

Sample Summary for Electronic Document Submittal

15 copies of this document may be included when a Lead Agency is submitting electronic copies of environmental impact reports, negative declarations, mitigated negative declarations, or notices of preparation to the SCH. The SCH will still accept other summaries, such as an EIR summary prepared pursuant to CEQA Guidelines Section 15123, attached to the electronic copies of the document.

SCH # _____

Lead Agency: California Army National Guard

Project Title: Camp San Luis Obispo Bravo Range Modernization Project

Project Location: San Luis Obispo San Luis Obispo
City *County*

Please provide a Project Description (Proposed Actions, location, and/or consequences).

The existing Bravo Range is located on the north side of Range Road between San Benito Road and Chorro Reservoir Road in Camp San Luis Obispo.

The proposed project would upgrade the existing 1.6-acre Combat Pistol Qualification Course at the Bravo Range to meet modern military standards and allow soldiers to meet essential standard weapons qualification and sustainment training requirements. 15 previously-existing firing lanes would be replaced with 15 modern firing lanes at the same location. The previously-existing remote-controlled battery-operated flip-up targets would be replaced with hard-wired flip-up targets. Electrical and mechanical improvements would provide electrical power to the firing lanes for operation of the targetry. Drainage improvements and erosion protection would be installed to improve stormwater collection, control erosion on the site and downstream, and protect water quality in downstream receiving waterbodies.

Construction would take a total of three months to complete.

Please identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Air Quality - Although soils in the project area are not mapped as serpentine soils, the potential for construction to disturb soils containing Naturally Occurring Asbestos is considered a potentially significant impact. The prescribed mitigation requires a geologic evaluation to determine if the site will require an Asbestos Dust Mitigation Plan and Asbestos Health and Safety Program. If deemed necessary, the plan and program will be developed and subsequently implemented during construction.

Biological Resources - Construction activities could result in impacts to individual special-status plant and animal species, and would result in ~400 square feet of fill in a wetland. The prescribed mitigation measures would: require biological resources training for construction workers, place restrictions on the timing of construction; require pre-construction surveys for amphibians, reptiles, and special-status plants, and require on-site compensatory wetland mitigation.

Cultural Resources and Tribal Cultural Resources - Construction activities have the potential to result in disturbance to known and unknown cultural resources, and previously unrecorded human remains. The prescribed mitigation measures require cultural resources awareness training for construction workers and outline the procedures to be taken in the event of inadvertent discovery of archaeological resources, tribal cultural resources, or human remains.

Hazardous Materials - Construction activities have the potential to result in the inadvertent transport of contaminated soils and discovery of unexploded ordnance. The mitigation would require preparation of a spoils management plan, track-out prevention measures, proper storage of hazardous materials, and construction worker training in ordnance identification and handling.

Hydrology and Water Quality - The potential for the inadvertent migration of contaminated soils offsite could impact water quality. The mitigation requires implementation of track-out prevention measures during construction.

If applicable, please describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Not applicable.

Please provide a list of the responsible or trustee agencies for the project.
