Subject: Phase I Environmental Site Assessment report for a vacant land, located at 1424 Deepwater Avenue for parcel number 7422-023-047 within the Wilmington area of City of Los Angeles, Los Angeles County, California 90744.

Dear Mr. De La Torre:

Per your request, we are pleased to submit our report for a Phase I Environmental Site Assessment for the subject property. This report includes the results of our findings from visual surveys, historical land use review, interviews, records and regulatory review, and related sources.

According to a A Limited Environmental Site Investigation Report, conducted by The Source Group (SGI) Inc., dated November 6, 2009, concluded Based on the results of the data collected during this investigation, it is our opinion and recommendation that no further investigation or remediation is necessary at this site. You can find information about the investigations of potential leftover constituents from oil wells on pages 13 and 14. The testing data is on page 14.

The database search did not identify any evidence and /or removal of any constituents or debris from oil drilling. During inspection of the site, USAE did not identify any debris from oil drilling.

We appreciate the opportunity to be of service and look forward to working with you.

Very truly yours,
Nicholas

1.0 INTRODUCTION

This report presents a summary of the activities and the results of the Phase I Environmental Assessment performed by USA Environmental, Inc. ("USAE") for the subject property legally described in Section 4.0 of this report. This assessment generally follows industry guidelines for a Phase I Environmental Risk Report.

2.0 PURPOSE AND SCOPE

The purpose of this investigation was to determine if there exists any significant surface or subsurface property contamination by hazardous and toxic substances that could constitute a potential liability for the property owner or lessee.

The Environmental Site Assessment, (according to was conducted according to the American Society for Testing & Materials Standard Practice doe ESA's number E-1527-05, latest edition. and consisted of the following procedures as applicable:

1. A review of the chain of title for the subject property for a period of the last 50 years.
2. A determination of past site uses based upon interviews with prior or current owners, owners of adjacent property or other familiar with subject property, and a review of historical documents, aerial photographs and other relevant data, f available.
3. A review of the records of local, state, and federal environmental agencies to ascertain documented information regarding the site and surrounding areas.
4. A visit to the site to visually ascertain the existence of potential areas of currently recognized contamination, including unusual land or soil discoloration, stressed vegetation, physical

irregularities, dumping, aboveground (AST's) or underground tanks (UST's), transformer of landfills.

5. Visual identification of other issues deemed appropriate in order to determine evidence of potential contamination by currently recognized hazardous substances at the site.
6. Any other pertinent information deemed necessary for a Phase I meeting the minimum standards and requirements.
7. Preparation of a site sketches showing existing property boundaries and improvements, and locations for storage and/or use of hazardous materials and/or waste, if any.
8. Color photos of the subject site.
9. Preparation of a summary report indicating investigation done, sources of information, data obtained, and interpretation of data regarding possible or identified site contamination.

3.0 ACTIVITIES CARRIED OUT

USAE personnel performed a review of public records, for the purpose of identifying readily available evidence; that would provide a record of past and present activities, on or in the immediate vicinity of the subject property, which may have resulted in the deposit of hazardous materials, or contamination of the site by hazardous materials. Such activities conducted by USAE personnel during this portion of the environmental evaluation included review of the following:

3.1 REVIEW OF COUNTY RECORDS;

1. City, Building and Planning Department concerning historic and future development in the general vicinity;
2. City, Engineering Records;
3. City, Business License Section;
4. County, Bureau of Fire Prevention;
5. City, Hydraulic/Water Conservation Department;
6. State Regional Water Control Board;
7. County Environmental Health Services, Site Assessment and Mitigation
8. County, Assessor Office;
9. County, Appraisal Office;
10. County, Clerk and Recording Office.

3.2 REVIEW OF FEDERAL AND STATE RECORDS;

Review of Federal records to gain insight into any on site or surrounding environmental hazards, which included:

NPL, TSD, CERCLIS, CORRACTS, RCRIS-SG, RCRIS-LG, NFRAP, ERNS, FINDS, TRIS, NPL.

Review of State and County records to identify any hazardous substance release locations, and emergency response records concerning use, storage, spills, or accidents involving hazardous materials at or surrounding the site, including:

CAL-SITES, CORTESE, LUST, UST, HWIS, AST.

A detailed explanation of each database, its contents, codes used, and dates of last update are included in Appendix F.

3.3 SITE INVESTIGATION

USAE personnel conducted a site investigation on August 10, 2018 by Nicholas F. Aboufadel P.E. (see Appendix A) to identify any indications of environmental contamination. Some of the signs, which were investigated during on site investigations, include:

1. Surface spills or disposal areas of liquid or solids;
2. Surface storage of drums or transformers;
3. Areas of unusual and stressed vegetation;
4. The presence of buried material, (e.g., fills or vents pipes);
5. Fill areas;
6. Site drainage features;
7. General housekeeping and maintenance;
8. Staining on soil or pavement;
9. Abrupt or abnormal changes in land contours; and
10. Other areas of possible contamination sources.

Adjacent properties and land uses were also surveyed, regarding possible use or storage of hazardous materials that might impact the subject site.

“This Phase 1 environmental report was prepared for our client, LINC Housing, in advance of the project proposed as of the report preparation date. At the time of writing, the project consists of a three story 56-unit multifamily affordable housing building and a community room and supportive service offices for residents.”

7.0 REGULATORY REVIEW

7.1 Local Records Review;

A review of the City Building Permits, revealed the following information for the subject property (please see Appendix J).

No such address 1401 Eubank was assigned for the parcel site.

The address for the parcel site was 1424 Deepwater Avenue.

2000: Order to Comply: Trailers used as habitable buildings. Storage of motor homes, trailers, cars and equipment's.

2001: In 7/25/ 2001 On site complied. The manger of Agnrs Petroleum was on-site on 11/21/2000

2003: File Closed.

2009: File closed on 1/22/2009

2011: On 5/25/2011 Problem, workers for the circus are living on vacant land in RVS in R Zone.

According to the report of well Plugging and Abandonment, dated May 13, 1994, by the Resources Agency of California, Department of Conservation, Division of Oil, Gas and Geothermal Resources, Long Beach, California, eight oil wells were abandoned by Exxon Corporation.

A Limited Environmental Site Investigation Report, conducted by The Source Group (SGI) Inc., dated November 6, 2009:

Based upon discussions with Warren E&P personnel, it is SGI's understanding that eight oil wells were located and operated at this Site. All wells were abandoned by Exxon (the original property owner) prior to SGI's assessment.

- **Six exploratory trenches were excavated across the Site to evaluate the presence of petroleum-hydrocarbon-impacted or well-drilling-mud-impacted soil. Field data and observations collected during fieldwork were recorded and discussed in this report,**
- **The locations of eight abandoned oil wells were excavated to expose the abandoned wells, and their locations were marked at the surface,**
- **Fifteen direct-push borings were advanced to approximately 12 feet below ground surface (bgs). Soil samples collected from 12 of the 15 direct-push locations were submitted to the laboratory for chemical analysis.**

- **Samples were collected adjacent to the abandoned oil wells and from possible areas of concern based on field screening. Samples were analyzed for California Assessment Manual (CAM) 17 metals, total petroleum hydrocarbon (TPH) screen, and volatile organic compounds (VOCs), including fuel oxygenates and benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds),**
- **All trenches and excavations were backfilled with excavated soil to return the site to its pre-existing grade.**

Conclusions and Recommendations:

SGI performed a limited site assessment for TPH-, VOC-, and metals-impacted soil at the subject property located at 1424 Deepwater Avenue in Wilmington, California, in September and October 2009. No VOCs, including BTEX compounds, were detected above laboratory reporting limits. The analytical results were below soil screening levels for TPH and BTEX in soils between 20 and 150 feet above drinking water aquifers (Per LARWQCB Table 4-1, Attachment E). Sample results for metals were below the CHHSL values except arsenic and chromium. Arsenic concentrations were within background concentrations in all samples. The one sample containing an elevated concentration of total chromium would not be a concern (assuming one sixth of the reported value is due to the presence of chromium VI).

Results of the site characterization, based upon field observations suggest that the site poses little to no threat to groundwater from TPH, BTEX constituents, or metals in the near-surface soils. This site assessment only screened shallow soil to approximately twelve feet bgs and did not screen any other media nor did SGI screen for any other potentially hazardous substances. This assessment does not address future use of the site and is not a full environmental characterization as described by the LARWQCB or Cal/EPA. Based on the results of the data collected during this investigation, it is our opinion and recommendation that no further investigation or remediation is necessary at this site.

USAE submitted a request to the local Health Department and/or Environmental agency for the purpose of reviewing readily available environmental records that may be on file with this agency for the subject site. However, USAE was informed that no records for the subject site were on file with this agency.

Water Quality Agency Records

USAE submitted a request to the Water Quality Agency for the purpose of determining if past and present businesses at the subject site are listed on regulatory lists (such as leaking underground tank lists, site cleanup lists, etc.). USAE was informed that no records for the subject site are on file with this agency.

According to the County, Tax Assessor, the existing site is vacant land.

According to the City, Fire Department, Hazardous Materials Division, no underground storage tanks and no violations were found in the file for the site.

According to the City, Research Bureau, no underground storage tanks and no violations were found in the file for the site.

According to the search by EDR for databases and files from federal, state, and local environmental regulatory agencies. The complete records search report is included in Appendix F, and the results of USAE's review are presented below.

7.2 Federal;

The Federal records search compiles information from the records of the Environmental Protection Agency (USEPA) that identifies environmental problem sites and activities close in proximity (one-mile radius) to the subject site.

7.2.1 National Priorities List (NPL):

The NPL is the USEPA's database of uncontrolled or abandoned hazardous waste sites, identified for priority remedial actions, under the Superfund program. A site included on the NPL must either meet, or surpass, a predetermined hazard ranking system score, or be chosen as a state's top-priority site, or meet all three of the following criteria:

1. The U.S. Department of Health and Human Services issues a health advisory, recommending that people be removed from the site to avoid exposure;
2. The USEPA determines that the site represents a Significant threat;
3. The USEPA determines that remedial action is more cost effective than removal action.

Appendix F contains the NPL database that lists the facility locations within a one-mile radius of the subject site. No NPL sites were present around the subject site. This site does not have an environmental concern for the subject site.

7.2.2 Facilities under RCRA Corrective actions (CORRACTS):

Appendix F contains the HAZMAT database, which lists the facility locations within a one quarter- mile radius around the subject site. No HAZMAT sites were present around the subject site.

The database search did not identify any evidence and /or removal of any constituents or debris from oil drilling. During inspection of the site, USAE did not identify any debris from oil drilling.

8.0 SITE INVESTIGATION AND REVIEW OF HAZARDS

8.1 Topography;

The property is characterized as a flat area, gently sloping to the southeast side. Elevation on the site is approximately 4 feet above Mean Sea Level (MSL).

8.2 Soils;

The soil at the subject site consists of Silty Sandy Clay to approximately 25 feet below existing grade.

8.3 Geology;

The area is located within the Peninsular Ranges Geomorphic Province. Low topographic relief and shallow slopes characterize the plain. Pleistocene terrace deposits, along with Pleistocene and Holocene age alluvial and eolian fans, underlie it. The area is immediately underlain by poorly consolidated non-marine alluvial fans of Holocene age several hundred feet thick, and by stratified sedimentary rocks of marine origin.

The site vicinity is located in the southern part of the Peninsular Ranges geomorphic province of California. Cretaceous granite rocks of the southern California batholith comprise the major rock type in the area. The Green Valley Tonalite, a light gray intrusive igneous rock, also occurs throughout the site vicinity. Relatively unweathered tonalite may be found from 4 to 11 feet below the ground surface.

Large earthquakes from the San Andreas or San Jacinto fault zones could also produce significant ground shaking at the site. The maximum probable ground acceleration to be expected at the site would be in the range of 0.7g.

8.4 Hydrology;

8.4.1 Surface-Water Hydrology;

Site Surface Drainage: Hydraulic flow is generally in a down-gradient direction, usually toward the nearest surface water body. Based upon site surface and improvement characteristics observed during the on-site reconnaissance of the property, surface drainage at the subject site would flow on-site northeasterly direction.

The surface runoff is handled by a street runoff system. According to the County, Planning Department. There are no surface water bodies such as streams, lakes, etc. around the subject site. There are no rivers located near the site.

Flood Zone: The subject site is located in Zone X (area determined to be outside the 500-year flood plain) of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM).

8.4.2 Ground-Water Hydrology;

According to the County Public Works, Hydrology Department, the ground water depth is approximately 65 feet below the ground surface and the flow direction is to the northeasterly.

No Wetlands was found for the subject site.

8.5 Chemicals and raw materials;

No chemicals found at the subject site.

8.6 Polychlorinated Biphenyls (PCBs):

No transformer is located at the subject site.

8.7 Asbestos-containing Materials (ACM);

The site is a vacant lot. The presence of materials such as sprayed-on insulation, ceiling texture, which may potentially contain friable asbestos, could not be found.

8.8 Radon;

In the County area, only 0.5% of the homes are predicted to have radon levels above the EPA standard of 4 Pico Curies/Liter (CDHS, 1990). According to the Radiological Health Section of the County Public Health Department there is "no significant health hazard from radon" in County since most homes, building and schools have radon levels below 0.5 Pico Curies/Liter.

According to the California Department of Health, Radon Section, there are no radon problems within the area of the subject site. The EPA has set an action level for radon in air of 4 picocuries per liter (pCi/L). Due to the practical time constraints of this assessment, air sampling for radon gas was not requested nor conducted. Radon concentration determinations generally are not accurately measured by short period

sampling. If long-term exposure to radon gas is a concern, a minimum of a three-month alpha-track test is recommended.

8.9 Lead-based Paint;

The site is a vacant lot. The lead-based paints do not appear to represent an environmental threat to the subject property.

8.10 Lead in Drinking Water;

According to the County Water Department, no lead is found in the drinking water at the subject site. It is unlikely to find lead in the building that would affect the water supply, because the water department periodically tests it.

8.11 Hazardous Substances;

No hazardous substances found at the subject site.

8.12 Landfills;

No landfills were observed at the site or within a one-half mile (0.5 mile) radius of the site. Also, the database search did not identify any landfills near the site (see Appendix F: SWLF).

8.13 Pits, Sumps, Drywells and Catchbasins;

No pits, sumps, drywells, or catchbasins were found at the subject site.

8.14 On-site Aboveground and Underground Storage Tanks;

A review of State and Local records, and a site inspection were conducted, to identify any on-site UST's or AST's, concerning use, storage, spills, or accidents involving storage tanks at the site. The results are discussed below.

8.14.1 Underground Storage Tanks (USTs);

There was no evidence that any UST's had been recently removed from the property.

8.14.2 Aboveground Storage Tanks (ASTs);

There was no evidence that any ASTs had been recently removed from the property. No evidence of existing AST was observed on the property.

Additionally, neither stained soils, nor evidence of past liquid or solid discharges of hazardous materials were found.

8.15 Storm Water Drainage;

The storm water drainage is a street runoff system. There are no storm water permits for the site.

The site is located at 1424 Deepwater Avenue and the parcel number is 7422-023-047 within the Wilmington area of City Los Angeles, County of Los Angeles, State of California, referred to as the "subject site". This included visual observations of the subject property and limited observations of surrounding properties, review of historical land use, review of regulatory database, interviews, and related sources. This Environmental Site Assessment report was conducted according to the American Society for Testing & Materials Standard Practice, ESA's number E-1527-05, latest edition.

Site Improvements: The subject site consists of one parcel. The parcel consists of an irregular shape. The site consists of unpaved land. The parcel is located at 1424 Deepwater Avenue and the parcel number is 7422-023-047 (see Figures 1 and 2).

The subject site total area is approximately 58,135 square feet. The site is classified as zoned LAR1. This zoning classification allows residential development - vacant land.

Driveway and Parking Area: The site can be accessed from Eubank Avenue.

Current Use: Parcel is unpaved lot.

Current Occupants/Tenants (Please See Appendix C): At the time of the survey was conducted, the site is unpaved lot.

Vegetation: Visual observations were made of the vegetation noted on the property in an effort to evaluate if it had sustained damage that could be related to the presence of localized soil or water contamination. None of the vegetation observed appeared to be damaged or stressed in a manner, which could be attributable to the presence of contamination.

Stained Soil: Visual observations were made of the soil to identify any discolorations or surface staining which could be indicative of contaminant discharge. No soil stains were observed on the subject site.

Surface Anomalies/Depression: Visual observations were also made to evaluate the presence of environmentally unusual and /or suspicious conditions such as land depressions and other surface anomalies indicative of possible oil wells, drywells, sumps, waste dump sites, leach fields or other subsurface activities. No surface anomalies or depressions were observed during our site visit.

A review of the City Building Permits, revealed the following information for the subject property (please see Appendix J).

No such address 1401 Eubank was assigned for the parcel site.

The address for the parcel site was 1424 Deepwater Avenue.

According to the report of well Plugging and Abandonment, dated May 13, 1994, by the Resources Agency of California, Department of Conservation, Division of Oil, Gas and Geothermal Resources, Long Beach, California, eight oil wells were abandoned by Exxon Corporation.

A Limited Environmental Site Investigation Report, conducted by The Source Group (SGI) Inc., dated November 6, 2009:

Based upon discussions with Warren E&P personnel, it is SGI's understanding that eight oil wells were located and operated at this Site. All wells were abandoned by Exxon (the original property owner) prior to SGI's assessment.

- **Six exploratory trenches were excavated across the Site to evaluate the presence of petroleum-hydrocarbon-impacted or well-drilling-mud-impacted soil. Field data and observations collected during fieldwork were recorded and discussed in this report,**
- **The locations of eight abandoned oil wells were excavated to expose the abandoned wells, and their locations were marked at the surface,**
- **Fifteen direct-push borings were advanced to approximately 12 feet below ground surface (bgs). Soil samples collected from 12 of the 15 direct-push locations were submitted to the laboratory for chemical analysis.**
- **Samples were collected adjacent to the abandoned oil wells and from possible areas of concern based on field screening. Samples were analyzed for California Assessment Manual (CAM) 17 metals, total petroleum hydrocarbon (TPH) screen, and volatile organic compounds (VOCs), including fuel oxygenates and benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds),**
- **All trenches and excavations were backfilled with excavated soil to return the site to its pre-existing grade.**

SGI Conclusions and Recommendations:

SGI performed a limited site assessment for TPH-, VOC-, and metals-impacted soil at the subject property located at 1424 Deepwater Avenue in Wilmington, California, in September and October 2009. No VOCs, including BTEX compounds, were detected above laboratory reporting limits. The analytical results were below soil screening levels for TPH and BTEX in soils between 20 and 150 feet above drinking water aquifers (Per LARWQCB Table 4-1, Attachment E). Sample results for metals were below the CHHSL values except arsenic and chromium. Arsenic concentrations were within background concentrations in all samples. The one sample containing an elevated concentration of total chromium would not be a concern (assuming one sixth of the reported value is due to the presence of chromium VI).

Results of the site characterization, based upon field observations suggest that the site poses little to no threat to groundwater from TPH, BTEX constituents, or metals in the near-surface soils. This site assessment only screened shallow soil to approximately twelve feet bgs and did not screen any other media nor did SGI screen for any other potentially hazardous substances. This assessment does not address future use of the site and is not a full environmental characterization as described by the LARWQCB or Cal/EPA. Based on the results of the data collected during this investigation, it is our opinion and recommendation that no further investigation or remediation is necessary at this site.

Recommendations

Based on the site investigation and the research of records, USA Environmental, Inc. does not suggest the existence of an environmental condition that should be a cause of concern for the subject property.

USA Environmental, Inc. did not perform any previous environmental inspection for the seller or purchaser of the subject property. Also, USA Environmental, Inc. never had any affiliation with the seller or the purchaser of the subject property.

If you have any questions, please feel free to call me any time.

Very truly yours,

Nicholas

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do **NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of

EXECUTIVE SUMMARY

assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reponsible Party: BACKLOG SITE CLEANUP PLANNING REPORT
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: This site is projected to be remediated by responsible parties with reimbursement to DHS for its oversight/monitoring costs. However, if the responsible parties are unable to fund the cleanup, another source of revenue will need to be established.
Site Description: The Watson Yard is approximately 90 acres and is designed for the transfer of goods into rail cars. Materials most often handled are plastic pellets. No hazardous wastes are transferred at this location.
Hazardous Waste Desc: The yard's right-of-way abuts several services which include truck repair, diesel engine service, cargo van storage, and a junkyard. Approximately 500 gallons of diesel fuel from a truck were disposed of onto the rail yard property around January 1, 1986. Efforts made by the railroad removed 63 yards of contaminated soil. Follow-up inspections indicated additional soil staining existed at the yard.
Threat To Public Health & Env: Known concentrations of soil contaminants do not exceed 30 parts per million (ppm) of diesel fuel. Soil excavated in the most contaminated areas did not exceed two feet in depth. There is minimal threat to ground water supply. There is no public threat since no unauthorized personnel are permitted in this area. The area is fenced and guarded by Santa Fe Railroad police.
Site Activity Status: DHS in conjunction with the Los Angeles County Health Department oversaw the soil removal process. Additional remedial measures may be necessary, pending resolution of enforcement actions and expanded characterization.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site History:

This case was active in the 1990s, prior to residential development, under the Los Angeles County Department of Public Works, California Department of Toxic Substances Control (DTSC), and the Los Angeles Regional Water Quality Control Board (LARWQCB). Remedial activities were performed to address hydrocarbon and chlorinated solvent releases, with site closure granted by the LARWQCB in 1996. Chlorinated solvent detections within the Monterey Pines neighborhood, discovered during an investigation at the adjacent Carousel Tract neighborhood, prompted the LARWQCB to try to locate a viable responsible party. These efforts have not yielded a viable responsible party. This prompted the LARWQCB to review the case with the DTSC to evaluate a way to get assessment accomplished. With support from the LARWQCB, the DTSC requested that USEPA perform an investigation at Monterey Pines to evaluate the extent to which there may be health risks to residents in the Monterey Pines community. USEPA agreed and is doing so independently. USEPA's web site with information about their investigation is online at the following link: http://www.epaos.org/site/site_profile.aspx?site_id=8119

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

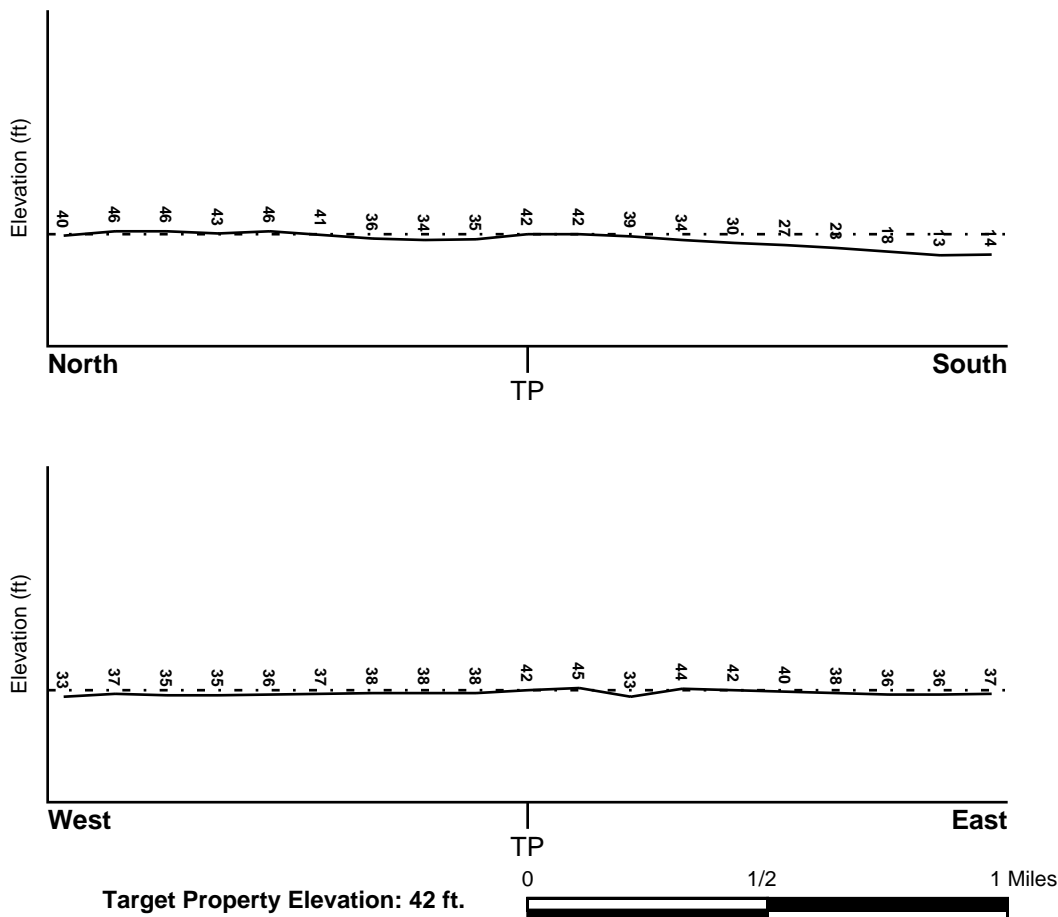

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
