1.0 Introduction

1.1 Purpose of Report & Study Objectives

The purpose of this traffic study is to assess the impacts of the proposed expansion of the St. Francis of Rome Church.

The project site is located at 21591 Lemon Street, in the City of Wildomar. The proposed church site will be converting the existing church building into a multipurpose room. In addition the project is proposing to construct the following:

- 303 additional seats to the existing 897-seat church (bringing the total capacity to 1,200 seats) (north side of property); and
- Office and Classrooms (southwest side of property).

The following is operational details based on information provided by the project applicant:

- The site includes an existing pre-school with an enrollment of approximately 20 students.
- Phase 3 of the project would include addition of classrooms/meeting rooms for Faith Formation which will be held on Sundays and some evenings.
- No day school is being proposed.
- There are 10 rooms that can hold approximately 20 persons for meetings and Faith Formation.
- Mass times are as follows:
 - Saturday: 4:00 to 5:00 PM and 6:00 to 7 PM
 - Sunday: 7:00 to 8 AM, 9:00 to 10:00 AM, 11:00 AM to 12:00 PM., 1:00 to 2:00 PM, AND 5:00 to 6:00 PM
 - Weekday Masses: 8:00 a.m. (Only about 60 people attend this mass daily)

It is understood that the church, classrooms and multipurpose room will not be in operation at the same time.

The project will be built in two phases; however, the project will be analyzed in one phase for the traffic study. The project is planned to open in 2020.

This traffic study has been prepared in accordance with the traffic study guidelines, requirements and thresholds of significance for the City of Wildomar.

Based on typical activities of the proposed land use, the project is not expected to result in any significant change to weekday conditions or activities of the church. Hence, a weekday conditions analysis is not required for the proposed project.

In order to determine peak hours for Saturday and Sunday conditions, RK conducted 24-hour ADT counts on the roadway segments located adjacent to the project site. The peak hours for the adjacent roadways on Saturday and Sunday are 2:00 PM to 4:00 PM and 11:00 AM to 1:00 PM, respectively. This analysis evaluates the potential traffic impacts associated with the proposed project during peak Saturday roadway activities from 2:00 PM to 4:00 PM, and peak Sunday roadway activities from 11:00 AM to 1:00 PM.

This analysis is considered conservative since it will add the peak traffic generation of the site to peak traffic conditions of the circulation system. In reality, the site and the circulation system might not peak at the same exact time periods.

This study is prepared in accordance with the scope of work approved by the City of Wildomar staff. A copy of the scope of work which was approved via email communication is contained in Appendix H.

1.2 Site Location & Project Description

The project site is located at 21591 Lemon Street, in the City of Wildomar. The proposed church site will be converting the existing church building into a multipurpose room. In addition the project is proposing to construct the following:

- 303 additional seats to the existing 897-seat church (bringing the total capacity to 1,200 seats) (north side of property); and
- Office and Classrooms (southwest side of property).

The project will be built in two phases; however, the project will be analyzed in one phase for the traffic study. The project is planned to open in 2020.

Access for the proposed project will continue to utilize two existing unsignalized driveways on Lemon Street and one existing unsignalized driveway on Mojonnier Way.

The location of the project site is presented on Exhibit 1-1. The site plan is shown on Exhibit 1-2.

1.3 Traffic Study Area & Analysis Scenarios

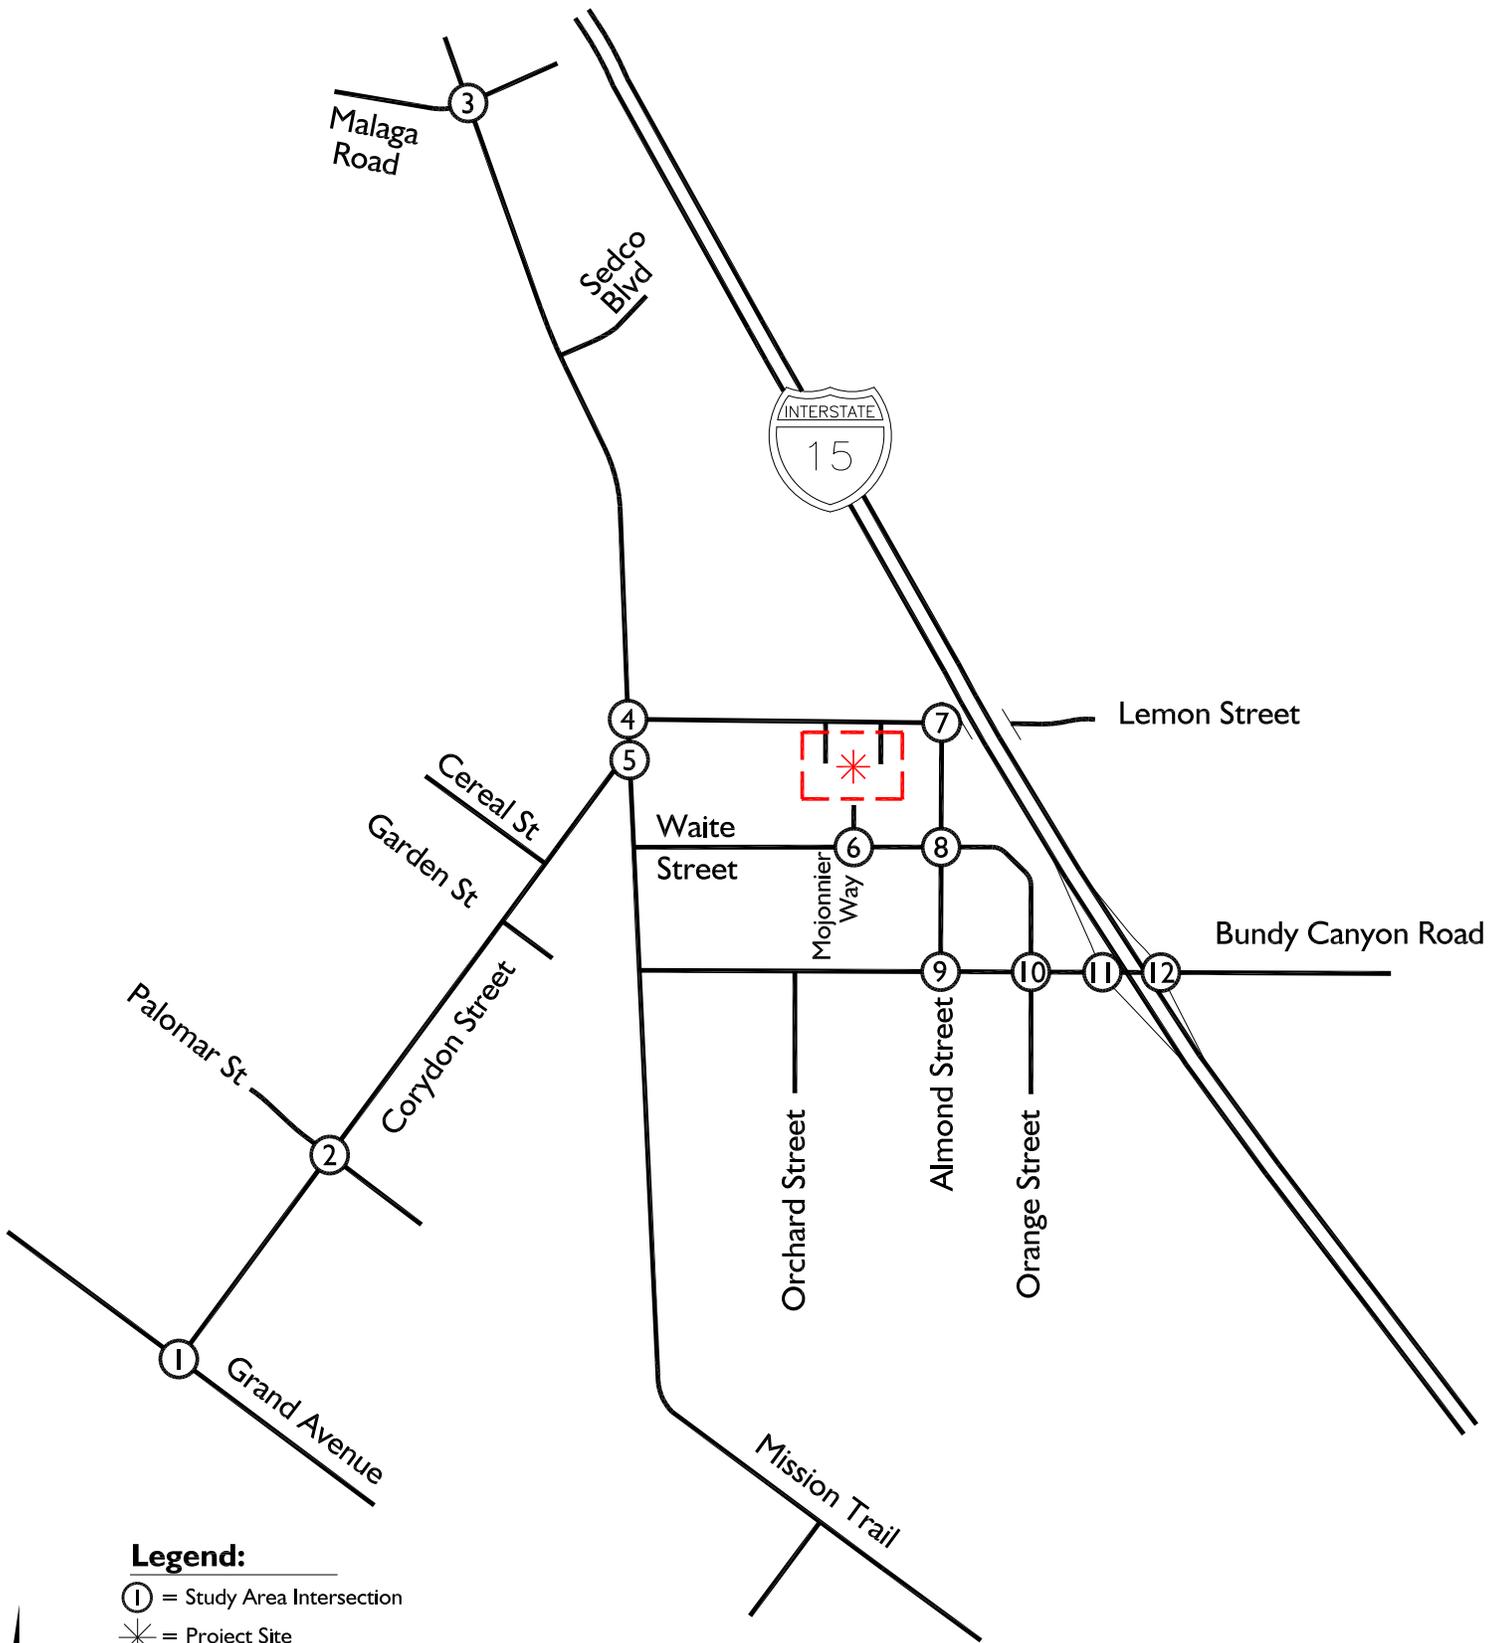

Exhibit 1-1 illustrates the site location map and traffic analysis study area. The study area consists of the following intersections:

North-South Street	East-West Street
1. Grand Avenue	Corydon Street
2. Palomar Street	Corydon Street
3. Mission Trail	Malaga Road
4. Mission Trail	Lemon Street
5. Mission Trail	Corydon Street
6. Mojonnier Way	Waite Street
7. Almond Street	Lemon Street
8. Almond Street	Waite Street
9. Almond Street	Bundy Canyon Road
10. Orange Street	Bundy Canyon Road
11. I-15 Southbound Ramps	Bundy Canyon Road
12. I-15 Northbound Ramps	Bundy Canyon Road

The analysis evaluates traffic conditions of the study intersections for the following scenarios in accordance with the City of Wildomar and the approved scope of work. A copy of the scope of work which was approved via email communication is contained in Appendix H.:

- Existing Conditions;
- Existing Plus Project Conditions;
- Opening Year (2020) Cumulative Without Project Conditions (Existing Plus Ambient Growth Plus Cumulative Project); and
- Opening Year (2020) Cumulative With Project Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project).

- * = Project Site

2.0 Analysis Methodologies, Performance Criteria, & Thresholds of Significance

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report in accordance with the City of Wildomar requirements.

This section also discusses the agency-established applicable performance criteria and thresholds of significance for the study facilities.

2.1 Intersection Peak Hour Level of Service Analysis Methodology

The current technical guide to the evaluation of traffic operations is the Highway Capacity Manual (HCM2010). The HCM defines level of service as a qualitative measure which describes operational conditions within a traffic stream, generally in terms of such factors as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate LOS (Level of Service) conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted.

The definitions of level of service for uninterrupted flow (flow unrestrained by the existence of traffic control devices) are:

- LOS A represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.
- LOS B is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable. Freedom to select desired speeds is relatively unaffected, but there is a slight decline in the freedom to maneuver.
- LOS C is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

- LOS D represents high-density but stable flow. Speed and freedom to maneuver are severely restricted, and the driver experiences a generally poor level of comfort and convenience.
- LOS E represents operating conditions at or near the capacity level. All speeds are reduced to a low, but relatively uniform value. Small increases in flow will cause breakdowns in traffic movement.
- LOS F is used to define forced or breakdown flow. This condition exists wherever the amount of traffic approaching a point exceeds the amount which can traverse the point. Queues form behind such locations.

The level of service is typically dependent on the quality of traffic flow at the intersections along a roadway. The HCM methodology expresses the level of service at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control. The levels of service determined in this study are calculated using the HCM methodology.

For signalized and all-way stop intersections, average control delay per vehicle is used to determine the level of service. Levels of service at signalized and all-way stop study intersections have been evaluated using the signalized HCM intersection analysis program.

Study area intersections, which are stop sign controlled with stop control on the minor street only, have been analyzed using the unsignalized intersection methodology of the HCM. For these intersections, the calculation of level of service is dependent on the occurrence of gaps occurring in the traffic flow of the main street. Using data collected, describing the intersection configuration and traffic volumes at these locations, the level of service has been calculated. The level of service is determined based on the worst individual movement or movements sharing a single lane. The relationship between level of service and delay is different than for signalized intersections.

The levels of service are defined for the various analysis methodologies as follows:

LOS	Intersection LOS Criteria	
	Signalized Delay (Seconds)	Unsignalized Delay (Seconds)
A	0.00 - 10.00	0.00 - 10.00
B	10.01 - 20.00	10.01 - 15.00
C	20.01 - 35.00	15.01 - 25.00
D	35.01 - 55.00	25.01 - 35.00
E	55.01 - 80.00	35.01 - 50.00
F	>80.01	>50.01

For this study, the HCM level of service grades will be determined utilizing the HCM 2010 Methodology and the Synchro analysis software.

All analysis parameters utilized in this analysis are in accordance with the City of Wildomar Traffic Study Guidelines.

Existing conditions peak hour factors have been calculated based upon the traffic counts collected at the study area intersections. Existing peak hour factors have been used for Project Opening Year (2020).

2.2 Level of Service Performance Criteria & Thresholds of Significance

The City of Wildomar has established Level of Service (LOS) D as the minimum LOS for its intersections. *Therefore, any intersection operating at LOS "E" or worse will be considered deficient for the purposes of this analysis.*

In accordance with the *County of Riverside Traffic Impact Analysis Preparation Guide* (dated April 2008), the following type of traffic impacts may be considered to be "significant" under CEQA:

- When existing traffic conditions exceed the General Plan target LOS.
- When project traffic, when added to existing traffic, will deteriorate the LOS to below the target LOS, and impacts cannot be mitigated through project conditions of approval.

- When cumulative traffic exceeds the target LOS, and impacts cannot be mitigated through the TUMF network (or other funding mechanism), project conditions of approval, or other implementation mechanisms. For the case of the proposed project, since the project is a public/institution land use, it is exempt from TUMF and DIF. Hence, any required and identified mitigations would need to be addressed and implemented on a fair-share basis.

3.0 Existing Traffic Volumes & Circulation System

This section provides a discussion of existing study area conditions and traffic volumes.

3.1 Existing Traffic Controls & Intersection Geometrics

Exhibit 3-1 identifies the existing roadway conditions for the study area roadways. The number of through traffic lanes for existing roadways and the existing intersection controls are identified.

3.2 Existing Conditions Traffic Volumes

As previously noted, based on typical church activities, the project is not expected to result in any significant change to weekday conditions. Hence, a weekday conditions analysis is not required for the proposed project.

This analysis evaluates the potential traffic impacts associated with the proposed project during peak Saturday roadway traffic from 2:00 PM to 4:00 PM, and peak Sunday roadway traffic from 11:00 AM to 1:00 PM.

Existing Saturday and Sunday traffic volumes for the study area intersections are shown on Exhibit 3-2. These volumes are based upon manual Saturday and Sunday peak hour turning movement counts compiled for RK in September 2018. The Saturday and Sunday peak hour were determined by counting 24-hour ADT counts on both Saturday and Sunday. The traffic count worksheets are included in Appendix A.

3.3 General Plan Circulation Element

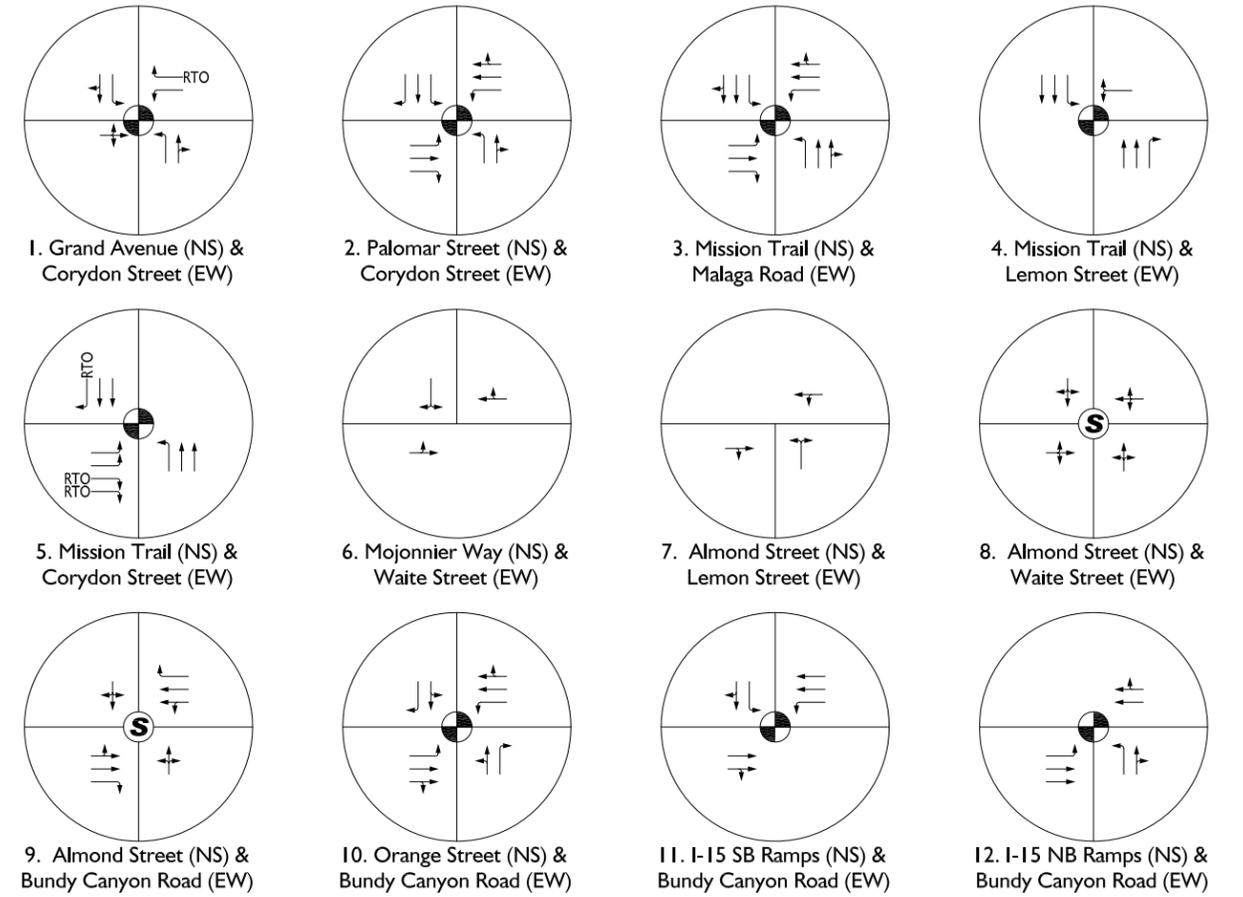

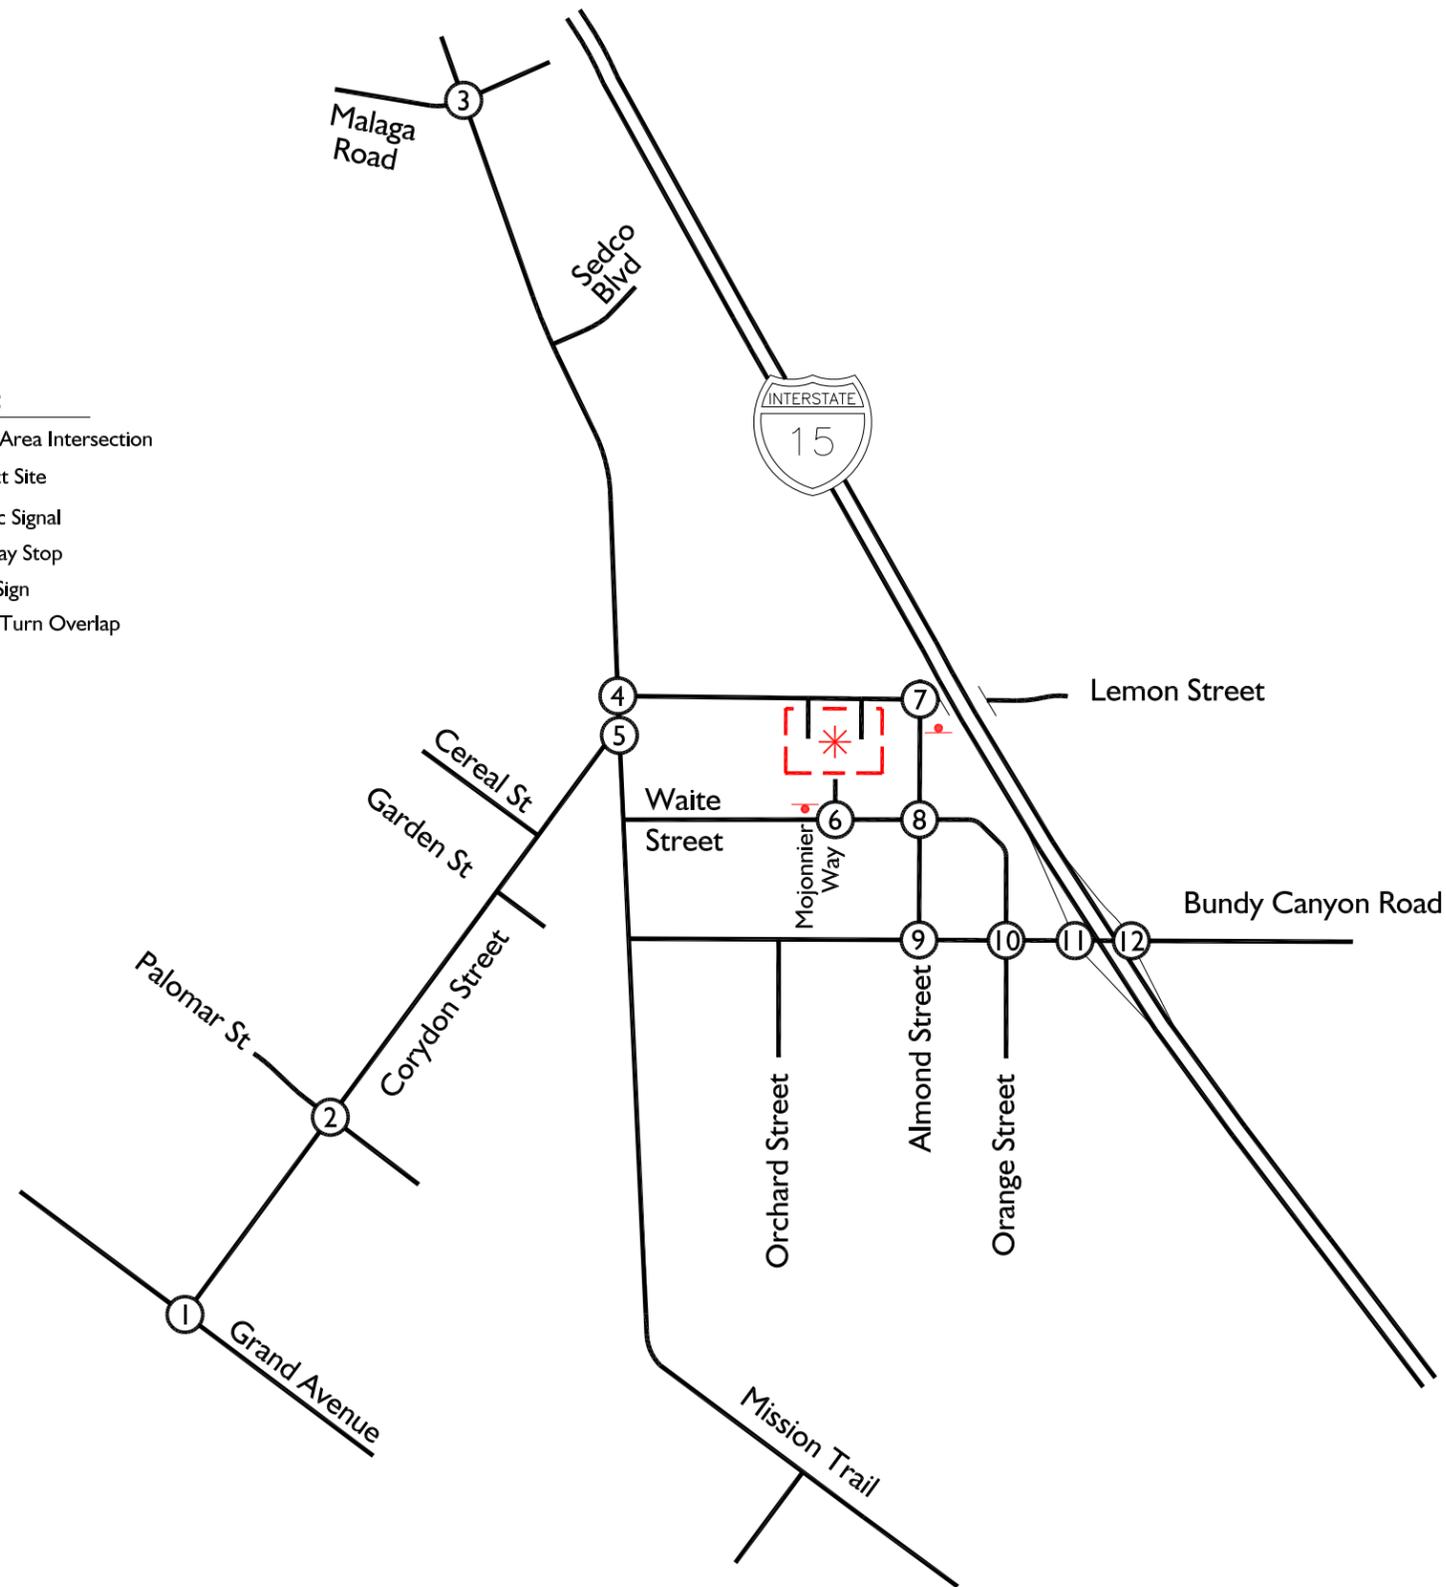

Exhibit 3-3 shows the County of Riverside (Elsinore Area) General Plan Roadway Network and Circulation System.

Exhibit 3-4 shows the County of Riverside General Plan Roadway Cross Sections.

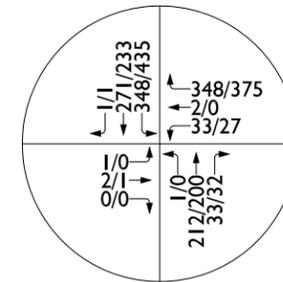

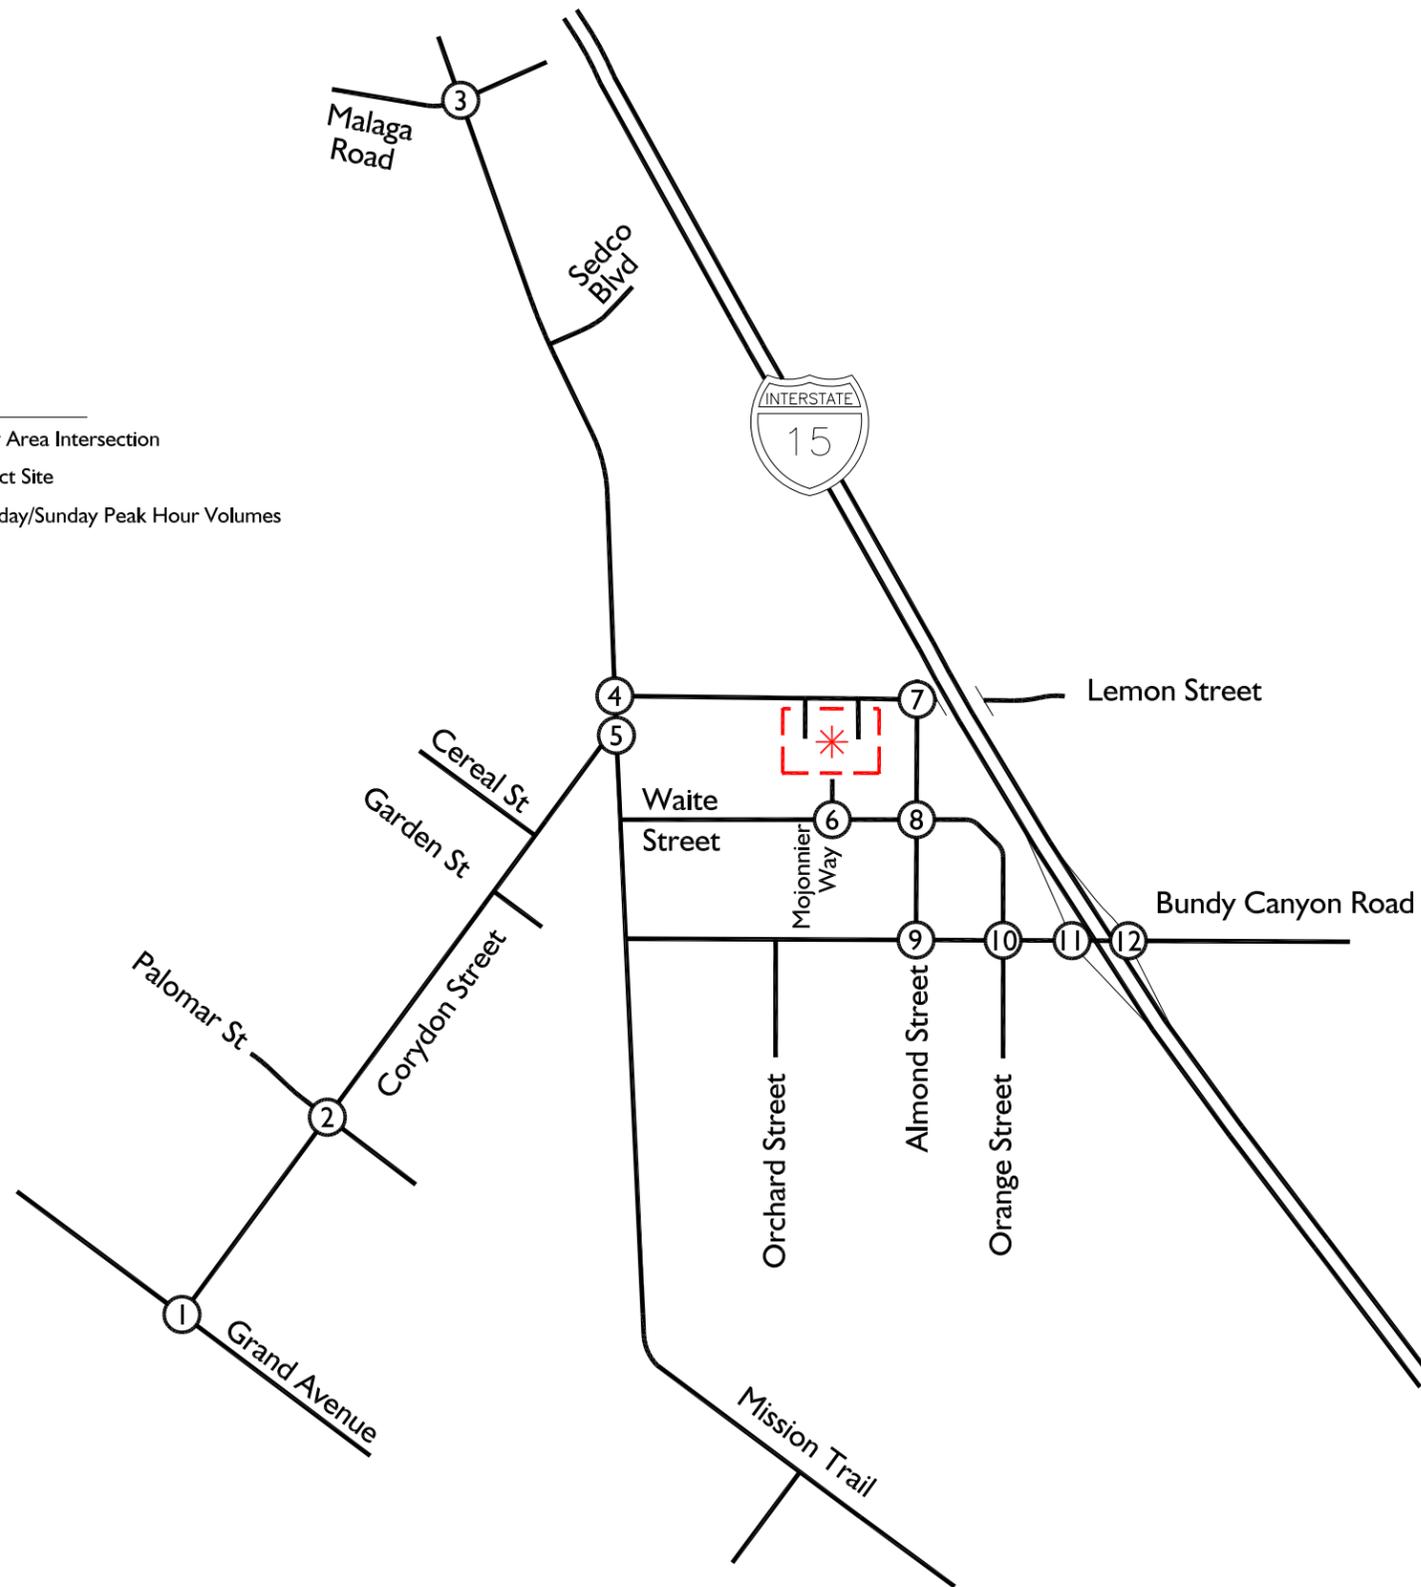

Exhibit 3-5 shows the County of Riverside (Elsinore Area) General Plan of Trails System in the project site vicinity.

4.0 Projected & Future Traffic Volumes

This section provides a discussion on methodologies utilized to derive future traffic volumes for the study area.

4.1. Project Traffic Conditions

4.1.1 Trip Generation

Trip generation represents the amount of traffic that is attracted and produced by a development.

As previously noted, the proposed project is not expected to result in any significant change to the weekday conditions based on typical church activities.

Trip generation for the proposed project is determined based on ITE 10th Edition trip generation rates for the proposed land uses as shown in Table 4-1.

Utilizing the ITE trip generation rates shown in Table 4-1, Table 4-2 summarizes the daily and peak hour trip generation for the proposed project.

As shown in Table 4-2, the proposed project is forecast to generate approximately 300 daily trips during the Saturday conditions, including 133 trips during the peak hour.

As shown in Table 4-2, the proposed project is forecast to generate approximately 367 daily trips during the Sunday conditions, including 164 trips during the peak hour.

4.1.2 Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the project. Trip distribution is heavily influenced by the geographical location of the site, the location of retail, employment, recreational opportunities, and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses and highways within the community.

Forecast trip distribution for the proposed project has been developed through discussions with the City during the scoping process.

Exhibit 4-1 shows the trip distribution for the proposed project.

4.1.3 Modal Split

Modal split denotes the proportion of traffic generated by a project that would use any of the transportation modes, namely buses, cars, bicycles, motorcycles, trains, carpools, etc. The traffic reducing potential of public transit and other modes is significant. However, the traffic projections in this study are conservative in that public transit and alternative transportation may be able to reduce the traffic volumes, but, no modal split reduction is applied to the projections. With the implementation of transit service and provision of alternative transportation ideas and incentives, the automobile traffic demand can be reduced significantly.

4.1.4 Project Peak Hour Traffic Volumes/Assignment

The assignment of traffic from the project site to the adjoining roadway system has been based upon the project's trip generation, trip distribution, and proposed arterial highway and local street systems that this traffic study assumes would be in place by the time of occupancy of the site.

Project Saturday and Sunday traffic volumes are shown on Exhibit 4-2.

4.2 Existing Plus Project Traffic Volumes

Existing Plus Project Conditions traffic volumes are derived by adding the project traffic volumes shown in Exhibit 4-2 to the existing traffic volumes shown in Exhibit 3-2.

Existing Plus Project Saturday and Sunday peak hour intersection turning movement volumes are shown in Exhibit 4-3.

4.3 Background Traffic

4.3.1 Method of Projection

To assess future conditions, project traffic is combined with existing traffic, area-wide growth, and cumulative projects' traffic.

For Opening Year (2020) conditions, to account for area wide/ambient growth in the study area, an annual growth rate of two percent (2%) has been applied to existing traffic volumes over a two-year period, as directed by City Staff.

4.3.2 Cumulative Projects Traffic

Information on future projects in the vicinity of study area has been obtained from the City of Wildomar staff for inclusion in this analysis and shown in Table 4-3.

"Probable future projects" include projects that have been filed with the City but are not yet approved or projects that the City reasonably anticipates will be submitted in the foreseeable future.

Table 4-3 shows the proposed land uses for the nearby cumulative projects provided by the City staff.

Exhibit 4-4 shows the location of the cumulative projects.

Table 4-3 also shows the Saturday and Sunday peak hour and daily trip generation for the cumulative projects.

Cumulative Projects traffic volumes are shown on Exhibit 4-5.

In reality, some of the cumulative projects may be downsized or may not be developed by project Opening Year (2020). In addition, many of the related projects have been or will be subject to a variety of mitigation measures that will reduce the potential environmental impacts associated with those projects. However, those mitigation measures have not been taken into account in projecting the environmental impact of the related projects.

Therefore, the cumulative analyses set forth below are conservative and could result in greater impacts than actually anticipated. Additionally, the analysis utilizes a growth rate of two (2) percent per year for project Opening Year (2020) conditions, which would already capture and account for most projects in the area. The growth rate methodology is considered conservative since it is applied to all movements of the study intersections.

4.4 Opening Year (2020) Cumulative Without Project Conditions Traffic Volumes

Opening Year (2020) Cumulative Without Project Conditions traffic volumes consist of existing traffic volumes and a 4% growth rate (to account for two years of annual growth at 2%) and also the traffic associated with cumulative projects in year 2020 as discussed in Section 4.3.2.

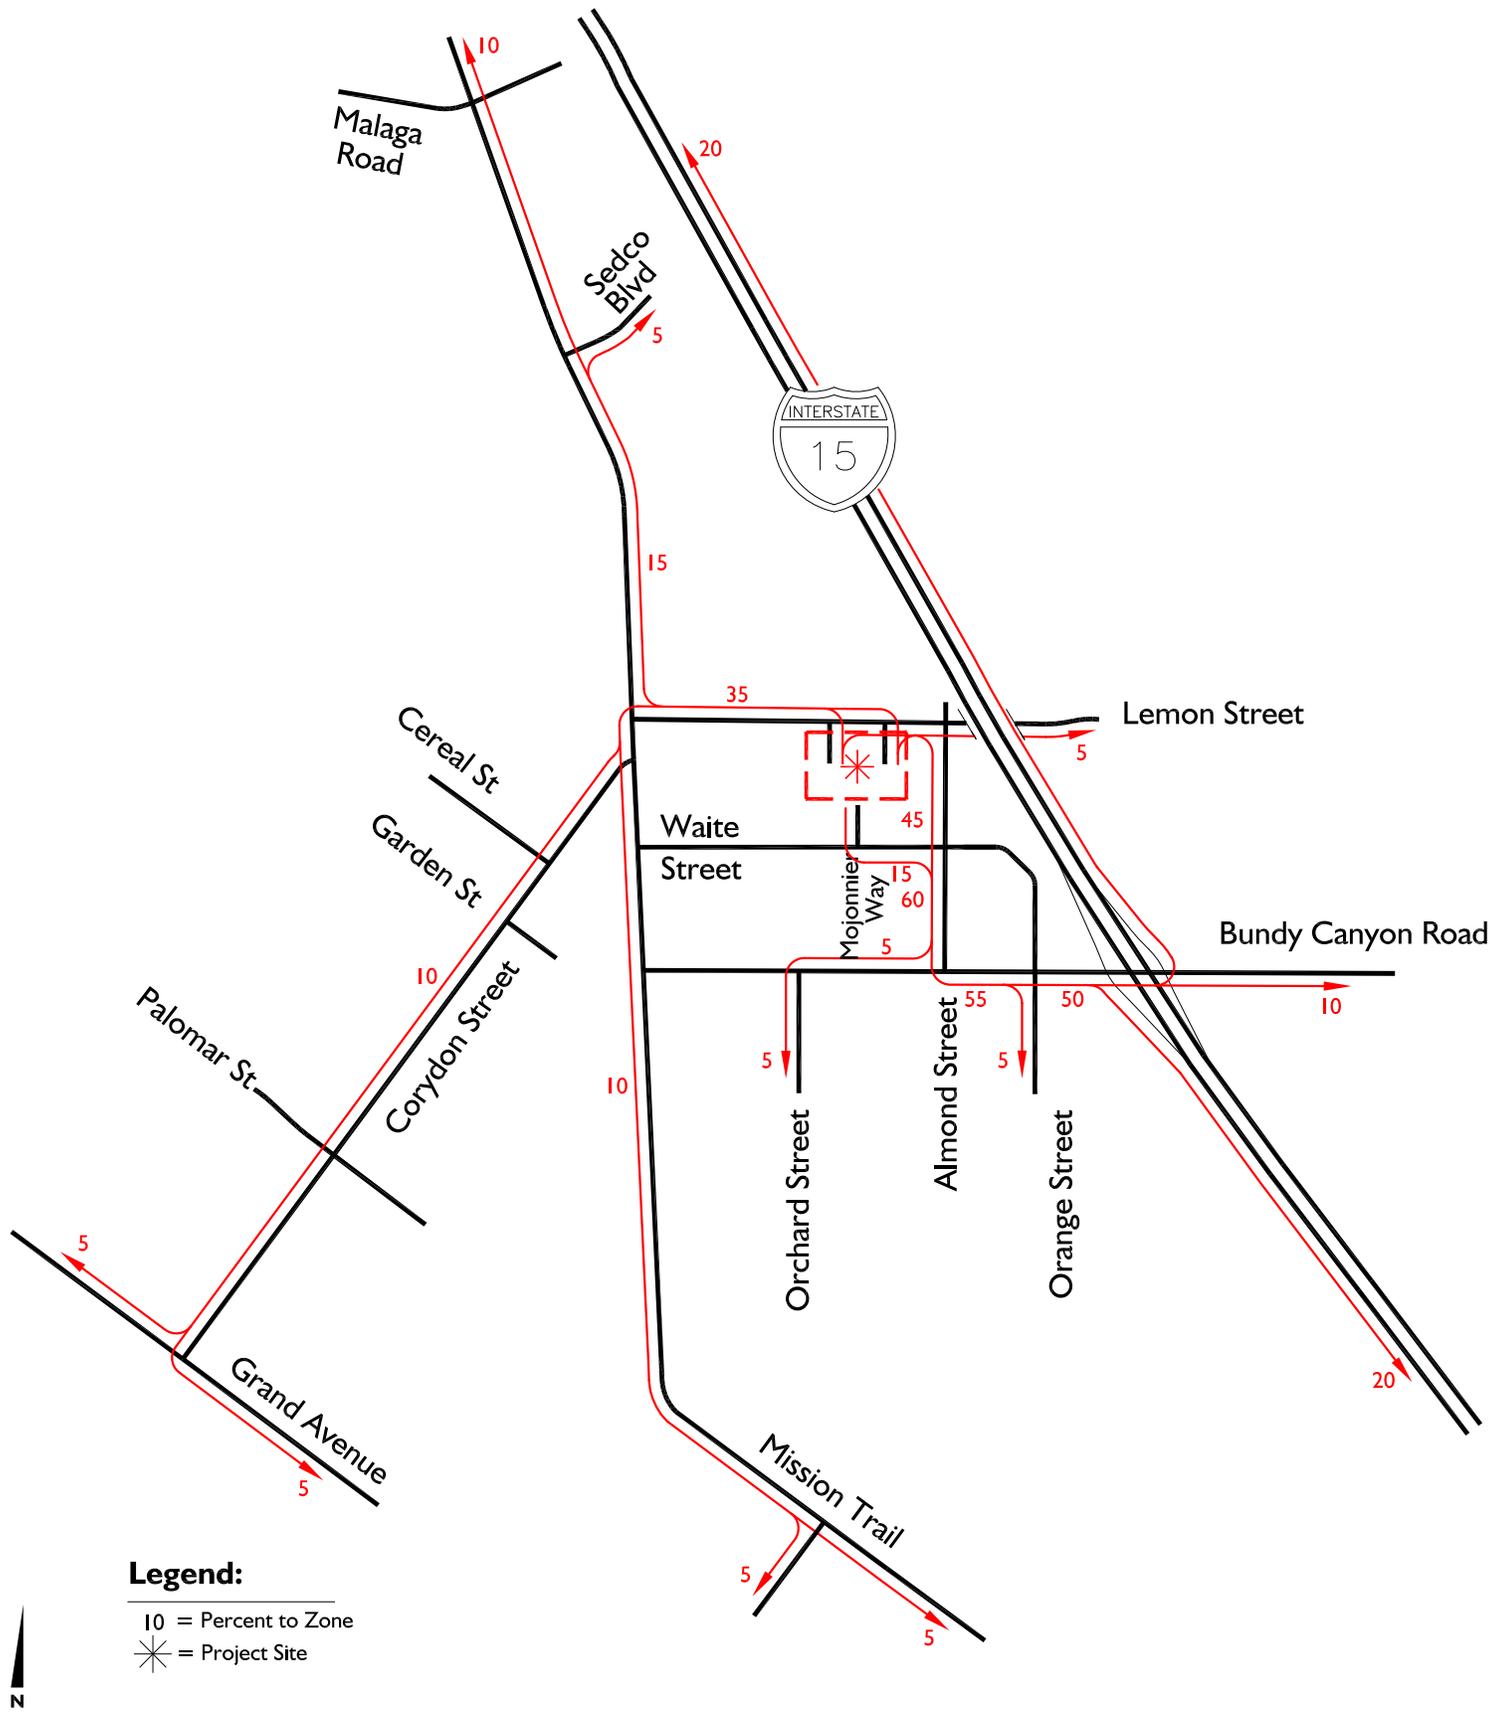

Opening Year (2020) Cumulative Without Project Conditions traffic volumes are shown on Exhibit 4-6.

4.5 Opening Year (2020) Cumulative With Project Conditions Traffic Volumes

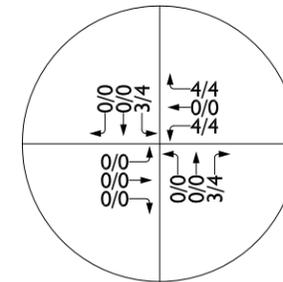

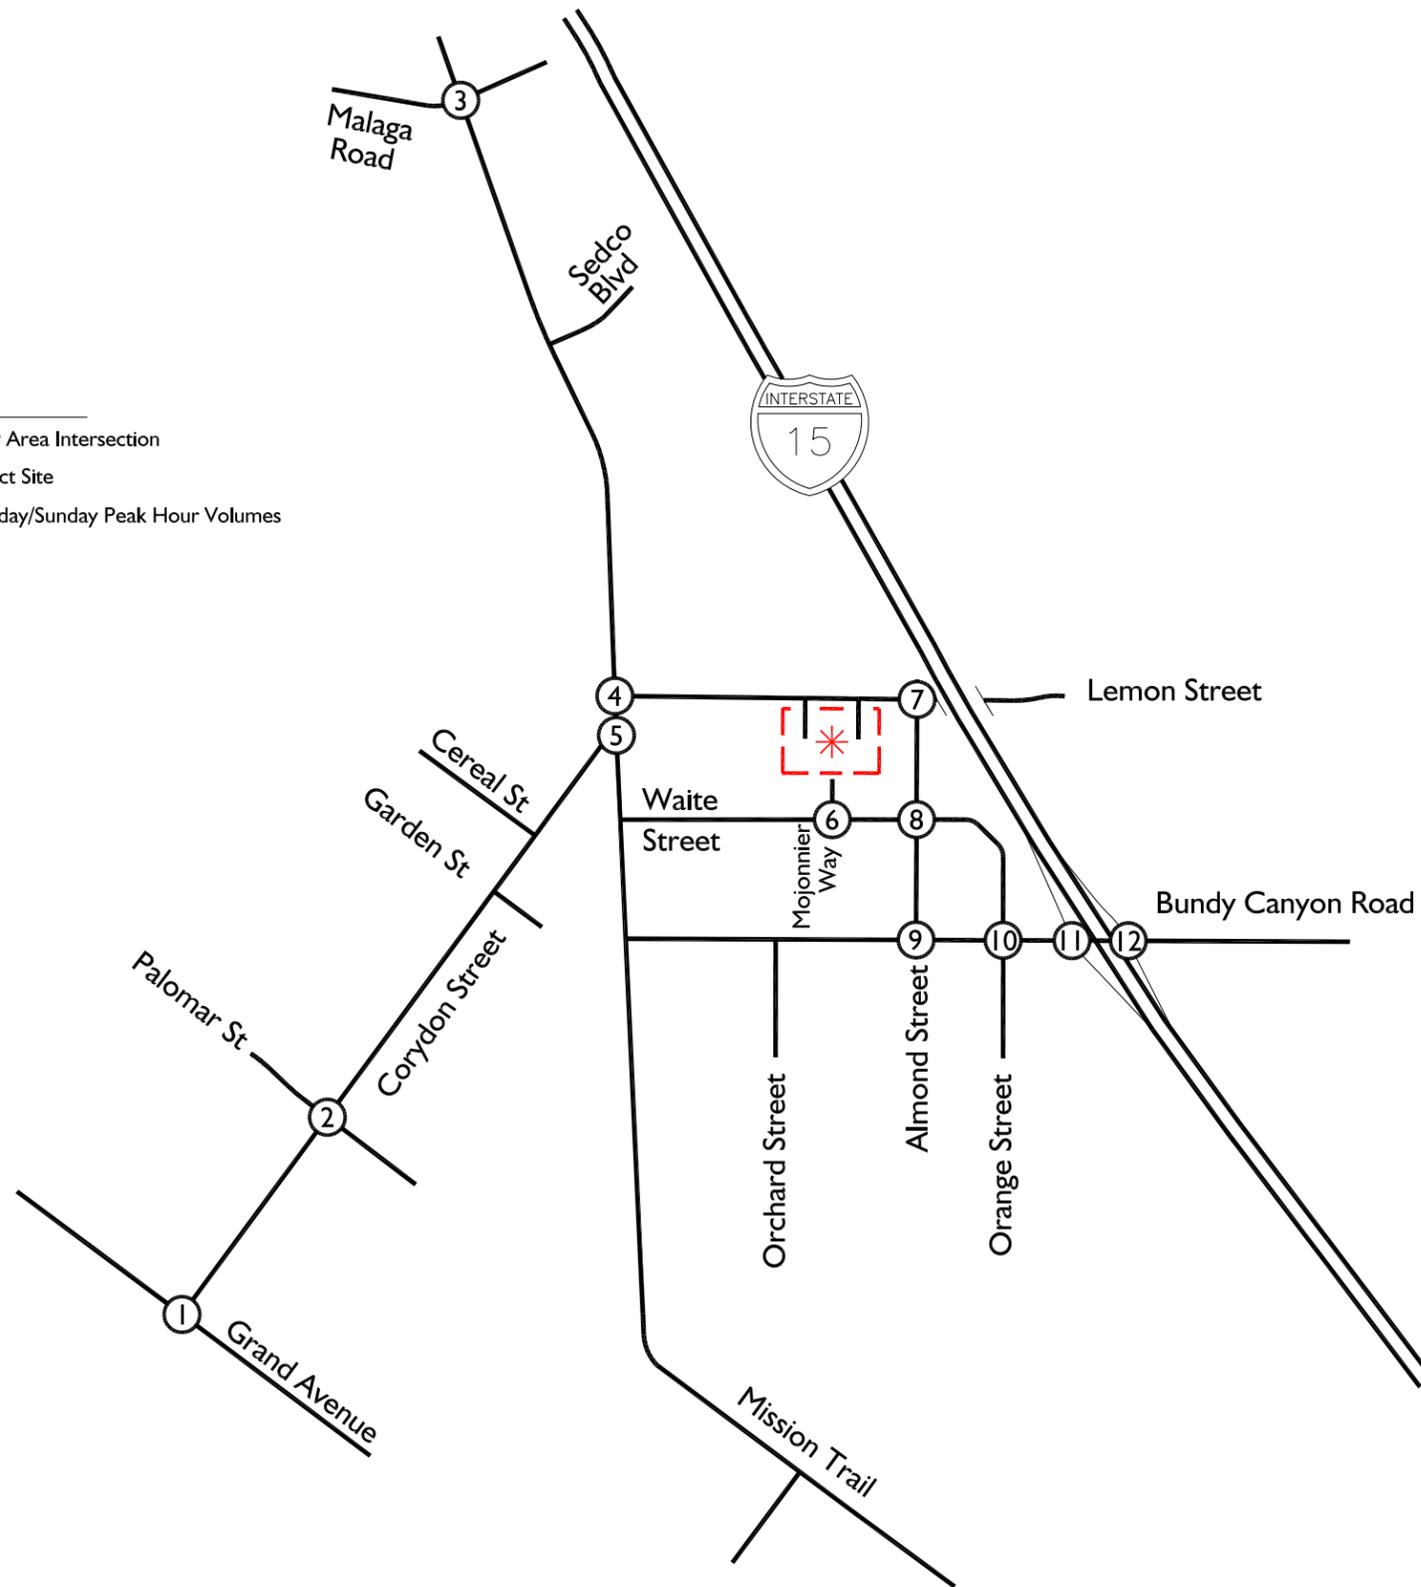

Opening Year (2020) Cumulative With Project Conditions traffic volumes consist of existing traffic volumes and a 4% growth rate (to account for two years of annual growth at 2%) and also the traffic associated with cumulative projects in year 2020 as discussed in Section 4.3.2., and also the traffic generated by the proposed project.

Opening Year (2020) Cumulative With Project Conditions traffic volumes are shown on Exhibit 4-7.

5.0 Traffic Analysis

This section provides a discussion on the study intersection peak hour level of service analysis and findings.

5.1 Existing Conditions Level of Service

Existing Conditions Level of Service (LOS) calculations for the study intersections are shown in Table 5-1 and are based upon manual peak hour turning movement counts compiled for RK in September 2018 and shown in Exhibit 3-2 and the existing geometry shown in Exhibit 3-1.

As shown in Table 5-1, all study area intersections are currently operating at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Existing Conditions.

Detailed LOS analysis sheets for Existing Conditions are contained in Appendix B.

5.2 Existing Plus Project Conditions Level of Service

Existing Plus Project Conditions Level of Service (LOS) calculations for the study intersections are shown in Table 5-2 and are based upon the Existing Plus Project Conditions traffic volumes shown in Exhibit 4-3 and the existing geometry shown in Exhibit 3-1.

As shown in Table 5-2, all study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Existing Plus Project Conditions.

As also shown in Table 5-2, based on agency-established thresholds of significance, the proposed project is forecast to not result in a significant traffic impact at the study intersections for Existing Plus Project Conditions.

Detailed LOS analysis sheets for Existing Plus Project Conditions are contained in Appendix C.

5.3 Opening Year (2020) Cumulative Without Project Conditions Level of Service

Opening Year (2020) Cumulative Without Project Conditions Level of Service (LOS) calculations for the study intersections are shown in Table 5-3 and are based upon the Opening Year (2020) Cumulative Without Project Conditions traffic volumes shown in Exhibit 4-6 and the existing geometry shown in Exhibit 3-1.

As shown in Table 5-3, all study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Opening Year (2020) Cumulative Without Project Conditions, with the exception of the following intersections during the noted peak hours:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and
- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

Detailed LOS analysis sheets for Opening Year (2020) Cumulative Without Project Conditions are contained in Appendix D.

5.4 Opening Year (2020) Cumulative With Project Conditions Level of Service

Opening Year (2020) Cumulative With Project Conditions Level of Service (LOS) calculations for the study intersections are shown in Table 5-4 and are based upon the Opening Year (2020) Cumulative With Project Conditions traffic volumes shown in Exhibit 4-7 and the existing geometry shown in Exhibit 3-1.

As shown in Table 5-4, all study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Opening Year (2020) Cumulative With Project Conditions, with the exception of the following intersections during the noted peak hours:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and

- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

As also shown in Table 5-4, based on agency-established thresholds of significance, the proposed project is forecast to result in a significant traffic impact at the following study intersections for Opening Year (2020) Cumulative With Project Conditions:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and
- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

Detailed LOS analysis sheets for Opening Year (2020) Cumulative With Project Conditions are contained in Appendix E.

The following mitigation measures shown in Table 5-4 are identified to eliminate the identified significant traffic impacts at the study intersections for Opening Year (2020) Cumulative With Project Conditions:

Int Mitigation #1

Int 11 – I-15 SB Ramps / Bundy Canyon Rd:

The project applicant shall make a fair share contribution to implement the following:

- a) Widen the southbound off-ramp from one left-turn lane and one shared through/right-turn lane to consist of two left-turn lanes and one shared through/right-turn lane.
- b) Widen the eastbound approach from one through lane and one shared through/right-turn lane to consist of two through lanes and one right-turn lane.

Int Mitigation #2

Int 12 – I-15 NB Ramps / Bundy Canyon Rd:

The project applicant shall make a fair share contribution to implement the following:

- a) Widen the northbound off-ramp from one left-turn lane and one shared through/right-turn lane to consist of one left-turn lane, one shared through/right-turn lane and one right-turn lane.
- b) Widen the westbound approach from one through lane and one shared through/right-turn lane to consist of two through lanes and one right-turn lane.

Table 5-4 summarizes Opening Year (2020) Cumulative With Project Conditions peak hour LOS of the study intersection assuming implementation of the identified feasible mitigation measure. HCM calculation worksheets for Mitigated Opening Year (2020) Cumulative With Project Conditions are contained in Appendix F.

As shown in Table 5-4, assuming implementation of the identified mitigation measure, the study intersections are forecast to operate at an acceptable LOS for Opening Year (2020) Cumulative With Project Conditions and the impacts are reduced to a level considered less than significant.

6.0 Findings, Recommendations & Conclusions

The purpose of this traffic study is to assess the impacts of the proposed expansion of the St. Francis of Rome Church.

6.1 Proposed Project

The project site is located at 21591 Lemon Street, in the City of Wildomar. The proposed church site will be converting the existing church building into a multipurpose room. In addition the project is proposing to construct the following:

- 303 additional seats to the existing 897-seat church (bringing the total capacity to 1,200 seats) (north side of property); and
- Office and Classrooms (southwest side of property).

Access for the proposed project will continue to utilize two existing unsignalized driveways on Lemon Street and one existing unsignalized driveway on Mojonier Way.

The project will be evaluated in a single phase and is planned to open in 2020.

6.2 Project Trip Generation

Trip generation for the proposed project is determined based on ITE trip generation rates for the proposed land uses.

As previously noted, the proposed project is not expected to result in any significant change to the weekday conditions based on typical church activities.

The proposed project is forecast to generate approximately 300 daily trips during the Saturday conditions, including 133 trips during the peak hour.

The proposed project is forecast to generate approximately 367 daily trips during the Sunday conditions, including 164 trips during the peak hour.

6.3 Study Area & Conditions

This traffic study has been prepared in accordance with the traffic study guidelines, requirements and thresholds of significance for the City of Wildomar.

This study is prepared in accordance with the scope of work approved by the City of Wildomar staff. A copy of the scope of work which was approved via email communication is contained in Appendix H.

The study area consists of the following intersections:

North-South Street	East-West Street
1. Grand Avenue	Corydon Street
2. Palomar Street	Corydon Street
3. Mission Trail	Malaga Road
4. Mission Trail	Lemon Street
5. Mission Trail	Corydon Street
6. Mojonnier Way	Waite Street
7. Almond Street	Lemon Street
8. Almond Street	Waite Street
9. Almond Street	Bundy Canyon Road
10. Orange Street	Bundy Canyon Road
11. I-15 Southbound Ramps	Bundy Canyon Road
12. I-15 Northbound Ramps	Bundy Canyon Road

The analysis evaluates traffic conditions of the study intersections for the following scenarios in accordance with the City of Wildomar and the approved scope of work. A copy of the scope of work which was approved via email communication is contained in Appendix H.:

- Existing Conditions;
- Existing Plus Project Conditions;
- Opening Year (2020) Cumulative Without Project Conditions (Existing Plus Ambient Growth Plus Cumulative Project); and

Opening Year (2020) Cumulative with Project Conditions (Existing Plus Ambient Growth Plus Cumulative Projects Plus Proposed Project).

6.4 LOS Analysis & Significant Impact Summary

Existing Conditions

All study area intersections are currently operating at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Existing Conditions.

Existing Plus Project Conditions:

All study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Existing Plus Project Conditions.

Based on agency-established thresholds of significance, the proposed project is forecast to not result in a significant traffic impact at the study intersections for Existing Plus Project Conditions.

Opening Year (2020) Cumulative Without Project Conditions:

All study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Opening Year (2020) Cumulative Without Project Conditions, with the exception of the following intersections during the noted peak hours:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and
- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

Opening Year (2020) Cumulative With Project Conditions:

All study area intersections are forecast to continue to operate at an acceptable level of service (LOS D or better) during the Saturday and Sunday peak hours for Opening Year

(2020) Cumulative With Project Conditions, with the exception of the following intersections during the noted peak hours:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and
- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

Based on agency-established thresholds of significance, the proposed project is forecast to result in a significant traffic impact at the following study intersections for Opening Year (2020) Cumulative With Project Conditions:

- Int 11 - I-15 Southbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours); and
- Int 12 - I-15 Northbound Ramps / Bundy Canyon Road (both Saturday & Sunday peak hours).

The following mitigation measures are identified to eliminate the identified significant traffic impacts at the study intersections for Opening Year (2020) Cumulative With Project Conditions:

Int Mitigation #1

Int 11 – I-15 SB Ramps / Bundy Canyon Rd:

The project applicant shall make a fair share contribution to implement the following:

- a) Widen the southbound off-ramp from one left-turn lane and one shared through/right-turn lane to consist of two left-turn lanes and one shared through/right-turn lane.
- b) Widen the eastbound approach from one through lane and one shared through/right-turn lane to consist of two through lanes and one right-turn lane.

Int Mitigation #2

Int 12 – I-15 NB Ramps / Bundy Canyon Rd:

The project applicant shall make a fair share contribution to implement the following:

- a) Widen the northbound off-ramp from one left-turn lane and one shared through/right-turn lane to consist of one left-turn lane, one shared through/right-turn lane and one right-turn lane.
- b) Widen the westbound approach from one through lane and one shared through/right-turn lane to consist of two through lanes and one right-turn lane.

Assuming implementation of the identified mitigation measure, the study intersections are forecast to operate at an acceptable LOS for Opening Year (2020) Cumulative With Project Conditions and the impacts are reduced to a level considered less than significant.

6.5 Fees and Funding

Project fair-share contribution represents the project's traffic contribution at each study area intersection as a percentage of the overall growth in traffic for Opening Year 2020 conditions. This table is for informational purposes only and is not tied to mitigation. The project's fair share contribution is summarized in Table 6-1, and a conceptual cost estimate summary is also provided in Table 6-2.

The City of Wildomar also implements Development Impact Fees (DIF) and participates in the County of Riverside Transportation Uniform Mitigation Fee program (TUMF). Both the DIF and the TUMF programs are designed to provide funding for mitigation of intersections that are forecast to exceed their present capacity. For the case of the proposed project, since the project is a public/institution land use, it is exempt from TUMF and DIF. Hence, the required and identified mitigations would need to be addressed and implemented on a fair-share basis.

Mitigation measures are identified for the following two (2) study area intersections:

- I-15 Southbound Ramps at Bundy Canyon Road; and

- I-15 Northbound Ramps at Bundy Canyon Road.

All two (2) intersections are included within the TUMF roadway network. Therefore, the said intersections may be eligible for funding for mitigation measures through the TUMF program. Since the said intersections are within the County's TUMF roadway network, they are not covered by the City's DIF program. For the case of the proposed project, since the project is a public/institution land use, it is exempt from TUMF and DIF. Hence, the required and identified mitigations would need to be addressed and implemented on a fair-share basis.

6.6 Site Access Recommendations

- I. Sight distance at all project access points should be reviewed with respect to City of Wildomar sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

- II. Provide appropriate signage and pavement markings at the project site driveways, including stop bars and stop signs.

TABLE 6-1

Project Fair-Share Intersection Contribution

Project Fair-Share Contribution for Opening Year (2020) Cumulative Conditions With Project											
Intersection		Existing Traffic		Opening Year (2020) Cumulative Conditions With Project Traffic		Growth in Traffic		Project Traffic		Project % of Opening Year (2020) Cumulative Conditions With Project Growth in Traffic	
		Saturday	Sunday	Saturday	Sunday	Saturday	Sunday	Saturday	Sunday	Saturday	Sunday
11	I-15 Southbound Ramps (NS) / Bundy Canyon Road (EW)	1,721	1,719	3,398	3,059	1,677	1,340	67	83	4.00%	6.19%
12	I-15 Northbound Ramps (NS) / Bundy Canyon Road (EW)	1,817	1,794	4,325	3,763	2,508	1,969	40	50	1.59%	2.54%

¹ Project Fair-Share Contribution represents the project's traffic contribution at each study area intersection as a percentage of the overall growth in traffic for Opening Year 2020 conditions. This table is for informational purposes only and is not tied to mitigation.

TABLE 6-2

Mitigation Measures Conceptual Cost Estimate Summary

Intersection		Cost of Mitigation Measures	Project Fair Share		Project Share of Cost	
			Saturday	Sunday	Saturday	Sunday
11.	I-15 Southbound Ramps (NS) / Bundy Canyon Road (EW)	\$745,550	4.00%	6.19%	\$29,786	\$46,180
12.	I-15 Northbound Ramps (NS) / Bundy Canyon Road (EW)	\$745,550	1.59%	2.54%	\$11,891	\$18,932
Total		\$1,491,100	---	---	\$41,677	\$65,112

Assumes not right-of way acquisition is required.
