1.0 SUMMARY

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Northgate Environmental Management, Inc. (Northgate) for Brooks Street Partners Management LLC (Brooks Street) at the Angel Stadium of Anaheim property located at 2000 East Gene Autry Way and 2200 East Katella Avenue in Anaheim, California (the Site). The Site consists of approximately 153.3-acres bound by a railroad easement to the north, Interstate 57 to the east, East Orangewood Avenue to the south, two apartment buildings and vacant land to the southwest, South State College Boulevard to the west, and apartment buildings to the northwest. The Site is generally pentagonal in shape with the exception of portions of the contiguous land to the southwest and northwest of the Site that are not included in the subject Site boundary. The Site is developed with a professional baseball stadium for the Los Angeles Angels of Anaheim, a commercial structure occupied by an indoor music venue and meeting space facility, and surface parking. It does not include a commercial office building located along the western perimeter on South State College Boulevard. The Site covers fifteen parcels identified as Assessor's Parcel Numbers (APNs) 232-011-02, -06, -35 through -44, -47, -48, and -50 in Orange County. A Site Vicinity Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

Northgate's review indicates that the Site was occupied by orchards through the mid-1960s. A railroad track extended through the western portion of the Site in the early 1960s. The Site was developed with a baseball stadium between 1964 and 1966. Stadium operations have generally included offices, a baseball field for recreational use, seating, and various food and beverage services. The stadium development included a basement level beneath the perimeter for facilities maintenance including painting, storage, and offices, in addition to a second subterranean level beneath the southwestern portion of the structure for private viewing rooms and practice facilities for the baseball teams during games. Operations at the baseball stadium facility have also historically included a storage area in the eastern portion of the Site for hydraulic trash compactors, trash dumpsters, a gasoline storage and dispensing aboveground storage tank (AST), and a diesel powered generator with storage of diesel fuel. A vacant fenced area in the same area has been utilized for the stockpiling of imported soil that is transported into the stadium and used temporarily for automobile events including truck and motorcycle racing prior to transport back to the stockpile area. The northwestern corner of the Site remained vacant land until it was developed with an indoor music venue and meeting space facility in 1998. This facility is still present and operations include indoor space for meetings and events including musical performances, a commercial kitchen, and office spaces.

The Site is listed on several environmental databases including the Underground Storage Tank (UST), Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), Historic UST (HIST UST), databases indicating the presence of a 1,000-gallon gasoline UST installed in 1986. The geolocation of the database listings indicates that this tank was potentially located near the intersection of East Gene Autry Way and South State College Boulevard along the western portion of the Site. No further information was available regarding this UST including whether it was removed, abandoned, or is still present at the Site. The Site was also listed on several other environmental databases including the AST, Resource Conservation Recovery Act Small Quantity Generator (RCRA-SQG), RCRA-Non-Generator, Hazardous Waste Tracking System (HAZNET), California Environmental Reporting System (CERS), CERS Hazardous Waste, CERS Tanks, Emergency Response Notification System (ERNS), California Integrated Water Quality System (CIWQS), Enforcement and Compliance History Online (ECHO), and Facility Index System (FINDS) environmental databases. These database listings indicate that the Site has generally used and/or stored water and oil-based paints, propane, oxygen, gasoline, diesel, and chemicals including acetylene, carbon dioxide, chlorodifluoromethane, and 1,1,1,2-tetrafluoroethane under the oversight of the Anaheim Fire Department. Only administrative violations were reported and were noted to have been brought into compliance.

In summary, Northgate has performed a Phase I ESA of the Angel Stadium of Anaheim property located at 2000 East Gene Autry Way and 2200 East Katella Avenue in Anaheim, California in conformance with the scope and limitations of ASTM Practice E 1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). Any exceptions to, or deletions from, these practices are described in Section 2.3 of this report. Our review did not identify the presence of the following Recognized Environmental Condition (RECs) in connection with the property except for the following:

- Historic Site operations in the northeastern portion of the Site have included the long-term operation of hydraulic trash compactors, a gasoline storage and dispensing AST, and a diesel powered generator with storage of diesel fuel. No documented hazardous materials releases have been identified at any of these features. However, these historic operations are reasonably associated with the use, storage, and potential release of petroleum products, solvents, and/or other hazardous materials.
- A 1,000-gallon gasoline UST was identified on historic environmental databases and was listed to have been installed in 1986. Based on the geolocation of the database listings, this tank was potentially located near the intersection of East Gene Autry Way and South State College Boulevard along the western portion of the Site. Another potential location for this UST was identified to the in the northwestern portion of the Site near the former railroad track where a potential excavation area was identified on a 2005 aerial

photograph. No Site staff has any knowledge of a UST currently or previously present or operated at the Site. No further information was available regarding this UST including whether it was removed, abandoned, or is still present at the Site.

Our review also identified the following potential business environmental risks:

- Soil is stockpiled in the northeastern corner of the Site that is transported into the stadium and used temporarily for automobile events including truck and motorcycle racing. The soil is transported back to this area after the event is completed and stockpiled until needed again. Given that the soil is used for creating drivable areas routinely used by automobiles and motorcycles, there is a potential for hydrocarbons to be present in some of this material. The potential presence of hydrocarbons in this soil would not likely represent a significant impact to current use of the Site. However, the hydrocarbons, if present, could potentially necessitate the removal and disposal of the soil at a designated facility that accepts such material at a time when removal of the soil is desired.
- Based on the age of the stadium structure at the Site, it is possible that asbestos containing materials (ACMs) and lead based paints (LBPs) are potentially present in building materials within the structure.
- The Site was occupied by agricultural orchards from at least the late 1930s through the mid-1960s. Pesticides and/or herbicides could potentially be present in shallow soil at the Site related to this historic agricultural land use. The potential presence of pesticides in soil would not likely represent a significant impact to current use of the Site. However, the pesticides, if present, could potentially impact any future redevelopment of the Site.
- A railroad track previously extended through the western portion of the Site. Pesticide use was typically associated with historic railroad tracks and spurs. The potential presence of pesticides in soil would not likely represent a significant impact to current use of the Site; however, pesticides, if present, could potentially impact future redevelopment at the Site.
- Potential historic industrial and/or manufacturing facilities were historically located adjacent to the southwest of the Site with the railroad track extending from these facilities through the subject Site.
- The Site is located adjacent to the California State Route 57 freeway that has operated as a freeway since the late 1970s. Shallow soil in areas of the Site located in close proximity to the freeway could potentially contain elevated levels of lead related to fallout from automobile exhaust prior to the ban on leaded gasoline in the 1990s. Similarly, the railroad track could potentially contain pesticides in shallow soil. The potential presence of lead and/or pesticides in soil would not likely represent a significant

impact to current use of the Site; however, the lead and/or pesticides, if present, could potentially impact future redevelopment at the Site.

Based on the results of this Phase I ESA and the proposed redevelopment of the Site to include residential and commercial development in addition to potential underground parking, Northgate recommends that a Phase II ESA be conducted at the Site.

2.0 INTRODUCTION

This report presents the results of a Phase I ESA of the Angel Stadium of Anaheim property located at 2000 East Gene Autry Way and 2200 East Katella Avenue in Anaheim, California. The Site consists of fifteen parcels covering approximately 153.3-acres of land identified as APNs 232-011-02, -06, -35 through -44, -47, -48, and -50 in Orange County. The Site is generally pentagonal in shape with the exception of portions of the contiguous land to the southwest and northwest of the Site that are not included in the subject Site boundary. The Site is bound by a railroad track to the northeast, the Interstate 57 freeway to the east, the Santa Ana River to the southeast, East Orangewood Avenue to the south, South State College Boulevard to the west and East Katella Avenue to the northwest. The Site is developed with a professional baseball stadium for the Los Angeles Angels of Anaheim, a commercial structure occupied by an indoor music venue and meeting space facility, and surface parking. It does not include a commercial office building located along the western perimeter on South State College Boulevard. A Site Vicinity Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

2.1 Purpose

The purpose of the Phase I ESA has been to identify the potential presence of RECs at the Site. The term "RECs" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include *de minimus* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

2.2 Scope of Services

Northgate has performed the Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-13, *Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and 40 CFR Part 312, *Standards and Practices for All Appropriate Inquiry – Final Rule*. This investigation was performed by Nicky Robinson, P.E., Senior Engineer with assistance and review Derrick Willis, Northgate Principal. The scope of work for the investigation included the following services:

- Review of readily available information regarding the history of the Site, including historic aerial photographs, maps, previous reports, and other information, and discussions with individuals familiar with the Site;

- Review of environmental lien documents obtained for the Site;
- A reconnaissance of the Site and near vicinity;
- Discussions with regulatory officials and review of regulatory agency publications and files, as applicable;
- Evaluation of RECs, development of conclusions and scope of work to evaluate potential on-Site contamination concerns; and
- Preparation of this report.

2.3 Limitations and Exceptions

2.3.1 Limitations

The purpose of an environmental assessment is to reasonably evaluate the potential for, or actual impact of, past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the Site that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at un-sampled locations.

Except where there is express concern of our client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Where the scope of services is limited to interview and/or review of readily available reports and literature, any conclusions and/or recommendations are necessarily based largely on information supplied by others, the accuracy or sufficiency of which may not be independently reviewed by Northgate.

Any opinions and/or recommendations presented apply to Site conditions existing at the time of performance of services. We are unable to report on, or accurately predict, generally unforeseeable events that may impact the Site following performance of services, whether occurring naturally or caused by external forces. Therefore, we cannot assume responsibility for such events or their impact. We also cannot assume responsibility for changes in environmental standards, practices, or regulations.

2.3.2 Exceptions

The time intervals between some historical information sources may exceed five years due to the unavailability of such records. However, in our opinion, this data gap does not significantly impact our ability to evaluate historic land use conditions at the Site given the availability of other sources for this information.

At the time this report was prepared, no response to Northgate's request to review files had been received from the City of Anaheim Public Utilities Department. This constitutes a data gap as defined in the ASTM Standard which could potentially impact our ability to evaluate environmental conditions at the Site. Northgate will issue an addendum to this report upon receipt of the files if information in the files changes the conclusions or recommendations provided in this report.

Northgate was unable to access a small structure occupied by a pump house, which is owned and operated by the City of Anaheim. These constitute data gaps as defined by the ASTM standard. However, given the availability of other information related to the Site, these data gaps are not considered to significantly impact our ability to evaluate environmental conditions at the Site. . There were no other limiting conditions.

2.4 User Reliance

This report has been prepared for the exclusive use of Brooks Street (the User) and their corporations, subsidiaries, affiliates, partners, partnerships, and lenders in evaluating environmental conditions at the Site. Others may not use or rely on the information contained in this report without the express written consent of Northgate.

3.0 SITE DESCRIPTION

3.1 Site Location and Legal Description

The Site consists of approximately 153.3-acres of land located at 2000 East Gene Autry Way and 2200 East Katella Avenue in the City of Anaheim, California. The Site consists of fifteen parcels identified as APNs 232-011-02, -06, -35 through -44, -47, -48, and -50 in Orange County. The Site is generally pentagonal in shape with the exception of portions of the contiguous land to the southwest and northwest of the Site that are not included in the subject Site boundary. The Site is bound by a railroad track to the northeast, the Interstate 57 freeway to the east, the Santa Ana River to the southeast, East Orangewood Avenue to the south, South State College Boulevard to the west and East Katella Avenue to the northwest. The Site is currently developed with a professional baseball stadium for the Los Angeles Angels of Anaheim, a commercial structure occupied by an indoor music venue and meeting space facility, and surface parking. It does not include a commercial office building located along the western perimeter on South State College Boulevard. A Site Vicinity Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

3.2 Site Vicinity General Characteristics

The Site consists of a commercial development within an area of mixed commercial and residential development in urban Anaheim. The Site is developed with professional baseball stadium, a commercial performance theater, and surface parking lots. The stadium is identified as 2000 East Gene Autry Way and includes a basement level in the southwestern portion of the structure and the performance theater is identified as 2200 East Katella Avenue. The remainder of the Site is occupied by asphalt paved parking areas.

3.3 Geology and Groundwater

3.3.1 Geology

The Site is located in the Coastal Plain in the northern portion of the Peninsular Ranges Geomorphic Providence. The Los Coastal Plain is bound to the northeast by the Puente Hills and Santa Monica Mountains, to the southeast by the San Joaquin Hills, to the southwest by the Pacific Ocean, and to the northwest by the Santa Monica Mountains. The Site vicinity is generally underlain by alluvial deposits of Quaternary age that consist of silty sand, interbedded clay, silt, sand, and gravelly sands (PAI, 2017). A geotechnical investigation performed by another consultant in the Site vicinity indicates that subsurface materials in the Site vicinity consist of sand from the surface to approximately 20 feet below ground surface (bgs), which is

underlain by silty sand to approximately 45 feet bgs, followed by sand to approximately 70 feet bgs, then silty and sand to 80 feet bgs and silty clay to approximately 100 feet bgs (ME, 2020).

According to the U. Geological Survey topographic map of the Orange and Anaheim Quadrangles, elevations at the Site range from about 145 to 155 above sea level. On a regional basis, surface topography generally slopes down to the southwest.

3.3.2 Groundwater

The Site is located within the Forebay Area of the Main subbasin of the Orange County Groundwater Basin (AECOM, 2019). The Site and vicinity are underlain by the Talbert Aquifer between about 100 to 200 feet bgs followed by the Main Aquifer between about 200 and 500 feet bgs (MPI, 2005). On a regional basis, groundwater is encountered at approximately 70 to 80 feet bgs and groundwater flow is reported towards the southwest (PAI, 2017).

3.4 Current Use of the Property

The Site is currently developed with a professional baseball stadium for the Los Angeles Angels of Anaheim, a commercial structure occupied by an indoor music venue and meeting space facility, and surface parking.

3.5 Description of Structures, Roads, Sewage, and Potable Water Sources

The Site is currently developed with a professional baseball stadium for the Los Angeles Angels of Anaheim, a commercial structure occupied by a performance theater, and surface parking. Access to the Site is available from South Douglas Road to the northeast, from East Orangewood Avenue to the south, South State College Boulevard to the west, and from East Katella Avenue to the northwest. The stadium is identified as 2000 East Gene Autry Way and includes multiple levels of stadium seating and a basement level in the southwestern portion of the structure. The performance theater is identified as 2200 East Katella Avenue. Additional descriptions of the structures are provided in Section 6.0 below. The remainder of the Site is occupied by asphalt paved parking areas. Water and sewer connections are provided through the City of Anaheim.

3.6 Current Uses of Adjoining Properties

The Site is generally pentagonal in shape with the exception of portions of the contiguous land to the southwest and northwest of the Site that are not included in the subject Site boundary. The Site is bordered to the northeast by a railroad track followed by commercial development then the Interstate 57 freeway followed by additional commercial development. To the east, the Site is bordered by a narrow easement for the Santa Ana River Trail followed by the Interstate57

freeway then the concrete-lined, channelized Santa Ana River and commercial development. A railroad, train station, and transit center are located to the east of the Interstate 57 freeway and to the northeast of the Site. East Orangewood Avenue followed by commercial development then the concrete-lined, channelized Santa Ana River border the Site to the South. The Interstate 5 freeway and California State Route 22 are located farther south of the Site. Residential development and a former railroad spur are located adjacent to the Site to the southwest of the Site and to the northeast of the intersection of East Orangewood Avenue and South State College Boulevard. The Site is bordered to the west by South State College Boulevard followed by mixed residential and commercial development then the Interstate 5 freeway and additional commercial development. A commercial office building and a residential multi-family development with associated paved surface parking lots are located adjacent to the west and northwest of the Site and to the southeast of the intersection of South State College Boulevard and East Katella Avenue. The Site is bordered to the northwest by East Katella Avenue followed by commercial development then a railroad and additional commercial development. The Site is located in an area that generally includes residential and commercial development.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Liens or Activity and Use Limitations

An environmental lien and activity and use limitation (AUL) search was conducted for APN 232-001-041 by Environmental Data Resources (EDR). EDR's review indicates that there are no environmental liens or activity and use limitations of record for that parcel. Northgate was not provided with any title reports for the Site. A copy of the Environmental Lien and AUL Search are included in Appendix A (EDR, 2020a).

4.2 Valuation Reduction for Environmental Issues

Northgate has not been provided with any information indicating that the value of the property has been reduced due to environmental issues.

4.3 Owner, Property Manager, and Occupant Information

According to the EDR Environmental Lien and AUL report (Appendix A) title to the Site is vested in Aramark Entertainment, Inc. FKA Ogden Entertainment, Inc. The stadium is occupied by and managed by the Los Angeles Angels of Anaheim and includes a baseball field for the team. The theater venue is occupied and managed by Nederlander Concerts. The remainder of the Site is occupied by asphalt paved parking areas.

4.4 Specialized Knowledge

The User completed a Phase I ESA User Questionnaire for the Site. Mr. Alex Winsberg, as General Counsel for the Site occupant, completed the questionnaire. He has been associated with the Site for 56 years. Mr. Winsberg indicated that he was not aware of any environmental cleanup liens or any activity or land use limitations against the Site. He noted that the Angels baseball franchise has continuously occupied the Site since 1963 and that the Site has been occupied by a baseball stadium and parking lot throughout this duration of time. Mr. Winsberg indicated that the only chemicals he is aware of at the Site include regular cleaning materials and those associated with parked automobiles. He was not aware of any chemical spills or environmental cleanups that have taken place at the Site.

Mr. Winsberg indicated that fill materials have been imported to the Site and are stored in the parking lot along the eastern portion of the Site adjacent to the 57 freeway. These fill materials are transported into the baseball stadium for "Monster Truck" and motocross event then returned to the stockpile storage area until needed again. He also indicated that he is not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in,

on, or from the Site nor any notices from any governmental entity regarding any possible environmental violations. Mr. Winsberg noted that he is not aware of any obvious indications of the presence or likely presence of contamination at the Site. The only storage tank that Mr. Winsberg is familiar with is an aboveground propane tank.

A copy of the Questionnaire is included in Appendix B. The User has indicated that they do not possess any additional specialized knowledge regarding the Site.

4.5 Reason for Performing the Phase I ESA

Northgate understands that Brooks Street is evaluating the property for potential purchase and redevelopment. Northgate understands that Brooks Street intends to redevelop the Site with a mixed-use development proposed to include residential, hotel, office, and commercial land uses with the potential for subterranean parking levels.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

To determine if the Site has any documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the Site prescribed by ASTM 1527-13 and *All Appropriate Inquiry*, Northgate reviewed a summary of regulatory agency database listings prepared by EDR. In addition, where appropriate, we reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of possible concern to the subject Site. The EDR report presenting a summary of the agency databases reviewed and a map showing the location of the identified sites is provided as Appendix C (EDR, 2020b). The results of the database search and follow-up agency file review are summarized below. Copies of information obtained for the Site are included in Appendix D.

5.1.1 Site

Database listings for the Site included in the EDR environmental database report are shown on the following table. The records for the Site include listings on the UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), Historic UST (HIST UST), California aboveground storage tank (CA AST), Resource Conservation Recovery Act Small Quantity Generator (RCRA-SQG), RCRA-Non-Generator, Hazardous Waste Tracking System (HAZNET), California Environmental Reporting System (CERS), CERS Hazardous Waste, CERS Tanks, Emergency Response Notification System (ERNS), California Integrated Water Quality System (CIWQS), Enforcement and Compliance History Online (ECHO), and Facility Index System (FINDS) environmental databases.

EDR Site #	Site Listing and Address	Regulatory Database	Information in EDR Report
A1	Angel Stadium of Anaheim – 2000 East Gene Autry Way East Parking Lot, Anaheim	RCRA-SQG	The EDR database report contains a listing for the Site in 2017 as a small quantity generator of hazardous wastes including aqueous solutions with total organic residues, halogenated solvents, ignitable waste, cadmium, chromium, lead, benzene, tetrachloroethylene, unspecified organic liquid mixture, and other organic solids. Operations were listed to have started in 1966. No violations were reported. The EDR report does not contain information indicating a hazardous materials release at the Site related to this listing.

EDR Site #	Site Listing and Address	Regulatory Database	Information in EDR Report
A2 and A4	Angel Stadium of Anaheim – 2000 East Gene Autry Way, Anaheim	CA AST	The EDR database report contains two listings for ASTs at the Site. One listing identified the AST capacity at 1,475-gallons. No further information is provided in either listing. Based on information available about the Site, these listings are likely associated with a propane AST and diesel fuel storage in a generator and associated AST that are located in the northeastern portion of the Site. The EDR report does not contain information indicating a hazardous materials release at the Site related to these listings.
A3 and A5	Angel Stadium of Anaheim – 2000 East Gene Autry Way, Anaheim	FINDS and ECHO	The EDR database report contains listings on the FINDS and ECHO databases for the Site. No violations were reported for the Site on the ECHO database listing. No further information was available. The EDR report does not contain information indicating a hazardous materials release at the Site related to these listings.
A6, A8, and A10	Angels Baseball LP/Angels Stadium/Walt Disney Corp – 2000 East Gene Autry Way, Anaheim	HAZNET	The EDR database report contains multiple listings on the HAZNET database for the removal of hazardous waste from the Site. Materials removed from the Site have included unspecified solvent mixture and tank bottom waste in 1992, asbestos containing waste between 1996 through 1998 and in 2011, inorganic solid waste and polychlorinated biphenyls (PCBs) and material containing PCBs n 1997, inorganic solid waste, oil/water separation sludge in and unspecific, aged, or surplus organics 2013, and unspecific, aged, or surplus organics in 2016.
A7	Gotcha Glacier – 2000 East Gene Autry Way, Anaheim	CERS HAZ WASTE, CERS TANKS, CIWQS, and CERS	The EDR database contains a listing on the CERS HAZ WASTE database as a hazardous waste generator and on the CERS TANKS database for the aboveground storage of petroleum. The facility is also identified on the CERS database with several administrative violations between 2014 and 2017 including failure to prepare and implement a spill prevention control and countermeasure plan, to complete and electronically submit a business activities page and/or business owner operator identification page in addition to a site map and hazardous material inventory, to submit a business plan, and to dispose of hazardous wastes within 180 days. All violations were noted to have been resolved and returned to compliance. The facility is also listed on the CIWQS database between 2000 and 2001 related to stormwater management during construction on Site.

EDR Site #	Site Listing and Address	Regulatory Database	Information in EDR Report
A9	2000 East Gene Autry Way, Anaheim	CHMIRS	The EDR database contains a listing on the CHMIRS database for a release of paint on April 9, 2019. While mixing paints for disposal. A spill onto asphalt occurred. It was reported that no storm drains or waterways were impacted and the Anaheim Fire Department was on scene to oversee the clean-up. No further information was available.
B19, E29, and E30	Anaheim Stadium/Angels Baseball Stadium LP/Angels Stadium – 2000 South Gene Autry Way and 2000 South State College Boulevard, Anaheim	SWEEPS UST, UST, FID UST, HIST UST, RCRA NonGen/NLR, and FINDS	The EDR database report contains a listing on the SWEEPS UST database for a 1,000-gallon UST containing gasoline that was installed in 1986. This listing is mapped at the entrance to the Site along the western perimeter at the intersection of East Gene Autry Way and South State College Boulevard. No further information was available. The EDR report does not contain information indicating a hazardous materials release at the Site related to these listings.
C20 and C23	City National Grove of Anaheim	CA CERS and FINDS	The EDR database report contains a listing on the CERS database for the facility as a chemical storage facility. The facility had several administrative violations between 2013 and 2018 including failure to complete a hazardous materials business plan, failure to electronically submit a hazardous material s business plan, and failure to electronically update a hazardous materials business plan. All violations were noted to have been returned to compliance. Additionally, the facility was listed on the FINDS database.
C26	2150 East Katella Avenue, Anaheim	ERNS	The EDR database report had a listing on the ERNS database for an incident that involved the mechanical failure of an Amtrak train at this location due to mechanical problems. This incident was identified as a non-release and the engine was transferred to an off-Site facility for repairs. Based on discussions with the User, this portion of the Site, that was formerly occupied by a train station platform, is not included within the boundaries of the subject Site.
G40 and G41	Anaheim Public Utilities Well 45 – 2204 East Katella Avenue, Anaheim	CA AST	The EDR database report contains a listing for a 2,000-gallon diesel AST. No further information is provided in the listing. The EDR report does not contain information indicating a hazardous materials release at the Site related to this listing.

5.1.2 Off-Site Sources

The regulatory agency database search prepared by EDR indicates the presence of 275 agency-database listings for facilities located within an approximate one-mile radius of the Site. The EDR database report containing a list of the agency databases searched is attached in Appendix C. Sites with documented releases impacting groundwater located within 0.25-mile upgradient and/or cross-gradient of the Site, or otherwise judged to be of potential impact to soil, soil vapor, or groundwater quality at the Site, are summarized in the following table.

A total of six off-Site facilities were listed on the EDR non-proprietary historic automobile database within one-eighth of a mile from the Site. Most of these facilities were located to the northwest (cross-gradient) of the subject Site. No records of contamination or releases at this property impacting the environment or the subject Site were identified as part of the regulatory review. Given the lack of a documented release, these facilities do not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site and are not included in the following table.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Alex Foods – Alex Snacks Division – 2125 East Orangewood Avenue, Anaheim	CA LUST, CA SWEEPS UST, CA HIST UST, CA FID UST, CA HIST CORTESE, CA CERS, and CA EMI	Adjacent to the southwest (downgradient) of the Site	The facility is identified on the leaking UST (LUST) database for a release of mineral oil impacting soil in 1998. This facility and the surrounding area were identified as light industrial operations. Approximately 400-gallons of food grade mineral oil were accidentally released from an aboveground pipeline due to a failure in the hydraulic system. Given that numerous pipelines were below ground, a LUST case was opened under the oversight of Anaheim Public Utilities. An assessment was conducted that included advancing six borings to 15 feet bgs. Total petroleum hydrocarbons (TPH) as mineral oil were reported at concentrations ranging between 220 and 1,270 milligrams per kilogram in four of the 18 samples, all from separate borings and most at the deepest interval. Approximately 72 tons of impacted soil were excavated from the facility and transported off-site for disposal. Only small amounts of low concentrations of impacts were reported to remain prior to the area being paved over. The facility received regulatory closure from the City of Anaheim, Public Utilities Department on February 23, 2000. Given the downgradient location, the release to soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
1900 South State College Boulevard, Anaheim	CA UST	Adjacent to west (cross-gradient) of the Site	The facility is listed on the California UST database for the presence of a historic UST. No further information is available. This address is associated with the current commercial office building located adjacent to the west of the Site along South State College Boulevard. No records of contamination or releases at this property impacting the environment or the subject Site were identified as part of the regulatory review. Given the cross-gradient location and lack of a documented release, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Shell Development Peacock – 2100 East Katella Avenue, Anaheim	ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, and HAZNET	Adjacent to the northwest (cross-gradient) of the Site	The facility is listed on the EDR proprietary (non-regulatory) Historic Auto database as a gasoline service station in 2000 and 2001. No records of contamination or releases at this property impacting the environment or the subject Site were identified as part of the regulatory review. This area was redeveloped in 2008 with a multi-story residential and commercial development, which would have likely remediated any potential impacts from this historic land use. Given the cross-gradient location, the redevelopment activities, and lack of a documented release, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
College Chevron – 1800 South State College Boulevard, Anaheim	CA HIST UST, and EDR Hist Auto	Adjacent to the northwest (cross-gradient) of the Site	This facility is listed as a gasoline service station between 1976 and 1983 and as an automotive repair shop between 1986 and 1988. Four USTs installed at the facility in 1961. The tanks included one 2,000-gallon, one 5,600-gallon, and one 6,200-gallon for the storage of product that was not identified as gasoline or diesel; however, given that the facility was identified as a gasoline service station, these three USTs likely contained gasoline. The fourth UST was a 550-gallon waste oil UST. No records of contamination or releases at this property impacting the environment or the subject Site were identified as part of the regulatory review. Given the cross-gradient location and lack of a documented release, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Stadium Towers, LLC/Spieker Properties – 2400 East Katella Avenue, Anaheim	CA LUST, SWEEPS UST, CA UST, and CA CERS	Approximately 100-feet north and northeast (upgradient) of the Site	This facility is listed for a release of diesel impacting soil. A 550-gallon diesel UST was removed in May 2004 and results from two soil samples collected beneath the tank did not report concentrations of hydrocarbons of hydrocarbon related volatiles above laboratory reporting limits. Limited diesel impacted soil was encountered during removal of the fuel lines, which was reported to have been associated with a release during the fuel line disconnection by the UST removal contractor. Approximately two cubic yards of impacted soil were excavated and removed from the facility. The facility received regulatory closure and a letter of no further action from the City of Anaheim Public Utilities Department on February 21, 2007. Given the limited release impacting soil only and the regulatory closure status with no further action required, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Stadium Motors, Inc/Caliber Collision Centers – 2225 East Katella Avenue, Anaheim	CA LUST, CA HIST CORTESE, CA UST, CA SWEEPS UST, CA HIST UST, CA FID UST, RCRA-SQG, CA CERS HAZ WASTE, CA CERS, CA EMI, and RCRA NonGen/NLR	Approximately 450-feet north (cross- to upgradient) of the Site	This facility is identified for the presence and removal of six USTs in 1991 that included one 2,000-gallon gasoline, one 1,000-gallon waste oil, one 550-gallon transmission fluid tank, and three 550-gallon waste-oil tanks. During removal, waste-oil impacted soil was encountered, excavated, and removed. Limited waste oil impacted soil was left in place. Given that the impacts were approximately 90 feet above groundwater and the limited mobility of waste oil impacts in additional to the removal of the source of the impacts, the facility received regulatory closure and a letter of no further action from the City of Anaheim on October 19, 1994. Given the limited release impacting soil only and the regulatory closure status with no further action required, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Ryder Truck Rental – 1730 Anaheim Boulevard, Anaheim	CA LUST and CA HIST CORTESE	Approximately 0.10-miles northwest (cross-gradient) of the Site	This facility is identified for a release of waste oil impacting soil encountered during tank closure in 1997. No further information is available. The facility received regulatory closure on December 10, 1997. The address is currently mapped approximately 1 mile northwest (cross-gradient) of the Site but the database geolocation is mapped approximately 0.10-miles northwest (cross-gradient) of the Site. Given the release impacting soil only and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Shell/ Tesoro Shell/ Shell Service Station/ Stadium Shell/ Shell Oil Products – 2331 East Katella Avenue, Anaheim	LCA LUST, CA FID UST, CA SWEEPS UST, CA HIST UST, CA CERS TANKS, CA CERS HAZ WASTE, CA CERS, CA HAZNET, RCRA NonGen/NLR, FINDS, ECHO, and EDR Hist Auto	Approximately 0.10-miles north (cross- to upgradient) of the Site	This facility is identified as a gasoline service station that previously operated three 10,000-gallon gasoline USTs that were removed in 2003 and replaced with two new gasoline USTs with a 20,000-gallon and a 12,000-gallon capacity. Approximately 861 tons of soil were removed and disposed of during tank removal activities in 2003. A voluntary groundwater assessment program was implemented. The highest reported concentrations of total petroleum hydrocarbons as gasoline (TPH-g) up to 100 micrograms per liter (µg/L), benzene (5.1 µg/L), toluene (8.0 µg/L), ethylbenzene (3.5 µg/L), xylenes (27.3 µg/L), methyl-tert-butyl-ether (1.8 µg/L)), and tert-butyl alcohol (83 µg/L) in groundwater. Quarterly groundwater monitoring was conducted between March 2003 and January 2008. Monitored natural attenuation was the only groundwater cleanup remedy. Four groundwater monitoring wells were monitored during the quarterly events and all four wells reported results that were not detected above laboratory reporting limits for all contaminants during the third quarter of 2007. The facility was recommended for closure given that the source of contamination had been removed, 861 tons of soil had been removed and additional soil sampling indicated relatively low concentrations of impacted soil remained, groundwater contaminant concentrations were all non-detect for the last monitoring event in the third quarter of 2007, and the facility was expected to remain operational as an active gasoline service station with no proposed change in land use. The facility received regulatory closure from the City of Anaheim, Public Utilities Department on August 26, 2008. Given the relative distance from the Site, that the two downgradient wells along East Katella Avenue only reported TPH-g during one quarterly event in 2004 at concentrations ranging between 72 and 74 µg/L, which is below current regulatory screening criteria, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Lamcor, Inc. – 2025 East Orangewood Avenue, Anaheim	CA LUST, CA HIST CORTESE, CA HIST UST, and CA CERS	Approximately 0.10-miles south and southwest (downgradient) of the Site	This facility is listed for a release of gasoline impacting soil in 1988 that was discovered during tank closure activities. The facility previously operated two 2,000-gallon gasoline USTs that were installed in 1979. No further information was available. The facility received regulatory closure from County of Orange on April 4, 1989. Given the downgradient location, the release impacting soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Gateway Apartments II – 2020, 2034, 2040, & East Orangewood Avenue, Anaheim	CA ENVIROSTOR and CA VCP	Approximately 0.10-miles southwest (downgradient) of the Site	This facility covers approximately 6.2-acres that was formerly occupied by an orchard through 1965, mobile home manufacturing between 9165 and 1979, then an industrial facility for metal finishing, manufacturing plastic injection molds, machining and milling of metals, and cleaning and painting of materials. Environmental investigations performed at this facility indicated that trace quantities of a few metals, TPH, and the pesticide dichlorodiphenyldichloroethylene detected in soil and traces of acetone, benzene, and tetrachloroethylene in soil gas beneath the facility. A soil management plan and a human health risk assessment report were prepared for the redevelopment activities at the facility. Redevelopment was conducted under a California Land Reuse and Revitalization Act agreement dated September 23, 2004. Remedial activities included excavation of impacted soil. This facility was redeveloped into a multi-story residential development. The Department of Toxic Substances Control issued a certificate of completion for the completion of the redevelopment activities at the property dated September 16, 2014. Given the downgradient location, the release impacting soil only, the redevelopment and remedial activities, and the regulatory certification status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Everest Electronic – 2100 East Orangewood, Anaheim	CA LUST, CA UST, CA HIST UST, CA HIST CORTESE, CA CERS, and CA EMI	Approximately 0.11-miles southwest (downgradient) of the Site	This facility is identified for a release of gasoline impacting soil in 1990 that was encountered during tank closure activities. The facility previously operated a 10,000-gallon diesel, a 10,000-gallon waste oil, and a 1,000-gallon gasoline UST. No further information was available. The facility received regulatory closure from the County of Orange on August 9, 1990. Given the downgradient location, the release impacting soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Unocal/ Anaheim Stadium Union 76/ Unocal, Union Oil Service Station – 2001 East Katella Avenue, Anaheim	CA LUST, CA UST, CA HIST UST, and EDR Hist Auto	Approximately 0.11-miles west and northwest (cross-gradient) of the Site	This facility was identified as a gasoline service station between at least 1972 and 2008. A waste-oil sump was installed at the facility in 1968. The facility was identified for a release of waste oil that received regulatory closure from the County of Orange on August 28, 1990. No further information was available. Given the relative location, the release impacting soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
County of Orange PFRD/ County of Orange GSA Transportation – 1750 South Douglas Road, Anaheim	CA LUST,CA UST, CA AST, and CA CERS	Approximately 0.11-miles northeast (upgradient) of the Site	This facility is listed for a release of diesel impacting soil in 2003 that was encountered during system upgrade activities to the USTs followed by removal of the USTs in 2008. Impacted soils were reported to have been excavated from the facility. The facility received regulatory closure from City of Anaheim, Public Utilities Department on March 4, 2009. Given the release impacting soil only and the regulatory closure status with no further action required, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Howell Elementary School Project – Site B/C – 2222 East Howell Avenue, 2223 and 2225 East Katella Avenue, and 2331 East Katella Avenue, Anaheim	CA ENVIROSTOR and CA SCH	Approximately 0.15-miles north and northwest (cross- to upgradient) of the Site	This facility was historically occupied by orchards through the early 1970s prior to development for commercial use between 1972 and 1977. The commercial development included automotive services and a gasoline service station that included the operation of a clarifier, a 12,000-gallon and a 20,000-gallon UST, automobile service bays, and dispensers. The facility was reported for a release of waste oil encountered during removal of six USTs that included the excavation of impacted soil. This release received regulatory closure from the Anaheim Fire Department on August 1, 1991. A work plan was developed to further investigate features of potential environmental concern as part of the potential acquisition of the property by the Anaheim Elementary School District as a potential school site. The Anaheim Elementary School District issued a letter dated January 17, 2019 that indicated that it is no longer pursuing the potential acquisition of the property as a potential school site and has discontinued further study of the property. No further investigations or records of contamination or releases at this property have been performed at this facility and the land use appears to have remained unchanged. Given the release impacting soil only and the regulatory closure status with no further investigations or records of contamination or releases identified, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Equilion Enterprises, LLC/ Starwood O.C. Portfolio VII, LLC/ GRE Stadium Centre LLC – 2099 South State College Boulevard, Anaheim	CA LUST, CA UST, CA FID UST, CA SWEEPS UST, CA CERS, CA CERS TANKS, and EDR Hist Auto	Approximately 0.12-miles southwest (downgradient) of the Site	This facility is listed for a release of diesel impacting soil in 2002. The facility operated a 500-gallon diesel UST that was removed on September 27, 2002 and replaced by a new 1,000-gallon diesel UST. Limited diesel impacted soil was left in place given the small volume and that there was no threat to groundwater located approximately 80 feet bgs. The facility received regulatory closure with a letter of no further action from the City of Anaheim, Public Utilities Department. The facility was subsequently listed as a gasoline service station between 2005 and 2007. Given the downgradient location, the release impacting soil only, and the regulatory closure status with no further action required, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Arco/BP West Coast Products LLC – 1801 South State College Boulevard, Anaheim	CA LUST, HIST UST, CA UST, CA SWEEPS UST, RCRA NonGen/NLR, CA HAZNET, CA CERS HAZ WASTE, CA CERS TANKS, CA CERS, and EDR Hist Auto	Approximately 0.15-miles north and northwest (cross- to upgradient) of the Site	This facility was identified as a gasoline service station that has operated two 10,000-gallon and one 8,000-gallon gasoline USTs. It was identified for a release of gasoline impacting soil encountered in 1993 during tank removal activities. Assessments were conducted to evaluate the extent of impacted soil prior to the excavation and removal of approximately 1,428 tons of impacted soil. Closure was recommended given that the contaminated soil was removed and there was no threat to groundwater or public health. The facility received regulatory closure from the City of Anaheim, Public Utilities Department on October 19, 1994. Given the relative location, the release impacting soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Malibu Grand Prix – 2430 East Katella Avenue, Anaheim	CA LUST, CA HIST CORTESE, CA HIST UST, CA CERS, RCRA-SQG, CA EMI, FINDS, and ECHO	Approximately 0.16-miles north (cross- to upgradient) of the Site	This facility is identified for a release of gasoline impacting groundwater reported in 1986. A vapor extraction system was installed at the property in December 1989 and operated between April and September 1990. Groundwater monitoring was then conducted for five years and concentrations of TPH and benzene were not reported in groundwater beneath the facility. Closure was recommended based on the groundwater data and that the facility did not appear to pose a significant threat to groundwater. The facility received regulatory closure from the Santa Ana Regional Water Quality Control Board on August 26, 1993. Given the relative location, the groundwater analytical data, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.

Property Name	Agency Database	Location Relative to Site	Potential Environmental Concern
Itasco – 2211 East Howell Avenue, Anaheim	CA ENVIROSTOR, CA CPS-SLIC, CA HIST CORTESE, SEMS-ARCHIVE, and CA CERS	Approximately 0.20-miles north and northwest (cross-to upgradient) of the Site	This facility operated during the 1980s and was identified for a release of trichloroethene (TCE) to soil in 1983. Excavation was conducted to remediate the facility and included an excavation to 8 feet bgs followed by the removal of approximately 409 tons of impacted soil for off-site disposal. Confirmation soul samples were reported to be below regulatory screening levels. The soil excavation was reported to have provided adequate remediation of the soil and the facility was provided with regulatory closure on November 8, 1983. The facility was then referred to the Environmental Protection Agency (EPA) due to reported TCE in groundwater; however, the EPA indicated that this was a low priority site. Given the relative location, the release to soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Katella Yard – 10852 Douglas, Anaheim	LUST	Approximately 0.23-miles northeast (upgradient) of the Site	This facility is identified for a release of diesel and gasoline impacting soil in 1993. The facility received regulatory closure from the County of Orange on June 19, 1998. No further information is available. Given the relative distance, the release impacting soil only, and the regulatory closure status, this facility does not appear to represent a potential threat to soil, soil vapor, and/or groundwater quality at the subject Site.
Texaco Oil – 1650 State College Boulevard, Anaheim	CA LUST, CA HIST UST, CA HIST CORTESE, and CA CERS	Approximately 0.25-miles northwest (cross-gradient) of the Site	This facility is identified for a release of gasoline impacting soil. The facility operated three 10,000-gallon gasoline USTs and a 550-gallon waste oil UST. The Orange County Health Care Agency provided regulatory closure on June 2, 1986. Given the cross-gradient location and the regulatory status, this facility does not appear to represent a significant potential threat to soil, soil vapor, or groundwater quality at the Site.

5.2 Vapor Encroachment Screening

A vapor encroachment screening (VES) evaluation was performed for the Site using EDR's vapor encroachment condition application (VEC App), which assists in screening for vapor encroachment risk in accordance with ASTM E2600 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions." A "Tier I" VES was performed to evaluate the potential for vapors associated with contaminated soil and/or groundwater to impact the Site, whether originating from the Site or from nearby off-Site sources. For properties where a VEC could not be ruled out, existing subsurface investigation reports, if available, were used to evaluate potential impacts to the Site (Tier 2 screening).

The following table presents a summary of the VES findings:

Potential for Vapor Intrusion on Site	
Areas of Concern	*Conclusion*
Site (existing conditions)	VEC could be present.
Site (former condition)	VEC not present.
Adjoining Property or near-by Property Operations or Existing Conditions	VEC not present.
Historical Uses of Adjoining Property or Near-by Properties	VEC could not be ruled out.

Our review indicates that historic operations at the Site have included the long-term operation of hydraulic trash compactors, a gasoline storage and dispensing AST, and a diesel powered generator with storage of diesel fuel. No documented hazardous materials releases have been identified at any of these features. However, these historic operations are reasonably associated with the use, storage, and potential release of petroleum products, solvents, and/or other hazardous materials. Additionally, 1,000-gallon gasoline UST was identified on historic environmental databases and was listed to have been installed in 1986. Based on the geolocation of the database listings, this tank was potentially located near the intersection of East Gene Autry Way and South State College Boulevard along the western portion of the Site. No Site staff has any knowledge of a UST currently or previously present or operated at the Site. No further information was available regarding this UST including whether it was removed, abandoned, or is still present at the Site.Furthermore, historic occupants of the properties adjacent to the southwest of the have included apparent industrial operations. This constitutes land uses reasonably associated with the use, storage, and potential release of petroleum products, solvents, and/or other hazardous materials. Based on these conditions, a VEC could be present for the subject Site.

5.3 Additional Environmental Record Sources

Northgate contacted local regulatory agencies for information regarding the use or storage of hazardous materials at the Site, and reviewed files at any agency maintaining a file for the subject Site. The following agencies were contacted for information regarding the use or storage of hazardous materials at the Site:

- Department of Toxic Substances Control (DTSC) EnviroStor Website;
- State Water Resources Control Board (SWRCB) GeoTracker Website;
- California Environmental Protection Agency (CalEPA) Website;
- State Water Resources Control Board (SWRCB);
- Santa Ana Regional Water Quality Control Board (SARWQCB);
- Orange County Fire Authority (OCFA);
- Anaheim Fire Department (AFD);
- Orange County Health Care Agency (OCHCA);
- City of Anaheim;
- City of Anaheim, Public Utilities Department (CAPUD), Environmental Services;
- Orange County Public Works (OCPW);
- State of California, Department of Water Resources (DWR);
- South Coast Air Quality Management District (SCAQMD); and
- Oil and Gas Wells.

The results of our review are described in the following sections. Relevant documents pertaining to the agency reviews are located in Appendix D.

5.3.1 Department of Toxic Substances Control (DTSC) EnviroStor Website

The Site is not listed on the Department of Toxic Substances Control (DTSC) EnviroStor website, and thus, there are no files related to the property.

5.3.2 State Water Resources Control Board (SWRCB) GeoTracker Website

The Site is not listed on the State Water Resources Control Board (SWRCB) GeoTracker website, and thus, there are no files related to the property. Northgate submitted a file review request to the SWRCB. The SWRCB did not have any records on file for the subject Site.

Northgate additionally followed up with the SWRCB, provided a copy of the permit to operate a UST from 1986 obtained for the Site, and requested any available records specific to this UST. The SWRCB indicated that they do not have any records associated with any USTs at the subject Site.

5.3.3 California Environmental Protection Agency (CalEPA) Website

The Site is listed on the California Environmental Protection Agency (CalEPA) website as Angel Stadium of Anaheim at 2000 East Gene Autry Way. This listing identifies the Site for the use of water and oil based paints, propane, oxygen, gasoline, diesel, and chemicals including acetylene, carbon dioxide, chlorodifluoromethane, and 1,1,1,2-tetrafluoroethane under the oversight of the Anaheim Fire Department. Violations were noted between 2014 and 2019 related to the facility as a hazardous waste generator, the aboveground petroleum storage at the facility, and the hazardous materials release response plan. No further information was noted; however, no current violations were reported, which indicates all violations were brought into compliance.

The Site is also listed as City National Grove of Anaheim at 2200 East Katella Avenue for the chemical storage of propane, diesel fuel, and liquid carbon dioxide under the oversight of the Anaheim Fire Department. Violations were noted between 2013and 2018 related to the hazardous materials release response plan. No further information was noted; however, no current violations were reported, which indicates all violations were brought into compliance.

The Site is also listed as Verizon Wireless: Angel Stadium at 2000 East Gene Autry Way. This listing is identified as a wireless telecommunications carrier/radiotelephone communication service for the use of lead acid batteries. One violation was noted in 2017 related to the facility's hazardous materials release response plan. No further information was noted; however, no current violations were reported, which indicates that the violation was brought into compliance.

5.3.4 Santa Ana Regional Water Quality Control Board (SARWQCB)

Northgate submitted a file review request to the Santa Ana Regional Water Quality Control Board (SARWQCB). The SARWQCB did not have any records on file for the subject Site. Northgate additionally followed up with the SARWQCB, provided a copy of the permit to operate a UST from 1986 obtained for the Site, and requested any available records specific to this UST. The SARWQCB indicated that they do not have any records associated with any USTs at the subject Site.

5.3.5 Orange County Fire Authority (OCFA)

Northgate submitted a file review request to the Orange County Fire Authority (OCFA). The OCFA indicated that properties within the City of Anaheim are not under the jurisdiction of the OCFA and thus, there are no files related to the property.

5.3.6 Anaheim Fire Department (AFD)

Northgate submitted a file review request to the Anaheim Fire Department (AFD). Files maintained for the AFD were provided by the City of Anaheim for review and included hazardous materials inspection reports between 2007 and 2019. Hazardous materials inspection reports for the Angel Stadium portion of the Site were provided between 2007 and 2019. These reports indicated that this portion of the Site had administrative violations related to failure to update, submit, and/or certify a chemical inventory, failure to update the Site map, failure to submit information to CERS, and failure to certify the hazardous materials business plan. Hazardous materials inspection reports for the indoor music venue and meeting space facility portion of the Site were provided between 2013 and 2018. These reports indicated that this portion of the Site had administrative violations related to failure to maintain a CUPA permit, failure to establish and submit a hazardous materials business plan, and failure to update the chemical inventory. All of these violations for both portions of the Site were noted to have been fixed and returned to compliance.

Northgate additionally followed up with the AFD, provided a copy of the permit to operate a UST from 1986 obtained for the Site, and requested any available records specific to this UST. The AFD indicated that they do not have any records associated with any USTs at the subject Site.

5.3.7 Orange County Health Care Agency (OCHCA)

The Orange County Health Care Agency (OCHCA) maintains database lists online with property addresses identified as permitted AST or UST facilities, hazardous waste facilities, and industrial program cleanup cases. The Site was not listed on any of the databases maintained by the OCHCA. Additionally, Northgate submitted a file review request to the OCHCA. The OCHCA did not have any records on file for the subject Site.

5.3.8 City of Anaheim

Northgate submitted a file review request to the City of Anaheim. The City of Anaheim indicated that available records were maintained for the AFD. A discussion of the regulatory file review is provided above in Section 5.3.6.

5.3.9 City of Anaheim, Public Utilities Department (CAPUD), Environmental Services

Northgate submitted a file review request to the City of Anaheim, Public Utilities Department (CAPUD), Environmental Services. The CAPUD, Environmental Services did not have any records on file for the subject Site.

Northgate additionally followed up with the CAPUD, provided a copy of the permit to operate a UST from 1986 obtained for the Site, and requested any available records specific to this UST. The CAPUD indicated that they do not have any records associated with any USTs at the subject Site.

5.3.10 Orange County Public Works (OCPW)

Northgate submitted a file review request to the Orange County Public Works (OCPW). The OCPWD did not have any records on file for the subject Site.

5.3.11 State of California, Department of Water Resources (DWR)

Northgate reviewed information available online from the State of California, Department of Water Resources (DWR). The DWR had a record of a well completion report located at 2204 East Katella Avenue, associated with the City of Anaheim owned and operated pump house. Information available on the well completion report indicates that it was installed in 2000 to a total depth of 1,410 feet bgs. Subsurface materials were noted to consist mostly of sand with layers of clay and a few layers of gravel. Groundwater was measured at a depth of 113 feet bgs.

5.3.12 South Coast Air Quality Management District (SCAQMD)

Northgate reviewed the SCAQMD's online Facility Information Detail (FIND) database for any files available for the Site. The FIND database contained multiple listings for the Site at 2000 Gene Autry Way for the stadium. The baseball stadium was listed for the storage and dispensing of gasoline in 1983, 1992, and 2015. The 2015 permit for the storage and dispensing of gasoline indicates that a 1,000-gallon AST for gasoline with a dispensing nozzle are operated at the Site. No information was provided in the 1983 permit related to the gasoline storage container type, size, or location. The facility was listed for a minor administrative violation for failure to submit monthly gasoline throughput data in 2018. The stadium was also identified for the operation of an internal combustion engine to operate a diesel-fueled generator in March 1991 and December 2015. The facility was also listed for violations related to dust minimization during surface disturbance operations in 2012 that was returned to compliance. No further information was available.

5.3.13 Oil and Gas Wells

According to the EDR GeoCheck® - Physical Setting Source Addendum located in the Radius report (Appendix C), there is no record of an oil or gas well or related features on-Site or within 1-mile of the Site. Information available on the California Division of Oil, Gas, and Geothermal

Resources website indicates that there are no wells located on the Site. There are no wells that appear to represent an environmental concern to the Site.

5.4 Other Environmental Issues

5.4.1 Floodplain Maps

Northgate viewed an online version of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for Orange County, Panel 0142J. According to the FIRM, the Site is located in Flood Zone X – areas determined to be within the 0.2-percent annual chance floodplain and areas within the 1% annual chance flood with average depths less than one foot or with drainage areas of less than one square mile. However, the Site location is noted to be an area with a reduced flood risk due to the presence of a levee (FEMA, 2009). The Site lies within the 100- and 500-year flood zones.

5.4.2 Radon

According to the EDR Radius Report (Appendix C), the federal Environmental Protection Agency (EPA) radon zone for Orange County is Zone 3 (indoor average level less than 2 pCi/L).

The State of California Division of Drinking Water and Environmental Management maintains a database of radon test results indicating that one sample collected in the 92806 zip code, California, in the living area-first floor, did not exceeded 4 pCi/L. The DHS and the EPA recommend that some form of mitigation be conducted for houses with indoor radon concentrations of 4 pCi/L or greater.

These results indicate that radon gas does not appear to constitute a significant environmental concern at the Site.

5.5 Land Use History

Information on historical land use at the Sites and adjacent area was evaluated by reviewing historic aerial photographs, maps, and other documents. A summary of our investigation findings is presented below.

5.5.1 Aerial Photographs

Northgate reviewed historic aerial photographs of the Sites from 1938, 1947, 1963, 1966, 1972, 1977, 1987, 1989, 1990, 2005, 2009, 2012, and 2016 obtained from EDR (EDR, 2020c). Copies of the aerial photographs are provided in Appendix E. A summary of our aerial photograph review is presented below.

Year: 1938	**Scale:** 1" = 500'	**Source:** USDA
Site Description: The riverbed for the Santa Ana River is shown to extend through the eastern portion of the Site extending from north to south. The remainder of the Site is occupied by orchards with several dirt roads.		
North:	A railroad, then a road followed by orchards.	
East:	The Santa Ana River and riverbed followed by orchards.	
South:	Orchards and the Santa Ana River and riverbed.	
West:	Orchards and a road.	

Year: 1947	**Scale:** 1" = 500'	**Source:** FAIR
Site Description: The Site appears similar to the 1938 photograph, except that the riverbed had been graded and is being used for crop production.		
North:	Appears similar to the 1938 photograph.	
East:	Appears similar to the 1938 photograph.	
South:	Orchards and the graded riverbed of the Santa Ana River.	
West:	Appears similar to the 1938 photograph.	

Year: 1952	**Scale:** 1" = 500'	**Source:** USDA
Site Description: The Site appears similar to the 1947 photograph.		
North:	Appears similar to the 1947 photograph.	
East:	Appears similar to the 1947 photograph.	
South:	Appears similar to the 1947 photograph, except that residential development is present farther southwest of the Site.	
West:	Appears similar to the 1947 photograph.	

Year: 1963	**Scale:** 1" = 500'	**Source:** USGS
Site Description: The Site appears similar to the 1952 photograph, except that a railroad extends through the western portion of the Site extending from north to south.		
North:	Appears similar to the 1952 photograph, except that a road is now present adjacent to the northwest of the Site and limited commercial development are now shown farther northwest of the Site	
East:	Appears similar to the 1952 photograph.	
South:	Vacant land and limited development that appears to be industrial facilities are present adjacent to the southwest of the Site followed by orchards and the graded riverbed (used for crop production) of the Santa Ana River. Residential development is located farther southwest of the Site.	
West:	Orchards with limited residential development adjacent to the northwest followed by a road then vacant land and limited commercial development.	

Year: 1966	**Scale:** 1" = 500'	**Source:** USGS
Site Description: The Site is in the construction phase for development with a professional baseball stadium in the central portion of the Site. The remainder of the Site is occupied by asphalt paved surface parking lots. The northeastern corner and a portion of the northwestern corner are shown as vacant land graded for development. A small structure is present in this northwestern area, which may be associated with temporary construction offices for the redevelopment at the Site. A small orchard is still present in the northeastern corner of the Site. The railroad track has been abandoned through the center of the Site extending from north to south.		
North:	Appears similar to the 1963 photograph.	
East:	A road is present adjacent to the northeast followed by vacant land and the Santa Ana River followed by orchards.	
South:	Development adjacent to the southwest appears to be industrial in nature and followed by a road then vacant land, a small orchard, and limited commercial development.	
West:	Unmapped area.	

Year: 1972	**Scale:** 1" = 500'	**Source:** USGS
Site Description: The Site is fully developed with the completed professional baseball stadium in the central portion of the Site. The remainder of the Site is occupied by asphalt paved surface parking lots with landscape along the perimeter entrance on the western portion of the Site. Vacant graded land is present in the northeastern and northwestern corners of the Site.		
North:	A railroad, then a road followed by vacant land and limited commercial development.	
East:	Vacant land, a road, and parking lot to the northeast followed by the channelized Santa Ana River then orchards.	
South:	Apparent industrial development with parking adjacent to the southwest of the Site followed by a road then additional commercial development followed by residential development. Dirt trails and a water retention pond are mapped to the southeast.	
West:	Paved parking lots with two commercial structure adjacent to the northwest followed by a road then commercial development with some vacant land.	

Year: 1977	**Scale:** 1" = 500'	**Source:** EDR
Site Description: The Site appears similar to the 1972 photograph.		
North:	A railroad followed by land graded for redevelopment and commercial development.	
East:	The California State Route 57 freeway followed a parking lot then the channelized Santa Ana River.	
South:	Appears similar to the 1970 photograph.	
West:	Appears similar to the 1970 photograph.	

Year: 1987	**Scale:** 1" = 500'	**Source:** USDA
Site Description: The Site appears similar to the 1977 photograph, except that the baseball stadium in the central portion of the Site has been developed to extend the outfield portion slightly towards the northeast. A large letter A billboard is present in the surface parking area in the eastern corner of the Site near the California State Route 57 freeway and the Santa Ana River. A billboard is located in the northwestern portion of the Site near the former railroad track and the northern perimeter of the Site. A ponded area for apparent surface runoff is present in the northwestern corner of the Site near the railroad tracks.		
North:	Appears similar to the 1977 photograph.	
East:	Appears similar to the 1977 photograph.	
South:	Apparent industrial development adjacent to the southwest has expanded followed by a road then additional commercial development with residential development farther south and southwest of the Site.	
West:	Paved parking lots with expanded commercial development adjacent to the northwest followed by a road then commercial development. The area appears fully developed with commercial development.	

Year: 1989	**Scale:** 1" = 500'	**Source:** USDA
Site Description: The Site appears similar to the 1987 photograph, except that the vacant land in the eastern corner near the letter A billboard is partially occupied by aboveground facilities that appear to include storage tanks and equipment.		
North:	A railroad followed by commercial development. Limited vacant land is still present to the northwest of the Site.	
East:	Appears similar to the 1987 photograph.	
South:	Appears similar to the 1987 photograph except that additional commercial development is present to the southwest of the Site.	
West:	Appears similar to the 1987 photograph.	

Year: 1990	**Scale:** 1" = 500'	**Source:** USDA
Site Description: The Site appears similar to the 1989 photograph**,** except that construction trailers are present on the surface parking lot areas in the eastern portion of the Site to the east of the stadium.		
North:	Appears similar to the 1989 photograph.	
East:	Appears similar to the 1989 photograph.	
South:	Appears similar to the 1989 photograph.	
West:	Appears similar to the 1989 photograph.	

Year: 1995	**Scale:** 1" = 500'	**Source:** USGS/DOQQ
Site Description: The Site appears similar to the 1990 photograph, except that the northeastern and northwestern corners have been paved.		
North:	Appears similar to the 1990 photograph.	
East:	Appears similar to the 1990 photograph.	
South:	Appears similar to the 1990 photograph.	
West:	Appears similar to the 1990 photograph.	

Year: 2005	**Scale:** 1" = 500'	**Source:** USDA/NAIP
Site Description: The Site appears similar to the 1995 photograph, except that a commercial structure is now located in the northwestern corner of the Site with the remainder of the area occupied by asphalt paved surface parking lots. A potential excavation area, noted by the rectangular cut and fill in the asphalt, is present in the northwestern portion of the Site near the former billboard, which is no longer shown, to the east of the commercial structure and just east of the former railroad track. There is a potential this could be the area associated with the documented UST at the Site. The equipment storage area in the northeastern portion of the Site appears to have expanded slightly.		
North:	Appears similar to the 1995 photograph except that commercial development has expanded and the area appears fully developed.	
East:	Appears similar to the 1995 photograph.	
South:	Appears similar to the 1995 photograph.	
West:	Appears similar to the 1995 photograph, except that an additional commercial structure is now present adjacent to the northwest of the Site.	

Year: 2009	**Scale:** 1" = 500'	**Source:** USDA/NAIP
Site Description: The Site appears similar to the 2005 photograph.		
North:	Appears similar to the 2005 photograph.	
East:	Appears similar to the 2005 photograph.	
South:	Appears similar to the 2005 photograph, except that apparent industrial development adjacent to the southwest of the Site has been partially demolished and replaced by vacant land and additional residential development has replaced parking areas farther south of the Site.	
West:	Appears similar to the 2005 photograph, except that a residential apartment development and a commercial structure are now present adjacent to the northwest of the Site and some commercial development west of the road has been demolished and the vacant land has been graded for redevelopment.	

Year: 2012	**Scale:** 1" = 500'	**Source:** USDA/NAIP
Site Description: The Site appears similar to the 2009 photograph.		
North:	Appears similar to the 2009 photograph.	
East:	Appears similar to the 2009 photograph.	
South:	Appears similar to the 2009 photograph.	
West:	Appears similar to the 2009 photograph.	

Year: 2016	**Scale:** 1" = 500'	**Source:** USDA/NAIP
Site Description: The Site appears similar to the 2012 photograph.		
North:	Appears similar to the 2012 photograph.	
East:	Appears similar to the 2012 photograph.	
South:	Appears similar to the 2012 photograph, except vacant land adjacent to the southwest is being redeveloped.	
West:	Appears similar to the 2012 photograph.	

5.5.2 Sanborn Maps

No Sanborn Map coverage is available for the subject Site or surrounding properties. A copy of the Sanborn Map coverage statement is provided in Appendix F (EDR, 2020d).

5.5.3 Topographic Maps

Northgate reviewed historic topographic maps for the Site obtained from EDR for the years 1896, 1898, 1901, 1902, 1932, 1935, 1942, 1949, 1950, 1964/19652, 1972, 1981, and 2012. Copies of the topographic maps are provided in Appendix G (EDR, 2020e). Information from the topographic maps is summarized below.

Quadrangle:	Anaheim	**Scale:** 1:62,500	**Series:** 15 Minute
1896:	The Site is shown as vacant land with a portion of the Santa Ana River and the adjacent riverbed mapped through the eastern portion of the Site flowing from north to south extending off Site. A railroad is located adjacent to the north of the Site. A grid of street and limited development is mapped to the east and southeast of the Site. The topography generally slopes gently towards the southwest.		
1898:	The Site and vicinity appear similar to the 1896 map.		
1901:	The Site and vicinity appear similar to the 1898 map, except that an additional railroad line is mapped farther northwest of the Site.		
Quadrangle:	Corona	**Scale:** 1:125,000	**Series:** 30 Minute
1902:	The Site and vicinity appear similar to the 1901 map.		
Quadrangle:	Orange	**Scale:** 1:31,680	**Series:** 7.5 Minute
1932:	The Site and vicinity to the north, south, and west are unmapped. The Site vicinity to the east appears similar to the 1902 map.		

Quadrangle:	Garden Grove/Orange	**Scale:** 1:62,500	**Series:** 7.5 Minute
1935:	The Site appears similar to the 1902 map and is shown as vacant land. The Site vicinity appears similar to the 1902 and 1932 maps except that the Santa Ana River to the east has been channelized and residential and commercial development have expanded in the area. A freeway is now mapped to the southwest of the Site.		
Quadrangle:	Anaheim	**Scale:** 1:50,000	**Series:** 15 Minute
1942:	The Site is fully occupied by an orchard. A road extends partially onto the northwestern portion of the Site. The vicinity is also primarily occupied by orchards with a grid of intersecting streets and limited residential development mapped in the area. Commercial development is mapped farther southeast of the Site. The United States 101 Freeway is now mapped farther to the west of the Site.		
Quadrangle:	Orange/Anaheim	**Scale:** 1:24,000	**Series:** 7.5 Minute
1949:	The Site and vicinity appear similar to the 1947 map except that sand pits are now identified to the northeast of the Site along the Santa Ana River.		
1950:	The Site and vicinity appear similar to the 1949 map.		
1964/1965:	The Site is developed with a professional baseball stadium in the central portion of the Site. A railroad line extends through the western portion of the Site from north to south. Power lines are present through the southeastern portions of the Site. An orchard is still present on the northwestern corner of the Site. The Site vicinity is primarily shown as orchards in the immediate Site vicinity with commercial and residential development farther from the Site. Development has expanded in the Site vicinity. The City of Orange is identified to the south of the Site. A substation and a well are mapped to the northwest of the Site in South Anaheim.		
1972:	The Site and vicinity appear similar to the 1964/1965 map, except that areas occupied by orchards have reduced and residential and commercial development have expanded in the area.		
1981:	The Site appears similar to the 1972 map. No orchards are mapped in the Site vicinity and the area has been developed with commercial development with residential development mapped farther from the Site. The Interstate 57 freeway is now mapped to the east of the Site		
2012:	The Site and vicinity appear similar to the 1981 map and are mapped as high-density urban development.		

5.5.4 City Directories

Northgate reviewed a summary of local city directory listings for the Site and nearby vicinity available at approximate five year intervals from 1966 to 1995 obtained from EDR. A copy of the EDR city directory search is provided in Appendix H (EDR, 2020f). The Site has historically been identified as the Angels Baseball Stadium since 1970. Additional listings associated with the baseball stadium have included restaurants, concession facilities, banquet rooms, general business offices, ticket offices, and sporting events held at the stadium.

Listings in the vicinity of the Site consisted primarily of commercial development. These listings primarily included business offices and restaurants. The Southern California Gas Company was identified across South State College Boulevard to the west of the Site between 1966 and 1995. Listings in the Site vicinity determined to be of potential environmental concern to the subject Site are described in detail in Section 5.1.2.

5.5.5 Land Use Summary

Based upon our review of available historic documents obtained from EDR and publically available information from several online search engines, a summary of the historic land use of the Site follows. Prior to the development of the baseball stadium, which still currently occupied the property, the entire Site was occupied by orchards with a portion of the riverbed for the Santa Ana River, later graded for row-crops, extending through the eastern portion of the Site. The orchards reportedly consisted of citrus, and eucalyptus trees (BD, 2016) and the row crops consisted of corn. The Santa Ana River was channelized by 1935 and the riverbed that extended into the eastern portion of the Site was graded, and as previously mentioned, used for crop production. The land use remained unchanged until the early 1960s. A railroad track was constructed in the western portion of the Site between 1962 and 1963. This railroad track entered the Site from the adjacent industrial development to the southwest and extended from south to north to connect with the existing railroad track located adjacent to the north of the Site. The location of this railroad track remains visible in aerial photographs and on historic topographic maps through 1981; however, particularly given the location near the main entry road to the stadium, it is unlikely that the railroad was used during operations of the baseball stadium and more likely that is was present but not used and/or paved over during or after development of the baseball stadium (EDR, 2020c and EDR, 2020e).

Construction of the baseball stadium began on August 31, 1964 and was completed in 1966 with the first baseball game held on April 19, 1966. At this time, the stadium consisted of three tiers with a total of 43,204 seats. At the time of opening of the stadium, it was utilized by both a baseball and a football team for professional sporting events. By 1980, the stadium was expanded to better accommodate both sports and added nearly 23,000 seats for a total of 65,158 seats and new executive and media boxes and a sound system were added to the stadium. Additionally, the large letter "A" structure was moved from the stadium to the southeastern portion of the parking lot at this time. In January 1994, the Northridge earthquake caused damage primarily a result of the large "Jumbotron" screen in left field breaking off from the top of the stadium into the upper deck and destroying approximately 800 seats. After their season ended in 1994, the football team moved out of the stadium and renovations began at the stadium in 1996 to convert it to a baseball only facility and upgrade the stadium. The renovation work was primarily conducted in the centerfield and outfield areas in the northeastern portion of the

Site, which was completed in 1997. The renovation work included converting outfield seats to bleachers, adding video display boards, adding a water feature outside of the centerfield area, changing out the color of the seats throughout the stadium, painting the exterior concrete structure and ramps, and constructing a plaza outside of the stadium behind the home plate area in the southwestern portion of the Site. The baseball stadium has remained unchanged and includes the baseball field, seating, dining and food services, facilities maintenance areas, and parking surrounding the stadium (BoB, 2020).

In 1998, the northwestern portion of the Site was redeveloped with a commercial structure that was originally occupied by Tinseltown Studios, an awards show themed venue, prior to being converted to a music and concert venue in 1999. The venue changed names from The Sun theatre in 1999 to The Grove of Anaheim in 2002 and finally to City National Grove of Anaheim in 2011. The theatre consists of a 1,700-seat facility that is primarily utilized as an entertainment venue for musical performers. In 2002, the facility began hosting community and private events, family shows, and comedy shows (CNGA, 2020). This commercial structure is still present in the northwestern portion of the Site and has remained unchanged.

5.6 Interviews

5.6.1 Owner Interview

The Site was formerly owned by the City of Anaheim until recently sold to the owner of the Angels baseball franchise. The current owner was interviewed via a written response from their General Counsel to a Phase I ESA Questionnaire provided by Northgate. A summary of the responses to the questionnaire is provided in Section 4.4 above. A copy of the questionnaire is included in Appendix B.

5.6.2 Key Site Manager Interview

The previous facilities manager, Mr. Mike McKay, and the current facilities manager, Mr. Jose Padilla, were interviewed during a Site meeting on January 9, 2020. Mr. McKay previously worked in facilities maintenance for the Site for 35 years and Mr. Padilla is currently working in facilities maintenance for the Site. Relevant information related to the structures and Site use is incorporated into the Site reconnaissance section below.

Mr. McKay and Mr. Padilla indicated that all hazardous materials have historically been stored in the internally named “Packer Area” located in the northeastern portion of the Site within the parking lot of the Site. This area is a fenced enclosure that includes hydraulic trash compactors, a 1,000-gallon gasoline AST, a propane AST, and dumpsters. Mr. McKay indicated that this area has never been connected to the sanitary sewer system.

Mr. McKay and Mr. Padilla indicated that with the exception of utilities, they were not aware of any underground features at the Site including any USTs. Mr. McKay noted that power lines were previously present along the southern portion of the Site. He also indicated that water is used to wash down the stadium and stadium seating after event that is connected to sewer. Mr. McKay and Mr. Padilla noted that subsurface sewer lines are located along the exterior perimeter of the stadium. Mr. McKay informed us that a former water production well was previously abandoned and was located in the asphalt paved parking lot located south of the baseball stadium.

Mr. McKay and Mr. Padilla indicated that dirt is stockpiled in the northeastern corner of the Site in a fenced enclosure that is transported into the baseball stadium and temporarily used for events including truck and motorcycle events and races. After these events are completed, the soil is transported back to the enclosure and stockpiled until needed again. Northgate was informed by Mr. McKay and Mr. Padilla that a train station platform was previously located along the northern portion of the property but that this area is not part of the subject Site.

5.6.3 User Interview

The User is also the owner and manager of the Site. Northgate interviewed Mr. Calvin Ching, Mr. Nathan Bautista, and Mr. Jose Padilla during a reconnaissance of the stadium portion of the Site performed on February 24, 2020 and further interviewed Mr. Padilla during a reconnaissance of the indoor music venue and meeting space facility portion of the Site, identified as City National Grove of Anaheim, performed on March 16, 2020. Relevant information related to the structures and Site use is incorporated into the Site reconnaissance section below. Additional information from the Site owner and manager are included in the preceding sections.

5.7 Previous Reports

Northgate was not provided with any previous reports prepared for the Site.

6.0 SITE RECONNAISSANCE

Current Site conditions were observed during a reconnaissance of the Site and near vicinity by Ms. Nicky Robinson of Northgate on February 24, 2020 and by Mr. Ricardo Munoz of Northgate on March 16, 2020. Ms. Robinson and Mr. Munoz were escorted by Mr. Jose Padilla during the reconnaissance of the Site on both dates. Site photographs from the reconnaissance are attached at the end of this report. Features identified during the Site reconnaissance are identified on Figure 3.

6.1 Methodology and Limiting Conditions

The Site reconnaissance was performed by traversing the Site on foot and the general Site vicinity by car. Northgate was unable to access a small structure occupied by a pump house, which is owned and operated by the City of Anaheim. There were no limiting conditions.

6.2 General Site and Vicinity Conditions

6.2.1 Site

The Site is bound by a railroad track to the northeast, the Interstate 57 freeway to the east, the Santa Ana River to the southeast, East Orangewood Avenue to the south, South State College Boulevard to the west and East Katella Avenue to the northwest in Anaheim, California. Two structures are present on the Site located in the center and northwestern corner of the Site. The structure in the center portion of the Site is identified as the Angel Stadium of Anaheim that is used for professional baseball games and other professional sporting events. The structure in the northwestern portion of the Site is identified as City National Grove of Anaheim, a music and performing arts venue. The reminder of the Site is occupied by asphalt paved parking areas. Descriptions of key components of the Site are provided in the sections below.

City National Grove of Anaheim Facility

The northwestern portion of the Site is occupied by an approximate 27,500-square foot two-story building identified as City National Grove of Anaheim located at 2200 East Katella Avenue. The structure is occupied by an indoor music venue and meeting space facility, a commercial kitchen, office spaces, and storage areas.

The second story of the building is occupied by office spaces. A hydraulic powered elevator is utilized in this area. No leaks or staining indicative of a release was noted in the vicinity of the hydraulic tank. A traction powered lift is used by the stage for wheelchair access. North of the Site building is an enclosed fenced area used for equipment storage. This area included the use

of multiple shipping containers used for storage of equipment such as chairs, linens, tables, dishware, kitchen supplies, heaters, custodial equipment, vacuums, trashcans, to name a few. One shipping container stored gallon-sized containers of bleach, dish soap, floor sealer, pesticides, glass cleaner, and other general cleaning solutions. The enclosed area also included the storage of propane tanks, a fire cabinet which stored oils, lubricants, aerosols, paints, and other flammable chemicals, a grease bin, and a trash bin for cardboard. Northeast of the enclosure is a trash bin for food waste. East of the Site building is a transformer owned and operated by Southern California Edison. No leaks or staining indicative of a release was noted. A backup generator was also observed in this area. According to Mr. Padilla, the backup generator holds approximately 60 gallons of diesel fuel and is serviced by a contractor. A hydraulic powered trash compactor is also located east of the Site building. No leaks or staining indicative of a release was observed in the vicinity of the hydraulic tank. South of the Site are low areas that utilize stormwater drains and a sump pump.

A structure located to the east of The Grove structure is owned and operated by the City of Anaheim. This structure could not be accessed at the time of the reconnaissance. Northgate was informed that this structure is a pump house for stormwater. No further information was available.

Angel Stadium of Anaheim

A baseball stadium occupies the central portion of the Site and includes a basement level below the perimeter of the stadium, an additional second subterranean level below the southwestern portion of the stadium behind home plate, and four-levels of above ground seating, food and beverage concessions and restaurants, offices, and storage areas. The upper four-levels of the stadium, located aboveground, are primarily occupied by seating and bleachers for viewing sporting events at the stadium. The seats are located along three-quarters of the perimeter of the stadium with the exception of the northeastern portion of the stadium, behind center field, which is occupied by a waterfall feature and a single level for seating and concessions. Restrooms are located throughout each level of the stadium. Food and beverage concession stands and restaurants are located along the perimeter of each level of the seating areas. The establishments were not open at the time of the reconnaissance so no food production or service was being conducted. Northgate was informed that there is no grease trap or tank at the facility so each food service vendor would have their own grease bin for off-Site removal, when operational. Beverage services include the use of cylinders of compressed carbon dioxide for carbonated beverage services. The central portion of the stadium is occupied by a baseball stadium comprised of grass and dirt cover. Additionally, corporate offices for the Anaheim Angels baseball franchise are located along the exterior of the southeastern portion of the stadium. In

general, the corporate office portion of the stadium includes offices, conference rooms, hallways, storage rooms for office supplies, restrooms, and small kitchens. Hydraulic elevators are present throughout the stadium with equipment located in equipment rooms on the lower levels of the stadium. No stains or leaks were observed at any of the hydraulic pump equipment assemblies associated with the elevators. No hazardous materials or wastes were observed to be generated, stored, or used in these portions of the Site.

A subterranean level is present below the seating areas along the perimeter of the stadium. This level primarily includes offices, work areas, and storage for facilities maintenance and concession services. A paint shop is located in the northwestern portion of this level of the stadium outside of left field. It contains dozen of flammable cabinets for the storage of paint for facilities maintenance and improvement all in containers less than five-gallons each. A 55-gallon steel drum is stored in this area for the accumulation of waste paint. This drum is transported off-Site for disposal. Safety Data Sheets for all paint and supplies stored in this portion of the Site are stored in a binder in the paint room. Other rooms in the vicinity of the paint shop in the northwestern portion of the Site are occupied by a maintenance area, an electrical shop, a trash room, a plumbing shop, a carpentry shop, lumber and tools storage, equipment storage, and a locker room. The maintenance area performs minor repairs on golf carts and scooters used to transport personnel and equipment around the Site. A 55-gallon steel drum is stored in this area for the storage of waste oil. This drum is transported off-Site for disposal. There were no drains in this area, no evidence of stains, leaks, or spills, and no hazardous materials or wastes were observed to be generated, stored, or used in this portion of the Site. Generally, small or handheld tools were stored and used throughout the maintenance area, plumbing shop, and carpentry shop. A wash area room is also present in this portion of the subterranean level of the stadium for cleaning equipment with a drain that reportedly connects to the storm drain system. Additionally, offices and electrical rooms are located in the northwestern portion of this level of the stadium for use by facilities maintenance personnel.

Offices, locker rooms, restrooms, and equipment storage areas are located on the first subterranean level beneath the southwestern portion of the stadium behind home plate. This area also includes an electrical room with transformers, weight and gym areas for physical fitness for the baseball team, and hallways. Storage areas are located in the southeastern portion of this level below the stadium outside of right field primarily utilized by the stadium's concession services. This area includes storage for dry goods and food, beverages, janitorial cleaning supplies, a walk in refrigerator room, a walk-in freezer room, and general storage areas for event equipment and supplies. Cylinders of compressed carbon dioxide for beverage services of carbonated beverages are stored in this area. A former trash storage room is located in this area that has reportedly not been used for many years and is currently used for the storage of

beverages. Ice machines and a grease storage bin for food production operations are also present in this area. Minor, de minimis staining is present in the former trash room on the floor and near the grease storage bin. An electrical room and restrooms are also present in this area. A masonry enclosed reservoir for the storage or water for the fountain features located outside of centerfield in the northern portion of the stadium. Pumping and water treatment equipment are also stored near the water reservoir. No hazardous materials or wastes were observed to be generated, stored, or used in these portions of the Site.

An additional underground level is present below the perimeter of the southwestern portion of the stadium behind home plate. This level is occupied by suites for players and spectators at the stadium which includes a private room, seating, and food and beverage services. An indoor batting cage area for baseball players to practice is also located in this area. A sump and sump pump for stormwater are present beneath the batting cage that collects drainage from the field and stadium and pumps it to the storm drain system in the surrounding parking lot outside the stadium. This sump is only used for storm water collection.

"Packer Area" at Angel Stadium of Anaheim

A fenced area located in the eastern portion of the Site for the storage of dumpsters and equipment is internally identified as the "Packer Area," based on the presence of hydraulic trash compactors. Mr. McKay and Mr. Padilla indicated that all equipment has historically been stored in this area and the location has remained unchanged. Several dumpsters are stored in this area for trash and recyclable materials that are transported out of the Angel Stadium structure for later removal from the Site. In addition to the hydraulic compactors, all trash and recyclable materials are stored in this area.

Enclosed areas in the southern portion of the "Packer Area" are used for the storage of hazardous materials. This area includes a flammable cabinet filled with two 55-gallon drums for the storage of gasoline. An approximate 250-gallon AST for diesel is located in this area within a walled enclosure without secondary containment. An approximate 2,000-gallon propane AST is located adjacent to the "Packer Area" for refueling propane containers that fuel forklifts used around the Site.

Concrete and asphalt in the "Packer Area" are in poor condition with cracking present. Staining is present throughout this area, predominantly in the vicinity of the hydraulic compactors.

Other Exterior Areas

A former railroad platform station is located along the northern perimeter of the Site with associated surface parking. Northgate was informed that this area is not included within the boundaries of the subject Site. Transformers are also present in the north and northwestern parking lot area of the Site, which are located on concrete pads and owned and operated by Southern California Edison. No leaks or stains were observed from the transformers. A fenced area located in the northeastern portion of the Site is utilized for the storage of dirt used for professional automobile events at the Angel Stadium. Material is transferred from this area into the stadium for event and then transported back to this area and stored for future events. The material is transferred using standard construction equipment and compacted within the fenced and enclosed area for future use. Northgate was informed that this material was imported to the Site and has been used for many years.

A large "A" structure is located in the southwestern portion of the Site in the parking area of the Site that is used for advertising. Mr. McKay and Mr. Padilla informed Northgate that a former water well was abandoned in the southern portion of the Site. An asphalt patch is visible in this area and Mr. Padilla noted that the area around the well previously sunk down and the surface cover had to be restored. A former railroad track historically entered the Site from the former industrial operations adjacent to the southwest of the Site and extended through the western portion of the Site to the northern perimeter. The former track is no longer present, but the location of the former connection from the adjacent property to the southwest is marked by a fenced area extending into the subject Site.

The primary entrance to the Site is located along the western portion of the Site from South State College Boulevard. Numerous utilities, including a high pressure gas line, a sewer line, and a storm drain, are located beneath this road providing services to the Angel Stadium and its facilities. A landscaped are is also located along the western portion of the Site along South State College Boulevard. A fenced enclosure with electrical equipment identified as owned and operated by Southern California Edison is also present in this area. Additionally, a 1,000-gallon gasoline UST was identified on historic environmental databases and was listed to have been installed in 1986. Based on the geolocation of the database listings, this tank was potentially located in this area near the intersection of East Gene Autry Way and South State College Boulevard along the western portion of the Site. No Site staff has any knowledge of a UST currently or previously present or operated at the Site. No evidence of a current or former UST was observed in this area or in any other portion of the Site. Historic aerial photographs indicate a potential excavation in the late 1980s in the parking area in the northwestern portion of the Site, which may be another potential location for the UST. No further information was available

regarding this UST including whether it was removed, abandoned, or is still present at the Site. A loading dock area is present outside to the northwest of the stadium. A diesel-fired backup generator is present in this area.

The remainder of the Site is occupied by asphalt paved parking areas and driveways. De minimus staining was present throughout the parking areas. No hazardous wastes, materials, or chemicals were observed to be stored, generated, or used in any of these portions of the Site.

6.2.2 Site Vicinity

The Site is generally pentagonal in shape with the exception of portions of the contiguous land to the southwest and northwest of the Site that are not included in the subject Site boundary. The Site is bordered to the northeast by a railroad track followed by commercial development then the Interstate 57 freeway followed by additional commercial development. To the east, the Site is bordered by a narrow easement for the Santa Ana River Trail followed by the Interstate57 freeway then the concrete-lined, channelized Santa Ana River and commercial development. A railroad, train station, and transit center are located to the east of the Interstate 57 freeway and to the northeast of the Site. East Orangewood Avenue followed by commercial development then the concrete-lined, channelized Santa Ana River border the Site to the South. The Interstate 5 freeway and California State Route 22 are located farther south of the Site. Residential development and a former railroad spur are located adjacent to the Site to the southwest of the Site and to the northeast of the intersection of East Orangewood Avenue and South State College Boulevard. The Site is bordered to the west by South State College Boulevard followed by mixed residential and commercial development then the Interstate 5 freeway and additional commercial development. A commercial office building and a residential multi-family development with associated paved surface parking lots are located adjacent to the west and northwest of the Site and to the southeast of the intersection of South State College Boulevard and East Katella Avenue. The Site is bordered to the northwest by East Katella Avenue followed by commercial development then a railroad and additional commercial development. The Site is located in an area that generally includes residential and commercial development.

7.0 PHASE I ESA CONCLUSIONS

Northgate has performed a Phase I ESA of the Angel Stadium of Anaheim property located at 2000 East Gene Autry Way and 2200 East Katella Avenue in the City of Anaheim, California. The purpose of the investigation is to identify the potential presence of RECs at the Site.

A REC refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following RECs were identified during the course of this assessment:

- Historic Site operations in the northeastern portion of the Site have included the long-term operation of hydraulic trash compactors, a gasoline storage and dispensing AST, and a diesel powered generator with storage of diesel fuel. No documented hazardous materials releases have been identified at any of these features. However, these historic operations are reasonably associated with the use, storage, and potential release of petroleum products, solvents, and/or other hazardous materials.
- A 1,000-gallon gasoline UST was identified on historic environmental databases and was listed to have been installed in 1986. Based on the geolocation of the database listings, this tank was potentially located near the intersection of East Gene Autry Way and South State College Boulevard along the western portion of the Site. Another potential location for this UST was identified to the in the northwestern portion of the Site near the former railroad track where a potential excavation area was identified on a 2005 aerial photograph. No Site staff has any knowledge of a UST currently or previously present or operated at the Site. No further information was available regarding this UST including whether it was removed, abandoned, or is still present at the Site.

A Controlled Recognized Environmental Condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Northgate did not identify any CRECs during the course of this assessment.

An HREC refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following HRECs were identified during the course of this assessment:

- Northgate did not identify any HRECs during the course of this assessment.

A business environmental risk is defined by ASTM E 1527-13 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations. Our review identified the following potential business environmental risks:

- Soil is stockpiled in the northeastern corner of the Site that is transported into the stadium and used temporarily for automobile events including truck and motorcycle racing. The soil is transported back to this area after the event is completed and stockpiled until needed again. Given that the soil is used for creating drivable areas routinely used by automobiles and motorcycles, there is a potential for hydrocarbons to be present in some of this material. The potential presence of hydrocarbons in this soil would not likely represent a significant impact to current use of the Site. However, the hydrocarbons, if present, could potentially necessitate the removal and disposal of the soil at a designated facility that accepts such material at a time when removal of the soil is desired.
- Based on the age of the stadium structure at the Site, it is possible that ACMs and LBPs are potentially present in building materials within the structure.
- The Site was occupied by agricultural orchards from at least the late 1930s through the mid-1960s. Pesticides and/or herbicides could potentially be present in shallow soil at the Site related to this historic agricultural land use. The potential presence of pesticides in soil would not likely represent a significant impact to current use of the Site. However, the pesticides, if present, could potentially impact any future redevelopment of the Site.
- A railroad track previously extended through the western portion of the Site. Pesticide use was typically associated with historic railroad tracks and spurs. The potential presence of pesticides in soil would not likely represent a significant impact to current use of the Site; however, pesticides, if present, could potentially impact future redevelopment at the Site.
- Potential historic industrial and/or manufacturing facilities were historically located adjacent to the southwest of the Site with the railroad track extending from these facilities through the subject Site.
- The Site is located adjacent to the California State Route 57 freeway that has operated as a freeway since the late 1970s. Shallow soil in areas of the Site located in close proximity to the freeway could potentially contain elevated levels of lead related to fallout from automobile exhaust prior to the ban on leaded gasoline in the 1990s. Similarly, the railroad track could potentially contain pesticides in shallow soil. The potential presence of lead and/or pesticides in soil would not likely represent a significant

impact to current use of the Site; however, the lead and/or pesticides, if present, could potentially impact future redevelopment at the Site.

Based on the results of this Phase I ESA and the proposed redevelopment of the Site to include residential and commercial development in addition to potential underground parking, Northgate recommends that a Phase II ESA be conducted at the Site.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Nicky G. Robinson, PE, QSD/QSP
Senior Engineer

Derrick S. Willis
Principal

Qualifications of the Environmental Professionals are provided in Appendix I.

SITE PHOTOGRAPHS

1. View of the Site and entrance from the northwest along East Katella Avenue – view facing southeast.

2. View of the Site from main entrance from the northwest along East Katella Avenue – view facing southeast.

3. View of the baseball stadium in the central portion of the Site – view facing south.

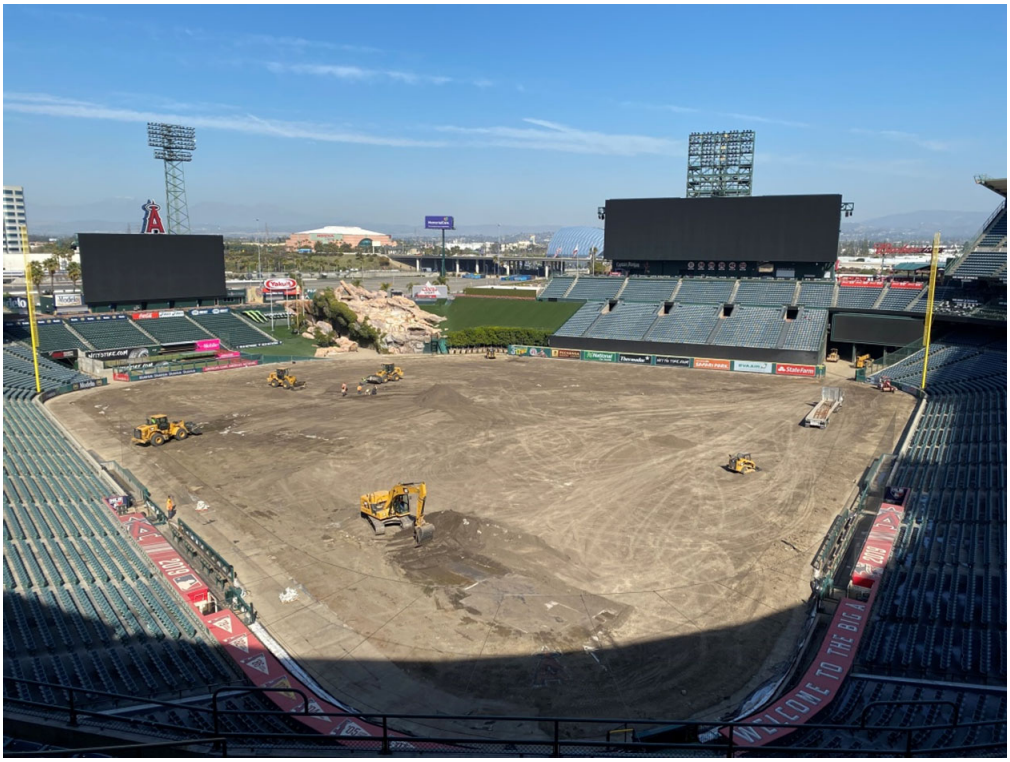
4. View of the northeastern portion of the Site and main entrance to the Site from South Douglass Road to the northeast – view facing east.

5. View of the baseball stadium in the central portion of the Site – view facing north.

6. View of southwestern portion of the Site and main entrance to the Site from East Orangewood Avenue to the south – view facing north.

7. View of the baseball stadium in the central portion of the Site – view facing northeast.

8. View of western portion of the Site and main entrance to the Site from South State College Boulevard to the west – view facing east.

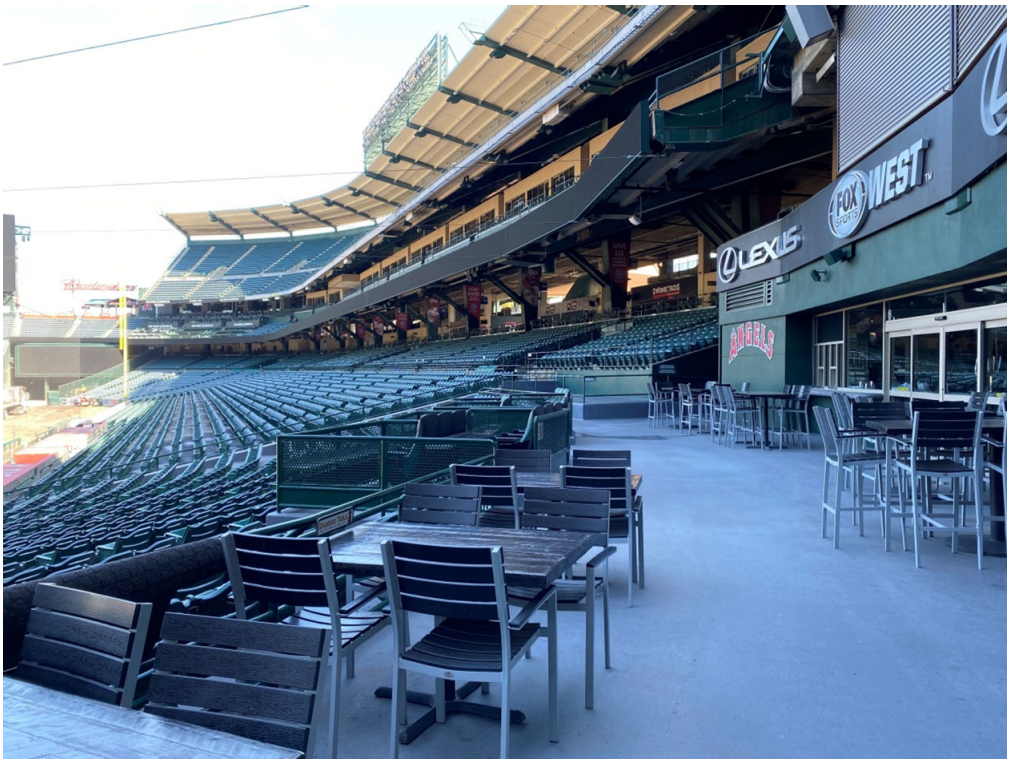


9. View of the interior of the baseball stadium occupied by a baseball field, currently covered in dirt being removed after a truck sporting event, surrounded by four levels of seating – view facing northeast.

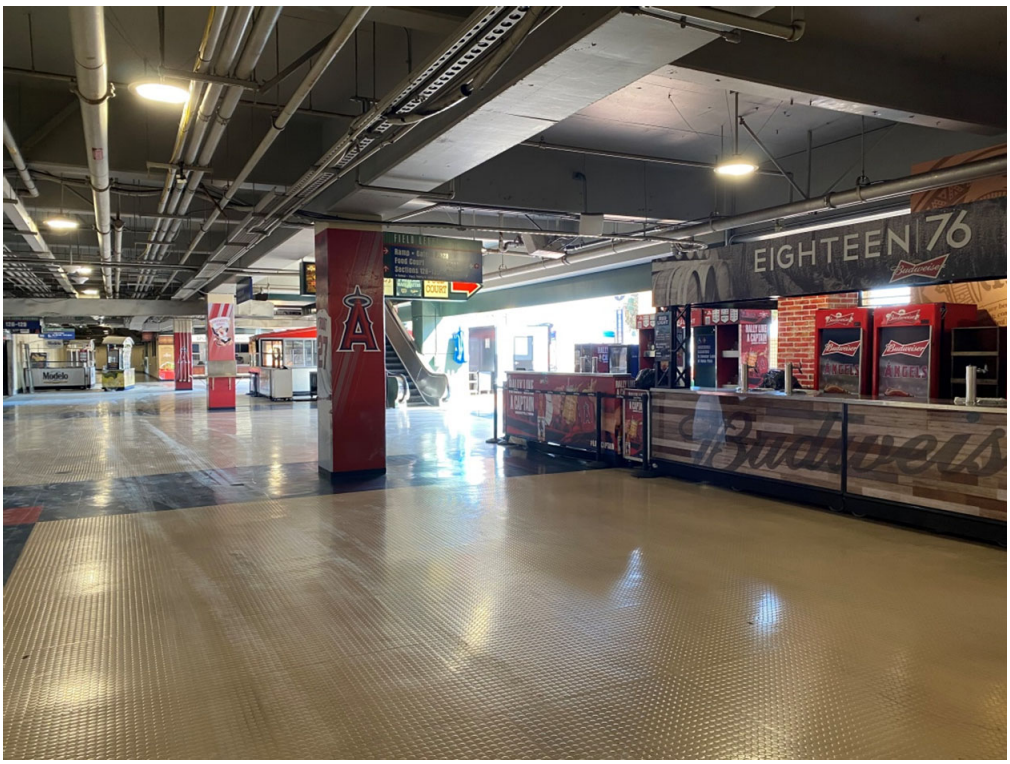
10. View of the interior of the baseball stadium occupied by a baseball field, currently covered in dirt being removed after a truck sporting event, surrounded by four levels of seating – view facing northeast.

11. View of the interior of the baseball stadium occupied by a baseball field, currently covered in dirt being removed after a truck sporting event, surrounded by four levels of seating – view facing west.

12. View of the interior of the baseball stadium at the Site – view facing north.

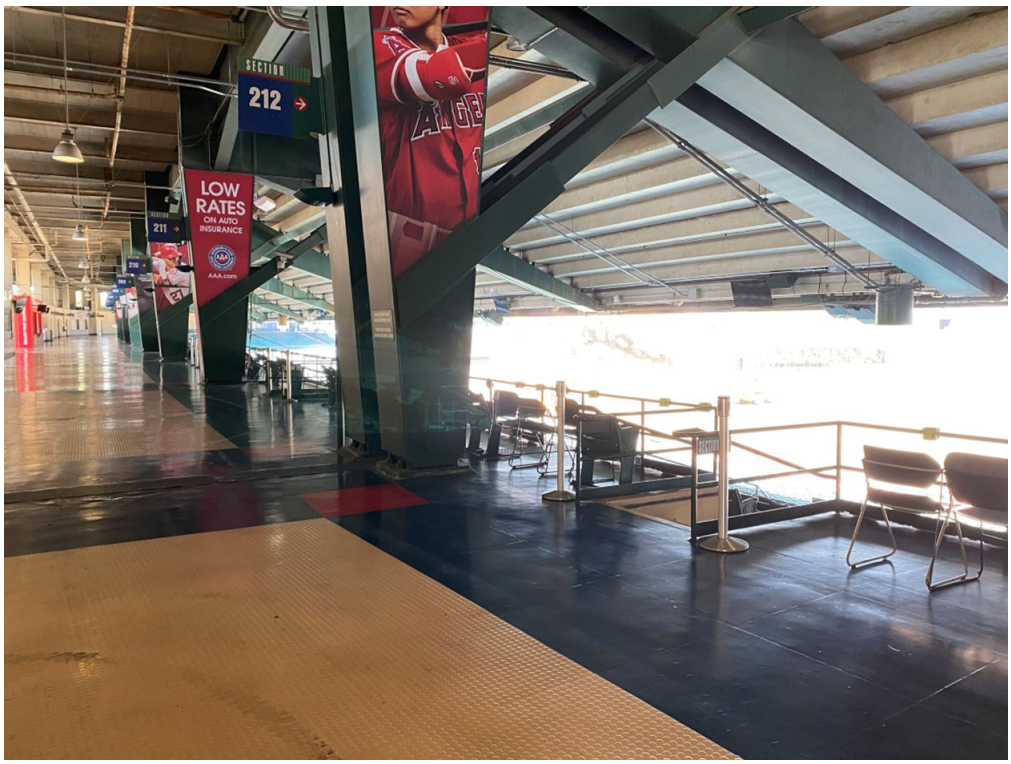


13. Typical concession and food/beverage service area within the baseball stadium in the central portion of the Site.



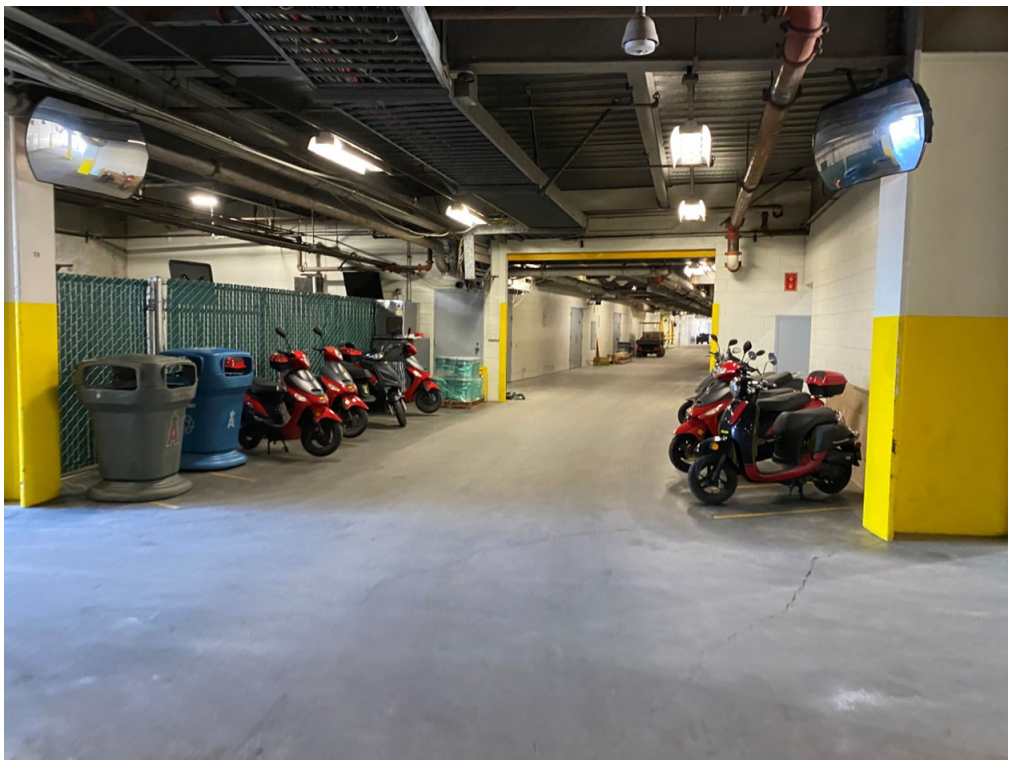
14. Typical concession and food/beverage service area within the baseball stadium in the central portion of the Site.

15. Typical restroom area along the perimeter of the stadium located in the central portion of the Site.

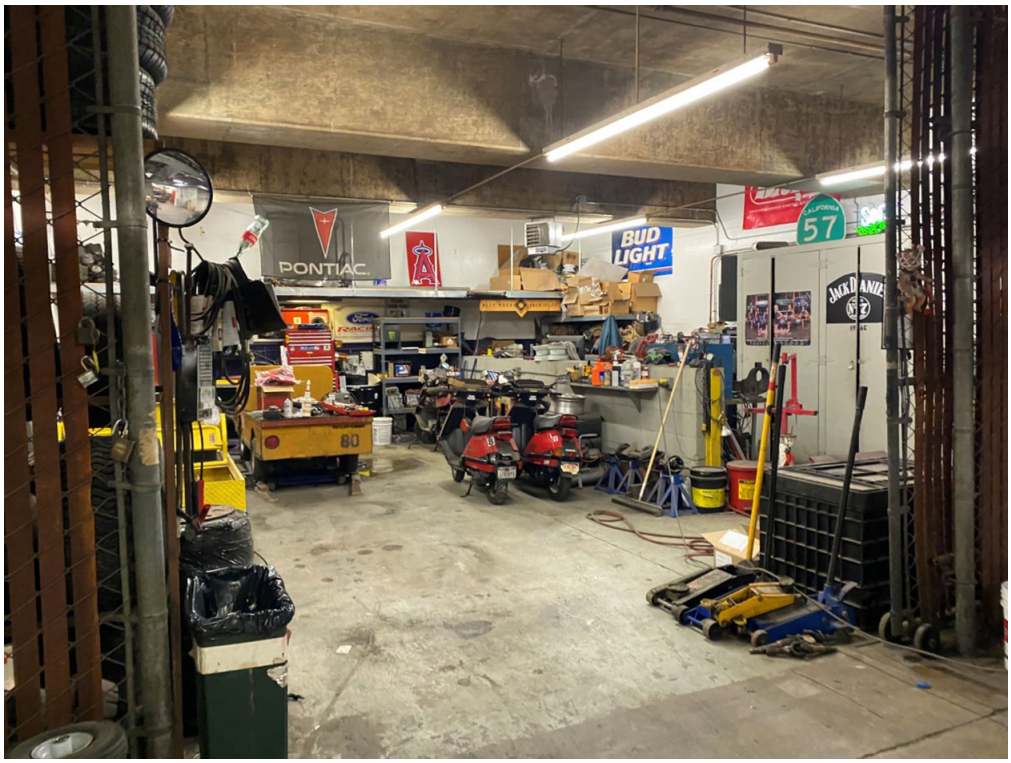


16. Typical Walkway and seating area throughout the stadium in the central portion of the Site.

17. Typical tunnel entry to the subterranean basement level of the baseball stadium in the central portion of the Site from the adjacent surround parking lots.



18. Typical hallway in the subterranean basement level of the baseball stadium in the central portion of the Site at the facilities maintenance offices with carts for personnel use.



19. Maintenance Area – View area in the subterranean basement level of the stadium used for minor maintenance of carts and equipment used at the Site. No floor drains present.

20. Maintenance Area – View area in the subterranean basement level of the stadium used for minor maintenance of carts and equipment used at the Site. No floor drains present.

21. Maintenance Area – 55-gallon drum for the storage of waste oil associated with minor maintenance performed in this area of the Site in the subterranean basement level.

22. Paint Shop – Safety Data Sheets maintained in the paint shop in the subterranean basement level of the stadium.

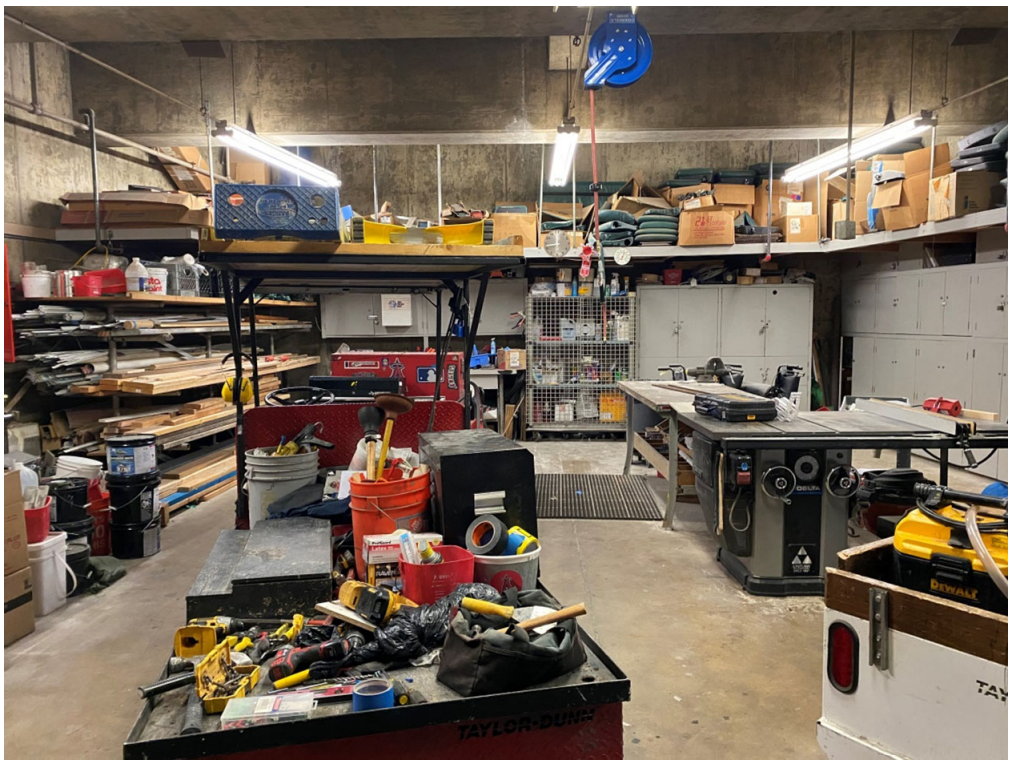
23. Paint Shop – View of paint storage in containers less than 5-gallons within the paint shop in the subterranean basement level of the stadium.

24. Paint Shop – View of flammable cabinets for additional painting supply storage within the paint shop in the subterranean basement level of the stadium.

25. Paint Shop – View of aerosol paints stored inside flammable cabinets within the paint shop in the subterranean basement level of the stadium.

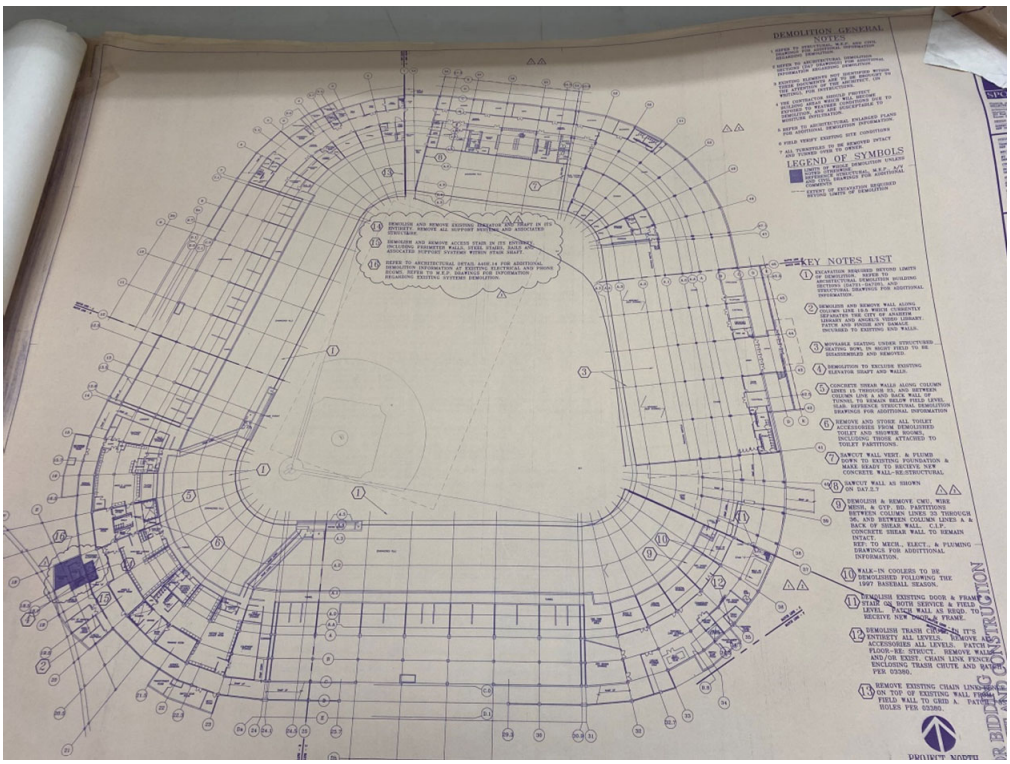
26. Paint Shop – Additional painting supplies including thinners, finishers, and glossers stored within a flammable cabinet in the subterranean basement level of the stadium.

27. Paint Shop – 55-gallon drum for the storage of waste paint within the paint shop in the subterranean basement level of the stadium.



28. Carpentry Shop – View of lumber storage and carpentry/wood-working area in the subterranean basement level of the stadium.

29. Elevator machine room in the northwestern portion of the subterranean basement level of the stadium.



30. Engineering design drawing of the subterranean basement level of the stadium stored in the plan room within this level of the structure.

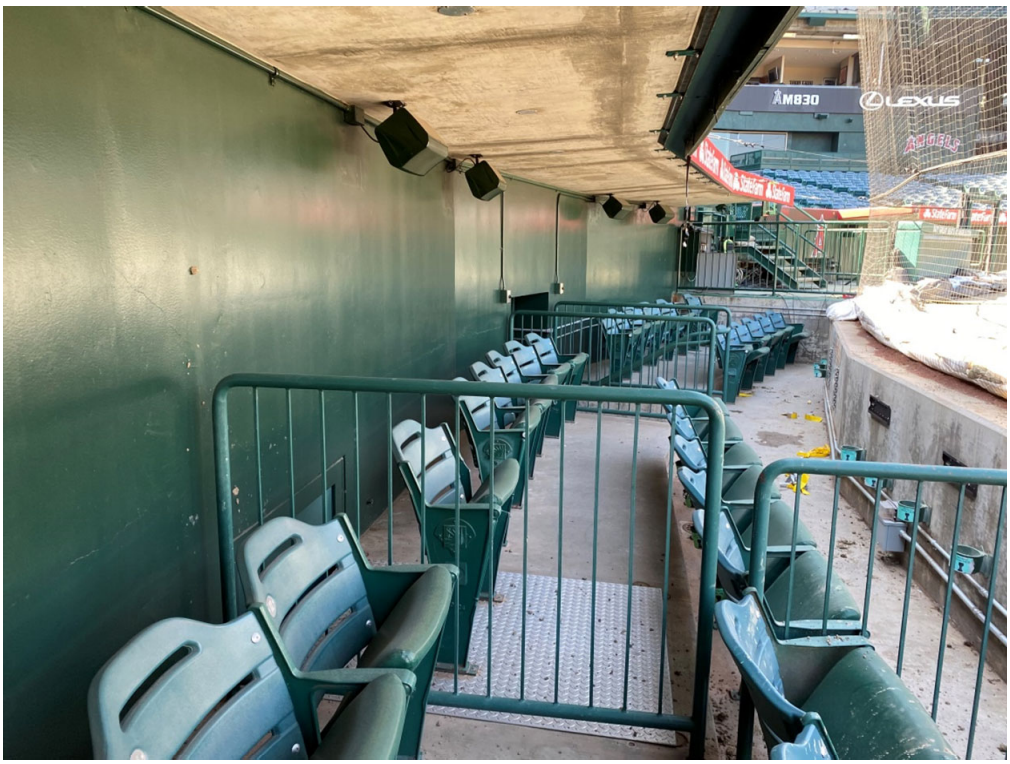
31. Locker Room – View of the locker room for the Angels baseball team within the southwestern portion of subterranean basement level of the stadium.

32. View of the freight elevator for transporting equipment and concessions within the southwestern portion of subterranean basement level of the stadium.

33. View of the batting cage within the second subterranean level in the southwestern portion of the baseball stadium where the stormwater sump pump is located.

34. View of the stormwater sump pump within the second subterranean level in the southwestern portion of the baseball stadium.

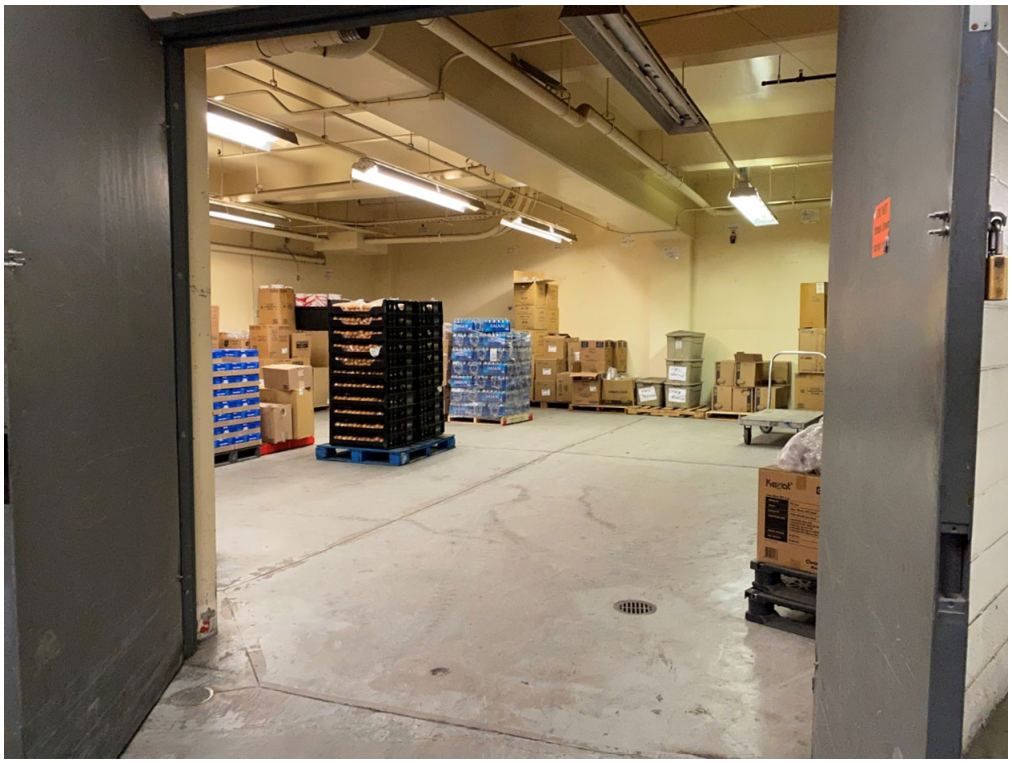
35. View of underground suites for stadium events in the second subterranean level in the southwestern portion of the baseball stadium.



36. View of the exterior portion of the suites available from the second subterranean level in the southwestern portion of the baseball stadium.

37. View of the baseball stadium from the suites accessible from the second subterranean level in the southwestern portion of the baseball stadium.

38. View of the janitor's closet on the second subterranean level in the southwestern portion of the baseball stadium.



39. View of concessions and dry goods storage area in the subterranean level in the northeastern portion of the baseball stadium.

40. Cylinders of compressed air for beverage concession services stored in the subterranean level in the southwestern portion of the baseball stadium.

41. Storage of cleaning supplies in the subterranean level in the southwestern portion of the baseball stadium.

42. Storage of dry goods in the subterranean level in the southwestern portion of the baseball stadium.

43. Storage of dry goods, supplies, and equipment in the subterranean level in the southwestern portion of the baseball stadium.

44. Storage of dry goods, supplies, and equipment in the subterranean level in the southwestern portion of the baseball stadium.

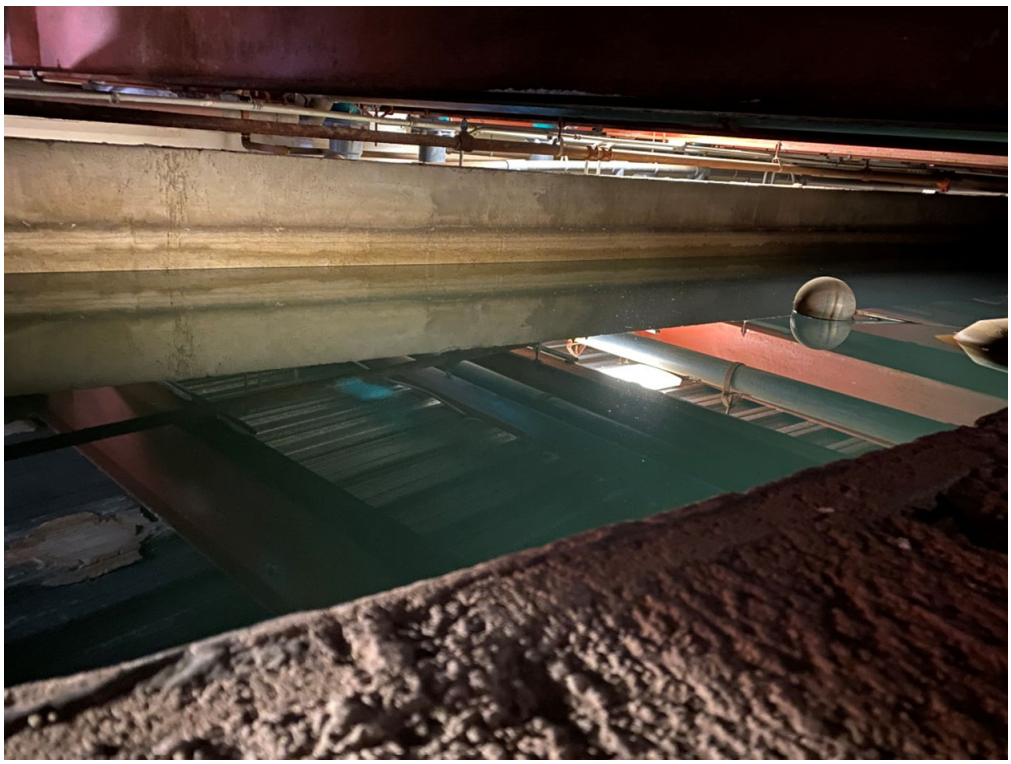
45. Ice machines and grease bin for concession and food/beverage services located in the subterranean level in the southwestern portion of the baseball stadium.

46. Beverage storage in the former trash room in the subterranean level in the southwestern portion of the baseball stadium.

47. Pumping equipment for the fountain feature behind centerfield in the subterranean level in the southwestern portion of the baseball stadium.

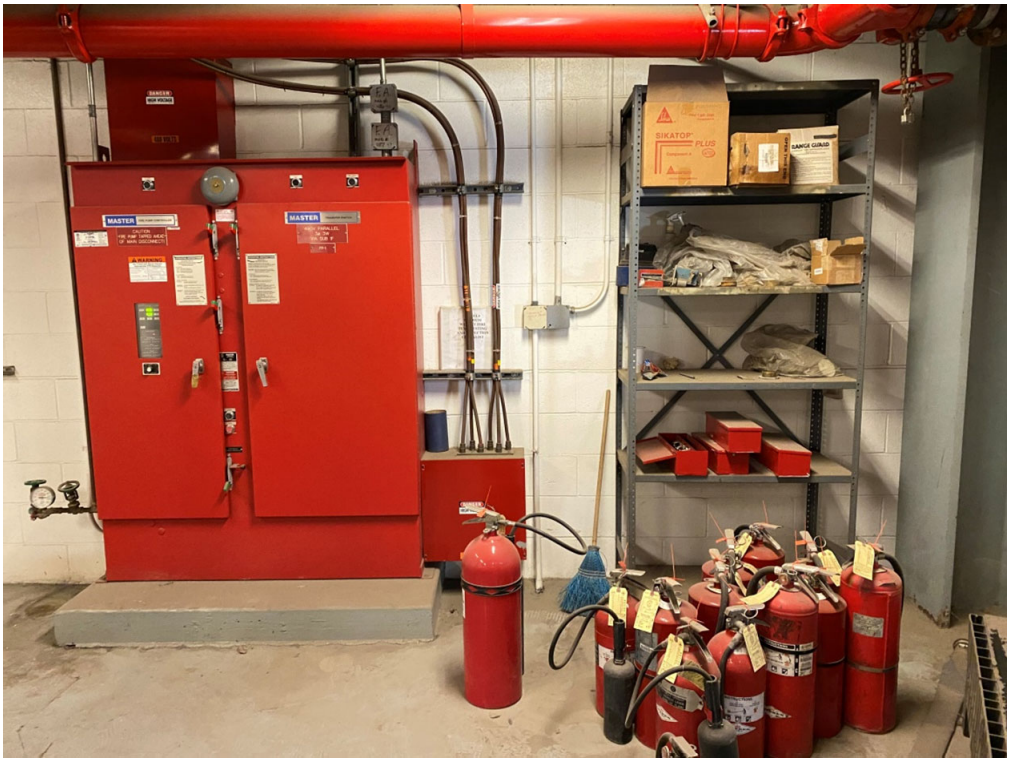
48. Pumping equipment for the fountain feature behind centerfield in the subterranean level in the southwestern portion of the baseball stadium.

49. Pumping and water treatment equipment for the fountain feature behind centerfield in the subterranean level in the southwestern portion of the baseball stadium.

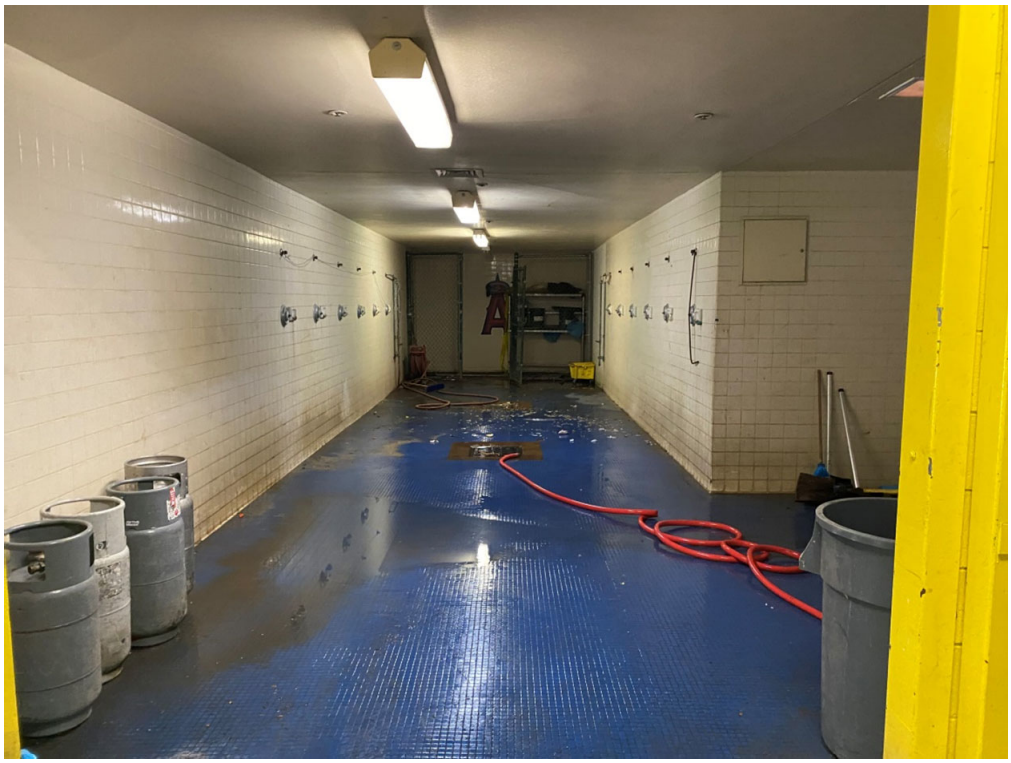


50. Water in masonry storage structure for the fountain feature behind centerfield in the subterranean level in the southwestern portion of the baseball stadium.

51. Fire water equipment and piping in the subterranean level in the southwestern portion of the baseball stadium.



52. Fire water equipment and piping in the subterranean level in the southwestern portion of the baseball stadium.



53. Wash down area for equipment with a drain to the storm drain system in the subterranean level in the northeastern portion of the baseball stadium.

54. Packer Area – Propane tank located outside of the fenced enclosure for the Packer Area in the southeastern portion of the Site.

55. Packer Area – Aboveground storage tank for propane located outside and adjacent to the southeast of the Packer Area in the southeastern portion of the Site.

56. Packer Area – View of entrance, dumpsters, and storage within the northern portion of the Packer Area at the Site.

57. Packer Area – View of dumpsters within the northern portion of the Packer Area.

58. Packer Area – View of dumpsters, hydraulic compactors, and storage within the southern portion of the Packer Area at the Site.

59. Packer Area – View of dumpsters and storage within the northern portion of the Packer Area at the Site.

60. Packer Area – Hydraulic compactor area in the southern portion of the Packer Area.

61. Packer Area – Hydraulic compactor area in the southern portion of the Packer Area.

62. Packer Area – Hydraulic compactor area in the southern portion of the Packer Area.

63. Packer Area – Hydraulic compactor area in the southern portion of the Packer Area.

64. Packer Area – Aboveground storage tank for diesel located in the southeastern portion of the Packer Area.

65. Packer Area – Flammable cabinet for the storage of gasoline in the southwestern portion of the Packer Area.

66. Packer Area – Two 55-gallon drums containing gasoline stored within a flammable cabinet in the southwestern portion of the Packer Area.

67. View of railroad track and former train station platform in the northern portion of the Site – view facing north.

68. View of transformers located along the railroad track in the northern portion of the Site – view facing north.

69. Transformers in the northern parking area of the Site – view facing southeast.

70. View of soil stockpile and storage area along the eastern perimeter of the property. Soil is stored here until transported into the stadium for automobile sporting events then transported back using standard yellow iron construction equipment – view facing east.

71. View of the parking area and "A" structure in the southeastern portion of the Site – view facing northeast.

72. View of abandoned former water well located in the parking area in the southern portion of the Site – view facing north.

73. View of the former railroad track entering the Site from the adjacent former industrial operations to the southwest – view facing west.

74. View of the former railroad track entering the Site from the adjacent former industrial operations to the southwest – view facing northeast.

75. View of storm drain system throughout the Site – view of storm drain along western driveway to the Site – view facing north.

76. View of landscaped area with electrical equipment in fenced enclosure located along the western portion of the Site– view facing north.

77. View of loading dock and backup generator outside the northwestern portion of the Stadium – view facing southwest.

78. View of pump station owned and operated by the City of Anaheim, not accessible, located in the northwestern portion of the Site near The Grove – view facing north.

79. View of parking areas in the northern portion of the Site followed by a railroad track then commercial development to the north of the Site – view facing north.

80. View of the parking areas in the northeastern portion of the Site followed by Highway 57 then commercial development to the northeast of the Site – view facing northeast.

81. View of parking areas and "Packer Area" for equipment storage in the eastern portion of the Site followed by Highway 57 then commercial development – view facing east.

82. View of the corporate offices outside of the stadium followed and parking areas in the southeastern portion of the Site followed by the Santa Ana River, Highway 57, then commercial development – view facing southeast.

83. View of the parking area in the southern portion of the Site followed by East Orangewood Avenue then commercial development – view facing south.

84. View of the parking area in the southern portion of the Site followed by residential development – view facing southeast.

85. View of the parking area in the western portion of the Site followed by a commercial office building and South State College Boulevard– view facing west.

86. View of the parking area and The Grove structure in the northwestern portion of the Site followed by East Katella Avenue and residential and commercial development – view facing northwest.

87. View of The Grove structure in the northwestern portion of the Site – view facing north.

88. View of the main entrance for The Grove structure located in the northwestern portion of the Site – view facing east.

89. View of the stage inside The Grove structure at the Site.

90. View of the kitchen inside The Grove structure at the Site.

91. Hydraulic tank utilized for the elevator inside The Grove structure at the Site.

92. Shipping containers located north of the Grove structure at the Site.

93. Typical type of equipment stored within a shipping container outside The Grove structure at the Site.

94. Typical cleaning solutions stored within the shipping containers outside The Grove structure at the Site.

95. Fire cabinet located north of Grove structure at the Site for the storage of flammable cleaning solutions, aerosols, paints, lacquers, and lubricants.

96. Grease bin located north of the Grove structure at the Site.

97. Transformer and backup generator located east of the Grove structure at the Site.

98. Hydraulic powered trash compactor located within an enclosed area east of the Grove structure at the Site.

99. Storm drain located in a low area south of the Grove structure at the Site.

100. Stormwater sump pump located south of the Grove structure at the Site.

101. Railroad track and commercial building located north of the Site – view facing north.

102. East Katella Avenue followed by multi-family residential building and commercial buildings located west to northwest of the Site – view facing north.

103. Highway 57 and the Santa Ana River located east and southeast of the Site followed by commercial development – view facing southeast.

104. East Orangewood Avenue followed by commercial development located south of the Site – view facing southwest.

105. Commercial development located farther south of the Site.

106. Location of former railroad track entry to the Site from the adjacent historic industrial area to the southwest of the Site – view facing west.

107. Commercial office building located adjacent to the west of the Site – view facing northwest.

108. South State College Boulevard followed by commercial development located west of the Site – view facing southwest.

109. Residential and/or commercial development under construction beyond South State College Boulevard to the west of the Site – view facing west.

110. Commercial development located farther west of the Site.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

PARCEL NO. 2:

AN EASEMENT FOR ACCESS PURPOSES, AS SET FORTH IN PARAGRAPH 3.1 OF THAT CERTAIN DECLARATION OF COVENANTS, CONDITIONS AND RESTRICTIONS AND GRANT OF EASEMENTS FOR SPORTSTOWN COMMERCIAL SITE, RECORDED DECEMBER 30, 1997 AS INSTRUMENT NO. 19970672346

OF OFFICIAL RECORDS, OVER AND ACROSS THAT PORTION OF LOT 5 OF TRACT 71 IN THE CITY OF ANAHEIM, COUNTY OF ORANGE, STATE OF CALIFORNIA, AS PER THE MAP FILED IN BOOK 10, PAGE 22 OF MISCELLANEOUS MAPS, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE CENTERLINE INTERSECTION OF STATE COLLEGE BOULEVARD, 106 FEET WIDE AND KATELLA AVENUE, 120 FEET WIDE, AS SHOWN ON THE RECORD OF SURVEY FILED IN BOOK 72, PAGE 18 OF RECORDS OF SURVEYS, RECORDS OF SAID COUNTY, SAID INTERSECTION BEING ALSO THE NORTHEAST CORNER OF SECTION 26, TOWNSHIP 4 SOUTH, RANGE 10 WEST, AS SHOWN ON THE RECORD OF SURVEY FILED IN BOOK 44, PAGES 43 AND 44 OF SAID RECORDS OF SURVEYS; THENCE SOUTH 89° 08' 21" EAST 416.30 FEET ALONG THE CENTERLINE OF SAID KATELLA AVENUE TO THE BEGINNING OF A CURVE CONCAVE NORTHWESTERLY AND HAVING A RADIUS OF 1000.00 FEET; THENCE NORTHEASTERLY ALONG SAID CURVE AND SAID CENTERLINE THROUGH A CENTRAL ANGLE OF 23° 12' 46" A DISTANCE OF 405.14 FEET; THENCE RADIAL TO SAID CURVE SOUTH 22° 21' 07" EAST 60.00 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE SOUTHEASTERLY AND HAVING A RADIUS OF 35.00 FEET, A RADIAL TO SAID BEGINNING BEARS NORTH 22° 21' 07" WEST SAID BEGINNING BEING ALSO THE TRUE POINT OF BEGINNING; THENCE SOUTHWESTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 86° 09' 04" A DISTANCE OF 52.63 FEET; THENCE SOUTH 18° 30' 11" EAST 7.47 FEET TO THE BEGINNING OF A CURVE CONCAVE NORTHEASTERLY AND HAVING A RADIUS OF 383.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 4° 39' 02" A DISTANCE OF 31.11 FEET TO THE BEGINNING OF A COMPOUND CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 43° 04' 11" A DISTANCE OF 18.79 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 38° 07' 35" A DISTANCE OF 16.64 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 371.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 9° 15' 36" A DISTANCE OF 60.00 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 38° 07' 35" A DISTANCE OF 16.64 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 43° 04' 11" A DISTANCE OF 18.79 FEET TO THE BEGINNING OF A COMPOUND CURVE HAVING A RADIUS OF 383.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 6° 15' 27" A DISTANCE OF 41.86 FEET; THENCE RADIAL TO SAID CURVE SOUTH 41° 26' 33" WEST 28.00 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE NORTHEASTERLY AND HAVING A RADIUS OF 411.25 FEET, A RADIAL TO SAID BEGINNING BEARS SOUTH 41° 26' 33" WEST; THENCE NORTHWESTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 35° 38' 48" A DISTANCE OF 255.86 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE NORTHWESTERLY AND HAVING A RADIUS OF 1060.00 FEET, A RADIAL TO SAID BEGINNING BEARS SOUTH 22° 21' 07" EAST SAID CURVE BEING ALSO CONCENTRIC WITH AND DISTANT SOUTHERLY 60.00 FEET FROM THE CENTERLINE OF SAID KATELLA AVENUE; THENCE NORTHEASTERLY 58.75 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 3° 10' 32" TO THE POINT OF BEGINNING.

PARCEL NO. 3:

AN EASEMENT FOR VEHICULAR INGRESS AND EGRESS AS SET FORTH IN PARAGRAPH 4.1 OF THAT CERTAIN DECLARATION OF COVENANTS, CONDITIONS AND RESTRICTIONS AND GRANT OF EASEMENTS FOR SPORTSTOWN COMMERCIAL SITE, RECORDED DECEMBER 30, 1997 AS INSTRUMENT NO. 19970672346, OF OFFICIAL RECORDS, OVER AND ACROSS THAT PORTION OF LOT 5 OF TRACT 71 IN THE CITY OF ANAHEIM, COUNTY OF ORANGE, STATE2 OF CALIFORNIA, AS PER THE MAP FILED IN BOOK 10, PAGE 22 OF MISCELLANEOUS MAPS, RECORDS OF SAID COUNTY, DESCRIBED AS

POINT OF BEGINNING; THENCE SOUTHWESTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 86° 09′ 04" A DISTANCE OF 52.63 FEET; THENCE SOUTH 18° 30′ 11" EAST 7.47 FEET TO THE BEGINNING OF CURVE CONCAVE NORTHEASTERLY AND HAVING A RADIUS OF 383.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGEL OF 4° 39′ 02" A DISTANCE OF 31.11 FEET TO THE BEGINNING OF A COMPOUND CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 43° 04′ 11" A DISTANCE OF 18.79 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 38° 07′ 35" A DISTANCE OF 16.64 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 371.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 9° 15′ 36" A DISTANCE OF 60.00 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 38° 07′ 35" A DISTANCE OF 16.64 FEET TO THE BEGINNING OF A REVERSE CURVE HAVING A RADIUS OF 25.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 43° 04′ 11" A DISTANCE OF 18.79 FEET TO THE BEGINNING OF A COMPOUND CURVE HAVING A RADIUS OF 383.25 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 6° 15′ 27" A DISTANCE OF 41.86 FEET; THENCE NORTH 50° 15′ 36" EAST 13.16 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE NORTHEASTERLY HAVING A RADIUS OF 189.70 FEET, A RADIAL LINE TO SAID BEGINNING BEARS SOUTH 50° 15′ 36" WEST; THENCE NORTHERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 29° 42′ 05" A DISTANCE OF 98.34 FEET; THENCE SOUTH 81° 28′ 19" WEST 7.92 FEET TO THE BEGINNING OF A CURVE CONCAVE EASTERLY HAVING A RADIUS OF 5.00 FEET; THENCE NORTHWESTERLY AND NORTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 180° 00′ 00" A DISTANCE OF 15.71 FEET; THENCE NORTH 81° 28′ 19" EAST 7.92 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE EASTERLY HAVING A RADIUS OF 189.70 FEET, A RADIAL LINE TO SAID BEGINNING BEARS SOUTH 82° 58′ 56" WEST; THENCE NORTHERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 29° 42′ 17" A DISTANCE OF 98.35 FEET; THENCE SOUTH 67° 55′ 02" EAST 5.03 FEET; THENCE NORTH 81° 28′ 19" EAST 104.51 FEET; THENCE NORTH 8° 31′ 41" WEST 17.25 FEET; THENCE NORTH 81° 28′ 19" EAST 168.42 FEET; THENCE NORTH 21° 01′ 41" EAST 147.75 FEET TO A LINE PARALLEL WITH AND DISTANT SOUTHEASTERLY 60.00 FEET FROM THE CENTERLINE OF SAID KATELLA AVENUE; THENCE SOUTH 49° 45′ 11" WEST 13.76 FEET ALONG SAID PARALLEL LINE TO THE BEGINNING OF A CURVE CONCAVE NORTHWESTERLY HAVING A RADIUS OF 1060.00 FEET; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 17° 53′ 42" A DISTANCE OF 331.07 FEET TO THE TRUE POINT OF BEGINNING.

APPENDIX B

PHASE I ENVIRONMENTAL SITE ASSESSMENT USER QUESTIONNAIRE

Phase I Environmental Site Assessment Questionnaire

(User Provided Information Questionnaire)

Date: April 6, 2020

Your Name: Alex Winsberg

Your Title: General Counsel

Site Name: Angel Stadium

Site Location: 2000 E. Gene Autry Way, Anaheim, CA

Relationship to Site: ☐ **Owner** ☑ **Occupant** ☐ **Purchaser** ☐ **Other (please explain)**

Length of Time Associated with Site: 56 years

Please review and complete this questionnaire which will assist Northgate in completing our site assessment. If sufficient space in not provided, please compete your response on a separate sheet of paper and attach it to this questionnaire.

1. Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

   ☐ Yes ☑ No ☐ Unknown ☐ N/A

   If Yes, please explain:_____

24411 Ridge Route Drive, Suite 130, Laguna Hills, California tel 949.716.0050 fax 949.716.0055
www.ngem.com

2. Are you aware of any activity or land use limitations, such as engineering controls (for contaminant control), land use restrictions or institutional controls, that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☐ Yes ☐ No ☑ Unknown ☐ N/A

If Yes, please explain: _____

_____

3. Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☑ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain: Angels Baseball staff has been on site since the 1980's, and the Angels have continuously been on the site since 1963.

4. Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a) Do you know the past uses of the Site?

☑ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain: The site has been used for a baseball stadium and parking since 1963.

_____

b) Do you know of specific chemicals that are present or once were present at the Site?

☑ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain: Regular cleaning materials, and chemicals associated with parked cars.

_____

c) Do you know of chemical spills that have taken place at the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

d) Do you know of any environmental cleanups that have taken place at the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

e) Do you know if any fill material has been imported to the Site?

☑ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain: Fill materials in the parking lot adajcent to the 57 freeway.
The materials are used yearly for Monster Truck and motorcross events.

5. Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

6. Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

7. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

8. Based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

☐ Yes ☑ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

9. Does the Site's purchase price reasonably reflect the fair market value of the property?

☐ Yes ☐ No ☑ Unknown ☐ N/A

If No, do you know the reason for lower purchase price? Is it possible that the lower purchase price is because of contamination known or believed to be present at the Site?

☐ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

10. Have any of the following documents been prepared for the Site and, if so, can copies be provided to Northgate:

- Environmental site assessment reports ☐ Yes ☐ No ☐ Copies available
- Environmental compliance audit reports ☐ Yes ☑ No ☐ Copies available
- Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, National Pollutant Discharge Elimination System permits, underground injection permits) ☑ Yes ☐ No ☐ Copies available
- Registrations for underground storage tanks (USTs) and/or above ground storage tanks (ASTs) ☐ Yes ☐ No ☐ Copies available
- Registrations for underground injection systems ☐ Yes ☐ No ☐ Copies available

- Material safety data sheets ☐ Yes ☐ No ☐ Copies available
- Community right-to-know plan ☐ Yes ☐ No ☐ Copies available
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. ☐ Yes ☐ No ☐ Copies available
- Reports regarding hydrogeologic conditions on the Site or in the surrounding area
  ☐ Yes ☑ No ☐ Copies available
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the Site or relating to environmental liens encumbering the Site ☐ Yes ☑ No ☐ Copies available
- Hazardous waste generator notices or reports ☐ Yes ☑ No ☐ Copies available
- Risk assessments ☐ Yes ☐ No ☐ Copies available
- Recorded Activity and Use Limitations (e.g. deed restriction, asphalt cap)
  ☐ Yes ☐ No ☐ Copies available

If you know of specific chemicals or other hazardous materials (e.g., PCB associated with transformers, batteries, etc.) that are present or were once present at the property, how were they used, stored, and disposed?

Unknown at this time.

Do you know of aboveground or underground storage tanks on the property? If yes, what did they contain?

Yes, there is an above-ground propane tank.

Do you have any knowledge or experience with nearby/adjacent properties? If yes, do you have knowledge of chemicals, releases, or cleanups on these properties?

No.

How long have you owned, operated, leased, or been familiar the present and past uses of the property?

Beginning in 1963.

Northgate Environmental appreciates your assistance on this project.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/25/2019 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 16 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 09/09/2019 has revealed that there is 1 ERNS site within approximately 0.001 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 22 CA ENVIROSTOR sites within approximately 1 mile of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 7 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 42 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/12/2019 has revealed that there are 3 FINDS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 6 CA HAZNET sites within approximately 0.001 miles of the target property.

CA HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the CA HWT list, as provided by EDR, and dated 10/07/2019 has revealed that there is 1 CA

HWT site within approximately 0.25 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 10/21/2019 has revealed that there are 4 CA CERS sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110070206426

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110006485561

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:

Name:	TESORO (SHELL) 68888
Address:	2331 E KATELLA AVE
City,State,Zip:	ANAHEIM, CA 92806
Site ID:	74528

TESORO SHELL 68888 (Continued) **S113157836**

CERS ID: 10403560
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 74528
Site Name: TESORO (SHELL) 68888
Violation Date: 02-07-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 02/07/2019. No audible alarm within OF Annunciator
Violation Division: Anaheim City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 74528
Site Name: TESORO (SHELL) 68888
Violation Date: 03-18-2016
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.
Violation Notes: Returned to compliance on 03/21/2016. 91 PLLD Failure during plan check inspection. Correction notice issued.

FINDS:

Registry ID: 110002916747

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

MALIBU GRAND PRIX (Continued) **1000246327**

corrective action activities required under RCRA.

FINDS:

Registry ID: 110002416724

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	*Site Inspection (SI) Report
Completed Date:	09/26/1989
Comments:	Site Inspection Done: EPA recommends Listing Site Inspec- tion; DHS recommends hazard ranking. Reasons for recommend- ation of further work at the site: Soil samples collected during cleanup in 1983 were either surface samples or samp- les collected at a maximum if 8 ft. depth. No sampling was done below the 8 feet that was excavated and backfilled with clean soil. It is not reasonable to believe that 1200ppm of TCE would remain within 8 feet of the surface in an unlined sump.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported

ITASCO (Continued) **S101541102**

Completed Document Type:	Preliminary Assessment Report
Completed Date:	01/08/1988
Comments:	Preliminary Assessment Done: Twenty yards, three of waste, removed to BKK (04/15/83). Samples (05/11/83) show solvent contamination. Site excavated to depth of eight feet; 409 tons of soil removed to BKK. Soil sample levels (11/04/83) below TTLC and TLC.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	05/06/1987
Comments:	Site Screening Done: CERCLA grant Preliminary Assessment required.

FINDS:

Registry ID: 110002870796

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 408055
Site Name: YRC, INC (896)
Violation Date: 01-06-2016
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 01/20/2016. The facility's removal records did not appear complete when compared to history. The records for the last year documented the removal of 145 gallons used oil, no used antifreeze, no used oil filters, no brake fluid waste, no used grease pads, no parts washer waste. In addition, I reviewed the state's hazardous waste tracker information and found 4 manifests for 2015 removals which they did not have in their records. Maintain accurate records for the removal of the facility's hazardous waste and have available for inspection.

Eval Notes:	On site to conduct a routine hazardous waste inspection. Met with Mark Link, terminal manager of the site. Also present was Janice Rodgers, environmental monitoring specialist, consultant of the site. Walked the facility, perimeter, and inspected the hazardous waste storage area. Observed the municipal trash. No signs of illegal disposal observed. Discussed hazardous waste management with Mr. Link. Manifests and emergency response plan were reviewed. A copy of this report will be sent to mark.link@yrcfreight.com.

Eval Notes:	On site for a routine hazardous waste inspection. Dominic DeSantis, terminal manager, was present for the inspection and provided consent to inspect. The facilityG s operations and the waste generated were

YRC, INC (896) (Continued) **S113001099**

discussed. The inspection included a review of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the facility's hazardous waste and damaged packages of hazardous material under evaluation for salvage was inspected. The storage containers were closed and labeled with the required information. The signed off manifests and receipts for the removal of the facility's hazardous waste were on site and available for inspection. The records for the last year were reviewed. The facility explained their handling of return to vendor (RTV) damaged packaged hazardous materials and provided their handling records for inspection. The records for the last year [Truncated]

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient Report
Violation Notes: Deficient 2013-2014 Annual Report
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-06-2002
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board staff conducted a routine compliance inspection of the above facility on September 6, 2002. The SWPPP was current, however, in another month, it will need recertifying. Training logs pertaining to the Storm Water Program could not be located. Staff advised Mr. Mac Farlane on how to incorporate the subject into other training sessions. Staff observed ponded water from vehicle washing leaving the facility. Staff informed Mr. Mac Farlane that no wash water of any kind is allowed to leave the facility boundaries. Mr. Mac Farlane agreed to inform his employees regarding this issue.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002878529

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type: Fieldwork
Completed Date: 07/10/2009
Comments: On July 10, 2009, fieldwork was completed per District's consultant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 07/07/2009
Comments: Via email on July 7, 2009, DTSC received a final copy of the Field Work Notice and was informed that the Notice was posted at the 1010 and 1016 E. Katella properties and delivered to properties within the line of sight of the proposed school property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/22/2009
Comments: DTSC did not review the Environmental Assessment Summary Report since the District terminated the EOA (August 2009) prior to receipt of the Report. The report summarized the soil and soil vapor sampling results from fieldwork conducted in July 2009. Maximum concentrations in soil gas include the following: 0.15 ug/l of naphthalene; 580 ug/l of PCE; 20 ug/l of TCE. The risk evaluation estimated the cancer risk due to chlorinated compounds via the vapor intrusion pathway as 1.5 x 10-5 and the total hazard index as 17. PCE is the primary contributor to risk and hazard.

CPS-SLIC:

Name:	BROWNCO CONSTRUCTION COMPANY
Address:	1000 EAST KATELLA AVENUE
City,State,Zip:	ANAHEIM, CA 92805
Region:	STATE
Facility Status:	**Open - Site Assessment**
Status Date:	11/13/2012
Global Id:	T10000004434
Lead Agency:	SANTA ANA RWQCB (REGION 8)
Lead Agency Case Number:	Not reported
Latitude:	33.8028819
Longitude:	-117.8967556
Case Type:	Cleanup Program Site
Case Worker:	JML
Local Agency:	Not reported
RB Case Number:	2080098
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The first report "Environmental Assessment Summary Report" was prepared by LFR, Inc. on September 3, 2009, for the Anaheim City School District, for the purpose of evaluating the Site's suitability as the location for a school facility. LFR found that tetrachloroethylene (PCE) exists in soil vapor at a maximum concentration of 580 micrograms per liter ("g/L) at the Site (Enclosure 1). Trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA) were also detected in soil gas at concentrations of 20 and 17 l "g /L, respectively. The PCE concentration in soil vapor was significantly aboveV% the California Human Health Screening Levels (CHHSLs) for shallow soil vapor for commercial and industrial land use. Based on the results from the first round of sampling at the Site by LFR, the owner of the Site then decided to conduct further investigation of soil and soil vapor at the Site. Tait Environmental Services (Tait) conducted the sampling on November 16 through 19, 2009. A total of 30 soil vapor borings and 6 soil borings were completed on the northwest side of the Site, adjacent to the Brownco facility. Soil vapor samples were collected from 5, 15 and 30 feet below ground surface (bgs). Soil borings were advanced to depths ranging from 48 to 80 feet bgs. Tait issued the "Soil Vapor Screening

BROWNCO CONSTRUCTION COMPANY (Continued) **S112274197**

and Soil Sampling Report" for the Site on January 13, 2010. The report indicates that high concentrations of PCE and TCE were detected in soil and soil vapor. The PCE concentrations in soil vapor ranged from 43 to 4,200 "g /L. PCE concentrations in soil ranged from non-detect to 4.4 micrograms per kilogram ("g /kg). The reported maximum PCE concentration in soil vapor at the Site is 4 orders of magnitude higher than the CHHSLs and as such can indicate a threat to human health through vapor intrusion into a nearby facility. The maximum concentration of PCE in soil is approximately twice the Regional Screening Level (RSL) for soil at the industrial sites. The highest concentrations of PCE in both soil and soil vapor samples were detected in sampling points that were located immediately on the east side of the Site boundary with the Brownco property. Additionally, the iso-concentration contours for soil vapor that were presented in the report for the depths of 5, 15 and 30 feet bgs consistently show a pattern that indicates a source of PCE in soil on the west side of the Jaycox/Brownco boundary. The isoconcentration contours provided for PCE in soil at the depths of 5, 15, 35, and 45 feet bgs (Enclosure X) show a similar pattern. Tait has made the observation that PCE and TCE were present in higher concentrations in the finer grade silt units and in lower concentrations in the intervening sand units. This observation may indicate that the subsurface soil contamination was caused by an older release of solvents at the surface, in the vicinity of former operations at 1000 East Katella facility. After our review of the information provided by Mr. Van Vlear, Brownco authorized PRWE, Inc. to perform a SVS to confirm if there was merit to the claims made by Mr. Van Vlear in his letter. The SVS was performed at this site on April 23, 2010 under the direct supervision of a Professional Geologist properly licensed in California The results of the SVS indicate elevated soil vapor concentrations at five foot depths of Perchloroethylene (PCE), Tetrachloroethylene (TCE), and 1,1,1-Trichloroethane (1,1,1-TCA) on the Brownco site. 1,1-Dichloroethene (1,1-DCE) a breakdown product of TCE and 1,1,1-TCA, was also present in two samples. Two soil boring were advanced to groundwater and subsequently converted to triplenested SVE wells. An undisturbed soil sample was collected every 5 feet to groundwater using stainless steel rings and via EPA Method 5035 and analyzed per EPA Method 8260B per the request of the RWQCB. Each soil boring was continuously cored for lithological description. Images recorded during the soil borings and SVE well installation at SB1 are presented on Figure 5. Groundwater was encountered at approximately 81 feet below ground surface (bgs) based only on field measurement. The well elevations have not been surveyed. A groundwater grab sample (along with a split for the RWQCB and a duplicate sample for quality assurance reasons) was collected from each soil boring location after a temporary well casing was installed to allow sufficient groundwater to be collected. Each soil Boring was completed as triple-completed SVE wells with 20 feet of slotted screen at the bottom of each casing. Soil Boring and Well Completion Logs are included in Appendix A. Soil samples from SB1 were collected at 5 foot intervals during advancement to groundwater and a temporary well casing was installed to collect a grab groundwater sample on June 1, 2011. As the groundwater infiltration rate was very slow, the temporary well was left in the secured borehole until June 2, 2011 when the groundwater grab samples were collected. The borehole was subsequently converted to triple-nested SVE wells. On June 3, 2011, soil samples from SB2 were collected at 5

BROWNCO CONSTRUCTION COMPANY (Continued) **S112274197**

foot intervals during advancement to groundwater and a temporary well casing was installed to collect a grab groundwater sample. As the groundwater infiltration rate was very slow, the temporary well casing was left in the secured borehole until June 6, 2011 when the groundwater grab samples were collected. The borehole was subsequently converted to triple-nested SVE wells, as shown on the well construction diagrams on the boring logs in Appendix A, on Jun 6, 2011. The laboratory analytical results for soil collected from SB1 and SB2 indicated that there was PCE present in all samples to groundwater. The highest concentrations of PCE detected in SB1 and SB2 were both at 10 ft bgs. The PCE concentrations were detected at 2,760 and 1,490 "g/kg, for SB1 and SB2, respectively. The laboratory analytical results for soil collected from SB1 and SB2 indicated that TCE was not present in all samples in either boring. The highest concentrations of TCE detected in SB1 and SB2 was 119 "g/kg at 30 ft bgs, and 70 "g/kg at 70 ft bgs, respectively. 1,1-DCE was only detected in one sample (SB1 at 70 feet) above the laboratory reporting limit. The concentration of 1,1-DCE detected in SB1-70 was 6.6 "g/kg. 1,1,1-TCA was detected only in one sample (SB2 at 45 feet) above the laboratory reporting limit. The concentration of 1,1,1-TCA detected in SB2-45 was 12 "g/kg. The laboratory analytical results for grab groundwater samples collected from SB1 and SB2 indicated that only PCE and TCEwere detected above laboratory practical quantification limits. Results of analysis of the grab groundwater sample collected from SB1 indicated that there was a detectable concentration of 1,500 "g/L of PCE and 140 "g/L of TCE in the groundwater sample. Results of analysis of the grab groundwater sample collected from SB2 indicated that there was an approx average concentration of 700 "g/L of PCE and 195 "g/L of TCE in the groundwater sample. Three groundwater monitoring wells (MW-1, MW-2 and MW-3) were installed at the site on November 2 and 3, 2011, according to the plan presented in the SVE well installation letterreport (PRWE, 2011b). The wells were installed after being permitted by the City of Anaheim,whose inspector visited the site on the morning of November 2, 2011. All work was performed under the direct supervision of a Professional Geologist currently registered in the State of California. The three groundwater monitoring wells were constructed with 4-inch Sch. 40 PVC slotted with 0.010 inch screen from 70 to 90 feet bgs and blank well casing from 70 feet bgs to the well vault at grade. The concentrations of PCE and TCE detected in the groundwater samples collected from MW-1 during this monitoring event were considerably lower than the concentrations detected in the groundwater grab sample collected through the temporary well installed in soil boring SB-1 (subsequently converted to VE-1) in June 201. MW-1 is located within 10 feet of the location where soil boring SB-1 (subsequently converted to VE-1) was advanced to groundwater and the concentrations of PCE and TCE can be compared. The concentrations of PCE and TCE in MW-1 are 63 and 22 "g/L, respectively; compared to 1,400 and 131 "g/L, respectively.

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 161
. Waste name: Fluid-cracking catalyst (FCC) waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 211
. Waste name: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 221
. Waste name: Waste oil and mixed oil

SUPERIOR PLATING (Continued) **1000473118**

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 711
. Waste name: Liquids with cyanides > 1000 mg/l

. Waste code: 722
. Waste name: Liquids with cadmium > 100 mg/l

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 917.4

SUPERIOR PLATING (Continued) **1000473118**

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 8458.7

Waste code: D007
Waste name: CHROMIUM

Registry ID: 110002815204

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	The 55 gallon drum of acetone exluded recyclable material and super sack of waste rags and gloves were stored open when waste was not being poured into. Hazardous waste containers must be stored closed,

Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 07/03/2017. Over 7 drums storing used acetone were on site, unmarked with each drumG s accumulation start date. One tote storing nickel strike solution was on site, marked with an accumulation start date of 7-7-14. A drum storing used oil was unmarked. Review of manifests show that these waste streams were last remove by a registered hauler for proper recycling / disposal over 180 days ago. The allowable storage time for a small quantity generator (SQG) is 180 days. However, if the waste must be transported over a distance of 200 miles or more to its TSD facility, the generator may store the waste on site for up to 270 days. Have the hazardous waste that has been on site beyond allowable storage time removed for proper recycling/disposal. Submit a copy of the removal records to this Agency within 30 days.

Eval Notes: On site to conduct a RCRA Hazardous Waste LQG reinspection. Met with Charles Berry, Nithesh Paramesh and Jose Sanchez. This following violations cited on 12/6/18 were corrected this date: I411 - All 55 gallon drums of ERM acetone and the super sack of waste rags and gloves were observed stored closed. I400 - All 55 gallon drums of ERM acetone, the super super sack of waste rags and gloves, and holding tanks within the treatment system were properly labeled. I226 - Daily inspection logs for hazardous waste tanks for December 2018 and January 2019 were available for review. I102 - Weekly inspection logs for hazardous waste containers for December 2018 and January 2019 were

THERMAL VAC TECHNOLOGY (Continued) **1000364809**

available for review. The following violations remain outstanding: I175 - During the routine inspection, the facility did not have a contingency plan that satisfied the requirements for a Hazardous Waste LQG. Mr. Berry stated the plan has been completed and he is awaiting management approval [Truncated]

Eval Notes: Received an email correspondence from CW Berry of Thermal Vac regarding the quantity of Potassium Cyanide that will be utilized at the facility. Per Mr. Berry, the facility will be well below the 100 TQ threshold. Sorry for delay, I had 47 CERS filings to do!! We have reduced to amount we store below the 100 pound limit. I have confirmed the amount in the tanks is 81 pounds based on lab analysis from Western Analytical Labs. I can send lab reports if you would like. I will be at Thermal-Vac tomorrow and confirm the details of storage and send that confirmation to you. We have arranged with Miles Chemical to purchase Potassium Cyanide in smaller packaging. Thanks CW

Eval Notes: Regional Board staff conducted a routine compliance inspection of the above facility on October 30, 2002. The SWPPP was last updated 2/28/01 with training records dating 3/14/02. Most of the items noted in previous inspections have either been moved indoors or removed from the facility. Mr. Oaks expressed the facility's interest in becoming exempt once Phase II of the General Industrial Permit is adopted. No major violations were observed at this time.

Eval Date: 03-17-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Heather Falcone, director of quality, and Sean Driscol, director of operations, were present for the inspection and provided consent to inspect. The facilityG s operations and the waste generated were discussed. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed and labeled with the required information, except as cited above. The facility is considering the on site reclamation of their used acetone for on site reuse. They are evaluating effective stills that will meet their standards. The continuous presence of floor drainage liquids in the ADB lineup (tank 7 nitric acid and tank 3 alkaline etch locations) two catch sumps and its possible classification as a wet process floor was discussed. Eval Date: 07-03-2018
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board Staff conducted a compliance inspection of the above facility on July 3, 2018. The facility is currently in Level 1 for Zinc, Iron, Nitrite plus Nitrate, Aluminum, and pH. The Annual Report and Ad Hoc Reports have not yet been submitted for the 2017-2018 reporting period. Staff met with Sean Driscol, Director of Operations. Mr. Driscol did not have knowledge of where the SWPPP or training records were kept. A site walk was then conducted. Industrial materials and equipment were observed without BMP implementation in the maintenance area at the northeastern portion of the facility. Mr. Driscol noted that tarps are deployed during rain events. 55-gallon drums containing waste oil were observed without cover or secondary containment. Scrap metal and industrial equipment were observed stored without BMP implementation at the northeastern corner of the facility. A Notice of Violation, dated September 19, 2017, was issued regarding the observations. 55-gallon drums containing unknown liquids were observed next to the property fence line without BMP implementation. Totes and 55-gallon drums of unknown liquids without BMP implementation were observed in the waste water treatment area at the northern portion of the facility. The facilityG s Level 1 ERA Report BMP implementation schedule notes that old equipment and materials will be removed or covered by 10/2/2017. Mr. Driscol noted that they are planning on constructing permanent overhead cover for the

THERMAL VAC TECHNOLOGY (Continued) **1000364809**

maintenance and waste water treatment areas.

Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: Sunny and cool. SWPPP site plan has been updated to show previously-missing exposed equipment but needs labels. Trench drain from central yard has been cleaned, rusted barrel emptied of water, dirt removed, and some of the rusted metal is now gone. Storm water samples show excursions for various metals at both monitoring locations. Contacts reported that metal items are covered where they are important to operations. Recommended covering rusted metal items in particular to bring down their sample results and explained that results show that BMPs are inadequate. Contacts report that chiller leaking potable water is planned to be replaced.

Eval Date: 12-06-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Present for the inspection was Nithesh Paramesh, Operations Manager, Jose Sanchez, Plating Manager, and Charles Berry, Consultant. The facility is conducting on site recycling of used acetone. The facility operates a ultrasonic cleaner to clean parts contaminated with oil/grease using acetone. Once the acetone is spent, it is transferred to a 55 gallon drum. Once the drum is full it is pumped into an acetone recycling unit. Filters capture the contaminants from the acetone and are reported to be managed as hazardous waste, no waste filters were observed at this time. The facility recycles approximately 55 gallons of acetone per month. Please do the following: - Begin labeling the 55 gallon drum of acetone as excluded recyclable material - On CERS, Facility Information Business Activities page, mark Yes for G Does your facility recycle more [Truncated]

Site Name:	THERMAL-VAC TECHNOLOGY
Violation Date:	03-17-2016
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 07/03/2017. Over 7 drums storing used acetone were on site, unmarked with each drumG s accumulation start date. One tote storing nickel strike solution was on site, marked with an accumulation start date of 7-7-14. A drum storing used oil was unmarked. Review of manifests show that these waste streams were last remove by a registered hauler for proper recycling / disposal over 180 days ago. The allowable storage time for a small quantity generator (SQG) is 180 days. However, if the waste must be transported over a distance of 200 miles or more to its TSD facility, the generator may store the waste on site for up to 270 days. Have the hazardous waste that has been on site beyond allowable storage time removed for proper recycling/disposal. Submit a copy of the removal records to this Agency within 30 days.

Eval Notes:	Received an email correspondence from CW Berry of Thermal Vac regarding the quantity of Potassium Cyanide that will be utilized at the facility. Per Mr. Berry, the facility will be well below the 100 TQ threshold. Sorry for delay, I had 47 CERS filings to do!! We have reduced to amount we store below the 100 pound limit. I have confirmed the amount in the tanks is 81 pounds based on lab analysis from Western Analytical Labs. I can send lab reports if you would like. I will be at Thermal-Vac tomorrow and confirm the details of storage and send that confirmation to you. We have arranged with Miles Chemical to purchase Potassium Cyanide in smaller packaging. Thanks CW

Eval Notes:	Regional Board staff conducted a routine compliance inspection of the above facility on October 30, 2002. The SWPPP was last updated 2/28/01 with training records dating 3/14/02. Most of the items noted in previous inspections have either been moved indoors or removed from the facility. Mr. Oaks expressed the facility's interest in becoming exempt once Phase II of the General Industrial Permit is adopted. No major violations were observed at this time.

Eval Notes:	On site for a routine hazardous waste inspection. Heather Falcone, director of quality, and Sean Driscol, director of operations, were present for the inspection and provided consent to inspect. The facilityG s operations and the waste generated were discussed. The inspection included a walk of the facility's outside perimeter and its trash storage areas. I did not observe hazardous waste in the facility's trash or as run off on the ground. The storage of the shop's hazardous waste was inspected. The storage containers were closed and labeled with the required information, except as cited above. The facility is considering the on site reclamation of their used acetone for on site reuse. They are evaluating effective stills that will meet their standards. The continuous presence of floor drainage liquids in the ADB lineup (tank 7 nitric acid and tank 3 alkaline etch locations) two catch sumps and its possible classification as a wet process floor was discussed. Eval Date:	07-03-2018
Violations Found:	Yes
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Regional Board Staff conducted a compliance inspection of the above facility on July 3, 2018. The facility is currently in Level 1 for Zinc, Iron, Nitrite plus Nitrate, Aluminum, and pH. The Annual Report and Ad Hoc Reports have not yet been submitted for the 2017-2018 reporting period. Staff met with Sean Driscol, Director of Operations. Mr. Driscol did not have knowledge of where the SWPPP or training records were kept. A site walk was then conducted. Industrial materials and equipment were observed without BMP implementation in the maintenance area at the northeastern portion of the facility. Mr. Driscol noted that tarps are deployed during rain events. 55-gallon drums containing waste oil were observed without cover or secondary containment. Scrap metal and industrial equipment were observed stored without BMP implementation at the northeastern corner of the facility. A Notice of Violation, dated September 19, 2017, was issued regarding the observations. 55-gallon drums containing unknown liquids were observed next to the property fence line without BMP implementation. Totes and 55-gallon drums of unknown liquids without BMP implementation were observed in the waste water treatment area at the northern portion of the facility. The facilityG s Level 1 ERA Report BMP implementation schedule notes that old equipment and materials will be removed or covered by 10/2/2017. Mr. Driscol noted that they are planning on constructing permanent overhead cover for the maintenance and waste water treatment areas.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: Sunny and cool. SWPPP site plan has been updated to show previously-missing exposed equipment but needs labels. Trench drain from central yard has been cleaned, rusted barrel emptied of water, dirt removed, and some of the rusted metal is now gone. Storm water samples show excursions for various metals at both monitoring locations. Contacts reported that metal items are covered where they are important to operations. Recommended covering rusted metal items in particular to bring down their sample results and explained that results show that BMPs are inadequate. Contacts report that chiller leaking potable water is planned to be replaced.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-06-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed, Supervising Hazardous Materials Specialist. Present for the inspection was Nithesh Paramesh, Operations Manager, Jose Sanchez, Plating Manager, and Charles Berry, Consultant. The facility is conducting on site recycling of used acetone. The facility operates a ultrasonic cleaner to clean parts contaminated with oil/grease using acetone. Once the acetone is spent, it is transferred to a 55 gallon drum. Once the drum is full it is pumped into an acetone recycling unit. Filters capture the contaminants from the acetone and are reported to be managed as hazardous waste, no waste filters were observed at this time. The facility recycles approximately 55 gallons of acetone per month. Please do the following: - Begin labeling the 55 gallon drum of acetone as excluded recyclable material - On CERS, Facility Information Business Activities page, mark Yes for G Does your facility recycle more [Truncated]

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Classification: Large Quantity Generator

Hazardous Waste Summary:

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Facility Has Received Notices of Violations:

INDEPENDENT FORGE CO. (Continued) **1000209523**

Regulation violated: Not reported
Area of violation: Generators - General
Date violation determined: 2005-02-02 00:00:00.0
Date achieved compliance: Not reported
Violation lead agency: State
Enforcement action: COMPLIANCE EVALUATION INSPECTION ON-SITE
Enforcement action date: Not reported
Enf. disposition status: Not reported
Enf. disp. status date: Not reported
Enforcement lead agency: Not reported
Proposed penalty amount: Not reported
Final penalty amount: Not reported
Paid penalty amount: Not reported

FINDS:

Registry ID: 110008270058

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CADILLAC PLATING, INC. (Continued) **S106105044**

Site Name: CADILLAC PLATING INC
Violation Date: 02-20-2014
Citation: 22 CCR 45 67450.11(d)(7)(E) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.11(d)(7)(E)
Violation Description: Failure to maintain the following records at the facility for a minimum of three years from the last date of any activity and made available to authorized representatives of the Department, the CUPA, or the U.S. EPA upon request: 1) Written approval from the agency operating the POTW receiving the facility's discharges; 2) Written method documented in the waste analysis plan for ensuring that the concentration of total cyanide does not exceed 5000 milligrams per liter in the aqueous waste resulting from the mixing; and 3) Documentation that the residual solids generated by the treatment have been either: A) Sent offsite for metals recovery or reclamation; or B) Determined to be not amenable for recycling.
Violation Notes: Returned to compliance on 03/21/2014. Closure plan was not available for inspection. Provide the closure plan for inspection.
Violation Division: Orange County Environmental Health
Violation Program: PBR
Violation Source: CERS

Site ID: 388600
Site Name: CADILLAC PLATING INC
Violation Date: 03-20-2017
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 03/26/2018. Multiple containers storing hazardous waste liquids were observed open. Open containers were observed in the treatment area, process area, and containment area. Any container used to store hazardous waste must be stored closed when not in active use. Please ensure that proper containers are used in that they can be properly sealed closed to prevent an unauthorized release of hazardous waste.
Violation Division: Orange County Environmental Health

Violation Date: 04-14-2016
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion

CADILLAC PLATING, INC. (Continued) **S106105044**

protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

Violation Notes: Returned to compliance on 07/03/2017. The PBR FTU2 tank marked "batch 1" was in use. This tank system must be certified by a professional engineer as required. Provide the tank system PE certification report to this Agency for our review.

Violation Date: 02-20-2014
Citation: 22 CCR 15 66265.193 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.193
Violation Description: Failure of the LQG and/or TP generator, on all new and existing hazardous waste tank systems and ancillary equipment, to meet the following secondary containment requirements: 1) Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and 2) Capable of detecting and collecting releases and accumulated liquids until the collected material is removed. 3) Constructed of or lined with materials that are compatible with the waste(s) to be placed in the tank system and shall have sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from nearby vehicular traffic); 4) Placed on a foundation or base capable of providing support to the secondary containment system and resistance to pressure gradients above and below the system and capable of preventing failure due to settlement, compression, or uplift; 5) Provided with a leak detection system that is designed and operated so that it will detect the failure of either the primary and secondary containment structure or any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours, or at the earliest practicable time if the existing detection technology or site conditions will not allow detection of a release within 24 hours; 6) Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated

CADILLAC PLATING, INC. (Continued) **S106105044**

	precipitation shall be removed from the secondary containment system within 24 hours, or in as timely a manner as is possible to prevent harm to human health or the environment, if removal of the released waste or accumulated precipitation cannot be accomplished within 24

Violation Description:	Failure to meet the following container management requirements: (a) A

CADILLAC PLATING, INC. (Continued) **S106105044**

container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Three hazardous waste containers were observed stored open as noted in the report. Hazardous waste containers must be stored closed when waste is not being added of removed. Two of the containers are unable to be stored closed and should not be used to store hazardous waste. Within 30 days, please discontinue using these containers to store hazardous waste and have the waste removed. Please obtain a cover for the filter cake hopper.

Violation Date: 03-26-2018
Citation: HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Description: Failure to adequately complete, and maintain for review, all requirements of the source reduction evaluation review and plan (SB-14).
Violation Notes: Returned to compliance on 12/04/2018. OBERVATION: A source reduction evaluation review and plan for [note year, once every 4 years beginning 1999 (2011, 2015, etc.)] was not prepared. On or before September 1, 1991, and every four years thereafter, each generator shall conduct a source reduction evaluation review and plan pursuant to section 67100.5 and have it available for inspection. CORRECTIVE ACTION: Immediately prepare this report and ensure that this report is done in a timely manner.

Citation:	22 CCR 15 66265.196 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.196
Violation Description:	Failure to immediately remove from service a tank system or secondary containment system from which there has been a leak, spill, is unfit for use and comply with applicable requirements.
Violation Notes:	Returned to compliance on 03/26/2018. OBSERVATION: Hazardous liquid (pH1) was observed within secondary containment of the Nickel plating line area. The nickel plating line is currently not in use and per Richard Amezaga, the secondary containment is being used to rinse 5-gallon containers. Therefore, any liquid in this secondary containment must be addressed immediately. This violation was abated as the liquid was removed during this inspection.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-06-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Please be advised that this Agency has reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Adjusted Closure Cost Estimate (CCE) was not properly calculated since it appears that the 2012 CCE was used. There is a comment "same as last year 2013 & inflation factor" on the attached Estimated Closure Cost (ECC). However, the copy of ECC submitted is from 2012. This Agency received a new closure cost and salvage value in 2013 (enclosed). The 2014 CCE is your 2013 CCE ($7,784.19) multiplied by a factor of 1.014 which is $7,893.17 - salvage value ($6,698.09). Revised Certification Of Financial Assurance Form and Estimate Closure Cost (enclosed) must be submitted to this Agency by 3/27/14.

Eval Notes:	An inspection was conducted on a neighboring business when staff obsevred a discharge to the storm drain from the facility. The company is a plater. Staff asked that the discharge of non-stormwater, originated from a yard washdown, be stopped. Mr. Ibarra agreed to do

CADILLAC PLATING, INC. (Continued) **S106105044**

that. Based on info from Mr. Ibarra and their consultant, Mr. Anil Desai, they are working on the NOI and the SWPPP. Told Mr. Ibarra and Mr. Desai of a concern that the production area is being slopped to discharge to the storm swale and the adjacent storm drain and flood control channel. The production area shows evidence of spill of chemicals and tracks from forklifts being carried outside. The company contact stated that they would do something such as building a berm to contain the spill and would sweep the area on a regular basis. Mr. Desai showed a report of the lab analysis of a storm water taken the previous weeks. All the results looked within the benchmark ranges.

Eval Notes:	Evaluation concludes 4 tanks and no containers to be the correct count for the continuous treatment unit. However, clarification is necessary as to the operation and use of the batch treatment tank. Also, the

CADILLAC PLATING, INC. (Continued) **S106105044**

tour along with the review of the 6-29-12 PE tank assessment report confirmed that the batch treatment tank, which was also in use as a pre-treatment tank for the continuous flow, was not included in the 6-29-12 PE assessment report. The drum rinsing is itself a separate unit. If batch treatment tank is a pretreatment tank for the continuous flow unit, then that adds one tank for the continuous flow unit The waste to be treated within the batch treatment unit must be confirmed. If the batches are different in content, then each treatment process would be unique and require its own unit identification.

Eval Notes:	Onsite for a reinspection of the facility. Met with Adam Ibarra of Imperial Plating. Adam was assisting this facility to bring the facility back into operation. Consent was provided to enter and observe the facilities status. The electricity has been restored in the process building where the plating operations occur. The electricity remains shut down in the treatment building and hazardous waste storage building. The electrical contractor is continuing to make the necessary upgrades required by OSHA. Hazardous waste filter cake was transported on this date. Currently, several liquid containers awaiting treatment were in the storage area. The following accumulation dates were observed: - Floor water - 4/6/17 - Colored liquid waste - 3/21/17 - Blue Liquid waste - 4/17/17 and 4/20/17 - black liquid waste - 4/6/17 Hazardous waste must be removed by 6/21/2017.

Eval Notes:	On site for a reinspection at Cadillac Plating. Met with Adan Ibarra and consent was provided to enter and conduct inspection activities. The facility is partially operating as the two southern most buildings (hazardous waste storage building and treatment building) are still without electricity. According to Mr. Ibarra, the electrical contractor will be at the facility sometime this week to resume electrical repairs. Mr. Richard Amezaga (facilities treatment and waste consultant) has been away due to a medical condition. Since the initial routine inspection that was conducted on 3/20/2017, only filter cake waste has been removed from the facility. All liquid hazardous waste observed on 3/20/2017 have been consolidated into larger totes and labeled. Documentation requested on the initial inspection has not been provided. Currently, the following violations are still open: - I126 - Training documentation unavailable - I183 -

CADILLAC PLATING, INC. (Continued) **S106105044**

Site Name:	CADILLAC PLATING INC
Violation Date:	04-14-2016
Citation:	22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f
Violation Notes:	Returned to compliance on 07/03/2017. The PBR FTU2 tank marked "batch 1" was in use. This tank system must be certified by a professional engineer as required. Provide the tank system PE certification report to this Agency for our review.

Violation Description:	Failure to inspect weekly areas where hazardous waste containers are stored. The owner or operator must look for leaking containers and for deterioration of containers caused by corrosion or other factors.
Violation Notes:	Hazardous waste container weekly inspection logs were unavailable for review. Hazardous waste containers are required to be inspected weekly and the inspections must be documented. Documentation must be available for 3 years. Within 30 days please begin inspecting all hazardous waste containers at least weekly.

Citation: 22 CCR 45 67450.13(a)(1) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(1)
Violation Description: Failure to prepare a written estimate of the cost of closing each unit which includes the cost that would be incurred for closing a treatment unit when using the owner or operator or generator's own staff and/or personal equipment taking into account any salvage value that may be realized from the sale of wastes, facility structure or equipment, land or other facility assets. This estimate shall be submitted as an attachment to the Certification of Financial Assurance for Permit by Rule and Conditionally Authorized Operations/ Maintenance page(s) of the Unified Program Consolidated Form (x/99)).
Violation Notes: Returned to compliance on 08/02/2016. On 4/4/16, after review of financial assurance documents submitted to CERS on 4/1/16, this agency requested submittal of revised/adequate copy of closure cost breakdown. To date, a revised copy of closure cost breakdown has not been submitted. The requested document must be submitted (electronically) by 7/11/16.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-06-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Please be advised that this Agency has reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Adjusted Closure Cost Estimate (CCE) was not properly calculated since it appears that the 2012 CCE was used. There is a comment "same as last year 2013 & inflation factor" on the attached Estimated Closure Cost (ECC). However, the copy of ECC submitted is from 2012. This Agency received a new closure cost and salvage value in 2013 (enclosed). The 2014 CCE is your 2013 CCE ($7,784.19) multiplied by a factor of 1.014 which is $7,893.17 - salvage value ($6,698.09). Revised Certification Of Financial Assurance Form and Estimate Closure Cost (enclosed) must be submitted to this Agency by 3/27/14.

Eval Notes:	On site for a follow-up inspection. Met with Brandy Corona of Cadillac Plating. Consent was provided to conduct inspection activities and to take photos. The following was observed: - Electricity for the entire facility has been restored. - Treatment operations have been ongoing sporadically. The treatment system was nt operating. - (1) 275-gallon tote containing floor waste was dated 6/15/2017 is is past the 90-day accumulation time (see violation I125 below). - (1) open-topped tank was full of liquid floor waste. Hazardous must be stored closed (see violation I145 below). - hazardous waste manifests were not available as they are under the control of Richard Amezaga.

Eval Notes:	On site to conduct a routine Tiered Permitting Permit By Rule (PBR) inspection, accompanied by Dean Freed. The facility's consultant, Bart Hamlett, was present for the inspection. The following PBR treatment units were observed: FTU #1 Continuous treatment G Plating process baths are plumbed to three lift stations along the plating process lines. Waste is pumped from the lift stations to the continuous treatment system FTU #2 Batch treatment G Floor wastewater is collected in a holding tank and pumped into containers which are brought over to and treated in the batch tank. Container rinsate is also treated in the batch tank. The exteriors of the treatment units were marked with the required information. The secondary containment beneath each unit was observed dry. CERS ID 10511809 Tiered Permitting submittal dated 3/18/19 was evaluated during this inspection and is being declined. Within 30 days please make the changes specified on CERS. Eval Notes:	On site to provide and review the 2-20-14 inspection report with Richard Amezaga, manager. Violations (P004, P006, X018) were corrected. We reviewed the tiered permitting units' identification and tank count. The manager provided a tour of the treatment system and each individual tank. He identified the continuous flow treatment unit to be FTU#1 and the batch treatment to be FTU#2. This showed that the marking of the units was reversed. He will correct the identification. We discussed the facility's notification of container rinsing within both the batch and the continuous treatment units. The facility triple rinses 5 gallon containers prior to disposal into the common trash. The rinsate is then treated on site within the PBR unit. We discussed the required weekly inspection of hazardous waste storage containers and daily inspection of hazardous waste tank systems. We discussed the storage of hazardous waste rinse water pending treatment by the unit. The [Truncated]

Eval Type:	Construction Storm Water Compliance Evaluation
Eval Notes:	An inspection was conducted on a neighboring business when staff obsevred a discharge to the storm drain from the facility. The company is a plater. Staff asked that the discharge of non-stormwater, originated from a yard washdown, be stopped. Mr. Ibarra agreed to do that. Based on info from Mr. Ibarra and their consultant, Mr. Anil Desai, they are working on the NOI and the SWPPP. Told Mr. Ibarra and Mr. Desai of a concern that the production area is being slopped to discharge to the storm swale and the adjacent storm drain and flood control channel. The production area shows evidence of spill of chemicals and tracks from forklifts being carried outside. The company contact stated that they would do something such as building a berm to contain the spill and would sweep the area on a regular basis. Mr. Desai showed a report of the lab analysis of a storm water taken the previous weeks. All the results looked within the benchmark ranges.

Eval Notes: On site to conduct a routine Hazardous Waste inspection, accompanied by Dean Freed. The facility's consultant, Bart Hamlett, was present for the inspection. The facility is a Large Quantity Generator of RCRA hazardous waste. Walked throughout the facility and observed hazardous waste generation points and storage areas. Waste generation and operations were discussed. There are two areas where plating is conducted. Nickel and Tin plating is conducted in one suite of the building and zinc plating and anodizing are conducted in another suite. Both process floors are said to be cleaned everyday using vacuum pumps and waste is batch treated. Several process tanks along the zinc plating, anodize, and alkaline zinc plating lines are plumbed to three respective lift stations, which are plumbed to the continuous treatment system. Hazardous waste containers and tanks were observed. One tank labeled ZC-7 in the process line is being used to store waste floor wastewater. [Truncated]

Eval Notes:	Evaluation concludes 4 tanks and no containers to be the correct count for the continuous treatment unit. However, clarification is necessary as to the operation and use of the batch treatment tank. Also, the tour along with the review of the 6-29-12 PE tank assessment report confirmed that the batch treatment tank, which was also in use as a pre-treatment tank for the continuous flow, was not included in the 6-29-12 PE assessment report. The drum rinsing is itself a separate unit. If batch treatment tank is a pretreatment tank for the continuous flow unit, then that adds one tank for the continuous flow unit The waste to be treated within the batch treatment unit must be confirmed. If the batches are different in content, then each treatment process would be unique and require its own unit identification.

CADILLAC PLATING, INC. (Continued) **S106105044**

Eval General Type:	Other/Unknown
Eval Date:	12-04-2018
Violations Found:	Yes
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The following violation was cited on 3/23/17 and 3/26/18 and remains outstanding: I444 - Generator has prepared a Source Reduction Plan (SB14). Inspector comments: The SB14 observed on site was only the source reduction plan. Please note SB14 consists of 3 documents: 1) Source Reduction Review and Plan 2) Summary Progress Report 3) Performance Report. This violation is being closed and recited. The following violation was cited on 3/23/17 and remains outstanding: I545 - Generator has properly maintained storage in tanks for incompatible materials, spills and overfills. Inspector comments: The batch treatment tank required an overfill prevention device. Please submit proof showing the batch treatment tank is equipped with overfill prevention. The following violations were cited on 3/26/18: I068 - Owner/Operator has appropriate emergency equipment. Inspector comments: One eyewash station was not connected to a potable water source; violation is outstanding. [Truncated]

Eval Notes:	Onsite for a reinspection of the facility. Met with Adam Ibarra of Imperial Plating. Adam was assisting this facility to bring the facility back into operation. Consent was provided to enter and observe the facilities status. The electricity has been restored in the process building where the plating operations occur. The electricity remains shut down in the treatment building and hazardous waste storage building. The electrical contractor is continuing to make the necessary upgrades required by OSHA. Hazardous waste filter cake was transported on this date. Currently, several liquid containers awaiting treatment were in the storage area. The following accumulation dates were observed: - Floor water - 4/6/17 - Colored liquid waste - 3/21/17 - Blue Liquid waste - 4/17/17 and 4/20/17 - black liquid waste - 4/6/17 Hazardous waste must be removed by 6/21/2017.

Eval Notes:	On site for a reinspection at Cadillac Plating. Met with Adan Ibarra and consent was provided to enter and conduct inspection activities. The facility is partially operating as the two southern most buildings

CADILLAC PLATING, INC. (Continued) **S106105044**

(hazardous waste storage building and treatment building) are still without electricity. According to Mr. Ibarra, the electrical contractor will be at the facility sometime this week to resume electrical repairs. Mr. Richard Amezaga (facilities treatment and waste consultant) has been away due to a medical condition. Since the initial routine inspection that was conducted on 3/20/2017, only filter cake waste has been removed from the facility. All liquid hazardous waste observed on 3/20/2017 have been consolidated into larger totes and labeled. Documentation requested on the initial inspection has not been provided. Currently, the following violations are still open: - I126 - Training documentation unavailable - I183 - EPA ID # is currently Inactive - [Truncated]

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2019

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019
Date Data Arrived at EDR: 05/14/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

East Map:	5641308 ORANGE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

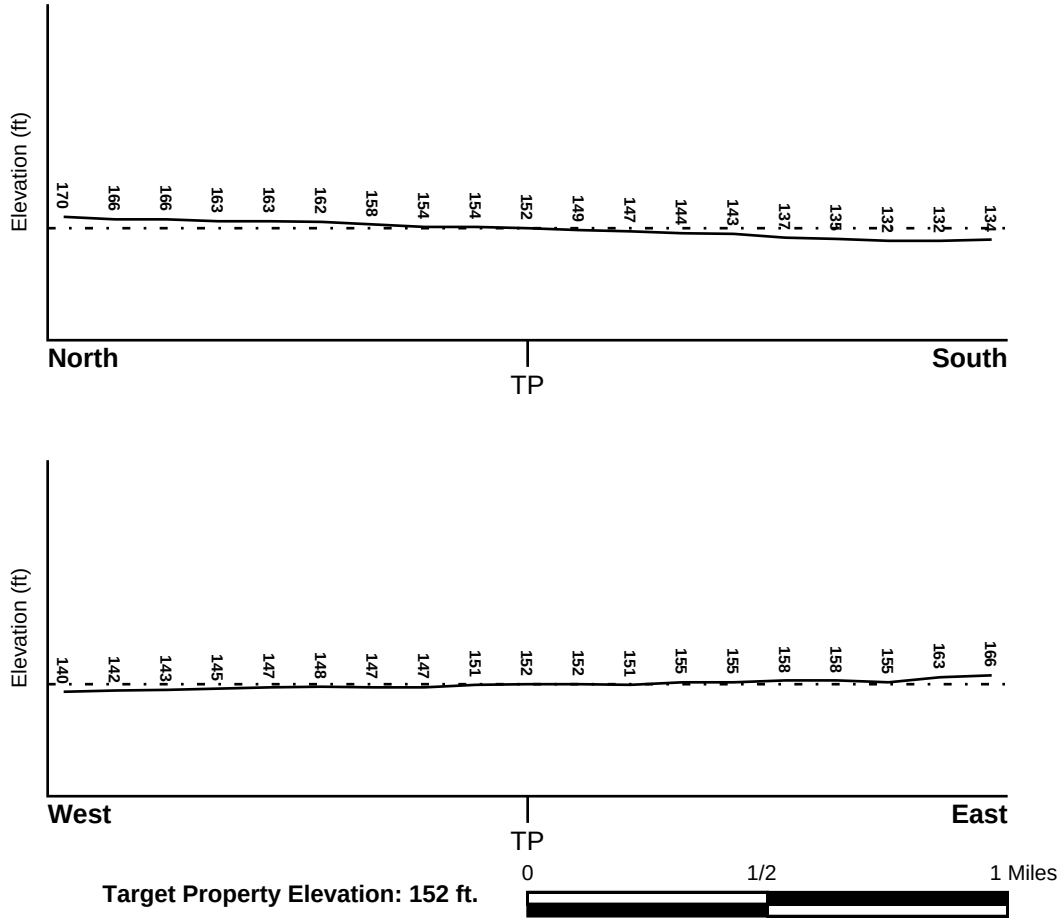
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0142J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06059C0021E	FEMA Q3 Flood data
06059C0161J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ANAHEIM	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile North
Site Name:	Neville Chem Co
Site EPA ID Number:	CAD008364150
Groundwater Flow Direction:	South
Inferred Depth to Water:	75 feet to 90 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

4G	1/2 - 1 Mile WNW	Not Reported
5G	1/2 - 1 Mile WNW	Not Reported
6G	1/2 - 1 Mile SSE	Not Reported
7G	1/2 - 1 Mile South	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6
2	16 inches	62 inches	stratified sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

Soil Map ID: 2

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Not reported	Not reported	Max: 14.11 Min: 1	Max: 8.4 Min: 6.6
2	16 inches	40 inches	stratified sand to sandy clay loam	Not reported	Not reported	Max: 14.11 Min: 1	Max: 8.4 Min: 6.6
3	40 inches	46 inches	silt loam	Not reported	Not reported	Max: 14.11 Min: 1	Max: 8.4 Min: 6.6
4	46 inches	59 inches	stratified sandy clay loam	Not reported	Not reported	Max: 14.11 Min: 1	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: HUENEME

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	27 inches	59 inches	stratified sand to silt loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: RIVERWASH

Soil Surface Texture: sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified coarse sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Vio	Violation Date	Date Cleared	Violation
Notice to Comply			
V 208	11/25/2019		208 Owner/Operator ID page is incomplete/outdated
	Comments : V208 [HSC 25509, CCR 2729.5]: The Owner/Operator ID Page on file with this agency contains outdated or incorrect information. All changes to the Owner/Operator ID Page shall be made and submitted within 30 days of the changes occurring. As of January 1, 2013, all business shall make changes to the Owner/Operator ID Page through the California Environmental Reporting System (CERS) and NOT by submitting a paper copy to this agency. Make the needed corrections within CERS and resubmit when completed.		
V 211	11/25/2019		211 Other
	Comments : HMBP CERTIFICATION - The Hazardous Materials Business Plan (HMBP) was to have been certified within 365 days of the previous submittal date (11/30/2017) within the California Environmental Reporting System (CERS). No certifications occurred in 2018 or 2019. The facility shall log into CERS, ensure all submitted information is correct and valid and submit as certification. As of January 1, 2020, the 365 day certification requirement is being expanded to a three (3) year certification requirement; however, because this facility is out of compliance currently, certification shall occur within 30 days.		

Access to conduct today's inspection/re-inspection granted by: Jose Padilla, Facilty Maint Manager
The above indicated violations must be abated by **12/26/2019**. If additional re-inspections are necessary, a $100.00 administrative fee will be charged for each additional re-inspection. Late submission of documentation is also subject to a $100.00 administrative fee at 30, 60 and 90 days from the date of inspection.
Please call (714) 765-4040 if you have any questions, or visit our website at www.anaheim.net/hms.

Notice to Comply			
V 203	8/28/2015	8/28/2015	203 Chemical inventory incomplete or needs update
	Comments : V203 [HSC 25504, 25505(d), CCR 2729.4]: The chemical inventory is in need of being revised and has not been annually certified. All revisions to the chemical inventory are to be reported within 30 days of the changes occurring and annual certification is to occur within one year of the previous submittal and/or certification. As of January 1, 2013, revisions to the chemical inventory and annual certifications are now to be done through the California Environmental Reporting System (CERS) found at CERS.CALEPA.CA.GOV and not by submitting hard copies to this agency. The chemical inventory was revised to remove gaseous CO2 and has been certified this date.		
General Comments			
	On site for routine inspection. A CERS certification occurred this date. All future revisions and/or certifications shall be done through CERS (CERS.CALEPA.CA.GOV) and not by submitting hard copies of documents to this agency. Annual certification shall occur or or before 365 days of this and each certification hereafter.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Northgate Env. Management, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # BEE2-4F93-88E3

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched	Address Not Identified in Research Source
2000 E Gene Autry Way	2014, 2010, 2005, 2002, 2001, 1997, 1992, 1991, 1986, 1980, 1975, 1971, 1970, 1966, 1965, 1961, 1960, 1956, 1955, 1952, 1950, 1946, 1945, 1941, 1936, 1930, 1926, 1925, 1922, 1921, 1920

APPENDIX I

ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

DERRICK S. WILLIS
PRINCIPAL II

Mr. Willis has over 28 years' experience serving both public sector and private clients in California and Canada on a wide variety of environmental projects. For the last several years, Mr. Willis' focus has been on formulating and facilitating closure and development strategies for large, complex, high profile, environmental projects for aerospace, industrial, and real estate development firms. Mr. Willis has extensive experience with due diligence/property transfer and development issues in a wide variety of industrial and regulatory settings. He is familiar with the industrial processes that generate environmental wastes, the fate and transport of chemicals in the environment, the potential adverse effects of these substances on human and ecological receptors, compliance challenges faced by business operators, the performance of remedial technologies, and how these issues play into site acquisition, development, and divestiture.

REPRESENTATIVE EXPERIENCE

Environmental Site Assessments

- ***RREEF, Multiple Sites, Southern California —*** Mr. Willis serves as client director for RREEF on multiple projects including acquisition studies (which include mold, asbestos and indoor air quality surveys), tenant audit programs, soil remediation, groundwater investigation and remediation, third party oversight, agency negotiation, and mold and asbestos abatement programs.
- ***Watson Land Company, Multiple Sites, Southern California —*** Mr. Willis has directed over 40 acquisition-related due diligence investigations for Watson Land Company (Watson). Scope of work has included Phase I ESAs, soil and groundwater investigations, risk evaluations, agency negotiation, and aiding Watson in evaluating and quantifying the potential risk associated with recognized environmental concerns.
- ***Various Clients, Various Locations, Southern California —*** Project manager for more than 200 Phase I environmental assessments (ESAs) for industrial facilities including aerospace, furniture and paper manufacturing factories; utility companies, vehicle and equipment maintenance facilities; and landfills as well former agricultural land. The objective of the ESAs was to evaluate and quantify potential liabilities associated with the acquisition and development of the properties.

Site Investigation and Remediation

- ***Kimco Realty Corporation, multiple locations in California and Nevada, –*** Serves Principal-in-Charge and program manager for investigation and remediation of several dry-cleaner sites in California (Cupertino, Daly City, Lakewood, and LaVerne) and Reno, Nevada. Projects range from investigation of soil impact to remediation of soil and groundwater. Mr. Willis is responsible for developing remedial strategies, negotiating with regulatory agencies, and providing technical direction to staff in order to evaluate and remediate site impacts, and bring sites to regulatory closure.

- ***Baker Cold Storage, Port of Long Beach Pier B Facility, California –*** Serves as project manager for investigation, remediation and redevelopment support of a 12-acre former wood treatment facility in the Port of Long Beach. The site is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans. In addition, tidally influenced groundwater is impacted with PCP and petroleum hydrocarbons and methane charged from oilfield operations. Mr. Willis evaluated investigation data, managed a groundwater investigation program and develop a remedial approach for soil and groundwater. Mr. Willis successfully streamlined the regulatory process by aggregating the remedial work plans including RCRA closure of a drip pad, into one encompassing work plan (Soil and Groundwater Response Plan) and one Remedial Design Document ([RDD] that incorporated the facility design components into building mitigation design), and securing agency approvals on components of site construction concurrent with development of the RDD. Site is currently being developed with a 250,000 square-foot cold storage facility.
- ***RREEF, Villa Marina Marketplace, Marina Del Rey, California —*** Mr. Willis managed the design and installation of a groundwater treatment system to treat groundwater impacted from metals and selenium to meet NPDES discharge requirements for a basement dewatering system for a shopping center. He currently manages the operation, maintenance and reporting associated with the ongoing dewatering system.
- ***Black Mountain Industrial Complex Remedial Design and Implementation, Nevada –*** Served as project manager for expedited investigation and remediation program for the Tronox industrial facility within the BMI Complex. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other products, and most recently alkali and manganese oxide-based chemicals. Historical Industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Developed streamlined investigation and remedial approach, prepared remedial plans, and rapidly mobilized and managed a team of staff and subcontractors to remove approximately 800,000 cubic yards of soil from the site to meet commercial soil cleanup goals for direct contact exposure in an expedited timeframe.
- ***Hawaii Wood Preserving Company Treatment Facility, Maui, Hawaii –*** Served as project manager, for decommissioning, investigation, remediation, and closure for a former wood treatment facility to allow for redevelopment. The site operated as from 1972 to 2001 to treat lumber with PCP, chromated copper arsenate (CCA), permithrin, and disodium octoborate. Chemicals were profiled, all equipment was decontaminated and ecommissioned, and verification sampling was conducted as part of decommissioning. A remedial investigation and remedial alternatives analysis was developed and implemented to investigate and develop a path-forward to closure. The implemented remedial approach consisted of site capping and long-term groundwater monitoring.
- ***Lockheed Martin Former International Light Metals Facility, Torrance, California —*** Served as project manager and principal investigator for a 67-acre aerospace facility where client objective was expedited redevelopment. The project included facility demolition, preparation and implementation of a Resource Conservation and Recovery Act (RCRA) closure plan for 11 permitted RCRA units, negotiations with the Department of Toxic Substance Control (DTSC), preparation of a RCRA Facility Assessment (RFA) (210 features identified that required intrusive investigation), implementation of a RCRA Facility Investigation (RFI) for soil and groundwater, preparation of a health-based risk assessment, and implementation of soil remediation. Site closure for soil was granted only three years after project initiation, in contrast to the normal six to eight year process, and has been used as an example by head DTSC officials as an example of

industry and the regulatory community working together to achieve expedited site closures for property redevelopment purposes. Mr. Willis also developed strategy for groundwater investigation and remediation and negotiated the corrective action consent agreement (CACA) with DTSC.

- ***Playa Capital Corporation, Playa Vista Development Project, Los Angeles, California —*** Mr. Willis served as program manager for the Playa Vista project, one of the largest and most visible brownfield development projects in the country. At 1,100 acres, it is the largest underway in Los Angeles County. His primary responsibility included environmental program management (including scoping, developing, scheduling, and tracking environmental activities for the development project), risk management (including developing and negotiating with agencies for appropriate cleanup criteria), remedial strategy/management (including development and implementation of pilot tests and oversight of investigation and remediation activities), agency/RP/buyer negotiations, consultant and contractor selection/oversight, coordination with Playa's infrastructure group on the development/implementation of integrated remedial approach where appropriate, litigation support, data management, and transactional support with respect to the sale of remediated parcels.
- ***Project Manager, Confidential Client, Buena Park, California —*** Served as project manager for multi-media remediation project at a commercial development in Buena Park, California. The site was a former food processing facility that was redeveloped into commercial offices and warehouse space. Evaluated the environmental liability for a Real Estate Investment Trust (REIT) that subsequently purchased the property, and managed remediation program in conjunction with site redevelopment.
- ***Project Manager, Brownfield Redevelopment, Torrance, California —*** Served as project manager for site redevelopment project for a PacTrust. Evaluated environmental liabilities associated with a 12-acre parcel that was part of a butadiene plant (Del Amo Superfund Site) left undeveloped as a brownfield, and formulated a strategy to expedite regulatory closure and redevelopment. A comprehensive investigation was completed on the parcel, and the report submitted to the Environmental Protection Agency (EPA) for review. Successfully negotiated with EPA to conduct a non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) closure program. Conducted soil remediation program under EPA oversight in conjunction with site construction activities.
- ***Project Manager, Investigation and Remediation Program, Safety Kleen, Vancouver, British Columbia, Canada —*** Managed remediation of former solvent recycler transfer stations in British Columbia and Alberta, Canada. Sites involved characterization and remediation of soil and perched groundwater zones. Assessed feasibility of vapor extraction for cleanup of vadose zone contamination, and designed and installed a dewatering system for perched water in former tank cavities and surficial saturated zone for Vancouver transfer station. Achieved regulatory site closure two years faster than previous consultant's estimate.
- ***Cupples Manufacturing, Investigation and Remediation Program, La Mirada, California —*** Project manager for soil/groundwater characterization and remediation program at a truck maintenance facility in La Mirada, California. Conducted an underground storage tank and clarifier removal program in conjunction with site characterization activities. Implemented remediation of soil and groundwater impacted with petroleum hydrocarbons. Negotiated and received closure from Regional Water Quality Control Board (RWQCB).
- ***Alberta Environment, Abandoned Wood Treatment Sites, Various Locations, Alberta, Canada —*** Project manager for the Wood Preserving Sites Characterization Program for Alberta

Environment. Performed site characterization of four former wood preservation sites in Alberta, Canada. The sites had been used for many years for treating wood poles and railroad ties with a pentachlorophenol/diesel mixture. Soil and/or groundwater were impacted at the sites. Soil borings and groundwater monitoring wells were installed, and laboratory analysis of soil and groundwater was performed, to help determine the lateral and vertical migration of dissolved-phase hydrocarbons in the groundwater and dense non-aqueous phase liquids (DNAPLs) through glacial tills and several non-confining layers. Detailed drilling and sampling plans were necessary to ensure correct evaluation of vertical DNAPL migration. Aquifer tests were performed and receptor data were collected in order to formulate a quantitative assessment of both health-based and environmental risk.

- ***Texaco Refining and Marketing Inc., Investigation and Remediation Programs, Various Locations, Southern California —*** Responsible for remediation programs at several petroleum retail outlets for Texaco in the southern California area. Projects included soil and groundwater investigation programs, underground storage tank (UST) removals, remedial design (including design and implementation of vapor extraction and aquifer tests), implementation of remedial program, and operation and maintenance of remediation systems. This included designing, specifying, permitting, and installing of all equipment (including piping, downhole pumps, off-gas treatment, and water treatment).
- ***Groundwater Contamination Investigation and Analysis, Technisol, Raymond, Alberta, Canada —*** Conducted a groundwater investigation program at a solvent recycling facility located in southern Alberta, Canada. The program was implemented to determine the lateral and vertical extent of several species of chlorinated volatile organic compounds present in the confined aquifer beneath the facility. Aquifer testing was performed to estimate migration rates and to provide preliminary data for remedial action. Successfully negotiated with Alberta Environment (lead regulatory agency) for monitored natural attenuation approach.
- ***Pier A Railyard, Port of Los Angeles, Los Angeles, California —*** Managed a soil and groundwater investigation program at a Port of Los Angeles rail transfer yard. The objective of the project was to characterize previously identified polynuclear aromatic compounds, volatile organic compounds, and petroleum hydrocarbons in the soil and groundwater, and identify any regulated building materials in the site structures in order to facilitate an expedited redevelopment program. The project was finished ahead of schedule and under budget.
- ***Soil and Groundwater Remediation, Texaco, Various Locations, Southern California —*** Conducted vapor extraction tests, performed data analysis, and generated recommendations for an industrial manufacturing facility to determine the viability of using vapor extraction for remediating chlorinated solvents, primarily tetrachloroethene (PCE), present in the soil beneath the facility. Each test was designed to assess air flow rates and vacuums, vertical interference and crossflow, radii of influence, potential for water upwelling, and effectiveness of vapor extraction in both vadose and capillary zones. Extracted vapors were collected to determine volatile organic compound concentrations. Data were used to determine well spacing and slotting intervals, optimum flow rate/vacuum combinations, extraction blower sizing, and vapor treatment equipment.
- ***Texaco, Various Locations, Southern California—*** Responsible for preparation of South Coast Air Quality Management District (SCAQMD) permitting, installation, operation and maintenance of thermal and catalytic oxidizers/vapor extraction systems for the remediation of soil (containing petroleum hydrocarbons) beneath operating service stations.

Litigation Support

- ***Litigation Support, Confidential Client, City of Commerce, California –*** Conducted site review of historical records, developed and implemented soil, soil vapor, and groundwater investigation, and developed Site Conceptual Model (SCM) for former aerospace facility that was now developed as a multi-tenant warehouse. Successful in being able reconstruct historical SCM to show that environmental impacts were caused by historic aerospace operations from the 1940s to 1960s and not from the more recent tenant operations. Provided information and deposition for property management firm's counsel.
- ***Mediation Support, Confidential Client, Los Angeles, California –*** Project manager for mediation support of insurance claim for cost reimbursement for handling, transportation and disposal of petroleum contaminated soil encountered during development of a high rise on a former hospital site. Work consisted of using photogrammetry and historical records to develop a volume of contaminated soil and expert witness report using spatial data analysis, rebuttal of expert witness reports, and expert witness testimony as part of mediation where a judgement was made in favor of our client for the full reimbursement cost.

EDUCATION

B.S., Geology, University of Alberta, Alberta, 1988

PROFESSIONAL HISTORY

Northgate Environmental Management, Principal, 2006 to date
LFR Levine Fricke, Principal Hydrogeologist, 2002 – 2006
Integrated Environmental Services, Director of Operations/Senior Program Manager, 1999– 2002
ARCADIS Geraghty & Miller, Inc. Senior Hydrogeologist, 1993 – 1999
Environmental Design Corporation, Vice President, 1992
Environmental Science & Engineering, Inc., Staff Geologist, 1991
Terracon Geotechnique, Ltd., Geologist, 1989 – 1991
Contract Positions, Various Locations, Geologist, 1988

REGISTRATIONS

Certified Environmental Manager, Nevada, No. EM 2252

NICKY G. ROBINSON, PE, QSD, QSP
SENIOR I ENGINEER

Ms. Robinson is a Professional Engineer with a variety of experience serving both public sector and private clients. Her professional engineering and management experience has been focused in remediation design and construction site oversight, Phase I and II environmental site assessments, environmental field sampling, environmental audits, site inspections, and technical data review. Ms. Robinson's environmental field experience includes soil and groundwater sampling, soil vapor studies, stormwater sampling, indoor air quality studies, air monitoring activities, and site cleanups. She has considerable experience managing and performing environmental due diligence and property transfer projects. Ms. Robinson's project experience also includes management of Total Maximum Daily Loading (TMDL) studies in surface waters; collecting storm water samples to quantify "first-flush" impacts and composite samples for pollutant loading characterization; obtaining NPDES permits and managing the water sample collection and analysis process to ensure permit compliance. Ms. Robinson is a licensed Civil Engineer in the state of California. She is a California licensed Qualified SWPPP Developer and Qualified SWPPP Practitioner and has received the OSHA 40 Hour HAZWOPER Training.

REPRESENTATIVE EXPERIENCE

Environmental Characterization and Remediation

- ***Southern California Edison (SCE) Power Pole Relocation into Closed Landfill, Carson, California*** **–** Ms. Robinson was the project manager for the relocation of power poles and associated anchoring systems into a closed and capped landfill, which was under the regulatory oversight of the DTSC. Ms. Robinson was responsible for providing environmental and engineering direction to SCE to guide their design, construction, and monitoring activities related to operations at the landfill to obtain DTSC approval. She provided direct field oversight of a field investigation program to obtain environmental and geotechnical design data to direct the final power pole design, which included air monitoring for SCAQMD Rules 1150, 402, and 403. Ms. Robinson was responsible for communication and providing technical support to SCE on this project. She was also responsible for preparing technical documents and management to ensure the overall project success and quality.
- ***Baker Cold Storage Facility Brownfield Clean-up, Long Beach, California*** **–** Ms. Robinson is the engineer of record for the remedial design for a site that is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans and under the regulation of the DTSC. She assisted with the development of the Soil and Groundwater Response Plan and the Remedial Design Document for the site that is currently being developed with a 250,000 square-foot cold storage facility. During development, Ms. Robinson conducted oversight of the site activities, including soil import/export, excavation, construction, and the installation of a methane barrier, and she has performed work zone and perimeter air monitoring. She also prepared daily activity reports including the analysis of air monitoring and Rule 1166 monitoring data to submit to the DTSC. Ms. Robinson coordinated field activities including the decontamination and sampling of former drip pads, air monitoring

activities, and wastewater sampling. She managed the data obtained from daily field activities and trained the field staff. Ms. Robinson prepare the Remedial Action Completion Report and the Operation and Maintenance Plan for the remedial activities.

- ***Black Mountain Industrial Complex, Henderson, Nevada –*** Ms. Robinson was a field engineer on site for the remediation of Tronox's industrial facility in Henderson, Nevada in which approximately 800,000 cubic yards of impacted soil were removed. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other products, and most recently alkali and manganese oxide-based chemicals. Historical Industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Her responsibilities included providing technical oversight of excavation, construction, and groundwater pumping well installation activities; collecting groundwater samples; obtaining soil and air samples; monitoring dust levels; and conducting weekly site inspections for SWPPP compliance. Ms. Robinson coordinated with design engineers to oversee the installation of their remediation and monitoring systems and provide field support and input for design revisions.
- ***CenterCal Development, Long Beach, California –*** Ms. Robinson is the engineer of record for the remedial design of a property in Long Beach that was formerly partially occupied by a gasoline service station with documented leaking underground storage tanks (USTs) impacting the subsurface. Historic site operations also included oil wells and crude oil pipelines. Ms. Robinson assisted with the design of an excavation program to remove impacted materials to accommodate the development of a mixed-use commercial and residential facility. Her work included analyzed historic investigation results and analytical data to determine the remediation program and provide support for the engineering decisions to reach a settlement agreement with the responsible party for the contamination present at the Site. Ms. Robinson also assisted with the preparation of various documents and reports for the site including a Remedial Action Plan, remedial costing analysis, and responses to questions from regulators and the responsible party.
- ***Kimco Lakewood Plaza, Bellflower, California –*** Ms. Robinson conducted soil and indoor air sampling to help determine a remedial design for soil impacts with VOCs from a former dry cleaning operation. She oversaw excavation activities and collected confirmation samples. Ms. Robinson managed the data and documents associated with the project and assisted with the preparation of final reports.

Environmental Site Assessments, Due Diligence, and Site Investigations

- ***Baker Cold Storage Facility Brownfield Clean-up, Long Beach, California –*** Ms. Robinson prepared an initial Phase I ESA and conducted site visits for the site that is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans and under the regulation of the DTSC. In addition, tidally influenced groundwater is impacted with PCP and petroleum hydrocarbons and methane charged from oilfield operations. She also conducted a groundwater investigation program to evaluate impacts for the design of the remedial actions and prepared reports documenting the field investigations for submittal to the DTSC.
- ***CenterCal Development, Long Beach, California –*** Ms. Robinson prepared an initial Phase I ESA, conducted site visits, coordinated a site investigation program with soil, groundwater, and soil vapor sampling, and prepared reports and documentation for a property in Long Beach that was

formerly partially occupied by a gasoline service station. The site was purchased by a developer to construct a mixed-use commercial and residential facility after remediating the known impacts that resulted from releases at the underground storage tanks associated with the gasoline station.

- ***Historic Oil Fields, Brea, California –*** Ms. Robinson conducted a Phase I ESA of historic oil fields spanning over 3,000 acres in Brea with operations still active across portions of the site. She coordinated a limited Phase II investigation across the site and utilized the results to prepare remedial cost documents, estimate of impacted material, and recommendations for areas of potential concern for redevelopment. She prepared all documentation, figures, and spreadsheets for meetings with developers interested in redeveloping the site.
- ***Park and Market Redevelopment, San Diego, California –*** Ms. Robinson managed and performed field activities, investigations, and oversight of the redevelopment of a property located in downtown San Diego that was formerly occupied by automobile repair facilities and several burn wells and pits associated with historic residential development. She conducted a Phase I and II ESA of the site which is currently being redeveloped with a high-rise residential tower over commercial development with subterranean parking extending to approximately 50 feet below ground surface. During excavation activities, impacted soils were encountered when former burn wells impacted with elevated concentrations of lead up to 60,000 parts per million. Ms. Robinson prepared a site-specific Health and Safety Plan and a Soil Management Plan for use during redevelopment. She also collected samples of impacted areas encountered, provided guidance to the developer regarding the disposal of the impacted material and proper handling procedures, and provided oversight of all work conducted with impacted materials. Ms. Robinson prepared summary reports of the field activities including analytical results, impacted soil removal totals, and photograph documentation of all activities.
- ***Monsanto Former Detergent Manufacturing Facility, Carson, California –*** Ms. Robinson measured groundwater levels and collected groundwater samples to monitor for hydrocarbons, predominantly benzene, which migrated through the soil to the groundwater beneath the site and migrated downgradient. Some samples were collected on the adjacent oil refinery property and Ms. Robinson received the appropriate training to access the refinery.
- ***Oxygen Biosparge Pilot Scale Investigation, Carson, California –*** Ms. Robinson collected groundwater samples using low flow sampling techniques as part of an oxygen biosparge in situ treatment system. Work was performed using supplied air in Level B personal protective equipment. She also routinely works in conjunction with a mobile laboratory to simultaneously collect and analyze soil vapor samples to monitor benzene concentrations as part of the pilot scale investigation.
- ***Los Angeles World Airports, Los Angeles International Airport, Los Angeles, California –*** Ms. Robinson reviewed historical reports, documents, and data for multiple portions of the Los Angeles International Airport and prepared summary documents. She also managed the review of similar work by other consultants for the facility. Ms. Robinson utilized the results of these investigation efforts to develop a facility wide groundwater monitoring program.
- ***Former Paint Facility, City of Commerce, California –*** Ms. Robinson was responsible for coordinating the field activities associated with collecting soil vapor and LNAPL samples for a former paint facility. A soil vapor extraction system was operated on the site and sampling was performed to develop a conceptual site model to assess the effectiveness of continued remediation

at the Site. Ms. Robinson was responsible for coordinating the sample collection and analysis with the laboratory and worked to draft the analytical report.

- ***Port of Oakland Embarcadero Cove, Oakland, California –*** Ms. Robinson was a staff engineer on site to oversee the abandonment of existing groundwater monitoring wells and the installation and development of new groundwater monitoring wells. Her responsibilities also included annual groundwater sampling at the site that is known to have been impacted by VOCs, SVOCs, organochlorine pesticides, PCBs, dioxins, and furans from facilities that previously occupied the site that were known to have handled and stored solvents, refined petroleum products, wood, preservatives, pesticides, and herbicides. She also assisted the preparation of the annual report and five-year review for the site.
- ***Former Apartment Complex Close-Out, Carson, California –*** Ms. Robinson was responsible for the oversight of environmental field activities related to the demolition of an existing apartment complex for redevelopment. Field activities included asbestos and lead-based paint surveys and removal, hazardous waste packaging and disposal, geophysical surveys, and air monitoring. Ms. Robinson also prepared close out reports and documents for the site.
- ***Former Dry-Cleaning Facility, Santa Rosa, California –*** Ms. Robinson performed low flow groundwater sampling for quarterly reporting for a site containing both a dry cleaner and a residential apartment building to monitor impacts to the groundwater. The site is known to have existing soil and groundwater impacts from historic use and storage of petroleum products and other hazardous substances on surrounding sites.
- ***Wetland Restoration Project, San Francisco, California –*** Ms. Robinson reviewed contractor submittals, including dust control, decontamination, soil stabilization, and execution plans for compliance with the project specifications and regulatory requirements and prepared responses to requests for information for the restoration of 26.5 acres of tidal wetland habitat. The site is known to have soil containing naturally occurring asbestos, copper, lead, nickel, zinc, TPH, PAHs, pesticides, and PCBs and some metals impacting groundwater.
- ***Environmental Site Assessments, Various Locations, California, Nevada, and Texas –*** Ms. Robinson has managed and conducted dozens of Phase I and Phase II environmental site assessments for commercial, industrial, and residential properties. Her responsibilities included complete site history reviews, identifying recognized environmental conditions and areas of potential concern, as well as field sampling and analysis to investigate potential impacts to soil and groundwater quality. Ms. Robinson assisted with the design of investigation programs, coordinated with field staff and subcontractors, and analyzed results to determine remedial actions. She also managed budgets, schedules, and client communication. Work was performed in general conformance with the ASTM environmental assessment standard and the U.S. EPA *All Appropriate Inquiry* guidelines. She has also conducted and completed preliminary endangerment assessments and obtained necessary permits for construction (NPDES, Rule 1166, etc.) on behalf of the developer to support the redevelopment activities.

Stormwater Monitoring and Compliance

- ***Machado Lake Nutrient TMDL Sampling, Torrance, California –*** Ms. Robinson manages the stormwater monitoring, sampling, and reporting for the City of Torrance in accordance with the provisions of the Machado Lake TMDL Special Studies Work Plan and the Machado Lake

Eutrophic, Algae, Ammonia, and Odors (Nutrient) TMDL (established by the Los Angeles Regional Water Quality Control Board) to monitor nutrients, including nitrogen and phosphorous discharged from the City of Torrance to Machado Lake. She coordinates routine sampling activities and has been a field lead for activities that include rapid mobilization during wet weather and dry weather events on a monthly basis since 2012 and data collection from data loggers to calculate flow rate and discharge volume and to monitor storm events. Ms. Robinson is also responsible for maintaining a network of flow sensors in subsurface conveyances and storm drains to quantify hydrology of the storm drain system and determine mass-based discharge compliance. She maintains discharge flow and volume calculations for annual reporting and prepares the annual report document. Ms. Robinson is also responsible for communicating with the City of Torrance, maintaining the scheduling, and ensuring the project stays within budget.

- ***Walteria Lake Monitoring Program for Nutrients and Toxics, Torrance, California –*** Ms. Robinson manages a monitoring program for discharge from Walteria Lake in accordance with the Walteria Lake Monitoring Program Nutrients and Toxics Study Work Plan developed by the Los Angeles County Flood Control District. She coordinates with the City of Torrance to conduct field sampling activities during pumping events that discharge from Walteria Lake. Ms. Robinson also maintains and analyzes the analytical and flow data from the stormwater and dry weather flow in relation to the applicable nutrients and toxics TMDL waste load allocations to determine if the lake contributes or removes pollutant loading from the flow. She also maintains communication with the City of Torrance and manages the budget and reporting for the project.
- ***Stormwater Basins Enhancement Project Monitoring and Reporting, Torrance, California –*** Ms. Robinson manages a project for the City of Torrance that includes stormwater sampling and flow measurements at various locations within three stormwater basins. The work is conducted in accordance with a plan approved by the Los Angeles Regional Water Quality Control Board. Ms. Robinson manages communication with the client, field sampling events, the schedule, and the project budget.
- ***Nutrient TMDL Sampling, Peter Weber Equestrian Center, Rolling Hills Estates, California –*** Ms. Robinson manages a project involving the collection of stormwater samples and flow measurements to monitor nutrients, including nitrogen and phosphorous at an active equestrian facility in Rolling Hills Estates following facility upgrades designed to reduce surface water impacts.
- ***Machado Lake Nutrient TMDL Sampling, Rolling Hills Estates, California –*** Ms. Robinson was the field lead for the collection of stormwater samples and flow measurements in accordance with the Palos Verdes Peninsula Coordinated Monitoring Plan and the Machado Lake Eutrophic, Algae, Ammonia, and Odors (Nutrient) TMDL (established by the Los Angeles Regional Water Quality Control Board) to monitor nutrients, including nitrogen and phosphorous discharged from Rolling Hills Estates to Machado Lake. Sampling activities included rapid mobilization during wet weather and dry weather events on a monthly basis between 2012 and 2016 to collect samples from surface waters and confined conveyance systems. She calculated monthly averages of total nitrogen and total phosphorous and compared the results to waste load allocations to determine attainment status.
- ***Anthropogenic Source Nutrient Assessment, Rolling Hills Estates, California –*** Ms. Robinson was a field lead for wet weather event stormwater sampling conducted for identification of nutrient

sources to study nutrient load reduction at the Model Equestrian Center Project, Rolling Hills Estates, California.

Engineering Design

- ***Baker Cold Storage Facility Brownfield Clean-up, Long Beach, California*** – Ms. Robinson is the engineer of record for the remedial design for a site that is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans and under the regulation of the DTSC. She assisted with the development of the Soil and Groundwater Response Plan and the Remedial Design Document for the site that is currently being developed with a 250,000 square-foot cold storage facility. The remedial design included a passive vapor mitigation system with a site cap. Ms. Robinson prepare the Remedial Action Completion Report and the Operation and Maintenance Plan for the remedial activities.
- ***Power Pole Relocation into Closed and Capped Landfill, Carson, California*** – Ms. Robinson managed the environmental component of a power pole relocation project that required removing two power poles and installing two new power poles with associated anchors and wires into a closed and capped landfill under the regulatory oversight of the DTSC. She worked with the client to develop an exploratory boring program on the landfill to guide the overall design, obtain necessary permits include a Rule 1150 permit from the AQMD, develop soil handling and monitoring procedures, prepare a work plan for DTSC approval, and oversaw the environmental monitoring during all excavation, power pole placement, backfilling, and landfill cap restoration procedures. Ms. Robinson coordinated with various entities including the DTSC, the client, the landowner, the site occupant, the engineer of record for the landfill, and the AQMD for the various components of this project. She prepared all documentation including work plans for the exploratory program and the power pole installation, health and safety plans, and completion reports.
- ***Vapor Barrier System Design for Duplex Development, Los Angeles, California*** – Ms. Robinson was one of the engineers responsible for the design of a vapor barrier system to prevent intrusion of VOCs in soil vapor into the development of several residential duplexes. Her work included working with a Principle Engineer to design the system and details and prepare the design drawings. Ms. Robinson also prepared inspections and oversight of the installation of the system.

Regulatory Compliance

- ***National Pollutant Discharge Elimination System Monitoring, Marina del Rey, California*** – Ms. Robinson coordinates field activities associated with water quality sampling and analysis, flow data collection and analysis, and system operation and maintenance for a groundwater treatment system for VOCs, selenium, and metals prior to discharge to the storm drain. Her responsibilities also include preparing quarterly and annual monitoring reports for the Regional Water Quality Control Board per requirements in the monitoring and reporting program of the NPDES permit for the project. She currently manages the testing, maintenance, and reporting associated with the ongoing dewatering system.
- ***Environmental Audits, Various Locations, California*** – Ms. Robinson has performed and managed multiple environmental audits at several commercial and industrial facilities in California.

Her responsibilities included conducting interviews with current tenants, inspecting site facilities to determine environmental compliance or potential issues, and completing a final audit report of findings. She also managed budgets, schedules, and client communication.

EDUCATION

B.S., Civil and Environmental Engineering, University of California, Los Angeles, 2009

PROFESSIONAL HISTORY

Northgate Environmental Management, Inc., Project Engineer, January 2015 to date
Northgate Environmental Management, Inc., Staff Engineer, August 2010 to January 2015
Incledon Consulting Group, Civil Engineer, July 2009 to July 2010
Incledon Kirk Engineers, Engineering Intern, June to September 2007 and June to September 2008

REGISTRATIONS / CERTIFICATIONS

Professional Engineer, California, No. 83985
Qualified SWPPP Developer (QSD) and Practitioner (QSP), No. 27442
OSHA 40-hour HAZWOPER

PRESENTATIONS

Brown, D., Dettle, J., and Robinson (Galloway), N., 2016. *Update on City of Torrance Stormwater Quality Project*, presentation, poster, and proceedings for the California Stormwater Quality Association's 12th Annual Conference on Stormwater Evolution: Source to Resource, San Diego, California. September 12-14, 2016.

Robinson, N., and Willis, D. 2018. *Minimizing Environmental Exposure by Incorporating Redevelopment Design in Remediation of Former Wood Treatment Facility*, poster and proceedings for the Association for Environmental, Health and Sciences Foundation's Annual West Coast Conference. March 19-22, 2018.
