Executive Summary

This Executive Summary provides a brief overview of the findings of this Phase I Environmental Site Assessment (Phase I ESA). Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

InSite Property Group (InSite, the User) retained Roux Associates, Inc. (Roux) to perform this Phase I ESA of the vacant property located at 3701 Pacific Place in Long Beach, California; The parcels are identified by Los Angeles Assessor's Parcel Numbers (APNs) 7140-014-019 (subsequently identified as Parcel 1), 7140-014-032 (Parcel 2), and 7140-014-033 (Parcel 3). The Site location is shown in Figure 1 and the Site and vicinity are shown in Figure 2. Roux performed this Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13), the California Land Re-Use and Revitalization Act of 2005 (CLRRA, Health & Safety Code Sections 25395.60 *et seq.*), the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA,, 42 USC Sections 9601 *et seq.*) and the "All Appropriate Inquiries" standards (AAI Standards) which the U.S. Environmental Protection Agency enacted (40 CFR Part 312; *see* CLRRA, Health & Safety Code Section 25395.65) in an effort to identify, to the extent feasible, the presence of recognized environmental conditions (RECs) with respect to the Site as defined in ASTM E1527-13 and to enable InSite to qualify as a *bona fide* purchaser (BFP) under CLRRA (see Health & Safety Code Sections 25395.69 and 25395.80) and as a *bona fide* prospective purchaser (BFPP) under CERCLA (see 42 USC Section 9601(35)(B)).

The Site is located in a mixed commercial and residential area within Long Beach, California. According to Los Angeles County Assessor data, the area of Parcel 1 is 9.75 acres, the area of Parcel 2 (located east of Parcel 1) is 2.96 acres, and the area of Parcel 3 (located east of Parcel 2) is 0.98 acres, acres for a combined total of 13.69 acres. At the time of Site reconnaissance, the Site was vacant, having previously been occupied by a golf learning facility. The former golf learning facility structures had been removed by the time of Site reconnaissance with the exception of a canopy toward the southeastern corner of the Site. An asphalt-paved parking area was also observed in the southeastern corner of the Site and a concrete sidewalk runs beneath the canopy and transects the southern portion of the Site. A dilapidated stone wall was present toward the northern corner of the Site. A billboard was observed in the southwestern corner of the Site, along the adjacent Interstate 405 (San Diego) Freeway (I-405). Remnants of the fencing system associated with the former golf driving range were visible along the western and northern boundaries. Unpaved walkways and access roads run along the western and northeastern borders of the Site. The majority of the Site was overgrown with significant amounts of unmanaged vegetation.

On August 2, 2019, Roux personnel visually assessed the Site for potential RECs, including, but not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

Roux also performed a records review in an effort to identify RECs in connection with the Site. This records review addressed the Site and surrounding properties. Roux reviewed commercially and publicly available records associated with the Site and nearby properties to assess potential concerns associated with the migration of hazardous substances. The records review also included reasonably ascertainable historical

data, which can be helpful in identifying the past uses of the Site and surrounding areas, as it may relate to the environmental condition of the Site.

Roux performed interviews and/or file reviews with various government agencies, the current owners of the Site, and other parties with possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site. Our findings based on these interviews and file reviews follow.

ASTM E 1527-13 defines a REC as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

A Controlled Recognized Environmental Condition (cREC) as:

"A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

And a Historical Recognized Environmental Condition (hREC) as:

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional (EP) must determine whether the past release is a *recognized* environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

Based on the information obtained through the performance of this Phase I ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2.

• REC 1 – Former Oil Sumps. According to historical sources, the Site was formerly used as an oil brine water treatment facility beginning in 1926 for nearby and on-Site oil production activities. Oil brine was pumped to evaporation and treatment ponds (oil sumps) on the Site; the majority of the Site was used as a treatment sump. Water was allowed to evaporate from the brine or seep into the subsurface below the sumps leaving behind a sludge. Following evaporation, the remaining sludge was left in the sumps or dumped elsewhere. Evaporation operations reportedly ceased at the Site in

the mid-1950s. No information was found indicating how the sumps were abandoned and whether or not fill was imported. Although numerous investigations and limited land farming activities have been conducted at the Site, no large-scale remediation appears to have been completed as of this report date. Petroleum hydrocarbon, metal (arsenic and lead) impacts have been identified across the Site in soil with limited semi-volatile organic compound (SVOC) impacts also detected. Volatile organic compounds (VOCs) tetrachloroethene (PCE), trichloroethene (TCE), benzene, and methane have been in soil vapor detected across the Site.

- REC 2 Former Oil Wells. According to California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) records, six oil wells were historically located on-Site and five of the six wells produced oil. The wells were reportedly drilled between 1937 and 1981. All six wells were abandoned between 1981 and 2014 according to DOGGR standards at their respective times of abandonment. Drilling of wells such as this are known to generate drill cuttings and drilling mud that could be impacted by hydrocarbons encountered in the subsurface. Operation of oil wells is also known to cause near-surface hydrocarbon impacts to soil and soil vapor.
- REC 3 Nearby Off-Site Historical Oil Development. According to historical sources, the Site vicinity, including adjoining properties, has been historically used for oil development activities including oil production wells, evaporation and treatment ponds (sumps), and ASTs. The oil development operations in the Site vicinity are likely to have produced hydrocarbon impacts to the subsurface with the potential to migrate on Site and comingle with impacts originating on Site. Prior investigations at the Site and nearby properties indicate that regional groundwater in the area has been degraded at least in part due to the historical oil development activities in the vicinity of the Site Total dissolved solid (TDS) impacts have been identified in the Gaspur aquifer, approximately 50 to 70 feet below ground surface (bgs), in the Site vicinity.

Roux did not identify cRECs or hRECs in connection with the current or historical operations at the Site or adjacent properties.

The term recognized environmental condition is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Other environmental features (OEFs) are environmental conditions that do not meet the definition of a REC, but which may warrant mention in a comprehensive Phase I ESA. Based on this Phase I ESA, Roux identified the following OEFs. To the extent possible, the locations of the OEFs are shown in Figure 2. To minimize possible confusion, the REC and OEF identification numbers are sequential.

- OEF 4 Commercial Pesticide and Herbicide Use. The former driving range / golf learning center
 operations may have involved the use of pesticides and herbicides to control and optimize vegetation
 typical of golf course facilities. No documentation was found confirming the use of pesticides or
 herbicides on-Site.
- OEF 5 Pressurized Oil Pipelines. Based on the National Pipeline Mapping System (NPMS) Public View database, it is possible that two active crude pipelines are located within 50 feet of the Site and may cross the southeastern corner of the Site. Two additional petroleum/crude pipelines were identified within 1,000 feet of the Site. No indication of a release from any of the pipelines was identified by Roux in the preparation of this Phase I ESA.

- OEF 6 Adjoining Off-Site Railroad Tracks. According to historical topographic maps, the northeastern adjoining railroad was constructed by 1924. Although the rail is currently used as a Los Angeles Metro passenger rail line, historical topographic maps identified the railroad as a Pacific Electric line in 1924 and later as a Southern Pacific line through 1987. The materials transported along the railroad historically is unknown. Both the presence of these railroad lines and the materials transported along the railroad lines may have potentially impacted the subsurface at the Site. Railroad ties have historically been and continue to be treated with copper arsenate, creosote (which contains polycyclic aromatic hydrocarbons, or PAHs), PCBs, pentachlorophenol (which also contains dioxins), and copper naphthalene. In addition to these chemicals, railway transportation is associated with heavy metals, herbicides, pesticides, VOCs, and petroleum product impacts. No evidence of a likely release associated with the rail lines was identified during the course of this Phase I ESA.
- OEF 7 Adjoining Off-Site Interstate Freeway. The Site is bordered to the south by the I-405 San
 Diego Freeway, the off-ramp of which adjoins the Site. It is not uncommon for near-surface soils at
 properties in close proximity to freeways that operated in the era of leaded gasoline to be impacted
 by aerially deposited lead. No documentation of lead contamination in the area adjoining I-405 was
 identified during the course of this Phase I ESA.
- OEF 8 On-Site and Nearby Transient Activity. Transient encampments were observed along the
 adjoining Los Angeles River and according to the Site personnel, transient activity was recently
 observed on the Site. Some of the domestic refuse observed on-Site may be associated with the
 reported transient activity. Although not observed during Site reconnaissance, used and discarded
 hypodermic needles are often present in areas with high transient activity.
- OEF 9 Unknown Fill Material. According to an interview with Site owner, Mark Pender, soil was imported to fill the on-Site oil sumps in or around the 1950s and the fill may have originated from a nearby California Department of Transportation (CalTrans) freeway project. Subsequently, according to Mr. Pender, approximately 80,000 cubic yards (CY) of sandy soil was imported from dredging operations at the Los Angeles River. Finally, another site owner, Steve Sukut, indicated that additional fill material was imported to the Site to facilitate grading for the golf learning facility. It is possible that the fill materials may be impacted, particularly with heavy metals or total petroleum hydrocarbons (TPH).

1. Introduction

As noted, Roux completed this Phase I ESA Site in accordance with ASTM E1527-13, California Land Reuse and Revitalization Act (CLRRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the All Appropriate Inquiries (AAI) Standards to identify, to the extent feasible, the presence of RECs on the Site and to enable InSite to qualify as a *bona fide* purchaser (BFP) under CLRRA and as a *bona fide* prospective purchaser (BFPP) under CERCLA. The Site location is shown in Figure 1 and the Site and vicinity are shown in Figure 2.

The following sections of this report present our Phase I ESA findings and conclusions. A glossary containing terms and definitions presented in ASTM E1527-13 is included in Appendix A – Glossary of Terms. Other appendices presented at the end of the report include historical topographic maps, historical aerial photographs, regulatory records review documentation, applicable historical records, and personnel qualifications.

1.1 Purpose

The purpose of this Phase I ESA is to conduct an investigation of the Site in accordance with ASTM E1527-13, CLRRA, CERCLA and the AAI Standards to identify, to the extent feasible, the presence of RECs on the Site and to enable InSite to qualify as a BFP under CLRRA and as a BFPP under CERCLA.

1.2 Scope of Services

The scope of services for this Phase I ESA included, but was not limited to, the activities listed below.

- A review of reasonably ascertainable and practicably reviewable historical sources, including
 topographic maps, historical aerial photographs, city directories, recorded land title records, building,
 assessors, and fire department records, for permits, citations, and reports connected to the Site to
 investigate past Site conditions to the extent such sources were practicably reviewable and publicly
 available within reasonable time and cost;
- A review of other government records including specific government lists pursuant to ASTM Standard
 E 1527-13 regarding environmental activities for the Site and local area properties;
- A visual inspection by an environmental professional to investigate the current use of the Site and to
 identify environmental concerns including but not limited to, the presence of hazardous substances
 or petroleum products, wastes, underground storage tanks (USTs), aboveground storage tanks
 (ASTs), or other environmental concerns;
- A review and assessment of commonly known or other reasonably ascertainable information;
- An evaluation of the degree obviousness of the presence and ability to detect the presence hazardous substances on the Site;
- A search for filed or recorded environmental cleanup liens;
- Interviews with available representatives of the owner of the Site, occupants, and local government officials by an environmental professional; and

Preparation of this Phase I ESA report.

Roux initiated this Phase I ESA pursuant to receipt of written authorization to proceed on March 26, 2019.

1.3 Standard of Care

Roux conducted this Phase I ESA using a defined scope of services considered appropriate and agreed upon by all parties on the date the service was authorized, unless the scope of services or the methods used were later modified, in writing, and accepted by all parties prior to performance. Roux conducted this Phase I ESA in accordance with the AAI Standards and generally accepted practices in a manner consistent with that level of care exercised by other members of our profession in the same locality and under similar conditions of time and accessibility of improvements and information. No other representations, expressed or implied, and no warranty or guarantee is included or intended to be part of this Phase I ESA.

Please note that the scope of services performed in execution of this assessment may not be appropriate to satisfy the needs of other parties. We, therefore, are not responsible for independent conclusions, opinions, or recommendations of others based on our assessment. Furthermore, this Phase I ESA relates to the environmental conditions of the Site and does not address issues raised in transactions such as business risk, purchase of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other offsite liabilities.

Additionally, the findings of this Phase I ESA are based on Roux's observations, inquiries, and historical research using reasonably ascertainable and practically reviewable information obtained within reasonable time and cost constraints. Roux does not represent that this Phase I ESA is an exhaustive investigation that reflects the findings of all of the information available for the Site, nor is it representative of future Site conditions. If additional information is generated from the Site, it should be provided to Roux so that we may evaluate its impact on our conclusions. As such, activities or episodes that transpire subsequent to this Phase I ESA are not considered in this assessment. It is not intended that a Phase I ESA in accordance with ASTM E1527-13 be an exhaustive assessment of a property nor can it wholly eliminate uncertainty regarding the potential for RECs in connection with a property.

1.4 Assumptions

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux's investigation to identify the presence of RECs connected with the Site in accordance with, among other standards as noted above, the AAI Standards and ASTM E1527-13. The preamble to the amended AAI Standards states:

The Environmental Protection Agency (EPA) today is taking final action to amend the standards and practices for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to reference a standard practice recently made available by ASTM International, a widely recognized standards development organization. Specifically, this final rule amends the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference ASTM International's E1527–13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site

Assessment Process" and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the All Appropriate Inquiries Rule¹.

One of the requirements that a person acquiring real property must meet in order to qualify as a BFP under CLRRA or the innocent landowner, contiguous owner, or BFPP defense to liability under CERCLA is that person must conduct all appropriate inquiries into the previous ownership and uses of the property in conformance with the AAI Standards (or the ASTM E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Standards, Roux's performance of this Phase I ESA in accordance with ASTM E1527-13 will not alone result in the User satisfying all requirements of the AAI Standards and will not in itself qualify the User as a BFP under CLRRA or provide a defense to CERCLA liability. The User has acknowledged that the AAI Standards also require that a prospective purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the AAI Standards. Accordingly, Roux makes no guarantees or warranties, expressed or implied, regarding this Phase I ESA, including without limitation, that this Phase I ESA will qualify the User as a BFP under CLRRA or for a defense to CERCLA liability.

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Standards require, and the conclusions and recommendations stated herein represent, the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion based on the facts available to Roux and conditions at the time of the performance of this Phase I ESA. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time this Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of this Phase I ESA. Implementation of the recommendations may not fully address the data gaps, and the information obtained from execution of those recommendations may alter and/or modify the interpretation of the Site conditions and conclusions, herein. This Phase I ESA does not include consideration of matters specifically excluded by ASTM E1527-13, including but not limited to, asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, and mold unless specifically identified herein.

Roux has not collected any soil and/or groundwater samples on the Site in connection with preparing this Phase I ESA, and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA should not be considered a legal interpretation of existing environmental laws and regulations. This Phase I ESA was conducted with a reasonable degree of inquiry to identify RECs, but

_

¹ Federal Register: December 30, 2013 (Volume 78, Number 250) Page 79319

uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA is not an appraisal or value judgment of the Site. The User has agreed that Roux shall not be liable for any use of this Phase I ESA Report as an appraisal or value judgment of the Site.

This Phase I ESA has been prepared for the exclusive use of the User for specific application to the Site covered by this Phase I ESA. The User has agreed that any third-party use of this Phase I ESA Report, upon disclosure by the User, is the sole responsibility and at the sole liability of the User.

1.5 User Reliance

This report is confidential and has been prepared at direction of Counsel for the exclusive use of the User. No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux's duties and obligations extend to the User and to no other party. Roux's duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Location and Legal Description

The Site consists of three contiguous parcels located in the Los Cerritos neighborhood of Long Beach, California (Figure 1). The parcels are identified by Los Angeles Assessor's Parcel Numbers (APNs) 7140-014-019 (subsequently identified as Parcel 1), 7140-014-032 (Parcel 2), and 7140-014-033 (Parcel 3). According to Los Angeles County Assessor data, the area of Parcel 1 is 9.75 acres, the area of Parcel 2 (located east of Parcel 1) is 2.96 acres, and the area of Parcel 3 (located east of Parcel 2) is 0.98 acres, acres for a combined total of 13.69 acres. The Site is bounded by a railway to the northeast, the Interstate 405 San Diego Freeway (I-405) to the south and by the Los Angeles River to the west (Figure 2).

2.2 Site and Vicinity General Characteristics

As depicted in the Long Beach, California (2012) 7.5-minute quadrangle topographic map published by the United States Geological Survey (USGS), the elevation of the Site is approximately 40 to 50 feet above mean sea level (msl). The topography of the Site and surrounding areas is varied and consists of small rolling hill-type features; the northwestern corner of the Site sits at an elevation approximately 10 to 15 feet lower than the majority of the Site. At the time of Site reconnaissance, the Site was vacant, having previously been occupied by a golf learning facility. The former golf learning facility structures had been removed by the time of Site reconnaissance with the exception of a canopy toward the southeastern corner of the Site. An asphalt-paved parking area was also observed in the southeastern corner of the Site and a concrete sidewalk runs beneath the canopy and transects the southern portion of the Site. A dilapidated stone wall was present toward the northern corner of the Site. A billboard was observed in the southwestern corner of the Site, along the adjacent I-405. Remnants of the fencing system associated with the former golf driving range were visible along the western and northern boundaries. Unpaved walkways and access roads run along the western and northeastern borders of the Site. The majority of the Site was overgrown with significant amounts of unmanaged vegetation.

2.3 Past and Current Use of the Site

Based on Roux's review of historical sources and previous reports, the Site was undeveloped until at least 1896. By 1926, the Site was occupied by Oil Operators, Inc. (Oil Operators), an oil brine water treatment facility and the majority of the Site was used as a treatment sump/pond. Oil brine was pumped to sumps on the Oil Operators facility and water was allowed to evaporate from the brine or seep into the subsurface below the sumps leaving behind a sludge. Following evaporation, the remaining sludge was left in the sumps or dumped elsewhere. Evaporation operations ceased at the Site in the mid-1950s. Active oil wells were located on the Site from at least 1951 through 1964. Remnants of the former on-Site sumps were present on the Site until approximately 1989, by which time the Site was apparently vacated. The Site was developed as a golf facility by 2002. As noted above, the Site was vacant at the time of the Roux reconnaissance. A detailed description of the current condition of the Site is provided in Section 4.2.

2.4 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of our review of those physical setting sources.

2.4.1 Surface Water and Drainage

A section of the Los Angeles River flows approximately 200 feet to the west of the Site at its closest approach. The Los Angeles River is a concrete-lined channel that runs generally north to south in the Site vicinity and discharges into the Pacific Ocean at the San Pedro Bay. No other significant surface water features were identified within the immediate Site vicinity.

2.4.2 Physiographic Setting

According to prior investigations, the Site lies within the southern portion of the Coastal Plain of Los Angeles County, which gently slopes down to the south-southwest. The Site is located within the West Coast Basin which is divided into four structural blocks delineated by zones of faulting and flexure. It is bounded on the north by the Ballona Escarpment, on the east by the Newport-Inglewood fault zone (NIFZ), and on the south and west by the Pacific Ocean and consolidated rocks of the Palos Verdes Hills (Groundwater Bulletin 118, February 2004). The Site is located along the NIFZ, which forms the boundary between the Central and West Coast subbasins and acts as a partial barrier to groundwater movement in the area. The NIFZ offsets, thins, and folds many of the aquifers. Due to the proximity of the Site to the NIFZ, aquifer depths, thicknesses, and potential for interconnections may vary significantly across the Site. The West Coast Basin is underlain by a series of marine and continental deposits ranging in age from Holocene to Middle Miocene. These deposits, which are thought to reach a cumulative thickness of up to 13,000 feet in some areas, overlie a basement complex of pre-Cretaceous igneous and metamorphic rock (LFR, 2009).

2.4.3 Regional and Local Geology

According to prior investigations, the Site is located within a transition area of the Peninsular Ranges and Transverse Range geomorphic provinces. The primary geologic feature in the vicinity of the Site is the NIFZ, which traverses the Site in a northwest-southeast direction. The term fault zone refers to the occurrence of a series of interconnected fault planes, rather than a single defining fault plane. Tertiary and younger sediments are structurally folded and deformed along the NIFZ. The Long Beach Anticline is expressed at Signal Hill and is composed of Middle Miocene through Pleistocene and Holocene sediments resting unconformably on the Late Cretaceous to Late Jurassic Catalina Schist (LFR, 2009).

Soil beneath the Site reportedly consists of sand, silt, and clay of variable thicknesses. The soil is underlain by a thin veneer of Recent alluvium, alluvial sediments of the Late Pleistocene-age Lakewood Formation, and sediments of the Early Pleistocene-age San Pedro Formation. The thickness of the sedimentary section underlying this area is approximately 12,000 feet (Dames & Moore 1988). The Site is located within the active Long Beach Oil Field. According to agency records and prior investigations, six oil wells are located on the Site (LFR, 2009).

2.4.4 Regional and Local Hydrogeology

The Bellflower aquitard immediately underlies the Site at approximately 5 to 50 feet bgs. Identified aquifers beneath the Site in order of increasing depth are the Lakewood Formation (which contains the Gaspur and Gage aquifers) and the San Pedro Formation (which contains the Lynwood, Silverado, and Sunnyside aquifers).

The Gaspur aquifer is present beneath the Site from approximately 50 to 70 feet bgs as sand and gravel. Shallow groundwater was encountered at 8 feet bgs in one boring located in the central portion of the Site during 1986 soil sampling activities; however, the presence of shallow groundwater was presumed to be a

localized perched condition. During December 2007 monitoring activities, the depth to groundwater beneath the Site ranged from 32.6 to 49.32 feet bgs, with a shallow gradient flowing in a southerly direction. The groundwater encountered during the December 2007 monitoring activities was believed to be the Gaspur aquifer (LFR, 2009).

The Gage aquifer has a base at approximately 180 feet bgs and has been found to be approximately 35 feet thick in the vicinity of the Site. Deposits in the Gage aquifer reportedly vary from silty sand to minor gravel. Groundwater in both aquifers of the Lakewood Formation has been reported to be of inferior chemical quality (LFR, 2009).

The lower Pleistocene San Pedro Formation unconformably underlies the Lakewood Formation and contains numerous aquifers of varying quality. The Lynwood aquifer has a base at approximately 600 feet bgs and is approximately 400 feet in thickness. According to data from the Water Replenishment District of Southern California (WRD), the shallowest contact with the Lynwood aquifer in the Site vicinity was approximately 280 feet bgs (WRD, 2018). The Silverado aquifer joins the Lynwood aquifer at approximately 600 feet bgs and continues to over 1,000 feet bgs. The deep Silverado aquifer is the only significant water-producing zone; the City of Long Beach obtains groundwater from more than 1,000 feet bgs within it (LFR, 2009).

Although groundwater underlying the Site is considered of beneficial use by the Regional Water Quality Control Board (RWQCB), regional groundwater quality is generally poor due to salt water intrusion and industrial waste disposal. Particularly in the vicinity of the Site, historic oil and gas production activities have contributed to poor groundwater quality. No active drinking water production wells were identified within one mile of the Site (LFR, 2009).

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; in-person reconnaissance of the Site and adjoining properties; discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Topographic Maps

To help understand the history of the Site and past land uses, copies of historical U.S. Geological Survey topographic maps published between 1896 and 2012 were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. These maps have been included, in reverse chronological order as Appendix B.

3.2 Aerial Photographs

To supplement the information from the topographic maps, a "Decade Package" of aerial photographs taken between 1928 and 2016 was obtained from EDR. The aerial photographs obtained by EDR have been consolidated and included, in reverse chronological order, as Appendix C.

3.3 Fire Insurance Maps

At Roux's request, EDR conducted a search for fire insurance map coverage of the Site. EDR indicated that no fire insurance map coverage was available for the Site. A copy of the Certified Sanborn Map Report is included as Appendix D to this report.

3.4 City Directories

City directories have been published for cities and towns across the United States since the 1700s. Originally a list of residents, the city directories subsequently developed into a useful tool for locating individuals or businesses in certain areas. A copy of "The EDR-City Directory Abstract" is included as Appendix E to this report.

3.5 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 7.0 and a copy of "The EDR Radius Map™ Report with GeoCheck®," dated July 26, 2019, is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

3.6 Site Reconnaissance

On August 2, 2019, Roux personnel conducted reconnaissance of the Site. During the Site reconnaissance, Roux were unaccompanied. A detailed description of the reconnaissance is provided in Section 4.2. Selected photographs taken during the reconnaissance have been annotated and are included in Appendix G.

3.7 Information from Regulatory Agencies

Roux contacted selected federal, state, and local regulatory agencies to determine whether they have potentially relevant environmental records pertaining to the Site, including in particular records relating to USTs, ASTs, environmental permits, enforcement orders, reports and correspondence related to Site investigation/assessment, soil sampling, monitoring, clean up/remediation, removal actions, closures, or any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Roux's interactions with them are documented below. Roux contacted or reviewed information from the following agencies:

Federal;

- United States Environmental Protection Agency (USEPA),
- National Pipeline Mapping System (NPMS),

State;

- State Water Resources Control Board (SWRCB): GeoTracker,
- SWRCB: Storm Water Multiple Application and Report Tracking System (SMARTS),
- Department of Toxic Substances Control (DTSC),
- DTSC: EnviroStor,
- DTSC: Hazardous Waste Tracking System (HWTS),
- California Air Resources Board (CARB),
- o California Office of Environmental Health Hazard Assessment (OEHHA),
- California Environmental protection Agency (CalEPA): CalRecycle,
- o CalRecycle: Solid Waste Information System (SWIS),
- State of California Department of Conservation: Division of Oil, Gas and Geothermal Resources (DOGGR),

County/Regional;

- Los Angeles Regional Water Quality Control Board (LARWQCB),
- South Coast Air Quality Management District (SCAQMD),
- Los Angeles County Fire Department (LACoFD): Health Hazardous Materials Division (HHMD),
- Los Angeles County Department of Public Works (LACDPW),
- LACDPW: Building & Safety Department,
- LACDPW: Geotechnical and Materials Engineering Division (GMED),
- LACDPW: Solid Waste Information Management System (SWIMS),
- County of Los Angeles Sanitation District (LACSD), and

- City/Local;
 - City of Long Beach- Department of Health and Human Services,
 - City of Long Beach -Environmental Health Bureau,
 - Long Beach Fire Department: Certified Unified Program Agency (CUPA),
 - City of Long Beach Development Services Department.

The following sections summarize Roux's review of those records. Copies of the records are provided in Appendix I – Regulatory Records Documentation.

3.7.1 Federal Agencies

3.7.1.1 United States EPA

Roux submitted a FOIA request on July 25, 2019 and received the USEPA tracking number EPA-HQ-2019-007593. As of this report date, a response has not been received.

Roux also queried the online MyProperty database on July 24, 2019. One listing associated with the Site was identified as follows "Long Beach Industrial Park (USEPA Registry ID- 110033607899), 3701 Pacific Place, Long Beach CA. Information system- California Department of Toxic Substances Control- Envirostor System."

3.7.1.2 NPMS

Roux queried the online NPMS Public View database on July 24, 2019. The following two pipelines cross the southeastern corner of the Site.

- An active (unfilled) crude pipeline (pipeline ID: 447) operated by Crimson Pipeline L.P. (operator ID: 32103). The pipeline is part of the East Crude (Line 700 Pipeline) system and is 7.55 miles total in length.
- An active (unfilled) crude pipeline (pipeline ID: 923) operated by Crimson Pipeline L.P. (operator ID: 32103). The pipeline is part of the Norwalk / Imperial Willow / Seabright system and is 18.19 miles total in length.

Two additional pipelines are located approximately 1,000 feet from the Site to the southeast.

- An active (filled) pipeline containing "non-HVL product" (pipeline ID: 034AC) operated by Tesoro SoCal Pipeline Company LLC (operator ID 39013). "Non-HVL product" indicates a refined and/or petroleum product that is not a highly volatile liquid (HVL). The pipeline is part of the Los Angeles (LA) Basin Pipelines system and is 2.23 miles total in length.
- An active (filled) crude oil pipeline (pipeline ID: 032E) operated by Tesoro SoCal Pipeline Company LLC (operator ID 39013). The pipeline is part of the LA Basin Pipelines system and is 5.83 miles total in length.

No information regarding environmental concerns or releases associated with the pipelines was identified during the review of historical sources or agency records. Any releases associated with a pipeline would be the responsibility of the respective pipeline operator. One pipeline located greater than 1,000 feet away from the Site was identified in the regulatory database as a release case; refer to Section 7.1.3 for further discussion. Roux are not aware of any spills, leaks, or other releases associated with the subsurface oil

pipelines located within or adjacent to the Site. On this basis, the presence of the oil pipelines is not considered a REC for Phase I ESA purposes.

3.7.2 State Agencies

3.7.2.1 SWQCB: GeoTracker

Roux queried the online SWRCB GeoTracker database on July 24, 2019. The following release cases were identified within 1,000 feet of the Site.

- Long Beach Industrial Park (Former Oil Operators; the Site), 3701 Pacific Place was listed as an active DTSC Voluntary Cleanup case.
- Long Beach Industrial Park, 4021 Pacific Place was listed as an inactive cleanup program case.
- Oil Operators Inc., 712 West Baker St, was listed as an active cleanup program case as well as a DTSC Evaluation case.
- BP Pipeline/Arco, Golden Avenue, was listed as an active cleanup program case.

3.7.2.2 SWQCB: SMARTS

Roux queried the online SWRCB SMARTS database on July 24, 2019. One listing was found in the vicinity of the Site. Metro Blue Line Track and System Refurbishment, North Pacific Place, Long Beach California 90806, was identified as an active construction facility as of February 21, 2019. No evidence of a release or other environment concern was noted at the Metro Blue Line Track and System Refurbishment facility.

3.7.2.3 DTSC

Roux submitted a Public Records Request form to DTSC offices in Chatsworth, Cypress, and Sacramento via email on July 25, 2019. The Cypress DTSC responded on August 1, 2019 with one listing as follows "Long Beach Industrial Park (Oil Operators; the Site)". The Cypress DTSC stated that the majority of information pertaining to the Site was provided on the EnviroStor website. The Sacramento DTSC responded on July 26, 2019 that no listings associated with the Site were identified.

3.7.2.4 DTSC: EnviroStor

Roux queried the online DTSC EnviroStor database on July 24, 2019. The Site was identified on the DTSC EnviroStor database along with two other facilities within 1,000 feet. Refer to Section 7.1 for further discussion.

- Long Beach Industrial Park (Former Oil Operators; the Site), 3701 Pacific Place was listed as an active DTSC Voluntary Cleanup case.
- Oil Operators Inc., 712 West Baker St, was listed as an active cleanup program case as well as a DTSC Evaluation case.

3.7.2.5 DTSC: HWTS

Roux queried the online DTSC HWTS database on July 24, 2019. One listing associated with the Site was identified.

According to the USEPA ID Profile, the name of the generator was identified as C.R.G. Properties
and the generator ID number was CAC002572604. In 2004, 0.417 tons of "off-spec, aged, or surplus
inorganics" (California waste code 141) was generated.

No information regarding a release or mishandling of the hazardous waste was provided on the DTSC HWTS database.

3.7.2.6 CARB

Roux submitted a Public Records Request via email on July 25, 2019. CARB's July 30, 2019 response indicated that they did not have any documents pertaining to the site.

3.7.2.7 California OEHHA

Roux submitted a Public Records Request via email on July 25, 2019. OEHHA responded on August 2, 2019 and stated that no records for the Site were identified.

3.7.2.8 CalEPA: CalRecycle

Roux submitted a Public Records Request via email on July 25, 2019. As of this report date, a response has not been received from the agency.

3.7.2.9 CalRecycle: SWIS

Roux queried the online SWIS Facility and Site database on July 24, 2019. The nearest SWIS facility was identified as California Department of Transportation (Caltrans) Long Beach, W LA River #2 (33.83167, -118.20572), located approximately 0.4 miles west of the Site across the Los Angeles River. The facility is classified as an unpermitted, closed solid waste disposal facility (unknown closure date). Based on the distance from the Site, this facility was not identified as a significant environmental concern.

3.7.2.10 DOGGR

Roux queried the online DOGGR database on August 12, 2019. According to the DOGGR database as well as other agency and historical sources, the Site is located within the Long Beach Oil Field, an area with significant oil and gas development activity. A total of 28 wells were identified as either on the Site or within approximately 1,000 feet of the Site. Three were identified as core holes and the rest were identified as oil and gas wells. All of the wells have reportedly been plugged. Six wells are reportedly located within the Site boundary and the other 22 wells were located off-Site.

Records on the DOGGR website were reviewed for the six wells located on the Site. Based on the records reviewed, the wells were drilled between 1937 and 1981 and five of the six on-Site wells were used for oil production. All six wells were reportedly abandoned between 1981 and 2014 in accordance with the DOGGR standards at their respective times of abandonment. Additional well details obtained from DOGGR records are provided below. Information has been incorporated into other sections of the report as appropriate, particularly Section 4.1.

Well API: 03706415, Well Number: 8-4 (Henceforth identified as Well 8-4)

According to DOGGR records, Well 8-4 was located toward the northern corner of the Site (see Figure 2) and drilled circa December 1937 by the Union Oil Company of California (Union Oil). Oil was identified in the well and production occurred intermittently through at least 1967 with several ownership changes. A formal *Order to Plug and Abandon Wells and Restore Lease Conditions* was issued by DOGGR to another entity, CRG Properties, Ltd. (CRG) on October 18, 2012. According to a letter from DOGGR dated August 28, 2015, surface plugging occurred on February 11, 2014 and the well was abandoned in compliance with agency standards by CRG. The total depth of the well according to abandonment records was 5,925 feet bgs and the depth to base of fresh water was listed as 2,250 feet bgs.

• Well API: 03706496, Well Number: 8-3 (Henceforth identified as Well 8-3)

According to DOGGR records, Well 8-3 was located toward the northern corner of the Site (see Figure 2), immediately north of Well 8-4. Well 8-3 was drilled circa October 1937 by Union Oil. Oil was identified in the well and production occurred intermittently through at least 1977 with several ownership changes during that time. A formal *Order to Plug and Abandon Wells and Restore Lease Conditions* was issued by DOGGR to CRG. On October 18, 2012. According to a letter from DOGGR dated March 27, 2017, surface plugging occurred on December 2, 2013 and the well was abandoned in compliance with agency standards by CRG. The total depth of the well according to abandonment records was 6,540 feet bgs and the depth to base of fresh water was listed as 2,260 feet bgs.

• Well API: 03709792, Well Number: 8-1 (Henceforth identified as Well 8-1)

According to DOGGR records, Well 8-1 was located towards the southeastern corner of the Site, north of the canopy structure (see Figure 2). The well was drilled circa August 1937 by Union Oil. Oil was identified in the well and production occurred through at least 1939. A notice of intent to abandon Well 8-1, dated June1992, stated that the total depth of the well was 4,532 feet bgs. A letter from DOGGR dated March 9, 1993 stated that the well was plugged on July 3, 1992 by Petro Resources, Inc. and that the well was abandoned in compliance with agency standards.

• Well API: 03709793, Well Number: 8-2 (Henceforth identified as Well 8-2)

According to DOGGR records, Well 8-2 was located towards the southeastern corner of the Site, north of the canopy structure and just south of Well 8-1 (see Figure 2). The well was drilled circa October 1937 by Union Oil. Oil was identified in the well and production occurred through 1993. Abandonment records indicated that the total depth of the well was 5,480 feet bgs with a base of freshwater sands at 2,250 feet bgs. According to a letter from DOGGR dated November 27, 1996, surface plugging was completed by North Side Oil Corporation on October 21, 1996 and the well was abandoned in compliance with agency standards.

Well API: 03722295, Well Number: 8-5 (Henceforth identified as Well 8-5)

According to DOGGR records, Well 8-5 was located along the south portion of the western border of the Site (see Figure 2). Well 8-5 was reportedly drilled circa July 1981 by Sun Oil Company. However, a Notice of Intention to Abandon Well dated August 1981 stated that the well was never logged or tested and it never produced. The total depth was listed as 4,965 feet bgs. The well abandonment was reportedly completed on August 22, 1981 by Sun Oil Company and a letter from DOGGR indicated that abandonment requirements had been fulfilled.

• Well API: 03722512, Well Number: 8-7 (Henceforth identified as Well 8-7)

According to DOGGR records, Well 8-7 was located toward the northern corner of the Site, south of Well 8-4 (see Figure 2). Well 8-7 was reportedly drilled circa August 1981 by Sun Oil Company. A notice of intent to abandon the well dated February 18, 2009 indicated that the total depth of the well was 5,837 feet bgs with a depth to base of fresh water at 2,935 feet bgs. The notice of intent was cancelled in March 2010 and a formal *Order to Plug and Abandon Wells and Restore Lease Conditions* was issued by DOGGR to CRG. On October 18, 2012. According to a letter from DOGGR dated March 27, 2017, surface plugging occurred on January 7, 2014 and the well was abandoned in compliance with agency standards by CRG.

3.7.3 County/Regional Agencies

3.7.3.1 *LARWQCB*

Roux submitted a Public Records Request via email on July 25, 2019. The LARWQCB responded on August 8, 2019 and stated that they did not have any records for the Site.

3.7.3.2 SCAQMD

Roux queried the online SCAQMD database on July 25, 2019. No listings associated with the Site were identified.

Roux also submitted a Public Records Request via email on July 25, 2019. SCAQMD responded on August 8, 2019 and stated that they did not have any listing for this Site.

3.7.3.3 LACoFD: HHMD

Roux submitted a Public Records Request online on July 25, 2019. The LACFD: HMD responded on July 25, 2019 and indicated that they did not locate any records for the Site.

3.7.3.4 *LACDPW*

Roux queried the Online File Review database for industrial waste, underground storage tanks, and stormwater records on July 25, 2019. No listings associated with the Site were identified.

3.7.3.5 LACDPW: Building & Safety Department

Roux queried the online Building Permits Viewer database on July 25, 2019. No records associated with the Site were identified.

3.7.3.6 LACDPW: GMED

Roux submitted a Public Records Request online on July 25, 2019. GMED responded on July 25, 2019 and stated that the address was outside of their jurisdiction.

3.7.3.7 LACDPW: SWIMS

Roux queried the online SWIMS Methane Hazards Search database on July 25, 2019. All of the parcels that comprise the Site are "located within 300 feet of one or more oil or gas wells" and "a methane system may be required" under possible redevelopment scenarios. The LACDPW as well as the City of Long Beach should be contacted prior to Site redevelopment activities to determine whether methane mitigation requirements exist for the Site.

3.7.3.8 LACSD

Roux submitted a Public Records Request online on July 25, 2019. LACSD responded on July 26, 2019 and indicated that no records were found for the Site.

3.7.4 City/Local Agencies

3.7.4.1 City of Long Beach: Department of Health and Human Services

Roux submitted a Public Records Request on July 25, 2019. The agency stated that they did not have any records pertaining to the site.

3.7.4.2 City of Long Beach: Environmental Health Bureau

Roux submitted a Public Records Request on August 8, 2019. As of this report date, a response has not been received from the agency.

3.7.4.3 Long Beach Fire Department: CUPA

Roux submitted a Public Records Request on August 8, 2019. On August 12, 2019 the Long Beach Fire Department stated they did not have any records pertaining to this Site.

3.7.4.4 City of Long Beach: Development Services Department

Roux submitted a Public Records Request on August 8, 2019. A response was received stating that building records including permits and certificates of occupancy were available online to review. The records reviewed are listed below.

3701 North Pacific Place

• April 1995 permit for rough grading, applicant: Management, M.

- July 1996 rough drawing depicting a proposed driving range with additional proposed features also shown (a parking lot, a restaurant / office, a pro shop, and a maintenance building), owner: M&S Golf.
- August 1996 rough drawing depicting a proposed single-story building (Building B) with an existing building (Building A) and a driving range also depicted, owner: M&S Golf.
- December 1996 permit for a foundation and ramp for a premanufactured building identified as Building A, a pro shop, applicant: Marrn, Boyd
- December 1996 permit for a foundation and ramp for a building identified as "office and snack shop, Building B" applicant: Golf M S.
- February 1997 permit for construction of a golf learning center including landscaping, a parking area, and lighting, applicant: Golf, M S.
- February 1997 permit for a new prefabricated storage building (identified as "Building C"), applicant:
 Golf, M S.
- April 1997 permit for an open steel canopy over tee line measuring 240 feet in length, applicant: Golf,
 M S.
- April 1997 rough drawing depicting a planned open patio cover measuring 240 feet in length with three existing structures (a pro shop, an office, and a maintenance facility) also depicted, owner: M&S Golf.
- July 1997 record indicating that a fee was issued for an oil well that was recorded on-Site, applicant:
 Golf Learning LLC.
- August 1997 certificate of occupancy for an open steel canopy over tee line, owner / applicant not listed.
- September 1997 permit for a new prefabricated storage building (identified as "Building C"), owner / applicant not listed.
- September 1997 record indicating that a fee was issued for an oil well that was recorded on-Site, applicant: Golf Center LLC.
- September 1997 certificate of occupancy for a foundation and ramp for a pre-manufactured building identified as Building B, an office and snack shop, owner / applicant not listed.
- November 1997 certificate of occupancy for a premanufactured building identified as Building A, a pro shop, owner / applicant not listed.
- December 1997 certificate of occupancy for a golf learning center landscaping, parking, and lighting standards, owner / applicant not listed.
- November 1998 permit for two flag poles with a banner, applicant: Golf, M S.
- April 2002 permit for a foundation for a modular building to extend retail building at golf driving range, applicant listed as Golf, M S.
- April 2002 rough drawing depicting a retail building addition at a driving range, applicant listed as Ruben C. Sanchez.
- June 2002 record indicating that a fee was issued for an oil well that was recorded on-Site, owner / applicant not provided.

• June 2002 certificate of occupancy for a foundation for a modular building to extend retail building at golf driving range, owner / applicant not listed.

4021 North Pacific Place

- September 1996 void permit to demolish a commercial steel building, owner listed as Northside Oil.
 Associated rough drawing does not appear to clearly correspond to the Site.
- March 1997 Grading completion certifications with indistinguishable details due to poor quality.

Information from building records has been incorporated into other sections of the report as applicable, particularly Section 4.1.

3.8 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible RECs in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire to the User at the beginning of this Phase I ESA to assist them with these tasks. The questionnaire was completed by Mr. Chip Brown, a representative of the User on August 14, 2019 and is included as Appendix H to this report. The following sections outline the answers to the questionnaire as completed by the User.

3.8.1 Environmental Liens or Activity and Use Limitations

The User indicated that they have no knowledge regarding environmental liens or activity and use limitations (engineering/institutional controls) with respect to the Site.

An environmental lien search performed by EDR on August 21, 2019. According to the search, environmental liens were not found to be associated with any of the Site parcel numbers. No other activity and use limitations (AULs) were found to be associated with any of the Site parcel numbers.

3.8.2 Specialized Knowledge

The User did not report any specialized knowledge in relation to the Site.

3.8.3 Valuation Reduction for Environmental Issues

The User provided the following information regarding the relationship of the purchase price to the fair market value of the property if it were not contaminated:

"The price of the property has been adjusted from what we understand would otherwise be fair market value to account for the property's environmental conditions, potential risks to an owner that may be associated with such conditions, and possible response actions that a new owner may need to undertake to address such conditions."

3.8.4 Commonly Known or Reasonably Ascertainable Information

The User provided the following information considered Commonly Known or Reasonably Ascertainable:

"We understand from available records that from the 1920s until the 1960s or 1970s the property was used as an oil brine treatment facility. A partial "cleanup/treatment" apparently took place in the 1970s and involved

removal, treatment, and replacement of sump materials. We also understand land farming took place on the property in 1980s and [the Site] was used as a driving range in the 2000s."

3.8.5 Obvious Indicators of the Presence or Likely Presence of Contamination of the Site

The User stated their understanding that materials from the oil brine treatment facility are still located on the property.

Additional environmentally related records were provided to Roux by the User during the preparation of this Phase I ESA. Information from these records has been incorporated as appropriate throughout this report.

3.9 Other Interviews

Roux performed interviews with the current owners of the Site and other parties having possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site.

On August 27, 2019, Roux interviewed Steve Sukut, of Sukut Development, Inc. (Sukut Development) via phone. Mr. Sukut stated that Sukut Development has owned the majority of the Site (Parcels 1 and 2 per property deed information) for approximately 15 years and purchased Parcels 1 and 2 from Pender Properties, Inc. (Pender Properties). From 1996 to 2016, Sukut Development operated the former on-Site golf learning facility. According to Mr. Sukut, clean soil fill was imported to the Site to facilitate grading for the driving range development circa 1996. The golf course learning canter operations ceased in 2016 and the buildings associated with the driving range were removed in 2017. However, Roux's review of historical aerial photographs suggest that the buildings had been removed by 2016. Mr. Sukut stated that no additional environmental investigations were conducted following the 2009 LFR Final Remedial Investigation (RI) Report and that he has no knowledge of high-pressure petroleum pipelines crossing the Site.

On August 28, 2019, Roux interviewed Mark Pender of Pender Properties. Pender Properties currently owns a portion of the Site (Parcel 3) according to property deed information. Mr. Pender stated that he has owned portions of the Site since approximately 1998. During that time, Pender Properties and Sukut Development had a partnership, CRG Properties. According to Mr. Pender, the former oil sumps on-Site were lined with clay. Soil was imported to fill the on-Site oil sumps in or around the 1950s and the fill may have originated from a nearby CalTrans freeway project. Later, prior to Site redevelopment activities circa 1986, a layer of polyethylene plastic sheeting was installed on the Site surface and approximately 80,000 cubic yards (CY) of sandy soil was imported to the Site from nearby Los Angeles River dredging activities and was placed on top of the plastic sheeting. The sandy soil layer on top reportedly ranged from two to eight feet thick across the Site. According to Mr. Pender, the golf learning center operations likely involved typical fertilizer and pesticide use for lawn upkeep, although he had no knowledge of bulk storage of these materials on-Site. Mr. Pender stated that the golf learning center operations ceased approximately three to four years ago and the buildings were removed approximately two to three years ago. Mr. Pender stated that no additional environmental investigations were conducted following the 2009 LFR Final RI Report and he had no knowledge of high-pressure petroleum pipelines crossing the Site or oil wells located on the Site.

4. Site History and Condition

This section documents the history of the Site and describes current conditions and existing or former environmental features. Pursuant to ASTM, Roux requested the following standard historical sources as described in Section 3.0:

- Historical aerial photographs;
- · Historical fire insurance maps;
- · Historical topographic maps; and
- · Local street directories.

Historical sources from the EDR reports have been supplemented by information obtained from the records requests as described in Section 3.7.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the sources above, particularly the historical aerial photographs and historical topographic maps.

	Summary of Historical Sources					
Date Range	Site Description	Historical Sources				
<1910	The earliest topographic map reviewed for Phase I ESA purposes was published in 1896 and indicates that no development had taken place within the Site boundary by that time. The Site appears to be approximately 25 feet above msl. Typical USGS mapping symbols from the time show the pre-channelization course of the Los Angeles River flowing north-south approximately 300 feet to the west of the Site at its closest approach. It also shows marsh or swamp areas to the northeast and southeast. The map shows a branch of the Southern Pacific Railroad approximately 1.3 miles northwest of the Site. There appear to be structures located at Cerritos to the northwest, Watson Crossing to the southwest, and Signal Hill to the southeast. No significant changes were noted in the 1899 and 1902 topographic maps.	- 1896, 1899, 1902 Historical Topographic Maps: Downey (15- minute)				
1911-1920	No significant changes were noted in the 1911 and 1916 topographic maps relative to the 1902 topographic map.	- 1911, 1916 Historical Topographic Maps (Nationwide Environmental Title Research, LLC HistoricalAerials.com)				

	Summary of Historical Sources					
Date Range	Site Description	Historical Sources				
1921-1930	No significant changes were noted in the 1923 topographic maps relative to the 1916 topographic map. The combined 1924, 1925 topographic maps indicate that the Site remained undeveloped at that time. The 1924 and 1925 topographic maps indicated that a railroad trending northwest-southeast, called "Pacific Electric," had been constructed by that time, bordering the Site to the northeast; the adjoining railroad has been identified as an OEF (see Section 8.5). In addition, the map depicted a structure was to the northeast of the Site, beyond the railroad, identified as a school. Several roads can be seen in the Site vicinity, particularly in the area to the east of Site, where the development of Los Cerritos was developing by that time. According to an aerial photograph from 1928, large pond-like features (oil sumps per previous reports and agency sources), bounded by unpaved dirt roads covered the majority of the Site by that time. Additional ponds were also present to the immediate south. As evident in the photograph, in the immediate Site vicinity, the Los Angeles River appears to be following its natural course with a meandering stream bed and stream deposits, located west of the Site. The areas immediately adjacent to the Site appear vacant but mostly cleared. Beyond the railroad line bordering the Site to the northeast appear to be the school structures noted in the 1924, 1925 topographic map; and the beginnings of the Los Cerritos residential neighborhood. A large circular feature (possible petroleum product or water AST), was located approximately 0.4 miles to the southeast of the Site. The 1930 topographic map appeared largely consistent with the 1924, 1925 historical topographic map.	- 1923 Historical Topographic Maps (Nationwide Environmental Title Research, LLC HistoricalAerials.com) - 1924 Historical Topographic Map: Compton (7.5-minute) - 1925 Historical Topographic Map: Cleanwater (7.5-minute) - 1928 EDR Aerial Photograph - 1930 Historic Topographic Map: Compton (7.5-minute) - May 27, 2009 LFR Final Remedial Investigation Report (RI)				
1931-1940	According to DOGGR records, four oil production wells were drilled on- Site by Union Oil Company of California circa 1937: Well 8-1, Well 8-2, Well 8-3, and Well 8-4.	- 1937 DOGGR Records				
1941-1950	Additional development to the east and southeast of the Site was apparent in the 1942 historical topographic map, several small circular features were noted to the southeast of the Site. An unpaved road was visible on the Site. The footprint of the ponds remained apparent in the 1947 aerial photograph with disturbances in the central and northern portions of the Site. The disturbances indicate that the ponds may have been undergoing a period of drying-out. An apparent tower is present toward the southeastern corner of the Site, the feature is a suspected oil derrick associated with one of the known former on-Site oil wells. Several small features, possible storage area or small structures, appeared near the tower/possible oil derrick. The large off-Site AST is no longer visible by the time of this photograph. Numerous apparent towers/possible oil derricks were present to the southeast of the Site along with several small structures likely associated with oil production activities. Additional residential structures were present to the northeast of the Site, beyond the adjoining railway. North of the Site, across the railway, several smaller ponds or reservoirs and circular features (possibly ASTs)	- 1942 Historical Topographic Map: Downey (15-minute) - 1943 Historical Topographic Map: Downey (15-minute) - 1947 EDR Aerial Photograph - 1947 Historical Topographic Map: Downey (15-minute) - 1949 Historical Topographic Map: Long Beach (7.5-minute)				

	Summary of Historical Sources					
Date Range	Site Description	Historical Sources				
	were noted; these features were likely associated with oil production activities in the area. The Los Angeles River to the west and the railroad to the northeast remained present in the 1947 topographic map. Significant redevelopment in the east, southeast, and southwest surrounding properties beyond the railroad was depicted as red-shaded areas. The 1949 topographic map identified the on-Site pond features as "oil sumps" and the region is shaded with dots which could indicate sand or mud, a dry lake or pond, or a wide wash. The adjacent Los Angeles River wash area was similarly shaded. The school to the northeast of the Site was identified as "Los Cerritos School."					
1951-1960	The general Site features in the 1953 aerial photograph appear generally similar to the 1947 aerial photograph. Along the northwestern boundary of the Site and immediately adjacent to the Site are several new structures that appear to be associated with oil development activities. Two small circular structures were visible (possibly ASTs) and several towers/possible oil derricks were noted in this area. Few significant changes were noted in the Site vicinity. Further residential development had occurred to the northeast of the Site, beyond the railway, additional residential structures were present and to the north, the footprints of the pond/reservoir and circular features were visible. A large region of earthwork following the alignment of present-day Interstate 710 Long Beach Freeway (I-710), trending north-south, was observed approximately 0.2 miles west of the Site.	- 1953 EDR Aerial Photograph				
1961-1970	By the time of an aerial photograph taken in 1963, there had been little discernible change at the Site, although considerable activity was apparent in the immediate Site vicinity was apparent. Immediately south of the Site appears to be construction of the present-day I-405, trending east-west. The oil sumps are no longer present immediately south of the Site; however, several pond and circular features were still present further to the south. The Los Angeles River located west of the Site had been channelized by that time with a concrete-lined profile. The present-day I-405 and I-710 freeway interchange appears to be under construction further to the west, along with a road bridge for the I405 to cross the Los Angeles River. North of the Site, beyond the railroad line, remnants of former pond/reservoir features are visible, but they appear to be no longer in use. One oil sump was still depicted on-Site (covering the majority of the Site) in the 1964 topographic map with dotted shading. Small circular features (possibly representing oil well derricks) were depicted in the Site vicinity. Small structures were depicted southeast of the Site. The adjacent and nearby freeways were shown as constructed, and the Los Angeles River was shown in its present channel configuration with adjacent intermittent ponds. The Virginia Country Club is marked to the	- 1963 EDR Aerial Photograph - 1964 Historical Topographic Map: Long Beach (7.5-minute)				

	Summary of Historical Sources					
Date Range	Site Description	Historical Sources				
	northeast, beyond a residential development. A number of circular features (possibly ASTs), including a water tower, were depicted in the area of a former sump located south of the Site beyond the I-405.					
1971-1980	The 1972 topographic map and 1972 aerial photograph were relatively consistent with the 1964 topographic map with additional circular structures (possibly ASTs) present along the northwestern border of the Site and immediately adjacent as depicted in the 1964 topographic map. Located immediately west of the Site were unpaved roadways leading to an apparent storage or dumping area. Additional residential development was visible to the north of the Site across the railroad lines. Pond features appeared alongside the Los Angeles River to the north and west of the Site. No significant changes were noted in the 1977 aerial photograph.	- 1972 Historical Topographic Map: Long Beach (7.5-minute) - 1972 EDR Aerial Photograph -1977 EDR Aerial Photograph				
1981-1990	The Site appeared partially cleared and graded with disturbances in the northern portion in the 1981 aerial photograph. The structures along the northwest border visible in prior aerial photographs and topographic maps were still present. No significant changes were noted in the 1981 topographic map in comparison to earlier versions. According to DOGGR records, two oil production wells were drilled on-Site by Sun Oil Company circa 1981: Well 8-5 and Well 8-7. Well 8-5 reportedly never produced oil and was abandoned later the same year (1981). The 1987 topographic map appears largely consistent with the 1981 topographic map. According to the 2009 RI, limited land farming activities were conducted at the Site from 1987 to 1989 in an attempt to remediate the impacts from the historical Oil Operators operations, however, remediation was reportedly not completed. The 1989 aerial photograph was largely consistent with the 1981 aerial photograph and topographic map. The apparent storage/dumping activities formerly located immediately west of the Site were no longer visible.	- 1981 EDR Aerial Photograph - 1981 Historical Topographic Map: Long Beach (7.5-minute) - 1981 DOGGR Records - 1987 Historical Topographic Map (Nationwide Environmental Title Research, LLC HistoricalAerials.com) - 1989 EDR Aerial Photograph - May 27, 2009 LFR Final Remedial Investigation Report (RI)				
1991-2000	According to DOGGR records, Well 8-1 was abandoned in 1992. The 1994 aerial photograph indicated that the Site remained cleared and graded with structures remaining along the northwest border. No other significant changes were noted in the Site vicinity. According to building records, the Site was developed as a golf learning facility by Sukut Properties between April 1995 and November 1998 (Golf Center LLC / M&S Golf). As part of the improvements, several structures were constructed on the Site during this time: a canopy over the tee line, Building A (golf pro shop), Building B (office and snack shop), Building C (storage), and Building D (maintenance facility). Buildings A, B, C, and D were identified as premanufactured-type	- 1992 DOGGR Records - 1994 EDR Aerial Photograph - 2000 Haines Company, Inc. City Directory Listing - 1995-1998 City of Long Beach Development Services Department: Building Records - 1996 DOGGR Records - August 27, 2019 Interview with Steve Sukut				

	Summary of Historical Sources					
Date Range	Site Description	Historical Sources				
	buildings. During this time, Well 8-2 was abandoned (1996). A 2000 city directory listing noted that Long Beach Golfing Learning Center operated at 3701 North Pacific Place. Due to the former driving range / golf learning center operations, commercial pesticides may have been historically used on-Site. It is unknown whether the pesticides were stored on the Site. The possible historical pesticide and herbicide use was therefore identified as an OEF (Section 8.5).					
2001-Present	By the time of an aerial photograph taken in 2002, the present-day asphalt-paved parking areas, concrete walkways, and canopy were visible. Several small structures were present in the southern portion of the Site. The structures along the northwestern border of the Site were no longer visible. Features characteristic of a golf facility cover the majority of the Site and the southeastern property. According to building records, Building A was expanded in 2002. The Site was no longer identified as an oil sump in the 2012 topographic map, and the circular features to the south were absent as well. The Southern Pacific Railroad is no longer depicted. The 2005, 2009, and 2012 aerial photographs appeared largely consistent with the 2002 aerial photograph, although over time the apparent golf features on-Site become progressively less distinguishable. City directory listings for the years 2006, 2010, and 2014 indicate the continued occupancy of the Site as a golf learning facility (Long Beach Golf Learning Center). According to DOGGR records, Well 8-3 was abandoned in 2013 and Well 8-4 and Well 8-7 were abandoned in 2014. By the time of the 2016 aerial photograph, the Site appears as a largely vacant lot. The asphalt-paved parking area, concrete walkway, and canopy remain present, however the additional structures formerly located in the southern portion of the Site were removed since the 2012 aerial photograph, reflecting the present configuration of the Site. No building records indicating specific removal dates of the former buildings were found. The pond/reservoirs and circular features located south of the Site, across I-405 became progressively less distinguishable as well between 2002 and 2016, indicating that they may have faded out of use. No other significant changes to the Site vicinity were noted during this time.	- 2002 EDR Aerial Photograph - 2002 City of Long Beach Development Services Department: Building Records - 2012 Historical Topographic Map: Long Beach (7.5-minute) - 2005, 2009, 2012, and 2016 EDR Aerial Photographs - 2006, 2010, 2014 EDR Digital Archive City Directory Listings - 2013-2016 DOGGR Records				

4.2 Site Reconnaissance

A Roux's representative conducted a reconnaissance of the Site and surrounding areas on August 2, 2019. Roux was unaccompanied during the Site reconnaissance. Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the Site reconnaissance, the weather was clear and warm. Roux personnel took representative photographs of

the Site and surrounding area which have been annotated and included in Appendix G. The following sections summarize observations during the inspection.

4.2.1 Current Site Condition and Limitations

At the time of Site reconnaissance, the Site was a vacant former golf learning facility. The Site was overgrown with vegetation and general refuse was present in numerous areas throughout the Site including domestic trash, tires, glass, and golf equipment. The topography of the Site and surrounding areas is varied and consists of small rolling hill-type features; the northwestern corner of the Site sits at an elevation approximately 10 to 15 feet lower than the rest of the Site. The former golf learning facility structures were removed by the time of Site reconnaissance with the exception of a canopy toward the southeastern corner of the Site. An asphalt-paved parking area was observed in the southeastern corner of the Site and a concrete sidewalk runs beneath the canopy and transects the southern portion of the Site. A dilapidated stone wall was present toward the northern corner of the Site. A billboard was observed in the southwestern corner of the Site, along the adjacent I-405. Remnants of the fencing system associated with the former driving range were visible along the western and northern boundaries. Unpaved walkways and access roads run along the western and northeastern borders of the Site.

Due to the large amount of vegetation present on the Site and the relatively large area of the Site, observation of all ground areas for potential features of concern was limited.

4.2.2 Phase I ESA Observations

During Site reconnaissance, Roux personnel attempt to identify any environmental features that may be relevant in the context of the Phase I ESA. Any such features are discussed in the sections below.

4.2.2.1 *Dumping*

Roux observed refuse throughout the Site including domestic trash, tires, glass, and golf equipment. Some of the refuse observed appeared to be remaining from historical golf learning center activities. However, much of the refuse may have been from small-scale illicit dumping activities.

It should be noted that numerous transient encampments were observed along the adjoining Los Angeles River and according to the Site personnel, transient activity was recently observed on the Site. Some of the domestic refuse observed on-Site may be associated with the reported transient activity. Although not observed during Site reconnaissance, used and discarded hypodermic needles are often present in areas with high transient activity.

4.2.2.2 Landfills or Land Farms

As noted above, the topography of the Site and surrounding areas is varied and consists of small rolling hill-type features. The varied topography is likely in part due to subsurface material remaining from the historical oil brine water treatment sumps (evaporation ponds / lagoons). Refer to Section 6.0 for discussion of the land farming operations performed during historical remedial efforts.

4.2.2.3 Oil and Gas Wells

According to previous investigations and agency records, six oil wells were formerly operated on the Site. Roux traversed the Site in the vicinity of known former oil and gas wells and did not observe evidence of the wells. This is unsurprising as abandoned oil or gas wells rarely leave behind any surface features following abandonment. The historical presence of oil wells at the site is considered a REC. Refer to Sections 6.0 and 8.2 for further discussion.

4.2.2.4 Monitoring Wells

According to previous investigations, two groundwater monitoring wells were installed on the Site, MW-3 and MW-7. Well MW-3 is located along the eastern border of the Site and MW-7 is located along the southern border of the Site. Well MW-3 was observed to be open during Site reconnaissance. Refer to Section 6.1 for discussion of previous groundwater monitoring and investigation activities.

4.2.2.5 Drainage Features

Roux observed a possible former drain located in the southwestern portion of the Site. The possible drain as well as piping remnants were observed on a concrete slab in the area of the former Building D, the maintenance facility for the historical golf learning center/driving range. It is unknown where the possible former drain discharged. No hazardous materials were observed in the vicinity of the feature; however, the feature was covered with plant debris and refuse at the time of Site reconnaissance, preventing direct visual observation.

4.2.2.6 Vapor Intrusion

Roux performed a vapor migration/intrusion pathway assessment. Refer to Section 6.0 for discussion of concerns associated with historical on-Site operations associated with oil development.

4.2.2.7 Other Features

The following features were not observed by Roux during the August 2, 2019 Site Reconnaissance, unless otherwise addressed above:

- · Areas of stressed vegetation
- Areas which receive flood or storm water from potentially contaminated areas
- Air compressor vent discharges
- Discolored or Spill Areas
- Drainage Swales and Culverts
- Electrical Transformers
- 55-Gallon Drums and Other Hazardous Materials
- Former Agricultural Applied Pesticide Area
- Hydraulic Lifts
- Incinerators
- Loading and Unloading Areas
- Non-Contact Cooling Water Discharge
- Oil-Water Separators
- Open Areas Away from Production Areas
- Process Area Sinks and Piping
- Rail Cars/Railroad Spurs
- Septic Systems Leach Fields or Seepage Pits
- Silos
- Sprayfields
- Storm Sewer and Spill Containment Collection System
- Storm Water Detention Pond
- Underground / Aboveground Storage Tanks and Associated Piping
- Waste Piles

5. Adjoining Properties

Adjoining and selected nearby properties are shown in Figure 2 and are described below.

5.1 Vacant, Former Golf Learning Center to the East

The eastern adjoining properties were historically part of the former Oil Operators facility and more recently, the former golf learning center which also encompassed the Site. Three oil wells, identified in previous investigations and agency records, were historically operated on the eastern adjoining properties. The wells were not observed during Site reconnaissance. A particularly low drainage area was noted in the vicinity of one of the former wells. A drum labeled as "soil cuttings" on hold pending analysis from prior boring activities was noted in the asphalt-paved parking area located east of the Site. The drum was observed to be in good condition; no secondary containment was observed; no staining in the vicinity of the drum was observed. Based on the nature of materials within the drum and the lack of staining or other indications of a release, the off-Site drum was not identified as a significant environmental concern.

5.2 Oil Operators, Inc. Property to the East

East of the Site, located south of Pacific Place, is an Oil Operators facility which appears to function as a small storage yard. Signage observed during Site reconnaissance indicated that an unknown quantity of hazardous and flammable material is or was stored at the facility. No indications of a release from the facility impacting the Site were observed during Site reconnaissance.

5.3 Interstate-405 San Diego Freeway to the South

The Site is bordered to the South by I-405 and an interchange lane connecting to I-710. It is not uncommon for near-surface soils at properties in close proximity to freeways that operated in the era of leaded gasoline to be impacted by aerially deposited lead. However, there is no documented lead impact to soils at the Site attributable to the adjacent highways. Considering the proximity of the freeways, the potential for aerially deposited lead is considered an OEF in this Phase I ESA (Section 8.5).

5.4 Los Angeles River to the West

The Site is bounded to the west by the Los Angeles River. This area consists of a concrete lined channel and a vacant intervening area. Five oil wells, identified in previous investigations and agency records, were historically operated in the western Los Angeles River intervening area. The wells were not observed during Site reconnaissance. The Los Angeles River intervening area sits at an elevation approximately 10 to 15 feet below the majority of the Site due to a relatively steep downward slope along the western edge of the Site.

5.5 Railroad to the Northeast

The Site is bounded to the northeast by a Los Angeles Metro railroad line. Based on the review of historical sources, the adjoining railroad has been present since at least 1924. It was originally operated by Pacific Electric and later, Southern Pacific. Although Pacific Electric and Southern Pacific operated primarily passenger rail units, freight units were also reportedly operated on the line. Based on the length of time the railroad has been present and the potential for impacts from freight transportation, the railroad was identified as an OEF (Section 8.5). Beyond the railroad line is a residential development and an elementary school, Los Cerritos Elementary School.

6. Summary of Key Previous Investigations And Documents

The following documents were provided to Roux for review:

- January 1, 1986 Geofon Geotechnical Investigation (no cover page)
- Statewide Investors Site Characterization Study (GEOFON, Jaykim; October 1, 1986)
- January 22, 1988 Jaykim Engineers Revisions to the Rule 1150 Permit for Land Farming
- February 11, 1988 SCAQMD Rule 1150 Excavation Permit
- July 18, 1988 Jaykim Engineers 72-hour Notice to Proceed with Land Farming
- July 18, 1988 Jaykim Engineers Results of Biodegradation Test Plot
- April 19, 1989 Jack K Bryant SCAQMD Rule 1150 Permit Letter for Remedial Activities
- August 30, 1989 Jack K Bryant Results of Post Excavation Soil Sampling

- June 15, 2009 DTSC Final RI Approval letter

A summary of key environmental documents is provided in the subsequent sections, mostly in the context of the 2009 LFR RI. The RI is a relatively comprehensive report that included discussion of numerous of the documents provided to Roux. The following sections summarize the findings from prior investigations by other consultants and do not include the opinions or recommendations of Roux unless explicitly stated. The RI and additional selected pertinent documented are included as Appendix J to the report.

6.1 Final Remedial Investigation Report (RI) (LFR, May 27, 2009)

According to the RI, the Site was a Brownfield development occupied by Long Beach Golf Learning Center, consisting of a driving range, putting practice and chipping areas, a snack bar, a golf shop, a maintenance building, and a paved parking lot. The subject of the RI consisted of the following APNs: 7140-014-019, 7140-014-020, 7140-014-021, 7140-014-022, 7140-014-023, 7140-014-025, and 7140-014-027.

The RI divides the subject into the following three areas:

- Portion 1 (APNs 7140-014-019 and 7140-014-020),
- Portion 2 (APNs 7140-014-021, 7140-014-022, 7140-014-023, and 7140-014-027), and
- Portion 3 (APN 7140-014-025).

Portions 2 and 3 are not part of the Site; they are located to the southeast of the Site. As previously stated in Section 2.1, the Site consists of parcels 7140-014-019, 7140-014-032, and 7140-014-033 which generally correspond to Portion 1 in the RI.

According to the RI, the Site was formerly owned by Oil Operators, a non-profit cooperative organization that functioned as a central oil brine water treatment facility serving member oil companies. Oil brine is generally comprised of drilling mud and other waste generated from oil production activities. The Oil Operators facility encompassed a large area of which the Site was the northernmost portion. Brine water treatment operations began in 1926. Oil brine was pumped to sumps on the Oil Operators facility, the majority of the Site was used as a treatment sump. Water was allowed to evaporate from the brine or seep into the subsurface below the sumps leaving behind a sludge. Following evaporation, the remaining sludge was left in the sumps or dumped elsewhere. Evaporation operations ceased at the Site when a water treatment plant (including evaporation ponds) was built south of the Site in the mid-1950s.

In the 1970s, a partial cleanup/treatment of the Site was conducted. The partial cleanup included removal, treatment, and replacement of a portion of the sump materials. However, detailed records describing the cleanup activities were not available for review. Additional investigations were performed in the 1980s.

Numerous reports reviewed by LFR and discussed in the RI are discussed below. It should be noted that the following information was obtained from the RI; not all of the reports were made available to Roux for direct review.

6.1.1 Oil Sump Site Development Feasibility Study (August 25, 1983) and Oil Sump Site Development, Supplemental Investigation (January 1984), prepared by Earth Technology Corporation

In an effort to assess the feasibility of supporting light industrial structures on the sump materials at the Oil Operators facility, 16 electric cone penetrometer tests (CPTs) were performed during two investigations by Earth Technology Corporation (ETC). The results indicated that the majority of sump materials remaining at the property were too compressible to directly support shallow foundations and differential foundation settlement would likely be excessive. Three subsurface profiles located across the Site were created based on the CPT results. The following four zones were identified in the RI:

- Zone 1: Stiff clay and sandy clay soil with occasional sand near the ground surface; relatively high to moderate oil content; "appeared to have been treated and recompacted."
- Zone 2: Firm to soft clay and silt; moderate to low oil content; may have been lightly treated and replaced; very compressible.
- Zone 3: Very soft clay; untreated and uncompacted; water saturated; highly compressible. Zone 3 materials reached as deep as 30 feet bgs in some locations at the Site. The deepest area appeared to be in the central portion of the Site.
- Zone 4: Natural soil with some moderately compacted sump material near the top.

6.1.2 Geotechnical Investigation (GEOFON, Inc., January 1986)

GEOFON, Inc. (GEOFON) conducted a geotechnical investigation to evaluate subsurface conditions at the Oil Operators facility for a potential business park development. A 1986 Site Characterization Study apparently referenced the report; however the date of the GEOFON report is unknown. A total of 12 borings (GB-1 through GB-12) were advanced on the property to assess soil types, levels of soil contamination, and depth of sump materials. Data from prior geotechnical investigations, including the previously discussed ETC activities were incorporated into the GEOFON report. The total volume sump material at the Site, including unprocessed, moderately processed, and lightly processed sump material was estimated to be 390,000 to 490,000 CY, of which an estimated 80,000 to 100,000 CY was unprocessed sump material. The sump materials were described as primarily "mud similar to clayey soils, mixed with highly variable amounts of salty water (brine) and oily wastes." Two areas with the greatest amount of sump material were described as follows:

- Approximately 75,000 CY of sump material was distributed throughout a rectangular area approximately 450 feet long, 300 feet wide, and 15 feet thick in the central portion of the Site; and
- Approximately 7,000 CY of sump material was distributed throughout a triangular area approximately 7 to 10 feet thick in the northern corner of the Site.

The primary area of occurrence of soft, unprocessed sump material was found at the base of the sump, approximately 20 to 30 feet bgs. Shallow groundwater was encountered at 8 feet bgs in one boring located in the central portion of the Site (GB-4). GEOFON concluded that this was a localized perched condition due to the presence of native sands at greater depths which were not saturated, and the lack of groundwater encountered in any other borings suggested localized perched groundwater.

GEOFON concluded that present surface conditions at the Oil Operators property were not suitable for supporting structures on shallow foundations due to the highly variable engineering properties of the sump materials and the high compressibility. However, following moisture-conditioning and compacting, the soils would be suitable for supporting structures according to GEOFON.

6.1.3 Site Characterization Study (Jaykim Engineers, Inc. and GEOFON, October 1986)

The scope of work for the Jaykim Engineers, Inc. (Jaykim) and GEOFON investigation consisted of 12 borings advanced to collect soil samples for geophysical and chemical analysis. The borings were converted to gas monitoring probes for the purpose of monitoring gas pressures and lower explosive limit (LEL) levels. The borings denoted GB-1 through GB-12 are reportedly the same borings referenced in the previously discussed GEOFON investigation.

According to the RI, soils at the property were characterized into the following six types based on physical characteristics:

- Type 1 Low to medium oil content in a dark silty or sandy clay;
- Type 2 Medium to high oil content, with some samples showing liquid oil, in a black, silty to sandy clay;
- Type 3 Extremely high oil content in a toothpaste-like consistency;
- Type 4 Very low oil content in a dry blue clay;
- Type 5 Very low oil content in a dry gray sand; and
- Type 6 None to very low oil content in a brown silty sand.

Concentrations of total petroleum hydrocarbons (TPH) in the samples analyzed ranged from non-detect (Type 6) to 75,800 milligrams per kilogram (mg/kg) (Type 3). Lead was detected up to 444 mg/kg (Type 3). Benzene and xylenes were detected at concentrations up to 3.0 mg/kg (Type 3) and 28 mg/kg (Type 2), respectively. Complete copies of the Jaykim and GEOFON reports were not available for LFR to review and tables and figures were absent. Therefore, the location and distribution of the contaminants are unknown.

Also discussed in the Site Characterization Study were four samples collected with a backhoe in April 1986. The analytical results were summarized with xylenes averaging 93 mg/kg, other volatile organic hydrocarbons averaging 11,158 mg/kg, non-volatile compounds averaging 130,200 mg/kg, and organic lead averaging 3.21 mg/kg. Detailed analytical results, tables, and figures were absent from the report.

As previously mentioned, the 12 borings advanced during the Jaykim and GEOFON investigations were converted to gas probes following collection of soil samples. Gas analysis included field testing for LEL

concentrations and probe pressures, as well as "GC/halogenated compounds and BTX." Methane concentrations reportedly ranged from 12.1 to 83.6 percent. Detailed analytical results, tables, and figures were absent from the report.

One groundwater sample was collected by GEOFON in 1986 from boring GB-4 in the presumed perched groundwater layer at 8 feet bgs. Concentrations reportedly included 26,000 micrograms per liter (μ g/L) of TPH, 18,000 μ g/L of zinc, and 16,000 μ g/L of lead. Jaykim reportedly collected additional perched groundwater samples in 1988. Concentrations reportedly included 16 milligrams per liter (μ g/L) of lead, 5.5 mg/L of chromium, and 7.3 mg/L of copper. The perched water appears isolated (not identified in other borings) at a location central to the Site. Off-Site migration of the perched water appears unlikely.

The Jaykim report also stated that the volume of fill material to be reprocessed was approximately 400,000 to 500,000 CY, of which approximately two thirds of the fill material were previously processed and had a relatively low oil content and soil-like properties. Jaykim stated that the low oil content fill material could be relatively easily removed, replaced, and compacted and that the remaining one third of fill material with a high oil content could be mixed with clean fill dirt, replaced, and compacted.

6.1.4 Agency Correspondences Related to Test Plot at Oil Operators North Site (Jaykim, 1988)

In a July 1988 letter to the RWQCB, Jaykim described the operation of a test plot to demonstrate the feasibility of soil bioremediation at the Oil Operators property. On May 31, 1988, the test plot area was cleared and leveled, and soil vapor readings within three inches of the soil surface were taken with a combustible vapor detector. Six "cells" that were approximately 8 feet wide by 50 feet long were staked out and rototilled. Ammonium nitrate and phosphate were then applied to the cells and tilled into the soil.

In June 1988, composite soil samples were collected from each cell. Oil-utilizing bacteria and warm water were added to five of the six cells and the five cells were then tilled and watered into the soil. Approximately 20 CY of oil-contaminated soil was removed to a depth of 15 to 20 feet bgs and mixed with surface soil in a one-to-one ratio. The soil mixture was then spread onto each of the cells at varying depths ranging from 3 to 6 inches and tilled into the surface and mixing was performed between two and six times daily over the course of five days to determine the optimal mixing frequency.

Results of the test indicated that the treatment process was more effective with more frequent mixing; the plots mixed six times per day had the greatest reduction in TPH concentrations (from 3,200 to 1,300 mg/kg), compared with reductions in a plot that was mixed twice daily (from 840 to 770 mg/kg).

6.1.5 Documents Detailing Land Farming Activities (Jaykim, Jack K. Bryant & Associates, 1987-1989)

Revised Excavation Management Plan for Oil Operators, Inc. North Site (Jaykim, October 1987). Planned land farming procedures to be accomplished in a grid pattern across the Site were described with an expected timeframe for completion of eleven months. Other activities to occur concurrently with the land farming included odor and dust control and groundwater monitoring.

Oil Operators, Inc. Rule 1150 Permit No. 157742 (Jack K. Bryant & Associates [JB], April 1989). This letter requested an extension of the Rule 1150 permit due to the time required to process 100,000 CY of material

containing 20,000 mg/kg or more of oil. The permit would again be extended if the material encountered had an absolute vapor pressure below 36 millimeters of mercury (mmHg).

6.1.6 Letter Detailing the Results of Post-Excavation Soil Sampling (JB, August 1989)

The letter provided analytical results for 14 soil samples collected during excavation activities that occurred in August 1989. The purpose of the soil sampling was reportedly to determine the amount of total recoverable petroleum hydrocarbons (TRPH) in soil at the Site; to analyze one sample for VOCs, semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), metals, and pH; and to determine the potential for bioremediation of the soil. Concentrations of TRPH ranged from 16 to 92,000 parts per million (ppm) with higher concentration samples located near the center of the Site. In the singular sample analyzed for VOCs, SVOCs, pesticides, PCBs, metals, and pH, detections included 7.5 mg/kg of ethylbenzene, 3 mg/kg of benzene, 540 mg/kg of lead, and 44 mg/kg of arsenic.

6.1.7 Preliminary Assessment (Ecology and Environment, Inc., 1990)

According to the Preliminary Assessment, the California Department of Health Services collected soil samples in October 1989. Analytical results exceeding reported regulatory standards included arsenic (44 mg/kg), naphthalene (8,700 μ g/kg), and TPH (95,000 ppm). Detailed analytical results, tables, and figures were absent from the report.

6.1.8 Documentation Regarding Groundwater Monitoring Activities (JB, RWQCB; 1987-1997)

A letter dated May 5, 1987 from the LARWQCB to Oil Operators provided approval for waste discharge requirements and included a requirement for monthly groundwater elevation measurement and quarterly groundwater monitoring. Subsequently, in letters dated November 7, 1989 and October 24, 1990, the previous quarterly groundwater monitoring requirement was altered to be annual groundwater monitoring as results reportedly did not show variations from previous tests. The actual groundwater monitoring report data was not made available to Roux for review.

6.1.9 Groundwater Monitoring Report for Oil Operators North Site (JB, February 1996)

This report presented the results of the groundwater sampling event that occurred in January 1996. Samples were collected from wells MW-2, MW-3 and MW-4. The depth to groundwater in the wells ranged from 39.3 feet bgs (MW-4) to 50.6 feet bgs (MW-2). The following results were provided by LFR in the RI:

- The pH ranged from 6.45 to 6.65 units;
- Concentrations of total dissolved solids (TDS) ranged from 2,690,000 μg/L to 10,800,000 μg/L;
- TRPH was detected in well MW-2 at 1,400 μg/L;
- TPH was not detected in any of the monitoring wells;
- Ethylbenzene and total xylenes were detected in MW-3 at concentrations of 0.9 μg/L and 2.4 μg/L, respectively, toluene was detected in monitoring well MW-4 at a concentration of 0.5 μg/L; and

 Lead, chromium, and nickel were not detected in any of the monitoring wells; zinc was detected at concentrations ranging from 20 μg/L (MW-3) to 120 μg/L (MW-2) and copper was detected at concentrations ranging from 74 μg/L (MW-4) to 80 μg/L (MW-2).

6.1.10 Annual Groundwater Monitoring Report 1996 for Oil Operators North Site (JB, March 1997)

This report presented the results of the groundwater sampling event that occurred in January 1996. Samples were collected from wells MW-2, MW-3 and MW-4. The depth to groundwater in the wells ranged from 42.43 feet bgs (MW-4) to 61.95 feet bgs (MW-2). The Site-wide increase in groundwater depths was attributed to earthmoving activities at the Site. The following results were provided by LFR in the RI:

- The pH ranged from 6.34 to 6.78 units;
- TDS concentrations ranged from 2,030,000 to 11,800,000 µg/L;
- TRPH and TPH were not detected in any of the wells;
- Benzene was detected in two wells, MW-2 and MW-3, at concentrations of 0.6 μg/L and 88 μg/L, respectively; toluene, ethylbenzene, and xylenes were detected in well MW-3 at concentrations ranging from 1.6 μg/L to 15 μg/L; and
- Zinc was detected at concentrations ranging from 100 μg/L (MW-4) to 200 μg/L (MW-2); lead was detected at concentrations ranging from 130 μg/L (MW-4) to 280 μg/L (MW-3); and nickel was detected in MW-3 at a concentration of 65 μg/L.

No other groundwater monitoring reports were provided to LFR or Roux for review; it is unknown whether additional groundwater sampling was conducted at the Site. Land farming operations reportedly ceased due to public complaints received by the SCAQMD; however, the date of these complaints is unknown.

A Voluntary Cleanup Program (VCP) application for the Oil Operators facility was approved by the DTSC on December 20, 2005. A Data Characterization Report was submitted to the DTSC to describe current and historical investigation and remediation activities in 2006. The DTSC challenged the report on the grounds that the Oil Operators facility had not been fully characterized and that further investigation was needed prior to the development of a remedial investigation workplan. In response to DTSC comments, a historical review of the facility was submitted in March 2007 which included the review of historical aerial photographs, topographic maps, and DOGGR records. The DTSC approved a remedial investigation workplan in September 2007.

6.1.11 Regional Degradation of Groundwater Quality (LFR, 2009)

In March 2009, LFR conducted groundwater monitoring. TDS in groundwater were 1,000 mg/L in MW-5, 2,000 mg/L in MW-6, 6,200 mg/L in MW-3, and 7,800 mg/L in MW-7, which indicated that concentrations of TDS in groundwater increased in the hydraulically downgradient direction. No clear trend regarding chloride concentrations was observed. According to LFR, it was unknown whether the elevated TDS concentrations were due to natural processes or historical operations on the Site or in the Site vicinity. LFR stated that "the Gaspur aquifer has historically been intruded by an influx of seawater during low water conditions in an inland direction to areas beyond Carson Street (located north of the Site) toward the crest of the Newport-Inglewood uplift." According to LFR, groundwater enters the Site classified as slightly saline (1,000 to 3,000 mg/L), and

exits the Site classified as moderately saline (3,000 to 10,000 mg/L), with even higher levels of TDS and chloride detected in the Gaspur aquifer south of the Site. Based on the groundwater monitoring data, LFR concluded that Site groundwater conditions did not appear to differ significantly from the regional groundwater quality. On this basis, LFR further concluded that groundwater in the area is degraded from numerous and complex interactions of nature as well as historical activities; the Site was likely part of this but did not appear to be the sole or even primary cause of groundwater degradation. Due to the regional groundwater degradation issue, LFR stated that remedial action within the context of the Gaspur aquifer would be highly costly and likely ineffective.

6.1.12 Remedial Investigation Activities (LFR, 2009)

LFR conducted soil investigation activities at the Site between November 2003 and December 2007. Refer to Appendix J for the LFR report and a complete discussion of investigation results. A summary of the results is provided below.

6.1.12.1 Soil

A summary of the soil sampling results is provided below.

- Petroleum hydrocarbons were the primary contaminant found at the Site, with longer carbon chains
 predominant. Both extractable and volatile hydrocarbon criteria were near or below the screening
 levels established by LFR using the Massachusetts Department of Environmental Protection (MA
 DEP) approach to evaluate potential hazard from exposure for low quality groundwater.
- When compared with the MA DEP screening levels, only the TPH concentration detected in one sample (B7A-40; 7,850 mg/kg) was considered a potential hazard. However, based on the depth below ground surface, this concentration was determined to be unlikely to pose a threat to any receptors.
- Analytical results for VOCs collected in soil samples by LFR in 2003 and in 2007 indicated that VOCs were not present at levels above USEPA industrial preliminary remediation goals (iPRGs) in the sump samples collected.
- SVOC exceedances of iPRGs were one benzo(a)pyrene exceedance at 50 feet bgs (boring B7), and two naphthalene exceedances at 30 and 50 feet bgs (boring B7A). Based on the depth below ground surface, these concentrations were not identified by LFR as a threat to any receptors.
- Metals of concern identified at the Site were arsenic (up to 28.6 mg/kg, exceeding typical California background concentrations) and lead. Lead concentrations were exceeded for disposal purposes; however, a deionized water evaluation suggested no significant water quality threat and levels were below the iPRG
- No PCBs or organochlorine pesticides were detected at concentrations above iPRGs.

6.1.12.2 Soil Vapor

PCE, TCE, and benzene were detected at concentrations above California Human Health Screening Levels (CHHSLs). Detectable PCE concentrations ranged from 5.3 µg/L to 9.1 µg/L, and TCE concentrations ranged

from 1.8 μ g/L to 2.0 μ g/L. Benzene was detected at concentrations up to 0.33 μ g/L. A preliminary Johnson and Ettinger evaluation performed by LFR indicated "insignificant concerns" for these compounds.

Methane was detected at concentrations up to 30%, with 2 samples (out of 26) containing methane between the LEL and the upper explosive limit (UEL), i.e. within the explosive range, during LFR's investigation. In prior investigations, methane concentrations reportedly ranged from 12.1% to 83.6%. LFR stated that methane would require consideration and potential mitigation during design and construction activities.

6.1.12.3 Groundwater

Historically, total petroleum hydrocarbons carbon chain (TPHcc), VOCs, and SVOCs were not detected above their respective maximum contaminant levels (MCLs). Due to the regional degradation of groundwater quality from historic oil production activities (TDS impacts), both on-Site and in the Site vicinity, the Site groundwater conditions were determined by LFR to be generally consistent with limited concerns. In prior investigations lead was observed in groundwater, however recent analysis found no significant impacts. Arsenic, barium, and mercury were detected at concentrations that exceeded their MCLs.

6.2 Final Remediation Investigation for Former Oil Operators North Site (June 15, 2009)

The DTSC issued a letter to LFR dated June 15, 2009 regarding the RI. The letter stated that the DTSC reviewed the final RI report dated May 27, 2007 and that the project was ready for a Feasibility Study (FS) as well as a Human Health and Ecological Risk Assessment (HHRA) workplan.

7. Records Review

7.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional "approximate minimum search distance" in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the "approximate minimum search distance" is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix F. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each.

The following section describes the findings of the database search. Roux has used professional judgement in determining which EDR-listed sites to include in the narrative of this report. Sites adjoining the Site are included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Subject Site or through the migration of groundwater. Sites with listings indicative of a release (e.g. SHWS, LUST, RELEASE) with a reasonable likelihood of affecting subsurface conditions at the Site are likewise discussed below. Nonadjacent sites with database listings not necessarily indicative of a release (e.g. hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST), or sites sufficiently distant from the subject Site, will not be discussed unless considered potentially relevant in context of the Phase I ESA.

7.1.1 Target Property

The target property is listed in a number of the federal, state, and local databases searched under different addresses and/or with different owner/operators. Based on the available information, the target property listings are summarized in the table below. The EnviroStor and VCP listings reference the DTSC active voluntary cleanup case for the Oil Operators historical operations. HAZNET database listings typically track hazardous waste handling and disposal originating at the facility. They are not, in themselves, indicative of a release at the property and are often an indication that good housekeeping measures are being implemented with regard to hazardous substances. Inclusion in other database records are summarized in the comments column of the table below.

Address	Owner/Operator	Database	Comment
3701 Pacific Place	Long Beach Industrial Park (A.K.A Former Oil Operators)	ENVIROSTOR VCP	ID: 70000161. Active voluntary cleanup case with petroleum hydrocarbons, methane, VOCs, SVOCs, and heavy metal (arsenic and lead) contamination in soil, soil gas, and groundwater due to former oil field waste treatment operations.
	C.R.G. Properties	HAZNET	ID: CAC002572604. 2004 disposal – off- specification, aged or surplus inorganics. No indication of a release.
	Long Beach Industrial Park	FINDS	Registry ID: 110033607899. Tracking other database listings.
4021 Pacific Place	Petro Resources Inc	SEMS-ARCHIVE	USEPA ID: CAD981371222. Non-NPL status.
	Long Beach Industrial Park	CPS-SLIC, CERS	Global ID: SL0603792443. Open – Inactive facility as of January 2015. Other solvent or non-petroleum hydrocarbon impact to soil.
	C.R.G. Properties	UST	UST listing. No indication of a release.

7.1.2 Adjoining Properties

Adjoining properties were identified on several databases searched by EDR, as summarized below.

- Oil Operators, Inc. (south) Facility 712 714 West Baker Street
- An Oil Operators, Inc. facility was also present on the south side of the I-405 Freeway, approximately 500 feet to the south of the Site with 712 as the primary street address. The Oikl Operators, Inc. (south) facility is listed on the CPS-SLIC, ENVIROSTOR, CHMIRS, CERS, SWEEPS UST, CA FID UST, EMI, HIST UST, SEMS-ARCHIVE, and UST databases. The CPS-SLIC, ENVIROSTOR, and CERS database listings refer to an open site assessment cleanup case with the Los Angeles Regional Water Quality Control Board as the lead agency. Based on the information documented in the "Supplemental Site Investigation (SSI) Report," prepared by Tetra Tech, Inc., dated July 17, 2015, the facility operated as a water treatment facility, treating produced water and other fluids recovered during oil production, from 1926 through 1998. The former settling basin, Basin 1, was repurposed for bioremediation for oily residual soil from water treatment. Cleanup criteria were established for the primary chemicals of concern (TPH, benzene, toluene, ethylbenzene, and xylene [BTEX], arsenic, chromium, lead and nickel) in Basin 1. The SSI found that the chemicals of potential concerns within the facility were total petroleum hydrocarbons gasoline range (TPHg) and methane in soil vapor; TPH, benzene, and total arsenic and lead in soil; and TPH, benzene, 1,2-

dichloroethane, arsenic, chromium, and lead in groundwater. The CHMIRS database details a release of less than 2 gallons of petroleum from a leaking pipeline in 1996. The "Workplan Supplemental Assessment for Origin of LNAPL Impacts near Bryon MW1," prepared by California Environmental, dated February 2019, notes three subsurface petroleum pipelines that border the facility to the east. Gasoline products detected in Brycon-MW1 within the facility are likely to have originated from the leaks associated with the bordering gasoline pipelines based on consistent chemical composition (see BP Pipeline case in Section 7.1.3). No documents subsequent to this workplan are available for review on Geotracker. It appears that the Oil Operators, Inc. (south) facility was once connected with the subject Oil Operators operations discussed at length throughout this report. As has been noted, on-Site and off-Site oilfield related activities have contributed to overall poor regional groundwater quality. The Oil Operators, Inc. (south) facility is considered to be addressed by the RECs listed in Section 8.2 covering former oilfield operations.

• Caltrans Long Beach, W LA River #2 - W Los Angeles/At End of W. Carson

The Caltrans Long Beach, W LA River #2 facility adjoins the Site to the north-northwest, across the Los Angeles River. The facility is listed on the SWF/LF and CERS databases. The database listings refer to the facility as a closed solid waste disposal site. Considering the closed operational status and the Los Angeles River intervening between the facility and the Site, it is considered unlikely that the former disposal operations at the Caltrans facility would have adversely impacted subsurface conditions at the Site.

7.1.3 Site Vicinity

EDR identified the following properties located within one mile of the Site from the databases searched. Roux has reviewed each of the database listings with a focus on any property that experienced a release of hazardous or petroleum product with the potential to affect subsurface conditions at the Site. Properties where listings did not contain any information suggestive of a release with the potential to have impacted conditions at the Site have not been included in this section.

BP Pipeline/Arco – Golden Avenue

The BP Pipeline/Arco facility is located approximately 1,396 feet south of the Site per the EDR Radius Map report. The facility is listed on the CPS-SLIC and CERS databases. The database listings identify an open – assessment and interim remedial action case with LA RWQCB as the lead agency. Soil gas investigations in July 2011, conducted by Oil Operators, Inc., determined that benzene in soil gas was due to a BP pipeline release. An SVE system was installed and operated from September 2012 through September 2014. On June 2013, Tesoro bought the BP pipelines and assumed responsibility for assessment and remediation activities. Tesoro constructed a new SVE treatment compound and resumed operation in April 2015. A "Revised Expanded Interim Remedial Action Plan," prepared by AECOM, dated October 31, 2018, was submitted and approved by the Water Board to continue addressing areas of concern. No documents subsequent to this workplan are available for review on GeoTracker. Considering the documented lateral extents of the release, the hydraulically downgradient location of the suspected release with respect to the Site, and the intervening distance, it is considered unlikely that the petroleum pipeline release at the BP Pipeline/Arco facility would have adversely impacted subsurface conditions at the Site.

• Store for Less - 1012 West Carson Street

The Store for Less facility is located approximately 1,698 feet northwest of the Site. The facility is listed on the SEMS-ARCHIVE and PRP databases. The PRP database listing identifies the facility as a potentially responsible party. Based on the information provided in the database listings, the facility is not considered a National Priorities List (NPL) site. No additional information is provided regarding any type of release. Considering the lack of indication of a known or potential release and the intervening distance of the facility with respect to the Site, it is considered unlikely that the Store for Less facility would have adversely impacted subsurface conditions at the Site.

Bixby Land Co. – 1101 Wardlow Street

The Bixby Land Co. facility is located approximately 1,885 feet south-southwest of the Site. The facility is listed on the CPS-SLIC database. This database listing refers to a TPH release to an unspecified media. The facility has received a No Further Action status. Considering the No Further Action status, the hydraulically downgradient location of the facility with respect to the Site, and the intervening distance, it is considered unlikely that the TPH release at the Bixby Land Co. facility would have adversely impacted subsurface conditions at the Site.

Raytheon Systems Co – 1500 Hughes Way

The Raytheon Systems Co facility is located approximately 2,280 feet west of the Site. The facility is listed on the SEMS, CORRACTS, RCRA-TSDF, RCRA-SQG, EMI, HWP, ENVIROSTOR, FINDS, EMI, CERS, SCH, and HAZNET databases. The RCRA-TSDF database listing identifies four violations and the RCRA-SQG database listing identifies three violations in October 11, 1988. All violations achieved compliance by February 21, 1989. The ENVIROSTOR database listing refers to a corrective action cleanup case with a no action required status with DTSC as the lead agency. The facility (also known as Hughes Aircraft Support) operated as a manufacturer of electronic components which generated and stored hazardous waste within the facility. The case achieved a no action required status in May 31, 2012. Potential contaminants of concern and potential media affected were not specified. Considering the no action required status, the hydraulically downgradient location of the facility with respect to the Site, and the intervening distance, it is considered unlikely that the operations at the Raytheon Systems Co facility would have adversely impacted subsurface conditions at the Site.

Long Beach USD-Board Building – 1515 Hughes Way

The Long Beach USD-Board Building facility is located approximately 3,083 feet west of the Site. The facility is listed on the ENVIROSTOR, SCH, HAZNET, and CERS databases. The ENVIROSTOR and SCH database listings refer to an active school site with DTSC as the lead agency. The facility has a voluntary cleanup agreement with the DTSC. Potential contaminants of concern and potential media affected were not specified. The CERS database listing identifies two violations involving the administration building. Both violations achieved compliance on January 12, 2016. Considering the lack of indication of a known or potential release and the hydraulically downgradient location of the facility with respect to the Site, and the intervening distance, it is considered unlikely that the Long Beach USD-Board Building facility would have adversely impacted subsurface conditions at the Site.

• South Region High School #4 5640019 - West Carson Street/Santa Fe Avenue

The South Region High School #4 5640019 facility is located approximately 3,838 feet northwest of the Site. The facility is listed on the ENVIROSTOR and SCH databases. The ENVIROSTOR database listing refers to a school cleanup case with no further action status with DTSC as the lead agency. Based on the information provided in the DTSC "Approval of Preliminary Environmental Assessment Report," dated March 6, 2006, step-out sampling conducted in March and June 2006 indicated no significant risks of metals and SVOCs to human health or the environment. On this basis, DTSC granted a no further action status for the Site. Considering the no further action status and the hydraulically cross-gradient location of the facility with respect to the Site, and the intervening distance, it is considered unlikely that conditions at the high school would have adversely impacted subsurface conditions at the Site.

8. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13, the AAI Standards, CLRRA and CERCLA. Roux separated the findings of this assessment into the following four categories: recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions and other environmental features.

8.1 Data Gaps

During conduct of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- As of this report date, the following agency records requests are pending: EPA, CalEPA: CalRecycle, and City of Long Beach: Environmental Health Bureau. Considering the responsiveness of other agencies and the breadth of information provided, it is not anticipated that these pending responses constitute a significant data gap.
- Due to the large amount of vegetation present on the Site and the relatively large area of the Site, direct observation of all ground areas for potential features of concern was limited during Site reconnaissance.

8.2 Recognized Environmental Conditions

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the recognized environmental conditions are shown in Figure 2.

- REC 1 Oil Sumps. According to historical sources, the Site was formerly used as an oil brine water treatment facility beginning in 1926 for nearby and on-Site oil development activities. Oil brine was pumped to evaporation and treatment ponds (sumps) on the Site; the majority of the Site was used as a treatment sump. Water was allowed to evaporate from the brine or seep into the subsurface below the sumps leaving behind a sludge. Following evaporation, the remaining sludge was left in the sumps or dumped elsewhere. Evaporation operations reportedly ceased at the Site in the mid-1950s. No information was found indicating how the sumps were abandoned and whether or not fill was imported. Although numerous investigations and limited land farming activities have been conducted at the Site, no large-scale remediation has been completed as of this report date. Petroleum hydrocarbon, metal (arsenic and lead) impacts have been identified across the Site in soil with limited SVOC impacts detected as well. In soil vapor, PCE, TCE, benzene, and methane were detected across the Site.
- REC 2 Former Oil Wells. According to DOGGR records, six oil wells were historically located on-Site and five of the six wells produced oil. The wells were reportedly drilled between 1937 and 1981.
 All six wells were abandoned between 1981 and 2014 according to DOGGR standards at their respective times of abandonment.
- REC 3 Nearby Off-Site Historical Oil Development. According to historical sources, the Site
 vicinity, including adjoining properties, has been historically used for oil development activities
 including oil production wells, evaporation and treatment ponds (sumps), and storage (ASTs). Prior
 investigations at the Site and nearby properties indicate that regional groundwater in the area has

been degraded at least in part due to the historical oil development activities in the vicinity of the Site. TDS impacts have been identified in the Gaspur aquifer, approximately 50 to 70 feet bgs, in the Site vicinity

8.3 Controlled Recognized Environmental Conditions

Roux did not identify cRECs in connection with the current and historical operations at the Site or adjacent properties.

8.4 Historical Recognized Environmental Conditions

Roux did not identify hRECs in connection with the current and historical operations at the Site or adjacent properties.

8.5 Other Environmental Features

OEFs are environmental conditions that do not meet the definition of a REC or cREC/hREC, but which may warrant mention in a comprehensive Phase I ESA. Based on the subject Phase I ESA, Roux identified the following OEFs at or adjacent to the Site. To minimize possible confusion, the REC and OEF identification numbers are sequential.

- OEF 4 Commercial Pesticide and Herbicide Use. The former driving range / golf learning center
 operations may have involved the use of pesticides and herbicides to control and optimize vegetation
 typical of golf course facilities. No documentation was found confirming the use of pesticides or
 herbicides on-Site.
- OEF 5 Pressurized Oil Pipelines. Based on the NPMS Public View database, is suspected that
 two active crude pipelines are located within 50 feet of the Site and may cross the southeastern
 corner of the Site. Two additional petroleum/crude pipelines were identified within 1,000 feet of the
 Site. No indication of a release from any of the pipelines was identified by Roux in the preparation of
 this Phase I ESA.
- OEF 6 Adjoining Off-Site Railroad Tracks. According to historical topographic maps, the northeastern adjoining railroad was constructed by 1924. Although the rail is currently used as a Los Angeles Metro passenger rail line, historical topographic maps identified the railroad as a Pacific Electric line in 1924 and later as a Southern Pacific line through 1987. The materials transported along the railroad historically is unknown. Both the presence of these railroad lines and the materials transported along the railroad lines may have potentially impacted the subsurface at the Site. Railroad ties have historically and are presently treated with copper arsenate, creosote (which contains PAHs), PCBs, pentachlorophenol (which also contains dioxins), and copper naphthalene. In addition to these chemicals, railway transportation is associated with heavy metals, herbicides, pesticides, VOCs, and petroleum product impacts. No evidence of a likely release associated with the rail lines was identified during the course of preparing this Phase I ESA.
- OEF 7 Adjoining Off-Site Interstate Freeway. The Site is bordered to the south by the I-405 San
 Diego Freeway, the off-ramp of which adjoins the Site. It is not uncommon for near-surface soils at
 properties in close proximity to freeways that operated in the era of leaded gasoline to be impacted

by aerially deposited lead. No documentation of lead contamination in the area adjoining I-405 was identified during the course of preparing this Phase I ESA.

- OEF 8 On-Site and Nearby Transient Activity. Transient encampments were observed along the
 adjoining Los Angeles River and according to the Site personnel, transient activity was recently
 observed on the Site. Some of the domestic refuse observed on-Site may be associated with the
 reported transient activity. Although not observed during Site reconnaissance, used and discarded
 hypodermic needles are often present in areas with high transient activity.
- OEF 9 Unknown Fill Material. According to an interview with Site owner, Mark Pender, soil was imported to fill the on-Site oil sumps in or around the 1950s and the fill may have originated from a nearby CalTrans freeway project. Subsequently, according to Mr. Pender, approximately 80,000 CY of sandy soil was imported from dredging operations at the Los Angeles River. Finally, another site owner, Steve Sukut, indicated that additional fill material was imported to the Site to facilitate grading for the golf learning facility. It is possible that the fill materials may be impacted, particularly with heavy metals or TPH.

10. Signature Of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the commercial property located at 3701 Pacific Place, Long Beach, California.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312" and,

"We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,

ROUX ASSOCIATES, INC.

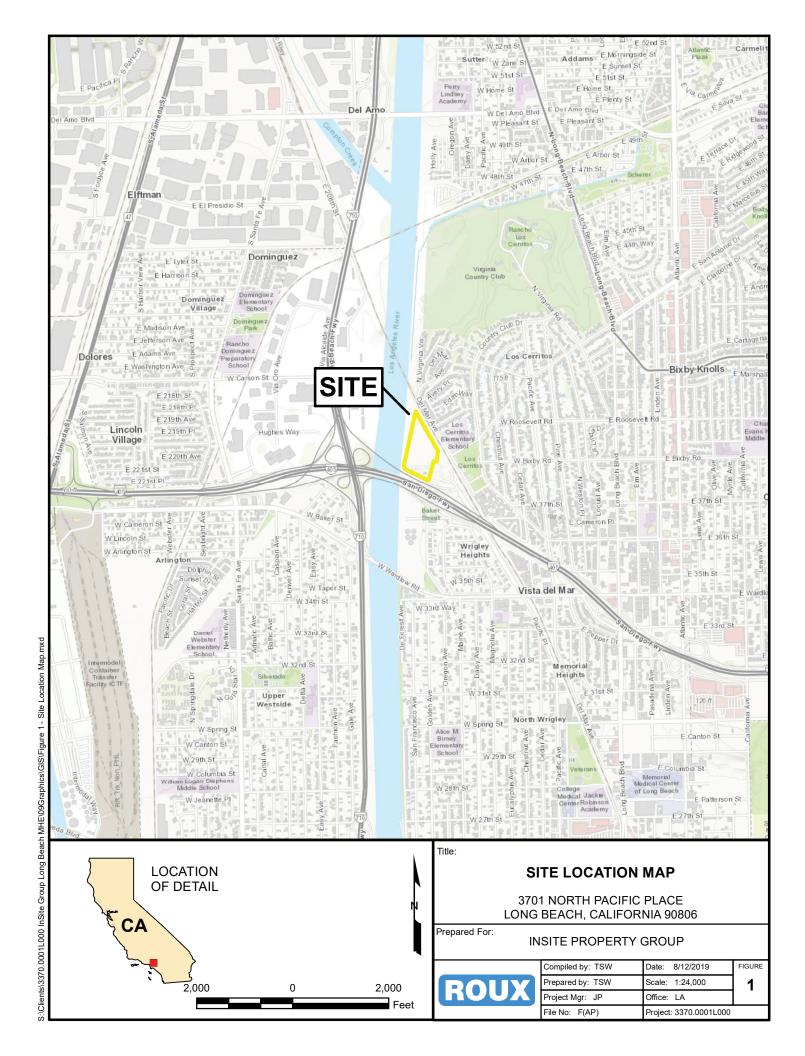

April McGuire
Project Engineer

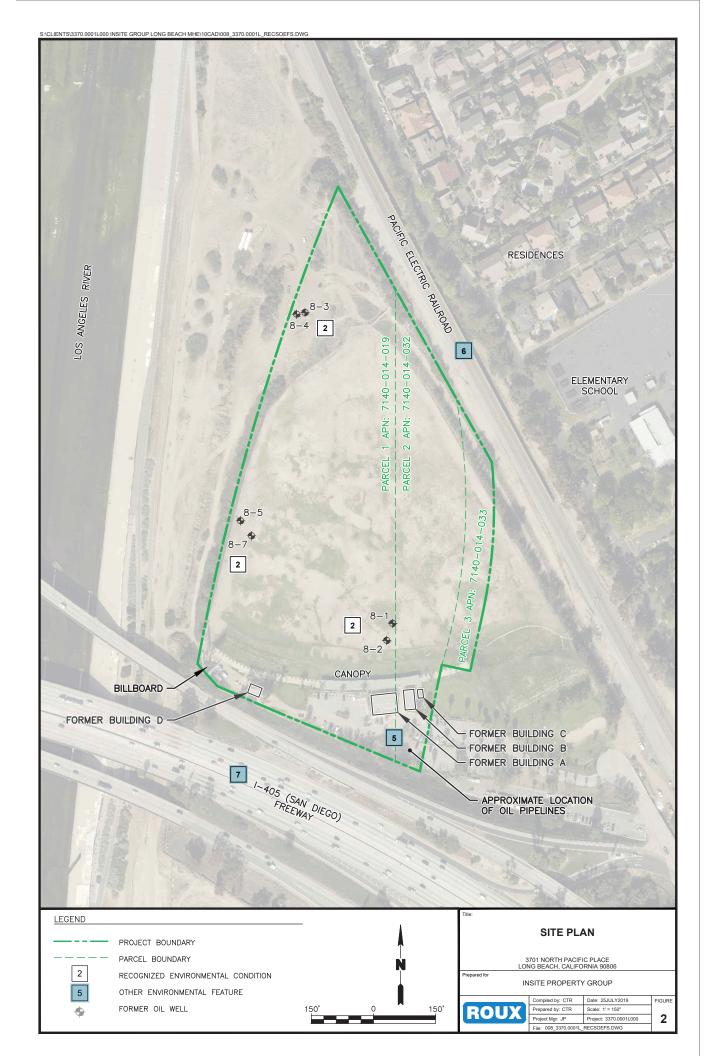

Chris Rose, P.E. Senior Engineer

Mauricio Escobar, P.G. Principal Geologist

APPENDIX A

Glossary of Terms

GLOSSARY OF KEY TERMS

This appendix provides definitions, description of terms, and a list of acronyms for many of the words used in ASTM E 1527-13. These terms are an integral part of ASTM E 1527-13 and are critical to understanding ASTM E 1527-13 and its use.

DEFINITIONS:

Abandoned Property – property that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current *owner* to surrender rights to the *property*.

Activity and Use Limitations – Legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) – The list of sites compiled by EPA that EPA has investigated, or is currently investigating, for potential hazardous substance contamination for possible inclusion on the National Priorities List.

Construction debris – Concrete, brick, asphalt, and other such building materials discarded in the construction of a building or other improvement to property.

Contaminated public wells – Public wells used for drinking water that have been designated by a government entity as contaminated by toxic substances (for example, chlorinated solvents), or as having water unsafe to drink without treatment.

Contiguous Property Owner Liability Protection – a person may qualify for the contiguous property owner liability protection if, among other requirements, such person owns real property that is contiguous to, and that is or may be contaminated by hazardous substances from other real property that is not owned by that person. Furthermore, such person conducted all appropriate inquiries at the time of acquisition of the property and did not know or have reason to know that the property was or could be contaminated by a release or threatened release from the contiguous property. The all appropriate inquiries must not result in knowledge of contamination. If it does, then such person did "know" or "had reason to know" of contamination and would not be eligible for the contiguous property owner liability protection.

Controlled Recognized Environmental Condition – a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

CORRACTS list – a list maintained by EPA of *hazardous waste* treatment, storage, or disposal facilities and other RCRA-regulated facilities (due to past interim status or storage of *hazardous waste* beyond 90 days)

that have been notified by the U.S. Environmental Protection Agency to undertake corrective action under RCRA. The *CORRACTS list* is a subset of the EPA database that manages RCRA data.

Demolition debris – Concrete, brick, asphalt, and other such building materials discarded in the demolition of a building or other improvement to property.

Drum – A container (typically, but not necessarily, holding 55 gal (208 L) of liquid) that may be used to store hazardous substances or petroleum products.

Dry wells – Underground areas where soil have been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and non-intentional), and wastewater disposal (often illegal).

Dwelling – Structure of portion thereof used for residential habitation.

Engineering controls – Physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to contaminants in the soil or groundwater on the property.

Environmental lien – A charge, security, or encumbrance upon title to a *property* to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of *hazardous substances* or *petroleum products* upon a *property*, including (but not limited to) liens imposed pursuant to CERCLA 42 USC § 9607(1) and similar state or local laws.

ERNS list – EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR parts 302 and 355.

Federal Register (FR) – Publication of the Untied States government published daily (except for federal holidays and weekends) containing all proposed and final regulations and some other activities of the federal government. When regulations become final, they are included in the Code of Federal Regulations (CFR), as well as published in the Federal Register.

Fire insurance maps – Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property. These maps are often available in local libraries, historical societies, private resellers, or from the map companies who produced them. See Question 23 of the transaction screen process in Practice E 1528 and 7.3.4.2 of this practice.

Hazardous substance — A substance defined as hazardous pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts: "(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Soil Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC § 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof, which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A)

through (F) of this paragraph; the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Hazardous waste – Any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Cat (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 et seq.) has been suspended by Act of Congress). The Solid Waste Disposal Act of 1980 amended RCRA. RCRA defines hazardous waste, in 42 USC § 6903, as: "a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may – (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."

Institutional control – A legal or administrative restriction (e.g., deed restriction, restrictive zoning) on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants in the soil or groundwater on the property.

Landfill – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *solid waste disposal site* and is also known as a garbage dump, trash dump, or similar term.

Local street directories – Directories published by private (or sometimes government) sources that show ownership, occupancy, and/or use of sites by reference to street addresses. Often, local street directories are available at libraries of local governments, colleges or universities, or historical societies.

Material safety data sheet (MSDS) – Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA's Hazard Communication Standard, 29, CFR 1910.1200.

National Contingency Plan (NCP) – The National Oil and Hazardous Substances Pollution Contingency Plan, found at 40 CFR § 300, that is the EPA's blueprint on how hazardous substances are to be cleaned up pursuant to CERCLA.

National Priorities List (NPL) – List compiled by the EPA, pursuant to CERCLA 42 USC § 9605(a)(8)(B), of properties with the highest priority for cleanup pursuant to EPA's Hazard Ranking System. See 40 CFR Part 300.

Occupants – Those tenants, subtenants, or other persons or entities using the *property* or a portion of the *property*.

Owner – Generally the fee owner of record for the *property*.

Petroleum exclusion – The exclusion from CERCLA liability provided in 42 USC § 9601(14), as interpreted by the courts and EPA: "The term (hazardous substance) does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Petroleum products – Those substances included within the meaning of the *petroleum exclusion* to CERCLA, 42 USC § 9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 USC § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to *Standard Definitions of Petroleum Statistics*¹.)

Phase I Environmental Site Assessment - The process described in this practice.

Pits, ponds, or lagoons – Man-made or natural depressions in the ground surface that are likely to hold liquids or sludge containing *hazardous substances* or *petroleum products*. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Property – The real property that is the subject of the *environmental site assessment* described in this practice. Real property includes buildings and other fixtures and improvement located on the property and affixed to the land.

Property tax files – The files kept for property tax purposes by the local jurisdiction where the property is located and includes records of past ownership, appraisals, maps, sketches, photos, or other information that is reasonable ascertainable and pertaining to the property.

RCRA generators – Those persons or entities that generate hazardous waste, as defined and regulated by RCRA.

RCRA generators list – List kept by the EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA.

RCRA TSD facilities – Those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

RCRA TSD facilities list – List kept by the EPA of those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

Recorded land title records – Records of fee ownership, leases, land contracts, easements, liens, and other encumbrances on or of the property recorded in the place where land title records are, by law or custom, recorded for the local jurisdiction in which the *property* is located. (Often such records are kept by a municipal or county recorder or clerk.) Such records may be obtained from title companies or directly from the local government agency. Information about the title to the property that is recorded in a U.S. district court or any place other than where land title records are, by law or custom, recorded for the local jurisdiction in which the property is located, are not considered part of recorded land title records.

Records of emergency release notifications (SARA § 304) – Section 304 of EPCRA or Title III of SARA requires operators of facilities to notify their local emergency planning committee (as defined in EPCRA) and the state emergency response commission (as defined in EPCRA) of any release beyond the facility's boundary of any reportable quantity of any extremely hazardous substance. Often the local fire department is the local emergency planning committee. Records of such notifications are "Records of Emergency Release Notifications" (SARA§ 304).

Report – The written record of a transaction screen process as required by Practice E 1528 or the written report prepared by the environmental professional and constituting part of a "Phase I Environmental Site Assessment," as required by this practice.

Solid waste disposal site – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *landfill* and is also known as a garbage dump, trash dump, or similar term.

Solvent – A chemical compound that is capable of dissolving another substance and may itself be a *hazardous substance*, used in a number of manufacturing/industrial processes including, but not limited to, the manufacture of paints and coatings for industrial and household purposes, equipment clean-up, and surface degreasing in metal fabricating industries.

State registered USTs – State lists of underground storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.

Sump - A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

TSD facility – Treatment, storage, or disposal facility (see RCRA TSD facilities).

Underground storage tank (UST) - Any tank, including underground piping connected to the tank, that is or has been used to contain *hazardous substances* or *petroleum products* and the volume of which is 10% or more beneath the surface of the ground.

USGS 7.5 Minute Topographic Map – The map (if any) available from or produced by the United States Geological Survey, entitled "USGS 7.5 Minute Topographic Map," and showing the property.

Wastewater – Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as storm water flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

Zoning/land use records – Those records of the local government in which the *property* is located, indicating the uses permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. They are often located in the planning department of a municipality or county.

DEFINITIONS SPECIFIC TO ASTM E 1527-13:

Actual knowledge – The knowledge actually possessed by an individual who is a real person, rather than an entity. Actual knowledge is to be distinguished from constructive knowledge that is knowledge imputed to an individual or entity.

Adjoining properties – Any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

Aerial photographs – Photographs taken from an airplane or helicopter (from a low enough altitude to allow identification of development and activities) of areas encompassing the property. Aerial photographs are often available from government agencies or private collections unique to a local area.

Appropriate inquiry – That inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA, 42 USC § 9601(35)(B), that will give a party to a *commercial real estate* transaction the *innocent landowner defense* to the CERCLA liability (42 USC § 9601(A) and (B) and § 9607(b)(3)), assuming compliance with other elements of the defense. See Appendix X1.

Approximate minimum search distance – The area for which records must be obtained and reviewed pursuant to Section 7 subject to the limitations provided in that section. This may include areas outside the *property* and shall be measured from the nearest *property* boundary. This term is used in lieu of radius to include irregularly-shaped properties.

Building department records – Those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property. Often, building department records are located in the building department of a municipality or county.

Business environmental risk – A risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of *business environmental risk* issues may necessitate that an *environmental professional* address one or more non-scope considerations, some of which are identified in Section 12.

Commercial real estate – Any real property except a dwelling or property with no more than four dwelling units exclusively for residential use (except that a dwelling or property with no more than four dwelling units exclusively for residential use is included in this term when it has a commercial function, as in the building of such dwellings for profit). This term includes, but is not limited to, undeveloped real property and real property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units; and any property with no more than four dwelling units for residential use when it has a commercial function, as in the building of such dwellings for profit.

Commercial real estate transaction – A transfer of title to or possession of real property or receipt of a security interest in real property, except that it does not include transfer of title to or possession of real property or the receipt of a security interest in real property with respect to an individual dwelling or building containing fewer than five dwelling units, nor does it include the purchase of a lot or lots to construct a dwelling for occupancy by a purchaser, but a commercial real estate transaction does include real property purchased or leased by persons or entities in the business of building or developing dwelling units.

Controlled Recognized Environmental Condition – a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Due diligence – The process of inquiring into the environmental characteristics of a parcel of *commercial real estate* or other conditions, usually in connection with a commercial real estate transaction. The degree and kind of due diligence vary for different properties and differing purposes.

Environmental audit – The investigative process to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations. This term should not be used to describe Practice E 1528 or this practice, although an environmental audit may include an *environmental site* assessment or, if prior audits are available, may be part of an environmental site assessment.

Environmental professional – A person processing sufficient training and experience necessary to conduct a *site reconnaissance, interviews,* and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding *recognized environmental conditions* in connection with the *property* in question. An individual's status as an environmental professional may be limited to the type of assessment to be performed or to specific segments of the assessment for which the professional is responsible. The person may be an independent contractor or an employee of the *user*.

Environmental site assessment (ESA) – The process by which a person or entity seeks to determine if a particular parcel of real *property* (including improvements) is subject to *recognized environmental conditions*. At the option of the *user*, an environmental site assessment may include more inquiry than that constituting *appropriate inquiry* or, if the user is not concerned about qualifying for the *innocent landowner defense*, less inquiry than that constituting *appropriate inquiry*. An environmental site assessment is both different from and less rigorous than an *environmental audit*.

Fill dirt – Dirt, soil, sand, or other earth, obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.

Hazardous waste/contaminated sites – Sites on which a release has occurred, or is suspected to have occurred, of any *hazardous substance, hazardous waste*, or *petroleum products*, and that release or suspected release has been reported to a government entity.

Historical Recognized Environmental Condition — a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

Innocent landowner defense – That defense to CERCLA liability provided in 42 USC § 9601(35) and § 9607(b)(3). One of the requirements to qualify for this defense is that the party make "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." There are additional requirements to qualify for this defense.

Interviews – Those portions of this practice that are contained in Section 9 and 10 thereof and address questions to be asked of *owners* and *occupants* of the *property* and questions to be asked of local government officials.

Key site manager – The person identified by the *owner* of a *property* as having good knowledge of the uses and physical characteristics of the property.

Local government agencies – Those agencies of municipal or county government having jurisdiction over the *property*. Municipal and county government agencies include, but are not limited to, cities, parishes, townships, and similar entities.

LUST sites – State lists of leaking underground storage tank sites. Section 9003 (h) of Subtitle I of RCRA gives EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so.

Major occupants – Those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the *property* or any anchor tenant when the *property* is a shopping center.

Material threat – A physically observable or obvious threat which is reasonable likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to human health and the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Obvious – That which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while *visually* or *physically observing the property*.

Other historical sources – Any source or sources other than those designated in 7.3.4.1-7.3.4.8 that are credible to a reasonable person and that identify past uses of the property. The term includes, but is not limited to, miscellaneous maps, newspaper archives, and records in the files and/or personal knowledge of the *property owner* and/or *occupants*.

Physical setting sources – sources that provide information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of a *property*.

Practically reviewable – Information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the property or a geographic area in which the property is located are not generally practically reviewable. Most databases of public records are practically reviewable if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be

identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be *practically reviewable*. In other words, then so much data is generated that it cannot be feasibly reviewed for its impact on the *property*, it is not *practically reviewable*.

Preparer – The person preparing the *transaction screen questionnaire* pursuant to Practice E 1528, who may be either the user or the person to whom the user has delegated the preparation of the *transaction screen questionnaire*.

Publicly available – Information that is publicly available means that the source of the information allows access to the information by anyone upon request.

Reasonably ascertainable – For purposes of both this practice and Practice E 1528, information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized Environmental Conditions – the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. De *minimis conditions* are not *recognized environmental conditions*.

Records review – That part that is contained in Section 7 of this practice addresses which records shall or may be reviewed.

Site reconnaissance – That part that is contained in Section 8 of this practice and addresses what should be done in connection with the *site visit*. The site reconnaissance includes, but is not limited to, the *site visit* done in connection with such a Phase I Environmental Site Assessment.

Site visit – The visit to the property during which observations are made constituting the *site reconnaissance* section of this practice and the *site visit* requirement of Practice E 1528.

Standard environmental record sources – Those records specified in 7.2.1.1.

Standard historical sources – Those sources of information about the history of uses of the property specified in 7.3.4.

Standard physical setting source – A current USGS 7.5-minute topographic map (if any) showing the area on which the property is located.

Standard practice(s) – The activities set forth in either and both this practice and Practice E 1528.

Standard sources – Sources of environmental, physical setting, or historical records specified in Section 7 of this practice.

Transaction screen process – The process described in Practice E 1528.

Transaction screen questionnaire - The questionnaire provided in Section 6 of Practice E 1528.

User – The party seeking to use Practice E 1528 to perform an *environmental site assessment* of the *property*. A user may include, without limitation, a purchaser of *property*, a potential tenant of *property*, an *owner* of *property*, a lender, or a property manager.

Visually and/or physically observed – During a *site visit* pursuant to Practice E 1528, or pursuant to this practice, this term means observations made by vision while walking through a *property* and the structures located on it and observations made by the sense of smell, particularly observations of noxious or foul odors. The term "walking through" is not meant to imply that disabled persons who cannot physically walk may not conduct a *site visit*; they may do so by the means at their disposal for moving through the *property* and the structures located on it.

ACRONYMS:

CERCLA – Comprehensive Environmental Response, Compensation and Liability Act of 1980 (as amended, 42 USC § 9601 *et seq.*)

CERCLIS – Comprehensive Environmental Response, Compensation and Liability Information System (maintained by EPA)

CFR – Code of Federal Regulations

CORRACTS – Facilities subject to corrective action under RCRA

EPA – United States Environmental Protection Agency

EPCRA – Emergency Planning and Community Right to Know Act (also known as SARA Title III), 42 USC § 11001 *et seq.*)

ERNS – Emergency response notification system

ESA - Environmental site assessment (different than an environmental audit)

FOIA – U.S. Freedom of Information Act (5 USC 552 et seg.)

FR - Federal Register

LUST – Leaking underground storage tank

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2019 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Site ID: 0903302 FPA Id: CAT080012867				

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there

are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup;

and School sites.

Potential Contaminants of Concern: Benzene, Toluene, Xylene, Arsenic, Chromium, Lead, Nickel, Crude Oil,

Gasoline

Site History: The Oil Operators Incorporated (OOI) property covers approximately

20-acres and is located south of the 405 freeway, east of the 710 freeway and the Los Angeles River, in the City of Long Beach. It is bounded on the south by Wardlow Road and on the east by Golden Avenue. A residential development is present to the east of the property, across Golden Avenue. The site address is 712 West Baker Street. Baker Street divides the property into two parts, a northern part and a larger southern part. The area immediately to the west of

the property is the Los Angeles River. OOI is a non-profit

cooperative organization of numerous oil companies, operators and individuals that operate oil wells in the Long Beach/Signal Hill area. OOI owns the subject property and has operated onsite water treatment facilities since 1926 to treat produced water (production brines) and other fluids recovered during oil production. The aforementioned process removed oil and sediment from the water, allowing the treated water to be disposed of offsite. As a by-product of this process, low-grade oil was recovered for recycling. In the mid 1950s, a water treatment plant was constructed onsite consisting

Distance Elevation Site

ite Database(s) EPA ID Number

OIL OPERATORS, INC. (Continued)

S105645229

EDR ID Number

of five circular concrete skimming basins and associated pumps, tanks, pipelines and other facilities. The treatment plant was located north of the two large rectangular basins, referred to as Basins 1 and 2. Basin 1 is a large square settling basin that contained residual oily solids that settled out of the oil production brine water processed throughout the site over the last several decades. Basin 2 received relatively clean water, after it had gone through various stages of skimming. In Basin 2, the treated water was held until it was released to the sanitation district for disposal. Additional smaller basins were historically present south of Basins 1 and 2. These smaller basins were closed in 1986 and 1987. Prior to ceasing operations in 1998, the OOI facility consisted of five circular concrete skimming basins, Basins 1 and 2, various aboveground storage tanks and surface buildings. Much of the vacant area of the property was formerly leased to a plant nursery. The property had been undergoing decommissioning in phases since 1998. The nursery vacated the site in 1999. In 2000, the City of Long Beach ordered all buildings, sheds and similar structures to be demolished with the debris hauled offsite. In 2001, the remaining aboveground storage tanks were cleaned and demolished. Currently, the site is vacant. Basin 1 has been the subject of remediation since it contained oily solids/sludge that settled out of the oil production wastewater processed at the site. Cleanup criteria were established for the primary chemicals of concern (COC) in Basin 1, which are total petroleum hydrocarbons (TPH), gasoline components; benzene, toluene, ethylbenzene and xylenes (BTEX) and heavy metals (arsenic, chromium, lead and nickel).

West Baker Street, Long Beach, California to the west of this site

(OOI Geotracker page:

http://geotracker.waterboards.ca.gov/profile report.asp?global id= SL2044M1596). In July 2011, OOI conducted a soil gas survey under the Regional Boards direction. The survey included the OOI property, and extended into the Wrigley Heights residences as far east as Maine Avenue. The survey found that benzene vapors were present below the ground in some Wrigley Heights areas near Golden Avenue. The levels of benzene found presented no immediate risks to human health. To address any potential for long-term human health impacts, the Regional Board directed OOI to install and operate a soil vapor extraction (SVE) system. A SVE system reduces the risk of vapor intrusion by depressurizing the subsurface below the impacted areas. Additionally, SVE removes the contaminants from the soil by applying a vacuum and creating a controlled air flow. The gas leaving the soil is treated aboveground to remove the contaminants, and then released into the air in accordance with applicable air quality regulations. OOI installed an SVE system and operated it from September 2012 to September 2014. After further review of data from the investigations performed by OOI, the Regional Board determined that the benzene present underneath the ground in the residential neighborhood originates from a BP pipeline release along Golden Avenue. West Coast Products LLC, ARCO, and ARCO Terminal Services Corporation (collectively BP) previously owned and operated petroleum pipelines that extend beneath Golden Avenue in Long Beach, California, to the west of the Wrigley Heights residences. On June 1, 2013, Tesoro bought the pipelines, and assumed responsibility for assessment and remediation activities related to them. The Regional Board issued BP a tentative clean-up and abatement order (CAO) on April 26, 2013, and a CAO on September 19, 2014. The order requires BP (now Tesoro) to assume the responsibility of soil vapor intrusion mitigation for the Wrigley Heights residences. At this time, Tesoro has taken over soil

S118504655

vapor mitigation activities from OOI. A new SVE aboveground treatment compound owned and operated by Tesoro to treat the extracted vapors has been constructed on OOI property; no new extraction wells are planned for construction at this time. Tesoro resumed soil vapor extraction activities with their new system in the beginning of April 2015. An additional soil, soil vapor, and groundwater investigation has been completed by Tesoro, and the investigation report is under review. A human health risk assessment has been prepared and reviewed by the Office of Environmental Health Hazard Assessment. The Regional Board is currently directing additional actions to address the areas of concern.

ORPHAN SUMMARY

Count: 3 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 45 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5652670 LONG BEACH, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

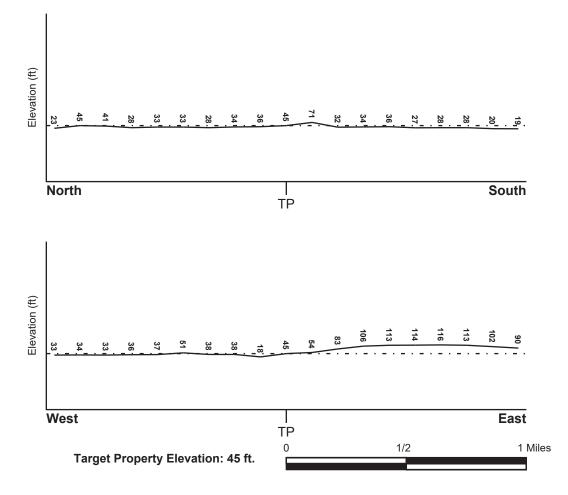

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 GROUNDWATER FLOW

 Not Reported
 GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic Category: Stratifed Sequence

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
Boundary			Classif	ication			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

clay silt loam loamy sand sandy loam fine sand clay loam

gravelly - sandy loam

coarse sand gravelly - sand

sand

Surficial Soil Types: loam

clay silt loam loamy sand sandy loam fine sand clay loam

gravelly - sandy loam coarse sand

gravelly - sand

weathered bedrock very fine sandy loam

LOCATION

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Phase I Environmental Site Assessment 3701 Pacific Place, Long Beach, California

APPENDIX H

User Questionnaire

3370.0001L.105/CVRS ROUX

ASTM E 1527-13 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.

Site Name/Address: 3701 Pacific PI, Long Beach, CA	
Person Interviewed/Title: Chip Brown / Partner	Date: 8/14/2019
If known, when was the property initially developed? Not known	
If different, when were the current building(s) on the property construct	ted?
1. Environmental cleanup liens that are filed or recorded against the sit	te (40 CFR 312.25).
Did a search of <i>recorded land title records</i> (or judicial records where appliens filed o <u>r recor</u> ded against the <i>property</i> under federal, tribal, state or	
Yes No V If you answer yes, please include an explanation in	in the space provided below:
2. Activity and land use limitations that are in place on the <i>property</i> of 312.26).	r that have been filed or recorded in a registry (40 CFF
Did a search of recorded <i>land title records</i> (or judicial records where ap <i>engineering controls</i> , land use restrictions or <i>institutional controls</i> that against the <i>property</i> under federal, tribal, state, or local law?	
Engineering Controls are defined as physical modifications to a site or to hazardous substances or petroleum products in the soil or ground was a legal or administrative restriction on the use of, or access to, a site exposure to hazardous substances or petroleum products in the soil or gethat could interfere with the effectiveness of a response action, in orderisk to public health or the environment.	ater on the property). <i>Institutional Controls</i> are defined e or facility to 1) reduce or eliminate the potential for ground water on the property, or 2) to prevent activities
Yes No V If you answer yes, please include an explanation in	n the space provided below:

Note 1 - In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than land title records. In such cases judicial records must be searched for environmental liens and AULs.

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the <i>property</i> or nearby properties? For example, are you involved in the same line of business as the current or former <i>occupants</i> of the <i>property</i> or an adjoining <i>property</i> so that you would have specialized knowledge of the chemicals and processes used by this type of business?
Yes No V If you answer yes, please include an explanation in the space provided below:
4. Relationship of the purchase price to the fair market value of the <i>property</i> if it were not contaminated (40 CFR 312.29).
a) Does the purchase price being paid for this <i>property</i> reasonably reflect the fair market value of the <i>property</i> ?
Yes No If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the <i>property</i> ?
The price of the property has been adjusted from what we understand would otherwise be fair market value to account for the property's environmental conditions, potential risks to an owner that may be associated with such conditions, and possible response actions that a new owner may need to undertake to address such conditions.
5. Commonly known or <i>reasonably ascertainable</i> information about the <i>property</i> (40 CFR 312.30).
Are you aware of commonly known or <i>reasonably ascertainable</i> information about the <i>property</i> that would help the <i>environmental professional</i> to identify conditions indicative of releases or threatened releases? For example, as <i>User</i> :
a. Do you know the past uses of the <i>property</i> ?
Yes No No
b. Do you know of specific chemicals that are present or once were present at the <i>property</i> ?
Yes No 🗸
c. Do you know of spills or other chemical releases that have taken place at the <i>property</i> ?
Yes No 🗸
d. Do you know of any environmental cleanups that have taken place at the property?
Yes No No
If you answered yes to any of the questions above, please include an explanation in the space provided below: We understand from available records that from the 1920s until the 1960s or 1970s the property was used as a an oil brine treatment facility. A partial "cleanup/treatment" apparently took place in the 1970s and involved removal, treatment, and replacement of sump materials. We also understand land farming took place on the property in 1980s and was used as a driving range in the 2000s.

6. The degree of obviousness of the presence of likely presence of contamination at the <i>property</i> , and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).						
Based on your knowledge and experience related to the <i>proposition</i> point to the presence or likely presence of contamination at						
Yes No If you answer yes, please include an exp	planation in the space provided below:					
We understand the materials from the oil brine tre	eatment facility are still located on the property.					
Please provide the following property contact information:						
Property Owner: Mark Pender	Phone Number: 818 519 6248

Regulatory Records Documentation

3370.0001L.105/CVRS ROUX

DEPARTMENT OF CONSERVATION

DIVISION OF OIL, GAS & GEOTHERMAL RESOURCES 5816 Corporate Ave., Suite 100 Cypress, CA 90630-4731 Phone:(714) 816-6847 Fax:(714) 816-6853

REPORT OF WELL ABANDONMENT

Cypress, California August 28, 2015

Mr Mark Pender C.R.G. Properties, LTD (C0250) 149 S. Barrington Ave. #804 Los Angeles, CA 90049

Your report of abandonment of well "Nwlbu" 8-4, A.P.I. No. 037-06415, Section 13, T. 04S, R. 13W, SB B.&M., Long Beach field, Los Angeles County, dated 2/9/2014, received 3/6/2014, has been examined in conjunction with records filed in this office. We have determined that all of the requirements of this Division have been fulfilled relative to plugging and abandonment of the well, removal of well equipment and junk, and filing of well records.

- NOTE: 1. Surface plugging completed on 2/11/2014.
 - 2. Site inspection made and approved on 3/21/2014.
 - This well has been abandoned in compliance with Division permit number 113-0597 issued on 7/19/2013.

Old New 412 412 03 03 00

No. P 113-0597

PERMIT TO CONDUCT WELL OPERATIONS

CRITICAL WELL CORRECTED COPY

> Cypress, California July 19, 2013

POOL CODE

Mr Mark Pender, Agent C.R.G. Properties, LTD (C0250) 149 S. Barrington Ave. #804 Los Angeles, CA 90049

Your proposal to Abandon well "NWLBU" 8-4, A.P.I. No. 037-06415, Section 13, T. 04S, R. 13W, SB B. & M., Long Beach field, Northwest Extension area, Brown pool, Los Angeles County, dated 7/10/2013. received 7/10/2013 has been examined in conjunction with records filed in this office.

THE PROPOSAL IS APPROVED PROVIDED:

- 1. Blowout prevention equipment, as defined by this Division's publication No. M07, shall be installed and maintained in operating condition and meet the following minimum requirements:
 - a. Class II3M, with hydraulic controls, during abandonment operations.
 - b. A 3M lubricator for wireline operations.
- 2. Blowout prevention practice drills are conducted at least weekly and recorded on the tour sheet. A practice drill may be required at the time of the test/inspection.
- 3. Hole fluid of a quality and in sufficient quantity to control all subsurface conditions in order to prevent blowouts shall be used.
- 4. All portions of the well not plugged with cement are filled with inert mud fluid having a minimum density of 72 lbs/cu.ft and a minimum gel shear strength of 25 lbs./100 sq. ft.
- 5. The proposed cement plug from 5878' to 3480' shall extend from 5878' to at least 2817'.
- 6. Prior to shooting any perforations braidenhead squeezes, a pressure test of the 8-5/8" casing shall be made to ensure casing integrity. If casing integrity is not demonstrated, a retainer or packer is required for squeeze operations.
- 7. The well location shall be surveyed prior to burying the well, and the survey shall be filed with this office. Latitude and longitude shall be in decimal degrees, to six decimal places, in NAD83.
- 8. All casing must be removed from between 5' and 10' below ground level.
- 9. Well site restoration shall be completed within 60 days following the completion of plugging operations.
- 10. No program changes are made without prior Division approval.
- 11. THIS DIVISION SHALL BE NOTIFIED TO:
 - a. Inspect the installed blowout prevention equipment prior to commencing **downhole** operations.

A copy of this permit and the proposal must be posted at the well site prior to commencing operations. Records for work done under this permit are due within 60 days after the work has been completed or the operations have been suspended. Issuance of this permit does not affect the Operator's responsibility to comply with other applicable state, federal, and local laws, regulations, and ordinances.

Page 2 of 2

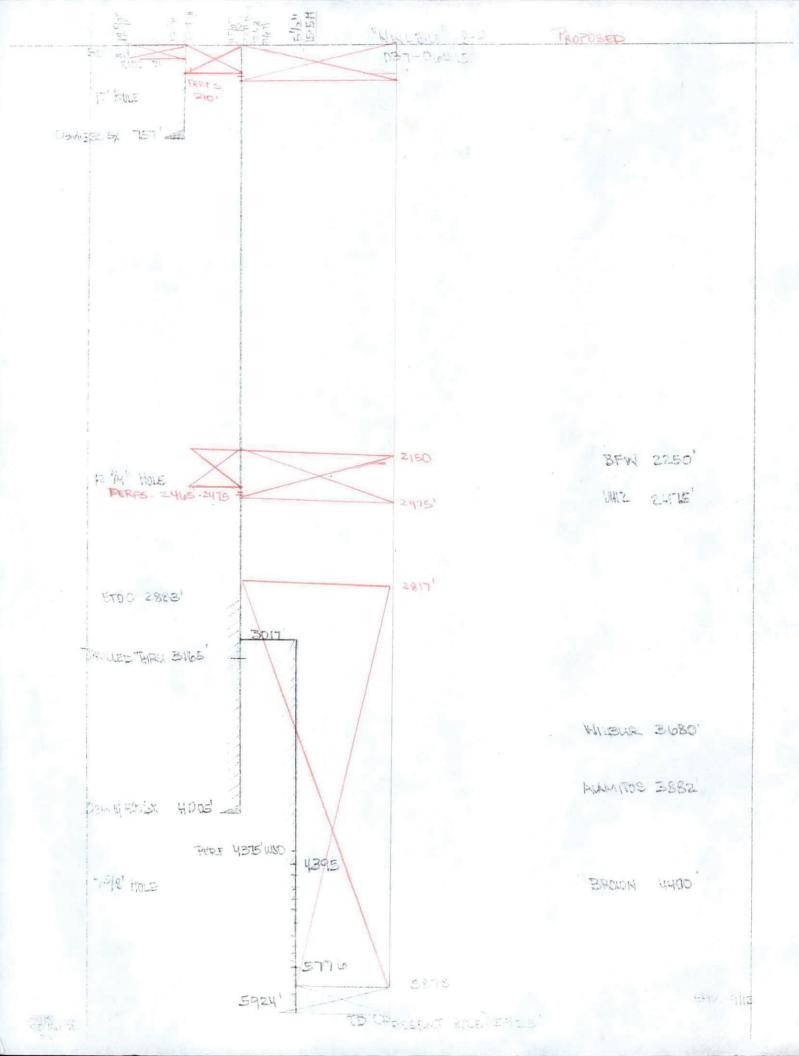

Well #: "Nwlbu" 8-4 API #: 037-06415 Permit : P 113-0597 Date: July 19, 2013

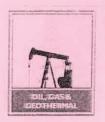

- b. Witness the clean-out depth at 5878'.
- c. Witness the placing, location and hardness of the cement plug from 5878' to 2817'.
- d. Witness the mudding operations.
- e. Witness a pressure test of the 8-5/8" casing.
- f. Witness the cement squeeze through the **perforations** at **2465'** or through a retainer or packer (if casing integrity is not demonstrated).
- g. Witness the placing, location and hardness of the cement plug from 2475' to 2150'.
- h. Witness the cement squeeze through the **perforations** at **200'** through a retainer or packer (if casing integrity is not demonstrated).
- i. Witness the placing, location and hardness of the cement plug from 210' to surface', including all annular spaces.
- i. Inspect the restored well site.

NOTE:

- Upon completion of the proposed work, a History of Oil or Gas Well (form OG103) shall be submitted to this
 office.
- 2. The well abandonment history (History of Oil or Gas Well form OG103), must include a description of the removal or abandonment of the well flowline and any associated piping.
- 3. Hydrogen sulfide gas (H₂S) is known to be present in this area, adequate safety precautions shall be taken prior to and during well operations.
- 4. The operator shall isolate the following zones:
 - a. Base of the Freshwater Sand at 2250'.
 - b. Top of the Upper Gas Zone at 2475'.
 - c. Top of the Wilbur Zone at 3680'.
 - d. Top of the Alamitos Zone at 3882'.
 - e. Top of the Brown Zone at 4400'.

Failure to achieve adequate zonal isolation may have negative impacts on current and future operations. In addition, failure to achieve adequate zonal isolation will also be noted on the Report of Operations (OG 109).

This notice must be filed, and approval given, before plugging and abandonment operations begin. If operations have not commenced within one year of the Division's receipt of the notice, this notice will be considered cancelled.

JUL 10 2013 to Elox 7/10/13

CRITICAL WELL DEFINITION

As defined in the California Code of Regulations, Title 14, Section 1720 (a), "Critical well" means a well within:

- (1) 300 feet of the following:
 - (A) Any building intended for human occupancy that is not necessary to the operation of the well; or
 - (B) Any airport runway.
- (2) 100 feet of the following:
 - (A) Any dedicated public street, highway or the nearest rail of an operating railway that is in general use;
 - (B) Any navigable body of water or watercourse perennially covered by water;
 - (C) Any public recreational facility such as a golf course, amusement park, picnic ground, campground or any other area of periodic high-density population; or
 - (D) Any officially recognized wildlife preserve.

This form may be printed from the DOGGR website at www.conservation.ca.gov/dog/

Contractor:

	Page 15 of 22

EXHIBIT A – Attachment II (continued) WELL CONDITIONS AND ABANDONMENT SPECIFICATIONS

C.R.G. Properties, Ltd. Well "Nwlbu" 8-4 (037-06415), Sec.13, Twn. 4S, Rge. 13W, S.B. B&M, Long Beach Oil Field

According to Division records, the present condition of the well is as follows:

- 1: Location: See map Exhibit A Attachment II
- 2. Accessibility:
- 3. Status: Idle deserted
- 4. Total Depth: 5925', Effective Depth: 5878'. Elevation of Kelly Bushing (KB) above sea level: 60'.
- Casing: 18-5/8" casing cemented 50'; 13-3/8" 36# casing cemented 757' with estimated top of cement behind pipe at 124' +/-; 8-5/8" cemented 4005' with estimated top of cement behind pipe at 2890', WSO; 5-1/2" cemented 3017'-5925'.perfs. 4375' WSO, 5712'-5730', 5734'-5754', 5761'-5776'.
- 8. Tubing: Unknown Rods: Unknown
- 7. Base of Fresh Water (BFW): 2250'
- 8. Producing Zone(s): Brown
- 9. Hole Fluid: Unknown
- 10. Junk: Unknown
- 11. Plugs: 5878 to 5925.
- Comments: Top of Brown zone 4400', top of Alamitos zone 3882', top of Wilbur zone 3680', and top
 of Upper Gas zone 2475'.

The following operations are necessary to plug and abandon the well:

- A Notice of Intention to Abandon (form OG 108) is to be filed with this Division at least 10 days prior to commencing work. Work is not to begin until a Permit to Conduct Well Operations (Form OG 111) has been issued. All well operations are to be witnessed by a representative of this Division as directed in the Permit to Conduct Well Operations.
- 2. The abandonment contractor will review job safety programs (JSP) with all crewmembers prior to work startup and/or if conditions change. Monitor well for any leaking gas. Position gas monitors and ventilation fans, if warranted before moving in any other equipment or personnel.
- 3. Adequate blowout prevention equipment, as defined in Division's publication No. M07, shall be installed and maintained in operating condition at all times. The minimum requirements are:
 - a. A 3M rod Reagan or equivalent BOPE for pulling rods and pump operations.
 - b. A Class II3M, with hydraulic controls, during abandonment operations.
 - c. A 3M lubricator for wire line operations.
- 4. All portions of the well not plugged with cement are filled with inert mud fluid having a minimum density of 72 lbs/cu.ft and a minimum gel shear strength of 25 lbs. /100 sq. ft. All cement plugs are to have a minimum compressive strength of 1000 psi and maximum liquid permeability of 0.1 md. All depths noted are from the KB.
- 5. Hole fluid of a quality and in sufficient quantity to control all subsurface conditions in order to prevent blowouts shall be used.
- 6. Kill well. Install and function test rod Reagan or equivalent BOPE. Pull out of the hole with rods and pump.

Contractor:	
	Agreement No. 2012-008
	Page 16 of 22

EXHIBIT A - Attachment II (continued) WELL CONDITIONS AND ABANDONMENT SPECIFICATIONS

- Remove rod Reagan. Install and function test Class II3M BOPE (function test BOPE each day thereafter).
- 8. Pull out all production tubing.
- 9. Use appropriate combination tools to clean out to 5878'.
- 10. Run in scraper. Scrape the 8-5/8" and 5 1/2" casings.
- 11. Run in hole with tubing (if tag high, clean out fill to 5878').
- 12. The well shall be plugged with cement from 5878' to 3480'
- 13. Prior to shooting any perforations for braidenhead squeezes, a pressure test of the casing shall be made to ensure casing integrity. If casing integrity is not demonstrated, a packer is required for squeeze operations.
- 14. The 8-5/8" casing shall be perforated from 2475 to 2465'. Get an injection rate or a breakdown.
- Sufficient cement shall be squeezed into the perforations to fill to 2150' outside the 8-5/8" casing.
- 16. The well shall be plugged with cement from 2475' to 2150'.
- 17. The 8-5/8" casing shall be cut and pulled from 210'.
- 18. The 13" casing shall be perforated from 210' to 200'. Sufficient cement shall be squeezed into the perforations to fill to surface.
- 19. The well shall be plugged with cement from 210' to surface.
- 20. All casing must be removed from between 5' and 10' below ground level.
- 21. A steel plate, at least as thick as the outer well casing and bearing the last five digits of the API number, shall be tack welded around the top of the outer casing.
- 22. Cellar, production pads and pipelines shall be removed and the resulting excavations filled with earth and compacted properly to prevent settling.
- 23. Remaining buried pipelines that cannot be removed shall be purged with clean water. Abandon line by pumping approved cement slurry mixture, weld steel cap on both ends of the line and bury.
- 24. All equipment, casing, or junk that requires removal to implement restoration to lawful conditions shall be removed and properly disposed of in accordance with environmental laws and in accordance with instructions from the Division of Oil and Gas. All liquid wastes shall be removed and properly disposed.
- 25. A well History (Form OG 103) shall be filed in duplicate with the Division within 60 days of completing the work and must include a description of the removal or abandonment of the well flow line and any associated piping.

Report on Test of Water Shut-off

(FORMATION TESTER)

No. T 167-576

Mr. C. G. Willis		
417 So. Hill Street Los Angeles, California 90013 Agent for GENERAL EXPLORATION CO. OF CALIF.	Inglewood,	Calif.
Los Angeles, California 90013	June 28, 1967	
Agent for GENERAL EXPLORATION CO. OF CALIF.	200	
DEAR SIR: (037-06415)		
Your well No. "Oil Operators" 4 , Sec.	13 , T. 4 S , R. 13 W	_, S.B. B & M.
Long Beach Field, in Los Angeles	County, was tested for	or water shut-off
on June 22, 1967 . Mr. R. Johnson, Engineer		
from 8:00 p.m. to 9:00 p.m. as prescribed by law; there were also	present R. Willis, Eng	ineer
Shut-off data: 5½ in. 15.5 lb. casing was cemented fr	om 3017' to	xx 5925 ft.
on June 20, 1967 in 7-5/8 in he	ole with 579 cu. ft	works of cement
slurry (1:1 pozzmix, 2% gel)		
filling akakakakakakiki behind	casing to 3017 f	ft. below surface.
Casing record of well: 18-5/8" cem. 50'; 13-3/8" cem. 757';	8-5/8" cem. 4005', w	rindow
3163'-3194' sidetracked @ 3165'; 5-1/2" cem. 3017'-59	23', peri. 4358' WSO	, TD 1st
tote 33/9 .		
Present depth 5925 ft. cmt. bridge 5925 ft. to 5880 ft. Cleaned of A Johnston tester was run into the has with ft. of water-mud cushion, and packer -set at 4342 Tester valve, with 3/4 in. bean, was open for 1 hr. and light blow for 2 minutes & no blow thereafter.	ft. with tailpiece to	drill pipe-robing, 4358 ft.
Mr. Willis reported that the with four, 3/8" holes at 4358'. THE ENGINEER NOTED: 1. When the drill pipe was removed, 45' of drilling f		
2. The pressure charts indicated the tester tool fun	ctioned properly.	
THE 5-1/2" SHUT-OFF AT 4358' IS APPROVED.
