EXECUTIVE SUMMARY

Apex Companies, LLC performed a Phase I ESA of the Sears store at the Brea Mall (Site) located at 100 Brea Mall, Brea, California in general conformance with the scope and limitations of ASTM Practice E1527-13 and additional terms and conditions required by contract with SPS Portfolio Holdings, LLC.

The Site is currently developed with a two-story Sears department store and attached automotive service center. The Site comprises approximately 13.21 acres and includes the retail building and adjoining parking areas. The Sears store occupies approximately 169,000 square-feet and the automotive service center occupies approximately 12,250 square-feet and is situated in the southwestern portion of the larger Brea Mall. Surrounding properties consist of commercial development and parking areas. Based on review of historical sources, the Site was used for agricultural purposes from the 1930s to the 1970s, and the current building was reportedly constructed in approximately 1977.

The Findings and Conclusions of our Phase I ESA are summarized below. Please refer to the entire report and appropriate Report Section for additional details regarding our findings.

TABLE ES-1 FINDINGS AND CONCLUSIONS SUMMARY							
Report Section	Further Action?	De Minimis Condition	Recognized Environmental Condition (REC)	Historical REC (HREC)	Controlled REC (CREC)	ASTM Non-Scope Condition	Comments
3.0 User Provided Information	Yes		Yes				Hydraulic hoists, floor drains, oil/water separator, former waste oil UST
4.1 Standard Environmental Record Sources (Databases)	No						
4.2 Additional Environmental Record Sources	No						
4.5 Historical Records Sources	No						
5.0 Site Reconnaissance	Yes	Yes	Yes				Hydraulic hoists, floor drains, oil/water separator, former waste oil UST
6.0 Interviews and Regulatory Agency Files	No						
9.0 Non-ASTM Considerations	No						

Apex performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Sears at Brea Mall, 100 Brea Mall, Brea, California. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed the following evidence of Recognized Environmental Condition in connection with the Site:

- Apex considers the operation of the automotive service center since the late 1970's to be a REC. The presence of hydraulic lifts, floor drains, and oil/water separator, and a former underground waste oil tank are possible sources of releases to the subsurface.

1.0 INTRODUCTION

1.1 Purpose

Apex Companies, LLC (Apex) has prepared this Phase I Environmental Site Assessment (ESA) of the Sears at Brea Mall at 100 Brea Mall Road, Brea, California. This Phase I ESA was performed at the request of SPS Portfolio Holdings, LLC. The purpose of this ESA is to identify the potential for recognized environmental conditions to exist at the Site.

1.2 Scope of Services

This ESA complies with the general scope and limitations of the ASTM Standard Practice for ESAs: The Phase I ESA Process, Designation E1527-13 and the U.S. Environmental Protection Agency's Standards and Practices for All Appropriate Inquiries, 40 CFR, Part 312.

The scope of services comprising this Phase I ESA was conducted to provide a reasonable level of investigation to identify *Recognized Environmental Conditions (RECs)*. This term, as well as the associated terms Historical REC (HREC), Controlled REC (CREC), and *de minimis* condition, are defined by ASTM E1527-13 and these definitions are provided in **Section 10.0** of this report.

1.3 Significant Assumptions

Apex has performed the historical and environmental record searches in accordance with ASTM E1527-13 and current industry practice. The data, findings, and conclusions presented in this Phase I ESA are based upon a search, review, and analysis of documents and interviews.

Conclusions reached regarding the conditions of the Site do not represent a warranty that all areas within the Site are of a similar quality as may be inferred from observable Site conditions and available Site history. As stated in the ASTM standard, no Phase I ESA can wholly eliminate uncertainty regarding the potential for environmental liability in connection with the Site. Apex's evaluation and analysis are intended to reduce, not eliminate, the potential for conditions that result in liability for the end user of this Phase I ESA.

1.4 Limitations and Exceptions

This report was prepared as a result of a contractual agreement that defined the approach and scope of services to be employed during the course of the investigation. The opinions and conclusions expressed in this study have been based strictly on the results of these contracted services. The scope of this Phase I ESA is intended to aid in the evaluation of RECs. Findings contained within this report are based on information collected from observations made on the day(s) of the Site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources. The services provided by Apex should not be construed as a warranty or guarantee that no RECs exist at the Site or that all RECs have been uncovered. No conclusions are stated or implied concerning the suitability of the Site for its eventual use. This document is not intended for purposes other than those expressly set forth herein or for use by parties other than for whom it has been prepared.

As limited by the ASTM Standard for Phase I ESAs, and Apex's scope of work, this project was non-intrusive in nature and did not include sampling or testing of soils, groundwater, surface water, building materials, or other materials. Additionally, unless specifically described in this report, Apex's scope of work explicitly excluded issues that are outside the scope of ASTM E1527-13 and may constitute a business environmental risk as defined by ASTM (see **Section 10.0**, Terminology).

ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- **Uncertainty Not Eliminated** - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs, and this practice recognizes reasonable limits of time and cost.
- **Not Exhaustive** - All Appropriate Inquiry does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions.
- **Level of Inquiry Is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial or customary practice, the appropriate level of environmental site assessment will be guided by the type of property, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.

In general, EPA does not regulate indoor air quality except to the extent that indoor air impacts are caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion). ASTM E1527-13 defines "migrate" and "migration" as referring to the movement of hazardous substances or petroleum products in any form, including solid and liquid at the surface or subsurface, and vapor in the

subsurface. Vapor migration in the subsurface is described in Guide E2600 – Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transaction; however, nothing in ASTM E1527-13 requires application of the Guide E2600 standard to achieve compliance with all appropriate inquiries.

A Phase I ESA meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction, is presumed to be valid. A Phase I ESA meeting or exceeding this practice and for which the information was collected or updated within one year prior to the date of the intended transaction may be used provided that the following components of the ESA were conducted or updated within 180 days of the date of purchase or the date of the intended transaction:

- interviews with owners, operators, and occupants;
- searches for recorded environmental cleanup liens;
- reviews of federal, tribal, state, and local government records;
- visual inspections of the property and of adjoining properties, and;
- the declaration by the environmental professional responsible for the assessment or update.

1.5 Special Terms and Conditions

There are no other special terms or conditions concerning this project other than those specifically described in **Section 1.2**, Scope of Work.

1.6 User Reliance

This report documents the Phase I ESA of the Site performed by Apex at the explicit request and direction of SPS Portfolio Holdings, LLC in general accordance with ASTM 1527-13 and the US EPA Standards and Practices for All Appropriate Inquiries, 40 CFR 312. The findings, opinions, and conclusions of this Phase I ESA are for the confidential and exclusive use of SPS Portfolio Holdings, LLC and the Simon Property Group. Reliance on this report for any use or by parties other than specifically stated is prohibited without the express written consent of Apex, and SPS Portfolio Holdings, LLC and the Simon Property Group, and such use is at the sole risk of the user.

2.0 SITE DESCRIPTION

2.1 Site Location and Ownership

The Site is located within the Brea Mall at 100 Brea Mall Road, in Brea, Orange County, California. According to information obtained from the Orange County Assessor, the Site has been assigned Assessor's Parcel Number 319-101-37 and is owned by Sears, Roebuck and Company. A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2, Appendix 1**.

2.2 Site and Vicinity General Characteristics

The Site is located in the City of Brea, California in an area of commercial development. The Site comprises approximately 13.21 acres and includes the retail building and adjoining parking areas. The Sears store occupies approximately 169,000 square-feet and the automotive service center occupies approximately 12,250 square-feet. The Site is bordered to the north and east by retail tenants associated with the Brea Mall. Parking areas are to the west and south. Details regarding adjoining properties are provided in **Section 2.4**. Photographs of the Site vicinity are provided in **Appendix 2**.

2.3 Current Site Use and Improvements

The Site is located within a larger multi-tenant shopping mall building. The Site consists of approximately 13.21 acres and includes the retail building and adjoining parking areas. The Sears store occupies approximately 169,000 square-feet and the automotive service center occupies approximately 12,250 square-feet within the southwestern portion of the larger Brea Mall.

2.4 Current Use of Adjoining Properties

Adjacent properties are defined as those sharing borders with the Site or separated only by a street, alley or other public right-of-way. A summary of adjacent land use as determined from aerial photographs and the Site reconnaissance is as follows:

TABLE 2-2 ADJOINING PROPERTY INFORMATION	
Direction	Properties
North	Nordstrom, the Foreign Exchange, Bebe, The Glen Ivy Day Spa, and Custom Signz
East	H&M, Lens Crafters, The Gar, California Pizza Kitchen; Parking lot; Brea Mall Drive

South	Parking lot, Brea Mall Drive, and BJ's Brew House and the Cheesecake Factory Restaurants
West	Parking lot and parking structure; Brea Mall Drive

Nearby properties of potential environmental concern are discussed further in **Sections 4.0** and **7.0** of this report.

3.0 USER PROVIDED INFORMATION

ASTM E1527-13 defines “User” as the party seeking to use Practice E1527 to complete an environmental site assessment of the Site. Apex understands that SPS Portfolio Holdings, LLC is the User as defined by ASTM E1527-13. ASTM E1527-13 specifies that certain tasks associated with identifying potential *recognized environmental conditions* at the Site should be performed by the User and provided to the Environmental Professional (i.e., User Responsibilities). Accordingly, Apex provided a Questionnaire to SPS Portfolio Holdings, LLC requesting the above information. The User Questionnaire was not returned to Apex. This is considered to be a data gap.

TABLE 3-1 USER PROVIDED INFORMATION	
Data Type	Information Provided
Environmental Liens, AUL, Title Records	The User did not provide information regarding environmental liens or AULs
Specialized User Knowledge	Specialized knowledge was not provided by the User.
Commonly Known or Reasonably Ascertainable Information	The User provided previous reports or provide commonly known or reasonably ascertainable information material to recognized environmental conditions.
Valuation Reduction for Environmental Issues	User did not provide information indicating a valuation reduction for environmental issues.
Reason for Performing Phase I ESA	This Phase I ESA was performed in connection with proposed improvement activities.
Other User Provided Information	Historical environmental reports provided by the client are summarized below and presented as Appendix 2 .

A Tank Removal Letter Report for the Site was prepared Petroleum Industry Consultants, Inc. (PIC) and dated October 7, 1988. According to the letter report a 550-gallon waste oil underground storage tank (UST) operated by Sears removed from the Site. The UST was located to the west of the automotive service center and removed on September 30, 1988. Removal was conducted under the supervision of the Orange County Fire Authority and Orange County Health Care Agency (OCHCA). One confirmation sample was collected from the bottom of the UST excavation at a depth of 10 feet below ground surface (bgs) (Sample P1) and one sample from the resulting soils stockpile (Sample SP1) generated from excavation activities. The soil samples were analyzed for total petroleum hydrocarbons (TPH) in general accordance with United States Environmental Protection Agency (USEPA) Method 418.1. TPH concentrations were reported to be below detection limits in Sample P1, while TPH was detected at 27 milligrams per kilogram (mg/kg) in Sample SP1. PIC concluded that the laboratory results indicated no significant release.

Two Hazardous Materials Business Plans prepared by Burns & McDonnell for Sears #1638/6458/8358, 100 Brea Mall, Brea, CA for submission to OCHCA were dated February 11, 2008 and February 12, 2009. According to the documents, hazardous materials stored at the Site included the following:

- Floor degreaser,
- Helium,
- Parts washing solvent,
- Used shop rags,
- Motor oil,
- Waste gasoline,
- Used antifreeze,
- Used oil filters,
- Used lead batteries,
- Refrigerant R-134A,
- Waste aerosols,
- Waste corrosives,
- Waste oxidizers,
- Waste propane,
- Used lead weights, and
- Used brake fluid.

None of the materials was reported to be stored in a UST. Motor oil and used antifreeze were the only materials reported to be stored in aboveground storage tanks (ASTs). The remaining materials were reported to be stored in containers of 55-gallons or less.

A Phase I ESA for Sears Store #1638/6458, 100 Brea Mall, Brea, CA was prepared by Terracon and dated October 27, 2014. According to the report, the Site was historically undeveloped land prior to the construction of the current department store in the late 1970s. Terracon reported the Site was occupied by Sears at the time of their report and the Site was used as a department store, automotive service center, and parking. Terracon noted an emergency generator, hydraulic elevators, a solid waste compactor, a cardboard baler, two ASTs, interior floor drains, pad-mounted transformers, and a solid waste dumpster at the Site. Based on site reconnaissance, RECs were not identified by Terracon associated with the aforementioned features. Other features included five hydraulic hoists and one 4-stage oil water separator associated with the automotive service center. Terracon summarized a subsurface investigation associated with the removal of one hydraulic hoist/reservoir from the automotive service center in 2007. Soil samples collected following removal of the unit were reportedly field screened utilizing a Petroflag® kit system. The samples reportedly exhibited TPH concentrations ranging from 68 to 143 mg/kg. Subsequently soil samples were collected from the excavation and analyzed for TPH and polychlorinated biphenyls (PCBs). Analytical results indicated that TPH and PCBs concentrations were below laboratory method detection limits (analytical methods not mentioned). Approximately 40 gallons of hydraulic oil and 9.4 tons of excavated soil were removed and disposed at off-site facilities. Based on the analytical results, recommended no

further action was recommended. Terracon reported that RECs associated with the Site included the operation of hydraulic hoists and an oil/water separator associated with the automotive service center.

A Phase II Environmental Site Assessment for Sears Store # 1638/6458, 100 Brea Mall, Brea, CA was prepared by Terracon and was dated April 17, 2015. The purpose of the assessment was to assess possible impacts to the Site resulting from the operation of the six active hydraulic hoists (an extra hoist was noted during the Phase II investigation) and the 4-stage oil water separator at the Site. Terracon drilled six soil borings (SB-1 through SB-6) one near each area of reservoir to maximum depths of 15 feet below ground surface (bgs). Terracon also drilled one soil boring (SB-7) in the area of the oil/water separator to a depth of 10 feet bgs. Terracon collected soil samples continuously for observation and field screening, and selected one soil sample from the soil boring for laboratory analysis. The soil samples were analyzed for Volatile Organic Compounds (VOCs) using USEPA Method 8260B and TPH using modified USEPA Method 8015. The soil samples collected did not exhibit VOC or TPH as gasoline (TPHg) range concentrations above the laboratory method detection limits. The soil samples collected from SB-4 and SB-7 exhibited TPH as diesel (TPHd) concentrations ranging from below detection limits to 2.8J mg/kg and TPH-oil (TPHo) concentrations ranging from below detection limits to 4.7 mg/kg. A "J-value" was reported to be an estimated concentration reported between the laboratory method detection limits and the laboratory reporting limits. The concentrations detected were reported to be below the Los Angeles Regional Water Quality Control Board's designated Maximum Contaminant Levels (MCLs) for TPHd (100 mg/kg) and TPHo (1,000 mg/kg) in soil in which groundwater is anticipated at less than 20 feet below the affected zone. The soil sample exhibiting the maximum concentration of TPH (SB-7 at a depth of 3 to 5 feet bgs) was additionally analyzed for CAM-17 metals using USEPA Method 6010/7000. The soil sample collected from SB-7 at 3 to 5 feet bgs reportedly exhibited various CAM-17 metals concentrations above the laboratory method reporting limits. The reported metals concentrations were compared to the California Human Health Screening Levels (CHHSLs), and with the exception of arsenic, the remaining reported concentrations were below the applicable CHHSL values for residential and commercial land use. The detected arsenic concentration of 2.0J mg/kg is above the residential and commercial CHHSL values of 0.07 mg/kg and 0.24 mg/kg, respectively. The detected arsenic concentration of 2.0J mg/kg was reportedly below the published California Department of Toxic Substances Control (DTSC) accepted regional background concentration screening level of 12 mg/kg for soil in southern California. Based on the soil sampling results, impacts to soil were not detected in the hydraulic lift areas and adjacent to the oil/water separator. Terracon concluded that the usage of petroleum and VOCs in the locations of the hydraulic lifts and oil/water separator did not appear to have impacted the Site.

A Phase I ESA for Sears Store #168 & Sears Auto Center #6458, 100 Brea Mall, Brea, CA was prepared by Terracon and dated May 6, 2015. According to the report, the Site was historically undeveloped land prior to the construction of the current department store in the late 1970s. Terracon reported the Site

was occupied by Sears at the time of their report and the Site was used as a department store, automotive service center, and parking. Terracon noted an emergency generator, hydraulic elevators, a solid waste compactor, a cardboard baler, two ASTs, multiple interior floor drains, pad-mounted transformers, a solid waste dumpster, six hydraulic hoists, and a 4-stage oil/water separator at the Site. Based on site reconnaissance, previously summarized Phase II ESA, historical records, and agency records, Terracon did not identify any RECs associated with the Site.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Consistent with ASTM E1527-13, Apex obtained and reviewed environmental databases and records to characterize the obvious and apparent uses of the Site. Apex retained Environmental Risk Information Services (ERIS) to provide a database and records search report. Apex has reviewed the listings provided by the database report and evaluated whether these listings should be considered RECs, and discusses listings pertaining to the Site, adjoining properties, or that are considered to be RECs in the sections below.

Environmental record sources required by the ASTM standard, and included in Apex's review, are listed below in **Table 4-1**. Other, supplemental (non-ASTM) databases were included in the review as well. A copy of the environmental records search report is presented in **Appendix 4**.

TABLE 4-1 SUMMARY OF ENVIRONMENTAL DATABASE INFORMATION			
Environmental Record	Search Distance (Miles)	No. of Sites Listed	Site Listed?
Federal National Priorities Sites List (NPL)	1.0	0	No
Federal Delisted NPL Sites	1.0	0	No
Federal CERCLIS Sites	0.5	0	No
Federal CERCLIS NFRAP Sites	0.5	0	No
Federal RCRA CORRACTS Facilities	1.0	0	No
Federal RCRA Non-CORRACTS TSD Facilities List	0.5	0	No
Federal RCRA Generators List	0.25	13	Yes
Federal Institutional Control / Engineering Control Registries (IC/EC)	0.5	0	No
Federal Emergency Response Notification System (ERNS) List	Site	0	No
State / Tribal-Equivalent NPL Sites	1.0	0	No
State / Tribal-Equivalent CERCLIS Sites	0.5	8	No
State / Tribal-Equivalent Landfill and Solid Waste Disposal Sites	0.5	0	No
State / Tribal-Equivalent Leaking Storage Tank (LUST) Sites	0.5	10	No
State / Tribal-Equivalent Spills Leaks Investigations and Cleanup (SLIC) List	0.5	0	No
State / Tribal Registered Storage Tank List	0.25	3	Yes

TABLE 4-1 SUMMARY OF ENVIRONMENTAL DATABASE INFORMATION			
Environmental Record	Search Distance (Miles)	No. of Sites Listed	Site Listed?
State / Tribal Voluntary Cleanup Sites (VCP)	0.5	0	No
State / Tribal Brownfields Sites	0.5	0	No
State / Tribal Institutional Control / Engineering Control Registries (IC/EC)	0.5	0	No

The Site was listed on the California Environmental Reporting System (CERS) database as a chemical storage facility and as a hazardous waste generator between 2013 and 2016. Violations listed on this database included submitting an incorrect Hazardous Materials Business Plan (HMBP), not submitting a HMBP, not labeling containers, not maintaining manifests, and for a leaking bottle of acid (which was corrected during the inspection). Due to the nature of the violations, they are not considered to be a REC.

The Site was listed on the HAZNET database for the generation of hazardous waste. Waste reported to have been generated included off-specification aged or surplus organics and unspecified organic liquid mixture between 1995 and 2015. Based upon information presented in the database report waste generated included unspecified solvent mixture, aqueous solution with total organics <10%, unspecified organic liquid mixture, liquids containing lead, oil/water separator sludge, other organic solids, oxygenated solvents, alkaline solution, unspecified oil waste, hydrocarbon solvent, surplus organics, latex waste, and liquids with pH less than or equal to 2. No violations were listed on the database. Based upon status, this listing is not considered to be a REC.

The Site was listed on the Historic HAZNET database as a hazardous waste generator. Wastes reported to have been generated at the Site between 1989 and 1992 on the database included paint sludge, unspecified aqueous solution, and halogenated solvents. No violations were listed. Based upon the status this listing is not considered to be a REC.

The Site was listed on the RCRA database as a small quantity waste generator. Violations were reported on database for the Site in 1992 and 1994. Specific information regarding the nature of the violation was not included in the listing.

The Site was also listed on the Delisted Tank database. Additional information regarding this listing was presented in **Section 3.0** in the previous reports.

Apex has limited the discussion of the surrounding properties based upon a combination of proximity, reported violations or releases, and presumed groundwater flow direction. These listings are

summarized as follows:

Tosco 76 Station #6356 at 1200 Imperial Highway is located approximately 400 feet to the southeast and downgradient from the Site is listed on the LUST database. This facility experienced an unauthorized groundwater release that impacted groundwater. Regulatory closure for the release was granted in 2003. Based upon the status and downgradient location this facility is not considered to be a REC.

Firestone at 891 Imperial Highway is located approximately 0.1 mile to the west and crossgradient from the Site is listed on the LUST database. This facility experienced an unauthorized diesel fuel release that impacted soil. Regulatory closure was granted in 1995. Based upon the status and distance this facility is not considered to be a REC.

City of Brea at 1 Civic Center is located approximately 0.1 mile to the northeast and upgradient from the Site is listed on the LUST database. This facility experienced an unauthorized diesel fuel release that impacted groundwater. Regulatory closure was granted in 1991. Based upon the status and distance this facility is not considered to be a REC.

Chevron at 700 Imperial Highway is located approximately 0.25 mile to the west and crossgradient from the Site is listed on the LUST database. This facility experienced an unauthorized gasoline release that impacted groundwater and is currently an active case. Due to the distance and crossgradient location this facility is not considered to be a REC.

Based on location, distance, type of listing, or regulatory status, none of the other facilities listed in the environmental databases are considered an environmental concern.

A total of 17 facilities that could not be mapped due to incomplete or incorrect address/geocoding information were listed in the database report. These sites were reviewed and determined to not be within the vicinity of the Site.

4.2 Additional Environmental Record Sources

The ASTM E1527-13 standard provides for review and analysis of additional environmental record sources during the performance of a Phase I ESA at the discretion of the environmental professional. Relevant factors in determining whether additional environmental records sources should be reviewed include, but are not limited to:

- the completeness of data provided by standard environmental record sources;
- whether additional environmental records sources are reasonably ascertainable;
- whether additional environmental record sources are useful, accurate, and complete in light of the records review objectives, and;
- whether additional environmental record sources are customarily obtained pursuant to the type of commercial real estate transaction involved.

Apex notes that some other nearby properties were identified on one or more non-ASTM environmental databases, which were not discussed above based on other database listings; however, these facilities were not considered to be environmental concerns for the Site.

4.3 *Environmental Liens and AULs*

Environmental liens and AULs can commonly be found within recorded land title records (e.g., County Recorder/Registry of Deeds). The types of title reports that may disclose environmental liens and AULs include Preliminary Title Reports, Title Commitments, Condition of Title, and Title Abstracts. Chain of title reports will not normally disclose environmental liens or AULs. Environmental liens and AULs that are imposed by judicial authorities may be recorded or filed in judicial records only. An environmental lien and AUL search was not obtained by Apex.

4.4 *Physical Setting*

Sources consulted to characterize the physical setting of the Site are identified in Section 9.0, References.

According to the United States Geological Survey (USGS) 7.5-minute topographic map of the area (La Habra, CA), the Site generally slopes to the southwest and is located at an elevation of approximately 360 feet above mean sea level (MSL).

According to the United States Fish and Wildlife Services (USFWS) National Wetlands Inventory wetlands mapper, there are no wetlands on the Site.

According to the Flood Emergency Mapping Agency (FEMA) Flood Insurance Rate Map (FIRM), the Site is not listed as being within the 100- or 500-year floodplains.

According to the National Cooperative Soil Survey (NCSS) Web Soil Survey at websoilsurvey.nrcs.usda.gov, the predominant soils on the Site consisted of Myford sandy loam. This soil

are moderately well drained soils and have high potential for runoff.

According to information associated with subsurface investigations in the vicinity presented on the State Water Resources Control Board's GEOTRACKER webpage, the Site is located along the northern edge of the Orange County Coastal Plain. The Puente Hills are located approximately two miles north-northeast of the Site. The Whittier Fault Zone, which borders the southern edge of the Puente Hills, is located approximately two miles northeast of the Site. The Puente Hills are composed primarily of Tertiary age consolidated sedimentary rocks that consist of sandstone, siltstone, and shale. Groundwater in the Site vicinity is likely to be encountered approximately 30 to 40 feet bgs. Based upon local topography the groundwater flow direction is expected to be to the southwest.

4.5 Historical Use Information

Apex collected information from historical data sources consisting of interviews, aerial photographs, and topographic maps for the Site and/or vicinity. Copies of historical sources are included as **Appendix 5** to this report.

A summary of the Site history from the above sources is presented below.

TABLE 4-2 SUMMARY OF SITE HISTORY		
Period	Source	Description
1800s	Topographic Maps	In the 1896 and 1898 topographic maps the Site and adjoining properties are depicted as undeveloped land.
1900s	Topographic Map	In the 1901 topographic map the Site and adjoining properties are depicted as undeveloped land.
1920s	Aerial Photograph Topographic Map	In the 1928 aerial photograph the Site and adjoining properties to the north, south, and east appear to be undeveloped land. Residential properties are apparent to the west. In the 1928 topographic map the Site and adjoining properties are depicted as undeveloped land.
1930s	Aerial Photograph Topographic Map	In the 1934 aerial photograph the Site and adjoining properties to the north, south, and east appear to be undeveloped land. Residential properties are apparent to the west. In the 1934 topographic map the Site and adjoining properties to the north, south, and east are depicted as undeveloped land. Small square structures are depicted to the west.
1940s	Topographic Map	In the 1942 topographic map the Site and adjoining properties to the north, south, and east are depicted as undeveloped land. Small square structures are depicted to the west.

**TABLE 4-2
SUMMARY OF SITE HISTORY**

Period	Source	Description
1950s	Topographic Maps Aerial Photograph	In the 1950 and 1952 topographic maps the Site and adjoining properties to the north, south, and east are depicted as undeveloped land. Small square structures are depicted to the west. In the 1952 aerial photograph the Site and adjoining properties to the north, south, and east appear to be undeveloped land. Residential properties are apparent to the west.
1960s	Aerial Photographs Topographic Map	In the 1960 and 1963 aerial photographs the Site and adjoining properties to the north, south, and east appear to be undeveloped land. Residential properties are apparent to the west. In the 1964 topographic map maps the Site and adjoining properties to the north, south, and east are depicted as undeveloped land. Small square structures are depicted to the west.
1970s	Aerial Photographs Topographic Map	In the 1972 aerial photograph the Site and adjoining properties appear generally as they are shown in the 1968 aerial photograph. In the 1975 aerial photograph the Site and adjoining properties to the north, south, and east appear to be graded land. Graded land and residential properties are apparent to the west. In the 1974 topographic map (actually an aerial photograph) the Site and adjoining properties appear as they did in the 1975 aerial photograph.
1980s	Aerial Photographs Topographic Maps City Directories	In the 1980 and 1987 aerial photographs the current department store is apparent on the Site and surrounding properties are developed with the current Brea Mall, commercial buildings, and restaurants. The 1980 topographic map depicts the Site and surrounding properties are depicted generally in their current configuration. In the 1980 city directories Sears and various Sears store departments, All State Insurance, and Western ST Optical were listed at the Site. In the 1985 city directories Sears and various Sears store departments, All State Insurance, All State Savings & Loan, H&R Block, Coldwell Banker, Dean Witter Reynolds, North ORG OCC Store, Orange CO REGL OCCU, and Western State Optical were listed at the Site.
1990s	Aerial Photograph City Directories	In the 1995 aerial photographs, the Site and adjoining properties appear generally in their current configuration. In the 1990 city directories Sears and various Sears store departments, All State Insurance, H&R Block, and Western ST Optical were listed at the Site. In the 1995 city directory Sears and various Sears store departments, All State Insurance, H&R Block, Crystal Galleries, Miracle Ear, Tux Den, and Western STS Optical were listed at the Site.
2000s	Aerial Photographs City Directories	In the 2005 and 2009 aerial photographs, the Site and adjoining properties appears generally in their current configuration. In the 2000 city directories Sears and various Sears store departments, H&R Block, Crystal Memories, and Miracle Ear were listed at the Site. In the 2004 city directories Sears and various Sears store departments, Crystal Empress, Friar Tux Shop, H&R Block, Miracle Ear, J Tran OD, and Univance Telecommunication were listed at the Site
2010s	Aerial Photographs City Directories	In the 2010, 2012, 2014, and 2016 aerial photographs, the Site and adjoining properties appears generally in their current configuration.

TABLE 4-2 SUMMARY OF SITE HISTORY		
Period	Source	Description
	Topographic Map	<p>In the 2014 city directories Sears and various Sears store departments, Miracle Ear Hearing Aid Center, H&R Block, R. Asadi OD, J Garcia OD, and Crystal Glass were listed at the Site.</p> <p>In the 2016 city directories Sears, Sears Automotive Center, Sears Appliance Repair, Sears Home Fashion, Sears Hearing Aid Center, Sears Home Service, Sears Parts Repair, H&R Block, Crystal Empress, J Garcia OD, A Owyang OD, and Miracle Ear were listed at the Site.</p> <p>In the 2015 topographic map no structures are depicted on the Site or surrounding properties, only streets are depicted.</p>

The Site was undeveloped land from the 1890s to the mid-1970s. The current shopping center that includes the Site was constructed between 1975 and 1980. Historic land use is not considered to be a REC to the Site.

Per ASTM E1527-13, review of standard historical sources at less than approximately five-year intervals is not required by this practice. If the specific use of the property appears unchanged over a period longer than five years, then it is not required to research the use during that period.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Apex representative, Mr. Ron Kofron, inspected the Site on January 18, 2018. Weather conditions at the time of the reconnaissance were sunny with a temperature of approximately 75 degrees Fahrenheit. The Site reconnaissance consisted of a walk-through of interior and exterior areas of the Site. Representative photographs are provided in **Appendix 2**.

5.2 Observations

The following is a summary of Site observations:

TABLE 5-1 SITE RECONNAISSANCE SUMMARY			
Observation	Observed		Comments
	Yes	No	
Structures (existing)	X		One existing structure discussed in Section 2.3
Structures (evidence of former)		X	
Aboveground Storage Tanks (ASTs)	X		Waste oil, motor oil and used antifreeze stored in ASTs in automotive service center
Underground Storage Tanks (USTs)	X		The location of the former waste oil tank was noted
Drums or Other Containers	X		Motor oil, antifreeze, degreaser, brake fluid, used gasoline, paints, and floor cleaners
Leaks, Spills, or Releases Around ASTs, USTs, and/or Chemical Storage Areas		X	
Stained or Corroded Floors, Walls, or Drains		X	
Pipes of Unknown Origin or Use		X	
Hydraulic Lifts or Elevators	X		Six hydraulic hoists. One passenger elevator and one freight elevator.
Transformers	X		Two pad mounted transformers
Hazardous Waste Disposal Areas		X	
Uncontained Debris, Refuse, or Unidentified Waste Materials		X	
Standing Water or Other Liquids		X	
Floor Drains or Sumps	X		Floor drains in automotive service center
Catch Basins, Dry Wells, and Storm Water Drainage		X	

TABLE 5-1 SITE RECONNAISSANCE SUMMARY			
Observation	Observed		Comments
	Yes	No	
Pits/Ponds/Lagoons		X	
Waste or Wastewater Discharges	X		Sanitary waste streams.
Oil/Water Separators	X		Four stage unit adjacent to automotive services center
On-Site Septic System		X	
Unusual Odors		X	
Stressed Vegetation/Stained Soil		X	
Fill Material		X	
Wells		X	
Other Observations		X	

Aboveground Storage Tanks

Five ASTs were observed in the automotive service center during the January Site reconnaissance and included the following:

- 500-gallon AST containing waste oil
- 400-gallon AST containing new oil
- 300-gallon AST containing new oil
- 200-gallon AST containing new oil
- 250-gallon AST containing waste antifreeze

The waste oil and new oil ASTs were noted to be double-walled and constructed of steel. The waste antifreeze AST was also double-walled and constructed of plastic. The ASTs were located on concrete pavement that appeared to be in good condition. No evidence of significant staining and/or releases was observed in the vicinity of the ASTs. During Apex's subsequent visit in April 2018, each of the ASTs had been removed.

Drums or Other Containers

During Apex's January Site reconnaissance antifreeze, waste absorbent, washer fluid, oil filters, transmission fluid, and waste aerosol cans were noted in 55-gallon drums. Waste brake fluid, waste gasoline, and grease were noted to be stored in 30-gallon drums. These drums were noted in the

automotive service center. During Apex's subsequent Phase II Investigation conducted in April 2018 (presented under separate cover), the drums in the automotive service center had been removed, along with all other inventory.

Various containers (ranging from 1-quart to 5-gallons) of floor cleaner, stripper, and finisher were noted in the janitorial supply areas on each floor, 1-gallon and 5-gallon containers of paint, small containers (less than 1-gallon) of engine oil, 5-gallon containers of joint compound, 5-gallon containers of flooring adhesive, 1-quart containers of paint thinner, and a 1-gallon container of refrigeration oil were noted in the second floor maintenance room. Sixty and 30-gallon plastic drums used to store waste corrosives, flammables, and oxidizers as well as a 55-gallon drum used to store intact, used or damaged paint containers were noted in the second floor hazardous waste storage area. A 55-gallon drum formerly used to store waste-gasoline was observed in the former garden tool and lawnmower service shop. No evidence of staining or spills was noted in any of the storage areas.

Hydraulic Lifts or Elevators

Six in-ground hydraulic lift units and ten apparent former hydraulic lift locations units were noted in the automotive service center. In addition, eight above-ground hydraulic lift units/alignment racks were observed during the January Site reconnaissance within the automotive service center. The lifts were noted to have been physically removed during Apex's subsequent Phase II Investigation conducted in April 2018.

One passenger elevator is located on the southern portion of the building and a freight elevator is located on the north side of the building. The elevators were noted to be hydraulically operated and reported to be maintained by Schindler Elevators. No evidence of surface staining was noted in the vicinity of the hydraulic fluid reservoirs associated with the two elevators. Escalators were also noted in the central portion of the building. The escalators were reported to be electrically operated and track-driven and do not utilize hydraulic fluid.

Transformers

Two pad-mounted transformers were noted on exterior areas of the Site building. The transformers are owned and operated by Southern California Edison. No evidence of surface staining was noted in the vicinity of the transformers.

Floor Drains and Sumps

During the Site reconnaissance, Apex observed floor drains in the automotive service center. Floor

drains in the automotive service center drain into the four-stage oil/water separator discussed below.

Oil/Water Separators

During the Site reconnaissance, Apex observed a four-stage oil/water separator outside of the automotive service center. The oil/water separator was reportedly used for the automotive center operations. The oil/water separator receives automotive waste fluid from on-site operations and discharges it to the municipal sewer system.

6.0 INTERVIEWS AND REGULATORY AGENCY FILE REVIEWS_____

The following interviews and information requests were completed to obtain additional information regarding the Site and potential recognized environmental conditions.

Mr. Andrew Sargent completed the User questionnaire (**Appendix 3**) and was interviewed regarding the property and its basic features and operations. Mr. Sargent was unaware of any environmental liens or AULs associated with the Site. Mr. Sargent indicated that SPS Portfolio Holdings, LLC owns the Brea Mall and provided multiple environmental documents pertaining to the mall. These documents are discussed in Section 3.0. Mr. Sargent indicated that there are no known releases associated with the Site.

Mr. Jason Jimenez, the assistant General Manager was unaware of USTs, monitoring wells, subsurface investigations, or unauthorized releases associated with the Site. According to Mr. Jimenez, all hazardous waste within the retail store is properly stored in containers in the hazardous waste accumulation area until transported offsite by a commercial service.

Apex submitted a request for regulatory records to the Orange County Health Care Agency (OCHCA). The records are provided in **Appendix 6** and summarized below.

A California Environmental Reporting System (CERS) Business Owner Operator Form was dated April 14, 2017. According to information presented on the form, hazardous materials reported to be stored at the Site included new motor oil, used motor oil, used oil filters, new antifreeze, waste antifreeze, used batteries, waste absorbent materials, waste lead weights, floor degreaser, new transmission fluid, reclaimed refrigerant, waste propane, waste flammable liquids, waste corrosives, waste oxidizers, waste toxics, waste aerosols, floor stripper, and waste gasoline. No USTs were listed to be at the Site.

OCHCA Inspection Reports for the Site dated 2013 through 2017 were also provided. A violation was issued to the Site for having a leaking bottle of acid in an open plastic bag in 2014. The leaking bottle of acid was reportedly doubled bagged, sealed, and labeled later during the inspection. The remaining violations issued to the Site were generally administrative in nature, (i.e. storing light tubes more than one year, containers not being labeled, weekly hazardous waste reports not being filled out, and not maintaining manifests) and not related to spills or releases. The information presented in the OCHCA records does not represent a REC.

Per ASTM E1527-13, if the Site or any of the adjoining properties is identified on one or more of the standard environmental record sources in pertinent regulatory files and/or records associated with the listing should be reviewed in order to obtain sufficient information to assist in determining if a REC, CREC.

HREC, or a *de minimis* condition exists at the property in connection with the listing. If, in the environmental professional's opinion, such a review is not warranted, the justification for not conducting the regulatory file review must be provided. As an alternative, files/records from an alternative source(s) (for example, on-Site records, user provided records, records from local government agencies, interviews with regulatory officials or other individuals knowledgeable about the environmental conditions that resulted in the standard environmental record source listing, etc.) may be reviewed.

Based upon the available records, no further file review is recommended at this time.

7.0 **OPINIONS, CONCLUSIONS, AND DATA GAPS**

Apex Companies, LLC has performed a Phase I ESA of the Sears at Brea Mall, 100 Brea Mall, Brea, California in general conformance with the scope and limitations of ASTM Practice E1527-13 and additional terms and conditions required by contract with SPS Portfolio Holdings, LLC.

Apex performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Sears at Brea Mall, 100 Brea Mall, Brea, California. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed the following evidence of Recognized Environmental Condition in connection with the Site:

- Apex considers the operation of the automotive service center since the late 1970's to be a REC. The presence of hydraulic lifts, floor drains, and oil/water separator, and a former underground waste oil tank are possible sources of releases to the subsurface.

Vapor Migration

In general, EPA does not regulate indoor air quality except to the extent that indoor air impacts are caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion). ASTM E1527-13 defines “migrate” and “migration” as referring to the movement of hazardous substances or petroleum products in any form, including solid and liquid at the surface or subsurface, and vapor in the subsurface. Vapor migration in the subsurface is described in Guide E2600 – Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transaction; however, nothing in ASTM E1527-13 should be construed to require application of the Guide E2600 standard to achieve compliance with all appropriate inquiries.

Subject to the above limitations, as part of Apex's evaluation of the property for the presence of RECs, the potential presence of hazardous substances or petroleum products in any form, including soil vapor, was evaluated. Based on all resources evaluated as part of this ESA, the potential for vapor migration is low.

Non-ASTM Considerations

No Non-ASTM considerations were encountered during the performance of this Phase I ESA.

Data Gaps

The user questionnaire was not returned to Apex. This data gap is not considered to be significant.

The ASTM Standard requires that the report identify the following: 1) *obvious* uses of the Site since 1940 or first development, whichever is *earlier*; and 2) significant “data gaps” which affect the ability of the Environmental Professional to identify *recognized environmental conditions*. A data gap by itself is not inherently significant. The report is also to include information on the sources consulted to address the data gap.

8.0 SIGNATURES AND EP STATEMENT

8.1 Statement of Responsible Environmental Professional

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Ronald J. Kofron
Environmental Professional
Senior Reviewer

Dana Williams
Environmental Professional
Site Assessor

8.2 Qualifications of Environmental Professionals and Site Assessor

Qualifications for Apex personnel responsible for the completion of this report are as follows:

Mr. Dana E. Williams worked under the responsible charge of Mr. Ronald J. Kofron, the principal environmental professional responsible for completion of this Phase I ESA. Mr. Williams is an Environmental Professional with Apex Companies and has been performing environmental site assessment services for over twenty years. Mr. Williams has a Bachelor of Science Degree in Meteorology and Climatology.

Mr. Kofron is the Senior Program Manager in the San Diego office of Apex and has primary responsibility for managing all Phase I, Phase II site assessments and remediation projects. Mr. Kofron's experience ranges from comprehensive environmental due diligence on real estate transactions and development projects on more than 500 environmental investigations ranging from small spills to Superfund Remedial Investigations and Feasibility Studies and remediation of contaminated sites. Mr. Kofron has B.S. and M.S. Degrees in Geology and is a Professional Geologist and a Certified Engineering Geologist in the state of California. Mr. Kofron has 33 years of experience as a consultant, and is an environmental professional as defined in § 312.10 of 40 CFR Part 312.

10.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

Recognized Environmental Condition (REC) - The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that indicate pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

De minimis condition – A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not *recognized environmental conditions* or *controlled recognized environmental conditions*.

Controlled Recognized Environmental Condition - A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). For example, if a leaking underground storage tank has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, this would be considered a controlled recognized environmental condition. The "control" is represented by the restriction that the property remains commercial. A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

Historical Recognized Environmental Condition (HREC) - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the

satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

Material Threat – A physically observable or *obvious* threat which is reasonably likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a *hazardous substance* and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Migrate/migration - Refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

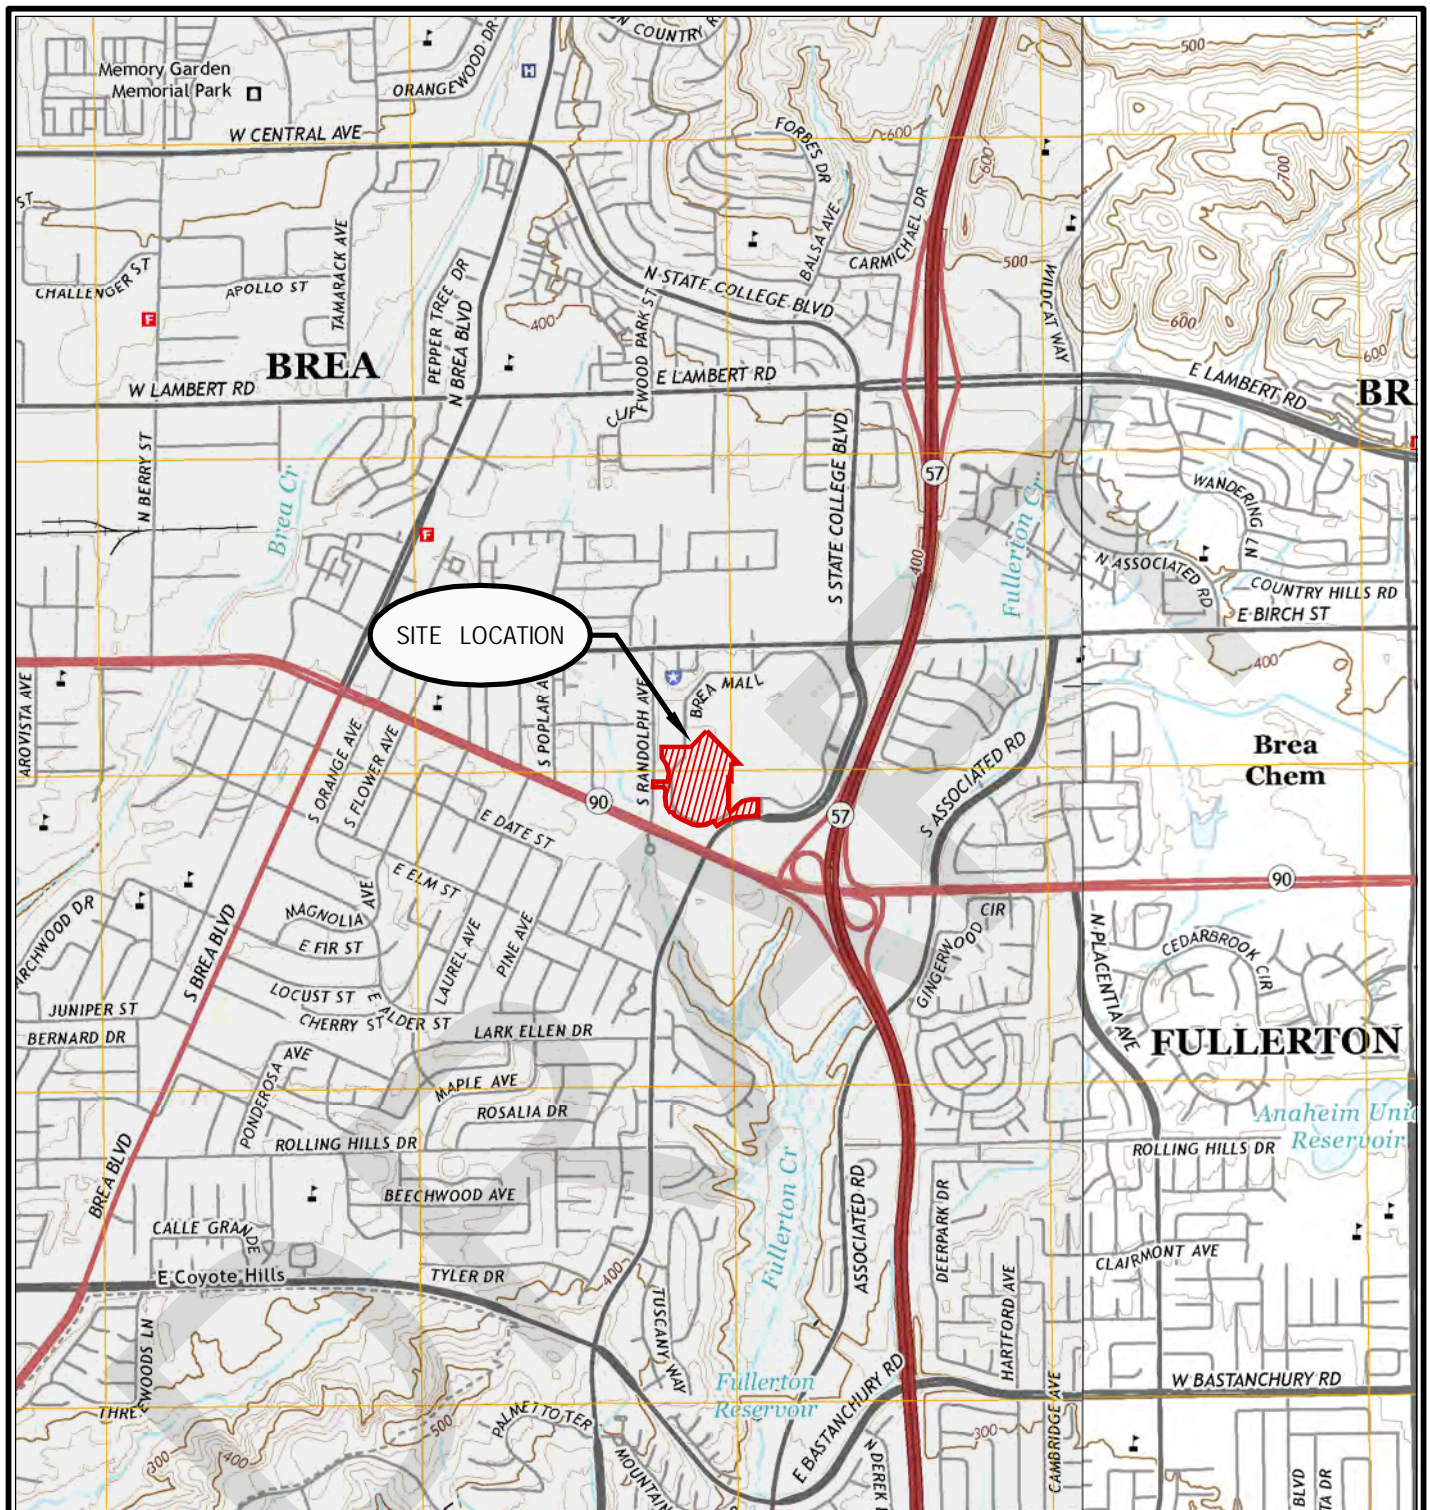

Data Gap - A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to Site reconnaissance (for example, an inability to conduct the Site reconnaissance), and interviews (for example, an inability to interview the key Site manager, regulatory officials, etc.). The report shall identify and comment on significant data gaps that affect the ability of the EP to identify recognized environmental conditions and identify the sources of information that were consulted to address the data gaps. A data gap by itself is not inherently significant.

Business Environmental Risk - A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations, some of which are identified in Section 13 of ASTM E1527-13 and include, but are not limited to, Asbestos-Containing Building Materials; Biological agents; Cultural and historic resources; Ecological resources; Endangered species; Health and safety; Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; Industrial hygiene; Lead-Based Paint; Lead in Drinking Water; Mold; Radon; Regulatory compliance; and Wetlands.

APPENDIX 3

User-Provided Information

DRAFT

ASTM E1527-13 USER QUESTIONNAIRE

Site Name: _____

Site Address: _____

Respondent Name: _____

Respondent Title/Company: _____

Date: _____

For Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments", 40 CFR Part 312), the user **must** provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete, and the environmental professional may identify a "data gap" which could impact the Phase I ESA report findings.

Question:	Yes	No
1. Environmental Liens Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? Check the box below as appropriate. <input type="checkbox"/> The scope of work for this Phase I Environmental Site Assessment (ESA) includes a search of recorded environmental liens as an added-scope item (in accordance with ASTM E1527-13 Section 6.2).		
2. Activity and Land Use Limitations (AULs) Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? Check the box below as appropriate. <input type="checkbox"/> The scope of work for this Phase I ESA includes a search of recorded AULs as an added-scope item (in accordance with ASTM E1527-13 Section 6.2).		
3. Specialized Knowledge or Experience Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		
4. Purchase Price vs. Fair Market Value Does the purchase price being paid for this property reflect any adjustments from the fair market value of the property? (If you conclude that the value is lower than the fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?)		

5. Commonly Known or Reasonably Ascertainable Information Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?		
5a. Do you know the past uses of the property?		
5b. Do you know of specific chemicals that are present or were once were present at the property?		
5c. Do you know of spills or other chemical releases that have taken place at the property?		
5d. Do you know of any environmental cleanups that have taken place at the property?		
6. Obviousness of the Presence or Likely Presence of Contamination Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?		

PLEASE PROVIDE EXPLANATION FOR ALL “YES” ANSWERS, OR ATTACH SUPPORTING DOCUMENTS.

5a. The Site was used for agriculture from the 1930s to the 1970s. The current building was reportedly constructed in approximately 1977.

5b. Floor degreasers, helium, petroluem based parts washing solvent, used shop rags, virgin motor oil, used motor oil, waste gasoline, used antifreeze, used oil filters, used lead batteries, refrigerant R-134A, waste aerosols, waste corrosives, waste oxidizers, waste propane, used lead weights, and used brake fluid.

6. The Site had an automotive service center with floor drains hydraulic lifts, a waste oil tank and an oil/water separator. The waste oil tank was removed in 1988.

Dear Mr. Forslund:

Attached are data pertinent to tank removal operations at Sears Automotive, 100 Brea Mall, Brea, California on September 30, 1988. As you recall, one 550 gallon waste oil tank was excavated and removed under Orange County permit #88-503. Upon approval of the Lower Explosion Level measurement, the onsite fire inspector supervised tank removal. No brass tags were recovered for background data of the tank.

Under your supervision, PIC environmental geologist, Randall Ferguson, recovered one sample from under the tank (P1) and one sample from the excavated spoils (SP1). Both soil samples were collected in glass jars and sealed with teflon lined lids and County of Orange evidence tape. The sample jars were placed on ice and transported the same day to Enseco-CRL in Garden Grove for quantitative testing via EPA method 418.1 (see attached Chain of Custody).

Sample P1 measured nondetectable concentrations of total petroleum hydrocarbons (TPH) and sample SP1 exhibited a TPH concentration of 27 ppm. These laboratory results indicate no significant historic leakage of stored product from the tank.

If there are any questions or problems regarding the above, do not hesitate to call us at 714/842-6331.

Respectfully submitted

J. Tim Hersch

Hazardous Materials Inventory Annual Certification Form

Dear Business Owner:

Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Inventory and Business Emergency Plan (BEP) to be reviewed and updated annually. If the information in your most recently submitted annual Inventory and BEP forms has not changed, or has undergone only minor changes, this completed certification form meets California requirements as specified in the Health and Safety Code, Chapter 6.95, Section 25503.3.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

Annual Hazardous Material Inventory Review and/or Update

- ☐ The information contained in the hazardous materials inventory most recently submitted to OCFA/HMS is complete, accurate, and up to date. There has been no significant change in the quantities of hazardous materials, as reported in the most recently submitted inventory, and no hazardous materials subject to reporting are being handled that are not listed on the most recently submitted inventory.
- ☐ If you need to change **ONLY** the Emergency contact names and/or telephone numbers, please attach the completed Page 4.
- ☒ The inventory as previously reported to OCFA/HMS has changed. **Attached is a complete set of inventory forms for all hazardous materials present at the facility.** These forms detail all the changes in inventory including new materials, materials that have been deleted, and changes to amounts of materials in the facility.

Triennial (3-year) Business Emergency Plan Review and Certification

- ☐ I certify that the Business Emergency Plan, a copy of which has been filed with OCFA/HMS, has been reviewed and the information contained in it is accurate and complete as of the date indicated on the signature line below.
- ☐ I certify that I have reviewed the Business Emergency Plan and have updated the following items:
- (ATTACH AS NECESSARY)
- ☐ Emergency contact names and/or telephone numbers
- ☐ Site and/or facility map(s)
- ☐ Emergency procedures
- ☐ Other Information
- ☐ A complete Business Emergency Plan is included with this form.

I certify under penalty of law that our business has reviewed and is familiar with the information submitted to the Orange County Fire Authority/HMS, and certify the submitted information is true, accurate, and complete.

If more hazardous components are present at greater than 1% by weight if non-carcinogenic, or 0.1% by weight if carcinogenic, attach additional sheets of paper capturing the required information.

Additional locally collected information: 246

(a) Is this material or any of its components a carcinogen (Refer to Attachment B)? ☐ Yes ☒ No

(b) Is this material prepackaged for retail sale? ☐ Yes ☒ No

(c) Is this material a commercial grade pesticide? ☐ Yes ☒ No

(d) If this material is radioactive, what type of emitter is it? ☐ Alpha ☐ Beta ☐ Gamma

(e) How is the material disposed of? (Refer to Table #2, page 25 of the green pages) Recycle

(f) Is a waste produced or left over after processing? ☒ Yes ☐ No

(g) How is the material used/What is the material used for? Brake repair

INTEROFFICE MEMORANDUM

TO: Unit Manager(s)
Unit: #1638 / 6458 / 8358 - Brea, CA
FROM: Michael Olsen, Director, Environmental Affairs
DATE: 3/17/2009
SUBJECT: Hazardous Materials Business Plan (HMBP)

FILE COPY

Enclosed is your stores' "Hazardous Materials Business Plan" prepared on your behalf by Burns & McDonnell and authorized by Sears Holdings Environmental Affairs

Please review the plan and make sure the training requirements that are detailed in the plan are followed. This plan must be attached as an addendum to your unit's Emergency Action Plan (EAP). The EAP must be created on the Sears Loss Prevention Intranet page and printed for retention. Follow the instructions on the EAP for distribution and retention. One additional copy of your EAP with the attached Hazardous Materials Business Plan must be retained in the yellow "Environmental Records" folder per state requirements. Please ensure these plans are retained as required by the State.

If you receive any correspondence regarding fees or renewal of your Hazardous Materials Business Plan, please forward to my attention at the following address:

Michael Olsen
Sears Holdings Management Co.
3333 Beverly Road B5 362A
Hoffman Estates, Illinois 60179
Phone: (847) 286-7222
Fax: (847) 286-6786

February 12, 2009

Hazardous Materials Business Plan
Sears #1638/6458/8358 – Brea, CA
100 Brea Mall Way

Dear Mr. Olsen:

Enclosed are the annual certification and the updated Hazardous Materials Business Plan forms for the above Sears facility. Please sign where indicated then forward them as soon as possible to the following address:

2/24
ATTN: Karen McCabney
Orange County Environmental Health
1241 E. Dyer Rd., Suite 120
Santa Ana, CA 92705

3/17 A copy of the plan must also be forwarded to the facility to be maintained on site and available for inspection at all times.

If you have any questions regarding this form, please contact me at (312) 223-0920 ext. 2235.

Sincerely,

Sindy Panagiotopoulos

HEALTH CARE AGENCY ENVIRONMENTAL HEALTH

Hazardous Materials and Emergency Plan Certification Form

Please submit form by March 1, 2009

Facility ID#: FA0025156

Dear Business Owner,

Chapter 6.95 of the California Health and Safety Code requires that your Hazardous Materials Inventory and Business Emergency Plan (BEP) be reviewed and updated annually. If the information in your most recent chemical inventory submittal and Business Emergency Plan has not changed, this completed certification form meets the California requirements as specified in the Health and Safety Code, Chapter 6.95, Section 25503.3.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

ANNUAL HAZARDOUS MATERIALS INVENTORY REVIEW AND/OR UPDATE

- ☐ The information contained in the hazardous materials inventory most recently submitted to the Orange County Health Care Agency is complete, accurate, and up to date. There has been no change in the quantities of hazardous materials, as reported in the most recently submitted inventory, AND no additional hazardous materials are in need of being reported.
- ☐ If you need to change ONLY the Emergency contact names and/or telephone numbers, please attach the CUPA form titled, "Owner/Operator Identification Form".
- ☒ The inventory as previously reported to the Orange County Health Care Agency has changed. Attached is a complete set of inventory forms for all reportable hazardous materials present at the facility.

TRIENNIAL (3-YEAR) BUSINESS EMERGENCY PLAN REVIEW AND CERTIFICATION

- ☐ I certify that the Business Emergency Plan, a copy of which has been filed with the Orange County Health Care Agency has been reviewed and the information contained in it is accurate and complete as of the date indicated below.
- ☒ I certify that I have reviewed the Business Emergency Plan and have updated the following items and the form is attached:
- ☐ Emergency contact names and/or telephone numbers
 - ☐ Site map
 - ☐ Emergency procedures
 - ☐ Other Information
- ☒ A complete Business Emergency Plan is included with this form.

I certify under penalty of law that our business has reviewed and is familiar with the information submitted to Orange County Health Care Agency, and also certify that the forms submitted are true, accurate and complete.

INCIDENT vs RESPONSE

If you have a release or a threatened release of hazardous materials and require emergency response, call 911. If you have a release or threatened release that is not an Emergency as described here, then 911 can be omitted; go to the Notification requirement below.

Person responsible for calling 911:

A hazardous materials Incident is a spill or release that can be absorbed, neutralized or otherwise controlled at the time of release; and can be controlled by the employees in the immediate work area or by maintenance personnel without exposure or health & safety hazards.

A hazardous material Response requires a response effort by employees from outside the immediate release area, or by other designated responders (e.g. fire dept), to an occurrence that results, or is likely to result, in an uncontrolled release of a hazardous substance.

NOTIFICATION

Both Incidents and Responses are considered releases/spills for the purpose of notification. Your business shall provide an immediate, verbal report of any release or threatened release of a hazardous material to the Administering Agency and State OES as soon as: 1) a person has knowledge of the release or threatened release; and 2) notification can be provided without impeding immediate control of the release or threatened release. Those numbers are:

State Office of Emergency Services (OES): (800) 852-7550 or (916) 845-8911

Orange County CUPA (714) 433-6000

Person responsible for calling CUPA and OES: Manager on Duty

WHEN COMPLETING SECTIONS BELOW USE ADDITIONAL PAGES OR ATTACHEMENTS AS NEEDED

1. Identify the local emergency medical facility that will be used by your business in the event of an accident or injury caused by a release or threatened release of hazardous materials:

Hospital/Clinic Brea Community Hospital			
Address 380 W. Central Ave.	City Brea	Zip Code 92821	Phone Number 714-529-0211

2. Does your business have an on-site emergency response team? ☐ Yes ☒ No
List Names & Titles of each person on response team.

3. Describe your business's procedures in the event of a release or threatened release of hazardous materials. Include all activities for the mitigation, prevention, or abatement of hazards to persons, property, or the environment such as:
- a) Actions taken to prevent a release from occurring.
 - b) Actions or equipment to prevent a release from spreading.
 - c) Actions for stopping a release.
 - d) Methods for clean up and disposal of released materials.
- Include attachments as necessary

Prevention:

This facility stores and uses chemicals including, but not limited to, lead acid batteries (corrosives), combustible liquids (motor oils and ATF), and products that are irritants or that present other health hazards. Incompatible chemicals are separated by 20 feet or by one-hour separation, and are stored in their original containers. Batteries are stored in a designated rack or on a shrink-wrapped pallet in a well-ventilated room away from drains and sources of electricity. Flammable materials not for retail sale are stored in a flammables cabinet. Used materials are stored in properly labeled drums, and are also kept away from drains and sources of electricity.

Mitigation:

Employee response to a leak, spill, fire, explosion or airborne release is illustrated in the facility's Emergency Action Plan. Trained employees manage small spills (spills that can be safely handled by employees in the immediate vicinity) of identified chemicals as long as there are no threats to human life or the environment. The immediate spill area will be evacuated of nonessential personnel and customers. The appropriate Material Safety Data Sheets for spilled materials are consulted for proper guidance in handling the substance(s) and a spill kit is obtained. A spill boom and absorbents are used to immediately block the flow of liquids from entering any nearby drains. Proper PPE is donned before handling a spilled product. In the event of a large spill, fire or release that threatens human health and/or the environment, the local fire department and/or environmental health department will be contacted. In the event of a small fire, if it is safe to do so, a fire extinguisher may be used to extinguish the fire.

Abatement:

The proper disposal, spill and leak procedures for each hazardous material at the facility are detailed in the facility's Environmental Operations Manual. Trained employees will clean up spilled hazardous materials and place used absorbents in DOT approved containers. These containers will be properly labeled as directed in the Environmental Operations Manual and stored according to local, state and federal regulations. Disposal containers must be kept in good condition and stored away from high traffic areas, electrical hazards, drains and fire exits. All hazardous waste materials will be disposed of by outside contractors at RCRA approved facilities.

4. Describe your facility emergency notification and evacuation procedure. What communications or alarms are used? How do these operate during a power failure? Specify emergency exits and employee staging areas.

Notification/Alarm Procedures:

In the event of a fire or other emergency requiring off-site emergency-response, the designated emergency contacts will do the following:

1. Call 911 in order to notify the local fire department and emergency medical response personnel;
2. Notify on site response personnel;
3. Activate local alarm systems;
4. Notify Contra Costa Health Services/HazMat at 925-646-1112;
5. Notify State Officer of Emergency Services at 800-852-7550;
6. If the spill involves hazardous waste, notify CalEPA-DTSC;
7. Submit a written follow-up spill notification to State OES and Notify Orange County Health Services/HazMat;

Note: This facility does not have a designated medical emergency response facility or an on-site emergency response team. The designated emergency coordinator or the manager on duty is responsible for the above.

Evacuation Notification:

Depending on the severity of an emergency incident, a partial or complete evacuation will be ordered by the emergency coordinator. The emergency coordinator may use the PA system, telephones or verbal means to initiate evacuation procedures. Employees are instructed to escort customers through the nearest emergency exit and meet at the designated staging area in the store parking lot. Evacuation information is posted throughout the facility, including in employee break rooms. In the event that outside notification is required, the emergency coordinator will telephone the fire department and other applicable agencies.

In the emergency coordinator's absence, the designated manager will be responsible for his/her duties. If outside notification has occurred, re-entry will only be permitted once the all clear is given from the responding agency. If no outside notification has occurred, re-entry will be permitted when the manager on duty that it is safe to do so.

-
- 5) Identify all areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake related ground motion.

Earthquakes:

Areas that require immediate attention following an earthquake include the following: any items that could fall, spill, break or move during an earthquake as well as hazardous materials and hazardous wastes in storage areas, utility lines and mains and hydraulic lift systems.

EMPLOYEE TRAINING PROGRAM – The training program shall, at a minimum, include:

- a) methods for safe handling of hazardous materials;
- b) procedures for coordination with local emergency response organizations;
- c) use of emergency response equipment and supplies under the control of the handler, and
- d) implementation of the Business Emergency Plan and notification requirements.

Employee Training:

Employees receive a training guide that covers the handling of hazardous materials, environmental management procedures and risks and hazards in the workplace. New employees are trained on the proper storage and handling methods of hazardous materials during their orientation period. All employees are trained in the isolation of spills and how to prevent spilled materials from entering storm and sewer systems. In addition, employees are trained on the following topics: use of absorbent materials and neutralizers to control and clean up spills and leaks; proper labeling, marking, disposal and recording of hazardous wastes; fire prevention and response; response to medical emergencies. Annual refresher trainings are conducted, and safety meetings are held on as needed basis.

Management personnel are trained in the proper procedures for agency notification, emergency response and evacuation notification.

All employees are trained on the proper handling and storage of hazardous materials during their initial orientation. They are given an Employee-Right-To-Know Handbook and watch a video which describes the hazards that may occur in the workplace. Employees also become familiar with the emergency response plan, spill clean up procedures and evacuation procedures. Employees attend annual refresher courses and store management conducts safety tailgate meetings on an as needed basis.

Employee Training Documentation:

The Loss Prevention Manager is responsible for overseeing and conducting all employee training. The LP Manager may be reached at 714-256-7300.

Training records, including a description of the training and training dates and employee signatures, are retained for at least three years. All training documentation is available for review.

Material Safety Data Sheet/ Emergency Response Plan Location:

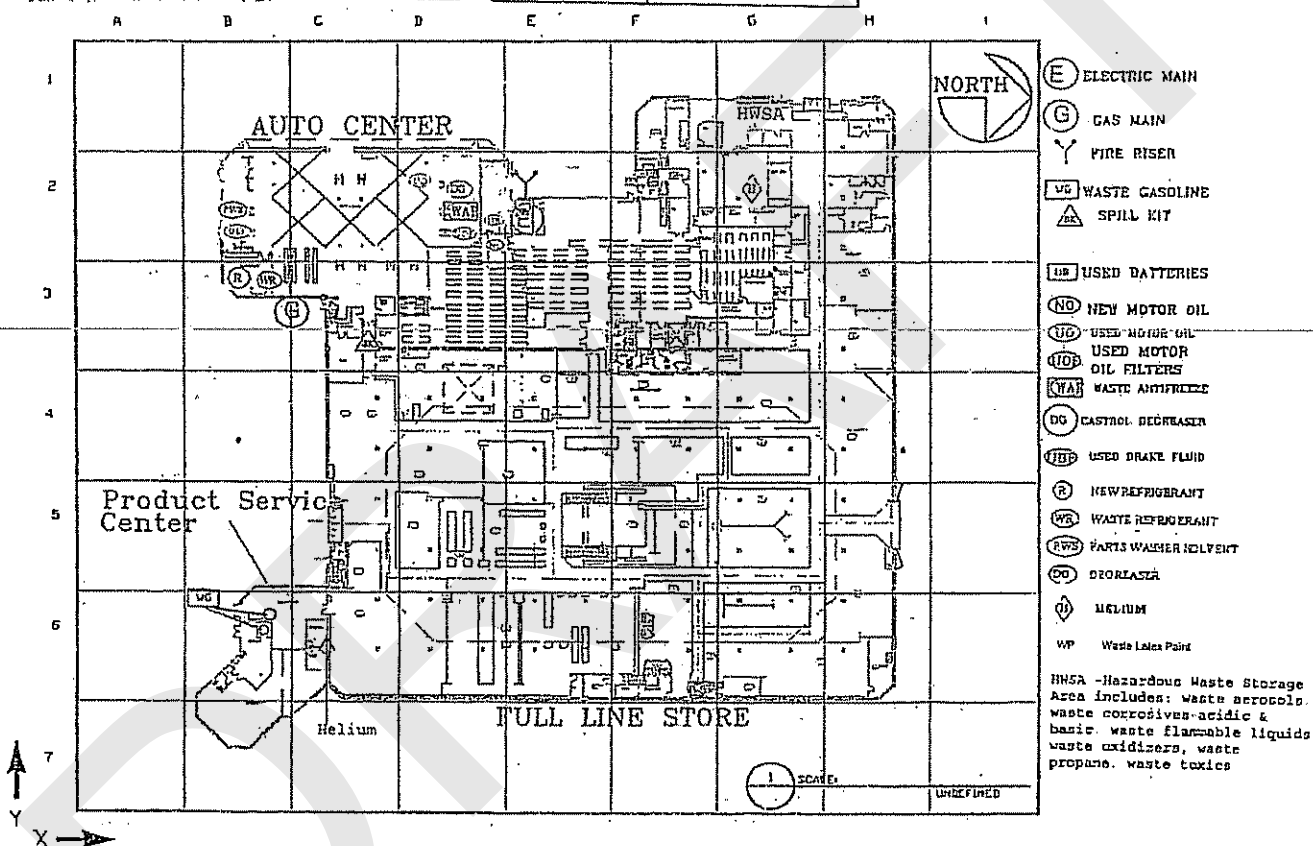

All managers have a copy of this emergency response plan. Employee training records are maintained in the Loss Prevention office and MSDSs are maintained in the HUB office.

Emergency Response Equipment:

The following equipment is available on site:

- Safety Glasses
- Rubber Gloves
- Chemical Apron
- Plumbed Eye Wash Station
- Portable Eye Wash Kit
- First Aid Kit(s)
- Absorbents ("Safety Sorbent")
- Acid Neutralizer
- Spill Boom
- Dustpan with Brush

U111 - BUSINESS EMERGENCY PLAN Failure to submit annual certification form by the specified due date (CA Health and Safety Code 25503.3)

Please submit the annual certification electronically through the E Submit Portal immediately.

COMMENTS

ZZZ9 - INSPECTOR COMMENTS

2013 BUSINESS EMERGENCY PLAN CERTIFICATION

Pursuant to California Health and Safety Code Chapter 6.95, businesses are required to certify chemical inventory annually, and your Business Emergency Plan every three (3) years.

In order to complete the certification please login to your e-Submit account at www.esubmit.ocgov.com. If you have forgotten your password, please email esubmit@ochca.com.

Once logged in, choose Brea HMBEP under Annual Certification. A summary appears with three black buttons. Review your submission first. If there are no changes, close the screen and choose Submit with no changes (Certify).

If changes have occurred, close the review screen and choose Amend prior to submission. Update the necessary pages, save, and choose confirm your submission located at the bottom of the page.

If you have not previously logged into the system and have not electronically submitted the required disclosure documents, you must visit www.esubmit.ocgov.com and request a user name and password to start the process.

Failure to complete and/or certify your chemical inventory and Business Emergency Plan will result in enforcement actions from this agency.

If you have any questions or require assistance, please contact esubmit@ochca.com or Bob Held at (714) 433-6244.

I declare that I have examined and received a copy of this inspection report.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal No. PA2140020 dated September 9, 2014, and was conducted consistent with the procedures included in ASTM E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The ESA was conducted under the supervision or responsible charge of Islam (Sami) R. Noaman, E.I.T., Environmental Professional. Chandel L. Davis performed the site reconnaissance on September 30, 2014.

Findings

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at 100 Brea Mall, Brea, Orange County, California and consists of two one to two story retail and automotive center buildings totaling approximately 169,000-square-foot (SF). At the time of the site reconnaissance, the site was occupied by Sears, Sears Optical, Sear Automotive Center, Sears's Key Service, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. On-site operations include general automotive parts sales, service and maintenance, and typical household merchandise retail.

Historical Information

Based on a review of historical information, the site consisted of undeveloped land from as early as 1898 through 1963. By 1977, the site was developed with the existing building and has remained relatively unchanged through the present.

The surrounding properties consisted of undeveloped scrubland from as early as 1898 through 1963. By 1977 the Brea Mall building located to the northeast of the site and associated parking lots to the southeast and southwest of the site were developed. Surrounding properties have remained relatively unchanged, with the exception of additions to the existing Brea Mall in the late 1980s and early 1990s. Indications or RECs were not identified with the adjoining properties.

Records Review

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was identified in the regulatory databases. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS), Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing

(HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and 2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of reported violations or release were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and /or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetraflouroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repairing center since 1977 through the present. A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. The historical UST was reportedly removed in 1988, and as discussed in Section 3.9. Evidence of subsurface impact associated with the historical UST was not identified. The 500-gallon waste oil UST does not represent a REC in connection with the site. The remaining identified facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, anticipated depth to groundwater within the site vicinity (approximately 90 feet bgs) and/or distance from the site.

Site Reconnaissance

One emergency generator, two hydraulic elevators, four air compressors, one solid waste compactor, one cardboard baler, two ASTs, multiple containers ranging in size from 1- to 55-gallon, two MSDSs, multiple interior floor drains, three pad-mounted transformers, one solid waste dumpster and baler were observed on site. Based on site reconnaissance, RECs were not identified associated with the aforementioned features.

Based on site reconnaissance, RECs were identified associated with the current site operations and include:

- Five in-ground hydraulic lift units were observed during the site reconnaissance. The lifts were located in the automotive service center. Based on the evidence of TPH concentrations reported for a lift unit removed in 2007 (Section 3.9), the in-ground hydraulic lift units appear to constitute an REC in connection with the site.
- One four stage oil/water separator was observed to the west of the automotive service center building during the site reconnaissance. The oil/water separator date of

construction is unknown, but is believed to have been installed in approximately 1977 during the construction of the automotive repair center. Based on the use of petroleum and halogenated solvents typically associated with automotive operations, and the subsurface nature of the oil/water separator, the oil water separator represents a REC in connection with the site.

Previous Reports

Petroleum Industry Consultants, Inc. (PIC) completed a letter report for the removal of a 550-gallon waste oil UST located south of the existing oil/water separator. On September 30, 1988 and subsequent to the UST removal, under the supervision of the Orange County Fire Authority and Orange County Environmental Health Department (OCEDH), PIC collected one confirmation sample from the bottom of the tank excavation at a depth of 10 feet below ground surface (P1) and one sample from the soils stockpile (SP1), generated from excavation activities. Soil samples were analyzed for total petroleum hydrocarbons (TPH), and analytical results exhibited a TPH concentration of 27 milligram per kilogram in SP1, and P1 did not exhibit a TPH concentration above the laboratory method detection limits. Soil samples were not analyzed for volatile organics or metals. The PIC letter concluded that the laboratory results indicated no significant release.

MACTEC completed the hydraulic lift system removal, documented in a report dated March 3, 2008. The report indicated removal activities were performed from July 31 to August 2, 2007. A total of eight soil samples were field screened utilizing a Petroflag® kit system at the time of the removal. These samples exhibited TPH concentrations ranging from 68 to 143 mg/kg. According to the MACTEC report, the Orange County Health Care Agency recommended threshold for TPH concentration was 1,000 mg/kg; however, MACTEC indicated the TPH threshold used in this project was 100 mg/kg. Subsequent to the lift system removal two end point samples (EP-1 through EP-4) were collected and analyzed for TPH and polychlorinated biphenyls (PCBs). Analytical results indicated that TPH and PCBs concentrations were not exhibited above laboratory method detection limits. Approximately 40 gallons of hydraulic oil and 9.4 tons of excavated soil were removed and disposed at off-site facilities. Based on the analytical results, MACTEC recommended no further action.

Adjoining Properties

The properties to the adjacent north consist of an asphalt-paved parking lot, the Brea shopping mall (1065 Brea Mall), and a four story parking garage and Image Auto Detailing (503 Brea Mall). The properties to the adjacent east consist of an asphalt-paved parking lot and Brea shopping mall (1065 Brea Mall) to the northeast. The properties to the adjacent south consist of an asphalt-paved parking lot followed by East Imperial Highway. The properties to the adjacent west consist of an asphalt-paved parking lot followed by South Randolph Avenue. Indications of RECs were not observed with the adjoining properties.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E 1527-13 at 100 Brea Mall in Brea, Orange County, California, the site. The following recognized environmental conditions were identified in connection with the site:

- Five in-ground hydraulic lift units were observed during the site reconnaissance. The lifts were located in the automotive service center. Based on the evidence of TPH concentrations reported for a lift unit removed in 2007 (Section 3.9), the in-ground hydraulic lift units to constitute an REC in connection with the site.
- One four stage oil/water separator was observed to the west of the automotive service center building during the site reconnaissance. The oil/water separator date of construction is believed to have been installed in approximately 1977 during the construction of the automotive repair center. Based on the use of petroleum and halogenated solvents typically associated with automotive operations, and the subsurface nature of the oil/water separator, the oil water separator represents a REC in connection with the site.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
SEARS STORE # 1638/6458
100 BREA MALL
BREA, ORANGE COUNTY, CALIFORNIA

Terracon Project No. 60149256.1638/6458
October 27, 2014

1.0 INTRODUCTION

1.1 Site Description

Site Name	Sears Store # 1638/6458
Site Location/Address	100 Brea Mall, Brea, Orange County, California
Land Area	Approximately 2.2-acres
Site Improvements	Improved with a one to two story retail and automotive center buildings totaling approximately 169,000-square-foot (SF).

The site location is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the USGS 7.5-minute series topographic map. A Site Diagram of the site and adjoining properties is included as Exhibit 2 of Appendix A. Acronyms and terms used in this report are described in Appendix B.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal No. PA2140020 dated September 9, 2014, and was conducted consistent with the procedures included in ASTM E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, user-provided information, and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance or inability to review information not received by the report date. Where

appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot completely eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records may not have been reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations and Significant Data Gaps

Based upon the agreed-on scope of services and the ASTM 1527-13 standard, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e. evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

An evaluation of the significance of these limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations,

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Sears Holdings Corporation, JPPII, LLC and JPP, LLC. Use or reliance by any other party is prohibited without the written authorization of Sears Holdings Corporation and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Master Services Agreement. The limitation of liability defined in the Master Services Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E 1527-13 Sections 4.6 and 4.8. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E 1527-13.

1.6 Client Provided Information

Prior to the site visit, Mr. Bruce Kaye, Manager of Environmental Affairs of Sears, was asked to provide the following user questionnaire information as described in ASTM E 1527-13 Section 6.

Client Questionnaire Responses

Client Questionnaire Item	Client Did Not Respond	Client's Response	
		Yes	No
Aware of any Environmental Cleanup Liens against the site.			X
Actual Knowledge of Environmental Liens or Activity Use Limitations (AULs) that may encumber the site.			X
Aware of any Specialized Knowledge or Experience related to the site or nearby properties.			X
Actual Knowledge of a Significantly Lower Purchase Price because of hazardous substances or petroleum products.			NA
Commonly Known or Reasonably Ascertainable Information that is material to a release in connection with the site.			X
Obvious Indicators of Contamination at the site.			X

NA = Not applicable

With the exception of client-provided records summarized in Section 3.9, and attached in Appendix C, the client stated that he was not aware of other environmental information pertaining to the site. A copy of the User Questionnaire is included in Appendix C.

2.0 PHYSICAL SETTING

Physical Setting Information		Source
Topography (Refer to Appendix A for an excerpt of the Topographic Map)		
Site Elevation	Approximately 360 feet (NGVD)	USGS Topographic Map, La Habra Quadrangle, California, dated 1981, photorevised from 1964
Surface Runoff/ Topographic Gradient	Sloping towards the southwest	
Closest Surface Water	Craig Park Lake, approximately 2,934 feet south of the site	

Soil Characteristics		
Soil Type	Myford sandy loam	Orange County, CA USDA-NRCS Web Soil Survey issued September 19, 2014 Hydraulic Lift System Removal, Assessment and Site Remediation Report Sears Auto Center No. 6458, 100 Brea Mall, Brea, California 92821 prepared by: MACTEC, dated March 3, 2008
Description	Moderately well drained soils with 2 to 9 percent slopes. Alluvium derived from mixed. Typical soil profile beneath the site consist of stiff reddish-brown silty clay with traces clay.	
Geology/Hydrogeology		
Formation	Quaternary deposits (Q)	Geological Map of California, dated 2010
Description	Older alluvium, lake, playa, and terrace deposits.	
Estimated Depth to First Occurrence of Groundwater	Approximately 90 feet below grade surface (bgs).	Groundwater Elevation Contours Map for Principal Aquifer, Orange County, dated June 2012
*Hydrogeologic Gradient	Not known - may be inferred to be parallel to topographic gradient (primarily to the southwest).	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify past uses for indications of RECs. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps

Readily available historical USGS topographic maps were reviewed to evaluate land development in connection with the site. Reviewed historical topographic maps are summarized below.

Anaheim, California, published **1898** (1:62,500)
Southern CA, California, published **1901** (1:250,000)
Corona, California, published **1902** (1:125,000)
Coyote Hills, California, published **1935** (1:31,680)
Anaheim, California, published **1942** (1:50,000)

La Habra, California, published **1950** and **1964** (1:24,000)

La Habra, California, published **1972** and **1981** photorevised from 1964
(1:24,000)

Historical Topographic Maps

Direction	Description
Site	Undeveloped land (1898-1950); an un-paved road intersects the site (1964); road is not depicted (1972); developed with existing building (1981).
North	Undeveloped land (1898-1950); an un-paved road runs from the site to the north (1964); former un-paved road is not depicted (1972); developed with existing building to the northeast (1981).
East	Undeveloped land (1898-1902); undeveloped land followed by a creek (1935-1964); undeveloped land followed by a road (1972); developed with existing building (1981).
South	Undeveloped land (1898-1902); undeveloped land followed by a road (1935-1950); an un-paved road runs from the site to the southeast (1964); former un-paved road is not depicted and a road runs from the northeast to the southwest (1972); developed with current road (1981).
West	Undeveloped land followed by a road (1898-1902); undeveloped land followed by a road and multiple structures (1935-1972); developed with current road (1981).

3.2 Historical Aerial Photographs

Selected historical aerial photographs from the United States Geological Survey (USGS) and United States Department of Agriculture (USDA) were reviewed at approximately 10 to 15 year intervals, if readily available, to obtain information concerning the history of development on and near the site. Evaluation of these aerals may be limited by a photo's quality and scale. Selected photographs are summarized below.

USGS, 1938, 1952, 1963, 1987, 1990, 1"=500'

Fairchild, 1947, 1"=500'

Teledyne, 1977, 1"=500"

USGS/DOQQ, 1995, 1"=500"

USDA/NAIP, 2005, 2009, 2010, 2012, 1"=500"

Historical Aerial Photographs

Direction	Description
Site	Undeveloped scrubland (1938-1952); undeveloped scrubland with an un-paved road running through the site (1963); developed with existing building (1977-2012).

Direction	Description
North	Undeveloped scrubland (1938-1952); undeveloped scrubland with an un-paved road running north and south, and an un-paved road running east and west (1963); developed with asphalt-paved parking lot to the northwest, asphalt-paved parking lot and cleared land to the north, and multi-tenant shopping mall to the northeast (1977); former cleared land is developed with shopping mall addition (1987); developed with shopping mall addition to the north and existing parking garage to the northwest (1990-2012).
East	Undeveloped scrubland followed by creek (1938-1963); developed with asphalt-paved parking lot to the southeast, multi-tenant shopping mall to the northeast, and cleared land to the east (1977); former cleared land is developed with shopping mall addition (1987-2012).
South	Undeveloped scrubland (1938-1963); developed with asphalt-paved parking lot and existing roads (1977-2012).
West	Undeveloped scrubland followed by a road and multiple structures (1938-1963); developed with asphalt-paved parking and existing road (1977-2012).

3.3 Historical City Directories

The Haines North Orange County and Haines Orange County city directories used in this study were made available through Historical Information Gatherers (HIG) (selected years reviewed: Brea Mall 1981 through 2011, Imperial Highway 1971 through 2011, State College Boulevard 1986-2011) and were reviewed at approximate five-year intervals, if readily available. Since these references are copyright protected, reproductions are not provided in this report. City directories for the site were not listed prior to 1981. The current street address for the site was identified as 100 Brea Mall, Brea, Orange County, California.

Historical City Directories

Direction	Description
Site	100 Brea Mall- <u>Sears (1981-2011)</u> ; H&R Block (2011); Miracle-Ear (2011); Crystal Empress (2011); Sears Optical (2011).
North	Multi-tenant shopping center.
East	Multi-tenant shopping center.
South	120 Brea Mall- The Cheesecake Factory (2006-2011). 600 Brea Mall- Magnolia's Peach (1986-1991); Creative Concepts (1991); Cornerstone Grill (1996); Airth Gizella (2002); BJ Restaurant and Brewery (2002-2011).
West	1039 East Imperial Highway- Name Brands Outlet (1981); Oak Gallery (1981); MacBeth's Stained Glass and Custom Framing (1986-1996); Two Wheeler Dealer (1986-2011); Fantastic Sam's (1986); Rockit Music (2002-2011). 1045 East Imperial Highway- Phone Center Stores (1981); Entire Computer Center (1986-1991); Boot Barn (1996); Riddle Stuart (2002); Eastwood Insurance Service (2002-2011); Elegant Nails and Spa (2006-2011).

Sears Roebuck and Co. at the site address was identified in the city directories from 1981 through 2011 and was observed at the time of the site reconnaissance. Sears was also listed in the regulatory database reports and is further discussed in Section 4.1.

3.4 Historical Fire Insurance Maps

Historical fire insurance maps produced by the Sanborn Map Company were requested from EDR to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

3.5 Site Ownership

Based on a review of client provided information, the current site owner is Sears Roebuck & Co. Historical review information indicated that the site has been operated/ owned by Sears from 1981 through the present.

3.6 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.7 Environmental Liens

Environmental lien records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.8 Interview Regarding Current and Historical Uses

The following individual was interviewed regarding the current and historical use of the site.

Interviewee

Interviewer	Interviewee	Title	Date/Time
Chandel L. Davis	Mr. Jonathan Garcia	Building Technician	September 30, 2014 / 10:00 AM

At the time of the site reconnaissance Terracon interviewed Mr. Jonathan Garcia, a building technician for Sears. Mr. Garcia indicated that the site is owned by Sears Roebuck & Co. and has been operating as a Sears, Sears Optical, Sears Automotive, Sears Key Services, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. Mr. Garcia stated that he

was not aware of any boilers/ chillers, water treatment chemicals, septic tanks, water wells, grease traps, solvent baths, petroleum pipelines, underground tanks (USTs) on site. Mr. Garcia was not aware of any pending, threatened or past environmental litigation, proceedings or notices of possible violations of environmental laws or liability or potential environmental concerns in connection with the site.

3.9 Prior Report Review

Previous environmental reports for the site were not provided by the client to Terracon for review. A summary of the findings of these reports is provided below. This summary is based solely on the information provided in the referenced documents and Terracon offers no assessment regarding the quality, completeness and/or accuracy of the information provided. This information is being considered solely in the context of additional historical information made available for the site.

- Tank Removal Letter Report
Sears Automotive
100 Brea Mall, Brea, California 92821
Prepared by: Petroleum Industry Consultants, Inc. (PIC)
For: Orange County Environmental Health Department (OCEDH)
Date: October 7, 1988

Petroleum Industry Consultants, Inc. (PIC) completed a letter report for the removal of a 550-gallon waste oil UST located south of the existing oil/water separator. On September 30, 1988 and subsequent to the UST removal, under the supervision of the Orange County Fire Authority and Orange County Environmental Health Department (OCEDH), PIC collected one confirmation sample from the bottom of the tank excavation at a depth of 10 feet below ground surface (P1) and one sample from the soils stockpile (SP1), generated from excavation activities. Soil samples were analyzed for total petroleum hydrocarbons (TPH), and analytical results exhibited a TPH concentration of 27 milligram per kilogram in SP1, and P1 did not exhibit a TPH concentration above the laboratory method detection limits. Soil samples were not analyzed for volatile organics or metals. The PIC letter concluded that the laboratory results indicated no significant release.

- Hydraulic Lift System Removal, Assessment and Site Remediation Report
Sears Auto Center No. 6458
100 Brea Mall, Brea, California 92821
Prepared by: MACTEC
For: Sears Holdings Management Corporation
Date: March 3, 2008

MACTEC completed a hydraulic lift system removal, documented in a report dated March 3, 2008. The report indicated removal activities were performed from July 31 to August 2, 2007. A total of eight soil samples were field screened utilizing a Petroflag® kit system at the time of the removal. These samples exhibited TPH concentrations ranging from 68 to 143 mg/kg. According to the MACTEC report, the Orange County Health Care Agency recommended threshold for TPH concentration was 1,000 mg/kg; however, MACTEC indicated the TPH threshold used in this project was 100 mg/kg. Subsequent to the lift system removal two end point samples (EP-1 through EP-4) were collected and analyzed for TPH and polychlorinated biphenyls (PCBs). Analytical results indicated that TPH and PCBs concentrations were not exhibited above laboratory method detection limits. Approximately 40 gallons of hydraulic oil and 9.4 tons of excavated soil were removed and disposed at off-site facilities. Based on the analytical results, MACTEC recommended no further action.

3.10 Historical Use Information Summary

Based on a review of historical information, the site consisted of undeveloped land from as early as 1898 through 1963. By 1977, the site was developed with the existing building and has remained relatively unchanged through the present.

The surrounding properties consisted of undeveloped scrubland from as early as 1898 through 1963. By 1977 the Brea Mall building located to the northeast of the site and associated parking lots to the southeast and southwest of the site were developed. Surrounding properties have remained relatively unchanged, with the exception of additions to the existing Brea Mall in the late 1980s and early 1990s. Indications or RECs were not identified with the adjoining properties.

4.0 RECORDS REVIEW

Regulatory database information was provided by EDR, a contract information services company. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated, and the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate site boundaries. Database definition, descriptions, and the database search report are included in Appendix D.

Federal and State Databases

Database	Description	Radius (miles)	Listings
Federal			
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.	1.0	0
NPL (Delisted)	The NPL (Delisted) refers to facilities that have been removed from the NPL.	0.5	0
CERCLIS	The CERCLIS database is a compilation of facilities which the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances pursuant to the CERCLA of 1980.	0.5	0
CERCLIS/ NFRAP	CERCLIS/NFRAP refers to facilities that have been removed and archived from EPA's inventory of CERCLA sites.	0.5	1
RCRA CORRACTS/ TSD	The EPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous waste that are undergoing "corrective action." A "corrective action" order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.	1.0	0
RCRA Non- CORRACTS/ TSD	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.	0.5	0
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.	0.1	2
IC / EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as	Site	0

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

Database	Description	Radius (miles)	Listings
	groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.		
ERNS	The Emergency Response Notification System (ERNS) is a listing compiled by the EPA on reported releases of petroleum and hazardous substances to the air, soil and/or water.	Site	0
State/Tribal			
RESPONSE	State Response Sites – Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.	1.0	0
ENVIORSTOR	The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.	0.5	6
CHMIRS	California Hazardous Material Incident Report System California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).	Site	0
SWF / LF	State and/or Tribal database of solid waste facilities located within California. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.	0.5	0
LUST	State and/or Tribal database of leaking underground storage tanks in state of California.	0.5	12
SLIC	The SLIC (Spills, Leaks, Investigations and Cleanup) program is designed to protect and restore water quality from spills, leaks, and similar discharges.	0.5	0

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

HISTUST	Hazardous Substance Storage Container Database The Hazardous Substance Storage Container Database is a historical listing of UST sites.	0.25	5
SWEEPS	Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and Maintained by a company contacted by the SWRCB in the early 1990's.	0.25	2
UST/AST	State and/or Tribal database of registered storage tanks in the State of California which may include the owner and location of the tanks.	0.25	5
DRYCLEANERS	A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry-cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services.	0.25	3
IC/EC	State and/or Tribal equivalent to the Federal IC / EC database list.	Site	0
SWRCY	A listing of recycling facilities in California.	0.5	0
VCP	State and/or Tribal facilities included as Voluntary Cleanup Program sites.	0.5	0
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.	0.5	0
HAZNET	The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 – 1,000,000 annually, representing approximately 350,000 – 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.	Site	1
EDR Historical Auto Station	EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.	0.25	5
EDR Historical Cleaners	EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in	0.25	3

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

	EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.		
--	--	--	--

In addition to the above ASTM-required listings, Terracon reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report included in Appendix D.

The site was not identified in the regulatory database review. The following table summarizes the information provided by the database and/or gathered by this office for identified facilities. Facilities are listed in order of proximity to the site. Additional discussion for selected facilities follows the summary table.

Listed Facilities

Facility Name And Location	Estimated Distance/Direction/Gradient	Database Listings
Sears #1638/6458/835	Site	FINDS
Sears Brea		RCRA-SQG
Sears Roebuck and Co. #1638 100 Brea Mall		EDR Hist Auto Stations, UST, HIST UST, HAZNET
California Cleaners 1027 E Imperial Highway	550 feet / Southwest / Down-gradient	DRYCLEANERS, RCRA-SQG
Wild West Cleaners 1080 E. Imperial Highway	900 feet / Southwest / Down-gradient	Orange County Industrial Site, DRYCCLEANERS, EDR Hist Cleaners.

Sears Roebuck and Co. #1638

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was not identified in the regulatory databases. The site was identified in the regulatory databases. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS), Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing (HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and

2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of reported violations or release were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and /or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetrafluoroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repairing center since 1977 through the present.

A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. The historical UST was reportedly removed in 1988, and as discussed in Section 3.9. Evidence of subsurface impact associated with the historical UST was not identified. The 500-gallon waste oil UST does not represent a REC in connection with the site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the site. The report listed 20 facilities in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this assessment; however, none of these facilities were identified as the site or adjacent properties. These facilities are listed in the database report in Appendix D.

4.2 Local Agency Inquiries

4.2.1 Health Department/Environmental Division

The Orange County Department of Environmental Health (OCDEH) was contacted by fax regarding environmental records or information indicating environmental concerns for the site. At this time, a response from the agency is not available.

4.2.2 The City of Brea Fire Department

The City of Brea Fire Department (BFD) was contacted by fax via the City of Brea's City Clerk's Office. Please refer to client-provided information discussed in Section 4.1 for review of available records.

4.2.3 Department of Toxic Substances Control

The Department of Toxic Substances Control (DTSC) was contacted by e-mail regarding environmental records for the site. On October 22, 2014, an electronic response from the DTSC indicated that no records available for the site; however, the DTSC response indicated the site was identified in the Generator Information Services Section. This information was previously discussed in Section 4.1.

4.2.4 South Coast Air Quality Management District (SCAQMD)

Terracon contacted the SCAQMD via the Facility Information Detail (FIND) online database regarding environmental information or information indicating environmental concerns for the site. A review of available records indicated the site is operation under an active permit to operate an emergency generator powered by natural gas. In addition, an inactive permit for CFC-12 recovery/recycling was identified in the FIND database. Outstanding compliance violations were not identified for the site.

4.2.5 Local/Regional Water Quality Agency

The Santa Ana Regional Water Quality Control Board was contacted by e-mail regarding environmental records for the site. On October 17, 2014, Terracon received a response from the agency indicating no records were available for the site.

4.2.6 The department of Conservation, Division of Oil, Gas & Geothermal Resources

Terracon completed a cursory review of records available at the Department of Conservation Division of Oil, Gas & Geothermal Resources (DOC – DOGGR) for the site. Based on a review of the DOC-DOGGR mapping system, oil wells were not identified to be located on the site.

4.3 Records Review Summary

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was identified in the regulatory databases. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS), Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing (HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and 2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of reported violations or release

were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and /or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetraflouroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repairing center since 1977 through the present. A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. The historical UST was reportedly removed in 1988, and as discussed in Section 3.9. Evidence of subsurface impact associated with the historical UST was not identified. The 500-gallon waste oil UST does not represent a REC in connection with the site. The remaining identified facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, anticipated depth to groundwater within the site vicinity (approximately 90 feet bgs) and/or distance from the site.

5.0 SITE RECONNAISSANCE

5.1 General Site Information

Information contained in this section is based on a visual reconnaissance conducted while walking through the site and the accessible interior areas of structures, if any, located on the site. Exhibit 2 in Appendix A is a Site Diagram of the site. Photo documentation of the site at the time of the visual reconnaissance is provided in Appendix E. Credentials of the individuals planning and conducting the site visit are included in Appendix F.

General Site Information

Site Reconnaissance	
Field Personnel	Chandel L. Davis
Reconnaissance Date	September 30, 2014
Weather Conditions	Sunny, 85° F
Site Contact/Title	Mr. Jonathan Garcia / Building Technician

Building Description				
Building Identification	Building Use	Approx. Construction Date	Number of Stories	Approx. Size (ft²)
Sears Store #1638	Retail	1977	2	160,000
Sears Auto Center #6458	Automotive maintenance	1977	1	9,000
Site Utilities				
Drinking Water	City of Brea			
Wastewater	City of Brea			
Natural Gas	Southern California Gas Company			
Electricity	Southern California Edison			

5.2 Overview of Current Site Occupants and Operations

The site is located at 100 Brea Mall, Brea, Orange County, California and consists of two one to two story retail and automotive center buildings totaling approximately 169,000-square-foot (SF). At the time of the site reconnaissance, the site was occupied by Sears, Sears Optical, Sear Automotive Center, Sears's Key Service, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. On-site operations include general automotive parts sales, service and maintenance, and typical household merchandise retail.

5.3 Site Observations

The following table summarizes site observations and interviews. Affirmative responses (designated by an "X") are discussed in more detail following the table.

Site Characteristics

Category	Item or Feature	Observed or Otherwise Identified
Site Operations, Processes, and Equipment	Emergency generators	X
	Elevators	X
	Air compressors	X
	Hydraulic lifts	X
	Dry cleaning	
	Photo processing	
	Ventilation hoods and/or incinerators	
	Waste treatment systems and/or water treatment systems	

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

Category	Item or Feature	Observed or Otherwise Identified
	Heating and/or cooling systems	
	Other processes or equipment	X
Aboveground Chemical or Waste Storage	Aboveground storage tanks	X
	Drums, barrels and/or containers \geq 5 gallons	X
	MSDS	X
Underground Chemical or Waste Storage, Drainage or Collection Systems	Underground storage tanks or ancillary UST equipment	
	Sumps, cisterns, catch basins and/or dry wells	
	Grease traps	
	Septic tanks and/or leach fields	
	Oil/water separators	X
	Pipeline markers	
	Interior floor drains	X
Electrical Transformers/PCBs	Transformers and/or capacitors	X
	Other equipment	
Releases or Potential Releases	Stressed vegetation	
	Stained soil	
	Stained pavement or similar surface	
	Leachate and/or waste seeps	
	Trash, debris and/or other waste materials	X
	Dumping or disposal areas	
	Construction/demolition debris and/or dumped fill dirt	
	Surface water discoloration, odor, sheen, and/or free floating product	
	Strong, pungent or noxious odors	
	Exterior pipe discharges and/or other effluent discharges	
Other Notable Site Features	Surface water bodies	
	Quarries or pits	
	Wells	

Site Operations, Processes, and Equipment

Emergency generators

One emergency generator was observed during the site reconnaissance. The generator was located in a central portion on the roof. The generator was fueled by natural gas. Surficial staining or releases were not observed on the concrete or in the vicinity of the emergency generator at the time of the visual reconnaissance. Based on site observations, the emergency generator does not appear to constitute a REC in connection with the site.

Elevators

Two hydraulic elevators were observed on the site. A freight elevator was observed near the loading dock on the north side of the site, and a passenger elevator was observed on the southeastern side of the site. The mechanical and hydraulic equipment for the elevators are located in rooms adjacent to the elevators on the first floor. According to Mr. Garcia, the elevator system is serviced by Schindler every couple months, and on an as needed basis. Mr. Garcia was not in possession of a key to the elevator equipment rooms. Mr. Garcia called a store manager to try and obtain a key to the equipment rooms, however the manager did not have a key either. Due to the absence of a key for the elevator equipment rooms, the base of the hydraulic equipment was not observed. Mr. Garcia was not aware of any maintenance or issues related to the elevators. Based on site observations and the interview with Mr. Garcia, the two elevators do not constitute a REC.

Air compressors

Four air compressors were observed on site. One compressor was located in the main retail building in the parts and service center, and the other three were located in the automotive repair center. One of the air compressors in the automotive service center was a small portable compressor. All three air compressors were located on concrete, and the air compressor in the main retail building has wood between the compressor and the concrete floor. Staining was observed beneath the two large air compressors located in the automotive building at the time of the site reconnaissance; however, absorbent was not observed. The staining appeared to be of *de minimis* status and does not appear to constitute a REC for the site at this time.

Hydraulic lifts

Five in-ground hydraulic lift units were observed during the site reconnaissance. The lifts were located in the automotive service center. Based on TPH concentrations reported for a lift unit removed in 2007 (Section 3.9, the in-ground hydraulic lift units appear to constitute an REC in connection with the site.

Five above-ground hydraulic lift units were observed during the site reconnaissance within the automotive center service area. No subsurface components appeared to be associated with these lift units. No evidence of hydraulic fluid releases were observed from the lifts at the time

of the site visit. Based on site observations and absence of subsurface components, the above ground hydraulic lift units do not appear to constitute an REC to the site.

Other processes or equipment

One cardboard baler was observed on the northwest side of the site near the loading dock. The cardboard baler was located concrete flooring that seemed to be in good condition with no cracks. Surficial staining or releases were not observed on the concrete, or in the vicinity of the cardboard baler, at the time of the visual reconnaissance. Based on site observations, the cardboard baler does not appear to constitute a REC in connection with the site.

Aboveground Chemical or Waste Storage

Aboveground storage tanks

Two ASTs were observed on the site during the site reconnaissance. One approximately 120-gallon AST used for storing new oil was observed on the north side of the automotive service center. The AST was located on concrete pavement that appeared to be in good condition. No evidence of staining and/or releases was observed in the vicinity of the AST during site reconnaissance. One approximately 220-gallon AST used for storing used anti-freeze was observed on the north side of the automotive service center. The AST was located on concrete that appeared to be in good condition. Evidence of *de minimis* staining was observed in the vicinity of the AST. Based on site observations and pavement conditions, the *de minimis* staining does not appear to constitute a REC in connection with the site at this time.

Drums, barrels, and/or containers ≥ 5 gallons

The following containers were observed during the site reconnaissance:

Approximate Quantity	Capacity	Contents	Location
3	5-gallon	Floor stripper	Janitorial supply
3	5-gallon	Used dry cell batteries	Hazardous materials storage area
5	5-gallon	Paint	Maintenance room/automotive service
1	55-gallon	Latex paint	Hazardous waste storage area
4	55-gallon	Hazardous waste storage	Hazardous waste storage area
3	45-gallon	Hazardous waste storage	Hazardous waste storage area
1	5-gallon	Floor finish	Janitorial supply closet
4	5-gallon	Hazardous materials spill kit	Hazardous materials storage area/automotive service
1	5-gallon	Apparently empty	Janitorial closet

Phase I Environmental Site Assessment

Sears Store # 1638/6458 ■ Brea, CA

October 27, 2014 ■ Terracon Project No. 60149256.1638/6458

2	55-gallon	Degreaser	Automotive service center
6	55-gallon	New oil	Automotive service center
1	One cubic yard	Oil filters and oil waste	Automotive service center
1	10-gallon	Spill kit	Automotive service center
1	55-gallon	Oil waste	Automotive service center
2	5-gallon	Oily rags waste	Automotive service center
3	35-gallon	Oil waste	Automotive service center
2	5-gallon	Brake fluid	Automotive service center
1	55-gallon	Scrap metal	Automotive service center
3	35-gallon	Wheel weights	Automotive service center
3	55-gallon	Used oil	Automotive service center
2	35-gallon	Used oil/ gas storage	Hazardous materials storage area/ parts and service center main retail building
1	5-gallon	Lubricant	Automotive service center
1	10-gallon	Apparently empty	Automotive service center

The used gas and oil containers in the parts and service center in the main retail building were stored on a wood slab on top of concrete. The six new oil 55-gallon drums were located on wood pallets on top of concrete. One 5-gallon floor stripper was located on tile flooring. One 5-gallon used battery storage containers and the three 45-gallon hazardous materials storage containers were located on wood shelving approximately 4 feet off the ground. All of the other containers were stored on concrete flooring. Staining and/or releases were not observed during the site reconnaissance. Based on site observations, RECs were not identified.

MSDS

Material Safety Data Sheets were observed in the service and parts center in the main retail building, and in the automotive repair center during the visual reconnaissance. Matching of MSDS to the chemical storage observed on site was not performed as part of the scope of services.

Underground Chemical or Waste Storage, Drainage or Collection Systems

Oil/water separators

One four stage oil/water separator was observed to the west of the automotive service center during the site reconnaissance. The oil/water separator date of construction is unknown, but is believed to have been installed in approximately 1977 during the construction of the automotive repair center. According to Mr. Garcia, the oil/water separator is used primarily for the automotive center operations. The oil/water separator receives automotive waste fluid from on-site operations and discharges it to the municipal sewer system. The condition of the tank and the current amount of product in the tank are unknown. The maintenance record of the oil/water separator was unavailable. Evidence of staining or surface releases was not observed in the vicinity of the oil/water separator at the time of the site reconnaissance. Based on the age of the oil/water separator and the absence of maintenance records, the oil water separator represents a REC in connection with the site.

Interior floor drains

Interior floor drains were observed at the following site locations: restrooms, janitorial supply, and the automotive service center. Staining and/or releases to the floor drains was not observed during the site reconnaissance. Potentially hazardous materials did not appear to be stored in the vicinity of the floor drains. Based on site observations, RECs were not identified.

Electrical Transformers/ PCBs

Transformers and/or capacitors

During Terracon's site visit, three pad-mounted transformer, owned and serviced by Southern California Edison (SCE) were observed on the site. No information with regard to PCB content of the transformer fluids was observed. Transformers contain mineral oil which may contain minor amounts of PCB and could be considered "PCB contaminated" (PCB content of 50-500 ppm).

SCE maintains responsibility for the transformers, and if the transformers were "PCB contaminated," the utility company is not required to replace the transformer fluids until a release is identified. However, no evidence of current or prior release was observed in the vicinity of the electrical equipment during the site reconnaissance. Based on site observations, RECs were not identified.

Releases or Potential Releases

Trash, debris and/or other waste materials

Trash and debris were observed near the trash compactor during the site reconnaissance. Based on visual observation (only of surface materials), approximately one half cubic yard of debris, which consisted of paper, cardboard, metal, wood, and plastic was observed. Leakage,

spills or other releases from these materials were not observed during the visual reconnaissance. The debris materials did not appear to be hazardous in nature.

One approximately 15-cubic-foot solid waste disposal dumpster, serviced by Oak Leaf was observed on the northeast portion of the site near the automotive service center. Staining or noxious odors was not observed in the vicinity of the on-site dumpster.

One solid waste disposal compactor was observed on the northeast side of the site. The solid waste compactor is hydraulically operated and surficial staining was not observed on the paved surface beneath the hydraulic reservoir.

Based on site observations, the trash/ debris, solid waste dumpster, and solid waste compactor do not appear to constitute a REC in connection with the site at this time.

5.4 Site Reconnaissance Summary

One emergency generator, two hydraulic elevators, four air compressors, one solid waste compactor, one cardboard baler, two ASTs, multiple containers ranging in size from 1- to 55-gallon, two MSDSs, multiple interior floor drains, three pad-mounted transformers, one solid waste dumpster and baler were observed on site. Based on site reconnaissance, RECs were not identified associated with the aforementioned features.

Based on site reconnaissance, RECs were identified associated with the current site operations and include:

- Five in-ground hydraulic lift units were observed during the site reconnaissance. The lifts were located in the automotive service center. Based on the evidence of TPH concentrations reported for a lift unit removed in 2007 (Section 3.9), the in-ground hydraulic lift units appear to constitute an REC in connection with the site.
- One four stage oil/water separator was observed to the west of the automotive service center building during the site reconnaissance. The oil/water separator date of construction is unknown, but is believed to have been installed in approximately 1977 during the construction of the automotive repair center. Based on the age of the oil/water separator and the absence of maintenance records, the oil water separator represents a REC in connection with the site.

6.0 ADJOINING PROPERTY RECONNAISSANCE

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

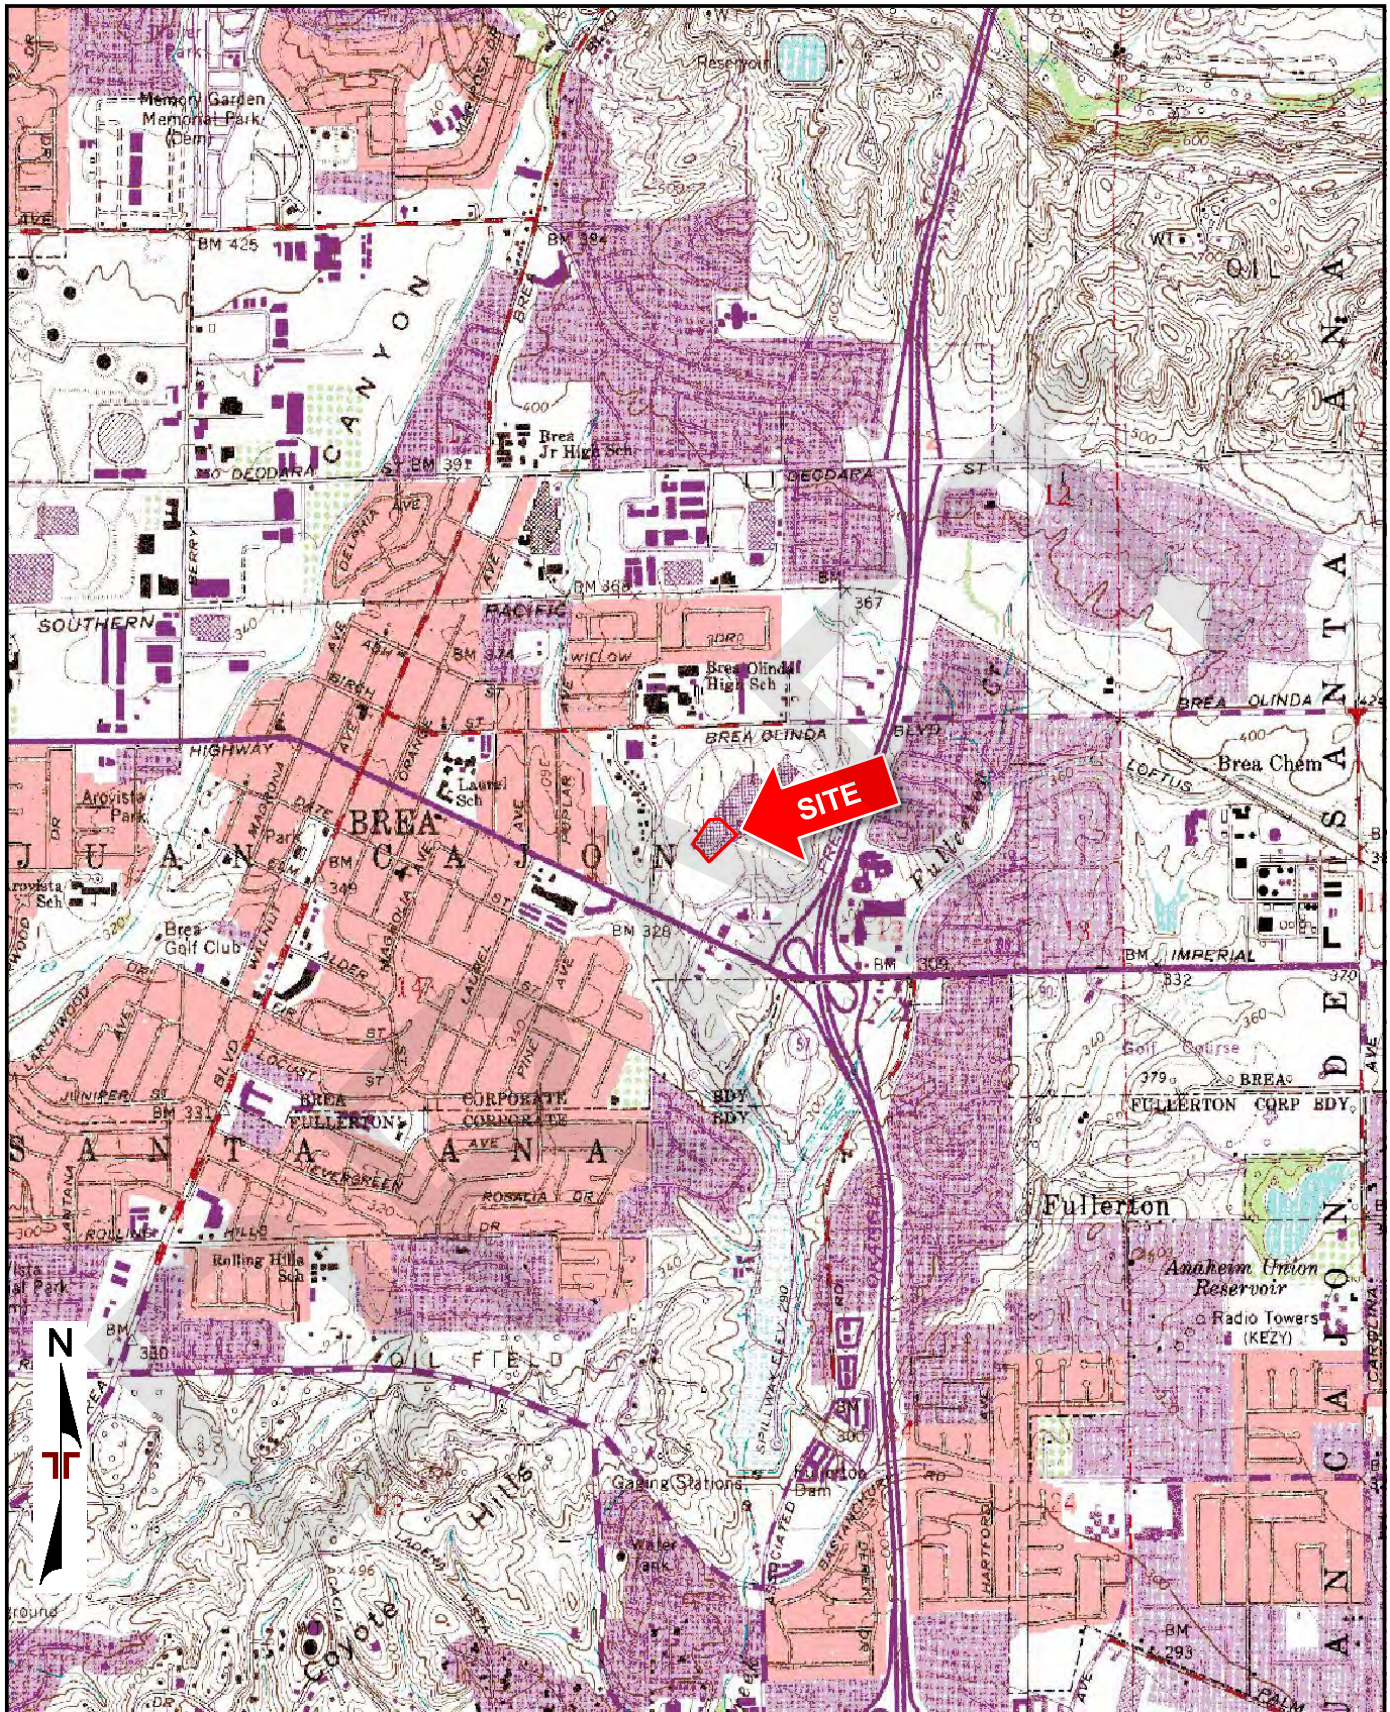

Direction	Description
North	The properties to the adjacent north consist of an asphalt-paved parking lot, the Brea shopping mall (1065 Brea Mall), and a four story parking garage and Image Auto Detailing (503 Brea Mall).
East	The properties to the adjacent east consist of an asphalt-paved parking lot and Brea shopping mall (1065 Brea Mall) to the northeast.
South	The properties to the adjacent south consist of an asphalt-paved parking lot followed by East Imperial Highway.
West	The properties to the adjacent west consist of an asphalt-paved parking lot followed by South Randolph Avenue.

Indications of RECs were not observed with the adjoining properties.

7.0 DECLARATION

I, Islam (Sami) R. Noaman E.I.T., declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312

APPENDIX B
DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	<p>Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining).</p> <p>Regulatory agencies have generally defined ACM as a material containing greater than one (1) percent asbestos, however some states (e.g. California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable.</p> <p>Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.</p>
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally exempt small quantity generators.
CFR	Code of Federal Regulations

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
CREC	Controlled Recognized Environmental Condition is defined in ASTM E 1527-13 as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.”
DOT	U.S. Department of Transportation
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a “solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.”
HREC	Historical Recognized Environmental Condition is defined in ASTM E 1527-13 as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”
ILP	Innocent Landowner/Operator Program
LQG	Large quantity generators.
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.
pCi/L	Pico Curies per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in Pico Curies per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ("cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA generators list is part of the RCRIS database maintained by EPA and lists facilities that generate hazardous waste as part of their normal business operations, as more particularly defined under Section 4.1 of this report.
RCRA CORRACTS/TS Ds	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/TS Ds	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-13 as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. <i>De minimis</i> conditions are not recognized environmental conditions."
SCL	State "CERCLIS" List (see SPL /State Priority List, below).

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	National Priorities List, as more particularly described under the Records Review section of this report.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.
SPL	State Priority List. State list of confirmed sites having contamination in which the state is actively involved in clean up activities or is actively pursuing potentially responsible parties for clean up. Sometimes referred to as a State "CERCLIS" List.
SQG	Small quantity generator.
SWF	Solid Waste Facility
TPH	Total Petroleum Hydrocarbons
TRI	Toxic Release Inventory. Routine EPA report on releases of toxic chemicals to the environment based upon information submitted by entities subject to reporting under the Emergency Planning and Community Right to Know Act.
TSCA	Toxic Substances Control Act. A federal law regulating manufacture, import, processing and distribution of chemical substances not specifically regulated by other federal laws (such as asbestos, PCBs, lead-based paint and radon). 15 U.S.C 2601 et seq.
USACE	United States Army Corps of Engineers
USC	United States Code
USGS	United States Geological Survey
USNRCS	United States Department of Agriculture-Natural Resource Conservation Service
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-13, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound

Term/Acronym	Description
Wetlands	<p>Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The Corps of Engineers Wetlands Delineation Manual (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present.</p> <p>The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.</p>

APPENDIX C
HISTORICAL DOCUMENTATION AND USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Relief and Brownfields Revitalization Act of 2001, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Failure to provide responses may result in significant data gaps, which may limit our ability to identify recognized environmental conditions. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of their actual knowledge.

Site Name: Sears Holding Company Phase I ESA(s)

Site Address: Multiple Sites as noted in Terracon proposal A2140020 dated September 9, 2014

1) Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state or local law (40 CFR 312.25)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

2) Are you aware of any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and / or have been filed or recorded in a registry under federal, tribal, state or local law (40 CFR 312.26)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

3) As the user of this ESA, do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312.28)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

4) Does the purchase price being paid for this site reasonably reflect the fair market value of the site? If no, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site (40 CFR 312.29)? ☐ No ☐ Yes If yes, please explain.

Not applicable

5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

6.) As the user of this ESA, based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence of likely presence of contamination at the site (40 CFR 312.31)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

Request for Information and Documentation

In addition to the specific questions outlined above, the User is requested to provide the following information and documentation, as available. ASTM requires that this information be provided to the Environmental Professional prior to the site visit.

EDR Inquiry # 4071150.3

Contact: Sami Noaman

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Limited Permission To Make Copies

Terracon (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. Research Summary for City Directory Abstract

Site Location:
100 Brea Mall
Brea, CA

HIG Project #:
148383

Date Completed:
10/2/2014

Historical
Information
Gatherers

Conducted For:
Terracon Consultants, Inc.
Sacramento, CA

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title.

DRAFT

Research Summary for City Directory Abstract

Site Location:
100 Brea Mall
Brea, CA

HIG Project #:
148383
Date Completed:
10/2/2014

Historical
Information
Gatherers

Conducted For:
Terracon Consultants, Inc.
Sacramento, CA

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.
600 XXXX = Correct address only. No other information.
X Streetname = intersecting cross street

Publication year, publisher and title.

2011 Haines North Orange County
2006 Haines North Orange County
2002 Haines North Orange County

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Primary Waste: CNWTRS
Waste Type2: Not reported
Waste2: Contaminated Ground Water
Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014
Number of Days to Update: 78

Source: EPA
Telephone: N/A
Last EDR Contact: 07/08/2014
Next Scheduled EDR Contact: 10/20/2014
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014

Source: EPA
Telephone: N/A
Last EDR Contact: 07/08/2014
Next Scheduled EDR Contact: 10/20/2014
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

East Map:	33117-H7 YORBA LINDA, CA
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

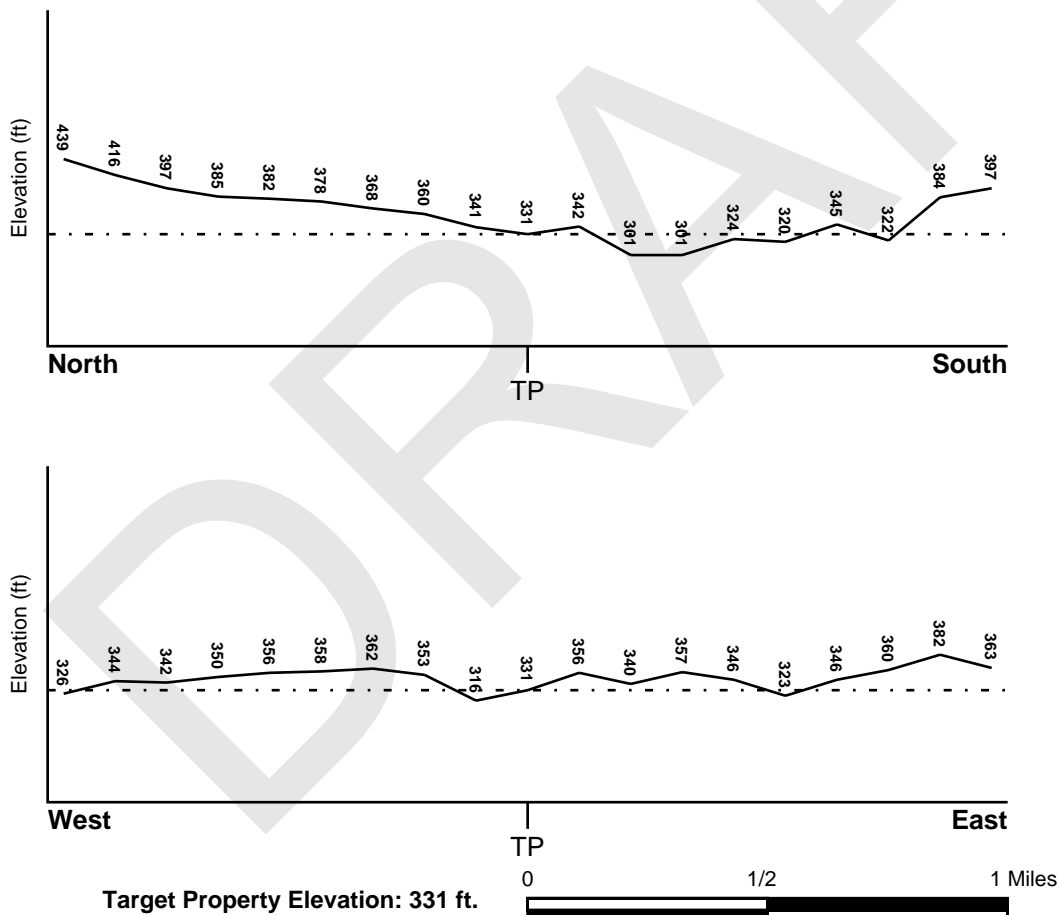

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
ORANGE, CA

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06059C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
LA HABRA

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/2 - 1 Mile North	S, SE
A2	1/2 - 1 Mile WNW	W
4	1/2 - 1 Mile WNW	S
A5	1/2 - 1 Mile WNW	Not Reported
6	1/2 - 1 Mile WSW	NE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MYFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6 Min: 5.1
2	11 inches	18 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6
3	18 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

CREDENTIALS**

CHANDEL DAVIS

STAFF ENVIRONMENTAL SCIENTIST

PROFESSIONAL EXPERIENCE

Ms. Davis is a staff environmental scientist in Terracon's Orange County, California office. Ms. Davis has a master's degree in environmental science and currently works on Phase I Environmental Site Assessments (ESAs) at Terracon. She has conducted site assessments on vacant land, office, retail, warehouse, industrial, automotive, and telecommunications sites. She also prepares ESA reports by researching city directories, agency records, topographic maps, and aerial photographs.

PROJECT EXPERIENCE

Undeveloped/Vacant land - California

Performed Environmental Site Assessment on multiple undeveloped /vacant properties.

Office Buildings - California

Performed Environmental Site Assessment on multiple office properties.

Retail Buildings - California

Performed Environmental Site Assessment on multiple retail properties.

Warehouse Buildings – California

Performed Environmental Site Assessment on multiple warehouse properties.

Industrial Buildings – California

Performed Environmental Site Assessments on multiple industrial properties.

Telecommunications Sites – California

Performed Environmental Site Assessments on multiple properties proposed for telecommunications installations.

ISLAM (SAMI) R. NOAMAN, E.I.T.

SENIOR PROJECT MANAGER

Professional Experience

Mr. Noaman is a Senior Project Manager in Terracon's Orange County, California office. He has over 11 years experience in environmental services including Phase I Environmental Site Assessments (ESAs), Limited Site Investigations (LSIs), and Remedial Investigations (RIs). He has conducted over 200 site assessments on vacant tracts, retail centers, multi-family housing, downtown properties, office buildings, industrial properties, and landfill sites. He prepares environmental site assessment and environmental site investigation reports. Mr.Noaman is also proficient in interaction and coordination with local, state, and federal regulatory agencies.

Phase I ESA 1527-05/13

Managed over two hundred Phase I ESAs based on the ASTM E1527-05/13 AAI standards. Management of tasks including proposal preparation, client interaction, site reconnaissance, and assigning research tasks to staff professionals. Mr. Noaman has participated in development of findings, conclusions, and recommendations throughout the ESA. Project experience includes industrial properties, mid- and high-rise office buildings, natural resources sites, multi-family residential properties, services stations, shopping centers, landfills, and dry cleaners. The following are examples of specific projects:

Phase I ESA Portfolios

Mr. Noaman has managed several ESA Portfolios including 10 water processing facilities, 12 commercial and retail properties, 30 telecommunication tower sites, and eight grocery store sites in Southern California.

Phase II Environmental Site Assessment

Mr. Noaman managed multiple Limited Site Investigations and Comprehensive Phase II ESA projects including dry-cleaning properties, auto repairing facilities, gasoline stations, and multiple industrial facilities. Mr. Noaman possesses extensive experience in data evaluation and validation.

LA Housing Partnership, 622-628 S. Alvarado St. LA

Prepared a Phase I ESA of a mixed retail and residential apartment building. The Phase I ESA recommended further investigation to evaluate dry cleaning operations. Multiple Soil Vapor Investigations of former dry cleaning operations were conducted subsequent to the ESA.

Education

Gutierrez Financial-multiple locations, Los Angeles, CA

Mr. Noaman managed this project which consisted of removal of two 10,000-gallon, two 4,000-gallon, two 2,000-gallon, and one 550-gallon gasoline/diesel/waste oil USTs. Responsibilities associated with this project included coordination/interaction with client, contractors, and regulators, field activities, data evaluation, and report evaluation. A No Further Action status was obtained for the client.

Los Angeles Unified School District (LAUSD Sites)

Managed soil certification and soil characterization projects for export/import soils for over nine Los Angeles Unified School District (LAUSD) school sites. Responsibilities were to prepare Sample Strategy Plans (SSP), implementation of sampling strategies proposed, preparation of soil certification reports, and submittal of reports to the LAUSD Office of Environmental Health (OEHS).

Stormwater Prevention and Pollution Control Plan (SWPPP)

Mr. Noaman has managed six freight facility SWPPP projects in Southern California. Mr. Noaman responsibilities include client and agency interaction, implementation of guidelines required by the state of California Water Resources Board, and preparation of required documents/reports.

Newton Plastics, Newton, NJ

Responsibilities were to manage the removal of two 12,000-gallon tanks containing solvents and gasoline. Phase II environmental site assessment at a plastic container manufacturing company. Mr. Noaman managed and assisted in report preparation, field activities, data evaluation, client and agency interactions, and report preparation. A No Further Action letter from the New Jersey Department of Environmental Protection (NJDEP) was obtained for the client.

Eagle Electric, NYC, NY

Responsibilities were to manage the clean-up of a former coal storage facility located in the basement of a landmark building in NYC. The clean-up activities included the removal of 412 tons of HAZMAT, management and safety supervision of multi-person crew, coordination for hazmat transportation and disposal, and client contact.

AROL Chemicals, Newark, NJ

Responsibilities were to complete a Phase I ESA on the subject site. The follow up Phase II included the removal of three 12,000-gallon USTs from a chemical plant and soil clean-up by excavation and disposal. Managed all client/contractors communications and scheduling.

Goblin Lighting, Staten Island, NY

Supervised the removal of five 500-gallon gasoline and one 1,100-gallon waste oil USTs and the clean-up of approximately 453 tons of gasoline contaminated soils. Communicated with the client, contractors, and disposal facilities (transfer station) and ensured the implementation of a Health and Safety Plan put in place for the project.

KeySpan Energy, NY

Mr. Noaman Managed the KeySpan project, which consisted of evaluation of boilers and above-ground tank systems and implementation of methods to prevent excessive scaling within these systems. Objectives were achieved by the development of a pH-controlled chemical reagent that was utilized by the client on a regular basis.

Hach Company, OH

Mr. Noaman played an important role in research and development of mass production of Ferrozone, an iron reagent used for determining trace levels of iron in chemical reagents and glycols. Ferrozone can also be used to analyze samples containing magnetite (black iron oxide) or ferrites.

KIWA of the Netherlands

Research and development associated with new synthetic methods to produce alkali Ferrates including potassium, sodium, and barium ferrates. Alkali ferrates are considered environmentally friendly oxidative reagents, used in wastewater treatment for municipal and industrial facilities.

DRAFT

CARL A. PARTEN

OFFICE MANAGER

PROFESSIONAL EXPERIENCE

Mr. Parten has over twenty-two years of experience in environmental site investigations and remediation studies for Industrial and Hazardous Waste sites, municipal solid waste landfill sites and underground storage tank (UST) facilities. He was the Risk Assessment and Corrective Action Manager for Terracon's Dallas office before taking over the Orange County location as Office Manager.

He has successfully managed and obtained regulatory closure of over 30 Voluntary Cleanup Program (VCP) sites and leaking underground storage tank (LUST) facilities, and coordinated UST removal and closure for numerous facilities in multiple states throughout the United States. Mr. Parten possesses extensive experience in the installation of monitor wells, aquifer characterization, sensitive receptor surveys, and risk-based assessments. Additionally, he has extensive experience in comprehensive soil and groundwater investigations on industrial facilities and municipal solid waste (MSW) landfill facilities, including evaluation of landfill gas/methane impacts. He has prepared and implemented corrective action work plans for remediation of chlorinated hydrocarbons at dry cleaner facilities and petroleum hydrocarbons at LUST facilities, MSW landfill facilities, and managed and implemented groundwater pump and treat, non-aqueous phase liquid (NAPL) recovery, and dual-phase vapor extraction systems for the recovery of petroleum hydrocarbons. Additionally, Mr. Parten developed work plans and implemented the remediation of heavy metals and poly-nuclear aromatic hydrocarbons (PAHs).

PROJECT EXPERIENCE

Municipal Landfill – VCP Site

Successfully oversaw and managed the engineering design and construction quality assurance for the closure and restoration of a high-profile MSW landfill in accordance with regulatory standards, subsequent to significant investigation activities. The remedy consisted of removal and consolidation of wastes and construction of LFG recovery trenches to prevent migration of landfill gas. The remedy utilized engineering controls and removal of impacted media. Project management responsibilities included coordination with Local, State and Federal officials, public/neighborhood communications, and interaction with attorneys, and management of project budgets that exceeded \$4.5 million over seven years. Terracon continues to provide post closure care monitoring and O&M for the site.

Department of Transportation Contract

Successfully managed a two-year environmental services contract with the Texas Department of Transportation (TxDOT) and coordinated multiple Terracon offices to provide geographic coverage of environmental consulting service throughout Texas. Mr. Parten was the liaison to TxDOT for the performance of environmental consulting services, and provided senior technical review of environmental investigations, Phase I ESAs,

Education

Work History

Terracon Consultants, Inc. (Irvine), Principal, Office Manager, August FJJl to Present

ATC (formerly ATEC) Associates, Inc. - Dallas, Texas, Senior Project Manager April 1990 to August 1998

Terratech, Inc. - San Jose, California, Environmental and Geotechnical Technician February 1989 to March 1990

Woodward-Clyde Consultants - San Jose, California, Environmental and Geotechnical Technician March 1987 to February 1989

removal of underground storage tanks, remediation of affected media and waste management, asbestos and lead-based paint investigations, and management of financial metrics and budgets in strict conformance with negotiated fees and procedures under a \$2,000,000 contract.

City-Operated LUST Facilities

Provided senior project management of 14 City operated LUST facilities through coordination of investigation, regulatory reporting and response actions in the pursuit of closure. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

Municipal Property

Provided senior project management and technical review of several properties, including the remediation of metals and PAH-impacted soils, using a combination of excavation and removal and in-place stabilization. Work was performed under the EPA Brownfields Program and the Voluntary Cleanup Program. The \$1.2 million dollar remediation project was part of a high-profile downtown parks and recreation redevelopment project that successfully established LEED Certified public parks in areas once occupied by commercial and industrial property. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

3.023-Acre Tract – VCP Site

Successfully managed a Phase I ESA and subsequent comprehensive site investigation to evaluate historical site activities and non-native fill material. Chemicals of concern included VOCs, TPH, metals and PAHs in on-site soil and groundwater. Subsequent to completion of a risk-based assessment, response actions including remediation of approximately 1,500 cubic yards of impacted soils was performed to obtain a voluntary cleanup program Certificate of Completion. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, and communication with state officials.

Retail Shopping Center – VCP Site

Conducted extensive site investigation activities to evaluate the magnitude and extent of chlorinated solvents identified in the vicinity of a former dry cleaners facility. The chlorinated solvent plume was defined to drinking water standards and was delineated to a creek channel nearly 1,200 feet from the source property. Based on site investigation results, assisted the property owner in entering the site into the VCP, and managed and implemented response actions and treatment of affected media utilizing a combination of source-removal/excavation (750 cubic yards) within the building interiors, hydrogen-releasing compound (HRC®) treatment of backfill, and HRC injection into the underlying soil and groundwater across the site. Treatment technology effectively remediated affected soils and significantly reduced contaminant levels within the on-site source areas. Additional response actions were conducted to reduce on-site groundwater contamination levels through HRC injection at over 250 locations. Monitored natural attenuation and groundwater monitoring was performed for a period of approximately four years. Mr. Parten assisted the client in the establishment of a deed restriction (Municipal Setting Designation) that restricted the use of groundwater on the site. Mr. Parten interacted with City and State officials and prepared and submitted multiple reports documenting site activities, and managed a project budget totaling \$1,200,000.

Additional Project Experience

Under the direction and senior technical review by Mr. Parten, final site closure has been obtained for over thirty VCP, Innocent Owner/Operator Program, LUST, and Industrial and Hazardous Waste facilities in multiple states across the United States. Additionally, Mr. Parten has coordinated and managed the removal of dozens of underground storage tank (UST) systems and remediation of contaminated soil and groundwater. Mr. Parten has provided expert testimony on multiple projects, and is a primary point of contact interacting with environmental attorneys and regulatory agencies.

Terracon Project No. 60159016.1638/6458

Dear Mr. Couvreur,

Terracon Consultants, Inc. (Terracon) is pleased to submit our report of Phase II Environmental Site Assessment (Phase II ESA) activities completed at the site referenced above. The report presents data from recent field activities that included the completion of soil borings and the collection of soil samples for chemical analysis. The activities were completed to address the findings of the Phase I Environmental Site Assessment (Phase I ESA) of the property dated October 27, 2014. Terracon conducted the Phase II ESA in general accordance with our proposal (P60150041.33) dated January 28, 2015 and your notice to proceed dated February 13, 2015.

Terracon appreciates this opportunity to provide environmental engineering services to Sears Holdings Management Corporation. Should you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,
Terracon Consultants, Inc.

SEARS STORE #1638/6458
100 BREA MALL
BREA, ORANGE COUNTY, CALIFORNIA

Terracon Project No. 60159016.1638/6458
April 17, 2015

1.0 SITE DESCRIPTION

The site is located at 100 Brea Mall, Brea, Orange County, California and consists of two one to two story retail and automotive center buildings totaling approximately 169,000 square feet (SF). At the time of the site reconnaissance, the site was occupied by Sears, Sears Optical, Sear Automotive Center, Sears's Key Service, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. On-site operations include general automotive parts sales, service and maintenance, and typical household merchandise retail. A Topographic Map showing the site location is included as Exhibit 1 and a Boring Location Diagram is included as Exhibit 2 in Appendix A.

Terracon previously performed a Phase I Environmental Site Assessment (ESA) of the property for Sears Holdings Management Corporation (Terracon Project No. 60149256.1638/6458 report dated October 27, 2014). During the site reconnaissance one emergency generator, two hydraulic elevators, four air compressors, one solid waste compactor, one cardboard baler, two ASTs, multiple containers ranging in size from 1- to 55-gallon, two MSDSs, multiple interior floor drains, three pad-mounted transformers, one solid waste dumpster, a cardboard bailer, five in-ground hydraulic lifts, and one oil/water separator were observed on site.

Based on a review of historical information, the site consisted of undeveloped land from as early as 1898 through 1963. By 1977, the site was developed with the existing building and has remained relatively unchanged through the present.

It should be noted that during the site reconnaissance to evaluate underground utilities and mark proposed boring locations, a sixth hydraulic lift was identified; and therefore, an additional soil boring was added to the scope of work to assess subsurface conditions in the area of the additional lift.

2.0 SCOPE OF SERVICES

Terracon's Phase II ESA was undertaken in response to the results of our Phase I ESA report dated October 27, 2014 (Terracon Project No. 60149324.1638/6458), which identified the following recognized environmental conditions (RECs).

Phase II Environmental Site Assessment Report

Sears Store #1638/6458 ■ Brea, California

April 17, 2015 ■ Terracon Project No. 60159016.1638

- Five in-ground hydraulic lift units were observed during the site reconnaissance. Based on the evidence of TPH concentrations reported for a former lift unit removed in 2007, the current/former in-ground hydraulic lift units constitute an REC in connection with the site. A sixth hydraulic lift was identified during the site visit for the Phase II.
- One four stage oil/water separator was observed to the west of the automotive service center building during the site reconnaissance. The oil/water separator date of construction is believed to have been installed in approximately 1977 during the construction of the automotive repair center. Based on the use of petroleum and halogenated solvents typically associated with automotive operations, and the subsurface nature of the oil/water separator, the oil water separator represents a REC in connection with the site.

The Phase II ESA was conducted to evaluate the presence or absence of indicator contaminants associated with the RECs identified by the Phase I ESA. It should be noted that based on the findings of the Phase I ESA, an evaluation of groundwater (estimated to be at a depth of 90 feet below grade surface) was not performed during this investigation. The scope of services was not intended to identify every chemical possibly associated with the site. Similarly, the proposed scope was not intended to evaluate the extent or magnitude of any existing contamination.

2.1 Standard of Care

Terracon's services were performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time. Terracon makes no warranties, either express or implied, regarding the findings and conclusions. Please note that Terracon does not warrant the work of laboratories, regulatory agencies, or other third parties supplying information used in the preparation of the report. These Phase II ESA services were performed in accordance with the scope of work agreed with you, our client, as reflected in our proposal and were not restricted by ASTM E1903-11.

2.2 Additional Scope Limitations

Findings, and conclusions, resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, nondetectable, or not present during these services. We cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent

conditions beyond those identified during this Phase II ESA. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations, or exploratory services. The data, interpretations, and our findings, are based solely upon data obtained at the time and within the scope of these services.

2.3 Reliance

This report has been prepared for the exclusive use of Sears Holdings Management Corporation (SHMC) and Sears Holdings Subsidiaries and Affiliates, and any authorization for use or reliance by any other party (except a governmental entity having jurisdiction over the site) is prohibited without the express written authorization of Sears Holdings Management Corporation and Terracon. Any unauthorized distribution or reuse is at Sears Holdings Management Corporation sole risk. Notwithstanding the foregoing, reliance by authorized parties will be subject to the terms, conditions, and limitations stated in the proposal, Phase II ESA, and Terracon's Master Environmental Services Agreement with Sears Holdings Management Corporation. The limitation of liability defined in the terms and conditions is the aggregate limit of Terracon's liability to Sears Holdings Management Corporation and all relying parties unless otherwise agreed in writing.

3.0 FIELD INVESTIGATION

Terracon conducted the fieldwork under a safety plan developed for this project. Work was performed using Occupational Safety and Health Administration (OSHA) Level D work attire consisting of hard hats, safety glasses, protective gloves, and protective boots. Prior to drilling activities, the soil boring locations were marked and an Underground Service Alert (Dig Alert Ticket No: A50500403) service was requested by Terracon personnel for clearance of public underground utilities. To further evaluate the presence of underground utilities at the site, a geophysical survey was performed in the vicinity of each boring location where mechanical drilling was to be performed.

Terracon's field activities were conducted on February 25, 2015 by an environmental professional under the supervision of a Principal Geologist with Terracon.

During this investigation, a total of seven (7) soil borings (SB-1 through SB-7) were advanced on-site using a direct-push technology drilling (DPT) rig and hand auger sampling equipment to a maximum depth of approximately 15 feet below ground surface (bgs). The approximate boring locations are presented on Exhibit 2, in Appendix A.

Hydraulic Lifts. Six lift reservoirs are present at the site. Terracon conducted the following scope to evaluate subsurface conditions at the lift locations.

Phase II Environmental Site Assessment Report

Sears Store #1638/6458 ■ Brea, California

April 17, 2015 ■ Terracon Project No. 60159016.1638

- Terracon advanced six soil borings, SB-1 through SB-6, (one near each area of reservoir) to maximum depths of 15 feet bgs. Terracon collected soil samples continuously for observation and field screening, and selected one soil sample from each soil boring for laboratory analysis. In the absence of field indicators of contamination, the soil samples were selected from depths ranging from approximately 3 to 10 feet bgs (highest PID readings) to evaluate surface conditions.

Oil/Water Separator. Based on the absence of subsurface investigation associated with the oil/water separator system and use of petroleum and halogenated solvents, Terracon conducted the following scope to evaluate subsurface conditions at the oil/water separator.

- Terracon advanced one soil boring, SB-7, in the area of the oil/water separator to a depth of 10 feet bgs. Terracon collected soil samples continuously for observation and field screening, and selected one soil sample from the soil boring for laboratory analysis. In the absence of field indicators of contamination, the soil sample was selected from 3 to 5 feet bgs (highest PID readings) to evaluate surface conditions. Groundwater is anticipated at a depth of 90 feet bgs; therefore, an evaluation of groundwater was not performed at this time.

Terracon field screened soil samples for organic vapors using a photoionization detector (PID). This device provides a direct reading in parts per million (ppm) isobutylene equivalents. Upon removal of the sampler from the borehole, Terracon put a portion of each sample in a sealable plastic bag. After a stabilization period, Terracon screened the headspace above the soil using the PID equipped with a 10.2 electron-volt (eV) ultraviolet lamp source. Terracon calibrated the PID in accordance with the manufacturer's recommendations before the field activities. The boring logs include the field screening results for each soil boring. Based on the field screening results, Terracon selected soil samples from each boring for laboratory analysis.

After packaging each sample in laboratory-provided containers, Terracon recorded the sample time on each container label in permanent ink and place the filled containers in an ice-filled cooler for transport to the nearest FedEx location. FedEx then delivered them to Environmental Science Corporation (ESC) in Mt. Juliet, Tennessee, a National Environmental Laboratory Accreditation Program (NELAP)-accredited laboratory, for laboratory analysis on a standard 7-day turnaround.

The samples from the borings were analyzed for Volatile Organic Compounds (VOCs) using United States Environmental Protection Agency (USEPA) Method 8260B and Total Petroleum

Hydrocarbons (TPH) using United States Environmental Protection Agency (USEPA) Method 8015M (see Appendix D for Chain of Custody).

At the completion of field activities, Terracon abandoned the borings with hydrated commercial bentonite sealant. The borings completed in the paved areas were completed to surface level with concrete.

4.0 RESULTS OF THE FIELD INVESTIGATION

4.1 Geology/Hydrogeology

The boring logs in Appendix B detail the observed soil stratigraphy. In general, Terracon encountered material consisting of silty sand and sandy silt below the asphalt and concrete to the boring termination depths of 10 and 15 feet bgs.

4.2 Field Screening

The field screening results are summarized on the boring logs in Appendix B. Elevated readings were not detected in soil collected from the borings.

5.0 ANALYTICAL RESULTS

The laboratory analytical report and chain-of-custody record are attached in Appendix D. The following sections describe the results of the testing.

5.1 Soil Sample Results

The soil samples collected at the site did not exhibit VOCs above the laboratory method detection limits.

The soil samples collected at the site did not exhibit TPH-gasoline (G) range concentrations above the laboratory method detection limits. The soil samples collected from SB-4 and SB-7 exhibited TPH-diesel (D) concentrations ranging from 1.8J mg/Kg to 2.8J mg/Kg TPH-G, and TPH-oil (O) concentrations ranging from 0.47J mg/Kg to 4.7 mg/Kg TPH-O. A "J-value" is an estimated concentration reported between the laboratory method detection limits and the laboratory reporting limits.

The reported TPH concentrations were compared to the Regional Water Quality Control Board (RWQCB)-Los Angeles Maximum Screening Level (MSL) of the more conservative 100 mg/Kg

and 1,000 mg/Kg for TPH-D and TPH-O, respectively, in soil where groundwater is anticipated at less than 20 feet below the affected zone. The reported TPH-D and TPH-O concentrations are below their respective MSLs.

The soil sample exhibiting the maximum concentration of TPH (SB-7 at a depth of 3 to 5 feet bgs) was additionally analyzed for CAM-17 metals using EPA Method 6010/7000.

The soil sample collected from SB-7 at 3 to 5 feet bgs exhibited various CAM-17 metals concentrations above the laboratory method reporting limits. The reported metals concentrations were compared to the California Human Health Screening Levels (CHHSLs), and with the exception of arsenic, the remaining reported concentrations were below the applicable CHHSL values for residential and commercial land use. The detected arsenic concentration of 2.0J mg/Kg is above the residential and commercial CHHSL values of 0.07 mg/Kg and 0.24 mg/Kg, respectively.

The Department of Toxic Substances Control (DTSC) established a regional background arsenic concentration in soil that can be used as a screening tool for sites throughout southern California. The term “background” collectively refers to both naturally occurring and anthropogenic concentrations in shallow soil. Statistical analysis of a large data set from school sites in Los Angeles County gave an upper-bound background arsenic concentration of 12 mg/kg. The analysis for 5 counties in southern California also gave an upper-bound background arsenic concentration of 12 mg/kg. The detected arsenic concentration of 2.0J mg/kg at the site is below the published DTSC’s accepted regional background concentration screening level of 12 mg/Kg. The detected arsenic concentration appears to be representative of background concentrations in the region of the site.

6.0 INVESTIGATION DERIVED WASTES

Following completion of the investigation activities, the residual soil cuttings were temporarily stored in a 5-gallon plastic bucket. Due to the relatively small quantity of IDW (less than 5 gallons) and the absence of field evidence of impairment, the soil cuttings were transported offsite by the drilling contractor (Vironex Drilling) to be disposed at a later date under their general disposal permit.

7.0 FINDINGS

Based on the scope of services described in this report and subject to the limitations described herein, Terracon concludes the following.

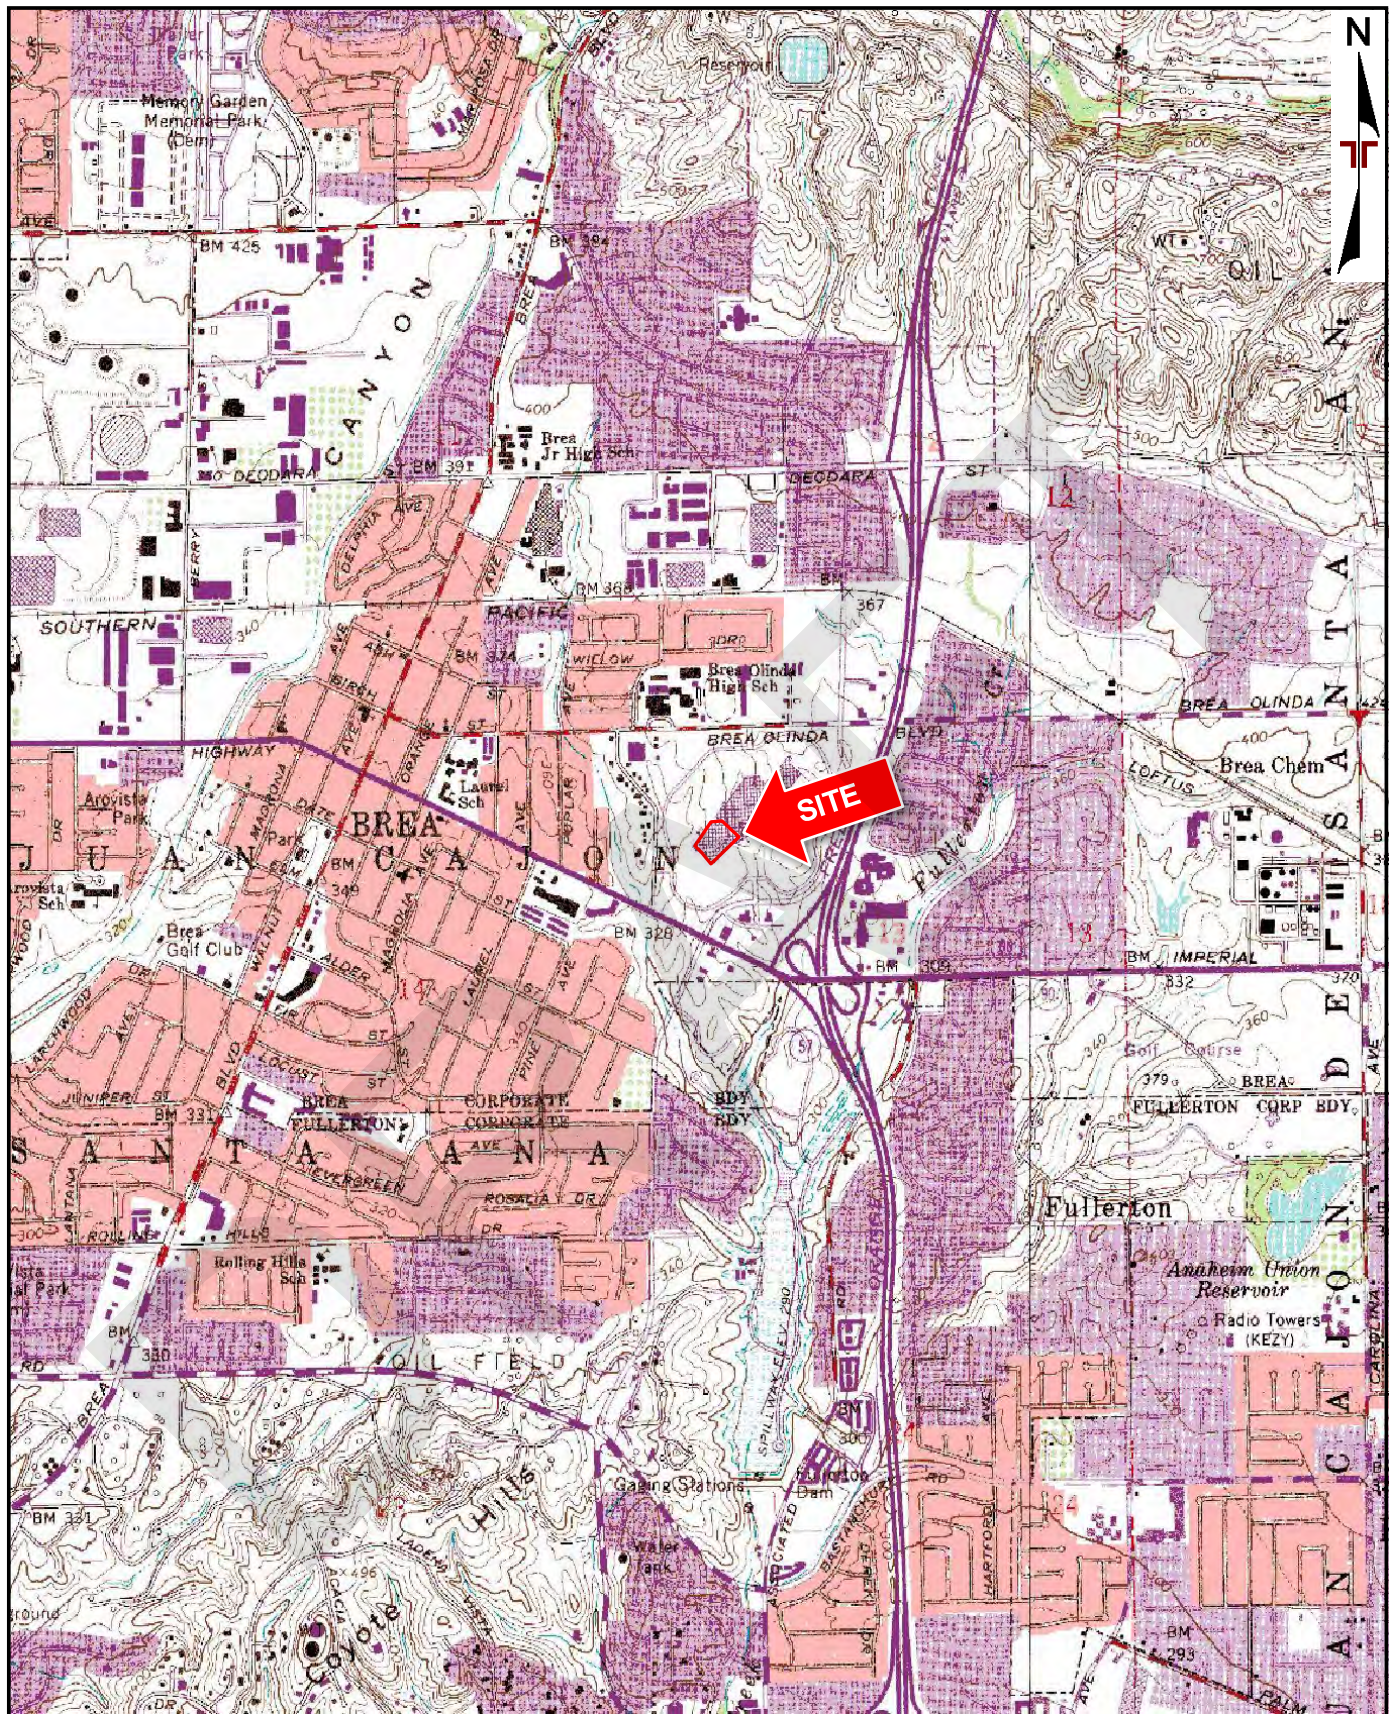

- Based on the soil sampling results, impacts to soil were not detected in the hydraulic lift areas and adjacent to the oil/water separator. Therefore, the usage of petroleum and halogenated organic compounds (i.e., PCE) in the locations of the hydraulic lifts and oil/water separator does not appear to have impacted the Sears Auto Center #6458 site.

APPENDIX B – SOIL BORING LOGS

Unified Soil Classification System
Boring Logs for SB-1 through SB-7

DRAFT

GENERAL NOTES

DESCRIPTION OF SYMBOLS AND ABBREVIATIONS

SAMPLING				WATER LEVEL		Water Initially Encountered	FIELD TESTS	(HP) Hand Penetrometer
						Water Level After a Specified Period of Time		(T) Torvane
						Water Level After a Specified Period of Time		(b/f) Standard Penetration Test (blows per foot)
					Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.			N N value
								(PID) Photo-Ionization Detector
								(OVA) Organic Vapor Analyzer
								(WOH) Weight of Hammer

DESCRIPTIVE SOIL CLASSIFICATION

Soil classification is based on the Unified Soil Classification System. Coarse Grained Soils have more than 50% of their dry weight retained on a #200 sieve; their principal descriptors are: boulders, cobbles, gravel or sand. Fine Grained Soils have less than 50% of their dry weight retained on a #200 sieve; they are principally described as clays if they are plastic, and silts if they are slightly plastic or non-plastic. Major constituents may be added as modifiers and minor constituents may be added according to the relative proportions based on grain size. In addition to gradation, coarse-grained soils are defined on the basis of their in-place relative density and fine-grained soils on the basis of their consistency.

LOCATION AND ELEVATION NOTES

Unless otherwise noted, Latitude and Longitude are approximately determined using a hand-held GPS device. The accuracy of such devices is variable. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

STRENGTH TERMS	RELATIVE DENSITY OF COARSE-GRAINED SOILS (More than 50% retained on No. 200 sieve.) Density determined by Standard Penetration Resistance Includes gravels and sands.			CONSISTENCY OF FINE-GRAINED SOILS (50% or more passing the No. 200 sieve.) Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance Includes silts and clays.		
	Descriptive Term (Density)	Standard Penetration or N-Value Blows/Ft.	Ring Sampler Blows/Ft.	Descriptive Term (Consistency)	Unconfined Compressive Strength, Qu, psf	Standard Penetration or N-Value Blows/Ft.
	Very Loose	0 - 3	0 - 6	Very Soft	less than 500	0 - 1
	Loose	4 - 9	7 - 18	Soft	500 to 1,000	2 - 4
	Medium Dense	10 - 29	19 - 58	Medium-Stiff	1,000 to 2,000	4 - 8
	Dense	30 - 50	59 - 98	Stiff	2,000 to 4,000	8 - 15
	Very Dense	> 50	≥ 99	Very Stiff	4,000 to 8,000	15 - 30
				Hard	> 8,000	> 30
						> 42

UNIFIED SOIL CLASSIFICATION SYSTEM

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests ^A					Soil Classification	
					Group Symbol	Group Name ^B
Coarse Grained Soils: More than 50% retained on No. 200 sieve	Gravels: More than 50% of coarse fraction retained on No. 4 sieve	Clean Gravels: Less than 5% fines ^C	Cu ≥ 4 and 1 ≤ Cc ≤ 3 ^E Cu < 4 and/or 1 > Cc > 3 ^E	GW	Well-graded gravel ^F	
		Gravels with Fines: More than 12% fines ^C	Fines classify as ML or MH Fines classify as CL or CH	GP	Poorly graded gravel ^F	
			GM	Silty gravel ^{F,G,H}		
		GC	Clayey gravel ^{F,G,H}			
	Sands: 50% or more of coarse fraction passes No. 4 sieve		Clean Sands: Less than 5% fines ^D	Cu ≥ 6 and 1 ≤ Cc ≤ 3 ^E Cu < 6 and/or 1 > Cc > 3 ^E	SW	Well-graded sand ^I
		Sands with Fines: More than 12% fines ^D	Fines classify as ML or MH Fines classify as CL or CH	SP	Poorly graded sand ^I	
			SM	Silty sand ^{G,H,I}		
		SC	Clayey sand ^{G,H,I}			
Fine-Grained Soils: 50% or more passes the No. 200 sieve	Silts and Clays: Liquid limit less than 50	Inorganic:	PI > 7 and plots on or above “A” line ^J PI < 4 or plots below “A” line ^J	CL	Lean clay ^{K,L,M}	
			ML	Silt ^{K,L,M}		
		Organic:	Liquid limit - oven dried Liquid limit - not dried	< 0.75	OL	Organic clay ^{K,L,M,N} Organic silt ^{K,L,M,O}
			Silts and Clays: Liquid limit 50 or more		Inorganic:	PI plots on or above “A” line PI plots below “A” line
	MH	Elastic Silt ^{K,L,M}				
	Organic:	Liquid limit - oven dried Liquid limit - not dried		< 0.75	OH	Organic clay ^{K,L,M,P} Organic silt ^{K,L,M,Q}
		Highly organic soils:			PT	Peat
	Primarily organic matter, dark in color, and organic odor					

^A Based on the material passing the 3-inch (75-mm) sieve

^B If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.

^C Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.

^D Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay

$$^E Cu = D_{60}/D_{10} \quad Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$$

^F If soil contains $\geq 15\%$ sand, add "with sand" to group name.

^G If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.

^H If fines are organic, add "with organic fines" to group name.

^I If soil contains $\geq 15\%$ gravel, add "with gravel" to group name.

^J If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.

^K If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.

^L If soil contains $\geq 30\%$ plus No. 200 predominantly sand, add "sandy" to group name.

^M If soil contains $\geq 30\%$ plus No. 200, predominantly gravel, add "gravelly" to group name.

^N $PI \geq 4$ and plots on or above "A" line.

^O $PI < 4$ or plots below "A" line.

^P PI plots on or above "A" line.

^Q PI plots below "A" line.

EPA= Environmental Protection Agency

< = not detected above laboratory reporting limits

bgs= below ground surface

Bold - indicates above applicable regulatory screening level

CHHSLs = California Human Health Screening Levels (CHHSLs) for Soil and Comparison to Other Potential Environmental Concerns for Residential land use only

*Background Metals = The Department of Toxic Substances Control (DTSC) established a regional background arsenic concentration in soil that can be used as a screening tool for sites throughout southern California. The term "background" collectively refers to both naturally occurring and anthropogenic concentrations in shallow soil. Statistical analysis of a large data set from school sites in Los Angeles County gave an upper-bound background arsenic concentration of 12 mg/kg. The analysis for 5 counties in southern California also gave an upper-bound background arsenic concentration of 12 mg/kg. The detected arsenic concentrations at the site are below the DTSC's established regional background concentration screening level.

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J	(EPA) - Estimated value below the lowest calibration point. Confidence correlates with concentration.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

Explanation of QC Qualifier Codes

Qualifier	Meaning
J	(EPA) - Estimated value below the lowest calibration point. Confidence correlates with concentration.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.

Terracon Project No. 60149256.1638/6458

Dear Mr. Olsen:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Phase I Environmental Site Assessment (ESA) report for the above-referenced site. This assessment was performed in accordance with ASTM 1527-13 and Terracon Proposal No. PT215006 and Sears Work Order dated April 28, 2015.

If there are any questions regarding this report or if we may be of further assistance, please do not hesitate to contact us.

Sincerely,
Terracon Consultants, Inc.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal No. PT215006 and Sears Work Order dated April 28, 2015, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The ESA was conducted under the supervision or responsible charge of Islam (Sami) R. Noaman, E.I.T., Environmental Professional. Sami Noaman performed the site reconnaissance on April 30, 2015.

Findings

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at 100 Brea Mall, Brea, Orange County, California and consists of a two-story Sears Store and a one-story Sears Auto Center buildings identified as Sears Store # 1638 and Sears Auto Center # 6458, totaling approximately 169,000-square-foot (SF). At the time of the site reconnaissance, the site was occupied by Sears, Sears Optical, Sear Automotive Center, Sears's Key Service, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. On-site operations include general automotive parts sales, service and maintenance, and typical household merchandise retail.

Historical Information

Based on a review of historical information, the site consisted of undeveloped land from as early as 1898 through 1963. By 1977, the site was developed with the existing buildings and has remained relatively unchanged through the present.

The surrounding properties consisted of undeveloped scrubland from as early as 1898 through 1963. By 1977 the Brea Mall building located to the northeast of the site and associated parking lots to the southeast and southwest of the site were developed. Surrounding properties have remained relatively unchanged, with the exception of additions to the existing Brea Mall in the late 1980s and early 1990s. Indications or RECs were not identified with the adjoining properties.

Records Review

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was identified in the regulatory databases as Sears Auto Center, Sears-Brea, and Sears Roebuck and Co. 1638/6458/8358. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS),

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing (HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and 2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of reported violations or release were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and /or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetraflouroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repairing center since 1977 through the present. A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. As discussed below, the historical UST was reportedly removed in 1988 and evidence of subsurface impact associated with the historical UST was not reported. Therefore, the 500-gallon waste oil UST does not represent an REC in connection with the site.

The remaining identified facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, anticipated depth to groundwater within the site vicinity (approximately 90 feet bgs) and/or distance from the site.

Site Reconnaissance

One emergency generator, two hydraulic elevators, four air compressors, one solid waste disposal dumpster, two solid waste compactors, one cardboard baler, two ASTs, multiple containers ranging in size from 1- to 55-gallon, Material Safety and Data Sheets (MSDS), multiple interior floor drains, three pad-mounted transformers, one solid waste dumpster, two solid waste compactors, five in-ground hydraulic lifts, an oil/water separator, and a cardboard baler were observed on site. Based on site reconnaissance observations and findings documented in the Terracon's' Phase II ESA report completed on April 17, 2015 (discussed below), RECs were not identified in connection with the site.

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Previous Reports

Petroleum Industry Consultants, Inc. (PIC) completed a letter report for the removal of a 550-gallon waste oil UST located south of the existing oil/water separator. On September 30, 1988 and subsequent to the UST removal, under the supervision of the Orange County Fire Authority and Orange County Environmental Health Department (OCEDH), PIC collected one confirmation sample from the bottom of the tank excavation at a depth of 10 feet below ground surface (P1) and one sample from the soils stockpile (SP1), generated from excavation activities. Soil samples were analyzed for total petroleum hydrocarbons (TPH). No petroleum hydrocarbons were detected in P1, while SP1 had 27 milligram per kilogram of TPH. Soil samples were not analyzed for volatile organics or metals; however, given the low concentrations of petroleum hydrocarbons observed a significant release is not suspected. The PIC letter concluded that the laboratory results indicated no significant release.

MACTEC completed the hydraulic lift system removal, documented in a report dated March 3, 2008. The report indicated removal activities were performed from July 31 to August 2, 2007. A total of eight soil samples were field screened utilizing a Petroflag® kit system at the time of the removal. These samples exhibited TPH concentrations ranging from 68 to 143 mg/kg. According to the MACTEC report, the Orange County Health Care Agency recommended threshold for TPH concentration was 1,000 mg/kg; however, MACTEC indicated the TPH threshold used in this project was 100 mg/kg. Subsequent to the lift system removal, two samples (EP-1 through EP-4) were collected from the bottom of the excavation pit and analyzed for TPH and polychlorinated biphenyls (PCBs). Analytical results indicated that TPH and PCBs concentrations were not exhibited above laboratory method detection limits. Approximately 40 gallons of hydraulic oil and 9.4 tons of excavated soil were removed and disposed off-site. Based on the analytical results, MACTEC recommended no further action.

A Phase I ESA was completed by Terracon on October 27, 2014. The Phase I ESA identified the two RECs. One associated with hydraulic lifts present at the site and one associated with the oil/water separator.

Terracon completed a Phase II ESA on April 17, 2015 to evaluate the presence or absence of contaminants associated with the RECs identified by the Phase I ESA. It should be noted that based on the findings of the Phase I ESA, an evaluation of groundwater (estimated to be at a depth of 90 feet below grade surface) was not performed during this investigation. During this investigation, a total of seven (7) soil borings (SB-1 through SB-7) were advanced to a maximum depth of approximately 15 feet bgs. Six soil borings were advanced within the auto center and one soil boring (SB-7) was advanced in the vicinity of the oil/water separator. The samples collected from the borings were analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method 8260B and TPH using USEPA Method 8015M. Based on the soil sampling results, impacts to soil were not detected in the hydraulic lift areas or adjacent to the oil/water separator, and do not appear to have impacted the Sears Auto Center #6458 site and do not represent an REC to the site.

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Adjoining Properties

The properties to the adjacent north consist of an asphalt-paved parking lot, the Brea shopping mall (1065 Brea Mall), and a four story parking garage and Image Auto Detailing (503 Brea Mall). The properties to the adjacent east consist of an asphalt-paved parking lot and Brea shopping mall (1065 Brea Mall) to the northeast. The properties to the adjacent south consist of an asphalt-paved parking lot followed by East Imperial Highway. The properties to the adjacent west consist of an asphalt-paved parking lot followed by South Randolph Avenue. Indications of RECs were not observed with the adjoining properties.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E1527-13 at 100 Brea Mall in Brea, Orange County, California, the site. RECs were not identified in connection with the site.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
SEARS STORE # 1638 AND SEARS AUTO CENTER # 6458
100 BREA MALL
BREA, ORANGE COUNTY, CALIFORNIA

Terracon Project No. 60149256.1638/6458

May 6, 2015

1.0 INTRODUCTION

1.1 Site Description

Site Name	Sears Store # 1638 and Sears Auto Center # 6458
Site Location/Address	100 Brea Mall, Brea, Orange County, California
Land Area	Approximately 2.2-acres
Site Improvements	Improved two-story Sears Store and a one-story Sears Auto Center buildings totaling approximately 169,000 (SF).

The site location is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the USGS 7.5-minute series topographic map. A Site Diagram of the Sears Property and adjoining properties and a Site Detail of the Sears Auto Center are included as Exhibits 2 and 2A of Appendix A. Acronyms and terms used in this report are described in Appendix B.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal No. PT215006 and Sears Work Order dated April 28, 2015, and was conducted consistent with the procedures included in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, user-provided information, and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance or inability to review information not received by the report date. Where

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot completely eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records may not have been reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations and Significant Data Gaps

Based upon the agreed-on scope of services and the ASTM E1527-13 standard, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e. evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

An evaluation of the significance of these limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations,

Phase I Environmental Site Assessment

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Sears Holdings Corporation, its subsidiaries, and affiliates. Use or reliance by any other party is prohibited without the written authorization of Sears Holdings Corporation and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Master Services Agreement. The limitation of liability defined in the Master Services Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-13 Sections 4.6 and 4.8. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-13.

**1.6 Client Provided Information**

Prior to the site visit, Sears Holdings Management Corporation (SHMC) was asked to provide the following user questionnaire information as described in ASTM E1527-13 Section 6.

Client Questionnaire Responses

Client Questionnaire Item	Client Did Not Respond	Client's Response	
		Yes	No
Aware of any Environmental Cleanup Liens against the site.			X
Actual Knowledge of Environmental Liens or Activity Use Limitations (AULs) that may encumber the site.			X
Aware of any Specialized Knowledge or Experience related to the site or nearby properties.			X
Actual Knowledge of a Significantly Lower Purchase Price because of hazardous substances or petroleum products.			NA
Commonly Known or Reasonably Ascertainable Information that is material to a release in connection with the site.			X
Obvious Indicators of Contamination at the site.			X

NA = Not applicable

A copy of the questionnaire is included in Appendix C. Terracon notes that SHMC was not aware of any additional environmental information other than what was provided in the prior reports. These reports are discussed further in Section 3.9

2.0 PHYSICAL SETTING

Physical Setting Information		Source
Topography (Refer to Appendix A for an excerpt of the Topographic Map)		
Site Elevation	Approximately 360 feet (NGVD)	USGS Topographic Map, La Habra Quadrangle, California, dated 1981, photorevised from 1964
Surface Runoff/ Topographic Gradient	Sloping towards the southwest	
Closest Surface Water	Craig Park Lake, approximately 2,934 feet south of the site	
Soil Characteristics		
Soil Type	Myford sandy loam	Orange County, CA USDA-

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Physical Setting Information		Source
Description	Moderately well drained soils with 2 to 9 percent slopes. Alluvium derived from mixed. Typical soil profile beneath the site consist of stiff reddish-brown silty clay with traces clay.	NRCS Web Soil Survey issued September 19, 2014 Hydraulic Lift System Removal, Assessment and Site Remediation Report Sears Auto Center No. 6458, 100 Brea Mall, Brea, California 92821 prepared by: MACTEC, dated March 3, 2008
Geology/Hydrogeology		
Formation	Quaternary deposits (Q)	Geological Map of California, dated 2010
Description	Older alluvium, lake, playa, and terrace deposits.	
Estimated Depth to First Occurrence of Groundwater	Approximately 90 feet below grade surface (bgs).	Groundwater Elevation Contours Map for Principal Aquifer, Orange County, dated June 2012
*Hydrogeologic Gradient	Not known - may be inferred to be parallel to topographic gradient (primarily to the southwest).	

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify past uses for indications of RECs. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps

Readily available historical USGS topographic maps were reviewed to evaluate land development in connection with the site. Reviewed historical topographic maps are summarized below.

Anaheim, California, published **1898** (1:62,500)
Southern CA, California, published **1901** (1:250,000)
Corona, California, published **1902** (1:125,000)
Coyote Hills, California, published **1935** (1:31,680)
Anaheim, California, published **1942** (1:50,000)
La Habra, California, published **1950** and **1964** (1:24,000)

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

La Habra, California, published **1972** and **1981** photorevised from 1964
(1:24,000)

Historical Topographic Maps

Direction	Description
Site	Undeveloped land (1898-1950); an un-paved road intersects the site (1964); road is not depicted (1972); developed with existing building (1981).
North	Undeveloped land (1898-1950); an un-paved road runs from the site to the north (1964); former un-paved road is not depicted (1972); developed with existing building to the northeast (1981).
East	Undeveloped land (1898-1902); undeveloped land followed by a creek (1935-1964); undeveloped land followed by a road (1972); developed with existing building (1981).
South	Undeveloped land (1898-1902); undeveloped land followed by a road (1935-1950); an un-paved road runs from the site to the southeast (1964); former un-paved road is not depicted and a road runs from the northeast to the southwest (1972); developed with current road (1981).
West	Undeveloped land followed by a road (1898-1902); undeveloped land followed by a road and multiple structures (1935-1972); developed with current road (1981).

3.2 Historical Aerial Photographs

Selected historical aerial photographs from the United States Geological Survey (USGS) and United States Department of Agriculture (USDA) were reviewed at approximately 10 to 15 year intervals, if readily available, to obtain information concerning the history of development on and near the site. Evaluation of these aerials may be limited by a photo's quality and scale. Selected photographs are summarized below.

USGS, 1938, 1952, 1963, 1987, 1990, 1"=500'

Fairchild, 1947, 1"=500'

Teledyne, 1977, 1"=500"

USGS/DOQQ, 1995, 1"=500"

USDA/NAIP, 2005, 2009, 2010, 2012, 1"=500"

Historical Aerial Photographs

Direction	Description
Site	Undeveloped scrubland (1938-1952); undeveloped scrubland with an un-paved road running through the site (1963); developed with existing building (1977-2012).

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Direction	Description
North	Undeveloped scrubland (1938-1952); undeveloped scrubland with an un-paved road running north and south, and an un-paved road running east and west (1963); developed with asphalt-paved parking lot to the northwest, asphalt-paved parking lot and cleared land to the north, and multi-tenant shopping mall to the northeast (1977); former cleared land is developed with shopping mall addition (1987); developed with shopping mall addition to the north and existing parking garage to the northwest (1990-2012).
East	Undeveloped scrubland followed by creek (1938-1963); developed with asphalt-paved parking lot to the southeast, multi-tenant shopping mall to the northeast, and cleared land to the east (1977); former cleared land is developed with shopping mall addition (1987-2012).
South	Undeveloped scrubland (1938-1963); developed with asphalt-paved parking lot and existing roads (1977-2012).
West	Undeveloped scrubland followed by a road and multiple structures (1938-1963); developed with asphalt-paved parking and existing road (1977-2012).

3.3 Historical City Directories

The Haines North Orange County and Haines Orange County city directories used in this study were made available through Historical Information Gatherers (HIG) (selected years reviewed: Brea Mall 1981 through 2011, Imperial Highway 1971 through 2011, State College Boulevard 1986-2011) and were reviewed at approximate five-year intervals, if readily available. Since these references are copyright protected, reproductions are not provided in this report. City directories for the site were not listed prior to 1981. The current street address for the site was identified as 100 Brea Mall, Brea, Orange County, California.

Historical City Directories

Direction	Description
Site	100 Brea Mall- <u>Sears (1981-2011)</u> ; H&R Block (2011); Miracle-Ear (2011); Crystal Empress (2011); Sears Optical (2011).
North	Multi-tenant shopping center.
East	Multi-tenant shopping center.
South	120 Brea Mall- The Cheesecake Factory (2006-2011). 600 Brea Mall- Magnolia's Peach (1986-1991); Creative Concepts (1991); Cornerstone Grill (1996); Airth Gizella (2002); BJ Restaurant and Brewery (2002-2011).
West	1039 East Imperial Highway- Name Brands Outlet (1981); Oak Gallery (1981); MacBeth's Stained Glass and Custom Framing (1986-1996); Two Wheeler Dealer (1986-2011); Fantastic Sam's (1986); Rockit Music (2002-2011). 1045 East Imperial Highway- Phone Center Stores (1981); Entire Computer Center (1986-1991); Boot Barn (1996); Riddle Stuart (2002); Eastwood Insurance Service (2002-2011); Elegant Nails and Spa (2006-2011).

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Sears Roebuck and Co. at the site address was identified in the city directories from 1981 through 2011 and was observed at the time of the site reconnaissance. Sears was also listed in the regulatory database reports and is further discussed in Section 4.1.

3.4 Historical Fire Insurance Maps

Historical fire insurance maps produced by the Sanborn Map Company were requested from EDR to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

3.5 Site Ownership

Based on a review of client provided information, the current site owner is Sears Roebuck & Co. Historical review information indicated that the site has been operated/ owned by Sears from 1981 through the present.

3.6 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.7 Environmental Liens

Environmental lien records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.8 Interview Regarding Current and Historical Uses

The following individual was interviewed regarding the current and historical use of the site.

Interviewee

Interviewer	Interviewee	Title	Date/Time
Chandel L. Davis	Mr. Cliff Granier	Building Technician	April 30, 2015 / 2:00 PM

At the time of the site reconnaissance Terracon interviewed Mr. Cliff Granier, a building technician for Sears. Mr. Garcia indicated that the site is owned by Sears Roebuck & Co. and has been operating as a Sears, Sears Optical, Sears Automotive, Sears Key Services, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. He also stated that he was not aware of any sumps, septic tanks, water wells, grease traps, solvent baths, petroleum

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

pipelines, underground tanks (USTs) on site. Mr. Granier was not aware of any pending, threatened or past environmental litigation, proceedings or notices of possible violations of environmental laws or liability or potential environmental concerns in connection with the site.

3.9 Prior Report Review

Previous environmental reports for the site were provided by the client to Terracon for review. A summary of the findings of these reports is provided below. This summary is based solely on the information provided in the referenced documents and Terracon offers no assessment regarding the quality, completeness and/or accuracy of the information provided. This information is being considered solely in the context of additional historical information made available for the site.

- Tank Removal Letter Report
Sears Automotive
100 Brea Mall, Brea, California 92821
Prepared by: Petroleum Industry Consultants, Inc. (PIC)
For: Orange County Environmental Health Department (OCEDH)
Date: October 7, 1988

PIC completed a letter report for the removal of a 550-gallon waste oil UST located south of the existing oil/water separator. On September 30, 1988 and subsequent to the UST removal, under the supervision of the Orange County Fire Authority and OCHCA, PIC collected one confirmation sample from the bottom of the tank excavation at a depth of 10 feet below ground surface (P1) and one sample from the soils stockpile (SP1) generated from excavation activities. Soil samples were analyzed for total petroleum hydrocarbons (TPH). No petroleum hydrocarbons were detected in P1, while SP1 had 27 milligram per kilogram of TPH. Soil samples were not analyzed for volatile organics or metals; however, given the low concentrations of petroleum hydrocarbons observed a significant release is not suspected. The PIC letter concluded that the laboratory results indicated no significant release.

- Hydraulic Lift System Removal, Assessment and Site Remediation Report
Sears Auto Center No. 6458
100 Brea Mall, Brea, California 92821
Prepared by: MACTEC
For: Sears Holdings Management Corporation
Date: March 3, 2008

MACTEC completed the hydraulic lift system removal, documented in a report dated March 3, 2008. The report indicated removal activities were performed from July 31 to August 2, 2007. A total of eight soil samples were field screened utilizing a Petroflag® kit system at the time of the removal. These samples exhibited TPH concentrations ranging from 68 to 143 mg/kg.

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Subsequent to the lift system removal, two samples (EP-1 through EP-4) were collected from the bottom of the excavation pit and analyzed for TPH and polychlorinated biphenyls (PCBs). Analytical results indicated that TPH and PCBs concentrations were not present above laboratory method detection limits. Approximately 40 gallons of hydraulic oil and 9.4 tons of excavated soil were removed and disposed off-site. Based on the analytical results, MACTEC recommended no further action.

- Phase I Environmental Site Assessment
Sears Store # 1638 and Sears Auto Center # 6458
Prepared by: Terracon Consultants, Inc.
For: Sears Holdings Management Corporation
Date: October 27, 2014

A Phase I ESA was completed by Terracon on October 27, 2014. The Phase I ESA identified the two RECs. One associated with six hydraulic lifts present at the site and one associated with the Oil / Water separator.

- Phase II Environmental Site Assessment
Sears Store # 1638 and Sears Auto Center # 6458
Prepared by: Terracon Consultants, Inc.
For: Sears Holdings Management Corporation
Date: April 17, 2015

The Phase II ESA was conducted to evaluate the presence or absence of contaminants associated with the RECs identified by the Phase I ESA. It should be noted that based on the findings of the Phase I ESA, an evaluation of groundwater (estimated to be at a depth of 90 feet below grade surface) was not performed during this investigation. During this investigation, a total of seven (7) soil borings (SB-1 through SB-7) were advanced to a maximum depth of approximately 15 feet bgs. Six soil borings were advanced within the auto center and one soil boring (SB-7) was advanced in the vicinity of the oil/water separator. The samples collected from the borings were analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method 8260B and TPH using USEPA Method 8015M. Based on the soil sampling results, impacts to soil were not detected in the hydraulic lift areas or adjacent to the oil/water separator, and do not appear to represent an REC to the site.

3.10 Historical Use Information Summary

Based on a review of historical information, the site consisted of undeveloped land from as early as 1898 through 1963. By 1977, the site was developed with the existing buildings and has remained relatively unchanged through the present.

The surrounding properties consisted of undeveloped scrubland from as early as 1898 through 1963. By 1977 the Brea Mall building located to the northeast of the site and associated parking lots to the southeast and southwest of the site were developed. Surrounding properties have remained relatively unchanged, with the exception of additions to the existing Brea Mall in the late 1980s and early 1990s. Indications or RECs were not identified with the adjoining properties.

4.0 RECORDS REVIEW

Regulatory database information was provided by EDR, a contract information services company. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated, and the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate site boundaries. Database definition, descriptions, and the database search report are included in Appendix D.

Federal and State Databases

Database	Description	Radius (miles)	Listings
Federal			
NPL	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.	1.0	0
NPL (Delisted)	The NPL (Delisted) refers to facilities that have been removed from the NPL.	0.5	0
CERCLIS	The CERCLIS database is a compilation of facilities which the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances pursuant to the CERCLA of 1980.	0.5	0
CERCLIS/	CERCLIS/NFRAP refers to facilities that have been	0.5	1

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Database	Description	Radius (miles)	Listings
NFRAP	removed and archived from EPA's inventory of CERCLA sites.		
RCRA CORRACTS/ TSD	The EPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous waste that are undergoing "corrective action." A "corrective action" order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.	1.0	0
RCRA Non-CORRACTS/ TSD	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.	0.5	0
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.	0.1	2
IC / EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.	Site	0
ERNS	The Emergency Response Notification System (ERNS) is a listing compiled by the EPA on reported releases of petroleum and hazardous substances to the air, soil and/or water.	Site	0
State/Tribal			
RESPONSE	State Response Sites – Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.	1.0	0
ENVIORSTOR	The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have	0.5	6

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

	known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.		
CHMIRS	California Hazardous Material Incident Report System California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).	Site	0
SWF / LF	State and/or Tribal database of solid waste facilities located within California. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.	0.5	0
LUST	State and/or Tribal database of leaking underground storage tanks in state of California.	0.5	12
SLIC	The SLIC (Spills, Leaks, Investigations and Cleanup) program is designed to protect and restore water quality from spills, leaks, and similar discharges.	0.5	0
HISTUST	Hazardous Substance Storage Container Database The Hazardous Substance Storage Container Database is a historical listing of UST sites.	0.25	5
SWEEPS	Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and Maintained by a company contacted by the SWRCB in the early 1990's.	0.25	2
UST/AST	State and/or Tribal database of registered storage tanks in the State of California which may include the owner and location of the tanks.	0.25	5
DRYCLEANERS	A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry-cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services.	0.25	3
IC/EC	State and/or Tribal equivalent to the Federal IC / EC database list.	Site	0
SWRCY	A listing of recycling facilities in California.	0.5	0
VCP	State and/or Tribal facilities included as Voluntary Cleanup	0.5	0

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

	Program sites.		
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.	0.5	0
HAZNET	The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 – 1,000,000 annually, representing approximately 350,000 – 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.	Site	1
EDR Historical Auto Station	EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.	0.25	5
EDR Historical Cleaners	EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.	0.25	3

In addition to the above ASTM-required listings, Terracon reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report included in Appendix D.

The site was not identified in the regulatory database review. The following table summarizes the information provided by the database and/or gathered by this office for identified facilities. Facilities are listed in order of proximity to the site. Additional discussion for selected facilities follows the summary table.

Listed Facilities

Facility Name And Location	Estimated Distance/Direction/Gradient	Database Listings

Sears-Brea		RCRA-SQG

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Facility Name And Location	Estimated Distance/Direction/Gradient	Database Listings
Sears Roebuck and Co. #1638/6458/8358 100 Brea Mall		EDR Hist Auto Stations, UST, HIST UST, HAZNET
California Cleaners 1027 E Imperial Highway	550 feet / Southwest / Down-gradient	DRYCLEANERS, RCRA-SQG
Wild West Cleaners 1080 E. Imperial Highway	900 feet / Southwest / Down-gradient	Orange County Industrial Site, DRYCCLEANERS, EDR Hist Cleaners.

Sears Roebuck and Co. #1638

The site was identified as Sears Auto Center, Sears-Brea, and Sears Roebuck and Co. 1638/6458/8358 in the regulatory databases. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS), Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing (HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and 2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of violations or release were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and / or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetrafluoroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repair center from 1977 to the present. A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. As previously discussed in Section 3.9, the historical UST was reportedly removed in 1988, and evidence of subsurface impact

associated with the historical UST was not identified. Therefore, the 500-gallon waste oil UST does not represent a REC in connection with the site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the site. The report listed 20 facilities in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this assessment; however, none of these facilities were identified as the site or adjacent properties. These facilities are listed in the database report in Appendix D.

4.2 Local Agency Inquiries

4.2.1 Health Department/Environmental Division

The Orange County Health Care Agency (OCHCA) was contacted by fax regarding environmental records or information indicating environmental concerns for the site. At this time, a response from the agency is not available.

4.2.2 The City of Brea Fire Department

The City of Brea Fire Department (BFD) was contacted by fax via the City of Brea's City Clerk's Office. Please refer to client-provided information discussed in Section 4.1 for review of available records.

4.2.3 Department of Toxic Substances Control

The Department of Toxic Substances Control (DTSC) was contacted by e-mail regarding environmental records for the site. On April 28, 2015, an electronic response from the DTSC indicated that no records available for the site; however, the DTSC response indicated the site was identified in the Generator Information Services Section. This information was previously discussed in Section 4.1.

4.2.4 South Coast Air Quality Management District (SCAQMD)

Terracon contacted the SCAQMD via the Facility Information Detail (FIND) online database regarding environmental information or information indicating environmental concerns for the site. A review of available records indicated the site is operation under an active permit to operate an emergency generator powered by natural gas. In addition, an inactive permit for CFC-12 recovery/recycling was identified in the FIND database. Outstanding compliance violations were not identified for the site.

4.2.5 Local/Regional Water Quality Agency

The Santa Ana Regional Water Quality Control Board was contacted by e-mail regarding environmental records for the site. At this time, a response from the agency is not available.

4.2.6 The department of Conservation, Division of Oil, Gas & Geothermal Resources

Terracon completed a cursory review of records available at the Department of Conservation Division of Oil, Gas & Geothermal Resources (DOC – DOGGR) for the site. Based on a review of the DOC-DOGGR mapping system, oil wells were not identified on the site.

4.3 Records Review Summary

The site was identified as Sears Auto Center, Sears-Brea, and Sears Roebuck and Co. 1638/6458/8358 in the regulatory databases. Sears Roebuck Co. #1638, identified on the site was identified as Facility Index System (FINDS), Resources Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), EDR Exclusive Historical US Automotive Stations (EDR Hist Auto Stations), underground storage tank listing (UST), historical UST listing (UST), and Facility and Manifest Data listing (HAZNET). Based on a review of the EDR Hist Auto Stations listing, the site was listed as Sears Auto Center in the years 2010 and 2011. A review of the RCRA-SQG indicated the site was registered as a small quantity generator of RCRA regulated waste in 1996 and as a historical generator in the years 1994, 1995, and in 1986. Indications of violations or release were not reported. Based on a review of the HAZNET listing, waste streams generated on-site were not reported; however, disposal methods were identified as storage, bulking, and / or transfer off-site, with no treatment recovery. Based on review of client-provided information dated 2009 and 2011 including Hazardous Materials Business Plans, regulatory inspection reports, and various Orange County Certified Unified Program Agency (CUPA) forms, waste streams identified on-site were reported as floor detergent, liquefied gas (helium and propane), sodium hydroxide, sodium xylenesulfonate, nonylphenol etoxylate, sodium metasilicate pentahydrate, corrosive materials (acids/alkaline), parts washer solvent mixture, waste absorbent materials (shop rags), motor oil, used motor oil, waste gasoline, used antifreeze, used brake fluid, spent oil and gasoline filters, used lead waste (tire balancing), used acid batteries, tetraflouroethane, waste aerosols, waste flammable liquids, and waste oxidizers. It should be noted the site operated an automotive repairing center since 1977 through the present. A review of the HIST UST and UST listing indicated the site was equipped with a 500-gallon UST used for storing waste oil, which was installed in 1977. As previously discussed in Section 3.9, the historical UST was reportedly removed in 1988, and evidence of subsurface impact associated with the historical UST was not identified. Therefore, the 500-gallon waste oil UST does not represent a REC in connection with the site.

The remaining identified facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, anticipated depth to groundwater within the site vicinity (approximately 90 feet bgs) and/or distance from the site.

5.0 SITE RECONNAISSANCE

5.1 General Site Information

Information contained in this section is based on a visual reconnaissance conducted while walking through the site and the accessible interior areas of structures, if any, located on the site. Exhibits 2 and 2A in Appendix A are a Site Diagram of the site and a Site Detail of the Sears Auto Center. Photo documentation of the site at the time of the visual reconnaissance is provided in Appendix E. Credentials of the individuals planning and conducting the site visit are included in Appendix F.

General Site Information

Site Reconnaissance				
Field Personnel	Sami Noaman			
Reconnaissance Date	April 30, 2015			
Weather Conditions	Sunny, 85° F			
Site Contact/Title	Mr. Cliff Granier / Building Technician			
Building Description				
Building Identification	Building Use	Approx. Construction Date	Number of Stories	Approx. Size (ft²)
Sears Store #1638	Retail	1977	2	160,000
Sears Auto Center #6458	Automotive maintenance	1977	1	9,000
Site Utilities				
Drinking Water	City of Brea			
Wastewater	City of Brea			
Natural Gas	Southern California Gas Company			
Electricity	Southern California Edison			

5.2 Overview of Current Site Occupants and Operations

The site is located at 100 Brea Mall, Brea, Orange County, California and consists of a two-story Sears Store and one-story Sears Auto Center buildings identified as Sears Store # 1648 and Sears Auto Center # 6458, totaling approximately 169,000-square-foot (SF). At the time of the site reconnaissance, the site was occupied by Sears, Sears Optical, Sear Automotive Center, Sears's Key Service, Sears Watch Repair, Crystal Empress gift shop, and a seasonal tax service. On-site operations include general automotive parts sales, service and maintenance, and typical household merchandise retail.

**5.3 Site Observations**

The following table summarizes site observations and interviews. Affirmative responses (designated by an "X") are discussed in more detail following the table.

Site Characteristics

Category	Item or Feature	Observed or Otherwise Identified
Site Operations, Processes, and Equipment	Emergency generators	X
	Elevators	X
	Air compressors	X
	Hydraulic lifts	X
	Dry cleaning	
	Photo processing	
	Ventilation hoods and/or incinerators	
	Waste treatment systems and/or water treatment systems	
	Heating and/or cooling systems	
	Other processes or equipment	
Aboveground Chemical or Waste Storage	Aboveground storage tanks	X
	Drums, barrels and/or containers ≥ 5 gallons	X
	MSDS	X
Underground Chemical or Waste Storage, Drainage or Collection Systems	Underground storage tanks or ancillary UST equipment	
	Sumps, cisterns, catch basins and/or dry wells	
	Grease traps	
	Septic tanks and/or leach fields	
	Oil/water separators	X
	Pipeline markers	
	Interior floor drains	X
Electrical Transformers/PCBs	Transformers and/or capacitors	X
	Other equipment	

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Category	Item or Feature	Observed or Otherwise Identified
Releases or Potential Releases	Stressed vegetation	
	Stained soil	
	Stained pavement or similar surface	
	Leachate and/or waste seeps	
	Trash, debris and/or other waste materials	X
	Dumping or disposal areas	
	Construction/demolition debris and/or dumped fill dirt	
	Surface water discoloration, odor, sheen, and/or free floating product	
	Strong, pungent or noxious odors	
	Exterior pipe discharges and/or other effluent discharges	
Other Notable Site Features	Surface water bodies	
	Quarries or pits	
	Wells	

Site Operations, Processes, and Equipment**Emergency generators**

One emergency generator was observed during the site reconnaissance. The generator was located in a central portion on the roof. The generator was fueled by natural gas. Surficial staining or releases were not observed on the concrete or in the vicinity of the emergency generator at the time of the visual reconnaissance. Based on site observations, the emergency generator does not appear to constitute a REC in connection with the site.

Elevators

Two hydraulic elevators were observed on the site. A freight elevator was observed near the loading dock on the southeastern portion of the Sears Store, and a passenger elevator was observed on the northeastern portion of the Sears Store. The mechanical and hydraulic equipment for the elevators are located in rooms adjacent to the elevators on the first floor. According to Mr. Granier, the elevator system is serviced by Schindler every couple months, and on an as needed basis. The base of the elevator pits were not observed due technician availability. Mr. Granier was not aware of any maintenance or issues related to the elevators and a review of maintenance records during the site reconnaissance did not identify significant releases from the elevator shafts. Based on site observations, the interview with Mr. Granier, and records review, the two elevators do not constitute a REC.

Air compressors

Four air compressors were observed on site. One compressor was located in the main retail building in the parts and service center, and the other three were located in the automotive repair center. One of the air compressors in the automotive service center was a small portable compressor. All three air compressors were located on concrete, and the air compressor in the main retail building was located on a wood support above concrete floor. Staining was observed beneath the two large air compressors located in the automotive building at the time of the site reconnaissance; however, absorbent was not observed. The staining appeared to be of *de minimis* status and does not appear to constitute a REC for the site at this time.

Hydraulic lifts

Five in-ground hydraulic lift units and Evidence of two former hydraulic lift units (one removed by MACTEC in 2007) were also observed. The lifts were located in the automotive service center. Based on a review of the MACTIC lift assessment report conducted in 2007, the former lift located on the northern portion of the auto center does not appear to represent an REC to the site. As discussed in Section 3.9, Terracon completed a Phase II ESA to address the presence of the existing and former in-ground lifts in April 2015. The scope consisted of six soil borings within the auto center area. Based on the findings of the Phase II report, impacts to soil were not detected in the hydraulic lift areas. Therefore, the presence of hydraulic lifts does not appear to have impacted the Sears Auto Center #6458 site, and do not appear to represent RECs to the site.

Five above-ground hydraulic lift units/alignment racks were onbserveed during the site reconnaissance within the autonotive center service area. No subsurface componenets appeared to be associated with theese lift units. No evidence of hydraulic fluid releases were observed from the lifts at the time of the site visit. Based on site observations and absense of subsurface components, the above ground hydraulic lift units do not appear to constitute an REC to the site.

Aboveground Chemical or Waste Storage

Aboveground storage tanks

Two ASTs were observed on the site during the site reconnaissance. One approximately 120-gallon AST used for storing new oil was observed on the north side of the automotive service center. The AST was located on concrete pavement that appeared to be in good condition. No evidence of staining and/or releases was observed in the vicinity of the AST during site reconnaissance. One approximately 100-gallon AST used for storing used anti-freeze was observed on the north side of the automotive service center. The AST was located on concrete that appeared to be in good condition. Evidence of *de minimis* staining was observed in the vicinity of the AST. Based on site observations and pavement conditions, the *de minimis* staining does not appear to constitute a REC in connection with the site at his time.

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

Drums, barrels, and/or containers ≥ 5 gallons

The following containers were observed during the site reconnaissance:

Approximate Quantity	Capacity	Contents	Location
3	5-gallon	Floor stripper	Janitorial supply
3	5-gallon	Used dry cell batteries	Hazardous materials storage area
5	5-gallon	Paint	Maintenance room/automotive service
1	55-gallon	Latex paint	Hazardous waste storage area
4	55-gallon	Hazardous waste storage	Hazardous waste storage area
3	45-gallon	Hazardous waste storage	Hazardous waste storage area
1	5-gallon	Floor finish	Janitorial supply closet
4	5-gallon	Hazardous materials spill kit	Hazardous materials storage area/automotive service
1	5-gallon	Apparently empty	Janitorial closet
2	55-gallon	Degreaser	Automotive service center
6	55-gallon	New oil	Automotive service center
1	One cubic yard	Oil filters and oil waste	Automotive service center
1	10-gallon	Spill kit	Automotive service center
1	55-gallon	Oil waste	Automotive service center
2	5-gallon	Oily rags waste	Automotive service center
3	35-gallon	Oil waste	Automotive service center
2	5-gallon	Brake fluid	Automotive service center
3	55-gallon	Scrap metal	Automotive service center
3	35-gallon	Wheel weights	Automotive service center
3	55-gallon	Used oil	Automotive service center
2	35-gallon	Used oil/ gas storage	Hazardous materials storage area/ parts and service center main

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

			retail building
1	5-gallon	Lubricant	Automotive service center
1	10-gallon	Apparently empty	Automotive service center

The used gas and oil containers in the parts and service center in the main retail building were stored on a wood slab on top of concrete. The six new oil 55-gallon drums were located on wood pallets on top of concrete. One 5-gallon floor stripper was located on tile flooring. One 5-gallon used battery storage containers and the three 45-gallon hazardous materials storage containers were located on wood shelving approximately 4 feet off the ground. All of the other containers were stored on concrete flooring. Staining and/or releases were not observed during the site reconnaissance. Based on site observations, RECs were not identified.

MSDS

Material Safety Data Sheets were observed in the service and parts center in the main retail building, and in the automotive repair center during the visual reconnaissance. Matching of MSDS to the chemical storage observed on site was not performed as part of the scope of services.

Underground Chemical or Waste Storage, Drainage or Collection Systems

Oil/water separators

One four stage oil/water separator was observed to the west of the automotive service center during the site reconnaissance. The oil/water separator date of construction is unknown, but is believed to have been installed during the construction of the automotive repair center. According to Mr. Anthony Dayton, Assistant Auto Center Manager, the oil/water separator is used primarily for the automotive center operations. The oil/water separator receives automotive waste fluid from on-site operations and discharges it to the municipal sewer system. The condition of the tank and the current amount of product in the tank are unknown. The maintenance record of the oil/water separator was unavailable. Evidence of staining or surface releases was not observed in the vicinity of the oil/water separator at the time of the site reconnaissance. To evaluate the presence of the oil/water separator, Terracon conducted Phase II ESA services, which included advancement of one soil boring to a maximum depth of 10 feet bgs. Based on the findings of Terracon's Phase II ESA, the presence of the oil/water separator does not appear to have impacted the Sears Auto Center #6458 site, and do not appear to represent RECs to the site.

Interior floor drains

Interior floor drains were observed at the following site locations: restrooms, janitorial supply, and the automotive service center. Staining and/or releases to the floor drains was not observed during the site reconnaissance. Potentially hazardous materials did not appear to be stored in the vicinity of the floor drains. Based on site observations, RECs were not identified.

Electrical Transformers/ PCBs

Transformers

During Terracon's site visit, three pad-mounted transformer, owned and serviced by Southern California Edison (SCE) were observed on the site. No information with regard to PCB content of the transformer fluids was observed. Transformers contain mineral oil which may contain minor amounts of PCB and could be considered "PCB contaminated" (PCB content of 50-500 ppm).

SCE maintains responsibility for the transformers, and if the transformers were "PCB contaminated," the utility company is not required to replace the transformer fluids until a release is identified. However, no evidence of current or prior release was observed in the vicinity of the electrical equipment during the site reconnaissance. Based on site observations, RECs were not identified.

Releases or Potential Releases

Trash, debris and/or other waste materials

One approximately 15-cubic-foot solid waste disposal dumpster, serviced by Oak Leaf was observed on the southeastern portion of the site near the automotive service center. Staining or noxious odors was not observed in the vicinity of the on-site dumpster.

One cardboard baler was observed on the northwest side of the site near the loading dock. The cardboard baler was located concrete flooring that seemed to be in good condition with no cracks. Surficial staining or releases were not observed on the concrete, or in the vicinity of the cardboard baler, at the time of the visual reconnaissance. Based on site observations, the cardboard baler does not appear to constitute a REC in connection with the site.

Two solid waste disposal compactors were observed on the east and southeast portions of the Sears Store. The solid waste compactors are hydraulically operated and surficial staining was not observed on the paved surface beneath the hydraulic reservoir.

Based on site observations, solid waste dumpster and solid waste compactors do not appear to represent an REC in connection with the site at this time.

5.4 Site Reconnaissance Summary

One emergency generator, two hydraulic elevators, four air compressors, one solid waste disposal dumpster, two solid waste compactors, one cardboard baler, two ASTs, multiple containers ranging in size from 1- to 55-gallon, Material Safety and Data Sheets (MSDS), multiple interior floor drains, three pad-mounted transformers, one solid waste dumpster, two solid waste compactors, five in-ground hydraulic lifts, an oil/water separator, and a cardboard

Phase I Environmental Site Assessment

Sears Store # 1638 and Sears Auto Center # 6458 ■ Brea, CA

May 6, 2015 ■ Terracon Project No. 60149256.1638/6458

baler were observed on site. Based on site reconnaissance observations and findings documented in the Terracon's' Phase II ESA report completed on April 17, 2015 (discussed below), RECs were not identified in connection with the site.

6.0 ADJOINING PROPERTY RECONNAISSANCE

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	The properties to the adjacent north consist of an asphalt-paved parking lot, the Brea shopping mall (1065 Brea Mall), and a four story parking garage and Image Auto Detailing (503 Brea Mall).
East	The properties to the adjacent east consist of an asphalt-paved parking lot and Brea shopping mall (1065 Brea Mall) to the northeast.
South	The properties to the adjacent south consist of an asphalt-paved parking lot followed by East Imperial Highway.
West	The properties to the adjacent west consist of an asphalt-paved parking lot followed by South Randolph Avenue.

Indications of RECs were not observed with the adjoining properties.

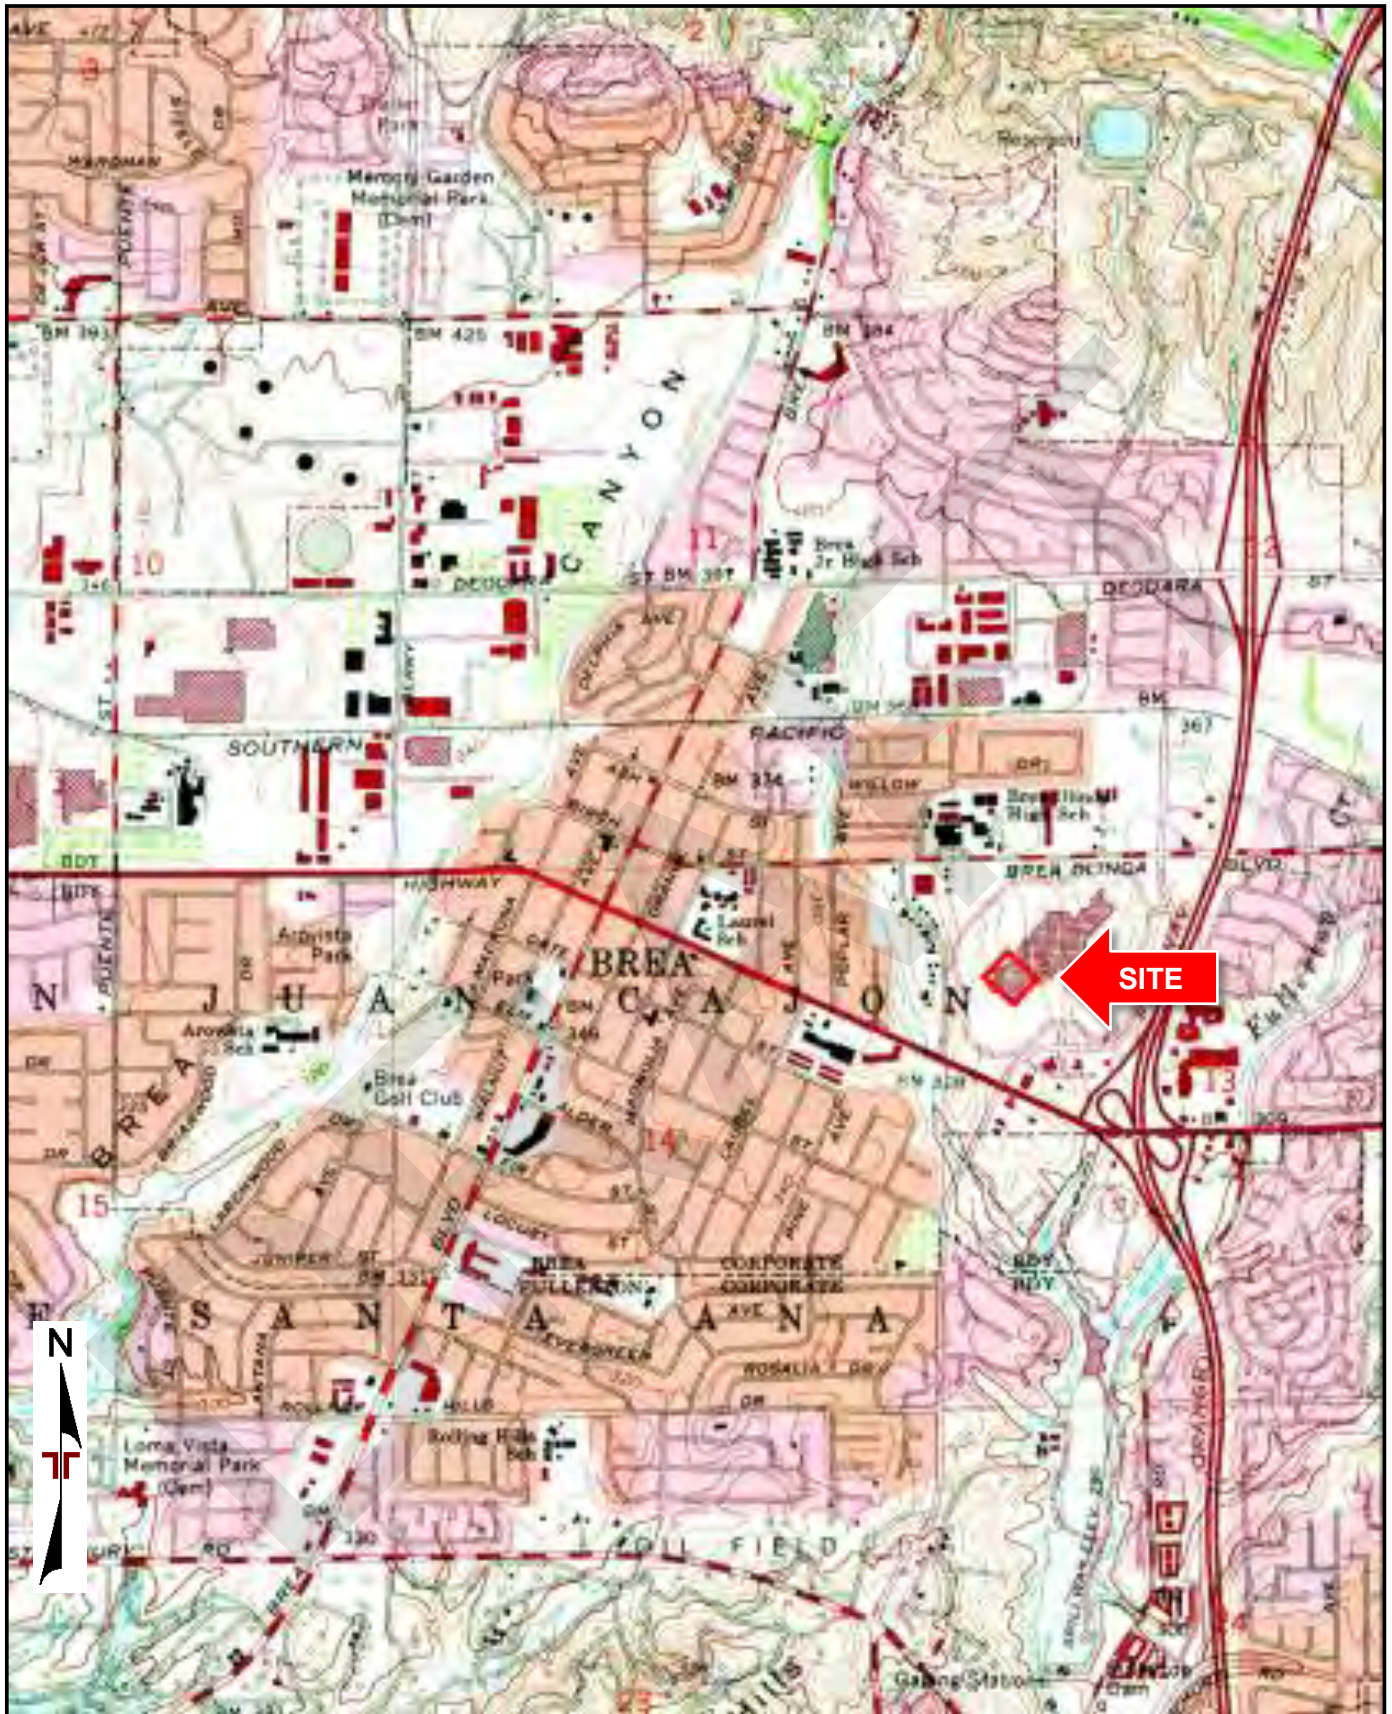

7.0 CONCLUSIONS

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E1527-13 at 100 Brea Mall in Brea, Orange County, California, the site. RECs were not identified in connection with the site.

8.0 DECLARATION

I, Islam (Sami) R. Noaman E.I.T., declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312

APPENDIX B
DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	<p>Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining).</p> <p>Regulatory agencies have generally defined ACM as a material containing greater than one (1) percent asbestos, however some states (e.g. California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable.</p> <p>Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.</p>
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes. BTEX are VOC components found in gasoline and commonly used as analytical indicators of a petroleum hydrocarbon release.
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (a.k.a. Superfund). CERCLA is the federal act that regulates abandoned or uncontrolled hazardous waste sites. Under this Act, joint and several liability may be imposed on potentially responsible parties for cleanup-related costs.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System. An EPA compilation of sites having suspected or actual releases of hazardous substances to the environment. CERCLIS also contains information on site inspections, preliminary assessments and remediation of hazardous waste sites. These sites are typically reported to EPA by states and municipalities or by third parties pursuant to CERCLA Section 103.
CESQG	Conditionally exempt small quantity generators.
CFR	Code of Federal Regulations

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
CREC	Controlled Recognized Environmental Condition is defined in ASTM E 1527-13 as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) , with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.”
DOT	U.S. Department of Transportation
ERNS	Emergency Response Notification System. An EPA-maintained federal database which stores information on notifications of oil discharges and hazardous substance releases in quantities greater than the applicable reportable quantity under CERCLA. ERNS is a cooperative data-sharing effort between EPA, DOT, and the National Response Center.
ESA	Environmental Site Assessment
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a “solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.”
HREC	Historical Recognized Environmental Condition is defined in ASTM E 1527-13 as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”
ILP	Innocent Landowner/Operator Program
LQG	Large quantity generators.
LUST	Leaking Underground Storage Tank. This is a federal term set forth under RCRA for leaking USTs. Some states also utilize this term.
MCL	Maximum Contaminant Level. This Safe Drinking Water concept (and also used by many states as a ground water cleanup criteria) refers to the limit on drinking water contamination that determines whether a supplier can deliver water from a specific source without treatment.

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.
pCi/L	Pico Curies per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in Pico Curies per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ("cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA generators list is part of the RCRIS database maintained by EPA and lists facilities that generate hazardous waste as part of their normal business operations, as more particularly defined under Section 4.1 of this report.
RCRA CORRACTS/TS Ds	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/TS Ds	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-13 as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. <i>De minimis</i> conditions are not recognized environmental conditions."
SCL	State "CERCLIS" List (see SPL /State Priority List, below).

Description of Selected General Terms and Acronyms (cont.)

Term/Acronym	Description
MSDS	Material Safety Data Sheets. Written/printed forms prepared by chemical manufacturers, importers and employers which identify the physical and chemical traits of hazardous chemicals under OSHA's Hazard Communication Standard.
NESHAP	National Emissions Standard for Hazardous Air Pollutants (Federal Clean Air Act). This part of the Clean Air Act regulates emissions of hazardous air pollutants.
NFRAP	Facilities where there is "No Further Remedial Action Planned," as more particularly described under the Records Review section of this report.
NOV	Notice of Violation. A notice of violation or similar citation issued to an entity, company or individual by a state or federal regulatory body indicating a violation of applicable rule or regulations has been identified.
NPDES	National Pollutant Discharge Elimination System (Clean Water Act). The federal permit system for discharges of polluted water.
NPL	National Priorities List, as more particularly described under the Records Review section of this report.
OSHA	Occupational Safety and Health Administration or Occupational Safety and Health Act
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.
SPL	State Priority List. State list of confirmed sites having contamination in which the state is actively involved in clean up activities or is actively pursuing potentially responsible parties for clean up. Sometimes referred to as a State "CERCLIS" List.
SQG	Small quantity generator.
SWF	Solid Waste Facility
TPH	Total Petroleum Hydrocarbons
TRI	Toxic Release Inventory. Routine EPA report on releases of toxic chemicals to the environment based upon information submitted by entities subject to reporting under the Emergency Planning and Community Right to Know Act.
TSCA	Toxic Substances Control Act. A federal law regulating manufacture, import, processing and distribution of chemical substances not specifically regulated by other federal laws (such as asbestos, PCBs, lead-based paint and radon). 15 U.S.C 2601 et seq.
USACE	United States Army Corps of Engineers
USC	United States Code
USGS	United States Geological Survey
USNRCS	United States Department of Agriculture-Natural Resource Conservation Service
UST	Underground Storage Tank. Most federal and state regulations, as well as ASTM E1527-13, define this as any tank, incl., underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground (i.e., buried).
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound

Term/Acronym	Description
Wetlands	<p>Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The <u>Corps of Engineers Wetlands Delineation Manual</u> (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present.</p> <p>The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.</p>

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Relief and Brownfields Revitalization Act of 2001, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Failure to provide responses may result in significant data gaps, which may limit our ability to identify recognized environmental conditions. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of their actual knowledge.

Site Name: Sears Holding Company Phase I ESA(s)

Site Address: Multiple Sites as noted in Terracon proposal A2140020 dated September 9, 2014

1) Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state or local law (40 CFR 312.25)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

2) Are you aware of any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and / or have been filed or recorded in a registry under federal, tribal, state or local law (40 CFR 312.26)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

3) As the user of this ESA, do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312.28)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

4) Does the purchase price being paid for this site reasonably reflect the fair market value of the site? If no, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site (40 CFR 312.29)? ☐ No ☐ Yes If yes, please explain.

Not applicable

5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

6.) As the user of this ESA, based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence of likely presence of contamination at the site (40 CFR 312.31)? ☐ No ☐ Yes If yes, please explain.

No other than what is in the environmental information provided for the site

Request for Information and Documentation

In addition to the specific questions outlined above, the User is requested to provide the following information and documentation, as available. ASTM requires that this information be provided to the Environmental Professional prior to the site visit.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Terracon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Research Summary for City Directory Abstract

Site Location:
100 Brea Mall
Brea, CA

HIG Project #:
148383
Date Completed:
10/2/2014

Historical
Information
Gatherers

Conducted For:
Terracon Consultants, Inc.
Sacramento, CA

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.
600 XXXX = Correct address only. No other information.
X Streetname = intersecting cross street

Publication year, publisher and title.

2011 Haines North Orange County
2006 Haines North Orange County
2002 Haines North Orange County
1996 Haines North Orange County

DRAFT

Research Summary for City Directory Abstract

Site Location:
100 Brea Mall
Brea, CA

HIG Project #:
148383

Date Completed:
10/2/2014

Historical
Information
Gatherers

Conducted For:
Terracon Consultants, Inc.
Sacramento, CA

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)
provides California with information on hazardous waste shipments for
generators, transporters, and treatment, storage, and disposal
facilities.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Status: Open - Assessment & Interim Remedial Action
Status Date: 09/17/2013
Lead Agency: ORANGE COUNTY LOP
Case Worker: JW
Local Agency: ORANGE COUNTY LOP
RB Case Number: 083001136T
LOC Case Number: 90UT242
File Location: Local Agency
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Please refer to recent Site Documents or Monitoring Reports in GeoTracker for site history. Orange County is not responsible for the accuracy of any professional interpretations provided in reports submitted by consultants for the responsible party.

WDS:

Facility ID: Santa Ana River 303184001
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

NPDES Number: CAG918001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Subregion: 8

Facility Telephone: Not reported

Facility Contact: JOHN MEDRANO

Agency Name: EXXON MOBIL REFINING & SUPPLY

Agency Address: 3700 W 190TH STREET

Agency City,St,Zip: TORRANCE 90509

Agency Contact: JOHN MEDRANO

Agency Telephone: 3102121870

Agency Type: Private

SIC Code: 5541

SIC Code 2: Not reported

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

Primary Waste: CNWTRS

Waste Type2: Not reported

Waste2: Contaminated Ground Water

Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

WDS:

Facility ID: Santa Ana River 30I017328
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 8

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014
Date Data Arrived at EDR: 01/08/2015
Date Made Active in Reports: 02/09/2015
Number of Days to Update: 32

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/16/2014	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/09/2014

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/18/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/19/2014	Telephone: 703-603-0695
Date Made Active in Reports: 10/20/2014	Last EDR Contact: 02/26/2015
Number of Days to Update: 31	Next Scheduled EDR Contact: 06/15/2015
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 03/10/2015	Telephone: 202-307-1000

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Photo #39 View of asphalt-paved parking lot and The Cheesecake Factory (120 Brea Mall) located to the adjoining southeast of the site.

Photo #40 View of four story parking garage and Image Auto Detailing (503 Brea Mall) located to the adjoining northwest of the site.

DRAFT

**APPENDIX F
CREDENTIALS**

ISLAM (SAMI) R. NOAMAN, E.I.T.

SENIOR PROJECT MANAGER

Professional Experience

Mr. Noaman is a Senior Project Manager in Terracon's Orange County, California office. He has over 11 years experience in environmental services including Phase I Environmental Site Assessments (ESAs), Limited Site Investigations (LSIs), and Remedial Investigations (RIs). He has conducted over 200 site assessments on vacant tracts, retail centers, multi-family housing, downtown properties, office buildings, industrial properties, and landfill sites. He prepares environmental site assessment and environmental site investigation reports. Mr.Noaman is also proficient in interaction and coordination with local, state, and federal regulatory agencies.

Phase I ESA 1527-05/13

Managed over two hundred Phase I ESAs based on the ASTM E1527-05/13 AAI standards. Management of tasks including proposal preparation, client interaction, site reconnaissance, and assigning research tasks to staff professionals. Mr. Noaman has participated in development of findings, conclusions, and recommendations throughout the ESA. Project experience includes industrial properties, mid- and high-rise office buildings, natural resources sites, multi-family residential properties, services stations, shopping centers, landfills, and dry cleaners. The following are examples of specific projects:

Phase I ESA Portfolios

Mr. Noaman has managed several ESA Portfolios including 10 water processing facilities, 12 commercial and retail properties, 30 telecommunication tower sites, and eight grocery store sites in Southern California.

Phase II Environmental Site Assessment

Mr. Noaman managed multiple Limited Site Investigations and Comprehensive Phase II ESA projects including dry-cleaning properties, auto repairing facilities, gasoline stations, and multiple industrial facilities. Mr. Noaman possesses extensive experience in data evaluation and validation.

LA Housing Partnership, 622-628 S. Alvarado St. LA

Prepared a Phase I ESA of a mixed retail and residential apartment building. The Phase I ESA recommended further investigation to evaluate dry cleaning operations. Multiple Soil Vapor Investigations of former dry cleaning operations were conducted subsequent to the ESA.

Education

*Bachelor of Science,
Chemistry/Environmental
Chemistry, 2002, City University of
New York, City College of New York*

Certifications

*Certified Engineer In Training (CA)
Certification No. EIT 171371*

*40-Hour OSHA Hazardous Waste
Operations & Emergency
Response Training Course*

Work History

*Terracon Consultants, Inc. (Irvine,
CA), Senior Project Manager, June
2012 to Present*

*Smith Emery GeoServices (SEG),
(Los Angeles, CA), Project
Manager, August 2008 to June 2012*

*KLK Environmental Group LLC.
(Kearny, NJ). Environmental
Scientist August 2003 to June 2008*

*UniChem Inc. (Kearny, NJ). Staff
Environmental Chemist August
2002 to June 2003*

Gutierrez Financial-multiple locations, Los Angeles, CA

Mr. Noaman managed this project which consisted of removal of two 10,000-gallon, two 4,000-gallon, two 2,000-gallon, and one 550-gallon gasoline/diesel/waste oil USTs. Responsibilities associated with this project included coordination/interaction with client, contractors, and regulators, field activities, data evaluation, and report evaluation. A No Further Action status was obtained for the client.

Los Angeles Unified School District (LAUSD Sites)

Managed soil certification and soil characterization projects for export/import soils for over nine Los Angeles Unified School District (LAUSD) school sites. Responsibilities were to prepare Sample Strategy Plans (SSP), implementation of sampling strategies proposed, preparation of soil certification reports, and submittal of reports to the LAUSD Office of Environmental Health (OEHS).

Stormwater Prevention and Pollution Control Plan (SWPPP)

Mr. Noaman has managed six freight facility SWPPP projects in Southern California. Mr. Noaman responsibilities include client and agency interaction, implementation of guidelines required by the state of California Water Resources Board, and preparation of required documents/reports.

Newton Plastics, Newton, NJ

Responsibilities were to manage the removal of two 12,000-gallon tanks containing solvents and gasoline. Phase II environmental site assessment at a plastic container manufacturing company. Mr. Noaman managed and assisted in report preparation, field activities, data evaluation, client and agency interactions, and report preparation. A No Further Action letter from the New Jersey Department of Environmental Protection (NJDEP) was obtained for the client.

Eagle Electric, NYC, NY

Responsibilities were to manage the clean-up of a former coal storage facility located in the basement of a landmark building in NYC. The clean-up activities included the removal of 412 tons of HAZMAT, management and safety supervision of multi-person crew, coordination for hazmat transportation and disposal, and client contact.

AROL Chemicals, Newark, NJ

Responsibilities were to complete a Phase I ESA on the subject site. The follow up Phase II included the removal of three 12,000-gallon USTs from a chemical plant and soil clean-up by excavation and disposal. Managed all client/contractors communications and scheduling.

Goblin Lighting, Staten Island, NY

Supervised the removal of five 500-gallon gasoline and one 1,100-gallon waste oil USTs and the clean-up of approximately 453 tons of gasoline contaminated soils. Communicated with the client, contractors, and disposal facilities (transfer station) and ensured the implementation of a Health and Safety Plan put in place for the project.

KeySpan Energy, NY

Mr. Noaman Managed the KeySpan project, which consisted of evaluation of boilers and above-ground tank systems and implementation of methods to prevent excessive scaling within these systems. Objectives were achieved by the development of a pH-controlled chemical reagent that was utilized by the client on a regular basis.

Hach Company, OH

Mr. Noaman played an important role in research and development of mass production of Ferrozone, an iron reagent used for determining trace levels of iron in chemical reagents and glycols. Ferrozone can also be used to analyze samples containing magnetite (black iron oxide) or ferrites.

KIWA of the Netherlands

Research and development associated with new synthetic methods to produce alkali Ferrates including potassium, sodium, and barium ferrates. Alkali ferrates are considered environmentally friendly oxidative reagents, used in wastewater treatment for municipal and industrial facilities.

DRAFT

CARL A. PARTEN

OFFICE MANAGER

PROFESSIONAL EXPERIENCE

Mr. Parten has over twenty-two years of experience in environmental site investigations and remediation studies for Industrial and Hazardous Waste sites, municipal solid waste landfill sites and underground storage tank (UST) facilities. He was the Risk Assessment and Corrective Action Manager for Terracon's Dallas office before taking over the Orange County location as Office Manager.

He has successfully managed and obtained regulatory closure of over 30 Voluntary Cleanup Program (VCP) sites and leaking underground storage tank (LUST) facilities, and coordinated UST removal and closure for numerous facilities in multiple states throughout the United States. Mr. Parten possesses extensive experience in the installation of monitor wells, aquifer characterization, sensitive receptor surveys, and risk-based assessments. Additionally, he has extensive experience in comprehensive soil and groundwater investigations on industrial facilities and municipal solid waste (MSW) landfill facilities, including evaluation of landfill gas/methane impacts. He has prepared and implemented corrective action work plans for remediation of chlorinated hydrocarbons at dry cleaner facilities and petroleum hydrocarbons at LUST facilities, MSW landfill facilities, and managed and implemented groundwater pump and treat, non-aqueous phase liquid (NAPL) recovery, and dual-phase vapor extraction systems for the recovery of petroleum hydrocarbons. Additionally, Mr. Parten developed work plans and implemented the remediation of heavy metals and poly-nuclear aromatic hydrocarbons (PAHs).

PROJECT EXPERIENCE

Municipal Landfill – VCP Site

Successfully oversaw and managed the engineering design and construction quality assurance for the closure and restoration of a high-profile MSW landfill in accordance with regulatory standards, subsequent to significant investigation activities. The remedy consisted of removal and consolidation of wastes and construction of LFG recovery trenches to prevent migration of landfill gas. The remedy utilized engineering controls and removal of impacted media. Project management responsibilities included coordination with Local, State and Federal officials, public/neighborhood communications, and interaction with attorneys, and management of project budgets that exceeded \$4.5 million over seven years. Terracon continues to provide post closure care monitoring and O&M for the site.

Department of Transportation Contract

Successfully managed a two-year environmental services contract with the Texas Department of Transportation (TxDOT) and coordinated multiple Terracon offices to provide geographic coverage of environmental consulting service throughout Texas. Mr. Parten was the liaison to TxDOT for the performance of environmental consulting services, and provided senior technical review of environmental investigations, Phase I ESAs,

Education

Bachelor of Science, Geology, Sul Ross State University, Alpine, Texas, 1994

Additional Courses:

University of Houston TCEQ Texas Risk Reduction Program (TRRP) Training Program I, II, and III

Roadmap to Remediation

CAPM Refresher Course, Texas A&M University

TNRCC Hazardous Waste Seminar

TNRCC PST Risk Assessments Seminar

TNRCC Pollution Prevention Training Workshop

API Risk/Exposure Assessment

Contaminant Fate and Transport Modeling in Risk Assessment

Environmental Hydrology and Soil Science

Certifications

Licensed Professional Geoscientist (P.G.), I.D. # 221, Texas Board of Professional Geoscientists, March 2003 (current)

Registered Professional Geologist (P.G.), I.D. # 004037; State of Tennessee, May 1996 (current)

TCEQ Corrective Action Project Manager, CAPM #01091 (current)

Work History

Terracon Consultants, Inc. (Irvine), Principal, Office Manager, August FJJl to Present

ATC (formerly ATEC) Associates, Inc. - Dallas, Texas, Senior Project Manager April 1990 to August 1998

Terratech, Inc. - San Jose, California, Environmental and Geotechnical Technician February 1989 to March 1990

Woodward-Clyde Consultants - San Jose, California, Environmental and Geotechnical Technician March 1987 to February 1989

removal of underground storage tanks, remediation of affected media and waste management, asbestos and lead-based paint investigations, and management of financial metrics and budgets in strict conformance with negotiated fees and procedures under a \$2,000,000 contract.

City-Operated LUST Facilities

Provided senior project management of 14 City operated LUST facilities through coordination of investigation, regulatory reporting and response actions in the pursuit of closure. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

Municipal Property

Provided senior project management and technical review of several properties, including the remediation of metals and PAH-impacted soils, using a combination of excavation and removal and in-place stabilization. Work was performed under the EPA Brownfields Program and the Voluntary Cleanup Program. The \$1.2 million dollar remediation project was part of a high-profile downtown parks and recreation redevelopment project that successfully established LEED Certified public parks in areas once occupied by commercial and industrial property. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

3.023-Acre Tract – VCP Site

Successfully managed a Phase I ESA and subsequent comprehensive site investigation to evaluate historical site activities and non-native fill material. Chemicals of concern included VOCs, TPH, metals and PAHs in on-site soil and groundwater. Subsequent to completion of a risk-based assessment, response actions including remediation of approximately 1,500 cubic yards of impacted soils was performed to obtain a voluntary cleanup program Certificate of Completion. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, and communication with state officials.

Retail Shopping Center – VCP Site

Conducted extensive site investigation activities to evaluate the magnitude and extent of chlorinated solvents identified in the vicinity of a former dry cleaners facility. The chlorinated solvent plume was defined to drinking water standards and was delineated to a creek channel nearly 1,200 feet from the source property. Based on site investigation results, assisted the property owner in entering the site into the VCP, and managed and implemented response actions and treatment of affected media utilizing a combination of source-removal/excavation (750 cubic yards) within the building interiors, hydrogen-releasing compound (HRC®) treatment of backfill, and HRC injection into the underlying soil and groundwater across the site. Treatment technology effectively remediated affected soils and significantly reduced contaminant levels within the on-site source areas. Additional response actions were conducted to reduce on-site groundwater contamination levels through HRC injection at over 250 locations. Monitored natural attenuation and groundwater monitoring was performed for a period of approximately four years. Mr. Parten assisted the client in the establishment of a deed restriction (Municipal Setting Designation) that restricted the use of groundwater on the site. Mr. Parten interacted with City and State officials and prepared and submitted multiple reports documenting site activities, and managed a project budget totaling \$1,200,000.

Additional Project Experience

Under the direction and senior technical review by Mr. Parten, final site closure has been obtained for over thirty VCP, Innocent Owner/Operator Program, LUST, and Industrial and Hazardous Waste facilities in multiple states across the United States. Additionally, Mr. Parten has coordinated and managed the removal of dozens of underground storage tank (UST) systems and remediation of contaminated soil and groundwater. Mr. Parten has provided expert testimony on multiple projects, and is a primary point of contact interacting with environmental attorneys and regulatory agencies.

RE: CITY DIRECTORY RESEARCH
Sears Brea Mall
100 Brea Mall Brea, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

100-400 of Brea Mall
100-255 of Randolph Avenue

Site Identification**Sears #1638/6458/8358**100 Brea Mall
Brea, CA 92821
County
Orange**CERS ID**
10140819**EPA ID Number**
CAD980892301**Submittal Status**Submitted on 4/14/2017 by *James Tunney* of SEARS, Roebuck & Co. / Kmart Corporation (Hoffman Estates, IL)
Submittal was *Accepted*; Processed on 8/2/2017 by *Shruthi Sili* for Orange County Environmental Health**Hazardous Materials**

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?

Yes**Underground Storage Tank(s) (UST)**

Does your facility own or operate underground storage tanks?

No**Hazardous Waste**

Is your facility a Hazardous Waste Generator?

Yes

Does your facility treat hazardous waste on-site?

No

Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?

No

Does your facility consolidate hazardous waste generated at a remote site?

No

Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?

No

Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.

No

Is your facility a Household Hazardous Waste (HHW) Collection site?

No**Excluded and/or Exempted Materials**

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?

No

Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.

No

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?

No**Additional Information**

No additional comments provided.

THE ITEMS NOTED BELOW WERE OBSERVED DURING THE COURSE OF A SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED.

I325 - Owner/Operator determined whether waste is a hazardous waste and retained waste analysis for 3 years Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years. 22 CCR 12 66262.11, 66262.40(c)

A 30 gallon drum is labeled was labeled waste gasoline, but per the mechanic on-site they use it to dispose of their waste break fluid. Mr. Lopez, automotive manager, is unsure of what is inside the drum. Please make a waste determination of this drum prior to disposal. Please submit the results to this agency within 30 days.

I400 - Generator properly labeled all containers or tanks containing hazardous waste as required Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. 22 CCR 12 66262.34(f)

The two 30 gallon waste gasoline containers did not have any accumulation start date written on them. Please make sure all containers holding hazardous waste has the following information on the label: "Hazardous Waste", waste (name), hazard property (Eg: toxic, flammable, corrosive, reactive etc.), physical state (solid, liquid), accumulation start date, and the business address.

I474 - Owner/Operator maintained a signed copy of manifests from the designated facility for 3 years Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years. 22 CCR 12 66262.40(a)

No manifest was available for review for the shop/ receiving area of the store. Please make sure to maintain manifests on-site for at least three years.

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary photos was given by the Customer Service Advisor, Dennis Garcia at 2:14pm. The hazardous waste containers found here:

- Waste Antifreeze = 150 gallon tank
- Used oil = 500 gal tanks
- Empty oil containers
- Clarifier water
- Brake Fluid = 30 gal
- Parts Cleaner
- Waste gasoline
- Used oil filters = 800 pounds (4X 55 gal drums)
- Aerosols = 200 pounds (2X 55 gal drums)

I declare that I have examined and received a copy of this inspection report.

PR0029526

- Fluorescent light bulb boxes = 5 items

No waste was found in the upstairs Shop/ receiving area. All hazardous waste containers were empty.

Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection.

The dumpsters outside the store were checked and no issues were observed during this inspection.

Manifests were reviewed for the automotive department and the hazardous waste was picked up by Asbury Environmental Services.

Emergency response information is posted in the break room for the employees.

The weekly inspections are done by the mechanic per Mr. Lopez (Auto Manager).

Employees are trained on hazardous waste management on an annual basis per Mr. Garcia.

Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.

I declare that I have examined and received a copy of this inspection report.

INSPECTOR COMMENTS:

On-site for a follow up inspection and to discuss the open violations. Met with Andrew Demeter reviewed manifests and the hazardous waste storage area in receiving.

Obtained consent to conduct the inspection from Mr. Demeter.

Abate violation 1475 from the previous inspection report. Copies of TSDf manifests were available and reviewed. Please note that manifest number 00443540 noted in the inspection report was in fact manifest number 00443504.

Abate violation 1400 from the previous inspection report. All containers in the hazardous waste storage area are labeled properly with accumulation start dates.

Discussed record keeping today. Manifest tracking needs to be done at this facility. The TSDf signed copy of manifests must be matched with the original left by the transporter.

I declare that I have examined and received a copy of this inspection report.

THE ITEMS NOTED BELOW WERE OBSERVED DURING COURSE OF THE SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED

1475 - Owner/Operator properly prepared manifests for transportation of hazardous waste Failure to prepare a hazardous waste manifest for the transport of a hazardous waste for off-site transfer, treatment, storage, or disposal. 22 CCR 12 66262.20

The TSDf copies of the manifests listed below could not be located in auto:

003074890 SKS (10/03/12)
004300682 SKS (04/16/14)
004443540 SKS (06/18/14)
003987138 SKS (11/25/13)

The 2013 manifests for the retail products could not be located during the inspection.

The TSDf signed copy of manifest 000721718 PSC could not be located during the inspection.

1663 - Generator maintains and operates the facility to minimize the possibility of fire/explosion/release Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment. 22 CCR 15 66265.31

A leaking gallon bottle of acid was observed in an open plastic bag in the hazardous materials area in receiving. The bottle was double bagged and placed into the appropriate sealed, labeled container during the inspection.

1400 - Generator properly labeled all containers or tanks containing hazardous waste as required Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. 22 CCR 12 66262.34(f)

Ensure all containers of universal waste are marked with an accumulation start date immediately.

On-site for a routine inspection. Met with Tony Perez and obtained consent to conduct the inspection.

The auto center manifests were reviewed with Mr. Perez. The retail waste manifests were reviewed with Andrew Demeter.

The containers in the auto shop appeared to be labeled properly. Five (5) containers of universal waste in the receiving area were missing accumulation dates (see violation above).

The facility has an on-line BEP and a copy was observed on-site.

No hazardous waste was observed in the trash.

Record ID: FA0025156
Inspection Date: 10/08/2014

Discussed the need to keep all leaking wastes contained.

The weekly hazardous waste inspection reports need to be completed correctly. The last inspection stated all containers had accumulation start dates. Five (5) containers of universal waste were observed not to have these dated during the inspection.

COMMENTS

ZZZ9 - INSPECTOR COMMENTS

On-site for a follow up inspection. Met with Carlos Gonzalez and obtained consent to conduct the inspection.

Abate violation W044 from the previous inspection report. The light bulbs and tubes have been disposed of as requested.

Observed the hazardous waste storage area this date. All containers are labeled and the area appears in good order.

I declare that I have examined and received a copy of this inspection report.

THE ITEMS NOTED BELOW WERE OBSERVED DURING COURSE OF THE SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED

W044 - UNIVERSAL WASTES Universal wastes are not managed in compliance with Chapter 23. (CA Code of Regulations 66261.9)

-The light tubes and bulbs need to be containerized and labeled properly. The receiving team was working on this during the inspection, but additional boxes for the longer tubes will have to be ordered.

-The light tubes can only be kept on-site for one (1) year. Please arrange for a disposal of the tight tubes and other universal wastes.

COMMENTS

ZZZ9 - INSPECTOR COMMENTS

On-site for routine inspection. Met with Tony Perez and Darlene Limas this date and obtained consent to conduct the inspection.

Hazardous Waste receipts made available and reviewed

HW containers properly labeled

Facility has an OCHCA hazardous materials disclosure that contains information for the emergency coordinator

Inspected the trash/dumpster and it does not appear to contain hazardous waste.

The perimeter of the facility was also inspected; no obvious signs of releases were noted.

COPY MAILED TO OWNER
