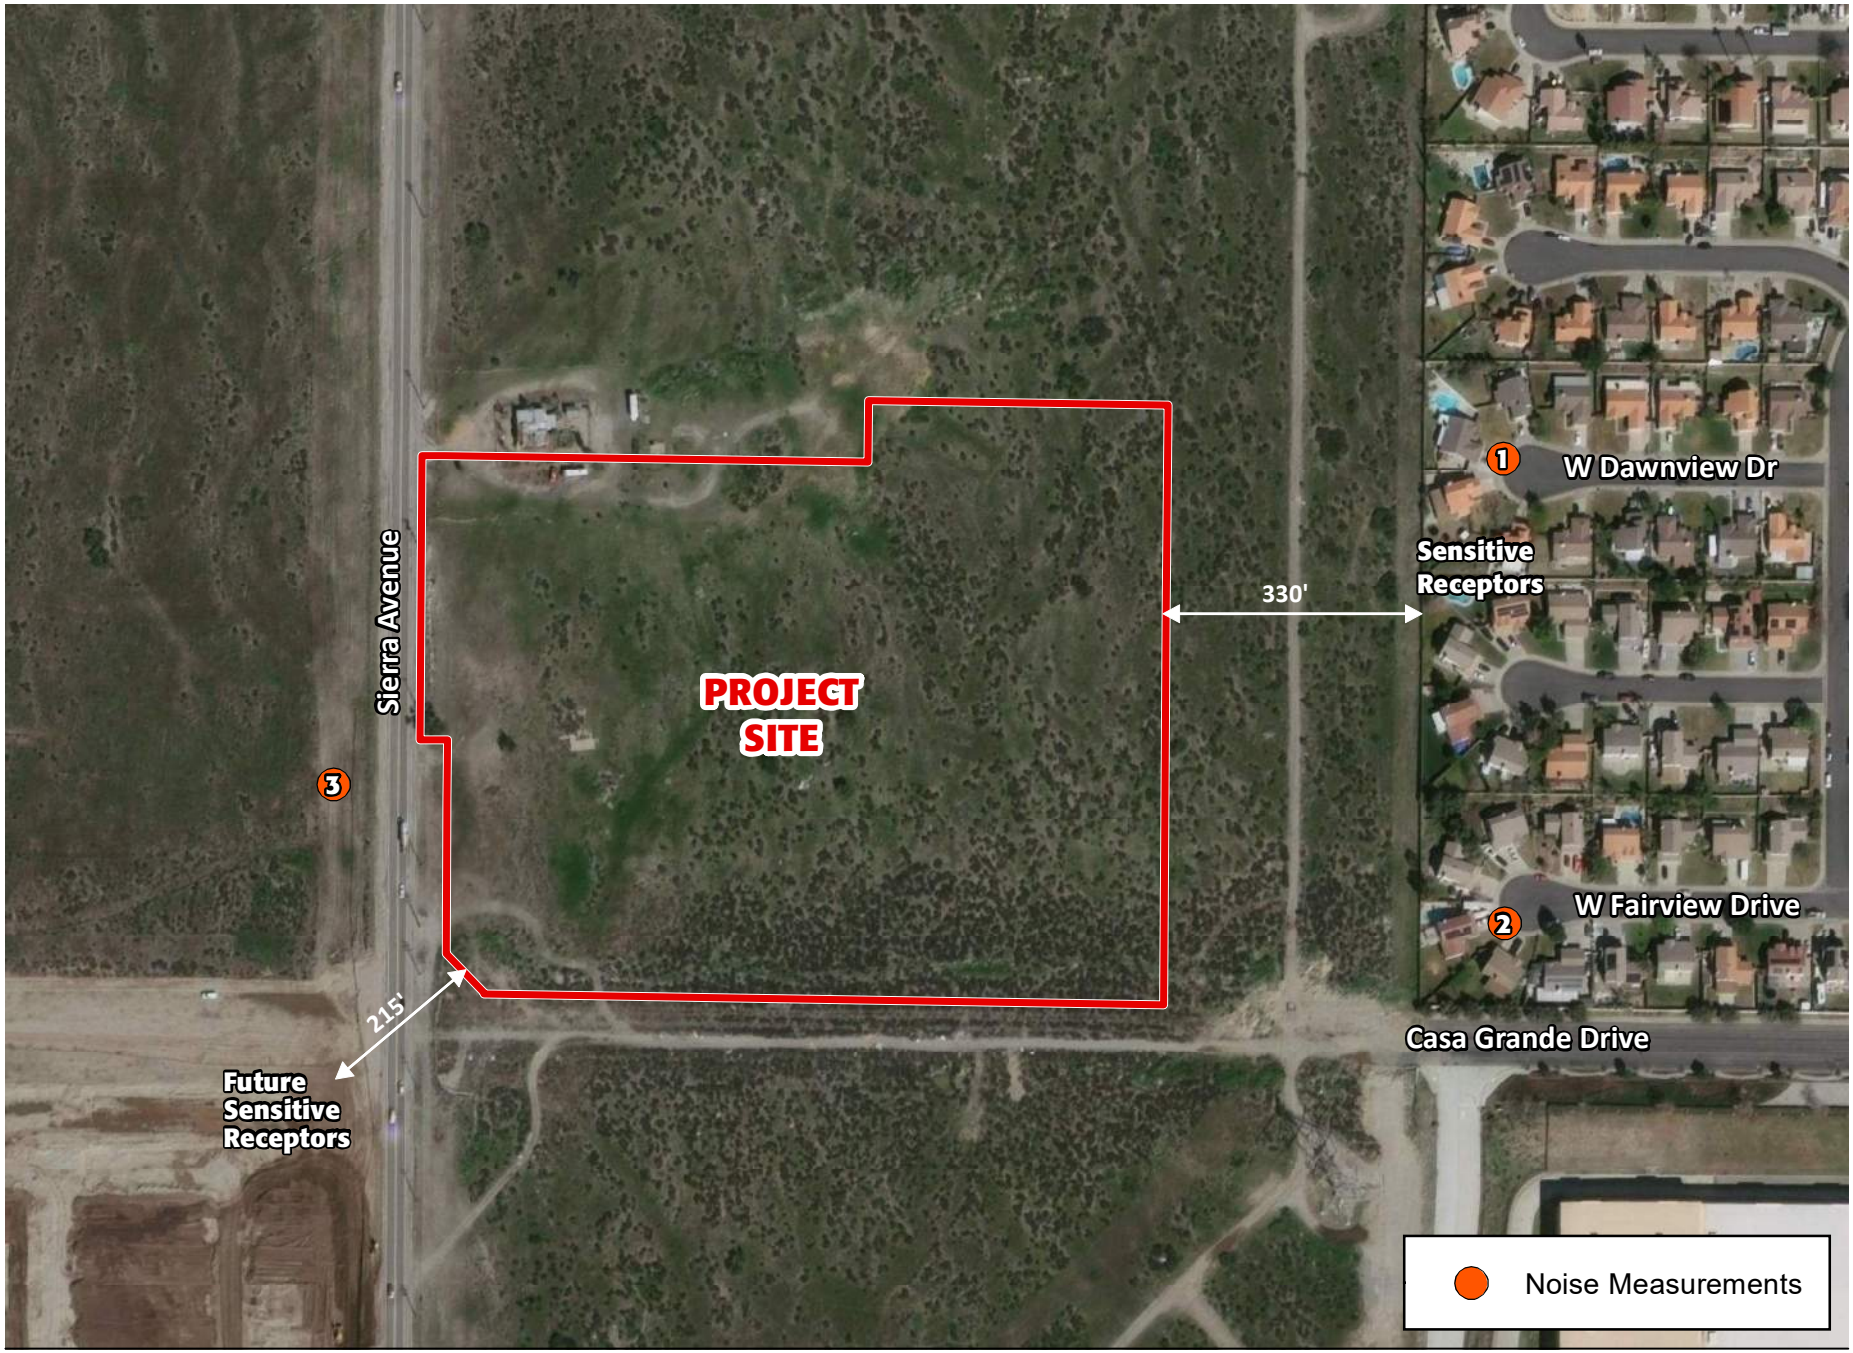

Table 5: Existing Noise Measurements

Site #	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	Time
1	West Dawnview Drive cul-de-sac to the east of the Project site.	37.8	32.6	60.2	12:43 p.m.
2	West Fairview Drive cul-de-sac to the east of the Project site.	45.4	33.4	60.5	12:58 p.m.
3	To the west of the Project site along Sierra Avenue.	73.2	40.6	89.9	1:25 p.m.

Source: Noise measurements taken by Kimley-Horn, February 20, 2020. See Appendix A for noise measurement results.

4.3 Sensitive Receptors

Sensitive populations are more susceptible to the effects of air pollution than is the general population. Sensitive receptors that are in proximity to localized sources of toxics are of particular concern. Land uses considered sensitive receptors include residences, schools, playgrounds, childcare centers, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. Sensitive land uses surrounding the Project consist mostly of single-family residential communities. Sensitive land uses near the Project include the single-family residential communities 330 feet to the east and a future residential community currently under construction, located 215 feet to the southwest.

5 SIGNIFICANCE CRITERIA AND METHODOLOGY

5.1 CEQA Thresholds

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains analysis guidelines related to noise impacts. These guidelines have been used by the City to develop thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generate excessive groundborne vibration or groundborne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels.

5.2 Methodology

This analysis of the Existing and With Project noise environments is based on noise prediction modeling and empirical observations. Construction noise levels were based on typical noise levels generated by construction equipment published by the Federal Transit Administration. Reference noise levels are used to estimate operational noise levels at nearby sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point sources of noise). Noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise.

Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from Federal Transit Administration (FTA) published data for construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria for structural damage and human annoyance.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 Acoustical Impacts

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g. land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods surrounding the construction site. Project construction would occur adjacent to existing residential uses located approximately 330 feet to the east and 215 feet to the southwest from the Project construction area. However, it is acknowledged that construction activities would occur throughout the Project site and would not be concentrated at a single point near sensitive receptors.

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g. land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods surrounding the construction site. Project construction would occur adjacent to existing residential uses as close as 215 feet from potential construction. However, it is acknowledged that construction activities would occur throughout the Project site and would not be concentrated at a single point near sensitive receptors.

Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities would require concrete/industrial saws, excavators, and dozers during demolition; dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in Table 6: Typical Construction Noise Levels.

Table 6: Typical Construction Noise Levels			
Equipment	**Typical Noise Level (dBA) at 50 feet from Source**	**Typical Noise Level (dBA) at 100 feet from Source[1]**	**Typical Noise Level (dBA) at 215 feet from Source[1]**

Note: 1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$ Where: dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance			
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.			

As shown in Table 6, exterior noise levels could affect the nearest existing sensitive receptors in the vicinity. Sensitive uses in the Project site vicinity include existing residential uses to the east and southwest. These sensitive receptors may be exposed to elevated noise levels during Project construction. However, construction noise would be acoustically dispersed throughout the Project site and not concentrated in one area near surrounding sensitive uses. The City's Municipal Code does not establish quantitative construction noise standards. Instead, the Municipal Code establishes limited hours of construction activities. Municipal Code Section 18-63 states that construction activities may only take place between the hours of 7:00 a.m. and 6:00 p.m. on weekdays and between the hours of 8:00 a.m. and 5:00 p.m. on Saturdays, except in the case of urgent necessity or otherwise approved by the City of Fontana. All motorized equipment used in such activity shall be equipped with functioning mufflers as mandated by the state.

Construction activities may also cause increased noise along site access routes due to movement of equipment and workers. Compliance with the Municipal Code would minimize impacts from construction noise, as construction would be limited to daytime hours on weekdays and Saturdays. By following

Municipal Code standards, Project construction activities would result in a less than significant noise impact.

Operations

Implementation of the proposed Project would create new sources of noise in the project vicinity. The major noise sources associated with the Project that would potentially impact existing and future nearby residences include stationary noise equipment (i.e. trash compactors, air conditioners, etc.); truck and loading dock (i.e. slow moving truck on the site, maneuvering and idling trucks, equipment noise); parking areas (i.e. car door slamming, car radios, engine start-up, and car pass-by); and off-site traffic noise.

Mechanical Equipment

The nearest sensitive receptors to the Project site are the residences 330 feet east and 215 feet southwest of the Project site. Potential stationary noise sources related to long-term operation of residential development in the Project site would include mechanical equipment. Mechanical equipment (e.g. heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet.[3] HVAC noise levels would attenuate to approximately 39.3 dBA at the nearest residences located approximately 215 feet southwest of the Project site, which is well below he City's 65 dBA noise standard for residential uses. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels. Further, it is noted that noise from stationary sources at the Project site would primarily occur during the daytime activity hours of 7:00 a.m. to 10:00 p.m. Therefore, the proposed project would result in a less than significant impact related to stationary noise levels.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. Loading/unloading activities would occur on the southern portion of the proposed warehouse building in the southern portion of the Project site. Driveways and access to the site would occur along Almond Avenue. As noted above, Section 30-543(A) of the Municipal Code limits noise from industrial uses.

The proposed warehouse building includes dock-high doors for truck loading/unloading and manufacturing/light industrial operations. The dock-high doors are set back approximately 500 feet from the nearest residences to the east and southwest of the Project site. Loading dock noise is approximately 68 dB at 50 feet.[4] Loading dock noise levels would be approximately 48 dB at the nearest receptors conservatively assuming a clear line of sight and no attenuation from intervening walls or structures. Furthermore, loading dock doors would be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of

[3] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, 2015.

[4] Charles M. Salter Associates, Inc., *Midpoint at 237 Loading Dock Noise Study,* March 27, 2014.

the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City's noise standards of 65 dBA for residential uses.

Trucks at the Project site would also utilize backup alarms during loading/unloading activities. Backup alarms produce a typical noise level of 79 dB at 30 feet.[5] At 500 feet, backup alarm noise levels would be approximately 54.6 dB[6] and would be below the City's 65 dBA noise standard for residential uses. Therefore, noise levels from trucks and loading/unloading activities would not exceed any local noise standards and a less than significant impact would occur.

Parking Noise

The Project would provide 175 parking stalls, 45 trailers stalls, and 11 dock doors, and up to 136 parking stalls and 69 trailer stalls in the future (see Section 1.2, *Project Description*). Parking stalls would located on all sides of the proposed warehouse building near the site perimeter. Nominal parking noise would occur within the on-site parking facilities. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA[7] and may be an annoyance to adjacent noise-sensitive receptors. Conversations in parking areas may also be an annoyance to adjacent sensitive receptors. Sound levels of speech typically range from 33 dBA at 50 feet for normal speech to 50 dBA at 50 feet for very loud speech.[8] It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period.

Additionally, parking noise also occurs at the adjacent properties to the east, southeast, and southwest under existing conditions. Parking and driveway noise would be consistent with existing noise in the vicinity and would be partially masked by background traffic noise from motor vehicles traveling along Sierra Avenue and Casa Grande Drive. Actual noise levels over time resulting from parking activities are anticipated to be far below the local noise standards. Therefore, noise impacts associated with parking would be less than significant.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Impact Study, the proposed Project would generate 554 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable.[9] Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

[5] Ibid.

[6] Based on the inverse square law for sound attenuation, and assuming a minimum of 5 dB noise reduction from the intervening warehouse building on the proposed Project site (FHWA, 2006).

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions with and without the Project, based on traffic volumes from the Traffic Impact Analysis. As indicated in Table 7: Existing and Project Traffic Noise Levels, Existing Plus Project traffic-generated noise levels on Project area roadways would range between 67.3 dBA CNEL and 72.3 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.1 dBA CNEL along Sierra Avenue. In addition, as shown in Table 8: Opening Year and Opening Year Plus Project Traffic Noise Levels, Opening Year Plus Project traffic noise levels on Project area roadways range between 68.3 dBA CNEL and 72.5 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.1 dBA CNEL along Sierra Avenue. As such, the Project would result in an increase of less than 3.0 dBA CNEL for the roadway segments analyzed and traffic noise. A less than significant impact would occur in this regard.

Table 7: Existing and Project Traffic Noise Levels

Roadway Segment	Existing		Existing Plus Project		Project Change from Existing Conditions	Significant Impact?
	ADT	dBA CNEL[1]	ADT	dBA CNEL[1]		
Sierra Avenue						
North of Casa Grande Avenue	9,756	67.2	9,895	67.3	0.1	No

ADT = average daily trips; dBA = A-weighted decibels; CNEL= Community Equivalent Noise Level
1. Traffic noise levels are at 100 feet from the roadway centerline.
Source: Based on traffic data provided by Kimley-Horn and Associates, Inc., March 2020. Refer to Appendix A for traffic noise modeling results.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.2 Would the Project generate excessive groundborne vibration or groundborne noise levels?

Increases in groundborne vibration levels attributable to the proposed Project would be primarily associated with short-term construction-related activities. The Federal Transit Administration (FTA) has published standard vibration velocities for construction equipment operations in their 2018 *Transit Noise and Vibration Impact Assessment Manual*. The types of construction vibration impacts include human annoyance and building damage.

Human annoyance is evaluated in vibration decibels (VdB) (the vibration velocity level in decibel scale) and occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. The FTA Transit Noise and Vibration Impact Assessment Manual identifies 75 VdB as the approximate threshold for annoyance. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience cosmetic damage (e.g. plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any vibration damage.

Table 9: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet and 215 feet for typical construction equipment. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in Table 9, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity, which is below the FTA's 0.20 PPV threshold. The nearest sensitive receptors are the residential uses located approximately 215 feet to the southwest of the active construction zone.

Table 9: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 100 Feet (in/sec)[1]	Approximate VdB at 25 Feet	Approximate VdB at 215 Feet[2]
Large Bulldozer	0.089	0.011	87	59
Caisson Drilling	0.089	0.011	87	59
Loaded Trucks	0.076	0.010	86	58
Jackhammer	0.035	0.004	79	51
Small Bulldozer/Tractors	0.003	0.000	58	30

Notes:
1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.
2. Calculated using the following formula: Lv(D) = Lv(25 feet) - (30 x log10(D/25 feet)) per the FTA Transit Noise and Vibration Impact Assessment Manual (2018).

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

As shown in Table 9, construction VdB levels would not exceed 59 VdB at 215 feet (i.e. below the 75 VdB annoyance threshold). It is also acknowledged that construction activities would occur throughout the

Project site and would not be concentrated at the point closest to the nearest residential structure(s). Therefore, vibration impacts associated with the Project construction would be less than significant.

Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g. refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the proposed Project would include truck deliveries. Due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. According to the FTA's Transit Noise and Vibration Impact Assessment, trucks rarely create vibration levels that exceed 70 VdB (equivalent to 0.012 inches per second PPV) when they are on roadways. Therefore, trucks operating at the Project site or along surrounding roadways would not exceed FTA thresholds for building damage or annoyance. Impacts would be less than significant in this regard.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

The nearest airport to the Project site is the Ontario International Airport located approximately 10.5 miles to the southwest. The Project is not within 2.0 miles of a public airport or within an airport land use plan. Additionally, there are no private airstrips located within the Project vicinity. Therefore, the Project would not expose people residing or working in the Project area to excessive airport- or airstrip-related noise levels and no mitigation is required.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

6.2 Cumulative Noise Impacts

The Project's construction activities would not result in a substantial temporary increase in ambient noise levels. The City permits construction activities between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, between the hours of 8:00 a.m. and 5:00 p.m. on Saturdays (except in the case of urgent necessity or otherwise approved by the City of Fontana), and prohibited on Sundays and Federal holidays. There would be periodic, temporary, noise impacts that would cease upon completion of construction activities. The Project would contribute to other proximate construction project noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the Project's construction-related noise impacts would be less than significant following compliance with the General Plan and the Municipal Code. Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the Project site and vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project specific noise impacts, would not be cumulatively significant.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

MEMORANDUM

To:	Kari Cano
From:	Alex Pohlman
	Kimley-Horn and Associates, Inc.
Date:	June 2, 2020
Subject:	Mango Replacement Site: Proposed Sierra Casa Grande Warehouse Residential Replacement Site – Noise Impacts

---

Purpose

The purpose of this memorandum is to identify noise impacts associated with the proposed residential replacement site located on the northwest corner of Malaga Street and Mango Avenue (Mango Replacement Site) in the City of Fontana. Specifically, this analysis addresses the air quality impacts referenced in State CEQA Guidelines.

Project Description

The project is proposing residential replacement sites for the development of residential dwelling units at two project sites within the City of Fontana in efforts to account for the potential residential dwelling units lost with the development of the proposed Sierra Avenue at Casa Grande Drive Warehouse. The two replacement sites are proposed within the City of Fontana and are shown on Exhibit 1. One replacement site is located on the northwest corner of the intersection of Mango Avenue at Malaga Street. The site is currently 5.69 acres and occupied by 14 existing residential dwelling units. The second replacement site, located on the northeast corner of the intersection of Palmetto Avenue at Arrow Boulevard (Palmetto Replacement Site), is mentioned in this memorandum yet analyzed a separate document.

The replacement of residential land uses due to the development of the Sierra Avenue at Casa Grande Drive Warehouse would result in the development of a maximum of 219 new residential dwelling units, in addition to the existing units on each site. The 219 dwelling units would be split proportionally between the two replacement sites as follows:

- **Malaga Street/Mango Avenue Site**: 195 new dwelling units
  - 14 existing dwelling units
  - 209 onsite total dwelling units

  - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

- **Palmetto Avenue/Arrow Boulevard Site**: 24 new dwelling units
  - 8 existing dwelling units
  - 32 onsite total dwelling units
  - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

Noise Background

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Since the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

Noise, on the other hand, is typically defined as unwanted sound. A typical noise environment consists of a base of steady ambient noise that is the sum of various distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from traffic on a major highway.

Several rating scales have been developed to analyze the adverse effect of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise as well as the time of day when the noise occurs. For example, the equivalent continuous sound level (L_{eq}) is the average acoustic energy content of noise for a stated period of time; thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. The Day-Night Sound level (L_{dn}) is a 24-hour average L_{eq} with a 10 dBA "weighting" added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity in the nighttime. The Community Noise Equivalent Level (CNEL) is a 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 PM to 7:00 AM and an additional 5 dBA weighting during the hours of 7:00 PM to 10:00 PM to account for noise sensitivity in the evening and nighttime.

Regulatory Setting

City of Fontana General Plan

The City of Fontana General Plan Noise and Safety Element (Noise Element) ensures that development accounts for physical constraints and the natural hazards of the land. The noise component of the General Plan identifies potential noise problems and exposure in the community and provides an integrated approach to regulating noise. The City currently regulates noise levels and exposure, consistent, consistent with this Plan, in the Zoning and Development Code.

Goal 8: The City of Fontana protects sensitive land uses from excessive noise by diligent planning through 2035.

Policy 8.1: New sensitive land uses shall be prohibited in incompatible areas.

Policy 8.2: Noise-tolerant land uses shall be guided into areas irrevocable committed to land uses that are noise-producing, such as transportation corridors.

Policy 8.3: Where sensitive uses are to be placed along transportation routes, mitigation shall be provided to ensure compliance with state-mandated noise levels.

Policy 8.4: Noise spillover or encroachment from commercial, industrial and educational land uses shall be minimized into adjoining residential neighborhoods or noise-sensitive users.

Goal 9: The City of Fontana provides a diverse and efficiently operated ground transportation system that generates the minimum feasible noise on its residents through 2035.

Policy 9.1: All noise sections of the State Motor Vehicle Code shall be enforced.

Policy 9.2: Roads shall be maintained such that paving is in good condition and free of cracks, bumps, and potholes.

Policy 9.3: Noise mitigation shall be included in the design of new roadway projects in the city.

Goal 10: Fontana's residents are protected from the negative effects of "spillover" noise.

Policy 10.1: Residential land uses and areas identified noise-sensitive shall be protected fro excessive noise from non-transportation sources including industrial, commercial, and residential activities and equipment.

City of Fontana Municipal Code

Chapter 18, Article II. Section 18-63. – Prohibited Noises

(b) The following acts, which create loud, excessive, impulsive or intrusive sound or noise that annoys or disturbs persons of ordinary sensibilities from a distance of 50 feet or more from the edge of the property, structure or unit in which the source is located, are declared to be in violation of this article.

Section 18-63(b)(6) Loading, unloading or opening boxes. The creation of load, excessive or intrusive and excessive noise in connection with loading or unloading of any vehicle or the opening and destruction of bales, boxes, crates and containers.

Section 18-63(b)(7) Construction or repairing of buildings or structures. The erection (including excavating), demolition, alteration or repair of any building or structure other than between the hours of 7:00 a.m. and 6:00 p.m. on weekdays and between the hours of 8:00 a.m. and 5:00 p.m. on Saturdays, except in case of urgent necessity in the interest of public health and safety, and then only with a permit from the building inspector, which permit may be granted for a period not to exceed three days or less while the emergency continues and which permit may be renewed for periods of three days or less while the emergency continues. If the building inspector should determine that the public health and safety will not be impaired by the erection, demolition, alteration or repair of any building or structure or the excavation of streets and highways within the hours of 6:00 p.m. and 7:00 a.m., and if he shall further determine that loss or inconvenience would result to any party in interest, he may grant permission for such work to be done on weekdays within the hours of 6:00 p.m. and 7:00 a.m., upon application being made at the time the permit for the work is awarded or during the progress of the work.

Section 18-63(b)(8) Noise near schools, courts, place of worship or hospitals. The creation of any loud, excessive, impulsive or intrusive noise on any street adjacent to any school, institution of learning, places of worship or court while the premises are in use, or adjacent to any hospital which unreasonably interferes with the workings of such institution or which disturbs or unduly annoys patients in the hospital; provided conspicuous signs are displayed in such streets indicating that the street is a school, hospital or court street.

Chapter 30, Article V. Division 6, Sec. 30-182. - Noise

(a) No use shall create or cause to be created any sound that exceeds the ambient noise standards outlined in Table 30-182.A (**Table 1, Noise Standards**)

(b) No use shall create or cause creation of noise from a portable electronic device such as a car stereo, portable radio and/or cassette/compact disc player or similar device which exceeds the ambient noise standards outlined in Table 30-182.A (**Table 1**)

Table 1: Noise Standards

Exterior	65 db	65 db
Source: Fontana Municipal Code, Chapter 30, Article V. Division 6, Sec. 30-182. – Noise, Table 30-469		

Chapter 30, Article V. Division 6, Sec. 30-183. - Vibration

No use shall create or cause to be created any activity that causes a vibration that can be felt beyond the property line with or without the aid of an instrument.

Chapter 30, Article VII. Division 6, Sec. 30-259. - Vibration
(a) Noise levels. No person shall create or cause to be created any sound which exceeds the noise levels in this section as measured at the property line of any residentially zoned property: (1) The noise level between 7:00 a.m. and 10:00 p.m. shall not exceed 70 db(A). (2) The noise level between 10:00 p.m. and 7:00 a.m. shall not exceed 65 db(A).

(b) Noise measurements. Noise shall be measured with a sound level meter that meets the standards of the American National Standards Institute (ANSI) Section SI4-1979, Type 1 or Type 2. Noise levels shall be measured using the "A" weighted sound pressure level scale in decibels (reference pressure = 20 micronewtons per meter squared).

(c) Vibration. No person shall create or cause to be created any activity which causes a vibration which can be felt beyond the property line of any residentially zoned property with or without the aid of an instrument.

Significance Criteria

Criteria for determining the significance of noise impacts were developed based on information contained in the Fontana General Plan and Fontana Municipal Code. A significant impact related to noise would occur if:

- Project construction activities occur outside the hours that construction noise is considered exempt as specified in the City of Fontana Municipal Code, Section 18-63(7), 7:00 a.m. to 6:00 p.m. on weekdays and between the hours of 8:00 a.m. to 5:00 p.m. on Saturdays
    - and Project construction noise levels would exceed the exterior 65 dBA noise level standard
    - and the Project creates a community noise level increase of greater than 3 dBA L_{eq}.

- Off-site traffic noise levels, without or with the Project at existing or future noise-sensitive land uses exceed the City of Fontana General Plan noise standard of 65 dBA CNEL and the Project creates a community noise level increase of greater than 3 dBA CNEL.

- Project construction vibration levels exceed the Caltrans human annoyance vibration threshold of 0.2 in/sec PPV at adjacent uses (Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual). The FTA threshold is used to quantify

potential impacts related to perception of short-term construction-related vibration levels.

Noise Impacts

Construction Noise

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods near the construction site.

Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities would require concrete/industrial saws, excavators, and dozers during demolition, tractors and dozers during site preparation; graders, dozers, excavators, and tractors during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in **Table 2: Typical Construction Noise Levels**. It should be noted that the noise levels shown in **Table 2** are maximum noise levels (i.e., the equipment engine at maximum speed). However, equipment used on construction sites typically operates under less than full power conditions, or part power.

Noise-sensitive uses closest to the project site include residences to north located adjacent to the Project site. As shown in **Table 2**, construction noise levels would range from approximately 76 dBA to 85 dBA at a distance of 50 feet. As such, noise levels at the residences to the north of the project site could exceed ambient noise levels and may cause periodic disturbance during the construction period. However, Section 18-63(7) exempts construction noise between the hours of 7:00 a.m. to 6:00 p.m. on weekdays and between the hours of 8:00 a.m. to 5:00 p.m. on Saturdays. Construction activities for the proposed Project would only occur during the time period specified in the Municipal Code. Additionally, construction noise from the project would be acoustically dispersed throughout the project site (depending on what construction phase or activity is occurring) and not concentrated in one area near surrounding uses for an extended period of time. As such, construction-related noise impacts would be less than significant in this regard.

Table 2: Typical Construction Noise Levels

Operational Noise

Implementation of the proposed project would result in noise sources typical of residential developments in the area. The major noise sources associated with the project would include off-site traffic noise. The closest sensitive receptors are located to the north, adjacent to the project site.

Project implementation would generate increased traffic volumes along Mango Avenue and Project area roadways. According to the trip generation analysis, the Project would result in an additional 820 average daily vehicle trips. The Project's increase in traffic would result in noise increases on Project area roadways. In general, a 3-dBA increase in traffic noise is barely perceptible to people, while a 5-dBA increase is readily noticeable. Traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to generate a 3-dBA increase[1]. According to the Background Report identified as Appendix 1 of the Fontana General Plan, the daily average daily traffic along Mango Avenue (between Foothill Boulevard and Miller Avenue) is 8,900 vehicles[2].

[1] According to the California Department of Transportation, *Technical Noise Supplement to Traffic Noise Analysis Protocol* (September 2013), it takes a doubling of traffic to create a noticeable (i.e., 3 dBA) noise increase

[2] City of Fontana, *Fontana General Plan Update: Background Report*, November 13, 2018

Therefore, because the increase of 820 daily trips generated by the proposed Project is not enough to double the number of trips along Mango Avenue, the Project would not generate sufficient traffic to result in a permanent 3-dBA increase in ambient noise levels. Noise impacts associated with traffic would be less than significant.

Vibration Impacts

Increases in groundborne vibration levels attributable to the project would be primarily associated with short-term construction-related activities. Project construction would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The Federal Transit Administration (FTA) has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 3, Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in **Table 3**, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity. The nearest sensitive receptors are the residential uses to the north, located adjacent to the Project site. As shown in **Table 3**, at 25 feet, construction equipment vibration velocities would not exceed 0.089 in/sec PPV, which is below the FTA's 0.20 PPV threshold. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest residential structure. Therefore, vibration impacts associated with the proposed Project would be less than significant.

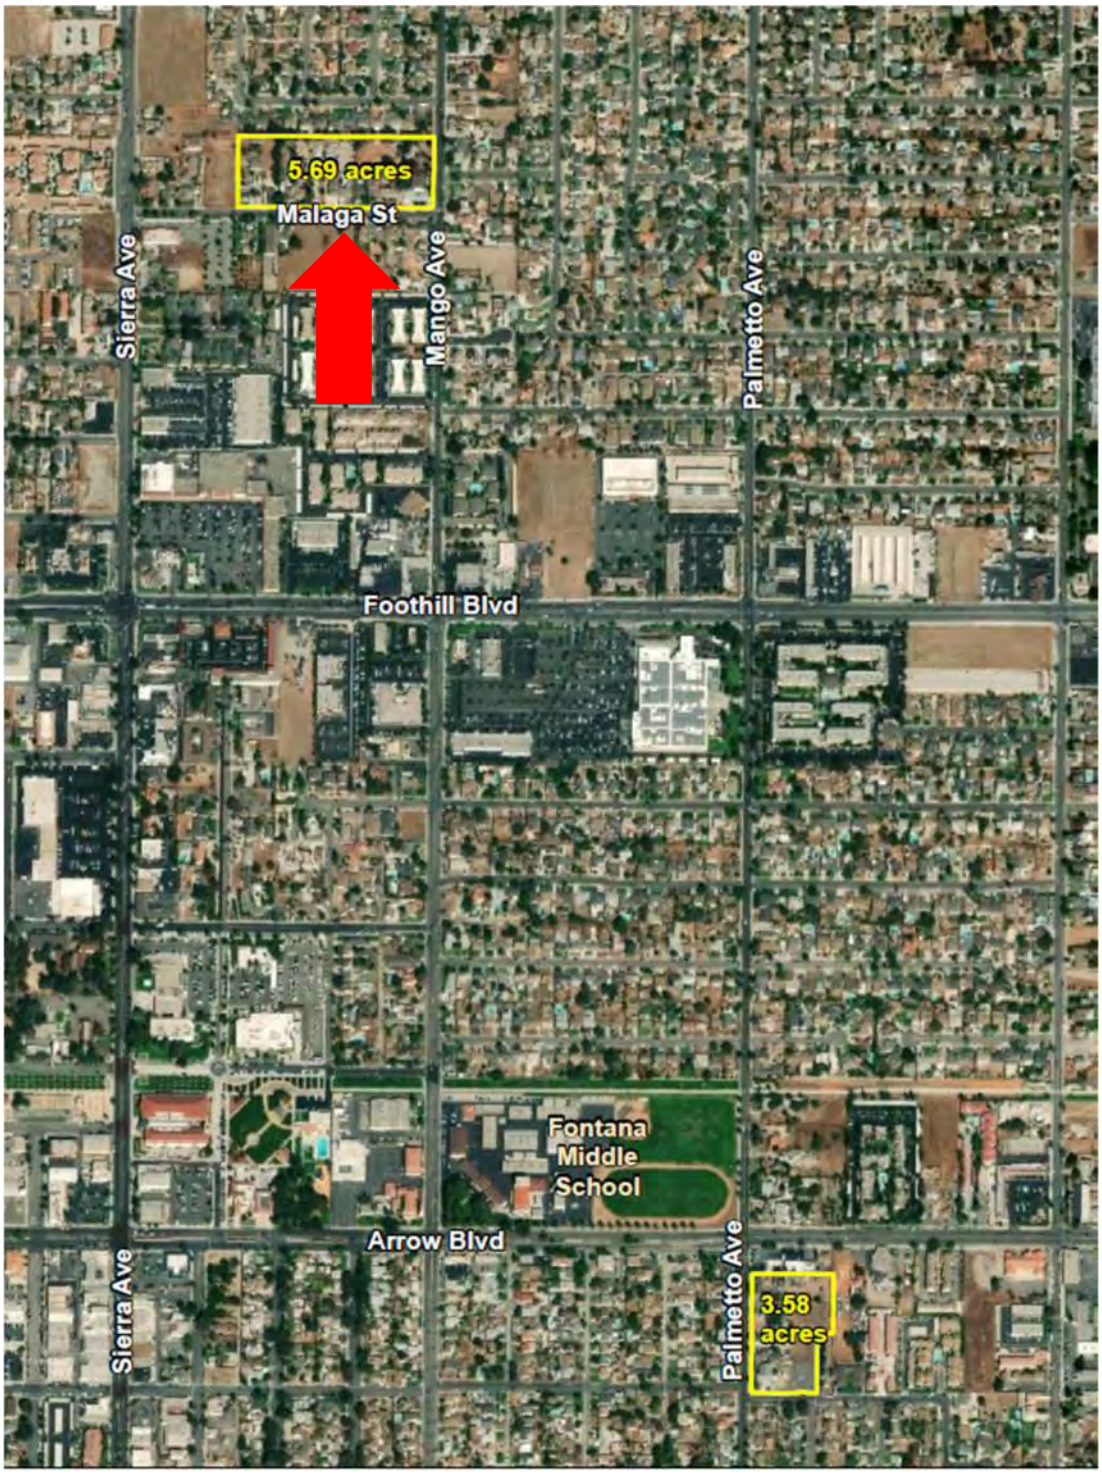

Table 3: Typical Construction Equipment Vibration Levels	
Equipment	**Peak Particle Velocity at 25 Feet (in/sec)**
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Trucks	0.076
Rock Breaker	0.059
Jackhammer	0.035
Small Bulldozer/Tractors	0.003
Notes: 1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018; D = the distance from the equipment to the receiver.	
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.	

Conclusion

Project implementation would result in less than significant short- and long-term noise impacts. No mitigation measures would be required. Therefore, the proposed project would not result in significant effects related to Section 15332(d) of the State CEQA Guidelines.

MEMORANDUM

To:	Kari Cano
From:	Alex Pohlman
	Kimley-Horn and Associates, Inc.
Date:	June 2, 2020
Subject:	Palmetto Replacement Site: Proposed Sierra Casa Grande Warehouse Residential Replacement Site – Noise Impacts

---

Purpose

The purpose of this memorandum is to identify noise impacts associated with the proposed residential replacement site located on the northeast corner of Palmetto Avenue and Valencia Avenue (Palmetto Replacement Site) in the City of Fontana. Specifically, this analysis addresses the air quality impacts referenced in State CEQA Guidelines.

Project Description

The project is proposing residential replacement sites for the development of residential dwelling units at two project sites within the City of Fontana in efforts to account for the potential residential dwelling units lost with the development of the proposed Sierra Avenue at Casa Grande Drive Warehouse. The two replacement sites are proposed within the City of Fontana and are shown on Exhibit 1. One replacement site is located on the northeast corner of the intersection of Palmetto Avenue at Valencia Avenue. The site is currently 3.58 acres and occupied by 8 existing residential dwelling units and a church building. The other replacement site, located on the northwest corner of the intersection of Mango Avenue at Malaga Street (Mango Replacement site), is mentioned in this memorandum yet analyzed in a separate document.

The replacement of residential land uses due to the development of the Sierra Avenue at Casa Grande Drive Warehouse would result in the development of a maximum of 219 new residential dwelling units, in addition to the existing units on each site. The 219 dwelling units would be split proportionally between the two replacement sites as follows:

- **Palmetto Avenue/Arrow Boulevard Site**: 24 new dwelling units
  - 8 existing dwelling units
  - 32 onsite total dwelling units

  - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

- **Malaga Street/Mango Avenue Site**: 195 new dwelling units
  - 14 existing dwelling units
  - 209 onsite total dwelling units
  - Proposed Residential Designation: R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

Noise Background

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Since the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

Noise, on the other hand, is typically defined as unwanted sound. A typical noise environment consists of a base of steady ambient noise that is the sum of various distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from traffic on a major highway.

Several rating scales have been developed to analyze the adverse effect of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise as well as the time of day when the noise occurs. For example, the equivalent continuous sound level (L_{eq}) is the average acoustic energy content of noise for a stated period of time; thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. The Day-Night Sound level (L_{dn}) is a 24-hour average L_{eq} with a 10 dBA "weighting" added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity in the nighttime. The Community Noise Equivalent Level (CNEL) is a 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 PM to 7:00 AM and an additional 5 dBA weighting during the hours of 7:00 PM to 10:00 PM to account for noise sensitivity in the evening and nighttime.

Regulatory Setting

City of Fontana General Plan

The City of Fontana General Plan Noise and Safety Element (Noise Element) ensures that development accounts for physical constraints and the natural hazards of the land. The noise component of the General Plan identifies potential noise problems and exposure in the community and provides an integrated approach to regulating noise. The City currently regulates noise levels and exposure, consistent, consistent with this Plan, in the Zoning and Development Code.

Goal 8: The City of Fontana protects sensitive land uses from excessive noise by diligent planning through 2035.

Policy 8.1: New sensitive land uses shall be prohibited in incompatible areas.

Policy 8.2: Noise-tolerant land uses shall be guided into areas irrevocable committed to land uses that are noise-producing, such as transportation corridors.

Policy 8.3: Where sensitive uses are to be placed along transportation routes, mitigation shall be provided to ensure compliance with state-mandated noise levels.

Policy 8.4: Noise spillover or encroachment from commercial, industrial and educational land uses shall be minimized into adjoining residential neighborhoods or noise-sensitive users.

Goal 9: The City of Fontana provides a diverse and efficiently operated ground transportation system that generates the minimum feasible noise on its residents through 2035.

Policy 9.1: All noise sections of the State Motor Vehicle Code shall be enforced.

Policy 9.2: Roads shall be maintained such that paving is in good condition and free of cracks, bumps, and potholes.

Policy 9.3: Noise mitigation shall be included in the design of new roadway projects in the city.

Goal 10: Fontana's residents are protected from the negative effects of "spillover" noise.

Policy 10.1: Residential land uses and areas identified noise-sensitive shall be protected fro excessive noise from non-transportation sources including industrial, commercial, and residential activities and equipment.

City of Fontana Municipal Code

Chapter 18, Article II. Section 18-63. – Prohibited Noises

(b) The following acts, which create loud, excessive, impulsive or intrusive sound or noise that annoys or disturbs persons of ordinary sensibilities from a distance of 50 feet or more from the edge of the property, structure or unit in which the source is located, are declared to be in violation of this article.

Section 18-63(b)(6) Loading, unloading or opening boxes. The creation of load, excessive or intrusive and excessive noise in connection with loading or unloading of any vehicle or the opening and destruction of bales, boxes, crates and containers.

Section 18-63(b)(7) Construction or repairing of buildings or structures. The erection (including excavating), demolition, alteration or repair of any building or structure other than between the hours of 7:00 a.m. and 6:00 p.m. on weekdays and between the hours of 8:00 a.m. and 5:00 p.m. on Saturdays, except in case of urgent necessity in the interest of public health and safety, and then only with a permit from the building inspector, which permit may be granted for a period not to exceed three days or less while the emergency continues and which permit may be renewed for periods of three days or less while the emergency continues. If the building inspector should determine that the public health and safety will not be impaired by the erection, demolition, alteration or repair of any building or structure or the excavation of streets and highways within the hours of 6:00 p.m. and 7:00 a.m., and if he shall further determine that loss or inconvenience would result to any party in interest, he may grant permission for such work to be done on weekdays within the hours of 6:00 p.m. and 7:00 a.m., upon application being made at the time the permit for the work is awarded or during the progress of the work.

Section 18-63(b)(8) Noise near schools, courts, place of worship or hospitals. The creation of any loud, excessive, impulsive or intrusive noise on any street adjacent to any school, institution of learning, places of worship or court while the premises are in use, or adjacent to any hospital which unreasonably interferes with the workings of such institution or which disturbs or unduly annoys patients in the hospital; provided conspicuous signs are displayed in such streets indicating that the street is a school, hospital or court street.

Chapter 30, Article V. Division 6, Sec. 30-182. - Noise

(a) No use shall create or cause to be created any sound that exceeds the ambient noise standards outlined in Table 30-182.A (**Table 1, Noise Standards**)

(b) No use shall create or cause creation of noise from a portable electronic device such as a car stereo, portable radio and/or cassette/compact disc player or similar device which exceeds the ambient noise standards outlined in Table 30-182.A (**Table 1**)

Table 1: Noise Standards

Chapter 30, Article V. Division 6, Sec. 30-183. - Vibration

No use shall create or cause to be created any activity that causes a vibration that can be felt beyond the property line with or without the aid of an instrument.

Chapter 30, Article VII. Division 6, Sec. 30-259. - Vibration
(a) Noise levels. No person shall create or cause to be created any sound which exceeds the noise levels in this section as measured at the property line of any residentially zoned property: (1) The noise level between 7:00 a.m. and 10:00 p.m. shall not exceed 70 db(A). (2) The noise level between 10:00 p.m. and 7:00 a.m. shall not exceed 65 db(A).

(b) Noise measurements. Noise shall be measured with a sound level meter that meets the standards of the American National Standards Institute (ANSI) Section SI4-1979, Type 1 or Type 2. Noise levels shall be measured using the "A" weighted sound pressure level scale in decibels (reference pressure = 20 micronewtons per meter squared).

(c) Vibration. No person shall create or cause to be created any activity which causes a vibration which can be felt beyond the property line of any residentially zoned property with or without the aid of an instrument.

Significance Criteria

Criteria for determining the significance of noise impacts were developed based on information contained in the Fontana General Plan and Fontana Municipal Code. A significant impact related to noise would occur if:

- Project construction activities occur outside the hours that construction noise is considered exempt as specified in the City of Fontana Municipal Code, Section 18-63(7), 7:00 a.m. to 6:00 p.m. on weekdays and between the hours of 8:00 a.m. to 5:00 p.m. on Saturdays
    - and Project construction noise levels would exceed the exterior 65 dBA noise level standard
    - and the Project creates a community noise level increase of greater than 3 dBA L_{eq}.

- Off-site traffic noise levels, without or with the Project at existing or future noise-sensitive land uses exceed the City of Fontana General Plan noise standard of 65 dBA CNEL and the Project creates a community noise level increase of greater than 3 dBA CNEL.

- Project construction vibration levels exceed the Caltrans human annoyance vibration threshold of 0.2 in/sec PPV at adjacent uses (Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual). The FTA threshold is used to quantify

potential impacts related to perception of short-term construction-related vibration levels.

Noise Impacts

Construction Noise

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods near the construction site.

Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities would require concrete/industrial saws, excavators, and dozers during demolition, tractors and dozers during site preparation; graders, dozers, excavators, and tractors during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in **Table 2: Typical Construction Noise Levels**. It should be noted that the noise levels shown in **Table 2** are maximum noise levels (i.e., the equipment engine at maximum speed). However, equipment used on construction sites typically operates under less than full power conditions, or part power.

Noise-sensitive uses closest to the project site include residences to west on the opposite side of Palmetto Avenue. As shown in **Table 2**, construction noise levels would range from approximately 76 dBA to 85 dBA at a distance of 50 feet. As such, noise levels at the residences to the west of the project site could exceed ambient noise levels and may cause periodic disturbance during the construction period. However, Section 18-63(7) exempts construction noise between the hours of 7:00 a.m. to 6:00 p.m. on weekdays and between the hours of 8:00 a.m. to 5:00 p.m. on Saturdays. Construction activities for the proposed Project would only occur during the time period specified in the Municipal Code. Additionally, construction noise from the project would be acoustically dispersed throughout the project site (depending on what construction phase or activity is occurring) and not concentrated in one area near surrounding uses for an extended period of time. As such, construction-related noise impacts would be less than significant in this regard.

Operational Noise

Implementation of the proposed project would result in noise sources typical of residential developments in the area. The major noise sources associated with the project would include off-site traffic noise. The nearest sensitive receptors to the project site are the residences to west on the opposite side of Palmetto Avenue.

Project implementation would generate increased traffic volumes along Palmetto Avenue and Project area roadways. According to the trip generation analysis, the Project would result in an additional 520 average daily vehicle trips. The Project's increase in traffic would result in noise increases on Project area roadways. In general, a 3-dBA increase in traffic noise is barely perceptible to people, while a 5-dBA increase is readily noticeable. Traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to generate a 3-dBA increase[1]. According to the Background Report identified as Appendix 1 of the Fontana General Plan, the daily average daily

[1] According to the California Department of Transportation, *Technical Noise Supplement to Traffic Noise Analysis Protocol* (September 2013), it takes a doubling of traffic to create a noticeable (i.e., 3 dBA) noise increase

traffic along Palmetto Avenue (between Arrow Boulevard and Orange Way) is 8,500 vehicles[2]. Therefore, because the increase of 520 daily trips generated by the proposed Project is not enough to double the number of trips along Palmetto Avenue, the Project would not generate sufficient traffic to result in a permanent 3-dBA increase in ambient noise levels. Noise impacts associated with traffic would be less than significant.

Vibration Impacts

Increases in groundborne vibration levels attributable to the project would be primarily associated with short-term construction-related activities. Project construction would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The Federal Transit Administration (FTA) has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 3, Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in **Table 3**, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity. The nearest sensitive receptors are the residential uses to the west, located adjacent to the Project site. As shown in **Table 3**, at 25 feet, construction equipment vibration velocities would not exceed 0.089 in/sec PPV, which is below the FTA's 0.20 PPV threshold. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest residential structure. Therefore, vibration impacts associated with the proposed Project would be less than significant.

[2] City of Fontana, *Fontana General Plan Update: Background Report*, November 13, 2018

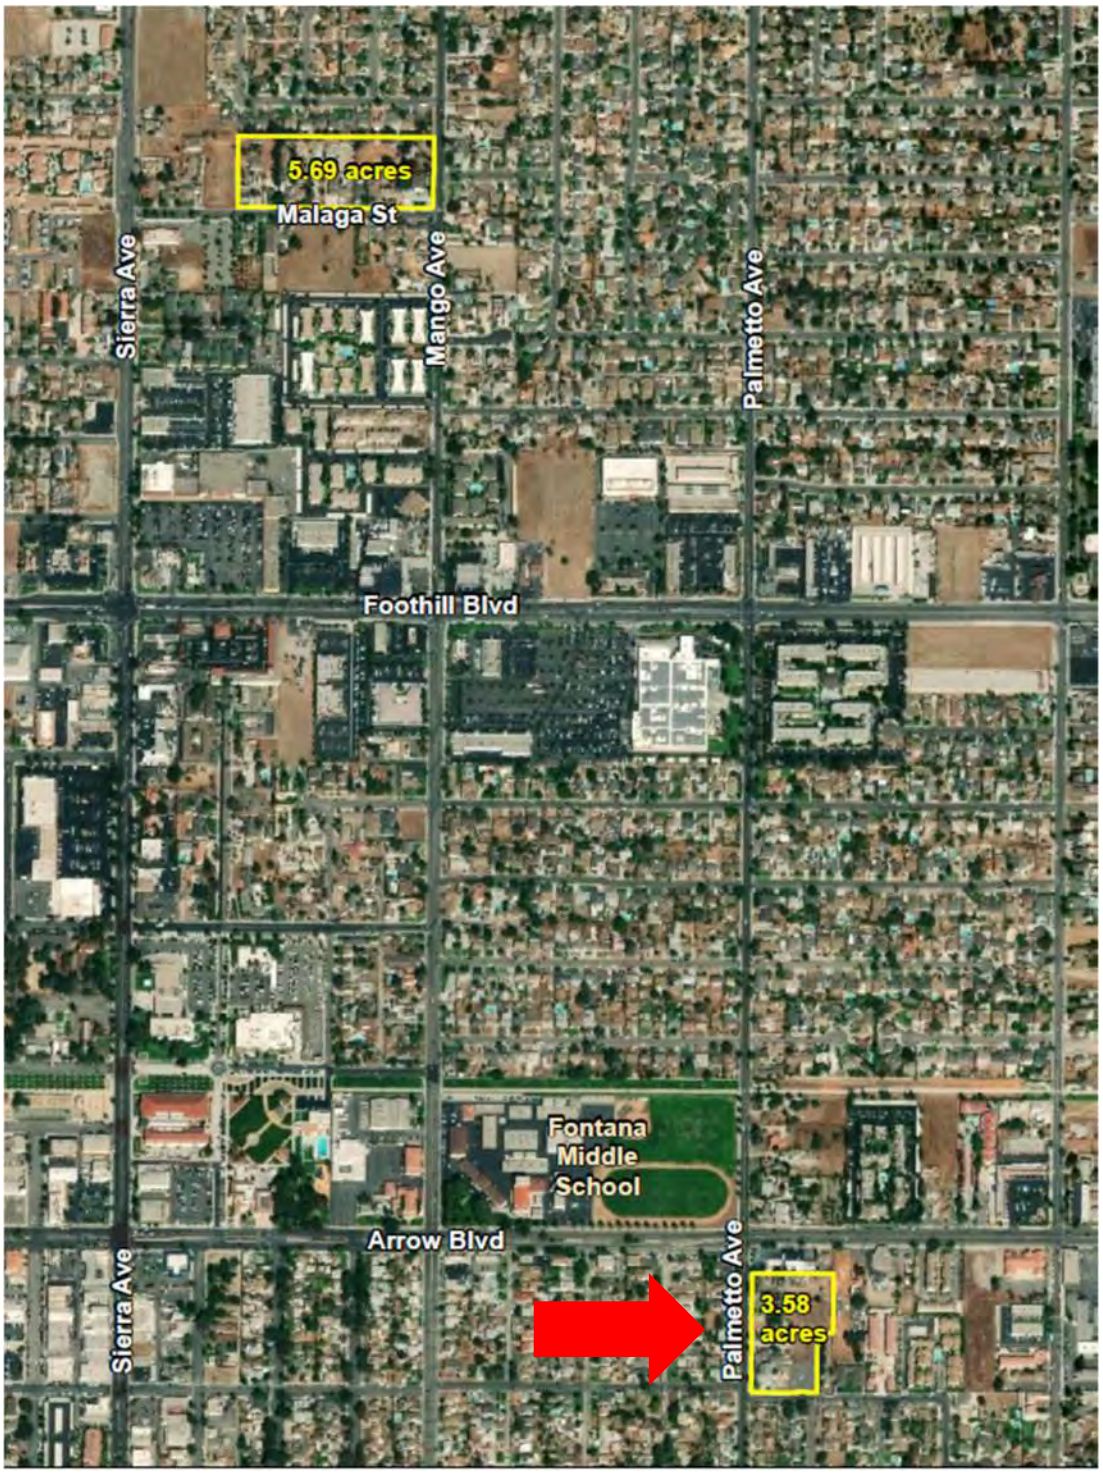

Table 3: Typical Construction Equipment Vibration Levels	
Equipment	**Peak Particle Velocity at 25 Feet (in/sec)**
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Trucks	0.076
Rock Breaker	0.059
Jackhammer	0.035
Small Bulldozer/Tractors	0.003
Notes: 1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018; D = the distance from the equipment to the receiver.	
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.	

Conclusion

Project implementation would result in less than significant short- and long-term noise impacts. No mitigation measures would be required. Therefore, the proposed project would not result in significant effects related to Section 15332(d) of the State CEQA Guidelines.

TRAFFIC IMPACT STUDY
FOR THE PROPOSED
SIERRA AND CASA GRANDE WAREHOUSE
IN THE CITY OF FONTANA

INTRODUCTION

Purpose and Study Objectives

This traffic impact study has been prepared to address the traffic-related impacts of the proposed Sierra and Casa Grande Warehouse project in the City of Fontana. This traffic study has been conducted in accordance with the traffic study requirements of the City of Fontana and San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP).

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related impacts on the roadway system. Where necessary, circulation system improvements have been identified to mitigate significant project impacts at the study locations.

Project Overview

The project is located on the northeast corner of the future intersection of Sierra Avenue and Casa Grande Drive, in the northern area of the City of Fontana. The project site is shown in its regional setting on Figure 1. The project site (approximately 15.2 acres) is currently bounded by vacant land to the north and south, Sierra Avenue to the west, and single-family residential uses to the east.

The project consists of the construction of a 332,996 square-foot warehouse with 134 parking stalls, 67 trailer parking stalls as well as 35 loading docks. A copy of the project site plan is provided on Figure 2.

Vehicular access for the project site would be via two full-movement driveways on Sierra Avenue, one right-in/right-out driveway and one full-movement driveway on Casa Grande Drive. All four project driveways would be unsignalized. Passenger vehicles would access the project site via the two driveways on the Sierra Avenue and trucks would access the project site via the two driveways on Casa Grande Drive.

ANALYSIS SCENARIOS AND METHODOLOGY

Analysis Scenarios

Based on the City of Fontana's Traffic Impact Analysis (TIA) guidelines, the project will be evaluated in the morning and evening peak hours for the following conditions:

- Existing Conditions
- Existing Plus Project
- Project Opening Year 2021
- Project Opening Year 2021 Plus Project
- Horizon Year 2040
- Horizon Year 2040 Plus Project

Intersection Analysis – HCM Methodology

This study includes evaluation of morning and evening peak hour operations at two existing intersections, one future intersection, and the project site driveways, located in the City of Fontana.

Peak hour intersection operations at signalized and unsignalized intersections were evaluated using the methods prescribed in the current Highway Capacity Manual (HCM) 6th edition, consistent with the requirements of the 2016 San Bernardino County CMP.

The City of Fontana's TIA guidelines require analysis of traffic operations to be based on the vehicular delay methodologies of the HCM (Transportation Research Board Special Report 209). The City does not designate a specific software to be used in the analysis but allows the use of one of several software packages that are consistent with the HCM methodologies. The intersection analysis for the proposed project has been accomplished using the Vistro software program and using the specified input parameters outlined in the San Bernardino County CMP.

Per the HCM Methodology, Level of Service (LOS) for signalized intersections is defined in terms of average vehicle delay. Specifically, LOS criteria are stated in terms of the average control delay per vehicle for the peak 15-minute period within the hour analyzed. The average control delay includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay. The tables on the following page provide a description of the operating characteristics of each Level of Service and define the LOS in terms of average seconds of delay for signalized and unsignalized intersections.

LEVEL OF SERVICE DEFINITIONS	
Level of Service	Description
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service	Signalized Intersection (Average delay per vehicle, in seconds) [1]	Unsignalized Intersections (Average delay per vehicle, in seconds) [2]
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

[1] Source: Highway Capacity Manual (HCM 6th Edition), Exhibit 18-4.

[2] Source: Highway Capacity Manual (HCM 6th Edition), Exhibits 19-1 and 20-2.

Level of Service Standards and Measure of Significance

The Level of Service standard in the City of Fontana for an intersection is LOS C or better. According to the City of Fontana's TIA guidelines, a significant traffic impact would occur when the project causes the Level of Service to fall below LOS C, or causes the peak hour delay to increase as follows:

- LOS A/B – by 10.0 seconds
- LOS C – by 8.0 seconds
- LOS D – by 5.0 seconds
- LOS E – by 2.0 seconds
- LOS F – by 1.0 second

AREA CONDITIONS

Study Area

This traffic study includes documentation of existing conditions, future conditions, and identification of project-related impacts at the following study intersections:

1. Sierra Avenue at Casa Grande Drive (future intersection)
2. Sierra Avenue at SR-210 Westbound Ramp
3. Sierra Avenue at SR-210 Eastbound Ramp

The study locations were established in consultation with City of Fontana staff through the Scoping Letter Agreement process. A copy of the approved Scoping Letter Agreement is provided in *Appendix A*.

Existing Street System

Regional access to the site is provided primarily by the Foothill Freeway (SR-210). Access to the SR-210 Freeway via Sierra Avenue is located approximately 1.5 miles south of the project site. Another facility that provides regional access to the site includes the Interstate 15 (I-15) Freeway, with access to the freeway located approximately 3 miles to the west of the project site.

Existing lane configurations and intersection controls at the study intersections are shown on Figure 3. A copy of the City of Fontana's Hierarchy of Streets Plan is provided on Figure 4. The following provides a description of the roadways surrounding the project site.

Sierra Avenue – Sierra Avenue is a two-lane undivided roadway north of Summit Avenue, and a five-to-six-lane divided roadway south of Summit Avenue. Throughout the entire roadway within the study area, Sierra Avenue has left-turn lanes at arterial intersections. On-street parking on Sierra Avenue is not allowed. Sierra Avenue forms the western boundary of the project site and would provide passenger vehicle access to the site via two full-movement driveways. Sierra Avenue is designated as a Major Divided Highway on the City of Fontana Circulation Master Plan, which would

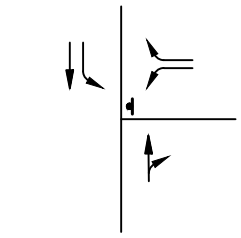
provide six travel lanes and a median with left turn pockets approaching intersections. This would ultimately only allow right-in/right-out driveways to the project along Sierra Avenue with the Horizon Year conditions.

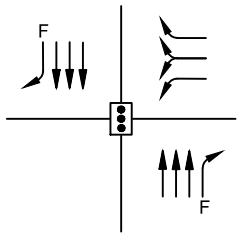
Casa Grande Drive – Casa Grande Drive is a four-lane undivided roadway through the study area with bike lanes in both directions. On-street parking on Casa Grande Drive is not allowed. Casa Grande Drive will form the southern boundary of the project site and would provide truck access to the site via one western, right-in/right-out driveway and one eastern, full-movement driveway.

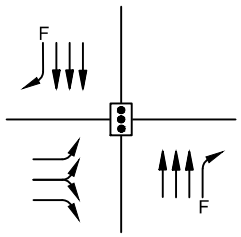
Transit Service

Transit service to the project area is provided via the OmniTrans transit lines, which serve many San Bernardino cities in the area. The closest bus stop in the project vicinity is at the intersection of Sierra Avenue at Sierra Lakes Parkway, approximately 1 ¼ mile south of the project site. A description of the bus route serving the project area is provided below.

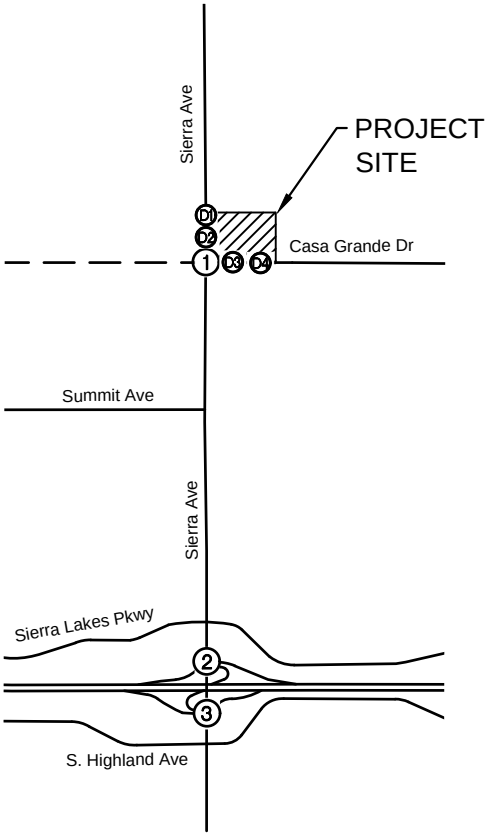
Route 82 operates between the City of Fontana and the City of Rancho Cucamonga, traveling through Fontana along Sierra Avenue and Jurupa Avenue. Route 82 operates on weekdays from approximately 4:30 AM to 10:15 PM with approximately 15-minute headways (the time between bus arrivals), on Saturdays from approximately 6:15 AM to 7:30 PM with approximately 30-minute headways, and on Sundays from approximately 6:15 AM to 7:10 PM with approximately 30-minute headways.







Existing Traffic Volumes



Existing morning and evening peak hour turning movement volumes and daily roadway volumes were collected on a typical weekday in September, 2019. The study intersection of Sierra Avenue at Casa Grande Drive is a future intersection. Volumes at this intersection were estimated based on existing daily roadway volumes. This intersection will be analyzed for Existing Plus Project and Future scenarios. Existing morning and evening peak hour volumes are presented on Figure 5. Peak hour intersection traffic count worksheets and daily roadway volume worksheets are provided in *Appendix B*.

Existing Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results of the intersection analysis for Existing Conditions are shown on Table 1. Copies of Existing Conditions intersection analysis worksheets are provided in *Appendix C*. Review of this table indicates that the all study intersections currently operate at an acceptable Level of Service under Existing Conditions.

Notes:

- Bold and shaded values indicate intersections operating at an unacceptable Level of Service, or a significant impact to the intersection, per City standards.

- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.

- At an unsignalized intersection, delay refers to the average delay per vehicle on the intersection approach with the highest delay.

- Delay values are based on the methodology outlined in the Highway Capacity Manual (6th Edition).

- S = Signalized

PROJECT TRAFFIC

Project Trip Generation

Trip generation estimates for the project are based on daily and peak hourly trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition). ITE trip generation estimates for the project are based on the trip generation rate for the following ITE Land Use: Warehousing (Land Use 150).

Passenger vehicle and truck mix assumptions for the project were derived from the City of Fontana TIA Guidelines, which indicate that truck trips for a warehouse use make up approximately 20.43% of the project trips on a daily basis.

The Fontana study specifies a truck mix of approximately 17% of the trucks being 2-axle, 23% 3-axle, and 60% 4+-axle. These vehicle classification splits were applied to the daily and peak hour trip generation to develop an estimate of truck volumes by number of axles that would be associated with the proposed project.

Passenger car equivalent (PCE) factors were then applied to the truck types, based on number of axles (2.0 PCE for 2-axle trucks, 2.5 PCE for 3-axle trucks, and 3.0 PCE for 4+-axle trucks) to determine the total PCE volumes to be generated by the project.

The trip generation rates, truck mix, PCE factors, and the resulting trip generation estimates for the project are summarized on Table 2. With the PCE factors, the project is estimated to generate 782 PCE trips on a daily basis, with 77 PCE trips in the morning peak hour, and 85 PCE trips in the evening peak hour.

Trip Distribution and Assignment

Project trip distribution assumptions for the project site were developed based on existing traffic patterns and the likely origins and destinations of employees and trucks. Trip distribution assumptions for passenger cars and trucks are shown on Figure 6. Based on the trip distribution and assignment assumptions, the new trips to be added to the street system by the proposed project were calculated and are shown on Figure 7.

FIGURE 7
PROJECT-RELATED TRAFFIC VOLUMES

Existing Plus Project Conditions

Project-related traffic was added to the Existing traffic volumes, and the resulting traffic volumes at the study locations are shown on Figure 8.

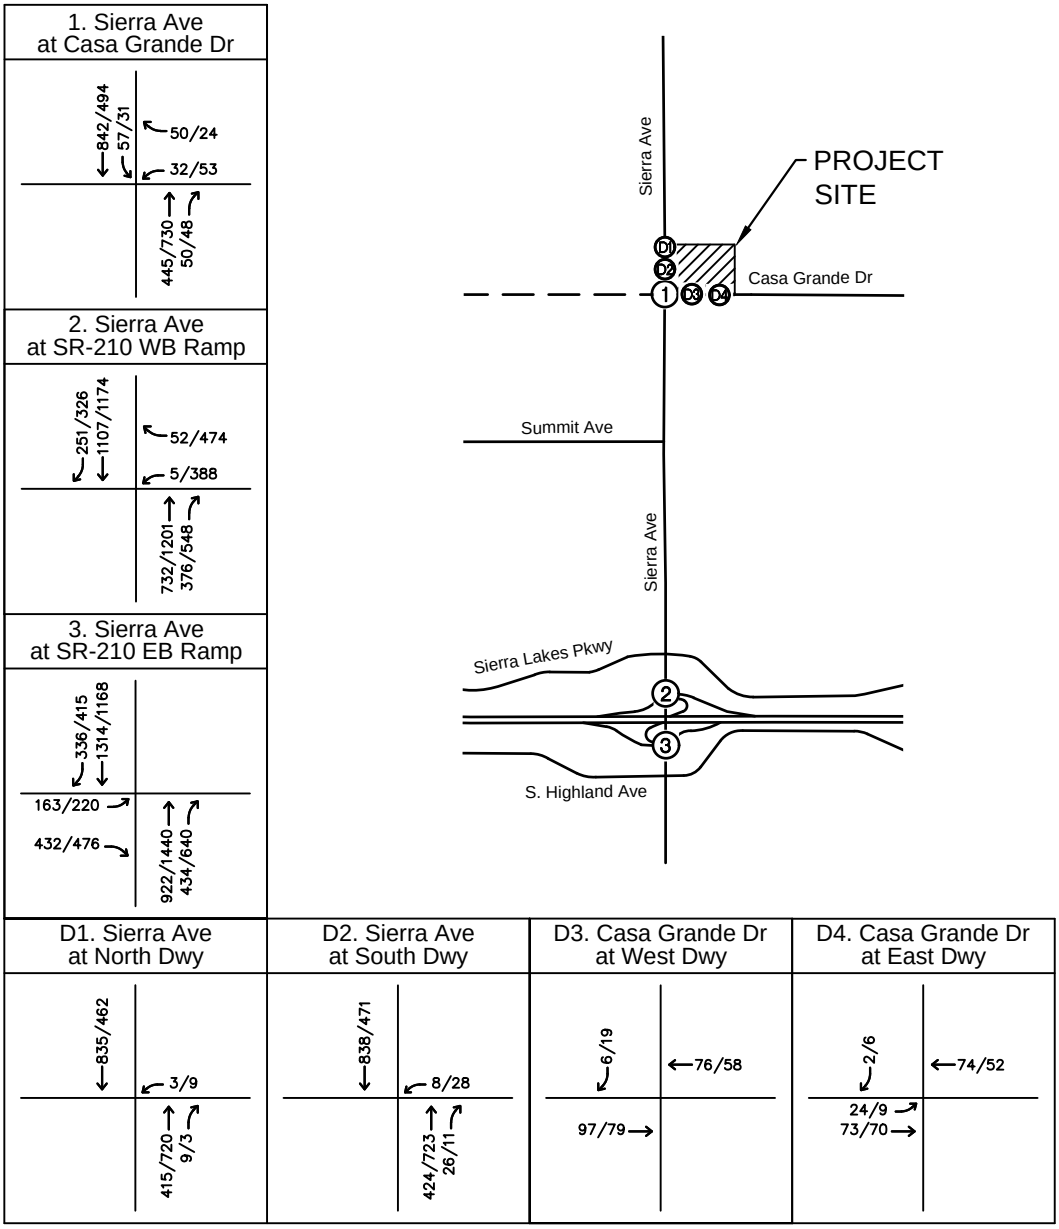
Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Existing Plus Project condition. The results of the intersection analysis are shown on Table 3. Copies of intersection analysis worksheets for this scenario are provided in *Appendix C*.

Review of this table indicates that, with the addition of Project traffic, the following study intersection would operate at an unacceptable Level of Service during the peak hours:

- #1 - Sierra Avenue at Casa Grande Drive: AM – LOS E; PM – LOS E
- D1 – Sierra Avenue at North Driveway: AM – LOS D
- D2 – Sierra Avenue at South Driveway: AM – LOS D; PM – LOS D

The Level of Service for an unsignalized intersection is reported based on the single approach movement with the highest delay, which in this case, would be the westbound approach for intersections #1, D1, and D2. The side street traffic at the unsignalized intersections experience delay during the peak hours while waiting for an acceptable gap in traffic on Sierra Avenue. While the side street approach operates at a deficient Level of Service based on the highest delay approach, the overall intersection delay would be acceptable. Any queuing that occurs on the side street is contained on the minor intersection approach or driveways and does not impact the progression of traffic on the main arterial.



To improve the minor approach delay and access to the project driveways, it is recommended that the developer build half of the roadway width along the project frontage on Sierra Avenue, including two northbound lanes and a two-way left-turn lane (TWLTL). A median on Sierra Avenue along the project frontage is assumed in Horizon Year analyses.

FUTURE CONDITIONS

Project Opening Year 2021 Conditions

The Project Opening Year (the year the project would be constructed and occupied) is anticipated to be Year 2021. Based on consultation with City staff, an ambient growth rate of 2% per year to Project Opening Year 2021 was applied to existing traffic volumes. Cumulative Project traffic was also added to Project Opening Year 2021 volumes and is explained below.

Notes:

- Bold and shaded values indicate intersections operating at an unacceptable Level of Service, or a significant impact to the intersection, per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At an unsignalized intersection, delay refers to the average delay per vehicle on the intersection approach with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual (6th Edition).
- S = Signalized; U = Unsignalized

Cumulative Projects

Information about Cumulative Projects in the area was provided by the City of Fontana. Cumulative Projects consist of any project that has been approved, but is not yet constructed/occupied, and projects that are in various stages of the application and approval process but have not yet been approved. A summary of Cumulative Projects in the project vicinity and the trip generation associated with each is provided on Table 4. The locations of the Cumulative Projects are shown on Figure 9.

Trip Generation

Trip generation information for Cumulative Projects was derived either from approved traffic studies, where available; or developed by Kimley-Horn if approved traffic studies were not available.

Trip Distribution and Assignment

Likewise, trip distribution and assignment for the Cumulative Projects were either derived from approved traffic studies, where available; or were developed by Kimley-Horn if approved traffic studies were not available. Project information and trip distribution assumptions for Cumulative Projects are provided in *Appendix D*.

Ambient growth and Cumulative Project trips were added to existing traffic to develop Project Opening Year 2021 forecasts. The resulting peak hour turning movement volumes at the study locations are shown in Figure 10.

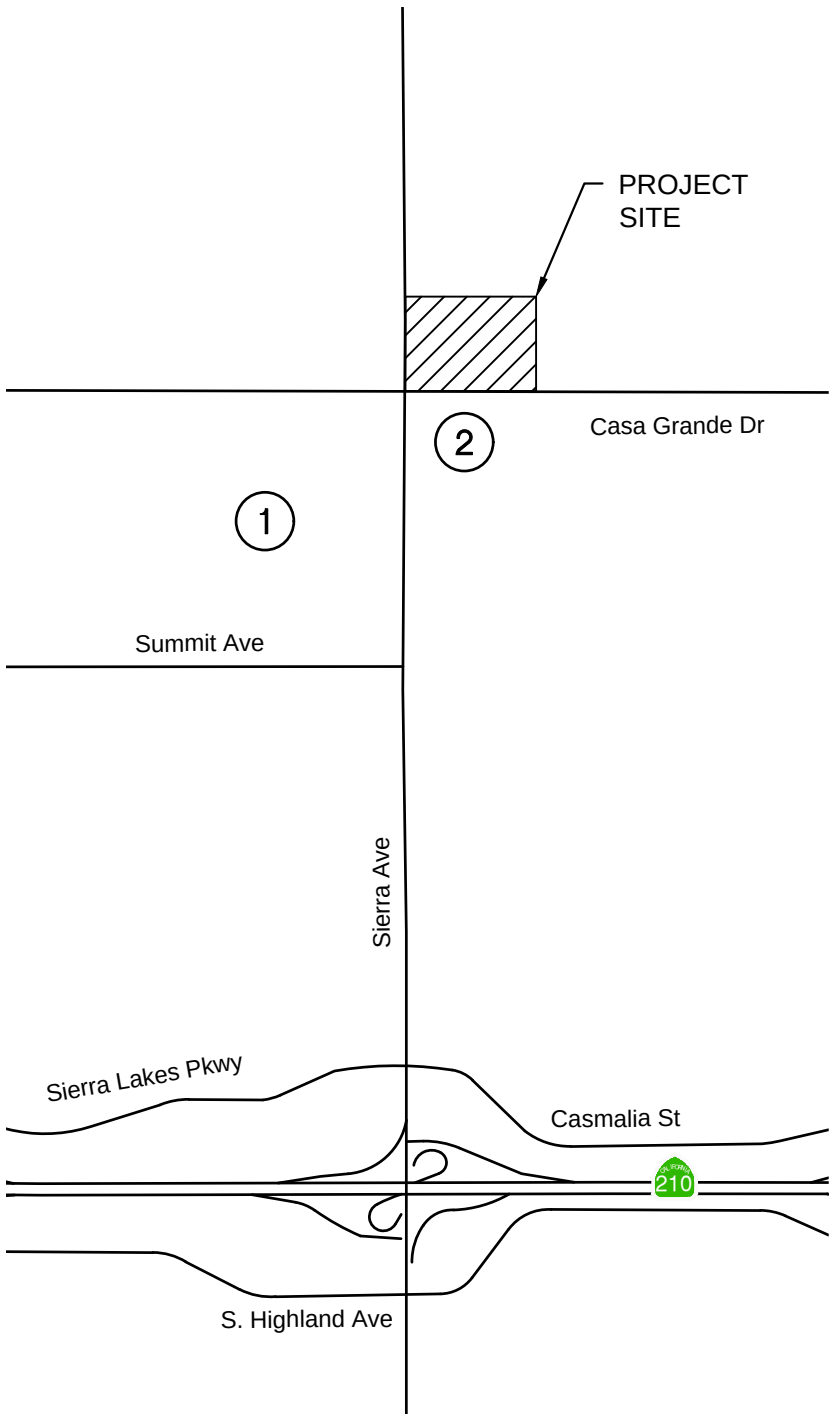
Roadway and Intersection Improvements

Local roadway and intersection improvements have been conditioned on other projects or will be built before the completion of Cumulative Projects. For the Project Opening Year 2021 and Horizon Year 2040 analysis scenarios, the following local intersections improvements are assumed:

- Sierra Avenue and Casa Grande Drive
    - Addition of west leg – one left-turn lane, one thru/right-turn lane
    - Installation of a traffic signal

Project Opening Year 2021 lane configurations and intersection control with the addition of these improvements are shown on Figure 11.

Peak Hour Operating Conditions



Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Project Opening Year 2021 condition. The results are shown on Table 5. Intersection analysis worksheets for this scenario are provided in *Appendix C*.

Review of this table indicates that, with the addition of background growth and cumulative project traffic, all study intersections would operate at an acceptable Level of Service.

- At an unsignalized intersection, delay refers to the average delay per vehicle on the intersection approach with the highest delay.

- Delay values are based on the methodology outlined in the Highway Capacity Manual (6th Edition).

- S = Signalized; U = Unsignalized

FUTURE CONDITIONS WITH PROJECT

Project Opening Year 2021 Plus Project

Project-related traffic was added to the Project Opening Year 2021 traffic volumes, and the resulting peak hour turning movement volumes at the study intersections are shown on Figure 12.

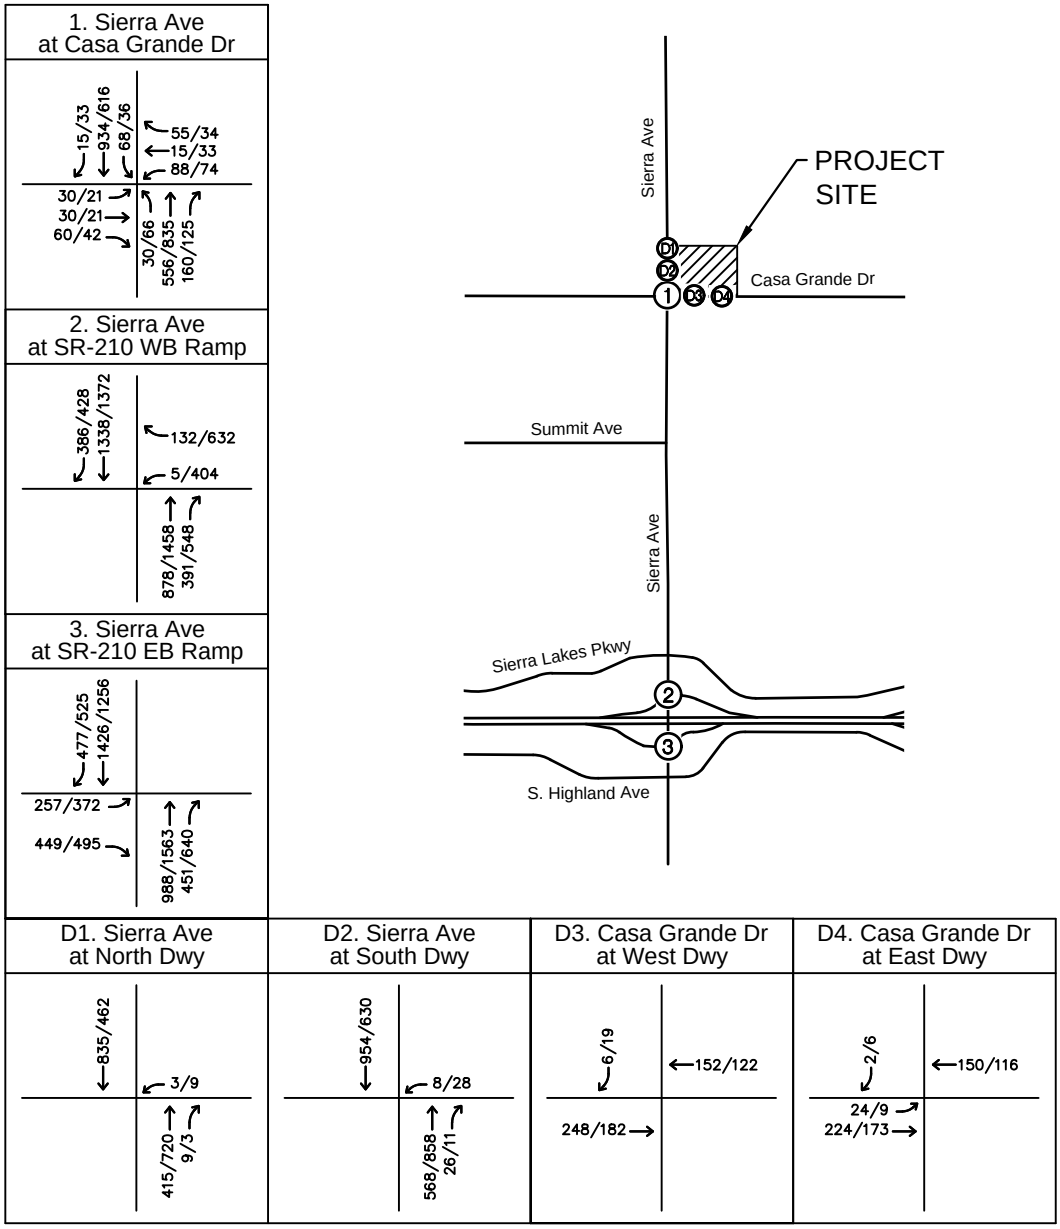
Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Project Opening Year 2021 Plus Project condition. The results of the intersection analysis are shown on Table 6. Copies of intersection analysis worksheets for this scenario are provided in *Appendix C*.

Review of this table indicates that, with the addition of Project traffic, all study intersections would operate at an acceptable Level of Service.

HORIZON YEAR CONDITIONS

Horizon Year 2040 Conditions



To develop the Horizon Year 2040 intersection turning movement forecasts, the San Bernardino Transportation Analysis Model (SBTAM) Base Year 2012 and Horizon Year 2040 future traffic projections were used. The raw forecasts obtained from the model output were post-processed by determining the annual growth between the base model year and the future model year and applying the resulting growth to existing count volumes. The B-Turns analysis worksheets, developed by the Federal Highway Administration (FHWA), translate the grown volumes into peak hour turning movements. As a conservative approach, if a turning movement volume produced by this model was less than Project Opening Year 2021 volumes for that movement, manual adjustments were made to assure that all forecast Horizon year volumes would be equal to or greater than the Project Opening Year 2021 turning movement volumes. Both SBTAM Model plots and B-Turns analysis worksheets are provided in *Appendix E.* The resulting traffic volumes for Horizon Year 2040 condition are shown on Figure 13.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Horizon Year 2040 condition. The results of the intersection analysis are shown on Table 7. Copies of intersection analysis worksheets for this scenario are provided in *Appendix C*.

Review of this table indicates that under Horizon Year 2040 conditions, the study intersections would operate at an acceptable Level of Service.

- S = Signalized; U = Unsignalized

Horizon Year 2040 Plus Project Conditions

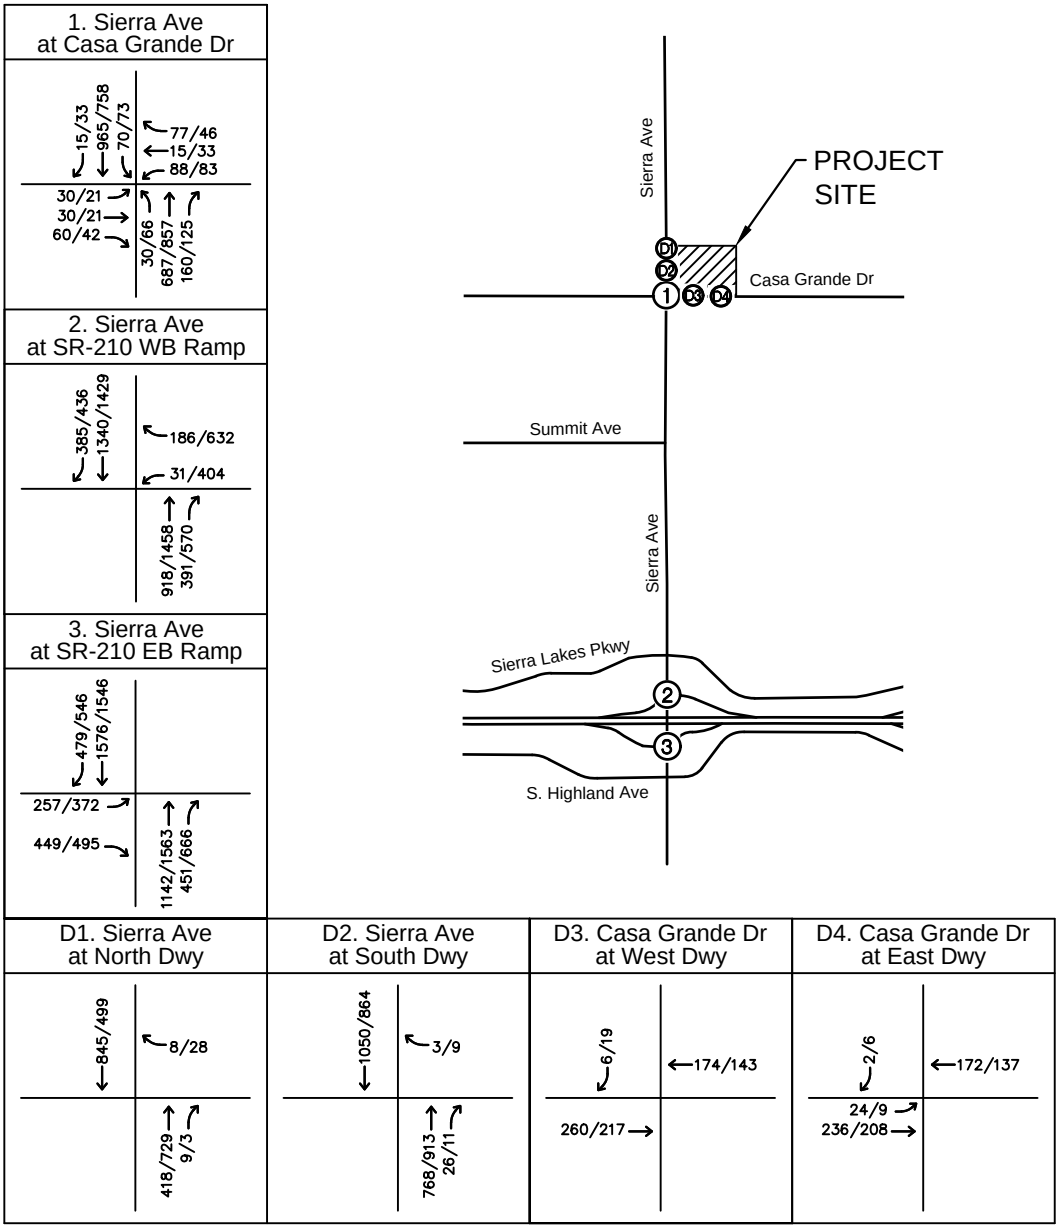
Project-related traffic was added to the Horizon Year 2040 traffic volumes. Horizon Year 2040 Plus Project peak hour turning movement volumes at study intersections are shown on Figure 14.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Horizon Year 2040 Plus Project condition. The results of the intersection analysis are shown on Table 8. Copies of intersection analysis worksheets for this scenario are provided in *Appendix C*.

Review of this table indicates that, with the addition of Project traffic, the study intersections would operate at an acceptable Level of Service.

MITIGATION MEASURES



Based on the Level of Service standards and significant impact criteria discussed previously, the project-related impact would not be considered significant at any of the study intersections; therefore, no mitigation is required.

SITE CIRCULATION

Vehicular access for the project site would be via two full-movement driveways on Sierra Avenue, one western right-in/right-out driveway on Casa Grande Drive, and one full-movement driveway to the east. All project driveways would be unsignalized. In Horizon Year conditions, both driveways on Sierra Avenue are to only allow right-in/right-out movements due to the installation of a raised median.

The project site plan presented on Figure 2 (previously referenced) indicates that passenger vehicles would access the project site via the two driveways on the Sierra Avenue and trucks would access the project site via the two driveways on Casa Grande Drive. Because the west driveway on Casa Grande Drive only allows right-in/right-out movements, it is recommended that trucks enter the project site via the full-movement east driveway to reduce the potential for trucks spilling back into the intersection of Sierra Avenue at Casa Grande Drive.

Notes:

[1]Right-in/right-out operation at Sierra Ave Driveways under Horizon Year conditions

- Bold and shaded values indicate intersections operating at an unacceptable Level of Service, or a significant impact to the intersection, per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At an unsignalized intersection, delay refers to the average delay per vehicle on the intersection approach with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual (6th Edition).
- S = Signalized; U = Unsignalized

SUMMARY OF FINDINGS AND CONCLUSIONS

- The project is located on the northeast corner of the future intersection of Sierra Avenue and Casa Grande Drive, in the northern area of the City of Fontana.

- The project consists of the construction of a 332,996 square-foot warehouse with 134 parking stalls, including 67 trailer parking stalls as well as 35 loading docks.

- The project is estimated to generate 782 trips on a daily basis, with 77 trips in the morning peak hour, and 85 trips in the evening peak hour.

- Based on the City of Fontana's Level of Service standards and significant impact criteria, the project-related impact would not be considered significant at the study intersections; therefore, no mitigation is required.

- Vehicular access for the project site would be via two full-movement driveways on Sierra Avenue and two full-movement driveways on Casa Grande Drive. All project driveways would be unsignalized. Horizon Years allow only right-in/right-out driveways on Sierra Avenue.

- Passenger vehicles would access the project site via the two driveways on the Sierra Avenue. Trucks would access the project site via the two driveways on Casa Grande Drive.

- To improve the minor approach delay and access at the project driveways, it is recommended that the developer build half of the roadway width along the project frontage on Sierra Avenue which would include two northbound lanes and a two-way left-turn lane (TWLTL) .

- It is recommended that trucks enter the project site via the full-movement east driveway on Casa Grande Drive to reduce the potential for trucks spilling back into the intersection of Sierra Avenue at Casa Grande Drive. The west driveway on Casa Grande allows only right-in/right-out movements.

Scenario 1 EX AM
5/5/2020

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.241	7.3	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.403	13.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 2: Sierra Avenue at SR-210 WB Ramp

Control Type:	Signalized	Delay (sec / veh):	7.3
Analysis Method:	HCM 6th Edition	Level Of Service:	A
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.241

Intersection Setup

Name	Sierra Avenue			Sierra Avenue								
Approach	Northbound			Southbound			Eastbound			Westbound

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.415	16.2	B
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.446	14.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 2: Sierra Avenue at SR-210 WB Ramp

Control Type:	Signalized	Delay (sec / veh):	16.2
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.415

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Two-way stop	HCM 6th Edition	WB Left	0.294	47.4	E
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.247	7.5	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.404	13.4	B
4	Sierra Ave / North Dwy	Two-way stop	HCM 6th Edition	WB Left	0.017	26.2	D
5	Sierra Ave / South Dwy	Two-way stop	HCM 6th Edition	WB Left	0.048	27.5	D
6	Casa Grande Dr / West Dwy	Two-way stop	HCM 6th Edition	SB Right	0.006	8.7	A
7	Casa Grande Dr / East Dwy	Two-way stop	HCM 6th Edition	SB Right	0.002	8.7	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Sierra Avenue at Casa Grande Drive

Control Type:	Two-way stop	Delay (sec / veh):	47.4
Analysis Method:	HCM 6th Edition	Level Of Service:	E
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.294

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Two-way stop	HCM 6th Edition	WB Left	0.401	45.6	E
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.420	16.3	B
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.448	14.3	B
4	Sierra Ave / North Dwy	Two-way stop	HCM 6th Edition	WB Left	0.047	24.7	C
5	Sierra Ave / South Dwy	Two-way stop	HCM 6th Edition	WB Left	0.155	27.7	D
6	Casa Grande Dr / West Dwy	Two-way stop	HCM 6th Edition	SB Right	0.020	8.7	A
7	Casa Grande Dr / East Dwy	Two-way stop	HCM 6th Edition	SB Right	0.006	8.6	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.606	11.9	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.315	8.4	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.431	14.0	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.591	10.0	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.507	17.5	B
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.501	15.7	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Sierra Avenue at Casa Grande Drive

Control Type:	Signalized	Delay (sec / veh):	10.0
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.591

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.616	12.0	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.322	8.5	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.434	14.1	B
4	Sierra Ave / North Dwy	Two-way stop	HCM 6th Edition	WB Left	0.010	17.1	C
5	Sierra Ave / South Dwy	Two-way stop	HCM 6th Edition	WB Left	0.033	20.2	C
6	Casa Grande Dr / West Dwy	Two-way stop	HCM 6th Edition	SB Right	0.007	9.1	A
7	Casa Grande Dr / East Dwy	Two-way stop	HCM 6th Edition	SB Right	0.002	9.1	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.622	12.1	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.333	9.0	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.462	13.6	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.610	10.5	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.507	17.6	B
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.501	15.8	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Sierra Avenue at Casa Grande Drive

Control Type:	Signalized	Delay (sec / veh):	10.5
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.610

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.634	12.7	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.340	9.2	A
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.465	13.8	B
4	Sierra Ave / North Dwy	Two-way stop	HCM 6th Edition	WB Right	0.013	10.9	B
5	Sierra Ave / South Dwy	Two-way stop	HCM 6th Edition	WB Right	0.008	14.7	B
6	Casa Grande Dr / West Dwy	Two-way stop	HCM 6th Edition	SB Right	0.007	9.2	A
7	Casa Grande Dr / East Dwy	Two-way stop	HCM 6th Edition	SB Right	0.002	9.2	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Sierra Avenue at Casa Grande Drive

Control Type:	Signalized	Delay (sec / veh):	12.7
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.634

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Sierra Avenue at Casa Grande Drive	Signalized	HCM 6th Edition	WB Left	0.641	11.4	B
2	Sierra Avenue at SR-210 WB Ramp	Signalized	HCM 6th Edition	WB Right	0.511	17.7	B
3	Sierra Avenue at SR-210 EB Ramp	Signalized	HCM 6th Edition	EB Right	0.504	15.9	B
4	Sierra Ave / North Dwy	Two-way stop	HCM 6th Edition	WB Right	0.072	14.7	B
5	Sierra Ave / South Dwy	Two-way stop	HCM 6th Edition	WB Right	0.029	17.0	C
6	Casa Grande Dr / West Dwy	Two-way stop	HCM 6th Edition	SB Right	0.022	9.1	A
7	Casa Grande Dr / East Dwy	Two-way stop	HCM 6th Edition	SB Right	0.007	9.0	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Kimley»Horn

MEMORANDUM

To:	Mahmoud Khodr, P.E., PTOE City of Fontana
From:	Trevor Briggs, P.E. Kimley-Horn and Associates, Inc.
Date:	June 4, 2020
Subject:	Traffic Memorandum for the Proposed Sierra Casa Grande Warehouse Residential Replacement Sites – Mango Avenue Site

The following memorandum was prepared to evaluate the trip generation potential and land use integration for the proposed residential replacement site located on the northwest corner (NWC) of Malaga Street and Mango Avenue (Mango Replacement Site) in the City of Fontana.

PROJECT DESCRIPTION

The project is proposing residential replacement sites for the development of residential dwelling units at two project sites within the City of Fontana in efforts to account for the potential residential dwelling units lost with the development of the proposed Sierra Avenue at Casa Grande Drive Warehouse. The two replacement sites are proposed within the City of Fontana and are shown on **Figure 1**. One replacement site is located on the northwest corner of the intersection of Mango Avenue at Malaga Street. The site is currently 5.69 acres and occupied by 14 existing residential dwelling units. The second replacement site, located on the northeast corner of the intersection of Palmetto Avenue at Arrow Boulevard (Palmetto Replacement Site), is mentioned in this memorandum yet analyzed a separate document.

The replacement of residential land uses due to the development of the Sierra Avenue at Casa Grande Drive Warehouse would result in the development of a maximum of 219 new residential dwelling units, in addition to the existing units on each site. The 219 dwelling units would be split proportionally between the two replacement sites as follows:

- Malaga Street/Mango Avenue Site: 195 new dwelling units
  - 14 existing dwelling units
  - **209 onsite total dwelling units**
  - **Proposed Residential Designation: WMXU-1: Walkable Mixed-Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)**
- Palmetto Avenue/Arrow Boulevard Site: 24 new dwelling units[1]
  - 8 existing dwelling units
  - **32 onsite total dwelling units**
  - **Proposed Residential Designation: -R-2: Medium Density Residential (5.1-12 du/ac)**

[1] The addition of 71 new dwelling units was initially estimated for this site and has since been refined to 24 units. The initial estimate of 71 dwelling units was conservatively used for trip generation analyses.

The City of Fontana *General Plan Land Use Map* as well as the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) was used to estimate the maximum trip generation for this proposed project. **Table 2** shows the estimated maximum trip generation of the replacement site, and the results are presented as follows:

- **1,427** Daily Trips
- AM Peak Hour – **90** Total Trips
- PM Peak Hour – **109** Total Trips

Based on the trip generation estimates for the proposed project site, a traffic study is not warranted.

SENATE BILL 330 (SB-330)

SB-330, approved in October 2019, is a new law in California that directly affects municipal control over housing development. The main purpose of the bill is to increase housing in California to keep up with the growing population, and does this by restricting measures that prevent low income housing from being built. In summary, the bill restricts cities and counties from taking measures that impede housing development, such as housing bans and downsizing, and expedites the permitting of housing in urbanized areas throughout California.

Within this bill, Governor Newsom has called for the following:

- An additional 180,000 homes annually to keep up with the population growth
- 3.5 million new homes to be built over the next 7 years

SB-330 directly applies to this Sierra Casa Grande Warehouse project, as the project decreases the potential amount of homes in the State of California, and specifically the City of Fontana. SB-330 requires the replacement of this housing at suitable sites within the City of Fontana.

TRIP GENERATION

The City of Fontana *General Plan Land Use Map* (adopted September 10, 2019) indicates that the 15.2-acre site of the proposed Sierra Avenue at Casa Grande Drive Warehouse project is currently designated as R-M: Medium Density Residential (5.1-12 du/ac). Were this site to be developed to its maximum existing land-use density, a total of 183 dwelling units could be developed. With the proposed change in land use to this warehouse site, the potential maximum of 183 dwelling units could be split proportionately and accommodated between the two replacement sites mentioned previously.

The Mango Replacement site (5.69 acres) is currently designated as R-SF: Single Family Residential (2.1-5 du/ac). The 195 replacement dwelling units and the retention of the 14 existing dwelling units on the site would yield a maximum 209 total dwelling units for a density of 36.7 du/ac. This density corresponds with the WMXU-1 Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac) designations found in the *General Plan Land Use Map.* The Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) was used to estimate the maximum trip generation for the Mango Replacement site. **Table 1** shows a summary of the site's existing and proposed land use designations and densities and **Table 2** shows the estimated maximum trip generation of the Mango Replacement site.

Table 1: Existing and Proposed Site Designations

Site	Size (ac)	Existing Land Use Designation	Existing Dwelling Units	Maximum Potential/New Residential Dwelling Units	Proposed Maximum Dwelling Units	Proposed Land Use Designation
Sierra Ave at Casa Grande Dr Warehouse	15.2	R-M: medium Density Residential (5.1-12 du/ac)	0	183	-	I-L: Light Industrial (0.1-0.6 FAR)
Mango Replacement Site[1]	5.69	R-SF: Single Family Residential (2.1-5 du/ac)	14	195	209	WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)
Notes: *du = Dwelling Unit* *ac = acre* *[1] An additional 24 du would be replaced at the Palmetto Replacement site.*						

Table 2: Estimated Maximum Mango Replacement Site Trip Generation

				Trip Generation Rates and Estimates						
					AM Peak Hour			PM Peak Hour		
	Land Use		Unit	Daily	In	Out	Total	In	Out	Total
Rates	Multifamily Housing (Low-Rise)	**ITE Code** 220	DU	7.320	0.106	0.354	0.46	0.353	0.207	0.56
Estimates	Multifamily Housing (Low-Rise)	**Quantity** 195	DU	1,427	21	69	90	69	40	109
Total Project Trips				1,427	21	36	90	69	40	109

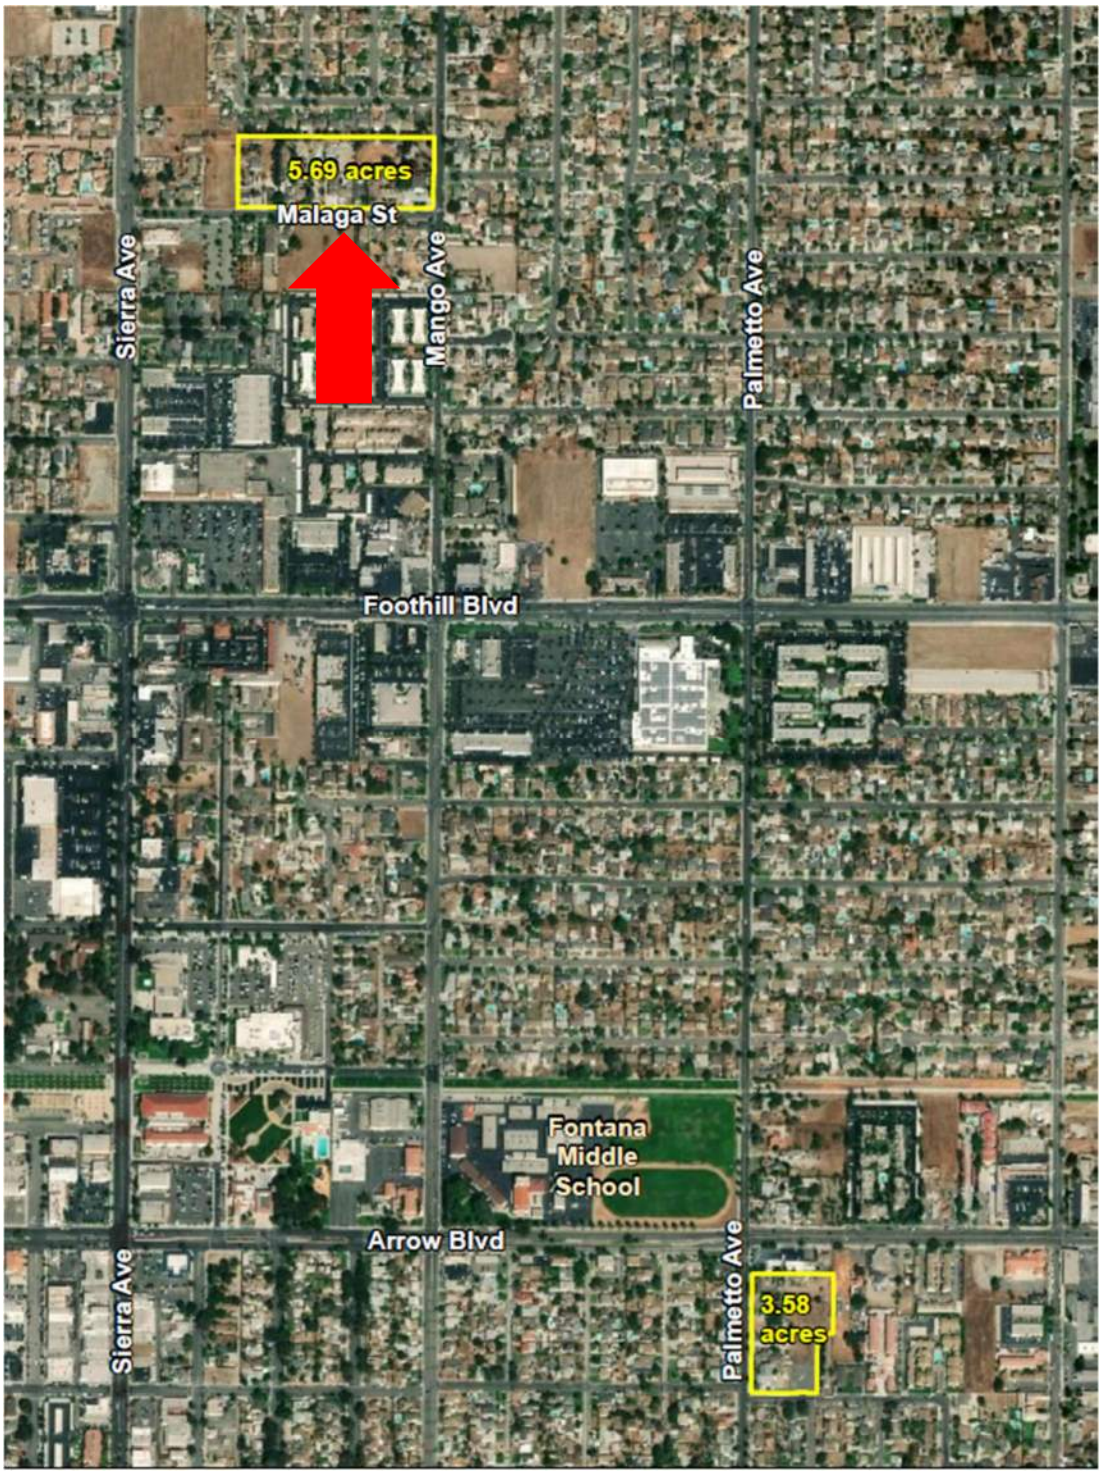
GENERAL ACCESS TO THE SITE ON ROADWAYS

Access to the parcel would be from Malaga Street and Mango Avenue. These streets each have one travel lane in each direction with no sight distance limitations. The proposed project site is at the center of 5 major freeways; CA-210 to the north, I-10 and CA-66 (Foothill Boulevard) to the south, CA-259 to the east, and I-15 to the west. These freeways can take residents from the project site to local locations around the City of Fontana and to different cities such as Los Angeles, Temecula, San Bernardino, or Victorville. To access the all freeways, residents would head north on Sierra Avenue to reach the CA-259 or I-15 onramps, which connect to the CA-210, I-10, and CA-66. The drives from the project location to the CA-259 and I-15 freeway onramps total a 10- to 15-minute trip each.

Three OminTrans transit routes are located within walking distance of the site. Routes 67 and 82 operate on Sierra Avenue with bus stops within 0.2 miles of the site. These routes operate at 1 hour headways and both provide a connection to the Fontana Metrolink station, approximately 1.25 miles to the south. These route schedules are staggered to provide service every 30 minutes. OmniTrans Route 14 has stops on Foothill Boulevard, approximately 0.3 miles from the project site. Route 14 operates at 15-minute headways and provides connections to the San Bernardino Transit Center, the OmniTrans Metro Station and the Fontana Metrolink Station, as well as Fontana City Hall.

Throughout the City of Fontana, the project site location is easily accessible to Grocery Stores, Schools, Downtown Fontana, and Community Parks. To access these locations, residents are close to major east-west corridors through the City: Baseline Avenue, to the north of the site and Foothill Boulevard to the south. Sierra Avenue, running north to south through the City, is one block west of the site. Overall, the project site is located within walking distance to commercial and retail centers along Foothill Boulevard and is central to employment centers within the City.

LAND USE INTEGRATION



According to the *General Plan Land Use Map*, the project location is surrounded by R-SF: Single Family Residential land use to the north and east, and WMXU-1: Walkable Mixed-Use Corridor & Downtown designations to the south and west. Re-designation of the site from R-SF: Single Family Residential to WMXU-1: Walkable Mixed-Use Corridor & Downtown would be consistent with the surrounding land-use designations and walkable residential nature of the proposed replacement site.

CONCLUSION

According to Appendix B of San Bernardino County's Congestion Management Plan (CMP), "TIA Reports shall be prepared by local jurisdictions when local criteria and thresholds indicate they are necessary. However, TIA reports must be prepared to satisfy CMP requirements, except as noted below, when a proposed change in land use, development project, or at a local discretion, a group of projects are forecast to equal or exceed the CMP threshold of 250 two-way peak hour trips generation, based on trip generation rates published for the applicable use of uses in the Institute of Transportation Engineers' Trip Generation or CMA-approved data source."

The sum of the two-way peak hour trips for the proposed Mango Replacement site is estimated to be less than the 250-trip threshold set forth by the County of San Bernardino. Therefore, a traffic study would not be warranted for this proposed project based on San Bernardino County's CMP thresholds.

Figure 1 - Project Location

Kimley»Horn

MEMORANDUM

To:	Mahmoud Khodr, P.E., PTOE City of Fontana
From:	Trevor Briggs, P.E. Kimley-Horn and Associates, Inc.
Date:	June 4, 2020
Subject:	Traffic Memorandum for the Proposed Sierra Casa Grande Warehouse Residential Replacement Sites – Palmetto Avenue Site

The following memorandum was prepared to evaluate the trip generation potential and land use integration for the proposed residential replacement site located on the northeast corner (NEC) of Palmetto Avenue and Valencia Avenue (Palmetto Replacement site) in the City of Fontana.

PROJECT DESCRIPTION

The project is proposing residential replacement sites for the development of residential dwelling units at two project sites within the City of Fontana in efforts to account for the potential residential dwelling units lost with the development of the proposed Sierra Avenue at Casa Grande Drive Warehouse. The two replacement sites are proposed within the City of Fontana and are shown on **Figure 1.** One replacement site is located on the northeast corner of the intersection of Palmetto Avenue at Valencia Avenue. The site is currently 3.58 acres and occupied by 8 existing residential dwelling units and a church building. The other replacement site, located on the northwest corner of the intersection of Mango Avenue at Malaga Street (Mango Replacement site), is mentioned in this memorandum yet analyzed in a separate document.

The replacement of residential land uses due to the development of the Sierra Avenue at Casa Grande Drive Warehouse would result in the development of 219 new residential dwelling units, in addition to the existing units on each site. The 219 dwelling units would be split proportionally between the two replacement sites as follows:

- Malaga Street/Mango Avenue Site: 195 new dwelling units
  - 14 existing dwelling units
  - **209 onsite total dwelling units**
  - **Proposed Residential Designation: WMXU-1: Walkable Mixed-Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)**
- Palmetto Avenue/Arrow Boulevard Site: 24 new dwelling units[1]
  - 8 existing dwelling units
  - **32 onsite total dwelling units**
  - **Proposed Residential Designation: R-2: Medium Density Residential (5.1-12 du/ac)**

[1] The addition of 71 new dwelling units was initially estimated for this site and has since been refined to 24 units. The initial estimate of 71 dwelling units was conservatively used for trip generation analyses.

The City of Fontana *General Plan Land Use Map* as well as the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) was used to estimate the maximum trip generation for this proposed project. **Table 2** shows the estimated maximum trip generation of the replacement site, based on an initial estimate of 71 dwelling units, and the results are presented as follows:

- **520** Daily Trips
- AM Peak Hour – **33** Total Trips
- PM Peak Hour – **40** Total Trips

Based on the trip generation estimates for the proposed project site, a traffic study is not warranted.

SENATE BILL 330 (SB-330)

SB-330, approved in October 2019, is a new law in California that directly affects municipal control over housing development. The main purpose of the bill is to increase housing in California to keep up with the growing population, and does this by restricting measures that prevent low income housing from being built. In summary, the bill restricts cities and counties from taking measures that impede housing development, such as housing bans and downsizing, and expedites the permitting of housing in urbanized areas throughout California.

Within this bill, Governor Newsom has called for the following:

- An additional 180,000 homes annually to keep up with the population growth
- 3.5 million new homes to be built over the next 7 years

SB-330 directly applies to this Sierra Casa Grande Warehouse project, as the project decreases the potential amount of homes in the State of California, and specifically the City of Fontana. SB-330 requires the replacement of this housing at suitable sites within the City of Fontana.

TRIP GENERATION

The City of Fontana *General Plan Land Use Map* (adopted September 10, 2019) indicates that the 15.2-acre site of the proposed Sierra Avenue at Casa Grande Drive Warehouse project is currently designated as R-M: Medium Density Residential (5.1-12 du/ac). Were this site to be developed to its maximum existing land-use density, a total of 183 dwelling units could be developed. With the proposed change in land use to this warehouse site, the potential maximum of 183 dwelling units could be split proportionately and accommodated between the two replacement sites mentioned previously.

The Palmetto Replacement site (3.58 acres) is currently designated as R-SF: Single Family Residential (2.1-5 du/ac). The 71 replacement dwelling units and the retention of the 8 existing dwelling units on the site would yield a maximum 79 total dwelling units for a density of 22.0 du/ac. This density corresponds with the R-MF: Multi Family Residential (12.1-24 du/ac) or WMXU-1 Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac) designations found in the *General Plan Land Use Map.* The Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition) was used to estimate the maximum trip generation for the Palmetto Replacement site. **Table 1** shows a summary of the site's existing and proposed land use designations and densities and **Table 2** shows the estimated maximum trip generation of the Palmetto Replacement site.

Table 1: Existing and Proposed Site Designations

Site	Size (ac)	Existing Land Use Designation	Existing Dwelling Units	Maximum Potential/New Residential Dwelling Units	Proposed Maximum Dwelling Units	Proposed Land Use Designation
Sierra Ave at Casa Grande Dr Warehouse	15.2	R-M: medium Density Residential (5.1-12 du/ac)	0	183	-	I-L: Light Industrial (0.1-0.6 FAR)
Palmetto Replacement Site[1]	5.69	R-SF: Single Family Residential (2.1-5 du/ac)	8	71	79	R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac)

Notes:
du = Dwelling Unit
ac = acre
[1] An additional 195 du would be replaced at the Mango Replacement site.

Table 2: Estimated Maximum Palmetto Replacement Site Trip Generation

				Trip Generation Rates and Estimates						
					AM Peak Hour			PM Peak Hour		
	Land Use		Unit	Daily	In	Out	Total	In	Out	Total
Rates	Multifamily Housing (Low-Rise)	**ITE Code** 220	DU	7.320	0.106	0.354	0.46	0.353	0.207	0.56
Estimates	Multifamily Housing (Low-Rise)	**Quantity** 71	DU	520	8	25	33	25	15	40
Total Project Trips				520	8	25	33	25	15	40

GENERAL ACCESS TO THE SITE ON ROADWAYS

Access to the parcel would be from Palmetto Avenue and Valencia Avenue to the south. Both streets have one lane in each direction. It is suggested that project access onto Palmetto Avenue be restricted within the 200 feet of Arrow Boulevard to not conflict with the northbound left-turn lane at the signalized intersection. The proposed project site is surrounded by 5 major freeways; CA-210 and CA-66 (Foothill Boulevard) to the north, I-10 to the south, CA-259 to the east, and I-15 to the west. These freeways can take residents from the project site to local locations around the City of Fontana to different cities such as Los Angeles, Temecula, San Bernardino, or Victorville. To access all freeways, residents would head east onto Palmetto Avenue, turn north onto Sierra Avenue, and follow the corridor to the CA-259 or I-15 onramps, which connect to the CA-210, I-10, and CA-66. The drive from the project location to the CA-259 and I-15 freeway onramps total a 15- to 20-minute trip each.

OmniTrans Route 12 operates at one-hour headways along Arrow Boulevard, with bus stops about 0.1 miles from the project. This route provides connections to the Fontana Metrolink Station, which is about ¾ mile southwest of the project.

Throughout the City of Fontana, the project site location is easily accessible to Schools, Grocery Stores, Downtown Fontana, and Community Parks. To access these locations, residents are close to major corridors that run throughout the entire city; Foothill Boulevard, running east to west, is just north of Arrow Boulevard, and Sierra Avenue, running north to south, is two blocks west of Palmetto Avenue. Additionally, the proposed project site is within walking distance to Fontana Middle School as well as commercial and retail centers along Arrow Boulevard that are central to the City.

LAND USE INTEGRATION

According to the *General Plan Land Use Map*, the project location is surrounded by R-SF: Single Family Residential land use to south, east, and west, R-M: Medium Density Residential to the north, and P-PF: Public Facilities and WMXU-1: Walkable Mixed-Use Corridor & Downtown designations to the northwest. Re-designation of the site from R-SF: Single Family Residential to R-MF: Multi-Family Residential (12.1-24 du/ac) or WMXU-1: Walkable Mixed Use Corridor & Downtown (0.2-2 FAR, 3-39 du/ac) would be consistent with the surrounding land-use designations and walkable residential nature of the proposed replacement site.

CONCLUSION

According to Appendix B of San Bernardino County's *Congestion Management Plan (CMP)*, "TIA Reports shall be prepared by local jurisdictions when local criteria and thresholds indicate they are necessary. However, TIA Reports must be prepared to satisfy CMP requirements, except as noted below, when a proposed change in land use, development project, or at local discretion, a group of projects are forecast to equal or exceed the CMP threshold of 250 two-way peak hour trips generation, based on trip generation rates published for the applicable use of uses in the Institute of Transportation Engineers' Trip Generation or CMA-approved data source."

The sum of the two-way peak hour trips for the proposed Palmetto Replacement site is estimated to be less than the 250-trip threshold set forth by the County of San Bernardino, therefore, a traffic study would not be warranted for this proposed project based on the San Bernardino County's CMP thresholds.
