Executive Summary

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of City of Long Beach (Client) for the proposed renovation of the Century Villages at Cabrillo (project site), located at 2001 River Avenue in the city of Long Beach, Los Angeles County, California (Figures 1 and 2). The project site consists 27-acres of the existing Century Villages. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard, and discussed in the Introduction section of this report.

The approximately 27-acre project site is bordered by Cabrillo High School to the north, California State Long Beach Technology to the south, Job Corp community to the east and Terminal Island Freeway to the west. Historically, the project site had been used as naval housing for shipbuilding for Long Beach Port starting in the 1950s and was closed in 1991 as part of the Base Realignment and Closure Commission (BRAC) in 1991. The 27-acres were conveyed in 1997 to benefit the homeless and was part of the 140 acres of federal property that was included in the Long Beach Naval Station decommissioning. When the Villages at Cabrillo originally opened, the facility primarily utilized rehabilitated former navy housing with new construction introduced over time.

The project site is comprised of 23 parcels and is associated with the Assessor Parcel Numbers [APNs] 7402 -019-006, -008, -011, -014, -016, -017, -018, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -032, -035, -036, -037, -039, and -040. Terminal Island Freeway bounds the project site to the west and W 20th Street bounds the project site to the south. Figure 2 shows the local vicinity and Figure 3 the current conditions of the project site. The project site is in the city of Long Beach, which is southwest of the City of Signal Hill, southeast of the city of Carson, and north of the Pacific Ocean. Regional access to the site is provided by State Route 1, approximately 0.12-mile south of the site.

The proposed project involves the demolition of 215 dwelling units, 10,030 square feet of amenities, 10,200 square feet of education uses, and 7,250 square feet of services and administration; and the development of 750 dwelling units, 77,000 square feet of amenities, 15,000 square feet of educational uses, 17,000 square feet of commercial/retail uses, and 48,000 square feet of administrative and supportive services. Buildout of the community would result in a total of 1,380 dwelling units, 79,350 square feet of amenities, 15,000 square feet of educational uses, 22,850 square feet of commercial/retail uses, and 67,050 square feet of administrative and supportive services. The existing and proposed buildings would range between 15 and 80 feet tall and would be arranged around a series of outdoor spaces and community amenities. The project also includes a central transit center, and dedicated bicycle and pedestrian facilities.

Executive Summary

The objective of a Phase I ESA is to assess whether “recognized environmental conditions” (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the “business environmental risk” associated with the subject site. Our opinion regarding an REC’s potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

No RECs were identified for the project site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

No HREC were identified for the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

SUMMARY

Based on the results of this assessment, REC, CRECs, and HRECs were not identified for the project site.

Executive Summary

The remainder of this report contains additional information regarding the Phase I ESA work performed, the findings summarized above, and any limitations.

1. Introduction

PlaceWorks has performed a Phase I Environmental Site Assessment (ESA) on behalf of City of Long Beach (Client) for the proposed renovation of the Century Villages at Cabrillo (project site), located at 2001 River Avenue in the city of Long Beach, Los Angeles County, California (Figures 1 and 2). The project site consists of the 27-acre existing Century Villages. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard, and discussed in the Introduction section of this report.

The approximately 27-acre project site is bordered by Cabrillo High School to the north, California State Long Beach Technology to the south, Job Corp community to the east and Terminal Island Freeway to the west. Historically, the project site had been used as naval housing for shipbuilding for Long Beach Port starting in the 1950s and was closed in 1991 as part of the Base Realignment and Closure Commission (BRAC) in 1991. The 27-acres were conveyed in 1997 to benefit the homeless and was part of the 140 acres of federal property that was included in the Long Beach Naval Station decommissioning. When the Villages at Cabrillo originally opened, the facility primarily utilized rehabilitated former navy housing with new construction introduced over time.

The proposed project involves the demolition of 215 dwelling units, 10,030 square feet of amenities, 10,200 square feet of education uses, and 7,250 square feet of services and administration; and the development of 750 dwelling units, 77,000 square feet of amenities, 15,000 square feet of educational uses, 17,000 square feet of commercial/retail uses, and 48,000 square feet of administrative and supportive services. Buildout of the community would result in a total of 1,380 dwelling units, 79,350 square feet of amenities, 15,000 square feet of educational uses, 22,850 square feet of commercial/retail uses, and 67,050 square feet of administrative and supportive services. The existing and proposed buildings would range between 15 and 80 feet tall and would be arranged around a series of outdoor spaces and community amenities. The project also includes a central transit center, and dedicated bicycle and pedestrian facilities.

1.1 OBJECTIVE

The objective of this assessment was to evaluate site history, existing observable conditions, current site use, and current and historic uses of surrounding properties to identify the potential presence of Recognized Environmental Conditions (RECs) in connection with the project site. RECs are defined by ASTM as

“the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the

1. Introduction

environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

In addition, the Standard requires the identification of historical RECs (HRECs) and known or suspect environmental conditions in the Phase I ESA report. The standard defines historical RECs as

“a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, defined by ASTM as “a risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate. Consideration of environmental risk issues may involve addressing one or more non-scope considerations.”

1.2 SITE IDENTIFICATION

The project site is located at 2001 River Avenue, Long Beach, Los Angeles County, California (Figure 1). Figure 2, *Local Vicinity*, provides a map depicting the general location of the project site. The project site is approximately 27- acres in size in total and is comprised of 23 parcels that are associated with the Assessor Parcel Numbers [APNs] 7402 -019-006, -008, -011, -014, -016, -017, -018, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -032, -035, -036, -037, -039, and -040. Figure 3 is an aerial photograph showing current site conditions.

Access to the site is from W 20th Street to the south of the project site. The project site is in an area that primarily consist of industrial, residential, and institutional uses.

1.3 DETAILED SCOPE OF SERVICES

PlaceWorks performed the following detailed scope of services to complete our Phase I ESA assessment:

1. Visual observations of site conditions, and of adjoining property use, to evaluate the nature and type of activities that have been or are being conducted at and adjacent to the site, in terms of the

1. Introduction

potential for release or threat of release of hazardous substances or petroleum products.

2. Review of federal and state environmental database information within the ASTM- specified radii from the project site using a database service to access records. Use of 7.5-minute topographic maps to evaluate the site's physical setting.
3. Review of federal and state environmental files, as necessary, pertaining to the project site and nearby sites with the potential to impact the project site.
4. Review of previous reports (if any) prepared for the project site.
5. Review of historical aerial photographs.
6. Contacts with state and local agencies, as necessary, regarding the site and surrounding properties and structures.
7. Interviews with the Key Site Manager and property tenant representatives (if any). Interpretation of information and data assembled as a result of the above work tasks, and formulation of conclusions regarding the potential presence and impact of RECs as defined by the ASTM E 1527-13 Standard.

1.4 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM Phase I ESA practice: Asbestos-Containing Materials, Biological Agents, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality unrelated to releases of hazardous substances or petroleum products in the environment and mold.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, the assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as “electrical or hydraulic equipment known or likely to contain PCBs” to the extent visually and or physically observed or identified from the interview or records review.

1.5 EXCEPTIONS AND DEVIATIONS

PlaceWorks has completed this assessment in substantial conformance with ASTM E 1527-13. In our opinion, there were no exceptions, addition, deviations, or deletions made to the ASTM work scope.

1.6 LIMITATIONS

Our work for this project was performed generally consistent with the ASTM E 1527-13 Standard for Phase I Environmental Site Assessments. Several organizations other than ASTM, such as professional associations (e.g. ASFE and AGWSE) have also developed “guidelines” or “standards” for environmental site assessments. The Phase I ESA presented herein is consistent with the ASTM E 1527-13 Standard, which may vary from the specific “guidelines” or “standards” required by other organizations.

2. Site Description

This section describes the site location and ownership of the site as well as other pertinent details.

2.1.1 Name of Site Owner

The project site is currently owned by The Century Villages at Cabrillo (CVC).

2.1.2 Site Location Map

The United States Geological Survey (USGS) topographic map for the project site is the Long Beach, California Quadrangle. The USGS topographic map was used as the source for site setting information. The project site is in Los Angeles County at approximately 33.7929 north latitude and 118.2224 west longitude. The project site is in Section 26 and 27 of Township 4 South, Range 13 West of the San Bernardino Base Line and Meridian. Figure 1 is the site location map.

2.2 SITE AND VICINITY DESCRIPTION

The 27-acre project site is a portion of the former United States Naval housing facility located on the western edge of the City of Long Beach. The project site has been developed and redeveloped over the past seventy years and the former Naval housing and facilities were either rehabilitated or removed for new construction. Existing land uses on the project site are comprised of a combination of one and two-story rehabilitated Naval housing and new one, two, three, four and five-story residential buildings some of which are built over enclosed garages that are lined with ground floor functions including service providers and community spaces.

There are currently 845 dwelling units within the project site, 12,380 square feet of amenities, 10,200 square feet of education uses, and 5,850 square feet of commercial and retail, and 26,300 square feet of services and administration. There is also about 5,000 square feet for play area that consists of playground, mural, shade structures, tetherball, and other amenities. Open space and parking areas also spread throughout the project site.

The southern portion of the project site, south of Williams Street, has a more organized structure with outdoor spaces, circulation paths, and activity centers while the northern portion has an organic structure with meandering walking paths, open spaces that blend with parking lots, and pockets of activity spaces. Newer residential buildings are developed around deliberate open spaces while the rehabilitated housing units are less dense and spread evenly across portions of the project sit

The project site is composed of 23 parcels and is associated with the following Assessor Parcel Numbers [APNs] and buildings:

to the north and east. Industrial uses are immediately to the south along with major infrastructure that serve the Port of Long Beach and Los Angeles, including the Terminal Island Freeway, San Pedro Branch railroad, and Southern California Edison's electricity transmission corridor to the west of the project site. W 20th Street bounds the project site to the south and Terminal Island Freeway bounds the project site to the west. Figure 3 is an aerial photograph showing current site conditions and the project site boundaries.

2.3 PHYSICAL SETTING

Subsurface explorations were not performed for this evaluation; therefore, site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the subject property area.

2.3.1 Topography

Topographically, the property slopes generally to the southeast. Based on a review of the USGS 7.5-minute Topographic Series, Long Beach, California Quadrangle Map (USGS 2012), surface elevation of the project site is approximately 13-feet above sea level.

2.3.2 Geologic Information

The project site is located within the Los Angeles Basin within the coastal section of the Peninsular Ranges Geomorphic Province of California. The Peninsular Ranges Geomorphic Province is characterized by northwest-trending mountain ridges separated by sediment-floored valleys and bounded by the Transverse Ranges Geomorphic Province to the north and the Colorado Desert Geomorphic Province to the east. The city of Long Beach is situated in the Los Angeles sedimentary basin which is atop of Miocene and Pliocene sediments and Miocene basement rock (Randell et al 1983).

The project site sits atop of young alluvial fan and valley deposits of sand from the Holocene to the late Pleistocene (Saucedo et al, 2016). These deposits are characterized by poorly consolidated and poorly sorted sand alluvial fan and valley deposits. Based on a review of historic topographic maps, the Los Angeles River flowed over the project site before it was channelized (Appendix A). Artificial fill deposits are south of the project site, old alluvial flood plain deposits are west of the project site, and old paralic deposits of sand are east of the project site (Saucedo et al, 2016). The United States Department of Agriculture Natural Resources Conservation Services maps the soil beneath the project site. The soil component is listed as Urban land-Metz-Pico complex 0 to 2 percent slopes (USDA, 2019).

Our review of the California Department of Conservation Data Viewer map, there is no indication that active faults or fault traces are known to exist beneath the project site. The most important structural features in the area from a seismic shaking standpoint include the Newport-Inglewood Fault (approximately 2.5-miles northeast of the project site) and the Palos Verdes Fault (approximately 4-miles southwest of the project site).

2. Site Description

2.3.3 Naturally Occurring Asbestos Containing Minerals and Radon

Based on a review of A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos (Department of Conservation, Division of Mines and Geology 2000) and Van Gosen and Clinkenbeard (2011), the site is not located within a ten-mile radius from an area thought to contain naturally occurring asbestos (NOA).

Based on a review of the US EPA's Radon Zone website, Los Angeles County is listed as being within Zone 2, which is the second-lowest classification of potential radon (USEPA 2016). Based on this classification, naturally occurring radon is not likely to be a potential hazard at the site.

2.3.4 Groundwater and Surface Water Information

The project site is located within the West Coast Groundwater Basin, which encompasses 160 square miles in the southwestern part of the Los Angeles Coastal Plain in Los Angeles County. Based on surface topography, surface water at the site generally flows to the southeast. No natural water bodies are present on the project site. The Pacific Ocean is located approximately 3.36-miles south of the project site and the Los Angeles River is 0.82-mile east of the project site. The nearest stream to the site is the Dominguez channel, which is approximately 0.3 mile west. Hydrogeologic investigations were not performed on the project site for this investigation; therefore, it is unknown to what extent localized variations in groundwater presence and flow occur on the site.

According to the Flood Insurance Rate Map (FIRM) for the project site, the majority of the project site is in an area with reduced flood risk due to levee (FEMA, 2008). A portion of the southwestern corner of the project site is in Zone A, which is defined as an area subject to inundation by the 1-percent-annual-chance flood event (FEMA, 2019). The project site is serviced by the Long Beach Water Department, which provides potable water to the city of Long Beach. Long Beach Water Department receives 60 percent of its potable water from local groundwater and the rest from imported water from the Colorado River and Northern California Bay-Delta region. There are no monitoring wells located on the property.

3. Site History and Background Information

3.1 PREVIOUS REPORTS

No previous environmental reports for the project site were provided by the Client or reviewed by PlaceWorks in preparation of the Phase I ESA. A historic resource assessment was reviewed for information on site history and past usage of the site (LSA 2013).

3.2 PAST USAGE OF THE SITE

Past usage of the site was assessed through review of historical aerial photographs, topographic maps, and databases. Copies of historical information reviewed are included in Appendix A. Based on a review of historical information; the proposed project site appears to have been vacant land until it was developed into naval housing in the late 1940s/1950s until 1991 when the naval shipyard closed and the housing was transferred to assist homeless persons.

The Cabrillo Family Housing facility was requested by the Navy in World War II for low-cost housing for its personnel. A 1993 cultural resources report, which includes the project area states that most of the buildings associated with the Cabrillo Housing Project that were evaluated as part of the study are modern multifamily units built in 1965, 1966, and 1968. In 1993, the Committee on Armed Services of the House of Representatives passed a bill providing for the transfer of the Cabrillo site to the City, with the understanding that the site would then be subsequently transferred to the CSULB Foundation (LSA 2013). It was officially transferred to the City in 1996 and redevelopment of the land soon began. Twenty-six acres were utilized for the establishment of the Villages at Cabrillo, which provides housing for the homeless.

Thus, this section specifies whether or not we perceive a risk of vapor migration to the project site.

To assess a vapor migration risk, a review and analysis of the site-specific environmental database report and other reasonably ascertainable records was implemented to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on the records review, it is unlikely that a potential source of vapor migration currently exists beneath the site from off-site properties. No chlorinated VOC contamination was identified within 100 feet and no petroleum hydrocarbon contamination was identified with 30 feet of the project site.

4.2.7 User-Provided Information

The ASTM Standard requires disclosure in the Phase I ESA report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs or HRECs, or whether the user has determined that the property's Title contains environmental liens or other information related to environmental condition of the property, including engineering and

institutional controls and Activity and Use Limitations, as defined by ASTM. In addition, we are required by the ASTM Standard to inquire whether the user of the report has prior knowledge that the price of the property has been reduced for environmentally related reasons.

PlaceWorks was informed by the user that to their knowledge there are no liens or other information about the environmental condition of the property in the Title. In addition, the user was not aware of specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs with the exception of the information provided above, and has not indicated that the price of the property has been reduced for environmentally-related reasons.

4. Environmental Records Review

5. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe site conditions was conducted by PlaceWorks on May 12, 2020. No weather-related conditions or other conditions that would limit our ability to observe the site occurred during our site reconnaissance. PlaceWorks personnel observed the exterior portions of the property, including the property boundaries. Site photographs are included in Appendix C.

ASTM requires that the current site owner or Key Site Manager and user, if different from the current owner or Key Site Manager, be asked if there are any helpful documents or information that can be made available for review. These consist of environmental site assessment reports, audits, permits, tank registrations, Material Safety Data Sheets, Community Right-to-Know plans, safety plans, hydrogeologic or geotechnical reports, or hazardous waste generator reports.

5.1 CURRENT USE OF THE PROPERTY

Century Villages at a Cabrillo is a gated community that houses low income families and children, war veterans, and homeless persons. The community has a convenience store, community lounges, gym, playgrounds, preschool, outdoor patios, and other communal uses for its residents. The dwelling units are apartment homes and attached duplex-like homes with street parking, carports, and a parking garage.

5.2 SITE VISIT OBSERVATIONS

5.2.1 General Description of Structures

Structures at Cabrillo Century Villages include four main buildings; Century Village Cabrillo (CVC), Long Beach Solana Housing (LBSH), Plaza, Casa de Cabrillo, Family Commons, and Anchor Place. The exterior structure material varies slightly per building, but most structures are stucco with wood siding. Other ancillary buildings around the community appeared to be made of wood siding, stucco, and concrete/cinderblock.

5.2.2 Heating and Cooling System

Th Gateway Building has two boilers and solar panels. The solar panels are used for electrolal power and heating. The Anchor Building has two boilers and solar panels. Solar panels are used for heating only. The Plaza has a cooling tower, two boilers for HVAC, and domestic hot water on roof. The Family Commons Building has individual instant hot water heaters (160 units).

5.2.3 Potable Water Supply and Sewage Disposal System or Septic Systems

No.

5. Site Reconnaissance and Key Personnel Interview(s)

5.2.4 Use of Petroleum Products and Hazardous Materials

De minimis use of petroleum products was observed at the project site.

5.2.5 Storage of Petroleum Products and Hazardous Materials (Storage Tanks, Drums)

“Yellow Locker” holds gasoline and paint/paint thinners.

5.2.6 Disposal of Petroleum Products and Hazardous Materials

No evidence of disposal of petroleum products or hazardous materials was observed at the project site.

5.2.7 Vehicle Maintenance Lifts

No vehicle maintenance lifts were observed at the project site.

5.2.8 Emergency Generators and Sprinkler System Pumps

No sprinkler system pumps were observed on the project site. Two small gasoline-powered generators.

5.2.9 Polychlorinated Biphenyls (PCBs) Associated with Electrical or Hydraulic Equipment

No equipment was observed to be PCB containing.

5.2.10 Floor Drain and Sumps

Floor drains are throughout the community, both indoor and outdoor drains were observed. One storage sump is located onsite for sewage. Sump stores and pumps out sewage to another sewer line. During time of site visit, the facilities manager noticed it was backed up and pumps were not working properly.

There are two pumps located near the grand lawn that are used when the storm drains are full to later be pumped out when the storm drains are not overflowing.

5.2.11 Catch Basins

Catch basins were observed throughout the community outside. Several were seen in the grand lawn and were about 2' x 2' in area for water.

5.2.12 Dry Wells

No dry wells were observed at the project site.

5. Site Reconnaissance and Key Personnel Interview(s)

5.2.13 Pits, Ponds, Lagoons, and Pools of Liquid

No pits, ponds, lagoons, or pools of liquid were observed at the project site.

5.2.14 Odors

Petroleum hydrocarbon odors were not noted at the project site.

5.2.15 Stains or Corrosion on Floors, Walls, or Ceilings

No unusual staining or corrosion was observed on the subject site.

5.2.16 Stained Soil or Pavement

Minor stains on driveways/parking lots were observed.

5.2.17 Stressed Vegetation

No stressed vegetation was observed at the project site.

5.2.18 Solid Waste and Evidence of Waste Filling

No solid waste disposal or evidence of waste filling was observed on the project site.

5.2.19 Wastewater and Stormwater Discharge

No wastewater discharge was observed on the project site. Stormwater is expected to exit the project site via overland flow to local roadways and creeks.

5.2.20 Monitoring, Water Supply, or Irrigation Wells

No monitoring, water supply or irrigation wells were observed at the project site.

5.2.21 Non-Scope Considerations

No railroad tracks are located within 1,500 feet of the project site.

5.3 INTERVIEWS

A questionnaire was completed by Brian D'Andrea, senior vice president of housing for Century Village at Cabrillo on March 3, 2020. Mr. D'Andrea was not aware of any leaks, spills, or discharges of hazardous materials to the proposed expansion site or adjacent to the proposed expansion site. He was not aware of any environmental cleanup liens against the properties nor was she aware of any land use limitations due to environmental issues. Mr. D'Andrea was also not aware of any environmental cleanups, spills, or chemical releases that may have occurred on the project site. The questionnaire is included in Appendix D.

6. Data Gap Identification

Adjacent landowners were not interviewed for this Phase I ESA Environmental Site Assessment. Chain-of-title documentation was not reviewed so it could not be ascertained if the complete title report contains environmental liens or other information related to environmental condition of the property. However, the database search contained in Appendix B indicates that the site is not on the Recorded Environmental Cleanup Liens database which is maintained by the DTSC and contains a listing of liens placed upon real properties. The site is also not listed on the DTSC's Deed Restriction database which lists sites with DTSC with restricted land use. The site is not listed on NPL Liens, a database the EPA maintains on real property, in order to recover remedial action expenditures when the property owner has received notification of potential liability.

7. Findings and Conclusions

PlaceWorks has performed a Phase I Environmental Site Assessment on behalf of City of Long Beach (Client) for the proposed renovation of the Century Villages at Cabrillo (project site), located at 2001 River Avenue in the city of Long Beach, Los Angeles County, California (Figures 1 and 2). The project site consists 27-acres of the existing Century Villages. The Phase I ESA was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard, and discussed in the Introduction section of this report.

The approximately 27-acre project site is bordered by Cabrillo High School to the north, California State Long Beach Technology to the south, Job Corp community to the east and Terminal Island Freeway to the west. Historically, the project site had been used as naval housing for shipbuilding for Long Beach Port starting in the 1950s and was closed in 1991 as part of the Base Realignment and Closure Commission (BRAC) in 1991. The 27-acres were conveyed in 1997 to benefit the homeless and was part of the 140 acres of federal property that was included in the Long Beach Naval Station decommissioning. When the Villages at Cabrillo originally opened, the facility primarily utilized rehabilitated former navy housing with new construction introduced over time.

The project site is comprised of 23 parcels and is associated with the Assessor Parcel Numbers [APNs] 7402 -019-006, -008, -011, -014, -016, -017, -018, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -032, -035, -036, -037, -039, and -040. Terminal Island Freeway bounds the project site to the west and W 20th Street bounds the project site to the south. Figure 2 shows the local vicinity and Figure 3 the current conditions of the project site. The project site is in the city of Long Beach, which is southwest of the City of Signal Hill, southeast of the city of Carson, and north of the Pacific Ocean. Regional access to the site is provided by State Route 1, approximately 0.12-mile south of the site.

The proposed project involves the demolition of 215 dwelling units, 10,030 square feet of amenities, 10,200 square feet of education uses, and 7,250 square feet of services and administration; and the development of 750 dwelling units, 77,000 square feet of amenities, 15,000 square feet of educational uses, 17,000 square feet of commercial/retail uses, and 48,000 square feet of administrative and supportive services. Buildout of the community would result in a total of 1,380 dwelling units, 79,350 square feet of amenities, 15,000 square feet of educational uses, 22,850 square feet of commercial/retail uses, and 67,050 square feet of administrative and supportive services. The existing and proposed buildings would range between 15 and 80 feet tall and would be arranged around a series of outdoor spaces and community amenities. The project also includes a central transit center, and dedicated bicycle and pedestrian facilities.

7. Findings and Conclusions

The objective of a Phase I ESA is to assess whether “recognized environmental conditions” (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the “business environmental risk” associated with the subject site. Our opinion regarding an REC’s potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

No RECs were identified for the project site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

No HREC were identified for the project site.

CONTROLLED RECS ENVIRONMENTAL CONDITIONS

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

SUMMARY

Based on the results of this assessment, REC, CRECs, and HRECs were not identified for the project site.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 6 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Eval Notes: Onsite to conduct a routine Hazardous Materials Inspection however the facility is no longer required to be in the HMBP program. I met with the contact and Owner Mr. Dave Rikimaru. A tour of the facility was conducted and it is noted that the facility no longer stores a reportable amount of Hazardous Materials at the site. The Motor oil is stored in small containers <1 gallon. The Compressed gases stored on site are below the reportable volume. No Hazardous Solids were observed. This facility is not out of business but is out of the HMBP program. Ensure that if the volume of Hazardous Materials stored on site increases to above the reportable volume (55 gallons for liquids, 500 lbs of solids and 200 cuft of gases) the facility completes and submits an HMBP in CERS. Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation

Potential Contaminants of Concern: Benzene, Toluene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The Site consists of two valve box vaults located on the west side of Route 103 approximately 1,500 feet south of Willow Street. To the west immediately adjacent to the site is the Union Pacific Railroad right-of-way followed by the Southern California Edison property. The SCE property is currently used as a truck container storage yard by Three Rivers Trucking. To the east of the Site across Route 103 is an elementary school. Tesoro operates the Burnett Street Valve Box that consists of seven petroleum product pipelines that originate, terminate, or continue at the valve box. The valve box has operated as a long-term routing station for products in the Tesoro pipeline network. In November 1992, a release of 160,000 gallons of gasoline was reported, which resulted in soil and groundwater impacts. A total of 58,540 gallons of product were recovered during emergency response activities between November 1992 and May 1993. Groundwater impacts include total petroleum hydrocarbons gasoline range organics (TPH-GRO) and the gasoline constituents benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), and tert-butanol (TBA). Previous investigations identified two water-bearing zones within the recent alluvium, designated as the Water Table Shallow Zone and Water Table Deep Zone. These zones are part of the Semi-perched aquifer within the Gaspur Channel. Water bearing zones beneath the Semi-perched aquifer at the Site include the Gaspur and the Gage aquifers. The water bearing zones at this Site are generally described as follows: The Water Table Shallow Zone within the Semi-perched aquifer consists primarily of silty sand to sandy silt with isolated beds of clay and clayey silt, is present beneath the Site from approximately 20 to 35 feet below ground surface (bgs), and ranges in thickness from approximately 2 to 15 feet. The Water Table Deep Zone within the Semi-perched aquifer consists primarily of sand and silty sand with lenses of clay. The top of the Water Table Deep Zone is generally encountered from 35 to 45 feet bgs and extends to approximately 75 feet bgs. At this depth a thin, laterally continuous layer of clay to silty clay marks the basal portion of the deeper zone. The Gaspur aquifer, ranging from 65 to 67 feet in thickness, is present beneath the Water Table Deep Zone

and consists primarily of gravels, sands and isolated silts/clays to about 142 feet bgs. The Gage aquifer is unconformably separated from the base of the Gaspar aquifer by a thin layer of silt and silty sand at about 142 feet bgs. It consists primarily of poorly graded sand (with marine shell fragments and silt) and continues beneath the Site to at least 172 feet bgs, the maximum depth investigated by AECOM in 2008. Each of these different water bearing zones beneath the Site appears distinct and characterized by different groundwater flow directions and gradients.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 1779040.4
- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Amount (Lbs): 1203356.2
- Waste code: D003
- Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 1779040.4

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 1203356.2

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Background Info:	The site is comprised of three former hazardous waste disposal facilities which accepted primarily, liquid industrial waste. Disposal of waste occurred from the early-1960's to the mid-1970's. The waste which included chromic, nitric, and sulfuric acids, was discharged into the soil and groundwater via wells and pits. Since 1976, operations at the site include a municipal waste transfer station, which is currently operating. Other areas of the site remain vacant or appear to be used for storage. The surrounding area is generally industrialized. Not reported In 1976, BKK Corporation (BKK) signed a Consent Order with DHS (predecessor to DTSC) to perform the Remedial Investigation/ Feasibility Study (RI/FS) and prepare the Remedial Action Plan for the site. Various rounds of RI activities occurred and a couple of draft RI reports were submitted; however, outstanding RI issues remain, especially with respect to groundwater characterization.

In 1998, an escrow account was established for the site's remedial costs as a result of a lawsuit settlement between BKK and other potentially responsible parties (PRPs).

Not reported

In 2003, DTSC conducted a PRP search. DTSC sent PRP notice letters to 14 companies. DTSC met with PRPs to discuss the site's status and their potential liability at the site and to facilitate their participation in the cleanup of the site.

DTSC provided the PRPs a draft Consent Order for the site. DTSC subsequently decided to continue to work with BKK with the funds remaining in the escrow account. DTSC notified the PRPs that the response date to form a steering committee and to comment on the draft Consent Order was postponed. DTSC decided to separate the site into two operable units: soil and groundwater. BKK will focus remedial efforts on the soil operable unit with the remaining escrow funds.

CA BOND EXP. PLAN:

Reponsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible parties have entered into an enforceable agreement with DHS for oversight/monitoring of their cleanup efforts. DHS has budgeted \$50,000 for related direct costs. DHS will recover 100 percent of direct costs plus staff costs and overhead associated with the project. The responsible parties will pay all costs associated with site cleanup.
Site Description: The site is the location of three former hazardous waste disposal facilities that operated from 1964 to 1977. These facilities disposed metallic acid waste and basic solutions into onsite liquid injection wells.
Hazardous Waste Desc: Materials disposed of onsite include chromic, nitric, and sulfuric acids, sodium hydroxide, potassium hydroxide, and ammonia. Other substances disposed of onsite include alodyine, paint strippers and various industrial solvents. The estimated quantity of injected wastes is approximately 39 million gallons.
Threat To Public Health & Env: Although the area is industrialized, a residential neighborhood is one-quarter mile from the site. Workers onsite and residences in this area may be exposed to contaminated dust if subsurface soils are disturbed or excavated. The shallow aquifer beneath the site is degraded and unusable. However, usable aquifers potentially exist beneath the shallow zone that may have been impacted by the site operations.
Site Activity Status: A consent order was signed between DHS and the landowner, BKK Corporation, on December 31, 1987 whereby BKK agreed to perform RI/FS activities and to develop a remedial action plan. The work is expected to commence in Fall, 1988. At present, the site is paved, used as a non-hazardous waste transfer station, and is secured to preclude public access.

Completed Document Type: Removal Action Completion Report
Completed Date: 08/02/2006
Comments: In a letter, dated August 2, 2006, DTSC determined that the primary activities of the Removal Action Workplan have been completed and that operation and maintenance activities pertaining to the asphalt and concrete paved areas are to be implemented. This removal action was an interim action in which portions of the Site were paved with asphalt and concrete to minimize potential risks to Site workers that could occur due to direct exposure to soil where chemical impacts are present.

Completed Document Type: Removal Action Workplan
Completed Date: 03/22/2005
Comments: In a letter, dated March 22, 2005, the Final Removal Action Workplan (RAW), dated March 11, 2005, was approved. The RAW presents an interim action to cap approximately 127,700 square feet of unpaved areas with asphalt and concrete. This interim action will minimize potential exposure to contaminated soil. To prevent further delays to implement this removal action, DTSC approved a modification to the RAW to place asphalt on the RAW-proposed concrete portion in the same construction manner as proposed for other asphalt areas in a letter, dated January 27, 2006. DTSC determined that implementation of this modification does not significantly change the scope, performance, or cost of this interim action. On April 10, 2006, BKK proposed a different modification to the RAW; and DTSC conditionally accepted this latest proposal to modify the RAW in a letter, dated April 12, 2006. Basically, the proposal is to pave a specific area of the Site with concrete instead of asphalt. This modification does not significantly change the scope, performance, or cost of this interim action.

Completed Document Type: Removal Action Completion Report
Completed Date: 08/02/2006
Comments: In a letter, dated August 2, 2006, DTSC determined that the primary activities of the Removal Action Workplan have been completed and that operation and maintenance activities pertaining to the asphalt and concrete paved areas are to be implemented. This removal action was an interim action in which portions of the Site were paved with asphalt and concrete to minimize potential risks to Site workers that could occur due to direct exposure to soil where chemical impacts are present.

Completed Date: 03/22/2005
Comments: In a letter, dated March 22, 2005, the Final Removal Action Workplan (RAW), dated March 11, 2005, was approved. The RAW presents an interim action to cap approximately 127,700 square feet of unpaved areas with asphalt and concrete. This interim action will minimize potential exposure to contaminated soil. To prevent further delays to implement this removal action, DTSC approved a modification to the RAW to place asphalt on the RAW-proposed concrete portion in the same construction manner as proposed for other asphalt areas in a letter, dated January 27, 2006. DTSC determined that implementation of this modification does not significantly change the scope, performance, or cost of this interim action. On April 10, 2006, BKK proposed a different modification to the RAW; and DTSC conditionally accepted this latest proposal to modify the RAW in a letter, dated April 12, 2006. Basically, the proposal is to pave a specific area of the Site with concrete instead of asphalt. This modification does not significantly change the scope, performance, or cost of this interim

Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: On January 4, 2010 Tesoro notified California Emergency Management Agency of a naphtha release to ground water from a storage tank (Tank 80214). It is estimated that about 15,200 barrels of naphtha was released. The Regional Board issued a 13267 Order on January 14, 2010 and required Tesoro to complete the assessment and delineation. On April 11, 2011, the Regional Board issued a Cleanup and Abatement Order to direct Tesoro to assess, monitor, and clean up and abate waste release that occurred after May 11, 2007 at the Los Angeles Refinery (LAR). Shell Oil Product US is still responsible to clean up soil and groundwater contamination occurred prior to May 2007 under CAO No. 88-70.

Potential Media Affected: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The Tesoro Los Angeles Refinery (LAR) located at 2101 E. Pacific Coast Highway in Wilmington, California (Site). The Site is an active petroleum refinery operated by Tesoro and covers approximately 300 acres. The refining operations include gasoline, diesel fuel, jet fuel, fuel oil, and petroleum coke. Environmental investigation activities at the Site began in the early 1980s. Groundwater monitoring/sampling commenced in 1985. These investigations documented soil and groundwater impacts by petroleum hydrocarbons and other chemicals of concern (COCs), and defined the extent and magnitude of Light Non-Aqueous Phase Liquid (LNAPL) plumes in the Water Table Aquifer at the Site. Dissolved phase impacts have also been documented in deeper aquifers on and off site. COCs sourced from LAR are MTBE, TBA, and benzene and have migrated off site beyond Site boundaries into some adjacent areas. The cleanup is conducted under Cleanup and Abatement Order No. 88-70 and Order No. 85-17. Discharger participates in the Carson Regional Groundwater Group (CRGG) to assess regional deeper groundwater contamination matter with fuel oxygenates. Currently, there is ongoing LNAPL recovery, a soil vapor extraction system which is being expanded to the Wilmington Sales Terminal to include air sparging wells, and a biosparge boundary control system which is being installed along the western boundary.

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 787561

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 787561

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 4212

- Waste code: D003
- Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Amount (Lbs): 855

Site History: Regional Board has overseen the site investigation and cleanup efforts at the Tesoro Pipeline #7 (California State Fire Marshall Case Number 1236). Tesoro's Line 7 is located at 2000 East Sepulveda Boulevard in Carson, California. The location is in the northeastern corner of the Kinder Morgan Carson Terminal facility. Liquid phase hydrocarbon release was reported on August 5, 2013. The release point was identified as Jet Fuel (contents of Tesoro's Line 7) on August 18, 2013. Based on the inventory estimates, Tesoro estimates that a total of 164 barrels of Jet Aviation Fuel was released from Line 7. Since August 6, 2013, Kinder Morgan/Tesoro has made recovery efforts in the open excavation area of the release point. Tesoro obtained access from Kinder Morgan to conduct further investigation to define the vertical and lateral extent of the impacts associated with Line 7 release. Technical reports have been submitted to Regional Board for review.

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: BURIED DRUM REMOVAL
Completed Document Type: No Further Action Letter
Completed Date: 06/27/1996
Comments: DTSC determined the interim measure specific to the removal of buried drums has been completed. A total of 20 buried drums were removed from under the southern slope of the former surface impoundment. No further action for the buried drums is required except for submittal of the waste manifest for the drum contents and the contaminated soil. On 4/1/1996, DTSC issued closure certification approval with conditions for the former surface impoundment. As a condition of closure certification approval, the Facility (Huntway) agreed to monitoring groundwater on a quarterly basis for one year concluding in December 1996. Unless new evidence warrant additional action and provided the Facility complies with the requirements of the closure certification approval, DTSC hereby concludes regulatory involvement of the former surface impoundment and the planned construction on the site can begin. DTSC is preparing a RCRA Facility Assessment (RFA) for other portions of the Facility based on a visual site inspection conducted on May 15, 1996.

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Amount (Lbs):	WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE. 8002
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	72545
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 8002

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Amount (Lbs): 72545

- Waste code: D003
- Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Appendix D. Questionnaire

Appendix

Environmental Site Assessment Questionnaire for Client

The following information is requested to evaluate the potential for environmentally-related impacts and property contamination. This questionnaire is to be completed by the User of the Phase I Environmental Site Assessment, as defined by ASTM E-1527-13, or its authorized representative.

PART I

1.	<u>Project description</u> : The City of Long Beach is proposing to redevelop the Century Villages at Cabrillo in Long Beach, CA. The City requested the preparation of a Phase I Environmental Site Assessment (ESA) as part of its due diligence responsibilities for the proposed project.
2.	<u>Property address(es) and Assessor Parcel Number(s) (APN)</u> : The APNs for the project site are 7402-019-006, -008, -011, -014, -016, -017, -018, -021 to -030, -032, -035, -036, -037, -039, and -040 <i>see attached</i>
3.	<u>Current property owner (name, address, telephone number)</u> : The Century Villages at Cabrillo (CVC) currently owns the property.
4.	<u>Current property development/improvements</u> : The site is 27-acres of a former United States Naval housing facility. Currently, the site is developed with single-story former navy housing,
5.	<u>Date(s) of current property development/improvements</u> : The site appears to have been used for naval housing starting in the 1950s until 1991. In 1997 the property was used to benefit the homeless under the McKinney-Vento Homeless Assistance Act. The site is a mix of new development and original buildings constructed in the 1950s.
6.	<u>Past property use, development/improvements</u> : Based on a review of historical information, the proposed project site appears to have been vacant land until it was developed into naval housing in the late 1940s/1950s until 1991 when the naval shipyard closed and the housing was transferred to assist homeless persons.
7.	<u>Neighboring property uses</u> : The project site is bordered by Cabrillo High School to the north, California State Long Beach Technology to the south, Job Corp community to the east and Terminal Island Freeway to the west.

along with one, two, three, four and five story new construction and other related amenity spaces.

PART II

1. Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, local or state law? Yes ☐ No ☒
2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law? Yes ☐ No ☒ *None other than affordability covenants*
3. Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Yes ☐ No ☒
4. Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,
 - (a) do you know of specific chemicals that are present at the *property*?
 - (b) do you know of spills or other chemical releases that have taken place at the *property*?
 - (c) do you know of any environmental cleanups that have taken place at the *property*?
 Yes ☐ No ☒
5. Based on your knowledge and experience related to the *property*, are there any obvious indicators that point to the presence or likely presence of contamination at the *property*? Yes ☐ No ☒
