## **ATTACHMENT B PROJECT DESCRIPTION**

CEMEX Construction Materials Pacific LLC (the “Applicant”) has applied to the County of Fresno Department of Public Works and Planning (County) for two Unclassified Conditional Use Permits (CUP Application Nos. 3666 and 3667) to allow the Rockfield Quarry a continuation and modification of its current aggregate (rock, sand, and gravel) mining and processing operations. The project is generally located at two separate sites approximately two miles apart, The first, the Plant Site, is located on the west side of North Friant Road between North Willow Avenue and Little Dry Creek, and the second, the Quarry Site, is located on the west side of North Friant Road between Bluff View Avenue and Lost Lake Road. The County is the lead agency for preparation of the Environmental Impact Report (EIR No. 7763) for this project and is issuing this Notice of Preparation pursuant to Section 15082 of the CEQA Guidelines.

### **PROJECT LOCATION**

The project site is located at two sites: 13475 N. Friant Road and 14765 North Friant Road, Fresno, CA 93636, between North Friant Road and the San Joaquin River, in an unincorporated portion of Fresno County. See attached Figure 1, “Vicinity Map.” Continued surface mining disturbances are planned on the two locations, the Plant Site and the Quarry Site, as described below:

- Plant Site (CUP 3666): CEMEX’s current Plant Site is located on approximately 122 acres on the west side of N. Friant Road (Assessor Parcel Numbers (APNs) 300-070-56S, 57S, 58S, 59S, & 60S), approximately 1.5 miles north of the City of Fresno and approximately 0.7 mile north of the intersection of N. Willow Avenue and N. Friant Road.
- Quarry Site (CUP 3667): CEMEX’s current Quarry Site is located on approximately 349 acres on the west side of N. Friant Road (APNs 300-040-19 & 20, 300-080-01S, 300-250-12 & portion of 300-310-01) approximately 2.0 miles north of CEMEX’s current Plant Site and approximately 2.0 miles south of the unincorporated community of Friant.

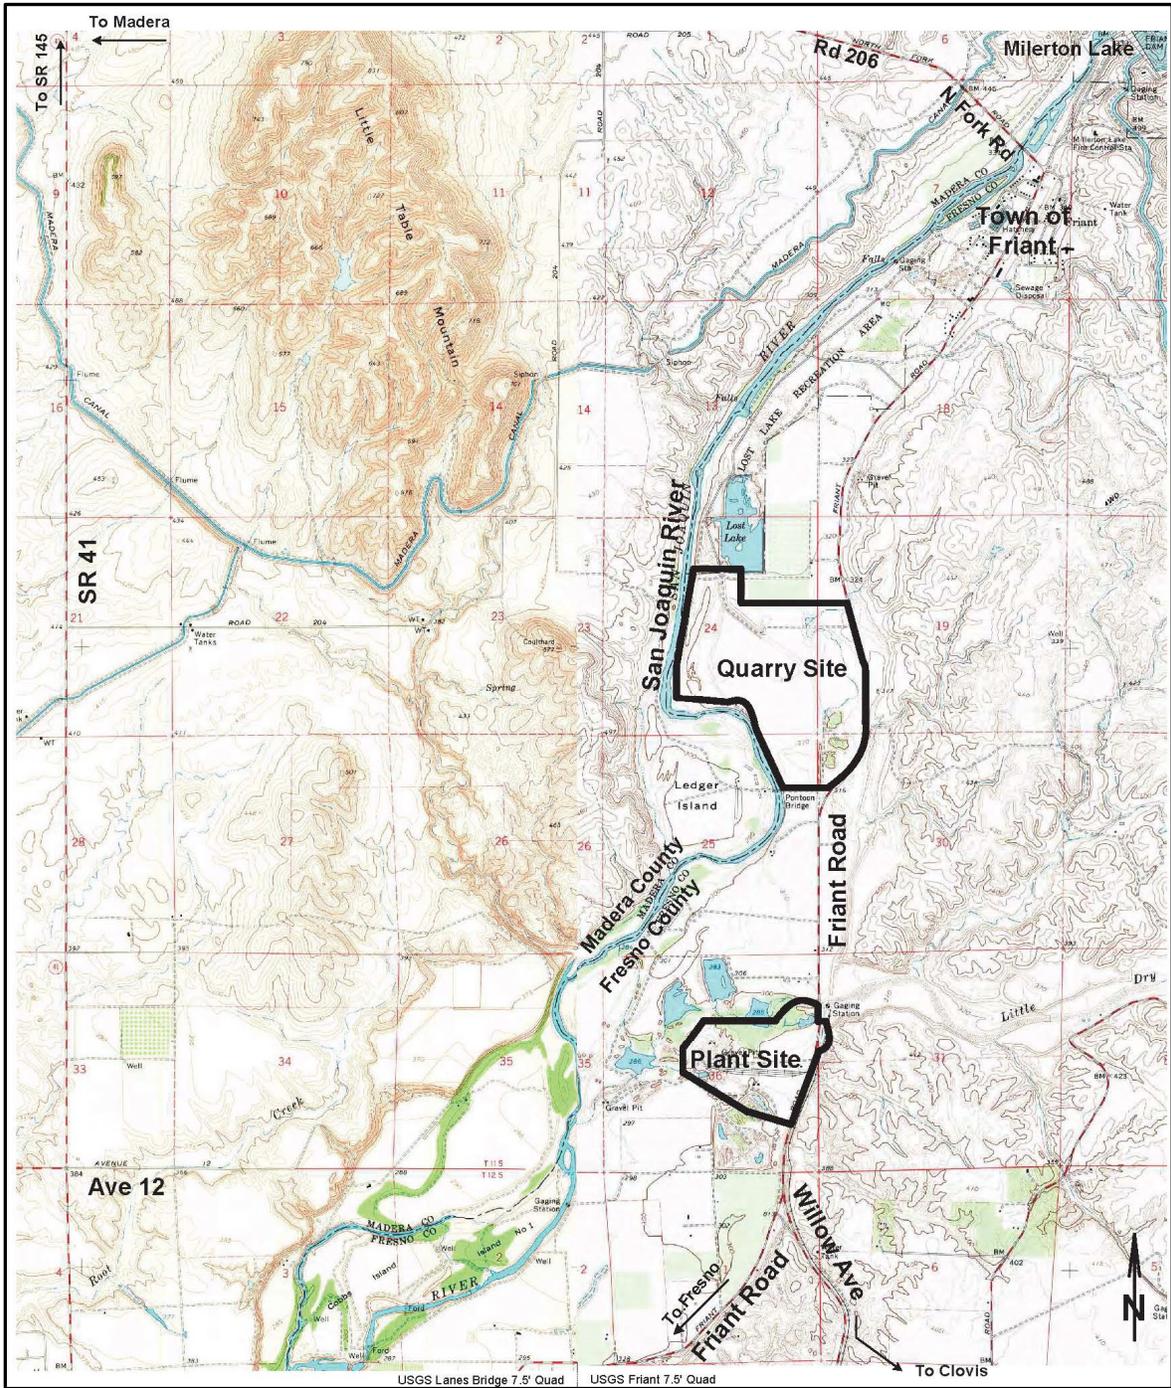

Figure 2, “Plant Site and Quarry Site Aerials,” shows the location and existing configuration of the Plant and Quarry sites.

### **PROJECT DESCRIPTION**

The Applicant is requesting a continuation and modification of its current aggregate (rock, sand, and gravel) mining and processing operations. The Project includes the following two project life stages that are estimated to span 100 years:

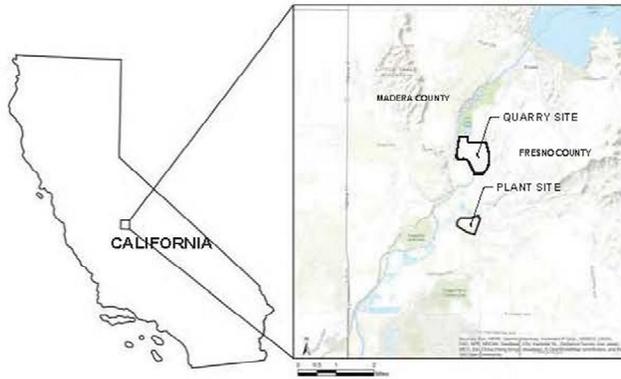

- Stage 1:
  - Continue concurrent operations at both the Quarry Site and the Plant Site for up to 30 years.
  - At the Plant Site, the existing aggregate processing plant would continue to be used to wash, screen, crush, and sort aggregate mined on site.
  - At the Quarry Site the hard rock deposit that lies beneath the alluvial deposit currently being mined, would be mined. Excavation of the hard rock would require drilling and blasting and would occur to a depth of approximately 600-feet below ground surface (bgs).
  - An aggregate processing plant would be added to the Quarry Site to wash, screen, crush, and sort the hard rock to be mined on site.
  - Aggregate products produced at the Quarry Site used at the asphalt and ready-mix plants at the Plant Site would be transported approximately 2 miles south to the Plant Site via Friant Road in the same manner as the raw aggregate currently being transported from the Quarry Site to the Plant Site for the existing operations.

- Other aggregate products produced at the Quarry site not used by the asphalt and ready-mix plants at the Plant Site would be sold directly from the quarry.
  - The existing asphalt plant at the Plant Site would be replaced with a modern Hot Mix Asphalt (HMA) plant.
  - Periodic use of a portable crushing plant to recycle come-back concrete would continue with the addition of asphalt recycling and import of concrete debris to recycle into crushed miscellaneous base (CMB) and asphalt debris to be recycled asphalt product (RAP).
  - Mine the remaining alluvial deposit at the Plant Site to a depth of approximately 85-feet below ground surface (bgs).
  - Relocation of the plant operations at the Plant Site to the Quarry Site in less than 30 years to recover the deposit beneath the plants.
  - Upon approval of project permits, the combined annual sales of aggregate from both sites is estimated to ramp up from the 1.4 MT allowed under the current permits to 2.0 MT in approximately five years and up to 3.0 MT in approximately 10 years.
  - When mining is completed at the Plant Site, reclamation would consist of approximately 122 acres of open space, riparian, and open water wildlife habitat.
- Stage 2:
    - Continue hard rock mining and processing operations only at the Quarry Site for approximately 70 more years. The ready-mix concrete plant and the hot-mix asphalt plant would be relocated from the Plant Site to the Quarry Site.
    - The periodic use of a portable plant to recycle concrete and asphalt debris (including imported) into CMB and RAP would be added to the Quarry Site.
    - All aggregate products produced at the Quarry site would be used by the on-site asphalt and ready-mix plants or sold directly from the Quarry Site. The interplant haul would cease.
    - Stage 2 operations are estimated to have annual aggregate sales of 3.0 MT.
    - Reclamation of the Quarry Site would create approximately 349 acres of open space, riparian, and open water wildlife habitat.
