

APPENDIX F:
LIMITED ENVIRONMENTAL SITE
CHARACTERIZATION

28 January 2015

Mr. Mark Tersini
KT Properties, Inc.
21710 Stevens Creek Blvd., Suite 200
Cupertino, California 95014

Subject: **Limited Environmental Site Characterization**
The Oaks at 21255 Stevens Creek Boulevard
Cupertino, California
Langan Project: 770619001

Dear Mr. Tersini:

This letter report presents the results of the limited environmental site characterization (ESC) performed by Langan Treadwell Rollo (Langan) for the proposed development at The Oaks which is located at 21255 Stevens Creek Boulevard, Cupertino, California (site). The site is northwest of the intersection of Stevens Creek Boulevard and Mary Avenue, across from DeAnza College. It is bound on the north and east side by Mary Avenue, Stevens Creek Boulevard to the south and an on-ramp onto Highway 85 to the west. It is currently The Oaks shopping center and is occupied by several one-story buildings and surrounding paved parking lots and landscaping.

We understand that the proposed development is not yet planned, but that a mid- to high-rise building with one to three basement levels is being considered. The purpose of this ESC was to conduct soil sampling and analysis to assess the potential for soil contamination resulting from past and/or present site activities and nearby off-site operations. The objective of the ESC was to preliminarily characterize the soil to assist in the off-haul of excavated material from the site.

SUBSURFACE INVESTIGATION

On 2 and 3 October 2014, Langan drilled three exploratory borings (B-1, B-2, and B-3) with a truck-mounted hollow stem auger drill rig to collect soil samples for chemical analysis. Drilling was conducted by Gregg Drilling and Testing, Inc. a project team member from Martinez, California. Prior to performing the field exploration, Underground Service Alert (USA) was contacted and a private utility locator was retained to check the boring locations for existing utilities.

The borings were drilled with a hollow stem auger to about 47 feet below ground surface (bgs). Our engineer logged the borings and obtained samples of the material encountered for visual classification and laboratory testing. Logs of the borings are presented in Appendix A as Figures A-1 through A-3. The soil encountered in the borings was classified in accordance with the Classification Chart presented on Figure A-4.

Soil samples were collected at approximate depths of 2.5, 5.0, 8.0, 10.0, 15.0, and 17.0 feet bgs. Each sample tube was sealed with Teflon and plastic caps, labeled, and placed on ice in a cooler for delivery to the analytical laboratory under chain of custody procedures. A total of four soil samples from each boring were analyzed for the chemical parameters discussed below, at a State of California certified analytical laboratory. The other samples were held pending results of the initial round of analyses.

Upon completion, the boreholes were backfilled with cement grout in accordance with the requirements of the Santa Clara Valley Water District (SCVWD). The soil cuttings from the borings were collected in 55-gallon drums, which were stored temporarily at the site, tested, and eventually transported off-site for proper disposal.

SUBSURFACE CONDITIONS

The site is in Cupertino, which is underlain by alluvial sediment deposited from the Santa Cruz Mountains. These alluvial fan deposits are typically coarse grained with large amounts of gravel deposits.

The surface material encountered in the borings consists of 3.5 to 6 inches of asphalt concrete (AC) and aggregate base (AB). Beneath the pavement section, the upper 2.5 to 6.5 feet consists of very dense sand with clay and gravel and hard sandy clay with varying amounts of gravel. Below these depths are medium dense to very dense sand and gravel layers with varying amounts of silt and clay interbedded with 3.5 to 7 feet thick layers of very stiff to hard sandy clay, sandy clay with gravel, and clay with gravel to the maximum explored depth of 46.5 feet.

During the investigation, groundwater was not encountered while drilling the three borings. The California Geological Survey, as part of their Seismic Hazards Zone Report (Cupertino Quadrangle) reported the historic high groundwater level in this area as approximately 50 feet bgs.

ANALYTICAL TESTING

A total of twelve soil samples were submitted to McCampbell Analytical, Inc. a state-certified laboratory in Pittsburg, California. The chemical analytical schedule was chosen to satisfy soil profiling scenarios generally accepted by landfills. The soil samples were analyzed for some or all of the following: total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), organochlorine pesticides (OCPs) and polychlorinated biphenyls (PCBs), California assessment metals (CAM) 17 metals, and leaking underground fuel tank (LUFT) 5 metals.

ANALYTICAL RESULTS

The soil analytical results are presented in Tables 1 and 2 and the certified laboratory reports and chain-of-custody records are presented in Appendix B.

Soil samples analyzed for metals were initially compared to total threshold limit concentration (TTLC) criteria. Selected soil samples equal to or exceeding the soluble threshold limit concentration (STLC) were additionally analyzed for STLC by California waste extraction test (WET) method based on their initial total metal concentrations. The STLC analyses were run to assess if metal concentrations in soil were at State of California hazardous waste levels.

Non-Metal Compounds

Soil analytical results for parameters other than metals are summarized in Table 1. TPHd was detected at or above the laboratory reporting limit (1 milligram per kilogram (mg/kg)) in two of the twelve samples analyzed at concentrations of 1.2 mg/kg and 4.4 mg/kg. TPHmo was detected at or above the laboratory reporting limit (5 mg/kg) in two of the twelve samples analyzed at concentrations of 8.2 mg/kg and 17 mg/kg. TPHg was not detected above the laboratory reporting limit (1 mg/kg) in any of the twelve samples analyzed.

No VOCs, SVOCs, PCBs, or OCPS were detected above laboratory reporting limits in any of the samples analyzed.

Metals

The metal analytical results are summarized in Table 2. Total lead was detected at or above the laboratory reporting limit in all twelve of the samples analyzed at concentrations ranging from 3.9 mg/kg to 17 mg/kg (Table 2). Total chromium was detected in each of the twelve samples analyzed at concentrations ranging from 26 mg/kg to 81 mg/kg (Table 2). Total chromium was detected at concentrations above 50 mg/kg, but below 1000 mg/kg, in nine of the twelve samples analyzed. Each of these samples was subsequently run for STLC chromium to determine soluble chromium levels. STLC chromium was detected at or above the laboratory reporting limit in three of the nine samples analyzed at concentrations ranging from 0.057 milligrams per liter (mg/L) to 0.22 mg/L. None of three soil samples exceeded the State of California hazardous waste criteria of 5 mg/L.

The remaining metal concentrations were within normal¹ background ranges found in the western United States.

Based on the analytical results from the chemical analyses of soil samples from the exploratory borings, none of the material contains elevated metals at concentrations exceeding State of California or Federal hazardous waste levels.

¹ "U.S.G.S. Professional Paper 1270, Element Concentrations in Soils and Other Surficial Materials of the Conterminous United States," 1984.

DISCUSSION

The site is northwest of the intersection of Stevens Creek Boulevard and Mary Avenue, across from DeAnza College. It is bound on the north and east side by Mary Avenue, Stevens Creek Boulevard to the south and an on-ramp onto Highway 85 to the west. It is currently The Oaks shopping center and is occupied by several one-story buildings and surrounding paved parking lots and landscaping. We understand that the proposed development is not yet planned, but that a mid- to high-rise building with one to three basement levels is being considered.

The site is in Cupertino, which is underlain by alluvial sediment deposited from the Santa Cruz Mountains. These alluvial fan deposits are typically coarse grained with large amounts of gravel deposits.

The surface material encountered in the borings consists of 3.5 to 6 inches of AC and AB. Beneath the pavement section, the upper 2.5 to 6.5 feet consists of very dense sand with clay and gravel and hard sandy clay with varying amounts of gravel. Below these depths are medium dense to very dense sand and gravel layers with varying amounts of silt and clay interbedded with 3.5 to 7 feet thick layers of very stiff to hard sandy clay, sandy clay with gravel, and clay with gravel to the maximum explored depth of 46.5 feet.

During the investigation, groundwater was not encountered while drilling the three borings. The California Geological Survey, as part of their Seismic Hazards Zone Report (Cupertino Quadrangle) reported the historic high groundwater level in this area as approximately 50 feet bgs.

Based on the analytical results from this limited ESC, none of the material at the Site contains elevated concentrations exceeding State of California or Federal hazardous waste levels. Therefore, material removed from the site during excavation activities will most likely be disposed of as unrestricted waste. If contaminated or hazardous material is encountered during construction, a soil management plan (SMP) and a health and safety (H&S) plan (prepared by others) will be required. The SMP would provide recommended measures to mitigate the long-term environmental or health and safety risks caused by the presence of hazardous materials in the soil. The SMP would also contain contingency plans to be implemented during soil excavation if unanticipated hazardous materials are encountered. The H&S plan would outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction. Based on the results of this limited ESC, no contaminated or hazardous material was encountered; therefore, no SMP is required at this time.

LIMITATIONS

Descriptions of specific field activities and historical events are based on our observations and on information provided by others. The opinions and information presented in this report apply to Site conditions and the information that was available at the time the work was performed and do not apply to changes of which we are not aware or have not had the opportunity to evaluate. Langan makes no guarantees or warranties with respect to the accuracy or completeness of this information.

We appreciate the opportunity of being of service to you on this project. If you have any questions or require additional information, please call.

Sincerely yours,
Langan Treadwell Rollo

Adam Brown
Senior Staff Geologist

Peter J. Cusack
Senior Associate/VP

							Project No.:	770619001	Figure:	A-3b	

UNIFIED SOIL CLASSIFICATION SYSTEM			
Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	GW	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	SW	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	ML	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	MH	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		PT	Peat and other highly organic soils

SAMPLE DESIGNATIONS/SYMBOLS

GRAIN SIZE CHART		
Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 76.2 to 19.1 19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200 No. 4 to No. 10 No. 10 to No. 40 No. 40 to No. 200	4.76 to 0.075 4.76 to 2.00 2.00 to 0.420 0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

 Unstabilized groundwater level

 Stabilized groundwater level

-  Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter.
Darkened area indicates soil recovered
-  Classification sample taken with Standard Penetration Test sampler
-  Undisturbed sample taken with thin-walled tube
-  Disturbed sample
-  Sampling attempted with no recovery
-  Core sample
-  Analytical laboratory sample
-  Sample taken with Direct Push or Drive sampler

SAMPLER TYPE

- | | | | |
|-----|--|-----|--|
| C | Core barrel | PT | Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube |
| CA | California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter | S&H | Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter |
| D&M | Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube | SPT | Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter |
| O | Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube | ST | Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure |

Laboratory Manager

***The report shall not be reproduced except in full, without the written approval of the laboratory.
The analytical results relate only to the items tested. Results reported conform to the most
current NELAP standards, where applicable, unless otherwise stated in the case narrative.***

Glossary of Terms & Qualifier Definitions

Client: Treadwell & Rollo
Project: #770619001; The Oaks
WorkOrder: 1410373

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Matrix interferences, or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
TEQ	Toxicity Equivalence

Analytical Qualifiers

e2	diesel range compounds are significant; no recognizable pattern
e7	oil range compounds are significant

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD was out of acceptance criteria; LCS validated the prep batch.
F2	LCS recovery for this compound is outside of acceptance limits.

McCormick Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1410373 A

Report Created for: Treadwell & Rollo
555 Montgomery St., Suite 1300
San Francisco, CA 94111

Project Contact: Peter Cusack

Project P.O.:

Project Name: #770619001; The Oaks

Project Received: 10/09/2014

Analytical Report reviewed & approved for release on 10/24/2014 by:

Question about
your data?

Angela Rydelius,
Laboratory Manager

***The report shall not be reproduced except in full, without the written approval of the laboratory.
The analytical results relate only to the items tested. Results reported conform to the most
current NELAP standards, where applicable, unless otherwise stated in the case narrative.***

Glossary of Terms & Qualifier Definitions

Client: Treadwell & Rollo
Project: #770619001; The Oaks
WorkOrder: 1410373

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Matrix interferences, or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
TEQ	Toxicity Equivalence

Analytical Qualifiers

e2	diesel range compounds are significant; no recognizable pattern
e7	oil range compounds are significant

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD was out of acceptance criteria; LCS validated the prep batch.
F2	LCS recovery for this compound is outside of acceptance limits.
