PROJECT DESCRIPTION: The Lahontan Regional Water Quality Control Board (Lahontan Water Board) is preparing General Waste Discharge Requirements for Small Industrial Wastewater Treatment Systems (Small Industrial Order) that will be applicable to the Lahontan Region. Industrial wastewater refers to wastewater generated by industrial (nondomestic) sources that is kept separate from domestic wastewater. Examples include discharges from restaurants, cannabis cultivation or manufacturing practices, maintenance yards, manufacturing facilities, small community drinking water treatment systems, other commercial operations, and does not include domestic wastewater mixed with wastewater from nondomestic sources. The most similar, extant general permit, State Water Resources Control Board Order WQ 2014-0153-DWQ General Waste Discharge Requirements for Small Domestic Wastewater Treatment Systems (Small Domestic Systems Order), regulates the discharges from small domestic wastewater treatment and disposal systems (monthly average flow rate of 100,000 or less gallons per day). The Small Domestic Systems Order does not regulate wastewater discharges to small wastewater treatment systems from facilities generating industrial wastewater.

The Lahontan Water Board recognized a need to consistently and effectively regulate wastewater discharges to small wastewater systems generating industrial wastewater. The proposed Small Industrial Order for the Lahontan Region provides regulation for industrial wastewater treatment systems and regulates facilities with a monthly average flow rate of less than or equal to 100,000 gallons per day maximum industrial wastewater.

Lahontan Water Board staff has prepared a draft general order for small industrial wastewater systems for public comment and review. The draft general order contains requirements for a written sampling and analysis plan and compliance with the Monitoring and Reporting Program.
