FieldTurf Testing Report

DAVID TETER CONSULTING

November 22, 2022

Mr. Mike Harden
Environmental Science Associates
2121 Alton Parkway, Suite 100
Irvine, California 92606

RE: Testing of FieldTurf Cryogenic Crumb Rubber for Total CAM 17 Metals and FieldTurf Core Vertex 2.5 Fiber for Total PFAS Using the Total Oxidizable Precursor Assay

Dear Mr. Harden:

David Teter Consulting (Consultant) has prepared this letter report to present the testing results of FieldTurf cryogenic crumb rubber for total California Assessment Manual (CAM 17) metals and FieldTurf Core Vertex 2.5 fiber product for total per- and polyfluoroalkyl substances (PFAS) using the Total Oxidizable Precursor (TOP) assay.

EXECUTIVE SUMMARY

1. None of the metals detected in the crumb rubber sample exceeded US EPA Regional Screening Levels (RSLs) or California Department of Toxic Substances Control (DTSC) modified RSLs for unrestricted residential use. The detected concentration of zinc in the crumb rubber is 14,000 milligrams per kilogram (mg/kg), which exceeds the California Total Threshold Limit Concentration (TTLC) for characterization as a California (non-RCRA) hazardous waste. This is an expected result as the concentration of zinc in crumb rubber typically ranges from 7,000 to 20,000 mg/kg. and does not affect any human health exposure aspects¹.
2. The FieldTurf Core Vertex 2.5 fiber product was analyzed for an extended list of 68 PFAS of concern using EPA Method 537 Modified (537M), which is currently considered the most comprehensive testing approach for targeted compounds. No listed molecular PFAS of concern were detected above the laboratory reporting limit in the pre-weathered sample.
3. The FieldTurf Core Vertex 2.5 fiber product was subjected to the TOP assay which uses both heat and an aggressive hydroxyl radical oxidation process to attempt to break down precursor compounds of PFAS into measurable perfluoroalkyl acids (PFAA). Perflurorobutanoic acid (PFBA) and Perfluoro-2-methoxypropanoic acid (MTP) were detected in the post-TOP assay sample at concentrations just above their respective laboratory reporting limits.

SAMPLING AND ANALYSIS

The Consultant contacted FieldTurf and requested that all samples be collected as follows:

1. Whoever prepares the sample(s) for shipping shall be wearing nitrile gloves when handling the sample. It is preferred that the sample handler have not consumed fast food, pizza, or microwaved popcorn within the last 24 hours. The sample handler shall not be wearing any rain resistant material. Ideally, the sample handler should not breathe on the sample.

¹ The US EPA Regional Screening Level for zinc in an unrestricted use scenario is 23,500 mg/kg (noncarcinogenic child) or 235,000 mg/kg (noncarcinogenic adult), assuming a hazard index (HI) of 1.

DAVID TETER CONSULTING

2. Each sample is placed within a LDPE bag prior to placing the sample into the shipping box. Do not allow the sample to be in direct contact with the shipping box. Each sample shall be shipped in a separate box.
3. The bagged sample shall not be written on with a Sharpie or other permanent marker.

The above measures are necessary given the prevalence of PFAS contained in fast food packaging as well as materials with water resistant or waterproof coatings which could lead to cross contamination of the sample.

The following samples were shipped under chain-of-custody procedure to Eurofins/TestAmerica (Laboratory) of West Sacramento, California:

- FieldTurf Cryogenic Crumb Rubber; and
- FieldTurf Core Green fiber product.

The samples were received by the Laboratory in good condition. The FieldTurf cryogenic crumb rubber was analyzed by the Laboratory for CAM 17 metals using EPA Methods 6020A/7471B. The FieldTurf Core Vertex 2.5 fiber product was analyzed by Laboratory using the TOP assay which uses an aggressive heat and hydroxyl radical oxidation process to break down precursor compounds into measurable PFAAs and EPA Method 537M to analyze for an extended list of 68 molecular PFAS of concern in both the pre- and post-weathered samples.

RESULTS

Cryogenic Crumb Rubber

None of the detected metals exceeded US EPA RSLs or DTSC-modified RSLs for unrestricted residential use. The concentration of zinc in the crumb rubber is 14,000 mg/kg, which exceeds the California Total Threshold Limit Concentration (TTLC) for characterization as a California (non-RCRA) hazardous waste. This is an expected result as the concentration of zinc in crumb rubber typically ranges from 7,000 to 20,000 mg/kg. and does not affect any human health exposure aspects. The US EPA Regional Screening Level for zinc in an unrestricted use scenario is 23,500 mg/kg (noncarcinogenic child) or 235,000 mg/kg (noncarcinogenic adult), assuming a hazard index (HI) of 1. The matrix spike (MS) and/or matrix spike duplicate (MSD) quality control levels were exceeded for the antimony, copper, and lead. These analytical issues do not affect the validity of the results.

Core Vertex 2.5 Fiber

TOP Assay

A sample of the pre-TOP assay FieldTurf Core Vertex 2.5 fiber product was analyzed for an extended list of 68 molecular PFAS of concern using EPA Method 537M. No PFAS were detected above the laboratory reporting limits in the pre-TOP assay FieldTurf Core Vertex 2.5 fiber product. Perflurobutanoic acid (PFBA) and Perfluoro-2-methoxypropionic acid (MTP) were detected in the post-TOP assay sample at concentrations of 1.7 micrograms per kilogram ($\mu\text{g}/\text{kg}$) and 5.9 $\mu\text{g}/\text{kg}$, respectively. The detected concentrations are only slightly above their respective laboratory reporting limits. PFBA was also detected in the method blank and the laboratory control spike (LCS) and/or laboratory control spike duplicate (LCSD) are outside of the quality control limits and biased-high. The LCS and/or LCSD for MTP are outside of the quality control limits and biased-high. These analytical issues are unlikely to affect the validity of the results, although they likely resulted in overestimated post-TOP assay concentrations of PFBA and MTP.

DAVID TETER CONSULTING

CLOSING

I appreciate the opportunity to work with you on this project. Should you have any questions or require additional information, please do not hesitate to contact me at (415) 889-8875 or at david@daviddeterconsulting.com.

Sincerely,

David Teter, PhD, PE
Principal Engineer

Qualifiers

LCMS

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Receipt

The samples were received on 7/29/2022 10:20 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 21.1° C.

Receipt Exceptions

No actual label on sample#2 instead there were tags on the sample with FTVTC1 Field Turf, while COC lists as Core Vertex 2.5 C.

The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC): Sample Core Vertex 2.5 (320-90614-2) lists as 3 count however only 2 turf samples were submitted to the lab.

Metals

Method 6020A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-618879 and analytical batch 320-619999 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6020A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-618879 and analytical batch 320-620221 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6020A: The following sample was diluted to bring the concentration of target analyte within the calibration range: Cryogenic Rubber 14-30 (320-90614-1). Elevated reporting limits (RLs) are provided.

Method 7471B: The sample was processed outside the method recommended holding time for water and soil samples. As this sample is a cryogenic rubber, the holding time may not be applicable. Cryogenic Rubber 14-30 (320-90614-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method 537 (modified): The continuing calibration verifications (CCVs) associated with batch 320-609328 recovered above the upper control limit for several analytes. The sample associated with these CCVs was non-detect for the affected analytes; therefore, the data have been reported.

Method 537 (modified): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: Core Vertex 2.5 (320-90614-2). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 537 (modified): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: (MB 320-608980/1-A). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample.

Method 537 (modified): The laboratory control sample (LCS) for preparation batch 320-608972 and analytical batch 320-609328 recovered outside control limits for the following analytes: R-EVE and R-PSDA. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 537 (modified): The laboratory control sample (LCS) for preparation batch 320-608972 and analytical batch 320-609328 recovered low outside control limits for the following analytes: PPF Acid and MTP. Re-analysis confirms the low recoveries. The recovery is being compared to the laboratory default limits. As additional data points are analyzed, the control limits will be updated to reflect the method performance.

Method 537 (modified): The Isotope Dilution Analyte (IDA) M2-4:2FTS is reporting as outside of control limits in the following QC samples but the actual control limits are 25 to 150 for this IDA and therefore is in control. (CCB 320-617867/1) and (CCV 320-617867/3)

Method 537 (modified): The labeled analyte M2-4:2FTS is converted to PFBA during the oxidation step of the TOP assay. The PFBA result in the Post-Treatment Method Blank (MB) indicates how much of a field sample's Post-Treatment PFBA result is contributed by the

Job ID: 320-90614-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

Reverse Surrogate, when adjusted for dilution factors.

Method 537 (modified): The labeled analyte M2-4:2FTS is employed in this analysis as a "Reverse Surrogate". It is used to monitor the oxidation efficiency of the TOP assay. This analyte is fortified into all sample fractions prior to any processing. The recovery of this analyte should be 0% in Post-Treatment fractions, indicating complete oxidation of the sample. Core Vertex 2.5 (320-90614-2), (LCS 320-608980/2-A), (LCSD 320-608980/3-A) and (MB 320-608980/1-A)

Method 537 (modified): The continuing calibration verifications (CCVs) associated with batch 320-617867 recovered outside the control limits for R-EVE. This analyte is a poor performer, with control limits at +/- 50%. The CCVs are within the 50% limit, therefore the data is reported. (CCV 320-617867/9) and (CCV 320-617867/3).

Method 537 (modified): The laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) for preparation batch 320-608980 recovered low outside control limits for the following analytes: MTP. The recovery is being compared to the laboratory default limits. As additional data points are analyzed, the control limits will be updated to reflect the method performance. (LCS 320-608980/2-A) and (LCSD 320-608980/3-A)

Method 537 (modified): Zero percent recovery of precursor analytes (such as 4:2 FTS, 6:2 FTS, 8:2 FTS, FOSA, NMeFOSAA, NEtFOSAA, etc.) and enhanced recoveries of PFCA is observed in the Post-Treatment Laboratory Control Sample (LCS) and Post-Treatment Laboratory Control Sample Duplicate (LCSD) associated with these samples, consistent with the expected oxidation of precursor analytes. The existing LCS control limits are based upon our historical performance for a set of 24-36 analytes in the LCS solution. We have recently expanded to 70+ analytes. As the LCS solution now contains new/additional precursor analytes we are seeing enhanced recoveries for some PFCA vs. the historical limits as a result. The LCS results are flagged as being high and outside of the established limits for some analytes; however, this is a function of the new analytes in the LCS solution and not indicative of an "out of control" process. (LCS 320-608980/2-A) and (LCSD 320-608980/3-A)

Method 537 (modified): The "I" qualifier means the transition mass ratio for the indicated analyte was above the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty, and the reported value may have some high bias. However, analyst judgment was used to positively identify the analyte. Core Vertex 2.5 (320-90614-2)

Method 537 (modified): The following analyte recovered outside control limits for the laboratory control sample (LCS) associated with preparation batch 320-608980 and analytical batch 320-617867: Perfluorododecanesulfonic acid (PFDoS). This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 537 (modified): The continuing calibration verification (CCV) associated with batch 320-609326 recovered above the upper control limit for R-EVE and R-PSDA. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 537 (modified): The low level continuing calibration verification associated with analytical batch 320-609326 recovered below limits for TAF. The associated sample is bracketed by continuing calibration verifications which are in control for this analyte, therefore the data is reported. (CCVL 320-609326/2)

Method 537 (modified): The transition mass ratio was outside of the established ratio limit for 3:3 FTCA in (CCVL 320-609326/2) associated to this data set. This is indicated by the "R" flag in the raw data. As the flagged data is in control in the CCVL, there is no adverse impact to the data. (CCVL 320-609326/2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method SHAKE: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: Core Vertex 2.5 (320-90614-2). The reporting limits (RLs) have been adjusted proportionately. Preparation batch 320-608972

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	False	Refer to Job Narrative for details.
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
