CHAPTER 1
Introduction

1.1 Overview

The San Diego Unified School District (District), as the lead agency under the California Environmental Quality Act (CEQA), has prepared this Initial Study/Mitigated Negative Declaration (MND) to evaluate the potential environmental impacts associated with the Franklin Elementary School Whole Site Modernization Project (Proposed Project). The Proposed Project would repair, renovate, and revitalize the existing Franklin Elementary School (Project Site or campus). Improvements would include demolition of a classroom building (Building 04-05), kindergarten building (Building 05-06), and two existing portables in the northern portion of the campus, and the construction of a new two-story 16,400 square feet building in its place (Building 08). The new building would include 12 classrooms and a new cafeteria. In addition, the Proposed Project would modernize Buildings 01-01, 02-02, 02-03, and 06-07, which would include repairing interior and exterior finishes, replacing doors and windows as needed, renovating restrooms, adding a new public address system, and repairing and replacing deteriorating plumbing as necessary. Improvements would also include repairing sidewalks and ramps, modifying the existing security fence. The Proposed Project would not include any changes to the current number of students, student capacity, or staff. Implementation of the Proposed Project would require approval by the District Board of Education. As part of the District's discretionary review process, the Proposed Project is required to undergo an environmental review in accordance with CEQA.

1.2 CEQA Requirements

Approval of the Proposed Project is a discretionary action and is therefore subject to the requirements of CEQA (Public Resources Code [PRC], Division 13, Sections 21000–21177) and the State CEQA Guidelines (California Code of Regulations [CCR], Title 14, Sections 15000–15387). Initial Studies/Environmental Checklist Forms such as this document are typically used as a basis for deciding whether to prepare an environmental impact report (EIR), a mitigated negative declaration (MND), or a negative declaration (ND) for a project, pursuant to CEQA.

An Initial Study/Environmental Checklist Form is intended to satisfy the requirements of CEQA (PRC Division 13, Sections 21000-21177) and the State CEQA Guidelines (14 CCR 15000-15387). CEQA encourages lead agencies and applicants to modify their projects to avoid significant adverse impacts. Per CEQA (14 CCR 15070), an MND may be prepared for a project subject to CEQA when an Initial Study has identified potentially significant impacts on the environment, but revisions have been made or mitigation has been added so that no significant

impacts on the environment would result from project implementation. Based on the findings of the Initial Study, the District has determined that preparation of an MND is the appropriate method to present environmental review of the Proposed Project in compliance with CEQA.

1.3 Terminology

The following terms are used to describe the level of significance of impacts.

- A finding of *no impact* is used if the analysis concludes that a project would not affect the particular topic area in any way.
- An impact is considered *less than significant* if the analysis concludes that a project would cause no substantial adverse change to the environment and requires no mitigation.
- An impact is considered *less than significant with mitigation incorporated* if the analysis concludes that a project would cause no substantial adverse change to the environment provided that environmental commitments or other enforceable measures are included as part of the Proposed Project.
- An impact is considered *potentially significant* if the analysis concludes that a project could have a substantial adverse effect on the environment.

1.4 Initial Study Organization

The content and format of this report are designed to meet the requirements of CEQA. This Initial Study/MND identifies the potential environmental impacts of the Proposed Project to support the decision to prepare an MND. The report contains the following sections.

- **Chapter 1, Introduction,** identifies the purpose and scope of the Initial Study/MND.
- **Chapter 2, Project Description,** identities the location and environmental setting of the Project Site and describes the Proposed Project in detail.
- **Chapter 3, Environmental Checklist,** presents the checklist responses for each resource topic. This section identifies the potential impacts of implementing the Proposed Project, and identifies all references and individuals cited in this Initial Study/MND.

CHAPTER 2
Project Description

2.1 Project Overview

This chapter provides a description of the proposed Franklin Elementary School Whole Site Modernization Project (Proposed Project), which provides a basis for the environmental analysis contained in this Initial Study/MND. The Proposed Project involves improvements to the existing Franklin Elementary School (Project Site or campus), including demolition of two permanent buildings and two portable classrooms, and construction of a proposed two-story building in its place, which would include classrooms and a cafeteria. In addition, the Proposed Project would modernize all other buildings, including repairing interior and exterior finishes, replacing doors and windows, renovating restrooms, adding a new public address system, replacing plumbing as necessary, repairing sidewalks, and adding an additional security fence.

2.2 Environmental Setting

2.2.1 Project Location

Franklin Elementary School is located in the Mid-City Kensington-Talmadge (Kensington) community, in the central portion of the city of San Diego. Kensington is located east of the community of Normal Heights, west of the community of College Area, north of the community of City Heights, and south of the community of Mission Valley. As shown in **Figure 1**, the Project Site is located approximately 0.27 miles east of Interstate (I-) 15 and approximately 1.4 miles south of I-8. Local access is provided by El Cajon Boulevard to the south, Adams Avenue to the north, and Fairmount Avenue to the east, which connects to Montezuma Road and the College Area.

The entire four-acre campus is considered to constitute the Project Site. The Project Site is located entirely within Assessor's Parcel Number (APN) 471-021-03. The Project Site is bound by Monroe Avenue to the north, Van Dyke Avenue to the east, Meade Avenue to the south, and Copeland Avenue to the west, as shown in **Figure 2**.

2.2.2 Surrounding Uses

The Project Site is located within a suburban residential neighborhood comprised primarily of single-family and multi-family (one- and two-story) homes. Residences surround the Project Site to the north, east, south, and west. A church is located 0.07 mile southeast of the Project Site, and Hoover High School is located 0.23 mile to the east. Undeveloped canyons that are part of the

Benjamin Franklin Elementary School

Figure 2
Project Location

ESA

larger San Diego River system are situated along both sides of Fairmont Avenue. The southernmost extent of the canyon system is located in between houses, approximately 50 feet from the eastern boundary of the Project Site.

2.2.3 Project Site Characteristics

The entire four-acre Project Site is zoned as Residential-Single Unit RS-1-7 (City of San Diego 2019). According to the City of San Diego General Plan, the Project Site has a land use designation of Institutional and Public and Semi-Public Facilities, which is consistent with its use as a school (City of San Diego 2018). By state law, school facilities can be exempted from local zoning ordinances consistent with California Government Code Section 53094. The District Board of Education adopted a resolution on July 10, 2018, exempting Franklin Elementary School from local zoning ordinances consistent with the project being carried out as described in this Initial Study.

The Project Site is currently occupied by Franklin Elementary School, a transitional kindergarten through fifth grade magnet school focused on Science, Technology, Engineering, Art, and Mathematics (STEAM) education. The school began in 1929 with temporary wood portables on the Project Site, with the first permanent building constructed in 1934. Since its original construction, a number of improvements have occurred, including the addition of buildings between 1941 through 1951, installation of a heating, ventilation, and air conditioning (HVAC) system on the rooftops, installation of rooftop solar panels, construction of a new library in 2007, and other general improvements. The school currently has a reported actual student enrollment of 381 students and a program capacity of 432 students for the 2018-2019 school year (District 2019). Projected enrollment for the 2019-2020 School year is 395 students with the same program capacity from the prior school year. Currently the school has 19 classrooms including 17 permanent classrooms and 2 relocatable classrooms located within two portable classroom buildings. There are an estimated 20-25 staff members employed at the school as well, as of 2018-2019

TABLE 1
NET CHANGE OF CLASSROOMS WITH PROPOSED PROJECT IMPLEMENTATION

Building Number	Existing Classrooms	New Classrooms
Building 01-01	6	5
Building 01-02	6	5
Building 01-04/05	5	0 (Demolished)
Relocatable Buildings	2	0 (Demolished)
New Building	0	10
Totals	**19**	**20**

As shown in **Figure 2**, primary campus development is situated in the northwestern portion of the Project Site (fronting Monroe Avenue and Copeland Avenue). In its current configuration, the school has three single-story classroom buildings (Buildings 01-01, 02-02, and 04-05), a single-story kindergarten classroom building (Building 05-06), a two-story assembly and administration

building (Building 02-03), a library (Building 06-07), and two portable buildings. The existing school structures include 10,973 square feet (sf) of administrative space (the administrative and library buildings), 22,788 sf of classrooms, and an additional 3,840 sf of portable space, for a total of 37,601 sf. In addition, the campus includes a covered lunch area, asphalt playground areas, covered walkways, wooden planter boxes in the northeastern corner of the campus, an American with Disabilities Act (ADA) drop-off loop and parking space along Copeland Avenue, and a natural-turf joint-use baseball field in the southern portion of the Project Site. Landscaping is limited to shade trees throughout the Project Site and ornamental landscaping along Monroe Avenue and Copeland Avenue and in courtyards in between classrooms.

The campus does not include any parking lots or general-use drop-off loops. The ADA drop-off loop on Copeland Avenue serves as the school buses drop-off and pick-up area. However, street parking is available on all sides of the campus except along Meade Avenue.

The Project Site itself is relatively level, with topography gently sloping downward to the east. The central asphalt playground area located east of the existing library is topographically lower than where the library and adjacent playground are located. In addition, Van Dyke Avenue to the east of the Project Site is topographically lower than the Project Site, with a retaining wall bordering the eastern boundary of the Project Site.

The school is open during the traditional school year (late August through June) and does not provide summer school. School hours (bell schedule) are 7:50 a.m. to 2:10 p.m. Monday through Friday, except for early dismissal at 12:15 p.m. on Wednesdays. In addition, there are several after-school clubs that run on the campus, including Drama Club and Science Olympiad Club.

2.3 Project Characteristics

The Proposed Project would modernize the Franklin Elementary School. Proposed Project components are shown on **Figure 3**.

2.3.1 Proposed Classroom Building

The proposed improvements would require the demolition of the existing classroom Building 04-05, the kindergarten classroom Building 05-06, portable classroom buildings, and rehabilitation of the asphalt playground areas adjacent to the area where the existing portables will be removed. A new approximately 16,400 sf two-story building would be constructed in the northeastern portion of the project site along Monroe Avenue. The new building (Classroom Building 08) would be approximately 29 feet in height, and would include 12 classrooms, a maker space, collaborative space, cafeteria, and restrooms. The proposed building would incorporate a stucco finish, similar to existing buildings on the campus. Once completed, the total number of classrooms would be increased by 1 classroom building from 19 classrooms to 20 classrooms.

D160537.00 - San Diego Unified School District On-Call CEQA Services\03 Working Documents\D160537.12 - Franklin MND\05 Graphics-GIS-Modeling

2.3.2 Whole Site Modernization

Buildings 01-01 and 02-02 (classroom buildings) and Building 02-03 (the assembly and administration building) would include interior and exterior modernization improvements. Improvements would include repairing interior and exterior finishes, replacing doors and windows as needed, renovating restrooms, adding a new public address system, and repairing and replacing deteriorating plumbing, as necessary. In addition, the library (Building 06-07) would include double door improvements and replacement of guardrails at the library stairs.

Improvements would also include repairing sidewalks and ramps throughout the campus, and repair of the existing retaining wall along Van Dyke Avenue. The proposed open area south of the new proposed classroom building extending to the joint-use field would receive new asphalt, concrete, and playgrounds. In addition, the wooden raised bed garden would be relocated from the northeastern corner of the campus to where the existing portables are currently located, and the existing lunch covered structure would be replaced with an updated structure.

Modernization would also include additional security features, including creating a single point of access to Building 02-03 and 01-01 and mounted security cameras throughout the campus. Improvements would also include modifying the existing security fencing in areas where it is not at least 10 feet high.

2.3.3 Landscaping Plan

The northern half of the Project Site consists almost entirely of impervious paved surfaces with small portions of ornamental landscaping, and the southern half consists of pervious decomposed granite with a natural turf joint-use baseball field. The Proposed Project would involve the reconfiguration of buildings on the paved portion of the Project Site as described above. Overall, there would not be a change in the amount of impervious surfaces. Three ornamental trees on the Project Site would be removed to construct the proposed classroom building (Building 08) and accommodate other site improvements. One tree located in the courtyard between Building 04-05 and 05-06, and two along Van Dyke Avenue between Monroe Avenue and Ethelda Place would be removed. Additional drought tolerant trees and landscaping would be added throughout the site as necessary.

2.3.4 Operational Changes

There would be no operational changes with implementation of the Proposed Project. The Proposed Project does not change the current number of students, student capacity, or staff. In addition, there would be no changes to the bell schedule.

2.4 Construction Process and Timeline

Construction would involve demolition, site clearing, grading and excavation of an average of 2 feet below grade for building foundations extending five feet beyond the footprint of the proposed new building, installation of improvements and structural development, and site cleanup. The depth of excavation required is dependent on the distance to the underlying shallow bedrock.

Excavation would not need to extend beyond this bedrock material to support the building foundation. Prior to construction, portable classrooms would be added to the campus to accommodate students while the new classroom building is beingconstructed. Construction would begin February 2021 and would occur for 12 months in threephases, as detailed below and in **Table 2**. Phase 1 would include demolition of Buildings 04-05and 05-06 (classroom and kindergarten classroom buildings), interior demolition and construction of the assembly and administration building (Building 02-03) and improvements at the library (Building 06-07), and the addition of two new temporary portables. Phase 2 would include theconstruction of the new classroom building (Building 08), interior demolition and construction ofclassroom Buildings 01-01 and 02-02, and demolition of the existing Portable 2. Phase 3 wouldinclude demolition of the remaining portable classrooms, as well as the landscape, hardscape, andasphalt playground areas improvements.

Phase 1: Demolition (February to July 2021):

Building 02-03 (Assembly and Administrative Building)

- Demolish administrative offices (interior) and begin new construction.
- Replace door at existing foyer. New opening at Building 02-03 lobby wall. Reconfigure unisex bathroom at lobby. New furniture and casework.
- Demolish auditorium (interior) and primetime area and begin new construction.

Building 06-07 (Library)

- Add double doors to library. Replace guardrails at library stairs.

Building 04-05 (Classroom Building) and Building 05-06 (Kindergarten Classroom Building)

- Demolish all of Buildings 04-05 and 05-06 to accommodate the new classroom building (Building 08)

Portables 1 through 4

- Maintain existing Portable 1 and 2 on site.
- Add additional Portables for kindergarten and 1st grades (New Portables 3 and 4).
- Relocate kindergarten and 1st grade students into Portables 3 and 4.

Phase 2: New Building (July to December 2021):

New Classroom Building 08

- Construct new two-story classroom building (Building 08).
- Replace existing lunch shelter.
- Paving at new building.
- Relocate raised bed garden.
- Once construction has completed move 2nd through 5th graders and teacher lounge into new classroom building (Building 08).

Portable 2

- Demolish existing Portable 2.

Building 01-01 (Classroom Building) and Building 02-02 (Classroom Building)

- Interior demolition and construction.
- New paving and ADA ramps.

Phase 3: Site Finishing and Modernization (December 2021 to February 2022):

- Move kindergarten, 1st graders, and equipment into Buildings 01-01 and 02-02.
- Demolish remaining Portables 1, 3, and 4.
- Landscape, hardscape, and asphalt playground area improvements.

TABLE 2
CONSTRUCTION PHASING

Phase	Approximate Timeline	Description
Phase 1	February 2021 to July 2021	Begin modernization of assembly and administration building (Buildings 02-03) and library (06-07), demolish classroom buildings (Buildings 04-05 and 05-06), and add temporary portables.
Phase 2	July 2021 to December 2021	Construct new classroom building (Building 08), demolish one existing portable, begin modernization of classroom buildings (Buildings 01-01 and 02-02).
Phase 3	December 2021 to February 2022	Demolish remaining portables, and improvements to landscape, hardscape, and playground areas.

SOURCE: District, 2019

Construction is expected to occur between 7:00 a.m. and 7:00 p.m., Monday through Friday (sometimes Saturday), and would comply with the City of San Diego Municipal Code limits regarding construction activity (Municipal Code Section 59.5.0404). No nighttime construction would occur. Construction would overlap with active school hours. All construction and work areas would be clearly demarcated and student access would be prohibited, consistent with construction efforts on other District facilities. All construction equipment staging would be located on-site, in clearly demarcated areas that would not disturb existing school uses. During construction, materials and equipment may be visible from Monroe Avenue and Van Dyke Avenue, however the District would screen these areas with construction fencing. Construction workers would park on the project site in specially designated areas. Construction of the Proposed Project is not expected to require lane closures and is not anticipated to interfere, even temporarily, with emergency access.

2.5 Discretionary Approvals Required

2.5.1 Lead Agency

In conformance with CEQA Guideline Sections 15050 and 15367, the District is the Lead Agency, which is defined as the "public agency, which has the principal responsibility for carrying out or approving a project." There are no responsible or trustee agencies. The California

Division of State Architects (DSA) is a reviewing agency that reviews the project design for compliance with the California Code of Regulations, Title 24.

2.5.2 Permits and Other Approvals

Actions and approvals that may be required from other agencies for the Proposed Project include:

- DSA – General Construction Permit and compliance with California Code of Regulations Title 24
- San Diego Regional Water Quality Control Board– National Pollutant Discharge Elimination System (NPDES) and Stormwater Pollution Prevention Plan (SWPPP)

11.	**Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resource Code Section 21080.3.1:**	Jamul Indian Village requested AB 52 consultation, and consultation was initiated by the District on October 25, 2018.

Environmental Factors Potentially Affected

The following checklist is used to evaluate the potential for significant environmental impacts caused by the Proposed Project. All responses must consider the project in its entirety and any actions involved (i.e., offsite as well as onsite impacts, cumulative as well as project-level impacts, indirect as well as direct impacts, and construction as well as operational impacts).

This checklist is adapted from the form provided in Appendix G of the State CEQA Guidelines (which was updated by the California Resource Agency in December 2018 for implementation in 2019). The checklist is modified as appropriate for this project. There are 21 CEQA subject categories to be considered, with this checklist organized as such. Each subject discussion includes an evaluation matrix, followed by a brief discussion explaining the evaluation rationale. As appropriate, each subject discussion may address more than one specific issue question if there is a salient interrelation.

The 21 CEQA subject categories—or environmental factors—that must be considered are presented below. Each category is scored according to the potential level of impact significance the Proposed Project may have on the environment. The levels of significance are indicated and described below.

3 = Potentially Significant: There is substantial evidence than an effect is significant.

2 = Less than Significant with Mitigation: Applies in situations where a "potentially significant" impact can be reduced to a "less than significant" level with the incorporation of adequate and feasible mitigation measure(s).

1 = Less than Significant: This is an effect that is discernible but would not cause a lasting significant impact.

0 = No Impact: This is an adequate determination if the referenced information sources show that the impact simply does not apply to projects like the one involved.

1	Aesthetics	0	Agriculture and Forestry Resources	2	Air Quality
2	Biological Resources	2	Cultural Resources	1	Energy
1	Geology/Soils	1	Greenhouse Gas Emissions	1	Hazards and Hazardous Materials
1	Hydrology/ Water Quality	0	Land Use/ Planning	0	Mineral Resources
2	Noise	0	Population/Housing	1	Public Services
1	Recreation	1	Transportation	2	Tribal Cultural Resources
1	Utilities and Service Systems	1	Wildfire	2	Mandatory Findings of Significance

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial study:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Date
Signature	Date

Environmental Checklist

Aesthetics

Issues (and Supporting Information Sources):		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
1.	**AESTHETICS — Except as provided in Public Resources Code Section 21099, would the project:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.** The Project Site is within an urbanized area on an existing school site. Surrounding land use is dominated by residential development consisting primarily of single-family and multi-family homes. While the Mid-City Communities Plan does not designate specific scenic vistas, views within the Kensington community along Meade Avenue from 1-15 to 42nd Street facing east are considered public view points. Public view points, as described in the Mid-City Communities Plan, offer framed public views of panoramic aesthetic features such as open space areas or significant architecture (City of San Diego 1998). Meade Avenue forms the southern boundary of the Project Site, where development is limited to the existing joint-use natural turf baseball field. The Proposed Project does not include any activities in this part of the Project Site and would not construct any permanent structures along Meade Avenue. The new two-story building would be constructed on the northeast end of the Project Site fronting Monroe Avenue and would not be visible from the public view point. Although implementation of the Proposed Project would modify the existing views of the campus, these changes would not be visible from the identified public view point on Meade Avenue and therefore would not result in a substantial adverse effect on a scenic vista. Therefore, a less than significant impact would occur.

b) **No Impact.** Designated scenic highways within the County of San Diego include portions of State Route (SR-)75, SR-163, SR-125, and SR-78, and eligible state scenic highways include Interstate (I-)5 and SR-52 (Caltrans 2019). The Project Site is more than five miles from SR-75, SR-125, SR-78, and SR-52, and more than three miles from

I-5 and SR-163. While Franklin Elementary School qualifies as a historical resource pursuant to CEQA (as further detailed within Issue 5 below), the Proposed Project would not be visible from a designated scenic highway. Therefore, there are no potential impacts related to scenic resources along a state scenic highway, and no impacts would occur.

c) **Less-than-Significant Impact.** The Project Site is located in an urbanized (suburban) area within an existing school campus. The existing visual character surrounding the Project Site is that of a residential neighborhood, with single- and multi-family residences surrounding the school to the north, south, and west, and single-family homes to the east. The Project Site is currently developed as an operating school with three single-story classroom buildings, a single-story kindergarten classroom building, a two-story assembly and administration building, a library, two portable buildings (with two classrooms in each), as well as a joint use baseball field and playground area. While the Project Site itself is relatively level, the surrounding topography gently slopes downward to the east. Van Dyke Avenue to the east of the Project Site is topographically lower than the Project Site, with a retaining wall bordering the eastern boundary of the Project Site. Public views addressed in this analysis include those from Copeland Avenue, Meade Avenue, Van Dyke Avenue, and Monroe Avenue. Views from private residences surrounding the Project Site are not protected under CEQA, and therefore are not further discussed.

Construction of the Proposed Project would include the presence and use of heavy machinery including, but not limited to, large trucks, bulldozers, and a construction staging area. Construction activities associated with the Proposed Project are considered a temporary, short-term visual effect.

All of the Proposed Project improvements would occur entirely within the developed campus (Project Site) and would be partially to entirely visible, depending on viewing location. Prominent visual elements on the northern end of the Project Site, along Monroe Avenue, include the existing administration building (Building 02-03) and a classroom building (Building 04-05). Views along Monroe Avenue would change due to the replacement of an existing single-story classroom building (Building 04-05) with a new two-story building, which would be located at the northeast end of the Project Site.

Prominent visual elements on the eastern portion of the Project Site, along Van Dyke Avenue, primarily include the existing retaining wall and playground areas, and views of the classroom building (Building 04-05), kindergarten classrooms (05-06), and two portables are visible in the distance. Views along Van Dyke Avenue would change due to the demolition of the existing classroom building (Building 04-05), kindergarten building (Building 05-06), and portables. The addition of new asphalt playgrounds and repair of the retaining wall would also alter views along Van Dyke Avenue.

Despite these changes, views along Monroe Avenue and Van Dyke Avenue would not be substantially altered as the proposed classroom building would be consistent in size, scale and building materials of existing campus structures. The existing ornamental landscaping would remain along the exterior perimeter of the Project Site along Monroe Avenue and Copeland Avenue. Additionally, street trees along Meade Avenue and Van Dyke Avenue would remain in place. Therefore, the visual character and quality of public views would not be significantly impacted from Monroe Avenue or Van Dyke Avenue.

Due to site configuration and intervening structures and landscape, the demolition activities, construction of the new two-story building, and reconfiguration of the playground would not be visible from Meade Avenue or Copeland Avenue, and public views would remain the same.

Other modernization elements of the Proposed Project, including repaving of the playground area east of the existing portable classrooms, repairing interior and exterior finishes, replacing doors and windows, renovating restrooms, adding a new public address system, replacing plumbing as necessary, repairing sidewalks, and adding an additional security fence, are all small scale modifications that would not constitute a significant change in the visual quality from public views.

Overall, the visual character would be similar to the existing conditions, which is that of a school and school-related uses. Therefore, impacts on the visual character or quality of public views of the Project Site or surrounding area would be less than significant.

d) **Less-than-Significant Impact.** The Project Site is located adjacent to Copeland Avenue, Meade Avenue, Van Dyke Avenue, and Monroe Avenue, which contain residential vehicles and streetlights of a suburban neighborhood scale that emit light and glare during the day and night. In addition, the campus includes existing exterior security lighting that is consistent with District Site Operations Circular No. 1053, which requires all lighting to be turned off prior to 10:00 p.m.

The proposed classroom building would include exterior security lighting. However, similar to existing conditions, lighting would be required to be consistent with District Site Operations Circular No. 1053, which requires all lighting to be turned off prior to 10:00 p.m. to avoid excessive energy consumption and to limit nighttime light spillover into adjacent residential areas. The Proposed Project would not generate substantially more light and glare compared to existing conditions. Construction activities would only occur during permitted daytime hours, and no nighttime construction or lighting would be required. After completion of construction, no substantial changes to sources of light are expected to occur at the site and its surroundings as a result of implementation of the Proposed Project.

The proposed classroom building would be constructed using a smooth stucco finish, consistent with other materials on existing buildings, and would not constitute a substantial source of glare. Therefore, impacts associated with light and glare as they relate to daytime and/or nighttime views in the area would be less than significant.

Agricultural and Forest Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
2. AGRICULTURAL AND FOREST RESOURCES — In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. **Would the project:**				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Project Site is in an urbanized area on an existing school site. According to the California Department of Conservation's San Diego County Important Farmland map, the Project Site is classified as "Urban and Built-Up Land," which does not contain any agricultural uses or areas designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (California Department of Conservation 2016). Therefore, the Proposed Project would not convert farmland to a non-agricultural use and no impact would occur.

b) **No Impact.** As mentioned above in Issue 2 (a), the Project Site is fully developed in an urbanized area and does not contain any agricultural land (California Department of Conservation 2016). The Project Site is zoned as RS-1-7, which does not permit agricultural uses beyond limited community gardens (City of San Diego 2019a, City of San Diego 2019b). There are no Williamson Act contracts in the project vicinity (California Department of Conservation 2013). Therefore, the Proposed Project would

not conflict with existing zoning for agricultural use or a Williamson Act contract and no impact would occur.

c) **No Impact.** As mentioned above in Issue 2 (a) and (b), the Project Site is in an urbanized area on an existing school site. The Proposed Project Site is zoned as RS-1-7, which does not include forest lands, timberlands, or timberland zoned Timberland Production (City of San Diego 2019a). Therefore, the Proposed Project would not conflict with existing zoning for forest land and no impact would occur.

d) **No Impact.** As mentioned above in Issue 2 (c), the Project Site is fully developed and, according to the City of San Diego General Plan and Municipal Code, is not designated as forest land (City of San Diego 2015, City of San Diego 2019a). Therefore, the Proposed Project would not result in the loss of forest land or conversion of forest land to non-forest use; therefore, no impact would occur.

e) **No Impact.** As mentioned above, construction and operation of the Proposed Project would have no impact on agriculture or forest resources. Additionally, there would be no need for land acquisitions to implement the Proposed Project. No other changes in the existing environment, which, due to their location and nature, would result in the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use under the Proposed Project. Therefore, there would be no impact.

Air Quality

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
3. AIR QUALITY — Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. **Would the project:**				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☒	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion

a) **No Impact.** The Project Site is located in the San Diego Air Basin (SDAB), which is within the jurisdiction of the San Diego Air Pollution Control District (SDAPCD). SDAPCD is required, pursuant to the federal and state Clean Air Acts, to reduce emissions of criteria air pollutants currently in nonattainment of federal and state ambient air quality standards in the SDAB. The SDAB is currently classified as a federal nonattainment area for the 2008 8-hour ozone (O3) standard. The SDAB is currently classified as a federal attainment/maintenance area for both the federal 1997 8-hour O3 standard and the federal carbon monoxide (CO) standard. In addition, the SDAB is classified as a state nonattainment area for the California standards for O3, particulate matter less than 2.5 microns (PM2.5), and particulate matter less than 10 microns (PM10) (USEPA 2019, CARB 2018). Note, O3 emissions are not directly emitted from sources; O3 emissions are formed by the combination of O3 precursors of nitrogen oxides (NOx) and volatile organic compounds (VOC) emissions (i.e., vehicle tailpipe emissions) in the atmosphere in the presence of sunlight.

All areas designated as nonattainment are required to prepare plans showing how the area would meet the state and federal air quality standards by its attainment dates. The San Diego Regional Air Quality Strategy (RAQS) is the region's applicable air quality plan for improving air quality in the SDAB and attaining federal and state air quality standards. The RAQS relies on information from the California Air Resources Board (CARB) and the San Diego Association of Governments (SANDAG), including projected growth in the County, which is based in part on local general plans. Therefore, the Proposed Project needs to be consistent with the air quality standards outlined in the RAQS.

Air pollutant emissions generated from the construction and operation of the Proposed Project would have the potential to affect implementation of the RAQS. Emissions from construction activities would be minimal, as shown under Issue 3 (b), below. Project construction would comply with SDAPCD Rules and Regulations, including Rules 50, 51, and 55, which forbid visible emissions, nuisance activities, and require fugitive dust control measures, respectively. The Project would repair, renovate, and revitalize the existing Franklin Elementary School and would not result in a change in existing land uses. The Project would not increase the school's current number of students, student capacity, or staff, therefore, would not increase motor vehicle trips to the Project Site, which in turn would not increase operational vehicle emissions from the school (as analyzed in Issue 3 (b) below), and would not generate an increase in area housing. As such, the Proposed Project would not conflict with or obstruct the implementation of the San Diego RAQS, and there would be no impact.

b) **Less-than-Significant Impact.** Project construction and operation would generate air pollutant emissions that could violate regional air quality standards, or contribute to an existing or projected air quality violation. Project construction and operational emissions could result in a cumulatively considerable net increase of a criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard.

School facilities are currently operating on the Project Site, and residences are located within immediate proximity (i.e., across the streets surrounding the Project Site). These proximate residents and on-site students are considered air quality sensitive receptors. Project demolition, removal, and construction of buildings would include the operation of heavy equipment, which would generate diesel exhaust and fugitive dust, and potentially contribute to local exposure of the nearby sensitive receptors to substantial pollutant concentrations. With the demolition and removal of two existing buildings (Buildings 04-05 and 05-06), construction of a new building, and modernization of the existing buildings to remain, the operation of the resultant buildings would minimize school building emissions with the improved efficiency of the new and modernized building facilities and elimination of less efficient older building facilities. The analysis provides a worst-case, conservative estimation of Project construction and operational emissions, and determines whether these emissions could contribute significantly to existing or projected air quality violations, either directly or cumulatively.

Project construction emissions would vary from day-to-day over the approximately 12-month duration, depending on the specific type and level of construction activity, and, for fugitive dust, prevailing weather conditions. Project construction activities would include the following phases: Phase 1) construction of portable classrooms, begin modernization of buildings, and demolition of buildings 04-05 and 05-06; Phase 2) grading, construction of new classroom building, paving, architectural coating, continued site modernization, and demolition of Portable 2; and Phase 3) finishing site modernization and demolition of Portables 1, 3, and 4. As SCAQMD emission thresholds are in terms of daily emissions (pounds per day), construction-related emissions were quantified in pounds per day for a worst-case day of construction emissions (i.e., the maximum potential daily emissions

that could potentially occur on a given day due to multiple pieces of equipment operating simultaneously with overlapping construction phases) using the California Emissions Estimator Model (CalEEMod), version 2016.3.2 for off-road emissions (construction equipment) and 2017 Emission Factors model (EMFAC2017) for on-road emissions (haul trucks, vendor trips and worker trips). Project construction emissions of each criteria pollutant were then compared to applicable SDAPCD thresholds. Calculations are included in Appendix A and **Table 2** below.

TABLE 2
MAXIMUM DAILY UNMITIGATED REGIONAL CONSTRUCTION EMISSIONS

	Estimated Emissions (lbs/day)a					
Source	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Maximum Daily Emissions by Project Phase[b]						
Phase 1	6	6	7	<1	1	<1
Phase 2	44	29	31	<1	2	1
Phase 3	12	7	8	<1	1	<1
Maximum Regional Construction Emissions	**44**	**29**	**31**	**<1**	**2**	**1**
SDAPCD Thresholds of Significance	75	250	550	250	100	55
Exceeds Thresholds?	No	No	No	No	No	No

a Totals may not add up exactly due to rounding in modeling calculations. Detailed emissions calculations are provided in Appendix A.

b Site modernization would occur throughout the construction period, therefore emissions from site modernization would occur at the same time as the other activities occurring onsite. As there is not a detailed construction schedule available for the project, there is the potential for other subphases to occur at the same time. During Phase 2 there is the potential for grading to occur on one portion of the site while demolition is finishing on another. During Phase 3, there is the potential for building construction, architectural coating of buildings, and paving to all occur at the same time and to overlap with site modernization activities. Therefore, the Maximum Emissions by Project Phase represents these worst-case overlap scenarios.

SOURCE: ESA 2019.

As shown in Table 2, the Project's estimated worst-case day construction emissions would be below the applicable threshold levels. Typical daily construction emissions would be less than the worst-case day emissions. In addition, with the implementation of Mitigation Measure AIR-1, as required to reduce health risk emissions, as detailed in Issue 3 (c) below, maximum daily construction emissions would be even lower than disclosed above. The Proposed Project is required to comply with SDAPCD rules and regulations, including Rules 50, 51, and 55, as described above in Issue 3 (a) to further reduce emissions. Therefore, construction impacts associated with the Proposed Project would be less than significant.

The Proposed Project would not result in an increase in students, student capacity, or staff, and there would be no change in the number of vehicle trips associated with operation of the school. Therefore, mobile source emissions would not change from current conditions, and a quantified analysis is not necessary. Project operation (of the new building and modernized buildings minus the replacement of existing buildings) would continue to generate long-term regional emissions of criteria air pollutants less than or similar to the existing facilitates including ozone precursors associated with

building operations (other than mobile sources), including building energy sources and area sources (architectural coatings and consumer cleaning products). Operations-related emissions (i.e., area and energy sources) were modeled using CalEEMod, and compared to applicable SDAPCD thresholds for criteria pollutants. As shown in **Table 3**, to determine the total net operational emissions from the Proposed Project, the total existing operational emissions from the existing sources to be removed (i.e. portables to be removed, Buildings 04-05 and 05-06 to be demolished) was subtracted from the total Project emissions (area sources and energy) from the resultant Project sources (i.e. new building and modernized existing buildings).

As shown in Table 3, the Project's operational emissions would be negligible, and well below the applicable threshold levels. Therefore, operational impacts associated with the Proposed Project would be less than significant.

Project construction and operational activities would not result in a cumulatively considerable net increase of criteria pollutants in a non-attainment region. The Project Site is within the SDAB, which is classified as a nonattainment area for certain federally and state-designated criteria pollutants, including O_3, PM10, and PM2.5. As shown in Tables 2 and 3, Project construction and operation emissions of O_3 precursors of VOC and NOx, PM10, and PM2.5 would not exceed SDAQMD standards. Also, construction emissions would be temporary and localized, and the Project would comply with all required SDAPCD emissions and fugitive dust measures, which would ensure that the cumulative contribution of criteria pollutants during Project construction would be less than significant.

TABLE 3
PROPOSED PROJECT OPERATIONAL EMISSIONS

	Estimated Emissions (lbs/day)[a]					
Emissions Source	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM 2.5**
Existing[b]						
Area Sources	0.98	0.00	0.00	0.00	0.00	0.00
Energy	0.01	0.07	0.05	0.00	0.00	0.00
Total Existing Emissions	0.98	0.07	0.06	0.00	0.00	0.00
Project[c]						
Area Sources	1.08	0.00	0.00	0.00	0.00	0.00
Energy	0.01	0.06	0.05	0.00	0.00	0.00
Total Project Emissions	1.09	0.06	0.05	0.00	0.00	0.00
Total Net Emissions[d]	0.10	(0.01)	0.00	0.00	0.00	0.00
SDAPCD Significance Threshold	*75*	*250*	*550*	*250*	*100*	*55*
Exceed SDAPCD Threshold?	No	No	No	No	No	No

[a] Detailed emissions calculations are provided in Appendix A.

[b] Existing emissions are emissions from sources to be removed (Buildings 04-05 and 05-06 and portables) and current emissions from Buildings 01-01, 02-02, and 02-03 which are to be modernized.

[c] Project emissions are emissions from new sources associated with the project (i.e. new building) and emissions from the modernization of Buildings 01-01, 02-02, and 02-03.

[d] Net emissions are the project emissions minus the existing emissions

SOURCE: ESA 2019.

As presented in Tables 2 and 3 for construction and operational emissions, respectively, the maximum daily emissions for the criteria pollutants would be below SDAPCD significance thresholds, which were developed in order that emissions in the SDAB can meet or will maintain compliance with the state and federal ambient air quality standards. The standards were established at levels that provide public health protection and allow an adequate margin of safety, including protecting the health of sensitive populations such as asthmatics, children, and the elderly. As Project-related construction and operational emissions would not exceed any regulatory thresholds, off-site receptors would not be exposed emission levels in excess of the health-based ambient air quality standards. As such, construction and operation activities related to the implementation of the Proposed Project would not contribute to health effects related to these pollutants, and impacts would be less than significant.

c) **Less-than-Significant Impact with Mitigation Incorporated.** Project construction emissions could expose sensitive air quality receptors to substantial pollutant concentrations. Sensitive air quality receptors are facilities and structures where people, particularly, children, the elderly, and those with respiratory illnesses (e.g., asthma), live or spend considerable amounts of time, such as retirement homes, residences, schools, playgrounds, childcare centers, and athletic facilities. The Project Site itself is an existing school facility with children (students) when school is in session, and therefore, an air quality sensitive receptor. The Project Site is located within a residential neighborhood, with single-family residences across the streets that surround the Project Site, including Van Dyke Avenue to the east, Meade Avenue to the south, Copeland Avenue to the west, and Monroe Avenue to the north.

Project construction would occur in three phased areas of the Project Site over a total of approximately 12 months. For potential health risks, the duration of Project construction is significantly lower than the 30-year exposure period typically associated with chronic cancer health risks. However, due to the revision in health risk methodology and the increased risk to young children, the Office of Environmental Health Hazards Association (OEHHA), recommends a quantitative health risk assessment (HRA) be conducted for any activities lasting more than two months or disturbing more than one acre (OEHHA, 2015). Accordingly, a quantitative construction HRA was conducted to determine the potential health risk to both onsite (school) and offsite (residential) receptors from exposure to diesel particulate matter (DPM) in the exhaust from the construction equipment operation. **Table 4** summarizes the carcinogenic and non-carcinogenic risk for the maximum impacted sensitive residential and onsite school receptors, both before and after mitigation. Detailed assumptions and methodology are included in Appendix A.

TABLE 4
INCREMENTAL INCREASE IN CARCINOGENIC RISK AND HAZARDOUS INDEX

Sensitive Receptor	Maximum Cancer Risk (# in one million) [a]	Chronic Risk Hazard Index (HI)[b]
Unmitigated Risk		
Residential	53.76	0.49
School	11.31	0.51
Maximum Individual Cancer Risk Threshold[c]	1	1
Exceeds Threshold?	**Yes**	No
Mitigated Risk		
Residential	6.58	0.05
School	1.47	0.06
Maximum Individual Cancer Risk Threshold[c]	10	1
Exceeds Threshold?	No	No

[a] Cancer risk values based on a 30-year exposure of maximum levels of DPM. Residential construction risk was calculated assuming a child was born at the beginning of the project construction and be exposed throughout project construction. School related construction risk assumes the school is closed during the summer (approximately 3-month period) and that the same children are present throughout the entire construction period when school is in session (approximately 9-month period).

[b] Chronic risk HI values based on the annual maximum levels of DPM divided by the corresponding DPM reference exposure levels (RELs).

[c] See text below for explanation of thresholds

See Appendix A for additional details and modeling data.

SOURCE: ESA, 2019.

As shown in Table 4, the chronic health risk hazard index (HI) for the Proposed Project during construction is estimated at 0.49 for residences and 0.51 for students, which is below the significance threshold of a chronic risk HI of greater than 1. However, as shown in Table 4, the maximum incremental increase in cancer risk would be up to approximately 54-in-one-million for residences and 11-in-one-million for students, which would exceed the SDAPCD significance threshold of 1-in-one-million without the incorporation of toxics best available control technologies (T-BACTs). Therefore, the Proposed Project would have a potentially significant carcinogenic health risk, and thus, mitigation measures would be required. With incorporation of **Mitigation Measure AIR-1** (detailed below), carcinogenic risk would be reduced to 6.58 for residents and 1.47 for students which is below the 10-in-one-million regulatory threshold for projects that have incorporated T-BACTs.[1, 2] Therefore, with the incorporation of mitigation, health risk

[1] Mitigation Measure AIR-1 is considered T-BACTs for this project.

[2] SDAPCD Rule 1210 implements the public notification and risk reduction requirements of State law, and requires facilities with high potential health risk levels to reduce health risks below significant risk levels. Rule 1200 requires that projects that propose to increase cancer risk to between 1 and 10 in one million need to implement T-BACT or impose the most effective emission limitation, emission control device or control technique to reduce the cancer risk. At no time shall a project increase the cancer risk to over 10 in one million or a health hazard index (chronic and acute) greater than one. Projects creating cancer risks less than one in one million are not required to implement T-BACT technology.

impacts from Project construction activities would be reduced to less than significant levels.

Once the Proposed Project is operational, toxic air contaminant emissions would not increase over existing conditions. As the Project modernization of an existing school site and does not change land uses, there would be no new significant sources of toxic air contaminants. Therefore, operational emissions would be minimal, and compliance with all SDAPCD rules would ensure that nearby sensitive receptors would not be exposed to substantial pollutant concentrations.

The implementation of the Proposed Project would not increase the school's student or employee capacity, and therefore, would not result in an increase in peak hour traffic at local intersections. Therefore, impacts would be less than significant.

Mitigation Measures:

AIR-1: Equipment Emission Standards. The Proposed Project shall utilize off-road diesel-powered construction equipment that meet or exceed the CARB and USEPA Tier 4 Final off-road emissions standards for cranes and generators used during new building construction and Tier 3 off-road emissions standards for all other equipment rated at 50 horsepower (hp) or greater during Project construction. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a CARB-certified Level 3 Diesel Particulate Filter or equivalent. A copy of each unit's certified tier specification or model year specification and CARB or SDAPCD operating permit (if applicable) shall be available upon request at the time of mobilization of each applicable unit of equipment.

Significance Determination: Less than significant with mitigation.

d) **Less–than-Significant Impact.** Project-related odor emissions would be minimal and would not affect a substantial number of people. During construction activities, emissions from construction equipment may be evident in the immediate area on a temporary basis. Potential sources that may emit odors during construction activities include any architectural coating and asphalt paving. Additionally, material deliveries and hauling heavy-duty truck trips could create an occasional "whiff" of diesel exhaust for nearby receptors. These odors would not affect a substantial number of people because the scale of construction would be small. Operation of the modernized school would not produce objectionable odors. Therefore, the Proposed Project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people, and impacts would be less than significant.

Biological Resources

Issues (and Supporting Information Sources):		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
4.	**BIOLOGICAL RESOURCES — Would the project:**				
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Discussion

a) **Less-than-Significant Impact with Mitigation Incorporated.** The Project Site is developed as an operating elementary school and is either paved or graded and actively used, such as the joint-use baseball field. Ornamental landscaping is present on the Project Site, including along the periphery of the Project Site along Monroe Avenue and Copeland Avenue, and in courtyards between classrooms. Implementation of the Proposed Project would include the removal of three ornamental trees, as described in the project description, to allow for the construction of the proposed classroom building. As part of the Project, additional drought tolerant trees and landscaping would be added throughout the site as necessary.

Ornamental vegetation including trees occurring on site provide suitable nesting habitat for migratory birds and raptors protected under the Federal Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code, which prohibit the take or destruction of migratory birds/raptors, their nests, and/or eggs. Construction is anticipated to commence in February 2021 and take approximately 12 months. Therefore, construction is expected to overlap the avian breeding season (generally

February 1 through September 15) and could result in direct and indirect impacts to nesting raptors and migratory birds. Removal of the single tree and vegetation during the breeding season could result in direct impacts to nesting raptors and migratory birds if nests are present at the time of removal. These direct impacts could include injury or mortality of young (eggs and hatchlings) that cannot escape from the nest during tree or vegetation removal. Indirect impacts to raptors and migratory birds nesting in trees and vegetation within and surrounding the Project Site could result from construction noise and vibration. Construction noise and vibration could negatively affect a bird's breeding and foraging behavior in a manner that causes nest abandonment. These potential direct and indirect impacts would be significant given that impacts to nesting birds could result in a violation of the MBTA and Sections 3503 and 3503.5 of the California Fish and Game Code. However, with implementation of **Mitigation Measure BIO-1** (detailed below), potential impacts to nesting raptors and migratory birds would be less than significant. After completion of construction, suitable tree-nesting habitat would be replaced on the Project Site and school activities would continue similar to existing conditions and no impacts to habitats or sensitive species would occur.

Mitigation Measures:

BIO-1: Migratory Birds. To the extent feasible, tree and vegetation removal shall take place outside of the general avian breeding season (February 1 through August 15) and other construction activities shall be initiated outside of the general avian breeding season. If avoidance is not feasible, the following measures shall be followed:

a) If tree or vegetation removal must occur during the avian breeding season, a nesting bird survey of trees and vegetation planned for removal shall be conducted by a qualified avian biologist no more than 1 week prior to commencement of tree and vegetation removal activities. "A qualified avian biologist" refers to a person with the ability to identify birds present in San Diego County to the species level by sight or sound and who is familiar with the breeding and nesting behaviors of native bird species. If active nests with eggs or chicks of bird species protected under the MBTA are detected within trees or vegetation planned for removal, the trees will remain in place until it has been determined by the avian biologist that the nest is no longer active.

b) If construction activities are initiated during the avian breeding season, a nesting bird survey shall be conducted by a qualified avian biologist within the project area and within 300 feet of construction activities to determine if construction activities are affecting their behavior. If it is determined that behavior is being affected during construction, the qualified biologist shall coordinate with the construction manager to implement real-time engineering controls, which may consist of limiting work to only a portion of each hour, ceasing noise-producing activities, and moving people away from the site to avoid affecting behavior. The qualified biologist shall periodically observe the birds to determine when nestlings fledge. No prohibitions shall be applicable thereafter.

Significance Determination: Less than significant with mitigation.

b) **Less than Significant Impact.** The Project Site is developed as an operating elementary school and all areas on campus are either paved or graded; there is no riparian habitat on the Project Site. Undeveloped canyons that are part of the larger San Diego River system are situated along both sides of Fairmont Avenue. The southernmost extent of the canyon system is located in between houses, approximately 50 feet from the eastern boundary of the Project Site. While there is native vegetation in proximity to the Project Site, a retaining wall and chain link fence, along with Van Dyke Avenue, is situated between the Project Site and native vegetation communities. Additionally, all Project-related activities would occur within the limits of the Project Site, and not within these potentially sensitive natural communities. Therefore, implementation of the Proposed Project would result in no direct impacts to riparian habitat or other sensitive natural communities and habitats.

c) **No Impact.** No state or federally protected wetlands are present within or adjacent to the Project Site (Fish and Wildlife Service 2019). The Proposed Project would occur entirely within the existing developed school campus. Therefore, the Proposed Project would not affect any state or federally protected wetlands either directly or indirectly. Therefore, no impact would occur.

d) **No Impact.** The Project Site is located in an urban and developed area surrounded by residential development. The Project Site is completely developed as an operating school and is either paved or graded and actively used. The Project Site and surrounding area do not contain any streams or bodies of water that may be inhabited by any native resident or migratory fish species. Because the Proposed Project would occur on an existing developed school campus, the Project Site is not considered a migratory wildlife corridor. Therefore, the Proposed Project would not result in the interference of the movement of any native or migratory species, wildlife corridors, or the use of native wildlife nursery sites. Thus, no impact would occur.

e) **No Impact.** The Proposed Project would be in compliance with the City's General Plan, Municipal Code, and Mid-City Communities Plan which have policies that protect biological resources; however, there are no local policies or ordinances specific to the protection of trees. Therefore, the Proposed Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Thus, no impact would occur.

f) **No Impact.** The Project Site is fully developed in an urban area. In the City of San Diego, local habitat, species, and biological resources are protected under the City's Multiple Species Conservation Program (MSCP). To implement the MSCP, the City developed Multi-Habitat Planning Areas (MHPA). While the nearest MHPA includes the undeveloped canyons east of the Project Site situated along both sides of Fairmont Avenue, the Project Site itself is located outside of the MSCP MHPA boundaries (City of San Diego 2008). Therefore, the Proposed Project would not conflict with applicable conservation plans, and no impact would occur.

Cultural Resources

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES — Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?	☐	☒	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Discussion

The information in this section is based on a records search conducted at the South Coast Information Center (SCIC) and the *Benjamin Franklin Elementary School Whole Site Modernization Project Historic Resources Assessment*, located in Appendix B.

a) **Less-Than-Significant Impact with Mitigation Incorporated.** The SCIC records search indicates that 25 previous cultural resources investigations have been conducted within 0.5 mile of the Project Site. Of these 25 studies, one overlaps the Project Site (SD-03402) and is an Archaeological-Historical Study for the City Heights Redevelopment Plan prepared in 1991. The SCIC records search results also indicate that one archaeological resource has been previously recorded within the Project Site (P-37-012463) and 11 historic architectural resources have been previously recorded within 0.5 miles of the Project Site. The one resource identified within the Project Site is a historic-period refuse deposit consisting of bottle fragments, building materials, horseshoes, household items, and butchered bone (Smith 1991). The refuse deposit was identified in 1991 during utility trenching in the northeastern portion of the Project Site under approximately 8 feet of fill. The Project includes excavations of an average of 2 feet deep and would not exceed the approximate 8-foot depth of fill underlying the Project Site. Given that Project excavations would occur in non-native fill material it is unlikely that excavations extend into native soils, or that intact archaeological resources would be encountered. However, in the unlikely event that archaeological resources are encountered they may qualify as historical resources pursuant to CEQA. With the incorporation of **Mitigation Measures CUL-1** through **CUL-3**, potential impacts to archaeological resources that qualify as historical resources would be reduced to a less than significant level.

   As detailed in Appendix B, Franklin Elementary School was evaluated with regard to eligibility for listing in the National Register of Historic Places (National Register) and the California Register of Historical Resources (California Register) as potential individual resources as well as a potential historic district. As a result of this focused research and survey investigations, Franklin Elementary School is recommended eligible

as a historic district on the California Register. The campus is associated with the construction of residential suburbs in the Kensington neighborhood due to the population boom associated with the thriving San Diego Naval Station and defense industry during World War II that made a significant contribution to the broad patterns of development at the local level. Further, Franklin Elementary School is eligible as an example of an expanding elementary school campus reflective of evolving Modernist principles as designed by notable San Diego architects Frank W. Stevenson and Samuel Wood Hamill. Therefore, the Project Site qualifies as a historical resource pursuant to CEQA.

The modifications to the potential historic resource would include the repair, replacement and modernization of facilities at the campus, including work to Buildings 01-01, 02-02, and 02-03. Proposed work would also include the demolition of Buildings 04-05 and 05-06, in order to make space to construct a new classroom building. Further work would include the repair of sidewalks and access ramps, and security fence modifications and additions. The library (Building 06-07) would include improvements to the existing double doors and existing guardrails at the library stairs. The library was built in 2007, and therefore is not a contributing building to the historic district. Thus, improvements at the library would not contribute to any historical resource impacts.

While the detailed design for the new classroom building has not yet been established, if it is carefully and deliberately designed to be compatible with the remaining historic district, and if the remaining buildings are to receive rehabilitation treatments to retain their character-defining features both at the interior and exterior according to the mitigation measures, the Project would conform to the Secretary of Interior Standards for Rehabilitation. While the campus would lose two of the contributing buildings that comprise the potential historic district (Buildings 04-05 and 05-06), the remaining Buildings 01-01, 02-02, and 02-03, if retained relatively intact, would still collectively retain sufficient historic significance to convey their association for eligibility as a historic district. Therefore, after implementation of **Mitigation Measures CUL-4** through **CUL-6**, the Proposed Project would have no adverse impact on historic resources because the eligibility of the historic resource as a district would be retained after Project completion.

Mitigation Measures:

CUL-1: Retention of Qualified Archaeologist. Prior to the start of any ground disturbing activities, a qualified archaeologist, defined as an archaeologist meeting the Secretary of the Interior's Standards for professional archaeology (U.S. Department of the Interior 2008) shall be retained by District to carry out all mitigation measures related to cultural resources.

CUL-2: Cultural Resources Sensitivity Training. Prior to start of any ground-disturbing activities, the qualified archaeologist shall conduct cultural resources sensitivity training for all construction personnel associated with the Project. Construction personnel shall be informed of the types of cultural resources that may be encountered during construction, and of the proper procedures to be enacted in the event of an inadvertent discovery of archaeological resources or human remains. District shall

ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance.

CUL-3: Unanticipated Discoveries. In the event of the unanticipated discovery of non-prehistoric archaeological materials, all work shall immediately cease in the area (within approximately 100 feet) of the discovery until it can be evaluated by the qualified archaeologist. Construction shall not resume until the qualified archaeologist has conferred with District, and if necessary, the appropriate Native American representatives for prehistoric resources, on the significance of the resource.

If it is determined that the discovered archaeological resource constitutes a historical resource or a unique archaeological resource under CEQA, avoidance and preservation in place is the preferred manner of mitigation. Preservation in place may be accomplished by, but is not limited to, avoidance, incorporating the resource into open space, capping, or deeding the site into a permanent conservation easement. In the event that preservation in place is demonstrated to be infeasible and data recovery through excavation is the only feasible mitigation available, an Archaeological Resources Treatment Plan shall be prepared and implemented by the qualified archaeologist in consultation with District that provides for the adequate recovery of the scientifically consequential information contained in the archaeological resource. The qualified archaeologist and District shall consult with appropriate Native American representatives in determining treatment for prehistoric or Native American resources to ensure cultural values ascribed to the resource, beyond those that are scientifically important, are considered.

CUL-4: Historic American Building Survey Recordation. Prior to the issuance of a building permit for the subject property, a recordation document shall be prepared in accordance with Historic American Buildings Survey (HABS) Level III requirements for the eligible buildings within the identified historic district. The recordation document shall be prepared by a qualified architectural historian or historic preservation professional who satisfies the Secretary of the Interior's Professional Qualification Standards for Architectural History pursuant to 36 CFR 61. This document shall include a historical narrative on the architectural and historical importance of the building and its contributions to the history of the area and educational institutions. The document shall also record the existing appearance of the buildings in professional large format photographs. The buildings' exteriors, representative interior spaces, character-defining features, as well as the property setting and contextual views will be documented. All documentation components shall be completed in accordance with the Secretary of the Interior's Standards and Guidelines for Architectural and Engineering Documentation (HABS/HAER standards). Copies of the completed report will be submitted to the South Coastal Information Center (SCIC) at the California State University – San Diego.

The report shall record the history of the subject property and its physical condition, both historic and current, through site plans, historic maps, and photographs, as well as current photographs, written data, and text. The documentation will be organized in the HABS/HAER "short form" format to include the following sections: name, location, significance, description, history, sources, historians, project information, sketch map, and index of photographs. Selected photographic copies or original photographic prints (pursuant to HABS/HAER guidelines) of historic images showing the subject property and original surroundings will be included.

CUL-5: Development of Preservation Plan. Prior to the start of construction, a Qualified Preservation Professional shall be retained to develop a plan of action for avoidance and protection of historic materials in coordination. The plan shall include at a minimum:

1. Notation of the building/structure/feature on construction plans.
2. Pre-construction survey to document the existing physical condition of the building/structure/feature.
3. Procedures and timing for the placement and removal of a protective barrier(s), such as protective wood boards, bracing or framing to protect fragile fenestration and other exposed architecture features and materials, protective fencing and/or concrete or water-filled plastic K-rails around each retained building/structure/feature.
4. Monitoring of the installation and removal of protective barriers by the Qualified Preservation Professional, or his or her designee.
5. Monitoring of the condition of the building/structure/feature at regular intervals during the duration of demolition and construction including vibration monitoring.
6. Post-construction survey to document the condition of each remaining building, structure, and feature after completion of the Project.
7. Preparation of a technical memorandum documenting the pre-construction and post-construction conditions of the historic materials and resource in compliance with protective measures outlined in this mitigation measure.

The plan shall comply with the Secretary of the Interior's Standards for the Treatment of Historic Properties and shall be memorialized in a technical memorandum, which shall be submitted to District for review and approval. The final approved plan shall be submitted to the District no later than 30 days prior to the start of construction including any staging or demolition activities. The plan shall be provided to each construction manager/foreman at the project kick-off meeting for each phase of work. The technical memorandum documenting the pre-construction and post-construction conditions shall be submitted to the District within 30 days of completion of the Project and removal of the protective barriers.

In addition, prior to the start of construction, the District shall inform construction personnel of the location and significance of the historic materials/resource, and of the avoidance and protective measures that shall be implemented. The District shall ensure that the crew for each phase of construction is provided with this information.

CUL-6: Design Review. The District shall retain a qualified preservation consultant who meets the Secretary of the Interior's Professional Qualifications Standards for History, Architectural History, or Architecture, pursuant to 36 CFR 61 and who has at least 10 years of experience in design review and collaboration applying the Standards (Qualified Preservation Professional) to review the final plans for all new proposed construction to ensure conformance with the Secretary of the Interior's Standards for Rehabilitation (Standards) for the remaining portions of the historic district. The Qualified Preservation Professional shall address the compatibility of the new construction with adjacent historical resources in relation to Standards 9 and 10 (related and adjacent new construction).

The Qualified Preservation Professional shall prepare a Secretary of the Interior's Standards Preservation and Plan Review Report, documenting conformance with the Standards for the remaining portions of the historic district. The Qualified Preservation Professional shall submit a draft report to the District within 30 days of completion of the draft design plans, and shall make any recommendations necessary to bring the design into conformance with the Standards. The Qualified Preservation Professional shall review the final design plans and prepare a final report documenting conformance with the Standards, which shall be submitted to the District no less than 30 days prior to the commencement of construction. The final plan review shall be submitted to the District along with the final plan set prior to Project approval.

Significance Determination: Less than significant with mitigation.

b) **Less-Than-Significant Impact with Mitigation Incorporated**. As indicated above, the SCIC records search identified one previously recorded archaeological resource consisting of a historic-period refuse deposit in the northeastern portion of the Project Site. The deposit was identified at a depth of 8 feet, underlying non-native fill. Project excavations would occur in non-native fill material and not exceed depths of 2 feet. As such, it is unlikely that intact archaeological resources would be encountered as a result of Project-related ground disturbance. However, in the unlikely event that archaeological resources are encountered they may qualify as unique archaeological resources pursuant to CEQA. With the incorporation of **Mitigation Measures CUL-1** through **CUL-3**, potential impacts to unique archaeological resources would be reduced to a less than significant level.

c) **Less-than-Significant Impact.** No known human remains exist within the Project Site. However, the Project involves ground disturbance that, while unlikely, has the potential to encounter buried human remains. Should Project-related ground disturbance unearth, expose, or disturb previously unknown human remains, the statutes of PRC Section 5097.98 and Health and Safety Code Section 7050.5 should be followed. Accordingly, the San Diego County Coroner must be notified in the event human remains are encountered. If the County Coroner determines that the remains are Native American, the California Native American Heritage Commission (NAHC) would be notified in accordance with Health and Safety Code Section 7050.5, subdivision (c), and PRC Section 5097.98 (as amended by Assembly Bill 2641). The NAHC would designate a Most Likely Descendent for the remains per PRC Section 5097.98. As the Project contractor would be required to comply with applicable Health and Safety Codes, impacts to human remains would be less than significant.

Energy

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
6. ENERGY — Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Discussion

a) **Less-Than-Significant Impact.** This section analyzes impacts on energy resources due to construction and operation of the Project. The analysis below includes the Project's energy requirements and energy use efficiencies by energy type for each stage of the Project construction and operations.

Construction

The Proposed Project would consume energy during construction activities primarily from on- and off-road vehicle fuel consumption of diesel and gasoline, and electricity from existing grid (not generators) for water conveyance for dust control. The estimated fuel consumption for off-road construction equipment is based on the number and type of equipment that would be used during construction activities, the total duration of construction activities, the hourly equipment fuel consumption factors from the CARB OFFROAD model, which was used in the Project's air quality analysis, and the hourly consumption estimates. On-road vehicles would include vendor trucks to deliver supplies necessary for Project construction, and fuel consumption for employee commute trips. Electricity consumption from water conveyance for dust control was calculated using assumptions for gallons used per acre per day, and CalEEMod water conveyance intensity factors were applied to calculate total construction electricity consumption. Construction activities typically do not involve the consumption of natural gas, therefore, it's not assumed for this analysis. **Table 5** summarizes the Project's total fuel and electricity consumption from construction activities.

As shown in Table 5, the energy consumption summary provided represents the amount of energy that could potentially be consumed during Project construction based on a conservative set of assumptions, provided in Appendix C. As shown in Table 5, on- and off-road vehicles would consume an annual estimated average of 4,182 gallons of gasoline, approximately 35,266 gallons of diesel fuel, and approximately 14,021 kWh of electricity throughout the Project's construction. For comparative purposes, the fuel consumption during Project construction would represent approximately 0.0004 percent of the 2017 annual on-road gasoline-related energy consumption and 0.04 percent of the 2017 annual diesel fuel-related energy consumption in San Diego County. Electricity

would represent approximately 0.0001 percent of San Diego Gas and Electric's (SDG&E) total electricity sales for 2018. Detailed calculations are shown in Appendix C.

TABLE 5
SUMMARY OF ENERGY CONSUMPTION DURING PROJECT CONSTRUCTION

Fuel Type	Annual Average Quantity/Project Total
Gasoline	**Gallons**
On-Road Construction Equipment	4,182
Off-Road Construction Equipment	0
Total Gasoline	4,182
Diesel	**Gallons**
On-Road Construction Equipment	5,380
Off-Road Construction Equipment	29,886
Total Diesel	35,266
Electricity	**kWh**
Water Conveyance for Dust Control	14,021
Project Length	1 year

SOURCE: ESA, 2019

Project construction contractors would be required to comply with applicable CARB regulations governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. CARB adopted an Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling time in order to reduce public exposure to diesel particulate matter and other toxic air contaminants. CARB approved the Truck and Bus regulation to reduce NO_X, PM10, and PM2.5 emissions from existing diesel vehicles operating in California. In addition to limiting exhaust from idling trucks, CARB recently promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower to reduce emissions by requiring the installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models.

While intended to reduce construction criteria pollutant emissions, compliance with the above anti-idling and emissions regulations would also result in a more efficient use of construction-related energy and the minimization or elimination of wasteful and unnecessary consumption of energy. The regulation was estimated by CARB to reduce non-essential idling and associated emissions of diesel particulate matter and NO_X emissions by 64 and 78 percent respectively in analysis year 2009. These reductions in emissions are directly attributable to overall reduced idling times and fuel combustion as a result of compliance with the regulation.

Project construction compliance with these CARB regulations would result in energy savings of approximately 108 gallons of diesel fuel saved per year, assuming a fuel reduction equivalent to the percent reduction of diesel particulate matter or NO_X as estimated by CARB for 2009 (the lesser value, i.e., 64 percent, is used as a conservative assumption). Heavy-duty engines continue to become more efficient and reduction amounts may lessen in the future due to this. Although the energy savings cannot be precisely quantified, the Project would still reduce consumption of diesel fuel under the anti-idling measure.

Project construction use of electricity would be temporary, sporadic, and cease upon completion of Project construction. Electricity for water conveyance would only be used when necessary to reduce fugitive dust, which would decrease after completion of the earth-moving phases and paving, when the Project Site would be paved and less dust to control. Thus, construction of the Project would use energy necessary to build the Project, but would not result in the wasteful, inefficient, and unnecessary use of energy, and impacts would be less than significant.

Operations

Project operations would consume energy from electricity for lighting and water conveyance, natural gas for heating/cooling, and fossil fuels (diesel and gasoline) for employee, student, and visitor trips. During operation of the Project, energy would be consumed for multiple purposes, including, but not limited to, heating/ventilating/air conditioning (HVAC); refrigeration; lighting; and the use of electronics, equipment, and appliances for the new and modernized buildings.

The energy produced by the existing campus uses was estimated and subtracted from the energy use estimated for the campus expansion to estimate the net energy use under the Project. Electricity and natural gas usage were estimated using CalEEMod emission factors, while fuel consumption was estimated using EMFAC2017 emission factors and total VMT from the CalEEMod emissions modeling for the Project. **Table 6** summarizes the Project's operational energy usage by sources in comparison to SDG&E and San Diego County's transportation fuel use.

Project operation would result in a slight net decrease demand for electricity. As shown in Table 6, Project operation would result in a projected net total consumption of electricity of approximately -0.03 GWh per year, which represents -0.00002 percent of SDG&E's total sales in 2018.

TABLE 6
PROJECT ESTIMATED OPERATIONAL ENERGY USAGE AND REGIONAL ENERGY SUPPLY

Source	Natural Gas Per Year (million kBtu)[a]	Electricity Per Year (GWh)[b]	Gasoline (gallons)	Diesel (gallons)

[c] California Energy Commission (CEC), California Annual Retail Fuel Outlet Report, 2017.
[d] Project electricity and natural gas was calculated using CalEEMod outputs

SOURCE: ESA, 2019.

Project operation would result in a slight decrease in the demand for natural gas resources. As shown in Table 6, Project operation is projected to generate an annual net total demand for natural gas of approximately -0.02 million kBtu and represent -0.00002 percent of SDG&E's total sales in 2018. As with electricity, Project operation would comply with the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance to minimize natural gas demand. As such, Project operation would minimize energy demand. Therefore, with the incorporation of these features, operation of the Project would not result in the wasteful, inefficient, and unnecessary consumption of natural gas and impacts would be less than significant.

As the Project does not change the current number of students, student capacity or staff, the Project would not change the existing demand for fuel resources. Therefore, the Project's fuel consumption would not result in the wasteful, inefficient, and unnecessary consumption of fuel and impacts would be less than significant.

b) **Less-Than-Significant Impact.** Project construction equipment would comply with federal, state, and regional requirements, where applicable. With respect to truck fleet operators, United States Environmental Protection Agency (EPA) and National Highway Traffic Safety Administration (NHTSA) have adopted fuel efficiency standards for medium- and heavy-duty trucks. The Phase 1 heavy-duty truck standards apply to combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles for model years 2014 through 2018 and result in a reduction in fuel consumption from 6 to 23 percent over the 2010 baseline, depending on the vehicle type. U.S. EPA and NHTSA also adopted the Phase 2 heavy-duty truck standards, which cover model years 2021 through 2027 and require the phase-in of a 5 to 25 percent reduction in fuel consumption over the 2017 baseline depending on the compliance year and vehicle type. The energy modeling for trucks does not take into account specific fuel reductions from these regulations, since they would apply to fleets as they incorporate newer trucks meeting the regulatory standards; however, these regulations would have an overall beneficial effect on reducing fuel consumption from trucks over time as older trucks are replaced with newer models that meet the standards.

In addition, construction equipment and trucks are required to comply with CARB regulations regarding heavy-duty truck idling limits of five minutes at a location and the phase-in of off-road emission standards that result in an increase in energy savings in the form of reduced fuel consumption from more fuel-efficient engines. Although these regulations are intended to reduce criteria pollutant emissions, compliance with the anti-idling and emissions regulations would also result in the efficient use of construction-related energy.

Electricity and natural gas usage during Project operations, as reported in Table 5 and Table 6, would be minimized through incorporation of applicable 2016 Title 24 standards and applicable 2016 CALGreen requirements.

As discussed in detail in Issue 8, Greenhouse Gas Emissions*,* the most applicable plan, policy, or regulation adopted for the purpose of reducing greenhouse gas (GHG) emissions are Assembly Bill (AB) 32 and Senate Bill (SB) 32, which codified the state's long-term GHG emissions reduction targets. Consistent with recent juridical and legislative action, this analysis also considers the long-range (2050) reduction target outlined in Executive Order (EO) S-3-05. Additionally, the analysis considers consistency with the District's "Dream Big" Ideas, which were developed to support GHG reductions consistent with regional and statewide targets. GHG reduction plans consider strategies that result in energy savings such as increasing renewable electricity use, reducing water use, and improving overall energy efficiency of buildings and mobile sources. Therefore, since Project operation is consistent with AB32, SB32, Title 24, and CALGreen standards, it does not obstruct any applicable renewable energy or energy efficiency plan, and impacts are less than significant.

b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.**

i) Similar to all of southern California, the Project Site is in a known seismically active region where the potential of seismic hazards exists. The site is not located on an Alquist-Priolo Earthquake Fault Zone (City of San Diego 2008). The nearest Alquist-Priolo fault is the Newport-Inglewood Rose Canyon Fault, located approximately 5 miles west of the Project Site (City of San Diego 2018. Therefore, there is not a risk of fault rupture of a known Alquist-Priolo fault on the Project Site, and effects would be less than significant.

ii) All of San Diego County, including the Project Site, is located within Seismic Zone 4 (Section 1629.4.1 of the California Building Code [CBC]), which is the highest seismic zone, and is subject to ground shaking. A seismic event on the Rose Canyon fault could cause significant ground shaking on the Project Site. Construction of the new school facilities would be required to comply with all seismic-safety development requirements, including the Title 24 standards of the California Building Code under the direction and approval authority of the Division of the State Architect. Conformance with all applicable seismic-safety development requirements would minimize seismic ground shaking effects in the event of a major earthquake and ensure that the potential seismic or geologic hazard impacts are not significant. Conformance with all applicable seismic-safety development requirements would ensure that seismic ground shaking effects would be less than significant.

iii) Liquefaction occurs when cohesion-less soils become liquefied when agitated by strong vibratory motion due to earthquakes. Research and historical data indicate that loose granular soils and non-plastic silts that are saturated by a relatively shallow groundwater table are susceptible to liquefaction. The Proposed Project consists of demolition and modernization improvements to existing facilities and reconstruction of a new school building. According to the City of San Diego's Seismic Safety Study, the Project Site is not identified as an area susceptible to liquefaction (City of San Diego 2008). As a result, the Proposed Project would not expose people or structures to potentially substantial adverse effects related to liquefaction, and impacts would be less than significant.

iv) According to the Department of Conservation Relative Landslide Susceptibility and Landslide Distribution Map, the site is mapped as "marginally susceptible" to landslides (California Department of Conservation 1995). However, the Project Site and surrounding topography are relatively flat. Additionally, according to the City of San Diego's Seismic Safety Study Geological Hazards map, the Project Site is classified as "other level areas", which are defined as gently sloping to steep terrain, favorable geologic structure, and low risk for geological hazards. Therefore, the potential for landslides would be less than significant.

b) **Less-than-Significant Impact.** The entire Project Site has been disturbed through prior development of the campus. Soils under the Project Site are classified primarily as Pleistocene-age very old paralic deposits (broadly equivalent to the Lindavista Formation) (SDNHM 2019). Implementation of the Proposed Project would not result in substantial soil erosion or the loss of topsoil, as developed areas are less likely to erode and the soils on the Project Site were previously altered from the original construction of the campus. Construction activities would include ground disturbance, however, given the shallow depth of earthwork required and the site's relatively level topography, rapid storm water runoff would be limited, and would not exacerbate erosion potential. Therefore, impacts would be less than significant related to soil erosion.

c) **Less-than-Significant Impact.** As previously discussed above, the Project Site has low potential for liquefaction, landslides, and soil erosion, and impacts are considered less than significant. The Project Site is not located on a geologic unit or soil that is unstable or would become unstable as a result of the Project, resulting in an on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse. Therefore, impacts would be less than significant.

d) **Less-than-Significant Impact.** Expansive soils are fine-grained soils (generally high-plasticity clays) that can undergo a significant increase in volume with an increase in water content and a significant decrease in volume with a decrease in water content. Changes in the water content of an expansive soil can result in severe distress to structures constructed upon the soil. Because the proposed renovations would take place on an already developed campus, the Proposed Project would not be located on expansive soils that would create substantial risk to life or property. Construction would be required to comply with applicable regulations, including adhering to the CBC design parameters. Therefore, with compliance to applicable regulations related to expansive soils, impacts would be less than significant.

e) **No Impact.** Implementation of the Project would not result in any impacts regarding inadequate soils to support septic systems. Franklin Elementary School uses the existing sewer system for the disposal of wastewater, and would not use septic tanks or alternative wastewater disposal systems. Therefore, there would be no impact.

f) **Less-than-Significant Impact.** A paleontological database search was conducted by the San Diego National History Museum (SDNHM), located in Appendix D. The SDNHM search indicates the Project Site is underlain by the Lindavista Formation. The Pleistocene-age (1.5 million – 500,000 years) Lindavista Formation underlies the entire Project Site and rests upon the 930,000-year-old Tierra Santa Terrace. The formation is broadly equivalent to very old paralic deposits. The Lindavista Formation has moderate paleontological sensitivity and has produced fossil specimens of marine invertebrates, as well as sharks and baleen whales throughout San Diego County. Specifically, fossil collection localities from the formation have been identified within one mile of the Project Site. These localities produced trace fossil burrows, leaf impressions of vascular plants, a ray tooth plate, a partial antler of an artiodactyl, and a whale cervical vertebra.

Project ground disturbing activities include demolition, site clearing, grading, and excavation; however, ground disturbing activities would be limited to an average of approximately 2 feet in depth, and would not exceed the approximately 8-foot depth of fill underlying the Project Site. Thus, the Proposed Project would not include excavation into native soils. As such, implementation of the Proposed Project would not cause a substantial adverse change in the significance of unique paleontological resources and/or unique geologic features, and impacts would be less than significant.

Greenhouse Gas Emissions

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
8. GREENHOUSE GAS EMISSIONS — Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Discussion

a) **Less-Than-Significant Impact.** Project construction activities would generate GHG emissions. Once construction activities are complete, indirect greenhouse gas emissions may be generated by the operation of the new facilities. GHGs generated from Project construction and operation could contribute to a direct, indirect, or cumulative significant impact.

The District has not yet formally adopted specific thresholds of significance with regard to GHG emissions, nor has the District adopted a qualified plan, policy, or regulation to reduce GHG emissions that qualifies for tiering in CEQA documents (per State CEQA Guidelines Section 15183.5(a)). The City of San Diego adopted a Climate Action Plan (CAP) in December 2015 that identifies measures to meet GHG reduction targets for 2020 and 2035. However, the CAP does not include emissions associated with District and school operations; therefore, the City's CAP is not an applicable plan. The District has formed a committee to discuss a range of environmental sustainability activities, projects, and policies for consideration. This committee has generated various climate change-related "Dream Big" Ideas, including developing a CAP and developing enough solar capabilities to go "off-grid" by 2025 (District 2014). No timetable for developing and adopting the CAP and other "Dream Big" ideas has been set.

Other lead agencies throughout the state have adopted or recommend mass emission thresholds for evaluating construction and operational emissions. For example, the County of San Diego currently recommend projects be compared to a 900-metric-ton carbon dioxide equivalent ($MTCO_2e$) screening level to identify which projects require additional analysis and mitigation.

Project emissions below this 900 $MTCO_2e$ level are considered less than cumulatively considerable, and project emissions above this level require additional analysis. Moreover, projects that result in a net benefit by reducing GHG emissions are determined to have a less-than-significant impact related to GHG emissions. Recent Court decisions, including the *Center for Biological Diversity et al., Plaintiffs and Respondents v. California Department of Fish and Wildlife, Defendant and Appellant; The Newhall Land and Farming Company, Real Party in Interest. No. S217763 (Newhall Ranch)*, have

recommended that analyses emphasize the consideration of GHG efficiency, and while the County guidance encourages CEQA analyses to focus on the GHG efficiency of a proposed project, the County also acknowledges that some projects are sufficiently small such that it is highly unlikely they would generate a level of GHGs that would be cumulatively considerable.

This 900 $MTCO_2e$ screening level was developed in the California Air Pollution Control Officers Association (CAPCOA) *CEQA & Climate Change* paper (CAPCOA 2008) as a theoretical basis for screening-out smaller residential and non-residential (commercial, office) uses that emit low-levels of GHG emissions from further analysis. This 900 $MTCO_2e$ screening level is based on land-use related emission sources (e.g., on-road passenger vehicles, electricity and utility consumption) that are similar to school-related emissions and is the lowest numerical threshold recommended for use by any large jurisdiction in the state[3] (AEP 2016). Accordingly, the 900 $MTCO_2e$ threshold is applicable to the Proposed Project and meets the criteria identified in the *Newhall Ranch* decision needed to analyze project-level GHG emissions (e.g., project-specific emission sources).

Project construction activities would generate GHG emissions from the operation of off-road diesel equipment exhaust and emissions from employee, material delivery, and haul truck travel over the 12 months of construction. GHG emissions would be primarily generated during construction as carbon dioxide (CO_2) from the combustion of gasoline and diesel as vehicle tailpipe emissions with more limited emissions of nitrous oxide (N_2O) and methane (CH_4), as well as, other GHG emissions related to vehicle cooling systems.

Construction-related GHG emissions for the Proposed Project were estimated using CalEEMod, version 2016.3.2., for onsite equipment and EMFAC2017 for on-road haul, vendor and worker trips, using the same assumptions used in the air quality emissions analysis above (see Issue 3). Total estimated construction-related GHG emissions are shown in **Table 7**.

TABLE 7
ESTIMATED TOTAL CONSTRUCTION GHG EMISSIONS

Emission Source	Estimated CO_2e Emissions (MT)
Phase 1	50
Phase 2	244
Phase 3	101
Total Construction Emissions	395
Annual Construction (Amortized over 30 years)	13 (MT/yr)

CO_2e= carbon dioxide equivalent; MT =metric tons; MT/yr = metric tons per year.
SOURCE: ESA CalEEMod Modeling, 2019. Appendix E.

[3] Numerical thresholds adopted, proposed, or recommended throughout the state range from 1,100 $MTCO_2e$ to 100,000 $MTCO_2e$.

As shown in Table 7, the total estimated GHG emissions during construction of the Proposed Project would be approximately 395 MT of CO_2e. Consistent with the above mentioned GHG guidance, the sum of project-related GHG emissions of this previous project were amortized over a 30-year period of approximately 13 MT of CO_2e, to be added to annual operational emissions of this Project.

Project operation would generate direct and indirect operational GHG emissions from building facilities. The Project would remove existing buildings and thus the emissions from these sources would be replaced by emissions from the new and modernized buildings. Therefore, in order to determine the total net increase in emissions from the Proposed Project, the emissions from the sources to be removed (i.e. portable classrooms and Buildings 04-05 and 05-06), and existing emissions from the buildings to be modernized are subtracted from the new emissions generated by the new building and the modernized buildings. The net annual GHG emissions for the existing site and Proposed Project (including Project construction amortized over 30 years) are shown in **Table 8**.

TABLE 8
ESTIMATED PROJECT ANNUAL GREENHOUSE GAS EMISSIONS

Emission Source	Estimated CO_2e Emissions (MT/yr)[1]
Existing Operational Emissions[2]	
Area	<1
Energy	61
Water and Wastewater	2
Solid Waste	27
Total Existing Emissions	**89**
New Annual Operational Emissions[3]	
Area	<1
Energy	57
Mobile Sources	0
Water and Wastewater	2
Solid Waste	29
Total Annual Emissions	**898**
Net Annual Emissions[4]	**-1**
Annual Construction Emissions (Amortized)	**13**
Total Annual Emissions	**12**
Threshold	900
Exceeds Threshold?	**No**

1 Totals may not add exactly due to rounding

2 Emissions from sources to be removed (i.e. portable buildings)

3 Emissions from sources to be added (i.e. new building)

4 Net emissions are the new emissions minus the existing emissions to be replaced.

CO_2e= carbon dioxide equivalent; MT = metric tons; MT/yr = metric tons per year.

SOURCE: ESA CalEEMod Modeling, 2019. Appendix E.

As shown in Table 8, the estimated annual project related GHG emissions (amortized construction plus operations) were calculated to be approximately 12 $MTCO_2e$, which would not exceed the 900 $MTCO_2e$ per year threshold described above. Therefore, the Proposed Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. This impact is considered less than significant.

b) **Less-than-Significant Impact.** As described in Issue 8 a) above, the City of San Diego has adopted a CAP, which is the City's plan to reduce GHG emissions, but the CAP does not include emissions associated with District and school operations. Therefore, the most applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions are AB 32 and SB 32, which codified the state's GHG emissions reduction targets for the future. Consistent with recent juridical and legislative action, this analysis also considers the long-range (2050) reduction target outlined in Executive Order (EO) S-3-05.[4] Additionally, the analysis considers consistency with the District's "Dream Big" Ideas (District 2014), which were developed to support GHG reductions consistent with regional and statewide targets.

CARB adopted the AB 32 Scoping Plan as a framework for achieving AB 32. The Scoping Plan outlines a series of technologically feasible and cost-effective measures to reduce statewide GHG emissions. These strategies are geared toward sectors and activities that generate significant amounts of GHGs. For example, the majority of measures address building energy, waste and wastewater generation, goods movement, on-road transportation, water usage, and GHGs with high global warming potential. Implementation of the Proposed Project would not conflict with statewide plans since it would not result in zoning or land use changes. Construction of the Project would be short-term in nature, and emissions would not exceed any proposed threshold throughout the state, including the 900 $MTCO_2e$ level referenced above. The Project replaces portable buildings on site with a new building, and modernizes some of the existing onsite buildings. The new building and building upgrades would reduce energy consumption, making the Project more efficient. As discussed above in Issue 8 (a), GHG operational emissions would be minimal and considerably lower than the 900 $MTCO_2e$ per year threshold identified above.

The State of California Executive Orders S-3-05 and B-30-15 establish goals to reduce GHG emissions to 40 percent below 1990 levels by 2030, and 80 percent below 1990 levels by 2050. SB 32 established the 2030 goal as law, but the 2050 goal has not yet been codified by the California Legislature. However, studies have shown that, to meet the 2030 and 2050 targets, aggressive technologies in the transportation and energy sectors, including electrification and the decarbonization of fuel, will be required. In its Climate Change Scoping Plan, CARB acknowledged that the "measures needed to meet the 2050 goal are too far in the future to define in detail." In the First Update, however, CARB generally described the type of activities required to achieve the 2050 target: "energy demand reduction through efficiency and activity changes; large-scale

4 EO S-3-05 establishes a goal of 80% below 1990 levels by 2050.

electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and rapid market penetration of efficiency and clean energy technologies that requires significant efforts to deploy and scale markets for the cleanest technologies immediately." Due to the technological shifts required and the unknown parameters of the regulatory framework in 2030 and 2050, quantitatively analyzing the Project's impacts further relative to the 2030 and 2050 goals currently is speculative for purposes of CEQA.

Although the Project's operational GHG emission levels in 2030 and 2050 cannot yet be reliably quantified, statewide efforts are underway to facilitate the State's achievement of those goals and it is reasonable to expect the Project's operational GHG emission levels to decline as the CARB regulatory initiatives identified in the 2017 Scoping Plan are implemented, and other technological innovations occur. Stated differently, the Project's emissions total for 2022, the first year of operation, represents the maximum emissions inventory for the Project as California's emissions sources are being regulated (and foreseeably expected to continue to be regulated in the future) in furtherance of the State's environmental policy objectives. Given the reasonably anticipated decline in Project emissions once fully constructed and operational, the Project would be consistent with the Executive Orders' goals.

Because the Project's location, land use characteristics, and design render it consistent with statewide and regional climate change mandates, plans, policies, and recommendations, the Project would be consistent with and would not conflict with any applicable plan, policy, regulation or recommendation to reduce GHG emissions. Therefore, impacts would be less than significant.

Hazards and Hazardous Materials

Issues (and Supporting Information Sources):		*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
9.	**HAZARDS AND HAZARDOUS MATERIALS — Would the project:**				
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.** Project construction would require the use of materials that are typically associated with construction activities, such as diesel fuels, hydraulic liquids, oils, solvents, and paints. According to the site-specific Summary of Asbestos Containing Materials and Lead Containing Paint Investigation prepared for a previous project (Appendix F), asbestos containing materials were found in all buildings on the Project Site, except for the kindergarten classroom (Building 05-06) and library (Building 06-07). Buildings identified as having asbestos containing materials that would be demolished or modernized as part of the Proposed Project include classroom buildings, 01-01, 02-02, 02-03, and 04-05. Lead based materials were also identified in several classrooms (Buildings 01-01, 02-02, and 04-05), and the administration building (Building 02-03), and all of these buildings identified as having lead based materials would be demolished or modernized as part of the Proposed Project. Lead based materials and asbestos containing materials are regulated by the California Department of Occupational Safety and Health (Cal/OSHA). Potentially hazardous materials, including lead and asbestos, found on site would be removed in accordance with state and federal

regulations regarding the transport, use, and storage of hazardous materials, including but not limited to the U.S. Department of Transportation Hazardous Materials Transportation Act, California Hazardous Waste Control Act, and California Hazardous Materials Release Response Plans and Inventory Law of 1985. Therefore, the Proposed Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and a less-than-significant impact is anticipated. The Project, including both the new building and the modernized buildings, would not change the ongoing operations at the school, and therefore no operational impacts are anticipated. The routine transport, use, or disposal of hazardous materials used on the Project Site during operation would continue to be conducted in accordance with state and federal regulations regarding hazardous materials. Therefore, construction and operational impacts for these issues would be less than significant.

b) **Less-than-Significant Impact.** Project construction would use typical construction materials. During construction activities, hazardous materials could accidentally be spilled or otherwise released into the environment. If an accident were to occur, clean up would be conducted in accordance with state and federal regulations regarding hazardous materials, including regulations under the United States Environmental Protection Agency (USEPA), Cal/OSHA, and California Department of Toxic Substances Control (DTSC). The Proposed Project would not change the ongoing operations at the Project Site. Therefore, construction and operational impacts for these issues would be less than significant related to foreseeable upset and accidental conditions.

c) **Less-than-Significant Impact.** The Project Site itself contains a kindergarten through fifth grade school and any hazardous materials used during Project construction would be transported, used, and stored in accordance with state and federal regulations regarding hazardous materials. The routine transport, use, or disposal of hazardous materials used on the Project Site (a school) would be conducted in accordance with state and federal regulations regarding hazardous materials. Therefore, the handling of hazardous materials within one-quarter mile of a school site would be less than significant.

d) **No Impact.** Government Code Section 65962.5 requires the California EPA (Cal EPA) to develop an annually update the Hazardous Waste and Substances Sites (Cortese) List. A review of the DTSC EnviroStor and State Water Resource Control Board (SWRCB) GeoTracker databases did not indicate any open cleanup sites or hazardous waste facilities within the Project Site (DTSC 2019, SWRCB 2019a). The Project Site is not identified on databases tracking hazardous materials. The nearest reported case is a leaking underground storage tank (LUST) cleanup site located approximately 0.11 miles southeast of the Project Site, at 4300 El Cajon Boulevard. The LUST site is listed as case completed as of April 26, 1990 (SWRCB 2019c). Other reported LUST sites within one-quarter mile of the Project Site include 4562 W Talmadge Drive, which approximately 0.22 miles northeast of the Project Site. The LUST site is listed as case completed as of July 23, 1996 (SWRCB 2019d). Therefore, as the Project Site is not listed as an open cleanup site or hazardous waste facility, no impact would occur.

e) **No Impact.** The Project Site is not within 2 miles of a public or private airport facility. Both the San Diego International Airport and the Montgomery-Gibbs Executive Airport are approximately 4 and 4.5 miles west and north of the Project Site, respectively. Other airport facilities include Marine Corps Air Station Miramar, approximately 7 miles northwest of the Project Site. The Project Site is not within the boundaries of the Airport Influence Area for Marine Corps Air Station Miramar, Montgomery-Gibbs, or San Diego International Airport (ALUC 2008, ALUC 2010, and ALUC 2013). There are no private airstrips within the vicinity of the Project Site. As such, the Proposed Project would not conflict with an Airport Land Use Compatibility Plan (ALUCP) or any other applicable rules and regulations that pertain to airports and airport safety or excessive noise, and no impacts would result upon implementation of the Proposed Project.

f) **Less-than-Significant Impact.** Emergency management services are overseen by the San Diego Fire-Rescue Department, which responds to emergencies such as earthquakes, floods, and terrorist acts. In addition, the District maintains a Natural Hazards Mitigation Plan that addresses issues related to multiple hazards, including earthquakes, floods, wildfires, landslides, and tsunamis. Current access to the Project Site for emergency vehicles is provided from the joint-use field along Meade Avenue and south of the most southern classroom building along Copeland Avenue, both accessible through a locked emergency access gate. Construction activities would occur within the Project Site but would not restrict access for emergency vehicles traveling to the school due to the phasing of construction. After construction of the Project, emergency access would not change from existing conditions. As a result, implementation of the Proposed Project would not impair or physically interfere with an emergency response, and the impacts are considered to be less than significant.

g) **Less-than-Significant Impact.** The Project Site is within a developed urban area that has not been identified as a wildland fire hazard area. According to the California Department of Forestry and Fire Protection's (CAL FIRE) Very High Fire Hazard Severity Zones (VHFHSZ) in Local Responsibility Area Map, the Project Site is not located within a fire hazard severity zone (CAL FIRE 2009). While open space areas are located in proximity of the Project Site (undeveloped canyons along both sides of Fairmont Avenue), all Project activities would occur within the already developed school property. Therefore, the Proposed Project would not expose people or structures directly or indirectly to a significant risk of loss, injury, or death from wildfires, and impacts would be less than significant.

Hydrology and Water Quality

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
10. HYDROLOGY AND WATER QUALITY — Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of imperious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☐	☒
d) In flood hazard, tsunami, or seiche zones, risk or release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Discussion

a, e) **Less-than-Significant Impact.** The Proposed Project includes demolition, construction, and modernization to select facilities and infrastructure at an existing kindergarten through fifth grade school campus in an urbanized area. During construction, exposed soil could temporarily increase the amount of sediment in runoff, which would enter the existing storm drain system. The Proposed Project would be required to obtain and comply with the Construction General Permit from the SWRCB. Stormwater best management practices (BMPs) would be required to limit erosion, minimize sedimentation, and control stormwater runoff water quality during construction activities. It is assumed that the limits of disturbance for the Proposed Project would require a Stormwater Pollution Prevention Plan (SWPPP). Compliance under the Construction General Permit and SWPPP would ensure that construction activities would not degrade the surface water quality of receiving waters to levels that would be below the standards that are considered acceptable by the San Diego Regional Water Quality Control Board (RWQCB) or other regulatory agencies. The Project Site would continue to drain into the

existing municipal storm drain system within the Project Site. The amount of stormwater runoff, and surface or ground water quality from the Project Site would not change substantially after implementation of the Proposed Project. Additionally, there would be no new additional source of polluted runoff.

It is not anticipated the Project construction would reach excavation depths greater than 2 feet, and no impacts to groundwater quality are anticipated. Similar to existing conditions, the Project does not propose to use groundwater. As a result, impacts related to surface water or groundwater quality would be less than significant, and the Proposed Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

b) **Less-than-Significant Impact.** The Project Site is within an established urban community that is serviced by the City of San Diego Water Utilities Department. The Project does not propose to use groundwater. Additionally, all Project improvements would occur within the existing school campus footprint, and the change in paved areas would be negligible. Therefore, the Proposed Project would not interfere with groundwater recharge such that the Proposed Project may impede sustainable groundwater management of a basin. Therefore, a less than significant impact would occur related to a decrease in groundwater supplies or groundwater recharge.

c) i) **Less-than-Significant Impact.** Construction of the Proposed Project would include ground disturbing activities in order to construct and modernize school facilities. These activities could temporarily alter the ground surface, consequently altering drainage patterns. Altered drainage patterns have the potential to result in erosion or sedimentation on or offsite by redirecting or concentrating flows on-site. However, as described above in Issue 10 (a), the Proposed Project would be required to comply with the Construction General Permit and a SWPPP. BMPs would be implemented to minimize sedimentation at the Project Site. After the completion of construction, the ground surface would have similar amounts of pervious and impervious surfaces. Drainage within the Project Site would continue to be serviced by the existing storm drain system. Additionally, no stream or river courses exist within the site vicinity that could be affected by the Proposed Project. Therefore, impacts on the existing drainage pattern regarding siltation or erosion on- or off-site would be less than significant.

ii) **Less-than-Significant Impact.** As previously discussed above, construction of the Proposed Project could temporarily alter the ground surface, consequently altering the drainage pattern. Altered drainage patterns have the potential to result in increased runoff, which could result in flooding on or offsite. However, as described above in Issue 10 (a), the Proposed Project would be required to comply with the Construction General Permit and a SWPPP. BMPs would be implemented to minimize runoff at the Project Site, which in turn would minimize flooding. After the completion of construction, the ground surface across the Project Site would be similar to existing conditions. Drainage within the Project Site would continue to be

serviced by the existing storm drain system. Therefore, impacts on the existing drainage pattern regarding runoff in a manner that would result in flooding on- or off-site would be less than significant.

iii) **Less-than-Significant Impact.** See discussion under Issue 10 (c)(i) and (ii), above. Construction of the Proposed Project would not result in significant impacts on the existing drainage pattern due to implementation of BMPs that would minimize flooding and runoff. After the completion of construction, drainage patterns would be similar to existing conditions. Drainage for the Project Site would continue to be serviced by the existing storm drain system. Therefore, impacts related to runoff exceeding the drainage system capacity would be less than significant.

iv) **No Impact.** The Project Site is not within a 100-year flood hazard area, as mapped on Federal Emergency Management Agency's (FEMA) Flood Insurance Rate Map (FEMA 2019). Therefore, the Proposed Project would not impede or redirect flows, and there would be no impact.

d) **Less-than-Significant Impact.** The Project Site is located approximately 6.3 miles east of Mission Bay and 8.7 miles from the Pacific Ocean. According to the California Emergency Management Agency's Tsunami Inundation Map, the Project Site is not in an affected USGS Quadrangle (California Emergency Management Agency 2019). In addition, the Project Site is not located near a body of water, and therefore not at risk by seiche. As previously discussed, the Project Site is not within a 100-year flood hazard area, as mapped on FEMA's Flood Insurance Rate Map (FEMA 2019). As a result, there would be a less-than-significant impact regarding risks from seiche, tsunami, or flood hazards that would risk or release pollutants due to inundation.

Land Use and Land Use Planning

Issues (and Supporting Information Sources):		*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
11.	**LAND USE AND LAND USE PLANNING — Would the project:**				
a)	Physically divide an established community?	☐	☐	☐	☒
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Proposed Project would occur within the existing boundaries of the school campus. Therefore, implementation of the Proposed Project would not physically divide an established community, and no impact would occur.

b) **No Impact.** The Proposed Project is consistent with the City's General Plan land use designation (Institutional & Public and Semi-Public Facilities). By state law, school facilities can be exempted from local zoning ordinances consistent with California Government Code Section 53094. The District adopted a resolution on July 10, 2018, exempting the Project Site from local zoning ordinances consistent with the Project being carried out as described in this Initial Study. Therefore, zoning information is provided only for reference because it is not binding on the project and no impacts would occur. The Proposed Project would not result in any changes to the existing land use at the site. Additionally, no components of the Proposed Project would have the potential to conflict with adjacent land uses. No impacts would occur.

Mineral Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
12. MINERAL RESOURCES — Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Discussion

a, b) **No Impact.** The Project Site is in Mineral Resource Zone (MRZ) 3, as identified in the Conservation Element of the City of San Diego's General Plan (City of San Diego 2008). MRZ-3 areas contain known mineral deposits that may qualify as mineral resources. However, the Proposed Project involves improvements of an existing school site; no mineral extraction or other mining operations occur within the Project Site. In addition, the District does not intend to remove the school; therefore, the Project Site would not be available for mineral extraction activities in the future. The Proposed Project would not result in the loss of availability of known mineral resource that would be of value to the region and the residents of the state, or result in the loss of a mineral resource recovery site. Therefore, there would be no impact on mineral resources.

Noise

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
13. NOISE — Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☒	☐	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Discussion

a) **Less-Than-Significant Impact with Mitigation Incorporated.** The Proposed Project would involve phased construction activities onsite over a 12-month period. Project construction would generate noise from the daytime operation of construction equipment on the Project Site and from haul truck trips on local roadways accessing and departing the Project Site. The Project Site is located within a single-family residential neighborhood, with residences across the streets that surround the Project Site, including Van Dyke Avenue to the north, Meade Avenue to the east, Copeland Avenue to the south, and Monroe Avenue to the west. In addition, operation of school facilities (currently and with the Project) places children (students) studying in classrooms within the Project Site, when school is in session. The residences and the school are considered sensitive noise receptors for the purposes of this noise analysis.

Existing Conditions

To characterize the existing ambient noise levels at the nearest residences surrounding the Project Site, recent noise measurements previously conducted for a similar recent District Initial Study/MND, Muir at Anderson School Whole Site Modernization Project Final Mitigated Negative Declaration, were utilized for the Proposed Project (District 2019). Both Muir at Anderson School and the Project Site are located within a single-family residential neighborhood, with the residences located immediately across the residential collector streets that surround the Project Site. Therefore, the previously measured daytime ambient noise levels would be similar for the Project with similar suburban environments (an elementary school located adjacent to residences in established urban/suburban San Diego neighborhoods).

The previous noise measurements for a similar school were conducted sequentially, each over a 15-minute duration, on Wednesday, October 24, 2018 from 9:44 a.m. to 12:44 p.m. at the residences nearest to the Muir at Anderson School. The dominant noise source

observed in the vicinity of the Muir at Anderson School was vehicular traffic on the roadways adjacent to the campus; however, these roadways were relatively lightly traveled neighborhood streets with low average daily traffic volumes, and at the time of day of the measurements did not include peak AM and PM traffic volumes from commuter traffic and from school traffic at the start and end of the school day. Therefore, the measurements represent the quiet part of the day, when most residents are at work and students are in class, when school is in session. The previous noise measurements ranged from approximately 49 – 57 dBA L_{eq} at the property line of the residences along the streets surrounding the Muir at Anderson School site, depending upon local traffic and neighborhood and school activity at the time of each measurement, and approximately 57 dBA L_{eq} onsite within the school grounds approximately 60 feet from classrooms and recess areas, when students were in school buildings (i.e., classrooms, lunchroom, etc.) and outside playing at recess areas on-site.

Construction Impacts

Project construction would generate noise from the use of heavy construction equipment on-site for the construction activities of installing temporary portables, site preparation, grading, building construction, paving, landscaping, and finishing that would be occurring during and located at each phase area of the Project Site. Based on the anticipated types and quantities of equipment needed for each construction activity of each construction phase, **Table 9** presents the hourly average construction phase noise levels (dBA L_{eq}) attenuated by closest distance (60 feet) from the construction phase activity to the nearby noise-sensitive receivers (i.e., the off-site residences across the streets surrounding the Project Site and the on-site students in buildings and recess areas).

TABLE 9
PREDICTED CONSTRUCTION NOISE LEVELS AT NEARBY SENSITIVE-RECEIVERS

Construction Phase	Distance from Project Property Line (feet)	Estimated Construction Noise Level (Leq, dBA)
Modernization	60	71
Demolition	60	82
Grading	60	80
Building Construction	60	74
Architectural Coating + Paving	60	78
Maximum Noise Level	**60**	**82**

Source: ESA 2019

As shown in Table 9, the estimated construction noise levels at the property line range from 71 to 82 dBA L_{eq}, depending upon each construction phase and its construction activities.

Project construction would be subject to the allowable construction hours and construction noise level limits of the City of San Diego Municipal Code Noise Ordinance, which states that:

> *Temporary construction noise which exceeds 75 dB(A) Leq at a sensitive receptor would be considered significant. Construction noise levels measured at or beyond the property line of any property zoned residential shall not exceed an average sound level greater than 75-decibels (dB) during the 12-hour period from 7:00 a.m. to 7:00 p.m. In addition, construction activity is prohibited between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays as specified in Section 21.04 of the San Diego Municipal Code, with the exception of Columbus Day and Washington's Birthday, or on Sundays, that would create disturbing, excessive, or offensive noise unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administration, in conformance with San Diego Municipal Code Section 59.5.0404.*

As shown in Table 9, Project construction noise levels would range from 71 to 82 dBA Leq, which at adjacent residences during some phases (demolition, grading, and paving), would exceed the City's construction average sound level limit of 75 dBA Leq during the 12-hour period from 7:00 a.m. to 7:00 p.m. at or beyond the property line of any property zoned residential. Therefore, impacts would potentially be considered significant. Prior to construction, it is a District best practice to send construction notices to the families of all enrolled students, the Mayor's office, local City councilmembers, local community planning group, and immediate campus neighbors, which may assist in allowing receptors to avoid peak construction noise periods. In addition, the Project would be required to implement the **Mitigation Measure NOI-1** during the demolition, grading, and paving phases, which would require construction equipment techniques, further detailed below.

Implementation of Mitigation Measure NOI-1 would reduce construction noise levels at the source by up to 15 dBA Leq, thereby, reducing the estimated construction noise levels of approximately 71 to 82 dBA Leq at residences to approximately 56 to 67 dBA Leq, which would be below the City's construction average sound level limit of 75 dBA Leq during the 12-hour period from 7:00 a.m. to 7:00 p.m. at or beyond the property line of any property zoned residential. Therefore, noise impacts to residences would be reduced to less than significant after mitigation.

In addition, Project construction would occur as close as approximately 60 feet to on-site school classroom buildings, therefore, the construction noise would have minimal distance for attenuation, as experienced for the off-site residential properties. The sequence of Project construction phases would determine when and where construction activities would occur on-site, and whether school would be in or out of session. The active construction phase area would be isolated at distance from active classrooms. Construction noise levels at a reference distance of 60 feet would result in a maximum average noise level of approximately 82 dBA Leq. Note the City's average construction noise level limit of the 75 dBA Leq Noise Ordinance is applicable only to residences, not schools; however, implementation of Mitigation Measure NOI-1 including the implementation of temporary noise barriers between the noise source and classroom,

would reduce construction noise level impacts to occupied classrooms (where students are actively studying and learning).

Operation Impacts

Project operation would not increase student or employee capacity at the school; thereby, there would be no increase in vehicle trips to the Project Site and no increase in vehicle traffic on area roadways due to the Project. Therefore, the Project off-site traffic noise impact would be less than significant.

In addition, the Proposed Project would replace existing on-site stationary noise sources, including heating, ventilation, and air conditioning (HVAC) units on the new classroom building. HVAC equipment would be a primary (loudest) operational noise source on-site associated with the proposed modernization improvements. Noise levels from HVAC equipment vary significantly depending on unit efficiency, size, and location but generally average from 45 dBA to 70 dBA L_{eq} at 50 feet (USEPA 1971). HVAC noise levels are typically attenuated by design, baffling, enclosures, barriers and distance. Section 59.5.0401 of the City of San Diego Noise Ordinance prohibits the 1-hour average sound level from exceeding the applicable limits at any location in the City of San Diego on or beyond the boundaries of the property on which the noise is produced. However, the Project would comply with the City Noise Ordinance by designing and locating HVAC units to provide sufficient baffling, barriers, and distance such that the noise level from HVAC units and generators would be less than 45 dBA L_{eq} at the property line. Therefore, impacts would be less than significant.

Mitigation Measures:

NOI-1: Construction Noise. The following construction equipment techniques shall be implemented by the construction contractor to reduce construction-related noise at nearby noise-sensitive receivers (on site students and off site residences):

a. Construction contractor(s) shall ensure proper maintenance and working order of construction equipment and vehicles, and all construction equipment shall be equipped with manufacturers-approved mufflers and baffles.

b. Construction contractor(s) shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), when feasible. Noisy equipment shall be switched off when not in use.

c. Construction activities shall be scheduled to avoid operating several pieces of equipment simultaneously, which causes high noise levels, to the extent feasible.

d. The construction contractor(s) shall place all stationary construction equipment so that emitted noise is directed away from sensitive receivers nearest the construction activity on the Project Site.

e. Temporary noise barriers shall be placed at the construction equipment operation to block the line-of-sight between the equipment and the offsite noise-sensitive receivers (adjacent residential properties) during demolition, grading, and paving phases of project construction to reduce noise levels at the residential property

line below the City's construction noise level limit for residences (noise barriers can achieve a noise reduction of up to 15 dBA at the source).

The noise barriers shall also be placed at the equipment to block the line-of-sight between the equipment and the onsite noise-sensitive receivers (adjacent classroom buildings) during project construction phases to minimize construction noise levels experienced in the classrooms that are active, when school is in session.

The following noise barrier design shall be implemented by the construction contractor in order to reduce construction-related noise at nearby noise-sensitive receivers to a less than significant:

A temporary 50-foot by 50-foot L-shaped noise barrier shall be constructed on-site for each small construction area at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 10 dBA to block the line-of-sight between construction equipment operations and the noise-sensitive receivers, thereby reducing construction noise at noise-sensitive receivers to less than significant.

Significance Determination: Less than significant with mitigation.

b) **Less-than–Significant Impact with Mitigation Incorporated.** During Project construction, the use of typical heavy construction equipment for demolition of buildings and pavement, grading, building construction and modernization, and paving would generate localized vibration levels, which, could potentially affect structures or annoy people, if located within approximately 50 feet. Non-typical heavy impact machinery that could result in excessive vibration conditions, such as pile drivers, would not be used.

Vibration analyses are typically conducted for potential structural damage to buildings, particularly older structures, and annoyance to humans in inhabited structures. The closest structures to the construction activities on the Project Site would be the existing school buildings to remain and be modernized (i.e., the two classroom buildings and administration/cafeteria located in the northwest corner of the Project Site) located adjacent to the site surface replacement (concrete, asphalt, paving), and approximately 40 feet from buildings to be demolished. The closest off-site structures would be residential structures approximately 63 feet from the Project Site property line across Monroe Avenue.

Construction vibration would have a significant impact if:

- Project construction activities cause groundborne vibration levels to exceed the building damage threshold of 0.2 inches per second (in/sec) peak particle velocity (PPV) at Building Category III Non-engineered timber and masonry buildings (FTA 2018), and
- Project construction activities cause groundborne vibration levels to exceed the human annoyance threshold of 80 VdB root mean squared (RMS) for Land Use Category 2 – Residences, and 83 VdB at Land Use Category 3 – Institutional, primarily day use (FTA 2018).

The vibration levels generated by the general construction equipment during the construction of the Proposed Project are identified in **Table 10,** in terms of PPV and RMS velocity. As shown, depending on the type of construction equipment used, vibration velocities could reach as high as approximately 0.210 in/sec PPV at 25 feet from the source (e.g., vibratory roller), which corresponds to a RMS velocity level of 94 VdB at 25 feet from the source.

TABLE 10
VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	Approximate PPV (in/sec) at 25 feet	Approximate RMS (VdB) at 25 feet
Vibratory Roller	0.210	94
Large Bulldozer	0.089	87
Loaded Trucks	0.076	86
Jackhammer	0.035	79
Small Bulldozer	0.003	58

SOURCE: FTA 2018.

As shown in Table 10, operation of a vibratory roller (used in soil compaction, if needed) would generate vibration levels that would have the potential to structurally impact structures, if operated within approximately 25 feet or less. Other heavy equipment generates vibration levels less than half of that of the vibratory roller at 25 feet.

Structural Damage Analysis

The residences adjacent to the Project Site boundary are conservatively considered as non-engineered timber and masonry building, and are located approximately 63 feet from the Project Site boundary across adjacent surrounding streets. Project construction activities closest to these residences would be residential structures approximately 63 feet from the northeast corner of the Project Site property line across Monroe Avenue. Therefore, operation of equipment generating the highest level of vibration (i.e., a vibratory roller) within 63 feet would not exceed the 0.2 in/sec PPV structural damage threshold. Therefore, the vibration impact to off-site residential structures from Project construction would be less than significant.

The school structures located on-site (classroom and administration buildings) would be located adjacent to near the operation of the Project construction equipment onsite. Operation of a vibratory roller within 25 feet would generate 0.21 in/sec PPV which would exceed the 0.2 in/sec PPV structural damage threshold for Building Category III Non-engineered timber and masonry buildings at 25 feet (FTA 2018). Therefore, the vibration structural damage impact to on-site structures from Project construction would be potentially significant. Therefore, the Proposed Project would be required to implement **Mitigation Measure NOI-2** related to vibration-generating monitoring, as further detailed below.

Human Annoyance Analysis

Construction vibration could annoy people within a nearby building. As shown in Table 10, the vibration generated by the operation of a vibratory roller, a large bulldozer, or a loaded haul truck at 25 feet would exceed the residential human annoyance threshold of 80 VdB, however, at 50 feet, would not exceed the threshold. Therefore, the operation of this equipment on-site along the northeastern corner of the Project Site boundary would not exceed the vibration threshold of human annoyance at the inhabited residences as close as approximately 63 feet, resulting in a less than significant impact.

In addition, construction vibration from the operation of this equipment on-site near inhabited on-site structures could potentially annoy people (students and teachers) within the adjacent classroom and administration buildings. The vibration impact threshold for human annoyance at a daytime institutional use is 83 VdB. As shown in Table 10, the vibration generated by the operation of a vibratory roller, a large bulldozer, or a loaded haul truck at 25 feet would potentially exceed the human annoyance threshold of 83 VdB, potentially resulting in a significant impact. Therefore, the Proposed Project would be required to implement **Mitigation Measure NOI-2** related to vibration-generating monitoring, as further detailed below.

Mitigation Measures:

NOI-2: Construction Vibration. The following construction equipment management techniques shall be implemented by the construction contractor to reduce construction-related vibration at nearby vibration-sensitive receivers (i.e., inhabited structures):

Prior to Project construction, the construction contractor(s) shall review all construction activity for potential vibration-generating activities from demolition, excavation, and construction within 50 feet of existing structures, and shall require a site-specific vibration compliance plan to be prepared to determine the exact area of potential impact and to identify appropriate construction equipment and techniques to reduce vibration levels to below 0.2 in/sec PPV (structural damage threshold for Building Category III Non-engineered timber and masonry buildings at 25 feet) at structures, and 83 VdB (human annoyance threshold at a daytime institutional use) at inhabited buildings. The plan shall, at a minimum, include but not limited to the following:

- Identify the Project's construction soil compaction for paving activities (i.e., from the operation of the vibratory roller), and other vibration-generating activities that have the potential to generate ground-borne vibration within 50 feet of inhabited structures; and identify the structural sensitivity of nearby structures to ground-borne vibration. This task should be conducted by a qualified structural engineer.
- A vibration monitoring and construction contingency plan to identify the structures where monitoring would be conducted; establish a vibration monitoring schedule; define structure-specific vibration limits; and address the need to conduct photo, elevation, and crack surveys to document before and after construction conditions. Construction contingencies shall be identified for actions to be taken when vibration levels approached the defined vibration limits.

- Maintain a monitoring log of the vibration levels observed at the structures when vibration-generating construction activities are within 50 feet of the structures. Monitor vibration levels and identify when approaching thresholds (0.2 in/sec PPV for structural damage and 83 VdB for human annoyance) and notify construction contractor immediately to ensure levels are not exceeded.
- Identify structure-specific vibration level limits for suspension of construction activities (i.e., stop work) and implement contingencies to either lower vibration levels or secure the affected structures.
- Post-construction survey on structures where either monitoring has indicated high vibration levels or complaints of damage have been made. Make appropriate repairs or compensation where damage has occurred as a result of construction activities.

Significance Determination: Less than significant with mitigation.

c) **No Impact.** The Project Site is not located within the vicinity of a private airstrip or an airport land use plan, i.e., the Project site is not located with the Airport Influence Area, Noise Contours Map (San Diego County Airport Land Use Commission 2010). The nearest public airport or public use airport to the Project Site is Montgomery-Gibbs Executive Airport, approximately 4 miles to the north and the San Diego International Airport, approximately 4.5 miles to the southwest. Therefore, the Project would not expose people residing or working in the project area to excessive noise levels

Population and Housing

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
14. POPULATION AND HOUSING — Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Project Site is within an existing school property in a built-out, urbanized community. The Proposed Project includes the demolition of two permanent buildings and two portable classrooms, and construction of a proposed two-story building in its place, as well as the modernization of other existing school facilities. The Proposed Project would not increase the current number of students, student capacity, staff capacity, or affect operations at the existing elementary school, and would not induce substantial population growth or result in the extension of public roads or other infrastructure. Therefore, no impacts would occur related to inducing substantial population growth in the area.

b) **No Impact.** The Project Site is within an existing school property in a built-out, urbanized community. No housing exists on the Project Site, and therefore the Proposed Project would not displace a substantial number of existing housing units or people, necessitating the construction of replacement housing elsewhere. Therefore, there would be no impact.

Public Services

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
15. PUBLIC SERVICES — Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:				
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.**

i) The Project Site is currently served by the San Diego Fire Department (SDFD). The SDFD responds from 51 stations in the City of San Diego and the closest station to the Project Site is located 0.9 miles southeast at 4206 Chamoune Avenue. As previously mentioned, the Proposed Project would not increase the students, student capacity, staff capacity, or affect operations at the existing elementary school. No additional fire services would be required by the Proposed Project. Therefore, the Proposed Project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives for any fire service agencies. As such, the impacts would be less than significant.

ii) The Project Site is currently serviced by the San Diego Police Department. The closest police station to the Project Site is the Mid-City Division, located one mile south at 4310 Landis Avenue. As previously mentioned, the Proposed Project would not increase the students, student capacity, staff capacity, or affect operations at the existing elementary school. No additional police services would be required by the Proposed Project. Therefore, the Proposed Project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives for any police service agencies. As such, the impacts would be less than significant.

iii) The Project Site is located on an existing elementary school campus. The Proposed Project would not increase the students, student capacity, staff capacity, or affect operations at the existing elementary school. No additional schools would be required by the Proposed Project. Therefore, the Proposed Project would not result in substantial adverse physical impacts associated with the need for new or physically altered school facilities. As such, the impacts would be less than significant.

iv) As previously mentioned, the Proposed Project would not increase the students, student capacity, staff capacity, or affect operations at the existing elementary school. No additional parks would be required by the Proposed Project. The existing joint-use field would not be modified as part of the Project. Therefore, the Proposed Project would not result in substantial adverse physical impacts associated with the need for new or physically altered park facilities. As such, the impacts would be less than significant.

v) As previously mentioned, the Proposed Project would not increase the students, student capacity, staff capacity, or affect operations at the existing elementary school. No additional public services would be required by the Proposed Project. Therefore, the Proposed Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives for any public service agencies. As such, the impacts would be less than significant.

Recreation

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
16. RECREATION:				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Discussion

a, b) **Less-than-Significant Impact.** In addition to the existing recreational facilities on the Project Site itself (e.g., joint-use baseball field, playground equipment), the Copley-Price Family YMCA is approximately 0.25 miles southeast, and is the closest recreational facility to the Project Site. The Kensington Park is the closest public recreational facility to the Project Site, approximately 0.5 miles northwest of Franklin Elementary School. The proposed upgrades would not increase the number of students, student capacity, staff capacity, or affect operations at the existing elementary school. As such, the Proposed Project would not increase the use of existing recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated. The Proposed Project would also not require the construction or expansion of additional recreational facilities that might have an adverse physical effect on the environment. Therefore, impacts would be less than significant.

Transportation

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
17. TRANSPORTATION — Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? ?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.** The Project Site is located within the Kensington community in the central portion of the city of San Diego. Regional access to the Project Site is provided by I-15, which is located approximately 0.27 miles to the west; I-8, located approximately 1.4 miles to the north; and I-805, located approximately 1.25 miles to the west (see Figure 1). Local access is provided by El Cajon Boulevard to the south, Adams Avenue to the north, and Fairmount Avenue to the east. The Project Site is bound by Monroe Avenue to the north, Meade Avenue to the south, Copeland Avenue to the west, and Van Dyke Avenue to the east (see Figure 2).

Construction is expected to occur between 7:00 a.m. and 7:00 p.m., Monday through Friday (sometimes Saturday), and would comply with the City of San Diego Municipal Code limits regarding construction activity (Municipal Code Section 59.5.0404). No nighttime construction would occur. The modernization improvements are scheduled to begin in early 2021.

Local Roadways

During the construction period, construction vehicles would use the roadways that surround the Project Site to deliver materials and haul waste. Workers' vehicles and construction vehicles could access the site from the above-mentioned local streets. Roadway users could experience temporary delays from material deliveries, but these delays would be both brief and infrequent. Therefore, they would not affect overall traffic circulation in the project vicinity. Construction staging would occur on-site and would not affect traffic operations on adjacent roadways. Construction activities would not impede non-motorized travel or public transportation in the project vicinity. The Proposed Project could, however, require temporary sidewalk closures while repairs are performed on existing sidewalks and Americans with Disabilities Act (ADA) ramps along the perimeter of the Project Site. However, any delays would be temporary and not considered to be significant. Temporary traffic control during

construction shall meet the requirements of the California Manual on Uniform Traffic Control Devices (Caltrans 2014).

As proposed, project modernization would not conflict with any applicable plans, ordinances, or policies establishing measures for effectiveness of the performance of the circulation system, such as the Mid-City Communities Plan Transportation Element, or the San Diego Metropolitan Transit System (MTS) ordinances. As previously noted, no student or staff capacity changes would occur and therefore no additional trips to and from the Project Site would be generated during operation. In accordance with the City's Traffic Impact Study Manual, a traffic impact study is not warranted (City of San Diego 1998). The Proposed Project would conform to the Mid-City Communities Plan Land Use and Transportation Elements and would not generate more than 1,000 average daily trips. Levels of service are not applied to residential streets because their primary purpose is to serve abutting lots, not carry through traffic. Therefore, the Proposed Project would not substantially degrade traffic operations or roadways in the project vicinity, nor would it impede non-motorized travel or public transportation. As such, impacts would be less than significant.

Congestion Management Program Facilities

State Proposition 111, passed by voters in 1990, established a requirement that urbanized areas prepare and regularly update a Congestion Management Program (CMP). Although the SANDAG provided regular updates for the state CMP from 1991 through 2008, the San Diego region elected to opt out of (be exempt from) the state CMP in October 2009. As such, there is no relevance of the Proposed Project to potential conflicts with an applicable CMP, and no impact would occur.

Transit, Bicycle, and Pedestrian Facilities

The Proposed Project would not directly or indirectly eliminate alternative transportation corridors or facilities (e.g., bus stops). In addition, the Proposed Project would not preclude increased alternative transportation services. Therefore, the Proposed Project would not conflict with adopted policies, plans, or programs supporting alternative transportation. As mentioned above, the Proposed Project would not impede non-motorized travel or public transportation in the project vicinity; it would not decrease the performance or safety of such facilities. As a result, impacts would be less than significant.

b) **Less-than-Significant Impact**. In accordance with Senate Bill (SB) 743, the CEQA Guidelines Section 15064.3, subdivision (b) was adopted in December 2018 by the California Natural Resources Agency. These revisions to the CEQA Guidelines criteria for determining the significance of transportation impacts are primarily focused on projects within transit priority areas, and shifts the focus from driver delay to reduction of greenhouse gas emissions, creation of multimodal networks, and promotion of a mix of land uses. Vehicle miles traveled, or VMT, is a measure of the total number of miles driven to or from a development and is sometimes expressed as an average per trip or per person.

The newly adopted guidance provides that a lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide. The City is currently engaged in this process and has not yet formally adopted its updated transportation significance thresholds or its updated transportation impact analysis procedures. Since the regulations of SB 743 have not been finalized or adopted by the City, the qualitative evaluation presented in Issue 17 (a), above, is used in this IS/MND to determine the significance of transportation impacts.

In addition, according to the new CEQA Guidelines, generally projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. The MTS has a bus stop for Bus Route 1 at the intersection of El Cajon Boulevard and Copeland Avenue, approximately 1,000 south of the Project Site. In addition, southbound Bus Route 13 stops at the intersection of El Cajon Boulevard and 43rd Street (1,500 feet southeast of the Project Site) and northbound Bus Route 13 stops at the intersection of Fairmount Avenue and Meade Avenue (800 feet east of the Project Site). As the Proposed Project is located within one-half mile of an existing major transit stop, the Proposed Project would have a less-than-significant impact related to CEQA Guidelines Section 15064.3.

c) **Less-than-Significant Impact.** An impact would occur if the Project substantially increases roadway hazards due to a geometric design feature or the introduction of incompatible uses (i.e., farming equipment). The only existing access to the Project Site is provided via two driveways on Copeland Avenue, which lead to/from an approximately 100-foot-long disabled-only passenger loading zone with one disabled-only parking stall. The Proposed Project would not modify these driveways or add any new driveways. Since all of the driveways are existing and were designed in compliance with the City's driveway and roadway requirements, the Proposed Project would not result in a roadway hazard due to a design feature. School bus and passenger loading/unloading would continue to occur along Copeland Avenue, with no changes resulting from the Proposed Project. Furthermore, implementation of the Project would not introduce incompatible uses into the surrounding roadway network. Therefore, impacts would be less than significant related to roadway hazards.

d) **Less-than-Significant Impact.** A significant impact would occur if the design of the Proposed Project would not satisfy local emergency access requirements. The Proposed Project would not include any alterations of existing roadway features (e.g., road realignment) that would create a permanent change to access for emergency vehicles. During construction of the Project, heavy construction-related vehicles could interfere with emergency response to the site (e.g., slowing vehicles traveling behind the truck). However, such delays would be infrequent and brief (drivers are required to pull over to allow an emergency vehicle on-call to pass), and contract specifications for the project would ensure that emergency vehicle access on area roadways would be maintained at all times. As such, inadequate emergency access would not occur as a result of project construction, and impacts would be less than significant.

Tribal Cultural Resources

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
18. Tribal Cultural Resources — Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☒	☐	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Discussion

a, b) **Less-than-Significant Impact with Mitigation Incorporated.** A Sacred Lands File (SLF) search request was submitted to the California Native American Heritage Commission (NAHC) on June 13, 2019. In the response dated June 25, 2019, the NAHC indicated that a search of the SLF for the Project Site returned negative results (NAHC 2019).

Pursuant to AB 52, California Native American tribes that are traditionally and culturally affiliated with the area can request notification of projects in their traditional cultural territory. Jamul Indian Village requested AB 52 consultation with the District on future projects; and consultation was initiated by the District on October 25, 2018. On November 12, 2018, the Jamul Indian Village provided a list of schools to District staff that were determined to be in sensitive areas, which included Franklin Elementary School. No other California Native American tribes are on the District's consultation list for AB 52.

Based on consultation, Jamul Indian Village requested a Kumeyaay Native American monitor for all ground disturbing activities. Therefore, to reduce potentially significant impacts on tribal cultural resources, **Mitigation Measure TRI-1**, which was developed in coordination with the Jamul Indian Village, would be required to minimize potential damage or loss of tribal cultural resources during project specific ground disturbing activities. Mitigation measure TRI-1 would reduce potential impacts to less than significant.

Mitigation Measures:

TRI-1: Monitoring of Ground-Disturbing Activities by Native American Monitors. To reduce potential impacts on Tribal Cultural Resources (TCRs), monitoring shall be conducted by a qualified Kumeyaay Native American monitor during all ground-disturbing activities. The role of the Native American monitor would be to work with the project's Qualified Archaeologist, identify potential Native American TCRs, represent tribal concerns, and communicate concerns and appropriate handling to the District and the Tribal Council. Appropriate representatives would be identified, based on the location of the identified traditional location or place. Specifically, the following measures shall be implemented to reduce impacts:

1) The Qualified Archaeologist shall maintain ongoing collaborative consultation with the Kumeyaay Native American Monitor during all ground disturbing activities. The requirement for the monitoring program shall be noted on all applicable construction documents, including demolition plans, grading plans, etc. The District shall notify the Monitor in writing of the start and end of all ground disturbing activities. Unless waived in writing by the Native American Monitor, the Kumeyaay Native American Monitor shall be present on-site full-time during ground disturbing activities, including but not limited to, grubbing, excavation, grading and/or other ground altering activities, including the placement of imported fill materials or fill used from other areas of the project site, to identify any evidence of potential archaeological or Tribal Cultural resources.

2) Prior to the initiation of ground disturbing activities, the contractor shall organize a pre-construction meeting of all personnel scheduled to work on the grading and construction phases of the project. The Qualified Archaeologist and Kumeyaay Native American Monitor shall review the grading monitoring program with the general Contractor and associated sub-contractors in attendance. The District shall prepare a written summary of the monitoring program and said summary shall be distributed to all personnel working or hired and scheduled to work on the grading and construction phases of the project.

3) The Native American consultant/monitor shall determine the nature and extent of a TCR unearthed during soil-disturbing and grading/excavation/trenching activities, be consulted with on implementation of the monitoring plan prepared by the District, and provide input regarding the handling of TCRs under the plan to the District's Qualified Archaeologist and the District.

4) If prehistoric resources are encountered during the Native American consultant's/monitor's absence, work shall stop until the Native American monitor can observe and comment on the nature of the find. Additional consultation may be required to determine the importance of the recovery and their appropriate handling. If human remains are encountered, see number 11 below.

5) Attendance by Native American monitors during construction and restoration of the proposed project is at the discretion of the Tribe, and the absence of a Native American monitor, should the Tribe choose to forgo monitoring for some reason, will not delay work.

6) If a determination is made that the unearthed artifact deposits are a potential TCR, the Tribe shall be notified and consulted with in regard to the respectful and dignified treatment of those resources. The avoidance and protection of the significant TCRs is the preferable mitigation. If, however, a data recovery plan is authorized by the District as the Lead Agency under CEQA, the Tribe shall be notified and consulted regarding the drafting and finalization of any such recovery plan. For significant TCRs that are to be treated pursuant to a recovery plan, an adequate artifact sample to address research avenues previously identified for sites in the area will be collected using professional archaeological collection methods. If the qualified archaeologist collects such resources, the Native American monitor must be present during any testing of those resources. Moreover, if the qualified archaeologist does not collect the TCRs that are unearthed during the ground disturbing activities, the Native American monitor, may at their discretion, collect said resources and provide them to the Tribe for respectful and dignified treatment in accordance with the Tribe's cultural and spiritual traditions.

7) The Native American monitors shall have the ability to notify the District's Qualified Archaeological monitor, who has the authority to temporarily stop work, if they find a cultural resource that may require further identification, recordation, and evaluation.

8) Interpretation of a find shall be requested from Native American monitors involved with the discovery, evaluation, or data recovery of unanticipated finds for inclusion in a final Cultural Resources report.

9) The Native American monitor, in consultation with the District's Qualified Archaeologist, will have the discretion to increase or decrease the level of monitoring under certain field conditions, such as modern disturbances, including previous excavation/grading/trenching activities that exceeded the depth of or removed potential archaeological deposits; the presence of fossil formations; or encounters with native soils.

10) If any TCRs are detected during project construction, prior to the completion of the project, a monitoring report and/or evaluation report, if appropriate, which describes the results, analysis and conclusions of the monitoring program (e.g., Cultural Resource Data Recovery Plan) shall be submitted by the Qualified Archaeologist, along with the Native American Monitor's notes and comments, to the District for approval. Said report shall be subject to confidentiality as an exception to the Public Records Act and will not be available for public distribution.

11) Human Remains. As specified by California Health and Safety Code Section 7050.5, if human remains are found on the project site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Coroner's office by telephone. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code 5097.98. If such a discovery occurs, a temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected, and consultation and treatment could occur as prescribed by law. By law, the Coroner will determine

within two working days of being notified if the remains are subject to his or her authority. If suspected Native American remains are discovered, the remains shall be kept in-situ or in a secure location in close proximity to where they were found, and the examination of the remains shall only occur on-site by a forensic anthropologist or osteologist while in the presence of a Kumeyaay Native American Monitor. If the remains are identified to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours. The NAHC will make a determination as to the Most Likely Descendent (MLD) and Public Resources Code 5097.98 shall be followed.

12) Repatriation and Report of Findings. If Native American Human Remains are found in the construction area, the preferred destination of the remains is repatriation on site and not removal and curation. In such a case, a repatriation area(s) shall be identified in an area deemed appropriate by the Tribe and agreed upon by the District to be used in the event that Native American Human Remains are discovered. Repatriation areas shall either be located on the project site. A repatriation area shall have a Cultural Conservation Easement and/or similar restrictive easement executed and recorded on the property to protect the Tribal Cultural Resource in perpetuity. The District shall be responsible for all costs and/or expenses related and/or associated with the repatriation area.

Significance Determination: Less than significant with mitigation.

References

California Native American Heritage Commission (NAHC), 2019. Native American Tribal Consultation, Pursuant to AB 52 Benjamin Franklin Elementary School Whole Site Modernization. June.

Utilities and Service Systems

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
19. UTILITIES AND SERVICE SYSTEMS — Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact.** Wastewater treatment service is provided to the Project Site by the Metropolitan Sewerage System (Metro System), which is owned and operated by the City of San Diego Public Utilities Department's (PUD) Wastewater Branch (PUD 2016). Three treatment plants treat wastewater generated in the Metro System, including the Point Loma Water Reclamation Plant (PLWRP), South Bay Water Reclamation Plant, and the North City Wastewater Treatment Plant. The PLWRP currently treats the wastewater generated by the Project Site and has a treatment capacity of 240 million gallons per day (mgd) and a peak wet weather capacity of 432 mgd. In 2015, the measured wastewater collected was 136.2 mgd, which leaves an available capacity of approximately 103.8 mgd (PUD 2016). With implementation of the Proposed Project, student capacity would not increase, and therefore would not represent a new source of wastewater generation within the PUD service area. Consequently, the Proposed Project would not exceed the capacity of the existing wastewater treatment provider. As such, the Proposed Project would not require the construction or expansion of water or wastewater facilities. Therefore, impacts would be less than significant.

Water service is provided to the Project Site by the PUD's Water Branch through agreements with the San Diego County Water Authority, which is a member agency of the Metropolitan Water District. According to PUD's 2015 Urban Water Management Plan, normal year water supply for 2020 will be 200,984 acre-feet per year, or

approximately 179 mgd (PUD 2016). Construction of the Proposed Project would require the use of water for activities such as dust suppression and the mixing of concrete; however, any water usage during construction would be minimal and temporary. Operation of the Proposed Project would not increase student capacity, which would result in water usage similar to existing conditions at the site. Therefore, the Proposed Project would not represent a new source of water demand within the PUD service area, and sufficient water supplies are available to serve the Proposed Project. Impacts on water supplies would be less than significant.

Currently, the City of San Diego is completing the Van Dyke Ave (4481) Storm Drain Replacement project as part of its Capital Improvements Program (CIP). The CIP project, which began construction on January 1, 2019, will abandon the existing 24-inch storm drain pipe running underneath Franklin Elementary School and will construct a new 24-inch pipeline in the right of way of Monroe Street (City of San Diego 2019a, City of San Diego 2019b). It is expected that construction of this CIP project would be completed prior to the start of construction of the Proposed Project. As previously mentioned above in Issue 10, during construction of the Proposed Project, exposed soil could temporarily increase the amount of sediment in runoff, which would enter the existing storm drain system. The Proposed Project would be required to obtain and comply with the Construction General Permit from the SWRCB. Stormwater BMPs would be required to limit erosion, minimize sedimentation, and control stormwater runoff water quality during construction activities. Upon completion, the Project Site would continue to drain into the existing municipal storm drain system within the Project Site. The amount of stormwater runoff from the site would not change substantially after implementation of the Proposed Project. Additionally, there would be no additional source of polluted runoff. Similarly, the Proposed Project would utilize existing connections for electric power, natural gas, and telecommunications facilities. As a result, impacts on the construction or expansion of stormwater drainage facilities, electric power, natural gas, or telecommunications facilities would be less than significant.

b) **Less-than-Significant Impact.** Implementation of the Proposed Project would not increase the number of students, student capacity, staff, or affect operations at the existing school. The Proposed Project would include water-efficient upgrades to plumbing fixtures in several buildings, including upgrades to restroom toilets and sinks that have the potential to reduce water consumption. Therefore, demand for water would not be significantly greater than what currently exists at the site. As such, sufficient water supplies are available to serve the Proposed Project, and impacts on water supplies would be less than significant.

c) **Less-than-Significant Impact.** Improvements proposed for the school would not increase the number of students, student capacity, staff, or affect school operations. Therefore, the Proposed Project would not generate greater demand for wastewater treatment compared with existing conditions. As such, the wastewater treatment provider that currently serves the project would have adequate capacity to meet demand, and impacts on wastewater service would be less than significant.

d) **Less-than-Significant Impact.** The waste generated during construction of the Proposed Project would mainly consist of general construction debris (including from demolition of classroom Building 04-05, the kindergarten classroom Building 05-06, the two portable buildings, and removal of the asphalt playground areas) and worker personal waste. The construction contractor would be required to dispose of solid waste in accordance with local solid waste disposal requirements. Similar to existing conditions, construction solid waste would be taken to the closest landfill to the project site, which is the Miramar Landfill, approximately 9.3 miles north of the Project Site. The Miramar Landfill has a permitted throughput of 8,000 tons per day, and has a remaining capacity of 15,527,878 cubic yards (CalRecycle 2019). The landfill's cease operation date is anticipated to be in the year 2025. Therefore, the landfill would have sufficient capacity to accommodate the Proposed Project's disposal needs. After completion of construction, solid waste generation would not be significantly greater than what currently exists at the site, as the Proposed Project would not increase capacity or affect operations. The Project Site would continue to be served by Miramar landfill with sufficient permitted capacity to accommodate the school's solid waste disposal needs. As a result, impacts would be less than significant.

e) **Less-than-Significant Impact.** As previously mentioned, the Proposed Project would be served by a permitted landfill capable of accommodating the school's solid waste. During construction, non-recyclable solid waste would be taken to a permitted landfill. During operation, the Proposed Project would continue to generate municipal solid waste that would be accepted by waste haulers and landfill operators. The school would continue to comply with federal, state, and local regulations related to solid waste. Therefore, impacts would be less than significant.

Wildfire

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
20. WILDFIRE — If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Discussion

a) **Less-than-Significant Impact**. The Project Site is within a developed urban area that has not been identified as a wildland fire hazard area. According to the CAL FIRE VHFHSZ in Local Responsibility Area Map, the Project Site is not located within a fire hazard severity zone (CAL FIRE 2009). While open space areas, which are considered a wildfire risk, are located in proximity of the Project Site (undeveloped canyons along both sides of Fairmont Avenue), all Project activities would occur within the already developed school property. As previously discussed above in Issue 9 (f), current access to the Project Site for emergency vehicles is provided from Meade Avenue and south of the most southern classroom building along Copeland Avenue, both accessible through a locked emergency access gate. Construction activities would occur within the Project Site but would not restrict access for emergency vehicles traveling to the school due to the phasing of construction. After construction of the Project, emergency access would not change from existing conditions. As a result, implementation of the Proposed Project would not substantially impair an adopted emergency response plan or emergency evacuation plan, and impacts are considered to be less than significant.

b) **Less-than-Significant Impact**. As detailed above in Issue 20 (a), the Project Site is within a developed urban area that has not been identified as a wildland fire hazard area. According to the CAL FIRE VHFHSZ in Local Responsibility Area Map, the Project Site is not located within a fire hazard severity zone (CAL FIRE 2009). While construction include materials that are considered flammable, such as fuels and household cleaners, the handling and storage of such materials would be conducted in accordance to applicable regulations. In addition, the Proposed Project would be designed and

constructed in accordance with the California Fire Code. After completion of construction, the modernization activities would not change the ongoing operations at the school. The Proposed Project would occur on an existing developed school site, and would not exacerbate wildfire risks, and would not expose people to pollutant concentrations for a wildfire or the spread of a wildfire. Therefore, impacts would be less than significant.

c) **Less-than-Significant Impact**. Construction of the Proposed Project would utilize existing infrastructure, including roads, water sources, and power lines surrounding the Project Site. Infrastructure is already established in the area, and would not exacerbate fire risk at the Project Site. Thus, impacts would be less than significant.

d) **Less-than-Significant Impact**. As detailed above in Issue 7, the Project Site contains relatively flat topography with low risk for geologic hazards and would have a less than significant impact related to landslides. In addition, the Project Site is not located within a flood hazard zone. As detailed above in Issue 10, construction of the Proposed Project would not result in significant impacts on the existing drainage pattern due to implementation of BMPs that would minimize flooding and runoff. After the completion of construction, drainage patterns would be restored to existing conditions. Drainage for the site would continue to be serviced by the existing storm drain system. Therefore, the Proposed Project would not expose people or structures to significant risk including downstream flooding or landslides as a result of runoff, post-fire slope stability, or drainage changes, and impacts would be less than significant.

Mandatory Findings of Significance

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
21. MANDATORY FINDINGS OF SIGNIFICANCE —				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Discussion

a) **Less-Than-Significant Impact with Mitigation Incorporated.** As discussed in Issue 4, the Project Site is developed as an operating elementary school with a majority of the campus paved or graded with a natural turf joint-use field. Implementation of the Proposed Project would include the removal of three ornamental trees, as detailed in the project description, which could provide suitable nesting habitat for migratory birds and urban-adapted raptors. With implementation of Mitigation Measure BIO-1, potential impacts to nesting birds and raptors would be less than significant. No federally protected wetlands are present at the Project Site, and the Proposed Project would not interfere with the movement of wildlife and/or wildlife corridors. With implementation of Mitigation Measure BIO-1, the Project would not result in impacts on biological resources that would have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or substantially reduce the number or restrict the range of a rare or endangered plant or animals. In addition, as discussed in Issue 5, given that Proposed Project excavations would occur in non-native fill material it is unlikely that excavations extend into native soils, or that intact archaeological resources would be encountered. However, in the unlikely event that archaeological resources are encountered they may qualify as historical resources pursuant to CEQA. With the incorporation of Mitigation Measures CUL-1 through CUL-3, potential impacts to archaeological resources would be reduced to a less than significant level. Additionally, as stated above, Franklin Elementary School is eligible as an example of an expanding elementary school campus reflective of evolving Modernist

principles as designed by notable San Diego architects Frank W. Stevenson and Samuel Wood Hamill. Therefore, the Project Site qualifies as a historical resource pursuant to CEQA. Mitigation Measures CUL-4 through CUL-6 would reduce impacts related to demolition activities included as part of the Proposed Project to less than significant. Further, implementation of Mitigation Measure TCR-1 would be required to minimize potential damage or loss of tribal cultural resources during project specific ground disturbing activities, and would reduce potential impacts to less than significant. Therefore, impacts would be less than significant with mitigation incorporated.

b) **Less-Than-Significant Impact with Mitigation Incorporated.** A cumulative impact would occur if the Proposed Project would result in an incrementally considerable contribution to a significant cumulative impact in consideration of past, present, and reasonably foreseeable future projects for each resource area. As indicated above, there are a number of environmental issues areas for which the Project would have no impact. These issues include agricultural and forestry resources, land use, mineral resources, and population and housing. For these issue areas, as the Proposed Project would have no impact, the Proposed Project would also not contribute to a cumulatively significant impact. The Proposed Project would result in a less than significant impact in certain environmental issue areas but because of the location and nature of the Proposed Project, the Proposed Project would not contribute to a cumulatively significant impact. However, the Proposed Project could contribute to cumulatively significant impacts when considered together with other past, present, or reasonably foreseeable future projects in the vicinity of the Franklin Elementary School for those areas in which a potentially significant impact has been identified. However, with implementation of Mitigation Measures AIR-1, BIO-1, CUL-1 through CUL-6, NOI-1 and NOI-2, and TCR-1 the Proposed Project would be reduced to less than significant impacts. With implementation of mitigation measures, the Project would not result in an incrementally considerable contribution to a significant cumulative impact. Therefore, with implementation of mitigation measures, a less than significant cumulative impact would occur.

c) **Less-Than-Significant Impact with Mitigation Incorporated**. As discussed above, all identified potential impacts associated with the Proposed Project would be reduced to less than significant with implementation of mitigation measures. No direct or indirect significant and unavoidable impacts would occur with implementation of the Proposed Project. As a result, the Proposed Project would not cause a substantial adverse effect on human beings, either directly, or indirectly, with implementation of mitigation measures.

Franklin School Project
Operational Assumptions

Mobile source emissions

- No New Studetns or Faculty, no new mobile source emissions.

Area source emissions

-Defaults Used

Water and Wastewater

Existing (removed):	1,407	gallons per day
	513,453	gallons per year
New Development:	536	gallons per day
	195,640	gallons per year
Remodel:	977	gallons per day
	356,722	gallons per year

*conservately assumes all water is indoor use

Information in the Utilities Section is based on City of San Diego PUD Sewer Design Guide, schools generate approximately 0.04 gallons per day (gpd) of wastewater per square foot (District 2018).

% septic	% Aerobic	% Lagoon		*No septic onsite
10.33	87.46	2.21	Default	
0	97.54	2.46	Revised	

Solid Waste

Source Utilities Section

Existing (removed):	52.75	Tons per year
New Development:	20.10	Tons per year
Remodel:	36.65	Tons per year

Information in Utilities Seciton is base on City of San Diego's Guidelines for a Waste Management Plan, the average waste generation rate for solid waste generated during ongoing use of a site is approximately 3 pounds per square foot.

Franklin School Project
Operational Assumptions

Stationary Sources

None

Energy Use

Existing:

Electricity: Historic defaults Used.
Natural Gas: Historic defaults Used.

New Building:

Electricity: Defaults Used and adjusted for Title 24 changes.
Natural Gas: Defaults Used and adjusted for Title 24 changes.

Modernization:

Electricity: Historic defaults Used, mitigated to add 5% energy efficiency for modernization efforts.
Natural Gas: Historic defaults Used, mitigated to add 5% energy efficiency for modernization efforts.

CalEEMod currently uses Title 24 efficiency standards. The project will be built post 2019 therefore as a conservative estimate of T24 efficiencies required, the emission factors are updated to account for the inclusion of 2019 Title 24 standards.

% Change between 2016 T24 (CalEEMod Default), 2013 T24 and 2019 Title 24

	T24 Electricity	**Lighting**	**T24 NG**
Non-Residential 2019	30%	0%	30%

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use DPF for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 P1 - Add Portable Classrooms - 2021

Unmitigated Construction On-Site

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use DPF for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 P1 - Add Portable Classrooms - 2021

Unmitigated Construction On-Site

2021 Road Dust

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
sL =	road surface silt loading (g/m^2)
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (\ s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ =	Unpaved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
s =	surface material silt content (%)
Sp =	mean vehicle speed (mph)
M =	surface material moisture content (%)
C =	Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

7. Construction Health Risk

7. Construction Health Risk
a.Methodology & Figure

HEALTH RISK ASSESSMENT (HRA) METHODOLOGY

The greatest potential for TAC emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during demolition, grading and excavation, and building construction activities. The cancer risk values for DPM considers exposure via the inhalation pathway. The potential exposure through other pathways (e.g., ingestion) requires substance and site-specific data, and the specific parameters for DPM are not known for these pathways.[1] The OEHHA guidelines recommends the incorporation of several factors to quantify the carcinogenic compound dose via the inhalation pathway. Once determined, the dose is multiplied by the compound-specific inhalation cancer potency factor to derive the cancer risk estimate. The dose takes into account the concentration at a sensitive receptor. The cancer potency factor is compound-specific. In performing health risk calculations, carcinogenic compounds are not considered to have threshold levels (i.e., dose levels below which there are no risks). Any exposure, therefore, will have some associated risk. Incremental health risks associated with exposure to carcinogenic compounds is defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. Under a deterministic approach (i.e., point estimate methodology), the cancer risk probability is determined by multiplying the chemical's annual concentration by its unit risk factor (URF). The URF for DPM recommended by the Scientific Review Panel[2] is 3.0 x 10-4 per microgram per cubic meter ($\mu g/m^3$). This value corresponds to a Cancer Potency Factor (CPF) of 1.1 per milligram/kilogram (body weight) per day (mg/kg(bw)-day). The URF for DPM means that for receptors with an annual average concentration of 1 $\mu g/m^3$ in the ambient air, the probability of contracting cancer over a 70-year lifetime of exposure is 300 in 1 million. The URF also assumes that a person is exposed continuously for a 70 year lifetime. This approach for calculating cancer risk is intended to result in conservative (i.e., health protective) estimates of health impacts and is used for assessing risks to sensitive receptors. The estimation of cancer risk generally uses the following algorithms:

$$\text{Risk} = \text{Dose inhalation} \times \text{Inhalation CPF} \times \text{ASF} \qquad \text{(Equation 1)}$$

Where:

$$\text{Dose inhalation} = C_{AIR} \times \text{DBR} \times \text{A} \times \text{EF} \times \text{ED} \times \text{FAH} / \text{AT} \qquad \text{(Equation 2)}$$

Inhalation CPF = inhalation cancer potency factor

ASF = age sensitivity factor

Where:

C_{AIR} = concentration of compound in air in micrograms per cubic meter ($\mu g/m^3$)

DBR = breathing rate in liter per kilogram of body weight per day (L/kg-body weight/day)

A = inhalation absorption factor (1 for DPM)

---

1 California Air Resources Board, Report to the Air Resources Board on the Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant, Part A Exposure *Assessment*, Approved by the Scientific Review Panel, (1998).

2 The Scientific Review Panel is charged with evaluating the risk assessments of substances proposed for identification as toxic air contaminants by CARB, OEHHA, and the Department of Pesticide Regulation (DPR), and the review of guidelines prepared by OEHHA.

EF = exposure frequency in days per year (day/year)

ED = exposure duration in years (year)

FAH = fraction of time at home

AT = averaging time period over which exposure is averaged in days (day)

The OEHHA recommended values for the parameters listed above were used in the HRA analysis. The daily breathing rate (DBR) used in the analysis was based on was based on OEHHA recommendations which vary depending on age, as shown in the assumptions for each risk scenario. The recommended exposure frequency (EF) is 350 days per year which is equivalent to 0.96 (350 days / 365 days a year). The inhalation absorption factor (A) is assumed to be 1 for inhalation based risk assessment. As indicated in Equation 1 above, each age group has different exposure parameters which require cancer risk to be calculated separately for each age group. Values for fraction of time at home (FAH) also vary depending on age, as shown in the assumptions for each risk scenario. Once dose is calculated, cancer risk is calculated by accounting for cancer potency of the specific pollutant, and the age sensitivity factor (ASF), which also varies by age as shown in the assumptions for each risk scenario.

The HRA includes three separate components: 1) Emissions inventory; 2) Dispersion Modeling; and 3) Health Risk Calculations. Each of these components is discussed in detail in below.

EMISSIONS INVENTORY

Emissions analyzed in the HRA were based on the air quality and greenhouse gas sections of the MND. The MND analyzed construction emissions using the approved California Emissions Estimator Model (CalEEMod) model for onsite sources and Emission Factors (EMFAC) 2017 for offsite sources. The air quality analysis prepared for the MND estimated maximum daily emissions for each construction phase. The construction emissions utilized for this HRA assumed the same construction schedule and equipment types as the analysis contained in the DEIR. Specifically, the emissions estimate assumes three consecutive construction phases with completion anticipated by December 2021.

The emissions estimates provided in the MND represent the maximum daily emissions from each phase that would be expected from construction of the project utilizing maximum daily heavy-duty construction equipment activity levels.

DISPERSION MODELING

Dispersion modeling predicts the air pollutant concentrations due to emissions from a source at defined receptor point locations. Dispersion modeling was performed using the USEPA approved AMS/EPA Regulatory Model (AERMOD) with meteorological data from San Diego International Airport.[3] Emission sources were located on the Franklin School site corresponding to the areas of construction activity. Volume line sources were used to represent the emission sources on the project site. Construction emissions would not be generated during the nighttime hours; therefore, the dispersion modeling allocates the emissions during the active daytime construction hours. Sensitive receptors identified for modeling

[3] https://www.arb.ca.gov/toxics/harp/metfiles2.htm#metlist

were placed at the location of nearby sensitive land uses and onsite buildings. Sensitive receptors off-site include residential land uses to the north, east, south, and west of the project site with the directly across the street in any direction. Sensitive receptors, including the maximum residential and maximum school receptors are included in the figure below.

HEALTH RISK CALCULATIONS

The resulting health risk calculations were performed using a spreadsheet tool consistent with the OEHHA guidance. The spreadsheet tool incorporates the algorithms, equations, and a variable described above as well as in the OEHHA guidance, and incorporates the results of the AERMOD dispersion model. The risk calculations are included in the following risk scenarios

- Unmitigated Residential Risk
- Unmitigated School Risk
- Mitigated Constructional Risk
- Mitigated School Risk.

NB2	Building Construction and Architectural Coating Areas
NB3	Paving areas

Construction activities can occur between 7 am and 7 pm Monday through Friday.

Receptor Designations

Residential #43 to 806

RES50 #1 to 272 - Residential receptors with 50 meter spacing

RES10 #273 to #806 - Residential receptors with 10 meter spacing

School

LL #807 to 820 - Onsite receptrs for the library and LLC building - Impacted by all phases

02-02 #821 to 835 - Onsite receptors for building 02-02. Impacted by all but 1/3 of Modernization.

01-01 #836 to 850 - Onsite receptors for building 01-01. Impacted by all but 1/3 of Modernization.

02-03 #851 to 865 - Onsite receptors for building 02-03. Impacted by all but 1/3 of Modernization.

Port #866 to 872 - Onsite receptors for portable buildings. Impacts vary by building

School receptors: Risk for onsite receptors is determined by conservately assuming that all onsite receptors are exposed for the duration of the construction project. However, because modernization requires painting and repairs to classrooms, it is anticipated that students sould be located in the portable classrooms during the time the reparis to their classrooms are occurring. As the portable classrooms are located on the other side of the campus from the new building construction (greatest risk source) risk to students would be similar or lower at the portable classrooms than they would in the library or building 02-03. Also, as a conservative estimate of onsite risk, the Assembly and Administrative building (building 02-03) is evaluated as if it were regular classrooms.
