Subject: Phase I Environmental Site Assessment
Vacant Land
Assessor's Parcel Numbers (APNs): 016-221-27, 016-221-28, and 016-221-29
1580 Brookhollow Drive/East Warner Avenue
Santa Ana, California 92705
Partner Project No. 18-223753.1

Dear Mr. Bhakta:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (714) 477-8989.

Sincerely,

Ali Azimi
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Moda Hotels, LLC for the property identified by Assessor's Parcel Numbers (APNs) 016-221-27, 016-221-28, and 016-221-29 in the City of Santa Ana, Orange County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Moda Hotels, LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the southeast corner of the intersection of South Grand Avenue and Brookhollow Drive within a mixed commercial and light industrial area of Orange County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	1580 Brookhollow Drive/East Warner Avenue, Santa Ana, California
Property Use:	Vacant Land
Land Acreage (Ac):	2.75 Ac
Number of Buildings:	None
Assessor's Parcel Numbers (APNs):	016-221-27 (Parcel A); 016-221-28 (Parcel B); and 016-221-29 (Parcel C)
Current Tenants:	Unoccupied
Site Assessment Performed By:	Brittney Eugenio of Partner
Site Assessment Conducted On:	August 30, 2018

The subject property is currently vacant land with no structural development. During the site reconnaissance, several piles of gravel, woodchips, soil, and trash were observed throughout the subject property. In addition, an asphalt-paved parking lot covers approximately 4,000 square feet of the northern corner of the subject property. Furthermore, a Southern California Edison (SCE) utility pole and buried cable are located on the western portion of the subject property.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; agricultural land from at least 1938 until at least 1972; vacant land in at least 1977; developed with a commercial structure on the eastern portion from 1979 until 2005; and vacant land from 2005 until present day. The subject property was formerly occupied by Crazy Horse Steak House from 1970 until 2006.

The immediately surrounding properties consist of South Coast Metro Children's Village to the north across Brookhollow Drive; System Pavers to the northeast; SCE Johanna Substation and RV Storage Depot Santa Ana to the northwest across the intersection of South Grand Avenue and Brookhollow Drive; Del Taco and an unoccupied commercial building to the south across a freeway off-ramp; the Costa Mesa

Freeway to the southeast; and Spoons Grill and Bar and Grand and Dyer Business Park to the west across South Grand Avenue.

According to groundwater monitoring data available from the State Water Resources Control Board (SWRCB) GeoTracker website for a nearby site and topographic map interpretation, the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 16 to 32 feet below ground surface (bgs) and flow toward the south-southwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property, identified as Crazy Horse Steak House at 1580 Brookhollow Drive/East Warner Avenue, was formerly equipped with one 12,000-gallon gasoline underground storage tank (UST). The UST was installed in 1979, and appears to have been located near the southwestern exterior of the former restaurant building. On September 16, 1987, the UST was removed from the subject property and two confirmatory soil samples were collected from the western and eastern ends of the UST excavation. According to the analytical results, total petroleum hydrocarbons (TPH) was detected at a concentration of 4.8 milligrams per kilogram (mg/kg) and xylenes was detected at a concentration of 0.16 mg/kg from the sample collected from the western end. TPH and aromatic volatile organics were not detected above laboratory

detection limits from the sampled collected from the eastern end. No UST closure letter was found during the course of this assessment. Based on the analytical results, it does not appear a significant release of petroleum hydrocarbons occurred. Furthermore, Partner notes that Regional Water Quality Control Board's (RWQCB's) Maximum Soil Screening Levels (MSSLs) for TPH in the gasoline range and xylenes are 100 and 1.75 mg/kg, respectively, for concentrations detected in soil at less than 20 feet above groundwater. Therefore, it can be concluded that the concentrations of TPH and xylenes detected in soil in 1987 are below current regulatory standards. Based on the removal of the tank, the analytical results, the length of time since the sampling occurred (approximately 31 years), and likely degradation via natural attenuation, the former UST is not expected to represent a significant environmental concern.

- The subject property is located within an area of contaminated groundwater associated with part of the Orange County Groundwater Basin, known as the Southeast Santa Ana Site Discovery Project, a groundwater plume that is generally bound by East Edinger Avenue to the north, MacArthur Boulevard to the south, Red Hill Avenue to the east, and South Flower Street to the west. The groundwater in this area is contaminated with volatile organic compounds (VOCs) including tetrachloroethylene (PCE) and trichloroethylene (TCE). Regulatory oversight is being provided by the Department of Toxic Substances Control (DTSC) and RWQCB. Based on review of the regulatory database report and EnviroStor and GeoTracker online databases, several facilities located in the vicinity of the subject property are currently undergoing remediation for the release of PCE and TCE.

  The Soco West, Inc./Former Holchem Facility (also identified as Service Chemical Co, Holchem Service Chemical Co, Holchem, Inc., and Service Chemical Site) at 1341 East Maywood Avenue is located approximately 0.35-mile north-northwest of the subject property and situated hydrologically cross-gradient. This facility consists of approximately 0.50-acre of land and has one building on the southernmost portion (formerly housed distillation units and office space) and two concrete bermed storage areas. This facility has operated as various chemical distributors and hazardous waste solvent recycling, storage and treatment facilities including To-Be-Le, Inc. from 1965 to 1969 (chemical sales only); Service Chemical Company from 1969 to 1985; and Holchem, Inc. (Holchem) from 1985 to 1991. In 2001, Holchem merged with Brenntag West, Inc., which later changed its name to Soco West, Inc.

  Subsurface investigations at this off-site property began as early as 1985. In 1991, Holchem ceased operations and filed a notice with the former Department of Health Services (DHS - now the DTSC) to obtain closure of operations. The DTSC denied the closure request due to the presence of impacted soil beneath the property. Various corrective action activities were required by RCRA and the Hazardous Waste Permit previously obtained by Holchem. Constituents of concern detected in groundwater, soil and soil vapor include but are not limited to PCE, TCE, vinyl chloride (VC), cis-1,2-dichloroethylene (c-1,2-DCE), 1,1-dichloroethene (1,1-DCE), 1,1,1-trichloroethane (TCA), 1,4-dioxane and benzene. Remedial activities including on- and off-site groundwater monitoring, soil vapor extraction (SVE), and high-vacuum dual-phase extraction

(HVDPE) have been ongoing since the late 1980s. The DTSC has identified Soco West, Inc. and The Maywood Trust, UTD as the responsible parties for financial liabilities associated with the investigation and corrective actions. In November 2016, a *Remedial Design and Implementation Plan* (RDIP) was prepared by Geosyntec Consultants, Inc. (Geosyntec). The report proposes to demolish the existing structure, install low-permeability slurry walls, flow control gates and a permeable reactive barrier (PRB), seal the surface of the property with an asphalt cap and install a 1,4-dioxane in situ bioremediation (EISB) system. The DTSC conditionally approved the RDIP on December 5, 2016.

On January 18, 2017, a groundwater monitoring well, identified as MW-44B, was installed approximately 200 feet west of the subject property on the adjacent property at 2601 Hotel Terrace. According to the most recent groundwater monitoring report, this well was last sampled on October 9, 2017. Analytical results indicate that PCE and TCE were detected at concentrations of 1.1 and 3.1 micrograms per liter (µg/L), respectively. These concentrations are below the Maximum Contaminant Level (MCL) of 5 µg/L for both PCE and TCE. Review of the analytical results of the remaining wells sampled during this sampling event suggests the plume is migrating to the south-southwest, away from the subject property. Therefore, based on the analytical results of the October 2017 sampling event associated with MW-44B, it does not appear that groundwater beneath the subject property has been impacted by PCE or TCE above regulatory action levels. As such, no further investigation appears warranted.

- The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used on-site. Storage or mixing of these chemicals on the subject property historically is unlikely as no agricultural maintenance buildings were evident on-site based on our review of available documentation. The subject property is largely either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were generally mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of Assessor's Parcel Numbers (APNs) 016-221-27, 016-221-28, and 016-221-29 in the City of Santa Ana, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property identified by Assessor's Parcel Numbers (APNs) 016-221-27, 016-221-28, and 016-221-29 in the City of Santa Ana, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Moda Hotels, LLC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Moda Hotels, LLC. Either verbally

or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http: / www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User was not provided at the time of the assessment.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner submitted a Freedom of Information Act (FOIA) request to the Orange County Health Care Agency (OCHCA) for information pertaining to hazardous substances, underground storage tanks (USTs), releases, inspection records, etc. for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1580 Brookhollow Drive/East Warner Avenue in Santa Ana, California is located on the southeast corner of the intersection of South Grand Avenue and Brookhollow Drive. According to the City of Santa Ana online property information, the subject property is legally described as: *P BK 126 PG 46 PAR 5* (Parcel A); *P BK 126 PG 46 PAR 6* (Parcel B); and *P BK 126 PG 46 PAR 7* (Parcel C). Ownership is currently vested in Moda Rentals LLC since 2009.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently vacant land with no structural development. During the site reconnaissance, several piles of gravel, woodchips, soil, and trash were observed throughout the subject property. In addition, an asphalt-paved parking lot covers approximately 4,000 square feet of the northern corner of the subject property. Furthermore, a Southern California Edison (SCE) utility pole and buried cable are located on the western portion of the subject property.

The subject property is zoned SD8 for specific development by the City of Santa Ana.

The subject property is not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and light industrial area of Orange County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Brookhollow Drive beyond which is South Coast Metro Children's Village (1510 Brookhollow Drive)
Northeast:	Systems Pavers (1570 Brookhollow Drive)
Northwest:	Intersection of South Grand Avenue and Brookhollow Drive beyond which are SCE Johanna Substation (2500 South Grand Avenue) and RV Storage Depot Santa Ana (1316 East Warner Avenue)
South:	A freeway off-ramp beyond which are Del Taco (2701 South Grand Avenue) and an unoccupied commercial building (2705 South Grand Avenue)
Southeast:	Costa Mesa Freeway
West:	South Grand Avenue beyond which are Spools Grill and Bar (2601 Hotel Terrace) to the west and Grand and Dyer Business Park (2650-2722 South Grand Avenue) to the west-southwest

The adjacent properties to the south are identified as Leaking Underground Storage Tank (LUST), Statewide Environmental Evaluation and Planning System (SWEEPS) UST, California Facility Inventory Data (CA FID) UST, Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG), Facility Index System (FINDS), and Enforcement and Compliance History Online (ECHO) sites in the regulatory

database report. In addition, the adjacent properties to the west-southwest are identified as RCRA-SQG, FINDS, ECHO, and Environmental Data Resources, Inc. (EDR) US Historical Auto Station (Hist Auto) sites in the regulatory database report. These listings are further discussed in Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Tustin, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 60 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south-southwest. Improvements, with the exception of roadways, are not depicted on the 2015 map.

A copy of the 2015 topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the south-southwest. The nearest surface water in the vicinity of the subject property is an unidentified creek located approximately 1.91 miles of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Santa Ana Public Works Agency serves the subject property vicinity. According to the 2017 Water Quality Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Santa Ana are groundwater from 20 city-owned wells and surface water imported from the Colorado River and Northern California.

According to groundwater monitoring data available from the State Water Resources Control Board (SWRCB) GeoTracker website for a nearby site, the depth of groundwater in the vicinity of the subject property is inferred to be approximately 16 to 32 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is located within the Coastal Plain, which is situated in the northwest corner of the Peninsular Range geomorphic province. The Peninsular Range geomorphic province extends south from Santa Monica to the tip of Baja California. This geomorphic province consists of essentially northwest-treading mountain ranges and associated valleys. The Coastal Plain is bounded by the Santa Monica Mountains on the north, and the La Merced Hills, Puente Hills, Peralta/Santiago Hills and San Joaquin Hills to the northeast, east and south. This coastal plain slopes gently from the bordering highlands toward the ocean with seven main stream channels that drain the area. These include the Los Angeles River, Rio Hondo River, San Gabriel River, Coyote Creek, Santa Ana River, Santiago Creek and San Diego Creek. The major land forms of the Coastal Plain consist of bordering highlands and foothills, older and younger plains and hills, the rivers, which drain the area, and the offshore topography. The site is situated on the

alluvial plain. As per the Geologic Map of California, Santa Ana Sheet published in 1965, the property is underlain by undifferentiated Quaternary-age Recent Alluvial deposits.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Chino silty clay loam. The Chino series consists of deep, somewhat poorly drained soils with moderately highly permeability and formed in alluvium derived from sedimentary rock. Slopes range from zero to two percent.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map (FIRM), published by the Federal Emergency Management Agency (FEMA). According to Community Panel Number 06059C0278J, dated December 3, 2009, the subject property appears to be located in Zone X (unshaded), an area of minimal flood hazard.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1896-1935	Topographic Maps	Undeveloped
1938-1972	Aerial Photographs, Topographic Maps	Agricultural land
1977	Aerial Photograph	Vacant land
1979-2005	Aerial Photographs, City Directories, Building Records, Topographic Maps, Interviews	Commercial – restaurant (Crazy Horse Steak House)
2005-Present	Aerial Photographs, Building Records, Interviews, On-site Observations	Vacant land

The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used on-site. Storage or mixing of these chemicals on the subject property historically is unlikely as no agricultural maintenance buildings were evident on-site based on our review of available documentation. The subject property is largely either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were generally mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time.

Based on review of available regulatory agency records, an additional potential environmental concern regarding a former 12,000-gallon gasoline UST on the subject property was identified, as further discussed in Section 4.1.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from EDR on August 16, 2018. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date:	***1938, 1946, 1952, 1963***	***Scale:***	***1"=500'***
Subject Property:	Appears to be agricultural land		
North:	Appears to be agricultural land		
Northeast:	Appears to be agricultural land		
Northwest:	Appears to be agricultural land		

Date:	***1938, 1946, 1952, 1963***	***Scale:***	***1"=500'***
South:	Appears to be agricultural land		
Southeast:	Appears to be agricultural land followed by a road		
West:	Appears to be agricultural land		

Date:	***1972***	***Scale:***	***1"=500'***
Subject Property:	No significant changes are visible; however, what appears to be a billboard is visible along the southeastern boundary		
North:	No significant changes are visible		
Northeast:	No significant changes are visible		
Northwest:	Appears to be agricultural land across South Grand Avenue		
South:	Appears to be developed with a commercial structure, presumably a gasoline station across a freeway off-ramp		
Southeast:	Appears to be developed with the Costa Mesa Freeway		
West:	Appears to be agricultural land to the west and developed with the two current commercial structures to the west-southwest across South Grand Avenue		

Date:	***1977***	***Scale:***	***1"=500'***
Subject Property:	Appears to be vacant land		
North:	Appears to be developed with the current commercial structure across Brookhollow Drive		
Northeast:	Appears to be vacant land		
Northwest:	No significant changes are visible		
South:	No significant changes are visible		
Southeast:	No significant changes are visible		
West:	No significant changes are visible		

Date:	***1985***	***Scale:***	***1"=500'***
Subject Property:	Appears to be developed with a commercial structure on the eastern portion and vacant land on the western portion		
North:	No significant changes are visible		
Northeast:	Appears to be developed with the current commercial structure		
Northwest:	Appears to be vacant/graded land across South Grand Avenue		
South:	Appears to be redeveloped with a commercial structure across a freeway off-ramp		
Southeast:	No significant changes are visible		
West:	Appears to be developed with the current commercial structure to the west across South Grand Avenue		

Date:	***1989, 1994***	***Scale:***	***1"=500'***
Subject Property:	No significant changes are visible		
North:	No significant changes are visible		
Northeast:	No significant changes are visible		
Northwest:	Appears to be developed with an electrical substation across South Grand Avenue		
South:	Appears to be developed with an additional commercial structure across a freeway off-ramp		
Southeast:	No significant changes are visible		

Date: 1989, 1994	*Scale: 1"=500'*
West:	No significant changes are visible

Date: 2005, 2009, 2012, 2016	*Scale: 1"=500'*
Subject Property:	Appears to be vacant land; the commercial structure has been removed from the eastern portion
North:	No significant changes are visible
Northeast:	No significant changes are visible
Northwest:	Appears to be developed with an RV storage lot across South Grand Avenue
South:	No significant changes are visible
Southeast:	No significant changes are visible
West:	No significant changes are visible

Copies of the aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested Sanborn Fire insurance maps from EDR. On August 15, 2018, EDR responded that Sanborn map coverage was not available for the subject property.

A copy of the Sanborn Fire insurance maps no coverage documentation is in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on August 22, 2018 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 1580 Brookhollow Drive/East Warner Avenue (Subject Property)	
Year(s)	**Occupant Listed**
1986	Crazy Horse Steak House
1991	Crazy Horse Steak House
1995	Crazy Horse Steak House and Saloon
2002	Wealth Code

According to the city directory review, the subject property has been occupied by Crazy Horse Steak House from at least 1986 until at least 1995. Based on the city directory review, no environmentally sensitive listings were identified for the subject property address.

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1975	Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Mr. K's Restaurant, **John Martin Texaco Service (2701 South Grand Avenue)**
1980	Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Mr. K's Restaurant, **B&L Texaco (2701 South Grand Avenue)**
1986	Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Hershel's Deli and Bakery (2601 Hotel Terrance)
1991	Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
	industrial tenants (2650-2722 South Grand Avenue); Del Taco (2701 South Grand Avenue)
1995	Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Spoons Grill and Bar (2601 Hotel Terrance)
2002	Children's Village (1510 Brookhollow Drive); Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Del Taco (2701 South Grand Avenue); Independent Toyota Dealer, Goodyear, Duality Auto (2705 South Grand Avenue); Spoons Grill California (2601 Hotel Terrance)
2005	Santa Ana RV Storage LP (1316 East Warner Avenue); Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Del Taco LLC (2701 South Grand Avenue); Certified Tire, AST Enterprises Inc., B&B Ultratec Inc. (2705 South Grand Avenue); Spoons Restaurants Inc. (2601 Hotel Terrance)
2010	Santa Ana RV Storage LLC, Emergency Locksmith (1316 East Warner Avenue); Karpos Int Inc. (1510 Brookhollow Drive); Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Del Taco LLC (2701 South Grand Avenue); Southern Cal Discount Tire Co, Certified Tire (2705 South Grand Avenue); Isa and Est Inc. (2601 Hotel Terrance)
2014	Santa Ana RV Storage LLC (1316 East Warner Avenue); Children's Village LLC, Karpos Int Inc. (1510 Brookhollow Drive); Several commercial office tenants (1570 Brookhollow Drive); Several commercial and light industrial tenants (2650-2722 South Grand Avenue); Del Taco LLC (2701 South Grand Avenue); Southern Cal Discount Tire Co (2705 South Grand Avenue); Isa and Est Inc. (2601 Hotel Terrance)

According to the city directory review, the adjacent properties have been occupied by various commercial tenants including restaurants, offices, RV storage, a gasoline station, and tire centers. Please refer to Section 4.2.3 for further discussion of the adjacent tenants identified in the regulatory database report.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on August 15, 2018. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1896, 1901, 1902, 1932, 1935, 1942, 1948, 1950, 1965	
Subject Property:	Depicted as undeveloped
North:	Depicted as undeveloped
Northeast:	Depicted as undeveloped
Northwest:	Depicted as undeveloped
South:	Depicted as undeveloped
Southeast:	Depicted as undeveloped followed by a road
West:	Depicted as undeveloped

Date: 1972	
Subject Property:	Depicted as vacant land
North:	Depicted as vacant land
Northeast:	Depicted as vacant land
Northwest:	Depicted as vacant land across South Grand Avenue
South:	Depicted as vacant land across a freeway off-ramp
Southeast:	Depicted as developed with a freeway
West:	Depicted as vacant land across South Grand Avenue

Date: 1981	
Subject Property:	No significant changes depicted
North:	Depicted as developed with a structure across Brookhollow Drive
Northeast:	No significant changes depicted
Northwest:	No significant changes depicted
South:	No significant changes depicted
Southeast:	No significant changes depicted
West:	Depicted as vacant land to the west and developed with two structures to the west-southwest across South Grand Avenue

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Orange County Health Care Agency (OCHCA)
Point of Contact:	Liza Rodriguez
Agency Address:	1241 East Dyer Road Suite 120, Santa Ana, California 92702
Agency Phone Number:	(714) 433-6000
Date of Contact:	August 2018
Method of Communication:	Faxed Request
Summary of Communication:	As of the date of this report, Partner has not received a response from the OCHCA for inclusion in this report.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Santa Ana Fire Department (SAFD)
Point of Contact:	Joseph Mendoza
Agency Address:	20 Civic Center Plaza, Santa Ana, California 92702
Agency Phone Number:	(714) 647-5056
Date of Contact:	August 2018
Method of Communication:	Faxed Request/Email
Summary of Communication:	The subject property, identified as Crazy Horse Steak House at 1580 Brookhollow Drive/East Warner Avenue, was formerly equipped with one 12,000-gallon gasoline UST. The UST was installed in 1979, and based on limited information provided by historic site maps was presumably located near the southwestern exterior of the former restaurant building. On September 16, 1987, the tank was removed from the site and two confirmatory soil samples were collected from the western and eastern ends of the tank excavation. According to the analytical results, total petroleum hydrocarbons (TPH) was detected at a concentration of 4.8 milligrams per kilogram (mg/kg) and xylenes was detected at a concentration of 0.16 mg/kg from the sample collected from the western end. TPH and aromatic volatile organics were not detected above laboratory detection limits from the sampled collected from the eastern end. No UST closure letter was found during the course of this assessment. Based on the analytical results, it does not appear a significant release of petroleum hydrocarbons occurred. Furthermore, Partner notes that Regional Water Quality Control Board's (RWQCB's) Maximum Soil Screening Levels (MSSLs) for TPH in the gasoline range and xylenes are 100 and 1.75 mg/kg, respectively, for concentrations detected in soil at less than 20 feet above groundwater. Therefore, it can be concluded that the concentrations of TPH and xylenes detected in soil in 1987 are below current regulatory standards. Based on the

Regulatory Agency Data	
	removal of the tank, the analytical results, the length of time since the sampling occurred (approximately 31 years), and likely degradation via natural attenuation, the former UST is considered an environmental issue.

4.1.3 Fire Authority

Regulatory Agency Data	
Name of Agency:	Orange County Fire Authority (OCFA)
Point of Contact:	Robin Nelson-Glotfelty
Agency Address:	1 Fire Authority Road, Irvine, California 92602
Agency Phone Number:	(714) 573-6180
Date of Contact:	August 2018
Method of Communication:	Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the OCFA.

4.1.4 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Agency Website:	http://www3.aqmd.gov/webappl/fim/prog/search.aspx
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	August 2018
Method of Communication:	Online
Summary of Communication:	The subject property, identified as Crazy Horse Steak House at 1580 East Warner Avenue, was granted a Permit to Operate (PTO) for a gasoline storage tank with one dispensing nozzle in 1982. No Notices of Violation (NOV) or Notices to Comply (NTC) were issued. Please refer to Section 4.1.2 for further discussion of the former UST at the subject property. In addition, Crazy Horse Steak House 031489 at 1580 East Warner Avenue and Crazy Horse Steak House at 1580 Brookhollow Drive were identified in the SCAQMD online database. No PTOs were granted to these facilities, and no NOVs or NTCs were issued.

4.1.5 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Santa Ana Regional Water Quality Control Board (SARWQCB) SWRCB GeoTracker
Agency Website:	http://geotracker.waterboards.ca.gov/default.asp
Agency Address:	3737 Main Street, Suite 500, Riverside, California 92501
Agency Phone Number:	(951) 782-4130
Date of Contact:	August 2018

Regulatory Agency Data	
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the GeoTracker online database.

4.1.6 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC) EnviroStor and Hazardous Waste Tracking System (HWTS)
Agency Websites:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov/report_search.cfm?id=5
Agency Address:	5796 Corporate Avenue, Cypress, California 90630
Agency Phone Number:	(714) 484-5300
Date of Contact:	August 2018
Method of Communication:	Online Database
Summary of Communication:	According to records reviewed, the subject property identified as Zyer Hollow Partners LP at 1580 Brookhollow Drive was listed in the HWTS online database under EPA ID No. CAC002585922. This facility generated 7.585 tons of asbestos-containing waste in 2005. Review of additional records indicates this waste was generated in association with the demolition of a former restaurant building on the subject property. Based on the nature of waste and the off-site disposal, the waste generation at the subject property in 2005 is not expected to represent a significant environmental concern. No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the EnviroStor online database.

4.1.7 Building Department

Regulatory Agency Data	
Name of Agency:	Santa Ana Building Department (SABD)
Agency Address:	20 Civic Center Plaza, Santa Ana, California 92701
Agency Phone Number:	(714) 647-5800
Date of Contact:	August 27, 2018
Method of Communication:	In Person
Summary of Communication:	Records were available for review, as further discussed in the following table.

Building Records Reviewed for 1580 Brookhollow Drive/East Warner Avenue (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1979	Crazy Horse Steak House	Building permit for new 9,600 square foot restaurant with sewer connection
1987	Not listed	Building permit to remove underground storage tank
2006	Dyerhollow Partners LP	Building permit to demolish structure and clear lot

Building Records Reviewed for 1580 Brookhollow Drive/East Warner Avenue (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
2006	Dyerhollow Partners LP	Plumbing permit to cap the sewer

In addition, several plans and project files were on file for a proposed addition to the restaurant and the construction of two additional buildings. Based on review of aerial photographs, these improvements were never completed.

4.1.8 Planning Department

Regulatory Agency Data	
Name of Agency:	Santa Ana Planning Department (SAPD)
Agency Address:	20 Civic Center Plaza, Santa Ana, California 927011
Agency Phone Number:	(714) 647-5804
Date of Contact:	August 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned SD8 for specific development by the City of Santa Ana.

4.1.9 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR) - Southern District
Agency Website:	http://maps.conservation.ca.gov/doms/doms-app.html
Agency Address:	5816 Corporate Avenue, Suite 100, Cypress, California 90630
Agency Phone Number:	(714) 816-6847
Date of Contact:	August 2018
Method of Communication:	Online Database
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.10 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Orange County Assessor (OCA) and City of Santa Ana Property Information Search
Agency Address:	11 Civic Center Plaza, Santa Ana, California 92701
Agency Phone Number:	(714) 834-2727
Date of Contact:	August 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor's Parcel Numbers (APNs) 016-221-27 (Parcel A); 016-221-28 (Parcel B); and 016-221-29 (Parcel C), and is currently owned by Moda Rentals LLC since 2009. The subject property consists of a 2.75-acre vacant lot with no structures developed on-site.

4.1.11 Sanitation District

Regulatory Agency Data	
Name of Agency:	Orange County Sanitation District (OCSD)
Point of Contact:	Jana Botzheim
Agency Address:	10844 Ellis Avenue, Fountain Valley, California 92708
Agency Phone Number:	(714) 593-7451
Date of Contact:	August 2018
Method of Communication:	Online Request/Email
Summary of Communication:	No records regarding current and historical clarifiers, storm water and other waste water permits on the subject property were on file with the OCSD.

Copies of pertinent documents obtained from the above-referenced regulatory agencies (if available) are included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	**Y**
Federal RCRA CORRACTS Facility	1.00	N	N	**Y**
Federal RCRA TSDF Facility	0.50	N	N	**Y**
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	**Y**	N
Federal IC/EC Registries	0.50	N	N	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent properties to the south are identified as a LUST, SWEEPS UST, CA FID UST, RCRA-SQG, FINDS, and ECHO sites in the regulatory database report, as discussed below:

- The property, identified as Hennessey Auto Care (also identified as Goodyear Tire Center #1658) at 2705 South Grand Avenue, is located adjacent to the south of the subject property across a freeway off-ramp, and situated hydrologically down-gradient. This facility was formerly equipped with one 550-gallon waste oil UST. On November 10, 1993, a release of waste oil, which reportedly impacted soil only, was reported to the City of Santa Ana. The UST was removed and reported remedial actions included excavation. Regulatory closure was obtained on November 3, 1994. Based on the regulatory closure, removal of the tank, medium impacted (soil only), and the inferred direction of groundwater flow, this adjacent property is not expected to represent a significant environmental concern at this time and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as Hennessey's Goodyear Service at 2703 South Grand Avenue, is located adjacent to the south of the subject property across a freeway off-ramp, and situated hydrologically down-gradient. This facility was permitted to generate and store hazardous waste on-site as a small quantity generator. No violations were reported in the RCRA and ECHO databases. Based on the lack of an open release or violation and the inferred direction of groundwater flow, this adjacent property is not expected to represent a significant environmental concern at this time and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

In addition, the adjacent properties to the west-southwest are identified as RCRA-SQG, FINDS, ECHO, and EDR Hist Auto sites in the regulatory database report, as discussed below:

- The property, identified as High-Tec Coatings at 2668 South Grand Avenue, is located adjacent to the west-southwest of the subject property across South Grand Avenue, and situated hydrologically down-gradient. This facility was permitted to generate and store hazardous waste on-site as a small quantity generator. No violations were reported in the RCRA and ECHO databases. Based on the lack of a documented release or violation and the inferred direction of groundwater flow, this adjacent property is not expected to represent a significant environmental concern at this time and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as Basala Trading Co at 2674 South Grand Avenue, is located adjacent to the west-southwest of the subject property across South Grand Avenue, and situated hydrologically down-gradient. This facility was permitted to generate and store hazardous waste on-site as a small quantity generator. No violations were reported in the RCRA and ECHO databases. Based on the lack of a documented release or violation and the inferred direction of groundwater flow, this adjacent property is not expected to represent a significant environmental concern at this time and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as ARCO Industries/Western at 2718 South Grand Avenue, is located adjacent to the west-southwest of the subject property across South Grand Avenue, and situated hydrologically down-gradient. This facility was identified as a gasoline station in the Hist Auto database from 2002 to 2008. This location was likely an office for ARCO as the property has been developed with the existing business park since 1968. Based on the lack of a documented release or violation and the inferred direction of groundwater flow, this adjacent property is not expected to represent a significant environmental concern at this time and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

A nearby site of concern to the north-northwest is identified in the regulatory database report, as discussed below:

- The property, identified as Soco West, Inc./Former Holchem Facility (also identified as Service Chemical Co, Holchem Service Chemical Co, Holchem, Inc. and Service Chemical Site) at 1341 East Maywood Avenue, is located approximately 0.33-mile north-northwest of the subject property and situated hydrologically cross-gradient. This facility consists of approximately 0.50-acre of land and has one major building on the southernmost portion (formerly housed distillation units and office space) and two concrete bermed storage areas. This facility has operated as various chemical distributors and hazardous waste solvent recycling, storage and treatment facilities including To-Be-Le, Inc. from 1965 to 1969 (chemical sales only); Service Chemical Company from 1969 to 1985; and Holchem, Inc. (Holchem) from 1985 to 1991. In 2001, Holchem merged with

Brenntag West, Inc., which later changed its name to Soco West, Inc. According to records reviewed, neither Brenntag West, Inc. nor Soco West, Inc. (Soco) conducted any operations on-site.

Subsurface investigations began as early as 1985. In 1991, Holchem ceased operations and filed a notice with the former Department of Health Services (DHS) (now the DTSC) to obtain closure of operations. The DTSC denied the closure request due to the presence of impacted soil beneath the property. Various corrective action activities were required by the RCRA and Hazardous Waste Permit previously obtained by Holchem. Constituents of concern detected in groundwater, soil and soil vapor include but are not limited to tetrachloroethylene (PCE), trichloroethylene (TCE), vinyl chloride (VC), cis-1,2-dichloroethylene (c-1,2-DCE), 1,1-dichloroethene (1,1-DCE), 1,1,1-trichloroethane (TCA), 1,4-dioxane and benzene. Remedial activities including on- and off-site groundwater monitoring, soil vapor extraction (SVE) utilizing vapor treatment technology including a catalytic oxidizer and granular activated carbon (GAC), and high-vacuum dual-phase extraction (HVDPE) have been ongoing since the late 1980s. The DTSC has identified Soco West, Inc. and The Maywood Trust, UTD as the responsible parties for financial liabilities associated with the investigation and corrective actions. In November 2016, a *Remedial Design and Implementation Plan* (RDIP) was prepared by Geosyntec Consultants, Inc. (Geosyntec). The report proposes to demolish the existing structure, install low-permeability slurry walls, flow control gates and a permeable reactive barrier (PRB), seal the surface of the property with an asphalt cap and install a 1,4-dioxane in situ bioremediation (EISB) system. The DTSC approved the RDIP on December 5, 2016 as long as eight conditions are also reflected in the final design.

On January 18, 2017, a groundwater monitoring well, identified as MW-44B, was installed approximately 200 feet west of the subject property on the adjacent property at 2601 Hotel Terrace. According to the most recent groundwater monitoring report, this well was last sampled on October 9, 2017. Analytical results indicate that PCE and TCE were detected at concentrations of 1.1 and 3.1 micrograms per liter (µg/L), respectively. These concentrations are below the Maximum Contaminant Level (MCL) of 5 µg/L for both PCE and TCE. Review of the analytical results of the remaining wells sampled during this sampling event suggests the plume is migrating to the south-southwest, away from the subject property. Based on the close proximately, the contaminated groundwater plume is considered an environmental issue.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan listings are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Moda Hotels, LLC (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**

Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

Mr. Jorge Stambuk, subject property owner representative, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to Mr. Stambuk, the subject property was formerly developed with a Crazy Horse Steak House restaurant until 2005. Following that, the subject property has remained vacant land. Mr. Stambuk stated that current ownership has owned the property since 2009. Mr. Stambuk further stated that there are no USTs, ASTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of his knowledge. According to Mr. Stambuk, the subject property is proposed to be developed with a 140-unit hotel.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report.

5.1.3 Interview with Key Site Manager

Mr. Stambuk also acted as the key site manager. Information provided by Mr. Stambuk is discussed above in Section 5.1.1.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Brittney Eugenio
Site Assessment Conducted On:	August 30, 2018

Partner was unaccompanied during the field reconnaissance activities.

No potential environmental concerns were identified during the on-site reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

The subject property is vacant land. During the site reconnaissance, several small piles of gravel, woodchips, soil, and trash were observed throughout the subject property. No visual or olfactory evidence of hazardous substances and/or petroleum products was noted in the vicinity of these small stockpiles. As such, the observed stockpiles are not expected to represent a significant environmental concern. However, Partner recommends the observed materials be disposed of at an appropriate off-site disposal facility.

6.1.2 Sewage Discharge and Disposal

The subject property does not currently utilize sewage disposal due to the vacant state of the property. No wastewater treatment facilities or septic systems are located on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by percolation into the impervious ground surface.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish and Wildlife Service; however, a comprehensive wetlands survey would be required to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

The subject property does not currently utilize heating or cooling systems due to the vacant state of the property.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

The subject property does not currently generate domestic wastewater. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property is currently undeveloped. As such, ACMs are not expected to represent a significant environmental concern.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property is currently undeveloped. As such, LBP is not expected to represent a significant environmental concern.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones

EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Santa Ana Public Works Agency serves the subject property vicinity. According to the 2017 Water Quality Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Santa Ana are groundwater from 20 city-owned wells and surface water imported from the Colorado River and Northern California. According to the City of Santa Ana and the 2017 Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

The subject property is currently undeveloped. As such, mold is not expected to represent a significant environmental concern.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property, identified as Crazy Horse Steak House at 1580 Brookhollow Drive/East Warner Avenue, was formerly equipped with one 12,000-gallon gasoline underground storage tank (UST). The UST was installed in 1979, and appears to have been located near the southwestern exterior of the former restaurant building. On September 16, 1987, the UST was removed from the subject property and two confirmatory soil samples were collected from the western and eastern ends of the UST excavation. According to the analytical results, total petroleum hydrocarbons (TPH) was detected at a concentration of 4.8 milligrams per kilogram (mg/kg) and xylenes was detected at a concentration of 0.16 mg/kg from the sample collected from the western end. TPH and aromatic volatile organics were not detected above laboratory detection limits from the sampled collected from the eastern end. No UST closure letter was found during the course of this assessment. Based on the analytical results, it does not appear a significant release of petroleum hydrocarbons occurred. Furthermore, Partner notes that Regional Water Quality Control Board's (RWQCB's) Maximum Soil Screening Levels (MSSLs) for TPH in the gasoline range and xylenes are 100 and 1.75 mg/kg, respectively, for concentrations detected in

soil at less than 20 feet above groundwater. Therefore, it can be concluded that the concentrations of TPH and xylenes detected in soil in 1987 are below current regulatory standards. Based on the removal of the tank, the analytical results, the length of time since the sampling occurred (approximately 31 years), and likely degradation via natural attenuation, the former UST is not expected to represent a significant environmental concern.

- The subject property is located within an area of contaminated groundwater associated with part of the Orange County Groundwater Basin, known as the Southeast Santa Ana Site Discovery Project, a groundwater plume that is generally bound by East Edinger Avenue to the north, MacArthur Boulevard to the south, Red Hill Avenue to the east, and South Flower Street to the west. The groundwater in this area is contaminated with volatile organic compounds (VOCs) including tetrachloroethylene (PCE) and trichloroethylene (TCE). Regulatory oversight is being provided by the Department of Toxic Substances Control (DTSC) and RWQCB. Based on review of the regulatory database report and EnviroStor and GeoTracker online databases, several facilities located in the vicinity of the subject property are currently undergoing remediation for the release of PCE and TCE.

  The Soco West, Inc./Former Holchem Facility (also identified as Service Chemical Co, Holchem Service Chemical Co, Holchem, Inc., and Service Chemical Site) at 1341 East Maywood Avenue is located approximately 0.35-mile north-northwest of the subject property and situated hydrologically cross-gradient. This facility consists of approximately 0.50-acre of land and has one building on the southernmost portion (formerly housed distillation units and office space) and two concrete bermed storage areas. This facility has operated as various chemical distributors and hazardous waste solvent recycling, storage and treatment facilities including To-Be-Le, Inc. from 1965 to 1969 (chemical sales only); Service Chemical Company from 1969 to 1985; and Holchem, Inc. (Holchem) from 1985 to 1991. In 2001, Holchem merged with Brenntag West, Inc., which later changed its name to Soco West, Inc.

  Subsurface investigations at this off-site property began as early as 1985. In 1991, Holchem ceased operations and filed a notice with the former Department of Health Services (DHS - now the DTSC) to obtain closure of operations. The DTSC denied the closure request due to the presence of impacted soil beneath the property. Various corrective action activities were required by RCRA and the Hazardous Waste Permit previously obtained by Holchem. Constituents of concern detected in groundwater, soil and soil vapor include but are not limited to PCE, TCE, vinyl chloride (VC), cis-1,2-dichloroethylene (c-1,2-DCE), 1,1-dichloroethene (1,1-DCE), 1,1,1-trichloroethane (TCA), 1,4-dioxane and benzene. Remedial activities including on- and off-site groundwater monitoring, soil vapor extraction (SVE), and high-vacuum dual-phase extraction (HVDPE) have been ongoing since the late 1980s. The DTSC has identified Soco West, Inc. and The Maywood Trust, UTD as the responsible parties for financial liabilities associated with the investigation and corrective actions. In November 2016, a *Remedial Design and Implementation Plan* (RDIP) was prepared by Geosyntec Consultants, Inc. (Geosyntec). The report proposes to demolish the existing structure, install low-permeability slurry walls, flow control gates and a

permeable reactive barrier (PRB), seal the surface of the property with an asphalt cap and install a 1,4-dioxane in situ bioremediation (EISB) system. The DTSC conditionally approved the RDIP on December 5, 2016.

On January 18, 2017, a groundwater monitoring well, identified as MW-44B, was installed approximately 200 feet west of the subject property on the adjacent property at 2601 Hotel Terrace. According to the most recent groundwater monitoring report, this well was last sampled on October 9, 2017. Analytical results indicate that PCE and TCE were detected at concentrations of 1.1 and 3.1 micrograms per liter (µg/L), respectively. These concentrations are below the Maximum Contaminant Level (MCL) of 5 µg/L for both PCE and TCE. Review of the analytical results of the remaining wells sampled during this sampling event suggests the plume is migrating to the south-southwest, away from the subject property. Therefore, based on the analytical results of the October 2017 sampling event associated with MW-44B, it does not appear that groundwater beneath the subject property has been impacted by PCE or TCE above regulatory action levels. As such, no further investigation appears warranted.

- The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used on-site. Storage or mixing of these chemicals on the subject property historically is unlikely as no agricultural maintenance buildings were evident on-site based on our review of available documentation. The subject property is largely either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were generally mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of Assessor's Parcel Numbers (APNs) 016-221-27, 016-221-28, and 016-221-29 in the City of Santa Ana, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property identified by Assessor's Parcel Numbers (APNs) 016-221-27, 016-221-28, and 016-221-29 in the City of Santa Ana, Orange County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1980 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Owner-Builder Declaration

I hereby affirm under penalty of perjury that I am exempt from the Contractors' License Law for the following reason: [illegible] and Professions Code): Any City or County which requires a permit to construct, alter, improve, demolish or repair any [illegible] thereof, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, Commencing with Section 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

__I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structures are not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, one building or improvement is built within any year of completion, the Owner-Builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

__I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a Contractor(s) licensed pursuant to the Contractor's License Law.).

__I am exempt under Section _____ B. & P.C. for this reason.

Date: _____ Owner: _____

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

__I have and will maintain a Certificate of Consent to Self-Insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

__I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier X State Fund

Policy Number X 1726105 - 2005 Expires X 1-1-06

(This section need not be completed if the permit is for One hundred dollars ($100) or less)

__I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date X 1/21/05 Applicant X Robert Deacon

WARNING: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for in Section 3706 of the Labor Code, interest, and attorney's fees.

LICENSED CONTRACTORS DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class X B License Number X 716396

Date X 1-21-05 Contractor X Deacon Construction

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name: _____

Lender's Address: _____

APPLICANT'S DECLARATION

Demolition Permits-Asbestos Notification Federal Regulations (Title 40, Part 61)

__Required Letter of Notification

__I certify that the federal regulations regarding asbestos removal are not applicable to this project.

X I certify that I have read this application and state that the above information is correct. I agree to comply with all City and County ordinances and State Laws relating to building construction, and hereby authorize representatives of this City and County to enter upon the above-mentioned property for inspection purposes.

Owner-Builder Declaration

I hereby affirm under penalty of perjury that I am exempt from the Contractors' License Law for the following reason (Sec. 7031.5 Business and Professions Code: Any City or County which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, Commencing with Section 7000 of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec.7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

___I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of the property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

___I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a Contractor(s) licensed pursuant to the Contractor's License Law.)

___I am exempt under Section _____ B. & P.C. for this reason

Date: _____ Owner: _____

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

___I have and will maintain a Certificate of Consent to Self-Insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

X I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier X State Fund

Policy Number X 7726105-2005 Expires X 1-1-06

(This section need not be completed if the permit is for One hundred dollars ($100) or less)

X I certify that in the performance of the work for which this permit is issued, I shall not employ any persons in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date X 1-21-05 Applicant X Robert J Deacon

WARNING: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for by Section 3706 of the Labor Code, interest and attorney's fees.

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class X B License Number X 716396

Date X 1-21-05 Company X Onti Construction Inc

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name: _____

Lender's Address: _____

APPLICANT'S DECLARATION

Dish Size: Permit Antenna Not Restrict Federal Regulations (Title 47, Part 47)

___ Required Letter of Non Restrict

___I certify that the federal regulations regarding antenna restrictions are not applicable to this project.

X I certify that I have read this application and state that the above information is correct. I agree to comply with all City and County ordinances and State Laws relating to building construction, and hereby authorize representatives of the City and County to enter upon the above mentioned property for inspection purposes.

Applicant or agent sign X Robert Deacon Date X 1-21-05

1. INTRODUCTION

This report describes the fourth quarter 2017 groundwater monitoring event for the Former Service Chemical Facility located at 1341 East Maywood Avenue, Santa Ana, California (Property, **Figure 1**). Geosyntec Consultants, Inc. (Geosyntec) has prepared this report on behalf of Soco West, Inc. (Soco). The scope of this monitoring event was detailed in the Pre-Remedial Design Investigation and First Quarter 2017 Groundwater Monitoring Report (Geosyntec, 2017a), and modified by the 29 September 2017 memorandum (Geosyntec, 2017b), which was approved by the Department of Toxic Substances Control (DTSC) by email on 4 October 2017.

1.1 Property Background

The Property is approximately 120 feet by 200 feet in area (approximately 0.5 acres) and is covered with asphalt pavement and concrete. An approximately 2,000-square-foot single-story building with a canopy is located near the southern boundary. The Property and downgradient area lie in the western portion of the Tustin Plain alluvial lowland within the Orange County Groundwater Basin (Basin).

1.2 Property Geology and Hydrogeology

The geology and hydrogeology of the Property were described in the Resource Conservation and Recovery Act (RCRA) Facility Investigation and Data Gap Analysis Report and were summarized in the Feasibility Study/Remedial Action Plan (FS/RAP) (Geosyntec, 2015a). Beneath the Property, the shallow aquifer system consists of five hydrostratigraphic units (HSUs): silt/clay-dominated facies comprising HSUs 1, 2, and 4, and sand-dominated facies comprising HSUs 3 and 5 (ARCADIS, 2002). Characteristics of the five HSUs that comprise the shallow aquifer system are presented in the following table. Based on the subsurface data for the Property, it was determined that groundwater is under semi-confined to confined conditions and generally has a downward vertical gradient (ARCADIS, 2009).

HSU	Approximate Depth at the Property (feet bgs)	Approximate Elevation (feet amsl)	Lithology
1	0 to 10	65 to 55	Sandy silts and silty/clayey silts with perched water
2	10 to 50	55 to 15	Silts and clays with sandy silt lenses, low permeability soil
3	50 to 75	15 to -10	High permeability sands, silts, and clays
4	75 to 115	-5 to -50	Low permeability silts and clays (acts as a competent aquitard/semi-confining unit)
5	115 to ≥ 137	-50 to ≥ -72	High permeability sand and gravelly sand

Abbreviations:
amsl = above mean sea level
bgs = below ground surface

1.3 Downgradient Geology and Hydrogeology

Investigations of the downgradient area revealed that the hydrostratigraphy to the south of the Property is generally similar to that of the Property with respect to HSU 2 and HSU 3. However, the perched to semi-perched groundwater observed on the Property in HSU 1 has been shown by prior investigations to be a local feature that does not extend southward past the property located at 1331 East Warner Avenue (Warner), known as the former Diesel Logistics Property, or westward to Hathaway Street (ARCADIS, 2012). As noted, HSU 2 is dominated by laterally continuous silts and clays with intermittent and discontinuous thin lenses of slightly more permeable sandy silt and silty sand on the Property. However, some intermediate to high permeability sand units were also identified off-Property at depths between 16 and 22 feet, especially east of the Property on the south side of Warner. Overall, HSU 2 is predominantly a low-permeability unit where transport is primarily diffusive, resulting in limited lateral flux (ARCADIS, 2012). In consideration of this, HSU 3 is the primary downgradient transport pathway for solutes, and groundwater flow in HSU 3 is generally due south. HSU 4, the aquitard that underlies HSU 3 on the Property, similarly extends downgradient from the Property (i.e., south) (ARCADIS, 2012).

1.4 Report Organization

The remainder of this report is organized as follows:

- Section 2, *Fourth Quarter 2017 Groundwater Monitoring Field Activities*, describes activities conducted during the fourth quarter monitoring event including water level gauging, low-flow monitoring well sampling, and investigation-derived waste (IDW) management;
- Section 3, *Groundwater Monitoring Results*, describes the analytical results of samples collected during the fourth quarter 2017 monitoring event;
- Section 4, *Schedule*, presents the schedule for subsequent groundwater monitoring events; and
- Section 5, *References*, lists the documents cited within this report.

2. FOURTH QUARTER 2017 GROUNDWATER MONITORING FIELD ACTIVITIES

The fourth quarter 2017 groundwater monitoring activities were performed from 9 to 13 October 2017 in accordance with the Pre-Remedial Design Work Plan (Work Plan) (Geosyntec, 2015b) and consistent with historical monitoring of groundwater wells located on or north of Warner (ARCADIS, 2017). The fourth quarter 2017 groundwater monitoring event consisted of gauging groundwater elevation at 56 wells and sampling 52 wells (i.e., 30 of the 34 wells located on or north of Warner plus the 22 wells installed south of Warner). W-3 and W-6 were not sampled during this monitoring event due to insufficient water in the wells for purging and sampling. Monitoring activities were conducted by Blaine Tech, Inc. of Los Angeles, California, in accordance with the current low-flow purging and sampling protocols published by the United States Environmental Protection Agency (EPA) and DTSC (EPA, 2010; DTSC 2008).

2.1 Pre-Field Activities

Prior to the start of field activities, access was coordinated with the owners of the Property and the following properties located south of Warner:

- Hardy and Harper, Inc. at 1312 Warner;
- City of Santa Ana/Orange County Fire Authority Fire Station 79 at 1320 Warner;
- Heritage Paper at 2400 South Grand Avenue;
- PS Business Parks at 1241 East Dyer Road;
- Clarion Inn & Suites at 2620 Hotel Terrace;
- Spoons Grill and Bar at 2601 Hotel Terrace;
- Holiday Inn at 2726 South Grand Avenue; and
- La Quinta at 2721 Hotel Terrace.

In addition, the collection of split samples at Property wells was coordinated with Embee, Inc.'s (Embee) consultant, Stantec, Inc. (Stantec).

2.2 Groundwater Depth Measurement

The depth to water within each monitoring well at the Property was measured within a 6-hour period at the beginning of the sampling event on 9 October 2017. Depth to static water level was performed by measuring the vertical distance from a surveyed reference point on the well casing to the water level within each groundwater well. Field personnel measured the depth to water to the nearest 0.01 feet using an electric water level indicator consisting of a graduated cable and probe. The water level indicator was decontaminated prior to placement into each well.

Monitoring wells MW-9, EP-1, and EP-2 are located on the Embee site to the north of the Property and were gauged and sampled by Stantec on behalf of Embee. The results through the third quarter are presented as **Appendix A**.

2.3 Groundwater Sampling

Prior to sampling, field personnel purged each well according to EPA-recommended low-flow procedures while monitoring depth to water, temperature, pH, specific conductance, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity using a YSI Professional Plus handheld meter. Wells were purged using a bladder pump which was connected to new tubing and slowly lowered into the well to minimize any mixing of the water column, and placed in the middle of the screen at a maximum depth of approximately 1 to 5 feet above the total depth of the well. The pump was operated at a controlled rate between 50 and 400 milliliters per minute (mL/min) to minimize drawdown (a target of less than 0.33 feet of drawdown in each well) and to reduce agitation of the water within the well. Once the pump was started, the purge flow rate was adjusted as necessary to meet the specified flow rate.

The purging process continued until water quality parameters stabilized to within 10% for three consecutive measurements. Upon parameter stabilization, samples were collected by allowing a steady, non-turbulent flow of water into laboratory-prepared sample containers that were provided and certified as clean by Eurofins Calscience, Inc. of Garden Grove, California (Eurofins). Sample containers were stored on ice in a cooler and transferred to Eurofins under standard chain-of-custody protocol. Field quality control (QC) samples including trip blanks, equipment blanks, field sample duplicates, and matrix spike/matrix spike duplicates (MS/MSD) were also collected during monitoring.

2.4 Equipment Decontamination

Non-dedicated sampling equipment was decontaminated before and after samples were collected. Decontamination consisted of, in the following order: a detergent (e.g., Alconox®) and water wash, potable water rinse, and distilled water rinse.

2.5 Waste Management

Purged groundwater and decontamination water from the fourth quarter 2017 monitoring event was containerized in one 55-gallon Department of Transportation (DOT)-approved steel drum. On 27 October 2017, the drum was transported to the Demenno-Kerdoon recycling facility in Compton, California by Belshire Environmental, Incorporated (Belshire).

3. GROUNDWATER MONITORING RESULTS

The results from the fourth quarter 2017 groundwater monitoring activities are documented in the following sections.

3.1 Groundwater Elevations and Hydraulic Gradients

The following section summarizes the groundwater elevation data collected during the fourth quarter 2017 monitoring event. A summary of the groundwater elevation data is provided in **Appendix B**. Groundwater potentiometric surface maps for HSU 1 and HSU 3 are presented in **Figure 3** and **Figure 4**, respectively. A groundwater potentiometric surface map was not developed for HSU 2 due to variable groundwater elevations, nor for HSU 5 due to insufficient well coverage because HSU 4 acts as an aquitard and HSU 5 does not show impacts by Property contaminants.

3.1.1 HSU 1

HSU 1 is a relatively thin unit (i.e., approximately 10 feet thick) composed of laterally continuous interbedded sandy silts and silt/clayey silts present between approximately 65 and 55 feet amsl (i.e., ground surface and approximately 10 feet bgs) (ARCADIS, 2009). Off-Property investigations suggest that HSU 1 does not extend past the former Diesel Logistics property or westward to Hathaway Street (ARCADIS, 2012).

Excluding wells PB-2 and PB-3, which are screened in both HSU 1 and HSU 2, the groundwater elevation data collected during the fourth quarter of 2017 from wells within HSU 1 (i.e., W-1 through W-6) show a maximum decrease in groundwater elevation of 1.60 feet at W-6 as compared to the third quarter of 2017. Groundwater elevations in HSU 1 ranged from 51.22 (W-6) to 52.89 (W-4) feet amsl (i.e., 12.39 to 11.09 feet bgs). Based on the current data, the apparent hydraulic gradient within HSU 1 in the southern portion of the Property is oriented to the east-northeast with a magnitude of approximately 0.010 feet per foot (ft/ft), and to the east-southeast in the northern portion of the site with a magnitude of approximately 0.016 ft/ft (**Figure 3**). Historically, the hydraulic gradient in HSU 1 has been oriented to the south/southeast.

3.1.2 HSU 2

HSU 2 soils are found at depths between approximately 10 to 45 feet bgs (approximately 55 to 20 feet amsl) north of Warner and from ground surface to depths ranging from 35

to 50 feet bgs between Warner and Dyer Road. HSU 2 soils are dominated by laterally continuous low-permeability silts and clays with occasional thin discontinuous interbeds of more permeable sandy silt lenses (ARCADIS, 2009). Wells screened within HSU 2 have hydrostatic heads typically stabilizing at depths between 15 and 17 feet bgs (approximately 49 to 46 feet amsl). As previously reported, the observed head variations within HSU 2 are the result of the wide range of permeabilities within the heterogeneous HSU 2 soils and are influenced and/or controlled by an individual well's screen interval within the unit.

During the fourth quarter of 2017, the groundwater elevation in wells screened in HSU 2 ranged from 41.20 feet amsl (MW-20) to 51.21 feet amsl (MW-8) (i.e., 21.91 to 12.16 feet bgs) on or north of Warner, and from 40.84 feet amsl (MW-37A) to 50.93 feet amsl (MW-33A) (i.e., 22.50 to 11.66 feet bgs) south of Warner.

3.1.3 HSU 3

HSU 3 is composed of channel sands and associated bank and flood plain silts and clays present at elevations between approximately 15 feet amsl and 10 feet below mean sea level (bmsl) (approximately 50 to 75 feet bgs) on-Property and 30 feet amsl to 5 feet bmsl (approximately 35 to 70 feet bgs) off-Property. Wells constructed within HSU 3 have hydrostatic heads typically stabilizing at depths between 15 and 22 feet bgs (approximately 50 to 43 feet amsl). Groundwater elevation measurements collected during the fourth quarter of 2017 from monitoring wells with screen intervals in HSU 3 show an average increase of 0.29 feet, with a maximum increase of 1.16 feet recorded in well MW-33B as compared to third quarter 2017 data. Based on the current data, the hydraulic gradient in HSU 3 is oriented generally to the south between the Property and approximately 1,600 feet south of the Property (i.e., at the southern boundary of Southern California Edison [SCE] Johanna substation) with a gradient of 0.0033 ft/ft (**Figure 4**). South of the SCE substation, the apparent groundwater gradient direction becomes south/southwest with a gradient of 0.0020 ft/ft.

Paired wells screened in HSU 2 and HSU 3 on the Property (i.e., MW-24/MW-11 and MW-26/MW-13) indicated mixed vertical gradients. The MW-24/MW-11 pair had a downward gradient of 0.11 ft/ft and the MW-26/MW-13 pair had an upward gradient of 0.006 ft/ft. The paired wells south of Warner screened in HSU 2 and HSU 3 (i.e., MW-32A/B through MW-37A/B) indicated downward vertical gradients, ranging from 0.017 ft/ft (MW-37A/B) to 0.356 ft/ft (MW-33A/B).

3.1.4 HSU 5

HSU 5 is composed of the sand and gravelly sand units present at depths from approximately 115 feet bgs to at least 132 feet bgs (approximately 50 feet bmsl to 72 feet bmsl) near the Property. The total thickness of HSU 5 has not been completely investigated at the Property, as it has not been shown to be impacted.[1]

Wells screened within HSU 5 have hydrostatic heads typically stabilizing at depths between 21 and 25 feet bgs (approximately 42 to 46 feet amsl). In the past, however, wells screened within HSU 5 have had hydrostatic heads stabilizing at depths as shallow as 17 feet bgs (approximately 47 feet amsl). During the fourth quarter of 2017, increases of 1.05 and 0.83 feet were observed in wells D2-B2 and D3-B2, respectively, relative to third quarter 2017 groundwater elevations. Since the destruction of well D-1 during the second quarter of 2013, only two wells remain that are screened in HSU 5 (i.e., D2-B2 and D3-B2) so contouring this hydrostratigraphic unit is no longer possible.

3.2 Groundwater Sampling Results

The constituents of potential concern (COPCs) in groundwater identified in the FS/RAP are the chlorinated volatile organic compounds (VOCs) tetrachloroethene (PCE), trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, and 1,1,1-trichloroethane (1,1,1-TCA), plus 1,4-dioxane. The COPCs detected in groundwater during the fourth quarter 2017 monitoring event are presented in **Table 2**. The additional Embee data through the third quarter are presented as **Appendix A**. Sampling field data, laboratory analytical data reports, and historical groundwater analytical data are provided in **Appendix C** through **Appendix F**, respectively.

[1] Well D-1 was formerly screened in HSU 5 and located on-Property. VOCs were observed at well D-1 that occasionally exceeded 100 micrograms per liter (µg/L) from the time of well installation in 1992 to March 2000. Since that time, the total VOC concentration demonstrated a decreasing trend to 10 µg/L in the fourth quarter of 2012. The groundwater monitoring data for well D-1 suggest that the VOC pulse was associated with cross-contamination during well construction and that there is no hydraulic communication between HSU 3 and HSU 5 (ARCADIS, 2009). Well D-1 was abandoned in May 2013 to eliminate potential cross contamination to HSU 5 (ARCADIS, 2013).

3.2.1 HSU 1

COPC concentrations in HSU 1 wells are shown in **Figure 5** and **Table 2**. Six wells (i.e., PB-2, PB-3, W-1, W-2, W-4, and W-6) were sampled during the fourth quarter 2017 groundwater monitoring event.[2] Monitoring wells W-3 and W-6 were not sampled during the fourth quarter due to insufficient water in the well to purge and sample. The respective COPC concentrations were as follows:

- PCE: 190 to 11,000 µg/L;
- TCE: 200 to 170,000 µg/L;
- 1,1-DCE: 29 to 48,000 µg/L;
- cis-1,2-DCE: <2.0 to 6,900 µg/L;
- Vinyl chloride: <1.0 to 48 µg/L;[3]
- 1,1,1-TCA: <2.0 to 44,000 µg/L; and
- 1,4-Dioxane: 560 to 18,000 µg/L.

The COPC concentrations observed in HSU 1 during the fourth quarter of 2017 were consistent with historical concentrations.

3.2.2 HSU 2

COPC concentrations in HSU 2 wells are shown in **Figure 6** and **Table 2**. The ranges of COPC concentrations in the 16 HSU 2 wells on or north of Warner (i.e., MW-7, MW-10, MW-15 through MW-20, and MW-24 through MW-31) were as follows:

- PCE: <1.0 to 19,000 µg/L;
- TCE: 6.3 to 230,000 µg/L;
- 1,1-DCE: <1.0 to 100,000 µg/L;
- cis-1,2-DCE: <1.0 to 18,00 µg/L;

---

[2] PB-2 and PB-3 are screened across HSU 1 and HSU 2.
[3] PB-2 and PB-3 were non-detect for vinyl chloride with reporting limits of 250 µg/L and 500 µg/L, respectively.

- Vinyl chloride: <0.50 to 790 µg/L;[4]
- 1,1,1-TCA: <1.0 to 33,000 µg/L; and
- 1,4-Dioxane: <1.0 to 54,000 µg/L.

Concentrations of COPCs in HSU 2 wells on or north of Warner were consistent with historical concentrations.

Of the six HSU 2 wells south of Warner (i.e., MW-32A, MW-33A, MW-34A, MW-35A, MW-36A, and MW-37A), COPCs were detected only in wells MW-35A, MW-36A, and MW-37A. Concentrations for VOCs were as follows:

- PCE: <1.0 to 6.3 µg/L;
- TCE: <1.0 to 1,600 µg/L;
- 1,1-DCE: <1.0 to 71 µg/L;
- cis-1,2-DCE: <1.0 to 23 µg/L; and
- 1,4-Dioxane: <1.0 to 13 µg/L.

Since monitoring began, these were the first detections of TCE in MW-35A (8.4 µg/L) and MW-37A (1.1 µg/L). The equipment blank collected on the same sampling date as MW-37A, 10 October 2017, also had a detection of TCE at a concentration of 1.1 µg/L (see Section 3.2.5). Therefore, the groundwater monitoring data indicate that VOCs present in the low permeability silts and clays in HSU 2 are limited to the Property and the former Diesel Logistics property and are not migrating south of Warner. The VOCs detected at wells MW-35A and MW-36A, located approximately 200 and 400 feet east of the plume centerline, respectively, are from one or more upgradient sources and not from the Property.

3.2.3 HSU 3

COPC concentrations in HSU 3 wells are shown in **Figure 7** and **Table 2**. HSU 3 wells located on or north of Warner that were sampled during the fourth quarter 2017

[4] MW-24 was non-detect for vinyl chloride with a reporting limit of 1,000 µg/L.

groundwater monitoring event included MW-11, MW-12, MW-13, MW-22, MW-23, D2-B1, and D3-B1. The ranges of COPC concentrations were as follows:

- PCE: 4.0 to 320 µg/L;
- TCE: 56 to 4,200 µg/L;
- 1,1-DCE: <1.0 to 930 µg/L;
- cis-1,2-DCE: 1.5 to 2,500 µg/L;
- Vinyl chloride: <0.50 to 46 µg/L;
- 1,1,1-TCA: <1.0 to 5.2 µg/L;[5] and
- 1,4-Dioxane: 8.5 to 1,500 µg/L.

Concentrations of COPCs observed during the fourth quarter of 2017 in wells located on or north of Warner were generally consistent with historical concentrations.

The ranges of COPC concentrations in HSU 3 monitoring wells south of Warner (i.e., MW-32B through MW-47B) were as follows:

- PCE: <1.0 to 220 µg/L;
- TCE: <1.0 to 5,000 µg/L;
- 1,1-DCE: <1.0 to 510 µg/L;
- cis-1,2-DCE: <1.0 to 2,000 µg/L;
- Vinyl chloride: <0.5 to <10 µg/L;
- 1,1,1-TCA: <1.0 to <20 µg/L; and
- 1,4-Dioxane: <1.0 to 620 µg/L.

Concentrations of COPCs in HSU 3 wells south of Warner were consistent with concentrations detected during the third quarter 2017 sampling event.

[5] MW-22 and MW-23 were non-detect for 1,1,1-TCA with reporting limits of 50 µg/L and 20 µg/L, respectively.

3.2.4 HSU 5

HSU 5 wells D2-B2 and D3-B2 were sampled during the fourth quarter 2017 groundwater monitoring event. VOCs and 1,4-dioxane were not detected above the laboratory reporting limits in either well, confirming HSU 5 is not impacted by COPCs. COPC concentrations in HSU 5 wells are shown in **Figure 8** and **Table 2.**

3.2.5 Field Quality Control Samples

Field QC samples that were collected during monitoring included trip blanks, equipment blanks, field sample duplicates, and MS/MSD. VOCs were not detected in the trip blanks submitted during the fourth quarter 2017 groundwater monitoring event, nor in any of the laboratory-analyzed equipment blanks with the exception of a TCE detection at a concentration of 1.1 µg/L in EB-1, which was collected on 10 October 2017. As discussed in Section 3.2.2 above, the TCE detection of 1.1 µg/L in well MW-37A is potentially attributable to equipment contamination, and has been flagged in **Table 2** accordingly.

The analytical results from the submitted duplicate samples are generally consistent with results of their associated parent groundwater samples. Relative percent differences (RPD) were less than 30% except PCE and TCE at MW-44B, which had RPDs of 37% and 41%, respectively.

The MS/MSD sampling results for site COPCs were generally within the control limits, but matrix spike interference was suspected for the following exceptions:

- 1,4-dioxane at MW-30; and
- 1,4-dioxane and cis-1,2-DCE at MW-26.

The laboratory control sample (LCS) associated with each of the above MS/MSD samples was within control limits.

Based on QC review of the laboratory analytical results, the data are of acceptable quality for the intended purposes of this report.

4. SCHEDULE

At the request of DTSC, the installation of groundwater monitoring well MW-48 at 1251 East Dyer Road is planned for January 2018. Groundwater monitoring in 2018 will be conducted according to the Groundwater Sampling Schedule included as **Appendix G.**

Notes:

Split samples were not collected from the Soco West wells during third quarter 2015;
Arcadis was unable to access the site during the scheduled sample event.

USEPA = U.S. Environmental Protection Agency
SM = Standard Method
bgs = below ground surface
mg/L = Milligrams per liter
µg/L = Micrograms per liter
<x.xx = Analyte not detected at or above the stated reporting limit.
* = Data from Arcadis' "Third Quarter 2009 Groundwater Monitoring Report, Former Service Chemical Facility" (Table 1), October 30, 2009.
BS =Compound was found in the blank and sample
FQ = MS and/or MSD Recovery is outside acceptance limits.
H = Sample was prepped or analyzed beyond the specified holding time.
J = Estimated value detected below the laboratory reporting limit.
LQ LCS or LCSD is outside the control limits
I = Spectrofluorophotometer operated under synchronous scan protocol.
2 = A fluorescein peak is present that is near or in the normally acceptable wavelength range for eosine dye.
3 = USEPA Method 314.0 used prior to May 2010
ND = Not detected.
- = Not analyzed.
NS = Not sampled.
Bold Indicates analyte was detected at or above laboratory reporting limit.

1,1,1-TCA = 1,1,1-Trichloroethane
1,1,2-TCA = 1,1,2-Trichloroethane
1,1-DCA = 1,1-Dichloroethane
1,1-DCE = 1,1-Dichloroethene
1,2-DCA = 1,2-Dichloroethane
CF =Chloroform
cis -1,2-DCE = *cis* -1,2-Dichloroethene
Freon 113 = Trichlorotrifluoroethane
PCE = Tetrachloroethene
TCE = Trichloroethene
trans -1,2-DCE = *trans* -1,2-Dichloroethene
VC = Vinyl chloride
TVOCs = Total volatile organic compounds
VOC = Volatile organic compounds

TABLE D-2
Historic VOC and 1,4-Dioxane Data in Groundwater - Through Third Quarter 2017

Embee Processing
2136 South Hathaway Street
Santa Ana, CA

Notes:
Only compounds detected in one or more sample are presented. See the laboratory reports for a complete list of analytes and reporting limits.
Data from September 1991 through to September 2003 were referenced from Appendix D - Summary of Groundwater Laboratory Analytical Data - Current and Historical, Revised Third Quarter 2003 Groundwater Monitoring Report, December 22, 2003, Arcadis G&M, Inc.

<x.xx = Analyte not detected at or above the stated reporting limit.

USEPA = U.S. Environmental Protection Agency
µg/L = micrograms per liter
NA = Not analyzed
NS = Not sampled
- = Not analyzed

Qualifier Definitions:

B	Indicates analyte was found in associated blank, as well as in the sample.
BW	Matrix spike recovery below acceptance limits
BS	Compound was found in the blank and sample
FQ	MS and/or MSD Recovery is outside acceptance limits.
FW	Surrogate recovery could not be calculated.
H	Sample was prepped or analyzed beyond the specified holding time.
J	Estimated result. Result is less than the reporting limit.
LQ	LCS or LCSD is outside the control limits
LV	Elevated reporting limits due to limited sample volume.
ME	Matrix Spike recovery non calculable due to matrix interference and/or high sample concentration.
R	Result is not consistent with historic data, or the parent sample, and is considered not reliable.
RL	Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.
Bold	Indicates analyte was detected at or above laboratory reporting limit.

Analyte Abbreviations:

1,1,1,2-PCA = 1,1,1,2-Tetrachloroethane	CB = Chlorobenzene
1,1,1-TCA = 1,1,1-Trichloroethane	CF = Chloroform
1,1,2-TCA = 1,1,2-Trichloroethane	cis -1,2-DCE = cis-1,2-Dichloroethene
1,1-DCA = 1,1-Dichloroethane	Freon 11 = Trichlorofluoromethane
1,1-DCE = 1,1-Dichloroethene	Freon 113 = 1,1,2-Trichlorotrifluoroethane; trichlorofluoroethane
1,2-DCA =1,2-Dichloroethane	MTBE = Methyl-tert butyl ether
1,2-DCP = 1,2-Dichloropropane	PCE = Tetrachloroethene
1,2,4-TMB = 1,2,4-Trimethylbenzene	SVOCs = Semivolatile Organic Compounds
1,3-DCP = 1,3-Dichloropropane	TCE = Trichloroethene
DBCM = Dibromochloromethane	*trans* -1,2-DCE = trans-1,2-Dichloroethene
DBCP =1,2-Dibromo-3-chloropropane	VC = Vinyl Chloride
BDCM = Bromodichloromethane

Notes:

USEPA = U.S. Environmental Protection Agency
mg/L = Milligrams per liter.
µg/L = Micrograms per liter.
<x.xx = Analyte not detected at or above the stated reporting limit.
NS = Not Sampled
- = Not Analyzed

Qualifier Definitions:

^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
(d)	Analyzed by EPA method 200.7
B	The compound was found in the blank and the sample.
BS	Compound was found in the blank and sample
BW	Matrix spike recovery below acceptance limits
FQ	MS and/or MSD Recovery is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time.
HO	Sample was originally processed within hold time. Data quality required investigation. Re-analysis was completed past recommended hold time.
J	Estimated value; less than reporting limit, but greater than the method detection limit.
MS	Matrix spike exceeds acceptance limits due to matrix inteference.
tr	Trace result, below Practical Quantitation Limit.
TS	The reporting limit for this analyte has been raised to account for matrix interference.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-0685 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/10/17. They were assigned to Work Order 17-10-0685.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0685 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-0686 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/10/17. They were assigned to Work Order 17-10-0686.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0686 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-0711 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/10/17. They were assigned to Work Order 17-10-0711.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0711 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-0849 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/12/17. They were assigned to Work Order 17-10-0849.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0849 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-0924 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/12/17. They were assigned to Work Order 17-10-0924.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-10-0924 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-10-1064 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/13/17. They were assigned to Work Order 17-10-1064.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.
