**Subject: Phase II Environmental Site Assessment
1122 North Anaheim Boulevard, Anaheim, California**

INTRODUCTION

Leighton and Associates, Inc. (Leighton) is pleased to present this report summarizing the Phase II Environmental Site Assessment (ESA) activities completed for the proposed residential development located 1122 North Anaheim Boulevard in the city of Anaheim, California (site, Figure 1).

BACKGROUND

The site is approximately 4.5 acres and is currently occupied by Anaheim Fullerton Towing, who leases a portion of the site to Ecosystem Trucking. The site is developed with a small office building, an automobile and freight truck shop, an automobile storage warehouse, an employee breakroom building, an asphalt-paved impounded automobile parking lot, an unpaved freight truck parking lot, and a materials storage yard (e.g., shipping containers, truck trailer storage). Anaheim Fullerton Towing uses the site to store, maintain, and repair their company vehicles, as well as store vehicles that have been impounded by various city and police departments. Ecosystem Trucking uses the site to store/park their company vehicles (AECOM, 2017). Historical research completed by AECOM indicated that the site has been used as an automobile and freight truck storage/tow yard, maintenance and repair facility, and fueling site since at

least 1947. An oil-water separator is currently located in the automobile washing area located adjacent to the north of the main shop building (AECOM, 2017).

The site formerly operated five underground storage tanks (USTs) and associated fueling dispenser pumps. The USTs consisted of the following: one 2,000-gallon, one 10,000-gallon, and one 20,000-gallon diesel USTs and two 500-gallon waste oil USTs. The 2,000-gallon, 10,000-gallon, and two 500-gallon USTs were removed from the site in January 1999. The 20,000-gallon UST was abandoned in-place in April 1999. Soil sampling completed during tank removal/abandonment activities identified elevated concentrations of diesel-range petroleum hydrocarbons (TPHd) beneath the fuel dispensers associated with the 20,000-gallon UST. Additional assessment was completed in the vicinity of the TPHd-impacted soil identified during the tank abandonment activities and consisted of the advancement of five soil borings and the collection and analysis of 24 soil samples. Two soil samples contained elevated concentrations of TPHd (13,200 milligrams per kilogram [mg/kg] and 1,850 mg/kg). The Santa Ana Regional Water Quality Control Board (RWQCB) subsequently opened an investigation and recommended additional subsurface investigation at the site. Additional soil sampling was conducted in November 1999. Following the removal of petroleum impacted soil, the RWQCB issued regulatory case closure in 2000 (AECOM, 2017).

The property located adjacent to the east of the site was occupied by U.S. Industrial Chemicals Incorporated Anaheim Plant (a chemical plant) from at least 1938 to at least 1977. The chemical plant was developed with three steel molasses aboveground storage tank (ASTs), cooling towers, an evaporation and machine shop building, a liquid carbon and dry ice building, and additional associated buildings (AECOM, 2017).

The property located adjacent to the south of the site was formerly occupied by Regal Beloit Corporation – Electra Gear (Electra property), an automobile and truck parts manufacturer and operated multiple historical USTs on the property. Potential contaminants of concern include polychlorinated biphenyls (PCBs), motor oil, and tetrachloroethene (PCE) in soil. A soil gas survey was performed at the property in November 2017 and indicated that significant VOC impacts, specifically PCE, are present in soil gas beneath the neighboring property (AECOM, 2017).

OBJECTIVE

The purpose of the Phase II ESA was to determine what, if any, environmental impacts are present in the subsurface soil and soil gas from historic industrial uses of the site, as well as potential offsite sources, which could affect the future residential redevelopment of the site.

SCOPE OF WORK

The scope of work included the following:

- Advancement of nine initial exploratory soil borings (SB1 through SB9) to total depths between 15 and 35 feet below ground surface (bgs) and collection of soil samples for chemical analysis;
- Advancement of 14 step-out borings in the vicinity of initial borings SB6 and SB9 to total depths of 10 feet bgs and collection of soil samples for chemical analysis;
- Installation of soil gas probes in initial borings SB1 through SB6 and SB9 and collection of soil gas samples for chemical analysis; and
- Preparation of this report summarizing our findings and conclusions, including tables, illustrations, and appendices.

PHASE II ESA

Health and Safety Plan

Prior to starting work, Leighton prepared a site-specific Health and Safety Plan (HSP) to include safety aspects of the work performed at the site. The HSP was in compliance with the Occupational Safety and Health and Administration (OSHA) regulation 29 CFR 1910.120. The HSP was onsite with Leighton personnel at all times. The HSP outlined site procedures, potential hazards, and contains a hospital location map. All onsite Leighton personnel signed the HSP acknowledging acceptance.

Utility Clearance

Underground Service Alert (USA) was contacted at least 48 hours prior to the commencement of fieldwork to mark underground utility locations originating off-site from public utilities. Each proposed boring location was clearly marked in white paint prior to contacting USA.

In addition, Leighton hired Subsurface Surveys and Associates, Inc. (SSA) to complete a geophysical survey of the proposed boring locations. SSA performed a geophysical survey to assess the presence of buried magnetic, metallic, and electrically conductive features such as metal pipelines, buried tanks, debris, electrical lines, and other subsurface features in the area of the proposed borings. As part of the geophysical survey, SSA was able to confirm that the former 500-gallon waste oil USTs had been removed from the site and mark the location of the resulting excavation pit on the east side of the main shop building. Due to surface obstructions (large metals containers), SSA was unable to confirm the location, or former locations, of the diesel USTs reportedly located on the south side of the main shop building. A copy of the geophysical survey report is included in Appendix B.

Field Activities

Initial Soil Borings

On January 15, 2019, Leighton directed the advancement of seven soil borings (SB1 through SB7) to a total depth of 15 feet bgs, one soil boring (SB8) to a total depth of 25 feet bgs, and one soil boring (SB9) to a total depth of 35 feet bgs throughout the site (Figure 3). The borings were advanced using direct push drilling equipment operated by Millennium Environmental, Inc., a State of California licensed drilling contractor. Soil samples were collected at depths of 0.5, 2.5, 5.0 feet bgs and at 5-foot intervals thereafter to the total depth, for lithologic description and chemical analysis. Soil samples were logged and described under direct supervision of a licensed California Professional Geologist (PG). Soil samples were retained in either 6-inch acetate sleeves, capped with Teflon® paper and plastic end caps or 8-ounce laboratory-supplied glass jars. The containers were clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported to TestAmerica Laboratories, Inc. (TA) of Irvine, California for chemical analysis. Chain-of-custody protocol was followed throughout all phases of the sample handling process. Boring logs are included in Appendix C.

Each soil sample was field screened using a photoionization detector (PID) to evaluate the soil sample for the presence of volatile organic compound vapors. PID readings were obtained by placing an aliquot of soil collected adjacent from the portion retained for chemical analysis into a clean plastic bag and placing it in the sun or a warm area for 5 to 10 minutes. The readings were then collected from the headspace of the plastic bags by inserting the tip of the PID and recorded on the field boring logs.

Upon reaching the total depth of the borings described above, soil gas probes were installed at depths of 5 and 15 feet bgs in borings SB1 through SB6 and SB9. The soil gas probes consisted of inert 1/4-inch nylaflow tubing fitted with a porous airstone at the terminus, which was set within one foot of sand, with one foot of dry bentonite above, followed by hydrated bentonite to six inches below the depth of the upper probe or the ground surface. The surface end of the probe was fitted with a gas-tight leurlock to prevent infiltration of water or air. The soil gas probes were allowed to equilibrate for at least two hours prior to sampling.

Step-out Soil Borings

Based on the analytical results of soil samples collected from our initial soil borings, 14 step-out borings were advanced on February 21, 2019 to a total depth of 10 feet bgs in the vicinity of initial borings SB6 and SB9. The step-out borings were advanced using direct push drilling equipment operated by Millennium Environmental, Inc. Soil samples were collected at depths of 2.5, 5.0, 7.5 and 10 feet bgs. Soil samples were logged and retained using the same methods described above. The containers were clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported to TA of Irvine, California for chemical analysis. Chain-of-custody protocol was followed throughout all phases of the sample handling process.

Soil Gas Survey

On January 25, 2019, a soil gas survey was performed at the site to evaluate subsurface conditions for the presence of volatile organic compounds (VOCs) in soil gas. The soil gas survey was performed in conformance with the California Environmental Protection Agency – Department of Toxic Substances Control (DTSC) and California Regional Water Quality Control Board – Los Angeles and San Francisco Region's (LARWQCB and SFRWQCB) Advisory – Active Soil Gas Investigations, July 2015.

Soil gas sample collection and chemical analysis was performed using an onsite mobile laboratory operated by H&P Mobile Geochemistry Inc. (H&P). H&P is a certified National Environmental Laboratory Accreditation Program (NELAP) laboratory.

At each sampling location an appropriately decontaminated glass syringe was attached to the probe and the probe was purged prior to sample collection. A default three purge volumes was removed from the soil gas probes prior to sampling. Soil gas samples were obtained by drawing the sample through a luerlock connection which connects the sampling probe to the sample. Soil gas samples were immediately injected into the onsite mobile laboratory gas chromatograph/purge and trap system after collection.

A tracer gas mixture of 1,1-difluoroethane (DFA) was applied onto a cloth in the area of the soil gas probes at each point of connection in which ambient air could enter the sampling system. These connection points included the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. The tracer gas was not detected in the soil gas samples collected indicating that no ambient air compromised the soil gas analytical test data.

Two duplicate soil gas samples, collected for quality control purposes, were obtained and analyzed during the soil gas survey.

Upon completion of soil gas sampling activities, all borings were backfilled with hydrated bentonite chips to a depth of approximately 4 inches bgs. The surface was returned to its original finish.

Laboratory Analysis

Select soil samples collected from the initial soil borings on January 15, 2019 were analyzed for VOCs by Environmental Protection Agency (EPA) Method 8260B, total petroleum hydrocarbons (TPH) as gasoline, diesel, and oil by EPA Method 8015M, and Title 22 Metals by EPA Method 6010B/7471A.

Select soil samples collected from the step-out soil borings on February 21, 2019 were analyzed for TPH as gasoline (samples collected in the vicinity of boring SB9) or TPH diesel and oil (samples collected in the vicinity of boring SB6) using EPA Method 8015M.

Soil gas samples collected on January 25, 2019 were immediately injected into an onsite mobile laboratory gas chromatograph/purge and trap system, operated by H&P,

after collection. Each soil gas sample, including the duplicates, was analyzed for the tracer gas and VOCs by modified EPA Method 8260B.

Copies of the chain of custody forms and complete analytical reports are included in Appendix D.

RESULTS

Soil Analytical Results

The soil analytical results were compared to one or more of the following regulatory screening criteria:

- The EPA Region IX Residential Regional Screening Levels (RSLs, November 2018);
- The DTSC Southern California Background concentration of 12 mg/kg for arsenic; and
- The DTSC Office of Human and Ecological Risk (HERO) Note Number 3 (June 2018).

The complete laboratory reports are included in Appendix D. A summary of laboratory results are presented in Tables 1 and 2 and below.

Volatile Organic Compounds

Three VOCs were detected in soil samples collected from the site during this investigation. The VOC results are summarized below:

- 1,2,4-Trimethylbenzene was detected in one of the 12 soil samples analyzed during this investigation at a concentration of 3.9 micrograms per kilogram ($\mu\text{g}/\text{kg}$) (SB9-25). The detection of 1,2,4-Trimethylbenzene did not exceed the residential HERO Note Number 3 screening criteria of 300,000 $\mu\text{g}/\text{kg}$.
- 1,3,5-Trimethylbenzene was detected in one of the 12 soil samples analyzed during this investigation at an estimated concentration of 1.3 $\mu\text{g}/\text{kg}$ (SB9-25). The detection of 1,3,5-Trimethylbenzene did not exceed the residential HERO Note Number 3 screening criteria of 270,000 $\mu\text{g}/\text{kg}$.

- Methylene Chloride was detected in one of the 12 soil samples analyzed during this investigation at an estimated concentration of 4.9 µg/kg (SB6-2.5). The detection of methylene chloride did not exceed the residential HERO Note Number 3 screening criteria of 1,800 µg/kg.

Total Petroleum Hydrocarbons

TPH as gasoline, also referred to as gasoline range organics (GRO), was detected in four of the 37 soil samples analyzed during this investigation at concentrations ranging from 0.41 mg/kg (SB9-W5-5) to 260 mg/kg (SB9-5). The detected concentration of GRO in one soil sample, SB9-5, exceeded the residential RSL of 86 mg/kg.

TPH as diesel, also referred to as diesel range organics (DRO), was detected in 19 of the 39 soil samples analyzed during this investigation at concentrations ranging from 2.5 mg/kg to 1,800 mg/kg. The detected concentrations of DRO in three soil samples, SB6-2.5, SB6-E5-2.5, and SB6-5, exceeded the residential RSL of 96 mg/kg.

TPH as motor oil, also referred to as oil range organics (ORO), was detected in 38 of the 39 soil samples analyzed during this investigation at concentrations ranging from 2.5 mg/kg to 4,100 mg/kg. The detected concentrations of ORO in two soil samples (SB6-2.5 and SB6-5) exceeded the residential RSL of 2,500 mg/kg.

Title 22 Metals

Title 22 Metals were detected in each of the soil samples analyzed during this investigation with the exception of antimony, selenium, silver, and thallium. No samples contained metals at concentrations exceeding their respective screening criteria.

Soil Gas Analytical Results

The soil gas analytical results were compared to the adjusted HERO Note 3 (June 2018) and EPA Region 9 RSLs (November 2018) for indoor air in the more conservative residential setting assuming a future slab attenuation factor of 0.001 (DTSC, 2011). The selected decision criteria are conservative values typically used for screening purposes on residential properties and are not regulatory cleanup goals for the site.

The results of the laboratory analyses of the soil gas samples collected during this investigation are summarized in Table 3 and below:

- PCE was detected in 12 of the 16 soil gas samples analyzed during this investigation at concentrations ranging from 0.03 micrograms per liter ($\mu\text{g}/\text{L}$) to 0.21 $\mu\text{g}/\text{L}$. Detected concentrations of PCE did not exceed the residential HERO Note Number 3 screening criteria of 0.46 $\mu\text{g}/\text{L}$.
- Benzene was detected in one of the 16 soil gas samples analyzed during this investigation at a concentration of 0.02 $\mu\text{g}/\text{L}$ (SB6-5). The detected concentration of benzene did not exceed the residential HERO Note Number 3 screening criteria of 0.097 $\mu\text{g}/\text{L}$.
- n-Propylbenzene was detected in one of the 16 soil gas samples analyzed during this investigation at a concentration of 0.13 $\mu\text{g}/\text{L}$ (SB9-5). The detected concentration of n-Propylbenzene did not exceed the residential RSL screening criteria of 1,000 $\mu\text{g}/\text{L}$.
- N-Butylbenzene was detected in one of the 16 soil gas samples analyzed during this investigation at a concentration of 0.26 $\mu\text{g}/\text{L}$ (SB9-5). There is no applicable screening criteria for n-Butylbenzene.
- Sec-Butylbenzene was detected in one of the 16 soil gas samples analyzed during this investigation at a concentration of 0.12 $\mu\text{g}/\text{L}$ (SB9-5). There is no applicable screening criteria for sec-Butylbenzene.

CONCLUSIONS

Soil sample analytical results indicate that soil in the vicinity of two borings, SB6 and SB9, contain GRO or DRO and ORO at concentrations exceeding the RSL for residential land use.

- GRO was detected at a concentration of 260 mg/kg in boring SB9 at a depth of 5 feet bgs. GRO was not detected above the laboratory reporting limit in the soil samples collected above, at a depth of 2.5 feet bgs, and below, at a depth of 10 feet bgs, from within boring SB9. Soil samples collected at depths of 2.5, 5, and 7.5 feet bgs from step-out soil borings located approximately 2.5 feet north and south of SB9 and 5 feet east and west of SB9 did not contain GRO at concentrations exceeding the regulatory screening limits. Based on the results of our step-out soil samples, the GRO-impacted soil identified in boring SB9 appears to be very limited in vertical and lateral extent and is considered *de minimis*.

- DRO and ORO were detected at maximum concentrations of 4,100 mg/kg and 1,800 mg/kg in boring SB6 at depths of 2.5 and 5 feet bgs, respectively. DRO and ORO were not detected at concentrations exceeding the RSL for residential use in the soil sample collected at a depth of 10 feet bgs from within boring SB6. SB6 was advanced adjacent to the oil/water separator on the north side of the main shop building, and a potential release associated with the oil/water separator could be attributed as the source of contamination. DRO was detected at a concentration exceeding the residential RSL in one step-out soil boring, SB6-E5 (located 5 feet east of boring SB6) at a depth of 2.5 feet bgs. DRO was not detected above the laboratory reporting limits in step-out borings SB6-NE10 and SB6-SE10, located approximately 10 feet southeast and northeast of boring SB6. The extent of DRO-impacted soil is limited to an area approximately 10 feet by 15 feet and ranges in vertical depth from 5 feet in the vicinity of boring SB6-E5 up to 7.5 feet in the vicinity of boring SB6.

Concentrations of metals and VOCs detected in soil samples analyzed during this investigation do not exceed residential use screening criteria. Additionally, concentrations of VOCs detected in soil gas samples analyzed during this investigation do not exceed proposed residential use screening criteria.

RECOMMENDATIONS

Based on the results of this Phase II ESA, it is Leighton's opinion that additional assessment of the site is not warranted. The GRO-impacted soil in the vicinity of boring SB9 is considered *de minimis* and remediation and/or mitigation is not warranted prior to redevelopment of the site based on the insignificant quantity detected.

The lateral and vertical limits of DRO/ORO-impacted soil in the vicinity of boring SB6 have been delineated. The area of soil requiring removal and offsite disposal prior to redevelopment of the site is approximately 10 feet by 15 feet up to an average depth of 6.5 feet. The estimated quantity is approximately 36 cubic yards or roughly 58 tons. The area requiring removal is illustrated on Figure 2.

Prior to redevelopment of the site for residential use, it is likely that the abandoned in-place 20,000-gallon diesel, located on the south side of the main shop building will need to be removed under the guidance and direction of the Anaheim Fire Department. The

Anaheim Fire Department may require soil beneath the tank to be excavated and disposed of based on sample results collected during removal activities.

An estimate to provide the remedial activities listed above is provided below. It should be noted that the remedial activities (soil excavation and tank removal) are an approximation (based on current rates and tipping fees) and will be more precisely estimated prior to completion of remedial activities.

REMEDIAL ACTIVITIES (ROUGH ORDER MAGNITUDE)

Removal of oil/water separator, excavation of TPH-impacted soil (assumed up to 250 cubic yards of non-haz soil), and tank removal activities	\$ 135,000.00
--	---------------

In general, observations should be made during any future Site redevelopment for areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, waste drums, tanks, stained soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

LIMITATIONS

This investigation was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the activities described herein, and are limited to the portion of the Site investigated. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions outside of the area investigated or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the portion of the Site investigated, and the amount, type, distribution, and integrity of the information collected at the time of the investigation, and the methods utilized to collect and evaluate the data. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of the information provided by others.

CLOSING

We appreciate the opportunity to work with you on this project. If you have any questions regarding this report, please call us at your convenience.

Respectfully submitted,

Re: Geophysical Investigation, Tow Lot, 1122 North Anaheim Boulevard, Anaheim, California

This report is to present the results of our geophysical survey carried out over the property of a Tow Lot located at 1122 North Anaheim Boulevard in Anaheim, California (Figure 1). The survey was performed on January 10, 2019, and its purpose was to locate and identify, insofar as possible, the existence of any pipes, conduits, utilities, and other underground obstructions within the vicinity of nine (9) proposed boreholes scheduled for drilling.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field with anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

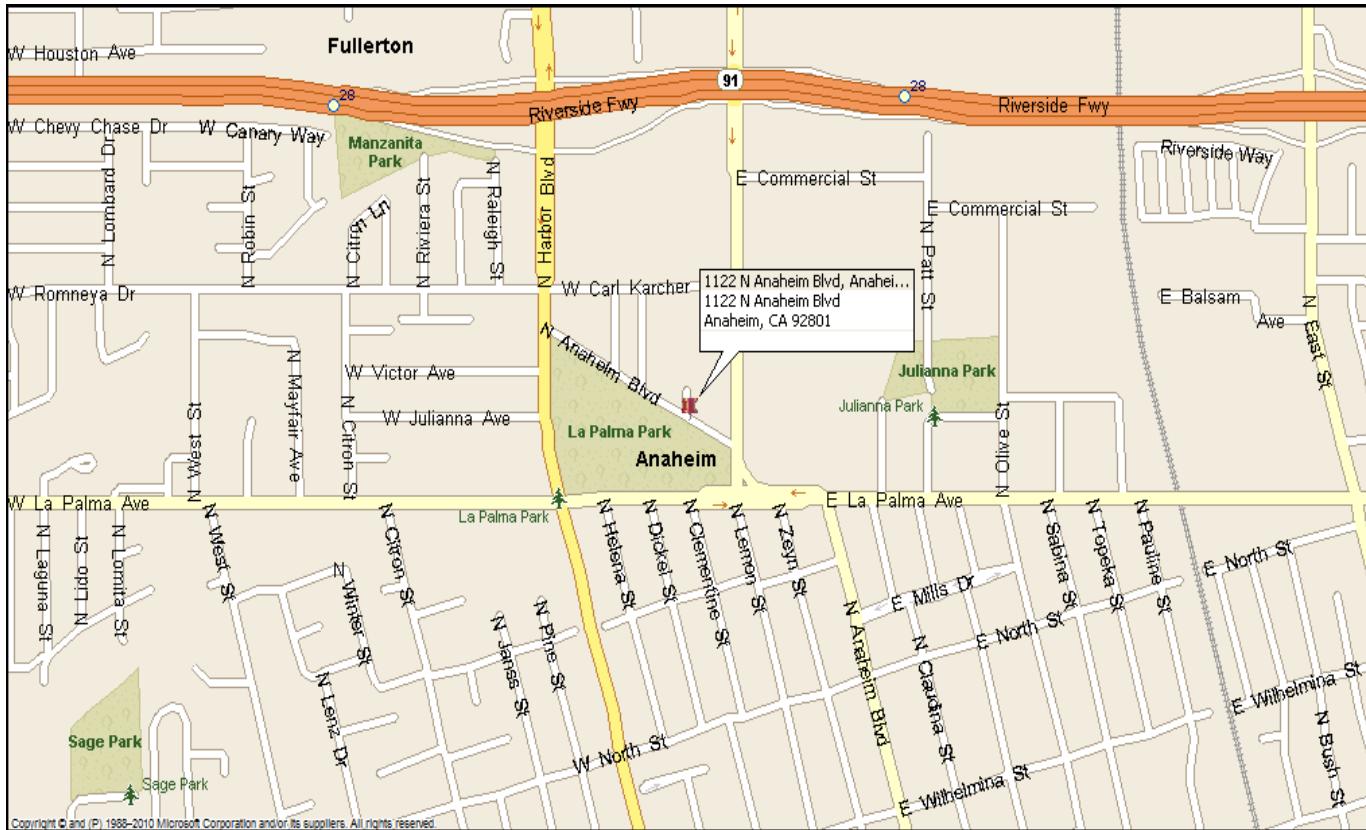

FIGURE 1 – Site location map

Survey Design – The areas to be surveyed were identified in the field by the client. It included nine (9) proposed boreholes placed in various locations on the asphalt and gravel surfaced lot of a tow yard.

In site situations and survey objectives such as this, the best use of time is achieved by systematically free-traversing with the instruments while monitoring them continuously to determine which responses are significant and due to true subsurface targets, and which are due to other non-target or above-ground features and must be ignored. Where applicable, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

Hard copy of the EM data was not acquired, that is, discrete readings on the nodes of a grid were not recorded that could be put into a contoured map format. Rather, the instruments' meters were read continuously, and in real-time, during each traverse. This free-traversing method allowed for immediate detection of anomalous objects and facilitated the opportunity to investigate them further, without the need to first download and process data in the office. The lack of hard copy for EM data sets does not degrade the quality of the survey in any way. Hard copy merely provides a basis for report documentation of these geophysical fields, if such documentation is needed.

A Geonic's model EM61 and a Fischer M-Scope, were used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. A Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic

field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were verbally relayed to the client, and further documented with site photographs (Figures 2-10).

Utilities detected within the survey areas were marked out with chalk spray paint using pink for backfilled excavation, green for clarifier, and white for unknown piping.

Once completed, the proposed boreholes were spray-painted with a pink circle and yellow "SSS" to indicate that Subsurface Surveys personnel had investigated them. Please refer to the attached photos for location and orientation of items detected within the survey.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby power lines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the

course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

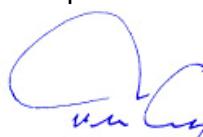

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Comments

No additional comments.

Receipt

The samples were received on 1/15/2019 2:24 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2° C.

Receipt Exceptions

The Field Sampler was not listed on the Chain of Custody.

GC/MS VOA

Method(s) 8260B: Surrogate recovery for 4-Bromofluorobenzene for the following sample was outside the upper control limit: SB7-2.5 (440-230161-32). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 440-523324 recovered above the upper control limit for 1,1-Dichloroethene and Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: SB1-2.5 (440-230161-2), SB2-2.5 (440-230161-7), SB3-2.5 (440-230161-12), SB4-2.5 (440-230161-17), SB6-2.5 (440-230161-27) and (CCVIS 440-523324/2).

Method(s) 8260B: Surrogate recovery for the following sample was outside control limits: 4-Bromofluorobenzene and Dibromofluoromethane are high. SB6-5 (440-230161-28). Re-extraction and/or re-analysis was performed with concurring results. The original analysis has been reported.

Method(s) 8260B: Internal standard (ISTD) 1,4-Dichlorobenzene-d4 (24.83% = 50-200), and Chlorobenzene-d5 (47.46% = 50-200) response for the following sample was outside control limits: SB6-2.5 (440-230161-27). The sample(s) was re-extracted and/or re-analyzed with concurring results, and the original set of data has been reported.

Method(s) 8260B: Surrogate 4-Bromofluorobenzene (161% = 79-120), Dibromofluoromethane (121% = 60-120), and Toluene-d8 (138% = 79-123) recovery for the following sample was outside control limits: SB6-2.5 (440-230161-27). Re-extraction and/or re-analysis was performed with concurring results. The original analysis has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) 8015B: Surrogate recovery for the following sample(s) was outside control limits: SB6-2.5 (440-230161-27) and SB6-5 (440-230161-28). Re-analysis was performed with concurring results. This analysis has been reported.

Method(s) 8015B: Surrogate recovery for the following sample was outside control limits: SB9-5 (440-230161-45). Evidence of matrix interference is present; therefore, re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The 8015-DRO method blank for preparation batch 440-522725 and 440-522727 and analytical batch 440-522739 contained C23-C40 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8015B: The following 8015-DRO sample required a dilution due to the nature of the sample matrix: SB6-2.5 (440-230161-27). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Case Narrative

Client: Leighton and Associates Inc
Project/Site: RPP Anaheim

TestAmerica Job ID: 440-230161-1

Job ID: 440-230161-1 (Continued)

Laboratory: TestAmerica Irvine (Continued)

Method(s) 8015B: The following 8015-DRO sample required a dilution due to the nature of the sample matrix: SB6-5 (440-230161-28). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 440-523104 and analytical batch 440-523631 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3546: Due to the matrix, the following samples could not be concentrated to the final method required volume: SB6-2.5 (440-230161-27), SB6-5 (440-230161-28), SB7-2.5 (440-230161-32) and SB9-10 (440-230161-46). The reporting limits (RLs) are elevated proportionately.440-522725 3546 8015_DRO

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt

The samples were received on 1/15/2019 2:24 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2° C.

Receipt Exceptions

The Field Sampler was not listed on the Chain of Custody.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The 8015-DRO matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-525292 and analytical batch 440-525506 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8015B: The 8015-DRO method blank for preparation batch 440-525292 and analytical batch 440-525506 contained C23-C40 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Case Narrative

Client: Leighton and Associates Inc
Project/Site: RPP Anaheim

Definitions/Glossary

Client: Leighton and Associates Inc
Project/Site: RPP Anaheim

TestAmerica Job ID: 440-230161-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Leighton and Associates Inc
Project/Site: RPP Anaheim

TestAmerica Job ID: 440-230161-1

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Solid	GRO (C4-C12)
8015B	3546	Solid	C13-C22
8015B	3546	Solid	C23-C40
8015B	5030B	Solid	GRO (C4-C12)
8260B		Solid	Ethyl-t-butyl ether (ETBE)
8260B		Solid	Isopropyl Ether (DIPE)
8260B		Solid	m,p-Xylene
8260B		Solid	Tert-amyl-methyl ether (TAME)
8260B		Solid	Xylenes, Total

Creator: Skinner, Alma D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Refer to Job Narrative for details.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

H&P Project: LA012519-ML
Client Project: 11862.002 / 1122 North Anaheim Blvd.

Dear Brynn McCulloch:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 25-Jan-19 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

Batch EA92502

The percent recovery for Chloroethane fell below the method criteria in the continuing calibration verification (CCV). Any result for this analyte may be biased low.

Batch EA92504

The percent recovery for Bromomethane fell below the method criteria in the CCV. Any result for this analyte may be biased low.

Notes and Definitions

QL-1H The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.

LCC Leak Check Compound

ND Analyte NOT DETECTED at or above the reporting limit

MDL Method Detection Limit

%REC Percent Recovery

RPD Relative Percent Difference

All soil results are reported in wet weight.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743 & 2745.

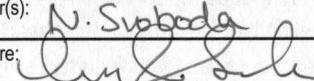

H&P is approved by the State of Louisiana Department of Environmental Quality under the National Environmental Laboratory Accreditation Conference (NELAC) certification number 04138

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Purge Volume Information

PV Amount:

3PV

PV Includes:

- Tubing
- Sand 40%
- Dry Bent 50%

Leak Check Compound

A cloth saturated with LCC is placed around tubing connections and probe seal. This is done for all samples unless otherwise noted.

Narrative

Job Narrative 440-234374-1

Comments

No additional comments.

Receipt

The samples were received on 2/21/2019 1:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5° C.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The 8015-DRO method blank for preparation batch 440-530575 and analytical batch 440-530656 contained C23-C40 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3546: Due to the matrix, the following sample could not be concentrated to the final method required volume: SB6-E5-2.5 (440-234374-9). The reporting limits (RLs) are elevated proportionately. 440-530575 3546 8015_DRO

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt

The samples were received on 2/21/2019 1:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5° C.

GC Semi VOA

Method(s) 8015B: Due to the high concentration of hydrocarbons, the 8015-DRO matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 440-531838 and analytical batch 440-531748 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method(s) 8015B: The 8015-DRO method blank for preparation batch 440-531838 and analytical batch 440-531748 contained C23-C40 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Leighton and Associates Inc
Project/Site: RPP Anaheim

TestAmerica Job ID: 440-234374-1
SDG: 1122 Anaheim Blvd., Anaheim CA

Laboratory: TestAmerica Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
California	State Program	9	CA ELAP 2706	06-30-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Solid	GRO (C4-C12)
8015B	3546	Solid	C13-C22
8015B	3546	Solid	C23-C40

Creator: Escalante, Maria I

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
