APPENDIX D

PHASE I ENVIRONMENTAL SITE ASSESSMENT

ELK GROVE CENTER, COSUMNES RIVER COLLEGE 10051 BIG HORN BOULEVARD ELK GROVE, CALIFORNIA

PROJECT NUMBER: 2019-00100 January 20, 2020

This document and its use is intended for the recipient and specific identified users contained within. Any unauthorized use of this report without prior consent is strictly prohibited.

January 20, 2020 Project No. 2019-00100

Mr. Dan McKechnie **Director of Facilities Planning** 3753 Bradview Sacramento, CA 95827

Subject: Phase I Environmental Site Assessment 10051 Big Horn Boulevard Elk Grove, CA 95757 APNs: 132-2140-001, 132-2140-002

Dear Mr. McKechnie:

We are pleased to present the following report, which contains the findings and conclusions of our Phase I Environmental Site Assessment conducted for the subject site. This report was designed to provide a Phase I Environmental Site Assessment in compliance with the ASTM E 1527-13 Standard and is in accordance with the All Appropriate Inquiries (AAI) rule standard. This report is also developed in compliance with the Department of Toxic Substances Control Phase I Site Assessment Advisory: School Property Evaluations, Revised September 5, 2001. Findings for this project have been provided in the body of the report and are listed in the executive summary.

Petralogix Engineering, Inc. uses professionals who meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. As an environmental consulting company, we have the specific qualifications (based on education, professional certification, training, and experience) to assess properties. Petralogix has developed and performed the all appropriate inquiries in conformance with the standards and practices as set forth in 40 CFR 312.

We appreciate the opportunity to provide our expertise on this project and look forward to Juestio providing other services in the future. Please feel free to contact us if you have any questions.

Sincerely, Petralogix Engineering, Inc.

Heather F. Shaddo

<u>PHASE I ENVIRONMENTAL SITE ASSESSMENT – IMPORTANT</u> <u>CONSIDERATIONS AND LIMITATIONS</u>

Contact Petralogix to Discuss all Questions

It is important to contact our firm whenever you have any questions. The value in retaining our company for your environmental consulting needs is that we are here to help and guide. No question or comment is unimportant to Petralogix. We can save our clients time, money, and confusion by discussing development components at critical times within a project's timeframe. We are here to help regarding possible environmental conditions that could affect your project.

Limitations of the Phase I Environmental Site Assessment (ESA)

When reviewing and considering the final Phase I ESA report it should be understood that it is not intended to be an all exhaustive end all review. Rather, a Phase I Environmental Site Assessment is written to provide database search results, third party information, observations, and professional opinions regarding a specific site for a specific project, under a specific timeframe.

There are many uncertainties that can exist about a property even with appropriate review being met under the requirements of the AAI and ASTM standards. Additional research can be performed to aid in a higher level of certainty about a site's historic environmental risk. The amount of research required to do this depends on the type of property, the risk tolerance of the client, and information developed in the course of the property review.

This Phase I ESA Report is useable for 180 days from the date of completion. The Report is produced for the client and project owner, and may not be used by a different entity or person without also satisfying the User's Responsibilities and having express consent from Petralogix Engineering, Inc.

Client & User Responsibilities

The ASTM Standard E1527-13 requires the user to be involved in the process and adequately inform professionals of their whole knowledge for a site. In order to meet the requirements to qualify for the innocent landowner defense within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) the following items must be performed.

- **<u>Required</u>** review title and judicial records for environmental liens or activities and use limitations (AULs).
- <u>Must</u> communicate any specialized knowledge or experience to the environmental professional that is material to recognized environmental conditions in connection to the property.
- <u>Must</u> communicate any actual knowledge of environmental liens or AULs encumbering the property to the environmental professional.
- **Shall** consider the relationship of the purchase price of the property to the fair market value. If the amount is lower, a written explanation of the lower value is required.
- <u>Must</u> communicate commonly known or reasonably ascertainable information about recognized environmental conditions in connection to the property to the environmental professional.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

10051 BIG HORN BOULEVARD

ELK GROVE, CALIFORNIA

OUR PROJECT NO: 2019-00100

1.0 SUMMARY

Petralogix Engineering, Inc. has been retained by the Los Rios Community College District to conduct a Phase I Environmental Site Assessment for the property located at 10051 Big Horn Boulevard, in Elk Grove, Sacramento County, California. The site assessor parcel numbers (APNs) are 132-2140-001, -002.

Our firm conducted a Public Records review, in which information was obtained from both federal and state databases. Petralogix uses Environmental Data Resources Inc. (EDR) to assist and supply many of these documents. In addition, we have supplemented this data with regional and local sources to determine whether or not obvious recognized or historically recognized environmental conditions (RECs) may exist (and/or be known to exist by regulatory agencies) for the site. The search radius for this investigation extended to adjoining properties, and properties within a search distance varying from one-eighth to one mile, depending on the information type that was being researched.

Background and past uses of the subject property were investigated in great detail. Sources describing the physical characteristics of the property, many of the surrounding properties, and the general region were compiled for review. These sources were studied in order to determine the topography, geologic setting, and groundwater depth and flow direction beneath the property. Site reconnaissance of the subject property was also performed. Immediate surroundings were also reviewed during our site reconnaissance. The complete data review and summary required for compliance (under the ASTM and AAI standards) can be found in the body of this document. This assessment was conducted under the supervision of Daniel E. Kramer, Chief Professional Geologist (PG#8657) and President of Petralogix.

Petralogix Engineering, Inc. 26675 Bruella Road, Galt, Ca 95632 (209)-400-5729 www.petralogix.com

1.1 Executive Summary

1.1.1 <u>Findings</u>

The 16.69-acre site consists of the Cosumnes River College-Elk Grove Center. The campus includes one building with classrooms, laboratories, offices and mixed use spaces, a common use lawn area, a parking lot, and vacant land in the northwest and southernmost portions. The general vicinity consists mostly of residential and agricultural use. Elizabeth Pinkerton Middle School and Cosumnes Oaks High School are located across Whitelock Parkway to the north of the subject property.

The subject property was vacant or agricultural land from at least 1894 to 1910. The subject property was a developed campus with one structure by 2013, with construction starting in late 2011 or early 2012. The on-site structure was built after 1980; building materials in the on-site structure are unlikely to contain lead and asbestos. Lead and asbestos are not a concern for the existing on-site structure.

The northern, central and part of the southern portions of the subject property were row or hay crops from at least 1937 to 2005, with a storage pond in the northern portion of the site from at least 1957 to 1972. Organochlorine pesticides may have been applied on-site in the past. This is considered a REC to the subject property. It is unknown what was stored in the historic pond; however, it is likely to be related to the agricultural use of the remainder of the subject property. Any water stored may have contained organochlorine pesticides related to the agricultural use on the site. This is considered a REC to the subject property.

The historic subject property address of 8355 Poppy Ridge Road included a farm with several farm/residential/barn structures with two wells and two septic systems built in the southern portion of the subject property between 1910 and 1972; the structures and septic systems were demolished with permit in 2006. These structures were built prior to the effective ban of lead paints and products and asbestos containing building materials. The potential for lead-based paints and products and asbestos containing building material leaching (or being physically mixed) into the soil near the previous location of the demolished structures and within a portion of the subject property is considered moderate to high. The demolished/former structures are therefore considered RECs. This farm (8355 Poppy Ridge Road) is listed on the HIST UST database for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1960. This site is also listed as inactive on the Sacramento Co. ML database. No record of removal was reviewed for the site. However, according to ENGEO (2004) a historic UST in the southern portion of the subject property was removed in approximately 1979, and sampling and testing by ENGEO in 2004 indicates that no release of petroleum hydrocarbons occurred. This is not considered a REC to the subject property.

Two abandoned wells related to the historic farm/barn structures (8355 Poppy Ridge Road) in the southern portion of the subject property were properly destructed in 2011 with Sacramento County EMD permits using sand cement and explosives. Prior to this, one well was improperly abandoned without a permit. A portion of the well casing was removed, rock was placed inside the casing, and the well was then buried with debris. Despite improper abandonment of one well previously, these wells were properly destructed with County oversight in 2011. This is not considered a REC to the subject property.

During site reconnaissance, the southern field was investigated for evidence of former historic structures as well as any evidence of the former wells; no evidence of former structures or wells was

Petralogix Engineering, Inc. 26675 Bruella Road, Galt, Ca 95632 (209)-400-5729 www.petralogix.com

observed. Minor staining was observed in the parking lot and a small pile of debris was observed in the southern field which consisted of concrete, metal posts, and plastic fencing.

Numerous surrounding sites and adjacent parcels were listed on some of the databases searched via EDR. None the sites listed likely to have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the subject property except for the following:

• G Suyenaga Nursery and Farm (8310 Poppy Ridge Road): This site is located 71 feet south (cross-gradient) of the subject property, across Poppy Ridge Road. This site is a farm listed on the HIST UST, SWEEPS UST, and CA FID UST databases for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1972. This site is listed as inactive on the Sacramento Co. ML database; however, no record of removal was reviewed for the site. If this UST were to leak and petroleum hydrocarbons to migrate to groundwater, this could be a concern to the subject property. However, based on the small capacity of the tank, depth to groundwater greater than approximately 70 feet bgs, and the nearby but cross-gradient location, it is unlikely that a release from this UST would impact groundwater and the subject property. This does not constitute a REC to the subject property.

The Tier 1 Screening for Vapor Intrusion at the subject property indicated that a UST 71 feet south/cross-gradient of the subject property (8310 Poppy Ridge Road), across Poppy Ridge Road, may cause a vapor intrusion/encroachment risk to the subject property if this UST were to leak. The vapor/instruction risk at the subject property from this UST is considered low, based on the small capacity of the UST and depth to groundwater at greater than 70 feet.

1.1.2 <u>Conclusions</u>

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 for 10051 Big Horn Boulevard, City of Elk Grove, California, (the subject property). Any exceptions to, or deletions from, this practice are described in the Limitations Section of this report. This assessment identified the following recognized environmental conditions (RECs) in connection with the subject property:

- The subject property was historically used as row crops or hay crops. Organochlorine pesticides may have been applied on-site in the past. This is considered a REC to the subject property.
- The historic storage pond in the northern portion of the subject property is considered a REC.
- The demolished/former structures in the southern portion of the subject property may have caused lead and asbestos to be present in the surrounding soil; this is considered a REC to the subject property.

This assessment has identified the following *de minimis* conditions:

- Minor staining observed in the parking lot.
- Small pile of debris in the southern field.

1.1.3 <u>Recommendations</u>

- Further investigation should be performed to evaluate whether any environmental media has been impacted by organochlorine pesticides applied to the subject property in the past.
- Further investigation should be performed to evaluate whether any environmental media has been impacted by the historic pond located in the northern portion of the subject property.
- Further investigation should be performed to evaluate whether lead and asbestos have been mixed into the on-site soil near the demolished structures in the southern portion of the subject property.
- The minor staining in the parking lot should be contained and monitored.
- The debris pile in the southern portion of the subject property should be removed.

ENVIRONMENTAL PROFESSIONAL?

A person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases (per ASTM Standards E1527)

&

In California such a person must hold a current Professional Engineer's or Professional Geologist's license.

2.0 INTRODUCTION

2.1 Purpose

In order to qualify for certification for new construction, and to assist in California Environmental Quality Act (CEQA) assessment, the school district is conducting a comprehensive Phase I Environmental Site Assessments (ESA) to determine whether there has been, or may have been, a release of hazardous materials or the presence of naturally occurring hazardous material. In order to address concerns regarding potential liability for toxic hazards, real estate investors

(lenders, brokers, buyers, and sellers) need to assess property prior to purchase. The main objective of any study should be to determine current and/or past occupants (or surrounding land uses) which could adversely impact property development, the environment, or the human health.

Performance of a Phase I Environmental Site Assessment according to ASTM Standard E1527-13 and the All Appropriate Inquiries (AAI) rule satisfies one of the requirements to qualify for landowner liability protections (LLPs) within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of this Phase I Environmental Site Assessment is to identify to **the extent feasible**, pursuant to the processes prescribed by the AAI rule and in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, recognized environmental conditions in connection with the property. Additional investigative procedures, designed to meet the due diligence criteria specified by many lending institutions, have also been implemented. As defined by ASTM¹ E1527-13, §1.1.1, the term "recognized environmental conditions" or (REC) refers to:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any **release** to the environment; (2) under conditions indicative of a **release** to the environment; or (3) under conditions that pose a material threat of a future **release** to the environment."

Under CERCLA the definition of a **release** is given as:

42 U.S.C. § 9601(22) defines a "**release**" as "<u>any spilling, leaking, pumping, pouring, emitting, emptying,</u> discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discharging of barrels, containers, and other closed receptacles containing any hazardous substances or pollutant or contaminant."

It is important to note the issuance and consideration of Business Recognized Environmental Concerns, Historic Recognized Environmental Concerns (HREC), and/or Controlled Recognized Environmental Concerns (CREC). Each of these items is more clearly defined in the regulatory literature and standards. We have considered the application of these definitions as part of this review. We do this to help determine impact significance for sites which once had items of recognized

¹ American Society for Testing and Materials, www.astm.org

ASTM STANDARDS AND REQUIREMENTS

Phase I ESAs must be conducted in accordance with the current version of American Society for Testing and Materials International (ASTM) Standard E1527 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", ASTM International in conjunction with ASTM Standard E1528 "Standard Practice for Environmental Site Assessments: Transaction Screen Process", ASTM International. For referenced ASTM standards, visit the ASTM website, <u>www.astm.org</u>, or contact ASTM Customer Service at <u>service@astm.org</u>. <u>Contact Petralogix to discuss these requirements in</u> <u>more detail. If preferred, we can come to your office and present a 30-minute power point on the</u> ASTM Standard as topic for better understanding. Contact us at <u>questions@petraolgix.com</u> to setup a presentation.

concern due to use and or historic practice, but for which a cleanup or change of regulatory law and regulation has removed the hazardous condition from the site.

2.2 Detailed Scope-of-Review

The scope of work performed to develop the information contained in this Phase I Environmental Site Assessment report includes:

- 1. Collecting available information concerning the property
- 2. Review of other data pertinent to the specific site
- 3. Conducting a site visit to assess physical features, observe adjacent land use, and gather evidence of indiscriminate and/or illegal waste disposal
- 4. Conducting a review of regulatory agencies' records
- 5. Contacting appropriate regulatory personnel,
- 6. Reviewing regulatory files regarding the property in question.
- 7. Detailed discussions with both the Client and all previous owners who are available to discuss the history of the site.

No previous environmental assessments were identified for review.

This Phase I Environmental Site Assessment discusses all work performed by Petralogix to date with regard to this specific project. The principal findings are outlined throughout the body of this text and are summarized in the conclusion of this report.

2.3 Significant Assumptions

<u>No significant assumptions</u> were made in the course of this assessment. To clarify, a significant assumption is defined in the following statement: "things and/or items that were based on speculative reports or study, or which were not verified through rigorous evaluation and objective review."

2.4 Limitations and Exceptions

This report was compiled as a Phase I Environmental Site Assessment for the subject project. This report contains information and data that was provided to Petralogix by a variety of outside sources.

Petralogix cannot warrant the accuracy and/or completeness of the information which was provided to us by those sources.

When an assessment is completed without adequate subsurface exploration or chemical screening very little certainty (or conclusive statement) can be made about the conditions of the soil and groundwater beneath a particular site. As is the case with this study, uncertainty regarding latent subsurface conditions which may be the result of on-site or off-site sources exists. In order to best determine with certainty these conditions, physical testing would be required. <u>Therefore, the findings and conclusions of this report are not scientific certainty, but rather a statement of probability based on professional judgment.</u> These statements of probability are based on the data gathered during the course of this investigation.

Petralogix is not able to represent that the site or adjoining land contains no hazardous waste, oil, underground storage tanks, or other latent condition beyond that detected or observed by Petralogix during the Phase I Environmental Site Assessment. Without physical tests and additional review for those sites, we can determine no definite answer. A possibility always exists for contaminants to migrate through surface water, air, or groundwater. An investigation to determine whether or not contaminants are present in the surface and subsurface soil is not within the scope of work required to produce the Phase I Environmental Site Assessment. Chemical analysis of soil and groundwater samples to quantify levels of contamination are also not within the scope of work required to develop a Phase I Environmental Site Assessment.

As discussed in ASTM E1527-13, it is never possible to eliminate all uncertainty from an investigation of this type:

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

For this assessment, there were no specific limitations identified.

2.5 Special Terms and Conditions

As part of this certain materials are not fully evaluated including Asbestos, Mold, Radon, Vapor, or Lead. These are discussed and considered, but we are not proposing to provide characterization of these items (nor is characterization required or intended within the ASTM scope). Intention here is directed towards screening.

Our office has not been provided with any specific criteria for the development of this report that is separate from the general request to evaluate the property in question for possible problems related to toxic or hazardous agents. We have not been directed to address any specific questions concerning the site. If there is a need to conduct an investigation into a specific question not addressed in this report, please contact Petralogix immediately regarding your concerns.

2.6 User Reliance

This report was prepared for the exclusive use of Los Rios Community College District. No other person or entity is entitled to use or rely upon this report without specific written authorization from Petralogix. Such reliance is subject to the same limitations, terms, and conditions as our original contract with the above stated client(s). Petralogix specifically rejects anv responsibility for unauthorized use of this report. Unauthorized use is any use that is not consented for by Petralogix in writing. This Phase I ESA is only reliable for 180 days from the date of the completion, January 20, 2020.

180 Day Limitation?

<u>Phase I ESAs are only valid for 180 days.</u> Many clients want a more detailed explanation of why. <u>Over time, conditions</u> may change at the site which cause an impact and form an environmental <u>liability</u>. There are many examples of this happening. One value of retaining the same professional with time is that the revised and updated Phase I ESAs are generally more simplified than if using multiple consultants.

3.0 SITE DESCRIPTION

3.1 Location and Legal Explanation

The subject property is located at the Cosumnes River College-Elk Grove Center campus, in Elk Grove, Sacramento County, located at the intersection of Whitelock Parkway and Big Horn Boulevard, approximately 1 mile west of Highway 99. To the north of the subject property is Whitelock Parkway, Elizabeth Pinkerton Middle School and Cosumnes Oaks High School. The site is located in a primarily rural area within the City of Elk Grove. The Cosumnes River College-Elk Grove Center address is 10051 Big Horn Boulevard, Elk Grove, Sacramento County, California, and consists of 16.69 acres of land (APNs: 132-2140-001, -002.).

A general location map (Vicinity Map – Plate 1) and a general site map showing survey photograph locations (Site Map – Plate 2) are attached to this report in **Appendix A**. Photographs from our onsite field survey of the subject property are attached to this report as **Appendix B**.

3.2 Site and Vicinity Features

The 16.69-acre site consists of the Cosumnes River College-Elk Grove Center. The campus includes one building with classrooms, laboratories, offices and mixed use spaces, a common use lawn area, a parking lot, and vacant land in the northwest and southernmost portions. The general vicinity consists mostly of residential and agricultural use. Elizabeth Pinkerton Middle School and Cosumnes Oaks High School are located across Whitelock Parkway to the north of the subject property.

3.3 Current Use - Property

The subject property is currently the Cosumnes River College-Elk Grove Center campus, with one structure, one parking lot, and two vacant fields.

3.4 Descriptions of Structures, Roads, Other Improvements for the Site

In the northern portion of the southern half of the site, south of the campus entrance off of Big Horn Boulevard, there is one campus building with classrooms, laboratories, offices and mixed use spaces. South of the building is a common use lawn area. West of the building is a paved trash storage area. In the northeast portion of the site is a parking lot, with another campus entrance at the northern end of the parking lot, off of Whitelock Parkway. The northeast and southernmost portions of the site are vacant land.

3.5 Current Uses - Adjoining Properties

To the north is Whitelock Parkway followed by Elizabeth Pinkerton Middle School and Cosumnes Oaks High School. To the east, northeast, northwest are residential housing. To the west is Big Horn Boulevard followed by vacant land and some residential housing. To the south is Poppy Ridge Road followed by agricultural land and farm houses.

3.6 Physical Setting

3.6.1 <u>Topography</u>

According to the most recent United States Geological Survey Topographic map covering the subject property and vicinity², the subject property is at an elevation of approximately 35 feet above mean sea level. The site is relatively flat. The general area slopes shallowly toward the west-southwest.

3.6.2 Geology and Soils

According to the most detailed Geologic Map covering the subject property and vicinity, the subject property consists of the middle unit of the Pleistocene Riverbank Formation $(Qr_2)^3$. This is Arkosic alluvium containing some locally derived detritus, chiefly sand with some silt, likely glacial outwash.

In the northwest portion of the site, soil consists of San Joaquin-Galt complex (0-1 percent slopes) with high to very high runoff and moderately well-drained alluvium derived from granite. In the central and southwest portions of the site, soil consists of Bruella sandy loam (0-2 percent slopes) with medium runoff and well-drained alluvium derived from granite. In the southeast corner site soil consists of Galt clay (0-1 percent slopes) with high runoff and somewhat poorly drained clayey alluvium derived from igneous, metamorphic and sedimentary rock over cemented alluvium derived from igneous, metamorphic and sedimentary rock.⁴

3.6.3 <u>Hydrogeology</u>

The most recent groundwater elevation map found for the area is from Fall 2007⁵. At this time, the groundwater elevation at the site was roughly 40 feet below msl. The subject property is at an

² US Geological Survey, 2018, 7.5' Topographic Map, California, Florin Quadrangle.

³ US Geological Survey Open File Report 80-849, Atwater, B.F., and Marchand, D.E., 1980, Preliminary maps showing Late Cenozoic deposits of the Bruceville, Elk Grove, Florin, and Galt, 7.5-minute quadrangles, Sacramento and San Joaquin Counties, California. Scale 1:24,000.

⁴ UC Davis California Soil Resource Lab, SoilWeb.

⁵ Sacramento County, California, Groundwater Elevations, Fall 2007. Department of Water Resources. https://waterresources.saccounty.net/Contour%20Maps/FALL%202007.pdf

elevation of approximately 35 feet above msl. Therefore, at this time depth to groundwater was 75 feet below ground surface (bgs). According to a Well Log for the destruction of two abandoned domestic wells at the subject property in 2011 (see Section 8.2.1), depth to groundwater was 72 feet bgs at this time. The subject property is in a region of a groundwater trough indicating that groundwater flows toward the center of the trough in all directions; however, nearest the subject property groundwater flow direction appears to be to the east based on the Fall 2007 groundwater map.

4.0 USER PROVIDED DATA

4.1 Title Records

Chain of title reports were not provided by the client for Petralogix's use in preparing this report. Environmental Data Resources, Inc. (EDR) performed a Title Search to identify any Liens and AULs associated with the subject property address of 10051 Big Horn Boulevard, City of Elk Grove, Sacramento County, California (APNs 132-2140-001, -002) recorded with the Sacramento County Recorder. There is a deed dated September 15, 2008 for APN 132-2140-002, identifying the subject property owner as Los Rios Community College District. No Liens or AULs were identified. The previous owner was not identified.

4.2 Environmental Liens or Activity and Use Limitations

No AUL or Environmental Liens were identified in the User Questionnaire. EDR performed a Lien and AUL search for the subject property address of 10051 Big Horn Boulevard, City of Elk Grove, Sacramento County, California (APNs 132-2140-001, -002). In addition, Petralogix reviewed the California EPA Department of Toxic Substances Control (DTSC) databases⁶ of land use restricted sites: "Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions" and "Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction."⁷ The subject property was not listed on either database.

4.3 Specialized Knowledge and Awareness

Mr. Dan McKechnie indicated no specialized knowledge or experience that is important or relevant to assessing or identifying recognized environmental conditions in connection with the subject property.

4.4 Commonly Known or Reasonably Ascertainable Data

Mr. Dan McKechnie indicates knowledge of commonly known or reasonably ascertainable information related to the subject property that was relevant to this study or review. Specifically, the past use of the subject property is farmland. No specific chemicals are known to be present or previously present on the subject property. No spills or other chemical releases are known to have taken place on the property. No known environmental cleanups have occurred on the property.

⁶ https://dtsc.ca.gov/land-use-restriction-sites/

⁷ https://dtsc.ca.gov/dtscs-cortese-list/

4.5 Valuation Decrease for Environmental Matters

Mr. Dan McKechnie indicates the knowledge of valuation reduction of the subject property due to any environmental issues, or otherwise, is not currently applicable to the subject property.

4.6 Owner, Property Manager, and Occupant Data

Orphan Sites

An orphan site can be described as a toxic waste area where the polluter could not be identified, or the polluter refused to take action or pay for the cleanup. It therefore is of great significance for due diligence review.

Mr. Dan McKechnie indicates he is the Owner's Representative. The current owner is the Los Rios Community College District. Information provided by the owner of the subject property is discussed in more detail in Section 8.1.

4.7 Purpose for Performing Phase I ESA

Mr. Dan McKechnie indicates the Phase I ESA has been requested for certification for new construction.

5.0 RECORDS EXAMINATION

In preparing this report, Petralogix has engaged the services of Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. EDR provided Petralogix with a list and profile of the recorded sites within the project study area that have been identified by regulatory agencies of significance.

EDR's report #5912702.2s is included as **Appendix D**. The date of the latest agency version of each database searched by EDR and the date EDR acquired the latest update are noted in the EDR report as part of the record for this Phase I ESA.

The EDR governmental database search included a list of "orphan sites." Orphan sites are locations which have a physical existence, but whose exact location is "fuzzy" and therefore, requires additional review to determine relevance to the site in question. These sites were not depicted on the EDR radius map of identified sites. EDR did not identify any "orphan sites."

5.1 Standard Environmental Records

A variety of standard environmental record sources have been reviewed based on the data provided by EDR in order to complete this report. Information on what sources were reviewed and search distances associated with those sources is listed in table form in **Appendix C**.

5.2 Supplementary Environmental Records

In addition to the standard environmental record sources, additional environmental records have been reviewed as well. These include a Phase I Environmental Site Assessment performed for the subject property by ENGEO Inc., dated February 2, 2004, and a Phase I Environmental Site Assessment Update performed for the subject property by Wallace Kuhl & Associates, dated July 22, 2008. These reports are discussed further in Section 5.3.1, and included as **Appendix H**.

5.3 Environmental Record Discoveries

5.3.1 <u>Subject Property</u>

The subject property is listed on an EDR database, as discussed in the following table. The site address for the subject property is 10051 Big Horn Boulevard.

Subject Property Address	Source	Comments
CRC Elk Grove Center 10051 Big Horn Boulevard	CIWQS	This site is listed on CIWQS from November 2011 to August 2013 and June 2012 to April 2014 for storm water management during construction.
Conrad/Joyce Aarseth 8355 Poppy Ridge Road	HIST UST, Sacramento Co. ML	This site is a farm previously located in the southern portion of the subject property, listed on the HIST UST database for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1960. The site is also listed as inactive on the Sacramento Co. ML. No leaks or spills have been reported. This is discussed further following this table.

The subject property (10051 Big Horn Boulevard) is listed on the CIWQS database for storm water management during construction. This does not constitute a REC to the subject property.

The historic subject property address of 8355 Poppy Ridge Road included a farm with several structures. This farm is listed on the HIST UST database for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1960. This site is also listed as inactive on the Sacramento Co. ML database. No record of removal was reviewed for the site (see Section 8.2.1). However, two previous environmental review were available for review.

Phase I Environmental Site Assessment, ENGEO Inc., 2004

ENGEO Inc. performed a Phase I Environmental Site Assessment for the subject property dated February 2, 2004 (included as Appendix H) for the historic property address of 8355 Poppy Ridge Road. At this time, the southern portion of the subject property consisted of a single family residential home, a mobile home structure, a large barn, and four out buildings, with two wells and two septic systems. The remainder of the property consisted of small dairy operations, irrigated pasture, and a Christmas tree farm. This assessment included an interview with the previous owner, Mr. Conrad Aarseth. Mr. Aarseth stated that a 550-gallon gasoline fuel UST was removed from the southern portion of the site in approximately 1979 without permits. ENGEO recommended that a Phase II Environmental Site Assessment be conducted to determine if the former tank impacted the soil at the Property.

<u>Phase I Environmental Site Assessment Update, Wallace Kuhl & Associates, 2008</u> Wallace Kuhl & Associates (WKA) performed a Phase I ESA Update (included as Appendix H) for the subject property dated July 22, 2008. Appendix C of this report includes a letter from ENGEO dated February 24, 2004 that details the results of Phase II ESA sampling at the subject property by ENGEO.

Petralogix Engineering, Inc. 26675 Bruella Road, Galt, Ca 95632 (209)-400-5729 www.petralogix.com

The former UST location was excavated (11 feet long x 9 feet wide x 6 feet deep) and five native soil samples were collected on the four side walls and the floor of the former tank location for analysis of petroleum hydrocarbons. Laboratory results indicate that no total petroleum hydrocarbons (gasoline, diesel, Benzene, Toluene, Ethylbenzene, and Xylenes) were detected at concentrations exceeding laboratory report limits in any of the five samples. ENGEO concluded that there are no data indicating historic leakage from the UST. Based on this assessment, the historic UST does not represent a REC to the subject property.

Through an interview with Mr. Rick Jordan (subject property owner at that time) and the City of Elk Grove Building Safety and Inspection Division, WKA documents that the historic structures were demolished with permit in 2006, along with two septic systems.

5.3.2 <u>Surrounding Sites</u>

Surrounding sites and adjacent properties were listed on some of the databases searched via EDR. See details below.

Facility Name	Location (miles)	Source	Comments
G Suyenaga Nursery and Farm 8310 Poppy Ridge Road	~71 feet south Cross-gradient	HIST UST, Sacramento Co. ML, SWEEPS UST, CA FID UST	This site is a farm listed on the HIST UST, SWEEPS UST, and CA FID UST databases for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1972. The site is also listed as inactive on the Sacramento Co. ML. No leaks or spills have been reported; however, given the close proximity to the subject property this may be a concern to the site. This is discussed further following this table.
Elizabeth Pinkerton Middle School 8365 Whitelock Parkway	~98 feet north Cross-gradient	RCRA NonGen/NLR	This site is a school listed on the RCRA NonGen/NLR database as a handler of hazardous waste. No violations are reported. This does not constitute a REC to the subject property.
Leonard H. Fehring 8399 Poppy Ridge Road	~614 feet east Down- gradient	HIST UST, Sacramento Co. ML	This site is a farm listed on the HIST UST database for a 250-gallon underground storage tank of unleaded motor vehicle fuel installed in 1956. The site is also listed as inactive on the Sacramento Co. ML. No leaks or spills have been reported. Based on this, and the small size of the UST, this site does not constitute a REC to the subject property.
Laguna Ridge High/Middle School No. 9 New Poppy Ridge Road/Big Horn Boulevard	~1337 feet north- northeast Cross-gradient	ENVIROSTOR, SCH	This site is a school listed on the ENVIROSTOR and SCH databases as having potential contaminants due to past agricultural use (row crops). No contaminants of concern were found and no action is required as of 2004. This does not constitute a REC to the subject property.

Facility Name	Location (miles)	Source	Comments
Laguna Ridge Elementary School #44 Elk Grove Boulevard/Bruceville Road	~2904 feet northwest Cross-gradient	ENVIROSTOR, SCH	This site is a school listed on the ENVIROSTOR and SCH databases as having potential contaminants. No contaminants of concern were found and no action is required as of 2006. This does not constitute a REC to the subject property.

G Suyenaga Nursery and Farm (8310 Poppy Ridge Road)

This site is located south (cross-gradient) of the subject property, across Poppy Ridge Road, roughly 71 feet from the site. This site is a farm listed on the HIST UST, SWEEPS UST, and CA FID UST databases for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1972. This site is also listed as inactive on the Sacramento Co. ML database; however, no record of removal was reviewed for the site. If this UST were to leak and petroleum hydrocarbons to migrate to groundwater, this could be a concern to the subject property. However, based on the small capacity of the tank, depth to groundwater greater than approximately 70 feet bgs, and the nearby but cross-gradient location, it is unlikely that a release from this UST would impact groundwater and the subject property. This does not constitute a REC to the subject property.

None of the other surrounding sites reviewed are likely to have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the subject property.

6.0 HISTORICAL USE DATA

6.1 Historical Aerial Photographs & Topographic Maps

Aerial photographs and topographic maps of the subject property provided by EDR, and aerial photographs from Google Earth, were reviewed as part of this investigation:

Aerial Photograph Description Table

Date	Photo Description
1937	The northern portion of the subject property appears to be vacant land. The
1947	center of the property appears to have an irrigation ditch. The southern portion of the property appears to be agricultural land with row or hay crops, two structures (likely farm houses or barn structures), several trees, and an access road. Smaller structures in the southern subject property may be present but obscured by trees. East-west trending roads border the subject property to the north and south. The general vicinity is agricultural land, including row crops and orchards, with several farm houses.

1957	The northern portion of the subject now appears to be a storage pond, and the
1964	southern crops extend farther north. There is an additional structure in the
1966	southern portion of the subject property. The general vicinity is similar to the
	previous photos.
1972	The center of the subject property is now cleared; to the south there are still row
	or hay crops. There appears to be one or two additional structures in the
	southern portion of the subject property. The northern portion of the site still
	appears to be a storage pond. The general vicinity is similar to the previous
	photos.
1984	The central and northern portions of the subject property are now one
1701	agricultural field of row or hay crops; the northern storage pond is no longer
	present. The southern portion is a different type of agricultural field still with
	several structures, likely farm houses. The general vicinity is similar to the
	previous photos.
1993	The subject property is now cleared of crops, possibly temporarily/seasonally,
1775	and is a vacant field in the north and central portions. Structures remain in the
	southern portion and more trees have been added in the southeast portion. The
	general vicinity is similar to previous photos.
1998	The subject property is similar to the previous photo (1993), with the exception
1770	of the north and central portions are again one field of row crops. The general
	vicinity is similar to previous photo.
2002	
	The subject property and vicinity is similar to the previous photo.
Google Earth	The subject property and vicinity is similar to the previous photo.
2005	The subject property still has new or her groups in the north and control portions.
	The subject property still has row or hay crops in the north and central portions,
Google	but some of the trees in the southern portion have been removed. The general
Earth	vicinity is similar to previous photo.
2006	The subject property is now cleared of crops and appears to be a vacant field. One
	of the structures in the southern portion has been removed. The general vicinity
	to the east, west, and south remain agricultural fields with farm houses. To the
	north and northwest there appears to be ongoing construction for both a
2007	residential neighborhood and possibly commercial use.
2007	
C 1	The subject property is similar to the previous photo, but is now cleared of all
Google	structures. The general vicinity is similar to the previous photo; construction
Earth	structures. The general vicinity is similar to the previous photo; construction appears ongoing to the north and northwest.
	structures. The general vicinity is similar to the previous photo; construction appears ongoing to the north and northwest. The subject property is now entirely cleared vacant land, apart from several
Earth	structures. The general vicinity is similar to the previous photo; construction appears ongoing to the north and northwest. The subject property is now entirely cleared vacant land, apart from several remaining trees in the south and possibly several unpaved roads. To the north is

The residential community to the northwest is significantly more developed.

	west of the subject property that connects to a paved entrance to the site in the			
	central portion. The northern portion of the southern half of the subject property			
	has one large structure and a field area. The northwest and southernmost portions			
	of the subject property remain vacant land. There is a paved region in the southern			
	portion with several apparent containers. The general vicinity is similar to the			
	previous photo, with the residential community to the northwest more developed.			
2016	The subject property is similar to the previous photo, with the exception of the containers in the southern paved area are now removed. To the east and northeast			
	there are additional housing developments in the general vicinity; the west and			
	south remain agricultural land.			

Topographic Maps

Date	Scale	Quadrangle	Map Description
1894	1:125,000	Lodi	The subject property and general vicinity are depicted as vacant land. There are four light duty roads that form a roughly 1.5 by 2 mile box around the subject property, two trend east- west to the north and south and two trend north-south to the east and west. There is also a northwest-southeast trending road roughly one mile to the east and a northwest-southeast trending railroad approximately 1.5 miles to the northeast. There are several structures depicted one mile to the northeast.
1909 1910	1:31,680	Florin Elk Grove Galt Bruceville	The subject property remains vacant. There is now an east-west trending unimproved road that terminates 0.25 miles to the east-southeast. There are more structures and unimproved roads depicted in the general vicinity.
1941	1:62,500	Franklin	There are now two structures depicted in the southern portion of the subject property; the remainder of the property is depicted as vacant land. The east-west trending road 0.25 miles from the subject property in the previous map is now a light duty road that extends farther west and borders the subject property to the south. There is now a structure depicted on the southern adjacent property. Multiple orchards and more structures are depicted in the surrounding vicinity. The northwest-southeast trending road to the northeast is depicted as a primary highway, labeled as Highway 99 and Highway 50.

Date	Scale	Quadrangle	Map Description
1947	1:50,000	Galt	The subject property and vicinity remain undeveloped and similar to previous map.
1952 1953	1:24,000	Elk Grove Galt Florin Bruceville	The subject property appears similar to the previous map, with one additional structure in the southern portion. The bordering road to the south is now a secondary highway labeled as Poppy Ridge Road. There is now a structure on the eastern adjacent property. The general vicinity has fewer orchards and more structures depicted, particularly to the northeast, east of Highway 99.
1968	1:24,000	Elk Grove Galt Florin Bruceville	There is now only one remaining structure on the subject property. The general vicinity is similar to the previous map.
1975	1:24,000	Elk Grove Galt Florin Bruceville	The subject property appears similar to the previous map. The general vicinity appears similar to previous map with further development to the northeast, east of Highway 99.
1980	1:24,000	Galt Florin Bruceville	There are now three structures depicted in the southern portion of the subject property. The general vicinity appears similar to previous map with further development to the northeast, east of Highway 99.
2012	1:24,000	Elk Grove Galt Florin Bruceville	The subject property has no structures depicted. The northern and southeast portions are depicted as woodland. There is now an east- west trending road bordering the subject property on the north labeled Whitelock Parkway. The general vicinity to the north and one mile to the west is now significantly developed with what appears to be mostly residential communities. The surrounding

Date	Scale	Quadrangle	Map Description
			vicinity to the east, west, and south remains mostly vacant land.

Based on the historical aerial photographs and topographic maps and supplemental information from Google Earth, the subject property was vacant or agricultural land from at least 1894 to 1910. Several farm/barn structures were built in the southern portion of the subject property between 1910 and 1972; the structures were removed between 2005 and 2007. Based on the aerial photographs, there was a storage pond in the northern portion of the site from at least 1957 to 1972, and the central, northern and part of the southern portions of the subject property were used as row crops or hay crops from at least 1937 to 2005. The subject property was a developed campus with one structure by 2013, with construction starting in late 2011 or early 2012. These photos and maps are included in **Appendix E**.

6.2 Sanborn Insurance Company Maps

An attempt was made by EDR to obtain Sanborn Insurance Company maps for the period covering the years 1894 through the present in order to determine what types of activities were conducted on the subject property and on adjoining properties. Sanborn maps for the subject property were not identified.

6.3 Local Street Directories

Cole Information and Dun & Bradstreet historical directory listings data by infoUSA⁸ for Elk Grove were reviewed, including issues dated approximately every five years from 1970 through 2014. The subject property was not identified at the target address (10051 Big Horn Boulevard), or on the cross street Whitelock Parkway. Listings indicate neighboring properties consist primarily of commercial businesses and medical facilities, as well as an Elk Grove Unified School adjacent north. No listings material to RECs were identified in the City Directory findings. City Directory listings are included in **Appendix E**.

7.0 SITE RECONNAISSANCE

A visual reconnaissance of the subject property was conducted on January 7, 2020, by Tonya Scheftner. During the site visit, the weather was foggy and cold. A site map and photographs of the subject property are attached to this report in **Appendices A** and **B**.

7.1 Procedure and Restrictive Conditions

The periphery of the subject property, northern and south fields, parking lot, and common areas of Elk Grove Center building were observed.

⁸ Provided by EDR.

7.2 Petralogix Site Visit Worksheet

Site Visit Observations		
Subject Property: 10051 Big Horn Blvd.	Weather: Foggy, cold	
Describe the current use of the property.	The subject property is currently used as a junior colleg campus – Elk Grove Center.	
Describe evidence of historic uses on the property.	None observed.	
Is there a Potable Water Source?	Well observed.	
Is there a Sewage Disposal Source?	Sacramento Area Sewer District	
Are there any onsite odors?	None observed.	
Are there any pools of Liquid?	None observed.	
Are there any electric or hydraulic equipment likely to contain PCBs?	Two ground-mounted transformers were observed in fenced and locked area west of the Elk Grove Center buildin	
Are there any storage tanks located onsite?	None observed.	
Are there any drums or other containers located onsite?	None observed, with the exception of small amounts cleaning supplies in janitorial closets.	
Observations – Structure Interior		
Are there any heating/cooling system?	Central heating and air.	
Are there any stains or corrosion?	None observed.	
Are there any sumps or drains?	None observed.	
Observations - Exterior		
Are there any Ponds, Lagoons, and/or Pits?	None observed.	
Is there any stained soil or pavement visible onsite?	Minor staining observed in parking lot.	
Was there any solid waste storage or deposition onsite?	Atlas dumpsters were observed on the site. A small pile debris that consisted of cement, metal posts, and plast fencing was observed in the southern field.	
Any noticeable wastewater discharge(s)?	None observed.	

Site Visit Observations		
Are there any wells or septic systems visible onsite?	One well, currently in operation to serve the campus observed in fenced area east of the Elk Grove Center building. No septic systems were observed.	
Observations – Vicinity Area		
Describe the topography of property and vicinity.	The subject property and vicinity are relatively flat.	
Describe the current use of adjoining properties.	To the north is Whitelock Pkwy followed by Elizabeth Pinkerton Middle School. To the east is residential tract homes. To the west is Big Horn Blvd followed by undeveloped land. To the south is Poppy Ridge Road followed by rural residential lots.	
Is there any evidence of past uses?	None observed.	
Describe the current land uses in area.	Residential, Educational, Agricultural	
Describe any evidence of past uses.	None observed.	

No RECs were observed during the site reconnaissance. A small pile of debris was observed in the southern field which consisted of concrete, metal posts, and plastic fencing which is considered *de minimis*.

During site reconnaissance, the southern field was investigated for evidence of former historic structures (such as slabs, footings, old building material) as well as any evidence of former wells; no evidence of former structures or wells was observed, however, there was tall grass, broken branches, and mulch piles which limited site observations.

8.0 INTERVIEWS

8.1 Interview with Owner / Site Manager and Key Individuals

Mr. Dan McKechnie, current Director of Facilities Planning for the Los Rios Community College District, was interviewed via an owner questionnaire (**Appendix F**) regarding current and historical use of the subject property. The current property owner is Los Rios Community College District; the purchase date and previous owners were not indicated. Current use of the property is as a higher education (general education) campus called Elk Grove Center. The subject property uses both a public water and sewer system with an age of 10 years, and uses both central electric and natural gas. There is currently a general education building built in 2009. No previous structures removed are known. No tanks are currently located on-site. Knowledge of past agricultural use is not known. Mr. McKechnie indicated that material safety data sheets and safety plans are available for the Campus, but were not provided.

8.2 Interviews with Local Government Offices

8.2.1 Sacramento County Environmental Health Division

The Sacramento County Environmental Health Division was contacted to determine whether any records were on file at that agency material to RECs in connection with the subject property address 10051 Big Horn Boulevard. The only records available are related to two abandoned wells at the site; this is discussed below. All of the records provided by SCEHD are available for review as Appendix G.

Abandoned Wells

The Environmental Management Department (EMD) discovered two abandoned domestic wells near an access road to a former house at the southern portion on the subject property (APN 132-2140-002). One well with open piping was discovered on September 28, 2010 and ordered to be inactivated, repaired or destructed by December 28, 2010; the other well with open casing was discovered on January 24, 2011 and directed to be inactivated, repaired or destructed by May 1, 2011. Around December 23, 2010 the first discovered well was improperly abandoned without a permit by Edward R. Bacon Company, Inc (ERBCO). A portion of the well casing was removed, rock was placed inside the casing, and the well was then buried with debris. Both the owners and ERBCO received a Notice of Violation from the EMD for this action. Both wells were then destructed properly and with a permit by Robert Allen Nix Well Drilling on June 22, 2011 using sand cement and explosives. These now properly destructed wells do not present RECs to the subject property.

Historic UST (8355 Poppy Ridge Road)

The historic subject property address of 8355 Poppy Ridge Road included a farm with several structures. This farm is listed on the HIST UST database for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1960 (see Section 5.3.1). A records request was submitted to the Sacramento County Environmental Health Division on January 12, 2019 for the historic southern subject property address of 8355 Poppy Ridge Road. No response has been received to date. However, a Phase I ESA performed by ENGEO in 2004 and a Phase I ESA Update performed by WKA in 2008 (sections 5.2 and 5.3.1) state that this UST was removed in approximately 1979 without permit. Sampling and testing performed by ENGEO in 2004 indicate that there was no release of petroleum hydrocarbons from this UST. This does not constitute a REC to the subject property.

8.2.2 <u>City of Elk Grove, Building Division</u>

EDR performed a search of building department records for the subject property and adjoining sites on behalf of Petralogix on December 20, 2019. No building records were available for the target property address, 10051 Big Horn Boulevard, Elk Grove, or for adjoining properties. A Phase I ESA Update performed by WKA in 2008 (section 5.2) for the subject property (historic address 8355 Poppy Ridge Road) stated that the on-site structures were demolished with permit in 2006.

8.2.3 Sacramento County Assessor-Recorder

Petralogix submitted a search request of property records for the subject property available at the Sacramento County Recorder office. Records identify the current property owner as Los Rios College District for APNs 132-2140-001 (acquisition year 2011) and 132-2140-002 (acquisition year 2008). Previous owners are provided back to 2006, and appear to be development companies.

8.2.4 Sacramento Metropolitan Air Quality Management District

The Sacramento Metropolitan Air Quality Management District was contacted to determine whether any records were on file at that agency material to RECs in connection with the subject property. Per SMAQMD, no documents were found related to the site address of 10051 Big Horn Boulevard, Elk Grove, or within one quarter mile of the site.

8.2.5 <u>Sacramento County Agricultural Commissioner</u>

The Sacramento County Agricultural Commissioner was contacted to determine whether any records were on file at that agency material to pesticide use in connection with the subject property. No documents were found related to the site address of 10051 Big Horn Boulevard, Elk Grove.

9.0 MOLD ASSESSMENT SCREENING

No obvious signs of mold were seen during our limited site visit. We are not certified mold experts. If the Los Rios Community College District is concerned with the possibility of mold, a survey is applicable. However, mold inspection is not a required part of a Phase I ESA evaluation under the ASTM Standard.

10.0 LEAD SCREENING EVALUATION

Campus construction started in 2011 or 2012 and was completed in 2013; the on-site structure was built after the ban of lead paints and products. Therefore, the potential for lead-based paints located in/on the site structure is considered low. We are not certified lead experts and lead inspection is not a required part of a Phase I ESA evaluation under the ASTM Standard.

Several structures demolished between 2005 and 2007 in the southern portion of the subject property were built between 1910 and 1972, prior to the effective ban of lead paints and products. The potential for lead-based paints and products leaching into the soil near the previous location of the demolished structures and within a portion of the subject property is considered moderate to high. Due to the demolished historic structures, lead may be present in the soil where the former buildings were previously located. The former demolished structures are therefore considered RECs.

11.0 ASBESTOS SCREENING EVALUATION

Campus construction started in 2011 or 2012 and was completed in 2013, after the effective ban of most asbestos containing building materials. The potential for asbestos containing building material located in/on the site structure is considered low. We are not certified asbestos experts and asbestos inspection is not a required part of a Phase I ESA evaluation under the ASTM Standard.

Several structures demolished between 2005 and 2007 in the southern portion of the subject property were built between 1910 and 1972, prior to the effective ban of most asbestos containing building materials. The potential for asbestos containing building material leaching (or being physically mixed) into the soil near the previous location of the demolished structures and within a portion of the subject property is considered moderate to high. Due to the demolished buildings,

asbestos may be present in the soil where the former buildings were previously located. The former demolished structures are therefore considered RECs.

12.0 RADON GAS ASSESSMENT

Radon gas emissions from the natural breakdown of elements in soil is a concern in many areas around the country. In particular, Radon gas can buildup in confined spaces such as tunnels and basements. A survey of the subject property was not conducted, but a review based on government data was performed. The Federal EPA Radon Zone for Sacramento County is Zone 3, indoor average level <2 pCi/L. Based on this low potential, Radon is a low concern for the subject property.

13.0 VEC & VAPOR INTRUSION SCREENING

The EDR VEC App was used by our firm to perform a Tier 1 Screening for Vapor. This App provides integrated data, analytical tools, and professional reporting searches to help review available environmental records (Appendx D). Based on our review, the subject property does not have listings that may have the potential to cause vapor intrustion/encroachment risk.

In addition, a search area of one-third of a mile was utilized in order to assess potential listings within the region which may have the potential to cause vapor intrusion/encroachment risk. Based on our review, there is one listing that may have the potential to cause vapor intrusion/encroachment risk. G Suyenaga Nursery Farm (8310 Poppy Ridge Road) located 71 feet to the south/cross-gradient reportedly has one 350-gallon UST that may cause a vapor intrusion/encroachment risk to the subject property if the UST were to leak to groundwater. However, based on the small capacity of the UST and depth to groundwater at greater than 70 feet, release to groundwater is unlikely.

14.0 DISCOVERIES & FINDINGS

- The northern, central and part of the southern portions of the subject property were row crops or hay crops from at least 1937 to 2005; the subject property was vacant or agricultural land from at least 1894 to 1910.
- Based on the aerial photographs, there was a storage pond in the northern portion of the site from at least 1957 to 1972.
- Several farm/residential/barn structures (8355 Poppy Ridge Road) were built in the southern portion of the subject property between 1910 and 1972; the structures were demolished in 2006. Two wells and two septic systems were associated with these structures. The two septic systems were removed with permit in 2006.
- The subject property was a developed campus with one structure by 2013, with construction starting in late 2011 or early 2012.
- The historic subject property address of 8355 Poppy Ridge Road included a farm with several structures (discussed above). This farm is listed on the HIST UST database for an underground storage tank of regular motor vehicle fuel installed in 1960. This site is also listed as inactive on the Sacramento Co. ML database; however, no record of removal was reviewed for the site. Based on a Phase I ESA performed by ENGEO in 2004, a 550-gallon UST was removed in 1979 without permit. Sampling and testing by ENGEO in 2004 indicate that release of petroleum hydrocarbons from this UST did not occur.

- Two abandoned wells in the southern portion of the subject property were properly destructed in 2011 with Sacramento County EMD permits using sand cement and explosives. Prior to this, one well was improperly abandoned without a permit. A portion of the well casing was removed, rock was placed inside the casing, and the well was then buried with debris.
- During site reconnaissance, the southern field was investigated for evidence of former historic structures as well as any evidence of the former wells; no evidence of former structures or wells was observed. Minor staining was observed in the parking lot and a small pile of debris was observed in the southern field which consisted of concrete, metal posts, and plastic fencing.
- Numerous surrounding sites and adjacent parcels were listed on some of the databases searched via EDR. None the sites listed likely to have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the subject property except for the following:
 - G Suyenaga Nursery and Farm (8310 Poppy Ridge Road): This site is located 71 feet south (cross-gradient) of the subject property, across Poppy Ridge Road. This site is a farm listed on the HIST UST, SWEEPS UST, and CA FID UST databases for a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1972. This site is listed as inactive on the Sacramento Co. ML database; however, no record of removal was reviewed for the site. If this UST were to leak and petroleum hydrocarbons to migrate to groundwater, this could be a concern to the subject property.
- The Tier 1 Screening for Vapor Intrusion at the subject property indicated that a historic UST 71 feet south/cross-gradient of the subject property (8310 Poppy Ridge Road), across Poppy Ridge Road, may cause a vapor intrusion/encroachment risk to the subject property if this UST were to leak.

15.0 PROFESSIONAL OPINIONS

- The subject property was historically used as row crops or hay crops. Organochlorine pesticides may have been applied on-site in the past. This is considered a REC to the subject property.
- A historic storage pond was located in the northern portion of the subject property. It is unknown what was stored in this pond; however, it is likely to be related to the agricultural use of the remainder of the subject property. Any water stored may have contained organochlorine pesticides related to the agricultural use on the site. This is considered a REC to the subject property.
- The historic UST in the southern portion of the subject property was removed in approximately 1979, and sampling and testing by ENGEO in 2004 indicates that no release of petroleum hydrocarbons occurred. This is not considered a REC to the subject property.
- The two abandoned wells in the southern portion of the subject property were eventually properly destructed with County oversight in 2011, despite improper abandonment of one well previously. This is not considered a REC to the subject property.
- The current on-site structure was built after 1980; building materials in the on-site structure are unlikely to contain lead and asbestos. Lead and asbestos are not a concern for the existing on-site structure.

- The structures in the southern portion of the subject property demolished in 2006 were built between 1910 and 1972, prior to the effective ban of lead paints and products and asbestos containing building materials. The potential for lead-based paints and products and asbestos containing building material leaching (or being physically mixed) into the soil near the previous location of the demolished structures and within a portion of the subject property is considered moderate to high. The demolished/former structures are therefore considered RECs.
- The site located south (cross-gradient) of the subject property (8310 Poppy Ridge Road), across Poppy Ridge Road, with a 350-gallon underground storage tank of regular motor vehicle fuel installed in 1972 would present a concern to the subject property if the UST were to leak and migrate to groundwater. However, based on the small capacity of the tank, depth to groundwater greater than approximately 70 feet bgs, and the nearby but cross-gradient location, it is unlikely that a release from this UST would impact groundwater and the subject property. This does not constitute a REC to the subject property.
- The vapor/instruction risk at the subject property from the UST approximately 71 feet south (8310 Poppy Ridge Road) is considered low, based on the small capacity of the UST and depth to groundwater at greater than 70 feet.
- Staining observed in the parking lot of the site is minor, and therefore considered *de minimis*.
- The small pile of debris observed in the southern field is considered *de minimis*.

16.0 FINAL CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 for 3835 Freeport Boulevard, City of Sacramento, California, (the subject property). Any exceptions to, or deletions from, this practice are described in the Limitations Section of this report. This assessment identified the following recognized environmental conditions (RECs) in connection with the subject property:

- The subject property was historically used as row crops or hay crops. Organochlorine pesticides may have been applied on-site in the past. This is considered a REC to the subject property.
- The historic storage pond in the northern portion of the subject property is considered a REC.
- The demolished/former structures in the southern portion of the subject property may have caused lead and asbestos to be present in the surrounding soil; this is considered a REC to the subject property.

This assessment has identified the following *de minimis* conditions:

- Minor staining observed in the parking lot.
- Small pile of debris in the southern field.

17.0 RECOMMENDATIONS

- Further investigation should be performed to evaluate whether any environmental media has been impacted by organochlorine pesticides applied to the subject property in the past.
- Further investigation should be performed to evaluate whether any environmental media has been impacted by the historic pond located in the northern portion of the subject property.
- Further investigation should be performed to evaluate whether lead and asbestos have been mixed into the on-site soil near the demolished structures in the southern portion of the subject property.
- The minor staining in the parking lot should be contained and monitored.
- The debris pile in the southern portion of the subject property should be removed.

18.0 SPECIFIC DEVIATIONS

No deviations have been taken from this standard.

19.0 ADDITIONAL SERVICES

No additional services were provided.

APPENDIX C

Search Radius	Database Reviewed (EDR)
1 mile	National Priority List (NPL) Source: U.S. Environmental Protection Agency (US EPA). The NPL database is a subset of CERCLIS (see below). It identifies sites for priority cleanup under Superfund Programs. NPL sites may encompass relatively large areas, thus the larger search radius.
0.5 mile	Delisted NPL List Source: US EPA. The Delisted NPL database includes sites which have been deleted from the NPL due to a no further response being needed. The EPA uses the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) to select sites for deletion. Generally this is based on cleanup action.
0.5 mile	Comprehensive Environmental Response Compensation and Liability Information System List (CERCLIS) Source: US EPA. The CERCLIS database contains information on potentially hazardous waste sites that have been reported to the US EPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are included, proposed for inclusion, or in the screening phase for possible inclusion in the NPL.
0.5 mile	CERCLIS "No Further Remedial Action Planned" (NFRAP) Source: US EPA. The CERC-NFRAP database contains information on sites designated "No Further Remedial Action Planned" which have been removed from the CERCLIS database. NFRAP sites may be sites where no contamination was found following an initial investigation, where remedial action has been completed, or where the contamination was not serious enough to require Federal Superfund action or NPL consideration.
1 mile	Corrective Action Report (CORRACTS) Source: US EPA. CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
0.5 mile	Resource Conservation and Recovery Act "Treatment, Storage, and Disposal Facilities" (RCRA-TSDF) Source: US EPA. The RCRA-TSDF database contains basic information on facilities that treat, store, or dispose of hazardous waste as defined by RCRA. This list is contained within the RCRAInfo database.
property and adjoining	RCRA Large Quantity Generators (LQG) and Small Quantity Generators (SQG)Source: US EPA. These lists are contained within the RCRAInfo database.Each site is categorized as one of the following:RCRA-LQG: Facilities that generate more than 1000 kg per month of non-acutely hazardouswaste, or more than 1 kg per month of acutely hazardouswaste.RCRA-SQG: Facilities that generate between 100 kg and 1000 kg per month of non-acutely hazardous waste.

Search Radius	Database Reviewed (EDR)
property only	Engineering Controls Sites List (US ENG CONTROLS) Source: US EPA. The US ENG CONTROLS database is a list of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.
property only	Sites with Institutional Controls (US INST CONTROL) Source: US EPA. The US INST CONTROL database lists sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation case requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.
property only	Federal Emergency Response Notification System (ERNS) Source: U.S. Coast Guard, National Response Center. ERNS database contains information on the reported releases of oil and hazardous substances.
1 mile	ENVIROSTOR Source: California EPA Department of Toxic Substances Control (DTSC). The ENVIROSTOR database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes NPL sites; State response sites including military facilities and State Superfund; Voluntary Cleanup sites; and school sites.
1 mile	HIST CAL-SITES Source: DTSC. The CAL-SITES database contains potential or confirmed hazardous substance release properties. In 1996, the EPA reevaluated and reduced the number of sites in this database. Cal-Sites is no longer updated and has been replaced by ENVIROSTOR.
0.5 mile	Spills, Leaks, Investigations, and Cleanups (SLIC) Source: State Water Resources Control Board (SWRCB). The SLIC list includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites.
0.5 mile	Solid Waste Information System SWF/LF (SWIS) Source: California Integrated Waste Management Board. The SWIS database contains an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.
0.5 mile	Geotracker's Leaking Underground Fuel Tank Report (LUST) Source: SWRCB. The LUST database contains an inventory of reported leaking underground storage tank incidents.

Search Radius	Database Reviewed (EDR)	
0.5 mile	Leaking Underground Storage Tanks on Indian Land (INDIAN LUST) Source: US EPA. The INDIAN LUST database records leaking underground storage tanks on Indian land in Arizona, California, New Mexico, and Nevada.	
property and adjoining	Active UST Facilities (UST) Source: SWRCB. The UST list contains an inventory of active underground storage tank facilities gathered from local regulatory agencies.	
property and adjoining	Facility Inventory Database (CA FID UST) Source: Cal EPA. The CA FID UST database is a historical listing of active and inactive underground storage tank locations.	
property and adjoining	Hazardous Substance Storage Container Database (HIST UST) Source: SWRCB. The HIST UST database is a historical listing of underground storage tanks.	
property and adjoining	Underground Storage Tanks on Indian Land (INDIAN UST) Source: US EPA Region 9. The Indian UST database contains an inventory of underground storage tanks on Indian land.	
property only	Deed Restriction Listing (DEED) Source: DTSC. The DEED database contains an inventory of Site Mitigation and Brownfields Reuse Program (SMBRP) facility sites with deed restrictions and Hazardous Waste Management Program (HWMP) facility sites with deed or land use restrictions. The SMBRP list includes active deed restrictions and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The HWMP list includes current or former hazardous waste facilities that have a recorded land use restriction at the local County recorder's office.	
0.5 mile	Voluntary Cleanup Program Properties (VCP) Source: DTSC. The VCP database contains an inventory of low threat properties with either confirmed or unconfirmed releases in which the project proponents have requested that DTSC oversee investigation and/or cleanup activities.	
1 mile	US Brownfields Source: US EPA. The US Brownfields database includes properties listed as Cooperative Agreement Recipients and properties addressed by Targeted Brownfields Assessments (TBA). EPA's TBA program is designed to help states, tribes, and municipalities minimize the uncertainties of contamination often associated with brownfields. States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the US EPA.	

Search Radius	Database Reviewed (EDR)
0.5 mile	SLIC REG 5 Source: California Regional Water Quality Control Board Central Valley Region (5). The SLIC (Spills, Leaks, Investigations and Cleanup) program is designed to protect and restore water quality from spills, leaks, and similar discharges.
0.5 mile	Leaking Underground Storage Tanks (LUST) REG 5 Source: California Regional Water Quality Control Board Central Valley Region (5). The LUST database contains an inventory of reported leaking underground storage tank incidents.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

CA FID UST: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, and dated 10/31/1994 has revealed that there is 1 CA FID UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/20/2019 Number of Days to Update: 13 Source: EPA Telephone: N/A Last EDR Contact: 12/10/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

NPL Site Boundaries

EPA Region 4 Telephone 404-562-8033

EPA Region 5 Telephone 312-886-6686

EPA Region 10 Telephone 206-553-8665 EPA Region 6 Telephone: 214-655-6659

EPA Region 7 Telephone: 913-551-7247

EPA Region 8 Telephone: 303-312-6774

EPA Region 9 Telephone: 415-947-4246

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/20/2019 Number of Days to Update: 13 Source: EPA Telephone: N/A Last EDR Contact: 12/09/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56 Source: EPA Telephone: 202-564-4267 Last EDR Contact: 08/15/2011 Next Scheduled EDR Contact: 11/28/2011 Data Release Frequency: No Update Planned

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/20/2019 Number of Days to Update: 13 Source: EPA Telephone: N/A Last EDR Contact: 12/10/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019 Date Data Arrived at EDR: 04/05/2019 Date Made Active in Reports: 05/14/2019 Number of Days to Update: 39 Source: Environmental Protection Agency Telephone: 703-603-8704 Last EDR Contact: 10/04/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/21/2019 Number of Days to Update: 14 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 12/09/2019 Next Scheduled EDR Contact: 01/27/2020 Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/21/2019 Number of Days to Update: 14 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 12/09/2019 Next Scheduled EDR Contact: 01/27/2020 Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/24/2019	Source: EPA
Date Data Arrived at EDR: 06/26/2019	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/16/2019 Next Scheduled EDR Contact: 04/06/2020 Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/16/2019 Next Scheduled EDR Contact: 04/06/2020 Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/16/2019 Next Scheduled EDR Contact: 04/06/2020 Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators) RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

	Data Release Frequency: No Update Planned

HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005 Date Data Arrived at EDR: 08/03/2006 Date Made Active in Reports: 08/24/2006 Number of Days to Update: 21 Source: Department of Toxic Substance Control Telephone: 916-323-3400 Last EDR Contact: 02/23/2009 Next Scheduled EDR Contact: 05/25/2009 Data Release Frequency: No Update Planned

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/29/2019 Date Data Arrived at EDR: 07/31/2019 Date Made Active in Reports: 10/08/2019 Number of Days to Update: 69 Source: Department of Toxic Substances Control Telephone: 916-323-3400 Last EDR Contact: 10/29/2019 Next Scheduled EDR Contact: 02/10/2020 Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 06/30/2018 Date Data Arrived at EDR: 07/16/2019 Date Made Active in Reports: 09/24/2019 Number of Days to Update: 70 Source: Department of Toxic Substances Control Telephone: 916-255-6504 Last EDR Contact: 09/24/2019 Next Scheduled EDR Contact: 01/20/2020 Data Release Frequency: Varies

TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995 Date Data Arrived at EDR: 08/30/1995 Date Made Active in Reports: 09/26/1995 Number of Days to Update: 27 Source: State Water Resources Control Board Telephone: 916-227-4364 Last EDR Contact: 01/26/2009 Next Scheduled EDR Contact: 04/27/2009 Data Release Frequency: No Update Planned

CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 08/14/2019 Date Data Arrived at EDR: 08/14/2019 Date Made Active in Reports: 08/21/2019 Number of Days to Update: 7 Source: CalEPA Telephone: 916-323-2514 Last EDR Contact: 10/22/2019 Next Scheduled EDR Contact: 02/03/2020 Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 10/25/2019 Date Data Arrived at EDR: 11/07/2019 Date Made Active in Reports: 11/20/2019 Number of Days to Update: 13 Source: Environmental Protection Agency Telephone: 202-564-6023 Last EDR Contact: 12/10/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Semi-Annually

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 09/03/2019 Date Data Arrived at EDR: 09/04/2019 Date Made Active in Reports: 11/05/2019 Number of Days to Update: 62 Source: DTSC and SWRCB Telephone: 916-323-3400 Last EDR Contact: 12/04/2019 Next Scheduled EDR Contact: 03/16/2020 Data Release Frequency: Semi-Annually

US FIN ASSUR: Financial Assurance Information

All owners and operators of facilities that treat, store, or dispose of hazardous waste are required to provide proof that they will have sufficient funds to pay for the clean up, closure, and post-closure care of their facilities.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 09/23/2019 Number of Days to Update: 89 Source: Environmental Protection Agency Telephone: 202-566-1917 Last EDR Contact: 12/19/2019 Next Scheduled EDR Contact: 04/06/2020 Data Release Frequency: Quarterly

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013 Date Data Arrived at EDR: 03/21/2014 Date Made Active in Reports: 06/17/2014 Number of Days to Update: 88 Source: Environmental Protection Agency Telephone: 617-520-3000 Last EDR Contact: 10/31/2019 Next Scheduled EDR Contact: 02/17/2020 Data Release Frequency: Quarterly

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017 Date Data Arrived at EDR: 05/08/2018 Date Made Active in Reports: 07/20/2018 Number of Days to Update: 73 Source: Environmental Protection Agency Telephone: 703-308-4044 Last EDR Contact: 11/08/2019 Next Scheduled EDR Contact: 02/17/2020 Data Release Frequency: Varies

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2017 Date Data Arrived at EDR: 11/16/2018 Date Made Active in Reports: 11/21/2019 Number of Days to Update: 370 Source: EPA Telephone: 202-566-0250 Last EDR Contact: 11/22/2019 Next Scheduled EDR Contact: 03/02/2020 Data Release Frequency: Annually

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UM	TRA: Uranium Mill Tailings Sites	for federal government use in national defense programs. When the mills

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS	

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- Groundwater flow direction, and
 Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

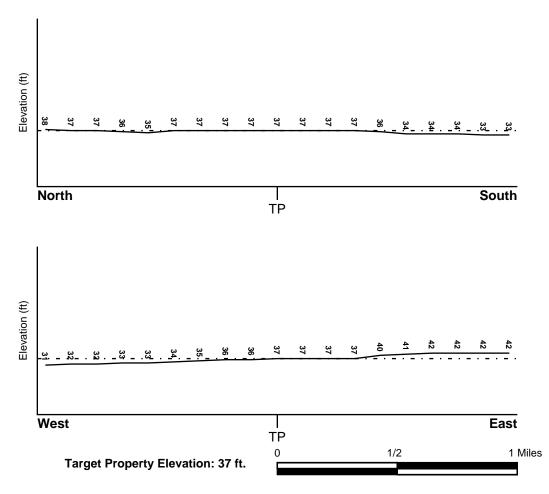

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06067C0319H	FEMA FIRM Flood data
Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY	NWI Electronic
<u>NWI Quad at Target Property</u> FLORIN	Data Coverage YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:		
Search Radius:	1.25 miles	
Status:	Not found	

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported LOCATION FROM TP GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1	
Soil Component Name:	SAN JOAQUIN
Soil Surface Texture:	silt loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Moderately well drained
Hydric Status: Partially hydric	
Corrosion Potential - Uncoated Steel:	Moderate
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1
2	14 inches	20 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1
3	20 inches	46 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 7.8 Min: 6.1

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA Telephone: 877-336-2627 Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS) This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database Source: Department of Water Resources Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations Source: Department of Conservation Telephone: 916-323-1779 Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon Source: Department of Public Health Telephone: 916-210-8558 Radon Database for California

Area Radon Information

Source: USGS Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones Source: EPA Telephone: 703-356-4020 Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Petralogix on Dec 20, 2019.

TARGET PROPERTY

10051 Big Horn Blvd Elk Grove, CA 95757

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

GLOSSARY

General Building Department concepts

- ICC: The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections): This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- Jurisdiction: This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- GC: General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- Sub: Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- Journeymen: Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- HVAC (Mechanical, Heating & Air companies): HVAC = Heating, Ventilation, and Air Conditioning.
- ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release): Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- "Pull" a permit: To obtain and pay for a building permit.
- CBO: Chief Building Official
- Planning Department: The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- Zoning Department: The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- Zoning District: A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- PIN (TMS, GIS ID, Parcel#): Property Identification Number and Tax Map System number.
- State Card (Business license): A license card issued to a contractor to conduct business.
- Building Inspector (Inspector): The inspector is a building department employee that inspects building construction for compliance to codes.
- C.O.: Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000 Permit Type: Bldg -New Permit Number: 10100000405 Status: Valuation: \$1,000,000.00 Contractor Company: OWNER-BUILDER Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- · search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- · search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any guestions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Petralogix were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

APPENDIX F

petralogix geophysics - environmental - geology

PHASE I ENVIRONMENTAL SITE ASSESSMENT - USER QUESTIONNAIRE ASSESSOR PARCEL NUMBERS: 132-2140-001, -002 ELK GROVE CENTER 10051 BIG HORN BOULEVARD ELK GROVE, CALIFORNIA

Petralogix Engineering, Inc. is preparing a Phase I Environmental Site Assessment (Phase I ESA) for the above referenced property in order to assess the potential of onsite items which may be considered as Recognized Environmental Condition or Concern (RECs).

A Recognized Environmental Condition or Concern (REC) is one of the terms used to identify environmental liability within the context of a Phase I Environmental Site Assessment. ASTM defines the recognized environmental condition in the E1527-13 standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment". De minimis conditions are not recognized environmental conditions.

We ask that you complete the following questionnaire and email it to tscheftner@petralogix.com. We will include this in the Phase I ESA report as an appendix. We appreciate your time and encourage you to call us at 209-770-0731 with any questions about this or any of the items contained with this document.

REQUIRED QUESTIONS

Please provide the following information to our firm in order to qualify for the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"). Failure to provide this information could result in a determination that "all appropriate inquiry" was not completed. Any information that is falsely recorded, or knowingly is wrong, could also lead to an incomplete defense. For this reason, if an area is unclear or if there is a possibility that further clarification could be presented by another person, then call our firm at 209-770-0731 to discuss.

PHASE I ENVIRONMENTAL SITE ASSESSMENT -OWNER/KEY SITE MANAGER QUESTIONNAIRE ASSESSOR PARCEL NUMBERS: 132-2140-001, -002 ELK GROVE CENTER **10051 BIG HORN BOULEVARD** ELK GROVE, CALIFORNIA

At the request of Los Rios Community College District, Petralogix Engineering, Inc. is preparing a Phase I Environmental Site Assessment (Phase I ESA) for the above referenced property. Since you are the owner of the property, we ask that you designate someone as the key site manager or "person with the most knowledge of the property" to complete this form. Alternatively, you as the owner can complete it yourself considering that you are the most knowledgeable person. The designated person should complete the following questionnaire and email it to tscheftner@petralogix.com. If you have any questions about this do not hesitate to call us at 209-770-0731.

GENERAL INFORMATION

1. Current property owner:

Los Rios Community College Distoret Name 1919 Spanos Cart Sacramento CA 95825

Address

CERTIFIED MAIL: 7001 1940 0000 7703 6753

Dear Sirs:

SUBJECT: NOTICE TO COMPLY – ABANDONED WELL PROGRAM SACRAMENTO COUNTY CODE, CHAPTER 6.28 (WELLS & PUMPS)

With your authorization, on January 24, 2011, a representative of the Sacramento County Environmental Management Department (EMD) discovered an abandoned well(s) or suspected abandoned well(s) at your property located at: **10051 BIG HORN BLVD., ELK GROVE, CA 95757 (APN: 132-2140-002)**

Sacramento County Code, Chapter 6.28 (Wells & Pumps) contains minimum requirements for the construction, modification, repair, inactivation, and destruction of wells and for the installation of pumps. The California Health & Safety Code and the Sacramento County Code both define "abandoned" or "permanently inactive" wells as wells that have not been used for a period of one year or longer. Both codes mandate the legal destruction of abandoned or permanently inactive wells unless the owner demonstrates intent for future use of the wells by obtaining a well inactivation permit and by maintaining the wells in such a way that the following requirements are met:

- ✓ The well shall not allow impairment of the quality of water within the well and groundwater encountered by the well.
- ✓ The top of the well and the well casing shall be provided with watertight covers that are secured by locks or by other means to prevent their removal without the use of equipment or tools, to prevent unauthorized access, to prevent a safety hazard to humans and animals, and to prevent illegal disposal of wastes into the well.
- The well shall be marked so as to be easily visible and located, and labeled so as to be easily identified as a well.
- ✓ The area surrounding the well shall be kept clear of brush, debris, and waste materials.

NOTICE TO COMPLY

January 28, 2011 Page 2

We have enclosed an "Identification Sheet" for each of the wells on the aforementioned property, with specific information for taking appropriate action for each well. Failure to comply with this Notice may result in formal enforcement action pursuant to Chapter 6.28.

If you have any questions regarding this Notice, please contact Susan Williams at (916) 875-8452 or Lisa Christy at (916) 875-8466. You may access documents at our "Well Program" website at: <u>http://www.emd.saccounty.net/WP/EMDwells.htm</u>.

Sincerely,

banyman-

Barry Marcus, P.G. Supervising Environmental Specialist Environmental Compliance Division

September 14, 2011

Mr. Brice W. Harris, Chancellor Los Rios Community College District 1919 Spanos Court Sacramento, CA 95825

CERTIFIED MAIL: 7004 1350 0002 4341 4378

Dear Mr. Harris:

SUBJECT: NOTICE OF VIOLATION OF SACRAMENTO COUNTY CODE, CHAPTER 6.28 – WELLS AND PUMPS, AND NOTIFICATION OF POTENTIAL FILING OF ADMINISTRATIVE ENFORCEMENT ORDER (WP0047528)

On January 3, 2011, the Environmental Management Department (EMD) received an application for a supply well inactivation from David Nichols with Los Rios Community College District (LRCCD). The supply well was located at 0 POPPY RIDGE ROAD, ELK GROVE, CA 95757 (APN 132-2140-002-0000). In an effort to satisfy the requirements contained in the California Health & Safety code and the Sacramento County Code with respect to supply well inactivation, LRCCD solicited bids for the removal of a turbine pump in the well, placement of a cap over the well casing, and removal of concrete, a power pole, an electrical panel and debris from the well site. Edward R. Bacon Company, Inc. (ERBCO) received the contract from LRCCD for this work. On or about December 23, 2010, ERBCO completed activities at the site that were not in conformance with the scope of work identified in LRCCD bid documents, including the removal of a portion of the well casing, the placement of $\frac{1}{4}$ " - $\frac{1}{2}$ " rock inside the well casing, and the burial of the well with wood, leaves, mud and debris. On February 3, 2011, we issued a "Notice of Violation" to Edward R. Bacon Company, Inc. (ERBCO) for violations of Sacramento County Code, Chapter 6.28 ("Wells & Pumps"). On March 7, 2011, we received a permit application from Robert Allen Nix for the legal destruction of the well, which was complicated by the actions of ERBCO.

We have added LRCCD to this enforcement case because you hired a contractor that was not properly licensed to complete the contracted work. Specifically, removal of the well pump may only be performed by a C-61 or C-57 licensed contractor in the State of California. The permit acquired by LRCCD in January was not a pump removal permit but a well inactivation permit. The work completed by ERBCO complicated the proper legal destruction of the well and compromised the quality and completeness of the well destruction. Sacramento County Code, Chapter 6.28, Section 6.28.000.1 ("Responsibility for Compliance") states that the well owner shall be responsible for compliance with all applicable provisions of the Chapter, and "well owner" is defined as the owner of the property on which the well is located.

10590 Armstrong Avenue • Suite A • Mather, CA 95655 • phone (916) 875-8550 • fax (916) 875-8513 • www.emd.saccounty.net

- ⁽)

NOTICE OF VIOLATION September 14, 2011 Page 2

Based upon the information in the record to date, EMD is preparing to take administrative action to assess appropriate penalties. This action will address violations of our well ordinance (Sacramento County Code, Title 6, Chapter 6.28 "Wells & Pumps"), which requires well owners, licensed well contractors, and their authorized agents to comply with all provisions contained in the ordinance to ensure that the groundwater of Sacramento County will not be polluted or contaminated by improper well construction, modification, repair, inactivation, or destruction, or by improper pump installation. The following potential violations have been identified:

- <u>FAILURE TO OBTAIN A PERMIT</u>: Sacramento County Code, Chapter 6.28, Section 6.28.030.A prohibits the construction, repair, modification, inactivation or destruction of a well without an EMD permit. On or about December 23, 2010, based on photographic evidence and information you have provided to us, your contractors modified or destroyed a well without an EMD permit.
- <u>FAILURE TO POSSESS A VALID C-57 LICENSE</u>: Sacramento County Code, Chapter 6.28, Section 6.28.030.a.1 prohibits the construction, repair, modification, or destruction of a well without a valid C-57 contractor's license. ERBCO's license has a B classification (general building contractor) and a C10 classification (electrical) but it does not include the C-57 classification. On or about December 23, 2010, your contractors modified or destroyed a well without a valid C-57 license.
- <u>FAILURE TO COMPLY WITH CALIFORNIA WELL STANDARDS</u>: Sacramento County Code, Chapter 6.28, Section 6.28.040 contains standards for the construction, repair, modification, inactivation and destruction of supply wells. On or about December 23, 2010, your contractor modified or destroyed a well without complying with those standards.

Prior to filing an Administrative Enforcement Order (Order), we are offering you the opportunity to advise us of any other information that should be considered before the Order is filed. You may also take this opportunity to commence settlement discussions concerning the alleged violations. It is EMD's intention to file the Order within the next two weeks, unless you advise us of substantial reasons not to proceed as planned.

The maximum penalty for violation of any provision of the Sacramento County Code, Chapter 6.28, is \$10,000.00 per well, per day of violation. The Sacramento County Well and Pump Ordinance is available for your review online at http://gcode.us/codes/sacramentocounty.

NOTICE OF VIOLATION September 14, 2011

County of Sacramento. Environmental Compliance Division Dated: February 10, 2011

Dear Ms. Rothschild,

I am writing you in response to your notice of violation deeded February 3, 2011; your letter requests a 'statement of facts' relative to our activity at Poppy Ridge Road in Elk Grove. I have prepared for your review our statement of facts.

Statement of Fact

I received a telephone call for a Mr. David Nichols with the Del Rios School District in Elk Grove. Mr. Nichols described to me a site owned by the school district that needed to be cleared of debris, generally, an old power pole, miscellaneous debris, a concrete pipe, a well motor and a well pipe that needed to be capped. I thought that the project was simple enough and asked David to send me some photographs of the site along with a scope of work. I remember asking him specifically about the well and he said that it just needed to be capped and that he had a permit for that. After receiving the pictures and scope of work I had our office e-mail Mr. Nichols a proposal to perform the above-mentioned work. Our proposal was accepted and we had a crew sent out to perform the work. Our crew indicated to us that the work was completed as specified and we invoiced the school district and the district paid us for services rendered.

On January 19, 2011 we received a phone call from David Nichols and subsequently from Susan Williams that apparently the well casing had not been capped but rather the casing cut 3 feet below grade and filled with ¹/₄" and ¹/₂ rock, and covered with dirt. Susan explained to me that the School District had a permit to cap the well, and although we could have capped the well, our crew instead placed rock inside the well casing and did not cap the well, thereby improperly abandoning the well. She advised me that we would be receiving a notice of violation and that I needed to work out with the School District to remedy the problem and that we needed to engage the services of a licensed well driller to either abandon the well or remove the debris from the well and cap the well. Susan was very helpful and as our conversation continued she helped me understand that our crew had not performed what was asked of them. She forwarded me a list of well drillers in the area to contact in order to attain proposals to perform the work now being asked of us. I told Susan that I could not address the issue immediately since I have some family matters to take of but I will focus my attention on the matter the following week. I have been in contact with Mr. Nichols and indicated to him that although our crew did not mean to cause any harm or breach any codes, they mistakenly thought they were doing the proper thing and our Company will need to take responsibility for their mistake.

Conclusion

Since my initial conversation with Susan I have been attempting to contact some of the well drillers from the list she provided me. Several drillers that I contacted said that they do not abandon wells. Others I have called have not returned my call.

I am in contact with Mr. Nichols and am communicating with him regularly. In the meantime, we are still seeking proposals for performing the work on this site. I have also been communicating with Susan Williams and will follow up with her as things progress.

We are truly sorry for any inconvenience we have caused.Mr. Nichols and did mean to breach any codes or compliance issues. It was a mistake for which we are making our best effort to remedy. On a personal note, this has been devastating to me. I just wanted to help a customer. I feel horrible about the whole thing.

Truly,

Harry N. How III

Countywide Services Agency

Environmental Management Department

Steven C. Szalay, Interim County Executive Bruce Wagstaff, Agency Administrator Val F. Siebal, Department Director

Environmental Compliance Division Elise Rothschild, Chief

County of Sacramento

February 3, 2011

Harry Nash How III, RMO/CEO/President Edward R. Bacon Company, Inc. 650 Lighthouse Avenue #250 Pacific Grove, CA 93450

CERTIFIED MAIL: 7001 1940 0000 7703 6296

Dear Mr. How:

SUBJECT: NOTICE OF VIOLATION OF SACRAMENTO COUNTY CODE, CHAPTER 6.28 – WELLS AND PUMPS, AND NOTIFICATION OF POTENTIAL FILING OF ADMINISTRATIVE ENFORCEMENT ORDER (WP0047528)

The Environmental Management Department (EMD) has received an application for a supply well inactivation from David Nichols with Los Rios Community College District (LRCCD). The supply well is located at **0 POPPY RIDGE ROAD**, ELK GROVE, CA **95757** (AKA 10051 BIG HORN BOULEVARD, ELK GROVE, CA **95757**; APN 132-2140-002-0000). In an effort to satisfy the requirements contained in the California Health & Safety code and the Sacramento County Code with respect to supply well inactivation, LRCCD solicited bids for the removal of a turbine pump in the well, placement of a cap over the well casing, and removal of concrete, a power pole, an electrical panel and debris from the well site. Edward R. Bacon Company, Inc. (ERBCO) received the contract from LRCCD for this work. On or about December 23, 2010, ERBCO completed activities at the site that were not in conformance with the scope of work identified in LRCCD bid documents, including the removal of a portion of the well casing, the placement of $\frac{1}{4^n} - \frac{1}{2^n}$ rock inside the well casing, and the burial of the well with wood, leaves, mud and debris.

Based upon the information in the record to date, EMD is preparing to take administrative action to assess appropriate penalties and ensure code compliance. This action will address violations of our well ordinance (Sacramento County Code, Title 6, Chapter 6.28 "Wells & Pumps"), which requires well owners, licensed well contractors, and their vauthorized agents to comply with all provisions contained in the ordinance to ensure that the groundwater of Sacramento County will not be polluted or contaminated by improper well construction, modification, repair, inactivation, or destruction, or by improper pump installation. The following potential violations have been identified:

 <u>FAILURE TO OBTAIN A PERMIT</u>: Sacramento County Code, Chapter 6.28, Section 6.28.030.A prohibits the construction, repair, modification, inactivation or destruction of a well without an EMD permit. On or about December 23, 2010, based on photographic evidence and information you and LRCCD have provided to us verbally, you modified or destroyed a well without an EMD permit.

- <u>FAILURE TO POSSESS A VALID C-57 LICENSE</u>: Sacramento County Code, Chapter 6.28, Section 6.28.030.a.1 prohibits the construction, repair, modification, or destruction of a well without a valid C-57 contractor's license. Your license has a B classification (general building contractor) and a C10 classification (electrical) but it does not include the C-57 classification. On or about December 23, 2010, you modified or destroyed a well without a valid C-57 license.
- <u>FAILURE TO COMPLY WITH CALIFORNIA WELL STANDARDS</u>: Sacramento County Code, Chapter 6.28, Section 6.28.040 contains standards for the construction, repair, modification, inactivation and destruction of supply wells. On or about December 23, 2010, you modified or destroyed a well without complying with those standards.

YOU ARE HEREBY DIRECTED TO PREPARE A WRITTEN STATEMENT OF THE FACTS PERTAINING TO THIS CASE AND SUBMIT THAT STATEMENT TO THE EMD <u>ON OR BEFORE FEBRUARY 10, 2011</u>. SUPPORTING DOCUMENTATION SHALL INCLUDE RECEIPTS FOR ANY AND ALL MATERIALS USED IN THE MODIFICATION OR DESTRUCTION OF THIS WELL.

Once we have evaluated your written statement, you will receive further direction regarding how best to achieve code compliance in this matter. In the meantime, it is in your best interest to solicit cost estimates for the reparation or legal destruction of this well. It is likely that the most efficient remedy will be to legally destroy the well, rather than attempting to restore the well to an inactive condition. The maximum penalty for violation of any provision of the Sacramento County Code, Chapter 6.28, is \$10,000.00 per well, per day of violation. The Sacramento County Well and Pump Ordinance is available for your review online at <u>http://gcode.us/codes/sacramentocounty</u>.

Thank you for your prompt attention to this matter. If you have any questions, please feel free to contact Ms. Susan Williams of my staff at (916) 875-8452.

Sincerely,

ORIGINAL SIGNED BY:

Elise Rothschild Chief, Environmental Compliance Division

To: Susan Williams Fr: Harry How Re: Detail Statement of Facts/ Poppy Ridge Road Dated 2/23/2011

Dear Susan,

٢

1

ŀ

The purpose of this letter is to further detail our statement of facts with notes I have generated from information given to me from the crew sent out to perform the work at Poppy Ridge Road at the Los Rios School District. This represents to the best of my knowledge what happened at the project sight for work related to the well.

Remove 30 HP pump from Well: I was told that the pump motor was removed from its stand by unbolting it and lifting it from its base with a backhoe. The pump turbine shaft was left intact and inside the well casing.

Removal of Concrete Base: The concrete base that the pump motor stood on was removed by jack hammering. The casing and the shaft were cut approximately (3) feet below existing grade. Then (2) chunks of concrete from the concrete base were placed and wedged approximately (2) feet down inside the well casing to serve as I have been told as a base for rock material to sit on.

Rock in the well casing: It is my understanding that the well casing was then filled with about (2) feet of rock material varying in sizes from 1.5" to .25" and that this material filled the well casing above where the concrete pieces had wedged inside the well casing. A piece of carpet along with a wheel rim was placed over the well casing and the balance of the rock material was spread on top and around the well casing to serve as a gravel pad around the well. Finally the area around the well was covered with about 18" of dirt. Any remaining rock material was spread out next to dirt access road at the project site.

I asked the men performing the work how much material would they estimate was placed into the well? They told me not much since they only filled a couple of feet of the casing above where the concrete was wedged inside the casing then used the balance of the material for back fill. They indicated to me that they had purchased approximately (1) yard of rock material. I asked them if they heard any sounds of water inside the casing or sounds of rocks falling a distance into the well and they indicated that they did not. They informed me that the well was dry and they did not hear any sounds or indication of water. **Bill of Materials:** I have repeatedly requested that the crew that performed the work produce for me a receipt for the rock material used to back fill the site. To date they have not provided me any copies of receipt(s) and therefore cannot forward you any copies of same, despite my best efforts. I will continue trying however.

The above represents to the best of my knowledge what occurred on the well site at Poppy Ridge Road. Should you have any further questions please do not hesitate to call.

Truly,

Harry N. How III

Cc: David Nichols

Environmental Management Department Environmental Compliance Division

Per your directions I sent via fax the filled out application for the permit that you were so kind as to wave the fees. Per the attached you will see our purchase order, billing from vendor & pictures of the site once it was all removed. Please let me know how to proceed. Thanks for your assistance with this project.

From: Christy. Lisa [mailto:ChristyL@saccounty.net] Sent: Thursday, November 18, 2010 2:01 PM To: Nichols, Dave Subject: SUPPLY WELL INACTIVATION PERMIT FOR ABANDONED WELL

Attached is the general information sheet for what is needed to inactivate your well located at 0 Poppy Ridge Rd. in Elk Grove. I found out the "cauldron" is actually called a stand pipe and nothing needs to be done with it. If you have any other questions, let me know. I'll be out of the office tomorrow, but will return on Monday. Thanks.

CERTIFIED MAIL NO.: 7001 1940 0000 7703 3608

Dear Sir:

Countywide Services Agency

Environmental Management

Elise Rothschild, Acting Chief

Environmental Compliance Division

Department

SUBJECT: NOTICE TO COMPLY – ABANDONED WELL PROGRAM SACRAMENTO COUNTY CODE, CHAPTER 6.28 (WELLS & PUMPS)

With your authorization, on September 28, 2010, a representative of the Sacramento County Environmental Management Department (EMD) discovered an abandoned well(s) or suspected abandoned well(s) at your property located at: 0 POPPY RIDGE RD., ELK GROVE, CA 95825 (APN: 132-2140-0002).

Sacramento County Code, Chapter 6.28 (Wells & Pumps) contains minimum requirements for the construction, modification, repair, inactivation, and destruction of wells and for the installation of pumps. The California Health & Safety Code and the Sacramento County Code both define "abandoned" or "permanently inactive" wells as wells that have not been used for a period of one year or longer. Both codes mandate the legal destruction of abandoned or permanently inactive wells unless the owner demonstrates intent for future use of the wells by obtaining a well inactivation permit and by maintaining the wells in such a way that the following requirements are met:

- ✓ The well shall not allow impairment of the quality of water within the well and groundwater encountered by the well.
- ✓ The top of the well and the well casing shall be provided with watertight covers that are secured by locks or by other means to prevent their removal without the use of equipment or tools, to prevent unauthorized access, to prevent a safety hazard to humans and animals, and to prevent illegal disposal of wastes into the well.
- The well shall be marked so as to be easily visible and located, and labeled so as to be easily identified as a well.
 - The area surrounding the well shall be kept clear of brush, debris, and waste materials.

10590 Armstrong Avenue • Suite A • Mather, CA 95655 • phone (916) 875-8550 • fax (916) 875-8513 • www.emd.saccounty.net

NOTICE TO COMPLY.

133

October 1, 2010 Page 2

We have enclosed an "Identification Sheet" for each of the wells on the aforementioned property, with specific information for taking appropriate action for each well. Failure to Comply with this Notice may result in formal enforcement action pursuant to Chapter 6.28.

If you have any questions regarding this Notice, please contact Susan Williams at (916) 875-8452 or Lisa Christy at (916) 875-8466. You may access documents at our "Well Program" website at: <u>http://www.emd.saccounty.net/WP/EMDwells.htm</u>.

Countywide Services Agency

Environmental Management Department

Environmental Compliance Division Elise Rothschild, Chief

County of Sacramento

Steven C. Szalay, Interim County Executive Bruce Wagstaff, Agency Administrator Val F. Siebal, Department Director

January 28, 2011

Los Rios Community College District 1919 Spanos Court Sacramento, CA 95825

CERTIFIED MAIL: 7001 1940 0000 7703 6753

Dear Sirs:

SUBJECT: NOTICE TO COMPLY – ABANDONED WELL PROGRAM SACRAMENTO COUNTY CODE, CHAPTER 6.28 (WELLS & PUMPS)

With your authorization, on January 24, 2011, a representative of the Sacramento County Environmental Management Department (EMD) discovered an abandoned well(s) or suspected abandoned well(s) at your property located at: **10051 BIG HORN BLVD., ELK GROVE, CA 95757 (APN: 132-2140-002)**

Sacramento County Code, Chapter 6.28 (Wells & Pumps) contains minimum requirements for the construction, modification, repair, inactivation, and destruction of wells and for the installation of pumps. The California Health & Safety Code and the Sacramento County Code both define "abandoned" or "permanently inactive" wells as wells that have not been used for a period of one year or longer. Both codes mandate the legal destruction of abandoned or permanently inactive wells unless the owner demonstrates intent for future use of the wells by obtaining a well inactivation permit and by maintaining the wells in such a way that the following requirements are met:

- The well shall not allow impairment of the quality of water within the well and groundwater encountered by the well.
- ✓ The top of the well and the well casing shall be provided with watertight covers that are secured by locks or by other means to prevent their removal without the use of equipment or tools, to prevent unauthorized access, to prevent a safety hazard to humans and animals, and to prevent illegal disposal of wastes into the well.
- The well shall be marked so as to be easily visible and located, and labeled so as to be easily identified as a well.

The area surrounding the well shall be kept clear of brush, debris, and waste materials.

NOTICE TO COMPLY January 28, 2011 Page 2

We have enclosed an "Identification Sheet" for each of the wells on the aforementioned property, with specific information for taking appropriate action for each well. Failure to comply with this Notice may result in formal enforcement action pursuant to Chapter 6.28.

If you have any questions regarding this Notice, please contact Susan Williams at (916) 875-8452 or Lisa Christy at (916) 875-8466. You may access documents at our "Well Program" website at: http://www.emd.saccounty.net/WP/EMDwells.htm.

Sincerely,

Sangman -

Barry Marcus, P.G. Supervising Environmental Specialist Environmental Compliance Division

Wallace-Kuhl & Associates, Inc. (WKA), on behalf of the Los Rios Community College District, prepared this Phase I Environmental Site Assessment Update for the Laguna Ridge Bayless-Pulte Property located on Poppy Ridge Road, in Elk Grove, California. We declare that, to the best of our professional knowledge and belief, both the report preparer and reviewer meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312 and has the "specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312." Resumes of the key staff who prepared this report are included in Appendix A.

EXECUTIVE SUMMARY

The Laguna Ridge Bayless-Pulte Property (herein referred to as site) is located approximately two miles southwesterly from the central business district of the City of Elk Grove, Sacramento County, California. The site lies within a predominantly agricultural and rural residential area north of Poppy Ridge Road and east of Bruceville Road. The site is comprised of one Sacramento County Assessor's Parcel Number (APN) 132-2140-002 (formerly referenced as APN 132-0290-001 and having a prior street address of 8355 Poppy Ridge Road), totaling approximately 13 acres of fallow, formerly developed land. The following presents a list of observations and findings identified during the preparation of this updated report:

- The historic land use research dating back to the early 1900s revealed that the site was first developed in the early 1920s for residential use and had several additions constructed over the years including a barn. The demolished barn was originally used as a dairy barn. Historical information revealed at least two septic systems and two water wells were located on the site.
- On the day of the site reconnaissance, site conditions consisted of fallow, disced land with some scattered oak and other deciduous trees observed around the perimeter of the site and on the southern portion of the site. The southern portion of the site was disced and remnant gravel, brick, and aggregate material was dispersed among the disced material. No structures were present on the site.
- According to information presented in previous studies (See Section 4.2), historically the site contained several buildings, including a one-story wood-framed house with a detached garage, a small outbuilding, a barn and a carport (the barn had two extensions off of its northwest corner), and a modular home. These structures were located amongst the existing trees located in the southern part of the site.
- A 550-gallon underground storage tank (UST) was removed from the site in 1979. In 2006 ENGEO completed soil sampling and analysis from the former UST excavation and determined no data indicating a historical leak from the UST. The structures on the site were demolished in 2006. The remainder of the site consisted of dry-farmed land or fallow land.

- According to Mr. Rick Jordan with Pulte Homes (the current site owner), two septic systems were removed from the site at the time the structures were demolished in 2006.
- The site contains two known wells: one domestic water supply well and one irrigation well. In the event that the wells will not be used in the future, they must be properly abandoned in accordance with Sacramento County Environmental Health Department permitting requirements.
- Site reconnaissance and review of agency records did not reveal evidence of hazardous materials contamination on or adjacent to the site.
- Based on the completion of the potential Vapor Intrusion Condition (pVIC) screening matrix, it is presumed *unlikely* that a pVIC currently exists beneath the site.

This assessment has revealed evidence of historical Recognized Environmental Conditions in connection with the removed underground fuel storage tank (UST) formerly located on the site. No further investigation is recommended at this time.

1.0 INTRODUCTION

1.1 Purpose

The purpose of this report is to update those conditions likely to affect Recognized Environmental Conditions (REC) in connection with the Laguna Ridge Bayless-Pulte Property (herein referred to as site) that may have changed materially since the prior environmental site assessments were conducted. According to the American Society of Testing and Materials (ASTM) Standard E 1527-05 the term REC is defined as "the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, groundwater, or surface water of the property."

According to the ASTM, "this practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on CERCLA [Comprehensive Environmental Response, Compensation and Liability Act] liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B)."

1.2 Scope of Services

Wallace-Kuhl & Associates, Inc. (WKA) has completed this Phase I Environmental Site Assessment (ESA) Update for the site shown on Figures 1 and 2. The updating workscope was implemented in lieu of a full workscope ESA given the fact that at least five prior reports have been completed for the site:

- Wallace-Kuhl & Associates. *Preliminary Phase 1 Environmental Site Assessment, Laguna Ridge Specific Plan* (included the site and surrounding land areas), May 1998.
- Wallace-Kuhl & Associates. *Phase 1 Environmental Site Assessment Update, Elk Grove Senior Apartments, 8355 Poppy Ridge Road,* September 19, 2003 (WKA No. 4021.19).

- ENGEO. *Phase One Environmental Site Assessment, Laguna Ridge Clusters,* February 2, 2004.
- ENGEO. Phase II Sample Results, Laguna Ridge Clusters, Elk Grove, California. February 24, 2004.
- Wallace-Kuhl & Associates. *Reliance Letter and Site Assessment Update, Laguna Ridge Bayless South Property, 8355 Poppy Ridge Road, City of Elk Grove, California, July 21, 2004 (WK No. 4021.28).*

Based on the prior assessments of the site, WKA proposed only to update those conditions likely to affect RECs in connection with the site that may have changed since the prior ESA update was conducted in July 2004.

This update report has been prepared in conformance with *Section 4.6 (Continued Viability of Environmental Site Assessment)*, and *Sections 4.7* and *8.4 (Prior Assessment Usage)* of the American Society of Testing and Materials (ASTM) *Standard E 1527-05 for Environmental Site Assessment* and the scope and limitations defined in WKA proposal, 7PR08091, dated July 2, 2008. Mr. Bill Silvia with the Los Rios Community College District (LRCCD) authorized this assessment on July 3, 2008. The scope of this assessment included the following:

- Site reconnaissance with emphasis on changes in conditions or uses relative to the previous site work, both on-site and adjacent to the site.
- Interviews with current owners/occupants and/or regulatory personnel familiar with the site in order to identify changes in site conditions or uses since the prior ESA was performed.
- A current review of federal, state, tribal and county databases. Based on the outcome of the database search described in the preceding bullet item, review of specific regulatory agency files for identified contaminated facilities in order to evaluate whether the listed facilities are hazardous materials threats to the site.
- Review of the historical record sources, as necessary, that identify changes in site conditions or uses since the prior ESA was performed, including the following, as available:
 - Ownership Records
 - Aerial Photographs

- Local Street Directories
- Building Department Records
- Zoning and Land Use Records
- Color photography of the site.
- Review of prior ESA report for the site.
- Conduct a preliminary screen for potential vapor intrusion conditions on the site.
- Review of the completed ASTM E 1527 *User Questionnaire (Questionnaire)* regarding recorded environmental liens, activity and use limitations (AULs), relationship of the purchase price to the fair market value of the site, and any specialized knowledge of the of the site.
- Prepare a report of findings that document the results of the ESA update along with identifying significant "data gaps" that were not addressed in the previous ESAs.

1.3 Special Terms and Conditions

No special terms or conditions were requested or performed during the preparation of this ESA update. LRCCD authorized WKA to perform a search for recorded environmental liens and AULs for the site APN.

1.4 User Provided Information

Mr. Bill Silvia with LRCCD completed the *Questionnaire* for the site. Discussion regarding his responses is provided in the following section. A copy of the completed *Questionnaire* is included in Appendix B.

In summary, Mr. Silvia was not aware of any records of Environmental Liens or Activity and Use Limitations (AULs) currently recorded against the site. Mr. Silvia stated he does not possess specialized knowledge or experience related to the site. Mr. Silvia indicated the site was priced at fair market value. Mr. Silvia stated he was aware of the general site history as a farm. Mr. Silvia stated that he is not aware of any obvious indicators that point to the presence or likely presence of contamination at the site.

2.0 SITE DESCRIPTION

2.1 Site and Vicinity General Characteristics

The site, which was previously identified with a street address of 8355 Poppy Ridge Road, is located approximately one mile east of Bruceville Road, and approximately one mile west of West Stockton Boulevard, in Elk Grove, California (Figure 1). The site is comprised of one Sacramento County Assessor's Parcel Number (APN) 132-2140-002 (formerly referenced with APN 132-0290-001 and having a listed street address of 8355 Poppy Ridge Road), totaling approximately 13 acres of land (Figure 2).

2.2 Site Reconnaissance

Mr. Randy Wheeler, Senior Environmental Scientist with WKA conduced a visual site reconnaissance on July 7, 2008. Access to the site was provided from a gravel driveway off of Poppy Ridge Road. On the day of the site reconnaissance, site conditions consisted of fallow, disced land with some scattered oak and other deciduous trees observed around the perimeter of the site and on the southern portion of the site.

The southern portion of the site was disced and remnant gravel, brick, and aggregate material was dispersed among the disced material. No structures were present on the site. According to information presented in previous studies (See Section 4.2), historically the site contained several buildings, including a one-story wood-framed house with a detached garage, a small outbuilding, a barn and a carport (the barn had two extensions off of its northwest corner), and a modular home. These structures were located amongst the existing trees located in the southern part of the site. The buildings no longer exist and evidence of the former building locations were not determined during the site reconnaissance. The remainder of the site consisted of dry-farmed land or fallow land (Figure 3).

WKA observed one water supply well located on the east side of the gravel driveway. The submersible pump associated with the well appeared to be intact. The well was not connected to any power supply nor was it connected to a pressure tank. WKA also observed an irrigation/agricultural water supply well and standpipe located near the east site boundary. The well

pump appeared in good condition and WKA observed no significant stains on the concrete base or surrounding soils at the time of the site reconnaissance.

Amongst the western-most clump of trees (which was the location of the former one-storey residence), WKA observed a shallow, rectangular-shaped depression. This depression may have been related to a septic system associated with the former residence, which were both removed in 2006.

2.3 Adjoining Properties

The site is located within a predominantly agricultural and developing residential area of Elk Grove. Dry-farmed land and a rural residence bound the site to the east. Poppy Ridge Road bounds the site to the south, beyond that is a rural residence and farmland. Dry-farmed land bounds the site to the west. To the north is the Cosumnes Oaks High / Elizabeth Pinkerton Middle School. Cosumnes Oaks High School and Pinkerton Middle School share the same 60-acre campus area that includes 62 classrooms, a 700-seat performing arts facility, and a football stadium equipped with artificial turf and an all-weather track.

No industrial or heavy commercial facilities, or stationary sources of substantial hazardous air emissions are located on or within one-quarter mile of the site. No businesses that use, produce and/or bulk store hazardous materials or generate reportable quantities of hazardous waste were observed adjacent to the site. No adjoining or nearby properties were identified that have conditions indicative of RECs.

3.0 INTERVIEWS

Interviews with various persons familiar with the site vicinity, including representatives of public agencies, were conducted for the purpose of identifying past and present uses, which may have contributed to RECs on the site. Results of those interviews are discussed in the following sections.

3.1 Key Site Manager

Mr. Rick Jordan with Pulte Homes (current site owner) was interviewed by telephone on July 10, 2008. According to Mr. Jordan, Pulte Homes acquired the site in January 2006. Pulte Homes subsequently demolished and removed the structures, including two septic systems, located on the site. Mr. Jordan was not aware of any USTs (other than the UST removed in 1979) nor was he aware of any ASTs. Mr. Jordan indicated the two on-site water wells were left intact for possible future use during construction activities.

3.2 Government Officials

The Sacramento County Environmental Management Department (SCEMD) was contacted on July 10, 2008 concerning files related to the former site address of 8355 Poppy Ridge Road. According to Ms. Susan Genovese, the SCEMD did not have any records on file for the site APN or for the prior site address of 8355 Poppy Ridge Road.

4.0 **RECORDS REVIEW**

The purpose of the records review is to obtain and review information concerning the current use of the site and adjoining properties, since the prior ESA was performed, to identify the presence of RECs in connection with the site and nearby properties. The records review included review and discussion of the following, as available:

- Historical Use Information including, as necessary:
 - Ownership Records
 - Aerial Photographs
 - Local Street Directories
 - Building Department Records
 - Zoning and Land Use Records
- Prior Assessments
- Environmental Record Sources

4.1 Historical Use Information

Historical use information reviewed during the preparation of this report is discussed in the following subsections.

4.1.1 Ownership Records

Ownership information was obtained through ParcelQuest[®]. ParcelQuest[®] is an on-line distributor of "Assessor-Direct property information throughout the State of California." According to the *Detail Report* (ParcelQuest[®], 2008), obtained from ParcelQuest[®] on July 10, 2008, the referenced site for APN 132-2140-002 was listed as "Pulte Home Corporation."

4.1.2 Aerial Photographs

As part of the previous ESAs, historical aerial photographs of the site and general vicinity were obtained from Cartwright Aerial Surveys in Sacramento, California. Photographs covering the years 1961, 1968, 1976, 1981, 1987 and 1999 were reviewed. The reviewed years of aerial

photography revealed the site historically was used for a residence and irrigated and dry-farmed hay crops and a hobby-size walnut orchard. The site was also used as a Christmas tree farm.

As part of this ESA update, WKA reviewed a 2007 aerial photograph of the site obtained through Microsoft Virtual Earth. The site is shown as fallow land with no existing structures (as discussed in Section 2.2).

4.1.3 Local Street Directories

Local street directories were not researched during this project since the site currently does not have an assigned street address. Prior site use as a residence has been well documented in the prior reports completed for the site.

4.1.4 Building Department Records

Building department records were requested from the City of Elk Grove Building Safety and Inspection Division. One permit was on file for the prior site address of 8355 Poppy Ridge Road: 2006 for the demolition of one dwelling and five sheds/barns.

4.1.5 Zoning and Land Use Records

According to information obtained from the City of Elk Grove Assessor web site (City of Elk Grove, 2008), the site is zoned "RD-15" Residential Development – 15 acres. The listed land use for the APN is detailed below:

Land Use Code	General Description	Specific Description	Detail Description	Use of Parcel
IABBAA	Vacant	Residential	Acreage (10-49ac)	Economically ready
				for development

4.2 **Prior Assessments**

The following reports were prepared and reviewed as part of this ESA update:

- Wallace-Kuhl & Associates. *Preliminary Phase 1 Environmental Site Assessment, Laguna Ridge Specific Plan* (included the site and surrounding land areas), May 1998.
- Wallace-Kuhl & Associates. *Phase 1 Environmental Site Assessment Update, Elk Grove Senior Apartments, 8355 Poppy Ridge Road,* September 19, 2003 (WKA No. 4021.19).
- ENGEO. *Phase One Environmental Site Assessment, Laguna Ridge Clusters,* February 2, 2004.
- ENGEO. Phase II Sample Results, Laguna Ridge Clusters, Elk Grove, California. February 24, 2004.
- Wallace-Kuhl & Associates. *Reliance Letter and Site Assessment Update, Laguna Ridge Bayless South Property, 8355 Poppy Ridge Road, City of Elk Grove, California*, July 21, 2004 (WK No. 4021.28).

WKA concluded in the 1998 report:

WKA did not identify any specific environmental encumbrances related to the site and adjacent properties, although WKA did identify that a farm-exempt UST existed on the site at one time. The site has remained as rural residential and irrigated and dry-farmed haycrop land since at least the early 1950s.

According to the information presented in the subsequent September 19, 2003 ESA Update report prepared by WKA, the following conclusions are provided:

"Our historic land use research, which included reviews of topographic maps and aerial photography dating back to 1909, reveals that the property has supported a small farm and two rural residential sites, as well as fallow land and agricultural lands cultivated in irrigated pastures, dry-farmed haycrops, hobbyist-size orchard and Christmas trees. These types of agricultural uses typically do not require applications of environmentally persistent pesticides and we anticipate the potential for residual agricultural chemical concentrations to exist in surficial soils is low. This fact was supported by an interview with a senior agricultural inspector with Sacramento County as previously discussed in

our Laguna Ridge Specific Plan report. The subject property has not seen any historic use such as for commercial fruit or nut orchards or intensive rowcrop farmland, where persistent pesticide residuals are sometimes found at elevated concentrations. Therefore, we conclude that sampling and testing for persistent pesticide residuals in surficial soils of the subject property is unwarranted.

The subject property contains one active water supply well and one inactive water supply well. If their uses will cease in the future, each water supply well must be properly destroyed, this procedure requires a well abandonment permit from the Sacramento County Environmental Management Department, Environmental Health Division. The existing residences on the subject property are serviced by on-site septic systems. The septic systems are unlikely to have affected subsurface soils with hazardous materials, based on expected residential waste effluent as opposed to commercial or industrial wastewater discharges. When the property is redeveloped, the septic systems and associated leach fields and/or dry wells must be abandoned in accordance with the recommendations of a qualified geotechnical engineer.

Our field reconnaissance and review of agency records indicate no evidence of significant hazardous materials contamination on or adjacent to the subject property. We observed no evidence of bulk storage or production of hazardous materials during our windshield survey of the property surroundings.

With regards to the former farm-exempt UST on the subject property, the UST was removed with no oversight provided by the local fire district and/or the Sacramento County EMD.

We identified no state or federal Superfund sites within a one-mile radius of the subject property. We identified no agency-listed, contaminated sites on or within one-half mile of the subject property. As such, we have encountered no off-site locations that might have affected the subject property in terms of potential hazardous materials contamination. We identified no known *regional* impairments to groundwater quality beneath or in the vicinity of the subject property during review of the regulatory agency databases described in this report."

According to information provided in the February 24, 2004 *Phase II Sample Results Report*, prepared by ENGEO Incorporated for the site, one 550-gallon UST was removed from the site in approximately 1979. Because the UST was removed under the "agricultural use exemption," (i.e., no permit was required), sampling was not conducted. In February 2006, ENGEO excavated the former UST cavity. According to the ENGEO report, the UST cavity measured 11 feet long, nine feet wide and six feet deep. Soil samples collected from the UST cavity sidewalls and bottom were analyzed for petroleum hydrocarbon compounds, including gasoline, diesel, and Benzene, Toluene, Ethylbenzene and Xylenes. Results of the laboratory analysis indicated that the analyzed compounds were not detected at concentrations exceeding their respective laboratory reporting limits in each of the five samples analyzed. ENGEO concluded, "Based on the observations made of excavated soil, and the laboratory results, we conclude that there are no data indicating historic leakage for the UST formerly operated at the location where samples were collected." A copy of the ENGEO report is included for reference in Appendix C.

WKA completed an ESA Update for the site in July 2004. WKA provided the following summary:

"[WKA] completed various site assessment updating activities as presented under the following subheadings...We reviewed the ENGEO reports and concur with their methodologies, findings and conclusions.

We completed a current field reconnaissance of the subject property today. From the hazardous materials perspective, conditions at the property are virtually identical to those observed at the time of our referenced report.

The subject property remains as a rural residential site that has been fallowed. As such, little exists for us to describe in this site assessment update, which has not already been described both in our report and in the ENGEO Phase 1 report. Even the immediate neighborhood of the property remains substantially unchanged. The field observations and site assessment conclusions contained in our previous report remain valid.

Based on the innocuous findings in our original site assessment report and our updating field reconnaissance, in our opinion site assessment updating activities beyond this letter are <u>not</u> justified."

4.3 Environmental Record Sources

EDR[®] was contacted to provide a summary of facilities listed on regulatory agency databases (EDR[®], 2007e). Table 1 (attached) is a summary of the researched ASTM required *Standard Environmental Record Sources*, as well as several *Additional Environmental Record Sources*, as defined in Sections 8.2.1 and 8.2.2 of the ASTM Standard. For additional reference, the Executive Summary of the EDR[®] report is included in Appendix D. A copy of the entire EDR[®] report is included to the back cover of this report.

4.3.1 Site-Related Database Search Results

Review of the current EDR[®] report indicates the site is not listed on any of the EDR[®] databases. Review of the ESA report prepared by ENGEO in 2004 (ENGEO, 2004), noted that the original site address of 8355 Poppy Ridge Road was listed on the Historical UST database. This is consistent with the information presented within the prior reports prepared for the site.

4.3.2 Federal Database Search Results

No federally listed facilities were identified within the EDR[®] search radius.

4.3.3 State and County Database Search Results

No state listed facilities were identified within the EDR[®] search radius.

4.3.4 Preliminary Screen For Potential Vapor Intrusion Conditions

WKA conducted a preliminary screening for potential vapor intrusion conditions (pVIC) beneath the site using a pVIC-screening matrix¹. The matrix included performing a *Search Distance Test* to identify if there are any known or suspect contaminated sites surrounding or upgradient of the site within specific search radii, a *Chemicals of Concern (COC) Test* (for those known or suspect contaminated sites identified within the *Search Distance Test*) to evaluate whether or not COC are likely to be present, and a *Critical Distance Test* to evaluate whether or not COC in a

¹ The Preliminary Screen for Potential Vapor Intrusion Conditions was based on the guidelines presented in the ASTM *E 2600-08 Standard* Practice for Assessment of Vapor Intrusion Into Structures on Property Involved in Real Estate Transactions.

contaminated plume may be within the critical distance of the site (100 feet for non-petroleum hydrocarbon contaminants, and 30 feet for petroleum hydrocarbon contaminants). The Potential Vapor Intrusion Screening Matrix is included in Appendix E. Based on the completion of the potential Vapor Intrusion Condition (pVIC) screening matrix, it is presumed *unlikely* that a pVIC currently exists beneath the site.

4.3.5 Environmental Lien Search

Additionally, an environmental lien search for the site was requested through EDR[®]. According to EDR[®] no environmental liens or AULs were found for the site (EDR[®], 2008f). The EDR[®] Environmental Lien Search Report is included in Appendix F.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 Data Gaps

The historical research presented in previous reports documented the site use back to 1909. The time interval between the Standard Historical Sources exceeded the minimum five-year period and therefore represents a data gap. However, the data gap is not considered significant in terms of identifying RECs related to the site since the overall use of the site during the years where the data gaps were identified has not changed significantly.

No other data gaps were identified during the preparation of this report that affects the ability of the Environmental Professional to identify RECs on the site.

5.2 Conclusions

Since the prior ESA reports were completed in 2003 and 2004, the onsite buildings have been demolished and removed from the site. According to file information obtained from the City of Elk Grove, the on-site buildings were demolished under permit in 2006. Two inactive water wells (one domestic well and one irrigation well) remain on site. A 550-gallon underground storage tank (UST) was removed from the site in 1979. In 2006 ENGEO completed soil sampling and analysis from the former UST excavation and determined no data indicating a historical leak from the UST.

The site reconnaissance revealed no evidence of hazardous materials contamination on or adjacent to the site. No locations within the regulatory agency database search radii were encountered that have affected the site in terms of potential hazardous materials contamination. No known *regional* impairments to groundwater quality beneath of in the vicinity of the site were identified during review of the regulatory agency databases described in this report.

WKA interviewed Mr. Rick Jordan with Pulte Homes (current site owner) as part of this ESA update regarding information pertaining to the site use and conditions since the July 21, 2004 ESA update was completed. According to Mr. Jordan, the site has undergone building demolition activities in 2006 and periodic weed abatement. No information was discovered that would indicate RECs are associated with the site. No adverse findings were revealed based on the updating site visit conducted on July 7, 2008.

In summary, WKA has performed this ESA Update, the limited workscope items of which were performed in conformance with the scope and limitations of *Section 4.6 (Continued Viability of Environmental Site Assessment)*, and *Sections 4.7* and *8.4 (Prior Assessment Usage)* of the American Society of Testing and Materials (ASTM) *Standard E 1527-05 for Environmental Site Assessments* for the Laguna Ridge Bayless-Pulte Property located in Elk Grove, California.

Based on the completion of the pVIC-screening matrix, WKA concludes it is presumed *unlikely* that a pVIC currently exists beneath the site.

WKA identified no *new* agency-listed sites relative to the previous assessments for the site. The site is not an agency-listed site, as stated in the previous reports and based on the new (current) agency database search by EDR[®]. Consistent with the previous ESAs, this assessment has revealed evidence of a historical REC in connection with the removed UST from the site.

5.3 Recommendations

WKA makes no recommendations for additional site investigation at this time. This recommendation is consistent with the conclusions and recommendations presented in the July 2004 ESA update report prepared for the site.

5.4 Additional Services

Non-scope considerations, such as assessment for naturally occurring asbestos (NOA), wetlands evaluation, indoor air quality, laboratory testing of the soils and groundwater beneath the site for environmental contaminants (such as agricultural-related pesticides, termiticides, polychlorinated biphenyls [PCBs], or arsenic and lead), and assessments for asbestos containing materials and lead-based paint were not included or requested as part of this ESA update. Additionally, this ESA update did not include conducting a vapor intrusion assessment in accordance with the ASTM *E 2600-08 Standard Practice for Assessment of Vapor Intrusion Into Structures on Property Involved in Real Estate Transactions*. These additional components can be provided as part of a Phase II assessment, if requested or warranted.

6.0 **LIMITATIONS**

The statements and conclusions in this report are based upon the scope of work described above and on observations made only on the date of the field reconnaissance, July 7, 2008. Work was performed using a degree of skill consistent with that of competent environmental consulting firms performing similar work in the area. Information regarding the site that is *publicly available* and *practically reviewable*, as described in the ASTM standard, was obtained. Additional research or receipt of information regarding the site that was not disclosed or available to WKA during this assessment may result in revision of the conclusions. The conclusions in this report should be reevaluated if site conditions change. No recommendation is made as to the suitability of the site for any purpose. The results of this assessment do not preclude the possibility that materials currently or in the future defined as hazardous are present on the site, nor do the results of this work guarantee the potability of groundwater beneath the site. This report is applicable only to the investigated site and should not be used for any other property. No warranty is expressed or implied.

This report is viable for one year from the publication date of the report provided the following components are updated within 180 days of the date of purchase or (for transactions not involving an acquisition) the date of the intended transaction:

- Interviews with current owners/occupants and/or in order to identify changes in site conditions or uses since the publication date of this report
- Searches for recorded environmental cleanup liens
- Visual inspection of the site and of adjoining properties with emphasis on changes in conditions or uses since the publication date of this report
- A current review of federal, state, tribal and county databases
- The declaration by the environmental professional responsible for the assessment.

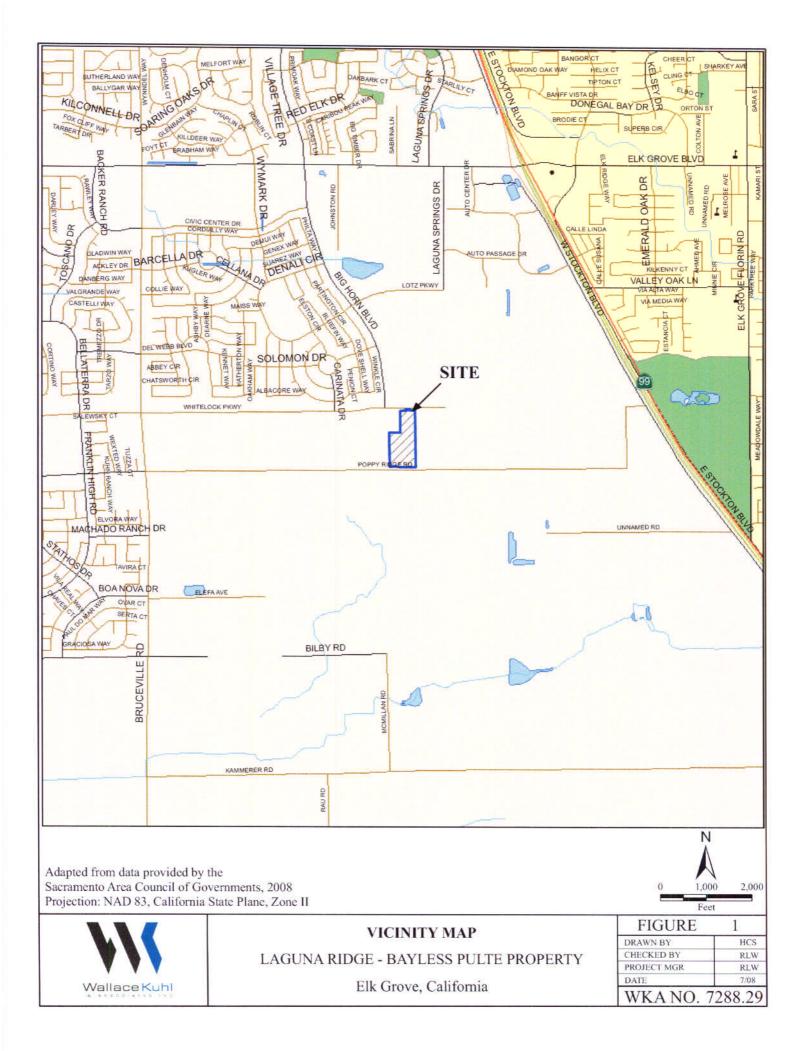

Environmental Site Assessments completed more than one year prior to the date of purchase must be reviewed and updated in order for the *Environmental Site Assessment* to be considered valid per Section 4.6 (*Continued Viability of Environmental Site Assessment*), and Sections 4.7 and 8.4 (*Prior Assessment Usage*) of the ASTM E 1527-05 Standard.

Resumes

RANDY WHEELER Senior Environmental Scientist

Mr. Wheeler has been employed in the fields of soil and groundwater investigations since 1988. With our firm since March 2003, Mr. Wheeler has over 19 years of experience conducting Phase I and Phase II site assessments. These projects include a large variety of properties ranging from single-family residential developments to large-scale commercial and industrial facilities.

He has also performed Phase 1 site assessments for several community-wide projects, including the South Sutter County Specific Plan; the results of which were or will be

used to formulate project area specific plans with city and county agencies. Mr. Wheeler has conducted several Brownfields investigations for the City of West Sacramento under the EPA Brownfields Grant program, including the West Capitol Avenue Corridor Study, and the West Capitol West End Community Wide Assessment. His projects have also included Phase 1 studies of several thousand acres of proposed mitigation lands in addition to performing Phase 1 and Phase 2 work on the former Union Pacific Rail yard in West Sacramento.

BENJAMIN MCLERNON Senior Staff Environmental Scientist

Mr. McLernon has been with Wallace-Kuhl & Associates since May of 2000. During a very short time as the CAD Manager for the drafting department, his dedication and genuine desire to improve productivity dramatically reduced job turnaround time. He also assisted with Environmental Site Assessments (ESAs) and assisted project engineers with soil and core sampling for use in geotechnical reports. Mr. McLernon has brought this job dedication and experience to his current position within the company as a Senior Staff Environmental Scientist. Since 2001, he has completed numerous ESAs in several California Central Valley and Eastern Sierra

Nevada counties, including ESAs for proposed school sites. Many of his projects have included Phase 2 assessments for persistent pesticide residuals and petroleum hydrocarbon contamination in soils and/or groundwater. Mr. McLernon's prior field reconnaissance experience in the United States Army lends itself well to the detailed site observations, topographic map interpretations, and aerial photography interpretive skills that are necessary for thorough investigations.

ASTM E 1527-05 User Questionnaire

E 1527-05 USER QUESTIONNAIRE LAGUNA RIDGE-BAYLESS/PULTE PROPERTY

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user¹ must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1.) Have you performed a search for environmental cleanup liens and AULs, as described under User Obligations in the attached proposal, for the property? $W \ll T \circ D o$

(2.) Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? λo

(3.) Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? \mathcal{NO}

(4.) As the *user* of the report, do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(5.) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present on the *property*? γ_{12} S App. N/A

(6.) Are you aware of commonly known or reasonably ascertainable information about the *property* that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? YES If so, what were they?

(b.) What, if any, specific chemicals are present or once were present at the property? NOT KNOWN

(c.) What, if any, spills or other chemical releases have taken place at the property? NONE KNOWN

(d.) What, if any, environmental cleanups have taken place at the property? Long KLOWI)

¹ User, as defined in the ASTM Standard is "the party seeking to use Practice E 1527 to complete an *environmental site assessment* of the *property*. A user may include, without limitation, a potential purchaser of *property*, a potential tenant of *property*, an *owner* of *property*, a lender, or a *property* manager. The user has specific obligations for completing a successful application of this practice as outline in Section 6 [of the ASTM Standard]."

E 1527-05 USER QUESTIONNAIRE (cont.) LAGUNA RIDGE-BAYLESS/PULTE PROPERTY

(7.) As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property? \mathcal{NO}

COMPLETION:

I have completed this User Questionnaire to the best of my knowledge and provided all information to the environmental professional as of the following date:

ENGEO Incorporated, Proposal for Phase II Evaluation, Laguna Ridge Clusters, Project No. 6150.5.002.02, January 16, 2004

Dear Mr. Van Maren:

ENGEO Incorporated (ENGEO) prepared this letter describing the results of the Phase II sampling activity performed at the property located at 8355 Poppy Ridge Road as outlined in our Proposal for Phase II Evaluation dated January 16, 2004.

BACKGROUND

The Property is located at 8355 Poppy Ridge Road in Elk Grove, California. ENGEO Incorporated completed a PSA for the Property dated February 2, 2004 in accordance with our agreement dated December 17, 2003.

Information reviewed during the PSA revealed that one 550-gallon UST had been removed from the Property in approximately 1979. The information revealed that the UST was used exclusively for agriculture purposes and that the historic contents were reported to have been limited to gasoline. Because the UST was removed under the agriculture use exemption, soil sampling was not conducted and there is no record to indicate whether the UST may have leaked during its operation. The PSA, therefore, contained a recommendation that soil sampling be

City of Rocklin Vivilacqua Property Phase II Sampling PHASE II SAMPLE RESULTS

5708.5.001.01 February 24, 2004 Page 2

conducted to further evaluate whether fuel product is present at detectable concentrations in soil at the former UST location.

SCOPE OF SERVICES

۲

Prior to the start of work, the excavation location was determined and Underground Service Alert (USA) contacted for underground utility clearance. The former UST cavity was excavated with the excavation measuring approximately 11 feet long, 9 feet wide, and 6 feet deep. Based on the character of the soil exposed by the trenching, we were able to visually confirm the location of all four sidewalls and the floor of the former UST cavity.

Sample Collection

We visited the site on February 6, 2004 to observe excavation of the former UST location and collect soil samples for laboratory analysis. Based on information gathered in the PSA, we assumed that the chemicals of concern are limited to gasoline and diesel fuel products. The excavation was performed using a backhoe provided by Ron Tilford Backhoe and soil samples were collected using manual soil coring equipment.

A photo ionization detector (PID) was used to monitor headspace for hydrocarbon vapors using soil samples collected from the excavation sidewalls and floor. No hydrocarbon odors were indicated by odors detected by field personnel or by headspace measurements made using the PID.

Two areas of dark brown to black soil staining were observed during the excavation. One of the stained areas was on surface soil that exhibited characteristics of historical oiling of the driveway. A sample was collected from the other stained area, which was discovered at a depth of 3.5 feet below the ground surface along the north wall of the trench.

A total of five samples were collected from the native soil along the four side walls and the floor of the former tank location. The sample along the northern wall originated from the stained soil, as described above. The approximate locations where the five samples were collected are illustrated on Figure 2. The results of the PID measurements are presented in Table 1. ENGEO field personnel did not observe any petroleum hydrocarbon odors emanating from the native soil in the trench.

Prior to sampling at each location, all sampling equipment was decontaminated using a 3-step decontamination process which included 1) wash in an Alconox detergent solution; 2) rinsing in two clean water baths; and, 3) final rinse with clean water spray. Samples 2(N42-48), 3(W46-52), 4(S53-59), and 5(E48-54) were collected using a slide hammer to drive 2" ID core sampler with brass sleeve. The sample from the bottom of the trench, 6(B80-86) was collected from the spoils in the backhoe bucket. In doing so, we made an effort to sample from a discrete location in order to sample at the target depth. All samples were logged according to the Unified Soil Classification System (USCS) to describe soil type, color, and moisture. Each sample tube was sealed using a Teflon sheet secured by a tight-fitting plastic cap on each end. Samples were labeled to indicate a

City of Rocklin Vivilacqua Property Phase II Sampling PHASE II SAMPLE RESULTS

5708.5.001.01 February 24, 2004 Page 3

unique sample number, sample location, time and date collected, and the sampler's identification. Samples were preserved in a chilled cooler and transported to Excelchem Environmental Laboratories, Inc. (Excelchem) of Roseville, California (DHS Certificate No. 2119) with completed chain-of-custody documentation.

One sample was collected from the native material exposed in each of the sidewalls of the trench at approximately 4.5 to 5.0 feet below the ground surface (bgs). This included the sample from the stained soil in the northern wall. The second area of staining was found 3.5 feet below the ground surface along the northern wall of the trench. The stain was a darker brown to black color relative to the native soil. When tested with the PID, no hydrocarbons were detected. This soil was sampled and submitted to the laboratory as sample 2(N42-48). When native material was encountered in the base of the excavation (approximately 6 feet bgs) another sample was collected. The location of the trench and five sample locations are recorded on Figure 2.

Laboratory Analyses

We submitted a total of five samples to Excelchem for analysis of total petroleum hydrocarbons as gasoline using EPA Method 8015, total petroleum hydrocarbons as diesel using EPA Method 8015m, and BTEX (benzene, toluene, ethylbenzene, and total xylenes) using EPA Method 602, and 8020. Results of the analysis are reported in milligrams per kilogram (mg/kg).

Laboratory results indicate that total petroleum hydrocarbons as gasoline, diesel, benzene, toluene, ethylbenzene, or total xylenes were not detected at concentrations exceeding their laboratory reporting limits in the five samples submitted for analysis.

CONCLUSIONS

Based on the observation made of excavated soil, and the laboratory results, we conclude that there are no data indicating historic leakage for the UST formerly operated at the location where samples were collected.

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report. Purchaser accepts of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2008 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

8355 POPPY RIDGE ROAD ELK GROVE, CA 95758

COORDINATES

Latitude (North):	38.390830 - 38° 23' 27.0''
Longitude (West):	121.397320 - 121° 23' 50.4''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	639968.8
UTM Y (Meters):	4250189.0
Elevation:	37 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: Most Recent Revision: 38121-D4 FLORIN, CA 1980

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 6 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
CONRAD/JOYCE AARSETH 8355 POPPY RIDGE RD ELK GROVE, CA 95624	HIST UST	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

Preliminary Screen For Potential Vapor Intrusion Conditions Matrix

Preliminary Screen for Potential Vapor Intrusion Conditions Matrix LAGUNA RIDGE-BAYLESS PULTE PROPERTY WKA No. 7288.29

Phase I ESA Preliminary Screen for Potential Vapor Intrusion Conditions (pVIC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test^[1].

(1) Search Radius Test: Are there any known or suspect contaminated sites in the primary area of concern within the corresponding search radii? (see attached Table 1).

Yes XNo If No, then screening for a pVIC is complete and no pVIC *currently* exists, go to #4. If Yes, then:

(2) **Chemicals of Concern**^[2] **Test**: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

Yes XNo If No, then screening for a pVIC is complete and no pVIC *currently* exists, go to #4. If Yes, then:

If Yes, check all COC that apply on attached Table 2.

(3) Critical Distance Test: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

- (3a) Is information related to the contaminated(s) plume available (i.e. isoconcentration maps, site drawings, etc.)?
- (3b) If No, then screening for a pVIC is complete and no pVIC currently exists, go to #4. If Yes, then:
- (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)?
- (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)?
 - 🗌 Yes 🚺 No

If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a pVIC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a pVIC *currently* exists beneath the site.

(4) Is it likely that a pVIC currently exists beneath the site?

Yes 📈 No If Yes, then recommend performing a full scope VIC assessment according to ASTM E 2600-08.

^[1] Based on guidance presented in the ASTM E 2600-08 Standard.

^[2] Chemical(s) of concern (COC): See attached table for typical chemicals of concern (as presented in Appendix X6 of the ASTM E 2600-08 Standard).

ENVIRONMENTAL LIEN REPORT

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business

Please contact EDR at 1-800-352-0050 with any questions or comments

PHASE ONE ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Van Maren:

ENGEO Incorporated is pleased to present our Phase One Environmental Site Assessment of the Laguna Ridge Clusters located in Sacramento County, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings regarding the properties.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Very truly yours,

ENGEO Incorporated

APPENDIX A - Environmental Data Resources, Inc., Sanborn and Radius Map Reports

6150.5.002.01 February 2, 2004

1.0 INTRODUCTION

Beazer Homes retained ENGEO Incorporated (ENGEO) to perform a Phase One Environmental Site Assessment on the Laguna Ridge Clusters Property in Sacramento County, California. (Property). ENGEO has performed this Phase One Environmental Site Assessment in general conformance with the scope and limitations of ASTM 1527-00 and according to our proposal dated December 17, 2003.

The Property encompasses approximately 17 acres located within the Laguna Ridge Specific Plan at 8355 Poppy Ridge Road. Reviews of aerial photographs and available historical records revealed the Property and nearby properties have been used for a small dairy, irrigated pasture, a Christmas tree farm, other agriculture production, and rural residences.

Based on the data obtained and reviewed in preparation of this Phase One Environmental Site Assessment, we have identified the following Recognized Environmental Conditions (REC) within the Property.

One 550-gallon underground gasoline fuel storage tank and dispenser was reportedly removed from the Property around 1979 with no permit. We understand no soil sampling or analytical testing of the soil under the former underground fuel storage tank was undertaken. The previous owner reported that this tank and dispenser was located adjacent to the northwest corner of the single car garage located along the west side of the main driveway entering the Property. We recommend that a Phase II Environmental Assessment be conducted to determine if the use of the former tank impacted the soil within the Property.

2.0 PURPOSE AND SCOPE

2.1 Purpose of Phase One Environmental Site Assessment

The purpose of this Phase One Environmental Site Assessment is to identify recognized environmental conditions associated with the Property. As defined in the American Society for Testing and Materials (ASTM) Standard Practice E 1527-00, a Recognized Environmental Condition (REC) is "the presence or likely presence of any hazardous substances or petroleum products on a Property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the Property."

2.2 Detailed Scope of Services

The scope of services performed includes the following:

- A review of publicly available and practically reviewable standard local, state and federal environmental record sources.
- A review of several publicly available and practically reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A review of previous environmental reports prepared for the Property.
- A reconnaissance of the Property.
- Interviews with knowledgeable private and public sector officials.
- Preparation of this report to describe our findings and conclusions.

2.3 Limitations and Exceptions of Assessment

ENGEO Incorporated strives to perform its services in a proper and professional manner with reasonable care and competence; however, our work product depends on information provided to us by others. The recommendations and conclusions presented in this report are based on the findings of our study, which were developed in part from the contracted services. The findings of the report are based on contracted database research, out-of-house reports, our observations, and personal communications. ENGEO Incorporated assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document shall not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO Incorporated. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase one environmental site assessment are typically valid for 180 days after completion of the report, particularly with regard to the regulatory database files. In some instances the shelf life of the report can be less.

This Phase One Environmental Site Assessment is not intended to represent a soil or groundwater characterization. This assessment does not verify the presence of soil or groundwater contamination and does not define the depth or extent of any contamination that may be present within the Property. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil and groundwater samples is required if more definitive information concerning site-specific conditions is desired. If additional assessment activities are conducted on the Property and if other entities are retained to provide such services, ENGEO shall be held harmless for any and all claims arising from or resulting from the performance of such services by other persons or entities, and from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect new information that becomes available after this report.

2.4 Special Terms and Conditions

ENGEO Incorporated has prepared this report for the exclusive use of our Client, Beazer Homes. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

Laboratory testing of soil or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for PCBs, or a mold survey.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's work. Visual observations referenced in this report are intended only to represent site conditions at the time of the site visit. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, which occurred subsequent to the site reconnaissance conducted by ENGEO personnel.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The Property consists of approximately 17 acres at 8355 Poppy Ridge Road. The Property is bounded by Poppy Ridge Road to the south and undeveloped property to the east, west and north within the City of Elk Grove, Sacramento County, California (Figure 1).

3.2 Site and Vicinity Characteristics

Past use of the Property has been limited to rural residential housing, a small dairy, irrigated pasture, and Christmas tree production. The top of the shallowest aquifer is approximately 97 feet below the ground surface (State of California, Department of Water Resources Web Site, <u>www.dwr.water.ca.gov</u>, State Well #06N05E01C001M).

The Property generally slopes from northeast to southwest with the highest elevation being approximately 35 feet above mean sea level (msl) and the lowest being approximately 30 feet above msl (USGS, 1992). A rural residence, a mobile home, one barn, and four out buildings occupy the southern portion of the Property. The balance of the Property consists of a fallow field.

Review of the *Geologic Map of the Late Cenozoic Deposits of the Sacramento Quadrangle*, Department of the Interior U.S. Geological Survey, 1985 compiled by Edward J. Helley and David S. Harwood, found that the geologic formation mapped at the site is the lower member of the Quaternary Riverbank Formation. The lower member of the Riverbank Formation generally consists of red, semi-consolidated gravel, sand, and silt deposited by ancient stream and river systems and remnants of dissected alluvial fans.

3.3 Current Use of Property/Description of Site Improvements

The southern portion of the Property is occupied by a single family residential structure, a mobile home structure, a large barn, and four out buildings. The balance of the Property is a fallow field historically used for a small dairy operation, irrigated pasture, and a Christmas tree farm.

3.4 Current Uses of Adjoining Properties

The properties adjoining the Property to the north are limited to undeveloped land historically used for rural residential housing, cattle grazing, and orchards. The properties adjoining the Property to the east and include rural residential housing and cattle grazing land. The properties adjoining the Property to the south are limited to Poppy Ridge Road, rural residential housing, and cattle grazing land.

4.0 **RECORDS REVIEW**

4.1 Historical Record Sources

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that may be sources or result in conditions that would cause a recognized environmental condition to exist on the Property.

4.1.1 <u>Chain of Title/Ownership</u>

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. However, laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources. A title report was not provided for review at the time of the publishing of this report.

4.1.2 <u>Historical Topographic Maps</u>

Historical USGS 7.5 Minute Topographic Maps were reviewed to determine if discernible changes in topography or improvements pertaining to the Property had been recorded. We reviewed USGS 7.5 Minute Florin Quadrangle Maps dated 1909, 1953, 1968, and 1980.

The map dated 1909 shows that Poppy Ridge Road does not yet extend to the Property and there are no improvements shown on the Property. One small building is shown on the adjoining property to the east. The maps dated 1953, 1968 and 1980 show Poppy Ridge Road in its current alignment. The 1953 map shows four structures on the Property, three along Poppy Ridge Road and the fourth midway into the Property along the eastern boundary of the Property. There are three additional small buildings shown on the properties to the east and one shown on the properties across Poppy Ridge Road the south. The maps dated 1968 and 1980 show the topographic contours in a slightly different configuration, even though the overall elevations seem to be unchanged. The map dated 1968 shows only one small building on the property located along Poppy Ridge Road. One building from the 1953 map is no longer shown on the adjoining properties to the east. However a new building is shown along Poppy Ridge Road in the same area. The map dated 1968 map. Two new buildings and a road are mapped within the properties south of Poppy Ridge Road.

4.1.3 Fire Insurance Maps

Environmental Data Resources, Inc. (EDR) provided a search for Sanborn Fire insurance maps covering the Property and surrounding properties. EDR reported no coverage for the Property and vicinity.

4.1.4 Aerial Photographs

We reviewed the following aerial photographs for information regarding past conditions and land use at the Property and in the immediate vicinity.

PHOTOGRAPH NUMBER	DATE	
SAC-01-11-5	2001	
91091-23-21	1991	
81081-3-96	1981	
3069-4-101	1971	
4-91	1961	

1961 – One house-sized square structure and two out buildings are in place in the present day location of the main house, single car garage, and western out building currently occupying the Property. A barn-sized structure and two additional out buildings are located in the southeast area of the Property in the same configuration as the structures currently occupying the Property. A driveway enters the Property at the approximate mid-point of the southern Property boundary and provides access to the structures. The mobile home structure currently located within the Property is not in place. A small rectangular structure oriented from northeast to southwest is located in the present day footprint of the mobile home structure. Two clusters of trees are in place, one in the southwest area of the Property surrounding the main house and a portion of the driveway. The second cluster of trees is located along the eastern boundary of the Property. A surface water drainage ditch is in place along the northern boundary of the Property. The northern quarter of the Property contains coloration consistent with irrigated pasture. A dirt road leads from the barn located within the Property to the adjoining properties to the east. Poppy Ridge Road is in place running east to west along the southern boundary of the Property. The surrounding properties are occupied by agricultural production land and rural residences. 1971 – The small rectangular structure oriented from northeast to southwest located in the present day footprint of the mobile home structure is no longer in place. The southern third of the northern portion of the Property is occupied by young evenly spaced rows of trees. The configuration of these trees is consistent with the reported use of the Property as a Christmas tree farm.

1981 – A rectangular structure consistent in size, shape, and orientation with the mobile home structure currently located within the Property is now in place east of the barn sized structure. The area of evenly spaced rows of trees has been slightly expanded to the east and into the adjoining Properties.

1991 – The evenly spaced rows of trees are largely no longer in place. A cluster of these overgrown trees appears to remain in place north of the barn sized structure located within the Property.

2001 – With the exception of the trees discussed on the 1991 aerial photograph appearing severely overgrown, conditions appear similar to those depicted on the 1991 photograph.

4.1.5 Other Local Agency Records

We contacted the Sacramento County Agriculture Commissioner's Office regarding past development and/or activities conducted at the Property. The results of the inquiries can be found in Section 6.0-Interviews, of this report.

4.2 Environmental Record Sources

Environmental Data Resources Inc. (EDR) performed a search of local, state and federal agency databases regarding the Property and known contaminated sites in the immediate vicinity. The databases searched are described below.

Appendix A provides the EDR report. EDR listed the Property as having been the historic location of an underground storage tank. The EDR mapped one additional location within 1-mile of the Property where hazardous materials/waste is generated, stored, or have been released from underground storage tanks. Each of these two locations either has no violations listed or has achieved regulatory closure.

4.2.1 Federal Record Sources

The following is a summary of federal databases reviewed by EDR:

- NPL National Priority List The National Priority List (Superfund) identifies over 1,200 sites for priority cleanup under the Superfund program.
- Proposed NPL Sites Provides a list of sites that are under consideration for inclusion on the NPL.
- CERCLIS Comprehensive Environmental Response, Compensation, and Liability Information System – CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priority List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.
- CERCLIS-NFRAP CERCLIS No Further Remedial Action Planned As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) has been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.
- CORRACTS Corrective Action Report CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
- RCRIS Resource Conservation and Recovery Information System RCRIS includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).
- ERNS Emergency Response Notification System ERNS records and stores information on reported releases of oil and hazardous substances.

6150.5.002.01 February 2, 2004

- BRS Biennial Reporting System A national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.
- CONSENT Superfund (CERCLA) Consent Decrees Major legal settlements that establish responsibility and standards for cleanup at NPL sites.
- ROD Records of Decision ROD documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.
- DELISTED NPL National Priority List Deletions Sites deleted by EPA in accordance with 40 CFR 300.425(e) where no further response is appropriate.
- FINDS Facility Index System/Facility Identification Initiative Program Summary Report FINDS contains both facility information and "pointers" to other sources that contain more detailed information.
- HMIRS Hazardous Materials Information Reporting System HMIRS contains hazardous material spill incidents reported to the Department of Transportation (DOT).
- MLTS Material Licensing Tracking System MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites that possess or use radioactive materials and are subject to NRC licensing requirements.
- MINES Mines Master Index File Provides a list of sites that have been subjected to mining activity.
- NPL Liens Under authority granted by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability.
- PADS PCB Activity Database System PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the EPA of such activities.
- RAATS RCRA Administrative Action Tracking System RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. Please note data entry of administrative actions was discontinued after September 30, 1995.
- TRIS Toxic Chemical Release Inventory System TRIS identifies facilities that release chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

6150.5.002.01 February 2, 2004

- TSCA Toxic Substances Control Act TSCA identifies manufacturers and importers of chemical substances included on the SCA Chemical Substance Inventory List.
- FTTS FIFRA/TSCA Tracking System, and FTTS INSP FTTS tracks administrative cases and pesticide enforcement actions and compliance related to FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act), TSCA, and EPCRA (Emergency Planning and Community Right-to Know Act).

4.2.1.1 Property

The Property is not listed on the above databases.

4.2.1.2 Other Properties

There are no facilities listed within the appropriate ASTM search distance of the Property.

4.2.2 State Record Sources

The following is a summary of state databases reviewed by EDR.

- AWP Annual Workplan Sites Identifies known hazardous substance sites targeted for cleanup.
- CAL-SITES Contains potential or confirmed hazardous substance release properties.
- CHMIRS California Hazardous Materials Information Reporting System Contains information on reported hazardous materials incidents.
- CORTESE "Cortese" Hazardous Waste and Substances Sites List Listed sites are designated by the State Water Resources Control Board (LUST), the Integrated Waste Board (SWF/LF), and the Department of Toxic Substances Control (Cal-Sites).
- NOTIFY 65 Proposition 65 Records Contains facility notifications regarding known releases that could impact drinking water and thereby expose the public to a potential health risk.
- TOXIC PITS Toxic Pits Cleanup Act Sites Identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

- SWF/LF (SWIS) Solid Waste Information System Active, closed and inactive landfills.
- WMUDS/SWAT Waste Management Unit Database Used by State Water Resources Control Board staff and Regional Water Quality Control Boards for program tracking and inventory of waste management units.
- LUST Leaking Underground Storage Tank Information System Contains an inventory of reported leaking underground storage tank incidents.
- CA BOND EXP. PLAN Bond Expenditure Plan A site-specific expenditure plan used as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. This has been superceded by the Annual Work Plan (AWP).
- CA UST Active UST Facilities A list of active UST facilities gathered from local regulatory agencies.
- CA FID UST Facility Inventory Database An historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board.
- HIST UST Hazardous Substance Storage Container Database A historical listing of UST sites.
- AST Above-ground Petroleum Storage Tank Facilities Registered above-ground storage tanks.
- CLEANERS Dry Cleaner Facilities A list of dry cleaner facilities that have EPA ID numbers. Specific criteria for the subject facilities warrant inclusion on this database.
- CA WDS Waste Discharge System Sites that have been issued waste discharge requirements.
- DEED List of Deed Restrictions A database of deed-restricted properties maintained by DTSC.
- HAZNET Hazardous Waste Information System Facility and manifest data regarding hazardous waste shipments.

4.2.2.1 Property

The Property is listed in the following databases (numbers of facilities are reported in parentheses):

• Hist UST (1)

4.2.2.2 Other Properties

The following databases have facilities listed within the appropriate ASTM search distance of the Property (numbers of facilities are reported in parentheses):

• CHMIRS (1)

4.2.3 Local Record Sources

The EDR reviewed the Sacramento County Master List and Contaminated Sites List. This database maintained by the Sacramento County Environmental Health Department includes sites from the underground tank and hazardous waste generator programs.

4.2.3.1 Property

The Property is not listed on the above databases.

4.2.3.2 Other Properties

There are no facilities listed within the appropriate ASTM search distance of the Property.

5.0 SITE RECONNAISSANCE

5.1 Methodology

An ENGEO staff member conducted a site reconnaissance on December 23, 2003. The Property was visually reviewed for evidence of materials storage, staining or discoloration of surface soil, debris, stressed vegetation, or other conditions that may be indicative of chemical discharges, and the presence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks.[¬] Photographs taken during the site reconnaissance are presented in Figure 4.

5.2 General Site Setting

The Property consists of approximately 17 acres located at 8355 Old Poppy Ridge Road in Elk Grove, California (Figure 1). Our research indicates that the Property has historically been used for rural residences, a small dairy, irrigated pasture, and Christmas tree production. We observed that the southern portion of the Property is occupied by a single family residence, a mobile home structure, a barn, and four out buildings. The balance of the Property consists of a fallow field.

5.3 Observations

The features currently occupying the Property are consistent with those described throughout this report. Pole mounted power lines were observed along the southern, western, and eastern boundaries of the Property as well as throughout the southern area of the Property servicing the structures in place. We observed six pole mounted transformers along these lines.

Exposed concrete piping, vent pipes, valves, and one agriculture production well were observed within the southern area of the Property. We observed that the agriculture production well located within the Property was electrically powered.

The interior of the barn, and the area along the outside of the mobile home structure were occupied by large quantities of debris. We observed this debris to include aluminum cans, household garbage, used appliances, miscellaneous hardware, computer components, barbeques, paper waste, plastic debris, and cardboard waste. We observed no soil staining along the perimeter of this debris.

The four out buildings located within the Property were occupied by a tractor, a pony, a lawn mower, and miscellaneous yard maintenance equipment. We observed one domestic water supply well with a large pressure tank located in the central area of the southern portion of the Property.

We observed the remainder of the Property to be fallow. Along the northern boundary of the Property, we observed an irrigation ditch overgrown by reeds and blackberry bushes.

Along the south side of the barn, we observed a recently added enclosure. This enclosure occupied a portion of the slab floor along the south side of the barn. Within the slab area, we observed a circular concrete pipe cemented to the floor. This pipe is approximately 48 inches in diameter and approximately 48 inches tall. Within the center of this feature, we observed a capped iron water pipe protruding approximately three inches up through the floor. The previous owner of the Property reported that until approximately 1965 this was a cattle watering structure within a temporary holding pen with a concrete slab floor.

5.4 Adjoining Properties

No evidence of RECs was noted in association with the adjoining properties.

6.0 INTERVIEWS

We interviewed Ms. Debbi Thompson, Senior Inspector for the Sacramento County Agricultural Commissioner's Office (SCACO). Ms. Thompson stated that the historic agricultural use for the Property would have been grazing, a small dairy, and a Christmas tree farm and that it is unlikely that pesticides have historically been applied.

We interviewed Mr. Daryl Johnson of PG&E. Mr. Johnson stated that the pole mounted power transformers observed within and surrounding the Property do not contain PCB cooling oils.

We interviewed Mr. Doug Bayless, the current owner of the Property. Mr. Bayless stated that he purchased the Property from Conrad Aarseth in approximately 1989. Mr. Bayless stated that since he purchased the Property, there have been residences located within the Property while the balance has gone unused. Mr. Bayless stated that the primary residence within the Property is located in the southwest area of the Property with the second residence being a mobile home structure located within the southeast area. Mr. Bayless stated that there are two septic systems located within the Property. The first septic system is reported to be along the west side of the main house and the second is reported to be along the east side of the mobile home structure.

We interviewed Mr. Conrad Aarseth, the previous owner of the Property. Mr. Aarseth reportedly purchased the Property in approximately 1949 and sold it to Mr. Doug Bayless in approximately 1989. Mr. Aarseth stated that from the time he purchased the Property until approximately 1965, he operated a small dairy with an average of 50 dairy cows on the Property. Mr. Aarseth stated that with the exception of a small addition to the barn, and the additions of the mobile home structure, the structures currently located within the Property are substantially the same as when he originally purchased the Property. Mr. Aarseth stated that from 1965 until approximately 1988 he operated a small Christmas tree farm within the Property. Mr. Aarseth stated that until approximately 1979, there was a 550-gallon underground gasoline fuel storage tank with dispenser located adjacent to the northwest corner of the small white single car garage currently situated along the west side of the

6150.5.002.01 February 2, 2004

driveway. Mr. Aarseth stated that he did not obtain a permit at the time of the tank removal. In addition there was no soil sampling or analytical testing of the soil under the former underground fuel storage tank at the time of the tank removal.

7.0 SUMMARY OF FINDINGS

Based on the data obtained and reviewed in preparation of this Phase One Environmental Site Assessment, we have identified the following Recognized Environmental Conditions (REC) within the Property:

The Property is occupied by two residential structures, one barn, and four out buildings all of which were constructed during a time when lead based paints and asbestos containing building materials (ACBM) may have been used in their construction. We recommend that a Cal-OSHA certified ACBM and lead based paint contractor by retained prior to any demolition or renovation activities so an assessment can be conducted.

The interior of the barn, and the area along the outside of the mobile home structure were covered by large quantities of debris. We observed this debris to include aluminum cans, household garbage, used appliances, miscellaneous hardware, computer components, barbeques, paper waste, plastic debris, and cardboard waste. We observed no soil staining along the perimeter of this debris. We recommend that this debris be collected for appropriate disposal and if during the removal, stained soil or suspected hazardous materials are encountered, we recommend that ENGEO be contacted so that further assessment may be conducted.

There are reportedly two septic systems located within the Property. We recommend that each of these systems be abandoned under permit from Sacramento County Environmental Management Department upon the demolition of the structures within the Property.

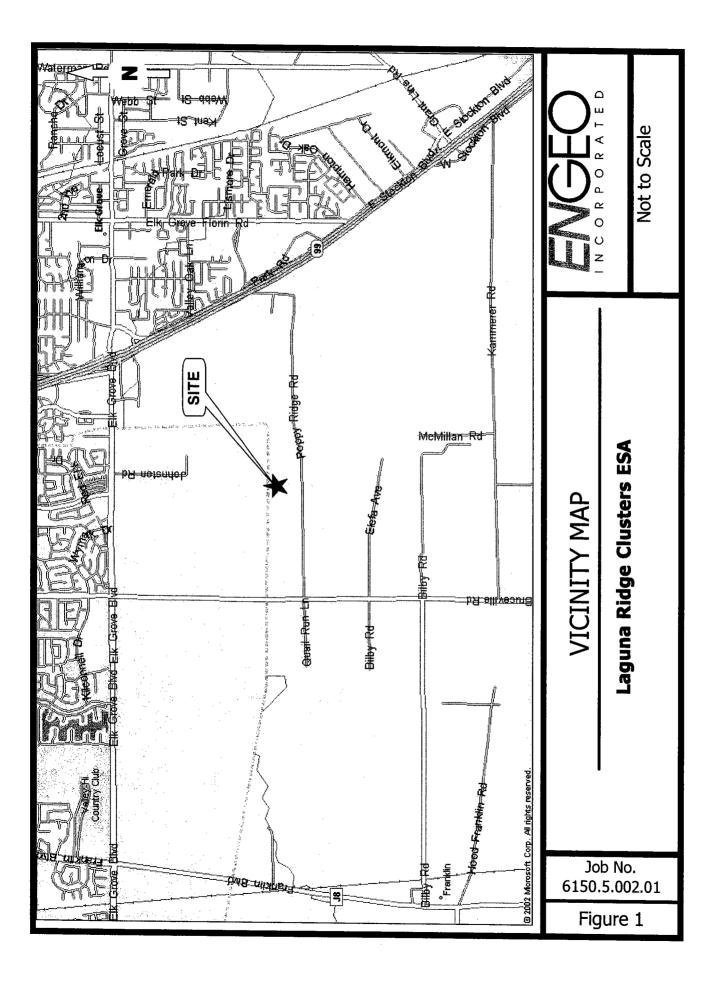

We observed two wells located within the Property, one for domestic use and one for agricultural production. We recommend that these wells either be upgraded for future use or abandoned under permit from the Sacramento County Environmental Management Department.

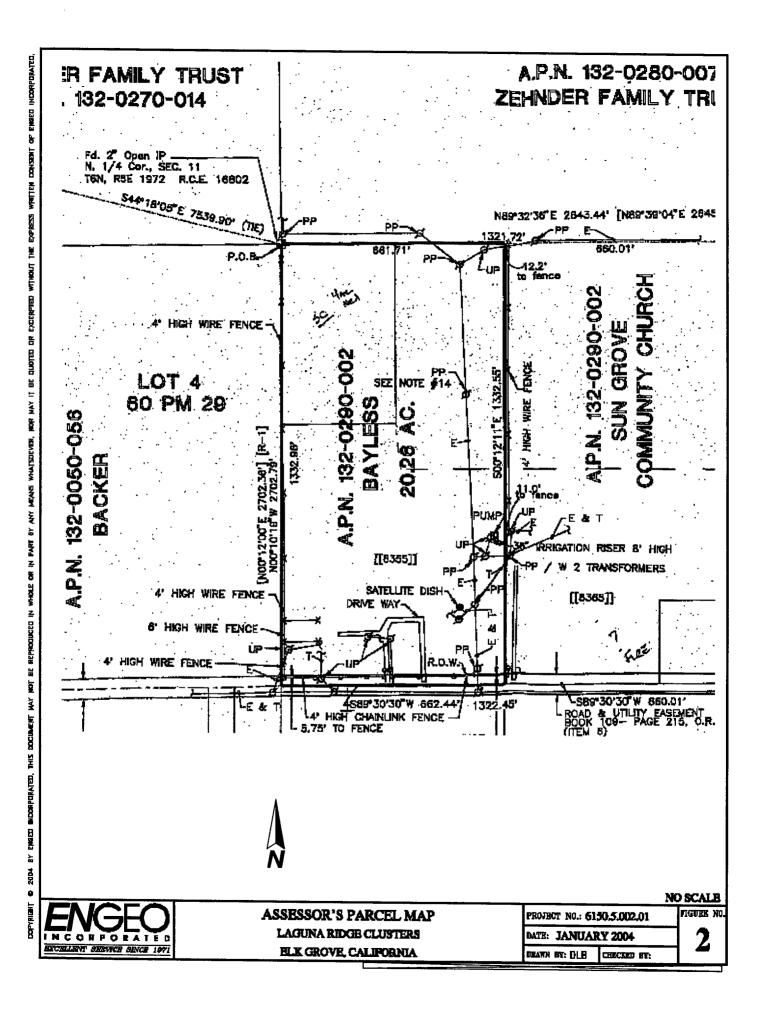

One 550-gallon underground gasoline fuel storage tank and dispenser was reportedly removed from the Property in approximately 1979 with no permit and no soil sampling/analytical testing done of the soil under the former underground fuel storage tank. The previous owner reported that this tank and dispenser was located adjacent to the northwest corner of the single car garage located along the west side of the main driveway entering the Property. We recommend that a Phase II Environmental Assessment be conducted to determine if the former tank impacted the soil within the Property.

ENGEO Incorporated has performed a Phase One Environmental Site Assessment in general conformance with the scope and limitations of ASTM 1527-00 and our proposal dated December 17, 2003 regarding the Property.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed

data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE ASTM STANDARD

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/2002 has revealed that there is 1 CHMIRS site within approximately 1 mile of the target property.

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Data Arrival at EDR: 09/24/03 Date of Government Version: 09/11/03 Elapsed ASTM days: 35 Date Made Active at EDR: 10/29/03 Date of Last EDR Contact: 09/24/03 Database Release Frequency: Quarterly **CORRACTS:** Corrective Action Report Source: EPA Telephone: 800-424-9346 CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 07/15/03 Database Release Frequency: Semi-Annually

RMP: Risk Management Plans

Source: Environmental Protection Agency

Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

BROWNFIELDS DATABASES

VCP: Voluntary Cleanup Program Properties

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 08/31/03 Database Release Frequency: Quarterly

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: N/A Database Release Frequency: Semi-Annually Date of Last EDR Contact: N/A Date of Next Scheduled EDR Contact; N/A

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided

on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals. Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States. **Daycare Centers: Licensed Facilities**

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LAGUNA RIDGE CLUSTERS 8355 POPPY RIDGE ROAD ELK GROVE, CA 95758

TARGET PROPERTY COORDINATES

Latitude (North):	38.391899 - 38° 23' 30.8"	
Longitude (West):	121.391197 - 121° 23' 28.3"	
Universal Tranverse Mercator:	Zone 10	
UTM X (Meters):	640501.2	
UTM Y (Meters):	4250317.0	
Elevation:	39 ft. above sea level	

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and

2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

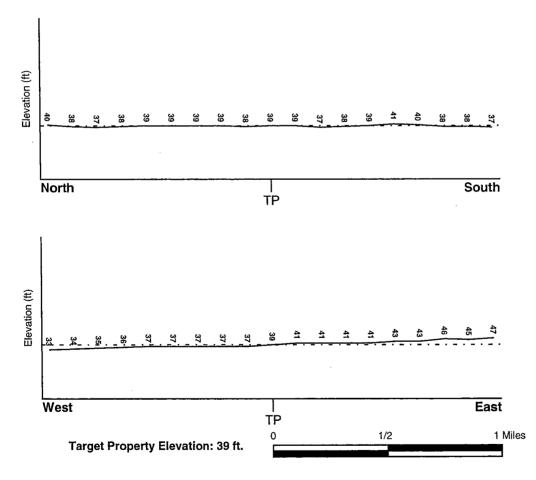

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

38121-D4 FLORIN, CA
General WSW
USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

TC01103085.1r Page A-2

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

r

Target Property County SACRAMENTO, CA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY	
NWI Quad at Target Property FLORIN	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	-	1.25 miles
Status:		Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported LOCATION FROM TP

GENERAL DIRECTION

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era:	Cenozoic	Category:	Stratifed Sequence
System:	Quaternary		
Series:	Quaternary		
Code:	Q (decoded above as Era, System & S	Series)	

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	SAN JOAQUIN	
Soil Surface Texture:	silt loam	
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.	
Soil Drainage Class:	Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.	
Hydric Status: Soil does not meet the requirements for a hydric soil.		
Corrosion Potential - Uncoated Steel: MODERATE		

inches

Depth to Bedrock Max:	> 60 inches
-----------------------	-------------

Soil Layer Information							
	Bou	ndary		Classi	ication		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	16 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.60
2	16 inches	19 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 6.10
3	19 inches	28 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.06 Min: 0.01	Max: 7.80 Min: 6.10
4	28 inches	60 inches	indurated	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00
5	60 inches	70 inches	stratified	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.20 Min: 0.06	Max: 7.80 Min: 6.10

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam sandy loam clay fine sandy loam
Surficial Soil Types:	loam sandy loam clay fine sandy loam
Shallow Soil Types:	clay loam loam silty clay loam
Deeper Soil Types:	cemented

sandy clay loam clay loam loamy sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Amdt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6

Source: Department of Conservation Telephone: 916-323-1779

RADON

State Database: CA Radon

Source: Department of Health Services Telephone: 916-324-2208 Radon Database for California

Area Radon Information

Source: USGS Telephone: 703-356-4020 The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA Telephone: 703-356-4020 Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
