APPENDIX

I. INTRODUCTION

This report has been prepared at the request of the City of St. Helena to determine if the traffic associated with two development scenarios for the Farmstead at Long Meadow Ranch project would result in any significant traffic, pedestrian or bicycle rider impacts. The first would be a proposed 65-unit lodging facility to be located along the east side of State Route 29 north of Mills Lane, while the second would include the 65-unit lodge as well as a new retail butcher shop within the Farmstead Farmers Market along Charter Oak Avenue east of SR 29 and traffic from a 200-guest event at the Charter Oak Avenue facility. The project location is shown in **Figures 1 & 2**. At City request, impacts due to both scenarios have been determined for harvest Friday AM and PM peak hour and Saturday afternoon peak hour traffic conditions for existing (2018), year 2022 and Cumulative (year 2040) conditions. Both year 2022 and 2040 “Without Project” analyses have been conducted assuming no improvements to Mills Lane, while all “With Project” analyses have assumed Mills Lane widening and realignment to intersect SR 29 at the Grayson Avenue signal. “With Project” conditions for both scenarios have also included construction of an improved parking lot in the southwest corner of the Dowdell Lane/McCormick Street intersection for use by lodging as well as Farmstead restaurant and farmers market employees in conjunction with elimination of the existing Farmstead restaurant and farmers market employee parking in a lot along Charter Oak Avenue west of SR 29. Evaluation has been conducted at the Pope Street-Mitchell Street, Charter Oak, Grayson Avenue-Mills Lane and Dowdell Lane intersections along SR 29 as well as along Mills Lane, Dowdell Lane and La Fata Street. Significant impacts, if any, have been identified and measures recommended to reduce all impacts to a less than significant level.

II. EXECUTIVE SUMMARY OF PROJECT IMPACTS & MITIGATIONS

A. LODGE ONLY

- **SIGNIFICANT OFF-SITE OPERATIONAL IMPACTS**
 - **SR 29/Grayson Avenue-Mills Lane** signalized intersection (2040). Operation as a four-leg signalized intersection will be an unacceptable Level of Service E during the Friday AM peak hour. Before Mills Lane realignment, operation of the SR 29/Grayson signal would be an acceptable Level of Service D.
- **SIGNIFICANT PEDESTRIAN/BICYCLE IMPACTS.**
 - **SR 29/Charter Oak Avenue** intersection (Existing, 2022 & 2040). Lodge guests will use the SR 29 crosswalk at Charter Oak Avenue which will continue to have pedestrian crossing numbers exceeding Caltrans’ warrant criteria for a pedestrian hybrid flashing beacon.

- **RECOMMENDED MITIGATIONS.**
 - **SR 29/Grayson Avenue-Mills Lane** intersection. Minor additional improvements are needed when Mills Lane is realigned and widened to connect to SR 29 at Grayson Avenue. The Mills Lane approach should be striped to provide an exclusive left turn lane and a combined through/right turn lane. In addition, the Grayson Avenue approach should be widened to provide a two-lane approach, one exclusively for left turns and one for combined through/right turns. Protected left turn phasing should be provided on the Mills-Grayson approaches.
 - **SR 29/Charter Oak Avenue** intersection. Provide a fair share contribution towards a pedestrian hybrid flashing beacon (a High Intensity Activated Crosswalk (HAWK) pedestrian signal) on SR 29 at the Charter Oak Avenue intersection.

B. TOTAL PROJECT

- **SIGNIFICANT OFF-SITE OPERATIONAL IMPACTS**
 - **SR 29/Grayson Avenue-Mills Lane** (2040) – None additional, see impact listed above for the lodge.
 - **SR 29/Dowdell Lane intersection** (Existing & 2022) – signal warrant
 - **SR 29/Charter Oak Avenue intersection** (Existing, 2022 & 2040)
 - signal warrant
- **SIGNIFICANT PEDESTRIAN/BICYCLE IMPACTS.**
 - None additional, see impact listed above for the lodge.
- **RECOMMENDED MITIGATIONS**
 - **SR 29/Grayson Avenue-Mills Lane intersection**
Minor additional improvements are needed when Mills Lane is realigned and widened to connect to SR 29 at Grayson Lane. The Mills Lane approach should be striped to provide an additional left turn lane and a combined through/right turn lane. In addition, the Grayson Avenue approach should be widened to provide a two-lane approach, one exclusively for left turns and one for combined through/right turns. Protected left turn phasing should be provided on the Mills-Grayson approaches.
 - **SR 29/Dowdell Lane intersection**
Provide a fair share contribution towards future signalization.
 - **SR 29/Charter Oak Avenue intersection**
Because City Public Works has indicated they are not in favor of a signal at this location, there are two possible options:

1. Schedule all large events to preclude any event traffic on the roadway system from 3:30-6:00 PM on weekdays and from 1:30-4:00 PM on weekend days. Measure 3 would also eliminate the need for the SR 29/Dowell Lane mitigation.

— or —

2. Provide additional funding to fully install the HAWK pedestrian signal at the SR 29/Charter Oak Avenue intersection – assuming Caltrans approval.

III. SUMMARY OF “WITH” VERSUS “WITHOUT” PROJECT CONDITIONS

A. WITHOUT PROJECT CONDITIONS

1. EXISTING (2018) HARVEST VOLUMES

Peak hour traffic volumes along Main Street (SR 29) in the project vicinity are similar during the Friday AM and PM commute and Saturday afternoon peak traffic hours (1,511 to 1,643 vehicles per hour [VPH]). Volumes on Mills Lane are minimal during all peak hours (11-25 VPH), while those on La Fata Street are higher on weekdays (31-36 VPH) compared to Saturday (13 VPH). Peak hour volumes on Dowdell Lane are also higher during the week (172 VPH) compared to Saturday (66 VPH).

2-WAY PEAK HOUR VOLUMES – HARVEST 2017

LOCATION	FRIDAY		SATURDAY AFTERNOON PEAK HOUR
	AM PEAK HOUR	PM PEAK HOUR	
Mills Lane (just east of SR 29)	25	20	11
La Fata Street (just north of Dowdell Lane)	31	36	13
Dowell Lane (just east of SR 29)	172	172	66
SR 29 (just north of Mills Lane)	1,643	1,560	1,511

Source: Komes Traffic Study by Omni Means (2017)

2. UNACCEPTABLE WITHOUT PROJECT INTERSECTION LEVEL OF SERVICE

a. EXISTING (2018) HARVEST

- **SR 29/Pope Street** (signal)
 - Friday AM & PM + Saturday PM peak hours
- **SR 29/Charter Oak Avenue** (unsignalized)
 - Friday AM peak hour – westbound stop sign controlled approach

b. YEAR 2022 HARVEST – MILLS LANE NOT IMPROVED OR REALIGNED

- **SR 29/Pope Street** (signal)
 - Friday AM & PM + Saturday PM peak hours
- **SR 29/ Charter Oak Avenue** (unsignalized)
 - Friday AM peak hour – westbound stop sign controlled approach

c. CUMULATIVE (YEAR 2040) HARVEST – MILLS LANE NOT IMPROVED OR REALIGNED

- **SR 29/Pope Street** (signal)
 - Friday AM & PM + Saturday PM peak hours
- **SR 29/Charter Oak Avenue** (unsignalized)
 - Friday AM & PM peak hours – westbound stop sign controlled approach

3. INTERSECTIONS WITH VOLUMES MEETING CALTRANS PEAK HOUR RURAL SIGNAL WARRANT #3 CRITERIA (WITHOUT PROJECT)

a. EXISTING HARVEST

- **SR 29/Dowdell Lane**
 - Friday AM & PM peak hours
- **SR 29/Charter Oak Avenue**
 - Friday AM & Saturday PM peak hours

b. YEAR 2022 HARVEST

- **SR 29/Dowdell Lane**
 - Friday AM & PM peak hours
 - Saturday PM peak hour
- **SR 29/Charter Oak Avenue**
 - Friday AM & PM peak hours
 - Saturday PM peak hour

c. CUMULATIVE (YEAR 2040) HARVEST

- **SR 29/Dowdell Lane**
 - Friday AM & PM peak hours
 - Saturday PM peak hour
- **SR 29/Charter Oak Avenue**
 - Friday AM & PM peak hours
 - Saturday PM peak hour

4. EXISTING PEDESTRIAN ACTIVITY

There is minimal pedestrian activity along either Mills Lane, Dowdell Lane or La Fata Street in the immediate project area, while some pedestrians (in particular high school students) walk along SR 29 both north and south of the Grayson Avenue signal. The location along SR 29 in the study area having the highest pedestrian crossings was at Charter Oak Avenue. There were from 9 to 73 crossings per hour during the 10 hours surveyed on Friday and Saturday for the report. This crossing, which now has pedestrian activated in-pavement lights, also has combined pedestrian and traffic volumes meeting Caltrans warrant guidelines for provision of a pedestrian hybrid flashing beacon (also called a High Intensity Activated Crosswalk – or HAWK pedestrian signal).

5. EXISTING BICYCLE ACTIVITY

There is minimal bicycle activity now along SR 29 in the study area due to the high traffic volumes and lack of bicycle lanes or paths (1 to 7 riders per hour depending upon the hour and the location). There is little or no bicycle activity along Mills Lane, La Fata Street or Dowdell Lane.

B. PROJECT TRIP GENERATION, DISTRIBUTION & IMPROVEMENTS

1. LODGE

a. Lodging Trip Generation

During a harvest Friday the proposed 65-unit lodging facility at 100 percent occupancy would be expected to generate 544 daily two-way trips with 19 inbound and 13 outbound trips during the AM commute peak traffic hour, as well as 20 inbound and 20 outbound trips during the PM commute peak traffic hour.

During a harvest Saturday the lodging facility at 100 percent occupancy would be expected to generate 534 daily two-way trips, with 17 inbound and 14 outbound trips during the peak traffic hour on SR 29, which would occur in the middle of the afternoon.

All project guests will park at the lodging facility which will be accessed at the Mills Lane/La Fata Street intersection, while all lodging employees will park in an improved parking lot on the southwest corner of the Dowdell Lane/McCormick Street intersection, about a quarter mile south of the lodging facility.

b. Relocation of Farmstead Restaurant/Farmers Market Employee Parking

All restaurant/farmers market employees will relocate from a lot on Charter Oak Avenue west of SR 29 to the new improved parking lot at the Dowdell Lane/McCormick Street intersection.

c. Mills Lane Improvements

Mills Lane will be widened with hotel development from La Fata Street to SR 29 to a 40-foot curb-to-curb width adjacent to the site and a 44-foot width near SR 29 at the signalized Grayson Avenue intersection. In addition, a 10-foot-wide Class I bicycle path/pedestrian walkway will be constructed on the north side of Mills Lane from SR 29 to La Fata Street.

d. La Fata Street Improvements

Large boulders along both side of La Fata Street near Mills Lane will be removed and the street section widened to 40 feet, curb to curb. In addition, a paved walkway will be provided on the west side of La Fata Street between Dowdell Lane and Mills Lane. This will complete the paved walkway system between the lodge and the improved parking lot at the Dowdell Lane/McCormick Street intersection.

e. Lodge Traffic Trip Distribution

Project employees will park in the new lot on the southwest corner of the Dowdell Lane/McCormick Street intersection, while project guests will park on site. Guest parking will be accessed via a driveway connecting to Mills Lane opposite La Fata Street.

Project guest and employee traffic was projected to distribute 50 percent south on SR 29, with 45 percent north on SR 29 and 5 percent on Grayson Avenue during all time periods except the Friday PM peak hour. During this period up to 60 percent of inbound guest traffic would be expected to come from the south on SR 29.

2. TOTAL PROJECT

a. Retail Butcher Shop Trip Generation & Distribution

Three retail customers are projected to be driving to/from the farmers market on Charter Oak Avenue during the Friday & Saturday PM peak hours. The shop will be closed during the Friday AM peak hour.

b. 200-Person Event Trip Generation & Distribution

Fourteen shuttle buses (applicant estimate) and a minor level of non-shuttle auto traffic are projected during the hour before and after an event. All access will be via Charter Oak Avenue and buses will park off site during an event. A vast majority of buses are projected to use SR 29 to/from south of the site.

C. PROJECT SIGNIFICANT OFF-SITE CIRCULATION IMPACTS

1. EXISTING (2018)

a. LODGE ONLY

- i. **Intersection Level of Service**
None.
- ii. **Signal Warrant**
None.
- iii. **Local Roadways**
None.

b. TOTAL PROJECT

- i. **Intersection Level of Service**
None.
- ii. **Signal Warrant**
 - **SR 29/Dowdell Lane**
 - Friday PM peak hour
 - **SR 29/Charter Oak Avenue**
 - Friday PM peak hour
 - Saturday PM peak hour

- iii. **Local Roadways**
None.

Less than significant with mitigation.

2. YEAR 2022

a. LODGE ONLY

- i. **Intersection Level of Service**
None.
- ii. **Signal Warrant**
None.
- iii. **Local Roadways**
None.

b. TOTAL PROJECT

- i. **Intersection Level of Service**
None.
- ii. **Signal Warrant**
 - **SR 29/Dowdell Lane**
 - Friday PM peak hour
 - Saturday PM peak hour
 - **SR 29/Charter Oak Avenue**
 - Friday PM peak hour
 - Saturday PM peak hour
- iii. **Local Roadways**
None.

Less than significant with mitigation.

3. CUMULATIVE (YEAR 2040)

a. LODGE ONLY

- i. **Intersection Level of Service**
 - **SR 29/Grayson Avenue-Mills Lane**
 - Friday AM peak hour – unacceptable signalized operation
- ii. **Signal Warrant**
None.
- iii. **Local Roadways**
None.

b. TOTAL PROJECT

- i. **Intersection Level of Service**
 - **SR 29/Grayson Avenue-Mills Lane**
 - Friday AM peak hour – unacceptable signalized operation
- ii. **Signal Warrant**
 - **SR 29/Charter Oak Avenue**
 - Friday PM peak hour
 - Saturday PM peak hour
- iii. **Local Roadways**
 - None.

Less than significant with mitigation.

D. PROJECT SIGNIFICANT PEDESTRIAN IMPACTS

- Existing Farmstead restaurant and farmers market employee parking will be moved from a lot along Charter Oak Avenue west of SR 29 to a new lot in the southwest corner of the Dowdell Lane/McCormick Street intersection. This will reduce, or at a minimum not increase pedestrian crossings of SR 29 at Charter Oak Avenue. Lodge guests would primarily walk to/from downtown St. Helena via SR 29, traveling through the Farmstead property to Charter Oak Avenue. Some guests will cross SR 29 at Charter Oak Avenue. Since the SR 29 crosswalk at Charter Oak Avenue already meets traffic and pedestrian criteria for provision of a pedestrian hybrid flashing beacon, continued use of the crossing due to project guests would be considered significant.

Less than significant with mitigation.

E. PROJECT BICYCLE RIDER IMPACTS

- There are no bicycle lanes or paths currently in the project area and little bike riding on local streets would initially be expected by lodging guests. However, a Class I bicycle path/pedestrian walkway will be constructed on the north side of Mills Lane from La Fata Street to SR 29. In addition, bicycles will be provided in each room for guests and bicycle lockers will be provided for employees.

Less than significant impact.

F. PROPOSED DOWDELL LANE EMPLOYEE PARKING LOT – SPACES PROVIDED VERSUS DEMAND

- The employee parking lot at the Dowdell Lane/McCormick Street intersection would be paved and have 73 striped parking spaces. Based upon applicant supplied total project employee numbers and shift change times, the maximum parking demand would occur for a one half hour period during the day (2:30-3:00 PM) when there would be up to 73 employees on-site at the same time. However, parking demand would be expected to be 15 to 20 percent less than this total due to car/vanpooling, transit use, drop off/pickup by friends and walking/biking by employees living near the project. The number of spaces to be provided in this lot should be adequate for the employee parking demand as detailed by the applicant.

Less than significant impact.

G. RECOMMENDED MITIGATIONS

A. LODGE

1. SR 29/GRAYSON AVENUE-MILLS LANE – LEVEL OF SERVICE IMPACT

- Minor additional improvements are needed when Mills Lane is realigned and widened to connect to SR 29 at Grayson Lane. The Mills Lane approach should be striped to provide an additional left turn lane and a combined through/right turn lane. In addition, the Grayson Avenue approach should be widened to provide a two-lane approach, one exclusively for left turns and one for combined through/right turns. Protected left turn phasing should be provided on the Mills-Grayson approaches.

2. SR 29/CHARTER OAK AVENUE INTERSECTION – SR 29 PEDESTRIAN CROSSINGS

- Provide a fair share contribution to the “HAWK” pedestrian hybrid flashing beacon proposed for the SR 29/Charter Oak Avenue intersection.

Impacts reduced to less than significant level.

B. TOTAL PROJECT

1. SR 29/GRAYSON AVENUE-MILLS LANE – LEVEL OF SERVICE IMPACT

- Minor additional improvements are needed when Mills Lane is realigned and widened to connect to SR 29 at Grayson Lane. The Mills Lane approach should be striped to provide an additional left turn lane and a combined through/right turn lane. In addition, the Grayson Avenue approach should be widened to provide a two-lane approach, one exclusively for left turns and one for combined through/right turns. Protected left turn phasing should be provided on the Mills-Grayson approaches.

2. SR 29/DOWDELL LANE INTERSECTION – SIGNAL WARRANT IMPACT

- Provide a fair share contribution towards the signal planned at the SR 29/Dowell Lane intersection (as detailed in the Highway 29 Specific Plan).

3. SR 29/CHARTER OAK AVENUE INTERSECTION – SIGNAL WARRANT IMPACTS

- Provide one of the following two measures.
 - a. Start and end all special events with more than 75 people at times that will not add traffic to SR 29 during the weekday and Saturday PM peak traffic periods (3:30-6:00 PM on weekdays and 1:30-4:00 PM on weekend days).

— or —
 - b. Provide additional funding for the “HAWK” pedestrian hybrid flashing beacon. The beacon will need to be in operation before major events are allowed to add traffic to the existing weekday and weekend peak traffic hours along SR 29. Should Caltrans not approve installation of the HAWK hybrid flashing beacon, then the only measure to reduce the impact to a level of insignificance is measure “a” – eliminating 200-person event traffic during the Friday and Saturday PM peak traffic hours.

Impacts reduced to less than significant level.

IV. PROJECT LOCATION & DESCRIPTION

A. LODGE

The proposed 65-unit Farmstead at Long Meadow Ranch lodging facility would be located east of SR 29 and north of Mills Lane in the southern section of the City of St. Helena (see **Figures 1 & 2 – Regional and Local Area Maps, Figure 3 – Existing Intersection Geometrics & Control, and Figure 4 – Site Plan**). Currently, the vast majority of the lodge site is vacant with the exception of a vegetable garden. The only street bordering the lodge site is Mills Lane, on the south. The site extends along Mills Lane from the Napa Valley Wine Train right-of-way to just east of the La Fata Street intersection. Lodge guest parking would be on-site and accessed via a driveway which would be the north leg of the Mills Lane/La Fata Street intersection, while lodge employee parking would be in a new paved lot on the southwest corner of the Dowdell Lane/McCormick Street intersection (see **Figure 5**). This lot is currently undeveloped and will also be used by employees of the existing Farmstead restaurant and farmers market. Overall the lodge will employ 65 staff, with a maximum of 47 on site during any given day. An on-call shuttle bus will be provided for all staff unable to walk between the new lot and either the lodge or restaurant/farmers market. A shelter will also be provided adjacent to the lot.

Mills Lane is planned to be widened between La Fata Street and SR 29 as well as realigned to intersect SR 29 as the fourth leg of the signalized Grayson Avenue intersection in conjunction with development of the Farmstead Lodge. The existing Mills Lane crossing of the Wine Train track would be eliminated and a new at-grade crossing provided. The new Mills Lane at-grade crossing of the Napa Valley Wine Train track would be protected by gates and flashing lights. Mills Lane will have two travel lanes, on-street parking on both sides of the street adjacent to the lodge and a Class I bicycle path and pedestrian walkway on the north side of the street from SR 29 to La Fata Street. The Mills Lane approach to the SR 29/Grayson Avenue signal will have two lanes, one exclusively for right turns and one for combined through/left turns.

The northwest end of the project site would extend to the Napa Valley Wine Train right-of-way and be adjacent to the existing Farmstead at Long Meadow Ranch restaurant and farmers market. Access between the two parcels would be possible for pedestrians and bicycles, but not autos. Guests walking to/from downtown St. Helena would use this route through the restaurant property to access SR 29 at the Charter Oak intersection.

The proposed lodging facility will contain 65 rooms as well as spa facilities for guests only. The existing Farmstead restaurant will be available for meals. There will be an expansion of existing cooking classes as well as gardening and crafts demonstrations (now taking place at the Farmstead restaurant to the north) in conjunction with the new lodging units. However, classes will be during non-peak restaurant and farmers market traffic hours (9:00 a.m. to noon).

As part of project development a Class I paved path/pedestrian walkway will be provided on the north side of Mills Lane between La Fata Street and SR 29. In addition, a paved pathway will be provided along the west side of La Fata Street between Mills Lane and Dowdell Lane that will complete a paved walkway system between the employee improved parking lot and the lodge entrance.

La Fata Street will be widened to 40 feet (curb to curb) just south of Mills Lane in conjunction with removal of the boulders that now line both sides of the street in this area. Finally, stop signs will be provided on the La Fata Street-Lodge driveway approaches to Mills Lane.

A Transportation Demand Management (TDM) coordinator will be provided in order to establish and maintain ongoing programs to reduce vehicle trips by guests and employees. Such measures will include car and vanpooling programs for employees, winery tours for guests with pickup/drop off at the lodge, etc.

B. RETAIL BUTCHER SHOP & 200-PERSON EVENT

A 408-square-foot butcher shop will be added to the farmers market and be open to the public. Hours will be 10:00 AM to 6:00 PM. Existing farmers market butchers and staff will work in the new retail facility. Local customers will either walk or drive to/from the site.

Based upon the applicant's request for four 200-person events per week with no restrictions on beginning or end times, for analysis purposes the City has requested that traffic from this size event be assumed on the local roadway network during the Friday and Saturday PM peak traffic hours. Access would be via 14 shuttle buses, although a few attendees would also be likely to drive. All shuttle buses will access the restaurant/farmers market parking lot along Charter Oak Avenue. They are assumed to park off site during the event.

V. SCOPE OF SERVICES

The following scope of services was requested by City of St. Helena staff for the traffic analysis.

I. ANALYSIS LOCATIONS

- SR 29/Pope Street-Mitchell Street intersection (signal)
- SR 29/Charter Oak Avenue intersection
- SR 29/Mills Lane intersection
- SR 29/Grayson Avenue intersection (signal)
- SR 29/Dowdell Lane intersection
- Mills Lane
- La Fata Street
- Dowdell Lane

II. ANALYSIS TIME PERIODS

- Harvest Friday AM and PM commute peak traffic hours
- Harvest Saturday afternoon peak traffic hour

III. ANALYSIS SCENARIOS

- A. **Existing Without Project** (with Mills Lane remaining unimproved and not realigned at SR 29)
- B. **Existing + Lodge** (with Mills Lane widened and realigned as the fourth leg of the SR 29/Grayson Avenue signal)
- C. **Existing + Total Project** (lodge, retail butcher shop + 200-person event)
- D. **Year 2022 Without Project** (with Mills Lane remaining unimproved and not realigned at SR 29)
- E. **Year 2022 + Lodge** (with Mills Lane widened and realigned as the fourth leg of the SR 29/Grayson Avenue signal)
- F. **Year 2022 + Total Project** (lodge, retail butcher shop + 200-person event)
- G. **Cumulative (Year 2040) Without Project** (with Mills Lane remaining unimproved and not realigned at SR 29)
- H. **Cumulative (Year 2040) + Lodge** (with Mills Lane widened and realigned as the fourth leg of the SR 29/Grayson Avenue signal)
- I. **Cumulative (Year 2040) + Total Project** (lodge, retail butcher shop + 200-person event)

VI. EXISTING CONDITIONS (WITHOUT PROJECT)

A. ROADWAYS

Main Street (State Routes 29 & 128) is the primary north-south travel route through the Napa Valley and the major north-south route through the City of St. Helena. In this study it is referred to as SR 29. North of St. Helena SR 29 extends to Calistoga and Lake County, while to the south it extends to the cities of Napa and American Canyon. Main Street is classified as a Regional Connector Street in the St. Helena General Plan Update 2030 Circulation Element. In the project vicinity SR 29 has recently been reconstructed and has single travel lanes in each direction and a median continuous two-way left turn lane extending south for about three miles to the Mee Lane intersection. The posted speed limit in the vicinity of Mills Lane is 35 miles per hour and no on-street parking is allowed, while just south of Charter Oak Avenue the speed limit is reduced to 25 miles per hour. Curb and gutter along with two- to four-foot-wide paved shoulder are in place along both sides of the street. The SR 29/Grayson Avenue intersection was signalized about two years ago. There is a crosswalk on the west leg of the intersection (across Grayson Avenue), but none across SR 29. The signal is vehicle activated on the Grayson Avenue approach with SR 29 traffic receiving a continuous green light unless traffic approaches on Grayson Avenue, or a left turn is made from northbound SR 29 to Grayson Avenue. The SR 29 Specific Plan indicates that the SR 29/Dowdell Lane intersection will ultimately be signalized, while the SR 29/Pope Street-Mitchell Street intersection has been signalized for more than 50 years.

Mills Lane is a 14- to 15-foot-wide street extending easterly from SR 29 for about 0.85 miles before ending. It provides access to vineyards and intermittent residences. There are no curbs, gutters, sidewalks or paved shoulders, but grass and gravel shoulders are in place. Two-way

traffic flow is possible by slow-moving vehicles, but it requires one or both drivers to partially pull off to the gravel and grass shoulders. Mills Lane is stop sign controlled on its approach to SR 29 and the posted speed limit is 25 miles per hour. Mills Lane also has about a 20-foot-wide at-grade crossing of the Napa Valley Wine Train single track about 20 feet from the east edge of SR 29. The crossing is protected by stop signs and “Railroad Crossing” crossbucks.

La Fata Street is primarily a 40-foot-wide curb-to-curb street extending southerly from Mills Lane to Dowdell Lane and then further south to Vintage Avenue. The La Fata Street centerlines are offset by about 40 feet at Dowdell Lane. Along the 40-foot section curb and gutter are in place along both sides of the street and on-street parking is allowed. La Fata Street primarily serves wine-related warehousing and production facilities. It is stop sign controlled on both approaches to Dowdell Lane, but not on its approach to Mills Lane. La Fata Street has been narrowed to about 14 to 15 feet for the first 60 feet south of Mills Lane by dirt being placed in the street. Large rocks also line the narrowed roadway and the north side of Mills Lane, potentially to preclude truck turns. There are no sidewalks or pathways along La Fata Street between Mills Lane and Dowdell Lane.

Dowdell Lane is a 40-foot-wide curb-to-curb street extending easterly from SR 29 to the east of La Fata Street, where it continues through a light industrial area and then narrows to serve vineyards and residences. Dowdell Lane between SR 29 and La Fata Street has curb, gutter and sidewalk along the south side of the street and on-street parking is allowed, while curb, gutter, minimal sidewalk and on-street parking is provided on the north side of the street. The posted speed limit is 25 miles per hour. Dowdell Lane is wide enough to allow right and left turning vehicles to separate on its stop sign controlled approach to SR 29. Dowdell Lane also has an at-grade crossing of the Napa Valley Wine Train single track about 20 feet from the east edge of SR 29. The crossing is protected by gates and flashing lights.

Charter Oak Avenue is a two-lane, 38-foot-wide street east and west of SR 29. Their “Tee” intersections with SR 29 are offset by about 90 feet, the west leg being to the north. Both Charter Oak Avenue approaches to SR 29 are stop sign controlled. There is a crosswalk across SR 29 between the offset intersections. The east leg of Charter Oak Avenue also has an at-grade crossing of the Napa Valley Wine Train about 20 feet from the east edge of SR 29. It is protected by gates and flashing lights.

Figure 3 provides a schematic presentation of analysis intersection approach lanes and control. For description purposes in this study, SR 29 and La Fata Street were designated to run in a north-south direction, while Mills Lane, Grayson Avenue, Dowdell Lane and Charter Oak Avenue were designated to run in an east-west direction.

B. RAILWAY

The Napa Valley Wine Train has a single track line extending between St. Helena and the City of Napa. In the project area it runs parallel to and about 20 feet to the east of the east curb of SR 29. Gates and flashing red lights are in place at the railroad’s at-grade crossings of Pope Street, Dowdell Lane and Charter Oak Avenue, but not at Mills Lane. The Mills Lane crossing has top signs and “Railroad Crossing” crossbucks on both approaches. Currently, there are, at most, three round trips per day during the summer and fall. The train speed limit is 15 miles per hour.

C. VOLUMES

1. EXISTING COUNTS (2017-2019)

The Napa County Travel Behavioral Study¹ shows that the highest weekday volumes in Napa Valley occur on a Friday, with the highest weekend volumes occurring on a Saturday. In addition, historical count data from the City of Napa show that Friday has the highest volumes of any weekday, while Caltrans historical counts for SR 29 between St. Helena and Napa also show that weekday AM and PM peak hour volumes are higher on a Friday than on either a Wednesday or Thursday. Therefore, Friday and Saturday peak traffic conditions were evaluated in this study at the request of St. Helena City staff.

Year 2018 fall weekday AM and PM peak hour and Saturday afternoon peak hour turn movement traffic counts were obtained from the City's General Plan Update Draft EIR traffic analysis for the SR 29 intersections with Pope Street-Mitchell Street, Mills Lane and Grayson Avenue. Year 2019 Friday and Saturday peak hour turn movement counts were conducted by Crane Transportation Group at the SR 29/Charter Oak Avenue intersection, while 2017 Friday and Saturday peak hour turn movement counts at the SR 29/Dowdell, Mills/La Fata and Dowdell/La Fata intersections were obtained from the Komes Winery traffic study by Omni Means (March 2018). The SR 29/Grayson Avenue signal was in operation and all local schools were open and had normal schedules on all count days. The peak traffic hours were determined to be 7:45-8:45 AM and 4:30-5:30 PM on Friday, and 2:00-3:00 PM on Saturday. The 2017 and 2019 counts were adjusted to match the 2018 count system used in the General Plan Update Circulation Element. No hose counts were utilized to obtain volume data or peak traffic hours for this study.

Traffic volumes along northbound SR 29 in the project area frequently exhibited stop-and-go flow, particularly during the Friday and Saturday afternoon peak traffic periods. This was due to capacity constraints at the signalized intersections along SR 29 in downtown St. Helena, particularly Pope Street-Mitchell Street. However, many drivers on SR 29 were courteous and stopped to allow turns to or from all side streets and driveways.

2. SEASONAL ADJUSTMENT

Project traffic impacts have been evaluated during September harvest conditions at the request of St. Helena City staff. Based upon more than four years of historical information from Caltrans PeMS (Performance Measurement System) count surveys along SR 29 in the Napa Valley, September has the highest daily volumes of the year (during harvest).

February 2017 peak hour traffic counts in the Komes traffic study and May 2019 traffic counts by Crane Transportation Group were seasonally adjusted to reflect September 2018 harvest conditions based upon historical traffic count data from Caltrans. Resultant harvest 2018 Friday AM and PM peak hour and Saturday afternoon peak hour volumes are presented in **Figures 6, 7 and 8**.

¹ Fehr & Peers, December 8, 2014.

The following chart presents a comparison of projected Harvest 2018 two-way peak hour traffic flows on the roads in close proximity to the project site.

2-WAY PEAK HOUR VOLUMES – HARVEST 2018

LOCATION	FRIDAY		SATURDAY AFTERNOON
	AM PEAK HOUR	PM PEAK HOUR	PEAK HOUR
Mills Lane (just east of SR 29)	25	20	11
La Fata Street (just north of Dowdell Lane)	31	36	13
Dowdell Lane (just east of SR 29)	172	172	66
SR 29 (just north of Mills Lane)	1,643	1,560	1,511

Source: Crane Transportation Group

As shown, two-way volumes along SR 29 are projected to be similar during the Friday AM and PM and Saturday afternoon peak traffic hours (between about 1,511 to 1,643 VPH). Volumes on Mills Lane are minimal during all peak hours (11-25 VPH), while those on La Fata Street are higher on weekdays (31-36 VPH) compared to Saturday (13 VPH). Peak hour volumes on Dowdell Lane are also higher during the week (172 VPH) compared to Saturday (66 VPH).

D. INTERSECTION LEVEL OF SERVICE

1. ANALYSIS METHODOLOGY

Transportation engineers and planners commonly use a grading system called level of service (LOS) to measure and describe the operational status of the local roadway network. LOS is a description of the quality of a roadway facility's operation, ranging from LOS A (indicating free-flow traffic conditions with little or no delay) to LOS F (representing oversaturated conditions where traffic flows exceed design capacity, resulting in long queues and delays). Intersections, rather than roadway segments between intersections, are almost always the capacity controlling locations for any circulation system.

Signalized Intersections. For signalized intersections, the Year 2017 6th Edition *Highway Capacity Manual* (Transportation Research Board, National Research Council) methodology was utilized. With this methodology, operations are defined by the level of service and average control delay per vehicle (measured in seconds) for the entire intersection. For a signalized intersection, control delay is the portion of the total delay attributed to traffic signal operation. This includes delay associated with deceleration, acceleration, stopping, and moving up in the queue. **Table 1** summarizes the relationship between delay and LOS for signalized intersections.

Unsignalized Intersections. For unsignalized (all-way stop-controlled and side-street stop-controlled) intersections, the Year 2017 6th Edition *Highway Capacity Manual* (Transportation Research Board, National Research Council) methodology for unsignalized intersections was utilized. For side-street stop-controlled intersections, operations are defined by the level of service and average control delay per vehicle (measured in seconds), with delay reported for the

stop sign controlled approaches or turn movements. For all-way stop-controlled intersections, operations are defined by the average control delay for the entire intersection (measured in seconds per vehicle). The delay at an unsignalized intersection incorporates delay associated with deceleration, acceleration, stopping, and moving up in the queue. **Table 2** summarizes the relationship between delay and LOS for unsignalized intersections.

The Synchro software program was utilized for all level of service analysis. The software is not impacted by speed limits. However, methodology to reflect the impact of vehicle queuing along Main Street was worked out between the City and Fehr & Peers as part of their General Plan Update Circulation Element analysis. This same methodology was utilized in this revised Farmstead Traffic Impact Study.

2. MINIMUM ACCEPTABLE OPERATION

a. Signalized Intersections on Main Street (SR 29)

The City of St. Helena uses LOS D as the poorest acceptable operation at a signalized intersection along Main Street.

b. Unsignalized Intersections on Main Street (SR 29)

The City of St. Helena uses LOS D at unsignalized intersections along Main Street as the poorest acceptable operation for the side street stop sign controlled approach.

3. EXISTING INTERSECTION OPERATION

Table 3 shows that for harvest 2018 conditions three of the five analyzed intersections were experiencing acceptable operation during both the Friday and Saturday peak traffic hours.

HARVEST 2018 ACCEPTABLE OPERATION (FRIDAY & SATURDAY PEAK TRAFFIC HOURS)

SR 29/Mills Lane (Mills Lane single lane stop sign controlled approach)	LOS B
SR 29/Grayson Avenue (signal)	LOS C or D
SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C

It should be noted that the new median continuous two-way left turn lane provided on SR 29 greatly facilitates left turn movements from Dowdell Lane, as do the older continuous two-way left turn lanes north and south of Charter Oak Avenue.

Table 3 also shows that two of the intersections were experiencing unacceptable operation.

HARVEST 2018 UNACCEPTABLE OPERATION

SR 29/Pope Street-Mitchell Street	LOS F during all Friday & Saturday peak hours
SR 29/Charter Oak Avenue	LOS E during the Friday AM peak hour

The SR 29/Charter Oak Avenue intersection experienced acceptable levels of service (LOS C or D) on both Charter Oak Avenue stop sign controlled intersection approaches during the Friday and Saturday PM peak traffic hours. However, during the Friday AM peak hour, while the eastbound approach was operating at an acceptable LOS C, the westbound approach was operating at an unacceptable LOS E. Level of service worksheets are contained in **Appendix A**.

E. INTERSECTION SIGNAL WARRANTS

1. ANALYSIS METHODOLOGY

Traffic signals are used to provide an orderly flow of traffic through an intersection. Many times they are needed to offer side street traffic an opportunity to access a major road where high volumes and/or high vehicle speeds block crossing or turn movements. They do not, however, increase the capacity of an intersection (i.e., increase the overall intersection's ability to accommodate additional vehicles) and, in fact, often slightly reduce the number of total vehicles that can pass through an intersection in a given period of time. Signals can also cause an increase in traffic accidents if installed at inappropriate locations.

There are 10 possible tests for determining whether a traffic signal should be considered for installation. These tests, called "warrants", consider criteria such as actual traffic volume, pedestrian volume, presence of school children, and accident history. The intersection volume data together with the available collision histories were compared to warrants contained in the *California Manual on Uniform Traffic Control Devices, 2014, Revision 3 (2014 CMUTCD Rev. 2)*. Section 4C of the 2014 CMUTCD Rev. 3 provides guidelines, or warrants, which may indicate need for a traffic signal at an unsignalized intersection. As indicated in the 2014 CMUTCD Rev. 3, satisfaction of one or more warrants does not necessarily require immediate installation of a traffic signal. It is merely an indication that the local jurisdiction should begin monitoring conditions at that location and that a signal may ultimately be required.

Warrant 3, the peak hour volume warrant, is often used as an initial check of signalization needs since peak hour volume data is typically available and this warrant is usually the first one to be met. Warrant 3 is based on a logarithmic curve and takes only the hour with the highest volume of the day into account. Please see **Appendix B Figures A-1 to A-2** for the warrant charts.

Caltrans "rural" peak hour volume signal warrant has been used for all unsignalized intersection analysis along SR 29 in this study. Rural warrant criteria are used where speeds on the uncontrolled approaches are 40 mph or greater, or where the local population is less than 10,000 people. Although the speeds on SR 29 at the analysis intersections in this study are less than 40 mph, the St. Helena population is less than 10,000 people. Therefore, based upon direction from the City, rural warrants were used for evaluation purposes.

2. MINIMUM ACCEPTABLE OPERATION

Table 4 shows that the **SR 29/Charter Oak Avenue** intersection would have volumes meeting rural signal warrant criteria during the Friday AM and Saturday PM peak hours, while the **SR 29/Dowdell Lane** intersection would have volumes meeting rural warrant criteria during the Friday AM and PM peak hours.

F. PLANNED OR ONGOING IMPROVEMENTS

Mills Lane widening and realignment at SR 29. Mills Lane is planned to be widened between La Fata Street and SR 29 as well as realigned to intersect SR 29 as the fourth leg of the signalized Grayson Avenue intersection in conjunction with development of the Farmstead Lodge. Mills Lane will have a two-lane approach to SR 29, currently planned as an exclusive right turn lane and a shared through/left turn lane. This will necessitate split signal phasing on the Mills Lane and Grayson Avenue intersection approaches.

SR 29/Dowdell Lane signalization. The Highway 29 Specific Plan (February 2005) indicates that the SR 29/Dowdell Lane intersection will be signalized at some unspecified time in the future. At direction of City staff, this intersection has not been assumed signalized for any analysis horizon year.

G. PEDESTRIAN & BICYCLE FACILITIES AND VOLUMES

1. PEDESTRIAN

a. Facilities

Sidewalks are provided along the following streets in the project area.

- SR 29 along both sides of street north of Charter Oak Avenue.
- SR 29 along the west side of the street, Charter Oak Avenue to Grayson Avenue.
- SR 29 gravel pathway along west side of street from Grayson Avenue to Dowdell Lane.
- Grayson Avenue along both sides of the street.
- Charter Oak Avenue east of SR 29, both sides of the street.
- Charter Oak Avenue west side of SR 29, south side of the street (sidewalk or paved path).
- Dowdell Lane, south side of the street from La Fata Street to McCormick Street.

There are no sidewalks along Mills Lane or along La Fata Street between Mills Lane and Dowdell Lane. There are crosswalks of SR 29 at the following locations.

- Charter Oak Avenue between the two offset Charter Oak Tee intersections. This crossing also includes pedestrian activated “in pavement” flashing lights on each side of the crosswalk.

b. Volumes

Figure 9 presents pedestrian volumes at the five analysis intersections along SR 29 as well as along Mills Lane, La Fata Street and Dowdell Lane during the Friday AM & PM and Saturday afternoon peak traffic hours. Counts at the Pope Street-Mitchell Street, Charter Oak, Mills Lane and Grayson Avenue intersections were from 2018 or 2019 unless a 2016 count had a higher pedestrian total. Counts along Mills Lane, La Fata Street and Dowdell Lane were from 2016. As shown, the highest volume location for pedestrian crossings of SR 29 was at the Charter Oak Avenue crosswalk. **Table 5** provides the total pedestrian crossings by hour at this location. Friday and Saturday pedestrian crossings of SR 29 at Charter Oak Avenue were conducted in both 2016 (May and June) and 2019 (September). As shown, the 2016 crossings were typically higher each hour than those in 2019.

SR 29 PEDESTRIAN CROSSINGS AT CHARTER OAK AVENUE

DAY & TIME	HIGHEST HOURLY VOLUME	
	2016	2019
Friday AM Peak Period (7:00-9:00 AM)	31	20
Friday PM Peak Period (3:00-6:00 PM)	58	45
Saturday PM Peak Period (1:00-6:00 PM)	73	41

Source: Crane Transportation Group

Pedestrian crossings of SR 29 in 2016 at Grayson Avenue-Mills Lane intersections ranged from 5 to 14 people per hour during the three peak traffic hours evaluated, while crossings at Dowdell Lane ranged from 7 to 10 people per hour during the same hours.

c. Pedestrian Hybrid Beacon Guidelines

The California Manual of Uniform Traffic Control Devices 2014 (California MUTCD, Revision 4, March 29, 2019) has guidelines for the installation of pedestrian hybrid beacons on high and low speed roadways. These devices are also referred to as High Intensity Activated Crosswalk or “HAWK” pedestrian signals. Low speed roadways are those where vehicle speeds are 35 mile per hour or less, which would be appropriate for SR 29 at Charter Oak Avenue. The chart for installation with vehicular and pedestrian input values is presented in **Appendix C-
Figure A-3**. With two-way hourly volumes on SR 29 of more than 1,350 vehicles per hour and a crosswalk length of about 46 feet at Charter Oak Avenue, the chart indicates that a pedestrian hybrid beacon would be appropriate with more than 20 pedestrian crossings an hour. The number of pedestrian crossings during 9 of the 10 survey hours exceeded this number of pedestrians. It should be noted that activation of the HAWK beacon will provide a red light to north and southbound traffic flow on SR 29. This will allow left turn movements to proceed from both Charter Oak Avenue approaches.

In contrast, at the Dowdell Lane intersection based upon similar vehicular volumes and a curb-to-curb width of about 40 feet on SR 29, the number of pedestrian crossings would not meet guideline criteria for provision of a beacon at this location.

2. BICYCLE

a. Facilities

There are no Class I bicycle paths, signed and striped Class II bicycle lanes or signed Class III bike routes in the project vicinity.

b. Volumes

Figure 10 presents 2018, 2019 and 2016 bicycle rider counts. As shown, there were more bicycle riders along SR 29 at Charter Oak Avenue than at Dowdell Lane: During the Friday AM peak hour there were 9 at Charter Oak Avenue and 7 at Dowdell Lane; during the Friday PM peak hour there were 10 at Charter Oak Avenue and 2 at Dowdell Lane; and during the Saturday afternoon peak hour there were 6 at Charter Oak Avenue and 2 at Dowdell Lane. Bike ridership along Mills Lane, La Fata Street and Dowdell Lane was minimal during all peak hours; one or zero bike riders on any of these three streets.

H. PLANNED PEDESTRIAN AND BICYCLE FACILITIES

1. PEDESTRIAN

A combined sidewalk/Class I bike path will be provided by the project along the north side of Mills Lane when it is widened between SR 29 and La Fata Street as part of project development. In addition, a paved pathway will be provided on the west side of La Fata Street between Mills and Dowdell lanes as part of project development.

2. BICYCLE

Based upon the St. Helena Bicycle Plan and current updates provided by City staff,² bike routes are planned in the following locations in the project area.

- SR 29 – Class II bicycle lanes.
- Mills Lane – Class II bicycle lanes extending from SR 29 to the east of La Fata Street. However, the City has agreed that a Class I path on the north side of Mills Lane between SR 29 and La Fata Street can replace the previously proposed Class II bike lanes as part of the Farmstead lodge project.
- Charter Oak Avenue (east of SR 29) – Class I multiuse path.
- It was formerly planned that the Class I Vine Trail bicycle/pedestrian path be located along the Wine Train right-of-way. However, it has been determined by the City that there is insufficient right-of-way to accommodate the Vine Trail in this location.

² By Whitlock & Weinberger Transportation, Inc. & Questa Engineering Corp., January 2012.

VII. FUTURE HORIZON (WITHOUT PROJECT) ANALYSIS CONDITIONS

Traffic analysis has also been conducted in this study for two future horizon years as requested by St. Helena City staff:

- The year after estimated project completion – year 2022
- Cumulative Conditions – year 2040

A. YEAR 2022 WITHOUT PROJECT CONDITIONS

1. NO MILLS LANE WIDENING OR REALIGNMENT

a. Volumes

Year 2022 peak hour traffic volumes have been developed using both a specific list of known projects supplied by the City of St. Helena Planning Department and a 1 percent per year growth rate along SR 29 to reflect regional growth. Specific projects and their projected Friday AM & PM peak hour and Saturday afternoon peak hour trip generation are presented in **Table 6** with resultant year 2022 harvest Friday AM and PM peak hour and Saturday afternoon peak hour (Without Project) traffic volumes presented in **Figures 11, 12 and 13**, respectively.

b. Intersection Level of Service

Table 7 shows that for harvest 2022 conditions three of the five analyzed intersections would be experiencing acceptable operation during the harvest Friday and Saturday peak traffic hours.

HARVEST 2022 ACCEPTABLE OPERATION (FRIDAY & SATURDAY PEAK TRAFFIC HOURS)

SR 29/Mills Lane (Mills Lane stop sign controlled)	LOS B or C
SR 29/Grayson Avenue (signal)	LOS C or D
SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C

Table 7 also shows that two of the intersections were experiencing unacceptable operation.

HARVEST 2018 UNACCEPTABLE OPERATION

SR 29/Pope Street-Mitchell Street	LOS F during all peak hour
SR 29/Charter Oak Avenue	LOS E during the Friday AM peak hour

The SR 29/Charter Oak Avenue intersection would experience acceptable levels of service (LOS C or D) on both Charter Oak Avenue stop sign controlled intersection approaches during the Friday and Saturday PM peak traffic hours. However, during the Friday AM peak hour, while the eastbound approach would be operating at an acceptable LOS C, the westbound approach

would be operating at an unacceptable LOS E. Level of service worksheets are contained in **Appendix A**.

c. Intersection Signal Warrant

Table 4 shows that both the SR 29/Charter Oak Avenue and SR 29/Dowdell Lane intersections would have harvest 2022 Friday AM & PM peak hour and Saturday PM peak hour volumes meeting rural signal Warrant #3 volume criteria levels.

B. CUMULATIVE (YEAR 2040) WITHOUT PROJECT CONDITIONS

1. NO MILLS LANE WIDENING OR REALIGNMENT

a. Volumes

Cumulative (year 2040) weekday AM and PM peak hour and Saturday PM peak hour volumes for the SR 29/Pope Street-Mitchell Street, SR 29/Grayson Avenue and SR 29/Mills Lane intersections were obtained from the City's General Plan Update Circulation Element traffic analysis as directed by St. Helena Planning staff. In addition, cumulative projections were developed for the SR 29/Charter Oak Avenue and SR 29/Dowdell Lane intersections as well as for Dowdell Lane, Mills Lane and La Fata Street based upon traffic from the list of cumulative projects considered in the General Plan Update Circulation Element for the project area (see **Table 6**).

Resultant cumulative (year 2040) harvest Friday AM and PM peak hour and Saturday afternoon peak hour Without Project volumes are presented in **Figures 14, 15 and 16**, respectively. It should be noted that cumulative traffic projections from the 2040 General Plan Update analysis included a 75-unit hotel on the Farmstead project site. Trip generation from this lodging facility (using standard Institute of Transportation Engineers *Trip Generation Manual*, 10th Edition trip rates)³ was removed from the Cumulative projections to reflect a true "Without Project" condition for the analysis roadways.

b. Intersection Level of Service

Table 8 shows that for cumulative (year 2040) conditions three of the five analyzed intersections would be experiencing acceptable operation during both the Friday and Saturday peak traffic hours.

³ Institute of Transportation Engineers, 2017.

CUMULATIVE (YEAR 2040) ACCEPTABLE OPERATION (FRIDAY & SATURDAY PEAK TRAFFIC HOURS)

SR 29/Mills Lane (Mills Lane stop sign controlled)	LOS B or C
SR 29/Grayson Avenue (signal)	LOS C or D
SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C

Table 8 also shows that there would be unacceptable operation at two intersections.

CUMULATIVE (YEAR 2040) UNACCEPTABLE OPERATION

- SR 29/Pope Street-Mitchell Street** (signal): LOS F during all Friday & Saturday peak hours
- SR 29/Charter Oak Avenue** (Charter Oak stop sign controlled approach): LOS F westbound approach Friday AM peak hour, LOS E westbound approach Friday PM peak hour

c. Intersection Signal Warrant

Table 4 shows that both the SR 29/Charter Oak Avenue and SR 29/Dowdell Lane intersections would have 2040 harvest Friday AM and PM peak hour and Saturday PM peak hour volumes meeting rural signal warrant #3 volume criteria levels.

VIII. PROJECT IMPACTS

A. SIGNIFICANCE CRITERIA

The significance criteria utilized in this study are based on the City of St. Helena's General Plan Circulation Element documentation for roadway and intersection operations.

The City's current LOS standard is LOS D for signalized intersections on Main Street (SR 29/128) and LOS C elsewhere. Based on City of St. Helena and CEQA standards, a project's impact would be considered significant if any of the following conditions occur.

- If operating conditions at a signalized intersection on Main Street (SR 29/128) deteriorate from LOS D without the project to LOS E or F with the project and an increase in delay of five seconds or greater.
- If operating conditions at a signalized intersection on Main Street (SR 29/128) operating at LOS E without the project deteriorate to LOS F with the project.
- If the average intersection delays at a signalized intersection on Main Street (SR 29/128) operating at LOS E or F without the project increases by more than five seconds with the project.

- If operating conditions at an unsignalized intersection on Main Street (SR 29/128) operating at LOS D or better without the project degrade to LOS E or F with the project and the volumes would qualify for signalization under the Caltrans peak hour volume warrants for signalization. If operating conditions at an unsignalized intersection not on Main Street operating at LOS C or better without the project degrade to LOS D, E or F with the project and the volumes would qualify for signalization under the Caltrans peak hour volume warrants for signalization.
- If average delay at an unsignalized intersection on Main Street (SR 29/128) operating at LOS E or F without the project increases by five or more seconds with the project and the volumes qualify for signalization under the Caltrans peak hour volume warrants for signalization. If average delay at an unsignalized intersection not on Main Street operating at LOS D, E or F without the project increases by five or more seconds with the project and the volumes qualify for signalization under the Caltrans peak hour volume warrants for signalization.
- If traffic volumes at an unsignalized intersection meet the peak hour signal warrant thresholds, then a significant impact is considered if total volumes passing through the intersection increase by 1 percent or greater with the project.
- For vehicle queuing, if the lane storage length sufficiently accommodates the 95th percentile vehicle queue length without the project and the vehicle queue length would increase to exceed the available storage with the project. If the 95th percentile queue length exceeds the available storage length without the project and the turning movement volume would increase by 3 percent or more with the project and increase the total intersection volume by 1 percent.
- If, in the opinion of the registered traffic engineer conducting this study, the addition of project traffic, pedestrians or bicycle riders would result in a significant safety impact.

B. PROJECT TRIP GENERATION & REASSIGNMENT OF LOCAL AREA VOLUMES

1. FARMSTEAD LODGE

a. TRIP GENERATION

Project lodging trip generation has been developed assuming 100 percent occupancy using the traffic engineering profession's standard source of trip rate data: *Trip Generation Manual*, 10th Edition, by the Institute of Transportation Engineers (ITE), 2017.

There are five lodging categories in the ITE manual.

Hotel
All Suites Hotel
Business Hotel
Motel
Resort Hotel

- Hotel trip rates were used because they provided the most conservative projection of lodge traffic activity.
- The Business Hotel and Motel uses were dismissed immediately from consideration.
- The All Suites Hotel category was dismissed because of a limited survey sample size and the description of a small restaurant, limited kitchen facilities and small amounts of meeting space did not seem to fit the proposed use. Also, Hotel trip rates are much higher.
- The Resort Hotel category also has a limited survey sample size (only 6 to 9 facilities surveyed in the 1980s and 1990s in California, Florida and South Carolina). Surveyed facilities provided golf courses, tennis courts, beach access, etc. Due to the significant number of attractions in the Napa Valley requiring use of an automobile, and due to Hotel trip rates being conservatively higher than those from the resort facilities, the Resort Hotel trip rates were also dismissed.

Table 9 shows that on a harvest Friday the proposed 65-unit lodging facility at 100 percent occupancy would be expected to generate 544 daily two-way trips (272 in and 272 out), with 19 inbound and 13 outbound trips during the AM commute peak traffic hour and 20 inbound and 20 outbound trips during the PM commute peak traffic hour. For a harvest Saturday, lodging peak hour trip rates are only available for the facility's peak traffic generation hour, and not during the local roadway system peak traffic hour. On a Saturday midafternoon the peak traffic hour on SR 29 is 2:00-3:00 when less traffic activity would be expected at the lodging facility, whereas the lodging facility's peak traffic hour would likely be in the early evening as some guests are leaving for dinner while others are arriving from a day's tourist activities. It was projected that the lodging facility trip generation on a Saturday afternoon during the time of peak traffic volumes on SR 29 (2:00-3:00) would be about 65 percent of the trip generation during the lodging facility's busiest traffic hour during the day, resulting in 17 inbound and 14 outbound trips during the SR 29 peak traffic hour on Saturday afternoon. This projection is supported by hourly hotel parking demand data from both the Institute of Transportation Engineers⁴ and the Urban Land Institute, which show low parking accumulation at hotels during the middle of the afternoon. In addition, hourly hotel trip generation data from the 10th Edition *Trip Generation Manual* also support the 65 percent of maximum trip generation occurring during the middle of a Saturday afternoon.

Lodge employee trip generation by shift was developed by the project applicant for each hour of the day and is presented in **Appendix D**, while a summary presentation is contained in **Table 10**. Based upon this data, projected lodge employee versus guest trip generation was determined for each of the three peak analysis hours on Friday and Saturday and is presented in **Table 11**.

⁴ *Parking Generation*, 4th Edition, 2010.

It is likely that a small proportion of traffic during the Friday and Saturday PM peak traffic hours would be traveling along SR 29 with or without the project being in operation. After consultation with City staff, 90 percent of project traffic was projected to be newly added to SR 29, with 10 percent captured from the ambient traffic flow on the state highway. This passby capture would result in 100 percent of guest traffic being newly added to Mills Lane, La Fata Street and Dowdell Lane, while only 90 percent would be newly added to SR 29.

b. TRIP DISTRIBUTION

Based upon discussion with City of St. Helena staff, project guest traffic was distributed to SR 29 as shown in **Table 12** for the Friday and Saturday peak traffic hours. Overall, a 50-50 north-south distribution pattern on SR 29 was projected for all in and outbound guest traffic, with an exception during the Friday PM peak hour when 60 percent of the inbound traffic was projected to come from the south. The same 50-50 distribution was also considered acceptable for employee traffic during all peak time periods. **Appendix E Figures A-4 to A-7** present lodge guest and employee trip distribution during the Friday AM and PM and Saturday PM peak traffic hours, respectively.

c. REASSIGNMENT OF FARMSTEAD RESTAURANT/FARMERS MARKET EMPLOYEE TRAFFIC TO THE NEW DOWDELL IMPROVED PARKING LOT

In addition to the 65-unit lodging facility, the proposed project would also result in the transfer of Farmstead restaurant/farmers market employee traffic from a lot on Charter Oak Avenue west of SR 29 to the new improved parking lot at the Dowdell/McCormick intersection. **Table 13** presents the amount of restaurant/farmers market employee traffic that would be transferred to the new parking lot.

d. MILLS LANE WIDENING & REALIGNMENT TO THE SR 29/GRAYSON AVENUE SIGNALIZED INTERSECTION

The widening and realignment of Mills Lane to connect to SR 29 at the signalized Grayson Avenue intersection by itself will produce a change in traffic patterns east of SR 29. Some traffic now using Dowdell Lane to access SR 29 will shift to Mills Lane due to the easier signalized access provided to the state highway and Grayson Avenue. **Figure 5** presents the intersection approach lanes and control after proposed improvements.

2. TOTAL PROJECT

a. LODGE

Trip generation and distribution are detailed above.

b. RETAIL BUTCHER SHOP

Butcher shop traffic is estimated to be three local customer auto trips in/out during the Friday and Saturday PM peak traffic hours. The shop will be closed during the Friday AM peak hour. Volumes are shown on **Appendix E Figure A-7**. The majority of local area customers driving to/from the butcher shop during the PM peak traffic hours on SR 29 would be expected to use Charter Oak Avenue east of the project driveway.

c. 200-PERSON EVENT

Shuttle buses will be required by the City for events this large. The applicant will be providing 14 shuttle buses to provide access for guests staying in Napa and Sonoma Valley lodging facilities. Also, it is projected that a few guests will drive to the event (up to five vehicles/hour) or walk from nearby lodging. Event traffic volumes are shown on **Appendix E Figure A-8**. The majority of shuttle buses would be expected to travel to/from the south on SR 29.

C. EXISTING + PROJECT CIRCULATION IMPACTS

1. LODGE ONLY

a. Volumes

Resultant Existing + Lodge Friday AM and PM and Saturday afternoon peak hour harvest volumes are presented in **Figures 17, 18 and 19**, respectively.

b. Intersection Level of Service Impacts

Table 3 shows that acceptable operation would result at the following two intersections along SR 29 with the addition of lodge traffic during Friday AM and PM and Saturday afternoon peak hour conditions.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C
SR 29/Grayson Avenue-Mills Lane (signal)	LOS C or D

Table 3 also shows that the **SR 29/Charter Oak Avenue** intersection would maintain acceptable operation during the Friday and Saturday PM peak hour analysis time periods with the addition of lodge traffic (LOS C or D), while during the Friday AM peak hour operation of the westbound approach would remain an unacceptable LOS E. However, there would only be a 2.8-second increase in delay on the westbound approach during this time period, which would be less than the 5-second minimum change significance criteria limit. In addition, **Table 3** shows that the

SR 29/Pope Street-Mitchell Street intersection, which would already be experiencing unacceptable LOS F operation during the Friday and Saturday peak hours would have delay increased by lodge traffic. However, the increases during each peak hour would be less than 3 seconds, which would also be less than the 5-second minimum change significance criteria limits.

Less than significant.

c. Signal Warrant Impacts

Table 4 shows that while the **SR 29/Charter Oak Avenue** intersection volumes would already be exceeding rural signal warrant #3 volume criteria levels during the Friday AM peak hour and Saturday PM peak hour, the addition of project traffic would not increase volumes passing through the intersection by 1 percent or greater during either time period, which is the City's significance criteria limit. Also, the addition of project traffic to Friday PM peak hour volumes would not increase traffic to meet rural warrant #3 volume criteria during this time period.

At the **SR 29/Dowdell Lane** intersection volumes would already be exceeding rural signal warrant #3 volume criteria levels during the Friday AM and PM peak hours. However, project traffic would not increase volumes passing through the intersection by 1 percent or greater during either time period. Also, the addition of project traffic to Saturday PM peak hour volumes would not increase traffic to meet rural warrant #3 volume criteria during this time period.

Less than significant.

d. Impacts to Mills Lane, La Fata Street and Dowdell Lane

The net change in traffic due to the 65-unit lodging facility, relocation of Farmstead restaurant/farmers market employee parking and change in traffic patterns east of SR 29 due to the realignment of an improved Mills Lane to the SR 29/Grayson Avenue signal would increase existing volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

YEAR 2018 HARVEST VOLUMES WITH & W/O THE LODGE

TIME PERIOD	MILLS LANE 2-WAY VOLUMES		LA FATA STREET 2-WAY VOLUMES		DOWDELL LANE 2-WAY VOLUMES	
	W/O PROJECT	WITH PROJECT	W/O PROJECT	WITH PROJECT	W/O PROJECT	WITH PROJECT
Friday AM Peak Hour	25	71	31	46	172	163
Friday PM Peak Hour	20	77	36	63	172	161
Saturday Afternoon Peak Hour	11	33	13	26	66	68

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the lodge and improvement/realignment of Mills Lane to the SR 29/Grayson Avenue signal.

2. TOTAL PROJECT

a. Volumes

Resultant Existing + Total Project Friday AM and PM and Saturday afternoon peak hour harvest volumes are presented in **Figures 20, 21 and 22**, respectively.

b. Intersection Level of Service Impacts

Table 3 shows that acceptable operation would remain at the following two intersections along SR 29 with the addition of total project traffic during Friday AM and PM and Saturday afternoon peak hour conditions.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C
SR 29/Grayson Avenue-Mills Lane (signal)	LOS C or D

Table 3 also shows that the **SR 29/Charter Oak Avenue** intersection would maintain acceptable operation during the Friday and Saturday PM peak hour analysis time periods with the addition of total project traffic (LOS C or D), while during the Friday AM peak hour operation of the westbound approach would remain an unacceptable LOS E. However, there would only be a 2.8-second increase in delay on the westbound approach during this time period, which would be less than the 5-second minimum change significance criteria limit. In addition, **Table 3** shows that the **SR 29/Pope Street-Mitchell Street** intersection, which would already be experiencing unacceptable LOS F operation during the Friday and Saturday peak hours would have delay increased by total project traffic. However, the increases during each peak hour would be less than 4.3 seconds, which would also be less than the 5-second minimum change significance criteria limits.

Less than significant.

c. Signal Warrant Impacts

Table 4 shows that at the **SR 29/Charter Oak Avenue** intersection the addition of project traffic would increase Friday PM peak hour volumes to exceed rural signal warrant #3 volume criteria levels, while during the Saturday PM peak hour project traffic would increase total volumes entering the intersection by 2.3 percent during a period when “Without Project” volumes would already be exceeding warrant criteria. This would be a significant impact. During the AM peak hour, a time period when “Without Project” traffic would already be exceeding rural warrant #3 volume criteria the addition of project traffic would increase volumes by less than 1 percent, and not produce a significant impact.

At the **SR 29/Dowdell Lane** intersection the addition of project traffic would only produce a significant impact during the Friday PM peak hour, when volumes passing through the intersection would increase by 1.6 percent during a period when “Without Project” volumes would already be exceeding rural warrant volume criteria. During the AM peak hour, a time

period when “Without Project” traffic would already be exceeding rural warrant #3 volume criteria the addition of project traffic would increase volumes by less than 1 percent, and not produce a significant impact. Finally, during the Saturday PM peak hour project traffic would not increase volumes to meet rural warrant #3 volume criteria levels. It should be noted that levels of service at the Dowdell Lane intersection will remain acceptable even though rural signal warrant criteria are met during the Friday peak hours.

Less than significant with mitigation.

d. Impacts to Mills Lane, La Fata Street and Dowdell Lane

The net change in traffic due to the total project would increase existing volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

YEAR 2018 HARVEST VOLUMES WITH & W/O THE TOTAL PROJECT

TIME PERIOD	MILLS LANE @ SR 29 2-WAY VOLUMES		LA FATA STREET @ DOWDELL LANE 2-WAY VOLUMES		DOWDELL LANE @ SR 29 2-WAY VOLUMES	
	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT
Friday AM Peak Hour	25	71	31	46	172	163
Friday PM Peak Hour	20	77	36	63	172	161
Saturday Afternoon Peak Hour	11	33	13	26	66	68

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the total project.

D. YEAR 2022 + PROJECT VEHICLE IMPACTS

1. LODGE ONLY

a. Volumes

Year 2022 + Lodge Friday AM and PM and Saturday afternoon peak hour volumes are presented in **Figures 23, 24 and 25**, respectively.

b. Intersection Level of Service Impacts

Table 7 shows that acceptable operation would remain at the following two intersections along SR 29 with the addition of lodge traffic during Friday AM and PM and Saturday afternoon peak hour conditions.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C
SR 29/Grayson Avenue-Mills Lane (signal)	LOS D

Table 7 also shows that the **SR 29/Charter Oak Avenue** intersection would maintain acceptable operation during the Friday and Saturday PM peak hours with the addition of lodge traffic (LOS D), while during the Friday AM peak hour operation of the westbound approach would remain an unacceptable LOS E. However, there would only be a 2.6-second increase in delay on the westbound approach during this time period, which would be less than the City's 5-second minimum change significance criteria limit. In addition, **Table 3** shows that the **SR 29/Pope Street-Mitchell Street** intersection, which would already be experiencing unacceptable LOS F operation during the Friday and Saturday peak hours would have delay increased by lodge traffic. However, the increases during each peak hour would be 3 seconds or less, which would also be less than the 5-second minimum change significance criteria limits.

Less than significant.

c. **Signal Warrant Impacts**

Table 4 shows that at the **SR 29/Charter Oak Avenue** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without lodge traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, volume increases due to the lodge would be less than the City's minimum significance criteria limit of 1 percent during all peak hours.

At the **SR 29/Dowdell Lane** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without lodge traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, volume increases due to the lodge would be less than the City's minimum significance criteria limit of 1 percent during all peak hours.

Less than significant.

d. **Impacts to Mills Lane, La Fata Street and Dowdell Lane**

The net change in traffic due to the 65-unit lodging facility, relocation of Farmstead restaurant/farmers market employee parking and change in traffic patterns east of SR 29 due to the realignment of an improved Mills Lane to the SR 29/Grayson Avenue signal would increase 2022 Without Project volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

YEAR 2022 HARVEST VOLUMES WITH & W/O THE LODGE

TIME PERIOD	MILLS LANE @ SR 29 2-WAY VOLUMES		LA FATA STREET @ DOWDELL LANE 2-WAY VOLUMES		DOWDELL LANE @ SR 29 2-WAY VOLUMES	
	W/O PROJECT	WITH LODGE	W/O PROJECT	WITH LODGE	W/O PROJECT	WITH LODGE
Friday AM Peak Hour	26	77	43	62	235	223
Friday PM Peak Hour	29	91	53	84	227	208
Saturday Afternoon Peak Hour	11	41	30	53	137	131

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the lodge and improvement/realignment of Mills Lane to the SR 29/Grayson Avenue signal.

Less than significant.

2. TOTAL PROJECT

a. Volumes

Year 2022 + Total Project Friday AM and PM and Saturday afternoon peak hour volumes are presented in **Figures 26, 27 and 28**, respectively.

b. Intersection Level of Service Impacts

Table 7 shows that acceptable operation would remain at the following two intersections along SR 29 with the addition of lodge traffic during the Friday AM and PM and Saturday afternoon peak hour conditions with the addition of project traffic.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C
SR 29/Grayson Avenue-Mills Lane (signal)	LOS D

Table 7 also shows that the **SR 29/Charter Oak Avenue** intersection would maintain acceptable operation during the Saturday PM peak hour with the addition of total project traffic (LOS D), while during the Friday AM peak hour operation of the westbound approach would remain an unacceptable LOS E. However, there would only be a 2.6-second increase in delay on the westbound approach during this time period, which would be less than the 5-second minimum change significance criteria limit. During the Friday PM peak hour operations of the westbound approach would change from an acceptable LOS D to an unacceptable LOS E. However, the delay increase would only be 3.3 seconds. For these reasons, the impact is considered less than significant.

Less than significant.

c. Signal Warrant Impacts

Table 4 shows that at the SR 29/Charter Oak Avenue intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. While the volume increase would be less than 1 percent during the AM peak hour, the increases during the Friday PM peak hour and Saturday PM peak hour would be greater than 1 percent and would therefore be a significant impact (2.3% during the Friday PM peak hour and 2.2% during the Saturday PM peak hour).

At the **SR 29/Dowdell Lane** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. While the volume increase would be less than 1 percent during the AM peak hour, the increases during the Friday PM peak hour and Saturday PM peak hour would be greater than 1 percent and would therefore be a significant impact (1.1% both hours).

Less than significant with mitigation.

d. Impacts to Mills Lane, La Fata Street and Dowdell Lane

The net change in traffic due to the total project would increase 2022 Without Project volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

YEAR 2022 HARVEST VOLUMES WITH & W/O THE TOTAL PROJECT

TIME PERIOD	MILLS LANE @ SR 29 2-WAY VOLUMES		LA FATA STREET @ MILLS LANE 2-WAY VOLUMES		DOWDELL LANE @ SR 29 2-WAY VOLUMES	
	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT
Friday AM Peak Hour	26	77	43	62	235	223
Friday PM Peak Hour	29	91	53	84	227	208
Saturday Afternoon Peak Hour	11	41	30	53	137	131

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the total project.

Less than significant.

E. CUMULATIVE (YEAR 2040) CIRCULATION IMPACTS

1. LODGE ONLY

a. Volumes

Cumulative (year 2040) + Lodge Friday AM and PM and Saturday afternoon peak hour volumes are presented in **Figures 29, 30 and 31**, respectively.

b. Intersection Level of Service Impacts

Table 8 shows that acceptable operation would remain at the following intersection along SR 29 with the addition of lodge traffic during the Friday AM and PM and Saturday afternoon peak hour conditions.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach)	LOS C
---	-------

Table 8 shows that at the **SR 29/Pope Street-Mitchell Street** intersection signalized operation would remain an unacceptable LOS F with or without lodge traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, the increases in delay due to lodge traffic would be less than 5 seconds during each peak hour (3.2 seconds Friday AM, 2.9 seconds Friday PM and 3.0 seconds Saturday PM).

At the **SR 29/Charter Oak Avenue** intersection operation of the stop sign controlled westbound Charter Oak Avenue approach would remain an unacceptable LOS F with or without lodge traffic during the Friday AM peak hour and an unacceptable LOS E during the Friday PM peak hour. However, the increases in delay due to lodge traffic would be less than 5 seconds during either peak hour (3.7 seconds Friday AM & 0.3 seconds Friday PM). Operation would remain acceptable during the Saturday PM peak hour with the addition of lodge traffic.

At the **SR 29/Grayson Avenue-Mills Lane** signalized intersection operation would be an unacceptable LOS E during the Friday AM peak hour with a fourth intersection leg. Friday AM peak hour operation would change from an acceptable LOS D to an unacceptable LOS E (with a 23.7 second increase in delay). This would be a significant impact.

Less than significant with mitigation.

c. Signal Warrant Impacts

Table 4 shows that at the **SR 29/Charter Oak Avenue** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, volume increases would be less than 1 percent during all three peak hours.

At the **SR 29/Dowdell Lane** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, volume increases would be less than 1 percent during all three peak hours.

Less than significant.

d. Impacts to Mills Lane, La Fata Street and Dowdell Lane

The net change in traffic due to the 65-unit lodging facility, relocation of Farmstead restaurant/farmers market employee parking and change in traffic patterns east of SR 29 due to the realignment of an improved Mills Lane to the SR 29/Grayson Avenue signal would increase year 2040 Without Project volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

CUMULATIVE (YEAR 2040) HARVEST VOLUMES WITH & W/O THE LODGE

TIME PERIOD	MILLS LANE @ SR 29 2-WAY VOLUMES		LA FATA STREET @ DOWDELL LANE 2-WAY VOLUMES		DOWDELL LANE @ SR 29 2-WAY VOLUMES	
	W/O PROJECT	WITH PROJECT	W/O PROJECT	WITH PROJECT	W/O PROJECT	WITH PROJECT
Friday AM Peak Hour	26	80	43	69	235	216
Friday PM Peak Hour	29	100	53	96	227	202
Saturday Afternoon Peak Hour	12	47	30	58	137	126

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the lodge, and improvement/realignment of Mills Lane to the SR 29/Grayson Avenue signal.

Less than significant.

2. TOTAL PROJECT

a. Volumes

Cumulative (year 2040) + Total Project Friday AM and PM and Saturday afternoon peak hour volumes are presented in **Figures 32, 33 and 34**, respectively.

b. Intersection Level of Service Impacts

Table 8 shows that acceptable operation would remain at the following intersection along SR 29 with the addition of total project traffic during the Friday AM and PM and Saturday afternoon peak hour conditions.

SR 29/Dowdell Lane (Dowdell Lane 2-lane stop sign controlled approach) LOS C

Table 8 shows that at the SR 29/Pope Street-Mitchell Street intersection signalized operation would remain an unacceptable LOS F with or without lodge traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. However, the increases in delay due to lodge traffic would be less than 5 seconds during each peak hour (3.2 seconds Friday AM, 4.4 seconds Friday PM and 4.8 seconds Saturday PM).

At SR 29/Charter Oak Avenue operation of the stop sign controlled westbound Charter Oak Avenue approach would remain an unacceptable LOS F with or without lodge traffic during the Friday AM peak hour and an unacceptable LOS E during the Friday PM peak hour. However, the increases in delay due to lodge traffic would be less than 5 seconds during either peak hour (3.7 seconds Friday AM & 4.6 seconds Friday PM). Operation would remain acceptable during the Saturday PM peak hour with the addition of lodge traffic.

At the **SR 29/Grayson Avenue-Mills Lane** signalized intersection operation would be an unacceptable LOS E during the Friday AM peak hour. Friday AM peak hour operation with a fourth intersection leg would change from an acceptable LOS D to an unacceptable LOS E (with a 23.7 second increase in delay). This change would all be due to lodge traffic.

Less than significant with mitigation.

c. Signal Warrant Impacts

Table 4 shows that at the **SR 29/Charter Oak Avenue** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. While the volume increase would be less than 1 percent during the AM peak hour, the increases during the Friday PM peak hour and Saturday PM peak hour would be greater than 1 percent and would therefore be a significant impact (2.2% during the Friday PM peak hour and 2.1% during the Saturday PM peak hour).

At the **SR 29/Dowdell Lane** intersection, volumes would be exceeding rural peak hour signal warrant volume criteria levels with or without total project traffic during the Friday AM and PM peak hours and the Saturday PM peak hour. The volume increase would be less than 1 percent during the all three peak hours.

Less than significant with mitigation.

d. Impacts to Mills Lane, La Fata Street and Dowdell Lane

The net change in traffic due to the total project would increase 2035 Without Project volumes on Mills Lane, La Fata Street and Dowdell Lane by the following amounts.

**CUMULATIVE (YEAR 2040) HARVEST VOLUMES
WITH & W/O THE TOTAL PROJECT**

TIME PERIOD	MILLS LANE @ SR 29 2-WAY VOLUMES		LA FATA STREET @ DOWDELL LANE 2-WAY VOLUMES		DOWDELL LANE @ SR 29 2-WAY VOLUMES	
	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT	W/O PROJECT	WITH TOTAL PROJECT
Friday AM Peak Hour	26	80	43	69	235	216
Friday PM Peak Hour	29	100	53	96	227	202
Saturday Afternoon Peak Hour	12	47	30	58	137	126

Source: Crane Transportation Group

The 40-foot-wide curb-to-curb sections of Mills Lane, La Fata Street and Dowdell Lane could easily accommodate the expected volume increases due to the lodge, which includes realignment of Mills Lane to the SR 29/Grayson Avenue signal.

Less than significant.

F. PROJECT PEDESTRIAN IMPACTS & CONCERNS

1. PEDESTRIAN ACTIVITY ALONG MILLS LANE AND LA FATA STREET

Figure 35 shows the project employee walking route between the proposed Dowdell Lane/McCormick Street parking lot and the lodge/restaurant/farmers market facilities, while **Table 14** shows the maximum number of total project employees (lodge/restaurant & farmers market) that would be expected to walk between the Dowdell Lane employee parking lot and the uses on the project site. The lodge will be providing a pedestrian walkway system throughout their site connecting to the Farmstead restaurant and farmers market. There would be at most a total of about 100 walking trips in each direction over a 24-hour period if all employees drove alone. However, this number would potentially be reduced a little due to a few employees being dropped off/picked up, taking transit or walking and biking if they lived nearby. Paved pathways

will be provided along the west side of La Fata Street (Mills Lane to Dowdell Lane) and along the north side of Mills Lane (from La Fata Street to SR 29). Due to the distance between the employee improved parking lot at the Dowdell Lane/McCormick Street intersection and the lodging facility (a quarter mile to the north) and the restaurant-farmers market facilities (about half a mile to the north), there may be some employees unable to walk this distance – or – bad weather may make this walk difficult. In addition, there would be safety concerns regarding employees walking at night to/from the Dowdell Lane parking lot through a deserted industrial area. As shown in **Table 14**, about a third of all employees would be walking at night.

In order to reduce concerns about employees walking between the Dowdell Lane parking lot and the lodge/restaurant-farmers market, the project will be providing on-call shuttle service during all hours. A shelter will also be provided at the Dowdell Lane parking lot.

Less than significant.

2. SR 29 CROSSING AT CHARTER OAK AVENUE

The project would result in minor changes in pedestrian crossings of SR 29 at Charter Oak Avenue, and potentially there may even be a reduction during some hours due to the removal of restaurant-farmers market employee traffic formerly crossing at this location being greater than the increase from lodge guests. The vast majority of lodge guest pedestrian activity would be to/from downtown St. Helena, with a much smaller amount to/from the Grayson Avenue signal. (See **Figure 36**) Those pedestrians traveling between the project and downtown would walk through the Farmstead restaurant property and travel along SR 29 north of Charter Oak Avenue. Some would cross SR 29 at Charter Oak Avenue on their way to or from downtown.

The City of St. Helena does not have a significance criteria for pedestrian crossing impacts. However, the SR 29 crosswalk at Charter Oak Avenue already has existing traffic and pedestrian crossing volumes exceeding minimum guidelines for provision of a pedestrian hybrid flashing beacon during 9 of the 10 surveyed hours in 2016 and eight of the nine surveyed hours in 2019. Therefore, it is projected that the additional lodge traffic and pedestrians would continue to result in a significant safety impact for pedestrian crossings at the SR 29 Charter Oak crosswalk.

Less than significant with mitigation.

G. PROJECT BICYCLE IMPACTS

The project is proposing a Class I bicycle path along the north side of Mills Lane between SR 29 and La Fata Street. In addition, bicycles will be provided in each guest's room and bicycle lockers will be provided for employees.

Less than significant.

H. PROPOSED DOWDELL LANE EMPLOYEE PARKING LOT ADEQUACY

The proposed Farmstead employee paved parking lot at the southwest corner of the Dowdell Lane/McCormick Street intersection would provide 73 parking spaces. Three driveway connections would be provided to Dowdell Lane. See **Figure 37**. The most westerly would be for inbound vehicles only and would serve a “U” shaped parking lot with one-way flow parking aisles that would have an exit just west of McCormick Street. A third driveway for two-way flow would be provided between the one-way inbound and outbound driveways and would serve a dead end parking aisle with 90-degree parking. All parking spaces would be striped, so it would be possible to drive across empty parking stalls between the two distinct parking areas.

Based upon applicant provided lodge and restaurant/farmers market employee numbers and shift change times, there would be one time during the day (between 2:30 and 3:00 PM) when there would be an overlap of 73 employees on the project site at the same time (see **Appendix D**). However, the employee parking demand would potentially be at least 15 to 20 percent less than 73 spaces due to TDM program car and vanpooling, employee drop off and pickup by a friend or family member, and walking or biking by employees living nearby. Therefore, the proposed employee parking lot should have an adequate parking supply for the currently proposed total project employee levels. Surveys by the project applicant of employee travel modes at the existing restaurant-farmers market facilities show about a 30 percent elimination of drive alone auto travel.

Less than significant.

IX. RECOMMENDED MITIGATIONS

A. LODGE – See Figure 38

1. SR 29/GRAYSON AVENUE-MILLS LANE INTERSECTION

- Minor additional improvements are needed when Mills Lane is realigned and widened to connect to SR 29 at Grayson Lane. The Mills Lane approach should be striped to provide an exclusive left turn lane and a combined through/right turn lane. In addition, the Grayson Avenue approach should be widened to provide a two-lane approach, one exclusively for left turns and one for combined through/right turns. Protected left turn phasing should be provided on the Mills-Grayson approaches.

Resultant AM peak hour operation: LOS D-52.7 seconds delay

2. SR 29/CHARTER OAK AVENUE INTERSECTION – SR 29 PEDESTRIAN CROSSINGS

- Provide a fair share contribution to the “HAWK” pedestrian hybrid flashing beacon proposed for the SR 29/Charter Oak Avenue intersection.

Impacts reduced to a less than significant level.

B. TOTAL PROJECT – See Figure 39

1. SR 29/DOWDELL LANE INTERSECTION – SIGNAL WARRANT IMPACT

- Provide a fair share contribution towards the signal planned at the SR 29/Dowell Lane intersection (as detailed in the Highway 29 Specific Plan).

There is sufficient storage between the Dowdell and Grayson-Mills intersections (when both are signalized) to accommodate southbound left turns to Dowdell Lane and northbound left turns to Grayson Avenue in the SR 29 median storage lane during the Friday AM and PM peak hours as well as during the Saturday PM peak hour. As shown below, there is a total of 450 feet of storage in the continuous two-way left turn lane between intersections and the maximum 95th percentile left turn lane queues total (NB + SB) between intersections (if both are signalized) is 175 feet.

VEHICLE 95TH PERCENTILE QUEUING @ SR 29 SIGNALIZED INTERSECTIONS WITH DOWDELL LANE & GRAYSON-MILLS

CUMULATIVE (YEAR 2040) + TOTAL PROJECT

TIME PERIOD	TOTAL STORAGE BETWEEN INTERSECTIONS (FT.)	95% QUEUES (FT.)		
		NB LT TO GRAYSON-MILLS	SB LT TO DOWDELL	TOTAL NB + SB LT STORAGE DEMAND
Weekday AM Peak Hour	450	100	75	175
Weekday PM Peak Hour	450	150	25	175
Saturday PM Peak Hour	450	75	25	100

2. SR 29/CHARTER OAK AVENUE INTERSECTION – SIGNAL WARRANT IMPACTS

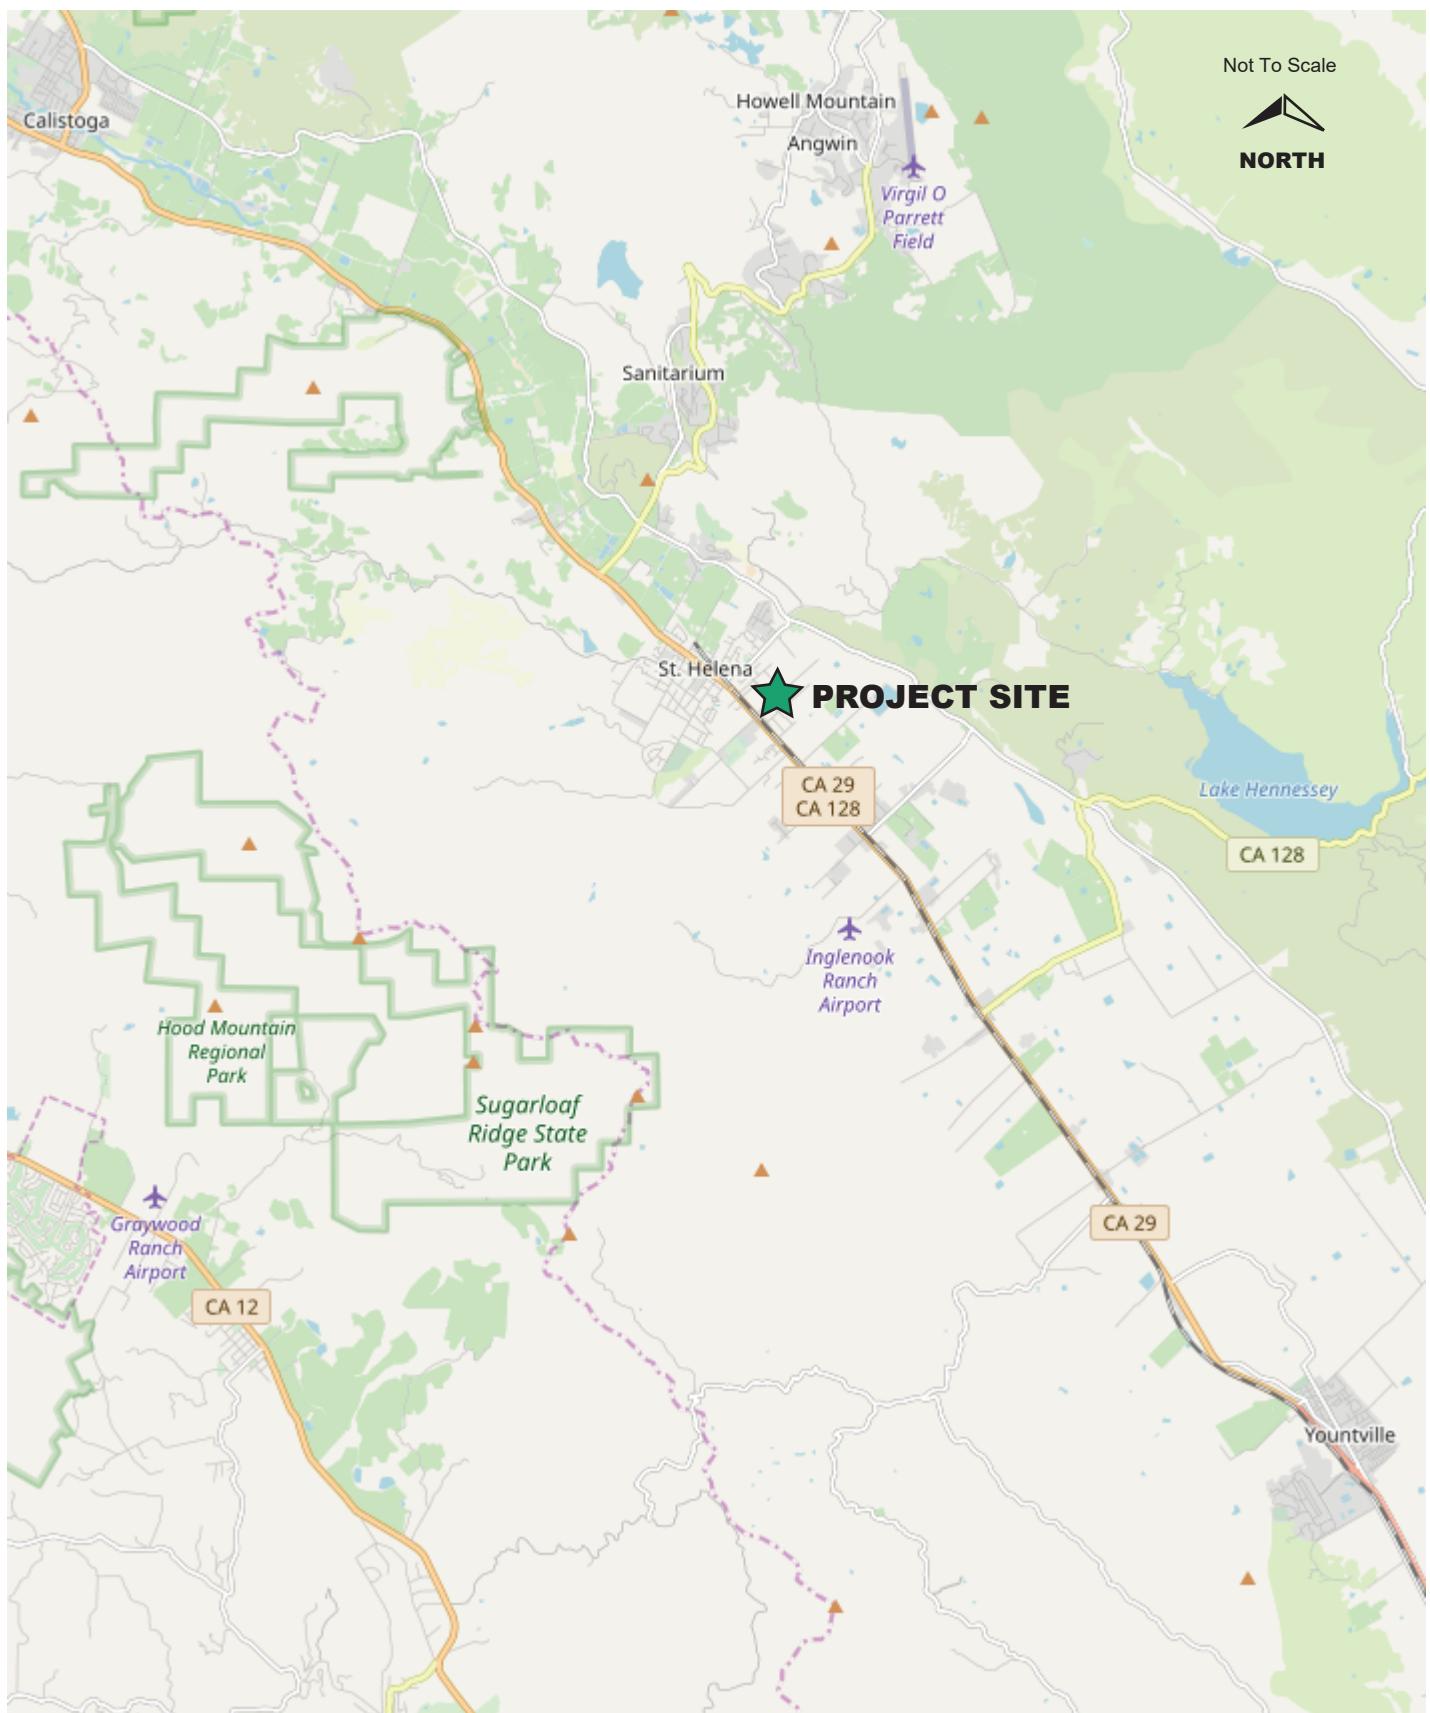

- Since City Public Works has indicated they are not in favor of signalizing this intersection, provide one of the following two measures.
 - a. Start and end all special events with more than 75 people at times that will not add traffic to SR 29 during the weekday and Saturday PM peak traffic periods (3:30-6:00 PM on weekdays and 1:30-4:00 PM on weekend days).

— OR —
 - b. Provide additional funding for the “HAWK” pedestrian hybrid flashing beacon. The beacon will need to be in operation before major events are allowed to add traffic to the existing weekday and weekend peak traffic hours along SR 29. Please note that Caltrans approval will be required for provision of the HAWK hybrid flashing beacon. If they do not approve of its installation, then the only measure to reduce the project impact to a level of insignificance is to eliminate traffic from the 200-person events during the Friday and Saturday PM peak hours.

Impacts reduced to a less than significant level.

This Report is intended for presentation and use in its entirety, together with all of its supporting exhibits, schedules, and appendices. Crane Transportation Group will have no liability for any use of the Report other than in its entirety, such as providing an excerpt to a third party or quoting a portion of the Report. If you provide a portion of the Report to a third party, you agree to hold CTG harmless against any liability to such third parties based upon their use of or reliance upon a less than complete version of the Report.

Tables

Table 1**SIGNALIZED INTERSECTION LOS CRITERIA**

Level of Service	Description	Average Control Delay (Seconds Per Vehicle)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	≤ 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.0 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.0 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, and/or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	35.0 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.0 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation, poor progression, or very long cycle lengths.	> 80.0

Source: Year 2017 6th Edition Highway Capacity Manual (Transportation Research Board).

Table 2**UNSIGNALIZED INTERSECTION LOS CRITERIA**

Level of Service	Description	Average Control Delay (Seconds Per Vehicle)
A	Little or no delays	≤ 10.0
B	Short traffic delays	10.0 to 15.0
C	Average traffic delays	15.0 to 25.0
D	Long traffic delays	25.0 to 35.0
E	Very long traffic delays	35.0 to 50.0
F	Extreme traffic delays with intersection capacity exceeded (for an all-way stop), or with approach/turn movement capacity exceeded (for a side street stop controlled intersection)	> 50.0

Source: Year 2017 6th Edition Highway Capacity Manual (Transportation Research Board).
