## Dear Ms. Wells:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the Extended Database Search (EDS) report of the abovementioned address (the "subject property").

This assessment was performed in general conformance with the scope and limitations as designed and intended to be utilized as a limited screening tool to meet the financial needs and requirements of the client.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (415) 992-3755.

Sincerely,

Jay Grenfell
National Client Manager

## INTRODUCTION

Partner Engineering \& Science, Inc. (Partner) has performed an Extended Database Search (EDS) for the property located at Northwest Corner of County Line Road and 7th Place in the City of Calimesa, Riverside County, California ("the subject property"). This review incorporates the findings of historical sources and a database search of information that is electronically compiled from standard, federal, state, county, and city databases. The databases include compilations of regulatory agency listings of potential hazardous waste sites and generators, solid waste landfills, disposal facilities, and sites with documented releases, and sites under investigation. The EDS was designed and intended to be utilized as a limited screening tool to meet the financial needs and requirements of the client.

## Limitations

Any and all conclusions expressed or implied in this report are limited by the contractual Scope of Work and standard commercial methods used to perform these services. This records review has been performed in accordance with applicable guidelines that have been set forth by the ASTM E1527-13 Standard for Phase I ESA.

In preparing this report, Partner has relied solely on information that has been provided and/or derived from secondary sources and compiled data. Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. No other warranties are implied or expressed. The methodologies of this records review are not intended to identify all environmental concerns which may be identified in other Environmental Site Assessments.

All reports, both verbal and written, are for the sole use and benefit of Citibank, N.A. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of Partner.

## HISTORICAL USE INFORMATION

The purpose of this historical review is to describe the previous uses of the subject property and adjoining properties. Partner has obtained historical use information regarding the subject property from one or more of the following sources: assessor information, city directory listings, historical aerial photographs, topographic maps, fire insurance maps, online research, and/or client-provided documentation.

A chronological listing of the historical data found is summarized in the table below:

## Historical Use Information for the Subject Property

| Period/Date | Source | Description/Use |
| :--- | :--- | :--- |
| N/A | Fire Insurance Maps | No Coverage |
| 1895-1929 | Topographic Maps | Undeveloped/Native land |
| 1938-1972 | Aerial Photographs, Topographic Maps | Rural residence and outbuildings |
| 1975-2012 | Aerial Photographs, Topographic Maps | Vacant land |

According to aerial photographs, a structure appears on the subject property from at least 1938 until 1972. The structure is not visible on the 1975 aerial photograph, indicating it had been removed, however, a structure remains erroneously depicted on the topographic maps until 1999. Aerial photographs from 1980 through 2012 indicate trees on the property, with no structures visible. No city directory listings were found for the subject property, which is indicative that the subject property was undeveloped land, or agriculturally developed. City directory listings for adjacent properties reflected residential uses.

Copies of reviewed historical sources are not included as an attachment to this report.

## MAPPED DATABASE RECORDS SEARCH

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet. A copy of the regulatory database report is included in the Appendices.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

## Contaminant Migration/Hydrology

Based on topographic map interpretation, groundwater in the vicinity of the subject property is inferred to flow toward the west.

## Regulatory Database Details

## Subject Property Listings

The subject property is not identified in the regulatory database report.

## Adjacent Property Listings

Based solely on the addresses, the adjacent properties are not identified in the regulatory database report.

## Sites of Concern within Search Radius

No additional sites of concern are identified in the radius report.

## CONCLUSIONS AND RECOMMENDATIONS

Partner's limited research for the Extended Database Search has not revealed evidence of recognized environmental conditions in connection with the subject property. Based solely on the limited resources reviewed, Partner recommends no further investigation of the subject property at this time.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.
Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.
Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

## Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and $1,000 \mathrm{~kg}$ of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Secondary Waste: | Not reported |
| Secondary Waste Type: | Not reported |
| Design Flow: | 5 |
| Baseline Flow: | 3 |
| Reclamation: | Producer-User: Reclamation requirements that have been issued to a producer of reclaimed water who also uses the product. |
| POTW: | POTW has a local pretreatment program that has been approved by the U.S. EPA (or the regional board if the state is delegated the Federal Pretreatment Program) as being in conformance with federal prtreatment regulations [40CFR Part 403]. |
| Treat To Water: | Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances. |
| Complexity: | Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells. |
| Facility ID: | Santa Ana River 362222P01 |

Soil samples were taken December 22, 2009 during tank and piping removal activities. Up to 29 ppm TPHg, 990 ppb 1,2,4-TMB, 280 ppb 1,3,5-TMB, 770 ppb benzene, 410 ppb ethylbenzene, 2640 ppb total xylenes, 2200 ppb toluene, and 86000 ppb ethanol was detected under the piping. A total of 10.65 tons of impacted soil was removed from the site on March 11, 2010 in the vicinity of PD2-2. Soil samples taken at the bottom of the excavation at 7 had $1930 \mathrm{ppm} \mathrm{TPHg}, 29.2$ ppm benzene, 503 ppm toluene, 721 ppm xylenes, 2.89 ppm MTBE, 19.1 ppm naphthalene, 260 ppm 1,2,4-TMB, 84.6 ppm 1,3,5-TMB, 22.4 ppm n-butylbenzene, 13.6 ppm isopropylbenzene, 5.2 ppm sec-butylbenzene and 6.3 ppm 4 -isopropyltoluene. The pit was excavated deeper and soil

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

## Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

## Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015
Date Data Arrived at EDR: 01/06/2016
Date Made Active in Reports: 05/20/2016
Number of Days to Update: 135

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System
SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016

## Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/30/2016

## Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms ( kg ) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/30/2016
Date Made Active in Reports: 09/02/2016
Number of Days to Update: 64

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and $1,000 \mathrm{~kg}$ of hazardous waste per month.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/30/2016

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/30/2016

## ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## ADDITIONAL ENVIRONMENTAL RECORDS

## Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/22/2016 Date Made Active in Reports: 09/02/2016 Number of Days to Update: 72

Data Release Frequency: No Update Planned

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions \& Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically $700,000-1,000,000$ annually, representing approximately 350,000-500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.
Medical Centers: Provider of Services Listing

| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK ${ }^{\circledR}$ - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK ${ }^{\circledR}$ - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

06065C - FEMA DFIRM Flood data
06071C - FEMA DFIRM Flood data

## NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:
Search Radius: $\quad 1.25$ miles
Status: Not found

## AQUIFLOW ${ }^{\circledR}$

Search Radius: 1.000 Mile.
EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION <br> B11$\frac{\text { FROM TP }}{1 / 4-1 / 2 \text { Mile ENE }}$ | GENERAL DIRECTION <br> GROUNDWATER FLOW |
| :--- | :--- | :--- |
|  | Not Reported |  |

For additional site information, refer to Physical Setting Source Map Findings.

## GEOCHECK ${ }^{\circledR}$ - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK ${ }^{\circledR}$ - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

## Soil Map ID: 1

| Soil Component Name: | RAMONA |
| :--- | :--- |
| Soil Surface Texture: | sandy loam |
| Hydrologic Group: | Class B - Moderate infiltration rates. Deep and moderately deep, <br> moderately well and well drained soils with moderately coarse <br> textures. |
| Soil Drainage Class: | Well drained |

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris \& Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Air Quality Technical Memo

## MEMORANDUM

To: Claudia Graujeda, Project Manager<br>From:<br>Subject: Ian McIntires, Dudek<br>Air Quality Analysis for the $7^{\text {th }}$ Street and County Line Road RV Fueling and Retail Project<br>Date:<br>Attachment(s): December 2, 2019<br>A: CalEEMod 2016.3.2 Modeling and Estimated Emissions

County Line Road RV Fueling and Retail Project (Project) located northeast of County Line Lane and County Line Road in the City of Calimesa (City), California. This memorandum estimates criteria air pollutant emissions from construction and operation of the Project and evaluates potential air quality impacts resulting from Project implementation.

The Project is located within the South Coast Air Basin (SCAB) and is within the jurisdictional boundaries of the South Coast Air Quality Management District (SCAQMD), which has jurisdiction over Calimesa. California Emissions Estimator Model (CaIEEMod) Version 2016.3.2 was used to estimate air quality emissions.

The contents and organization of this memorandum are as follows: project description; environmental setting; methodology; threshold of significance and an impact analysis for the air quality assessment; conclusions; and references cited.

## 1 Project Description

The Project includes the construction of 3,000 square feet of coffee/donut shop and a 3 fueling position RV fueling facility on a 1.3 -acre site, which is currently unoccupied. Access to the Project site would be provided on County Line Lane via two protected driveways. In addition, Right turn in only access to the Project site would be provided on County Line Road via two protected driveways.

## 2 Environmental Setting

### 2.3 Existing Conditions

The Project is located within the SCAB. The SCAB is a 6,745-square-mile area bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The SCAB's air pollution problems are a consequence of the combination of emissions from the nation's second-largest urban area, meteorological conditions that hinder dispersion of those emissions, and mountainous terrain surrounding
the SCAB that traps pollutants as they are pushed inland with the sea breeze (SCAQMD 2017). Meteorological and topographical factors that affect air quality in the SCAB are described below. ${ }^{1}$

## Climate

The SCAB is characterized as having a Mediterranean climate (typified as semiarid with mild winters, warm summers, and moderate rainfall). The general region lies in the semi-permanent high-pressure zone of the eastern Pacific; as a result, the climate is mild and tempered by cool sea breezes. The usually mild climatological pattern is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds. The extent and severity of the air pollution problem in the SCAB is a function of the area's natural physical characteristics (e.g., weather and topography) and of manufactured influences (e.g., development patterns and lifestyle). Moderate temperatures, comfortable humidity, and limited precipitation characterize the climate in the SCAB. The average annual temperature varies little throughout the SCAB, averaging 75 degrees Fahrenheit ( ${ }^{\circ}$ F). However, with a lesspronounced oceanic influence, the eastern inland portions of the SCAB show greater variability in annual minimum and maximum temperatures. All portions of the SCAB have recorded temperatures over $100^{\circ} \mathrm{F}$ in recent years. Although the SCAB has a semiarid climate, the air near the surface is moist because of the presence of a shallow marine layer. Except for infrequent periods when dry air is brought into the SCAB by offshore winds, the ocean effect is dominant. Periods with heavy fog are frequent, and low stratus clouds, occasionally referred to as "high fog," are a characteristic climate feature. Annual average relative humidity is $70 \%$ at the coast and $57 \%$ in the eastern part of the SCAB. Precipitation in the SCAB is typically 9 to 14 inches annually and is rarely in the form of snow or hail because of typically warm weather. The frequency and amount of rainfall is greater in the coastal areas of the SCAB.

The City of Calimesa's climate is characterized by relatively low rainfall, with warm summers and mild winters. Average temperatures range from a high of $94^{\circ} \mathrm{F}$ in August to a low of $39^{\circ} \mathrm{F}$ in December (Western Regional Climate Center (WRCC) 2016). ${ }^{2}$ Annual precipitation averages about 14 inches, falling mostly from October through April (WRCC 2016).

## Sunlight

The presence and intensity of sunlight are necessary prerequisites for the formation of photochemical smog. Under the influence of the ultraviolet radiation of sunlight, certain "primary" pollutants (mainly reactive hydrocarbons and oxides of nitrogen $\left[\mathrm{NO}_{x}\right]^{3}$ ) react to form "secondary" pollutants (primarily oxidants). Since this process is time dependent, secondary pollutants can be formed many miles downwind of the emission sources. Southern California also has abundant sunshine, which drives the photochemical reactions that form pollutants such as ozone ( $\mathrm{O}_{3}$ ) and a substantial portion of fine particulate matter ( $\mathrm{PM}_{2.5}$, particles less than 2.5 microns in diameter). In the SCAB, high concentrations of $\mathrm{O}_{3}$ are normally recorded during the late spring, summer, and early autumn months, when more intense sunlight drives enhanced photochemical reactions. Because of the prevailing daytime winds and time-

[^7]delayed nature of photochemical smog, oxidant concentrations are highest in the inland areas of Southern California.

## Temperature Inversions

Under ideal meteorological conditions and irrespective of topography, pollutants emitted into the air mix and disperse into the upper atmosphere. However, the Southern California region frequently experiences temperature inversions in which pollutants are trapped and accumulate close to the ground. The inversion, a layer of warm, dry air overlaying cool, moist marine air, is a normal condition in coastal Southern California. The cool, damp, and hazy sea air capped by coastal clouds is heavier than the warm, clear air, which acts as a lid through which the cooler marine layer cannot rise. The height of the inversion is important in determining pollutant concentration. When the inversion is approximately 2,500 feet above mean sea level (amsl), the sea breezes carry the pollutants inland to escape over the mountain slopes or through the passes. At a height of 1,200 feet amsl, the terrain prevents the pollutants from entering the upper atmosphere, resulting in the pollutants settling in the foothill communities. Below 1,200 feet amsl, the inversion puts a tight lid on pollutants, concentrating them in a shallow layer over the entire coastal basin. Usually, inversions are lower before sunrise than during the daylight hours.

Mixing heights for inversions are lower in the summer and inversions are more persistent, being partly responsible for the high levels of $\mathrm{O}_{3}$ observed during summer months in the SCAB. Smog in Southern California is generally the result of these temperature inversions combining with coastal day winds and local mountains to contain the pollutants for long periods, allowing them to form secondary pollutants by reacting in the presence of sunlight. The SCAB has a limited ability to disperse these pollutants due to typically low wind speeds and the surrounding mountain ranges.

As with other cities within the SCAB, the City is susceptible to air inversions, which trap a layer of stagnant air near the ground where pollutants are further concentrated. These inversions produce haziness, which is caused by moisture, suspended dust, and a variety of chemical aerosols emitted by trucks, automobiles, furnaces, and other sources. Elevated concentrations of particles less than 10 microns in diameter ( $\mathrm{PM}_{10}$ ) and of $\mathrm{PM}_{2.5}$ can occur in the SCAB throughout the year, but they occur most frequently in fall and winter. Although there are some changes in emissions by day of the week and by season, the observed variations in pollutant concentrations are primarily the result of seasonal differences in weather conditions.

### 2.3 Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. Criteria air pollutants that are evaluated include volatile organic compounds (VOCs, also referred to as reactive organic gases (ROGs)), $\mathrm{NO}_{x}$, carbon monoxide (CO), sulfur oxides ( $\mathrm{SO}_{x}$ ), $\mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$. VOCs and $\mathrm{NO}_{\mathrm{x}}$ are important because they are precursors to ozone $\left(\mathrm{O}_{3}\right)$ formation. Criteria air pollutant emissions from construction activities is typically associated with operation of off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicle trips. Operational emission sources for the Project would typically include mobile (vehicle) sources, area sources associated with use of consumer products, as well as energy use (electricity and natural gas) associated with operations.

## 3 Methodology

### 3.1 Construction

Emissions from Project construction activities were estimated using the CalEEMod. CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant and GHG emissions associated with the construction and operational activities from a variety of land use projects, such as residential, commercial, and industrial facilities. CalEEMod input parameters, including the Project land use type and size and construction schedule were based on information provided by the Project applicant, or default model assumptions if Project specifics were unavailable.

For the purposes of estimating the Project construction emissions, it is anticipated that construction would commence in May 2020 and would be completed by April 2021. The construction equipment mix and estimated hours of equipment operation per day used for the air emissions modeling of the Project are based on CalEEMod defaults based on the multi-family residential land use type which are shown in Table 1. Construction worker estimates, vendor, and haul truck trips by construction phase were based on CalEEMod default values. CalEEMod default trip length values were used for the distances for all construction-related trips.

The construction equipment mix and vehicle trips used for estimating the Project-generated construction emissions are shown in Table 1.

## Table 1

Construction Scenario Assumptions

| Construction Phase | One-way Vehicle Trips |  |  | Equipment |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Average Daily <br> Worker Trips | Average <br> Daily <br> Vendor <br> Truck Trips | Total Haul Truck Trips | Equipment Type | Quantity | Usage Hours |
| Demolition | 14 | 0 | 8 | Concrete/Industrial Saws | 1 | 8 |

### 3.2 Operations

During long-term operations, the Project would generate air pollutants and GHGs from mobile, energy, and area sources. GHGs would also be generated by water and waste water generation and solid waste. CaIEEMod was used to estimate emissions from all these sources. Emission factors representing the vehicle mix and emissions for 2022 were used to estimate emissions associated with mobile sources. Default CaIEEMod assumptions were used for building and lighting electricity use, generation of electricity associated with water supply, treatment, distribution and wastewater treatment, natural gas combustion, area sources (i.e., landscaping, consumer products, and architectural coatings for building maintenance) and solid waste disposal. However, default vehicle trip generation rates included in CalEEMod for the Project were adjusted to match the Project trip generation estimates from the Traffic Impact Analysis (TIA). Overall, the Project would result in approximately 2,977 daily vehicle trips.

## 4 Air Quality Assessment

### 4.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.), which provides guidance that a Project would have a significant environmental impact if it would:

- Conflict with or obstruct the implementation of the applicable air quality plan (AQP)
- Result in a cumulatively considerable new increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard
- Expose sensitive receptors to substantial pollutant concentrations
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people

Construction of the Project would result in emissions of criteria air pollutants for which the California Air Resources Board (CARB) and the United States Environmental Protection Agency (EPA) have adopted ambient air quality standards (i.e., the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS)). Projects that emit these pollutants have the potential to cause or contribute to violations of these standards. The SCAQMD CEQA Air Quality Handbook, as revised in March 2015, sets forth quantitative emission significance thresholds for criteria air pollutants, which, if exceeded, would indicate the potential to contribute to violations of the NAAQS or CAAQS. Project-related air quality impacts estimated in this environmental analysis, as shown in Table 2 (SCAQMD Air Quality Significance Thresholds), would be exceeded.

If the Project's construction or operational emissions would exceed the SCAQMD VOC or NOx thresholds shown in Table 2, then it would result in a substantial contribution to an existing air quality violation of the NAAQS or CAAQS for $\mathrm{O}_{3}$, which is a nonattainment pollutant. Ozone is not emitted directly into the air but is a pollutant formed by a photochemical reaction in the atmosphere. Ozone precursors, VOC and $\mathrm{NO}_{\mathrm{x}}$, react in the atmosphere in the presence of sunlight to form ozone. Therefore, the SCAQMD does not have a recommended ozone threshold, but it does have thresholds of significance for VOC and $\mathrm{NO}_{x}$.

## Table 2

SCAQMD Air Quality Significance Thresholds

| Criteria Pollutants Mass Daily Thresholds |  |  |
| :---: | :---: | :---: |
| Polutant | Construction (pounds per day) | Operation (pounds per day) |
| VOCs | 75 | 55 |
| $\mathrm{NO}_{\mathrm{x}}$ | 100 | 55 |
| CO | 550 | 550 |
| SOx | 150 | 150 |
| $\mathrm{PM}_{10}$ | 150 | 150 |
| PM 2.5 | 55 | 55 |
| Lead ${ }^{\text {a }}$ | 3 | 3 |
| TACs and Odor Thresholds |  |  |
| TACs ${ }^{\text {b }}$ | Maximum incremental cancer risk $\geq 10$ in 1 million <br> Cancer Burden >0.5 excess cancer cases (in areas $\geq 1$ in 1 million) <br> Chronic and acute hazard index $\geq 1.0$ (project increment) |  |
| Odor | Project creates an odor nuisance pursuant to SCAQMD Rule 402 |  |
| Ambient Air Quality Standards for Criteria Pollutants ${ }^{\circ}$ |  |  |
| $\mathrm{NO}_{2}$ 1-hour average <br> $\mathrm{NO}_{2}$ annual arithmetic mean | SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: <br> 0.18 ppm (state) <br> 0.030 ppm (state) and 0.0534 ppm (federal) |  |
| CO 1-hour average CO 8-hour average | SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: <br> 20 ppm (state) and 35 ppm (federal) <br> 9.0 ppm (state/federal) |  |
| PM 10 24-hour average PM 10 annual average | $10.4 \mu \mathrm{~g} / \mathrm{m}^{3}$ (construction) $^{\mathrm{d}}$ $2.5 \mu \mathrm{~g} / \mathrm{m}^{3}$ (operation) $1.0 \mu \mathrm{~g} / \mathrm{m}^{3}$ |  |
| PM ${ }_{2}$. 24 -hour average | $10.4 \mu \mathrm{~g} / \mathrm{m}^{3}$ (construction) $^{\mathrm{d}}$ <br> $2.5 \mu \mathrm{~g} / \mathrm{m}^{3}$ (operation) |  |

## Source: SCAQMD 2015.

Notes: SCAQMD = South Coast Air Quality Management District; VOC = volatile organic compounds; $\mathrm{NO}_{\mathrm{x}}=0$ oxides of nitrogen; $\mathrm{CO}=$ carbon monoxide; $\mathrm{SO}_{\mathrm{x}}=$ sulfur oxides; $\mathrm{PM}_{10}=$ coarse particulate matter; $\mathrm{PM}_{2.5}=$ fine particulate matter; $\mathrm{TAC}=$ toxic air contaminant; $\mathrm{NO}_{2}=$ nitrogen dioxide; ppm = parts per million by volume; $\mu \mathrm{g} / \mathrm{m}^{3}=$ micrograms per cubic meter.
GHG emissions thresholds for industrial projects, as added in the March 2015 revision to the SCAQMD Air Quality Significance Thresholds, were not include included in Table 3.2-4 as they are addressed within the GHG emissions analysis and not the air quality analysis.
a The phaseout of leaded gasoline started in 1976. Since gasoline no longer contains lead, the Project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.
b TACs include carcinogens and noncarcinogens.
c Ambient air quality standards for criteria pollutants are based on SCAQMD Rule 1303, Table A-2, unless otherwise stated.
d Ambient air quality threshold are based on SCAQMD Rule 403.

### 4.1 Impact Analysis

## a) Would the Project Conflict With or Obstruct Implementation of the Applicable Air Quality Plan?

As previously discussed, the Project site is located within the SCAB under the jurisdiction of the SCAQMD, which is the local agency responsible for administration and enforcement of air quality regulations for the area. The SCAQMD has established criteria for determining consistency with the AQMP, currently the 2016 AQMP, in Chapter 12, Sections 12.2 and 12.3, in the SCAQMD CEQA Air Quality Handbook (SCAQMD 1993). The criteria are as follows (SCAQMD 1993):

- Consistency Criterion No. 1: The Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards of the interim emissions reductions specified in the AQMP.
- Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

## Consistency Criterion No. 1

Impact Criterion b), evaluates the Project's potential impacts in regards to CEQA Guidelines Appendix G Threshold 2 (the Project's potential to violate any air quality standard or contribute substantially to an existing or projected air quality violation impact analysis). As discussed in below, the Project would result in a less than significant impact associated with the violation of an air quality standard. Because the Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, the Project would not conflict with Consistency Criterion No. 1 of the SCAQMD CEQA Air Quality Handbook.

## Consistency Criterion No. 2

While striving to achieve the NAAQS for $\mathrm{O}_{3}$ and $\mathrm{PM}_{2.5}$ and the CAAQS for $\mathrm{O}_{3}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$ through a variety of air quality control measures, the 2016 AQMP also accommodates planned growth in the SCAB. Projects are considered consistent with, and would not conflict with or obstruct implementation of, the AQMP if the growth in socioeconomic factors (e.g., population, employment) is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook).

The SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by the SCAG for its RTP/SCS (SCAG 2016), which is based on general plans for cities and counties in the SCAB, for the development of the AQMP emissions inventory (SCAQMD 2017). ${ }^{4}$ The SCAG 2016 RTP/SCS, and associated Regional Growth Forecast, are

[^8]generally consistent with the local plans; therefore, the 2016 AQMP is generally consistent with local government plans.

The City's 2014 General Plan identifies the Project site as C-C (Community Commercial) (City of Calimesa 2014). The Project would be consistent with the current zoning and General Plan land use designation. In addition, the Project does not include development that would result in population growth. The Project includes development of a coffee/donut shop and a 3 fueling position RV fueling facility, which would be consistent with the City's zoning and General Plan as well as SCAG's growth projections anticipated in the 2016 Final AQMP. Vehicle trips and trip distance would be consistent with SCAG's growth projections anticipated in the 2016 Final AQMP. As such, it is reasonable to assume vehicle trip generation and planned development for the site has been anticipated in the SCAG growth projections because the land use would remain the same (i.e., commercial). Because the Project is consistent with the anticipated population growth of the City and the associated vehicle trips have been factored into the underlying growth projections of the 2016 Final AQMP, the Project would not result in a conflict with, or obstruct implementation of, the applicable air quality plan. Accordingly, the Project would meet Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook.

## Summary

As described previously, the Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, and would not conflict with Consistency Criterion No. 1. The Project would be consistent with the land use assumptions and demographic growth forecasts in the SCAG 2016 RTP/SCS; therefore, would also be consistent with the SCAQMD 2016 AQMP, which based future emission estimates on the SCAG 2016 RTP/SCS. Thus, the Project would not conflict with Consistency Criterion No. 2. Based on these considerations, impacts related to the Project's potential to conflict with or obstruct implementation of the applicable air quality plan would be less than significant.
b) Would the Project result in a cumulatively considerable new increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

Construction and operation of the Project would result in emissions of criteria air pollutants from mobile, area, and energy source, which may cause exceedances of national and California ambient air quality standards or contribute to existing nonattainment of ambient air quality standards. The following discussion identifies potential short-term construction and long-term operational impacts that would result from implementation of the Project.

## Construction

Construction of the Project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation, and for dust,

Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socio-economic and transportation activities projections in their 2016 RTP/SCS are integrated in the 2016 AQMP (SCAQMD 2017).
the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated with a corresponding uncertainty in precise ambient air quality impacts.

As discussed in Section 3, Methodology (Construction), criteria air pollutant emissions associated with temporary construction activity were quantified using CalEEMod. Construction schedule assumptions, including phase type, duration, and sequencing, were based on CalEEMod default values and is intended to represent a reasonable scenario in the absence of Project-specific information. It was assumed that construction would commence in May 2020 and would be completed by April 2021.

Implementation of the Project would generate criteria air pollutant emissions from entrained dust, off-road equipment, vehicle emissions, architectural coatings, and asphalt pavement application. Entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ emissions. The Project would be required to comply with SCAQMD Rule 403 to control dust emissions generated during the grading activities. Standard construction practices that were assumed to be employed to reduce fugitive dust emissions, and were quantified in CalEEMod, include watering of the active sites two times per day depending on weather conditions. Internal combustion engines used by construction equipment, vendor trucks (i.e., delivery trucks), and worker vehicles would result in emissions of VOCs, $\mathrm{NO}_{x}, \mathrm{CO}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$. The application of architectural coatings, such as exterior application/interior paint and other finishes, and application of asphalt pavement would also produce VOC emissions; however, the contractor is required to procure architectural coatings from a supplier in compliance with the requirements of SCAQMD's Rule 1113 (Architectural Coatings).

Table 3 presents the estimated maximum daily construction emissions generated during construction of the Project. The values shown are the maximum summer or winter daily emissions results from CalEEMod. Details of the emission calculations are provided in Attachment A.

## Table 3

Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

| Year | VOC |  |  |  |  |  |  | $\mathrm{NO}_{x}$ | CO | $\mathrm{SO}_{\mathrm{x}}$ | $\mathrm{PM}_{10}$ | $\mathrm{PM}_{2.5}$ |
| :--- | :---: | :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | pounds per day |  |  |  |  |  |  |  |  |  |  |  |
| 2020 | 2.22 | 21.10 | 15.41 | 0.03 | 3.55 | 2.12 |  |  |  |  |  |  |
| 2021 | 6.03 | 14.59 | 14.22 | 0.03 | 1.12 | 0.78 |  |  |  |  |  |  |
| Maximum Daily Emissions | 6.03 | 21.10 | 15.41 | 0.03 | 3.55 | 2.12 |  |  |  |  |  |  |
| SCAQMD Threshold | 75 | 100 | 550 | 150 | 150 | 55 |  |  |  |  |  |  |
| Threshold Exceeded? | No | No | No | No | No | No |  |  |  |  |  |  |

Notes: VOC = volatile organic compound; $\mathrm{NO}_{\mathrm{x}}=$ oxides of nitrogen; $\mathrm{CO}=$ carbon monoxide; $\mathrm{SO}_{\mathrm{x}}=$ sulfur oxides; $\mathrm{PM}_{10}=$ coarse particulate matter; $\mathrm{PM}_{2.5}=$ fine particulate matter.
See Attachment A for complete results.
The values shown are the maximum summer or winter daily emissions results from CalEEMod.

As shown in Table 3, daily construction emissions would not exceed the SCAQMD significance thresholds for VOC, $\mathrm{NO}_{\mathrm{x} .} \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, or $\mathrm{PM}_{2.5}$ during construction in all construction years. Construction-generated emissions would be temporary and would not represent a long-term source of criteria air pollutant emissions. As such, impacts would be less than significant.

## Operation

Operation of the Project would produce VOCs, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$ emissions from area sources, including natural gas combustion, use of consumer products, and motor vehicle trips the Project site. The estimation of operational emissions was based on proposed land use defaults and total area (i.e., square footage) that would be in operation by 2022 (first year of full operation).

CalEEMod was used to estimate daily emissions from Project-related operational sources. Table 4 summarizes the operational emissions criteria pollutants that would be generated from the Project. Operational emissions were then compared to the SCAQMD operational thresholds.

Table 4
Estimated Maximum Daily Operational Criteria Air Pollutant Emissions

| Emission Source | VOC | $\mathrm{NO}_{\mathrm{x}}$ | CO | $\mathrm{SO}_{\mathrm{x}}$ | PM10 | PM 2.5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | pounds per day |  |  |  |  |  |
| Area | 0.13 | <0.01 ${ }^{\text {a }}$ | <0.01 ${ }^{\text {a }}$ | 0.00 | 0.00 | 0.00 |
| Energy | 0.02 | 0.22 | 0.19 | <0.01 ${ }^{\text {a }}$ | 0.02 | 0.02 |
| Mobile | 6.04 | 40.23 | 41.35 | 0.17 | 10.48 | 2.88 |
| Total | 6.19 | 40.45 | 41.54 | 0.17 | 10.50 | 2.90 |
| SCAQMD Threshold | 55 | 55 | 550 | 150 | 150 | 55 |
| Threshold Exceeded? | No | No | No | No | No | No |

Notes: VOC = volatile organic compound; $\mathrm{NO}_{\mathrm{x}}=$ oxides of nitrogen; $\mathrm{CO}=$ carbon monoxide; $\mathrm{SO}_{\mathrm{x}}=$ sulfur oxides; $\mathrm{PM}_{10}=$ coarse particulate matter; $\mathrm{PM}_{2.5}=$ fine particulate matter; SCAQMD = South Coast Air Quality Management District. See Attachment A for complete results.
The values shown are the maximum summer or winter daily emissions results from CaIEEMod.
a $\quad<0.01=$ value less than reported 0.01 metric tons per year.

As shown in Table 4, the combined daily area, energy, and mobile source emissions would not exceed the SCAQMD operational thresholds for VOC, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$. Impacts associated with Projectgenerated operational criteria air pollutant emissions would be less than significant.
c) Would the Project expose sensitive receptors to substantial pollutant concentrations?

Air quality varies as a direct function of the amount of pollutants emitted into the atmosphere, the size and topography of the air basin, and the prevailing meteorological conditions. Air quality problems arise when the rate of pollutant emissions exceeds the rate of dispersion. Reduced visibility, eye irritation, and adverse health impacts upon those persons termed "sensitive receptors" are the most serious hazards of existing air quality conditions. Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution, include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Sensitive receptors include residences, schools, playgrounds, child-care centers, athletic facilities, long-term health-care facilities, rehabilitation centers, convalescent centers, and retirement homes. The discussion below reviews the significance of emissions within the context of potential impacts to sensitive receptors. Sensitive receptors in the vicinity of the Project include single-family residential uses to the north, south, and west of the Project site, adjacent to County Line Lane and County Line Road.

## Localized Significance Thresholds

The SCAQMD recommends a localized significance threshold (LST) analysis to evaluate localized air quality impacts to sensitive receptors in the immediate vicinity of the Project site as a result of construction activities. The impacts were analyzed using methods consistent with those in the SCAQMD's Final Localized Significance Threshold Methodology (SCAQMD 2009). The Project is located in Source Receptor Area (SRA) 28 (Hemet/San Jacinto Valley). The Project's construction activities would occur over a 1.3-acre work area; therefore, for the purposes of the LST analysis, emissions thresholds based on a one-acre site were utilized. This is a conservative approach, as LSTs increase with the size of project site. As mentioned previously, the closest sensitive receptors are residences located adjacent to the Project site. The closest receptor distance available in the SCAQMD LST Methodology is 25 meters ( 82 feet) which was assumed for this analysis.

Project construction activities would result in temporary sources of on-site criteria air pollutant emissions associated with construction equipment exhaust and dust-generating activities. The maximum daily on-site construction emissions generated during construction of the Project is presented in Table 5, and compared to the SCAQMD localized significance criteria for SRA 28 to determine whether Project-generated on-site construction emissions would result in potential LST impacts.

## Table 5

Construction Localized Significance Thresholds Analysis

| Year | $\mathrm{NO}_{2}$ |  |  | CO |
| :--- | :---: | :--- | :--- | :--- |
|  |  |  |  |  |
|  | pounds per day (on site) | $\mathrm{PM}_{2.5}$ |  |  |
| 2020 | 1.63 | 18.35 | 2.90 | 1.77 |
| SCAQMD LST Criteria | 162 | 750 | 4 | 3 |
| Threshold Exceeded? | No | No | No | No |

## Source: SCAQMD 2009.

Notes: $\mathrm{NO}_{2}=$ nitrogen dioxide; $\mathrm{CO}=$ carbon monoxide; $\mathrm{PM}_{10}=$ particulate matter; $\mathrm{PM}_{2.5}=$ fine particulate matter; $\mathrm{SCAQMD}=$ South Coast Air Quality Management District; LST = localized significance threshold.
See Attachment A for detailed results.
Localized significance thresholds are shown for a 1 -acre project site corresponding to a distance to a sensitive receptor of 25 meters.

As shown in Table 5, proposed construction activities would not generate emissions in excess of sitespecific LSTs; therefore, localized Project construction impacts would be less than significant.

## CO Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO "hotspots." CO transport is extremely limited, because CO disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels, affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections. Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would
be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots. During construction of the Project, construction traffic would affect the intersections near the Project site. However, construction activities would be temporary and would not be a source of substantial daily vehicle trips. Regarding long-term mobile-source emissions, the Project would not generate a substantial amount of traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing. Finally, as discussed in the TIA, transportation impacts would be less than significant. Therefore, the Project would not generate additional traffic volumes and impacts related to CO hot spots would be less than significant.

## Toxic Air Contaminants

Toxic air contaminants (TACs) are defined as substances that may cause or contribute to an increase in deaths or in serious illness, or that may pose a present or potential hazard to human health. As discussed under the LST analysis, the nearest sensitive receptors to the Project site are residences located adjacent to the Project.

Health effects from carcinogenic air toxics are usually described in terms of cancer risk. The SCAQMD recommends an incremental cancer risk threshold of 10 in 1 million. "Incremental cancer risk" is the net increased likelihood that a person continuously exposed to concentrations of TACs resulting from a project over a 9-, 30-, and 70-year exposure period will contract cancer based on the use of standard Office of Environmental Health Hazard Assessment risk-assessment methodology (OEHHA 2015). In addition, some TACs have non-carcinogenic effects. The SCAQMD recommends a Hazard Index of 1 or more for acute (shortterm) and chronic (long-term) non-carcinogenic effects. ${ }^{5}$ TACs that would potentially be emitted during construction activities associated with the Project would be diesel particulate matter.

Diesel particulate matter emissions would be emitted from heavy equipment operations and heavy-duty trucks. Heavy-duty construction equipment is subject to a CARB Airborne Toxics Control Measure for in-use diesel construction equipment to reduce diesel particulate emissions. As described for the LST analysis, $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ (representative of diesel particulate matter) exposure would be minimal. According to the Office of Environmental Health Hazard Assessment, health risk assessments (which determine the exposure of sensitive receptors to toxic emissions) should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should also be limited to the period/duration of activities associated with the Project. The duration of the proposed construction activities would constitute a small percentage of the total 30-year exposure period. The construction period for the Project would be approximately 12 months, after which construction-related TAC emissions would cease. Due to this relatively short period of exposure and minimal particulate emissions on site, TACs generated during construction would not be expected to result in concentrations causing significant health risks.

[^9]It is expected that operation of the Project would not result in any non-permitted direct emissions (e.g., those from a point source such as diesel generators). In addition, the Project would not result in substantial diesel vehicle trips (i.e., delivery trucks). Therefore, the Project would not result in exposure of sensitive receptors in the vicinity of the Project site to substantial TAC concentrations due to either construction or operation and impacts would be less than significant.

## Health Effects of Criteria Air Pollutants

Construction emissions of the Project would not exceed the SCAQMD thresholds for any criteria air pollutants, including VOC, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$.

Health effects associated with $\mathrm{O}_{3}$ include respiratory symptoms, worsening of lung disease leading to premature death, and damage to lung tissue (CARB 2019). VOCs and $\mathrm{NO}_{x}$ are precursors to $\mathrm{O}_{3}$, for which the SCAB is designated as nonattainment with respect to the NAAQS and CAAQS. The contribution of VOCs and $\mathrm{NO}_{x}$ to regional ambient $\mathrm{O}_{3}$ concentrations is the result of complex photochemistry. The increases in $\mathrm{O}_{3}$ concentrations in the SCAB due to $\mathrm{O}_{3}$ precursor emissions tend to be found downwind of the source location because of the time required for the photochemical reactions to occur. Further, the potential for exacerbating excessive $\mathrm{O}_{3}$ concentrations would also depend on the time of year that the VOC emissions would occur, because exceedances of the $\mathrm{O}_{3}$ NAAQS and CAAQS tend to occur between April and October when solar radiation is highest. Due to the lack of quantitative methods to assess this complex photochemistry, the holistic effect of a single project's emissions of $\mathrm{O}_{3}$ precursors is speculative. That being said, because the Project would not exceed the SCAQMD thresholds, the Project would not contribute to health effects associated with $\mathrm{O}_{3}$.

Health effects associated with $\mathrm{NO}_{x}$ include lung irritation and enhanced allergic responses (CARB 2019). Because project-related $\mathrm{NO}_{x}$ emissions would not exceed the SCAQMD mass daily thresholds, and because the SCAB is a designated attainment area for $\mathrm{NO}_{2}$ and the existing $\mathrm{NO}_{2}$ concentrations in the area are well below the NAAQS and CAAQS standards, it is not anticipated that the Project would cause an exceedance of the NAAQS and CAAQS for $\mathrm{NO}_{2}$ or result in potential health effects associated with $\mathrm{NO}_{2}$ and $\mathrm{NO}_{x}$.

Health effects associated with CO include chest pain in patients with heart disease, headache, light-headedness, and reduced mental alertness (CARB 2019). CO tends to be a localized impact associated with congested intersections. The associated potential for CO hotspots was discussed previously and determined to be less than significant. Thus, the Project's CO emissions would not contribute to significant health effects associated with CO.

Health effects associated with $\mathrm{PM}_{10}$ include premature death and hospitalization, primarily for worsening of respiratory disease (CARB 2019). Construction of the Project would not exceed thresholds for PM 10 or PM2.5, would not contribute to exceedances of the NAAQS and CAAQS for particulate matter, and would not obstruct the SCAB from coming into attainment for these pollutants. The Project would also not result in substantial diesel particulate matter emissions during construction. Additionally, the Project would be required to comply with SCAQMD Rule 403, which limits the amount of fugitive dust generated during construction. Due to the minimal contribution of particulate matter during construction, the Project is not anticipated to result in health effects associated with $\mathrm{PM}_{10}$ or $\mathrm{PM}_{2.5}$.

In summary, construction and operation of the Project would not result in exceedances of the SCAQMD significance thresholds for criteria pollutants, and potential health effects associated with criteria air pollutants would be less than significant.
d) Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The occurrence and severity of potential odor impacts depend on numerous factors. The nature, frequency, and intensity of the source; wind speed and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying, cause distress among the public, and generate citizen complaints.

During Project construction, exhaust from equipment may produce discernible odors typical of most construction sites. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment. However, such odors would disperse rapidly from the Project site and generally occur at magnitudes that would not affect substantial numbers of people. Accordingly, impacts associated with odors during construction would be less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding (SCAQMD 1993). Operation of the Project would create odors related to RV fueling at the proposed fuel facility. These odors would be temporary and dissipated quickly by regional air movement and localized winds, and no buildup of odors is expected to occur. In addition, the fuel facility would be equipped with Phase I and Phase II control to be in compliance with CARB and SCAQMD requirement of installing a vapor recovery system to collect gasoline vapors during fuel delivery or fuel storage and vehicle fueling, which would also have a co-benefit for controlling odors. This system will control at least $90 \%$ of the fuel vapors typically vented and the associated odors. Therefore, Project operations would result in an odor impact that is less than significant.

## 5 Conclusion

Construction of the Project would not exceed the SCAQMD's construction significance thresholds for VOC, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}$, $\mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$. In addition, operational criteria air pollutant emissions associated with the Project would not would not exceed the SCAQMD's operational significance thresholds for VOC, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{x}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$. Air quality impacts would be less than significant.

### 1.3 User Entered Comments \& Non-Default Data

Project Characteristics - 7th St \& County Line Rd RV Fueling \& Retail Project. Riverside County.
Land Use - Construction of 3,000 SF in retail and RV fuel station on 1.3 acre site.
Construction Phase - Default schedule assumed.
Off-road Equipment - Default equipment assumed.
Grading - Assumed soil will be balanced.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Demolition - Demolition of 1,625 SF single family home.
Trips and VMT - Rounded trips.
Vehicle Trips - Updated trip rates per TIA (Ganddini Group, Inc).
Energy Use - Assumed no natural gas consumption by fuel pumps.
Water And Wastewater - Assume 100\% aerobic.
Construction Off-road Equipment Mitigation - Compliance with SCAQMD Rule 403 - water twice daily.
Water Mitigation - Assume 20\% reduction in water consumption per CalGreen.
Waste Mitigation - Assum 50\% waste diverted per AB 939.

## 7th St \& County Line Rd RV Fueling \& Retail Project

## Riverside-South Coast County, Summer

### 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Fast Food Restaurant with Drive Thru | 3.00 | 1000sqft | 0.07 | 3,000.00 | 0 |
| Gasoline/Service Station | 3.00 | Pump | 0.04 | 1,680.00 | 0 |
| Other Asphalt Surfaces | 1.19 | Acre | 1.19 | 51,836.40 | 0 |

### 1.2 Other Project Characteristics

| Urbanization | Rural | Wind Speed (m/s) | 2.4 | Precipitation Freq (Days) | 28 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Climate Zone | 10 |  | Operational Year |  |  |

### 1.3 User Entered Comments \& Non-Default Data

Project Characteristics - 7th St \& County Line Rd RV Fueling \& Retail Project. Riverside County.
Land Use - Construction of 3,000 SF in retail and RV fuel station on 1.3 acre site.
Construction Phase - Default schedule assumed.
Off-road Equipment - Default equipment assumed.
Grading - Assumed soil will be balanced.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Demolition - Demolition of 1,625 SF single family home.
Trips and VMT - Rounded trips.
Vehicle Trips - Updated trip rates per TIA (Ganddini Group, Inc).
Energy Use - Assumed no natural gas consumption by fuel pumps.
Water And Wastewater - Assume 100\% aerobic.
Construction Off-road Equipment Mitigation - Compliance with SCAQMD Rule 403 - water twice daily.
Water Mitigation - Assume 20\% reduction in water consumption per CalGreen.
Waste Mitigation - Assum 50\% waste diverted per AB 939.

## 7th St \& County Line Rd RV Fueling \& Retail Project

Riverside-South Coast County, Winter

### 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Fast Food Restaurant with Drive Thru | 3.00 | 1000sqft | 0.07 | 3,000.00 | 0 |
| Gasoline/Service Station | 3.00 | Pump | 0.04 | 1,680.00 | 0 |
| Other Asphalt Surfaces | 1.19 | Acre | 1.19 | 51,836.40 | 0 |

### 1.2 Other Project Characteristics

| Urbanization | Rural | Wind Speed (m/s) | 2.4 | Precipitation Freq (Days) | 28 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Climate Zone | 10 |  | Operational Year |  |  |

### 1.3 User Entered Comments \& Non-Default Data

Project Characteristics - 7th St \& County Line Rd RV Fueling \& Retail Project. Riverside County.
Land Use - Construction of 3,000 SF in retail and RV fuel station on 1.3 acre site.
Construction Phase - Default schedule assumed.
Off-road Equipment - Default equipment assumed.
Grading - Assumed soil will be balanced.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.

7th St County Line Rd RV Fueling Retail Project - Riverside-South Coast County, Winter
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Off-road Equipment - Default equipment assumed.
Demolition - Demolition of 1,625 SF single family home.
Trips and VMT - Rounded trips.
Vehicle Trips - Updated trip rates per TIA (Ganddini Group, Inc).
Energy Use - Assumed no natural gas consumption by fuel pumps.
Water And Wastewater - Assume 100\% aerobic.
Construction Off-road Equipment Mitigation - Compliance with SCAQMD Rule 403 - water twice daily.
Water Mitigation - Assume 20\% reduction in water consumption per CalGreen.
Waste Mitigation - Assum 50\% waste diverted per AB 939.

## Appendix D

 Biological Resources Records and Literature Search
## Claudia Grajeda

J \& T Management, Inc.
139 Radio Road
Corona, CA 92879

## Subject: Results of Biological Resources Records and Literature Search conducted for the 742 County Line Road Project in the City of Calimesa, California

Dear Ms. Grajeda

Dudek conducted a review of available relevant literature and data on special-status biological resources (habitats, species, and aquatic resources) that occur or have the potential for occurrence within the project site, plus a 100foot buffer (the study area).

Special-status biological resources present or potentially present on the study area were identified through a literature search using the following sources: USFWS's Critical Habitat and Occurrence Data (USFWS 2019a); CDFW's California Natural Diversity Database (CDFW 2019b); the California Native Plant Society's online Inventory of Rare and Endangered Plants (CNPS 2019); the Calflora database, which compiles observation and plant data from both private and public institutions, including the Consortium of California herbaria (Calflora 2019); a Natural Resources Conservation Service soil map (USDA 2019); the USGS 7.5-minute topographic quadrangle (USGS 2019); U.S. Environmental Protection Agency Watershed Assessment, Tracking \& Environmental Results System (EPA 2019), which includes the National Hydrography Dataset; and the National Wetland Inventory (USFWS 2019b). Searches were completed for the following USGS quadrangles (which include the quadrangle within which the study area is located and the eight surrounding quadrangles): Yucaipa, Keller Peak, Big Bear Lake, Harrison Mountain, Redlands, Forest Falls, Sunnymead, El Casco, and Beaumont.

Attachment A, Special-Status Plant Species Potentially Occurring in the Study Area, lists special-status plant species that have been documented in the USGS 7.5-minute Yucaipa quadrangle and the eight surrounding quadrangles (CDFW 2019; CNPS 2019). For each species listed, a determination was made regarding the potential for the species to occur in the study area based on information gathered during the literature search, including the location of the site, habitats present, current site conditions, and past and present land use.

Attachment B, Special-Status Wildlife Species Potentially Occurring in the Study Area, lists special-status wildlife species that have been documented in the USGS 7.5-minute Yucaipa quadrangle and the eight surrounding quadrangles (CDFW 2019). For each special-status wildlife species, a determination was made regarding potential use of the study area based on information gathered during the literature review, known habitat preferences, and knowledge of the species' relative distributions in the area.

The Biological Resources Literature and Records Search concluded that there are no listed species with a potential to occur within the project site or study area. There are no special-status plant or wildlife species with a moderate or high potential to occur; however, there are seven special-status wildlife species, California Species of Special Concern (SSC), which were determined to have a low potential to occur within the project site and study area.

Subject: Results of Biological Resources Records Search conducted for the 742 County Line Road Project in Calimesa, California

The complete impact analysis for biological resources will be included in the Initial Study/Mitigated Negative Declaration, pursuant to the California Environmental Quality Act statutes and guidelines. If you have any additional questions regarding the results of the Biological Resources Literature and Records Search, please contact me at 760.601 .3416 or bstrittmater@dudek.com

Sincerely,

Britney Strittmater
Senior Biologist

## Attachment A

Plant PTO Table

| Scientific Name | Common Name | Status (Federal/State/C | Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet) | Potential to Occur |
| :---: | :---: | :---: | :---: | :---: |
| Abronia villosa var. aurita | chaparral sand-verbena | None/None/1B. 1 | Chaparral, Coastal scrub, Desert dunes; sandy/annual herb/(Jan)Mar-Sep/245-5250 | Not expected to occur. The site is located within the appropriate elevation range for this species; however, it lacks the chaparral, coastal scrub, or sand dune habitat suitable to support this species. |
| Allium howellii var. clokeyi | Mt. Pinos onion | None/None/1B. 3 | Great Basin scrub, Meadows and seeps (edges), Pinyon and juniper woodland/perennial bulbiferous herb/Apr-June/4265-6070 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Allium marvinii | Yucaipa onion | None/None/1B. 2 | Chaparral (clay, openings)/perennial bulbiferous herb/Apr-May/2490-3495 | Not expected to occur. There is no suitable chaparral or clay soils present to support this species. |
| Arenaria lanuginosa var. saxosa | rock sandwort | None/None/2B. 3 | Subalpine coniferous forest, Upper montane coniferous forest; mesic, sandy/perennial herb/July-Aug/4770-8530 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Arenaria paludicola | marsh sandwort | FE/SE/1B. 1 | Marshes and swamps (freshwateror brackish); sandy, openings/perennial stoloniferous herb/May-Aug/5-560 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present to support this species. |
| Astragalus lentiginosus var. coach | Coachella Valley milk-vetch | FE/None/1B. 2 | Desert dunes, Sonoran desert scrub (sandy)/annual / perennial herb/Feb-May/130-2150 | Not expected to occur. The site is located outside of the species' known elevation range and there are no desert dunes or desert scrub habitat present. |
| Astragalus lentiginosus var. sierrat | Big Bear Valley milk-vetch | None/None/1B.2 | Mojavean desert scrub, Meadows and seeps, Pinyon and juniper woodland, Upper montane coniferous forest; gravelly or rocky/perennial herb/Apr-Aug/5905-8530 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Astragalus leucolobus | Big Bear Valley woollypod | None/None/13.2 | Lower montane coniferous forest, Pebble (Pavement) plain, Pinyon and juniper woodland, Upper montane coniferous forest; rocky/perennial herb/May-July/3605-9465 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Astragalus pachypus var. jaegeri | Jaeger's bush milk-vetch | None/None/1B. 1 | Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; sandy or rocky/perennial shrub/Dec-June/1195-3200 | Not expected to occur. The project site is located within the species' known elevation range and although non-native grassland is present; the grassland is associated the rural residences present and the site lacks rocky substrates to support this species. The nearest known occurrence is approximately 6.2 miles from the site (CDFW 2019). |
| Atriplex coronata var. notatior | San Jacinto Valley crownscale | FE/None/1B. 1 | Playas, Valley and foothill grassland (mesic), Vernal pools; alkaline/annual herb/Apr-Aug/455-1640 | Not expected to occur. The site is located outside of the species' known elevation range. |
| Atriplex serenana var. davidsonii | Davidson's saltscale | None/None/1B. 2 | Coastal bluff scrub, Coastal scrub; alkaline/annual herb/Apr-Oct/30-655 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or alkali soils present. |
| Berberis nevinii | Nevin's barberry | FE/SE/1B. 1 | Chaparral, Cismontane woodland, Coastal scrub, Riparian scrub; sandy or gravelly/perennial evergreen shrub/(Feb)Mar-June/225-2705 | Not expected to occur. There is no chaparral, woodland, coastal scrub, or riparian vegetation to support this species. |
| Boechera parishii | Parish's rockcress | None/None/1B. 2 | Pebble (Pavement) plain, Pinyon and juniper woodland, Upper montane coniferous forest; rocky, quartzite on clay, or sometimes carbonate/perennial herb/Apr-May/5805-9810 | Not expected to occur. The site located is outside of the species' known elevation range and there is no woodland or coniferous forest to support this species. |
| Botrychium crenulatum | scalloped moonwort | None/None/2B. 2 | Bogs and fens, Lower montane coniferous forest, Meadows and seeps, Marshes and swamps (freshwater), Upper montane coniferous forest/perennial rhizomatous herb/June-Sep/4160-10760 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |

| Scientific Name | Common Name | Status (Federal/State/C | Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet) | Potential to Occur |
| :---: | :---: | :---: | :---: | :---: |
| Calochortus palmeri var. palmeri | Palmer's mariposa lily | None/None/1B. 2 | Chaparral, Lower montane coniferous forest, Meadows and seeps; mesic/perennial bulbiferous herb/Apr-July/2325-7840 | Not expected to occur. There is no suitable vegetation present and the site lacks mesic conditions to support this species. |
| Calyptridium pygmaeum | pygmy pussypaws | None/None/1B. 2 | Subalpine coniferous forest, Upper montane coniferous forest; sandy or gravelly/annual herb/June-Aug/6495-10205 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Carex occidentalis | western sedge | None/None/2B. 3 | Lower montane coniferous forest, Meadows and seeps/perennial rizizomatous herb/June-Aug/5395-10285 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Castilleja cinerea | ash-gray paintbrush | FT/None/1B. 2 | Mojavean desert scrub, Meadows and seeps, Pebble (Pavement) plain, Pinyon and juniper woodland, Upper montane coniferous forest (clay openings)/perennial herb (hemiparasitic)/June-Aug/5905-9710 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or clay soils present. |
| Castilleja lasiorhyncha | San Bernardino Mountains owl's-clover | None/None/1B. 2 | Chaparral, Meadows and seeps, Pebble (Pavement) plain, Riparian woodland, Upper montane coniferous forest; mesic/annual herb (hemiparasitic)/May-Aug/4265-7840 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Centromadia pungens ssp. laevis | smooth tarplant | None/None/1B. 1 | Chenopod scrub, Meadows and seeps, Playas, Riparian woodland, Valley and foothill grassland; alkaline/annual herb/Apr-Sep/0-2100 | Not expected to occur. The site is located outside of the species' known elevation range and lacks suitable alkaline soils to support this species. |
| Chloropyron maritimum ssp. mariti | salt marsh bird's-beak | FE/SE/1B. 2 | Coastal dunes, Marshes and swamps (coastal salt)/annual herb (hemiparasitic)/May-Oct(Nov)/0-100 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Chorizanthe parryi var. parryi | Parry's spineflower | None/None/1B. 1 | Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; sandy or rocky, openings/annual herb/Apr-June/900-4005 | Not expected to occur. The site is located within the species' known elevation range; however, this species is primarily restricted to alluvial floodplains and alluvial chaparral and scrub which are absent from the site. The nearest known occurrence is approximately 3.1 miles from the site (CDFW 2019). |
| Chorizanthe xanti var. leucotheca | white-bracted spineflower | None/None/1B. 2 | Coastal scrub (alluvial fans), Mojavean desert scrub, Pinyon and juniper woodland; sandy or gravelly/annual herb/Apr-June/980-3935 | Not expected to occur. The site is located within the species' known elevation range; however, suitable vegetation and alluvial fans are absent. |
| Cuscuta obtusiflora var. glandulos: | Peruvian dodder | None/None/2B. 2 | Marshes and swamps (freshwater)/annual vine (parasitic)/July-Oct/45-920 | Not expected to occur. This is located outside of the species' known elevation range and are no marshes or swamps in the study area. |
| Deinandra mohavensis | Mojave tarplant | None/SE/1B. 3 | Chaparral, Coastal scrub, Riparian scrub; mesic/annual herb/(May)June-Oct(Jan)/2095-5250 | Not expected to occur. The site does not contain chaparral, coastal scrub, or riparian scrub to support this species. |
| Dodecahema leptoceras | slender-horned spineflower | FE/SE/1B. 1 | Chaparral, Cismontane woodland, Coastal scrub (alluvial fan); sandy/annual herb/Apr-June/655-2495 | Not expected to occur. The site is located within the species' known elevation; however, there is no suitable chaparral, cismontane woodland, or coastal scrub to support this species and the site lacks suitable alluvial fan habitat to support this species. The nearest known occurrence is approximately 5.4 miles from the site (CDFW 2019). |
| Drymocallis cuneifolia var. cuneifol | wedgeleaf woodbeauty | None/None/1B. 1 | Riparian scrub, Upper montane coniferous forest; Sometimes carbonate/perennial herb/June-Aug/5905-7925 | Not expected to occur. The site is located outside of the species' known elevation range and there is no riparian scrub or coniferous forest present. |
| Eremogone ursina | Big Bear Valley sandwort | FT/None/1B. 2 | Meadows and seeps, Pebble (Pavement) plain, Pinyon and juniper woodland; mesic, rocky/perennial herb/May-Aug/5905-9515 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Eriastrum densifolium ssp. sanctor | Santa Ana River woollystar | FE/SE/1B. 1 | Chaparral, Coastal scrub (alluvial fan); sandy or gravelly/perennial herb/Apr-Sep/295-2000 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Eriogonum kennedyi var. alpigenu\| | southern alpine buckwheat | None/None/1B. 3 | Alpine boulder and rock field, Subalpine coniferous forest; granitic, gravelly/perennial herb/July-Sep/8530-11485 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |

| Scientific Name | Common Name | Status (Federal/State/C | Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet) | Potential to Occur |
| :---: | :---: | :---: | :---: | :---: |
| Eriogonum kennedyi var. austromc | southern mountain buckwheat | FT/None/1B. 2 | Lower montane coniferous forest (gravelly), Pebble (Pavement) plain/perennial herb/June-Sep/5805-9480 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Eriogonum microthecum var. lacus | Bear Lake buckwheat | None/None/18. 1 | Great Basin scrub, Lower montane coniferous forest; clay outcrops/perennial shrub/July-Aug/6560-6890 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Erythranthe exigua | San Bernardino Mountains monkeyflowe | None/None/1B. 2 | Meadows and seeps, Pebble (Pavement) plain, Upper montane coniferous forest; mesic, clay/annual herb/May-July/5905-7595 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Erythranthe purpurea | little purple monkeyflower | None/None/1B. 2 | Meadows and seeps, Pebble (Pavement) plain, Upper montane coniferous forest/annual herb/May-June/6230-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Gilia leptantha ssp. leptantha | San Bernardino gilia | None/None/1B. 3 | Lower montane coniferous forest (sandy or gravelly)/annual herb/June-Aug/4920-8400 | Not expected to occur. The site is located outside of the species' known elevation range and there are no coniferous forests present to support this species. |
| Heuchera parishii | Parish's alumroot | None/None/1B. 3 | Alpine boulder and rock field, Lower montane coniferous forest, Subalpine coniferous forest, Upper montane coniferous forest; rocky, sometimes carbonate/perennial rhizomatous herb/June-Aug/4920-12465 | Not expected to occur. The site is located outside of the species' known elevation range and there are no rocky areas or coniferous forests to support this species. |
| Horkelia cuneata var. puberula | mesa horkelia | None/None/18. 1 | Chaparral (maritime), Cismontane woodland, Coastal scrub; sandy or gravelly/perennial herb/Feb-July(Sep)/225-2655 | Not expected to occur. The site is located within the species' known elevation range; however, there is no suitable vegetation present. |
| Horkelia wilderae | Barton Flats horkelia | None/None/1B. 1 | Chaparral (edges), Lower montane coniferous forest, Upper montane coniferous forest/perennial herb/May-Sep/5495-9595 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Hulsea vestita ssp. pygmaea | pygmy hulsea | None/None/1B. 3 | Alpine boulder and rock field, Subalpine coniferous forest; granitic, gravelly/perennial herb/June-Oct/9300-12795 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Imperata brevifolia | California satintail | None/None/2B. 1 | Chaparral, Coastal scrub, Mojavean desert scrub, Meadows and seeps (often alkali), Riparian scrub; mesic/perennial rhizomatous herb/Sep-May/0-3985 | Not expected to occur. Although the site is located within the appropriate elevation range, there is no suitable vegetation present or mesic conditions to support this species. |
| Ivesia argyrocoma var. argyrocom: | silver-haired ivesia | None/None/1B. 2 | Meadows and seeps (alkaline), Pebble (Pavement) plain, Upper montane coniferous forest/perennial herb/(May)June-Aug/4795-9710 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Lasthenia glabrata ssp. coulteri | Coulter's goldfields | None/None/18. 1 | Marshes and swamps (coastal salt), Playas, Vernal pools/annual herb/Feb-June/0-4005 | Not expected to occur. The site is located within the species' known elevation range; however, there are no marshes, swamps, playas, or vernal pools present to support this species. |
| Lewisia brachycalyx | short-sepaled lewisia | None/None/2B. 2 | Lower montane coniferous forest, Meadows and seeps; mesic/perennial herb/(Feb)Apr-June(July)/4490-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Lilium parryi | lemon lily | None/None/1B. 2 | Lower montane coniferous forest, Meadows and seeps, Riparian forest, Upper montane coniferous forest; mesic/perennial bulbiferous herb/July-Aug/4000-9005 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or mesic conditions present to support this species. |
| Malacothamnus parishii | Parish's bush-mallow | None/None/1A | Chaparral, Coastal scrub/perennial deciduous shrub/June-July/1000-1495 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Mentzelia tricuspis | spiny-hair blazing star | None/None/2B. 1 | Mojavean desert scrub; sandy, gravelly, slopes, and washes/annual herb/Mar-May/490-4200 | Not expected to occur. Although the site is located within the appropriate elevation range for this species, there is no suitable vegetation present and the project lacks slopes or washes to support this species. |

| Scientific Name | Common Name | Status (Federal/State/C | Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet) | Potential to Occur |
| :---: | :---: | :---: | :---: | :---: |
| Monardella macrantha ssp. hallii | Hall's monardella | None/None/1B. 3 | Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland/perennial rhizomatous herb/June-Oct/2395-7200 | Not expected to occur. The site contains non-native grasslands; however, the site is located slightly below the species' known elevation range and this species is known to occur within the Santa Ana Mountains, San Jacinto Mountains, San Bernardino Mountains, and Agua Tibia Mountain bioregions. The nearest CNDDB occurrence is approximately 6.1 miles from the site (CDFW 2019). |
| Nama stenocarpa | mud nama | None/None/2B. 2 | Marshes and swamps (lake margins, riverbanks)/annual / perennial herb/Jan-July/15-1640 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Navarretia peninsularis | Baja navarretia | None/None/1B. 2 | Chaparral (openings), Lower montane coniferous forest, Meadows and seeps, Pinyon and juniper woodland; mesic/annual herb/(May)June-Aug/4920-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or mesic conditions present to support this species. |
| Oxytropis oreophila var. oreophila | rock-loving oxytrope | None/None/2B. 3 | Alpine boulder and rock field, Subalpine coniferous forest; gravelly or rocky/perennial herb/June-Sep/11150-12465 | Not expected to occur. The site is located outside of the species' known elevation range and there are no rocky areas or coniferous forests to support this species. |
| Packera bernardina | San Bernardino ragwort | None/None/13. 2 | Meadows and seeps (mesic, sometimes alkaline), Pebble (Pavement) plain, Upper montane coniferous forest/perennial herb/May-July/5905-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present to support this species. Additionally, the site contains sandy loam, compacted soils instead of the mesic or alkaline soils needed to support this species. |
| Parnassia cirrata var. cirrata | San Bernardino grass-of-Parnassus | None/None/1B. 3 | Lower montane coniferous forest, Meadows and seeps, Upper montane coniferous forest; mesic, streamsides, sometimes calcareous/perennial herb/Aug-Sep/4100-8005 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Perideridia parishii ssp. parishii | Parish's yampah | None/None/2B. 2 | Lower montane coniferous forest, Meadows and seeps, Upper montane coniferous forest/perennial herb/June-Aug/4805-9845 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Petalonyx linearis | narrow-leaf sandpaper-plant | None/None/2B. 3 | Mojavean desert scrub, Sonoran desert scrub; Sandy or rocky canyons/perennial shrub/(Jan-Feb)Mar-May(June-Dec)/-80-3660 | Not expected to occur. No suitable vegetation present. |
| Phlox dolichantha | Big Bear Valley phlox | None/None/1B. 2 | Pebble (Pavement) plain, Upper montane coniferous forest (openings)/perennial herb/May-July/6000-9745 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Physaria kingii ssp. bernardina | San Bernardino Mountains bladderpod | FE/None/1B. 1 | Lower montane coniferous forest, Pinyon and juniper woodland, Subalpine coniferous forest; usually carbonate/perennial herb/May-June/6065-8860 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or carbonate soils present. |
| Poa atropurpurea | San Bernardino blue grass | FE/None/1B. 2 | Meadows and seeps (mesic)/perennial rhizomatous herb/(Apr)May-July(Aug)/4460-8055 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or mesic conditions present to support this species. |
| Pyrrocoma uniflora var. gossypina | Bear Valley pyrrocoma | None/None/18. 2 | Meadows and seeps, Pebble (Pavement) plain/perennial herb/July-Sep/5245-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Ribes divaricatum var. parishii | Parish's gooseberry | None/None/1A | Riparian woodland/perennial deciduous shrub/Feb-Apr/210-985 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Sidalcea hickmanii ssp. parishii | Parish's checkerbloom | None/SR/1B. 2 | Chaparral, Cismontane woodland, Lower montane coniferous forest/perennial herb/(May)June-Aug/3280-8200 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |

| Scientific Name | Common Name | Status (Federal/State/C | Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet) | Potential to Occur |
| :---: | :---: | :---: | :---: | :---: |
| Sidalcea malviflora ssp. dolosa | Bear Valley checkerbloom | None/None/18. 2 | Lower montane coniferous forest (meadows and seeps), Meadows and seeps, Riparian woodland, Upper montane coniferous forest (meadows and seeps)/perennial herb/May-Aug/4900-8810 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present. |
| Sidalcea neomexicana | salt spring checkerbloom | None/None/2B. 2 | Chaparral, Coastal scrub, Lower montane coniferous forest, Mojavean desert scrub, Playas; alkaline, mesic/perennial herb/Mar-June/45-5020 | Not expected to occur. The site is located within the species' known elevation range; however, there are no coniferous forests, meadows, seeps, or riparian woodlands present to support this species. |
| Sidalcea pedata | bird-foot checkerbloom | FE/SE/1B. 1 | Meadows and seeps (mesic), Pebble (Pavement) plain/perennial herb/May-Aug/5245-8200 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present to support this species. |
| Streptanthus campestris | southern jewelflower | None/None/1B. 3 | Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland; rocky/perennial herb/(Apr)May-July/2950-7545 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present to support this species. |
| Symphyotrichum defoliatum | San Bernardino aster | None/None/1B. 2 | Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Meadows and seeps, Marshes and swamps, Valley and foothill grassland (vernally mesic); near ditches, streams, springs/perennial rhizomatous herb/July-Nov(Dec)/5-6695 | Not expected to occur. The site is located within the species' known elevation range and non-native grasslands are present; however, the grasslands are associated with rural residential development and the site lacks vernally mesic conditions and ditches, streams, or springs are absent. |
| Taraxacum californicum | California dandelion | FE/None/1B. 1 | Meadows and seeps (mesic)/perennial herb/May-Aug/5310-9185 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or mesic conditions present to support this species. |
| Thelypodium stenopetalum | slender-petaled thelypodium | FE/SE/1B. 1 | Meadows and seeps (mesic, alkaline)/perennial herb/May-Sep/5245-8200 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present and the site lacks suitable mesic or alkaline soils to support this species. |
| Thelypteris puberula var. sonorens | Sonoran maiden fern | None/None/2B. 2 | Meadows and seeps (seeps and streams)/perennial rhizomatous herb/Jan-Sep/160-2000 | Not expected to occur. The site is located outside of the species' known elevation range and there are no meadows or seeps present to support this species. |
| Trichocoronis wrightii var. wrightii | Wright's trichocoronis | None/None/2B. 1 | Meadows and seeps, Marshes and swamps, Riparian forest, Vernal pools; alkaline/annual herb/May-Sep/15-1425 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation or vernal pools present and the site lacks suitable alkaline soils to support this species. |
| Viola pinetorum ssp. grisea | grey-leaved violet | None/None/1B. 2 | Meadows and seeps, Subalpine coniferous forest, Upper montane coniferous forest/perennial herb/Apr-July/4920-11155 | Not expected to occur. The site is located outside of the species' known elevation range and there is no suitable vegetation present to support this species. |

| Row Labels | Common Name | Status (Feder | Habitat | Potential to Occur | Western R |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Amphibians |  |  |  |  |  |
| Rana draytonii | California red-legged frog | FT/SSC | Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water, uses adjacent uplands | Not expected to occur. The project site does not have the aquatic habitat to support this species. | Covered |
| Rana muscosa | mountain yellow-legged frog | FE/SE, WL | Lakes, ponds, meadow streams, isolated pools, and open riverbanks; rocky canyons in narrow canyons and in chaparral | Not expected to occur. The project site does not have the aquatic habitat to support this species. | Covered |
| Spea hammondii | western spadefoot | None/SSC | Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley-foothill woodlands, pastures, and other agriculture | Not expected to occur. The project site does not have the aquatic habitat to support this species. | Covered |
| Reptiles |  |  |  |  |  |
| Actinemys marmorata | northwestern pond turtle | None/SSC | Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter | Not expected to occur. The project site does not have the aquatic habitat to support this species. | Covered |
| Anniella stebbinsi | southern California legless lizard | None/SSC | Coastal dunes, stabilized dunes, beaches, dry washes, valley-foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and moist sandy or loose, loamy soils | Low potential to occur. There are sandy loamy soils present and this species has been found approximately 3.7 miles away from the site (CDFW 2019). However, the site lacks mesic conditions to support these species and is located in an urbanized area minimizing the potential to occur. | None |
| Arizona elegans occidentalis | California glossy snake | None/SSC | Commonly occurs in desert regions throughout southern California. Prefers open sandy areas with scattered brush. Also found in rocky areas. | Not expected to occur. The project site does not have open sandy or rocky areas to support this species. | None |
| Aspidoscelis tigris stejnegeri | San Diegan tiger whiptail | None/SSC | Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas. | Not expected to occur. There is no chaparral or woodland areas in the project site. There are also no water resources or riparian vegetation present. | Covered |
| Charina umbratica | southern rubber boa | None/ST | Montane oak-conifer and mixed-conifer forests, montane chaparral, wet meadows; usually in vicinity of streams or wet meadows | Not expected to occur. There is no suitable vegetation present or water resources (i.e., streams or wet meadows) present to support this species. | Covered |
| Crotalus ruber | red diamondback rattlesnake | None/SSC | Coastal scrub, chaparral, oak and pine woodlands, rocky grasslands, cultivated areas, and desert flats | Not expected to occur. Although there non-native grassland present, the site lacks rocky substrates, | Covered |
| Phrynosoma blainvillii | Blainville's horned lizard | None/SSC | Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley-foothill hardwood, conifer, riparian, pine-cypress, juniper, and annual grassland habitats | Low potential to occur. Non-native grasslands are present; however, the site is located in an urbanized area. There is also no coastal scrub, chaparral, or riparian habitat in the project site to support this species. The nearest CNDDB occurrence is approximately 5.2 miles from the site (CDFW 2019). | Covered |
| Salvadora hexalepis virgultea | coast patch-nosed snake | None/SSC | Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites | Not expected to occur. The site does not contain shrubby vegetation to support this species. | None |
| Thamnophis hammondii | two-striped gartersnake | None/SSC | Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools | Not expected to occur. There are no water resources present to support this species. | None |
| Birds |  |  |  |  |  |
|  |  | BCC/SSC, ST | Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberryy; forages in grasslands, woodland, and agriculture | Not expected to occur. No suitable emergent wetland vegetation present to support this species. | Covered |
| Agelaius tricolor (nesting colony) | tricolored blackbird |  | Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats | Not expected to nest in the project site; low potential to forage. There are no cliffs or many large trees in the project site to support nesting of this species. The project site is a marginally flat open area that can potentially provide foraging habitat for this species; however potential is low due to it being a highly disturbed and urbanized area. |  |
| Athene cunicularia (burrow sites | burrowing owl | BCC/SSC | Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows | Low potential to occur. The project site is open and does contain non-native grasses. However, the nearest known occurrence is approximately 8.9 miles from the site (CDFW 2019). | Covered |
| Buteo swainsoni (nesting) | Swainson's hawk | BCC/ST | Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture | Not expected to occur. There is no suitable woodland and savanna, riparian, or isolated trees for nesting. Species may forage in open areas to the northwest. The nearest known occurrence is approximately 1.5 miles away from the site (CDFW 2019). | Covered |
| Coccyzus americanus occidental | western yellow-billed cuckoo | FT, BCC/SE | Nests in dense, wide riparian woodlands and forest with well-developed understories | Not expected to occur. The site does not contain riparian woodlands and forests to support this species. | Covered |
| Cypseloides niger (nesting) | black swift | BCC/SSC | Nests in moist crevices, caves, and cliffs behind or adjacent to waterfalls in deep canyons; forages over a wide range of habitats | Not expected to occur. There are no caves, cliffs, or waterfalls in the site to support this species. | Covered |
| Elanus leucurus (nesting) | white-tailed kite | None/FP | Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands | Not expected to nest. Low potential to forage. There is no suitable vegetation for this species to nest. However, non-native grasslands are present that can potentially provide foraging habitat. The nearest known occurrence is approximately 2.3 miles from the site (CDFW 2019). | Covered |

| Lepus californicus bennettii | San Diego black-tailed jackrabbit | None/SSC | Arid habitats with open ground; grasslands, coastal scrub, agriculture, disturbed areas, and rangelands | Low potential to occur. Non-native grasslands are present; however, they are associated with a rural residential development and the site is surrounded by rural residences to the east, south, and west. The nearest known occurrence is approximately 5.6 miles from the site (CDFW 2019). | Covered |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Neotoma lepida intermedia | San Diego desert woodrat | None/SSC | Coastal scrub, desert scrub, chaparral, cacti, rocky areas | Not expected to occur. No suitable vegetation present. | Covered |
| Nyctinomops femorosaccus | pocketed free-tailed bat | None/SSC | Pinyon-juniper woodlands, desert scrub, desert succulent shrub, desert riparian, desert wash, alkali desert scrub, Joshua tree, and palm oases; roosts in high cliffs or rock outcrops with drop-offs, caverns, and buildings | Not expected to occur. The site does not have desert like habitat suitable for this species to occur. | None |
| Onychomys torridus ramona | southern grasshopper mouse | None/SSC | Grassland and sparse coastal scrub | Low potential to occur. Non-native grasslands are present; however, they are associated with a rural residential development and the site is surrounded by rural residences to the east, south, and west. | None |
| Perognathus alticolus alticolus | white-eared pocket mouse | None/SSC | Arid ponderosa pine communities | Not expected to occur. There are no pine communities present. | None |
| Perognathus Iongimembris brevi | Los Angeles pocket mouse | None/SSC | Lower-elevation grassland, alluvial sage scrub, and coastal scrub | Not expected to occur. There is suitable coastal scrub present to support this species. | Covered |
| Taxidea taxus | American badger | None/SSC | Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils | Not expected to occur. Non-native grasslands are present; however, they are associated with a rural residential development and the site is surrounded by rural residences to the east, south, and west. | None |

Prepared for: Mainor Bojorquez
County Line Neighborhood Market, LP
P.O. Box 1958

Corona, CA 92878
(951) 280-3833

Project Size: Approximately 1.3 acres
USGS Quadrangle: Yucaipa, Calif., 7.5' quadrangle (Section 14, T2S R2E, San Bernardino Baseline and Meridian)

Keywords: Yucaipa Valley area; Phase I historical/archaeological resources survey; WWII era single-family residence, Minimal Traditional style; not a "historical resource" under CEQA

## MANAGEMENT SUMMARY

In December 2019 and January 2020, at the request of County Line Neighborhood Market, LP, CRM TECH performed a cultural resources survey on a residential property at 727 County Line Lane, City of Calimesa, Riverside County, California. The subject property of the study comprises Assessor's Parcel No. 411-040-001, an approximately 1.3 -acre parcel located on the northeast corner of County Line Road and County Line Lane, in the northwest quarter of Section 14, T2S R2W, San Bernardino Baseline and Meridian.

The study is part of the environmental review process for the proposed County Line Neighborhood Market Project, which entails demolition of the existing buildings on the property and the construction of an approximately 2,400 -square-foot convenience store/restaurant and a canopied fueling station. The City of Calimesa, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA). The purpose of the study is to provide the City with the necessary information and analysis to determine whether the proposed project would cause substantial adverse changes to any "historical resources," as defined by CEQA, that may exist in or around the project area.

In order to identify such resources, CRM TECH conducted a historical/archaeological resources records search, pursued historical background research, and carried out an intensive-level field survey. As a result of these research procedures, the existing residence on the property was found to date to circa 1940 and to retain sufficient historical characteristics to warrant recording into the California Historical Resources Inventory. It does not, however, appear to meet any of the criteria for listing in the California Register of Historical Resources. Therefore, the building does not constitute a "historical resource" under CEQA provisions.

No other potential "historical resources" were identified within the project area. Based on these findings, CRM TECH recommends to the City of Calimesa a conclusion that the proposed project will have No Impact on any "historical resources." No further cultural resources investigation is recommended for the project unless development plans undergo such changes as to include areas not covered by this study. However, if buried cultural materials are discovered during any earth-moving operations associated with the project, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

## INTRODUCTION

In December 2019 and January 2020, at the request of County Line Neighborhood Market, LP, CRM TECH performed a cultural resources survey on a residential property at 727 County Line Lane, City of Calimesa, Riverside County, California (Fig. 1). The subject property of the study comprises Assessor's Parcel No. 411-040-001, an approximately 1.3-acre parcel located on the northeast corner of County Line Road and County Line Lane, in the northwest quarter of Section 14, T2S R2W, San Bernardino Baseline and Meridian (Figs. 2, 3).

The study is part of the environmental review process for the proposed County Line Neighborhood Market Project, which entails demolition of the existing buildings on the property and the construction of an approximately 2,400 -square-foot convenience store/restaurant and a canopied fueling station. The City of Calimesa, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA; PRC §21000, et seq.). The purpose of the study is to provide the City with the necessary information and analysis to determine whether the proposed project would cause substantial adverse changes to any "historical resources," as defined by CEQA, that may exist in or around the project area.

In order to identify such resources, CRM TECH conducted a historical/archaeological resources records search, pursued historical background research, and carried out an intensive-level field survey. The following report is a complete account of the methods, results, and final conclusion of the study. Personnel who participated in the study are named in the appropriate sections below, and their qualifications are provided in Appendix 1.

Figure 1. Project vicinity. (Based on USGS San Bernardino and Santa Ana, Calif., 120'x60' quadrangles [USGS 1969; 1979a])

Figure 2. Project area. (Based on USGS El Casco and Yucaipa, Calif., 7.5' quadrangles [USGS 1979b; 1996])

Figure 3. Aerial image of the project area.

## SETTING

## CURRENT NATURAL SETTING

The City of Calimesa is located in the southern portion of the Yucaipa Valley, an eastward extension of the larger San Bernardino Valley. The topography of the project vicinity is dominated by rolling hills and eroded drainages, and the natural environment is characterized by the temperate Mediterranean climate, with the average maximum temperature in July reaching well into the 90s (Fahrenheit) and the average minimum temperature in January hovering around 35 degrees. Rainfall is typically less than 20 inches annually, most of which occurs between November and March.

Formerly rural and agricultural in character, in recent decades the Yucaipa Valley area has been gradually developing into a more suburban landscape. The generally rectangular-shaped project area is bounded by County Line Road on the south, a vacant parcel on the east, and County Line Lane on the north and the west. The surrounding land use is predominantly rural residential, with the Interstate Highway 10 corridor lying a short distance to the east (Fig. 3).

A vacant residence and a detached garage are currently situated in the western portion of the property, accompanied by what remains of a cluster of domestic trees. The ground surface in the project area has been extensively disturbed by past agricultural use and construction activities. The elevation is roughly 2,372 feet above mean sea level, and the terrain is generally level. Aside from the introduced landscaping plants, vegetation in the project area consists mainly of the typical small shrubs and grasses (Fig. 4).

Figure 4. Overview of the project area. (Photograph taken on December 19, 2019; view to the northwest)

## CULTURAL SETTING

## Prehistoric Context

The earliest evidence of human occupation in inland southern California was discovered below the surface of an alluvial fan in the northern portion of the Lakeview Mountains, overlooking the San Jacinto Valley, with radiocarbon dates clustering around 9,500 B.P. (Horne and McDougall 2008). Another site found near the shoreline of Lake Elsinore, close to the confluence of Temescal Wash and the San Jacinto River, yielded radiocarbon dates between 8,000 and 9,000 B.P. (Grenda 1997). Additional sites with isolated Archaic dart points, bifaces, and other associated lithic artifacts from the same age range have been found in the Cajon Pass area, typically atop knolls with good viewsheds (Basgall and True 1985; Goodman and McDonald 2001; Goodman 2002; Milburn et al. 2008).

The cultural prehistory of southern California has been summarized into numerous chronologies, including those developed by Chartkoff and Chartkoff (1984), Warren (1984), and others. Specifically, the prehistory of the inland region has been addressed by O’Connell et al. (1974), McDonald et al. (1987), Keller and McCarthy (1989), Grenda (1993), Goldberg (2001), and Horne and McDougall (2008). Although the beginning and ending dates of each's cultural horizons vary, the framework of regional prehistory can be generally parsed into three primary periods:

- Paleoindian Period (ca. 18,000-9,000 B.P.): Native peoples of this period created fluted spearhead bases designed to be hafted to wooden shafts. The distinctive method of thinning bifaces and spearhead preforms by removing long, linear flakes leaves diagnostic Paleoindian markers at tool-making sites. Other artifacts associated with the Paleoindian toolkit include choppers, cutting tools, retouched flakes, and perforators. Sites from this period are very sparse across the landscape and most are deeply buried.
- Archaic Period (ca. 9,000-1,500 B.P.): Archaic sites are characterized by abundant lithic scatters of considerable size with many biface thinning flakes, bifacial preforms broken during manufacture, and well-made groundstone bowls and basin metates. As a consequence of making dart points, many biface thinning waste flakes were generated at individual production stations, which is a diagnostic feature of Archaic sites.
- Late Prehistoric Period (ca. 1,500 B.P.-contact): Sites from this period typically contain small lithic scatters from the manufacture of small arrow points, expedient groundstone tools such as tabular metates and unshaped manos, wooden mortars with stone pestles, acorn or mesquite bean granaries, ceramic vessels, shell beads suggestive of extensive trading networks, and steatite implements such as pipes and arrow shaft straighteners.

## Ethnohistoric Context

The Yucaipa Valley area is generally considered a part of the traditional homeland of the Serrano people, which is centered in the San Bernardino Mountains. Together with that of the Vanyume people, linguistically a subgroup, the territory of the Serrano also includes part of the San Gabriel Mountains, much of the San Bernardino Valley, and the Mojave River valley in the southern portion of the Mojave Desert, reaching as far east as the Cady, Bullion, Sheep Hole, and Coxcomb Mountains.

The name "Serrano" was derived from a Spanish term meaning "mountaineer" or "highlander." One of the more important Serrano villages, known as Yukaipa't and occupied by the Yucaipaiem clan, was located in the Yucaipa Valley and ultimately bestowed its name to this area (Strong 1929:11). The basic written sources on Serrano culture are Kroeber (1925), Strong (1929), and Bean and Smith (1978). The following ethnographic discussion of the Serrano culture is based mainly on these sources.

Prior to European contact, the Serrano were primarily hunter-gatherers and occasionally fishers, and settled mostly on elevated terraces, hills, and finger ridges near where flowing water emerged from the mountains. They were loosely organized into exogamous clans, which were led by hereditary heads, and the clans in turn were affiliated with one of two exogamous moieties. The clans were patrilineal, but their exact structure, function, and number are unknown, except that each clan was the largest autonomous political and landholding unit. There was no pan-tribal political union among the clans, but they shared strong trade, ceremonial, and marital connections that sometimes also extended to other surrounding nations, such as the Kitanemuk, the Tataviam, and the Cahuilla.

Although contact with Europeans may have occurred as early as 1771 or 1772, Spanish influence on Serrano lifeways was negligible until the 1810s, when a mission asistencia was established on the southern edge of Serrano territory. Between then and the end of the mission era in 1834, most of the Serrano in the western portion of their traditional territory were removed to the nearby missions. In the eastern portion, a series of punitive expeditions in 1866-1870 resulted in the death or displacement of almost all remaining Serrano population in the San Bernardino Mountains. Today, most Serrano descendants are affiliated with the San Manuel Band of Mission Indians, the Morongo Band of Mission Indians, or the Serrano Nation of Indians.

## Historic Context

The Yucaipa Valley area received its first European visitors in 1772, when a small force of Spanish soldiers traveled through the San Bernardino Valley under the command of Pedro Fages, the comandante of Alta California (Beck and Haase 1974:15; Schuiling 1984:23). The name "San Bernardino" was bestowed on the region in the 1810s, when an asistencia to Mission San Gabriel and an associated mission rancho were established under that name in present-day Loma Linda (Lerch and Haenszel 1981).

In 1842, after secularization of the mission system, the Mexican authorities in Alta California granted Rancho San Bernardino, along with several adjacent former mission ranchos, to members of a prominent Los Angeles family, the Lugos. An adobe house built the following year by one of the grantees, Diego Sepulveda, became the earliest non-Indian settlement in the Yucaipa Valley (Schuiling 1984:38). As elsewhere in Alta California during the Spanish and Mexican periods, cattle raising was the primary economic activity on Rancho San Bernardino and other nearby land grants, often with the local Native American population providing the labor force (Lerch and Haenszel 1981). The subject property was not included in any of the land grants and thus remained public land when Alta California was annexed by the United States in 1848.

After nine years of cattle raising on their vast domain, the Lugo family sold the entire rancho in 1851 to Amasa M. Lyman and Charles C. Rich, leaders of the Mormon colony that was to become today's

City of San Bernardino (Schuiling 1984:45). During the 1850s, the Yucaipa wing of the rancho and the former Sepulveda adobe were occupied by John Brown, Sr., an early non-Mormon pioneer, although he never acquired the property from the Mormon leaders (Archer 1976). In 1857, the Yucaipa property was purchased by James W. Waters, who developed it into one of southern California's most prosperous stock ranches and grain farms (ibid.; Schuiling 1984:106).

James Waters sold the property to John C. Dunlap in 1869, and the Dunlap family continued the successful ranching and farming operations on the Yucaipa Ranch for the rest of the 19th century (Archer 1976; Schuiling 1984:106). In the early 20th century, following the death of John Dunlap and his wife, their heirs incorporated the Yucaipa Land and Water Company to subdivide the ranch into small farms (Archer 1976). For the next few decades, the Yucaipa Valley remained primarily an agricultural area where the local economy focused on a number of cash staples, from apples in the 1910s to peaches, plums, and cherries in the 1930s, followed by poultry after World War II (ibid.; Schuiling 1984:107).

In the southern portion of the Yucaipa Valley, the Calimesa area was initially named South Yucaipa or the South Bench and was known mainly for being a stop on a branch of the wagon road between the San Bernardino Valley and the San Gorgonio Pass (Gunther 1984:94; COC n.d.). In the 1910s, when the automobile highway network began to replace the wagon roads, the Yucaipa Valley route was selected for what would later become U.S. Highway 70/99 (now Interstate Highway 10) over the formerly preferred route in the San Timoteo Canyon, which provided a major boost to the growth of South Yucaipa (COC n.d.). In an effort to establish its own identity, South Yucaipa obtained a separate post office in 1929, and in the process adopted the new name of Calimesa, coined from "California" and "mesa," through a local contest (ibid.; Gunther 1984:94).

The Calimesa Improvement Association was formed in 1939 and a community center was constructed (COC n.d.). Ten years later, the community organized a volunteer fire department (ibid.). The City of Calimesa was incorporated in 1990, one year after its sister community of Yucaipa in San Bernardino County, with a land base of some 15 square miles (U.S. Census Bureau n.d.). Like other formerly agrarian communities in the San Bernardino Valley region, Calimesa's rapid growth in recent decades has been driven primarily by residential and commercial development in the ongoing suburban expansion (COC n.d.).

## RESEARCH METHODS

## RECORDS SEARCH

As the project area lies in close proximity to the boundary between Riverside County and San Bernardino County, the records search for this study was conducted at the official repositories of cultural resources records for either county, namely the Eastern Information Center (EIC) at the University of California, Riverside, and the South Central Coastal Information Center (SCCIC) at California State University, Fullerton. CRM TECH archaeologist Nina Gallardo completed the portion of the records search at the EIC on December 16, 2019, and the portion at the SCCIC on December 19.

During the records search, Gallardo examined maps and records on file at the information centers for previously identified cultural resources and existing cultural resources reports within a one-mile radius of the project area. Previously identified cultural resources include properties designated as California Historical Landmarks, Points of Historical Interest, or Riverside/San Bernardino County Historical Landmarks as well as those listed in the National Register of Historic Places, the California Register of Historical Resources, or the California Historical Resources Inventory.

## HISTORICAL RESEARCH

Historical background research for this study was conducted by CRM TECH historian/architectural historian Terri Jacquemain on the basis of published literature in local and regional history, real property tax assessment records and building safety records of the County of Riverside, various online genealogical databases, U.S. General Land Office (GLO) land survey plat maps dated 1880, U.S. Geological Survey (USGS) topographic maps dated 1901-1996, and aerial photographs taken in 1938-2018. The historic maps are collected at the Science Library of the University of California, Riverside, and the California Desert District of the U.S. Bureau of Land Management, located in Moreno Valley. The aerial photographs are available at the Nationwide Environmental Title Research (NETR) Online website and through the Google Earth software.

## FIELD SURVEY

On December 19, 2019, CRM TECH archaeologist Daniel Ballester carried out the field survey of the project area. The survey was completed on foot at an intensive-level by walking a series of parallel east-west transects at 15-meter (approximately 50-foot) intervals except there the transects were interrupted by the existing buildings. In this way, the ground surface in the entire project area was systematically and carefully examined for any evidence of human activities dating to the prehistoric or historic period (i.e., 50 years ago or older). Ground visibility was poor to fair (50\%$80 \%$ ) due to moderate vegetation growth over most of the property, which was considered adequate in light of past ground disturbances.

As the existing residence and garage on the property appeared to date to the historic period, Ballester made detailed notations and preliminary photo-recordation of their structural and architectural characteristics, including notable features, construction details, and current conditions of each building. Ballester's observations and photographs form the basis of the building description presented below. The field data were then compiled into standard record forms and submitted to the EIC for inclusion in the California Historical Resources Inventory (see App. 2).

## RESULTS AND FINDINGS

## RECORDS SEARCH

According to EIC and SCCIC records, the project area had not been surveyed for cultural resources prior to this study (Fig. 5), and no cultural resources had been recorded within or adjacent to its boundaries. Within the one-mile scope of the records search, EIC and SCCIC records show a total of 25 previous studies on various tracts of land and linear features (Fig. 5). As a result, 16 historical/

Figure 5. Previous cultural resources studies in the vicinity of the project area, listed by EIC file number. Locations of known historical/archaeological sites are not shown as a protective measure.
archaeological sites, including 15 recorded sites and one pending site, and one isolate-i.e., a locality with fewer than three artifacts-have been identified within the one-mile radius.

Five of the 16 known sites were of prehistoric-i.e., Native American-origin, consisting primarily of bedrock milling features, habitational debris, a burial, and lithic scatters. All five of them were located along Yucaipa Creek, roughly a half-mile to the north of the project area. The other 11 sites, including the pending site, and the isolate dated to the historic period and included three early and mid-20th century residences, structural remains, a hog farm, various infrastructure features, and scattered refuse items. Closest among these was a circa 1946 single-family residence located on Seventh Place and south of County Line Road, a few hundred feet to the southeast. In view of their distance from the project area, none of these 17 known cultural resources require further consideration during this study.

## HISTORICAL RESEARCH

Historical sources consulted for this study suggest that the first man-made feature known to be present within the project area was the residence currently on the property, which was constructed around 1940, at the onset of World War II (Figs. 6-8; County of Riverside 1937-1963). Prior to that, a dirt road may have traversed near the southern edge of the project area in 1879, but by the turn of the 20th century no man-made features were found in the immediate vicinity of the project area (Figs. 6, 7). In the Calimesa-Yucaipa area, only a few winding roads and a handful of widely scattered buildings were reported at the time (Fig. 7).

Figure 6. The project area and vicinity in 1879. (Source: GLO 1880)

Figure 7. The project area and vicinity in 1898-1899. (Source: USGS 1901a; 1901b)

The earliest available aerial photographs demonstrate that at least by 1938 ground disturbances had occurred at and around the location of the buildings currently in existence in the project area, likely indicating the beginning of construction (NETR Online 1938). By the 1950s, the residence and the garage were both in place, along with the addition to the residence (Fig. 8; NETR Online 1959). At that time, what is now County Line Lane served as the original alignment of County Line Road at the project location (ibid.). The completion of Interstate Highway 10 in the 1950s soon resulted in the realignment of County Line Road, leaving the project area "sandwiched" between the two roads (NETR Online 1966-1969).

Prior to 1972, aside from a cluster of landscaping trees near the house, no agricultural activities were evident in the project area (NETR Online 1959-1972). By 1978, part of the land surrounding the house had been evidently planted into an orchard of some kind (NETR Online 1978; 1980). In any event, by 1995 the orchard had been removed, and no further construction or agricultural activities appear to have occurred on the property since then (NETR Online 1995-2016; Google Earth 1995-2018).

According to archival records of the County of Riverside, the project area remained in the hands of the Redlands and Yucaipa Land Company until Grover C. and Anna A. Cox acquired the property and evidently built their home on it around 1940 (County of Riverside 1937-1963). Five years later, their son John Cox was added to the title (ibid.; Ancestry.com n.d.). Grover Cleveland Cox (18841961), an Illinois native, was listed in local directories as a rancher at this address throughout the 1950s (Ancestry.com n.d). After his death in 1961, the property was acquired by Don Parker as of 1965 and by O.W. Hiatt as of 1975 (County of Riverside 1965-1975). Permits for a seepage pit in 1965 and an electrical change-out in 1975 are the only records pertaining to this house found on file at the County of Riverside Building and Safety Department (ibid.).

## FIELD SURVEY

During the field survey, the existing residence at 727 County Line Lane and the accompanying garage were found to be the only features in the project area that date to the prehistoric or historic period. These buildings, although rather unremarkable in character and suffering from recent neglect, are known to be more than 50 years of age and retain sufficient historic integrity to relate to the period of origin, namely the 1940s era. The design, layout, materials, and overall appearance of the residence, exemplified by its frugal plan and unembellished profile, are all consistent with the

Minimal Traditional-style buildings from the "lean years" of the Great Depression and WWII. As such, the residence was recorded into the California Historical Resources Inventory during this study, with the garage as an associated feature (see App. 2 for description and other details). No other potential "historical resources" were encountered throughout the course of the survey.

## DISCUSSION

The purpose of this study is to identify any cultural resources within the project area and to assist the City of Calimesa in determining whether such resources meet the official definition of "historical resources," as provided in the California Public Resources Code, in particular CEQA. According to PRC §5020.1(j), "'historical resource' includes, but is not limited to, any object, building, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California."

More specifically, CEQA guidelines state that the term "historical resources" applies to any such resources listed in or determined to be eligible for listing in the California Register of Historical Resources, included in a local register of historical resources, or determined to be historically significant by the lead agency (Title 14 CCR §15064.5(a)(1)-(3)). Regarding the proper criteria for the evaluation of historical significance, CEQA guidelines mandate that "generally a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing on the California Register of Historical Resources" (Title 14 CCR §15064.5(a)(3)). A resource may be listed in the California Register if it meets any of the following criteria:
(1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
(2) Is associated with the lives of persons important in our past.
(3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
(4) Has yielded, or may be likely to yield, information important in prehistory or history. (PRC §5024.1(c))

In summary of the research results presented above, the residence at 727 County Line Lane is the only potential "historical resource" encountered within the project area. Dating to circa 1940, this modest building retains sufficient historical characteristics to warrant recording into the California Historical Resources Inventory. However, there is no evidence that the residence is closely associated with any person or event of recognized historic significance, nor is it known to embody the work of a prominent architect, designer, or builder. It does not represent an important example of its architectural style or any property type, period, region, and method of construction, and it holds little potential for any important data for the study of history. Based on these findings, the present study concludes that the residence at 727 County Line Lane does not appear to meet any of the criteria for listing in the California Register of Historical Resources, and does not qualify as a "historical resource" under CEQA provisions.

## CONCLUSIONS AND RECOMMENDATIONS

CEQA establishes that "a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (PRC §21084.1). "Substantial adverse change," according to PRC §5020.1(q), "means demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired."

As stated above, the residence at 727 County Line Lane, the only feature of prehistoric or historic origin found in the project area, does not appear to meet CEQA's definition of a "historical resource." Therefore, CRM TECH concludes that no "historical resources" exist within the project area and presents the following recommendations to the City of Calimesa:

- The proposed project will not cause a substantial adverse change to any known "historical resources."
- No further cultural resources investigation will be necessary for the project unless development plans undergo such changes as to include areas not covered by this study.
- If any buried cultural materials are encountered during earth-moving operations associated with the project, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

*P3a. Description (continued): over the main mass ends with medium-width eave and rake overhangs, and the roof of the addition sports wide overhangs with dog-ear wood trim under the rakes. The entire roof is covered with brown composition shingles, and the exteriors walls are painted bluish gray in contrast to the white trim.

The main entry is set at the northern end of the primary façade and is filled with a weathered wood door and a metal security screen that open to a small, elevated porch under a secondary front-facing gable. The porch roof is supported by four square wooden posts, while the concrete platform and the accompanying concrete steps are flanked by plain wooden balustrades. A secondary front entry opens on the addition, with a glazed wood door accessed by an unadorned concrete stoop with two concrete steps.

Fenestration to the house consists of modern vinyl-framed double-hung and sliding windows with undivided panes on the main mass and steel-framed casement windows in $3 \times 3-p a n e$ configuration on the addition. Almost all of the windows have been sealed with oriented strand board, as has the glazing on the secondary front door.

A rectangular garage that is similar in materials and design elements to the original portion of the residence stands to the southwest, with hinged double doors opening in the center of the northern façade, under a gable end. A paneled wood door of modern origin with a pet door in set on the eastern façade. Fenestration to the garage is limited to a small vinyl-framed sliding window in each of the side wall and on the rear side. The buildings are situated in a rural setting and surrounded by more than one acre of vacant land, along with paved walkways, abandoned planters, domestic trees, and other remnants of the simple landscaping.
*B10. Significance: (continued): it holds little potential for any important data for the study of history. Therefore, the residence does not appear eligible for listing in the National Register of Historic Places or the California Register of Historical Resources.

## Subject: Geotechnical Engineering Investigation Proposed Commercial Development County Line Lane \& County Line Road Calimesa, California

Dear Ms. Grajeda:
At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has prepared this Geotechnical Engineering Investigation report for the Proposed Commercial Development to be located at the subject site.

The accompanying report presents our findings, conclusions, and recommendations regarding the geotechnical aspects of designing and constructing the project as presently proposed. In our opinion, the proposed project is feasible from a geotechnical viewpoint provided our recommendations are incorporated into the design and construction of the project.

We appreciate the opportunity to assist you with this project. Should you have questions regarding this report or need additional information, please contact the undersigned at (909) 980-6455.

Respectfully Submitted,

## SALEM ENGINEERING GROUP, INC.

## GEOTECHNICAL ENGINEERING INVESTIGATION PROPOSED COMMERCIAL DEVELOPMENT COUNTY LINE LANE \& COUNTY LINE ROAD CALIMESA, CALIFORNIA

## 1. PURPOSE AND SCOPE

This report presents the results of our Geotechnical Engineering Investigation for the Proposed Commercial Development to be located at the northeast corner of County Line Lane and County Line Road in Calimesa, California (see Figure 1, Vicinity Map).

The purpose of our geotechnical engineering investigation was to observe and sample the subsurface conditions encountered at the site, and provide conclusions and recommendations relative to the geotechnical aspects of constructing the project as presently proposed.

The scope of this investigation included a field exploration, laboratory testing, engineering analysis and the preparation of this report. Our field exploration was performed on December 13, 2019 and included the drilling of six (6) small-diameter soil borings to a maximum depth of $461 / 2$ feet at the site. Additionally, two (2) percolation tests were performed at depths of approximately 5 and 10 feet below ground surface. The locations of the soil borings and percolation tests are depicted on Figure 2, Site Plan. A detailed discussion of our field investigation, exploratory boring logs are presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to evaluate pertinent physical properties for engineering analyses. Appendix B presents the laboratory test results in tabular and graphic format.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions.

If project details vary significantly from those described herein, SALEM should be contacted to determine the necessity for review and possible revision of this report. Earthwork and Pavement Specifications are presented in Appendix C. If text of the report conflict with the specifications in Appendix C, the recommendations in the text of the report have precedence.

## 2. PROJECT DESCRIPTION

Based on the information provided to us, we understand that the proposed development of the site will include demolition of an existing single family residence and construction of an RV fueling center with a 4-pump canopy, underground storage tanks, and a 3,000 square-foot coffee shop/retail building with a drive-thru. Maximum wall load is expected to be on the order of 3 kips per linear foot. Maximum column load is expected to be on the order of 50 kips . Floor slab bearing pressure is expected to be on the order of 150 psf.

A site grading plan was not available at the time of preparation of this report. As the site area is essentially level, we anticipate that cuts and fills during earthwork will be minimal and limited to providing level pads and positive site drainage. In the event that changes occur in the nature or design of the project, the conclusions and recommendations contained in this report will not be considered valid unless the changes are reviewed and the conclusions of our report are modified. The site configuration and locations of proposed improvements are shown on the Site Plan, Figure 2.

## 3. SITE LOCATION AND DESCRIPTION

The subject site is located on the northeast corner of County Line Lane and County Line Road in the City of Calimesa, California (Vicinity Map, Figure 1). The site is rectangular in shape and encompasses approximately 2.60 acres.

The site is currently a single-family residence with 2 buildings surrounded by undeveloped land. The project site is relatively flat with no major changes in grade level. The site's elevation is approximately 2,373 feet above mean sea level based on Goggle Earth Imagery.

## 4. FIELD EXPLORATION

Our field exploration consisted of site surface reconnaissance and subsurface exploration. The exploratory test borings (B-1 through B-6) were drilled on December 13, 2019 in the areas shown on the Site Plan, Figure 2. The test borings were advanced with a 4 -inch diameter solid flight auger rotated by a truck-mounted CME 45 drill rig. The test borings were extended to a maximum depth of $461 / 2$ feet below existing grade.

The materials encountered in the test borings were visually classified in the field, and logs were recorded by a field engineer and stratification lines were approximated on the basis of observations made at the time of drilling. Visual classification of the materials encountered in the test borings were generally made in accordance with the Unified Soil Classification System (ASTM D2487).

A soil classification chart and key to sampling is presented on the Unified Soil Classification Chart, in Appendix "A." The logs of the test borings are presented in Appendix "A." The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol. The location of the test borings were determined by measuring from features shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants.

The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted. Soil samples were obtained from the test borings at the depths shown on the logs of borings. The MCS samples were recovered and capped at both ends to preserve the samples at their natural moisture content; SPT samples were recovered and placed in a sealed bag to preserve their natural moisture content. The borings were backfilled with soil cuttings after completion of the drilling.

## 5. LABORATORY TESTING

Laboratory tests were performed on selected soil samples to evaluate their physical characteristics and engineering properties. The laboratory-testing program was formulated with emphasis on the evaluation of natural moisture, density, shear strength, consolidation, expansion index, maximum density and optimum moisture determination, expansion index, and gradation of the materials encountered.

In addition, chemical tests were performed to evaluate the corrosivity of the soils to buried concrete and metal. Details of the laboratory test program and the results of laboratory test are summarized in Appendix "B." This information, along with the field observations, was used to prepare the final boring logs in Appendix "A."

## 6. GEOLOGIC SETTING

The site is located within the northwestern portion of the San Gorgonio pass within the northernmost portion of the Peninsular Ranges Geomorphic Province. The San Gorgonio Pass is a tectonic physiographic feature that separates the San Bernardino Mountains of the Transverse Ranges on the north and the San Jacinto Mountains on the south. The San Gorgonio Pass is expressed as a narrow notch that cuts through the mountains into the Colorado Desert to the east. Most of the Calimesa's vicinity is underlain by a thick sequence of terrestrial sediments that rest on the basement comprising igneousmetamorphic rocks. Younger alluvium occurs in active channels of San Timoteo Wash and tributary canyons, where the alluvium has been deposited on sediments of San Timoteo Formation. The nearsurface deposits in the vicinity of the subject site are mapped as (Qoa) dissected older alluvium deposits that are slightly indurated, and consisting of alluvial fan gravel, and sand, light-orange brown-red. Deposits encountered on the subject site during exploratory drilling are discussed in detail in this report.

## 7. GEOLOGIC HAZARDS

### 7.1 Faulting and Seismicity

The Peninsular Range has historically been a province of relatively high seismic activity. The nearest faults to the project site are associated with the S. San Andreas Fault system located approximately 5.6 miles from the site. There are no known active fault traces in the project vicinity. Based on mapping and historical seismicity, the seismicity of the Peninsular Range has been generally considered high by the scientific community.

The project area is not within an Alquist-Priolo Earthquake Fault (Special Studies) Zone and will not require a special site investigation by an Engineering Geologist. Soils on site are classified as Site Class D in accordance with Chapter 16 of the California Building Code.

The proposed structures are determined to be in Seismic Design Category D. To determine the distance of known active faults within 100 miles of the site, we used the United States Geological Survey (USGS) web-based application 2008 National Seismic Hazard Maps - Fault Parameters. Site latitude is $34.0035^{\circ}$ North; site longitude is $117.0673^{\circ}$ West. The ten closest active faults are summarized below in Table 7.1.

TABLE 7.1
REGIONAL FAULT SUMMARY

| Fault Name | Distance to Site <br> (miles) | Maximum Earthquake <br> Magnitude, $\mathbf{M}_{\mathbf{w}}$ |
| :---: | :---: | :---: |
| S. San Andreas; <br> PK+CH+CC+BB+NM+SM+NSB+SSB+BG+CO | 5.6 | 8.2 |
| San Jacinto; SBV+SJV+A+CC+B+SM | 5.9 | 7.9 |
| San Jacinto; A+CC+B+SM | 8.1 | 7.6 |
| San Jacinto; SBV | 9.8 | 7.1 |
| San Andreas; PK+CH+CC+BB+NM+SM+NSB | 13.5 | 8.0 |
| S. San Andreas; BG+CO | 15.6 | 7.4 |
| Pinto Mtn | 20.2 | 7.3 |
| Cleghorn | 20.8 | 6.8 |
| North Frontal (West) | 24.5 | 7.2 |
| Cucamonga | 24.7 | 6.7 |

The faults tabulated above and numerous other faults in the region are sources of potential ground motion. However, earthquakes that might occur on other faults throughout California are also potential generators of significant ground motion and could subject the site to intense ground shaking.

### 7.2 Surface Fault Rupture

The site is not within a currently established State of California Earthquake Fault Zone for surface fault rupture hazards. No active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low.

### 7.3 Ground Shaking

Based on the 2016 CBC, a Site Class D was selected for the site based on soil conditions encountered and our experience in the vicinity of the subject site. Table 9.2.1 includes design seismic coefficients and spectral response parameters, based on the 2016 California Building Code (CBC) for the project foundation design.

Based on Office of Statewide Health Planning and Development (OSHPD) Seismic Design Maps, the estimated design peak ground acceleration adjusted for site class effects $\left(\mathrm{PGA}_{\mathrm{M}}\right)$ was determined to be 0.625 g (based on both probabilistic and deterministic seismic ground motion).

### 7.4 Liquefaction

Soil liquefaction is a state of soil particles suspension caused by a complete loss of strength when the effective stress drops to zero. Liquefaction normally occurs under saturated conditions in soils such as sand in which the strength is purely frictional. Primary factors that trigger liquefaction are: moderate to strong ground shaking (seismic source), relatively clean, loose granular soils (primarily poorly graded sands and silty sands), and saturated soil conditions (shallow groundwater). Due to the increasing overburden pressure
with depth, liquefaction of granular soils is generally limited to the upper 50 feet of a soil profile. However, liquefaction has occurred in soils other than clean sand.

The soils encountered within the depth of $461 / 2$ feet on the project site consisted predominately of medium dense to very dense clayey sand, silty sand, well-graded sand with silt, poorly graded sand with silt; and stiff to hard sandy clay, sandy silt, and sandy clayey silt. The historically highest groundwater is estimated to be at a depth more than 50 feet below ground surface based on regional groundwater data. Low to very low cohesion strength is commonly associated with the sandy soil profile at the site. A seismic hazard, which could cause damage to the proposed development during seismic shaking, is the post-liquefaction settlement of liquefied sands.

The Riverside County Office of Information Technology GIS website shows the subject site to be in a low liquefaction potential area. The site was evaluated for liquefaction potential. The liquefaction analysis indicated that the soils had a low potential for liquefaction under seismic condition. Therefore, no mitigation measures are warranted.

### 7.5 Seismic Densification

One of the most common phenomena during seismic shaking accompanying any earthquake is the induced settlement of loose unconsolidated soils. Based on site subsurface conditions and the seismicity of the region, any loose granular materials at the site could be vulnerable to this potential hazard. Our analysis of dynamic densification of "dry" soil in the upper 50 feet of existing soil profile was performed.

For the analysis, a maximum earthquake magnitude of $8.2 \mathrm{M}_{\mathrm{w}}$ and a peak horizontal ground surface acceleration of 0.625 g (with a 2 percent probability of exceedance in 50 years) were considered appropriate for the analysis. The seismic densification of dry to damp alluvial sandy soils due to onsite seismic activity is calculated to have a total settlement of approximately 0.19 inch. The differential settlement is estimated to be 0.1 inch. The seismic densification settlement analysis is included in Appendix A.

### 7.6 Lateral Spreading

Lateral spreading is a phenomenon in which soils move laterally during seismic shaking and is often associated with liquefaction. The amount of movement depends on the soil strength, duration and intensity of seismic shaking, topography, and free face geometry. Due to the relatively flat site topography, we judge the likelihood of lateral spreading to be low.

### 7.7 Landslides

There are no known landslides at the site, nor is the site in the path of any known or potential landslides. We do not consider the potential for a landslide to be a hazard to this project.

## $7.8 \quad$ Tsunamis and Seiches

The site is not located within a coastal area. Therefore, tsunamis (seismic sea waves) are not considered a significant hazard at the site. Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Flooding from a seismically-induced seiche is considered unlikely.

## 8. SOIL AND GROUNDWATER CONDITIONS

### 8.1 Subsurface Conditions

The subsurface conditions encountered appear typical of those found in the geologic region of the site. In general, the soils within the depth of exploration consisted predominately of medium dense to very dense clayey sand, silty sand, well-graded sand with silt, poorly graded sand with silt; and stiff to hard sandy clay, sandy silt, and sandy clayey silt.

No significant fill soils were encountered in our borings. However, fill soils are expected to be present on site between or beyond our boring locations since the site is currently occupied by a single-family residence. Verification of the possible fill soil and the extent of fill should be determined during site grading.

The soils were classified in the field during the drilling and sampling operations. The stratification lines were approximated by the field engineer on the basis of observations made at the time of drilling. The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted.

The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol. The locations of the test borings were determined by measuring from feature shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants.

### 8.2 Groundwater

The test boring locations were checked for the presence of groundwater during and after the drilling operations. Free groundwater was not encountered during this investigation. The historically highest groundwater is anticipated to be at a depth of more than 50 feet below existing grade based on local groundwater data.

It should be recognized that water table elevations may fluctuate with time, being dependent upon seasonal precipitation, irrigation, land use, localized pumping, and climatic conditions as well as other factors. Therefore, water level observations at the time of the field investigation may vary from those encountered during the construction phase of the project. The evaluation of such factors is beyond the scope of this report.

### 8.3 Soil Corrosion Screening

Excessive sulfate in either the soil or native water may result in an adverse reaction between the cement in concrete and the soil. The 2014 Edition of ACI 318 (ACI 318) has established criteria for evaluation of sulfate and chloride levels and how they relate to cement reactivity with soil and/or water.

A soil sample was obtained from the project site and was tested for the evaluation of the potential for concrete deterioration or steel corrosion due to attack by soil-borne soluble salts and soluble chloride.

The water-soluble sulfate concentration in the saturation extract from the soil sample was detected to be $533 \mathrm{mg} / \mathrm{kg}$. ACI 318 Tables 19.3.1.1 and 19.3.2.1 outline exposure categories, classes, and concrete requirements by exposure class. ACI 318 requirements for site concrete based upon soluble sulfate are summarized in Table 8.3 below.

TABLE 8.3
WATER SOLUBLE SULFATE EXPOSURE REQUIREMENTS

| Water Soluble <br> Sulfate (SO <br> 4 $)$ in <br> Soil, Percentage by <br> Weight | Exposure <br> Severity | Exposure <br> Class | Maximum <br> w/cm Ratio | Minimum <br> Concrete <br> Compressive <br> Strength | Cementations <br> Materials <br> Type |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0.0533 | Not <br> Applicable | S 0 | $\mathrm{~N} / \mathrm{A}$ | $2,500 \mathrm{psi}$ | No Restriction |

The water-soluble chloride concentration detected in saturation extract from the soil samples was 115 $\mathrm{mg} / \mathrm{kg}$. This level of chloride concentration is considered to be mildly corrosive.

It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, applicable manufacturer's recommendations for corrosion protection of buried metal pipe be closely followed.

### 8.4 Percolation Testing

Two (2) percolation tests (P-1 and P-2) were performed within assumed infiltration areas and were conducted in accordance with the guidelines established by the County of Riverside. The approximate locations of the percolation tests are shown on the attached Site Plan, Figure 2. The boreholes were advanced to the depths shown on the percolation test worksheets. The holes were pre-saturated before percolation testing commenced.

Percolation rates were measured by filling the test holes with clean water and measuring the water drops at a certain time interval. The percolation rate data are presented in tabular format at the end of this Report. The difference in the percolation rates are reflected by the varied type of soil materials at the bottom of the test holes. The test results are shown on the table below.

| Test No. | Depth <br> (Feet) | Measured <br> Percolation Rate <br> $(m i n /$ inch $)$ | Infiltration Rate* <br> (inch/hour) | Soil Type** $^{*}$ |
| :---: | :---: | :---: | :---: | :---: |
| P-1 | 9 | 250.0 | $\mathbf{0 . 0 1}$ | Clayey SILT (ML) |
| P-2 | 5 | 125.0 | $\mathbf{0 . 0 3}$ | Clayey SAND (SC) |

* Tested infiltration Rate $=(\Delta \mathbf{H} 60 r) /\left(\Delta t\left(r+2 \mathrm{H}_{\text {avg }}\right)\right)$
** At bottom of drilled holes

The soil infiltration or percolation rates are based on tests conducted with clear water. The infiltration/percolation rates may vary with time as a result of soil clogging from water impurities. The infiltration/percolation rates will deteriorate over time due to the soil conditions and an appropriate factor of safety (FS) may be applied. The owner or civil engineer may elect to use a lower FS for the design; however, more frequent maintenance will be expected. The soils may also become less permeable to impermeable if the soil is compacted. Thus, periodic maintenance consisting of clearing the bottom of the drainage system of clogged soils should be expected.

The infiltration rate may become slower if the surrounding soil is wet or saturated due to prolonged rainfalls. Additional infiltration tests should be conducted at bottom of the drainage system during construction to verify the infiltration rate. Groundwater, if closer to the bottom of the drainage system, will also reduce the infiltration rate.

The scope of our services did not include a groundwater study and was limited to the performance of infiltration testing and soil profile description, and the submitted data only. Our services did not include those associated with septic system design. Neither did services include an Environmental Site Assessment for the presence or absence of hazardous and/or toxic materials in the soil, groundwater, or atmosphere; or the presence of wetlands.

Any statements, or absence of statements, in this report or on any boring logs regarding odors, unusual or suspicious items, or conditions observed, are strictly for descriptive purposes and are not intended to convey engineering judgment regarding potential hazardous and/or toxic assessment. The geotechnical engineering information presented herein is based upon professional interpretation utilizing standard engineering practices. The work conducted through the course of this investigation, including the preparation of this report, has been performed in accordance with the generally accepted standards of geotechnical engineering practice, which existed in the geographic area at the time the report was written. No other warranty, express or implied, is made.

Please be advised that when performing infiltration testing services in relatively small areas (double rings) that the testing may not fully model the actual full scale long term performance of a given site. This is particularly true where infiltration test data is to be used in the design of large infiltration areas such as those proposed for the site. Subsurface conditions, including infiltration rates, can change over time as finegrained soils migrate. It is not warranted that such information and interpretation cannot be superseded by future geotechnical engineering developments. We emphasize that this report is valid for the project outlined above and should not be used for any other sites.

## 9. CONCLUSIONS AND RECOMMENDATIONS

### 9.1 General

9.1.1 Based upon the data collected during this investigation, and from a geotechnical engineering standpoint, it is our opinion that the site is suitable for the proposed construction of improvements at the site as planned, provided the recommendations contained in this report are incorporated into the project design and construction. Conclusions and recommendations provided in this report are based on our review of available literature, analysis of data obtained from our field exploration and laboratory testing program, and our understanding of the proposed development at this time.
9.1.2 The primary geotechnical constraints identified in our investigation is the presence of potentially compressible (collapsible) soils and expansive soils at the site. Recommendations to mitigate the effects of these soils are provided in this report.
9.1.3 The scope of this investigation did not include subsurface exploration within the existing building or areas inaccessible to our drill rig. As such, subsurface soil conditions and materials present below the existing site structures are unknown and may be different than those noted within this report. The presence of potentially unacceptable fill materials, undocumented fill, and/or loose soil material that may be present below existing site features shall be taken into consideration. Our firm shall be present at the time of demolition activities to verify soil conditions are consistent with those identified as part of this investigation.
9.1.4 No significant fill soils were encountered in our borings. However, fill soils are expected to be present on site between our boring locations since the site is currently occupied by a singlefamily residence. Undocumented fill materials are not suitable to support any future structures and should be excavated and recompacted. The extent and consistency of the fills should be verified during site construction. Prior to fill placement, Salem Engineering Group, Inc. should inspect the bottom of the excavation to verify the fill condition.
9.1.5 Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than $1 / 2$ inch in diameter. Tree roots removed in parking areas may be limited to the upper $1 \frac{1}{2}$ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.
9.1.6 The site is currently occupied by a single-family residence. Underground structures may exist within the site area. Site demolition activities shall include removal of all surface obstructions not intended to be incorporated into final design. In addition, underground buried structures and/or utility lines encountered during demolition and construction should be properly removed and the resulting excavations backfilled with Engineered Fill. It is suspected that possible demolition activities of the existing structures may disturb the upper soils. After demolition activities, it is recommended that disturbed soils be removed and/or recompacted.
9.1.7 The majority of the upper soils within the project site are identified primarily as clayey sand and sandy clay. The clayey soils exhibit a moderate swell potential and are subject to volumetric changes if moisture contents vary. The clayey soil, in its present condition, possess hazards to construction in terms of possible post-construction movement of the foundations and floor systems if no mitigation measures are employed. The estimate swell pressures of the clayey material may cause movement affecting slabs and brittle exterior finishes. Accordingly, measures are considered necessary to reduce anticipated soil movement.
9.1.8 To minimize the potential soil movement due to expansive soil conditions, it is recommended that the upper 12 inches of soil beneath the required granular aggregate subbase within slab on grade and exterior flatwork areas be replaced with Non-Expansive Engineered Fill meeting the requirements of Section 9.4. Other than complete soil replacement, mitigation measures will not eliminate post-construction soil movement, but will reduce the soil movement. Success of the
mitigation measures will depend on the thoroughness of the contractor and developer in dealing with the soil conditions. In any event, the developer should be aware that some soil movement is to be expected.
9.1.9 As an alternative to the use of non-expansive soils, its' recommended the slab to have a minimum thickness of 5 inches and a minimum concrete compressive strength of $4,500 \mathrm{psi}$.
9.1.10 Based on the subsurface conditions at the site and the anticipated structural loading, we anticipate that the proposed buildings may be supported using conventional shallow foundations provided that the recommendations presented herein are incorporated in the design and construction of the project.
9.1.11 Provided the site is graded in accordance with the recommendations of this report and foundations constructed as described herein, we estimate that total settlement due to static and seismic loads utilizing conventional shallow foundations for the proposed structures will be within 1 inch and corresponding differential settlement will be less than $1 / 2$ inch over 20 feet.
9.1.12 All references to relative compaction and optimum moisture content in this report are based on ASTM D1557 (latest edition).
9.1.13 SALEM shall review the project grading and foundation plans, and specifications prior to final design submittal to assess whether our recommendations have been properly implemented and evaluate if additional analysis and/or recommendations are required. If SALEM is not provided plans and specifications for review, we cannot assume any responsibility for the future performance of the project.
9.1.14 SALEM shall be present at the site during site demolition and preparation to observe site clearing/demolition, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.
9.1.15 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

### 9.2 Seismic Design Criteria

9.2.1 For seismic design of the structures, and in accordance with the seismic provisions of the 2016 CBC, our recommended parameters are shown below. These parameters were determined using California's Office of Statewide Health Planning and Development (OSHPD) (https://seismicmaps.org/) in accordance with the 2016 CBC. The Site Class was determined based on the soils encountered during our field exploration.

TABLE 9.2.1
SEISMIC DESIGN PARAMETERS

| Seismic Item | Symbol | Value |
| :---: | :---: | :---: |
| Site Coordinates ( Datum = NAD 83) |  | $\begin{gathered} \text { 34.0035 Lat } \\ \text {-117.0673 Lon } \end{gathered}$ |
| Site Class | -- | D |
| Soil Profile Name | -- | Stiff Soil |
| Risk Category | -- | II |
| Site Coefficient for PGA | $\mathrm{F}_{\text {PGA }}$ | 1.000 |
| Peak Ground Acceleration (adjusted for Site Class effects) | $\mathrm{PGA}_{\mathrm{M}}$ | 0.625 g |
| Seismic Design Category | SDC | D |
| Mapped Spectral Acceleration (Short period - 0.2 sec ) | Ss | 1.543 g |
| Mapped Spectral Acceleration (1.0 sec. period) | $\mathrm{S}_{1}$ | 0.730 g |
| Site Class Modified Site Coefficient | $\mathrm{F}_{\mathrm{a}}$ | 1.000 |
| Site Class Modified Site Coefficient | $\mathrm{F}_{\mathrm{v}}$ | 1.500 |
| MCE Spectral Response Acceleration (Short period - 0.2 sec ) $\quad \mathrm{S}_{\mathrm{MS}}=\mathrm{F}_{\mathrm{a}} \mathrm{S}_{\mathrm{s}}$ | $\mathrm{S}_{\text {MS }}$ | 1.543 g |
| MCE Spectral Response Acceleration (1.0 sec. period) $\quad \mathrm{S}_{\mathrm{M} 1}=\mathrm{F}_{\mathrm{v}} \mathrm{S}_{1}$ | $\mathrm{S}_{\mathrm{M} 1}$ | 1.095 g |
| Design Spectral Response Acceleration $\mathrm{S}_{\mathrm{DS}}=2 / 3 \mathrm{~S}_{\mathrm{MS}} \quad$ (short period -0.2 sec ) | $\mathrm{S}_{\mathrm{DS}}$ | 1.029 g |
| Design Spectral Response Acceleration $\mathrm{S}_{\mathrm{D} 1}=2 / 3 \mathrm{~S}_{\mathrm{M} 1} \quad$ (1.0 sec. period) | $S_{\text {D1 }}$ | 0.730 g |

9.2.2 Conformance to the criteria in the above table for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

### 9.3 Soil and Excavation Characteristics

9.3.1 Based on the soil conditions encountered in our soil borings, the upper soils can be excavated with moderate effort using heavy-duty conventional earthmoving equipment.
9.3.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable Occupational Safety and Health Administration (OSHA) rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.
9.3.3 The upper soils within the project site are identified primarily as clayey sand and sandy clay. The clayey soils are moisture-sensitive and moderately expansive.
9.3.4 The near surface soils identified as part of our investigation are, generally, moist due to the absorption characteristics of the soil. Earthwork operations may encounter very moist unstable soils which may require removal to a stable bottom. Exposed native soils exposed as part of site grading operations shall not be allowed to dry out and should be kept continuously moist prior to placement of subsequent fill.

### 9.4 Materials for Fill

9.4.1 The upper soils are predominately clayey sand and sandy clay. The test results indicate that the soils have a moderate expansion potential ( $\mathrm{EI}=45$ ). It is recommended that the upper 12 inches of soil within the building pad and exterior flatwork areas be replaced with Non-Expansive Fill ( $\mathrm{EI} \leq 20$ ).
9.4.2 The soils with an Expansion Index greater than 20 ( $\mathrm{EI}>20$ ) but no greater than $50(\mathrm{EI} \leq 50)$ may be placed below a depth of 12 inches within the building pad and exterior flatwork areas or in the parking and non-structural areas.
9.4.3 Import soil shall be well-graded, slightly cohesive silty fine sand or sandy silt, with relatively impervious characteristics when compacted. A clean sand or very sandy soil is not acceptable for this purpose. This material should be approved by the Engineer prior to use and should typically possess the soil characteristics summarized below in Table 9.4.3.

TABLE 9.4.3
IMPORT FILL REQUIREMENTS

| Minimum Percent Passing No. 200 Sieve | 20 |
| :--- | :--- |
| Maximum Percent Passing No. 200 Sieve | 50 |
| Minimum Percent Passing No. 4 Sieve | 80 |
| Maximum Particle Size | $3 \prime$ |
| Maximum Plasticity Index | 12 |
| Maximum CBC Expansion Index | 20 |

9.4.4 The preferred materials specified for Engineered Fill are suitable for most applications with the exception of exposure to erosion. Project site winterization and protection of exposed soils during the construction phase should be the sole responsibility of the Contractor, since they have complete control of the project site.
9.4.5 Environmental characteristics and corrosion potential of import soil materials should also be considered.
9.4.6 Proposed import materials should be sampled, tested, and approved by SALEM prior to its transportation to the site.
9.5.1 A SALEM representative should be present during all site clearing and grading operations to test and observe earthwork construction. This testing and observation is an integral part of our service as acceptance of earthwork construction is dependent upon compaction of the material and the stability of the material. The Geotechnical Engineer may reject any material that does not meet compaction and stability requirements. Further recommendations of this report are predicated upon the assumption that earthwork construction will conform to recommendations set forth in this section as well as other portions of this report.
9.5.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer and geotechnical engineer in attendance.
9.5.3 Site preparation should begin with removal of existing surface/subsurface structures, underground utilities (as required), any existing uncertified fill, and debris. Excavations or depressions resulting from site clearing operations, or other existing excavations or depressions, should be restored with Engineered Fill in accordance with the recommendations of this report.
9.5.4 Surface vegetation consisting of grasses and other similar vegetation should be removed by stripping to a sufficient depth to remove organic-rich topsoil. The upper 2 to 4 inches of the soils containing, vegetation, roots and other objectionable organic matter encountered at the time of grading should be stripped and removed from the surface. Deeper stripping may be required in localized areas. In addition, existing concrete and asphalt materials shall be removed from areas of proposed improvements and stockpiled separately from excavated soil material. The stripped vegetation, asphalt and concrete materials will not be suitable for use as Engineered Fill or within 5 feet of building pads or within pavement areas. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas or exported from the site.
9.5.5 Structural building pad areas should be considered as areas extending a minimum of 5 feet horizontally beyond the outside dimensions of buildings, including footings and non-cantilevered overhangs carrying structural loads.
9.5.6 Any fill materials encountered during grading should be removed and replaced with engineered fill. The actual depth of the overexcavation and recompaction should be determined by our field representative during construction.
9.5.7 To minimize post-construction soil movement and provide uniform support for the proposed buildings, it is recommended that the overexcavation and recompaction within the proposed building area be performed to a minimum depth of three (3) feet below existing grade or two (2) feet below proposed footing bottom, whichever is deeper. The overexcavation and recompaction should also extend laterally to a minimum of 5 feet beyond the building area.
9.5.8 To minimize the potential soil movement, it is recommended that the upper 12 inches of soil beneath the required granular aggregate subbase within slab on grade and exterior flatwork areas be removed and replaced with Non-Expansive Engineered Fill meeting the requirements of Section 9.4.
9.5.9 As an alternative to the use of non-expansive soils, its' recommended the slab to have a minimum thickness of 5 inches and a minimum concrete compressive strength of $4,500 \mathrm{psi}$.
9.5.10 Within pavement and canopy areas, it is recommended that the overexcavation and recompaction be performed to a minimum depth of one (1) foot below existing grade or proposed grade, whichever is deeper. The overexcavation and recompaction should also extend laterally to a minimum of 2 feet beyond the pavement area.
9.5.11 Prior to placement of fill soils, the upper 8 to 10 inches of native subgrade soils should be scarified, moisture-conditioned to no less than the optimum moisture content and recompacted to a minimum of 90 percent ( $95 \%$ for granular, non-expansive soils) of the maximum dry density based on ASTM D1557-07 Test Method.
9.5.12 All Engineered Fill (including scarified ground surfaces and backfill) should be placed in thin lifts to allow for adequate bonding and compaction (typically 6 to 8 inches in loose thickness).
9.5.13 Engineered Fill soils should be placed, moisture conditioned to near optimum moisture content, and compacted to at least 90 percent relative compaction.
9.5.14 Non-Expansive Engineered Fill and non-cohesive soils should be placed, moisture conditioned to near optimum moisture content, and compacted to at least $95 \%$ relative compaction
9.5.15 Final pavement subgrade should be finished to a smooth, unyielding surface. We further recommend proof-rolling the subgrade with a loaded water truck (or similar equipment with high contact pressure) to verify the stability of the subgrade prior to placing aggregate base.
9.5.16 An integral part of satisfactory fill placement is the stability of the placed lift of soil. If placed materials exhibit excessive instability as determined by a SALEM field representative, the lift will be considered unacceptable and shall be remedied prior to placement of additional fill material. Additional lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.
9.5.17 The most effective site preparation alternatives will depend on site conditions prior to grading. We should evaluate site conditions and provide supplemental recommendations immediately prior to grading, if necessary.
9.5.18 We do not anticipate groundwater or seepage to adversely affect construction if conducted during the drier moths of the year (typically summer and fall). However, groundwater and soil moisture conditions could be significantly different during the wet season (typically winter and spring) as surface soil becomes wet; perched groundwater conditions may develop. Grading during this time period will likely encounter wet materials resulting in possible excavation and fill placement difficulties.

Project site winterization consisting of placement of aggregate base and protecting exposed soils during construction should be performed. If the construction schedule requires grading operations during the wet season, we can provide additional recommendations as conditions warrant.
9.5.19 The wet soils may become non conducive to site grading as the upper soils yield under the weight of the construction equipment. Therefore, mitigation measures should be performed for stabilization.

Typical remedial measures include: discing and aerating the soil during dry weather; mixing the soil with dryer materials; removing and replacing the soil with an approved fill material or placement of slurry, crushed rocks or aggregate base material; or mixing the soil with an approved lime or cement product.

The most common remedial measure of stabilizing the bottom of the excavation due to wet soil condition is to reduce the moisture of the soil to near the optimum moisture content by having the subgrade soils scarified and aerated or mixed with drier soils prior to compacting. However, the drying process may require an extended period of time and delay the construction operation.

To expedite the stabilizing process, slurry or crushed rock may be utilized for stabilization provided this method is approved by the owner for the cost purpose. If the use of slurry or crushed rock is considered, it is recommended that the upper soft and wet soils be replaced by 6 to 24 inches of slurry or $3 / 4$-inch to 1 -inch crushed rocks. The thickness of the slurry or rock layer depends on the severity of the soil instability.

The recommended 6 to 24 inches of slurry or crushed rock material will provide a stable platform. It is further recommended that lighter compaction equipment be utilized for compacting the crushed rock. A layer of geofabric is recommended to be placed on top of the compacted crushed rock to minimize migration of soil particles into the voids of the crushed rock, resulting in soil movement. Although it is not required, the use of geogrid (e.g. Tensar TX7) below the crushed rock will enhance stability and reduce the required thickness of crushed rock necessary for stabilization.

Our firm should be consulted prior to implementing remedial measures to provide appropriate recommendations.

### 9.6 Shallow Foundations

9.6.1 The site is suitable for use of conventional shallow foundations consisting of continuous footings and isolated pad footings bearing in properly compacted Engineered Fill.
9.6.2 The bearing wall footings considered for the structure should be continuous with a minimum width of 18 inches and extend to a minimum depth of 18 inches below the lowest adjacent grade. Isolated column footings should have a minimum width of 24 inches and extend a minimum depth of 18 inches below the lowest adjacent grade.
9.6.3 The bottom of footing excavations should be maintained free of loose and disturbed soil. Footing concrete should be placed into a neat excavation.
9.6.4 Footings proportioned as recommended above may be designed for the maximum allowable soil bearing pressures shown in the table below.

| Loading Condition | Allowable Bearing |
| :---: | :---: |
| Dead Load Only | $2,500 \mathrm{psf}$ |
| Dead-Plus-Live Load | $3,000 \mathrm{psf}$ |
| Total Load, Including Wind or Seismic Loads | $4,000 \mathrm{psf}$ |

9.6.5 For design purposes, total settlement due to static and seismic loadings on the order of 1 inch may be assumed for shallow footings. Differential settlement due to static and seismic loadings, along a 20 -foot exterior wall footing or between adjoining column footings, should be $1 / 2$ inch, producing an angular distortion of 0.002 . Most of the settlement is expected to occur during construction as the loads are applied. However, additional post-construction settlement may occur if the foundation soils are flooded or saturated. The footing excavations should not be allowed to dry out any time prior to pouring concrete.
9.6.6 Resistance to lateral footing displacement can be computed using an allowable coefficient of friction factor of 0.30 acting between the base of foundations and the supporting native subgrade.
9.6.7 Lateral resistance for footings can alternatively be developed using an equivalent fluid passive pressure of 300 pounds per cubic foot acting against the appropriate vertical native footing faces. The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance. An increase of one-third is permitted when using the alternate load combination that includes wind or earthquake loads.
9.6.8 Minimum reinforcement for continuous footings should consist of four No. 5 steel reinforcing bars; two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.
9.6.9 Underground utilities running parallel to footings should not be constructed in the zone of influence of footings. The zone of influence may be taken to be the area beneath the footing and within a 1:1 plane extending out and down from the bottom edge of the footing.
9.6.10 The foundation subgrade should be sprinkled as necessary to maintain a moist condition without significant shrinkage cracks as would be expected in any concrete placement. Prior to placing rebar reinforcement, foundation excavations should be evaluated by a representative of SALEM for appropriate support characteristics and moisture content. Moisture conditioning may be required for the materials exposed at footing bottom, particularly if foundation excavations are left open for an extended period.

### 9.7 Caisson Foundations

9.7.1 It is recommended that the caisson foundation should have a minimum depth of 8 feet below the lowest adjacent grade.
9.7.2 The caissons may be designed using an allowable sidewall friction of 300 psf . This value is for dead-plus-live loads. An allowable end bearing capacity of $4,500 \mathrm{psf}$ may be used provided that the bottom of the caisson is cleaned with the use of a clean-out bucket or equivalent and inspected by our representative prior to placement of reinforcement and concrete. An increase of one-third is permitted when using the alternate load combination that includes wind or earthquake loads.
9.7.3 Uplift loads can be resisted by caissons using an allowable sidewall friction of 200 psf of the surface area and the weight of the caisson.
9.7.4 The total static and seismic settlement of the caisson footing is not expected to exceed 1 inch. Differential settlement should be less than $1 / 2$ inch. Most of the settlement is expected to occur during construction as the loads are applied.
9.7.5 Lateral loads for caissons may be designed utilizing the Isolated Pole Formula and Specifications shown on Table 1804.2, Sections 1804.3.1 and 1808.2.2 of the California Building Code. The drilled caissons may be designed for a lateral capacity of 300 pounds per square foot per foot of depth below the lowest adjacent grade to a maximum of $4,500 \mathrm{psf}$.
9.7.6 These values may be increased by one-third when using the alternative load combinations that include wind or earthquake loads. These values should not be doubled since the values given herein are higher than the tabular values shown on the Table 1804.2. The lateral loading criteria is based on the assumption that the load application is applied at the ground level, flexible cap connections applied and a minimum embedment depth of 8 feet.
9.7.7 Sandy soils were encountered at the site. Casing of the drilled caisson will be required if seepage is encountered or the drilled hole has to be left open for an extended period of time.

### 9.8 Concrete Slabs-on-Grade

9.8.1 Slab thickness and reinforcement should be determined by the structural engineer based on the anticipated loading. We recommend that non-structural slabs-on-grade be at least 4 inches thick and underlain by six (6) inches of compacted granular aggregate subbase material compacted to at least $95 \%$ relative compaction.
9.8.2 Granular aggregate subbase material shall conform to ASTM D-2940, Latest Edition (Table 1, bases) with at least 95 percent passing a $1 \frac{1}{2}$-inch sieve and not more than $8 \%$ passing a No. 200 sieve or its approved equivalent to prevent capillary moisture rise.
9.8.3 The use of processed asphalt in the granular aggregate subbase material (i.e. recycled or miscellaneous base) will have to be approved by the owner. Asphalt is a petroleum hydrocarbon with numerous components, including naphthalene and other semi-volatile constituents that are regulated by California. This material in the subsurface could become a potential vapor intrusion risk (naphthalene is a recent risk-driver that DTSC is actively pursuing).
9.8.4 We recommend reinforcing slabs, at a minimum, with No. 4 reinforcing bars placed 18 inches on center, each way.
9.8.5 Slabs subject to structural loading may be designed utilizing a modulus of subgrade reaction K of 140 pounds per square inch per inch. The K value was approximated based on interrelationship of soil classification and bearing values (Portland Cement Association, Rocky Mountain Northwest).
9.8.6 The spacing of crack control joints should be designed by the project structural engineer. In order to regulate cracking of the slabs, we recommend that full depth construction joints or control joints be provided at a maximum spacing of 15 feet in each direction for 5 -inch thick slabs and 12 feet for 4 -inch thick slabs.
9.8.7 Crack control joints should extend a minimum depth of one-fourth the slab thickness and should be constructed using saw-cuts or other methods as soon as practical after concrete placement. The exterior floors should be poured separately in order to act independently of the walls and foundation system.
9.8.8 It is recommended that the utility trenches within the structure be compacted, as specified in our report, to minimize the transmission of moisture through the utility trench backfill. Special attention to the immediate drainage and irrigation around the structures is recommended.
9.8.9 Moisture within the structure may be derived from water vapors, which were transformed from the moisture within the soils. This moisture vapor penetration can affect floor coverings and produce mold and mildew in the structure. To minimize moisture vapor intrusion, it is recommended that a vapor retarder be installed in accordance with manufacturer's recommendations and/or ASTM guidelines, whichever is more stringent. In addition, ventilation of the structure is recommended to reduce the accumulation of interior moisture.
9.8.10 In areas where it is desired to reduce floor dampness where moisture-sensitive coverings are anticipated, construction should have a suitable waterproof vapor retarder (a minimum of 15 mils thick polyethylene vapor retarder sheeting, Raven Industries "VaporBlock 15, Stego Industries 15 mil "StegoWrap" or W.R. Meadows Sealtight 15 mil "Perminator") incorporated into the floor slab design. The water vapor retarder should be decay resistant material complying with ASTM E96 not exceeding 0.04 perms, ASTM E154 and ASTM E1745 Class A. The vapor barrier should be placed between the concrete slab and the compacted granular aggregate subbase material. The water vapor retarder (vapor barrier) should be installed in accordance with ASTM Specification E 1643-94.
9.8.11 The concrete maybe placed directly on vapor retarder. The vapor retarder should be inspected prior to concrete placement. Cut or punctured retarder should be repaired using vapor retarder material lapped 6 inches beyond damaged areas and taped.
9.8.12 The recommendations of this report are intended to reduce the potential for cracking of slabs due to soil movement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to soil movement. This is common for project areas that contain expansive soils since designing to eliminate potential soil movement is cost prohibitive. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing,
and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.
9.8.13 Proper finishing and curing should be performed in accordance with the latest guidelines provided by the American Concrete Institute, Portland Cement Association, and ASTM.

### 9.9 Lateral Earth Pressures and Frictional Resistance

9.9.1 Active, at-rest and passive unit lateral earth pressures against footings and walls are summarized in the table below:

| Lateral Pressures <br> Drained and Level Backfill Conditions | Equivalent Fluid Pressure, pcf |
| :---: | :---: |
| Active Pressure | 47 |
| At-Rest Pressure | 67 |
| Passive Pressure | 300 |
| Related Parameters | 0.30 |
| Allowable Coefficient of Friction | 120 |
| In-Place Soil Density $\left(\mathrm{lbs} / \mathrm{ft}^{3}\right)$ |  |

9.9.2 Active pressure applies to walls, which are free to rotate. At-rest pressure applies to walls, which are restrained against rotation. The preceding lateral earth pressures assume sufficient drainage behind retaining walls to prevent the build-up of hydrostatic pressure.
9.9.3 The top one-foot of adjacent subgrade should be deleted from the passive pressure computation.
9.9.4 The foregoing values of lateral earth pressures represent equivalent soil values and a safety factor consistent with the design conditions should be included in their usage.
9.9.5 For stability against lateral sliding, which is resisted solely by the passive pressure, we recommend a minimum safety factor of 1.5 .
9.9.6 For stability against lateral sliding, which is resisted by the combined passive and frictional resistance, a minimum safety factor of 2.0 is recommended.
9.9.7 For lateral stability against seismic loading conditions, we recommend a minimum safety factor of 1.1.
9.9.8 For dynamic seismic lateral loading the following equation shall be used:

| Dynamic Seismic Lateral Loading Equation |
| :---: |
| Dynamic Seismic Lateral Load $=3 / 8 \gamma \mathrm{~K}_{\mathrm{h}} \mathrm{H}^{2}$ |
| Where: $\gamma=$ In-Place Soil Density |
| $\mathrm{K}_{\mathrm{h}}=$ Horizontal Acceleration $=2 / 3 \mathrm{PGA}_{\mathrm{M}}$ |
| $\mathrm{H}=$ Wall Height |

### 9.10 Retaining Walls

9.10.1 Retaining and/or below grade walls should be drained with either perforated pipe encased in freedraining gravel or a prefabricated drainage system. The gravel zone should have a minimum width of 12 inches wide and should extend upward to within 12 inches of the top of the wall. The upper 12 inches of backfill should consist of native soils, concrete, asphaltic-concrete or other suitable backfill to minimize surface drainage into the wall drain system. The gravel should conform to Class II permeable materials graded in accordance with the current CalTrans Standard Specifications.
9.10.2 Prefabricated drainage systems, such as Miradrain®, Enkadrain®, or an equivalent substitute, are acceptable alternatives in lieu of gravel provided they are installed in accordance with the manufacturer's recommendations. If a prefabricated drainage system is proposed, our firm should review the system for final acceptance prior to installation.
9.10.3 Drainage pipes should be placed with perforations down and should discharge in a non-erosive manner away from foundations and other improvements. The top of the perforated pipe should be placed at or below the bottom of the adjacent floor slab or pavements. The pipe should be placed in the center line of the drainage blanket and should have a minimum diameter of 4 inches. Slots should be no wider than $1 / 8$-inch in diameter, while perforations should be no more than $1 / 4$-inch in diameter.
9.10.4 If retaining walls are less than 5 feet in height, the perforated pipe may be omitted in lieu of weep holes on 4 feet maximum spacing. The weep holes should consist of 2 -inch minimum diameter holes (concrete walls) or unmortared head joints (masonry walls) and placed no higher than 18 inches above the lowest adjacent grade. Two 8 -inch square overlapping patches of geotextile fabric (conforming to the CalTrans Standard Specifications for "edge drains") should be affixed to the rear wall opening of each weep hole to retard soil piping.
9.10.5 During grading and backfilling operations adjacent to any walls, heavy equipment should not be allowed to operate within a lateral distance of 5 feet from the wall, or within a lateral distance equal to the wall height, whichever is greater, to avoid developing excessive lateral pressures. Within this zone, only hand operated equipment ("whackers," vibratory plates, or pneumatic compactors) should be used to compact the backfill soils.

### 9.11 Temporary Excavations

9.11.1 We anticipate that the majority of the sandy site soils will be classified as Cal-OSHA "Type C" soil when encountered in excavations during site development and construction. Excavation sloping, benching, the use of trench shields, and the placement of trench spoils should conform to the latest applicable Cal-OSHA standards. The contractor should have a Cal-OSHA-approved "competent person" onsite during excavation to evaluate trench conditions and make appropriate recommendations where necessary.
9.11.2 It is the contractor's responsibility to provide sufficient and safe excavation support as well as protecting nearby utilities, structures, and other improvements which may be damaged by earth movements. All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a $1: 1$ projection down and away from the bottom of an existing foundation or vehicle load.
9.11.3 Temporary excavations and slope faces should be protected from rainfall and erosion. Surface runoff should be directed away from excavations and slopes.
9.11.4 Open, unbraced excavations in undisturbed soils should be made according to the slopes presented in the following table:

RECOMMENDED EXCAVATION SLOPES

| Depth of Excavation (ft) | Slope (Horizontal : Vertical) |
| :---: | :---: |
| $0-5$ | $1: 1$ |
| $5-10$ | $2: 1$ |

9.11.5 If, due to space limitation, excavations near property lines or existing structures are performed in a vertical position, slot cuts, braced shorings or shields may be used for supporting vertical excavations. Therefore, in order to comply with the local and state safety regulations, a properly designed and installed shoring system would be required to accomplish planned excavations and installation. A Specialty Shoring Contractor should be responsible for the design and installation of such a shoring system during construction.
9.11.6 Braced shorings should be designed for a maximum pressure distribution of 30 H , (where H is the depth of the excavation in feet). The foregoing does not include excess hydrostatic pressure or surcharge loading. Fifty percent of any surcharge load, such as construction equipment weight, should be added to the lateral load given herein. Equipment traffic should concurrently be limited to an area at least 3 feet from the shoring face or edge of the slope.
9.11.7 The excavation and shoring recommendations provided herein are based on soil characteristics derived from the borings within the area. Variations in soil conditions will likely be encountered during the excavations. SALEM Engineering Group, Inc. should be afforded the opportunity to provide field review to evaluate the actual conditions and account for field condition variations not otherwise anticipated in the preparation of this recommendation. Slope height, slope
inclination, or excavation depth should in no case exceed those specified in local, state, or federal safety regulation, (e.g. OSHA) standards for excavations, 29 CFR part 1926, or Assessor's regulations.

### 9.12 Underground Utilities

9.12.1 Underground utility trenches should be backfilled with properly compacted material. The material excavated from the trenches should be adequate for use as backfill provided it does not contain deleterious matter, vegetation or rock larger than 3 inches in maximum dimension. Trench backfill should be placed in loose lifts not exceeding 8 inches and compacted to at least $90 \%$ ( $95 \%$ for granular non-expansive soil) relative compaction at or above optimum moisture content.
9.12.2 Bedding and pipe zone backfill typically extends from the bottom of the trench excavations to approximately 6 to 12 inches above the crown of the pipe. Pipe bedding and backfill material should conform to the requirements of the governing utility agency.
9.12.3 It is suggested that underground utilities crossing beneath new or existing structures be plugged at entry and exit locations to the building or structure to prevent water migration. Trench plugs can consist of on-site clay soils, if available, or sand cement slurry. The trench plugs should extend 2 feet beyond each side of individual perimeter foundations.
9.12.4 The contractor is responsible for removing all water-sensitive soils from the trench regardless of the backfill location and compaction requirements. The contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction.

### 9.13 Surface Drainage

9.13.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change to important engineering properties. Proper drainage should be maintained at all times.
9.13.2 The ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than 5 percent for a minimum distance of 10 feet.
9.13.3 Impervious surfaces within 10 feet of the building foundation shall be sloped a minimum of 2 percent away from the building and drainage gradients maintained to carry all surface water to collection facilities and off site. These grades should be maintained for the life of the project. Ponding of water should not be allowed adjacent to the structure. Over-irrigation within landscaped areas adjacent to the structure should not be performed.
9.13.4 Roof drains should be installed with appropriate downspout extensions out-falling on splash blocks so as to direct water a minimum of 5 feet away from the structures or be connected to the storm drain system for the development.

### 9.14 Pavement Design

9.14.1 Based on site soil conditions, an R-value of 15 was used for the preliminary flexible asphaltic concrete pavement design. The R-value may be verified during grading of the pavement areas.
9.14.2 The pavement design recommendations provided herein are based on the State of California Department of Transportation (CALTRANS) design manual. The following table shows the recommended pavement sections for various traffic indices.

TABLE 9.14.2
ASPHALT CONCRETE PAVEMENT

| Traffic Index | Asphaltic <br> Concrete | Class II <br> Aggregate Base* | Compacted <br> Subgrade** $^{*}$ |
| :---: | :---: | :---: | :---: |
| 5.0 (Parking \& Vehicle Drive Areas) | $3.0^{\prime \prime}$ | $8.0^{\prime \prime}$ | $12.0^{\prime \prime}$ |
| 6.0 (Heavy Truck Areas) | $3.0^{\prime \prime}$ | $11.5^{\prime \prime}$ | $12.0^{\prime \prime}$ |

95\% compaction based on ASTM D1557-07 Test Method
**90\% (95\% for granular non-cohesive soils) compaction based on ASTM D1557 Test Method
9.14.3 The following recommendations are for light-duty and heavy-duty Portland Cement Concrete pavement sections.

TABLE 9.14.3
PORTLAND CEMENT CONCRETE PAVEMENT

| Traffic Index | Portland <br> Cement <br> Concrete* | Class II Aggregate <br> Base** | Compacted <br> Subgrade*** |
| :---: | :---: | :---: | :---: |
| 5.0 (Light Duty) | $5.5^{\prime \prime}$ | $6.0^{\prime \prime}$ | $12.0^{\prime \prime}$ |
| 6.0 (Heavy Duty) | $7.0^{\prime \prime}$ | $8.0^{\prime \prime}$ | $12.0^{\prime \prime}$ |

* Minimum Compressive Strength of 4,000 psi
** 95\% compaction based on ASTM D1557 Test Method
***90\% (95\% for granular non-cohesive soils) compaction based on ASTM D1557 Test Method
9.14.4 The concrete pavement should be reinforced with a minimum of No. 4 bars at 15 -inch on center both ways placed at mid-height or specified by the structural engineer.

## 10. PLAN REVIEW, CONSTRUCTION OBSERVATION AND TESTING

### 10.1 Plan and Specification Review

10.1.1 SALEM should review the project plans and specifications prior to final design submittal to assess whether our recommendations have been properly implemented and evaluate if additional analysis and/or recommendations are required.

### 10.2 Construction Observation and Testing Services

10.2.1 The recommendations provided in this report are based on the assumption that we will continue as Geotechnical Engineer of Record throughout the construction phase. It is important to maintain continuity of geotechnical interpretation and confirm that field conditions encountered are similar to those anticipated during design. If we are not retained for these services, we cannot assume any responsibility for others interpretation of our recommendations, and therefore the future performance of the project.
10.2.2 SALEM should be present at the site during site preparation to observe site clearing, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.
10.2.3 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

## 11. LIMITATIONS AND CHANGED CONDITIONS

The analyses and recommendations submitted in this report are based upon the data obtained from the test borings drilled at the approximate locations shown on the Site Plan, Figure 2. The report does not reflect variations which may occur between our test boring locations. The nature and extent of such variations may not become evident until construction is initiated.

If variations then appear, a re-evaluation of the recommendations of this report will be necessary after performing on-site observations during the excavation period and noting the characteristics of such variations. The findings and recommendations presented in this report are valid as of the present and for the proposed construction.

If site conditions change due to natural processes or human intervention on the property or adjacent to the site, or changes occur in the nature or design of the project, or if there is a substantial time lapse between the submission of this report and the start of the work at the site, the conclusions and recommendations contained in our report will not be considered valid unless the changes are reviewed by SALEM and the conclusions of our report are modified or verified in writing.

The validity of the recommendations contained in this report is also dependent upon an adequate testing and observations program during the construction phase. Our firm assumes no responsibility for construction compliance with the design concepts or recommendations unless we have been retained to perform the onsite testing and review during construction. SALEM has prepared this report for the exclusive use of the owner and project design consultants.

SALEM does not practice in the field of corrosion engineering. It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, that manufacturer's recommendations for corrosion protection be closely followed. Further, a corrosion engineer may be needed to incorporate the necessary precautions to avoid premature corrosion of concrete slabs and foundations in direct contact with native soil.

The importation of soil and or aggregate materials to the site should be screened to determine the potential for corrosion to concrete and buried metal piping. The report has been prepared in accordance with generally accepted geotechnical engineering practices in the area. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully Submitted,

APPENDIX
A

## APPENDIX A FIELD EXPLORATION

Fieldwork for our investigation (drilling) was conducted on December 13, 2019 and included a site visit, subsurface exploration, and soil sampling. The locations of the exploratory borings are shown on the Site Plan, Figure 2. Boring logs for our exploration are presented in figures following the text in this appendix. Borings were located in the field using existing reference points. Therefore, actual boring locations may deviate slightly.

In general, our borings were performed using a truck-mounted CME 45 drill rig equipped with 4-inch solid flight augers. Sampling in the borings was accomplished using a hydraulic 140-pound hammer with a 30inch drop. Samples were obtained with a 3-inch outside-diameter (OD), split spoon (California Modified) sampler, and a 2-inch OD, Standard Penetration Test (SPT) sampler. The number of blows required to drive the sampler the last 12 inches (or fraction thereof) of the 18 -inch sampling interval were recorded on the boring logs. The blow counts shown on the boring logs should not be interpreted as standard SPT "N" values; corrections have not been applied. Upon completion, the borings were backfilled with drill cuttings.

Subsurface conditions encountered in the exploratory borings were visually examined, classified and logged in general accordance with the American Society for Testing and Materials (ASTM) Practice for Description and Identification of Soils (Visual-Manual Procedure D2488). This system uses the Unified Soil Classification System (USCS) for soil designations. The logs depict soil and geologic conditions encountered and depths at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, drill rig penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the field logs were revised based on subsequent laboratory testing.

## APPENDIX B LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the American Society for Testing and Materials (ASTM), Caltrans, or other suggested procedures. Selected samples were tested for in-situ dry density and moisture content, corrosivity, consolidation, expansion potential, shear strength, maximum density and optimum moisture content, and grain size distribution. The results of the laboratory tests are summarized in the following figures.

## CONSOLIDATION - PRESSURE TEST DATA

 ASTM D2435LOAD IN KIPS PER SQUARE FOOT

Project Name: Proposed Commercial Development - Calimesa, CA
Project Number: 3-219-1043
Boring: B-1 @ 5

SALEM
engineering group, inc.

## APPENDIX C GENERAL EARTHWORK AND PAVEMENT SPECIFICATIONS

When the text of the report conflicts with the general specifications in this appendix, the recommendations in the report have precedence.
1.0 SCOPE OF WORK: These specifications and applicable plans pertain to and include all earthwork associated with the site rough grading, including, but not limited to, the furnishing of all labor, tools and equipment necessary for site clearing and grubbing, stripping, preparation of foundation materials for receiving fill, excavation, processing, placement and compaction of fill and backfill materials to the lines and grades shown on the project grading plans and disposal of excess materials.
2.0 PERFORMANCE: The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications. This work shall be inspected and tested by a representative of SALEM Engineering Group, Incorporated, hereinafter referred to as the Soils Engineer and/or Testing Agency. Attainment of design grades, when achieved, shall be certified by the project Civil Engineer. Both the Soils Engineer and the Civil Engineer are the Owner's representatives. If the Contractor should fail to meet the technical or design requirements embodied in this document and on the applicable plans, he shall make the necessary adjustments until all work is deemed satisfactory as determined by both the Soils Engineer and the Civil Engineer. No deviation from these specifications shall be made except upon written approval of the Soils Engineer, Civil Engineer, or project Architect.

No earthwork shall be performed without the physical presence or approval of the Soils Engineer. The Contractor shall notify the Soils Engineer at least 2 working days prior to the commencement of any aspect of the site earthwork.

The Contractor shall assume sole and complete responsibility for job site conditions during the course of construction of this project, including safety of all persons and property; that this requirement shall apply continuously and not be limited to normal working hours; and that the Contractor shall defend, indemnify and hold the Owner and the Engineers harmless from any and all liability, real or alleged, in connection with the performance of work on this project, except for liability arising from the sole negligence of the Owner or the Engineers.
3.0 TECHNICAL REQUIREMENTS: All compacted materials shall be densified to no less that 95 percent of relative compaction ( 90 percent for cohesive soils) based on ASTM D1557 Test Method (latest edition), UBC or CAL-216, or as specified in the technical portion of the Soil Engineer's report. The location and frequency of field density tests shall be determined by the Soils Engineer. The results of these tests and compliance with these specifications shall be the basis upon which satisfactory completion of work will be judged by the Soils Engineer.
4.0 SOILS AND FOUNDATION CONDITIONS: The Contractor is presumed to have visited the site and to have familiarized himself with existing site conditions and the contents of the data presented in the Geotechnical Engineering Report. The Contractor shall make his own interpretation of the data contained in the Geotechnical Engineering Report and the Contractor shall not be relieved of liability for any loss sustained as a result of any variance between conditions indicated by or deduced from said report and the actual conditions encountered during the progress of the work.
5.0 DUST CONTROL: The work includes dust control as required for the alleviation or prevention of any dust nuisance on or about the site or the borrow area, or off-site if caused by the Contractor's operation either during the performance of the earthwork or resulting from the conditions in which the Contractor leaves the site. The Contractor shall assume all liability, including court costs of codefendants, for all claims related to dust or wind-blown materials attributable to his work. Site preparation shall consist of site clearing and grubbing and preparation of foundation materials for receiving fill.
6.0 CLEARING AND GRUBBING: The Contractor shall accept the site in this present condition and shall demolish and/or remove from the area of designated project earthwork all structures, both surface and subsurface, trees, brush, roots, debris, organic matter and all other matter determined by the Soils Engineer to be deleterious. Such materials shall become the property of the Contractor and shall be removed from the site.

Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than 1 inch in diameter. Tree roots removed in parking areas may be limited to the upper $11 / 2$ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.
7.0 SUBGRADE PREPARATION: Surfaces to receive Engineered Fill and/or building or slab loads shall be prepared as outlined above, scarified to a minimum of 12 inches, moisture-conditioned as necessary, and recompacted to 95 percent relative compaction ( 90 percent for cohesive soils).

Loose soil areas and/or areas of disturbed soil shall be moisture-conditioned as necessary and recompacted to 95 percent relative compaction ( 90 percent for cohesive soils). All ruts, hummocks, or other uneven surface features shall be removed by surface grading prior to placement of any fill materials. All areas which are to receive fill materials shall be approved by the Soils Engineer prior to the placement of any fill material.
8.0 EXCAVATION: All excavation shall be accomplished to the tolerance normally defined by the Civil Engineer as shown on the project grading plans. All over-excavation below the grades specified shall be backfilled at the Contractor's expense and shall be compacted in accordance with the applicable technical requirements.
9.0 FILL AND BACKFILL MATERIAL: No material shall be moved or compacted without the presence or approval of the Soils Engineer. Material from the required site excavation may be utilized for construction site fills, provided prior approval is given by the Soils Engineer. All materials utilized for constructing site fills shall be free from vegetation or other deleterious matter as determined by the Soils Engineer.
10.0 PLACEMENT, SPREADING AND COMPACTION: The placement and spreading of approved fill materials and the processing and compaction of approved fill and native materials shall be the responsibility of the Contractor. Compaction of fill materials by flooding, ponding, or jetting shall not be permitted unless specifically approved by local code, as well as the Soils Engineer. Both cut and fill shall be surface-compacted to the satisfaction of the Soils Engineer prior to final acceptance.
11.0 SEASONAL LIMITS: No fill material shall be placed, spread, or rolled while it is frozen or thawing, or during unfavorable wet weather conditions. When the work is interrupted by heavy rains, fill operations shall not be resumed until the Soils Engineer indicates that the moisture content and density of previously placed fill is as specified.
12.0 DEFINITIONS - The term "pavement" shall include asphaltic concrete surfacing, untreated aggregate base, and aggregate subbase. The term "subgrade" is that portion of the area on which surfacing, base, or subbase is to be placed.

The term "Standard Specifications": hereinafter referred to, is the most recent edition of the Standard Specifications of the State of California, Department of Transportation. The term "relative compaction" refers to the field density expressed as a percentage of the maximum laboratory density as determined by ASTM D1557 Test Method (latest edition) or California Test Method 216 (CAL-216), as applicable.
13.0 PREPARATION OF THE SUBGRADE - The Contractor shall prepare the surface of the various subgrades receiving subsequent pavement courses to the lines, grades, and dimensions given on the plans. The upper 12 inches of the soil subgrade beneath the pavement section shall be compacted to a minimum relative compaction of 95 percent based upon ASTM D1557. The finished subgrades shall be tested and approved by the Soils Engineer prior to the placement of additional pavement courses.
14.0 AGGREGATE BASE - The aggregate base material shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate base material shall conform to the requirements of Section 26 of the Standard Specifications for Class II material, $3 / 4$-inch or $11 / 2$-inches maximum size. The aggregate base material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216. The aggregate base material shall be spread in layers not exceeding 6 inches and each layer of aggregate material course shall be tested and approved by the Soils Engineer prior to the placement of successive layers.
15.0 AGGREGATE SUBBASE - The aggregate subbase shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate subbase material shall conform to the requirements of Section 25 of the Standard Specifications for Class II Subbase material. The aggregate subbase material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216, and it shall be spread and compacted in accordance with the Standard Specifications. Each layer of aggregate subbase shall be tested and approved by the Soils Engineer prior to the placement of successive layers.
16.0 ASPHALTIC CONCRETE SURFACING - Asphaltic concrete surfacing shall consist of a mixture of mineral aggregate and paving grade asphalt, mixed at a central mixing plant and spread and compacted on a prepared base in conformity with the lines, grades, and dimensions shown on the plans. The viscosity grade of the asphalt shall be PG 64-10, unless otherwise stipulated or local conditions warrant more stringent grade. The mineral aggregate shall be Type A or $\mathrm{B}, 1 / 2$ inch maximum size, medium grading, and shall conform to the requirements set forth in Section 39 of the Standard Specifications. The drying, proportioning, and mixing of the materials shall conform to Section 39. The prime coat, spreading and compacting equipment, and spreading and compacting the mixture shall conform to the applicable chapters of Section 39, with the exception that no surface course shall be placed when the atmospheric temperature is below 50 degrees F . The surfacing shall be rolled with a combination steel-wheel and pneumatic rollers, as described in the Standard Specifications. The surface course shall be placed with an approved selfpropelled mechanical spreading and finishing machine.

## Appendix G

Paleontological Resources Records Search

Dudek
605 Third Street
Encinitas, CA 92024
Attn: Sarah Siren, Senior Paleontologist
re: Vertebrate Paleontology Records Check for paleontological resources for the proposed RV Fueling Station and Retail Project, Dudek Project \# 12214, in the City of Calimesa, Riverside County, project area

Dear Sarah:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for the proposed RV Fueling Station and Retail Project, Dudek Project \# 12214, in the City of Calimesa, Riverside County, project area as outlined on the portion of the Yucaipa USGS topographic quadrangle map that you sent to me via e-mail on 9 January 2020. We do not have any fossil vertebrate localities that lie directly within the proposed project area boundaries, but we do have localities somewhat nearby from sedimentary deposits similar to those that may occur in the proposed project area, either at the surface or at depth.

In the entire proposed project area there are surface deposits of older Quaternary Alluvium, derived as alluvial fan deposits from the San Timoteo Badlands just to the south. Our closest vertebrate fossil locality from somewhat similar older Quaternary deposits is LACM 4540, almost due south of the proposed project area on the northeastern side of the San Jacinto Valley just west of Jack Rabbit Trail, that produced a specimen of fossil horse, Equus. Our next closest older Quaternary locality is LACM 8062, almost due west of the proposed project area west of Mira Loma, that produced fossil specimens of undetermined elephant, Proboscidea, bear, Ursus, dog, Canis dirus, horse, Equus, camel, Camelops, and bison, Bison, at shallow but unstated depth. Slightly farther west-southwest of the proposed project area our older Quaternary
locality LACM 7811 produced a fossil specimen of coachwhip, Masticophis flagellum, at a depth of 9 to 11 feet below the surface.

Nearby less elevated terrain is geologically mapped as having exposures of the PloPleistocene San Timoteo Formation, and that rock unit probably underlies the older Quaternary deposits in the proposed project area. We have a series of localities from the San Timoteo Formation, LACM (CIT) 133, LACM (CIT) 515 and LACM 7618-7622, all south of the proposed project area in the San Timoteo Badlands on both sides of the Moreno Valley Freeway (Highway 60). These localities all produced specimens of fossil horse, Equus, and camel, Camelidae.

Very shallow excavations in the older Quaternary Alluvium found at the surface in the proposed project area are unlikely to uncover any significant vertebrate fossils. Deeper excavations that extend down into older sedimentary deposits, however, may well encounter significant fossil vertebrate remains. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains discovered while not impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

Samuel A. McLeod, PhD. Vertebrate Paleontology

Appendix H. 1
Noise Technical Memo

## MEMORANDUM

| To: | Claudia Grajeda <br> J \& T Management, Inc. <br>  <br>  <br>  <br>  <br> Corona, CA Road 92879 |
| :--- | :--- |
| From: | Mark Storm, INCE Bd. Cert. |
| Subject: | Noise Analysis for the 7 ${ }^{\text {th }}$ Street and County Line Road RV Fueling and Retail Project |
| Date: | 2 December 2019 |
| Attachment(s): | A: Acoustic Terminology and Definitions |
|  | B: Construction Noise Model Input and Output Data |
|  | C: Traffic Noise Model (v. 2.5) Input and Output Data |
|  | D: Operational Noise Model Input and Output Data |

Dudek is pleased to submit this noise impact assessment to assist the City of Calimesa (City) with initial environmental planning requirements for the proposed $7^{\text {th }}$ Street and County Line Road RV Fueling and Retail Project (project).

This memorandum estimates potential noise and vibration impacts from construction and operation of the project in accordance with the California Environmental Quality Act (CEQA) Guidelines.

The contents and organization of this memorandum are as follows: project description, environmental setting, regulatory setting, noise and vibration impacts assessment, conclusions, and references cited. Attachment A provides a glossary of common acoustical terms that should help acquaint the reader with metrics and descriptors used herein to present and discuss results of the noise impact assessment for the proposed project.

## 1 Project Description

The Project includes the construction of 3,000 square feet of coffee/donut shop and a recreational vehicle (RV) fueling facility on a 1.3 -acre site, which is currently unoccupied as seen in Figure 1, Project Location. Right-turn inonly access to the Project site would be provided on County Line Lane via two protected driveways.

## 2 Environmental Setting

### 2.1 Noise Characteristics and Terminology

Pressure fluctuations, traveling as waves through air from a source, exert a force perceived by the human ear as sound. Sound pressure level (often referred to generally as "sound level" or "noise level") is expressed by way of a logarithmic scale in decibels (dB) that represent magnitude of these air pressure waves with respect to the
threshold of average human hearing. The human ear is more sensitive to middle and higher frequencies (those usually associated with speech) of the audible spectrum, especially when the noise levels are quieter; thus, to accommodate for this phenomenon, a decibel weighting system was developed to mimic this human hearing frequency response. The frequency weighting called the "A" scale is typically used for quantifying typical environmental sound levels that de-emphasizes the low frequency components of the sound in a manner similar to the response of an average healthy human ear. An A-weighted sound level is thus described in units of "dBA" and distinguishes the value from a "flat" or unweighted dB value. In a manner similar to the scaling of temperature on a thermometer, Table 1 provides examples of common indoor and outdoor sound sources having A-weighted levels that "line-up" with the listed dB values.

## Table 1: Typical Sound Levels in the Environment and Industry

| Common Outdoor Activities | Noise Level (dB) | Common Indoor Activities |
| :---: | :---: | :---: |
| - | 110 | Rock band |
| Jet flyover at 300 meters (1,000 feet) | 100 | - |
| Gas lawn mower at 1 meter (3 feet) | 90 | - |
| Diesel truck at 15 meters (50 feet), at $80 \mathrm{kph}(50 \mathrm{mph})$ | 80 | Food blender at 1 meter (3 feet) <br> Garbage disposal at 1 meter (3 feet) |
| Noisy urban area, daytime | 70 | Vacuum cleaner at 3 meters (10 feet) |
| gas lawn mower at 30 meters (100 feet) |  |  |
| Commercial area | 60 | Normal speech at 1 meter (3 feet) |
| Heavy traffic at 90 meters (300 feet) |  |  |
| Quiet urban daytime | 50 | Large business office |
|  |  | Dishwasher, next room |
| Quiet urban nighttime | 40 | Theater, large conference room (background) |
| Quiet suburban nighttime | 30 | Library |
| Quiet rural night time | 20 | Bedroom at night, concert hall (background) |
| - | 10 | Broadcast/recording studio |
| Lowest threshold of human hearing | 0 | Lowest threshold of human hearing |

Source: Caltrans 2013a.
Notes: kph = kilometers per hour; mph = miles per hour

The equivalent noise level $L_{e q}$, also referred to as the energy-average sound level, is a single number representing the fluctuating sound level in decibels ( dB ) over a specified period of time. It is a sound-energy average of the fluctuating level and is equal to a constant unchanging sound of that dB level. Community noise sources vary continuously, being the product of many noise sources at various distances, all of which in aggregate tend to constitute a relatively stable background sound environment. This background, added to perceptibly dominant acoustical contributors (i.e., those that are the loudest and/or closest to the listener position) makes the overall "ambient" sound that a sound level meter can detect with its microphone and quantify as a dB level.

Noise levels are generally higher during the daytime and early evening when traffic (including airplanes), commercial, and industrial activity is the greatest. However, noise sources experienced during nighttime hours when background levels are generally lower can be potentially more conspicuous and irritating to the receiver. In order to evaluate noise in a way that considers periodic fluctuations experienced throughout the day and night, a concept termed "community noise equivalent level" (CNEL) was developed. The CNEL scale represents a time-weighted 24hour average noise level based on the A-weighted equivalent (Leq) sound level. But more than merely a 24-hour Leq, CNEL accounts for the increased noise sensitivity during the evening hours ( $7 \mathrm{p} . \mathrm{m}$. to $10 \mathrm{p} . \mathrm{m}$.) and nighttime hours (10 p.m. to 7 a.m.) by adding 5 dB to the hourly average sound levels occurring during the evening hours and 10 dB to the hourly average sound levels occurring during nighttime hours.

### 2.1.2 Exterior Noise Distance Attenuation

Noise sources are largely classified in two forms: 1) point sources, such as stationary equipment or a group of construction vehicles and equipment working within a spatially limited area at a given time; and 2) line sources, such as a roadway with a large number of pass-by sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 7.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites. These attenuation rates would also be expected for sound propagation away from a horizontal area source, which can be approximated as a single point such as the geographic center of the area. By comparison, sound generated by a line source (such as a roadway) typically attenuates at a rate of 3.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 4.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites.

Sound levels can also be attenuated by man-made or natural barriers. For the purpose of a sound attenuation discussion, hard, smooth, or otherwise acoustically reflective surfaces do not provide any excess ground-effect attenuation and are characteristic of sealed asphalt roads, bodies of water, and hard-packed soils. An acoustically soft or absorptive surface, on the other hand, is exemplified by fresh-fallen snow, tilled soils, or thickly-vegetated ground cover.

### 2.1.3 Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some
common sources of vibration are trains, buses on rough roads, and construction activities, such as blasting, pile driving, and heavy earthmoving equipment.

Several different descriptors are used to quantify vibration. Peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. PPV is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second (ips). The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body and is defined as the average of the squared amplitude of the signal. Decibel notation (VdB) is commonly used to describe RMS amplitude with respect to a reference quantity. The decibel notation acts to compress, and thus make more convenient for presentation and discussion purposes, the range of numbers required to describe vibration.

High levels of vibration may cause risk of or actual damage to buildings. However, most people consider vibration to be an annoyance that can affect concentration or disturb sleep. In addition, high levels of vibration can interfere with processes or equipment that are highly sensitive to vibration (e.g., electron microscopes). Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or slamming of doors. Typical outdoor sources of perceptible vibration are construction equipment, steelwheeled trains, and traffic on rough roads. If the roadway is smooth, which means there are little or no bumps that could cause a slight wheel drop or other force impulse, the vibration from traffic is rarely perceptible.

### 2.1.4 Sensitive Receptors

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound and/or vibration could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would be considered noise and vibration sensitive and may warrant unique measures for protection from intruding noise.

Sensitive receptors near the project site include existing single-family residential uses to the south, west, and north, the closest of which are located approximately 65 feet from the project site boundary. These sensitive receptors represent the nearest residential land uses with the potential to be impacted by construction and operation of the proposed project. Additional sensitive receptors are located farther from the project site in the surrounding community and would be less impacted by noise and vibration levels than the above-listed sensitive receptors.

## 3 Regulatory Setting

## City of Calimesa, General Plan

The City of Calimesa General Plan (August 2014) defines noise levels under 60 dBA CNEL as being completely compatible with residential use and levels between 60 and 70 dBA CNEL as tentatively compatible. The General Plan also includes the following noise goals and policies:

- Goal N-1. Ensure that all land uses are protected from excessive and unwanted noise.
- Goal N-2. Prevent and mitigate the adverse impacts of excessive noise exposure on the residents, employees, visitors, and noise-sensitive uses in Calimesa.
- Policy N-4. Encourage noise-tolerant land uses such as commercial or industrial development to locate in areas already committed to land uses that are noise-producing.
- Policy N-5. Ensure that noise-sensitive uses do not encroach into areas needed by noise-generating uses.
- Policy N-7. Consider the following uses to be sensitive to noise and vibration, and discourage these uses in areas where existing or projected future noise levels would be in excess of 65 dBA CNEL and/or vibration would be more than 0.0787 peak particle velocity (inches per second): schools; hospitals; rest homes; long-term care facilities; mental care facilities; residential uses; libraries; passive recreation uses; and places of worship.
- Policy N-31. Ensure that construction activities are regulated to establish hours of operation in order to prevent and/or mitigate the generation of excessive or adverse noise impacts on surrounding areas.
- Policy N-32. Require that all construction equipment be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer.

## City of Calimesa, Municipal Code

The City has developed standards for noise in its Noise Ordinance. Per the Municipal Code, noise from operations at any zone cannot exceed the exterior noise limit of another zone, as measured at the property line. The ordinance states that single and low-density residential zones (including R-I, R-T, R-2, RR, and SP) shall not be subject to noise levels, greater than 50 dB ; multi-family residential uses (including R-3, SP, and PRD) to noise levels greater than 55 dB ; commercial uses to levels greater than 60 dB ; and manufacturing . uses to levels greater than 70 dB . It also states that from 10 p.m. to 7 a.m., single family and low residential zones should have ambient noise levels no greater than 40 dB , and multi-family zones an ambient noise level no greater than 45 dB .

Municipal Code Section 8.15.080(A) prohibits the operation of any single or a combination of powered construction equipment at any construction site at the following intervals: before 7 AM or after 7 PM on weekdays; before 10 AM or after 5 PM on Saturdays, Sundays, and federal holidays. When January 1st, July 4th, or December 25th fall on a Sunday, no construction equipment shall be operated before 10 AM and after 5 PM on the following Monday.

No construction equipment is allowed to cause noise in excess of 75 dBA for more than eight hours during any 24hour period when measured at a residential property line or more than 78 dBA over 4 hours. No intermittent construction noise is allowed over $84 \mathrm{dBA} \mathrm{L}_{\text {eq }}$ (1-hour) or over $90 \mathrm{dBA} \mathrm{L}_{25}$ during any 15-minute period is also prohibited.

## 4 Thresholds of Significance

The following significance criteria are based on Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.) and will be used to determine the significance of potential noise impacts. Impacts related to noise would be significant if the proposed project would result in the following:
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies
b. Generation of excessive groundborne vibration or groundborne noise levels
c. Expose people residing or working in the project area to excessive noise levels (for a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport)

The following Section 5 considers each of these three significance criteria, evaluating potential impacts with respect to relevant regulations, standards, and guidance that have been introduced in Section 3.

## 5 Impact Discussion

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction

Construction activities would occur during the City's allowable hours of operation. The noise levels generated by construction equipment would vary depending upon factors such as the type and specific model of the equipment, the operation being performed and the condition of the equipment. The average sound level of the construction activity also depends upon the amount of time that the equipment operates and the intensity of the construction during the time period. Construction would involve several phases including grading, foundation, canopy and retail work, and site work. The typical maximum noise levels for various pieces of construction equipment at a distance of 50 feet are presented in Table 2. Project construction equipment would include standard equipment such as front end loaders, excavators, water trucks, cement trucks, pavers, rollers, and miscellaneous trucks. The highest noise levels from project construction are predicted to occur during foundation activities when noise levels from construction would be as high as 75 dBA Leq at the nearest existing residences, approximately 65 feet away. At typical distances (which includes equipment operation distributed across the site, not just at the closest point to adjacent residences), construction noise would range from approximately 63 to 68 dBA Leq.

Table 2. Typical Construction Equipment Maximum Noise Levels

| Equipment Type | Typical Equipment (Lmax, dBA at 50 Feet) |
| :--- | :---: |
| Air compressor | 78 |
| Backhoe | 78 |
| Concrete pump truck | 81 |
| Grader | 85 |
| Crane | 81 |
| Dump Truck | 76 |
| Dozer | 82 |
| Generator | 72 |
| Front End Loader | 79 |
| Paver | 77 |
| Pneumatic tools | 85 |
| Water pump | 77 |

Source: DOT 2006.
Note: $L_{\max }=$ maximum sound level; dBA = A-weighted decibels.

A Microsoft Excel-based noise prediction model emulating and using reference data from the Federal Highway Administration Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at the nearest occupied noise-sensitive land use. (Although the RCNM was funded and promulgated by the Federal Highway Administration, it is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the predictive modeling consist of the equipment type and number of each (e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of time within a specific time period, such as an hour, when the equipment is expected to operate at full power or capacity and thus make noise at a level comparable to what is presented in Table 2), and the distance from the noise-sensitive receiver to the construction zone. The predictive model also considers how many hours that equipment may be on site and operating (or idling) within an established work shift. Conservatively, no topographical or structural shielding was assumed in the modeling. The RCNM has default duty-cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty-cycle values were used for this noise analysis, which is detailed in Attachment B, Construction Noise Model Input and Output Data, and produce the predicted results displayed in Table 3.

Table 3
Construction Noise Modeling Summary Results

| Construction Phase | Predicted 8-hour Leq (dBA) |  |
| :---: | :---: | :---: |
|  | Nearest Receiver to Project <br> Property Line (65') | Nearest Receiver to Project <br> Geographic Center (200') |
| Grading | 73 | 63 |
| Foundation | 75 | 68 |
| Canopy and Retail Work | 74 | 64 |
| Site work | 75 | 65 |

Two predicted levels appear in Table 3 for each construction phase: 1) construction noise received by the nearest receiver when a portion of the anticipated construction equipment onsite (e.g., front-end loader) is working at the closest edge of the project boundary to the adjacent receiver, such as at the limits of grading or paving; and 2) construction noise from all expected equipment onsite, with an average location defined by the geographic center of the project site. Although the higher predicted construction noise levels are with respect to activities on or near the project boundary, these levels still would not exceed the City's 75 dBA Leq 8hr noise level criterion. Construction work would be intermittent and temporary. Therefore, temporary constructionrelated noise impacts would be less than significant.

## Long-Term Operational

## Increase of Off-Site Roadway Traffic Noise

The proposed project would result in the contribution of additional vehicle trips on local arterial roadways (i.e., County Line Lane), which could result in increased traffic noise levels at adjacent noise-sensitive land uses. Attachment C, Traffic Noise Model (v. 2.5) Input and Output Data, contains a spreadsheet with traffic volume data (average daily trips, ADT) for County Line Lane based on the Traffic Impact Assessment prepared for the
proposed project (Ganddini 2019). In particular, the proposed project would generate 1500 ADTs along County line Lane. Potential noise effects from vehicular traffic were assessed using the Federal Highway Administration's Traffic Noise Model version 2.5 (FHWA 2004). Information used in the model included the roadway geometry, posted traffic speeds, and traffic volumes for the following scenarios: existing (year 2019), existing plus project, existing plus ambient without project, existing plus ambient plus cumulative plus project, buildout (2023), and buildout plus project.

The City's Noise Element establishes a policy for exterior use areas of sensitive land uses to be protected from high noise levels. The Noise Element sets 65 dBA CNEL for the outdoor (i.e., exterior use) areas and 45 dBA CNEL for interior areas (e.g., residential indoor space) as the upper limit for normally acceptable levels. In addition, for the purposes of this noise analysis, traffic-related noise impacts are considered significant when they cause an increase of 3 dB or more from existing noise levels. An increase or decrease in noise level of at least 3 dB is required before any noticeable change in community response would be expected (Caltrans 2013a).

Traffic noise levels were modeled at representative noise-sensitive receivers M1 through M5, as shown in Figure 2, Modeled Receiver Locations. The receivers were modeled to be 5 feet above the local ground elevation. The noise model results are summarized in Table 4.

Table 4. Off-site Roadway Traffic Noise Modeling Results

|  | Exisiting <br> (2019) <br> Modeled Receiver <br> Tag (Location <br> Description) | Exisiting <br> with <br> project <br> Noise <br> Level | Existing <br> plus <br> ambient <br> Noise <br> Level | Existing <br> plus <br> Cumulative <br> and <br> project <br> Noise <br> Level | Year <br> 2023 <br> without <br> Project <br> Noise <br> Level | Year <br> 2023 <br> with <br> Project <br> Noise <br> Level | Maximum <br> Project- <br> Related <br> Noise Level <br> Increase |

| M4 <br> Northern Resident | 65.4 | 65.9 | 65.4 | 66.3 | 66 | 66.7 | 0.9 |
| M5 <br> Southern Resident | 60 | 60.3 | 60 | 60.5 | 60.2 | 60.6 | 0.5 |

Notes: $\mathrm{dBA}=\mathrm{A}$-weighted decibel; $\mathrm{CNEL}=$ Community Noise Equivalent Level; $\mathrm{dB}=$ decibel.
Table 4 shows that at all five listed representative receivers, the addition of proposed project traffic to the roadway network would result in a CNEL increase of less than 3 dB , which is below the discernible level of
change for the average healthy human ear. Thus, a less-than-significant impact is expected for proposed project-related off-site traffic noise increases affecting existing residences in the vicinity.

## Stationary Operations Noise

The proposed project is expected to feature "stationary" producers of noise associated with onsite operations that are distinct from the transportation noise studied in the preceding section. The assumed major onsite operating noise sources are as follows:

- The 3,000 square foot retail facility (e.g., coffee shop) would likely feature a packaged air-conditioner on its roof, which we could assume would be something like a 4-ton (refrigeration) unit resembling a Carrier CA16NA 048 having a reference sound power level of 78 dBA ( 76 dBA if equipped with "sound shield", Carrier 2012).
- Idling recreational vehicles (RV) idling just before and after using the fuel pumps, up to one at a time at night and idling for no more than five minutes in any hour (8.25\% of the time), consistent with state law for trucks. Conservatively, a large RV is considered an idling bus with $L_{\max }=75 \mathrm{dBA}$ at 50 feet.
- Up to one fuel pump operates at night for no more than 20 minutes in any hour (33\% of the time), and generates no more than 83 dBA at one meter.

Table 5 below shows the estimated combination of these three onsite operational noise sources and the applicable City of Calimesa noise thresholds. Attachment D, Operational Noise Model Input and Output Data, provides details of the calculated values appearing in Table 5. No exceedances with respect to the municipal standards are expected; thus, operational noise impact from stationary sources should be less than significant.

Table 5. Predicted Project Stationary Operations Noise at Nearest Sensitive Receptors

| Nighttime hourly Leq <br> Limit (commercial zone) | 55 | 55 | 55 | 55 |
| Exceedance? | no | no | no | no |

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction activities may expose persons to excessive groundborne vibration or groundborne noise, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2013b). Information from Caltrans indicates that continuous vibrations with a PPV of approximately 0.2 ips is considered annoying. For context, heavier pieces of construction equipment, such as a bulldozer that may be expected on the project site, have peak particle velocities of approximately 0.089 ips or less at a reference distance of 25 feet (DOT 2006).

Groundborne vibration attenuates rapidly, even over short distances. The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in FTA and Caltrans guidance. By way of example, for a bulldozer operating on site and as close as the western project boundary (i.e., 65 feet from the nearest receiving sensitive land use) the estimated vibration velocity level would be 0.021 ips per the equation as follows (FTA 2006):
$P_{\text {Provr }}=\operatorname{PPV}_{\text {ref }} *(25 / D)^{1.5}=0.021=0.089 *(25 / 65)^{1.5}$

In the above equation, $\mathrm{PPV}_{\text {rovr }}$ is the predicted vibration velocity at the receiver position, $\mathrm{PPV}_{\text {ref }}$ is the reference value at 25 feet from the vibration source (the bulldozer), and $D$ is the actual horizontal distance to the receiver. Therefore, at this predicted PPV, the impact of vibration-induced annoyance to occupants of nearby existing homes would be less than significant.

Construction vibration, at sufficiently high levels, can also present a building damage risk. However, anticipated construction vibration associated with the proposed project would yield levels of 0.021 ips PPV, which do not surpass the guidance limit of 0.2 to 0.3 ips PPV for preventing damage to residential structures (Caltrans 2013b) and is well below the General Plan's threshold of 0.0787 ips PPV. Because the predicted vibration level at 65 feet is less than this threshold, the risk of vibration damage to nearby structures is considered less than significant.

Once operational, the proposed project would not be expected to feature major onsite producers of groundborne vibration. Anticipated mechanical systems like heating, ventilation, and air-conditioning units are designed and manufactured to feature rotating (fans, motors) and reciprocating (compressors) components that are well-balanced with isolated vibration within or external to the equipment casings. If one were to consider an expected RV conservatively comparable to a loaded truck, which FTA guidance indicates has a reference vibration velocity level of 0.076 ips at 25 feet, then the travel of RVs onsite or on the adjoining streets would result in vibration velocity levels at nearest occupied residences that are compliant with the City's General Plan threshold of 0.0787 ips PPV. On these bases, potential vibration impacts due to proposed project operation would be less than significant.
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no private airstrips within the vicinity of the project site. The closest airport to the project site is the Redlands Municipal Airport, approximately 6.95 miles northwest of the site. According to the Airport Land Use Compatibility Plan Figure 3B, Noise Concerns: Noise, the project site is not located within any noise contours and would therefore not expose people residing or working in the project area to excessive noise levels. Impacts from aviation overflight noise exposure would be less than significant.

## 5 Conclusions

Based upon the modeled construction, traffic and operational noise, predicted sound levels are not in excess of City standards at the Project boundary with its neighbors.

We trust that this technical memorandum meets your Project needs with the City. Should you have any questions or require additional information, please do not hesitate to contact Mark Storm at (760) 479-4297, mstorm@dudek.com; or, Connor Burke at (760) 479-4272, cburke@dudek.com.

Sincerely,

Mark Storm, INCE Bd. Cert.

## Attachment A

Acoustic Terminology and Definitions

## Attachment A -- Acoustic Terminology \& Definitions

## Term

Ambient Noise Level

Decibel

A-Weighted Sound Level

Community Noise Equivalent Level

Day / Night Noise Equivalent Level

Equivalent Sound Level

Acoustic Center

## Definition

The normal or existing sounds pressure level of environmental noise at a given location. The composite of noise from all sources near and far.
dB is the unit for measuring sound pressure level, equal to 10 times the logarithm to the base 10 of the ratio of the measured sound pressure squared to a reference pressure, which is 20 micro-Pascal.
dBA is the sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.

CNEL is the A -weighted equivalent continuous sound exposure (CNEL) level for a 24 -hour period with a ten dB adjustment added to sound levels occurring during nighttime hours ( 10 pm to 7 am ) and a five dB adjustment added to the sound levels occurring during the evening hours ( 7 pm to 10 pm ).
$\mathrm{L}_{\mathrm{dn}}$ (or DNL) is the A-weighted equivalent continuous sound exposure level for a 24 -hour period with a ten dB adjustment added to sound levels occurring during nighttime hours ( 10 pm to 7 am ).
$\mathrm{L}_{\mathrm{eq}}$ is the sound level corresponding to a steady state sound level and containing the same total energy as a time varying signal over a given sample period.

For a source, the position where the propagating waves can be traced back to a single point of origin.

## Appendix H. 2 <br> Dual Site Noise Analysis

## MEMORANDUM

| To: | Kelly Lucia, Planning Manager, City of Calimesa |
| :--- | :--- |
| From: | Mark Storm, INCE Bd. Cert. |
| Subject: | Dual-Site Noise Analysis for 7th Street and County Line Road 76 Fueling Station Project |
|  | Noise Technical Memorandum - DRAFT |
| Date: | 26 May 2020 |
| Attachment(s): | A: Rincon Consultants - Calimesa Air Quality and Noise Analysis (May 12, 2017) |

We are pleased to present this technical memorandum summarizing the results of predicted "stationary" source noise emission for several operation scenarios associated with the above-referenced Project (76 Fueling Station Project), currently under construction, and the westerly adjoining RV Fueling Station and Retail project (RV Fueling/Retail project), proposed on the same block (bounded by West County Line Road and County Line Lane) in the City of Calimesa, California (City).

As proposed on May 14, 2020, Dudek has performed these predictive onsite operation noise analyses to evaluate the potential need for (and noise-reducing effects of) installing a noise wall along the western boundary of the RV Fueling/Retail project site, since we understand the previously prepared noise study ("Rincon Report", Rincon Consultants [2017], see Attachment A) assessed potential environmental noise impacts on the basis of a western noise-sensitive receptor (i.e., a residential land use) located on the RV Fueling/Retail project site. With implementation of the RV Fueling/Retail project, the previously analyzed sensitive receptor to the west would be demolished, and the nearest sensitive receptor to the 76 Fueling Station Project site would be on the northwestern corner of West County Line Road and County Line Lane. This analysis focuses on potential noise impacts to sensitive receptors located west of the 76 Fueling Station Project and adjacent RV Fueling/Retail project sites, based on the change in site conditions, to determine if the mitigation requiring installation of a sound barrier on the western site boundary is still applicable to reduce noise levels in compliance with City standards.

In summary and as a result of these predictive analyses, we find that noise generated by operation of the 76 Fueling Station Project would not exceed the City's daytime, evening or nighttime noise limits, and no noise barrier is needed. Upon buildout of the 76 Fueling Station Project and RV Fueling/Retail project, implementing a barrier along the western edge of the proposed commercial development would be a prudent way to help ensure aggregate noise emissions from operation of stationary onsite sound sources and idling vehicle traffic would comply with the City's applicable noise limits. Height of the barrier must be at least four feet tall, as discussed herein.

After an introduction to common acoustical terms used to frame the presentation of quantified findings herein, this document describes the methodology and predicted results for noise propagation from onsite stationary sound sources, compares the results with applicable City noise standards, then summarizes conclusions and recommendations.

## 1 Introduction

### 1.1 Noise Characteristics and Terminology

Pressure fluctuations, traveling as waves through air from a source, exert a force perceived by the human ear as sound. Sound pressure level (referred to as sound level) is expressed by way of a logarithmic scale in decibels (dB) that represent magnitude of these air pressure waves with respect to the threshold of average human hearing. The human ear is more sensitive to middle and high frequencies, especially when the noise levels are quieter; thus, to accommodate for this phenomenon, a weighting system was developed to mimic this human hearing frequency response. The frequency weighting called the "A" scale is typically used for typical environmental sound levels which de-emphasizes the low frequency components of the sound in a manner similar to the response of a human ear. This A-weighted sound level is also often referred to as the "noise level" and is referenced in units of dBA. In a manner similar to the scaling of temperature on a thermometer, Table 1 provides examples of common indoor and outdoor sound sources having A-weighted levels that "line-up" with the listed dB values.

Table 1. Typical Sound Levels in the Environment and Industry

| Common Outdoor Activities | Noise Level (dB) | Common Indoor Activities |
| :--- | :---: | :--- |
| - | 110 | Rock band |
| Jet flyover at 300 meters (1,000 feet) | 100 | - |
| Gas lawn mower at 1 meter (3 feet) | 90 | - |
| Diesel truck at 15 meters (50 feet), at 80 <br> kph (50 mph) | 80 | Food blender at 1 meter (3 feet) <br> Garbage disposal at 1 meter (3 feet) |
| Noisy urban area, daytime <br> gas lawn mower at 30 meters (100 feet) | 70 | Vacuum cleaner at 3 meters (10 feet) |
| Commercial area <br> Heavy traffic at 90 meters (300 feet) | 60 | Normal speech at 1 meter (3 feet) |
| Quiet urban daytime | 50 | Large business office <br> Dishwasher, next room |
| Quiet urban nighttime | 40 | Theater, large conference room (background) |
| Quiet suburban nighttime | 30 | Library |
| Quiet rural night time | 20 | Bedroom at night, concert hall (background) |
| - | 10 | Broadcast/recording studio |
| Lowest threshold of human hearing | 0 | Lowest threshold of human hearing |

Source: Caltrans 2013.
Notes: kph = kilometers per hour; mph = miles per hour
The equivalent noise level Leq, also referred to as the energy-average sound level, is a single number representing the fluctuating sound level in decibels ( dB ) over a specified period of time. It is a sound-energy average of the fluctuating level and is equal to a constant unchanging sound of that dB level. Community noise sources vary continuously, being the product of many noise sources at various distances, all of which in aggregate tend to constitute a relatively stable background sound environment. This background, added to perceptibly dominant acoustical contributors (i.e., those that are the loudest and/or closest to the listener position) makes the "ambient" sound that a sound level meter can detect with its microphone and quantify as a dB level.

### 1.2 Exterior Noise Distance Attenuation

Stationary operating equipment or slow-moving (or idling) vehicles within a spatially limited area at a given time can be considered "point sources" emitting noise that typically diminishes (attenuates) at a rate of 6.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 7.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites. These attenuation rates would also be expected for sound propagation away from a horizontal area source, which can be approximated as a single point such as the geographic center of the area. Acoustically hard or otherwise acoustically reflective surfaces do not provide any excess ground-effect attenuation and are characteristic of sealed asphalt roads, bodies of water, and hard-packed soils. This means the attenuation experienced for hard-surface conditions is attributed only to "geometric divergence" that yields the aforementioned 6 dB per doubling of distance from a point source. An acoustically soft or absorptive surface, on the other hand, is exemplified by fresh-fallen snow, soft sand, tilled soils, or thickly-vegetated ground cover and accounts for the higher attenuation rate ( 7.5 dB per doubling) with increasing distance from the source of sound emission.

Sound propagation between a source and a receptor position can additionally be attenuated by the presence of path-intervening man-made or natural barriers. The amount of attenuation varies with the degree of sound path occlusion and the proximity of the barrier to the source or the receptor. The air medium that conveys sound is acoustically absorptive as well, but the added sound attenuation effect-apart from geometric divergence already introduced-is greatly dependent on acoustical frequency and typically requires large distances between a source and the receptor to be meaningful.

## 2 Methodology

A computer program called CadnaA (Computer Aided Noise Abatement) was used to predict the aggregate sound propagation from the 76 Fueling Station Project's major anticipated stationary producers of noise emissions. CadnaA is commercially available software that enables predictive sound propagation in a three-dimensional (3D) model space from multiple point, line, and area-type noise sources. The outdoor noise propagation formulas and reference data incorporated into the software code adhere to several accepted standards, including the International Organization of Standardization (ISO) Standard 9613-2, "Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation" (ISO 1996). In summary, the CadnaA-based noise model was setup and "run" for several distinct operation scenarios with input parameters that included the following settings:

- A ground acoustical absorption coefficient of 0.2 , on a scale of zero (acoustically "hard" surfaces) to one (acoustically "soft"), to account for largely paved surfaces and some unpaved areas with vegetated landscaping.
- Single order of reflection (i.e., sound rays allowed to "bounce" off one encountered surface).
- Calm winds (i.e., speeds less than 0.5 meters per second in any direction) and 68 degrees Fahrenheit with 70 percent (\%) relative humidity.
- Sound source types that include the following:
- Points - fuel pumps, idling passenger vehicles, rooftop air-cooled condensers ("ACC" for HVAC);
- Horizontal areas - idling recreational vehicles (RVs); and,
- Vertical areas - car wash dryers (high-pressure blowers).
- Structures that include the following:
- Buildings - proposed "coffee/retail drive-thru", car-wash and convenience store; and,
- Barriers - short and tall noise walls.

Figure 1 presents an aerial view of the Project vicinity, overlain with a semi-transparent image of the site plans for the 76 Fueling Station Project site and adjoining RV Fueling/Retail project site. Sample model features and representative property line and neighboring-residence property line receptor positions (tagged oval locations) are also depicted.

Notes: dBA = A-weighted sound level; $\mathrm{L}_{\mathrm{w}}=$ sound power level

The sound power levels for the car wash facility dryers (assumed to be a set of blowers suspended from the ceiling of the tunnel) yield sound pressure levels that-if unobstructed-are comparable to the predicted levels at the three distances shown in Table 8 of the Rincon Report: 73 dBA at 70 feet, 70 dBA at 100 feet, and 64 dBA at 200 feet. But if the direct sound path (a.k.a., "line of sight" [LOS]) between this loud noise source and a receptor is occluded, then the received sound pressure level will be less. For purposes of this predictive analysis, unless otherwise noted, it is assumed the dryers are installed near but still within (by a distance of 2.5 feet from the exit plane) the exit end of the car wash facility tunnel. In some cases, and for results comparison within a studied scenario, the sound source representing these dryers is located just external to the tunnel; hence, the tunnel walls do not provide sound path occlusion under such a condition.

Additional working assumptions for the sound sources appearing in Table 2 are as follows:

- 5-ton ACC and the Car Wash Dryer - operating at full duty cycle for entire hour;
- Idling Passenger Vehicle - in the queue for the coffee/retail drive-thru or the car wash facility, full hour; in the parking lot, only up to 5 minutes per hour;
- Idling Recreational Vehicle - in the RV Fueling/Retail project parking lot, up to 5 minutes per hour; and,
- Fuel Pump - only up to 20 minutes of operation/usage per hour.

Six scenario sets of onsite operation have been studied, which are detailed as follows:
A. Typical expected daytime operation, 76 Fueling Station Project only - Under this scenario, the RV Fueling/Retail project to the west is not yet constructed, meaning only the 76 Fueling Station Project is fully operating and handling anticipated customer traffic during daytime hours (7a.m. to 7 p.m.) and include the following sound sources:

- Six (6) idling passenger cars in the queue for the car wash facility;
- Operating car wash facility, represented by blower noise on the southern exit side of the tunnel;
- One operating rooftop ACC for the convenience store;
- Four (4) fuel pumps - four on the 76 Fueling Station Project site; and,
- One (1) idling passenger car in a parking stall at the convenience store.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall (8' tall) along western edge of overall site.
B. Typical expected nighttime operation, 76 Fueling Station Project only - Under this scenario, the RV Fueling/Retail project to the west is not yet constructed, meaning only the 76 Fueling Station Project site convenience store is handling anticipated customer traffic during nighttime hours (7 p.m. to 7 a.m.) and includes the following sound sources:

- No operating car wash facility (and no queue);
- One operating rooftop ACC for the convenience store;
- Two (2) fuel pumps on the RV Fueling/Retail project site; and,
- One (1) idling passenger car - one in a parking stall at the convenience store.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall ( 8 ' tall) along western edge of overall site.
C. Typical expected daytime operation, 76 Fueling Station Project and RV Fueling/Retail project - Under this scenario, both the 76 Fueling Station Project and the RV Fueling/Retail project are fully operating and handling anticipated customer traffic during daytime hours and include the following sound sources:

- Eight (8) idling passenger cars in the queue for the coffee/retail drive-thru;
- Six (6) idling passenger cars in the queue for the car wash facility;
- Operating car wash facility, represented by blower noise on the southern exit side of the tunnel;
- Two (2) rooftop air-cooled condensing units (ACC) serving air-conditioning needs (about four tons of refrigeration each) - one for the coffee/retail shop, the other for the convenience store;
- Eight (8) fuel pumps - four on at RV Fueling/Retail project site, four at 76 Fueling Station Project site;
- Two (2) idling passenger cars - one in a parking stall for the coffee/retail shop, the other at the convenience store; and,
- An idling RV at a RV Fueling/Retail project site fuel pump.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall (8' tall) along western edge of overall site.
D. Typical expected nighttime operation, Project and RV Fueling/Retail project - Under this scenario, the Project and RV Fueling/Retail project are operating with less customer traffic, reflecting nighttime hours and the Car-Wash is not operating and include the following sound sources:

- Two (2) idling passenger cars in the queue for the coffee/retail drive-thru;
- No operating car wash facility (and no queue);
- Two (2) ACC - one for the coffee/retail shop, the other for the convenience store;
- Four (4) fuel pumps - two on the 76 Fueling Project site, two on the RV Fueling/Retail project site;
- Two (2) idling passenger cars - one in a parking stall for the coffee/retail shop, the other at the convenience store; and,
- An idling RV at a RV Fueling/Retail project fuel pump.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall ( 8 ' tall) along western edge of overall site.
E. Typical expected daytime operation, 76 Fueling Station Project plus RV Fueling/Retail project (RV station only) - Under this scenario, the drive-through retail portion of the RV Fueling/Retail project is not yet developed. The 76 Fueling Station Project and the RV fueling station portion of the RV Fueling/Retail project are handling anticipated customer traffic during daytime hours and include the following sound sources:

- Six (6) idling passenger cars in the queue for the car wash facility;
- Operating car wash facility, represented by blower noise on the southern exit side of the tunnel;
- One operating rooftop ACC for the convenience store;
- Eight (8) fuel pumps - four on at RV Fueling/Retail project site, four at 76 Fueling Station Project site;
- One (1) idling passenger car - one in a parking stall at the convenience store; and,
- An idling RV at a Project fuel pump.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall (8' tall) along western edge of overall site.
F. Typical expected nighttime operation, Project plus RV Fueling/Retail project (RV station only) - Under this scenario, the drive-through retail portion of the RV Fueling/Retail project is not yet developed. The Project fuel station/Car-Wash and the RV fueling station portion of the RV Fueling/Retail project are operating with less customer traffic, reflecting nighttime hours and the Car-Wash is not operating (however, its adjoining convenience store is assumed to remain open) and include the following sound sources:

- No operating car wash facility (and no queue);
- One operating rooftop ACC for the convenience store;
- Four (4) fuel pumps - two on the Project site, two on the 76 Fueling Station Project site;
- One (1) idling passenger car - one in a parking stall at the convenience store; and,
- An idling RV at a RV Fueling/Retail project fuel pump.

All listed sound sources are operating concurrently and continuously over the duration of a full hour. Three cases were modeled for this scenario and its conditions, representing different possible noise reduction features as follows:

1. No noise walls;
2. Short wall (4' tall) along western edge of overall site; and,
3. Taller wall (8' tall) along western edge of overall site.

## 3 Regulatory Setting

Per Section 8.15.040 of the City's Municipal Code, and unless a variance has been granted per the provisions of Section 8.15.200, noise from operations produced within a commercial zone cannot exceed an hourly Leq of 60 dBA during daytime hours ( 7 a.m. to 7 p.m.) and 55 dBA during evening ( $7 \mathrm{p} . \mathrm{m}$. to 10 p.m.) and nighttime ( 10 p.m. to 7 a.m.) hours.

## 4 Prediction Results

### 4.1 Scenarios A \& B

Table 3 presents the predicted noise levels associated with operation of the 76 Fueling Station Project at the indicated modeled receptor positions, which appear in Figure 1.

Table 3. Predicted Noise Levels - Scenarios A (daytime) \& B (evening/nighttime)

| Modeled Receptor Location (Tag) | City Daytime Noise Limit (dBA hourly Leq) | City Evening / Nighttime Noise Limit (dBA hourly Leq) | Predicted Daytime <br> (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Predicted Evening/Nighttime ( 7 p.m. to 7 a.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 | 4' | 8 | 0' | 4' | 8' |

| WNO2 | 60 | 55 | 48 | 46 | 43 | 28 | 22 | 20 |
| WPL01 | 60 | 55 | 49 | 49 | 44 | 30 | 26 | 19 |
| WPL02 | 60 | 55 | 49 | 48 | 42 | 29 | 24 | 19 |

Source: Dudek 2020
Notes: dBA = A-weighted sound level; Leq = energy-equivalent sound level
*height of barrier top edge above grade level
Under Scenario A and B conditions, in which the RV Fueling/Retail project is not yet constructed, Table 3 shows that the City noise limits would be satisfied at both representative western property line locations without an installed barrier.

If the car wash dryers are external to the exit end of the tunnel, such that they are essentially exposed and allowed to radiate noise freely to the west, then as presented in Table 4 the predicted noise levels would be higher than those shown in Table 3 for the daytime scenario.

Table 4. Predicted Noise Levels - Scenario A (louder car wash)

| Modeled <br> Receptor Location <br> (Tag) | City Daytime Noise Limit (dBA hourly Leq) | City Evening / Nighttime Noise Limit (dBA hourly Leq) | Dryers External <br> Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Table 3 <br> Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Dryers External - Table 3 <br> Difference in Predicted Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 | 4' | 8 | 0 | 4' | 8 | 0 ' | 4' | 8' |
| WN01 | 60 | 55 | 55 | 49 | 49 | 51 | 51 | 39 | 4 | -2 | 10 |
| WN02 | 60 | 55 | 53 | 50 | 45 | 48 | 46 | 43 | 5 | 4 | 2 |
| WPL01 | 60 | 55 | 56 | 51 | 48 | 49 | 49 | 44 | 7 | 2 | 4 |
| WPLO2 | 60 | 55 | 54 | 52 | 45 | 49 | 48 | 42 | 5 | 4 | 3 |

Source: Dudek 2020
Notes: dBA = A-weighted sound level; Leq = energy-equivalent sound level
*height of barrier top edge above grade level
There is anywhere from a 4-7 dBA difference due to the car wash dryer placement with respect to the tunnel exit (assuming no noise barrier present), but an external car wash dryer would not cause operational noise levels under scenario A to exceed the daytime limit of 60 dBA . In addition, the car wash would not operate between the hours of 7 p.m. and 7 a.m., so placement of the car wash dryer would not affect predicted evening/nighttime operational noise levels presented in Table 3.

### 4.2 Scenarios C \& D

Table 5 presents the predicted noise levels associated with operation of the 76 Fueling Station Project and RV Fueling/Retail project at the indicated modeled receptor positions, which appear in Figure 1.

## Table 5. Predicted Noise Levels - Scenarios C (daytime) \& D (evening/nighttime)

| Modeled <br> Receptor <br> Location | City Daytime Noise Limit (dBA hourly Leq) | City Evening / Nighttime Noise Limit (dBA hourly Leq) | Predicted Daytime <br> (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Predicted Evening/Nighttime (7 p.m. to 7 a.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (Figure 1 Tag) |  |  | 0 ' | 4 | 8' | 0 ' | 4' | 8' |
| WN01 | 60 | 55 | 58 | 52 | 46 | 51 | 44 | 40 |
| WNO2 | 60 | 55 | 56 | 50 | 46 | 45 | 39 | 37 |
| WPL01 | 60 | 55 | 66 | 59 | 53 | 59 | 53 | 47 |
| WPL02 | 60 | 55 | 59 | 53 | 48 | 46 | 41 | 38 |

Source: Dudek 2020
Notes: dBA = A-weighted sound level; Leq = energy-equivalent sound level
*height of barrier top edge above grade level
Under Scenario C conditions, in which both the 76 Fueling Station Project and RV Fueling/Retail project are built and fully operating, Table 5 shows that the daytime City noise limit of 60 dBA would be exceeded at one of the representative property line positions (WPLO1) if a barrier was not installed along the western edge of the RV Fueling/Retail project site. With a 4'-tall barrier, the daytime limit would be satisfied.

Under Scenario D conditions, Table 5 shows that the evening and nighttime City noise limit of 55 dBA would be exceeded at one of the representative property line positions (WPLO1) if a barrier is not installed along the western edge of the RV Fueling/Retail project site. With a 4'-tall barrier, the evening and nighttime limit would be satisfied.

If the car wash dryers are external to the exit end of the tunnel, such that they are essentially exposed and allowed to radiate noise freely to the west, then as presented in Table 6 the predicted noise levels would be higher than those shown in Table 5 for the daytime and evening scenarios.

## Table 6. Predicted Noise Levels - Scenario C (louder car wash)

| Modeled Receptor Location (Tag) | City Daytime Noise Limit (dBA hourly Leq) | City Evening / Nighttime Noise Limit (dBA hourly Leq) | Dryers External <br> Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Table 5 <br> Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Dryers External - Table 5 <br> Difference in Predicted Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |

Source: Dudek 2020
Notes: dBA = A-weighted sound level; Leq = energy-equivalent sound level
*height of barrier top edge above grade level
There is anywhere from a 0-2 dBA difference due to the car wash dryer placement with respect to the tunnel exit, and the results do not change the aforementioned recommendation of a barrier for Scenarios C and D.

### 4.2 Scenarios E \& F

Table 7 presents the predicted noise levels associated with operation of the 76 Fueling Station Project and RV fueling station component of the RV Fueling/Retail project at the indicated modeled receptor positions, which appear in Figure 1.

Table 7. Predicted Noise Levels - Scenarios E (daytime) \& F (evening/nighttime)

| Modeled Receptor Location (Tag) | City Daytime Noise Limit (dBA hourly Leq) | City Evening / <br> Nighttime Noise Limit (dBA hourly Leq) | Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Predicted Evening/Nighttime (7 p.m. to 7 a.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 ' | 4' | 8' | 0 | 4' | 8' |
| WN01 | 60 | 55 | 52 | 51 | 41 | 41 | 35 | 34 |
| WNO2 | 60 | 55 | 49 | 47 | 44 | 42 | 36 | 35 |
| WPL01 | 60 | 55 | 50 | 49 | 44 | 43 | 38 | 34 |
| WPL02 | 60 | 55 | 50 | 48 | 43 | 43 | 38 | 35 |

[^12]Under Scenario E and F conditions, in which the 76 Fueling Station Project and the RV fuel station portion of the RV Fueling/Retail project (i.e., the coffee/retail shop with drive-thru not erected) are built and fully operating, Table 7 shows that the City noise limits would be satisfied at both representative western property line locations without an installed barrier.

If the car wash dryers are external to the exit end of the tunnel, such that they are essentially exposed and allowed to radiate noise freely to the west, then as presented in Table 8, the predicted noise levels would be higher than those shown in Table 7 for the daytime and evening scenarios.

Table 8. Predicted Noise Levels - Scenario E (louder car wash)

| Modeled <br> Receptor Location (Tag) | City Daytime Noise Limit (dBA hourly Lea) | City Evening / <br> Nighttime Noise Limit (dBA hourly Leq) | Dryers External <br> Predicted Daytime (7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Table 7 <br> Predicted Daytime ( 7 a.m. to 7 p.m.) Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  | Dryers External - Table 7 <br> Difference in Predicted Operation Noise Levels (dBA Leq) for Western Barrier Height (feet)* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 ' | 4 | 8' | 0 | 4 | 8' | 0 ' | 4' | 8' |
| WNO1 | 60 | 55 | 55 | 49 | 49 | 52 | 51 | 41 | 3 | -2 | 8 |
| WNO2 | 60 | 55 | 53 | 50 | 46 | 49 | 47 | 44 | 4 | 3 | 2 |
| WPL01 | 60 | 55 | 57 | 51 | 48 | 50 | 49 | 44 | 7 | 2 | 4 |
| WPLO2 | 60 | 55 | 55 | 52 | 45 | 50 | 48 | 43 | 5 | 4 | 2 |

Source: Dudek 2020
Notes: dBA = A-weighted sound level; Leq = energy-equivalent sound level
*height of barrier top edge above grade level
There is a 3-7 dBA difference due to the car wash dryer placement with respect to the tunnel exit (assuming no noise barrier present), but an external car wash dryer would not cause operational noise levels under scenario E to exceed the daytime noise limit of 60 dBA . In addition, the car wash would not operate between the hours of 7 p.m. and 7 a.m., so placement of the car wash dryer would not affect predicted evening/nighttime operational noise levels presented in Table 7.

## 5 Conclusions \& Recommendations

Based on the studied scenarios, we recommended implementation of a noise barrier having a horizontal extent as shown in Figure 1, with minimum height varying with operation conditions as follows:

- Scenario C (full build-out both sites, and operation during daytime hours) - 4 feet;
- Scenario D (full build-out both sites, and operation during nighttime hours) - 4 feet;

For the other studied scenarios and conditions, the City's applicable noise limits are expected to be met at along the western extent of the proposed commercial development.

If implemented, the recommended noise barrier would need to be solid (i.e., no air gaps or cracks) and have sufficient mass and stiffness in order to exhibit a sound transmission class (STC) of 27 or better. The "apparent" or "field" STC of such a barrier, even if installed properly by the onsite contractor(s) or supplying vendor, would typically be 5 points less and thus yield an FSTC value of 22 . This value is at least 10 dB greater than the highest predicted
noise reduction effect due to barrier LOS-intervention, and is thus consistent with Caltrans Technical Noise Supplement ("TeNS") guidance that states: "any material may be used for a barrier between a noise source and a noise receiver as long as it has a [transmission loss] of at least 10 dBA more than the desired noise reduction" (Caltrans 2013). The sound transmission loss (TL) is comparable to the STC rating for purposes of this discussion.

Table 5-1 from Chapter 5 of the Caltrans TeNS document lists a variety of sample wall materials and their expected TL ratings (Caltrans 2013), some of which are reproduced below in Table 9 that would meet the recommended need of STC 27. Most of the options are composed of concrete block or poured concrete forms. Table 9 also includes sample steel and wood studded wall assemblies that may be less expensive options to field-erect on the RV Fueling/Retail project site. Although the Caltrans guidance does list wooden fence varieties and a few other material options, they tend not to have sufficient TL. Any such implemented barrier would need to comply with applicable City construction codes and other non-acoustical considerations.

Table 9. Sample Barrier Material Options

| Material | Thickness <br> (inches) | Weight (pounds <br> per square foot) | TL (dBA) |
| :--- | :--- | :--- | :--- |
| Concrete block, 8 by 8 by 16 inches, light weight | 8 | 31 | 34 |
| Dense concrete | 4 | 50 | 40 |
| Light concrete | 4 | 33 | 36 |
| 5/8"-thick gypsum wallboard on each side of 90mm steel channel <br> studs, glass fiber in the cavity | 4.8 | approx. 2-3 | 44 |

Subject: Noise \& Air Quality Assessment Memorandum<br>Proposed Commercial Development<br>NWC 7h ${ }^{\text {th }}$ street and Countyline Road<br>Calimesa, California

Dear Mr. Loubert:
At your request and authorization, a Noise and Air Quality Memorandum for the above-referenced project located at the northwest intersection of $7^{\text {th }}$ Street and Countyline Road in Calimesa, California (subject property) was conducted. The Noise Memorandum is an analysis of the operational and construction noise impacts of the proposed commercial development including the associated convenience store with fuel station and car wash facility. The Air Quality Memorandum includes an analysis of the emissions associated with the operational and construction of the subject property proposed development.

We appreciate the opportunity to assist you with this project. If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully submitted,
SALEM Engineering Group, Inc.

Maria G. Ruvalcaba, EP
Project Manager

## Subject: Calimesa Air Quality and Noise Analysis

Ms. Ruvalcaba:

This memorandum evaluates potential air quality and noise impacts associated with the construction and operation of a proposed commercial development in the City of Calimesa, California. The project involves construction of a 3,200 square foot (sf) convenience store, a 1,152 sf car wash, eight gasoline fueling stations, and associated vehicle parking on an estimated 1.65 -acre site. The purpose of this memorandum is to provide technical review of the project's air quality and noise impacts against applicable thresholds.

The project site is located approximately 375 feet west of Interstate 10 in Calimesa, Riverside County. The site is bordered to the north by County Line Lane. On the north side of County Line Lane is singlefamily residential development that is part of the City of Yucaipa. To the south, the site is bordered by West County Line Road. On the south side of West County Line Road are single family residences. To the west, the site is also adjoined by single family residences. Access to the project site would be provided via West County Line Road, County Line Lane, and $7^{\text {th }}$ Place. A driveway would be provided at the southwest portion of the site from West County Line Road and at the northwest corner of the site from County Line Lane. In addition, $7^{\text {th }}$ Place would provide access to the eastern portion of the site and provide additional circulation through the site, connecting West County Line Road to County Line Lane.

## Air Quality

## Setting

Federal and state ambient air quality standards for several criteria pollutants have been established to protect human health. The project site is in the South Coast Air Basin (SCAB), which is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, and includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Gorgonio Pass area in Riverside County. Air quality within the SCAB is primarily influenced by meteorology and a wide range of emissions sources, such as dense population centers, substantial vehicular traffic, and industry. The South Coast Air Quality Management District (SCAQMD) is the designated air quality control agency for the SCAB.
This air quality analysis conforms to the methodologies recommended in the SCAQMD's CEQA Air Quality Handbook (1993). The handbook includes significance thresholds for emissions, including, Reactive Organic Gases (ROGs), nitrogen oxides ( $\mathrm{NO}_{\mathrm{x}}$ ), carbon monoxide (CO), sulfur oxides ( $\mathrm{SO}_{\mathrm{x}}$ ),
particular matter up to ten microns ( $\mathrm{PM}_{10}$ ), and particulate matter up to 2.5 microns ( $\mathrm{PM}_{2.5}$ ), associated with both construction and operation of the project.

Project construction would generate diesel emissions and dust. Construction equipment that would generate criteria air pollutants includes excavators, graders, dump trucks, and loaders. Some of this equipment would be used during grading activities as well as when structures are constructed. It is assumed that all construction equipment used would be diesel-powered. The project's construction emissions were calculated using the California Emissions Estimator Model (CalEEMod) software version 2016.3.1. The construction schedule was based on CalEEMod defaults for all phases excluding architectural coating. The architectural coating phase was modified to overlap with building construction. CalEEMod defaults were also used for the number of pieces of equipment that would be used onsite during each phase of construction.

Operational emissions associated with the project were also estimated using CaIEEMod. Operational emissions include mobile source emissions, energy emissions, and area source emissions. Mobile source emissions are generated by the increase in motor vehicle trips to and from the project site associated with operation of onsite development. Emissions attributed to energy use include natural gas consumption for space and water heating, in addition to emissions generated from electricity use. Area source emissions are generated by landscape maintenance equipment, consumer products, and architectural coating.

The SCAQMD recommends the following quantitative regional significance thresholds for temporary construction activities and long-term project operation within the SCAB:

Table 1 SCAQMD Thresholds

| Construction Thresholds | Operational Thresholds |
| :--- | :--- |
| 75 pounds per day of $R O G$ | 55 pounds per day of ROG |
| 100 pounds per day of $\mathrm{NO}_{\mathrm{X}}$ | 55 pounds per day of $\mathrm{NO}_{\mathrm{X}}$ |
| 550 pounds per day of CO | 550 pounds per day of CO |
| 150 pounds per day of $\mathrm{PM}_{10}$ | 150 pounds per day of $\mathrm{SO}_{\mathrm{X}}$ |
| 55 pounds per day of $\mathrm{PM}_{2.5}$ | 150 pounds per day of $\mathrm{PM}_{10}$ |
|  | 55 pounds per day of $\mathrm{PM}_{2.5}$ |

Source: SCAQMD. March 2015. Accessed May 2017 at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.

In addition to the above thresholds, the SCAQMD has developed Localized Significance Thresholds (LSTs) in response to the Governing Board's Environmental Justice Enhancement Initiative (1-4), which was prepared to update the CEQA Air Quality Handbook (1993). LSTs were developed for $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ and were devised in response to concern about exposure of individuals to criteria pollutants in local communities. LSTs represent the maximum emissions from a project that will not cause or contribute to an air quality exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest sensitive receptor, taking into consideration ambient concentrations in each source receptor area (SRA), distance to the sensitive receptor, and project size. LSTs have been developed for emissions within construction areas up to five acres in size. However, LSTs only apply to emissions within a fixed stationary location and are not applicable to mobile sources, such as cars on a roadway (SCAQMD 2008). As such, LSTs are typically applied only to construction emissions because the majority of operational emissions are associated with project-generated vehicle trips.

The project site is located in Source Receptor Area 28 (SRA-28) and is approximately 1.65 acres and (SCAQMD 2008). LSTs for construction on a 1.65 -acre site in SRA-28 are shown in Table 2. LSTs are provided for receptors at a distance of 82 to 1,640 feet ( 25 to 500 meters) from the project site
boundary. The sensitive receptor closest to the project is the single-family residence located an estimated 125 feet ( 38 meters) north of the project site across County Line Lane. Therefore, for the purposes of this analysis, it is assumed that the receptors are located at a distance of 25 meters.

## Table 2 SCAQMD LSTs for Construction (SRA-28)

| Pollutant | Allowable emissions from a 1.65-acre <br> site in SRA-28 for a receptor 25 meters away |
| :--- | :---: |
| Gradual conversion of $\mathrm{NO}_{\mathrm{x}}$ to $\mathrm{NO}_{2}$ | 209 |
| CO | 978 |
| $\mathrm{PM}_{10}$ | 6 |
| $\mathrm{PM}_{2.5}$ | 4 |

Source: SCAQMD. 2009. Accessed May 2017 at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/appendix-c-mass-rate-Ist-look-up-tables.pdf?sfvrsn=2.

## Construction Emissions

Construction would consist of grading, site preparation, building construction, paving, and architectural coating. These activities would generate temporary air pollutant emissions, including fugitive dust ( $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ ) and exhaust emissions from heavy construction vehicles and soil hauling trucks and ROGs from architectural coatings.

Table 3 summarizes the maximum daily emissions of pollutants during the entire construction period as estimated in CalEEMod. As shown in the table, emissions of ROG, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, and $\mathrm{PM}_{2.5}$ would not exceed SCAQMD regional or local significance thresholds during project construction.

Table 3 Estimated Construction Emissions (Ibs/day)

|  | Estimated Maximum Emissions (lbs/day) |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | ROG | NO $_{\mathbf{x}}$ | CO | PM $_{10}$ | PM $_{\mathbf{2 . 5}}$ |
| 2018 Maximum Ibs/day | 6.9 | 20.9 | 17.7 | 3.7 | 2.2 |
| SCAQMD Thresholds | 75 | 100 | 550 | 150 | 55 |
| Threshold Exceeded? | No | No | No | No | No |
| 2018 Maximum On-site Ibs/day | 4.1 | 20.7 | 13.9 | 3.6 | 2.2 |
| Local Significance Thresholds (LSTs) <br> (On-site only) | N/A | 209 | 978 | 6 | 4 |
| Threshold Exceeded? | No | No | No | No | No |

[^13]
## Long-Term Regional Impacts

## Air Quality Management Plan (AQMP)

A project may be inconsistent with the SCAQMD AQMP if it would generate population, housing, or employment growth exceeding the forecasts used in the development of the AQMP. The 2016 AQMP relies on local city general plans and the Southern California Association of Government's (SCAG) Regional Transportation Plans (RTP) forecasts of regional population, housing and employment growth in its own projections for managing Basin air quality.

The project involves the construction of a commercial development consisting of a convenience store, car wash, gasoline fueling stations, and associated vehicle parking. The project does not include residences that would cause a direct increase in the City's population. While the project may provide new employment opportunities in Calimesa that could contribute to population growth, this contribution would be nominal. According to an employee density study prepared for SCAG in 2001, retail and service uses in Riverside County employ on average one employee per 629 sf. Based on this estimate, the project is expected to employ approximately 7 persons ( 1 employee/ $629 \mathrm{sf} \times 4,352$ sf of retail and service use) (SCAG 2001). According to data from the United States Census Bureau American Community Survey, an estimated 2,806 people were employed in Calimesa between the years 2011 and 2015 (U.S. Census Bureau 2015). In its 2016 RTP/ Sustainable Community Strategy (SCS), SCAG projects that employment in the City will increase to 5,900 by 2040 - an increase of 3,094 employees (SCAG 2016). Assuming that all project employees reside in the City, the project would constitute 0.2 percent of projected City growth. Therefore, the level of population growth associated with the project was anticipated in SCAG's long-term population forecasts and would not exceed official regional population projections. The project would be consistent with the AQMP.

## Carbon Monoxide (CO) Hot Spots

A CO hotspot is a localized concentration of CO that is above the state one-hour or eight-hour CO ambient air standards. Localized CO hotspots can occur at intersections with heavy peak hour traffic. Specifically, hotspots can be created at intersections where traffic levels are sufficiently high such that the local CO concentration exceeds the federal one-hour standard of 35.0 parts per million (ppm) or the federal and State eight-hour standard of 9.0 ppm (California Air Resources Board [California ARB] 2016).

The entire South Coast Air Basin is in conformance with state and federal CO standards and most air quality monitoring stations no longer monitor CO levels. The latest available data from the RiversideRubidoux station closest to the project site is from 2012 and the highest 8 -hour concentration reported that year was 1.59 ppm , which is less than one-fifth of the 9 ppm standard. Based on this low background level and stricter vehicle emissions standards in newer cars and new technology that increases fuel economy, CO concentrations are not forecast to exceed CO even with the increase in traffic associated with the project. Localized air quality impacts related to CO hot spots would not occur.

## Operational Emissions

The majority of project-related operational emissions would be due to vehicle trips to and from the site. As shown in Table 4, project-generated emissions would not exceed SCAQMD recommended thresholds for ROG, $\mathrm{NO}_{\mathrm{x}}, \mathrm{CO}, \mathrm{SO}_{\mathrm{x}}, \mathrm{PM}_{10}$, or $\mathrm{PM}_{2.5}$.

Table 4 Estimated Operational Emissions (Ibs/day)

|  | Estimated Emissions (lbs/day) |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Emissions Source | ROG | $\mathrm{NO}_{\mathrm{x}}$ | CO | $\mathbf{S O}_{\mathrm{x}}$ | $\mathrm{PM}_{10}$ | $\mathrm{PM}_{2.5}$ |
| Area | 0.2 | $<0.1$ | 0.3 | 0.0 | $<0.1$ | $<0.1$ |
| Energy | $<0.1$ | $<0.1$ | 0.5 | $<0.1$ | $<0.1$ | 0.1 |
| Mobile | 12.2 | 43.6 | 81.0 | 0.2 | 11.3 | 3.2 |
| Project Total | 12.4 | 43.6 | 81.8 | 0.2 | 11.3 | 3.2 |
| SCAQMD Thresholds | 55 | 55 | 550 | 150 | 150 | 55 |
| Threshold Exceeded? | No | No | No | No | No | No |

See attachments for CalEEMod computer model output. Note: Numbers may not add up due to rounding.

## Odors

The California Air Resource Board (ARB) Air Quality Land Use Handbook: A Community Health Perspective (2005) identifies land uses associated with odor complaints which include sewage treatment plants, landfills, recycling facilities, waste transfer stations, refineries, auto body shops, and livestock operations. Convenience stores, car washes, and gasoline fueling stations are not identified on this list. In addition, the project would have to comply with SCAQMD Rule 402, which prohibits the discharge of air contaminants that would cause injury, detriment, nuisance, or annoyance to the public. Furthermore, gas stations are required to include a vapor recovery system designed to capture vapors of gasoline or other fuels, so that they do not escape into the atmosphere. Therefore, the project would not generate objectionable odors that would harm adjacent sensitive receptors, including residences to the north, west, and south.

## Toxic Air Contaminants (TACs)

A TAC is defined by the California ARB as an air pollutant that may cause or contribute to an increase in deaths or serious illness, or which may pose a present or potential hazard to human health. The California ARB recommends a 50 -foot separation between sensitive land uses and typical gas-dispensing facilities (California ARB 2005). The project would include 8 pumping stations, which would be located approximately 175 feet from the nearest residence. Therefore, the project would not introduce sensitive receptors to a substantial source of TACs.

## Noise

## Noise Overview

Noise level is generally measured in decibels (dB) using the A-weighted sound pressure level (dBA). The A-weighting scale is an adjustment to the actual sound pressure levels to be consistent with that of human hearing response, which is most sensitive to frequencies around $4,000 \mathrm{Hertz}$ and less sensitive to low frequencies (below 100 Hertz).

Sound pressure level is measured on a logarithmic scale with the 0 dBA level based on the lowest detectable sound pressure level that people can perceive. Based on the logarithmic scale, a doubling of
sound energy is equivalent to an increase of 3 dBA , and a sound that is 10 dBA lower than the ambient sound level has no additive effect on ambient noise. Because of the nature of the human ear, a sound must be about 10 dBA greater than the ambient noise level to be judged as twice as loud. In general, a 3 dBA change in the ambient noise level is noticeable to a person with normal hearing, while 1-2 dBA changes generally are not perceptible outside of a controlled environment. Noise levels typically attenuate (or drop-off) at a rate of 6 dBA per doubling of distance from a point source, such as industrial machinery. Noise levels may also be reduced by intervening structures. Typically a solid wall or berm reduces noise levels by approximately 5 to 10 dBA (Federal Transit Authority [FTA] 2006). The manner in which buildings in California are constructed generally provides for an exterior-to-interior transmission loss of about 25 dBA with closed windows and doors (FTA 2006).

One of the most frequently used noise metrics that considers both duration and sound power level is the equivalent noise level (Leq). The Leq is defined as the single steady A-weighted level that is equivalent to the same amount of energy as that contained in the actual fluctuating levels over a period of time (essentially, the average noise level). Typically, Leq is summed over a one-hour period. Lmax is the highest RMS (root mean squared) sound pressure level within the measuring period, and Lmin is the lowest RMS sound pressure level within the measuring period.

The time period in which noise occurs is also important since noise that occurs at night tends to be more disturbing than that which occurs during the day. Community noise is usually measured using Day-Night Average Level (Ldn), which is the 24-hour average noise level with a 10-dBA penalty for noise occurring during nighttime (10 PM to 7 AM) hours, or Community Noise Equivalent Level (CNEL), which is the 24hour average noise level with a 5 dBA penalty for noise occurring from 7 PM to 10 PM and a 10 dBA penalty for noise occurring from 10 PM to 7 AM . Noise levels described by Ldn and CNEL typically do not differ by more than 1 dBA. In practice, CNEL and Ldn are often used interchangeably.

## City of Calimesa Noise Standards

The City of Calimesa Municipal Code sets forth the City's standards, guidelines, and procedures concerning the regulation of operational noise. Specifically, the Code includes Chapter 8.15, Noise Abatement and Control, which regulates noise levels within the City of Calimesa. These regulations are intended to implement the goals, objectives, and policies of the General Plan, protect the public health, safety, and welfare of the City, and to control unnecessary, excessive, and/or annoying noise in the City. Section 8.15 .040 of the Municipal Code sets limits on the creation of noise in exceedance of adopted exterior noise standards for the applicable zoning district over certain periods of time. Per the Municipal Code, noise from operations at any zone cannot exceed the exterior noise limit of another zone, as measured at the property line. Exterior noise standards for the City of Calimesa are shown in Table 5.

Table 5 City of Calimesa Exterior Noise Standards

| Applicable Limit One-Hour Average Sound Level <br> Zone <br> (in dBA Leq) |  |  |
| :---: | :---: | :---: |
| R-1, $R-T, R-2, R-R$ and S-P regulations | Day ( 7 AM to 10 PM) | 50 |
| with a density of five dwelling units or less per acre | Night (10 PM to 7 AM) | 40 |
| R-3, S-P and PRD regulations with a | Day (7 AM to 7 PM) | 55 |
| density of six or more dwelling units per acre | Evening (7 PM to 10 PM ) | 50 |
|  | Night (10 PM to 7 AM) | 45 |
| C-P-S, C-P, C-O | Day (7 AM to 7 PM) | 60 |
|  | Evening (7 PM to 10 PM ) | 55 |

| M | Day (7 AM to 10 PM) | 70 |
|  | Night (10 PM to 7 AM) | 50 |

Source: City of Calimesa Municipal Code, Section 8.15.040

Single-family and low-density residential zones shall not be subject to noise levels greater than 50 dBA between the hours of 7 AM and 10 PM. During nighttime hours, between 10 PM and 7 AM , single-family and low-density residential zones shall not be subject to noise levels greater than 40 dBA . Commercial zones have a maximum noise level of 60 dBA Leq between the hours of 7 AM and 7 PM and 55 dBA Leq between 7 PM and 7 AM. While the properties to the north, south, and west of the project site are all developed with residential use, the properties are zoned for commercial use. Therefore, the noise standard for commercial development is considered appropriate to determine operational noise impacts from the project.

Municipal Code Section $8.15 .080(\mathrm{~A})$ prohibits the operation of any single or a combination of powered construction equipment at any construction site at the following intervals: before 7 AM or after 7 PM on weekdays; before 10 AM or after 5 PM on Saturdays, Sundays, and federal holidays. When January $1^{\text {st }}$, July $4^{\text {th }}$, or December $25^{\text {th }}$ fall on a Sunday, no construction equipment shall be operated before 10 AM and after 5 PM on the following Monday.

In addition, Section $8.15 .080(\mathrm{~B})$ of the Municipal Code prohibits the operation of equipment or a combination of equipment that would cause noise at a level in excess of 75 dBA for more than eight hours during any 24-hour period when measured at or within the property lines of any residential use. Sound levels are corrected for time duration in accordance with Table 6:

Table 6 Construction Noise Level Allowance

| Total Duration in $\mathbf{2 4}$ Hours | Decibel Level Allowance | Total Decibel Level |
| :--- | :---: | :---: |
| Up to 15 minutes | +15 | 90 |
| Up to 30 minutes | +12 | 87 |
| Up to 1 hour | +9 | 84 |
| Up to 2 hours | +6 | 81 |
| Up to 4 hours | +3 | 78 |
| Up to 8 hours | 0 | 75 |

[^14]
## Construction Noise

Construction noise was estimated using the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM). RCNM predicts construction noise levels for a variety of construction operations based on empirical data and the application of acoustical propagation formulas. Using RCNM, construction noise levels were estimated at nearby sensitive receptors, including residences to the north, west, and south of the project site. RCNM provides reference noise levels for standard construction equipment, with an attenuation of 6 dBA per doubling of distance for stationary equipment and 3 dBA per doubling of distance for mobile equipment. The model does not take into consideration topographic variation, thus making the analysis conservative. Construction noise would be considered significant if construction occurs before 7 AM or after 7 PM on weekdays, before 10 AM or after 5 PM on weekends, and in excess of decibel standards set forth by Section 8.15.080(B) of the Calimesa Municipal Code.

Project construction would include site preparation, grading, building construction, architectural coating, and paving of the 3,200 sf convenience store, 1,152 sf car wash, eight gasoline fueling stations, and associated parking lot. Noise-sensitive uses closest to the project site include single-family residences located a minimum of 50 feet north, 50 feet west, and 150 feet south of the project site. Although the western residential property line abuts the western boundary line of the project site, the majority of construction activity would not operate along the boundary due to the limitation of space and proposed locations of the car wash, convenience market, and gas pumps. Regardless, these sensitive land uses may experience a temporary noise increase during construction activities on the project site. Table 7 shows the maximum expected noise levels at the nearest sensitive receptors (i.e., residences to the north, west, and south) based on the combined use of construction equipment anticipated to be used concurrently during each phase of construction.

Table 7 Construction Noise Levels by Phase

| Construction <br> Phase | Equipment | Estimated Noise Level at 50 feet <br> (dBA Lmax) | Esise Level at 150 <br> Feet <br> (dBA Lmax) |
| :--- | :--- | :---: | :---: | :---: |
| Site Preparation | Tractor, Dozer, Grader, <br> Backhoe | 85 | 76 |
| Grading | Tractor, Dozer, Grader, <br> Backhoe | 85 | 76 |
| Building <br> Construction | Crane, Generator, Tractor, <br> Backhoe, Welder/Torch | 84 | 75 |
| Architectural  <br> Coating Air Compressor (stationary) | 78 | 68 |  |
| Paving | Concrete Mixer Truck, Paver, | 79 | 75 |

Source: Federal Highway Administration, Roadway Construction Noise Model, Version 1.1, 2008.

The noise levels presented in Table 7 represent a conservative estimate of construction noise because they assume the simultaneous use of construction equipment in the same place. In practice, equipment would be dispersed temporally and spatially on the project site. Due to spatial and equipment limitations, only a limited amount of equipment can operate near a given location at a particular time.

Construction activity would not occur before 7 AM or after 7 PM on weekends, or before 10 AM or after 5 PM on weekends per City standards. Therefore, construction noise would not disturb nearby residences during recognized hours of sleep. However, per Section 8.15.080(B) of the Municipal Code, construction noise would be significant if it exceeds the City's noise standard of 75 dBA for up to eight hours during any 24 -hour period, and 78 dBA for up to four hours during any 24 -hour period (see Table 6). As shown in Table 7, construction noise could be as high 85 dBA Lmax at the nearest residence. If such levels persisted for four hours or more construction noise would exceed City standards.

## Long-Term Operational Noise Impacts

## On-Site Operational Noise Impacts

The primary noise source in the vicinity of the project site is Interstate 10, located approximately 375 east of the site. Potential noise sources associated with operation of the project would include car wash activities, heating and ventilation (HVAC) equipment, and on-site delivery and trash trucks. As discussed above, while the project site is bordered by single family residences to the north, west, and south, the underlying land zone to the west and south is Community Commercial. The property north of the site pertains to the City of Yucaipa and its underlying zoning is Regional Commercial. As such, project operational noise would be significant if noise levels exceeded 60 dBA Leq during the daytime hours of 7 AM to 7 PM and 55 dBA Leq during the evening and nighttime hours of 7 PM to 7 AM.

The primary source of operational noise as a result of the project would be activities associated with the drive-through car wash. Car wash equipment would include spray equipment, brush systems, and drying systems. Typically, the drying phase of a car wash cycle is the loudest. Rincon Consultants determined that a carwash has a reference noise level of 77.7 dBA Leq at a distance of 40 feet through a 10-minute noise measurement taken at a distance of 40 feet from an existing car wash that included two car wash cycles, both with car drying stages. The measurement was performed in March, 2017, using an ANSI Type 2 integrating sound level meter. Because the measurement also included secondary sources of noise, including 120 passenger vehicle pass-bys and 1 heavy duty truck pass by, it is considered a conservative estimate of car wash noise.

According to the project site plan, the car wash would be located in the northwestern portion of the project site, about 70 feet from the residential property line to the west, 100 feet from the residential property line to the north, and 200 feet from the residential property line to the south. Based on a noise attenuation of 6 dBA per doubling of distance, the car wash would generate a noise of level of 73 dBA Leq at the residence to the west, 70 dBA Leq at the residence to the north, and 64 dBA Leq at the residence to the south, as shown in Table 8. Car wash noise levels would exceed the City's noise standards for daytime and nighttime noise ( 60 dBA Leq and 55 dBA Leq, respectively).

Table 8 Noise from Car Wash at Nearby Residential Receptors

| Sensitive Receptor | Distance (ft) | Noise Level (dBA Leq) |
| :--- | :---: | :---: |
| West | 70 | 73 |
| North | 100 | 70 |
| South | 200 | 64 |

Other mechanical equipment on the project site would include commercial HVAC equipment. However, commercial HVAC equipment typically has noise shielding cabinets, is placed on the roof or within mechanical equipment rooms, and is not usually a substantial source of noise impacts. Typically, the shielding and location of these units reduces noise levels to no greater than 55 dBA Lmax at 50 feet from
the source (U.S. EPA 1971). Based on the configuration of the project site, HVAC equipment would likely be located a minimum of 100 feet from the residential property line to the north, 100 feet from the residential property line to the west, and 200 feet from the residential property line to the south. Accounting for noise attenuation over distance, noise levels from HVAC equipment would be approximately 49 dBA Leq at residences to the west and north and approximately 39 dBA Leq at residences to the south. These noise levels are lower than the City's noise standards for daytime and nighttime noise ( 60 dBA Leq and 55 dBA Leq, respectively).

On-site activities would include the use of delivery and trash-hauling trucks, which would use available areas for loading and unloading activities, generating noise throughout. The average noise level for a single idling truck is generally 72 dBA at a distance of 25 feet. Based on the configuration of the project site and layout of proposed driveways, delivery and trash-hauling trucks would operate an estimated 100 feet from the residential property lines to the west and south and 200 feet from the residential property line to the north. Based on attenuation of 6 dBA per doubling of distance, noise levels from trucks would be 60 dBA Leq at the western and southern property lines and 54 dBA Leq at the northern property line. However, California State law prohibits trucks from idling for longer than 5 minutes and delivery and trash truck trips to the site would only be periodic sources of operational noise. These noise levels would not conflict with the City's daytime noise standards ( 60 dBA Leq) ; however, they would exceed the City's nighttime noise standard ( 55 dBA Leq) if delivery and trash-hauling trucks were to operate at night.

Operational noise levels at nearby receptors would be a combination of all operational activities, including the carwash, mechanical equipment, and delivery trucks. Combined noise levels at receptors to the west, north, and south are shown in Table 9.

Table 9 Total Operational Noise at Nearby Receptors

|  |  | Noise Level (dBA Leq) |  |
| :--- | :---: | :---: | :---: |
| Operational Noise Source | Residence to the West | Residence to the North | Residence to the South |
| Car Wash | 73 | 70 | 64 |
| Mechanical Equipment | 49 | 49 | 39 |
| Trucks | 60 | 54 | 60 |
| Total Operational Noise | $\mathbf{7 3}$ | $\mathbf{7 0}$ | $\mathbf{6 6}$ |

As shown in Table 9, operational noise from the project would result in noise levels of 73 dBA Leq to the west, 70 dBA Leq to the north, and 66 dBA Leq to the south. These noise levels exceed the City of Calimesa noise standards of 60 dBA Leq during the daytime and 55 dBA Leq during the nighttime for commercial property, with operation of the carwash dominating noise levels.

## Offsite Roadway Noise Impacts

Potential roadway noise sources associated with operation of the project would include increased traffic on West County Line Road. Based on the ITE's trip generation rate for a service station with a convenience market and car wash, the project would generate an estimated 1,223 vehicle trips per day. However, due to the nature of the project and the proximity to Interstate 10, ITE estimates that $60 \%$ of the trips would be pass-by trips, resulting in 490 trips per day generated by the project. According to the California Department of Transportation (Caltrans) traffic volumes for all vehicles on California highways, the segment of Interstate 10 nearest to project site has an average daily volume of 104,000 vehicles (Caltrans 2015). The 490 new daily trips generated by the project would result in an increase in traffic of less than one percent. Since Interstate 10 currently dominates roadway noise in the vicinity of
the project site, an increase of vehicle trips on West County Line Road would only marginally contribute to existing traffic noise levels. In addition, the project would not create a considerable increase in through-traffic along West County Line. Patrons would be able to immediately enter and exit the site via the off- and on-ramps located an estimated 80 feet east from the project site. Therefore, the project would not generate a substantial increase in roadway noise for residences along West County Line Road and in the general vicinity of the project site.

## Conclusion and Recommendation

## Air Quality

Construction and operation of the project would not generate air quality impacts in excess of federal or regional thresholds. No measures would be necessary to reduce air quality impacts.

## Noise

## Construction Noise

Although construction equipment would not likely operate continuously throughout the day, construction noise would cause a substantial impact on nearby residences. Construction noise could be as high 85 dBA Lmax at the nearest sensitive receptor in which case construction noise would be in exceedance of City standards. The following recommendations would reduce construction noise levels to less than City standards (i.e. 75 dBA).

- Construction Noise. Temporary acoustic barriers (e.g. wooden sound barriers) shall be constructed along the northern, western, and eastern boundaries of the project site to reduce construction-generated noise levels at the adjacent single-family residences. The barriers shall be designed to obstruct the line-of-sight between the nearest residences and onsite construction equipment and reduce construction noise by 10 dBA .
- Construction Equipment. Equipment engine doors on motorized equipment shall be closed during equipment operation. When not in use, motorized construction equipment shall not be left idling. Stationary noise generating construction equipment (e.g. generators and compressors) shall be enclosed and centrally located on the project site at the greatest distance possible.

## Operational Noise

Operational activities associated with the drive-through car wash would be the primary source of noise during operation of the project. Noise levels in excess of 60 dBA Leq in the daytime and 55 dBA Leq during the evening and nighttime would likely be experienced at the nearest residences located to the west, north, and south (see Table 9).The following are recommendations that would reduce exterior noise levels to below City standards:

- Sound Wall. Construct a sound wall along the western boundary of the project site of sufficient height and width to obstruct the line-of-sight between the development and residences west of the project site. The sound wall should have sufficient height and length to achieve a 20 dB insertion loss and consist of materials with an STC of 30 or greater. Based on the United States Department of Housing and Urban Development (HUD) The Noise Guidebook (2009), such a sound barrier would be capable of achieving a noise reduction of 19.6 dBA. . Noise levels from car wash operations would potentially be reduced from approximately 70 dBA Leq to approximately 50 dBA Leq.
- Hours of Operation. Limit operational hours of the car was to 7 AM - 7 PM. These operational hours would prevent car wash operations from exceeding the nighttime noise standard of 40 dBA Req at the nearest residential receptors.

Compliance with the above recommendations would reduce noise impacts associated with project construction and operation; however, daytime operational noise from the drive-through car wash would still remain substantial.

Sincerely,
Rincon Consultants, Inc.

### 1.3 User Entered Comments \& Non-Default Data

## Calimesa Commercial Development - South Coast Air Basin, Winter

## Project Characteristics - Per project location.

Land Use - Land use totals estimated using Google Earth and Site Plan. Acreage estimated to 1.65 acres.
Construction Phase - Architectural Coating overlapped with Building Construction and Paving.
Architectural Coating - Per SCAQMD Rule 1113, use of low VOC paint ( $50 \mathrm{~g} / \mathrm{L}$ ).
Vehicle Trips - City Park represents landscaping.
Area Coating - Per SCAQMD Rule 1113, use of low VOC paint ( $50 \mathrm{~g} / \mathrm{L}$ ).
Energy Use -
Construction Off-road Equipment Mitigation - Per SCAMQD 403, watering twice per day.
Area Mitigation -
Energy Mitigation -

## EXECUTIVE SUMMARY

The purpose of this Traffic Impact Analysis is to provide an assessment of traffic operations resulting from development of the proposed 7th Street \& County Line Road RV Fueling \& Retail Project and to identify measures necessary to reduce potentially operational traffic deficiencies. This report analyzes traffic impacts for the anticipated project opening year in Year 2021 for Phase 1. Phase 2 will be constructed with installation of interim traffic signals at the I-10/County Line Road freeway interchange, or when Caltrans installs roundabouts at this freeway interchange.

Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with technical terms related to transportation engineering.

## PROJECT DESCRIPTION

The project site is located northeast of County Line Lane and County Line Road in the City of Calimesa. The currently vacant project site is proposed to be developed with 3,000 square feet of coffee/donut shop and a three (3) fueling position RV fueling facility. Full access for the project site is proposed to County Line Lane via two project driveways. All egress for the project site will occur at these two driveways on County Line Lane. The conditions of approval for the development will require County Line Lane to be constructed with a roadway cross-section width of 32 feet of pavement prior to Phase 1 occupancy. Right turn in only access for the project site is proposed to County Line Road via one project driveway. This driveway is ingress only. The proposed project is anticipated to be constructed and fully operational by year 2021 for Phase 1 . Phase 2 will be constructed with installation of interim traffic signals at the I-10/County Line Road freeway interchange, or when Caltrans installs roundabouts at this freeway interchange.

This analysis has been conducted with two phases for the proposed development. Phase 1 includes construction of only the 3 fueling position RV fueling facility. Phase 2 is the complete construction of the proposed development.

## EXISTING CONDITIONS

The study intersections currently operate within acceptable Levels of Service during the peak hours for Existing conditions, except for the following study intersections that currently operate at Level of Service F during the peak hours (see Table 1):

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hours - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F)

## PROJECT TRIPS

The proposed project is forecast to generate a total of approximately 2,977 daily trips, including 297 trips during the AM peak hour and 174 trips during the PM peak hour (see Table 2).

## FORECAST OPERATIONS

Existing Plus Project Conditions: The study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for both Phase 1 and Phase 2 Existing Plus Project conditions, except for the following study intersections that are forecast to operate at Level of Service E to F during the peak hours (see Table 4):

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F, PM Peak Hour - LOS E (Phase 2 only))

Based upon closer evaluation presented in the following "Other Considerations" section, the proposed project is forecast to result in minimal operational deficiencies during the peak hours for Existing Plus Project Phase 1 conditions. With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for Existing Plus Project Phase 2 conditions during the AM and PM peak hours.

Existing Plus Ambient Conditions: The study intersections are forecast to operate within acceptable Levels of Service ( D or better) during the peak hours for Existing Plus Ambient conditions, except for the following study intersections that are forecast to operate at Level of Service E to F during the peak hours (see Table 5):

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F)

With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the study intersections are forecast to operate within acceptable Levels of Service for Existing Plus Ambient conditions during the AM and PM peak hours.

Existing Plus Ambient Plus Project Conditions: The study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for both Phase 1 and Phase 2 Existing Plus Ambient Plus Project conditions, except for the following study intersections that are forecast to operate at Level of Service E to F during the peak hours (see Table 6):

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F, PM Peak Hour - LOS E (Phase 2 only))

Based upon closer evaluation presented in the following "Other Considerations" section, the proposed project is forecast to result in minimal operational deficiencies during the peak hours for Existing Plus Ambient Plus Project Phase 1 conditions. With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for Existing Plus Ambient Plus Project Phase 2 conditions during the AM and PM peak hours.

Existing Plus Ambient Plus Project Plus Cumulative Conditions: The study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for both Phase 1 and Phase 2 Existing Plus Ambient Plus Project Plus Cumulative conditions, except for the following study intersections that are forecast to operate at Level of Service E to F during the peak hours (see Table 7):

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM \& PM peak hour - LOS F)

With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for both Phase 1 and Phase 2 Existing Plus Ambient Plus Project Plus Cumulative conditions during the AM and PM peak hours.

## OPERATIONAL IMPROVEMENTS

The following improvements are necessary to be physically constructed prior to project Phase 2 opening:

- I-10 Southbound Ramps (NS) at County Line Road (EW) - \#6
- Install a traffic signal
- I-10 Northbound Ramps (NS) at County Line Avenue (EW) - \#7
- Install a traffic signal

The City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at both of these ramp intersection locations. The anticipated installation of these roundabouts is Year 2026. Traffic signal installation would be an interim measure until the roundabouts are constructed, with feasibility and necessity to be determined by the City of Calimesa and Caltrans. Traffic signal installation as an interim improvement would be a condition of approval to reduce project impacts for Phase 2. A fair share analysis has been prepared for these improvements.

The I-10/County Line Road interchange is identified as a Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) location in the City of Calimesa. As mitigation for the potential traffic impacts, the proposed project shall contribute through the adopted traffic impact fee program for the ultimate improvements for this interchange.

## VEHICLE MILES TRAVELED (VMT) ANALYSIS

Appendix G contains a VMT analysis for the proposed development.

## 1. INTRODUCTION

This section describes the purpose of this traffic impact analysis, project location, proposed development, and study area. Figure 1 shows the project location map and Figure 2 illustrates the project site plan. Figure 3 illustrates the project site plan with freeway interchange roundabout.

## PURPOSE AND OBJECTIVES

The purpose of this Traffic Impact Analysis is to provide an assessment of traffic operations resulting from development of the proposed 7th Street \& County Line Road RV Fueling \& Retail Project and to identify measures necessary to reduce potentially operational traffic deficiencies. Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with technical terms related to transportation engineering.

## PROJECT DESCRIPTION

The project site is located northeast of County Line Lane and County Line Road in the City of Calimesa. The currently vacant project site is proposed to be developed with 3,000 square feet of coffee/donut shop and a three (3) fueling position RV fueling facility. Full access for the project site is proposed to County Line Lane via two project driveways. All egress for the project site will occur at these two driveways on County Line Lane. The conditions of approval for the development will require County Line Lane to be constructed with a roadway cross-section width of 32 feet of pavement prior to Phase 1 occupancy. Right turn in only access for the project site is proposed to County Line Road via one project driveway. This driveway is ingress only. The proposed project is anticipated to be constructed and fully operational by year 2021 for Phase 1 . Phase 2 will be constructed with installation of interim traffic signals at the I-10/County Line Road freeway interchange, or when Caltrans installs roundabouts at this freeway interchange.

This analysis has been conducted with two phases for the proposed development. Phase 1 includes the addition of three (3) RV fueling positions to the adjacent gasoline station. Phase 2 consists of the 3,000 square foot coffee/donut shop for full buildout of the proposed development.

## STUDY AREA

The study intersections and general scope of the analysis were determined based on coordination with the City of Calimesa. Scoping documentation is provided in Appendix B. The study area consists of the following study intersections where the proposed project is expected to contribute 50 or more peak hour trips with classification of "Collector" to "Collector" and above, that are all located within the City of Calimesa, City of Yucaipa, and Caltrans jurisdictions:

| Study Intersections ${ }^{1}$ | Jurisdiction |
| :---: | :---: |
| 1. County Line Lane (NS) at County Line Road (EW) <br> 2. Coffee Shop Access (NS) at County Line Lane (EW) <br> 3. RV Access (NS) at County Line Lane (EW) <br> 4. I-10 Northbound Ramps (NS) at County Line Avenue (EW) <br> 8. Calimesa Boulevard (NS) at County Line Avenue (EW) | City of Calimesa <br> City of Calimesa/City of Yucaipa City of Calimesa/City of Yucaipa <br> City of Calimesa <br> City of Calimesa <br> Caltrans <br> Caltrans <br> City of Calimesa/City of Yucaipa |

[^15]The Yucaipa Freeway Corridor Specific Plan is located north of the project site and west of the I-10 Freeway extending northwest of Live Oak Canyon Road. Based on discussions with the City of Yucaipa Planning Department, the only active project within the specific plan is an expansion of The Pumpkin Factory located adjacent to the I-10 Freeway and Live Oak Canyon Rd. Access to this facility is provided on Live Oak Canyon Road. There are no other planned or active projects within this specific plan, and there are plans to extend County Line Lane from its northern terminus through the specific plan. Since there are no construction plans for the extension of County Line Lane, and it currently terminates and services only one single-family detached residential dwelling unit, it is not anticipated that project traffic would utilize this roadway for Opening Year 2021 conditions.

The City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at the I-10/County Line Road freeway interchange. The anticipated installation of these roundabouts is Year 2026.

Roberts Road is planned to be constructed northbound to County Line Road creating a 4-way intersection with County Line Lane dependent on construction of the Mesa Verde Specific Plan. 7th Place between County Line Lane and County Line Road is currently closed and being vacated. 7th Place south of County Line Road will be closed with a cul-de-sac constructed at its northern terminus just south of County Line Road dependent on construction of the Mesa Verde Specific Plan.

## ANALYSIS SCENARIOS

The following scenarios are analyzed during typical weekday AM and PM peak hour conditions:

- Existing Conditions
- Existing Plus Project (Phase 1 and 2) Conditions
- Existing Plus Ambient Conditions
- Existing Plus Ambient Plus Project (Phase 1 and 2) Conditions
- Existing Plus Ambient Plus Project (Phase 1 and 2) Plus Cumulative Conditions

Figure 3
Site Plan - With Freeway Interchange Roudabout

## 2. METHODOLOGY

This section discusses the analysis methodologies used to assess transportation facility performance as adopted by the respective jurisdictional agencies.

## INTERSECTION DELAY METHODOLOGY

To assess the performance of an intersection, the City of Calimesa use the intersection delay method based on procedures contained in the Highway Capacity Manual (Transportation Research Board, 6th Edition). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding Level of Service. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to Level of Service based on the following thresholds:

| Level of Service | Intersection Control Delay (Seconds / Vehicle) |  |
| :---: | :---: | :---: |
|  | Signalized Intersection | Unsignalized Intersection |
| A | $\leq 10.0$ | $\leq 10.0$ |
| B | $>10.0$ to $\leq 20.0$ | $>10.0$ to $\leq 15.0$ |
| C | $>20.0$ to $\leq 35.0$ | $>15.0$ to $\leq 25.0$ |
| D | $>35.0$ to $\leq 55.0$ | $>25.0$ to $\leq 35.0$ |
| E | $>55.0$ to $\leq 80.0$ | $>35.0$ to $\leq 50.0$ |
| F | $>80.0$ | $>50.0$ |

Source: Transportation Research Board, Highway Capacity Manual (6th Edition).
Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). At intersections with traffic signal or all way stop control, Level of Service is determined by the average control delay for the overall intersection. At intersections with cross street stop control (i.e., one- or two-way stop control), Level of Service is determined by the average control delay for the worst individual movement (or movements sharing a single lane).

Intersection delay analysis was performed using the Vistro (Version 6.00-03) software in accordance with Exhibit C of the Riverside County Transportation Department Traffic Impact Analysis Preparation Guide (April 2008).

## PERFORMANCE STANDARDS

## City of Calimesa

The definition of an intersection deficiency has been obtained from the City of Calimesa General Plan, which states that the City has a goal of Level of Service C on City-maintained roads. However, Level of Service D may be allowed on City-maintained road segments in commercial and employment areas or any combination of major highways, urban arterials, secondary highways, or freeway ramp intersections. Therefore, Level of Service D has been considered acceptable at the off-site study intersections at or near the vicinity of the l-10 Freeway ramps and Level of Service C has been considered acceptable at all other study locations, including on-site intersections.

19-0183

## City of Yucaipa

The City of Yucaipa has established Level of Service $C$ as the minimum acceptable Level of Service.

## California Department of Transportation

The California Department of Transportation (Caltrans) endeavors to maintain a target Level of Service at the transition between Level of Service $C$ and $D$ (maximum 35 seconds of control delay). If an existing facility, or study area intersection for purposes of this analysis, operates at an unacceptable Level of Service, then the existing control delay should be maintained. The lead agency may consult with the California Department of Transportation to determine the appropriate target Level of Service if the maximum 35 seconds of control delay is not feasible.

## REQUIREMENTS FOR IMPROVEMENTS

## City of Calimesa

Based on the established performance standards, a potentially operational transportation impact is defined to occur if the project causes or worsens unacceptable Level of Service ( E or F ) at a study intersection at or near the vicinity of the I-10 Freeway Ramps, or if the project causes or worsens unacceptable Level of Service (D, E or F) at all other study intersections including on-site intersections,

## City of Yucaipa

Based on the established performance standards, a potentially operational transportation impact is defined to occur if the project causes or worsens unacceptable Level of Service (D, E, or F) at a study intersection.

## California Department of Transportation

Based on the established performance standards, a potentially operational transportation impact is defined to occur if the project causes or worsens unacceptable Level of Service (E or F) at a freeway ramp.

## Requirements for Improvements

If a proposed project is forecast to result in a significant operational impact, improvements should be identified that will reduce the impact to a less than operational impact level. Improvements can be in many forms, including the addition of lanes, traffic control modification, or demand management measures. If no feasible improvements can be identified for an operationally impacted facility, project approval will require the City of Calimesa to adopt a statement of overriding considerations.

Direct project impacts are identified in the Existing Plus Project analysis scenario and must be improved via conditions of approval requiring the construction of any improvements necessary to meet the established Level of Service standards (or reduce the project impact to pre-project conditions). Cumulative impacts are identified in the cumulative conditions scenario and may be mitigated through the payment of various impact fees such as the County of Riverside Development Impact Fees, Road and Bridge Benefit District Fees, and the Transportation Uniform Mitigation Fees to the extent that these programs provide funding for the improvement facilities.

## 3. EXISTING CONDITIONS

## EXISTING ROADWAY SYSTEM

Figure 4 identifies the lane geometry and intersection traffic controls for Existing conditions based on a field survey of the study area. Regional access to the project site is provided by the I-10 Freeway located approximately 0.15 miles east of the project site. Key roadways providing local circulation include County Line Lane, Roberts Road (future), 7th Place, Calimesa Boulevard, and County Line Road.

## GENERAL PLAN CONTEXT

Figure 5 shows the City of Calimesa General Plan Circulation Element roadway classifications map. This figure shows the nature and extent of arterial and collector highways that are needed to adequately serve the ultimate development depicted by the Land Use Element of the General Plan. The City of Calimesa standard roadway cross-sections are illustrated on Figure 6.

Figure 7 shows the City of Yucaipa General Plan Circulation Element roadway classifications map. This figure shows the nature and extent of arterial and collector highways that are needed to adequately serve the ultimate development depicted by the Land Use Element of the General Plan.

## TRANSIT SERVICE

Figure 8 shows Existing public transit facilities and routes in the project vicinity serviced by Omnitrans. As shown on Figure 8, the project vicinity is served by OmniTrans Routes 308 and 309 along County Line Road east of Calimesa Boulevard. There is a transit stop for these routes at the intersection of $5^{\text {th }}$ Street and County Line Road.

Figure 9 shows Existing public transit facilities and routes in the project vicinity serviced by the City of Beaumont Transit System. As shown on Figure 9, the project vicinity is served by the City of Beaumont Transit System Commuter Link 120 along Calimesa Boulevard south of County Line Road. There is a transfer center near the Calimesa Dollar General.

## BICYCLE FACILITIES

The City of Calimesa has bicycle lanes painted adjacent to existing roadways. There are no facilities in the community for bikes only; however, the City does maintain a series of multi-use trails, which accommodate bicycles as well as pedestrians. There are no on-street bicycle facilities in the study area.

## EXISTING PEDESTRIAN FACILITIES

Existing pedestrian facilities adjacent to the project site are illustrated on Figure 10.

## EXISTING ROADWAY VOLUMES

Figure 11 shows the Existing average daily traffic volumes. The Existing average daily traffic volumes have been obtained from the California Department of Transportation (Caltrans) Traffic Volumes on California State Highways (2017) and factored from peak hour intersection turning movement volumes using the following formula for each intersection leg:

Evening Peak Hour (Approach Volume + Exit Volume) $\times 12.0=$ Leg Volume.

Existing peak hour traffic conditions are based upon AM peak period and PM peak period intersection turning movement counts obtained in September 2019 during typical weekday conditions when local schools were in session. The weekday AM peak period was counted between 7:00 AM and 9:00 AM and the weekday PM peak period was counted between 4:00 PM and 6:00 PM. The actual peak hour within the peak period is the four consecutive 15 minute periods with the highest total volume when all movements are added together. Thus, the weekday PM peak hour at one intersection may be 4:45 PM to 5:45 PM if those four consecutive 15 minute periods have the highest combined volume. Intersection turning movement count worksheets are provided in Appendix C.

Figure 12 and Figure 13 show the Existing AM peak hour and PM peak hour intersection turning movement volumes.

## EXISTING LEVELS OF SERVICE

The intersection Levels of Service for Existing conditions have been calculated and are shown in Table 1. Existing intersection Level of Service worksheets are provided in Appendix D.

As shown in Table 1, the study intersections currently operate within acceptable Levels of Service during the peak hours for Existing conditions, except for the following study intersections that currently operate at Level of Service F during the peak hours:

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F)

## EXISTING TRAFFIC SIGNAL WARRANT ANALYSIS

The need for a traffic control signal at the currently unsignalized study intersections of I-10 Southbound Ramps at County Line Road (\#6) and I-15 Northbound Ramps at County Line Avenue (\#7) have been evaluated using the California Department of Transportation peak hour traffic signal warrant criteria (Warrant 3) in accordance with the California Manual on Uniform Traffic Control Devices (2014 Update). Traffic signal warrant analysis worksheets are provided in Appendix E.

The peak hour traffic signal warrant (Warrant 3) is forecast to be satisfied at the currently unsignalized study intersections of I-10 Southbound Ramps at County Line Road (\#6) and I-15 Northbound Ramps at County Line Avenue (\#7) for Existing conditions.

The City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at both of these ramp intersection locations. The anticipated installation of these roundabouts is Year 2026. Traffic signal installation would be an interim measure until the roundabouts are constructed, with feasibility and necessity to be determined by the City of Calimesa and Caltrans. Traffic signal installation as an interim improvement would be a condition of approval to reduce project impacts for Phase 2. A fair share analysis has been prepared for these improvements.

Table 1

## Existing Intersection Levels of Service

| Study Intersection | Jurisdiction ${ }^{1}$ | Traffic Control ${ }^{2}$ | AM Peak Hour |  | PM Peak Hour |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Delay ${ }^{3}$ | LOS $^{4}$ | Delay ${ }^{3}$ | LOS $^{4}$ |
| 1. County Line Lane at County Line Road | Calimesa | CSS | 8.8 | A | 8.8 | A |
| 5. 7th Place at County Line Road | Calimesa | CSS | 12.4 | B | 9.7 | A |
| 6. I-10 SB Ramps at County Line Road | Caltrans | CSS | 1,074.9 | F | 306.7 | F |
| 7. I-10 NB Ramps at County Line Avenue | Caltrans | CSS | 51.8 | F | 29.5 | D |
| 8. Calimesa Boulevard at County Line Avenue | Calimesa/Yucaipa | TS | 12.9 | B | 12.3 | B |

Notes:
(1) Caltrans = California Department of Transportation
(2) CSS = Cross Street Stop; TS = Traffic Signal
(3) Delay is shown in seconds/vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).
(4) LOS = Level of Service

## 4. PROJECT TRIP FORECASTS

This section describes how project trip generation, trip distribution, and trip assignment forecasts were developed. The forecast project volumes are illustrated on figures contained in this section.

## PROJECT TRIP GENERATION

Table 2 shows the project trip generation based upon trip generation rates obtained from the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. Trip generation rates were determined for daily trips, AM peak hour inbound and outbound trips, and PM peak hour inbound and outbound trips for the proposed land use. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantity. The currently vacant project site is proposed to be developed with 3,000 square feet of coffee/donut shop and a 3 fueling position RV fueling facility.

It is important to note this is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not current provide trip generation rates for a RV fueling facility In reality, the proposed RV fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for passby trips.

As shown in Table 2, Phase 1 of the proposed project is forecast to generate a total of approximately 516 daily trips, including 30 trips during the AM peak hour and 42 trips during the PM peak hour.

As shown in Table 2, Phase 2 of the proposed project is forecast to generate a total of approximately 2,461 daily trips, including 267 trips during the AM peak hour and 132 trips during the PM peak hour.

As shown in Table 2, the proposed project (Phase 1 and Phase 2 combined) is forecast to generate a total of approximately 2,977 daily trips, including 297 trips during the AM peak hour and 174 trips during the PM peak hour.

## PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Figure 14 to Figure 17 show the forecast directional outbound and inbound distribution patterns for the project generated trips. The project trip distribution patterns are based on review of existing volume data, surrounding land uses, and the local and regional roadway facilities in the project vicinity. Full access for the project site is proposed to County Line Lane via two project driveways. All egress for the project site will occur at these two driveways. Right turn in only access for the project site is proposed to County Line Road via one project driveway. This driveway is ingress only.

Based on the identified project trip generation and distributions, Project Phase 1 average daily traffic volumes for have been calculated and shown on Figure 18. Project Phase 1 AM and PM peak hour intersection turning movement volumes are depicted on Figure 19 and Figure 20, respectively. Project Phase 2 average daily traffic volumes have been calculated and shown on Figure 21. Project Phase 2 AM and PM peak hour intersection turning movement volumes are depicted on Figure 22 and Figure 23, respectively.

## PROJECT DESIGN FEATURES

The proposed project shall construct the following improvements to provide project site access:

## Coffee Shop Access (NS) at County Line Lane (EW) - \#2

- Construct the project driveway to provide one inbound lane and one outbound lane with northbound stop-control.
- The existing eastbound lane on County Line Lane will be widened and allow shared through/right turn movements.
- The existing westbound lane on County Line Lane will be widened and allow shared through/left turn movements.
- The new northbound lane at the Coffee Shop Access will allow shared left/right turn movements.

## RV Access (NS) at County Line Lane (EW) - \#3

- Construct the project driveway to provide one inbound lane and one outbound lane with northbound stop-control.
- The existing eastbound lane on County Line Lane will be widened and allow shared through/right turn movements.
- The existing westbound lane on County Line Lane will be widened and allow shared through/left turn movements.
- The new northbound lane at the RV Access will allow shared left/right turn movements.

## Coffee Shop/RV Access (NS) at County Line Road (EW) - \#4

- Construct the project driveway to provide one inbound lane.
- The existing westbound lane on County Line Road will allow shared through/right turn movements.
- The Coffee Shop/RV Access will be restricted to right turns in only with no egress.

Table 2
Project Trip Generation - Phase 1 and Phase 2

| Trip Generation Rates |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Land Use | Quantity | Units ${ }^{2}$ | AM Peak Hour |  |  | PM Peak Hour |  |  | Daily |
|  |  |  | In | Out | Total | In | Out | Total |  |
| Coffee/Donut Shop with Drive-Thru RV Fueling Facility/Gas Station ${ }^{3}$ | $\begin{gathered} 3.000 \\ 3 \end{gathered}$ | $\begin{aligned} & \text { TSF } \\ & \text { FP } \end{aligned}$ | $\begin{gathered} 136 \\ 15 \end{gathered}$ | $\begin{gathered} 131 \\ 15 \end{gathered}$ | $\begin{gathered} 267 \\ 30 \end{gathered}$ | 66 21 | 66 21 | $\begin{gathered} 132 \\ 42 \end{gathered}$ | $\begin{gathered} 2,461 \\ 516 \end{gathered}$ |
| Total |  |  | 151 | 146 | 297 | 87 | 87 | 174 | 2,977 |

Notes:
(1) ITE = Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017; XXX= Land Use Code
(2) TSF = Thousand Square Feet; VFP = Vehicle Fueling Positions
(3) A passenger car equivalent (PCE) is a metric to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars. In consultation with City of Calimesa staff, the passenger car equivalent for a RV using the RV fueling facility would be 3.0. Thus, each trip generated by the RV fueling facility would be equivalent to 3 passenger cars.

However, it is important to note that the trip generation used in this report for the RV fueling facility is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a RV fueling facility In reality, the proposed RV fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

For these reasons, the passenger car equivalent of 3.0 was not applied to the trip generation for the RV fueling facility.

## 5. FUTURE VOLUME FORECASTS

This section describes how future volume forecasts for each analysis scenario were developed. Forecast study area volumes are illustrated on figures contained in this section.

## CUMULATIVE TRIPS

## Ambient Growth Rate

To account for ambient growth on roadways, existing roadway volumes were increased by a growth rate of two percent (2\%) per year over two years for Opening Year (2021) conditions. This equates to a total growth factor of approximately 1.04 . The ambient growth rate was conservatively applied to all movements at the study intersections.

## Other Development

To account for trips generated by future development, trips generated by pending or approved other development projects in the project vicinity were added to the study area. Table 3 shows the trip generation summary for other development projects and Figure 24 shows the other development location map.

Figure 25 shows the forecast average daily traffic volumes for the other development for Opening Year conditions. Figure 26 and Figure 27 show the forecast AM and PM peak hour intersection turning movement volumes for trips generated by other developments.

It should be noted that the Mesa Verde Specific Plan located west of the project site was not included in this analysis since the project is inactive.

## ANALYSIS SCENARIO VOLUME FORECASTS

## Existing Plus Project

Existing Plus Project volume forecasts were derived by adding the project generated trips to Existing volumes. Existing Plus Project average daily traffic volumes for Phase 1 are shown on Figure 28. Existing Plus Project AM and PM peak hour intersection turning movement volumes for Phase 1 are shown on Figure 29 and Figure 30.

Existing Plus Project volume forecasts were derived by adding the project generated trips to Existing volumes. Existing Plus Project average daily traffic volumes for Phase 2 are shown on Figure 31. Existing Plus Project AM and PM peak hour intersection turning movement volumes for Phase 2 are shown on Figure 32 and Figure 33.

## Existing Plus Ambient

To develop Existing Plus Ambient volume forecasts, Existing volumes were combined with ambient growth. Existing Plus Ambient average daily traffic volumes are shown on Figure 34. Existing Plus Ambient AM and PM peak hour intersection turning movement volumes are shown on Figure 35 and Figure 36.

## Existing Plus Ambient Plus Project

Existing Plus Ambient Plus Project volume forecasts were developed by adding project trips to the Existing Plus Ambient forecast. Existing Plus Ambient Plus Project average daily traffic volumes for Phase 1 are shown
on Figure 37. Existing Plus Ambient Plus Project AM and PM peak hour intersection turning movement volumes for Phase 1 are shown on Figure 38 and Figure 39.

Existing Plus Ambient Plus Project volume forecasts were developed by adding project trips to the Existing Plus Ambient forecast. Existing Plus Ambient Plus Project average daily traffic volumes for Phase 2 are shown on Figure 40. Existing Plus Ambient Plus Project AM and PM peak hour intersection turning movement volumes for Phase 2 are shown on Figure 41 and Figure 42.

## Existing Plus Ambient Plus Project Plus Cumulative

Existing Plus Ambient Plus Project Plus Cumulative volume forecasts were developed by adding trips generated by other developments to the Existing Plus Ambient Plus Project forecast. Existing Plus Ambient Plus Project Plus Cumulative average daily traffic volumes for Phase 1 are shown on Figure 43. Existing Plus Ambient Plus Project Plus Cumulative AM and PM peak hour intersection turning movement volumes for Phase 1 are shown on Figure 44 and Figure 45.

Existing Plus Ambient Plus Project Plus Cumulative volume forecasts were developed by adding trips generated by other developments to the Existing Plus Ambient Plus Project forecast. Existing Plus Ambient Plus Project Plus Cumulative average daily traffic volumes for Phase 2 are shown on Figure 46. Existing Plus Ambient Plus Project Plus Cumulative AM and PM peak hour intersection turning movement volumes for Phase 2 are shown on Figure 47 and Figure 48.

## 6. FUTURE OPERATIONAL ANALYSIS

Detailed intersection Level of Service calculation worksheets for each of the following analysis scenarios are provided in Appendix D.

## EXISTING PLUS PROJECT

The intersection Levels of Service for Existing Plus Project conditions are shown in Table 4. As shown in Table 4, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Phase 1 and Phase 2 Existing Plus Project conditions, except for the following study intersections that are forecast to continue operating at Level of Service E to F during the peak hours:

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hours - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F, PM Peak Hour - LOS E (Phase 2 only))

Based upon closer evaluation presented in the following "Other Considerations" section, the proposed project is forecast to result in minimal operational deficiencies during the peak hours for Existing Plus Project Phase 1 conditions. With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for Existing Plus Project Phase 2 conditions during the AM and PM peak hours.

## EXISTING PLUS AMBIENT

The intersection Levels of Service for Existing Plus Ambient conditions are shown in Table 5. As shown in Table 5, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Existing Plus Ambient conditions, except for the following study intersections that are forecast to operate at Level of Service E to F during the peak hours:

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hours - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F)

With installation of traffic signals or roundabouts at the I-10/County Line Road freeway interchange, the study intersections are forecast to operate within acceptable Levels of Service for Existing Plus Ambient conditions during the AM and PM peak hours.

## EXISTING PLUS AMBIENT PLUS PROJECT

The intersection Levels of Service for Existing Plus Ambient Plus Project conditions are shown in Table 6. As shown in Table 6, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Phase 1 and Phase 2 Existing Plus Ambient Plus Project conditions, except for the following study intersections that are forecast to continue operating at Level of Service E to F during the peak hours:

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hours - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM Peak Hour - LOS F, PM Peak Hour - LOS E (Phase 2 only))

Based upon closer evaluation presented in the following "Other Considerations" section, the proposed project is forecast to result in minimal operational deficiencies during the peak hours for Existing Plus Ambient Plus Project Phase 1 conditions. With installation of traffic signals or roundabouts at the I-10/County Line Road
freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for Existing Plus Ambient Plus Project Phase 2 conditions during the AM and PM peak hours.

## EXISTING PLUS AMBIENT PLUS PROJECT PLUS CUMULATIVE

The intersection Levels of Service for Existing Plus Ambient Plus Project Plus Cumulative conditions are shown in Table 7. As shown in Table 7, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Phase 1 and Phase 2 Existing Plus Ambient Plus Project Plus Cumulative conditions, except for the following study intersections that are forecast to continue operating at Level of Service E to F during the peak hours:

- I-10 Southbound Ramps at County Line Road - \#6 (AM \& PM peak hour - LOS F)
- I-10 Northbound Ramps at County Line Avenue - \#7 (AM \& PM peak hours - LOS F)

With installation of traffic signals or roundabouts at the l-10/County Line Road freeway interchange, the proposed project is forecast to result in no operational traffic deficiencies at the study intersections for both Phase 1 and Phase 2 Existing Plus Ambient Plus Project Plus Cumulative conditions during the AM and PM peak hours.

## OPERATIONAL IMPROVEMENTS

The following improvements are necessary to be physically constructed prior to project Phase 2 opening:

- I-10 Southbound Ramps (NS) at County Line Road (EW) - \#6
- Install a traffic signal
- I-10 Northbound Ramps (NS) at County Line Avenue (EW) - \#7
- Install a traffic signal

The City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at both of these ramp intersection locations. The anticipated installation of these roundabouts is Year 2026. Traffic signal installation would be an interim measure until the roundabouts are constructed, with feasibility and necessity to be determined by the City of Calimesa and Caltrans. Traffic signal installation as an interim improvement would be a condition of approval to reduce project impacts for Phase 2. A fair share analysis has been prepared for these improvements.

The I-10/County Line Road interchange is identified as a Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) location in the City of Calimesa. Appendix F contains these improvements. All identified intersection improvements have the funding mechanism of TUMF. As mitigation for the potential traffic impacts, the proposed project shall contribute through the adopted traffic impact fee program for the ultimate improvements for this interchange.

## I-10/COUNTY LINE ROAD FREEWAY INTERCHANGE DESIGN

The roundabout design used in this analysis is the Phase 3B Roundabout Design Alternative from the Mesa Verde Estates Focused Traffic Study, prepared by Urban Crossroads (October 10, 2016). It is the design alternative shown on the site plan.

Table 4
Existing Plus Project Intersection Levels of Service - Phase 1

(1) Caltrans = California Department of Transportation
(2) CSS = Cross Street Stop; TS = Traffic Signal; RB = Roundabout
(3) Delay is shown in seconds/vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).
(4) LOS = Level of Service

## 7. OTHER CONSIDERATIONS

## QUEUING ANALYSIS

A turn pocket queuing analysis has been conducted along County Line Road for Existing Plus Ambient Plus Project Plus Cumulative conditions at the request of the City of Calimesa Public Works Department. To provide a conservative estimate, the 95th percentile queue was used to calculate required storage lengths.

Typically when an exclusive left turn lane is required, a minimum of 2 passenger cars should be provided at 25 feet per vehicle ( 50 feet minimum storage length). Where possible, the recommended minimum pocket length used on roadways should be 100 feet where the speed is 30 miles per hour and 150 feet for arterials with speeds of 40 miles per hour or more. The recommended maximum single turn storage length shall be 300 feet; therefore, dual left turn lanes should be used when over 300 feet of storage is required or when necessary to provide acceptable levels of service at the intersection. For local streets and driveways, smaller storage lengths are permitted when volumes permit.

Table 8 summarizes results of the queuing analyses for left-turn movements conducted at the study area intersections along County Line Road. The values represent the projected queue length necessary for satisfactory operations. It is recommended that the ultimate turn bay length exceed the projected queue length. The queuing analysis reports are based on the 95th percentile queue length conducted as part of the VISTRO analysis (see Appendix D). As shown in Table 8, there will be adequate storage lengths for the left turn vehicles.

## PASSENGER CAR EQUIVALENT

A passenger car equivalent (PCE) is a metric to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars. In consultation with City of Calimesa staff, the passenger car equivalent for a RV using the RV fueling facility would be 3.0. Thus, each trip generated by the RV fueling facility would be equivalent to 3 passenger cars.

However, it is important to note that the trip generation used in this report for the RV fueling facility is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a RV fueling facility In reality, the proposed RV fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

For these reasons, the passenger car equivalent of 3.0 was not applied to the trip generation for the RV fueling facility.

## I-10/COUNTY LINE ROAD FREEWAY INTERCHANGE INTERIM TRAFFIC SIGNALIZATION

The purpose of this section is to demonstrate that Phase 1 of the proposed project (addition of three RV fueling positions to the existing gas station) would result in negligible impacts to the I-10/County Line Avenue freeway interchange.

## Caltrans Planned Interchange Improvements

Since the City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at the I-10/County Line Road freeway interchange by Year 2026. The operational improvements for
temporary traffic signals at the interchange would still apply should Phase 2 of the project proceed prior to completion of the ultimate buildout design of the freeway interchange.

## Phase 1 Trip Generation

As shown in Table 2, Phase 1 of the proposed project is forecast to generate a total of approximately 516 daily trips, including 30 trips during the AM peak hour and 42 trips during the PM peak hour.

It is important to note this is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not current provide trip generation rates for a RV fueling facility In reality, the proposed RV fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for passby trips.

The location of this RV fueling facility comparative to the density of nearby residential uses, and general supply of RV's combined with the market demand for fueling due to usage rates, the project applicant anticipates that a dozen or less daily vehicle trips will be made at this facility. The average fueling time spent at the facility for a RV is also multiple times longer than for typical automobiles at a standard gas station.

Thus, the daily trip generation utilized in this analysis may be around 43 times greater than what this land use will experience. The AM and PM peak hour trip generation is expected to be between $0-2$ vehicle trips based on daily vehicle trip expectations from the project applicant. To provide a conservative analysis, the Project Phase 1 trip generation is based on standard ITE rates for passenger vehicle fueling positions.

## Phase 1 Traffic Study Exemption

According to the Riverside County Transportation Department Traffic Impact Analysis Preparation Guide (2008), provides traffic study exemptions in Exhibit A. Exemption 10 states: "Any use which can demonstrate, based on the most recent edition of the Trip Generation Report published by the Institute of Transportation Engineers (ITE) or other approved trip generation data, trip generation of less than 100 vehicle trips during the peak hours.

Thus, Phase 1 of the proposed project is generally considered to have a negligible impact and would typically be exempt from preparation a traffic impact analysis based on Riverside County traffic study guidelines as adopted for use by the City of Calimesa.

## Existing and Existing Plus Project Phase 1 Level of Service

Table 9 shows detailed Level of Service operations for the currently deficient intersections at the l-10 Freeway Ramps and County Line Road interchange for Existing Plus Project Phase 1 conditions. It should be noted that delay increases exponentially as an intersection approach capacity based on equations from the Highway Capacity Manual delay methodology. Therefore, relatively minor changes in traffic volume can result in disproportionate changes in delay that may not necessarily be representative of actual conditions.

For example, the intersection of I-10 Southbound Ramps at County Line Road has an existing delay of 1,074.9 seconds per vehicle during the AM peak hour. This delay is for the critical movement, which is the 213 southbound left turning movements. Therefore, the HCM methodology calculates that the average delay for each of these 213 southbound left turning movements is almost 18 minutes per vehicle. Since the HCM methodology does not take into account the effect of vehicular platooning on acceptable gaps that can occur as a result of signalized upstream intersections, the computed average delay is much greater than what realistically occurs during typical operations in this particular case.

The intersection of I-10 Southbound Ramps at County Line Road is currently operating at Level of Service F during the AM and PM peak hours and is forecast to continue doing so with the addition of project Phase 1 trips. Although the existing Level of Service F is forecast to worsen in terms of delay during the AM and PM peak hours, the project adds zero trips to the critical southbound left turn movement and no more than eight (8) trips to the overall southbound approach during the peak hours at this intersection.

The intersection of I-10 Northbound Ramps at County Line Road is currently operating at LOS F during the AM peak hour and LOS D during the PM peak hour based on the worst individual movement and is forecast to continue doing so with the addition of project Phase 1 trips. Although the existing LOS F is forecast to worsen in terms of delay during the AM peak hour, the project only adds four (4) trips to the critical northbound left turn movement and overall northbound approach during the AM peak hour at this intersection. The critical northbound left turn movement goes from 1 trip during the AM peak hour to 5 trips (approximately 1 vehicle every 12 minutes); an increase in the volume of trips of this amount would not generally be noticeable to roadway users. The intersection operates at LOS D or better during the PM peak hour.

## Conclusion

In summary, the Level of Service deficiencies at the intersections I-10 Southbound Ramps at County Line Road and I-10 Northbound Ramps at County Line Road are existing deficiencies that are marginally impacted by the project. The addition of a relatively minor number of new trips associated with project Phase 1 is not forecast to change the Levels of Service. Since Phase 1 of the proposed is not expected to result in appreciable changes to actual operations of the currently deficient study intersections, the project Phase 1 is forecast to result in a minimal operational traffic impact.

The improvements for installation of temporary traffic signals at the $1-10 /$ County Line Road freeway interchange would still apply should Phase 2 of the project proceed prior to completion of the ultimate buildout design of the freeway interchange.

## 8. CONCLUSIONS

## PROJECT DESIGN FEATURES

The proposed project shall construct the following improvements to provide project site access:

## Coffee Shop Access (NS) at County Line Lane (EW) - \#2

- Construct the project driveway to provide one inbound lane and one outbound lane with northbound stop-control.
- The existing eastbound lane on County Line Lane will be widened and allow shared through/right turn movements.
- The existing westbound lane on County Line Lane will be widened and allow shared through/left turn movements.
- The new northbound lane at the Coffee Shop Access will allow shared left/right turn movements.

## RV Access (NS) at County Line Lane (EW) - \#3

- Construct the project driveway to provide one inbound lane and one outbound lane with northbound stop-control.
- The existing eastbound lane on County Line Lane will be widened and allow shared through/right turn movements.
- The existing westbound lane on County Line Lane will be widened and allow shared through/left turn movements.
- The new northbound lane at the RV Access will allow shared left/right turn movements.

## Coffee Shop/RV Access (NS) at County Line Road (EW) - \#4

- Construct the project driveway to provide one inbound lane.
- The existing westbound lane on County Line Road will allow shared through/right turn movements.
- The Coffee Shop/RV Access will be restricted to right turns in only with no egress.

## LEVEL OF SERVICE ANALYSIS SUMMARY

Table 10 shows a summary of the intersection Level of Service analysis for the scenarios evaluated.

## REQUIREMENTS FOR IMPROVEMENTS

The following improvements are necessary to be physically constructed prior to project Phase 2 opening:

- I-10 Southbound Ramps (NS) at County Line Road (EW) - \#6
- Install a traffic signal
- I-10 Northbound Ramps (NS) at County Line Avenue (EW) - \#7
- Install a traffic signal

The City of Calimesa and California Department of Transportation (Caltrans) plan to install roundabouts at both of these ramp intersection locations. The anticipated installation of these roundabouts is Year 2026. Traffic signal installation would be an interim measure until the roundabouts are constructed, with feasibility and necessity to be determined by the City of Calimesa and Caltrans. Traffic signal installation as an interim improvement would be a condition of approval to reduce project impacts for Phase 2. A fair share analysis has been prepared for these improvements.

The I-10/County Line Road interchange is identified as a Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) location in the City of Calimesa. As mitigation for
the potential traffic impacts, the proposed project shall contribute through the adopted traffic impact fee program for the ultimate improvements for this interchange.

## PROJECT FAIR SHARE CONTRIBUTION

The project fair share contributions have been calculated for the improvement location. The project fair share contribution is based on the proportion of project peak hour intersection turning movement volumes contributed to the improvement location relative to the total new peak hour intersection turning movement volumes forecast for Existing Plus Ambient Plus Project Plus Cumulative conditions.

Table 11 presents a summary of improvement cost and project cost shares at the Existing Plus Ambient Plus Project Plus Cumulative study intersection improvement locations. The intersection fair share cost calculations are typically based on the higher of the weekday morning and weekday evening peak hour traffic volumes. As shown in Table 11, the project's fair share percentages of identified impacted intersections are approximately $8.0 \%$ to $13.0 \%$ for Phase 1 , and approximately $31.9 \%$ to $58.1 \%$ for Phase 2 . The fair share calculations are intended only for the discussion purposes of this traffic impact analysis, and do not imply any legal responsibility or formula for contributions or mitigation.

The I-10/County Line Road interchange is identified as a Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) location in the City of Calimesa. Appendix F contains these improvements. All identified intersection improvements have the funding mechanism of TUMF. As mitigation for the potential traffic impacts, the proposed project shall contribute through the adopted traffic impact fee program for the ultimate improvements for this interchange.

## VEHICLE MILES TRAVELED (VMT) ANALYSIS

Appendix G contains a VMT analysis for the proposed development.

## GENERAL RECOMMENDATIONS

Site-specific circulation and access recommendations are depicted on Figure 49.
All roadway design, traffic signing and striping, and traffic control improvements relating to the proposed project should be constructed in accordance with applicable engineering standards and to the satisfaction of the City of Calimesa Public Works Department.

Site-adjacent roadways should be constructed or repaired at their ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Calimesa Public Works Department.

On-site traffic signing and striping plans should be submitted for City of Calimesa approval in conjunction with detailed construction plans for the project.

Off-street parking should be provided to meet City of Calimesa Municipal Code requirements.
On-street parking on County Line Road will be prohibited.
The final grading, landscaping, and street improvement plans should demonstrate that sight distance standards are met in accordance with applicable City of Calimesa/California Department of Transportation sight distance standards.

As is the case for any roadway design, the City of Calimesa should periodically review traffic operations in the vicinity of the project once the project is constructed to assure that the traffic operations are satisfactory.

| 7. -10 NB Ramps at County Line Avenue | Install traffic signa\| ${ }^{2}$ | \$ 600,000 | \$ | 280,292 |
| Total |  | \$ 1,200,000 | \$ | 628,888 |

Notes:
(1) Roundabout improvements included within the current Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) improvement list.
(2) Cost estimate based on values from the County of San Bernardino Congestion Management Program (2003 Update), and adjusted by the City of Calimesa. Cost estimates are sensitive to the quantity and location of work specified for a given installation. These values represent the relative magnitude of the cost and should be verified through the bidding process. Additional costs may be required for Caltrans encroachment permit processes.

All roadway design, traffic signing and striping, and traffic control improvements relating to the proposed project should be constructed in accordance with applicable engineering standards and to the satisfaction of the City of Calimesa Public Works Department.

Site-adjacent roadways should be constructed or repaired at their ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Calimesa Public Works Department.

On-site traffic signing and striping plans should be submitted for City of Calimesa approval in conjunction with detailed construction plans for the project.

Off-street parking should be provided to meet City of Calimesa Municipal Code requirements.
On-street parking on County Line Road will be prohibited.
The final grading, landscaping, and street improvement plans should demonstrate that sight distance standards are met in accordance with applicable City of Calimesa/California Department of Transportation sight distance standards.

As is the case for any roadway design, the City of Calimesa should periodically review traffic operations in the vicinity of the project once the project is constructed to assure that the traffic operations are satisfactory.

GLOSSARY

# GLOSSARY OF TERMS 

## ACRONYMS

| AC | Acres |
| :--- | :--- |
| ADT | Average Daily Traffic |
| Caltrans | California Department of Transportation |
| DU | Dwelling Unit |
| ICU | Intersection Capacity Utilization |
| LOS | Level of Service |
| TSF | Thousand Square Feet |
| V/C | Volume/Capacity |
| VMT | Vehicle Miles Traveled |
|  |  |
| TERMS |  |

AVERAGE DAILY TRAFFIC: The average 24 -hour volume for a stated period divided by the number of days in that period. For example, Annual Average Daily Traffic is the total volume during a year divided by 365 days.

BANDWIDTH: The number of seconds of green time available for through traffic in a signal progression.
BOTTLENECK: A point of constriction along a roadway that limits the amount of traffic that can proceed downstream from its location.

CAPACITY: The maximum number of vehicles that can be reasonably expected to pass over a given section of a lane or a roadway in a given time period.

CHANNELIZATION: The separation or regulation of conflicting traffic movements into definite paths of travel by the use of pavement markings, raised islands, or other suitable means to facilitate the safe and orderly movements of both vehicles and pedestrians.

CLEARANCE INTERVAL: Nearly same as yellow time. If there is an all red interval after the end of a yellow, then that is also added into the clearance interval.

CONTROL DELAY: The component of delay, typically expressed in seconds per vehicle, resulting from the type of traffic control at an intersection. Control delay is measured by comparison with the uncontrolled condition; it includes delay incurred by slowing down, stopping/waiting, and speeding up.

CORDON: An imaginary line around an area across which vehicles, persons, or other items are counted (in and out).

CORNER SIGHT DISTANCE: The minimum sight distance required by the driver of a vehicle to cross or enter the lanes of the major roadway without requiring approaching traffic travelling at a given speed to radically alter their speed or trajectory. Corner sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 36 inches above the pavement in the center of the nearest approach lane.

CYCLE LENGTH: The time period in seconds required for a traffic signal to complete one full cycle of indications.

CUL-DE-SAC: A local street open at one end only and with special provisions for turning around.

DAILY CAPACITY: A theoretical value representing the daily traffic volume that will typically result in a peak hour volume equal to the capacity of the roadway.

DELAY: The time consumed while traffic is impeded in its movement by some element over which it has no control, usually expressed in seconds per vehicle.

DEMAND RESPONSIVE SIGNAL: Same as traffic-actuated signal.
DENSITY: The number of vehicles occupying in a unit length of the through traffic lanes of a roadway at any given instant. Usually expressed in vehicles per mile.

DETECTOR: A device that responds to a physical stimulus and transmits a resulting impulse to the signal controller.

DESIGN SPEED: A speed selected for purposes of design. Features of a highway, such as curvature, superelevation, and sight distance (upon which the safe operation of vehicles is dependent) are correlated to design speed.

DIRECTIONAL SPLIT: The percent of traffic in the peak direction at any point in time.
DIVERSION: The rerouting of peak hour traffic to avoid congestion.
FORCED FLOW: Opposite of free flow.
FREE FLOW: Volumes are well below capacity. Vehicles can maneuver freely and travel is unimpeded by other traffic.

GAP: Time or distance between successive vehicles in a traffic stream, rear bumper to front bumper.
HEADWAY: Time or distance spacing between successive vehicles in a traffic stream, front bumper to front bumper.

INTERCONNECTED SIGNAL SYSTEM: A number of intersections that are connected to achieve signal progression.

LEVEL OF SERVICE: A qualitative measure of a number of factors, which include speed and travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience, and operating costs.

LOOP DETECTOR: A vehicle detector consisting of a loop of wire embedded in the roadway, energized by alternating current and producing an output circuit closure when passed over by a vehicle.

MINIMUM ACCEPTABLE GAP: Smallest time headway between successive vehicles in a traffic stream into which another vehicle is willing and able to cross or merge.

MULTI-MODAL: More than one mode; such as automobile, bus transit, rail rapid transit, and bicycle transportation modes.

OFFSET: The time interval in seconds between the beginning of green at one intersection and the beginning of green at an adjacent intersection.

PLATOON: A closely grouped component of traffic that is composed of several vehicles moving, or standing ready to move, with clear spaces ahead and behind.

PASSENGER CAR EQUIVALENT (PCE): A metric used to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars.

PEAK HOUR: The 60 consecutive minutes with the highest number of vehicles.
PRETIMED SIGNAL: A type of traffic signal that directs traffic to stop and go on a predetermined time schedule without regard to traffic conditions. Also, fixed time signal.

PROGRESSION: A term used to describe the progressive movement of traffic through several signalized intersections.

QUEUE: The number of vehicles waiting at a service area such as a traffic signal, stop sign, or access gate.
QUEUE LENGTH: The length of vehicle queue, typically expressed in feet, waiting at a service area such as a traffic signal, stop sign, or access gate.

SCREEN-LINE: An imaginary line or physical feature across which all trips are counted, normally to verify the validity of mathematical traffic models.

SHARED/RECIPROCAL PARKING AGREEMENT: A written binding document executed between property owners to provide a designated number of off-street parking stalls within a designated area to be available for specified businesses or land uses.

SIGHT DISTANCE: The continuous length of roadway visible to a driver or roadway user.
SIGNAL CYCLE: The time period in seconds required for one complete sequence of signal indications.
SIGNAL PHASE: The part of the signal cycle allocated to one or more traffic movements.
STACKING DISTANCE: The length of area available behind a service area, such as a traffic signal or gate, for vehicle queueing to occur.

STARTING DELAY: The delay experienced in initiating the movement of queued traffic from a stop to an average running speed through an intersection.

STOPPING SIGHT DISTANCE: The minimum distance required by the driver of a vehicle on the major roadway travelling at a given speed to bring the vehicle to a stop after an object on the road becomes visible. Stopping sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 6 inches above the pavement.

TRAFFIC-ACTUATED SIGNAL: A type of traffic signal that directs traffic to stop and go in accordance with the demands of traffic, as registered by the actuation of detectors.

TRIP: The movement of a person or vehicle from one location (origin) to another (destination). For example, from home to store to home is two trips, not one.

TRIP-END: One end of a trip at either the origin or destination (i.e., each trip has two trip-ends). A trip-end occurs when a person, object, or message is transferred to or from a vehicle.

TRIP GENERATION RATE: The quantity of trips produced and/or attracted by a specific land use stated in terms of units such as per dwelling, per acre, and per 1,000 square feet of floor space.

TRUCK: A vehicle having dual tires on one or more axles, or having more than two axles.

TURNING RADIUS: The circular arc formed by the smallest turning path radius of the front outside tire of a vehicle, such as that performed by a U-turn maneuver. This is based on the length and width of the wheel base as well as the steering mechanism of the vehicle.

UNBALANCED FLOW: Heavier traffic flow in one direction than the other. On a daily basis, most facilities have balanced flow. During the peak hours, flow is seldom balanced in an urban area.

VEHICLE MILES OF TRAVEL: A measure of the amount of usage of a section of highway, obtained by multiplying the average daily traffic by length of facility in miles.

## FW: 7th St \& County Line Road RV Fueling \& Retail Project

Bryan Crawford [bryan@ganddini.com](mailto:bryan@ganddini.com)
Wed, Sep 25, 2019 at 11:58 AM
To: Lori Askew [laskew@cityofcalimesa.net](mailto:laskew@cityofcalimesa.net)

Lori,
Attached is the revised scoping agreement based on the comments from Monae Pugh. The project applicant has determined that they would rather keep the existing driveway configuration on County Line Road with those project accesses being restricted to right turns in only. All egress will be to County Line Lane. The trip distribution figures have been updated to reflect this as well as northbound traffic included on County Line Lane for Year 2023. Site plans have been revised based on Monae's comments. Monae had a question regarding a retail component. The 3,000 square foot building has been analyzed as a coffee shop even though the site plan says "coffee shop/retail" . This building is anticipated to be either a coffee shop or fast-food restaurant. In consultation with the project applicant, we are using the land use with the highest trip generation rates as to provide for a conservative analysis.

Thank you.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | County Line Ln (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 0.002 | 8.8 | A |
| 5 | 7th PI (NS) at County Line Rd <br> (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.005 | 12.4 | B |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 3.123 | $1,074.9$ | F |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.013 | 51.8 | F |
| 8 | Calimesa Blvd (NS) at County <br> Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Left | 0.501 | 12.9 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | County Line Ln (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 0.005 | 8.8 | A |
| 5 | 7th PI (NS) at County Line Rd <br> (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.003 | 9.7 | A |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 1.552 | 306.7 | F |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | NB Thru | 0.005 | 29.5 | D |
| 8 | Calimesa Blvd (NS) at County <br> Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Left | 0.544 | 12.3 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.686 | 13.6 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.659 | 6.8 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.583 | 17.5 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.513 | 9.8 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 5.8 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 7.4 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 5.1 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | NB Right |  | 5.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | l-10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.791 | 16.8 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.680 | 7.9 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.612 | 17.1 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.539 | 10.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | County Line Ln (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | SB Left | 0.002 | 8.8 | A |
| 5 | 7th PI (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | NB Left | 0.005 | 12.6 | B |
| 6 | I-10 SB Ramps (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | SB Left | 3.644 | 1,319.2 | F |
| 7 | I-10 NB Ramps (NS) at County Line Ave (EW) | Two-way stop | HCM 6th Edition | NB Left | 0.014 | 57.4 | F |
| 8 | Calimesa Blvd (NS) at County Line Ave (EW) | Signalized | HCM 6th Edition | NB Left | 0.521 | 13.2 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | County Line Ln (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | SB Left | 0.005 | 8.9 | A |
| 5 | 7th PI (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | NB Left | 0.003 | 9.7 | A |
| 6 | I-10 SB Ramps (NS) at County Line Ave (EW) | Two-way stop | HCM 6th Edition | SB Left | 1.694 | 370.0 | F |
| 7 | I-10 NB Ramps (NS) at County Line Rd (EW) | Two-way stop | HCM 6th Edition | NB Thru | 0.005 | 31.8 | D |
| 8 | Calimesa Blvd (NS) at County Line Ave (EW) | Signalized | HCM 6th Edition | NB Left | 0.565 | 12.6 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.704 | 14.0 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.681 | 7.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.596 | 17.7 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.527 | 9.9 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | -10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 6.0 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 7.6 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | County Line Ln (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 0.036 | 9.0 | A |
| 2 | Coffee Shop Access (NS) at <br> County Line Ln (EW) | Two-way stop | HCM 6th <br> Edition | WB Thru | 0.000 | 0.0 | A |
| 3 | RV Access (NS) at County <br> Line Ln (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.022 | 8.6 | A |
| 4 | Coffee Shop/RV Access (NS) <br> at County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | EB Thru | 0.000 | 0.0 | A |
| 5 | 7 th PI (NS) at County Line Rd <br> (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.004 | 10.0 | B |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 1.780 | 412.7 | F |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | NB Thru | 0.006 | 34.1 | D |
| 8 | Calimesa Blvd (NS) at County <br> Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Left | 0.568 | 12.7 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.718 | 14.3 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.685 | 7.2 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.606 | 17.6 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.534 | 10.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Level Of Service Report

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 6.0 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 7.8 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 5.2 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | NB Right |  | 5.2 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.826 | 18.3 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.706 | 8.3 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Level Of Service Report

Intersection 6: I-10 SB Ramps (NS) at County Line Rd (EW)

Control Type: Analysis Method: Analysis Period:

Signalized
HCM 6th Edition 15 minutes

Delay (sec / veh):
18.3

Level Of Service:
Volume to Capacity (v/c):

B
0.826

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.635 | 17.3 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.559 | 10.2 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 6.5 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 9.1 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## 7th Street \& County Line Road RV Fueling

Vistro File: C:I....IAME.vistro
Scenario 12 Existing Plus Ambient Growth Plus Project Plus Cumulative AM Peak Hour - With Improvements (TS)
Report File: C:I...IAMEAPCI-TS.pdf

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.823 | 18.3 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.740 | 8.9 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Version 6.00-03 Scenario 12: 12 Existing Plus Ambient Growth Plus Project Plus Cumulative AM Peak Hour - With Improvements (TS)

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.688 | 17.9 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.598 | 11.0 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 6.5 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 9.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Version 6.00-03 Scenario 13: 13 Existing Plus Ambient Growth Plus Project Plus Cumulative AM Peak Hour - With Improvements (RB)

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 5.6 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | NB Right |  | 5.8 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

| 4 | Coffee Shop/RV Access (NS) <br> at County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | EB Thru | 0.001 | 0.0 | A |
| 5 | 7 th PI (NS) at County Line Rd <br> (EW) | Two-way stop | HCM 6th <br> Edition | NB Left | 0.039 | 12.6 | B |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Two-way stop | HCM 6th <br> Edition | SB Left | 2.835 | 921.2 | F |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Two-way stop | HCM 6th <br> Edition | NB Thru | 0.009 | 93.8 | F |
| 8 | Calimesa Blvd (NS) at County <br> Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Left | 0.628 | 13.7 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | WB Left | 0.942 | 28.0 | C |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.761 | 10.3 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Ave (EW) | Signalized | HCM 6th <br> Edition | SB Left | 0.720 | 18.2 | B |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Signalized | HCM 6th <br> Edition | NB Right | 0.623 | 11.4 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Version 6.00-03 Scenario 12: 12 Existing Plus Ambient Growth Plus Project Plus Cumulative PM Peak Hour - With Improvements (TS)

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | I-10 SB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 7.1 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | WB Right |  | 10.8 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Version 6.00-03 Scenario 13: 13 Existing Plus Ambient Growth Plus Project Plus Cumulative AM Peak Hour - With Improvements (RB)

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | --10 SB Ramps (NS) at <br> County Line Ave (EW) | Roundabout | HCM 6th <br> Edition | EB Thru |  | 5.8 | A |
| 7 | I-10 NB Ramps (NS) at <br> County Line Rd (EW) | Roundabout | HCM 6th <br> Edition | NB Right |  | 6.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## APPENDIX E

## TRAFFIC SIGNAL WARRANT WORKSHEETS

## PEAK HOUR VOLUME WARRANT (Rural Areas)

## Existing

Major Street Name $=\mathbf{I - 1 0}$ SB Ramps

Minor Street Name = County Line Road

Total of Both Approaches (VPH) = 499
Number of Approach Lanes Major Street $=\mathbf{1}$

High Volume Approach (VPH) = 305 Number of Approach Lanes Minor Street $=1$

WARRANTED FOR A SIGNAL

Major Street Approaches
** NOTE:
100 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACH WITH TWO OR MORE LANES AND 75 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACHING WITH ONE LANE.

# PEAK HOUR VOLUME WARRANT (Rural Areas) 

## Existing

Major Street Name = County Line Avenue $\quad$ Total of Both Approaches (VPH) = 1099 Number of Approach Lanes Major Street = 2

Minor Street Name $=\mathbf{I - 1 0}$ NB Ramps
High Volume Approach (VPH) = 270 Number of Approach Lanes Minor Street $=\mathbf{1}$

## WARRANTED FOR A SIGNAL

Major Street Approaches
** NOTE:
100 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACH WITH TWO OR MORE LANES AND 75 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACHING WITH ONE LANE.

## APPENDIX F

TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) IMPROVEMENT NETWORK

## APPENDIX G

## VEHICLES MILES TRAVELED ANALYSIS

## Background

California Senate Bill 743 (SB 743) directs the State Office of Planning and Research (OPR) to amend the California Environmental Quality Act (CEQA) Guidelines for evaluating transportation impacts to provide alternatives to Level of Service that "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." In December 2018, the California Natural Resources Agency certified and adopted the updated CEQA Guidelines package. The amended CEQA Guidelines, specifically Section 15064.3, recommend the use of Vehicle Miles Travelled (VMT) as the primary metric for the evaluation of transportation impacts associated with land use and transportation projects. In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. Agencies may currently opt-in to applying the updated CEQA guidelines for VMT analysis and implementation is required State-wide by July 1, 2020.

The updated CEQA Guidelines allow for lead agency discretion in establishing methodologies and thresholds provided there is substantial evidence to demonstrate that the established procedures promote the intended goals of the legislation. Where quantitative models or methods are unavailable, Section 15064.3 allows agencies to assess VMT qualitatively using factors such as availability of transit and proximity to other destinations. The Technical Advisory on Evaluating Transportation Impacts in CEQA (State of California, December 2018) ["Technical Advisory"] provides technical considerations regarding methodologies and thresholds with a focus on office, residential, and retail developments as these projects tend to have the greatest influence on VMT.

## VMT Assessment and Screening

The project VMT assessment has been performed in accordance with the Final City of Calimesa Transportation Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (May 2020).

The City of Calimesa guidelines state that the following activities generally will not require detailed VMT analysis based on substantial evidence provided in the OPR Technical Advisory supporting SB 743 implementation or is related to projects that are local serving which, by definition, would decrease the number of trips or the distance those trips travel to access the development (and are therefore VMT reducing projects):

- Projects located in a Transit Priority Areas (TPA) (as defined in the City guidelines)
- Projects located in a low-VMT generating area (as defined later in the City guidelines)
- Local serving K-12 schools
- Local parks
- Day care centers
- Local-serving gas stations
- Local-serving banks
- Local-serving hotels (e.g. non-destination hotels)
- Student housing projects
- Local-serving medical facilities
- Local serving community colleges that are consistent with the assumptions noted in the RTP/SCS
- Projects generating less than 110 daily vehicle trips. This generally corresponds to the following "typical" development potentials:
- 11 single family housing units
- 16 multi-family, condominiums, or townhouse housing units
- 10,000 square feet of office
- 15,000 square feet of light industrial
- 63,000 square feet of warehousing
- 79,000 square feet of high-cube transload and short-term storage warehouse

The Technical Advisory contains guidance indicating that local-serving retail, defined as less than 50,000 square feet, would typically shorten trips and reduce VMT. New retail development typically redistributes shopping trips rather than creating new trips. By adding retail opportunities into the urban fabric and thereby improving proximity, local-serving retail tends to shorten trips and reduce VMT.

## Presumption of Less Than Significant VMT Impact for Local Serving Retail Projects

The proposed project anticipated to have similar VMT characteristics as local-serving retail and gas stations since the total project is less than 50,000 square feet and the proposed RV fueling amenities are an addition to the adjacent local-serving gasoline station. Furthermore, the proposed RV fueling pumps and coffee/donut shop at the project site would introduce a new opportunity for such services in the community and thereby shorten the distance that patrons would otherwise travel to other similar uses. Therefore, the proposed project meets the screening criteria from the City of Calimesa and the Technical Advisory for presumption of less than significant VMT impact for local-serving gas station and retail uses.
