## 1.0 INTRODUCTION

This report presents the findings of the transportation impact analysis conducted for the Greenleaf Business Center Project (herein referred to as the “proposed Project”) in the City of Santa Fe Springs, California.

This study assessed the potential impacts resulting from the addition of the traffic generated by the proposed Project on the surrounding transportation system and to identify feasible measures to mitigate any significant impacts. In addition, this study includes a review of the site plan for the proposed Project to verify adequacy of internal circulation and external access.

The proposed Project location and vicinity are shown in Figure 1.

### 1.1 PROJECT DESCRIPTION AND LOCATION

The proposed Project site is located on the northwest corner of the Greenleaf Avenue/Los Nietos Road intersection in the City of Santa Fe Springs, California (City). Interstate 605 (I-605) is located approximately 1.6 miles west of the proposed Project site and Interstate 5 (I-5) is located approximately 3 miles south of the proposed Project site. The proposed Project site is currently largely vacant with a small industrial facility on the east side of the site. The proposed Project would replace this existing facility.

The proposed Project includes the demolition of the existing facility and construction of one new building that would consist of 200,500 square feet (sf) of warehousing space (approximately 60,150 sf is anticipated to be utilized for light industrial uses with the remaining 140,350 sf used as general warehousing space) and a 16,000-sf office to support the industrial tenants. In addition, the proposed Project would provide 459 surface parking spaces intended for trailer parking and storage but may also be utilized by automobiles. The Project proposes to provide 120 automobile parking spaces along the north side of the proposed Project site and 100 automobile parking spaces to the south of the proposed building. The building would consist of 46 loading dock positions on the west side facing the trailer parking area.

Site access would be provided via one driveway on Santa Fe Springs Road, one driveway on Los Nietos Avenue, and one driveway on Greenleaf Avenue. Due to the driveway’s close proximity to St. Paul High School to the north, the driveway on Greenleaf Avenue would be restricted to automobiles only and trucks would not be able to access the site through it. Primary truck access would be provided via the driveway on Santa Fe Springs Road and the driveway on Los Nietos Avenue.

The site plan for the proposed Project is presented in Figure 2.

## 1.2 STUDY SCOPE AND METHODOLOGY

The scope and analysis methodologies utilized for this study were developed in consultation with staff from the City of Santa Fe Springs Public Works Engineering Department, and are presented in this section.

### Analysis Scenarios

A vehicle level of service (LOS) analysis was performed to assess the performance of the transportation system during the weekday AM (7:00 – 9:00 AM) and PM (4:00 – 6:00 PM) peak periods for the following four scenarios:

- Existing Conditions;
- Existing Plus Proposed Project Conditions;
- Opening Year 2020 Conditions; and,
- Opening Year 2020 Plus Proposed Project Conditions.

### Study Intersections

Based on the expected distribution of the trips generated by the proposed Project and subsequent conversations with City staff, the following study intersections were selected for analysis:

1. Norwalk Boulevard/Los Nietos Road (signalized)
2. Norwalk Boulevard/Telegraph Road (signalized)
3. Santa Fe Springs Road/Slauson Avenue-Mulberry Drive (signalized)
4. Santa Fe Springs Road/Sorensen Avenue (unsignalized)
5. Santa Fe Springs Road/Los Nietos Road (signalized)
6. Santa Fe Springs Road-Bloomfield Avenue/Telegraph Road (signalized)
7. Greenleaf Avenue/Mulberry Drive (signalized)
8. Greenleaf Avenue/Reis Street (signalized)
9. Greenleaf Avenue/Barton Road (unsignalized)
10. Greenleaf Avenue/Los Nietos Road (signalized)
11. Greenleaf Avenue/Telegraph Road (signalized)

The study area for the analysis extends from Norwalk Boulevard to the west, Slauson Avenue to the north, Greenleaf Avenue to the east, and Telegraph Road to the south. The location of the study intersections are shown on the map in Figure 1.

## Intersection Analysis Methodology

In addition to the Circulation Element of the City's General Plan<sup>1</sup>, the City utilizes the guidelines in the Los Angeles County Traffic Impact Analysis guidelines<sup>2</sup>. Per the guidelines, the operating conditions at the study intersections under the jurisdiction of the City were evaluated using the Intersection Capacity Utilization (ICU) methodology, which is based on the sum of the volume to capacity (V/C) ratios for the conflicting movements at the intersection during the AM and PM peak hours.

All intersections were analyzed using the Synchro 10 analysis software that has the capability to perform the ICU method.

### *Level of Service*

"Level of service" (LOS) describes the operating conditions experienced by users of a facility. LOS is a qualitative measure of the effect of a number of factors, including speed and travel time, traffic interruptions and delay, freedom to maneuver, driving comfort and convenience. LOS is designated A through F from best to worst, and cover the entire range of traffic operations that might occur. LOS A through LOS E generally represent traffic volumes at less than roadway capacity, while LOS F represents over capacity and/or forced flow conditions. The LOS for the ICU methodology is based on the V/C ratio.

Table 1 presents the range of the V/C ratios (from City standards) associated with each LOS grade designation.

<sup>2</sup> Traffic Impact Analysis Report Guidelines, Los Angeles County, January 1997.

**Table 1: Signalized Intersection Level of Service Definitions**

| LOS | Description of Traffic Conditions                                                                                                                                                                                                                                 | Intersection Capacity Utilization Methodology (Volume/Capacity Ratio) |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| A   | Low volumes; high speeds; speed is not restricted by other vehicles; all signal cycles clear with no vehicles waiting through more than one signal cycle.                                                                                                         | $\leq 0.600$                                                          |
| B   | Operating speeds beginning to be affected by other traffic; between one and 10 percent of the signal cycles have one or more vehicles which wait through more than one signal cycle during peak traffic periods.                                                  | 0.601 - 0.700                                                         |
| C   | Operating speeds and maneuverability closely controlled by other traffic; between 11 and 30 percent of the signal cycles have one or more vehicles which wait through more than one signal cycle during peak traffic periods; recommended ideal design standards. | 0.701 – 0.800                                                         |
| D   | Tolerate operating speeds; 31 to 70 percent of the signal cycle have one or more vehicles which wait through more than one signal cycle during peak traffic periods; often used as design standard in urban areas.                                                | 0.801 – 0.900                                                         |
| E   | Capacity; the maximum traffic volume an intersection can accommodate; restricted speeds; 71 to 100 percent of the signal cycles have one or more vehicles which wait through more than one signal cycle during peak traffic periods.                              | 0.901 – 1.000                                                         |
| F   | Long queues of traffic, unstable flow; stoppages of long duration; traffic volume and traffic speed can drop to zero; traffic volume will be less than the volume which occurs at Level of Service “E”.                                                           | > 1.000                                                               |

Source: Santa Fe Springs General Plan, Circulation Element, City of Santa Fe Springs, 1994.

### **Significance Criteria**

According to the City guidelines, an intersection operating at a LOS D or better is considered to be operating satisfactory. A significant impact occurs if the operating conditions worsen from LOS D or better to LOS E or F after the addition of the traffic generated by a project. If the intersection is already operating at LOS E or F in the without-project conditions, a significant impact occurs if the V/C ratio increases by 0.01 or more after the addition of the traffic generated by a project.

### **Site Access and Circulation**

A qualitative site access and circulation analysis was conducted. This included a review of the proposed Project access points and a review of truck turning movements expected to occur on the site and whether the proposed Project site provided sufficient space to make the movements.

## 2.0 EXISTING CONDITIONS

A comprehensive data collection effort was undertaken to develop a detailed description of existing conditions in the vicinity of the proposed Project. The Existing Conditions analysis includes an assessment of the existing street system and an analysis of traffic volumes and current operating conditions.

### 2.1 ROADWAY NETWORK

The existing roadway network in the study area is comprised of the following street system:

**Interstate 605 (I-605)** is a freeway providing a connection between Interstate 210 and State Route 22. I-605 travels in the north-south direction west of the Project site. In the study area, there are generally five 12-foot general purpose lanes in each direction and access is provided via ramps on Telegraph Avenue and Slauson Avenue. The posted speed limit on I-605 is 65 miles per hour (mph).

**Interstate I-5 (I-5)** is a freeway providing a connection throughout Greater Los Angeles and extends to the north and to the south beyond Los Angeles. I-5 travels in the north-south direction south of the Project site. In the study area, there are generally three 12-foot general purpose lanes in each direction and access is provided via ramps on San Antonio Drive (which turns into Norwalk Boulevard) and Rosecrans Avenue. The posted speed limit on I-5 is 65 miles per hour (mph).

**Norwalk Boulevard** is a north-south major arterial roadway per the City's Circulation Element of the General Plan with two travel lanes in each direction. The street is approximately 80 feet wide with a posted speed limit of 40 miles per hour and consists of a two-way left-turn center lane. Parking is generally not permitted along both sides of the street.

**Santa Fe Springs Road** is a northeast-southwest major arterial roadway per the City's Circulation Element of the General Plan with two travel lanes in each direction. The street is approximately 80 feet wide with a posted speed limit of 45 miles per hour and consists of both raised center medians and a two-way left-turn center lane. With the exception of short segments, parking is generally not permitted along both sides of the street. The Project site is accessible from Santa Fe Springs Road via an existing driveway.

**Greenleaf Avenue** is a northwest-southwest secondary arterial roadway per the City's Circulation Element of the General Plan with one travel lane in each direction. The street is approximately 60 feet wide with a posted speed limit of 40 miles per hour and consists of a two-way left-turn center lane. Parking is generally permitted along both sides of the street. The Project site is accessible from Greenleaf Avenue via an existing driveway.

**Slauson Avenue** is an east-west major arterial roadway per the City's Circulation Element of the General Plan with three travel lanes in each direction. The street is approximately 85 feet wide with a

posted speed limit of 45 miles per hour and consists of a raised center median. Parking is generally not permitted along both sides of the street.

**Reis Street** is an east-west residential collector per the Los Angeles County Street Masterplan with one travel lane in each direction. The street is approximately 40 feet wide with a speed limit of 25 miles per hour. Parking is generally permitted along both sides of the street.

**Sorensen Avenue** is an east-west secondary arterial roadway per the City's Circulation Element of the General Plan with one travel lane in each direction in the project study area (widens to two lanes in each direction and shifts to a north-south direction west of the study area). The street is approximately 60 feet wide with a speed limit of 40 miles per hour and consists of a two-way left-turn center lane. Parking is generally permitted along both sides of the street.

**Barton Road** is an east-west residential collector per the Los Angeles County Street Masterplan with one travel lane in each direction. The street is approximately 35 feet wide with a speed limit of 25 miles per hour. Parking is generally permitted along both sides of the street.

**Los Nietos Road** is a northwest-southwest secondary arterial roadway per the City's Circulation Element of the General Plan with one travel lane in each direction. The street is approximately 60 feet wide with a posted speed limit of 40 miles per hour and consists of a two-way left-turn center lane. Parking is generally permitted along both sides of the street. The Project site is accessible from Los Nietos Road via an existing driveway.

**Telegraph Road** is an east-west major arterial roadway per the City's Circulation Element of the General Plan with three travel lanes in each direction. The street is approximately 80 feet wide with a posted speed limit ranging from 40-45 miles per hour and consists of a raised center median. Parking is generally not permitted along both sides of the street.

## 2.2 TRANSIT FACILITIES

The Norwalk Transit System (NTS) and Los Angeles County Metropolitan Transportation Authority (LA Metro) provide transit service in the study area. The following routes operate in the vicinity of the proposed Project site:

**NTS Route 3** extends from the Gateway Plaza to the Norwalk Boulevard/166<sup>th</sup> Street intersection. Route 3 travels on Telegraph Road in the vicinity of the proposed Project site. During the weekday AM and PM commute periods, Route 3 provides headways of approximately 60 minutes (one bus per hour) in both directions.

**NTS Route 7** extends from the El Monte Station to the Green Line Station. Route 7 travels on Santa Fe Springs Road in the vicinity of the proposed Project site. During the weekday AM commute period, Route 7 provides headways of approximately 50 minutes (approximately one bus per hour) in both directions. During the PM commute period, Route 7 provides headways of approximately 50 minutes (approximately one bus per hour) in both directions.

**LA Metro Route 120** extends from the Whittwood Town Center to the Aviation/LAX Station. Route 120 travels on Telegraph Road in the vicinity of the proposed Project site. During the weekday AM commute period, Route 120 provides headways of approximately 45 minutes (approximately 1.3 buses per hour) in both directions. During the weekday PM commute period, Route 120 provides headways of approximately 45 minutes (approximately 1.3 buses per hour) in the both directions.

## 2.3 BICYCLE AND PEDESTRIAN FACILITIES

A Class II Bicycle Lane is provided on Los Nietos Road west of Santa Fe Springs Road and on Santa Fe Springs Road south of Los Nietos Road. No other bicycle facilities are provided in the immediate vicinity of the proposed Project site.

All of the roadways in the study area, except Los Nietos Road, consist of sidewalks on both sides of the street, and all signalized intersections provide marked pedestrian crosswalks with pedestrian signals.

## 2.4 EXISTING TRAFFIC VOLUMES AND LEVELS OF SERVICE

This section presents the existing peak hour turning movement traffic volumes and the resulting operating conditions at each study intersection.

### Existing Traffic Volumes

The existing operations of the study intersections were assessed for the weekday AM and PM peak hours. Existing traffic volume data at the intersections of Norwalk Boulevard/Los Nietos Road (Intersection 1) and Norwalk Boulevard/Telegraph Road (Intersection 2) was collected on Wednesday, April 10, 2019 and the existing traffic volume data at the remaining intersections was collected on Wednesday, May 16, 2018. Both days represent a typical weekday with local schools and colleges in session. Data was collected between 7:00 AM and 9:00 AM and between 4:00 PM and 6:00 PM. The peak hour volumes utilized in this analysis, shown in Figure 3, represent the highest hour during the weekday AM and PM data collection periods.

Appendix A provides the detailed count sheets for each intersection.

## Existing Intersection Levels of Service

Intersection turning movement volumes, lane configurations, and traffic control were used to calculate the levels of service using the ICU method at the study intersections for the weekday AM and PM peak hours. Table 2 shows the LOS results based on the V/C ratios for the study intersections under Existing Conditions. As shown, all intersections currently operate at or better than the LOS D standard set forth by the City during both peak hours.

Detailed LOS worksheets for Existing Conditions are presented in Appendix B.

**Table 2: Intersection Level of Service - Existing Conditions**

| #  | Intersection                                           | Control    | Peak Hour | Existing |     |
|----|--------------------------------------------------------|------------|-----------|----------|-----|
|    |                                                        |            |           | V/C      | LOS |
| 1  | Norwalk Boulevard/Los Nietos Road                      | Signalized | AM        | 0.575    | A   |
|    |                                                        |            | PM        | 0.677    | B   |
| 2  | Norwalk Boulevard/Telegraph Road                       | Signalized | AM        | 0.842    | D   |
|    |                                                        |            | PM        | 0.849    | D   |

## 3.0 PROPOSED PROJECT TRAVEL DEMAND

This chapter describes the assumptions and methodology used in developing the traffic volumes associated with the proposed Project within the Study Area.

### 3.1 PROPOSED PROJECT DESCRIPTION

The proposed Project includes the construction of one new building that would consist of 200,500 sf of warehousing space (approximately 60,150 sf of which is anticipated to be utilized for light industrial uses with the remaining 140,350 sf used as general warehousing space) and a 16,000-sf office to support the industrial tenants. In addition, the proposed Project would provide 459 surface parking spaces intended for trailer parking and storage but may also be utilized by automobiles.

Site access would be provided via one driveway on Santa Fe Springs Road, one driveway on Los Nietos Avenue, and one driveway on Greenleaf Avenue. Due to the driveway's close proximity to St. Paul High School to the north, the driveway on Greenleaf Avenue would be restricted to automobiles only and trucks would not be able to access the site through it. Primary truck access would be provided via the driveway on Santa Fe Springs Road and the driveway on Los Nietos Avenue.

### 3.2 PROPOSED PROJECT TRIP GENERATION

The number of trips expected to be generated by the proposed Project were estimated using rates published in the Institute of Transportation Engineer's (ITE) Trip Generation Manual<sup>3</sup>. These rates are provided as both daily rates and AM and PM peak hour rates. Overall, the rates relate the number of vehicle trips traveling to and from the Project Site to the size of development of each land use. No credit for the existing uses on the project site was taken as the existing uses are largely vacant.

Based on discussions with the City staff and the project sponsor, the General Light Industrial land-use rates (ITE Code 110), the Warehousing land-use rates (ITE Code 150), and General Office Building land-use rates (ITE Code 710) were applied to determine the number of trips generated by the proposed Project. Data from the Fontana Truck Trip Generation Study<sup>4</sup> was used to account for the trucks expected to be generated by the proposed Project. It was estimated that 21.4% of the trips would be truck trips and a passenger car equivalent (PCE) factor was applied to the expected number of truck trips to convert them into automobile trips. Appendix C includes the detailed Project trip generation rates and calculations. The trips associated with the open yard component of the proposed Project that would be utilized for trailer parking and storage are captured by the square footage of the building in

the trip generation estimates. This portion of the proposed Project is not expected to generate additional trips.

As shown in Table 3, the proposed Project is expected to generate 863 trips on a weekday daily basis, including 105 trips in the AM peak hour (83 inbound and 22 outbound) and 103 trips in the PM peak hour (27 inbound and 76 outbound).

### 3.3 PROJECT TRIP DISTRIBUTION

The geographic distribution of trips generated by the proposed Project is dependent on characteristics of the street system serving the proposed Project Site and the level of accessibility of the routes to and from the proposed Project Site. The truck trip distribution was prepared in accordance with the designated City of Santa Fe Springs truck routes and no trucks were assigned traveling north on Greenleaf Avenue north of the proposed Project driveway.

The proposed Project trip distribution is presented in Figure 4.

### 3.4 PROJECT TRIP ASSIGNMENT

The trip distribution patterns shown in Figure 4 were applied to the proposed Project trip generation estimates summarized in Table 3 to calculate Project-generated traffic through the study intersections. Figure 4 illustrates the Project-only traffic volumes at the study intersections during the weekday AM and PM peak hours.

Figure 4

## 4.0 EXISTING PLUS PROJECT CONDITIONS

This section describes intersection operating conditions associated with the addition of the proposed Project traffic to the Existing Conditions. The analysis utilizes the data presented in the Existing Conditions section, plus the new activity generated by the proposed Project. The Existing Plus Project Conditions represent the existing traffic volumes and intersection configurations in year 2019 with the addition of the proposed Project traffic.

### 4.1 EXISTING PLUS PROJECT TRAFFIC VOLUMES

The weekday AM and PM peak hour traffic volumes generated by the proposed Project (as shown in Figure 4) were added to the Existing AM and PM peak hour traffic volumes (as shown in Figure 3). The resulting volumes are illustrated in Figure 5 and represent Existing Plus Project Conditions after addition of the proposed Project traffic to the Existing Conditions.

## 4.2 EXISTING PLUS PROJECT INTERSECTION LEVEL OF SERVICE

Existing lane configurations and traffic controls were used along with the Existing Plus Project traffic volumes to calculate the levels of service at the study intersections for the weekday AM and PM peak hours.

Table 4 shows the LOS results based on the V/C ratios for the study intersections for Existing Plus Project Conditions. As shown, all intersections continue to operate at or better than the LOS D standard set forth by the City during both peak hours. As such, the addition of the proposed Project traffic would not cause any significant impacts at the study intersections during the Existing Plus Project Conditions.

Detailed LOS worksheets for Existing Plus Project Conditions are presented in Appendix D.

**Table 4: Intersection Level of Service - Existing Plus Project Conditions**

| #  | Intersection                                           | Control    | Peak Hour | Existing |     | Existing Plus Project |     |

## 5.0 OPENING YEAR 2020 CONDITIONS

The Opening Year 2020 Conditions analysis forecasts how the study area's transportation system would operate with the full build-out of the proposed Project in combination with the growth and changes of the surrounding community by the year 2020. To derive the Opening Year 2020 baseline traffic forecast volumes, approved and pending projects in the vicinity of the proposed Project site were considered.

### 5.1 EXPECTED TRANSPORTATION IMPROVEMENTS

Based on conversations with the City staff, no roadway improvements or changes are expected to be implemented by the year 2020 in the study area.

### 5.2 TRAFFIC VOLUME FORECASTING

A list of approved/pending projects was provided by the City staff and is included in Appendix E. The number of trips generated by the approved/pending projects is also presented in Appendix E. Per direction from the City staff, a 1% per year growth rate was applied to the Existing traffic volumes and the traffic expected to be generated by the approved/pending projects was added. The resulting Opening Year 2020 Conditions traffic volumes is presented in Figure 6.

### 5.3 OPENING YEAR 2020 INTERSECTION LEVEL OF SERVICE

The Opening Year 2020 Conditions traffic counts presented in Figure 7 were added to the existing street network to calculate the levels of service at the study intersections for the weekday AM and PM peak hours. Table 5 shows the LOS results based on the V/C ratios for the study intersections for Opening Year 2020 Conditions. As shown, all intersections would operate at or better than the LOS D standard set forth by the City during both peak hours.

Detailed LOS worksheets for Opening Year 2020 Conditions are presented in Appendix F.

## 6.0 OPENING YEAR 2020 PLUS PROJECT CONDITIONS

This section describes intersection operating conditions associated with the addition of the proposed Project traffic to the Opening Year 2020 Conditions.

### 6.1 OPENING YEAR 2020 PLUS PROJECT TRAFFIC VOLUMES

The weekday AM and PM peak hour traffic volumes generated by the proposed Project (as shown in Figure 4) were added to the Opening Year 2020 Conditions AM and PM peak hour traffic volumes (as shown in Figure 6). The resulting volumes are illustrated in Figure 7 and represent Opening Year 2020 Plus Project Conditions after addition of the proposed Project traffic to the Opening Year 2020 Conditions.

## 6.2 OPENING YEAR 2020 PLUS PROJECT INTERSECTION LEVEL OF SERVICE

The Opening Year 2020 Plus Project traffic volumes were added to the existing street network to calculate the levels of service at the study intersections for the AM and PM peak hours.

Table 6 shows the LOS results based on the V/C ratios for the study intersections for Opening Year 2020 Plus Project Conditions. As shown, all intersections would continue to operate at or better than the LOS D standard set forth by the City during both peak hours except for the Greenleaf Avenue/Los Nietos Road intersection (intersection 10), which would operate at LOS E during the AM peak hour. As such, the addition of the proposed Project traffic would cause a significant impact at the Greenleaf Avenue/Los Nietos Road intersection during the Opening Year 2020 Plus Project Conditions and a mitigation measure to alleviate the significant impact at the intersection has been proposed.

Detailed LOS worksheets for Opening Year 2020 Plus Project Conditions are presented in Appendix G.

## 7.0 MITIGATIONS

The addition of the proposed Project traffic would cause a significant impact at the Greenleaf Avenue/Los Nietos Road intersection during the AM peak hour for Opening Year 2020 Plus Project Conditions. This section presents the proposed mitigation measures to alleviate the significant impact at the intersection. The operating conditions with the mitigation measure implemented were analyzed and compared with the significant impact found for the Opening Year 2020 Plus Project Conditions.

### 7.1 SPECIFIC INTERSECTION IMPROVEMENT

Specific intersection improvements designed to alleviate the significant impact were considered and are identified in this section.

In order to reduce the significant impact at the Greenleaf Avenue/Los Nietos Road intersection (Intersection 10) to a less-than-significant level, a 100-foot long (consistent with the existing left-turn lane) southbound right-turn only lane should be striped adjacent to the curb. Currently, the curb lane is approximately 24 feet wide and operates as a shared through/right-turn lane. As such, striping a separate southbound right-turn only lane would result in a 12-foot through lane and a 12-foot right-turn lane. The resulting southbound lane configurations on Greenleaf Avenue would be one left-turn only lane, one through lane, and one right-turn only lane. This mitigation measure can be accommodated within the existing right of way for Greenleaf Avenue and no widening of the roadway would be required. The project would be required to implement this mitigation measure prior to opening.

### 7.2 INTERSECTION LEVEL OF SERVICE WITH MITIGATION

This section provides the change in the level of service results after implementation of the proposed mitigations measures at the impacted study intersection for the Opening Year 2020 Plus Project Conditions.

Table 7 shows a comparison between results under the Opening Year 2020 Conditions and the results with the proposed mitigation measures implemented at the Greenleaf Avenue/Los Nietos Road intersection. As shown, the proposed mitigation measure (restripe to add a separate southbound right-turn lane) improves the LOS to an acceptable level of LOS D based on City standards and reduces the impact to less-than-significant levels during the Opening Year 2020 Plus Project Conditions.

Detailed LOS worksheets for Opening Year 2020 Plus Project Conditions with Mitigation Conditions are presented in Appendix G.

**Table 7: Intersection Level of Service - Opening Year 2020 Plus Project with Mitigation Conditions**

| #  | Intersection                     | Control    | Peak Hour | Opening Year 2020 |     | Opening Year 2020 Plus Project with Mitigation |     |
|----|----------------------------------|------------|-----------|-------------------|-----|------------------------------------------------|-----|
|    |                                  |            |           | V/C               | LOS | V/C                                            | LOS |
| 10 | Greenleaf Avenue/Los Nietos Road | Signalized | AM        | 0.886             | D   | 0.785                                          | C   |
|    |                                  |            | PM        | 0.852             | D   | 0.832                                          | D   |

## 8.0 SITE ACCESS AND CIRCULATION

This section describes the access and on-site circulation for the proposed Project site.

### 8.1 SITE ACCESS

As shown in the site plan provided in Figure 2, site access would be provided via one driveway on Santa Fe Springs Road, one driveway on Los Nietos Road, and one driveway on Greenleaf Avenue. Due to the driveway's close proximity to St. Paul High School to the north, the driveway on Greenleaf Avenue would be restricted to automobiles only and trucks would not be able to access the site through it. Primary truck access would be provided via the driveway on Santa Fe Springs Road and the driveway on Los Nietos Road. As currently proposed, all proposed Project driveways would operate as full access with all inbound movements uncontrolled and all outbound movements stop-controlled.

A review of the access points found that inbound vehicles making a right-turn into the proposed Project site at any of the driveways are not expected to experience any queuing on City streets as these inbound movements would be uncontrolled internal to the proposed Project site. As shown in the truck turning templates provided in Appendix H, trucks turning right into the proposed Project driveways on Santa Fe Springs Road and Los Nietos Road would need to utilize the entire curb lane as well as the entire width of the driveway.

Santa Fe Springs Road, Los Nietos Road and Greenleaf Avenue all consist of striped two-way left-turn center lanes. Inbound vehicles making a left-turn into the proposed Project site at either of the driveways are able to utilize the two-way left-turn center lanes to seek refuge and there is adequate vehicle storage in these center lanes for queueing. Any queuing that would occur for the outbound left turn movements will occur on the proposed Project site and would not affect City streets. As shown in the truck turning templates provided in Appendix H, trucks turning left into the proposed Project driveways on Santa Fe Springs Road and Los Nietos Road are able to adequately make the movement from the center two-way left-turn lanes and need to utilize the entire width of the driveway.

### 8.2 SITE CIRCULATION

As shown in the site plan in Figure 2, the proposed Project would provide surface parking spaces intended for trailer parking on the western portion of the Project site. The site plan provides adequate space for trucks to turn into and out of the proposed Project site and circulate through the truck parking and storage area. The site plan also provides adequate space in front of the loading dock positions for trucks to maneuver into and out of the loading docks. The truck turning templates for circulation internal to the proposed Project site are provided in Appendix H.

The proposed Project would also provide automobile parking areas to the north and south of the proposed warehouse building located on the east side of the Project site. The site plan provides

adequate space for automobiles to turn into and out of the proposed Project site and circulate through the automobile parking areas. Trucks would not be able to access the automobile parking areas.

## 9.0 CONCLUSIONS AND FINDINGS

The proposed Project includes the construction of one new building that would consist of 200,500 sf of warehousing space (approximately 60,150 sf of which is anticipated to be utilized for light industrial uses with the remaining 140,350 sf used as general warehousing space) and a 16,000-sf office to support the industrial tenants. In addition, the proposed Project would provide 459 surface parking spaces intended for trailer parking and storage but may also be utilized by automobiles.

Based on the City's significant impact criteria, it is expected that the addition of the proposed Project traffic would not cause any significant impacts at the study intersections during the Existing Plus Project Conditions but would result in one significant impact during the AM peak hour of the Opening Year 2020 Plus Project Conditions at the Greenleaf Avenue/Los Nietos Road intersection. The mitigation recommended at this intersection proposes to stripe a southbound right-turn only lane adjacent to the curb. This mitigation measure can be accommodated within the existing right of way and no widening of the roadway would be required. The proposed mitigation measure improves the LOS to an acceptable level based on City standards and reduces the impact to less-than-significant levels during the Opening Year 2020 Plus Project Conditions. The project would be required to implement this mitigation measure prior to opening.

Based on the proposed Project site plan, no issues were identified with site access and circulation. The proposed Project site plan provided adequate space on-site for truck stacking and thus, no excessive queuing at the proposed Project driveways would occur on any City streets.
