# NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION AND NOTICE OF PUBLIC HEARING EL DORADO IRRIGATION DISTRICT RESERVOIRS 2 AND 2A RECOATING PROJECT

The El Dorado Irrigation District (EID) proposes to adopt a Mitigated Negative Declaration (MND) pursuant to the California Environmental Quality Act (CEQA) (Section 15000 et seq., Title 14, California Code of Regulations) for the Reservoirs 2 and 2A Recoating Project (proposed Project). The proposed Project would rehabilitate the deteriorating interior and fading exterior surfaces of the existing Reservoir 2 and 2A water storage tanks as required in accordance with California Department of Health regulations. The approximately 9-acre project site is located south of U.S. Highway 50, on EID owned land along a private drive east of Snows Road approximately 950 feet north of the intersection with Bellwood Drive, in the Camino Community Region of El Dorado County.

The project would rehabilitate the deteriorating interior and fading exterior surfaces of the existing Reservoir 2 and 2A water storage tanks. The painted surfaces of both tanks are approximately 16-years old and the interior and exterior surfaces are in need of recoating to ensure compliance with California Department of Public Health standards and regulations to provide a safe and reliable potable water supply. The recoating process would require the use of air compressors, media blasters, generators, truck and material handling equipment. Structural repairs to interior of the tanks would be incorporated as needed based on interior inspection once the tanks are empty. The project is expected to begin in August 2020 and be completed in approximately 2-years. Work activities will be dependent on when weather conditions allow application of coatings. The project site is not identified on the lists specified in Government Code section 65962.5.

EID is the lead agency under CEQA for the proposed Project and has prepared an Initial Study (IS) on the proposed Project in accordance with the requirements of CEQA, the State CEQA Guidelines, and EID's Guidelines for Implementing CEQA. The IS describes the proposed Project and assesses the proposed Project's potentially significant adverse impacts on the physical environment. It concludes that the proposed Project's potentially significant or significant adverse effects on the environment could be mitigated to less-than-significant levels; therefore, a proposed MND has been prepared.

Agencies and members of the public are invited to comment on the proposed IS/MND. The comment period is from April 28, 2020 to May 27, 2020. The proposed IS/MND can be reviewed on the EID web site at <a href="https://www.eid.org/ceqa">www.eid.org/ceqa</a>. Comments must be received by 5:00 p.m. on May 27, 2020. Comments can be sent to Michael Baron, Environmental Review Analyst, El Dorado Irrigation District, at 2890 Mosquito Road Placerville, CA 95667 or by email at <a href="mailto:mbaron@eid.org">mbaron@eid.org</a>. The EID Board of Directors will hold a public hearing to consider the IS/MND on June 8, 2020, or at a subsequent regularly scheduled board meeting. Meetings typically begin at 9:00 a.m. Please check EID's website for information regarding the meeting format: https://www.eid.org/about-us/board-of-directors/meetings-agendas-and-minutes.

In accordance with the Americans with Disabilities Act (ADA) and California law, it is the policy of the El Dorado Irrigation District to offer its public programs, services and meetings in a manner that is readily accessible to everyone, including individuals with disabilities. If you are a person with a disability and require information or materials in an appropriate alternative format; or if you require any other accommodation for this meeting, please contact the EID ADA coordinator at 530.642.4045 or email at adacoordinator@eid.org at least 72 hours prior to the meeting. Advance notification within this guideline will enable the District to make reasonable accommodations to ensure accessibility.

agriculture, U.S. Highway 50, and Elementary

school

Other Public Agencies whose approval may be required or requested (e.g., permits, financing approval, or participation agreement.):

The project would not be subject to any other

agency approvals, permits, and/or plans.

### 1. INTRODUCTION

The El Dorado Irrigation District (EID) has prepared this Initial Study/proposed Mitigated Negative Declaration (IS/MND) in compliance with the California Environmental Quality Act (CEQA) to address the potentially significant environmental impacts of the proposed Reservoir 2 and 2A Tank Recoating Project ("proposed project" or "project")

As Lead Agency, in accordance with the California Environmental Quality Act (CEQA), EID has prepared this Initial Study to support the findings and conclusions of the Mitigated Negative Declaration (MND), prepared for this project. After the required public review of this document is complete, EID will consider adopting the proposed MND and a Mitigation Monitoring and Reporting Program and will decide whether to approve the proposed project.

# 1.1 Purpose of the Initial Study

This Initial Study (IS) has been prepared in accordance with CEQA (Public Resources Code, Section 21000 et seq.) and the State CEQA Guidelines (Title 14, California Code of Regulations, Section 15000 et seq.). The purpose of this IS is to (1) determine whether project implementation would result in potentially significant or significant effects on the environment; and (2) incorporate environmental commitments into the project design and propose feasible mitigation measures, as necessary, to eliminate the project's potentially significant or significant project effects, or to reduce them to a less-than-significant level.

An IS presents environmental analysis and substantial evidence in support of its conclusions regarding the significance of environmental impacts. Substantial evidence may include expert opinion based on facts, technical studies, or reasonable assumptions based on facts. An IS is neither intended nor required to include the level of detail provided in an Environmental Impact Report.

CEQA requires the State and local government agencies to consider the environmental consequences of projects that they propose to carry out or over which they have discretionary authority, before implementing or approving those projects. The public agency that has the principal responsibility for carrying out or approving a project is the lead agency for CEQA compliance (State CEQA Guidelines, Section 15367).

EID has principal responsibility for carrying out the project, and EID is therefore the CEQA lead agency for this project. EID has prepared this IS to evaluate the potential environmental effects of the project and has incorporated mitigation measures to reduce or eliminate potentially significant project-related impacts. Therefore, an MND has been prepared for this project.

#### 1.2 Public Review Process

The proposed IS/MND is subject to a 30-day public review period (April 28, 2020 through May 27, 2020). Adoption of the IS/MND will be considered by the EID Board of Directors at a public hearing on June 08, 2020. The public is encouraged to provide written comments during the 30-day review, and/or

attend the Board of Director's hearing. Comments may be submitted to EID at mbaron@eid.org or b U.S. mail to: El Dorado Irrigation District 2890 Mosquito Road, Placerville, California 95667

This page intentionally left blank

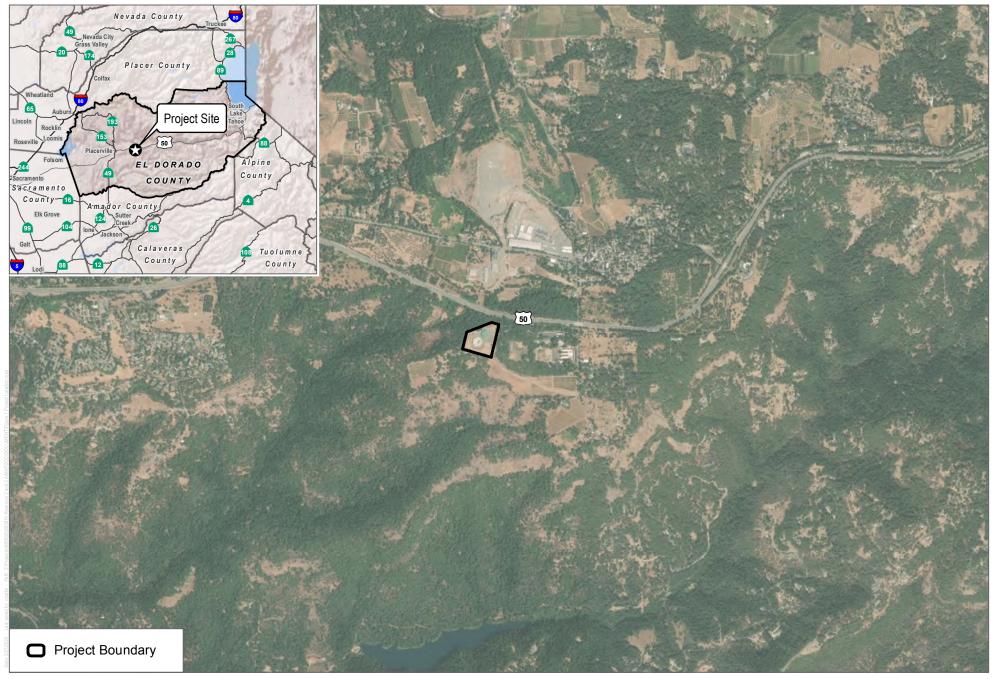

## 2. PROJECT DESCRIPTION

# 2.1 Project Context and Summary

The El Dorado Irrigation District (EID) is proposing to implement the Reservoir 2 and 2A Tank Recoating Project (project). The project would rehabilitate the deteriorating interior and fading exterior surfaces of the existing Reservoir 2 and 2A water storage tanks. The Reservoir 2 and 2A water storage tanks were originally constructed in 2003-2004 within the footprint of a former uncovered reservoir. The painted surfaces of both tanks are approximately 16-years old and the interior and exterior surfaces are in need of recoating to ensure compliance with California Department of Public Health standards and regulations to provide a safe and reliable potable water supply. Work is anticipated to begin in August 2020 and occur over 2-years. Specific temperatures and weather conditions are required to conduct the work and therefore work may be performed in 2- to 3-month increments during the duration of the project. Water services will not be interrupted during work activities, and therefore no service impacts to District customers is anticipated to occur. The equipment required to complete the work includes: sandblasting and compressor trailers, dehumidifier, portable generator, paint supply containment container, safety equipment, and personnel vehicles. All activities would occur on District owned property within a fully developed existing facility.

# 2.2 Project Location and Setting

The proposed project is located on a private drive off the east side of Snows Road approximately 950 feet north of the intersection with Bellwood Drive, in the Camino Community Region of El Dorado County. The project area is south of U.S. Highway 50 (US 50), on ElD owned land. The total project footprint encompasses approximately 8.47 acres including the staging area. The proposed project site is shown in Figure 1.

SOURCE: DigitalGlobe 2017

**DUDEK** & 0 1,000 2,000 Feet

FIGURE 1
Project Location

# 2.3 Objectives

The project has been designed to meet the following objectives:

- Comply with California Department of Public Health regulations
- Protect public health and safety and prevent corrosion damage by maintaining aging infrastructure
- Ensure a safe and reliable drinking water supply
- ▶ Ensure continued operational reliability of the EID drinking water system.

# 2.4 Project Components and Details

Reservoirs 2 and 2A are two 5.5 million gallon welded steel tanks. The tanks receive water from both Reservoir 1 and Reservoir A water treatment plants. The water in the tanks feeds both El Dorado Main #1 and #2. These mains feed water to multiple communities including Swansboro, Placerville, Coloma, Shingle Springs, Cameron Park, and El Dorado Hills. These tanks help to provide additional storage for the transmission system and allow the system to supply water at an even rate to each of the transmission systems based on the available water at Reservoir 2. Interior and exterior tank rehabilitation activities would include sand blasting and application of multiple layers of paint. Work may also include replacement of interior rafters or center support depending on a condition assessment after sand blasting is completed. Project activities will not require ground disturbance activities or necessitate the removal of trees. The new exterior tank color will be tan to ensure long-term performance of the coating and the new internal coating will help to keep the interior of the tank from corroding and causing permanent damage to the welded steel. At the completion of the project the tanks will have the ability to continue providing safe drinking water to the District's customers into the future.

# 2.5 Access and Staging

Access to the project area would be through an existing gated entrance from Snows Road located between HWY 50 and the Camino Union Elementary School campus. All equipment would be staged on-site within the fenced area of the existing facility.

# 2.6 Construction Equipment

The following equipment is expected to be used during project activities:

- Personal vehicles
- Dehumidifier
- Sand blasting equipment
- Air compressors
- Portable generators
- Paint supply containment container
- ▶ Safety equipment including scaffolding, tie-offs, harnesses, and ladders.
- Welder
- Miscellaneous hand and power tools

#### 2.7 Construction Schedule

The project is expected to begin in August 2020 and be conducted in 2- to 3-month work increments lasting for a total of 2-years. Work will be dependent on weather conditions (e.g. when weather conditions allow application of coatings) and could also be impacted by unplanned service outages (e.g. Pacific Gas & Electric public safety power shutdown (PSPS). Work would be completed by a 4- to 6-person crew and typically working 12-hours per day and 7-days per week during any 2- to 3-month increment. Work activities would primarily be implemented during the normal business hours of 7 a.m. to 7 p.m.

# 2.8 Permitting and Agency Requirements

As of the preparation of this document the project would not be subject to any other agency approvals, permits, and/or plans. Although the project area is within El Dorado County, it is a special district with equal authority; therefore, ElD is exempt from the El Dorado County General Plan and Zoning Ordinance requirements. However, ElD uses the goals and policies outlined in the General Plan as a metric for analyzing impacts under CEQA and elects to implement certain goals and policies when appropriate for a project.

\_

# **Environmental Factors Potentially Affected**

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

	Aesthetics		Agriculture and Forestry Resources		Air Quality		
$\boxtimes$	Biological Resources		Cultural Resources		Geology / Soils		
	Greenhouse Gas Emissions	$\boxtimes$	Hazards and Hazardous Materials		Hydrology / Water Quality		
	Land Use / Planning		Mineral Resources	$\boxtimes$	Noise		
	Population / Housing		Public Services		Recreation		
	Transportation		Tribal Cultural Resources		Utilities / Service Systems		
$\boxtimes$	Mandatory Findings of Significance		Energy		Wildfire		
	etermination (To be c		pleted by the Lead Ager	icy)			
	I find that the proposed a NEGATIVE DECLARA		ject COULD NOT have a signific DN will be prepared.	ant et	fect on the environment, and		
X	there will not be a sign	ifica	pposed project could have a signant effect in this case because reproject proponent. A MITIGATE	evisio	ons in the project have been		
	I find that the propose ENVIRONMENTAL IMP		roject MAY have a significant e T REPORT is required.	ffect	on the environment, and an		
	I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.						
	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

El Dorado Irrigation District

# **Evaluation of Environmental Impacts**

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts. Operations and maintenance impacts of the proposed project are routine, minimal, and essentially the same as current operations and maintenance of the existing facilities. There is no potential for significant impacts to any resource category from project operations and maintenance of the existing and proposed facilities.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required. "Beneficial impacts" are also identified where appropriate to provide full disclosure of any benefits from implementing the proposed project.
- 4) "Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less-Than-Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less-than-significant level.
- 5) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 6) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 7) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 8) The explanation of each issue should identify:
  - a) the significance criteria or threshold, if any, used to evaluate each question; and
  - b) the mitigation measure identified, if any, to reduce the impact to less than significant.
  - Significance thresholds are identified for certain resources, but others are not necessary because there is clearly no impact or the question itself provides the basis for the significance threshold.

#### 2.9 Aesthetics

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
	sthetics. Except as provided in Public rces Code Section 21099, would the project:				
a)	Have a substantial adverse effect on a scenic vista?				
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				
c)	Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?				

#### 2.9.1 Environmental Setting

The project is located on EID owned property adjacent to the south side of U.S. Highway 50 (HWY 50) in the Camino community region of El Dorado County. Surrounding land uses in proximity to the project area include an elementary school, medium density residential homes, and agricultural uses. Hwy 50 is identified by Caltrans as an Officially Designated State Scenic Highway, protected for maintaining and enhancing its scenic view sheds (California Department of Transportation, 2016). The project site is predominantly screened by thick forested area along the edge of the roadway. The tanks will be recoated using a tan colored coating that will blend into the surrounding view shed.

#### 2.9.2 DISCUSSION

a) & c)

**No Impact.** No scenic vistas are on the project site. No changes in size or capacity of the water tanks or new structures are included as part of the proposed project. Using a tan coating would improve the existing visual character of the site and surrounding view shed.

b) Less than Significant Impact. As described above, the project site is adjacent to a segment of Hwy 50 that is an Officially Designated State Scenic Highway by Caltrans. The existing project site may be slightly visible from HWY 50, but due to screening from a thick forested area along the edge of the roadway, views of the site are camouflaged. No physical changes to the existing tanks would occur. Recoating the water tanks in a tan color could improve the effectiveness provided by the existing natural screening from HWY 50. No mitigation is required.

d)	<b>No Impact.</b> The p	roject does not incl	ude any new soul	rces of substantial l	ight or glare.

15

# 2.10 Agriculture and Forestry Resources

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
II.	Ag	riculture and Forestry Resources.				
	In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997, as updated) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.					
	Wo	ould the project:				
	a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				
	b)	Conflict with existing zoning for agricultural use or a Williamson Act contract?				
	c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
	d)	Result in the loss of forest land or conversion of forest land to non-forest use?				
	e)	Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?				

#### 2.10.1 Environmental Setting

The project site has historically been used as a water storage facility and not used for agricultural or timberland production.

#### 2.10.2 Discussion

a) & e)

**No Impact.** The proposed project is not located in an area identified as Prime Farmland, Farmland of Statewide Importance, or Unique Farmland.

No Impact. The project site is zoned Planned Agriculture 10-acre minimum (PA-10), which allows for agricultural uses. However, the El Dorado County General Plan has designated the site as Public Facility (PF). The project site is located within a secured area used exclusively for water storage tanks and appurtenant facilities. No parcels within or adjacent to the site are under Williamson Act contracts (El Dorado County, 2018). Therefore, the proposed project would not conflict with existing zoning for agricultural uses or a Williamson Act contract.

c) & d)

**No Impact.** According to California Public Resource Code Sections 4526, 12220(g), and 51104 (g), the Project is not located within a designated forest land, timberland, or Timberland Production Zone. The project area has not been designated as a significant forestland or timberland resource. There will be no potential for forestland development as a result of the Project.

# 2.11 Air Quality

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III.	Air	Quality.				_
	est ma ma	nere available, the significance criteria ablished by the applicable air quality anagement district or air pollution control district by be relied on to make the following derminations.				
	Wc	ould the project:				
	a)	Conflict with or obstruct implementation of the applicable air quality plan?				
	b)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?				
	c)	Expose sensitive receptors to substantial pollutant concentrations?				
	d)	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?				

#### 2.11.1 ENVIRONMENTAL SETTING

#### Federal Laws, Regulations, and Policies

The Clean Air Act is implemented by the U.S. Environmental Protection Agency (USEPA) and sets ambient air limits, the National Ambient Air Quality Standards (NAAQS), for six criteria pollutants: particulate matter of aerodynamic radius of 10 micrometers or less (PM10), particulate matter of aerodynamic radius of 2.5 micrometers or less (PM2.5), carbon monoxide (CO), nitrogen dioxide (NO2), ground-level ozone, and lead. Of these criteria pollutants, particulate matter and ground-level ozone pose the greatest threats to human health.

#### State Laws, Regulations, and Policies

The California Air Resources Board (CARB) sets standards for criteria pollutants in California that are more stringent than the NAAQS and include the following additional contaminants: visibility-reducing particles, hydrogen sulfide, sulfates, and vinyl chloride. The proposed project is located within the Mountain Counties Air Basin, which is comprised of seven air districts: the Northern Sierra Air Quality Management District (AQMD), Placer County Air Pollution Control District (APCD), Amador County APCD, Calaveras County APCD, the Tuolumne County APCD, the Mariposa County APCD, and a portion of the El Dorado County AQMD (EDCAQMD), which consists of the western portion of El Dorado County. The El Dorado County Air Pollution Control District manages air quality for attainment and permitting purposes within El Dorado County.

USEPA and CARB regulate various stationary sources, area sources, and mobile sources. USEPA has regulations involving performance standards for specific sources that may release toxic air contaminants (TACs), known as hazardous air pollutants (HAPs) at the federal level. In addition, USEPA has regulations involving emission criteria for off-road sources such as emergency generators, construction equipment, and vehicles. CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB also establishes passenger vehicle fuel specifications.

USEPA and CARB designate regions as "attainment" (within standards) or "nonattainment" (exceeds standards) based on their respective ambient air quality standards. The County is in nonattainment of both federal and state ozone standards and for the state PM10 standard, and is in attainment or unclassified status for other pollutants (California Air Resources Board 2017).

#### Local Laws, Regulations, and Policies

The El Dorado County Air Quality Management District (EDCAQMD) is responsible for developing and administering programs to reduce air pollution levels below the health-based ambient air quality standards established by the state and federal governments. EDCAQMD is responsible for enforcing district rules, regulating stationary source emissions, approving permits, maintaining emissions inventories, issuing burn permits, administering grant programs, and reviewing air quality-related sections of environmental documents required to comply with CEQA. EDCAQMD regulates air quality through the federal and state Clean Air Acts, district rules, and its permit authority.

EDCAQMD has developed a Guide to Air Quality Assessment (2002) to evaluate project specific impacts and help determine if air quality mitigation measures are needed, or if potentially significant impacts could result. The Guide provides quantitative and qualitative significance criteria for both construction and operational emissions from a project.

A project would have a significant impact on air quality if quantified emissions exceed the following:

- Emissions of ROG and NOx will result in construction or operation emissions greater than 82lbs/day
- Emissions of PM10, CO, SO2 and NOx, as a result of construction or operation emissions, will result in ambient pollutant concentrations in excess of the applicable National or State Ambient Air Quality Standard (AAQS). Special standards for ozone, CO, and visibility apply in the Lake Tahoe Air Basin portion of the County; or
- Emissions of toxic air contaminants cause cancer risk greater than 1 in 1 million (10 in 1 million if best available control technology for toxics is used) or a non-cancer Hazard Index greater than 1. In addition, the project must demonstrate compliance with all applicable District, State and U.S. EPA regulations governing toxic and hazardous emissions.

A project would have a significant impact on air quality if a qualitative analysis indicates:

- The project triggers any of the air quality significance criteria in Appendix G of the CEQA Guidelines.
- The project results in excessive odors, as defined under the Health & Safety Code definition of an air quality nuisance.
- The project results in land use conflicts with sensitive receptors, such as schools, elderly housing, hospitals or clinics, etc.
- The project, as proposed, is not in compliance with all applicable District rules and regulations.
- The project does not comply with U.S. EPA general and transportation "conformity" regulations.

A project would have a cumulatively significant impact if:

- The project requires a change in the land use designation (e.g., general plan amendment or rezone) that increases ROG and NOx emissions compared to the prior approved use, and the increase in emissions exceeds the "project alone" significance levels shown above for ROG or NOx.
- Project CO emissions, if combined with CO emissions from other nearby projects, result in a "hotspot" that violates a state or national AAQS.
- The project is primarily an industrial project and a modeling analysis indicates that the project's impacts would exceed Class III Prevention of Significant Deterioration (PSD) increments (Class II in Lake Tahoe) for PM10, SO2, or NO2; or, the project is primarily a development project, and the emissions of ROG, NOx, or CO exceed the "project alone" significance criteria for those three pollutants noted above.
- The project causes the risk analysis criteria above for "project alone" Toxic Air Contaminants (TACs) to be exceeded when project emissions of TACs are considered in conjunction with TACs from other nearby projects.

For Fugitive dust (PM10), if dust suppression measures will prevent visible emissions beyond the boundaries of the project, further calculations to determine PM emissions are not necessary. All proposed development must comply with District Rule 223-1 Fugitive Dust.

Naturally occurring asbestos (NOA) is also a concern in El Dorado County because it is known to be present in certain soils and can pose a health risk if released into the air. The AQMD has adopted an El Dorado County Naturally Occurring Asbestos Review Area Map that identifies those areas more likely to contain NOA (El Dorado County 2005). All proposed development in a NOA area must comply with District Rule 223-2 Fugitive Dust – Asbestos Hazard Mitigation.

The EDCAQMD has developed a Guide to Air Quality Assessment to evaluate project specific impacts and help determine if air quality mitigation measures are needed, or if potentially significant impacts could result. The analysis in this section relies primarily on an air quality analysis prepared for the project by Dudek, which is included as Attachment A to this Initial Study (Dudek 2020).

#### Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines (14 CCR 15000 et seq.), which provides guidance that a project would have a significant environmental impact if it would:

- 1. Conflict with or obstruct implementation of the applicable air quality plan.
- 2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
- 3. Expose sensitive receptors to substantial pollutant concentrations.
- 4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

#### 2.11.2 Discussion

a) Less-than Significant. The MCAB is currently non-attainment for ozone (O3) (state and federal ambient standards) and particulate matter (PM10) (state ambient standard). While an air quality plan exists for ozone, none currently exists for particulate matter. The Sacramento Regional 2008 National Ambient Air Quality Standards (NAAQS) 8-Hour Ozone Attainment Plan and

Reasonable Further Progress Plan (Ozone Attainment Plan) was developed for application within the Sacramento region, including the MCAB portion of El Dorado County (EDCAQMD et al. 2017). If a project can demonstrate consistency with the Ozone Attainment Plan for ROG and NOx emissions, it would be determined that it would not have a significant cumulative impact with respect to ozone.

Projects within the MCAB portion of the County must demonstrate Ozone Attainment Plan consistency with the following four indicators:

- 1. The project does not require a change in the existing land use designation (e.g., a general plan amendment or rezone), or projected emissions of ROG and NOx from a project are equal to or less than the emissions anticipated for the site if development occurred under the existing land use designation;
- 2. The project does not exceed the "project alone" significance criteria;
- 3. The lead agency for the project requires the project to implement any applicable emission reduction measures contained in and/or derived from SMAQMD's Ozone Attainment Plan; and
- 4. The project complies with all applicable district rules and regulations.

The first way to assess project compliance with the Ozone Attainment Plan is to ensure that the population density and land use are consistent with the growth assumptions used in the plans for the MCAB. The project includes no uses that would generate a long-term increase in population or vehicle miles traveled and does not propose additional land for development or require a change in land use designations applied to the project site. The project, as proposed, would result in no long-term increase in population or vehicle miles traveled in the region. Furthermore, the project would not directly induce substantial population growth in the area. The project primarily consists of the recoating of two water storage tanks. Construction activities associated with the project include sand blasting, architectural coating, and equipment operation. Once construction activities are completed, no additional operational activities associated with the project would occur. Any routine maintenance associated with the tanks already occurs. Therefore, the project would be consistent with the regional growth forecasts and would not conflict with or exceed the assumptions of the Ozone Attainment Plan.

The second criterion assesses a project's contribution to existing air quality violations. Criteria air pollutant emissions associated with construction of the project were estimated using CCalEEMod Version 2016.3.2 for the following emission sources: operation of off-road construction equipment, on-road vendor (material delivery and off-site hauling) trucks, and worker vehicles. Emissions from sand blasting and architectural coating was estimated using a spreadsheet-based model. As discussed in b) below, it was determined that the project would not contribute to an air quality violation because construction emissions would not exceed the EDCAQMD thresholds of significance for ROG or NOx emissions.

The third criterion is compliance with control measures in the Ozone Attainment Plan. Most of the control strategies in the Ozone Attainment Plan include measures in the categories of transportation and stationary sources. The non-regulatory control measures include; on-road and off-road mobile incentive programs, and an emerging/voluntary urban forest development program. These are followed by the regulatory control measures, which include; indirect source rules and a variety of stationary and area-wide source control measures (CARB 2008). The CARB's strategy for reducing mobile source emissions includes the following: new engine standards, reducing emissions from in-use fleet, requiring the use of cleaner fuels, supporting

the use of alternative fuels, and pursuing long-term advanced technology measures. The project would result in no conflict with CARB's strategy for controlling mobile source emissions.

The final criterion is compliance with EDCAQMD rules and regulations. EID would implement the project in compliance with all applicable EDCAQMD rules. The EDCAQMD has adopted rules designed specifically to address a variety of air quality impacts through measures that construction and operational related air quality emissions. Rules designed to control air pollutant emissions and which may be applicable to the project include.

- Rule 202 visible emissions
- Rule 205 nuisance
- Rule 210 related to the discharge of air contaminants
- Rule 215 related to architectural coatings
- Rule 222 abrasive blasting
- Rule 223 related to fugitive dust
- Rule 223-1 related to fugitive dust from construction and disturbed areas
- Rule 223-2 related to asbestos

In summary, the project does not conflict with the growth assumptions for the region, does not exceed the EDCAQMD significance thresholds, would be consistent with all control measures of the Ozone Attainment Plan, and would comply with applicable EDCAQMD rules. The project would not conflict with or obstruct implementation of an applicable air quality plan and would therefore result in less than significant impact associated with conflict or obstruction of an applicable air quality plan.

b) Less than Significant Impact. Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and EDCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

#### **Construction Emissions**

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and ROG off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The CalEEMod Version 2016.3.2 was used to estimate emissions from construction of the project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of ROGs, NOx, CO, PM10, and PM2.5. PM10 and PM2.5 emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The project would be required to comply with EDCAQMD Rule 222 to control emissions generated during sand

blasting and Rule 215 during the application of coatings. Table 1 presents the estimated yearly emissions generated during construction of the project. Details of the emission calculations are provided in Attachment A.

 Table 1: Estimated Maximum Yearly Construction Criteria for Air Pollutant Emissions

	ROG	NOx	CO	SOx	PM10	PM <sub>2.5</sub>				
Year		Pounds per day								
2020	0.68	9.41	17.04	0.03	85.35	85.16				
2021	31.46	9.33	16.94	0.03	85.35	85.15				
2022	31.45	9.27	16.85	0.03	0.55	0.35				
Maximum	31.46	9.41	17.04	0.03	85.35	85.15				
EDCAQMD	82	82	NA	NA	NA	NA				
Threshold										
Threshold exceeded?	No	No	NA	NA	NA	NA				

**Notes:** ROG = reactive organic gas; NOx = oxides of nitrogen; CO = carbon monoxide; SOx = sulfur oxides; PM10 = coarse particulate matter; PM2.5 = fine particulate matter; EDCAQMD = El Dorado County Air Quality Management District.

See Attachment A for complete results.

As shown in Table 1, the project construction would not exceed EDCAQMD's thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

#### **Cumulative Analysis**

In considering cumulative impacts from the project, the analysis must specifically evaluate a project's contribution to the cumulative increase in pollutants for which the MCAB is designated as nonattainment for the California Ambient Air Quality Standards (CAAQS) and NAAQS. If a project's emissions would exceed EDCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the MCAB. If a project does not exceed thresholds and is determined to have less than significant project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the project's cumulatively considerable contribution is if the project's contribution accounts for a significant proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with EDCAQMD's 2008 Ozone Plan, which addresses cumulative emissions in the MCAB.

The MCAB has been designated as a state attainment area for O3 as discussed in Section 3.1. The attainment status is the result of EDCAQMD control measures for various sources of air pollutants and their precursors within the MCAB, including motor vehicles, off-road equipment, marine vessels, and commercial and industrial facilities. Construction of the project would generate ROG and NOx emissions (which are precursors to O3). As indicated in **Table 1**, project-generated yearly construction emissions would not exceed EDCAQMD's emission-based significance thresholds for ROG or NOx. The project would also not generate criteria air pollutant emissions during operations.

Cumulative localized impacts would potentially occur if a construction project were to occur concurrently with another off-site project. Construction schedules for potential future projects near the project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative.2 However, future projects would be subject to CEQA and would require an air quality analysis and, where necessary, mitigation if the project would exceed EDCAQMD's significance thresholds. Criteria air pollutant emissions

associated with construction activity of future proposed projects would be reduced through implementation of control measures required by EDCAQMD. Cumulative PM10 and PM2.5 emissions would be reduced because all future projects would be subject to EDCAQMD Rule 223.1, which sets forth general and specific requirements for all construction sites in the EDCAQMD.

Based on the previous considerations, the project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and cumulative impacts would be less than significant.

c) Less than Significant Impact. A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a TAC. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and non-carcinogenic effects. Non-carcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC. The Camino Elementary School is approximately 250 feet from the boundary of the project site. There are residences within 1,800 feet from the boundary of the project site.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the state of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills.

Project construction would result in emissions of diesel particulate matter (DPM) from heavy construction equipment and trucks accessing the site. DPM is characterized as a TAC by the State of California. TACs emissions would also be generated from the sand blasting and architectural coating activities. OEHHA has identified carcinogenic and chronic non-carcinogenic effects from long-term exposure, but has not identified health effects due to short-term exposure to diesel exhaust. According to OEHHA, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the project (2 years for the project). As the project does not include the application of T-BACT, the EDCAQMD threshold of one in one million will be applied for cancer risk. The hazard index of more than 1.0 means that predicted levels of a toxic pollutant are greater than the reference exposure level, which is considered the level below which adverse health effects are not expected.

A Health Risk Assessment (HRA) was prepared to evaluate impacts to sensitive receptors proximate to the project during construction. Sources evaluated during construction include onsite off-road equipment and diesel vehicles, abrasive blasting, and coating activities. Detailed HRA methodology is provided in Section 2.3 and AERMOD and HARP2 modeling output files are provided in Attachment A.

Tables 2 and 3 provide a summary of the cancer and non-cancer results by emissions source and pollutant for the maximally exposed individual resident (MEIR), maximally exposed individual worker (MEIW), sensitive receptor, and point of maximum impact (PMI).

Table 2: Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	14	701460.1	4289773	0.33	Respiratory	NA
MEIR	286	702056.7	4289599	0.0028	Respiratory	>1
MEIW	62	701564.8	4289734	0.033	Respiratory	>1
Sensitive Receptor- Camino Elementary School	62	701564.8	4289734	0.0063	Respiratory	>1

Source: Attachment B of Air Quality Report (Attachment A).

**Notes:** PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.

Table 3: Summary of Acute Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Acute HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	18			0.54	Respiratory	NA
MEIR	286	702056.7	4289599	0.020	Respiratory	>1
MEIW	62	701564.8	4289734	0.070	Respiratory	>1
Sensitive Receptor- Camino Elementary School	62	701564.8	4289734	0.070	Respiratory	>1

**Source:** Attachment B of Air Quality Report (Attachment A).

**Notes:** PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.

As shown in Tables 2 and 3, the project's emissions during construction would not exceed the EDCAQMDs significance thresholds.

#### **Health Effects of Criteria Air Pollutants**

Construction of the project would generate criteria air pollutant emissions; however, the project would not exceed the EDCAQMD emission thresholds and construction activities would be

carried out in compliance with applicable EDCAQMD rules. The MCAB is a nonattainment area for O3 and PM10, under the NAAQS and/or CAAQS.

ROG and NOx are precursors to O3, for which the MCAB is designated as nonattainment with respect to the NAAQS and CAAQS. Thus, existing O3 levels in the MCAB are at unhealthy levels during certain periods. The health effects associated with O3 are generally associated with reduced lung function. Because the project involves construction activities that would not result in ROG or NOx emissions that would exceed the EDCAQMD thresholds, the project is not anticipated to substantially contribute to regional O3 concentrations and the associated health impacts.

CO, PM10, and other pollutants are evaluated for significance by comparison against the NAAQS and CAAQS. A project would be considered significant if it is projected to cause a violation of any NAAQS and/or CAAQS. The MCAB portion of El Dorado County is classified as attainment (or unclassified) for all NAAQS and CAAQS for CO, PM2.5, NO2, SO2, sulfates, lead, and H2S, and is classified as nonattainment for the state 24-hour PM10 standard.

Emissions of CO, PM10, and other pollutants generated from operation of the Project would be considered significant if:

- 1. The Project's contribution by itself would cause a violation of the AAQS, or
- 2. The Project's contribution plus the background level would result in a violation of the AAQS and either
  - a. A sensitive receptor is located within a quarter-mile of the Project, or
  - b. The Project's contribution exceeds 5% of the AAQS

The EDCAQMD considers projects that fall below the significance levels for ROG and NOx emissions to also fall below significance thresholds for CO, NO2, PM10, and SO2. As discussed in 3.2.2 above, project ROG and NOx emission would be below the thresholds of significance during construction. Therefore, project emissions of CO, NO2, PM10, and SO2 are assumed to be less than significant in accordance with EDCAQMD guidance for impact evaluation. Additionally, the project would implement comply with Rules 202, 205, 210, 215, 222, 223, and 223-1, which would reduce emissions within the project site as discussed in 3.2.2, above.

The EDCAQMD considers lead, sulfates, and H2S to be less than significant except from industrial sources that result in these pollutants being directly emitted. The project would not include these sources and thus any potential emissions of lead, sulfates, and H2S would be less than significant.

Visibility impacts are controlled through state and federal regulatory programs that govern vehicle emissions and through mitigation required for O3 precursors and particulate matter. Due to these regulatory controls, EDCAQMD assumes that visibility impacts from projects in the MCAB portion of the County are less than significant.

Therefore, for the reasons discussed above, health effects associated with emissions of criteria air pollutants related to the Project would be less than significant.

d) Less than Significant Impact. It is possible that odors could be released during construction activities associated with the project. Diesel exhaust and reactive organic compounds would be emitted during construction activities from vehicle exhaust and architectural coatings. However, emissions would disperse rapidly from the area where the construction activities would be located, and thus would not reach an objectionable level at the nearest sensitive receptors. The potential release of odors associated with construction activities would be minor, temporary, and unlikely to be detectable to people other than construction personnel in the immediate construction area.

Common sources of odors include wastewater treatment plants, landfills, transfer stations, composting facilities, refineries, chemical plants, and food processing plants (EDCAQMD 2002). Operation of the project would not entail any of these potentially odor-causing land uses. Therefore, the project would not create any new sources of odor during operation.

# 2.12 Biological Resources

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	Biological Resources. Would the project:				
	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service?				
	P) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service?				
	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				
	d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				
	e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				
	) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				

#### 2.12.1 Environmental Setting

#### Federal Laws, Regulations, and Policies

#### **Endangered Species Act**

The Endangered Species Act (ESA) (16 U.S. Code [USC] Section 1531 *et seq.*; 50 Code of Federal Regulations [CFR] Parts 17 and 222) provides for conservation of species that are endangered or threatened throughout all or a substantial portion of their range, as well as protection of the habitats on which they depend. The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) share responsibility for implementing the ESA. In general, USFWS manages terrestrial and freshwater species, whereas NMFS manages marine and anadromous species.

Section 9 of the ESA and its implementing regulations prohibit the "take" of any fish or wildlife species listed under the ESA as endangered or threatened, unless otherwise authorized by federal regulations. The ESA defines the term "take" to mean "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (16 USC Section 1532). Section 7 of the ESA (16 USC Section 1531 *et seq.*) outlines the procedures for federal interagency cooperation to conserve federally listed species and designated critical habitats. Section 10(a)(1)(B) of the ESA provides a process by which nonfederal entities may obtain an incidental take permit from USFWS or NMFS for otherwise lawful activities that incidentally may result in "take" of endangered or threatened species, subject to specific conditions. A habitat conservation plan (HCP) must accompany an application for an incidental take permit.

#### Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) (16 USC, Chapter 7, Subchapter II) protects migratory birds. Most actions that result in take, or the permanent or temporary possession of, a migratory bird constitute violations of the MBTA. The MBTA also prohibits destruction of occupied nests. USFWS is responsible for overseeing compliance with the MBTA.

#### Bald and Golden Eagle Protection Act

The federal Bald and Golden Eagle Protection Act (16 U.S.C. 668-668c), first enacted in 1940, prohibits "taking" bald eagles, including their parts, nests, or eggs. The Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle ... [or any golden eagle], alive or dead, or any part, nest, or egg thereof." The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." The definition for "Disturb" includes injury to an eagle, a decrease in its productivity, or nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior. In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present.

#### Clean Water Act

Clean Water Act (CWA) section 404 regulates the discharge of dredged and fill materials into waters of the U.S., which include all navigable waters, their tributaries, and some isolated waters, as well as some wetlands adjacent to the aforementioned waters (33 CFR Section 328.3). Areas typically not considered to be jurisdictional waters include non-tidal drainage and irrigation ditches excavated on dry land, artificially irrigated areas, artificial lakes or ponds used for irrigation or stock watering, small artificial waterbodies such as swimming pools, vernal pools, and water-filled depressions (33 CFR Part 328). Areas meeting the regulatory definition of waters of the U.S. are subject to the jurisdiction of U.S. Army Corps of Engineers (USACE) under the provisions of CWA Section 404. Construction activities involving placement of fill into jurisdictional waters of the U.S. are regulated by USACE through permit requirements. No USACE permit is effective in the absence of state water quality certification pursuant to Section 401 of CWA.

Section 401 of the CWA requires an evaluation of water quality when a proposed activity requiring a federal license or permit could result in a discharge to waters of the U.S. In California, the State Water Resources Control Board (SWRCB) and its nine Regional Water Quality Control Boards (RWQCBs) issue water quality certifications. Each RWQCB is responsible for implementing Section 401 in compliance with the CWA and its water quality control plan (also known as a Basin Plan). Applicants for a federal license or permit to conduct activities that may result in the discharge to waters of the U.S.

(including wetlands or vernal pools) must also obtain a Section 401 water quality certification to ensure that any such discharge will comply with the applicable provisions of the CWA.

#### State Laws, Regulations, and Policies

#### California Fish and Game Code

The California Fish and Game Code includes various statutes that protect biological resources, including the Native Plant Protection Act of 1977 (NPPA) and the California Endangered Species Act (CESA). The NPPA (California Fish and Game Code Section 1900-1913) authorizes the Fish and Game Commission to designate plants as endangered or rare and prohibits take of any such plants, except as authorized in limited circumstances.

CESA (California Fish and Game Code Section 2050–2098) prohibits state agencies from approving a project that would jeopardize the continued existence of a species listed under CESA as endangered or threatened. Section 2080 of the California Fish and Game Code prohibits the take of any species that is state listed as endangered or threatened, or designated as a candidate for such listing. California Department of Fish and Wildlife (CDFW) may issue an incidental take permit authorizing the take of listed and candidate species if that take is incidental to an otherwise lawful activity, subject to specified conditions.

California Fish and Game Code Section 3503, 3513, and 3800 protect native and migratory birds, including their active or inactive nests and eggs, from all forms of take. In addition, Section 3511, 4700, 5050, and 5515 identify species that are fully protected from all forms of take. Section 3511 lists fully protected birds, Section 5515 lists fully protected fish, Section 4700 lists fully protected mammals, and Section 5050 lists fully protected amphibians.

#### Streambed Alteration Agreement

Sections 1601 to 1606 of the California Fish and Game Code require that a Streambed Alteration Application be submitted to CDFW for any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake. As a general rule, this requirement applies to any work undertaken within the 100-year floodplain of a stream or river containing fish or wildlife resources.

#### California Native Plant Protection Act

The California Native Plant Protection Act (California Fish and Game Code Section 1900–1913) prohibits the taking, possessing, or sale of any plants with a state designation of rare, threatened, or endangered (as defined by CDFW). The California Native Plant Society (CNPS) maintains a list of plant species native to California that has low population numbers, limited distribution, or are otherwise threatened with extinction. This information is published in the Inventory of Rare and Endangered Plants of California (CNPS 2001). Potential impacts to populations of CNPS-listed plants receive consideration under CEQA review.

The discussion of existing conditions and analysis of potential impacts included in this section relies on information contained in a biological resources assessment prepared for the project site by Dudek (Attachment B) (Dudek 2020).

#### 2.12.2 DISCUSSION

a) **Less Than Significant with Mitigation Incorporated.** The biological resources study performed for the project site determined that four special-status wildlife species have the

potential to occur at the project site: Native Bats (including Fringed Myotis) and Native and Migratory Birds (including Northern Goshawk and Bald Eagle). A field survey was conducted by Dudek wildlife biologist Paul Keating of the approximately 8-acre project site on February 12, 2020; none of the potential special-status species were identified at the site. Additionally, construction of the proposed project is not expected to result in direct impacts to special-status vegetation communities, since none are present on site. Therefore, due to the existing developed condition, and ongoing operations, the site lacks suitable habitat for special-status wildlife species. Each species and the suitability of the habitat on the project site are discussed further below.

Native Bats (including Fringed Myotis). The proposed project would rehabilitate existing tanks within an existing developed site that is frequently subject to disturbance related to operations and maintenance activities. Since the proposed project would not remove any trees that could support bat roosts on or adjacent to the project site, and since there is low potential for bat roosts to occur on or adjacent to the project site due to low habitat suitability, impacts associated with project disturbance of native bats and roosts would be less than significant.

Native and Migratory Birds (including Northern Goshawk and Bald Eagle) The proposed project does not include any tree or vegetation removal and it is unlikely that special-status birds with a low potential to occur on site would be directly impacted by the project; however, indirect effects primarily from increased noise from blasting the tanks during paint removal could lead to distress and nest abandonment if active nests are in or adjacent to the project site. Implementation of mitigation measures BOI-1 and BIO-2 would ensure that any potential impacts to nesting birds would be avoided.

#### **Mitigation Measures**

<u>BIO-1:</u> If construction activities are scheduled during the bird nesting season (February 1 to August 31), a qualified biologist shall conduct a nesting bird survey within 1 week prior to said activities to determine if any birds are nesting on or near the project site (including a 500-foot buffer for raptors). If any active nests are observed during surveys, a suitable avoidance buffer from the nests shall be determined and flagged by a qualified biologist based on species, location, and planned construction activities. Consultation with CDFW may be required to determine appropriate buffer distances. These nests shall be avoided until the chicks have fledged and the nests are no longer active, as determined by the qualified biologist.

<u>BIO-2:</u> If project activities associated with rehabilitation of the tanks need to occur within an established buffer around an active nest, then a nest monitoring protocol shall be implemented to ensure that adverse impacts would not occur to the active nest. The protocol would include the following:

- Just prior to the initiation of project activities within the nest buffer, a qualified biologist shall conduct observations, over the course of 1 to 2 days, of adult bird behavior associated with the nest to establish baseline behavioral conditions (e.g., frequency and type of bird vocalizations, frequency of nest departures/arrivals by adults, flight behavior and patterns). The biologist will then set thresholds of disturbance based on observations documented during the baseline survey, on known breeding behaviors of the species, and on best professional judgement and practicable experience.
- Once the project activities have commenced, the biologist shall be onsite in proximity to
  active nests and shall monitor adult bird behavior for the duration of the project activity.
  The biologist will specifically look for and document signs of agitation including but not
  limited to angry or anxious vocalizations, leaving and quickly returning to the nest or an

area near the nest, flying in small circles, wing fluttering while perched, extended periods of time away from the nest, and any other behaviors indicative of agitation or disturbance for that species of bird. The biologist will have the authority to stop work if continued evidence of bird agitation occurs and, in the opinion of the biologist, could result in nest abandonment. Work may resume after the biologist has determined that the bird is no longer agitated and nest viability will be ensured. If the biologist determines that the project activity cannot be conducted without continued disturbance to the nest, the activity will be postponed until after the nest is no longer active, as determined by the biologist.

- Upon completion of the project activity, the biologist shall prepare a brief letter report documenting the methods and results of the monitoring and submit the letter report to EID.
- b) **No Impact.** Construction of the proposed project is not expected to result in direct impacts to special-status vegetation or riparian communities, since none are present on site.
- c) **No Impact.** There are no wetlands or other waters in or immediately adjacent to the project site and the project would occur entirely within existing developed areas that are presently used during routine operations and maintenance activities on the project site. Therefore, no impacts to wetlands or other waters are expected to occur as a result of project implementation.
- d) No Impact. The site is located adjacent to US Highway 50 which poses a barrier to wildlife movement; additionally, the existing infrastructure facility is surrounded by an 8-foot-tall fence topped with barbed wire. The site does not currently function as a movement corridor and implementation of the proposed project would not result in any further impediments to wildlife movement. Therefore, no substantial direct impacts to local or regional wildlife movements are expected to occur as a result of project implementation.
- e) **No Impact.** The project is not located within an important biological corridor or rare plant preserve. The project would not conflict with any local policies or ordinances protecting biological resources would occur.
- f) **No Impact.** No Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan applies to the project site.

### 2.13 Cultural Resources

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
V.	Cu	Itural Resources. Would the project:				
	a)	Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?				
	b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?				
	c)	Disturb any human remains, including those interred outside of formal cemeteries?				

### 2.13.1 Environmental Setting

The proposed project would be entirely confined to the existing site boundary, which has been previously surveyed for cultural resources. The previous study was prepared as part of the preparation of an Environmental Impact Report (EIR) considering lining and covering reservoirs or replacing them with water storage tanks (El Dorado Irrigation District Line, Cover, and Tanks Project EIR,1999). The archival research and cultural resources study prepared for the project concluded that no significant prehistoric, historic structures, or cultural resources sites were located on or adjacent to reservoirs 2 and 2A. No changes in cultural resources impacts or mitigation measures from the previous EIR have been identified for Reservoirs 2 or 2A.

# 2.13.2 DISCUSSION

a) **No Impact.** The water storage tanks and appurtenant equipment and structures were originally constructed in 2003-2004 and would not be considered historical resources pursuant to Section 15064.5.

b) & c)

**No Impact.** There would be no ground disturbance as part of the proposed project.

# 2.14 Energy

ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy. Would the project:				
<ul> <li>Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?</li> </ul>				
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				

# 2.14.1 ENVIRONMENTAL SETTING

The project would not include the construction or operation of facilities that would require electricity from a regional or local utility provider. The activities that would require fuel usage include personal vehicles, air compressors and portable generators. Thus, electricity used for construction activities would be temporary and minimal.

### 2.14.2 DISCUSSION

- a) Less than Significant Impact. The proposed project would not substantially affect energy consumption or conservation. Petroleum fuel consumed by construction equipment would be the primary energy resource expended over the course of the project. Workers would likely travel to and from the project area in gasoline-powered vehicles. Construction is expected to occur in 2- to 3-month increments over a 2-year period, beginning August 2020. Once construction activities cease, petroleum use from generators, equipment, and transportation vehicles would cease.
  - Continued operation of the water storage tank facility would not increase energy consumption or increase inefficient energy use beyond the current energy consumption required for normal operation of the facility. No mitigation is required to implement the proposed project.
- **No Impact.** The project would not include an increased need for additional energy resources or change the source of energy in use during regular operation of the water storage tank facility.

# 2.15 Geology and Soils

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. Ge	ology and Soils. Would the project:				
a)	Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
	i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to California Geological Survey Special Publication 42.)				
	ii) Strong seismic ground shaking?			$\boxtimes$	
	iii) Seismic-related ground failure, including liquefaction?				
	iv) Landslides?			$\boxtimes$	
b)	Result in substantial soil erosion or the loss of topsoil?				
c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onor off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?				
d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994, as updated), creating substantial direct or indirect risks to life or property?				
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				

### 2.15.1 Environmental Setting

The project is located in a previously disturbed area that contains two large water storage tanks and associated equipment in the community region of Camino California on the west slope of the Sierra Nevada Foothills in eastern California. There are no known active faults in the project area. The closest fault zone to the project area is identified as the West Tahoe Fault, which has a mapped length of 45 km (28 miles) and is located south of Emerald Bay and extends onshore from the lake as two parallel strands. The West Tahoe Fault is located approximately 35 miles west of the project area (CGS, 2016).

There are two soils mapped in the Project area. The predominant soil is the Cohasset loam series (CmC), 3-20 percent slopes (Soil Web Survey, NRCS). This soil consists of well drained soils underlain by cobbly andesitic conglomerate. These soils are on tabular volcanic ridges and colluvial side slopes. The depth to both a restrictive feature and water table is at a depth of about 96 inches. The other soil type is Aiken loam series (AfB2), 3-9 percent slopes (Soil Web Survey, NRCS). This soil consists of very deep, well drained soils formed in material weathered from basic volcanic rocks. The soil occurs broad gently sloping tabular ridges and moderately steep to steep sideslopes. Depth to a restrictive feature is about 140 inches.

### 2.15.2 DISCUSSION

- a) i) Less than Significant Impact. As determined by the California Department of Conservation Division of Mines and Geology, there are no Alquist-Priolo fault zones within the west slope of El Dorado County (CGS, 2007).
- a) ii) Less than Significant Impact. The potential for seismic ground shaking in the project area would be considered remote as discussed in Section i) above.
- a) iii) Less than Significant Impact. El Dorado County is considered an area with low potential for seismic activity. There are no landslide, liquefaction, or fault zones within the area (CGS, 2016).
- a) iv) Less than Significant Impact. The proposed project does not include any grading or ground disturbance. The likelihood of landslide in the project area would be considered remote.
- b), c), d) e), f)

**No impact.** The proposed project does not include the construction of any new structures, installation of new septic tanks or alternative waste water disposal systems, or ground disturbance.

### 2.16 Greenhouse Gas Emissions

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. Gr	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?				
b)	Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				

# 2.16.1 ENVIRONMENTAL SETTING

Cumulative greenhouse gases (GHG) emissions are believed to contribute to an increased greenhouse effect and global climate change, which may result in sea level rise, changes in precipitation, habitat, temperature, wildfires, air pollution levels, and changes in the frequency and intensity of weatherrelated events. While criteria pollutants and toxic air contaminants are pollutants of regional and local concern (see Section III. Air Quality above); GHG are global pollutants. The primary land-use related GHG are carbon dioxide (CO2), methane (CH4) and nitrous oxides (N2O). For the purposes of evaluating GHG emissions, the amount of energy that an individual pollutant will absorb over a given amount of time is expressed relative to the amount of energy trapped by an equivalent amount of CO2, or the CO2 equivalents (CO2e). The CO2e of a pollutant is known as its global warming potential. CO2 is the benchmark having a global warming potential of 1. Methane (CH4) has a global warming potential of 21 and thus would be considered equivalent to 21 times the GHG emissions contribution of an equivalent amount of CO2. Nitrous Oxide has a global warming potential of 310. Emissions are expressed in annual metric tons of CO2e units of measure (i.e., MTCO2e/yr). The three other main GHGs are Hydroflourocarbons, Perflourocarbons, and Sulfur Hexaflouride. While these compounds have significantly higher global warming potentials (ranging in the thousands), all three typically are not a concern in land-use development projects and are usually only used in specific industrial processes.

#### **GHG Sources**

The primary man-made source of CO2 is the burning of fossil fuels; the two largest sources being coal burning to produce electricity and petroleum burning in combustion engines. The primary sources of man-made CH4 are natural gas systems losses (during production, processing, storage, transmission and distribution), enteric fermentation (digestion from livestock) and landfill off-gassing. The primary source of man-made N2O is agricultural soil management (fertilizers), with fossil fuel combustion a very distant second. In El Dorado County, the primary source of GHG is fossil fuel combustion mainly in the transportation sector (estimated at 70% of countywide GHG emissions). A distant second are residential sources (approximately 20%), and commercial/industrial sources are third (approximately 7%). The remaining sources are waste/landfill (approximately 3%) and agricultural (<1%).

#### **Regulatory Setting:**

Federal Laws, Regulations, and Policies

At the federal level, USEPA has developed regulations to reduce GHG emissions from motor vehicles and has developed permitting requirements for large stationary emitters of GHGs. the national program for GHG and fuel economy standards was developed jointly by the USEPA and the National Highway Traffic Safety Administration (NHTSA). Phase 1 of the program addressed model year 2012-2016 cars and light trucks and Phase 2 addresses model years 2017-2025. On August 9, 2011, USEPA and the NHTSA announced standards to reduce GHG emissions and improve fuel efficiency for heavy-duty trucks and buses. As part of the 2017-2025 standards rulemaking, EPA made a regulatory commitment to conduct an evaluation of the longer-term standards for model years 2022-2025, in coordination with NHTSA and the California Air Resources Board. Following conclusion of the this mid-term evaluation, NHTSA and EPA propose to amend the Corporate Average Fuel Economy (CAFE) and GHG emissions standards for passenger cars and light trucks and establish new standards, covering model years 2021 through 2026.

### State Laws, Regulations, and Policies

In September 2006, Governor Arnold Schwarzenegger signed Assembly Bill (AB) 32, the California Climate Solutions Act of 2006 (Stats. 2006, ch. 488) (Health & Safety Code, Section 38500 et seq.). AB 32 requires a statewide GHG emissions reduction to 1990 levels by the year 2020. AB 32 requires the California Air Resources Board (CARB) to implement and enforce the statewide cap. When AB 32 was signed, California's annual GHG emissions were estimated at 600 million metric tons of CO2 equivalent (MMTCO2e) while 1990 levels were estimated at 427 MMTCO2e. Setting 427 MMTCO2e as the emissions target for 2020, current (2006) GHG emissions levels must be reduced by 29%. CARB adopted the AB 32 Scoping Plan in December 2008 establishing various actions the state would implement to achieve this reduction (CARB, 2008). The Scoping Plan recommends a community-wide GHG reduction goal for local governments of 15%.

In June 2008, the California Governor's Office of Planning and Research's (OPR) issued a Technical Advisory (OPR, 2008) providing interim guidance regarding a proposed project's GHG emissions and contribution to global climate change. In the absence of adopted local or statewide thresholds, OPR recommends the following approach for analyzing GHG emissions: Identify and quantify the project's GHG emissions, assess the significance of the impact on climate change; and if the impact is found to be significant, identify alternatives and/or mitigation measures that would reduce the impact to less than significant levels (CEC, 2006).

### 2.16.2 DISCUSSION

CEQA does not provide clear direction on addressing climate change. It requires lead agencies identify project GHG emissions impacts and their "significance," but is not clear what constitutes a "significant" impact. At this time, there are no adopted quantitative federal or state guidelines for GHG emission impacts. As stated above, GHG impacts are inherently cumulative, and since no single project could cause global climate change, the CEQA test is if impacts are "cumulatively considerable." Not all projects emitting GHG contribute significantly to climate change. CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance that are consistent with the manner in which other impact areas are handled in CEQA.

EDCAQMD was part of the committee of air districts in the Sacramento Region involved in the development of GHG thresholds of 1,100 MTCO2e/yr for the construction phase of projects or the operational phase of land use development projects, or 10,000 MTCO2e/yr from the operation of stationary sources. If the significance thresholds are exceeded, then a project may have a cumulatively considerable contribution to a significant cumulative environmental impact, and all feasible mitigation is required.

a) Less than Significant Impact. Construction of the project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor and haul trucks, and worker vehicles. Additionally, the construction GHG emissions are shown annualized over 25 years (i.e., the lifetime of commercial projects per SLOAPCD). Therefore, the total construction GHG emissions were calculated, amortized over 25 years, and then compared to the EDCAQMD operational GHG significance threshold of 1,150 MT CO2e per year.

CalEEMod was used to estimate GHG emissions during construction. Construction of the project is anticipated to last up to 2 years. On-site sources of GHG emissions include off-road equipment and off-site sources include on-road vehicles (haul trucks, vendor trucks, and worker vehicles). Table 4 presents construction GHG emissions for the project from on-site and off-site emission sources.

**Table 4: Estimated Annual Construction GHG Emissions** 

	CO <sub>2</sub>	CH₄	N <sub>2</sub> 0	CO₂e
Year		Metric	Tons	
2020	48.72	0.00	0.00	48.78
2021	195.29	0.01	0.00	195.54
2022	144.02	0.01	0.00	144.20
			Total	388.52
Annu	ualized emissions	over 25 years (met	tric ton per year)1	15.54

**Notes:** CO2 = carbon dioxide; CH4 = methane; N2O = nitrous oxide; CO2e = carbon dioxide equivalent. Construction emissions were annualized over 25 years (SLOAPCD 2012). See Attachment A for complete results.

As shown in Table 4, the estimated total GHG emissions during construction of the project would be approximately 389 MT CO2e. Estimated project-generated construction emissions amortized over 25 years would be approximately 16 MT CO2e per year. As with project-generated construction air quality pollutant emissions, GHG emissions generated during construction of the project would be short-term in nature, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions. Because there is no separate GHG threshold for construction, the evaluation of significance is determined by comparing the amortized construction emissions to the operational emissions threshold. As such, the project would not exceed the SLOAPCD threshold of 1,150 MT CO2e per year.

b) Less than Significant Impact. The CARB Scoping Plan, approved by CARB on December 12, 2008, provides a framework for actions to reduce California's GHG emissions and requires CARB and other state agencies to adopt regulations and other initiatives to reduce GHGs. As such, the Scoping Plan is not directly applicable to specific Projects. Relatedly, in the Final Statement of Reasons for the Amendments to the CEQA Guidelines, the California Natural Resources Agency observed that "[t]he [Scoping Plan] may not be appropriate for use in determining the significance of individual Projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009). Under the Scoping Plan, however, there are several state regulatory measures aimed at the identification and reduction of GHG emissions. CARB and

other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area source emissions (e.g., energy usage, high GWP GHGs in consumer products) and changes to the vehicle fleet (i.e., hybrid, electric, and more fuel-efficient vehicles) and associated fuels (e.g., Low Carbon Fuel Standard). To the extent that these regulations are applicable to the project or its uses, the project would comply with all regulations adopted in furtherance of the Scoping Plan to the extent required by law.

The project would also not impede the attainment of the GHG reduction goals for 2030 or 2050 identified in Senate Bill (SB) 32 and Executive Order (EO) S-3-05, respectively. EO S-3-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes for a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. While there are no established protocols or thresholds of significance for that future year analysis; CARB forecasts that compliance with the current Scoping Plan puts the state on a trajectory of meeting these long-term GHG goals, although the specific path to compliance is unknown (CARB 2014).

CARB has expressed optimism with regard to both the 2030 and 2050 goals. It states in the First Update to the Climate Change Scoping Plan that "California is on track to meet the near-term 2020 GHG emissions limit and is well positioned to maintain and continue reductions beyond 2020 as required by Assembly Bill (AB) 32" (CARB 2014). With regard to the 2050 target for reducing GHG emissions to 80% below 1990 levels, the First Update states the following (CARB 2014):

This level of reduction is achievable in California. In fact, if California realizes the expected benefits of existing policy goals (such as 12,000 megawatts of renewable distributed generation by 2020, net zero energy homes after 2020, existing building retrofits under AB 758, and others) it could reduce emissions by 2030 to levels squarely in line with those needed in the developed world and to stay on track to reduce emissions to 80% below 1990 levels by 2050. Additional measures, including locally driven measures and those necessary to meet federal air quality standards in 2032, could lead to even greater emission reductions.

In other words, CARB believes that the state is on a trajectory to meet the 2030 and 2050 GHG reduction targets set forth in AB 32, SB 32, and EO S-3-05. This is confirmed in the Second Update, which states (CARB 2017):

The Proposed Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while also identifying new, technologically feasibility and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Proposed Plan is developed to be consistent with requirements set forth in AB 32, SB 32, and AB 197.

The project would be consistent with the applicable strategies and measures in the Scoping Plan and would not impede the state's trajectory toward future GHG reductions for 2030 or 2050. In addition, since the specific path to compliance for the state in regards to the long-term goals will likely require development of technology or other changes that are not currently known or available, specific additional mitigation measures for the project would be speculative and cannot be identified at this time. The project's consistency would assist in meeting the County's contribution to GHG emission reduction targets in California. With respect to future

GHG targets under the SB 32 and EO S-3-05, CARB has also made clear its legal interpretation that it has the requisite authority to adopt whatever regulations are necessary, beyond the AB 32 horizon year of 2020, to meet EO S-3-05's 80% reduction target in 2050. This legal interpretation by an expert agency provides evidence that future regulations will be adopted to continue the state on its trajectory toward meeting these future GHG targets.

Finally, the project would not exceed the significance threshold of 1,150 MT CO2e per year during construction. Because the project would not exceed the threshold, this analysis provides support for the conclusion that the project would not conflict with EO S-3-05's GHG reduction goals for California. Therefore, this impact would be less than significant.

As such, the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and no mitigation is required.

### 2.17 Hazards and Hazardous Materials

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IX.	На	zards and Hazardous Materials. Would the pro	ject:			_
	a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?				
	b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and/or accident conditions involving the release of hazardous materials into the environment?				
	c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				
	d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
	e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				
	f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				
	g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?				

### 2.17.1 ENVIRONMENTAL SETTING

Hazardous materials and hazardous wastes are subject to extensive federal, state, and local regulations to protect public health and the environment. These regulations provide definitions of hazardous materials; establish reporting requirements; set guidelines for handling, storage, transport, and disposal of hazardous wastes; and require health and safety provisions for workers and the public. The major federal, state, and regional agencies enforcing these regulations are USEPA and the Occupational Safety and Health Administration (OSHA); California Department of Toxic Substances Control (DTSC); California Department of Industrial Relations, Division of Occupational Safety and Health (Cal/OSHA); California Governor's Office of Emergency Services (Cal OES); and EDCAPCD.

#### FEDERAL LAWS, REGULATIONS, AND POLICIES

#### COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, also called the Superfund Act; 42 USC Section 9601 et seq.) is intended to protect the public and the environment from the effects of past hazardous waste disposal activities and new hazardous material spills. Under CERCLA, USEPA has the authority to seek the parties responsible for hazardous materials releases and to ensure their cooperation in site remediation. CERCLA also provides federal funding (through the "Superfund") for the remediation of hazardous materials contamination. The Superfund Amendments and Reauthorization Act of 1986 (Public Law 99-499) amends some provisions of CERCLA and provides for a Community Right-to-Know program.

#### RESOURCE CONSERVATION AND RECOVERY ACT

The Resource Conservation and Recovery Act of 1976 (RCRA; 42 USC Section 6901 et seq.), as amended by the Hazardous and Solid Waste Amendments of 1984, is the primary federal law for the regulation of solid waste and hazardous waste in the United States. These laws provide for the "cradle-to-grave" regulation of hazardous wastes, including generation, transportation, treatment, storage, and disposal. Any business, institution, or other entity that generates hazardous waste is required to identify and track its hazardous waste from the point of generation until it is recycled, reused, or disposed of.

USEPA has primary responsibility for implementing RCRA, but individual states are encouraged to seek authorization to implement some or all RCRA provisions. California received authority to implement the RCRA program in August 1992. DTSC is responsible for implementing the RCRA program in addition to California's own hazardous waste laws, which are collectively known as the Hazardous Waste Control Law.

#### **ENERGY POLICY ACT OF 2005**

Title XV, Subtitle B of the Energy Policy Act of 2005 (the Underground Storage Tank Compliance Act of 2005) contains amendments to Subtitle I of the Solid Waste Disposal Act, the original legislation that created the Underground Storage Tank (UST) Program. As defined by law, a UST is "any one or combination of tanks, including pipes connected thereto, that is used for the storage of hazardous substances and that is substantially or totally beneath the surface of the ground." In cooperation with USEPA, SWRCB oversees the UST Program. The intent is to protect public health and safety and the environment from releases of petroleum and other hazardous substances from tanks. The four primary program elements include leak prevention (implemented by Certified Unified Program Agencies [CUPAs], described in more detail below), cleanup of leaking tanks, enforcement of UST requirements, and tank integrity testing.

#### SPILL PREVENTION, CONTROL, AND COUNTERMEASURE RULE

USEPA's Spill Prevention, Control, and Countermeasure (SPCC) Rule (40 CFR, Part 112) apply to facilities with a single above-ground storage tank (AST) with a storage capacity greater than 660 gallons, or multiple tanks with a combined capacity greater than 1,320 gallons. The rule includes requirements for oil spill prevention, preparedness, and response to prevent oil discharges to navigable waters and adjoining shorelines. The rule requires specific facilities to prepare, amend, and implement SPCC Plans.

#### OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

OSHA is responsible at the federal level for ensuring worker safety. OSHA sets federal standards for implementation of workplace training, exposure limits, and safety procedures for the handling of hazardous substances (as well as other hazards). OSHA also establishes criteria by which each state can implement its own health and safety program.

#### FEDERAL COMMUNICATIONS COMMISSION REQUIREMENTS

There is no federally mandated radio frequency (RF) exposure standard; however, pursuant to the Telecommunications Act of 1996 (47 USC Section 224), the Federal Communications Commission (FCC) established guidelines for dealing with RF exposure, as presented below. The exposure limits are specified in 47 CFR Section 1.1310 in terms of frequency, field strength, power density, and averaging time. Facilities and transmitters licensed and authorized by FCC must either comply with these limits or an applicant must file an environmental assessment (EA) with FCC to evaluate whether the proposed facilities could result in a significant environmental effect.

FCC has established two sets of RF radiation exposure limits—Occupational/Controlled and General Population/Uncontrolled. The less-restrictive Occupational/Controlled limit applies only when a person (worker) is exposed as a consequence of his or her employment and is "fully aware of the potential exposure and can exercise control over his or her exposure," otherwise the General Population limit applies (47 CFR Section 1.1310).

The FCC exposure limits generally apply to all FCC-licensed facilities (47 CFR Section 1.1307[b][1]). Unless exemptions apply, as a condition of obtaining a license to transmit, applicants must certify that they comply with FCC environmental rules, including those that are designed to prevent exposing persons to radiation above FCC RF limits (47 CFR Section1.1307[b]). Licensees at co-located sites (e.g., towers supporting multiple antennas, including antennas under separate ownerships) must take the necessary actions to bring the accessible areas that exceed the FCC exposure limits into compliance. This is a shared responsibility of all licensees whose transmission power density levels account for 5.0 or more percent of the applicable FCC exposure limits (47CFR 1.1307[b][3]).

### CODE OF FEDERAL REGULATIONS (14 CFR) PART 77

14 CFR Part 77.9 is designed to promote air safety and the efficient use of navigable airspace. Implementation of the code is administered by the Federal Aviation Administration (FAA). If an organization plans to sponsor any construction or alterations that might affect navigable airspace, a Notice of Proposed Construction or Alteration (FAA Form 7460-1) must be filed. The code provides specific guidance regarding FAA notification requirements.

State Laws, Regulations, and Policies

#### SAFE DRINKING WATER AND TOXIC ENFORCEMENT ACT OF 1986 - PROPOSITION 65

The Safe Drinking Water and Toxic Enforcement Act of 1986, more commonly known as Proposition 65, protects the state's drinking water sources from contamination with chemicals known to cause cancer, birth defects, or other reproductive harm. Proposition 65 also requires businesses to inform the public of exposure to such chemicals in the products they purchase, in their homes or workplaces, or that are released into the environment. In accordance with Proposition 65, the California Governor's Office publishes, at least annually, a list of such chemicals. OEHHA, an agency under the California Environmental Protection Agency (CalEPA), is the lead agency for implementation of the Proposition 65 program. Proposition 65 is enforced through the California Attorney General's Office; however, district and city attorneys and any individual acting in the public interest may also file a lawsuit against a business alleged to be in violation of Proposition 65 regulations.

#### THE UNIFIED PROGRAM

The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. CalEPA and other state agencies set the standards for their programs, while local governments (CUPAs) implement the standards. For each county, the CUPA regulates/oversees the following:

- Hazardous materials business plans;
- California accidental release prevention plans or federal risk management plans;
- The operation of USTs and ASTs;
- Universal waste and hazardous waste generators and handlers;
- On-site hazardous waste treatment;
- Inspections, permitting, and enforcement;
- Proposition 65 reporting; and
- Emergency response.

#### HAZARDOUS MATERIALS BUSINESS PLANS

Hazardous materials business plans are required for businesses that handle hazardous materials in quantities greater than or equal to 55 gallons of a liquid, 500 pounds of a solid, or 200 cubic feet (cf) of compressed gas, or extremely hazardous substances above the threshold planning quantity (40 CFR, Part 355, Appendix A) (Cal OES, 2015). Business plans are required to include an inventory of the hazardous materials used/stored by the business, a site map, an emergency plan, and a training program for employees (Cal OES, 2015). In addition, business plan information is provided electronically to a statewide information management system, verified by the applicable CUPA, and transmitted to agencies responsible for the protection of public health and safety (i.e., local fire department, hazardous material response team, and local environmental regulatory groups) (Cal OES, 2015).

#### CALIFORNIA OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

Cal/OSHA assumes primary responsibility for developing and enforcing workplace safety regulations in California. Cal/OSHA regulations pertaining to the use of hazardous materials in the workplace (CCR Title 8) include requirements for safety training, availability of safety equipment, accident and illness prevention programs, warnings about exposure to hazardous substances, and preparation of emergency action and fire prevention plans. Hazard communication program regulations that are enforced by Cal/OSHA require workplaces to maintain procedures for identifying and labeling hazardous substances, inform workers about the hazards associated with hazardous substances and their handling, and prepare health and safety plans to protect workers at hazardous waste sites. Employers must also make material safety data sheets available to employees and document employee information and training programs. In addition, Cal/OSHA has established maximum permissible RF radiation exposure limits for workers (Title 8 CCR Section 5085[b]), and requires warning signs where RF radiation might exceed the specified limits (Title 8 CCR Section 5085 [c]).

#### CALIFORNIA ACCIDENTAL RELEASE PREVENTION

The purpose of the California Accidental Release Prevention (CalARP) program is to prevent accidental releases of substances that can cause serious harm to the public and the environment, to minimize the damage if releases do occur, and to satisfy community right-to-know laws. In accordance with this program, businesses that handle more than a threshold quantity of regulated substance are required to

develop a risk management plan (RMP). This RMP must provide a detailed analysis of potential risk factors and associated mitigation measures that can be implemented to reduce accident potential. CUPAs implement the CalARP program through review of RMPs, facility inspections, and public access to information that is not confidential or a trade secret.

#### **CALIFORNIA HIGHWAY PATROL**

CHP, along with Caltrans, enforce and monitor hazardous materials and waste transportation laws and regulations in California. These agencies determine container types used and license hazardous waste haulers for hazardous waste transportation on public roads. All motor carriers and drivers involved in transportation of hazardous materials must apply for and obtain a hazardous materials transportation license from CHP.

#### LOCAL LAWS, REGULATIONS, AND POLICIES

A map of the fuel loading in the County (General Plan Figure HS-1) shows the fire hazard severity classifications of the SRAs in El Dorado County, as established by CDF. The classification system provides three classes of fire hazards: Moderate, High, and Very High. The County's Fire Hazard Ordinance (Chapter 8.08) requires defensible space as described by the State Public Resources Code, including the incorporation and maintenance of a 100-foot fire break or vegetation fuel clearance around structures in fire hazard zones. The County's requirements on emergency access, signing and numbering, and emergency water are more stringent than those required by state law. The Fire Hazard Ordinance also establishes limits on campfires, fireworks, smoking, and incinerators for all discretionary and ministerial developments.

### **WILDFIRE RISK AND RESPONSE**

PRC 4201-4204 and Government Code 51175-51189 require identification of fire hazard severity zones in California. CAL FIRE has established a fire hazard severity classification system. Fire hazard severity zones are measured qualitatively, based on vegetation, topography, weather, crown fire potential (a fire's tendency to burn upwards into trees and tall brush), ember production, and movement within the area being consumed.

Fire prevention areas considered to be under State jurisdiction are referred to as State Responsibility Areas (SRA). In such areas, CAL FIRE is required to delineate three hazard ranges: moderate, high, and very high. The project site is within an SRA and has been classified by CAL FIRE as a Very High Fire Hazard Severity Zone (CAL FIRE, 2007).

Battalion 1 of CAL FIRE's Amador-El Dorado Unit has primarily responsibility for response to wildland fires in the project area (CAL FIRE 2018). Battalion 1 encompasses approximately 590,000 acres in El Dorado and Sacramento counties. El Dorado County communities within the Battalion include Camino, Diamond Springs, El Dorado, El Dorado Hills, Pioneer, Logtown, Latrobe, Nashville, Cameron Park, Placerville, Pleasant Valley, Pollock Pines, Rescue, Shingle Springs, and Grizzly Flats. Within Battalion 1, El Dorado Station 43 would provide first response to the project site. El Dorado Station 43 houses two Type III fire engines and one Type II fire dozer (CAL FIRE, 2018). It also houses one dozer tender unit and is the Battalion Chief Headquarters. El Dorado Station 43 is approximately 10 miles southwest of the project site, at 5660 Mother Load in Placerville.

### 2.17.2 DISCUSSION

a) Less than Significant Impact. The project would not involve the routine transportation, use, or disposal of hazardous materials. Construction and operational activities associated with the project would involve the use of common hazardous materials used in construction and

equipment and facilities maintenance activities including; bonding agents, paints, and sealant coatings, as well as petroleum-based fuels, hydraulic fluids, and lubricants used in vehicles and equipment. These materials would be used, stored, and transported to the site in accordance with applicable regulations and product labeling and safety data sheets. All construction waste materials would be disposed of in compliance with State and Federal hazardous waste requirements and at appropriate facilities.

b) **Less than Significant Impact with Mitigation Incorporated.** Adherence to regulations (see *Regulatory Setting*), Safety Data Sheets for materials used, and EID hazardous materials containment and spill prevention and clean-up protocols would prevent a significant risk of upset or accident conditions that would involve the release of hazardous materials into the environment with the incorporation of mitigation measure **HAZ-1**.

### **Mitigation Measures:**

**HAZ-1:** Implement **Hydro-1**.

- c) Less than Significant Impact. The Camino Elementary School is approximately 250 feet from the boundary of the project site. There are residences within 1,800 feet from the boundary of the project site. A Health Risk Assessment (HRA) was prepared to evaluate impacts to sensitive receptors proximate to the project during construction. Sources evaluated during construction include onsite off-road equipment and diesel vehicles, abrasive blasting, and coating activities. Project construction would result in emissions of diesel particulate matter (DPM) from heavy construction equipment and trucks accessing the site. DPM is characterized as a Toxic Air Containments (TAC) by the State of California. TACs emissions would also be generated from the sand blasting and architectural coating activities. The HRA modelling suggests that the risks associated with the release of TAC's during construction would not exceed significance thresholds for emissions. Further detailed discussion is provided in Sections 2.3 and 3.2.3 of Attachment A with respect to potential health impacts associated with TAC's.
- d) **No Impact.** The SWRCB GeoTracker and the California Department of Toxic Substances Control (DTSC) EnviroStor database were searched to identify toxic releases, hazardous waste, or other violations that could affect the project site (SWRCB, 2020 & DTSC, 2020). The project site is not listed as a hazardous waste site in either of these databases.

e) & f)

**No Impact.** The closest airport or airstrip to the Project site is the Placerville Airport, approximately 3.5-miles southwest of the project site. The airport has no direct link to the Project (i.e. roadway) and no safety hazard will occur as a result of the project.

g) Less than Significant Impact. The proposed project is located in an area classified by CALFIRE as a Very High Fire Hazard Severity Zone. The work area for the project is devoid of any vegetation. However the project site is surrounded by a mix of dense vegetation, grassland, and large oak and coniferous trees. Once the project work is completed, the risk to people from wildland fires would remain the same as the pre-project risk conditions.

# 2.18 Hydrology and Water Quality

			ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
X.	Ну	drol	logy and Water Quality. Would the project:				
	a)	dis sul	olate any water quality standards or waste scharge requirements or otherwise bstantially degrade surface or ground water ality?				
	b)	inte rec sus	bstantially decrease groundwater supplies or erfere substantially with groundwater charge such that there the project may impede stainable groundwater management of the sin?				
	c)	of t alte	bstantially alter the existing drainage pattern the site or area, including through the eration of the course of a stream or river or ough the addition of impervious surfaces, in a anner which would:				
		i)	Result in substantial erosion or siltation on- or off-site;				
		ii)	Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; or				
		iv)	Impede or redirect flood flows?				$\boxtimes$
	d)		flood hazard, tsunami, or seiche zones, risk ease of pollutants due to project inundation?				
	e)	wa	onflict with or obstruct implementation of a ter quality control plan or sustainable oundwater management plan?				

### 2.18.1 Environmental Setting

The project site is located approximately 450-feet southwest of China Creek. The creek is a tributary of the South Fork of the American River by way of Weber Creek (FWS, 2019). There are no other wetland or water features located in close proximity to the site.

The project site is not located within a 100-year flood zone (FEMA, 2008), and is not located in a dam inundation zone (El Dorado County, 2004).

### 2.18.2 Discussion

a) Less than Significant with Mitigation Incorporated. The proposed project would require the use of paints and other contaminants with potential to degrade surface or ground water quality resulting from unintentional spills during project implementation. These impacts would be significant without implementation of mitigation measure HYDRO-1

### **Mitigation Measures:**

<u>Hydro-1:</u> Prepare and Implement a Spill Prevention and Control Plan and Applicable Hazardous Materials Business Plans.

The contractor shall prepare a Spill Prevention and Control Plan (SPCP) and Hazardous Materials Business Plans (HMBP) to be reviewed and approved by the District prior to the start of work. The SPCP and HMBP shall be implemented by the contractor for the duration of the project. The SPCP and applicable HMBP shall identify the types of materials used for equipment operation (i.e. paints and/or other contaminants), and measures to prevent and materials available to clean up, hazardous material and waste spills. The SPCP shall also identify emergency procedures for responding to spills.

The SPCP and all material necessary for its implementation shall be accessible on-site prior to initiation of project construction and for the duration of the project. Employees and shall be provided the necessary information from the SPCP to prevent or reduce the discharge of pollutants from project activities to waters and to use the appropriate measures should a spill occur. In the event of a spill, work shall stop in the immediate vicinity of the spill until cleanup activities are completed. The contractor will immediately notify the District of any spill events.

b) **No Impact.** The proposed project would not involve extraction of groundwater and would not deplete groundwater supplies. The project area is not located in a known groundwater recharge basin, and the existing facilities would not interfere substantially with groundwater recharge.

c) i), ii), iii), iv)

**No Impact.** No ground disturbance would occur as a result of the proposed project. Therefore, the project would not result in erosion or siltation on- or off-site, increase the rate or amount of surface runoff, create new sources of polluted runoff or impede, redirect flood flows or stormwater.

- d) **No Impact.** The project site is not located in an area subject to seiche or tsunami. The project site does not pose a risk to release pollutants associated with inundation. No impact would occur.
- e) **No Impact.** The project would not result in other effects that would conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

# 2.19 Land Use and Planning

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XI.	. Land Use and Planning. Would the project:				
	a) Physically divide an established community?				$\boxtimes$
	b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<del></del>			

### 2.19.1 Environmental Setting

The project site is located on land designated Public Facilities (PF) in the General Plan, and zoned Planned Agriculture, 10-Acres (PA-10) (El Dorado County GOTNET, 2018). The project is proposed by EID, a special district that supplies water to customers throughout much of El Dorado County. Pursuant to Government Code sections 53091(D) and (E), many of EID's activities are not subject to local zoning or land use requirements, as stated below.

Building and zoning ordinances of a county or city shall not apply to the location or construction of facilities for the production, generation, storage, treatment, or transmission of water, or for the production or generation of electrical energy, facilities that are subject to Section 12808.5 of the Public Utilities Code.

Although the project area is within El Dorado County, it is a special district with equal authority; therefore, ElD is exempt from the El Dorado County General Plan and Zoning Ordinance requirements. However, ElD uses the goals and policies outlined in the General Plan as a metric for analyzing impacts under CEQA and elects to implement certain goals and policies when appropriate for a project.

### 2.19.2 Discussion

- a) No Impact. The proposed project is located in an established rural community setting adjacent to HWY 50 and elementary school property. The proposed project would recoat the interior and exterior of two large water storage tanks. Therefore, the proposed project would be incapable of physically dividing an established community.
- b) No Impact. The proposed project involves recoating existing water storage tanks associated with a drinking water storage and conveyance system. There would be no change in land use associated with implementing the project, and the project would not conflict with any land use plans or policy adopted for the purpose of avoiding or mitigating an environmental effect.

# 2.20 Mineral Resources

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. Mi	neral Resources. Would the project:				
a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				
b)	Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?				

# 2.20.1 ENVIRONMENTAL SETTING

There are no known mineral resources on the project site (CGS, 2001, El Dorado County, 2004).

# 2.20.2 DISCUSSION

- a) No Impact. There are no known mineral resources on the project site.
- **No Impact.** The project site is not within a designated locally important area of known mineral resources, designated in the El Dorado County General Plan (El Dorado County, 2004).

#### **2.21 Noise**

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII.	No	ise. Would the project result in:				
	a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?				
	b)	Generation of excessive groundborne vibration or groundborne noise levels?			$\boxtimes$	
	c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				

### 2.21.1 ENVIRONMENTAL SETTING

El Dorado County has developed and adopted goals and policies with the intent of controlling and reducing environmental noise and to protect its inhabitants from exposure to excessive noise levels. Noise standards applicable to the proposed Project are contained in the El Dorado County General Plan and El Dorado County Code of Ordinances.

#### **EL DORADO COUNTY GENERAL PLAN**

The Public Health, Safety, and Noise Element of the El Dorado County General Plan includes objectives, goals, and policies related to acceptable noise levels. The policies relevant to this project listed in the General Plan are provided below:

**Policy 6.5.1.2** Where proposed non-residential land uses are likely to produce noise levels exceeding the performance standards of Table 6-2 [Table 1 in this report, below] at existing or planned noise-sensitive uses, an acoustical analysis shall be required as part of the environmental review process so that noise mitigation may be included in the project design.

**Table 6:** Noise Level Performance Protection Standards for Noise Sensitive Land Uses Affected by Non-Transportation Sources

	Daytime	Evening	Night
Noise Level Descriptor	7 a.m 7p.m.	7 p.m10 p.m.	10 p.m7a.m.

	Community	Rural	Community	Rural	Community	Rural
Hourly Leq, dB	55	50	50	45	45	40
Maximum level (Lmax), dB	70	60	60	55	55	50

Source: Table 6-2 of El Dorado County General Plan Noise Element\*

**Notes:** Each of the noise levels specified above shall be lowered by 5 dB for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises. These noise level standards do not apply to residential units established in conjunction with industrial or commercial uses (e.g., caretaker dwellings).

The County can impose noise level standards which are up to 5 dB less than those specified above based upon determination of existing low ambient noise levels in the vicinity of the project site.

In Community areas the exterior noise level standard shall be applied to the property line of the receiving property. In Rural Areas the exterior noise level standard shall be applied at a point 100 feet away from the residence. The above standards shall be measured only on property containing a noise sensitive land use as defined in Objective 6.5.1. This measurement standard may be amended to provide for measurement at the boundary of a recorded noise easement between all affected property owners and approved by the County.

\*For the purposes of the Noise Element, transportation noise sources are defined as traffic on public roadways, railroad line operations, and aircraft in flight. Control of noise from these sources is preempted by federal and state regulations. Control of noise from facilities of regulated public facilities is preempted by California Public Utilities Commission regulations. All other noise sources are subject to local regulations. Non-transportation noise sources may include industrial operations, outdoor recreation facilities, HVAC units, schools, hospitals, commercial land uses, other outdoor land use, etc.

**Policy 6.5.1.3** Where noise mitigation measures are required to achieve the standards of Tables 6-1 and 6-2 [Table 5 in this report, above], the emphasis of such measures shall be placed upon site planning and project design. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise mitigations measures have been integrated into the project and the noise barriers are not incompatible with the surroundings.

**Policy 6.5.1.7** Noise created by new proposed non-transportation noise sources shall be mitigated so as not to exceed the noise level standards of Table 6-2 [Table 5 of this report] for noise-sensitive uses.

**Policy 6.5.1.11** The standards outlined in the Noise Element shall not apply to those activities associated with actual construction of a project as long as such construction occurs between the hours of 7 a.m. and 7 p.m., Monday through Friday and 8 a.m. and 5 p.m. on weekends, and on federally-recognized holidays.

**Policy 6.5.1.13** When determining the significance of impacts and appropriate mitigation to reduce those impacts for new development projects, including ministerial development, the following criteria shall be taken into consideration:

A. In areas which ambient noise levels are in accordance with the standards in Table 6-2 [Table 5 of this report], increases in ambient noise levels caused by new non-transportation noise sources that exceed 5 dBA shall be considered significant; and

B. In areas in which ambient noise levels are not in accordance with the standards in Table 6-2, increases in ambient noise levels caused by new non-transportation noise sources that exceed 3 dBA shall be considered significant.

#### **EL DORADO COUNTY CODE OF ORDINANCES**

The El Dorado County Code of Ordinances includes Chapter 9.16, Noise, which provides a subjective means of maintaining the ambient noise environment within the County. As Chapter 9.16 contains no quantitative standards or thresholds, it is not employed within this analysis.

**Section 130.37** of the Zoning Ordinance reiterates the standards and thresholds that are contained within the El Dorado County General Plan, Public Health, Safety and Noise Element. The Zoning Code provides exemptions to the Zoning Code standards within Section 130.37.020. The exemptions that are potentially applicable to the project are as follows:

- F. Noise sources associated with work performed by public or private utilities in the maintenance or modification of its facilities.
- Construction (e.g., construction, alteration or repair activities) during daylight hours provided that all construction equipment shall be fitted with factory installed muffling devices and maintained in good working order.

#### **EXISTING NOISE ENVIRONMENT**

The existing ambient noise environment in the project vicinity is dominated primarily by noise generated from vehicular traffic on U.S. Highway 50 (US 50). The El Dorado County General Plan provides a 60 dBA Ldn/CNEL future 2025 traffic noise contour in Attachment B-8 of the General Plan (EDC, 2004). The 2025 traffic 60 dBA Ldn traffic noise level contour is approximately 940 feet from the centerline of US 50 and encompasses the majority of the project site and the adjacent Camino School.

### **DISCUSSION**

a) The project would be performed in stages for both the interior and the exterior of the reservoirs, such as media blasting, repair, surface preparation, and recoating. Each of the project stages would involve small variations in the equipment employed. The most significant noise sources associated with the project are anticipated to be the media blasting and metal repair work that may be necessary. Media blasting is assumed to include noise sources such as an air compressor, a generator, a pressure pot, a dehumidifier, a forklift for material handling, and the noise from the blasting media impacting the reservoir surfaces. Sound pressure levels for the media blasting operations, based on the levels cataloged during the measurement survey and normalized to a 50-foot reference distance, are presented in Table 3 of Attachment C. As shown, SPLs associated with equipment assumed to be used during the media blasting operations ranges from 58 to 74 dBA Leq and 61 to 83 dBA Lmax at a reference distance of 50 feet. If all noise sources associated with the operation are assumed to be operational at a given time, the media blasting operations would result in a combined SPL of approximately 78 dBA Leq, with a maximum noise level of 83 dBA at 50 feet.

Metal repair work is assumed to include cutting, welding, and grinding metalwork. Sound pressure levels for metal repair work is presented in Table 4 of Attachment C. Sound pressure levels for the air compressor are based on the noise measurement survey, the generator SPLs are based on the supplied manufacturer reference level, SPLs for welding, grinding and cutting

are based on empirical reference data (BBN 1982). As shown, SPLs associated with equipment assumed to be used during the metal repair operations ranges from 58 to 80 dBA Leq and 61 to 80 dBA Lmax at a reference distance of 50 feet. If all noise sources associated with the operation are assumed to be operational at a given time, the metal repair operations would result in a combined SPL of approximately 80 dBA Leq, with a maximum noise level of 80 dBA at 50 feet.

Based on the distance from the acoustical center to the nearest noise-sensitive receptor the sound levels generated by the project will attenuate (lessen) over distance. Typical sound attenuation rate for localized point sources (e.g., heavy construction equipment, mobile-source construction noise, stationary-source construction noise) is 6 dB per doubling of distance (DD) between the noise source and the receptor.

The nearest noise-sensitive receptor in the project vicinity would be the Camino School. Applying the 6 dB/DD attenuation rate, project noise levels generated by the media blasting operations would be approximately 52 dBA Leq and 57 dBA Lmax. Project noise levels generated by the metal repair work would attenuate to approximately 56 dBA Leq and 55 dBA Lmax. Therefore, additional mitigation measures would be necessary to comply with the El Dorado County non-transportation noise standards if construction operations are performed outside of the exempted timeframe (7 AM to 7 PM Monday through Friday, and 8 AM to 5 PM on weekends and holidays).

This analysis was based on an noise analysis conducted by Dudek consulting firm (Dudek, 2020) and is provided in Attachment C. The following mitigation measures shall be implemented as part of construction activities associated with the project in order to reduce the effects of noise levels generated from construction operations.

#### Mitigation Measures

**Noise-1:** Construction operations and related activities shall comply with the operational hour limitations for construction as outlined in the El Dorado County General Plan. Construction shall be limited to the weekday hours of 7:00 AM to 7:00 PM and the weekend or holiday hours of 8:00 AM to 5:00 PM. If construction activities are to be conducted outside of the exempted construction operational hours, the additional mitigation measures provided below shall be implemented.

**Noise-2:** Construction equipment and vehicles shall be fitted with efficient, well-maintained mufflers that reduce equipment noise emission levels at the project site. Internal combustion powered equipment shall be equipped with properly operating noise suppression devices (e.g., mufflers, silencers, wraps) that meet or exceed the manufacturer's specifications. Mufflers and noise suppressors shall be properly maintained and tuned to ensure proper fit, function and minimization of noise.

<u>Noise-3:</u> Portable and stationary site support equipment (such as generators, compressors, etc.) shall be located as far as possible from nearby noise-sensitive receptors in the line of sight between the noise generating sources and noise-sensitive receptors shall be limited as much as possible. Such as locating noise generating equipment on the opposite side of the reservoir from the noise-sensitive receptors.

<u>Noise-4:</u> Construction equipment shall not be idled when not in use for extended periods (e.g., 5 minutes or longer) of time in the immediate vicinity of noise-sensitive receptors.

- b) Less than Significant Impact. The proposed project would not create a permanent new source of excessive groundborne vibration or groundborne noise. A temporary increase, not anticipated to exceed prescribed thresholds, in groundborne vibration and noise may result from construction activities. Based on groundborne vibration information collected by Caltrans, the estimated vibration velocity level at sensitive receptors 250 feet away from the nearest construction area would be a less than perceptible amount.
- c) **No Impact.** The project is not located within the vicinity of a private airstrip or within two miles of a public airport or public use airport.

# 2.22 Population and Housing

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV.	Po	pulation and Housing. Would the project:				
	a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				
	b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				

### 2.22.1 ENVIRONMENTAL SETTING

The project site is located in El Dorado County, in the unincorporated community region of Camino. The county's 2018 population is estimated to be 191,848 (DOF 2019a), forecast to increase to 206,010 by 2030 (DOF 2019b).

### 2.22.2 Discussion

- a) No Impact. No additional water capacity would be created as part of the proposed project. Therefore, the proposed project would have no potential to directly or indirectly induce population growth.
- b) **No Impact.** The proposed project does not include any expansion of use and/or construction of new facilities and therefore would not displace any houses or people.

### 2.23 Public Services

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XV.	Public Services. Would the project:				
	a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
	Fire protection?			$\boxtimes$	
	Police protection?				$\boxtimes$
	Schools?			$\boxtimes$	
	Parks?				$\boxtimes$
	Other public facilities?				$\boxtimes$

### 2.23.1 ENVIRONMENTAL SETTING

#### **EL DORADO COUNTY FIRE DISTRICT**

The El Dorado County Fire District provides fire protection services to 281 square miles of unincorporated El Dorado County. The Fire District has six staffed and seven unstaffed volunteer fire stations, and 72 uniformed personnel and three support personnel (El Dorado County Fire District, 2020). The Fire District responds to structural fires, vehicle accidents, medical aid requests, or any other emergencies. The nearest fire station to the project site is Fire Station 21 located at 4040 Carson Road, Camino CA 95709, approximately .5 miles north of the project site.

# **EL DORADO COUNTY SHERIFF'S DEPARTMENT**

Law enforcement in unincorporated areas of El Dorado County is provided by the El Dorado County Sheriff's Department. The Sheriff's Department operates from its headquarters in Placerville and from substations in South Lake Tahoe, El Dorado Hills, and Georgetown (El Dorado County Sheriff's Department, 2018). Specialized members of the Sheriff's Department also serve on additional units, including the Crisis Response, Off-Highway Vehicle Unit, Special Weapons and Tactics Team, Dive Team, and Search and Rescue Team. The patrol unit is the largest operational unit and consists of three lieutenants, 14 sergeants, and 76 deputy sheriff's (El Dorado County Sheriff's Department, 2018). The nearest Sheriff's office to the project site is approximately 7.5 miles to the west, at 300 Fair Ln, Placerville, CA 95667. The Sheriff's Department is responsible for managing the OES in El Dorado County. The OES is responsible for planning, response, recovery and mitigation of large-scale emergencies, and it provides a link between local emergency services and the State (El Dorado County Sheriff's Department, 2018).

### **S**CHOOLS

The nearest school to the proposed project area is the Camino Elementary School and the Camino Science and Natural Resources Charter School (shared campus) located adjacent to the project area, at 3060 Snows Road, Camino, CA 95709. As of 2015, the combined enrollment for both schools was approximately 530 students (Camino Union School District, 2015). Both schools teach grades kindergarten through 8th grade. There are no high schools or other middle schools located in close proximity to the project area.

#### **PARKS**

Other than the playground at the adjacent elementary school, there are no parks located in the vicinity of the project site.

### **OTHER**

The project area is located in a semi-rural community region of El Dorado County. Other public services (libraries, churches, community centers) are not located in close proximity to the proposed project.

### **DISCUSSION**

- a) i) Less than Significant Impact. The project would not involve the construction of habitable structures, nor would the project lead to a permanent resident population at or near the project area. However, short-term project activities have the potential for fire that would generate demands for fire protection services, but because the project work areas are paved there is very low potential to cause wildfire. Therefore, no new fire protection facilities would be required to provide fire protection services as a result of the project.
- a) ii) No Impact. The project would not involve the construction of habitable structures, nor would the project lead to an increased permanent resident population at or near the project area. Therefore, no new police protection facilities would be required to provide police protection services as a result of the project.
- a) iii)-v)

**No Impact.** The project would not lead to an increase in the resident population or housing stock of the area and therefore would not create a demand for new schools, parks, or other public facilities associated with an increase in resident population. The activities required for maintenance once the project is complete would not require new or expanded public facilities. No new public facilities would be required and there would be no adverse impact. There are no other public services (libraries, churches, community centers, hospitals) located in close proximity to the project area.

### 2.24 Recreation

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI.	Re	creation.				
	a)	Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				
	b)	Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?				

### 2.24.1 ENVIRONMENTAL SETTING

The Camino community region and surrounding area provide various opportunities for outdoor recreation with activities ranging from hiking, skiing, to aquatic recreation on rivers and lakes. The primary recreational resource in the vicinity of the study area is Apple Hill, which is a regional tourist attraction visited by over 500,000 people annually (Apple Hill Growers Association, 2020).

### 2.24.2 DISCUSSION

a) & b)

**No Impact.** The proposed project would recoat the interior and exterior of two large water storage tanks and would be un-related to recreational facilities. Therefore, the proposed project would not generate new demand for recreational facilities, so there would be no increase in use of existing neighborhood and regional parks or need for new or expanded recreational facilities as a result of the project.

# 2.25 Transportation

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. Tra	ansportation. Would the project:				
a)	Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?				
b)	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?				
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				
d)	Result in inadequate emergency access?				

### 2.25.1 Environmental Setting

Primary vehicle access to the project site would be provided by an existing encroachment onto Snows Road. No new access roads or changes to the existing access would be required to provide vehicle access.

Snows Road is a county maintained 2 lane roadway. The Transportation and Circulation Element of the El Dorado County General Plan requires that County-maintained roads and State highways within the unincorporated areas of the county shall not be worse than LOS E in the community regions, or LOS D in rural centers and rural regions (El Dorado County, 2009).

Project operations following completion of the proposed project would not change, compared to existing conditions. Therefore, an analysis of project-related traffic impacts using LOS was not performed, because LOS primarily is used for analyzing long-term effects of projects on traffic flow. This analysis used the recommended screening criterion from the Institute of Transportation Engineers (ITE, 1988) for assessing the effects of construction projects that create temporary traffic increases. To account the large percentage of heavy trucks associated with typical construction projects, the Institute of Transportation Engineers recommends a threshold level of 50 or more new peak-direction (one-way) trips during the peak hour. The proposed project does not include the use of heavy trucks or equipment. Traffic to and from the project site would primarily consist of personal worker vehicles and light duty trucks with occasional supply deliveries. There would be approximately 10 workers on-site during project implementation, which could result in up to 10 new trips during a.m. or p.m. peak direction trips.

According to the El Dorado County Bicycle Transportation Plan (El Dorado County Transportation Commission, 2010), bikeways are not planned in the project area. There are no transit facilities or railroads in the project area. The Placerville airport is approximately 3.5 Miles west of the project site.

### 2.25.2 DISCUSSION

a) Less than Significant Impact. The proposed project would not introduce any new land uses or activities in the project area that would generate long-term increases in traffic volume. Potential traffic increases would be limited to temporary project-related activities. Temporary increases would result in negligible increases resulting from worker commute trips to and from the project site along snows Road.

Because the proposed project would not result in more than 50 new trips during a.m. or p.m. peak hours, the proposed project is not anticipated to cause an increase in traffic that would be substantial in relation to the existing traffic load and capacity of the street system. Therefore, the proposed project would not result in substantial trip-generated traffic congestion. Also, construction-generated traffic would be temporary, and therefore would not result in any long-term degradation in performance of any of the roadways in the project vicinity.

- b) **No Impact.** The project would include improvements at an existing facility and would not result in any land use changes or change in vehicle miles traveled (VMT) compared to the existing operations of the facility. Negligible increases in construction-related activity from the proposed project would not disrupt the existing transportation network in the surrounding project area. No lane, street, sidewalk, or bikeway closures are planned, but workers would travel to and from the site. The project would not generate worker vehicle miles traveled (VMT) per employee exceeding 15 percent above the existing average worker VMT per employee in the project area. The project would not require a change to existing land use designations. Site operations would not require or result in additional activities for operations and maintenance beyond existing conditions.
- No Impact. The Project would not affect air traffic patterns, would not result in changes to public roadways, or change in existing land uses. No impact would result from hazards or safety risks associated with any change in air traffic patterns, roadway design or incompatible uses, inadequate emergency access, or conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities. Local roads serving the project site are lightly traveled and construction would be temporary and would not result in a substantial increase in traffic that would be anticipated to degrade any roadway or intersection level of service.
- d) **No Impact.** The project will only require the use of general–purpose vehicles, light duty trucks, small equipment trailers, and personal worker vehicles. The site provides adequate paved parking areas located off the main access roadway. Additionally, no slow moving heavy equipment will be required to implement the proposed project that could impede emergency vehicle access.

#### 2.26 Tribal Cultural Resources

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. Trib	al Cultural Resources. Would the project:				
1	Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geologically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i)	Listed or eligible for listed in the California Register of Historical Resources, or in local register of historical resources as defined in Public Resources Code section 5020.1(k)?				
ii)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?				

# 2.26.1 ENVIRONMENTAL SETTING

Tribal cultural resources are defined in CEQA as a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American tribe, which may include non-unique archaeological resources previously subject to limited review under CEQA.

AB 52 requires the lead agency to begin consultation with any California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project if: (1) the California Native American tribe requests to the lead agency, in writing, to be informed by the lead agency through formal notification of a proposed project(s) in the geographic area that is affiliated traditionally and culturally with the tribe; and (2) the California Native American tribe responds, in writing, within 30 days of receipt of the formal notification and requests the consultation (Public Resources Code, Section 21080.3.1[d]).

On January 17, 2020, EID sent written correspondence to the Shingle Springs Miwok, Torres Martinez Desert Cahuila Indians, United Auburn Indian Community of Auburn Rancheria, Wilton Rancheria, and the Wopumnes Nisenan-Mewuk Nation of El Dorado County providing project information and requesting a response if the groups are interested in consulting regarding the proposed project in accordance with AB-52. Tribal correspondence resulted in a response from the United Auburn Indian

Community of Auburn Rancheria requesting that EID contact the tribe in the event any TCR's are discovered during project construction. Other tribal groups on the Native American Heritage Commission (NAHC) list will be notified of the availability of this IS/MND.

### 2.26.2 DISCUSSION

a) i) & ii)

**No Impact.** Consultation with local Native American groups and individuals did not identify tribal cultural resources in the project site.

# 2.27 Utilities and Service Systems

		ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX.	Uti	ilities and Service Systems. Would the projec	t:			
	a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?				
	b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?				
	c)	Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand, in addition to the provider's existing commitments?				
	d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?				
	e)	Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?				

# 2.27.1 ENVIRONMENTAL SETTING

The project site and vicinity are served by Pacific Gas & Electric Company for electrical power. EID provides water service to the surrounding neighborhood. Since there will be no demolition of any structures or site clearing required for the project, it is unlikely that the project would generate solid waste requiring removal using specialized equipment or large trash containers.

### 2.27.2 Discussion

- a) No Impact. The project would not include new development that would require relocation or construction of new or expanded municipal wastewater treatment, storm water drainage, natural gas, or telecommunications facilities.
- b) **No Impact.** The project would not include new development that would increase water supply demand.

- c) **No Impact.** The project does not include elements that would generate wastewater flows. Therefore, the project would not exceed a wastewater treatment provider's capacity.
- d) **No Impact.** The proposed project does not include demolition of structures or site clearing that could generate excessive solid waste.
- e) **No Impact.** As discussed in item d), the proposed project does not include demolition of structures or site clearing that could generate excessive solid waste. Additionally, disposal of waste associated with paint, solvent, or other chemical containers that potentially contained hazardous materials associated with the proposed project would be disposed of in compliance with federal, state, and local regulations standards related to the disposal of hazardous waste.

#### 2.28 Wildfire

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. Wildfire. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:					
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?				
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				

# 2.28.1 ENVIRONMENTAL SETTING

The project area is classified by CAL FIRE as a Very High Fire Hazard Severity Zone (VHFSHZ) within the State Responsibility Area (SRA) (CAL FIRE, 2007). An SRA is an area where the State is financially responsible for the prevention and suppression of wildfires. According to the CAL FIRE VHFSHZ map.

### 2.28.2 Discussion

- a) **No Impact.** The project site is accessed from a gated dead-end road extending from an encroachment onto Snows Road. Traffic along Snows Road would not be impaired as a result of the proposed project due to low traffic volumes that would result from daily activities.
- b) Less than Significant Impact. The project work area is predominantly devoid of vegetation. However the project site is surrounded by a mix of dense vegetation, grassland, and large oak and coniferous trees. Once the project work is completed, the risk to people from wildland fires would remain the same as the pre-project risk conditions.
- c) No Impact. The project would not require installation of fuel breaks, emergency water sources, power lines, or other utilities that could exacerbate fire risk. The project area is accessed via existing gravel entrance off Snows Road. Worker vehicles and equipment would not impede access that may exacerbate fire risk or result in temporary or on-going impacts to the environment.

d)	<b>No Impact.</b> The proposed project will not include any habitable structures or grading that could significantly change the slope of the project site. Project implementation would not expose people or structures to significant risks because of runoff, post-fire slope instability, or drainage changes.

# 2.29 Mandatory Findings of Significance

	ENVIRONMENTAL ISSUES	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. M	landatory Findings of Significance.				
a <sup>°</sup>	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?				
b	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)				
c)	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?				

Amador Waterways v. Amador Water Agency (2004) 116 Cal. App. 4th at 1109; San Franciscans Upholding the Downtown Plan v. City and County of San Francisco (2002) 102 Cal. App. 4th 656.

#### 2.29.1 **DISCUSSION**

Less than Significant with Mitigation Incorporated. This Initial Study provides an analysis of a) potential environmental impacts of the project, including the potential to degrade the quality of the environment, impact fish, wildlife, or plant species, or harm important examples of major historical periods. No substantial evidence has been identified that would indicate that this project would have the potential to significantly degrade the quality of the environment. Mitigation measures to avoid, minimize, or compensate for potential impacts are included in sections 2.12. Biological Resources, 2.17 Hazards and Hazardous Materials, 2.19. Hydrology and Water Quality, and 2.21. Noise. With implementation of the aforementioned mitigation measures and with adherence to County, State, and Federal regulations, any impacts from the project would be rendered less than significant

b) Less than Significant Impact. Cumulative impacts are defined in Section 15355 of the California Environmental Quality Act (CEQA) Guidelines as two or more individual effects, which when considered together, would be considerable or which would compound or increase other environmental impacts.

The project would strip the existing finish coating from the existing reservoir tanks, prepare the surface and apply a new coating. The project would not involve development or changes in land use that would result in an excessive increase in population growth. This initial study found that with mitigation, there would be no significant impacts related to any of the topics in the CEQA Appendix G Checklist that would compound with similar effects such that the project's contribution would be cumulatively considerable. For these issue areas, either no impacts, or less than significant impacts would be anticipated. Since the projects potential impacts would primarily be temporary during construction, the impacts of the project would not be cumulatively considerable when considered with other regional projects.

As outlined and discussed in this document, as mitigated and with compliance with applicable County, state, and federal regulations this project would not be anticipated to have a significant environmental effect which would cause substantial adverse effects on human beings, either directly or indirectly. Based on the analysis in this study, it has been determined that the project would have less than significant cumulative impacts.

c) **Less than Significant Impacts.** Based on the discussion contained in this document, no potentially significant impacts to human beings are anticipated to occur.

# **APPENDIX A**

Draft Mitigation Monitoring and Reporting Program

# APPENDIX A Draft Mitigation Monitoring and Reporting Program

# DRAFT RESERVOIR 2 AND 2A RECOATING PROJECT MITIGATION MONITORING AND REPORTING PROGRAM

The California Environmental Quality Act (CEQA) requires that when a lead agency adopts a Mitigated Negative Declaration (MND), it shall prepare a mitigation monitoring and reporting program (MMRP) for all required mitigation measures (CEQA Guidelines Section 15097). This MMRP identifies the monitoring program for mitigation measures identified by the IS/MND to reduce or avoid impacts associated with implementing the proposed Reservoir 2 and 2A Recoating Project. The MMRP shall be maintained by the El Dorado Irrigation District (EID).

Number	Mitigation Measure	Implementation Responsibility	Monitoring Responsibility	Mitigation Timing	Performance Evaluation Criteria
Bio-1	If construction activities are scheduled during the bird nesting season (February 1 to August 31), a qualified biologist shall conduct a nesting bird survey within 1 week prior to said activities to determine if any birds are nesting on or near the project site (including a 500-foot buffer for raptors). If any active nests are observed during surveys, a suitable avoidance buffer from the nests shall be determined and flagged by a qualified biologist based on species, location, and planned construction activities. Consultation with CDFW may be required to determine appropriate buffer distances. These nests shall be avoided until the chicks have fledged and the nests are no longer active, as determined by the qualified biologist.	Contractor/EID	EID	Survey within 7 days prior to construction     Protective measures throughout construction	Measures implemented     Impacts to special-status birds avoided
Bio-2	If project activities associated with rehabilitation of the tanks need to occur within an established buffer around an active nest, then a nest monitoring protocol shall be implemented to ensure that adverse impacts would not occur to the active nest. The protocol would include the following:  • Just prior to the initiation of project	Contractor/EID	EID	<ul> <li>1 to 2 days Prior to the start of construction</li> <li>Protective measures throughout construction</li> </ul>	<ul> <li>Measures implemented</li> <li>Impacts to special- status birds avoided</li> </ul>

# **APPENDIX A (Continued)**

		Implementation	Monitoring		Performance Evaluation
Number	Mitigation Measure	Responsibility	Responsibility	Mitigation Timing	Criteria
	activities within the nest buffer, a qualified	, and personally	, <b>,</b>		
	biologist shall conduct observations, over the				
	course of 1 to 2 days, of adult bird behavior				
	associated with the nest to establish baseline				
	behavioral conditions (e.g., frequency and type				
	of bird vocalizations, frequency of nest				
	departures/arrivals by adults, flight behavior				
	and patterns). The biologist will then set				
	thresholds of disturbance based on				
	observations documented during the baseline				
	survey, on known breeding behaviors of the				
	species, and on best professional judgement				
	and practicable experience.				
	Once the project activities have				
	commenced, the biologist shall be onsite in				
	proximity to active nests and shall monitor				
	adult bird behavior for the duration of the				
	project activity. The biologist will specifically				
	look for and document signs of agitation				
	including but not limited to angry or anxious				
	vocalizations, leaving and quickly returning to				
	the nest or an area near the nest, flying in				
	small circles, wing fluttering while perched, extended periods of time away from the nest,				
	and any other behaviors indicative of agitation				
	or disturbance for that species of bird. The				
	biologist will have the authority to stop work if				
	continued evidence of bird agitation occurs				
	and, in the opinion of the biologist, could result				
	in nest abandonment. Work may resume after				
	the biologist has determined that the bird is no				
	longer agitated and nest viability will be				
	ensured. If the biologist determines that the				
	project activity cannot be conducted without				
	continued disturbance to the nest, the activity				
	will be postponed until after the nest is no				
	longer active, as determined by the biologist.				
	Upon completion of the project				
	activity, the biologist shall prepare a brief letter				
	report documenting the methods and results of				
	the monitoring and submit the letter report to				
	EID.

Air Quality and Greenhouse Gas Emissions Technical Memorandum

#### **MEMORANDUM**

To: Michael Baron, El Dorado Irrigation District

From: Adam Poll, Dudek

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2

and 2A Tank Recoating Project in El Dorado County, California

**Date:** April 9, 2020

cc: Markus Lang, Dudek
Attachment(s): A, CalEEMod Outputs

B, HARP2 and AERMOD Outputs

Dudek is pleased to submit this air quality and greenhouse gas (GHG) emissions assessment to assist the El Dorado Irrigation District (District) with initial environmental planning requirements for the proposed Reservoir 2 and 2A Tank Recoating Project (project). The project is one of several similar tank recoating projects that EID plans to undertake over the next few years. Under current regulatory conditions, the air quality and GHG emissions assessment provided by this memorandum is applicable to other tank recoating projects carried out by EID utilizing the same methods and equipment and located within the El Dorado County Air Quality Management District and located outside of areas identified as more likely to contain naturally occurring asbestos as identified on the El Dorado County Naturally Occurring Asbestos Review Area Map. This memorandum also includes a site and project-specific health risk assessment as a precautionary measure to assess the impact of construction on sensitive receptors proximate to the project site.

This memorandum estimates criteria air pollutant and GHG emissions and evaluates potential impacts from construction and operation of the project in accordance with the California Environmental Quality Act (CEQA) Guidelines.

The contents and organization of this memorandum are as follows: project description, general analysis and methodology, the air quality assessment, the GHG emissions assessment, conclusions, and references cited.

# 1 Project Description

The proposed project consists of abrasively blasting and recoating 2 large tanks used for water storage and conveyance as part of operation and maintenance (0&M) activities. A part of the District's main system, the two existing 5.5 million gallon welded steel drinking water storage tanks were constructed in 2003 and 2004. The interior and exterior of the tanks require recoating in order to prevent corrosion, and protect their structural integrity. Recoating of the interior in its entirety with either 100% solids polyurethane certified lining system or a three coat epoxy system is required in addition to the recoating of the exterior in its entirety with a fast cure epoxy which will require an abrasive blasting technique and pressure washing to remove deteriorating paint, clean, and prime tanks for repainting. The project is subject to CEQA review and the District is currently in the process of conducting CEQA analysis and preparing environmental documentation for the project. The expected duration of the project is

#### Memorandum

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2 and 2A Tank Recoating Project in El Dorado County, California

approximately 18 months to 2 years. No ground disturbance is required as project activities require no expansion of existing facilities and will stage from the existing developed area on the tank site.

The approximately 8.5-acre project site is located south of U.S. Highway 50 (US 50) in the unincorporated community of Camino in El Dorado County, California. The site is mostly located in Section 08, Township 10 North, and Range 12 East of the "Camino, CA" U.S. Geological Survey 7.5-minute quadrangle. The approximate center of the project site corresponds to 38.733848° north latitude and -120.682833° west longitude.

The site is bordered by US 50 to the north, Camino Elementary School to the east, and is generally surrounded by Sierran Mixed Conifer forest. Two existing large water storage tanks dominate the project site along with the necessary roadway and building infrastructure. Elevations on the project site range from 3,110 to 3,145 feet above mean sea level. This site slopes moderately to the north and east and the tank pad and immediate area have been previously graded. The region surrounding the project site receives approximately 39 inches of precipitation and 10 inches of snowfall annually. Average temperatures range from approximately 38°F to 90°F (WRCC 2020).

# 2 General Analysis and Methodology

#### 2.1 Construction

Emissions from the construction phase of the proposed project were estimated using the California Emissions Estimator Model (CalEEMod) Version 2016.3.2 (CAPCOA 2017).

The project would recoat two existing storage tanks. This would require the stripping of paint through sand blasting both inside and outside of the tanks. For the purposes of modeling, it was assumed that construction of the project would commence in November 2020¹ and would last approximately 24 months, ending in September 2022. The analysis contained herein is based on the following subset area schedule assumptions (duration of phases is approximate):

Sandblasting – Winter: 4 months

Sandblasting – Summer: 4 months

Coating – Winter: 4 months

Coating – Summer: 4 months

The phases listed above would occur sequentially in isolation with no overlap. The estimated construction duration was provided by the District. Detailed construction equipment modeling assumptions are provided in Attachment A, CalEEMod Outputs.

The construction equipment mix used for estimating the construction emissions of the project is based on information provided by the District and is shown in Table 1.

Table 1. Construction Scenario Assumptions

	One-Way Vehicle	Trips		Equipment		
Construction Phase	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Sandblasting - Winter	20	2	0	Aerial Lifts	1	8
				Air Compressors	1	8
				Generator Sets	1	8
Sandblasting -	20	2	0	Aerial Lifts	1	8
Summer				Air Compressors	1	8
				Generator Sets	1	8
Coating - Winter	20	2	0	Aerial Lifts	1	8

The analysis assumes a construction start date of November 2020, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

8858.0014 April 2020

Table 1. Construction Scenario Assumptions

	One-Way Vehicle Trips			Equipment		
Construction Phase	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
				Air Compressors	1	8
				Generator Sets	1	8
Coating – Summer	20	2	0	Aerial Lifts	1	8
				Air Compressors	1	8
				Generator Sets	1	8

Note: See Attachment A for details.

For the analysis, it was assumed that heavy construction equipment would be operating up to 8 hours per day, five days per week (22 days per month) during project construction. Construction worker and vendor trips were based on District information.

The project would be required to comply with El Dorado County Air Quality Management District (EDCAQMD) Rules 223, 223-1, 222, 202, and 205 to control dust emissions generated during any dust-generating activities. The project would be required to comply with EDCAQMD Rule 215 for use of architectural coatings.

The  $PM_{10}$  emissions from sandblasting were estimated using a spreadsheet model and emission factors from the United States Environmental Protection Agency AP-42 Chapter 3.2.6, Abrasive Blasting (US EPA 1997), the EDCAQMD (Serieh, pers. Comm. 2020), and activity data from the District. The reactive organic gas (ROG) emissions associated with coating of the tanks was estimated using the safety data sheets for each paint to be used and the quantities estimated by the District.

A detailed depiction of the construction schedule—including information regarding phases and equipment used during each phase—is included in Attachment A of this report. The information contained in Attachment A was used as CalEEMod model inputs.

# 2.2 Operation

The project entails construction only and does not have an operational component.

#### 2.3 Health Risk Assessment

As a precautionary measure, a health risk assessment (HRA) was performed to assess the impact of construction on sensitive receptors proximate to the project site (provided as Attachment B). This report includes an HRA associated with emissions from construction of the proposed project based on the methodologies prescribed in the Office of Environmental Health Hazard Assessment (OEHHA) document, Air Toxics Hot Spots Program Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHA Guidelines) (OEHHA 2015).

Health effects from carcinogenic air toxics are usually described in terms of cancer risk. The EDCAQMD recommends a carcinogenic (cancer) risk threshold of 1 in one million without toxics-Best Available Control

Technology (T-BACT) and 10 in one million with T-BACT. Additionally, some toxic air contaminants (TACs) increase non-cancer health risk due to long-term (chronic) exposures. The Chronic Hazard Index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. The EDCAQMD recommends a Chronic Hazard Index significance threshold of one (project increment). The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in this assessment. The HRA for the proposed project evaluated the risk to Camino Elementary School and existing residents from diesel emissions from exhaust from on-site construction equipment and diesel haul and vendor trucks during construction. TAC emissions from sandblasting and the application of architectural coatings were also evaluated.

The dispersion modeling of TACs was performed using the American Meteorological Society/EPA Regulatory Model (AERMOD), which is the model EDCAQMD requires for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (EPA 2018). For the proposed project, AERMOD was run with all sources emitting unit emissions (one gram per second) to obtain the "X/Q" values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength and is used as a way to simplify the representation of emissions from many sources. The X/Q values of ground-level concentrations were determined for construction emissions using AERMOD and the maximum concentrations determined for the one-hour and period-averaging periods. Principal parameters of this modeling are presented in Table 2.

**Table 2. AERMOD Principal Parameters** 

Parameter	Details
Meteorological Data	The latest six-year meteorological data (2009–2014) for the Auburn Municipal Airport from CARB were downloaded and then input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. Based on the EDCAQMD guidelines, the rural dispersion option was selected due to the project's proximity to development.
Terrain Characteristics	The terrain in the vicinity of the modeled project site is generally hilly. The elevation of the modeled site is approximately 3,100 feet above sea level.
Elevation Data	Digital elevation data were imported into AERMOD, and elevations were assigned to the emission sources and receptors. Digital elevation data were obtained through AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a 10-meter resolution.
Emission Sources and Release Parameters	Air dispersion modeling of construction equipment, sand blasting, and architectural coating was conducted using emissions estimated using the CalEEMod and spreadsheet models as described in Section 2.1, assuming emissions would occur eight hours per day, five days per week.

### **Table 2. AERMOD Principal Parameters**

Parameter	Details
Source Release Characterizations	The construction equipment and diesel truck emissions were modeled as volume sources around the perimeter of each tank. Each volume source had a side length of 15 meters with an initial lateral dimension of 3.49 meters and initial vertical dimension of 3.83 meters. The exterior sandblasting and coating of each tank was modeled as a circular area source with a radius of 33 meters. The interior sandblasting and coating of each tank was modeled as a volume source with a side length of 13 meters, an initial lateral dimension of 3.02 meters, and initial vertical dimension of 0.92 meters to represent the opening in each tank. The variable emissions function was used to model the months of the year the construction would take place. It was assumed that construction would occur 8 hours per day, 5 days per week during construction months.
Receptors	Property boundary receptors were included to determine the point of maximum impact, spaced at 25-meter intervals. A uniform Cartesian grid was placed over the site was spaced at 25 meters out to 100 meters from the property boundary; 50 meters from 100 to 350 meters from the property boundary; and 100 meters from 350 to 2,000 meters from the property boundary. The uniform Cartesian grid was then converted into discrete Cartesian receptors.

**Notes**: AERMOD = American Meteorological Society/EPA Regulatory Model; CARB = California Air Resources Board; EDCAQMD = El Dorado County Air Quality Management District; DPM = diesel particulate matter; CalEEMod = California Emissions Estimator Model. See Attachment B for additional information.

Dispersion model plotfiles from AERMOD were then imported into California Air Resources Board's (CARB's) Hotspots Analysis and Reporting Program Version 2 to determine health risk, which requires peak one-hour emission rates and annual-averaged emission rates for all pollutants for each modeling source. For the residential health risk, the HRA assumes exposure would start in the third trimester of pregnancy for a duration of 2 years. The results of the HRA are provided in Section 3.2.3 and detailed results and methodology are provided in Attachment B.

# 3 Air Quality Assessment

The project is located within the Mountain Counties Air Basin (MCAB) and is within the jurisdictional boundaries of the EDCAQMD, which has jurisdiction over El Dorado County. Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. Criteria air pollutants that are evaluated include volatile organic compounds (VOCs; also referred to as reactive organic gases (ROGs)), oxides of nitrogen (NOx), carbon monoxide (CO), sulfur oxides (SOx), particulate matter with an aerodynamic diameter less than or equal to 10 microns in size (coarse particulate matter, or  $PM_{10}$ ), and particulate matter with an aerodynamic diameter less than or equal to 2.5 microns in size (fine particulate matter, or  $PM_{2.5}$ ). ROGs and  $NO_x$  are important because they are precursors to ozone (O<sub>3</sub>).

### 3.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines (14 CCR 15000 et seq.), which provides guidance that a project would have a significant environmental impact if it would:

- 1. Conflict with or obstruct implementation of the applicable air quality plan.
- 2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
- 3. Expose sensitive receptors to substantial pollutant concentrations.
- 4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

In addition, Appendix G of the CEQA Guidelines indicates that where available, the significance criteria established by the applicable air quality management district may be relied upon to determine whether a project would have a significant impact on air quality. The EDCAQMD has adopted thresholds to address the significance of air quality impacts resulting from construction activities. These thresholds are identified in Table 3. According to the EDCAQMD, if ROGs and  $NO_x$  are less than significant during construction, then exhaust emissions of CO and  $PM_{10}$  are also considered to be less than significant.

Table 3
EDCAQMD Air Quality Significance Thresholds

Pollutant	Construction		
Criteria Pollutants Mass Daily Thresholds			
ROG	82 lbs/day		
NO <sub>x</sub>	82 lbs/day		

Source: EDCAQMD 2002.

Notes:

EDCAQMD = El Dorado County Air Quality Management District; Ib/day = pounds per day; ROG = Reactive Organic Gases; NOx = nitrogen oxides.

For qualitative screening, ROG and NO<sub>x</sub> Emissions may be assumed to not be significant during construction if:

- The project encompasses 12 acres or less of ground that is being worked at one time during construction
  and at least one of the recommended mitigation measures related to such pollutants is incorporated into
  the construction of the project; or
- The project proponent commits to pay mitigation fees in accordance with the provisions of an established mitigation fee program in the district (or such program in another air pollution control district that is acceptable to EDCAQMD); or
- Daily average fuel use is less than 337 gallons per day for equipment from 1995 or earlier, or 402 gallons per day for equipment from 1996 or later

For fugitive dust, if dust suppression measures will prevent visible emissions beyond the boundaries of the project, further calculations to determine particulate emissions are not necessary. For the other criteria pollutants, including CO,  $PM_{10}$ ,  $SO_2$ ,  $NO_2$ , sulfates, lead, and  $H_2S$ , a project is considered to have a significant impact on air quality if it will cause or contribute significantly to a violation of the applicable national or state ambient air quality standard(s).

Naturally occurring asbestos (NOA) is also a concern in El Dorado County because it is known to be present in certain soils and can pose a health risk if released into the air. The EDCAQMD has adopted an El Dorado County Naturally Occurring Asbestos Review Area Map that identifies those areas more likely to contain NOA (El Dorado County 2005).

The *Guide* to *Air Quality Assessment* also includes a Table (Table 5.2) listing project types with potentially significant emissions during operations.

For TAC emissions the EDCAQMD applies the following two alternative significance criteria. Exceeding either of these criteria will lead to a conclusion that a project has a significant impact with respect to toxic air contaminants:

- 1. the lifetime probability of contracting cancer is greater than one in one million (ten in one million if T-BACT is applied); or
- 2. the ground-level concentration of non-carcinogenic toxic air contaminants would result in a Hazard Index of greater than 1.

## 3.2 Impact Analysis

### 3.2.1 Would the project conflict with or obstruct implementation of the applicable air quality plan?

The MCAB is currently non-attainment for ozone  $(O_3)$  (state and federal ambient standards) and particulate matter (PM<sub>10</sub>) (state ambient standard). While an air quality plan exists for ozone, none currently exists for particulate matter. The Sacramento Regional 2008 National Ambient Air Quality Standards (NAAQS) 8-Hour Ozone Attainment Plan and Reasonable Further Progress Plan (Ozone Attainment Plan) was developed for application within the Sacramento region, including the MCAB portion of El Dorado County (EDCAQMD et al. 2017). If a project can demonstrate consistency with the Ozone Attainment Plan for ROG and NOx emissions, it would be determined that it would not have a significant cumulative impact with respect to ozone.

#### Memorandum

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2 and 2A Tank Recoating Project in El Dorado County, California

Projects within the MCAB portion of the County must demonstrate Ozone Attainment Plan consistency with the following four indicators:

- 1. The project does not require a change in the existing land use designation (e.g., a general plan amendment or rezone), or projected emissions of ROG and NO<sub>x</sub> from a project are equal to or less than the emissions anticipated for the site if development occurred under the existing land use designation;
- 2. The project does not exceed the "project alone" significance criteria;
- 3. The lead agency for the project requires the project to implement any applicable emission reduction measures contained in and/or derived from SMAQMD's Ozone Attainment Plan; and
- 4. The project complies with all applicable district rules and regulations.

The first way to assess project compliance with the Ozone Attainment Plan is to ensure that the population density and land use are consistent with the growth assumptions used in the plans for the MCAB. The project includes no uses that would generate a long-term increase in population or vehicle miles traveled and does not propose additional land for development or require a change in land use designations applied to the project site. The project, as proposed, would result in no long-term increase in population or vehicle miles traveled in the region. Furthermore, the project would not directly induce substantial population growth in the area. The project primarily consists of the recoating of two water storage tanks. Construction activities associated with the project include sand blasting, architectural coating, and equipment operation. Once construction activities are completed, no additional operational activities associated with the project would occur. Any routine maintenance associated with the tanks already occurs. Therefore, the project would be consistent with the regional growth forecasts and would not conflict with or exceed the assumptions of the Ozone Attainment Plan.

The second criterion assesses a project's contribution to existing air quality violations. Criteria air pollutant emissions associated with construction of the project were estimated using CCalEEMod Version 2016.3.2 for the following emission sources: operation of off-road construction equipment, on-road vendor (material delivery and off-site hauling) trucks, and worker vehicles. Emissions from sand blasting and architectural coating was estimated using a spreadsheet-based model. As discussed in b) below, it was determined that the project would not contribute to an air quality violation because construction emissions would not exceed the EDCAQMD thresholds of significance for ROG or NO<sub>x</sub> emissions.

The third criterion is compliance with control measures in the Ozone Attainment Plan. Most of the control strategies in the Ozone Attainment Plan include measures in the categories of transportation and stationary sources. The non-regulatory control measures include; on-road and off-road mobile incentive programs, and an emerging/voluntary urban forest development program. These are followed by the regulatory control measures, which include; indirect source rules and a variety of stationary and area-wide source control measures (CARB 2008). The CARB's strategy for reducing mobile source emissions includes the following: new engine standards, reducing emissions from inuse fleet, requiring the use of cleaner fuels, supporting the use of alternative fuels, and pursuing long-term advanced technology measures. The project would result in no conflict with CARB's strategy for controlling mobile source emissions.

#### Memorandum

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2 and 2A Tank Recoating Project in El Dorado County, California

The final criterion is compliance with EDCAQMD rules and regulations. EID would implement the project in compliance with all applicable EDCAQMD rules. The EDCAQMD has adopted rules designed specifically to address a variety of air quality impacts through measures that construction and operational related air quality emissions. Rules designed to control air pollutant emissions and which may be applicable to the project include.

- · Rule 202 visible emissions
- Rule 205 nuisance
- Rule 210 related to the discharge of air contaminants
- Rule 215 related to architectural coatings
- Rule 222 abrasive blasting
- Rule 223 related to fugitive dust
- Rule 223-1 related to fugitive dust from construction and disturbed areas
- Rule 223-2 related to asbestos

In summary, the project does not conflict with the growth assumptions for the region, does not exceed the EDCAQMD significance thresholds, would be consistent with all control measures of the Ozone Attainment Plan, and would comply with applicable EDCAQMD rules. The project would not conflict with or obstruct implementation of an applicable air quality plan and would therefore result in less than significant impact associated with conflict or obstruction of an applicable air quality plan.

3.2.2 Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and EDCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

#### **Construction Emissions**

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and ROG off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The CalEEMod Version 2016.3.2 was used to estimate emissions from construction of the project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of ROGs,  $NO_x$ , CO,  $PM_{10}$ , and  $PM_{2.5}$ .  $PM_{10}$  and  $PM_{2.5}$  emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The project would be required to comply with EDCAQMD Rule 222 to control emissions generated during sand blasting and Rule 215 during the application of coatings. Table 4 presents the estimated annual emissions generated during construction of the project. Details of the emission calculations are provided in Attachment A.

Table 4
Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

	ROG	NO <sub>x</sub>	СО	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	
Year	Pounds per day						
2020	0.68	9.41	17.04	0.03	85.35	85.16	
2021	31.46	9.33	16.94	0.03	85.35	85.15	
2022	31.45	9.27	16.85	0.03	0.55	0.35	
Maximum	31.46	9.41	17.04	0.03	85.35	85.15	
EDCAQMD Threshold	82	82	NA	NA	NA	NA	
Threshold Exceeded?	No	No	NA	NA	NA	NA	

**Notes:** ROG = reactive organic gas;  $NO_x$  = oxides of nitrogen; CO = carbon monoxide;  $SO_x$  = sulfur oxides;  $PM_{10}$  = coarse particulate matter;  $PM_{2.5}$  = fine particulate matter; EDCAQMD = EIDCAQMD = EIDCAQMD

As shown in Table 3, the project construction would not exceed EDCAQMD's thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be **less than significant**. As discussed in Section 2.2, operational activity would not increase beyond what currently occurs.

#### Cumulative Analysis

In considering cumulative impacts from the project, the analysis must specifically evaluate a project's contribution to the cumulative increase in pollutants for which the MCAB is designated as nonattainment for the California Ambient Air Quality Standards (CAAQS) and NAAQS. If a project's emissions would exceed EDCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the MCAB. If a project does not exceed thresholds and is determined to have less than significant project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the project's cumulatively considerable contribution is if the project's contribution accounts for a significant proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with EDCAQMD's 2008 Ozone Plan, which addresses cumulative emissions in the MCAB.

The MCAB has been designated as a state attainment area for  $O_3$  as discussed in Section 3.1. The attainment status is the result of EDCAQMD control measures for various sources of air pollutants and their precursors within the MCAB, including motor vehicles, off-road equipment, marine vessels, and commercial and industrial facilities. Construction of the project would generate ROG and  $NO_x$  emissions (which are precursors to  $O_3$ ). As indicated in

Table 4, project-generated construction emissions would not exceed EDCAQMD's emission-based significance thresholds for ROG or NO<sub>x</sub>. The project would also not generate criteria air pollutant emissions during operations.

Cumulative localized impacts would potentially occur if a construction project were to occur concurrently with another off-site project. Construction schedules for potential future projects near the project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative.<sup>2</sup> However, future projects would be subject to CEQA and would require an air quality analysis and, where necessary, mitigation if the project would exceed EDCAQMD's significance thresholds. Criteria air pollutant emissions associated with construction activity of future proposed projects would be reduced through implementation of control measures required by EDCAQMD. Cumulative PM<sub>10</sub> and PM<sub>2.5</sub> emissions would be reduced because all future projects would be subject to EDCAQMD Rule 223.1, which sets forth general and specific requirements for all construction sites in the EDCAQMD.

Based on the previous considerations, the project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and cumulative impacts would be **less than significant**.

3.2.3 Would the project expose sensitive receptors to substantial pollutant concentrations?

#### **Health Impacts of Toxic Air Contaminants**

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a TAC. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC. The Camino Elementary School is approximately 250 feet from the boundary of the project site.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the state of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills.

\_\_\_

The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145). This discussion is nonetheless provided in an effort to show good-faith analysis and to comply with CEQA's information disclosure requirements.

Project construction would result in emissions of diesel particulate matter (DPM) from heavy construction equipment and trucks accessing the site. DPM is characterized as a TAC by the State of California. TACs emissions would also be generated from the sand blasting and architectural coating activities. OEHHA has identified carcinogenic and chronic noncarcinogenic effects from long-term exposure, but has not identified health effects due to short-term exposure to diesel exhaust. According to OEHHA, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 30-year exposure period for the maximally exposed individual resident; however, such assessments should be limited to the period/duration of activities associated with the project (2 years for the project). As the project does not include the application of T-BACT, the EDCAQMD threshold of one in one million will be applied for cancer risk. The hazard index of more than 1.0 means that predicted levels of a toxic pollutant are greater than the reference exposure level, which is considered the level below which adverse health effects are not expected.

A HRA was prepared to evaluate impacts to sensitive receptors proximate to the project during construction. Sources evaluated during construction include onsite offroad equipment and diesel vehicles, abrasive blasting, and coating activities. Detailed HRA methodology is provided in Section 2.3 and AERMOD and HARP2 modeling output files are provided in Attachment B.

Tables 5 through 7 provides a summary of the cancer and non-cancer results by emissions source and pollutant for the maximally exposed individual resident (MEIR), maximally exposed individual worker (MEIW), sensitive receptor, and point of maximum impact (PMI).

Table 5
Summary of Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Cancer Risk (in a million)	Significance Threshold (in a million)
Offsite PMI	14	701460.1	4289773	32.60	NA
MEIR	286	702056.7	4289599	0.30	≥1
MEIW	62	701564.8	4289734	0.062	≥1
Sensitive Receptor – Camino Elementary School	62	701564.8	4289734	0.88	≥1

Source: Attachment B.

**Notes:** PMI = point of maximum impact; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.

Table 6
Summary of Chronic Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Chronic HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	14	701460.1	4289773	0.33	respiratory	NA
MEIR	286	702056.7	4289599	0.0028	respiratory	>1
MEIW	62	701564.8	4289734	0.033	respiratory	>1
Sensitive Receptor – Camino Elementary School	62	701564.8	4289734	0.0063	respiratory	>1

Source: Attachment B.

**Notes:** PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.

Table 7
Summary of Acute Non-Cancer Health Risk Results

Receptor Type	Receptor Number	UTME (m)	UTMN (m)	Acute HI	Health Endpoint(s)	Significance Threshold (HI)
Offsite PMI	18			0.54	respiratory	NA
MEIR	286	702056.7	4289599	0.020	respiratory	>1
MEIW	62	701564.8	4289734	0.070	respiratory	>1
Sensitive Receptor – Camino Elementary School	62	701564.8	4289734	0.070	respiratory	>1

Source: Attachment B.

**Notes:** PMI = point of maximum impact; HI = hazard index; m = meters; MEIR = maximally exposed individual resident; MEIW = maximally exposed individual worker; UTME = Universal Transverse Mercator East; UTMN = Universal Transverse Mercator North.

As shown in Tables 5 through 7, the project's emissions during construction would not exceed the EDCAQMDs significance thresholds. The impact to sensitive receptors would be **less than significant**.

#### **Health Effects of Criteria Air Pollutants**

Construction of the project would generate criteria air pollutant emissions; however, the project would not exceed the EDCAQMD emission thresholds and construction and operations activities would be carried out in compliance with applicable EDCAQMD rules. The MCAB is a nonattainment area for  $O_3$  and  $PM_{10}$ , under the NAAQS and/or CAAQS.

ROG and  $NO_x$  are precursors to  $O_3$ , for which the MCAB is designated as nonattainment with respect to the NAAQS and CAAQS. Thus, existing  $O_3$  levels in the MCAB are at unhealthy levels during certain periods. The health effects associated with  $O_3$  are generally associated with reduced lung function. Because the project involves construction

activities that would not result in ROG or  $NO_x$  emissions that would exceed the EDCAQMD thresholds, the project is not anticipated to substantially contribute to regional  $O_3$  concentrations and the associated health impacts.

CO,  $PM_{10}$ , and other pollutants are evaluated for significance by comparison against the NAAQS and CAAQS. A project would be considered significant if it is projected to cause a violation of any NAAQS and/or CAAQS. The MCAB portion of El Dorado County is classified as attainment (or unclassified) for all NAAQS and CAAQS for CO,  $PM_{2.5}$ ,  $NO_2$ ,  $SO_2$ , sulfates, lead, and  $H_2S$ , and is classified as nonattainment for the state 24-hour  $PM_{10}$  standard.

Emissions of CO, PM<sub>10</sub>, and other pollutants generated from operation of the Project would be considered significant if

- 1. The Project's contribution by itself would cause a violation of the AAQS, or
- 2. The Project's contribution plus the background level would result in a violation of the AAQS and either
  - a. A sensitive receptor is located within a quarter-mile of the Project, or
  - b. The Project's contribution exceeds 5% of the AAQS

The EDCAQMD considers projects that fall below the significance levels for ROG and  $NO_x$  emissions to also fall below significance thresholds for CO,  $NO_2$ ,  $PM_{10}$ , and  $SO_2$ . As discussed in 3.2.2 above, project ROG and NOx emission would be below the thresholds of significance during construction. Therefore, project emissions of CO,  $NO_2$ ,  $PM_{10}$ , and  $SO_2$  are assumed to be less than significant in accordance with EDCAQMD guidance for impact evaluation. Additionally, the project would implement comply with Rules 202, 205, 210, 215, 222, 223, and 223-1, which would reduce emissions within the project site as discussed in 3.2.2, above.

The EDCAQMD considers lead, sulfates, and  $H_2S$  to be less than significant except from industrial sources that result in these pollutants being directly emitted. The project would not include these sources and thus any potential emissions of lead, sulfates, and  $H_2S$  would be less than significant.

Visibility impacts are controlled through state and federal regulatory programs that govern vehicle emissions and through mitigation required for O<sub>3</sub> precursors and particulate matter. Due to these regulatory controls, EDCAQMD assumes that visibility impacts from projects in the MCAB portion of the County are less than significant.

Therefore, for the reasons discussed above, health effects associated with emissions of criteria air pollutants related to the Project would be less than significant.

#### 3.2.4 Would the project create objectionable odors affecting a substantial number of people?

It is possible that odors could be released during construction activities associated with the project. Diesel exhaust and reactive organic compounds would be emitted during construction activities from vehicle exhaust and architectural coatings. However, emissions would disperse rapidly from the area where the construction activities would be located, and thus would not reach an objectionable level at the nearest sensitive receptors. The potential release of odors associated with construction activities would be minor, temporary, and unlikely to impact people other than construction personnel in the immediate construction area; therefore, impacts are considered less than significant.

#### Memorandum

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2 and 2A Tank Recoating Project in El Dorado County, California

Common sources of odors include wastewater treatment plants, landfills, transfer stations, composting facilities, refineries, chemical plants, and food processing plants (EDCAQMD 2002). Operation of the project would not entail any of these potentially odor-causing land uses. Therefore, the project would not create any new sources of odor during operation and would result in an odor impact that is less than significant.

## 4 Greenhouse Gas Emissions Assessment

GHGs are gases that absorb infrared radiation in the atmosphere. The greenhouse effect is a natural process that contributes to regulating the Earth's temperature. Global climate change concerns are focused on whether human activities are leading to an enhancement of the greenhouse effect. Principal GHGs include carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), O<sub>3</sub>, and water vapor. If the atmospheric concentrations of GHGs rise, the average temperature of the lower atmosphere will gradually increase. Globally, climate change has the potential to impact numerous environmental resources through uncertain impacts related to future air temperatures and precipitation patterns. Although climate change is driven by global atmospheric conditions, climate change impacts are felt locally. Climate change is already affecting California: average temperatures have increased, leading to more extreme hot days and fewer cold nights; shifts in the water cycle have been observed, with less winter precipitation falling as snow, and both snowmelt and rainwater running off earlier in the year; sea levels have risen; and wildland fires are becoming more frequent and intense due to dry seasons that start earlier and end later (CAT 2010).

The effect each GHG has on climate change is measured as a combination of the mass of its emissions and the potential of a gas or aerosol to trap heat in the atmosphere, known as its global warming potential (GWP), which varies among GHGs. Total GHG emissions are expressed as a function of how much warming would be caused by the same mass of  $CO_2$ . Thus, GHG emissions are typically measured in terms of pounds or tons of  $CO_2$  equivalent ( $CO_2$ e). The  $CO_2$ e for a gas is derived by multiplying the mass of the gas by the associated GWP, such that metric tons (MT) of  $CO_2$ e = (MT of a GHG) × (GWP of the GHG). CalEEMod assumes that the GWP for  $CO_2$ , which means that emissions of 1 MT of  $CO_2$ 0 is 298, based on the Intergovernmental Panel on Climate Change's Fourth Assessment Report (IPCC 2007).

## 4.1 Thresholds of Significance

The significance criteria used to evaluate the project's GHG emissions impacts are based on the recommendations provided in Appendix G of the CEQA Guidelines. For the purposes of this GHG emissions analysis, the project would have a significant environmental impact if it would (14 CCR 15000 et seq.):

- 1. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

As stated in CEQA Guidelines Section 15064.4(b)(1)-(3), "a lead agency should consider the following factors, among others, when assessing the significance of impacts from GHG emissions on the environment: (1) the extent to which a project may increase or reduce GHG emissions as compared to the existing environmental setting; (2) whether project emissions exceed a threshold of significance that the lead agency determines applies to the project; and, (3) the extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions."

Section 15064(h)(3) of the CEQA Guidelines also states that: "A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the

requirements in a previously approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located."

The CEQA Guidelines do not prescribe specific methodologies for performing an assessment, do not establish specific quantitative thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009).

The OPR Technical Advisory titled *CEQA* and *Climate Change: Addressing Climate Change through California Environmental Quality Act Review* states that "public agencies are encouraged but not required to adopt thresholds of significance for environmental impacts. Even in the absence of clearly defined thresholds for GHG emissions, the law requires that such emissions from CEQA projects must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact" (OPR 2008). Furthermore, the advisory document indicates that "in the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a 'significant impact,' individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice."

Global climate change is a cumulative impact; a project participates in this potential impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. There are currently no established quantitative thresholds for assessing whether the GHG emissions of a project, such as the project, would be considered a cumulatively considerable contribution to global climate change; however, all reasonable efforts should be made to minimize a project's contribution to global climate change. In addition, while GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008), GHG emissions impacts must also be evaluated on a project-level under CEQA.

Unlike thresholds of significance established for criteria air pollutants in EDCAQMD's Guide to Air Quality Assessment, the EDCAQMD has not adopted GHG emissions thresholds for land use development projects. In the absence of County adopted thresholds, EDCAQMD recommends using the adopted thresholds of other lead agencies which are based on consistency with the goals of AB 32. Projects exceeding these thresholds would have a potentially significant impact and be required to mitigate those impacts to a less than significant level. Until the County adopts a CAP consistent with CEQA Guidelines Section 15183.5, and/or establishes GHG thresholds, the County will follow an interim approach to evaluating GHG emissions utilizing significance criteria adopted by the San Luis Obispo Air Pollution Control District (SLOAPCD) to determine the significance of GHG emissions, based on substantial evidence (SLOACPD 2012). These are summarized below:

- The threshold for stationary sources is 10,000 MT CO<sub>2</sub>e per year
- For nonstationary sources, the following two separate thresholds have been established:
  - 1,150 MT CO<sub>2</sub>e per year
  - 4.9 MT CO<sub>2</sub>e per service population per year (Service population is the sum of residents plus employees
    expected for a development project.)

The quantitative threshold of 1,150 MT CO<sub>2</sub>e annually adopted by SLOAPCD is applied to this analysis.

### 4.2 Impact Analysis

4.2.1 Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

#### **Construction Emissions**

Construction of the project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor and haul trucks, and worker vehicles. Additionally, the construction GHG emissions are shown annualized over 25 years (i.e., the lifetime of commercial projects per SLOAPCD). Therefore, the total construction GHG emissions were calculated, amortized over 25 years, and then compared to the EDCAQMD operational GHG significance threshold of 1,150 MT CO<sub>2</sub>e per year.

CalEEMod was used to estimate GHG emissions during construction. Construction of the project is anticipated to last up to 2 years. On-site sources of GHG emissions include off-road equipment and off-site sources include on-road vehicles (haul trucks, vendor trucks, and worker vehicles). Table 8 presents construction GHG emissions for the project from on-site and off-site emission sources.

Table 8
Estimated Annual Construction GHG Emissions

	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	CO <sub>2</sub> e			
Year	Metric Tons						
2020	48.72	0.00	0.00	48.78			
2021	195.29	0.01	0.00	195.54			
2022	144.02	0.01	0.00	144.20			
	388.52						
	15.54						

**Notes:**  $CO_2$  = carbon dioxide;  $CH_4$  = methane;  $N_2O$  = nitrous oxide;  $CO_2e$  = carbon dioxide equivalent. Construction emissions were annualized over 25 years (SLOAPCD 2012). See Attachment A for complete results.

As shown in Table 8, the estimated total GHG emissions during construction of the project would be approximately 389 MT CO<sub>2</sub>e. Estimated project-generated construction emissions amortized over 25 years would be approximately 16 MT CO<sub>2</sub>e per year. As with project-generated construction air quality pollutant emissions, GHG emissions generated during construction of the project would be short-term in nature, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions. Because there is no separate GHG threshold for construction, the evaluation of significance is determined by comparing the amortized construction emissions to the operational emissions threshold. As such, the project would not exceed the SLOAPCD threshold of 1,150 MT CO<sub>2</sub>e per year. Therefore, the project would have a **less than significant** impact.

# 4.2.2 Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The CARB Scoping Plan, approved by CARB on December 12, 2008, provides a framework for actions to reduce California's GHG emissions and requires CARB and other state agencies to adopt regulations and other initiatives to reduce GHGs. As such, the Scoping Plan is not directly applicable to specific Projects. Relatedly, in the Final Statement of Reasons for the Amendments to the CEQA Guidelines, the California Natural Resources Agency observed that "[t]he [Scoping Plan] may not be appropriate for use in determining the significance of individual Projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009). Under the Scoping Plan, however, there are several state regulatory measures aimed at the identification and reduction of GHG emissions. CARB and other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area source emissions (e.g., energy usage, high GWP GHGs in consumer products) and changes to the vehicle fleet (i.e., hybrid, electric, and more fuel-efficient vehicles) and associated fuels (e.g., Low Carbon Fuel Standard). To the extent that these regulations are applicable to the project or its uses, the project would comply with all regulations adopted in furtherance of the Scoping Plan to the extent required by law.

The project would also not impede the attainment of the GHG reduction goals for 2030 or 2050 identified in Senate Bill (SB) 32 and Executive Order (EO) S-3-05, respectively. EO S-3-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes for a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. While there are no established protocols or thresholds of significance for that future year analysis; CARB forecasts that compliance with the current Scoping Plan puts the state on a trajectory of meeting these long-term GHG goals, although the specific path to compliance is unknown (CARB 2014).

CARB has expressed optimism with regard to both the 2030 and 2050 goals. It states in the First Update to the Climate Change Scoping Plan that "California is on track to meet the near-term 2020 GHG emissions limit and is well positioned to maintain and continue reductions beyond 2020 as required by Assembly Bill (AB) 32" (CARB 2014). With regard to the 2050 target for reducing GHG emissions to 80% below 1990 levels, the First Update states the following (CARB 2014):

This level of reduction is achievable in California. In fact, if California realizes the expected benefits of existing policy goals (such as 12,000 megawatts of renewable distributed generation by 2020, net zero energy homes after 2020, existing building retrofits under AB 758, and others) it could reduce emissions by 2030 to levels squarely in line with those needed in the developed world and to stay on track to reduce emissions to 80% below 1990 levels by 2050. Additional measures, including locally driven measures and those necessary to meet federal air quality standards in 2032, could lead to even greater emission reductions.

In other words, CARB believes that the state is on a trajectory to meet the 2030 and 2050 GHG reduction targets set forth in AB 32, SB 32, and EO S-3-05. This is confirmed in the Second Update, which states (CARB 2017):

#### Memorandum

Subject: Air Quality and Greenhouse Gas Emissions Technical Memorandum for the Reservoir 2 and 2A Tank Recoating Project in El Dorado County, California

The Proposed Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while also identifying new, technologically feasibility and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Proposed Plan is developed to be consistent with requirements set forth in AB 32, SB 32, and AB 197.

The project would be consistent with the applicable strategies and measures in the Scoping Plan and would not impede the state's trajectory toward future GHG reductions for 2030 or 2050. In addition, since the specific path to compliance for the state in regards to the long-term goals will likely require development of technology or other changes that are not currently known or available, specific additional mitigation measures for the project would be speculative and cannot be identified at this time. The project's consistency would assist in meeting the County's contribution to GHG emission reduction targets in California. With respect to future GHG targets under the SB 32 and EO S-3-05, CARB has also made clear its legal interpretation that it has the requisite authority to adopt whatever regulations are necessary, beyond the AB 32 horizon year of 2020, to meet EO S-3-05's 80% reduction target in 2050. This legal interpretation by an expert agency provides evidence that future regulations will be adopted to continue the state on its trajectory toward meeting these future GHG targets.

Finally, the project would not exceed the significance threshold of 1,150 MT CO<sub>2</sub>e per year during construction. Because the project would not exceed the threshold, this analysis provides support for the conclusion that the project would not conflict with EO S-3-05's GHG reduction goals for California. Therefore, this impact would be less than significant.

As such, the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and no mitigation is required. This impact would be **less than significant**.

# 5 Conclusions

The project would not conflict with the EDCAQMD 2008 Ozone Plan or existing zoning designations. Emissions generated during construction of the project would not exceed the EDCAQMD's significance thresholds. The project would not generate criteria air pollutants during long-term operations. The project would also not result in a cumulatively considerable impact or expose sensitive receptors to substantial pollutant concentrations. The project would also not be a significant source of odors. Therefore, the project would result in a **less than significant** impact in regards to air quality.

Estimated total GHG emissions generated during construction would be below the EDCAQMD's bright-line threshold of 1,150 MT CO<sub>2</sub>e per year. The project would not conflict with applicable plans adopted for the purposed of reducing GHG emissions. Accordingly, potential cumulative GHG impacts would be **less than significant**.

EID Tank Recoating - Annual Average - El Dorado County AQMD Air District, Annual

#### EID Tank Recoating - Annual Average El Dorado County AQMD Air District, Annual

#### 1.0 Project Characteristics

#### 1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	0.00	User Defined Unit	0.00	0.00	0

#### 1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2022
Utility Company	Pacific Gas & Electric C	Company			
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

#### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Modeling construction only

Land Use - Tank sandblasting and recoating - no ground disturbance required

Construction Phase - 2 year total duration: sandblasting 4-months in summer and 4-months in winter; coating 4-months in summer and 4-months in Offf-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Trips and VMT - Average daily one-way trips: 20-one way trips workers per day; 2-one way trips vendor trucks per day

On-road Fugitive Dust - Default

Architectural Coating - VOCs modeled separately

Vehicle Trips - Modeling costruction emissions only

Consumer Products - Modeling costruction emissions only

Landscape Equipment - Modeling costruction emissions only

Energy Use - Modeling costruction emissions only

Water And Wastewater - Modeling costruction emissions only

Solid Waste - Modeling costruction emissions only

Construction Off-road Equipment Mitigation - Per spec sheets: air compressor Tier 4i, diesel gen set Tier 3 compliant

EID Tank Recoating - El Dorado County AQMD Air District, Summer

# EID Tank Recoating El Dorado County AQMD Air District, Summer

#### 1.0 Project Characteristics

#### 1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	0.00	User Defined Unit	0.00	0.00	0

#### 1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2022
Utility Company	Pacific Gas & Ele	ectric Company			
CO2 Intensity	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (Ib/MWhr)	.006

#### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Modeling construction only

Land Use - Tank sandblasting and recoating - no ground disturbance required

Construction Phase - 2 year total duration: sandblasting 4-months in summer and 4-months in winter; coating 4-months in summer and 4-months in winter

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Max day use of 8 hours assumed

Trips and VMT - Average daily one-way trips: 20-one way trips workers per day; 2-one way trips vendor trucks per day

On-road Fugitive Dust - Default

Architectural Coating - VOCs modeled separately

Vehicle Trips - Modeling costruction emissions only

Consumer Products - Modeling costruction emissions only

Landscape Equipment - Modeling costruction emissions only

Energy Use - Modeling costruction emissions only

Water And Wastewater - Modeling costruction emissions only

Solid Waste - Modeling costruction emissions only

Construction Off-road Equipment Mitigation - Per spec sheets: air compressor Tier 4i, diesel gen set Tier 3 compliant

# EID Tank Recoating El Dorado County AQMD Air District, Winter

### 1.0 Project Characteristics

#### 1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	0.00	User Defined Unit	0.00	0.00	0

#### 1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2022
Utility Company	Pacific Gas & Electric Co	ompany			
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

#### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Modeling construction only

Land Use - Tank sandblasting and recoating - no ground disturbance required

Construction Phase - 2 year total duration: sandblasting 4-months in summer and 4-months in winter; coating 4-months in summer and 4-months in winter

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults

Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Max day use of 8 hours assumed

Trips and VMT - Average daily one-way trips: 20-one way trips workers per day; 2-one way trips vendor trucks per day

On-road Fugitive Dust - Default

Architectural Coating - VOCs modeled separately

Vehicle Trips - Modeling costruction emissions only

Consumer Products - Modeling costruction emissions only

Landscape Equipment - Modeling costruction emissions only

Energy Use - Modeling costruction emissions only

Water And Wastewater - Modeling costruction emissions only

Solid Waste - Modeling costruction emissions only

Construction Off-road Equipment Mitigation - Per spec sheets: air compressor Tier 4i, diesel gen set Tier 3 compliant

EID Tank Recoating - Health Risk Assessment - El Dorado County AQMD Air District, Annual

## EID Tank Recoating - Health Risk Assessment El Dorado County AQMD Air District, Annual

#### 1.0 Project Characteristics

#### 1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	0.00	User Defined Unit	0.00	0.00	0

#### 1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2022
Utility Company	Pacific Gas & Ele	ectric Company			
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (Ib/MWhr)	0.006

#### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Modeling construction only

Land Use - Tank sandblasting and recoating - no ground disturbance required

Construction Phase - 2 year total duration: sandblasting 4-months in summer and 4-months in winter; coating 4-months in summer and 4-months in Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Off-road Equipment - Air compressor and gen set hp based on EID spec sheet. Aerial lift hp based on model defaults. Average of 6 hours per day Trips and VMT - Average daily one-way trips: 20-one way trips workers per day; 2-one way trips vendor trucks per day. Reduced trip length to 1,000 feet

On-road Fugitive Dust - Default

Architectural Coating - VOCs modeled separately

Vehicle Trips - Modeling costruction emissions only

Consumer Products - Modeling costruction emissions only

Landscape Equipment - Modeling costruction emissions only

Energy Use - Modeling costruction emissions only

Water And Wastewater - Modeling costruction emissions only

Solid Waste - Modeling costruction emissions only

Construction Off-road Equipment Mitigation - Per spec sheets: air compressor Tier 4i, diesel gen set Tier 3 compliant

\*\*\*

\*\*\* MODEL SETUP OPTIONS SUMMARY \*\*\*

\*\*Model Is Setup For Calculation of Average CONCentration Values.

- -- DEPOSITION LOGIC --
- \*\*NO GAS DEPOSITION Data Provided.
- \*\*NO PARTICLE DEPOSITION Data Provided.
- \*\*Model Uses NO DRY DEPLETION. DRYDPLT = F
- \*\*Model Uses NO WET DEPLETION. WETDPLT = F
- \*\*Model Uses RURAL Dispersion Only.
- \*\*Model Uses Regulatory DEFAULT Options:
  - 1. Stack-tip Downwash.
  - 2. Model Accounts for ELEVated Terrain Effects.
  - 3. Use Calms Processing Routine.
  - 4. Use Missing Data Processing Routine.
  - 5. No Exponential Decay.
- \*\*Other Options Specified:

CCVR\_Sub - Meteorological data includes CCVR substitutions TEMP\_Sub - Meteorological data includes TEMP substitutions

- \*\*Model Assumes No FLAGPOLE Receptor Heights.
- \*\*The User Specified a Pollutant Type of: TACS
- \*\*Model Calculates 3 Short Term Average(s) of: 1-HR 8-HR 24-HR and Calculates PERIOD Averages
- \*\*This Run Includes: 33 Source(s); 3 Source Group(s); and 2568 Receptor(s)

with: 0 POINT(s), including

0 POINTCAP(s) and 0 POINTHOR(s)

and: 31 VOLUME source(s)

and: 2 AREA type source(s)

and: 0 LINE source(s)

and: 0 RLINE/RLINEXT source(s)

and: 0 OPENPIT source(s)

and: 0 BUOYANT LINE source(s) with 0 line(s)

<sup>\*\*</sup>Model Set To Continue RUNning After the Setup Testing.

<sup>\*\*</sup>The AERMET Input Meteorological Data Version Date: 14134

```
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
   Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
   Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                       m for Missing Hours
                       b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 466.70; Decay Coef. = 0.000; Rot. Angle =
                                                                     0.0
      Emission Units = GRAMS/SEC
                                    ; Emission Rate Unit Factor = 0.10000E+07
      Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model =
                               4.6 MB of RAM.
**Input Runstream File:
                  aermod.inp
**Output Print File:
                aermod.out

                          MODEL SETUP OPTIONS SUMMARY
**Model Is Setup For Calculation of Average CONCentration Values.
 -- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F
**Model Uses RURAL Dispersion Only.
**Model Uses Regulatory DEFAULT Options:
    1. Stack-tip Downwash.
    2. Model Accounts for ELEVated Terrain Effects.
    3. Use Calms Processing Routine.
    4. Use Missing Data Processing Routine.
```

\*\*Other Options Specified:

5. No Exponential Decay.

CCVR\_Sub - Meteorological data includes CCVR substitutions

```
**Model Assumes No FLAGPOLE Receptor Heights.
**The User Specified a Pollutant Type of: TACS
**Model Calculates 3 Short Term Average(s) of: 1-HR 8-HR 24-HR
  and Calculates PERIOD Averages
**This Run Includes:
                     33 Source(s);
                                     3 Source Group(s); and 2568 Receptor(s)
        with:
                0 POINT(s), including
                                    0 POINTHOR(s)
              0 POINTCAP(s) and
               31 VOLUME source(s)
         and:
                2 AREA type source(s)
         and:
         and:
                0 LINE source(s)
                0 RLINE/RLINEXT source(s)
         and:
                0 OPENPIT source(s)
         and:
                0 BUOYANT LINE source(s) with
                                                  0 line(s)
         and:
**Model Set To Continue RUNning After the Setup Testing.
**The AERMET Input Meteorological Data Version Date: 14134
**Output Options Selected:
     Model Outputs Tables of PERIOD Averages by Receptor
     Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
     Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
     Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                   m for Missing Hours
                                   b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 466.70; Decay Coef. = 0.000; Rot. Angle =
                                                                                                       0.0
                                                       : Emission Rate Unit Factor = 0.10000E+07
         Emission Units = GRAMS/SEC
         Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model =
                                               4.6 MB of RAM.
**Input Runstream File:
