October 26, 2022

Draft Environmental Impact Report (Draft EIR) for the Proposed Artisan Hollywood Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Los Angeles is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments include recommended revisions to the CEQA regional air quality analysis during construction, project-level air quality mitigation measures for construction, revision of the toxic air contaminant analysis in the air quality section, and information about South Coast AQMD permits that the Lead Agency should include in the Final EIR.

South Coast AQMD Staff's Summary of Project Information in the Draft EIR

Based on the Draft EIR, the Lead Agency proposes the development of a 25-story building consisting of 270 multi-family residential units and 6,790 square feet of ground floor commercial space, 30,918 square feet of open space, and recreational amenities.¹ The Proposed Project includes removing the existing surfacer parking area and ornamental landscaping.² The Proposed Project would retain six existing buildings of approximately 33,828 square feet.³ With the inclusion of the existing buildings, the Proposed Project would result in 300,996 square feet of floor area.⁴ The Proposed Project's construction would require exporting up to 69,333 cubic yards of soil.⁵ The Proposed Project is located at 1520-1542 North Cahuenga Boulevard, 1523-1549 North Ivar Avenue, and 6350 West Selma Avenue in the Hollywood Community of Los Angeles.⁶ Based on a review of aerial photographs, South Coast AQMD staff finds that the nearest sensitive receptor (e.g., apartment) is within 150 feet northeast of the Proposed Project. The Proposed Project's construction is anticipated to occur over an approximately 26-month period and is expected to be completed in 2025.⁷

South Coast AQMD Staff's Comments on the Draft EIR

CEQA Regional Emissions Air Quality Analysis during Construction

Based on the Draft EIR, Table IV.A-6: Estimate of Maximum Regional Project Daily Construction Emissions⁸ (pounds per day or lbs/day) shows that the Proposed Project's construction NOx emissions are significantly close to the South Coast AQMD Regional Air Quality Significant Thresholds,⁹ 98 lbs/day compared to 100 lbs/day. Even though the amount of export soil is mentioned as approximately 69,333 cubic yards,¹⁰ in the California Emissions Estimator Model (CalEEMod) construction output files, the Lead Agency identifies zero hauling truck trips for the demolition and grading activities.¹¹ Due to the zero number of hauling truck trips, the emissions from hauling truck trips are calculated as zero.¹² Hence, it is possible that the Lead Agency underestimates the construction emissions. Therefore, South Coast AQMD staff recommends that the Lead Agency revise the CalEEMod analysis to reflect the appropriate hauling truck trips associated with the 69,333 cubic yards of exported soil and include the hauling emissions to the CEQA regional construction emissions, compared to the South Coast AQMD Regional Air Quality Significant Thresholds to determine the significance impacts level, and include it in the Final EIR. In the event that the construction emissions exceed the South Coast AQMD Regional Air Quality Significant Thresholds, the Lead Agency should provide air quality mitigation measures to commit to reducing the environmental impacts from construction activities in the Air Quality Section and include them in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

Additional Recommended Project-Level Air Quality Mitigation Measures during Construction

Based on the Draft EIR, the regional construction emissions are already at 98 lbs/day for NOx and are about to reach the South Coast AQMD Regional Air Quality Significant Thresholds. With the recommendation to revise the construction emissions, including hauling truck emissions, the significant impact level might result differently. In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,¹³ South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 Air Quality Management

⁸ *Ibid.* Page IV.A-58.

⁹ South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at:

<http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>.

¹³ South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at:

<http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>.

Plan,¹⁴ and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.¹⁵

Project-level air quality mitigation measures for construction air quality impacts that the Lead Agency should consider and include in the Final EIR and any subsequent CEQA document and future development projects may consist of the following:

- All off-road construction equipment with horsepower greater than 50 shall be required to have USEPA-certified Tier 4 engines or engines that are certified to meet or exceed the emission ratings for USEPA Tier 4 engines, where feasible. In the event that all construction equipment cannot meet the Tier 4 engine certification, the applicant must demonstrate through future study with written findings supported by substantial evidence that is approved by the Lead Agency before using other technologies/strategies that reductions in the daily NOx and PM_{2.5} emissions can be achieved by other technologies/strategies so that emissions from all concurrent construction would not exceed applicable SCAQMD daily emission thresholds.
- At a minimum, require the use of the 2010 model year¹⁶ that meets CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of PM and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks.
- Tune and maintain all construction equipment to be in compliance with the manufacturer's recommended maintenance schedule and specifications that optimize emissions without nullifying engine warranties. All maintenance records for each piece of equipment and their construction contractor(s) should be made available for inspection and remain onsite for a period of at least two years from the completion of construction.
- Require the use of electric or alternative-fueled (i.e., non-diesel) construction equipment, if available, including but not limited to concrete/industrial saws, pumps, aerial lifts, material hoists, air compressors, forklifts, excavators, wheel loaders, and soil compactors.
- Provide electric vehicle (EV) charging stations or, at a minimum, provide the electrical infrastructure, and electrical panels shall be appropriately sized. Electrical hookups should be provided for trucks to plug in any onboard auxiliary equipment.

¹⁴ South Coast AQMD's 2016 Air Quality Management Plan can be found at:

<http://www.aqmd.gov/docs/defaultsource/Agendas/Governing-Board/2017/2017-mar3-035.pdf> (starting on page 86)

¹⁵ Southern California Association of Governments' 2020-2045 RTP/SCS can be found at:

https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.

¹⁶ CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

Revision of the Toxic Air Contaminant Analysis in the Air Quality Section

In the Air Quality Section in the Draft EIR, the Lead Agency mentions, “*SCAQMD recommends that HRAs be conducted for substantial individual sources of diesel particulate matter (e.g., trucks stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units)*”,¹⁷ and the Lead Agency references it as from South Coast AQMD Health Risk Assessment Guidance.¹⁸ However, this written language is likely to be taken from CARB Air Quality and Land Use Handbook: A Community Health Perspective, under Table 1-1: Recommendations on Sitting New Sensitive Land Uses, and specifically for Distribution Centers.¹⁹ The above statement and Table 1-1 are meant for advisory recommendations on sitting new sensitive land uses (e.g., residences, schools) near distribution centers and other land use types. The Lead Agency may misunderstand the above advisory recommendations from CARB Air Quality and Land Use Handbook because the Proposed Project is not a distribution facility, nor are there any sitting new sensitive receptors near the Project site. Therefore, not including an HRA based on the above statement is misused. South Coast AQMD staff recommend that the Lead Agency remove the above explanation from the toxic air contaminants analysis under the air quality section in the Final EIR.

South Coast AQMD Permits and Responsible Agency

If the implementation of the Proposed Project would require modifying the existing or use of new stationary equipment, including but not limited to emergency generators, fire water pumps, boilers, etc., permits from South Coast AQMD are required. The Final EIR should include a discussion on stationary equipment requiring South Coast AQMD permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project. Any assumptions used for the stationary sources in the Final EIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD’s Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD’s webpage at: <http://www.aqmd.gov/home/permits>.

Conclusion

Pursuant to California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(b), South Coast AQMD staff requests that the Lead Agency provide South Coast AQMD staff with written responses to all comments contained herein prior to the certification of the Final EIR. In addition, when the Lead Agency’s position is at variance with recommendations raised in the comments, the issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice (CEQA Guidelines Section 15088(c)). Conclusory statements do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and to the public who are interested in the Proposed Project.

Project address:1520-1542 North Cahuenga Boulevard ,1523-1549 North Ivar Ave
6350 West Selma Avenue ,Hollywood,California 90028

Dear Artisan Ventures ,
I am writing to you as the owner of Caffe Etc(established in 2004) located just half a block away from the proposed construction site at Selma and Ivar .
I am highly concerned about the construction of this project and the noise and exhaust it could bring into the block.
I have outdoor seating and this could impact my business and customers ability to enjoy it .
Where all the construction vehicles be parked ?
Will they be driving down Selma ?
Will there be street closures ?
Please keep me updated with any further developments .
Thank you
Viviana Pollack

Erin Strelich
City of Los Angeles, Department of City Planning
221 N. Figueroa Street, Suite 1350
Los Angeles, CA 90012

Dear Ms. Strelich,

The purpose of this letter is to outline for you the concerns that The Los Angeles Film School has relative to the Artisan Hollywood project located at 1520-1542 N. Cahuenga Boulevard, 1523-1549 North Ivar Ave. and 6350 West Selma Ave., Hollywood, CA 90028.

Our student-centric institution is unique in a variety of ways. As such, our concerns relative to this project are equally unique. For historical context, The Los Angeles Film School ("LAFS") opened its doors in September of 1999 teaching a non-degree certificate program in immersive filmmaking. With a student body of just 200 at the end of 2000, LAFS operations were conducted from four floors at 6363 Sunset Boulevard. In 2004, the owners of LAFS expanded their educational operation by acquiring the Los Angeles Recording Workshop, now known as the Los Angeles Recording School, located at 6690 Sunset Boulevard. In 2005, LAFS became accredited by the Accrediting Commission of Career Schools and Colleges, a national accrediting agency recognized by the U.S. Department of Education. Shortly thereafter, LAFS gained approval to offer accredited degree programs, commencing with associate degrees in filmmaking, audio arts, game production, and computer animation. In 2005 and 2006, LAFS expanded its facilities throughout 6363 Sunset Boulevard and 6353 Sunset Boulevard; additionally, the LAFS facilities now include the historic Ivar Theatre. In 2015, LAFS began offering accredited baccalaureate degree programs. Now in 2022, LAFS operates four facilities in Hollywood California totaling over 230,000 square feet; services an on-campus student body of over 2500 (with over 12,000 alumni/ae); and offers three associate degree programs and nine baccalaureate degree programs focused on entertainment, audio and music production, film, and business.

As you might imagine, a facility working with film and video cameras, audio gathering equipment, and all the ancillary equipment associated with the training of film and video and audio content production and post-production requires a highly stable environment relatively free of extraneous noise and ground vibration. This is the primary focus of our school's concerns regarding the Artisan Hollywood Project: A 25-story construction project that includes four subterranean parking levels is likely to add a significant level of noise and vibration to the local Sunset – Ivar - Selma intersection location. Moreover, LAFS management is very concerned about the potential for construction at the Artisan Hollywood project to be occurring simultaneously at some periods with construction at 6407 Sunset where a 21-story hotel structure with a four-level subterranean parking structure is planned.

The proposed project would be constructed approximately 50 feet directly west of the Los Angeles Film School's main campus located at 6363 W. Sunset Boulevard, which contains, among other essential facilities, soundstages, a dubbing stage, media editing labs, sound design labs, and classrooms and theater spaces that are central to the Los Angeles Film School's educational mission. Since these uses are particularly sensitive to noise and vibration impacts, the impacts of the proposed project's construction alone could be particularly serious for our school and the learning environment of LAFS students.

In recent projects, the owners of LAFS engaged the services of an acoustical engineering consultant to provide LAFS management with some insight into the potential impact to LAFS operations of this level of construction in

THE
LOS ANGELES®
FILM SCHOOL

the immediate area of LAFS operations. The results of this consultant's analysis indicate to LAFS management that the anticipated construction in the area has the potential to significantly impact LAFS operations at 6363/6353 Sunset Boulevard, unless significant actions are taken by the construction contractors to mitigate the impacts of the significantly increased levels of noise and ground vibrations in the immediate area of the Sunset-Ivar intersection.

In addition to these primary concerns, LAFS management is additionally concerned with the impact on traffic congestion in the area, particularly relative to Ivar Avenue between Sunset and Selma. Access to all LAFS campus parking structures is located on Ivar between Sunset and Selma. We are concerned about the potential use of this section of Ivar for staging of construction equipment and operations, as well as the hauling of debris out and construction materials in throughout the construction period. The level of congestion we anticipate, particularly assuming construction at the Artisan Hollywood Project and 6407 overlaps, is likely to have a substantial impact on our students, future students, and employees being able to access the parking structure.

If the construction envisioned at Artisan Hollywood and 6407 overlaps, the consequence is likely to significantly impact LAFS students' ability to matriculate in a peaceful and stable environment, requiring LAFS to expend non-budgeted amounts to maintain its business operations. If the projects do not overlap, it will result in several years of construction directly next to our school. Similarly, construction at the Artisan Hollywood project may well impact LAFS' ability to attract new students for enrollment in a highly-competitive market. It is worth noting that LAFS hosts monthly campus open houses, which provide prospective students with an opportunity to visit our campus and see our technology in action, interact with our faculty, and provides the major source of new enrollments for our educational services. Should LAFS find itself in a position of having to expend non-budgeted amounts on temporary facilities to maintain its operations – while at the same time incurring a reduction in new enrollments – the impact could be devastating.

For the avoidance of doubt, LAFS management does not oppose development in the Hollywood area. However, it is essential that the city require new developments to employ significant and appropriate mitigation measures and technologies to avoid negative impact on its neighbors. In addition, LAFS management believes that allowing construction projects at The Artisan Hollywood and 6407 to overlap would be detrimental to all existing businesses in the area of the Sunset-Ivar intersection.

We hope and trust that the city will take these concerns to heart while reviewing the Artisan Hollywood Project. We look forward to working with the city and the Artisan Hollywood Project developers to ensure that the project, if approved, is a positive experience for the Hollywood community and does not negatively impact the educational environment for current and future LAFS students.

Best Regards,

Tammy Elliott
President
The Los Angeles Film School

Subject: Concerns regarding the proposed construction at Ivar and Selma

Dear Artisan Ventures, our attention in this matter

Case # ENV-2019-5591-EIR

I am writing to you as a business owner near the proposed construction site at Selma and Ivar. I have concerns about the construction phase of this project bringing a significant amount of noise, debris and fumes to this neighborhood. Easy access and available parking is important to my customers. This is a normally quiet neighborhood and loud construction from such a huge site at peak business hours could negatively affect my business. The Museum of Death has recently relocated to this Selma location and we are relying on a smooth transition from our former location at [6031 Hollywood Blvd](#). Our customers will need easy visual access when locating the new building! We would like to participate in any public comments and meet with the development team to discuss this matter further. Thank you for your attention to this matter! Cheers! Cathee Shultz and James Healy Museum of Death

Hello Erin,

Could you please enter this letter below and its attachment (very important) into the comments for this Case Number: ENV-2019-5591-EIR. Please confirm receipt. Thank you.

Sound Factory
 6357 Selma Ave.
 Los Angeles, CA, 90028
 November 7th, 2022

To: Artisan Ventures
 Project address: [6350 West Selma Avenue, Hollywood, California 90028, 1520–1542 North Cahuenga Boulevard, 1523–1549 North Ivar Avenue.](#)
 Subject: Selma and Ivar development concern letter

Dear Artisan Ventures,

I am writing to you as the property owner of [6357 Selma Ave](#), approximate 50 feet across the street from this proposed construction site on Selma and Ivar. I have serious concerns regarding the construction as it relates to the disruption of my existing recording studio business. After hiring an Acoustic firm specializing in the acoustical impacts of construction as well as specializing in recording studio design, their findings were that this construction would make the operation of our recording facility impossible. As you will see in the detailed attached report, the noise and vibrational pollution will create an environment inhospitable for to our recording operations. Recording with sensitive sound receivers is the one thing we do here.

There is already a precedent for this very circumstance from 2009 with East West Studios and Emerson college and their findings were clear. Construction of this type in this close proximity disrupts the ability for artists to record and for the studio to provide its service. If the studios were to close, even a few days, word can spread quickly in the tightly-knit high-end recording community that the studio is not an adequate recording location and alternatives are found quickly for those artists. Once lost this type of business is lost it very difficult to impossible to get back. This historic recording studio has been in continuous operation since the mid-1960's and is currently home to some of today's brightest music stars. The closure of this iconic studio would not just be a catastrophic loss to our business but could lead to the loss of an important part of Hollywood's musical history.

Beyond the sonic and vibration effects, we understand that the huge scale of this project is outside the guidelines of the Hollywood community plan. Further, what will be done to mitigate the debris, dust and air pollution? It appears that 100's of trucks a day would coming in and out of this area during excavation. Who will clean off the buildings and lot? There are potentially many workers and parked construction vehicles would strain already scarcely available parking. Interruption due to closed roads, accidental damage safety risk from falling object are also concerns.

This project cannot be built with out catastrophic affects to Sound Factory's business.

November 7, 2022

Cameell Hanna
Sound Factory
6357 Selma Ave
Los Angeles, CA 90028

**RE: Comments Regarding the Draft EIR, Noise, and Vibration
Artisan Hollywood Project, Los Angeles, CA**

Dear Cameell:

The following report summarizes our comments regarding noise and vibration from the Artisan Hollywood Project ("the Project") affecting the business operations of Sound Factory.

Executive Summary

- RNS Acoustics was engaged to review the Draft Environmental Impact Report (DEIR) for the Project, with respect to noise and vibration impacts that will affect Sound Factory. It is our professional opinion that the noise analysis does not adequately discuss or address the impacts to Sound Factory's operations as a recording studio. Intrusive noise and vibration from construction is expected to have significant detrimental effects on the ability of Sound Factory to conduct their normal business activities, potentially resulting in grave financial and reputational consequences for the studio.
- The preparer of the Noise Analysis (DEIR Chapter IVG and Appendix G) utilized the California Environmental Quality Act (CEQA) guidelines, Federal Transportation Administration (FTA) and Federal Highway Administration (FHWA) guidelines, Roadway Construction Noise Model (RCNM), and Transportation Noise Model (TNM) to determine the significance and levels of noise and vibration.
- The DEIR states that the Project will result in "Significant and Unavoidable impacts" to Sound Factory, with respect to exterior sound levels and ground-borne vibration (human annoyance) during construction, even with the proposed Project Design Features and Mitigation Methods.
 - The Noise Analysis estimates that the A-weighted Hourly Equivalent Levels from construction will be ~70 dBA LAeq,1hr at Sound Factory's property line, for all 5 primary phases of construction, including the noise barrier mitigation measure (Page IV.G-47, NOI-MM-1). This is ~10 dBA above the existing ambient sound levels, which is a significant increase.
 - The estimated ~70 dBA sound levels are based on NOI-MM-1, which states that temporary sound barriers will be erected at the north property line of the Project and be designed to attenuate sound levels at ground level at the Sound Factory by 15 dBA.
 - The DEIR does not include the specific barrier locations or height. The effectiveness of the sound barriers could be less than 15 dBA depending on the location and height of the noise source, especially if there are any openings in the sound barrier (i.e. site access for vehicles). The Noise Analysis states that with no barrier attenuation, the noise levels would be ~85 dBA at Sound Factory.

- The barriers will not provide any attenuation for noise sources that have line-of-sight to Sound Factory (i.e., noise sources above the ground floor of the project, and haul/delivery trucks on Selma Avenue).
 - Even if the barriers block 15 dBA of sound overall, they will be less effective at blocking low-frequency sounds. The Sound Factory building is also less effective at blocking low-frequency sounds than mid- and high-frequency sounds.
- The Noise Analysis is based on A-weighted Hourly Equivalent Levels, which is required by the CEQA regulations.
 - Hourly Equivalent Levels are an average of the fluctuating sound level over the course of an hour. Individual noise events can temporarily result in noise levels that are significantly louder than the Hourly Equivalent (average) level. Intermittent but frequent loud noise events would be disruptive to recording sessions.
 - A-weighting is commonly used for noise analysis and noise regulations, as it is correlated to how humans perceive the frequency content of sound. A-weighting de-emphasizes the contribution of low-frequency sounds. Large construction equipment can have significant low-frequency sound energy that is not represented by the A-weighted sound level. Building assemblies and noise barriers are less effective at blocking low-frequency sound compared to mid- and high-frequency sound.
- The construction Noise Analysis is based on assumptions about the sound levels, quantities, locations, and duty cycles of the noise generating equipment. The assumptions are based on the preliminary construction plan and FTA/FHWA guideline, which is appropriate for a CEQA EIR. However, the actual sound levels may be even louder at times if the actual equipment used varies compared to the assumptions made in the Noise Analysis.
- The Noise Analysis states that ground-borne vibration from Large Bulldozers, Caisson Drilling, Loaded Trucks, Jackhammers, and haul trucks on Selma Avenue will exceed the 65 VdB threshold for human annoyance at the Sound Factory. These events will also contribute towards ground-borne noise heard in the studios. The perceptible and annoying vibration events are expected to be frequent to near-constant during the Demolition and Excavation phases.
- Construction is anticipated to occur over a 26-month period. The exact construction schedule and length of the various phases is not readily apparent from our review of the DEIR. Los Angeles Municipal Code Section 112.05 indicates that construction is allowed between 7:00 am and 9:00 pm Monday through Friday, 8:00 am to 6:00 pm on Saturday and National Holidays, and at no time on Sundays. Certain phases and construction activities may be more disruptive to recording sessions than others, and it would be helpful to understand the construction schedule in more detail when scheduling clients.
- Occasional noise events, such as loud vehicles accelerating in front of the studio, are slightly audible inside the studios currently, particularly the low-frequency sound components. Intrusive noises from construction and haul/delivery trucks on Selma Avenue are expected to be far more frequent compared to the current ambient noise environment. Even though the studios are designed to a higher standard for sound isolation compared to normal commercial or residential construction, loud intermittent noise events are expected to be audible and annoying inside the studios, and disruptive to recording sessions.
- The remainder of this letter provides additional information regarding Sound Factory studios, the Project noise and vibration impacts to Sound Factory, comments and concerns regarding the DEIR Noise Analysis, and potential additional mitigation measures.

Sound Factory Overview

Sound Factory is located at 6357 Selma Avenue, 50 feet north of the north property line of the Project site. Sound Factory is a world-class recording studio that has been in operation since the late 1960's. Sound Factory has been home to over 2,500 album recordings including many of the most popular classic recordings such as "I Want You Back" by The Jackson 5 and "What's Going On" by Marvin Gaye, and many popular contemporary recordings by top recording artists such as Doja Cat, SZA, HER, and Lizzo. It is the sole remaining studio on the block that once housed three popular studios. So significant is this history that the majority of the stakeholders in the area are rebranding the area as the "Vinyl District."

Sound Factory studios are available 24-hours a day, 7-days a week, to accommodate the needs of artists and producers. The most critical hours of operation are from 8:00 am to midnight, Monday through Sunday.

Sound Factory consists of four primary recording suites (Studios A, B, C, and D), as well as ancillary spaces such as office, lounge, kitchen, restroom, and storage spaces. The recording studios were designed and constructed with various sound isolation techniques to limit sound transfer from room to room, and from exterior to interior. Based on our observations and review of the building plans for one of the studios, the sound isolation construction includes isolated interior walls and ceilings that are decoupled from the exterior structure, additional layers of gypsum board and plywood, thick insulation, sound-lock vestibules, floating floors in certain rooms, very quiet HVAC systems, and interior acoustical treatment.

RNS Acoustics measured the ambient (background) sound levels in the studios to be <= 17 – 23 dBA, depending on the specific space. These are very quiet sound levels, and even breathing or rustling clothes would noticeably increase the noise level. In fact, the ambient sound level at some frequencies was at the noise floor or measurable limit of our Class 1 Sound Level Meter and microphone, so the actual sound levels may be somewhat lower at certain frequencies. These low ambient sound levels are appropriate for a high-quality recording studio, where the highest level of fidelity and dynamic range is desired, both for recording and playback of audio.

While measuring sound levels and observing, there were a few instances where a helicopter or vehicle with loud exhaust was slightly audible inside the studios. Sound Factory staff indicated that such events are usually infrequent enough, or low enough in loudness, that the recording artists and producers can work around them. However, if loud exterior noise events were more frequent, as is expected from the Project construction, then they would be disruptive to recording sessions.

Artisan Project Overview

According to the DEIR Executive Summary (Chapter I – Section 5. Description of the Proposed Project – Page I-6), the Project is designed to include the following features:

- 270 Residential Units
- 6,790 square feet of ground floor commercial space, including restaurant, and retail uses
- 25 stories, 268 feet tall
- Up to 320 vehicle parking spaces
- Subterranean parking levels require estimated maximum depth of excavation of 50 feet below grade, resulting in the export of up to 69,333 cubic yards of soil.

Concerns with Project Construction Noise and Vibration

Definition of Noise Sensitive Receptors

The DEIR indicates that “Although recording studio uses are not defined as noise sensitive receptors by the *L.A. CEQA Thresholds Guide*, potential noise impacts at the nearest recording studios, including the Goya Studios located at 1541 Cahuenga Boulevard (represented by receptor location R4), and the Sound Factory located at 6357 Selma Avenue (represented by receptor location R7), were also evaluated for informational purposes only.” (Page IV.G-20)

- Even though the *L.A. CEQA Thresholds Guide* does not explicitly recognize recording studios as noise sensitive, it is our professional opinion, and common sense, that recording studios are in fact highly sensitive to intrusive noise and vibration. The *L.A. CEQA Thresholds Guide* does state that residential dwellings, auditoriums, and concert halls are noise sensitive receivers, and we would argue that a recording studio is at least as sensitive to intrusive noise as a concert hall or residential dwelling.

Construction Duration and Schedule

The DEIR indicates that construction is expected to take 26 months (Page II-19 – 7. Anticipated Construction Schedule). However, the DEIR does not appear to provide any breakdown of how long each phase is expected to take, or the planned hours of construction. Certain phases and construction activities may be more disruptive to recording sessions than others, and it would be helpful to understand the construction schedule in more detail when scheduling clients.

Estimated Exterior Noise Levels From Construction

The Noise Analysis (Chapter IVG and Appendix G) evaluated five specific construction phases. The analysis used the FHWA Roadway Construction Noise Model to estimate the sound levels at the Sound Factory property line (R7). The analysis first estimated the levels assuming no noise mitigation measures (Page IV.G-35). Based on the very significant increase over ambient noise levels at Sound Factory (and three other noise sensitive receivers), the noise analysis provides Noise Mitigation Measure NOI-MM-1 (Page IV.G-47). NOI-MM-1 states that temporary sound barriers will be erected at the north property line of the Project and be designed to provide a minimum 15 dBA noise reduction at ground level at the Sound Factory.

The following table summarizes the estimated construction noise levels from the various phases without mitigation (Page IV.G-35), and assuming that a 15 dBA attenuation is achieved from the sound barriers (Page IV.G-49).

Construction Phase	A-weighted Hourly Equivalent Level at R7 (dBA LAeq,1hr)	
	Without Mitigation	With 15 dBA Mitigation*
Demolition	85.1	70.1
Grading	85.8	70.8
Mat Foundation	84.9	69.9
Building Foundation	85.3	70.3
Building Construction	85	70
Existing Ambient	59.7	59.7

- *Note* - Concerns about NOI-MM-1 and the assumed 15 dBA sound barrier attenuation are discussed in more detail in the following section.

- The sound levels are calculated based on the FTA / FHWA / RCNM methodologies and guidelines, which is appropriate for a CEQA EIR Noise Analysis. However, A-weighted Hourly Equivalent Levels underestimate the actual impact to a very noise sensitive business such as Sound Factory recording studios.
 - Hourly Equivalent Levels are an average of the fluctuating sound level over the course of an hour. Individual noise events can temporarily result in noise levels that are significantly louder than the Hourly Equivalent (average) level. Intermittent but frequent loud noise events would be disruptive to recording sessions.
 - A-weighting is commonly used for noise analysis and noise regulations, as it is correlated to how humans perceive the frequency content of sound. A-weighting de-emphasizes the contribution of low-frequency sounds. Heavy construction equipment can have significant low-frequency sound energy that is not represented by the A-weighted sound level. Building assemblies and noise barriers are less effective at blocking low-frequency sound compared to mid- and high-frequency sound.
 - The calculated levels are assumed to be based on a construction plan shared with the preparer of the Noise Analysis, or generic scenarios outlined by FTA guidelines. The calculations are based on assumptions about the locations, quantities, maximum sound levels, and duty cycle of each piece of equipment per phase. It is possible that the noise levels could be louder if there are different types or additional pieces of equipment used compared to the assumptions (i.e. to meet a deadline). It is also possible that certain pieces of equipment could be louder than the assumptions used for the analysis.

Mitigation Measure NOI-MM-1 – Temporary Sound Barriers (Page IV.G-47)

Mitigation Measure NOI-MM-1 indicates that “temporary and impermeable sound barriers shall be erected” ... “along the northern property line of the Project Site between the construction areas” ... “and the Sound Factory Recording Studio (receptor location R7) (Page IV.G-47). The temporary sound barrier shall be designed to provide a minimum 15 dBA noise reduction at the ground level of receptor locations R1 and R7.”

- Sound barrier walls are typically limited to a theoretical maximum of 20-25 dBA attenuation, and 10-15 dBA is more common for real world conditions and constraints.
- Sound barrier effectiveness depends on the height of the wall compared to the heights of the noise source and receiver, as well as the location of the source and receiver in relation to the barrier. Sound can also flank around the sides of the barrier if it does not fully enclose the sound source(s).
- For example, it is possible that a sound barrier could attain 15 dBA attenuation for a sound source close to the barrier wall, but less attenuation would be attained for a sound source that is closer to the top of the barrier or further from the barrier.
- The sound barrier will only be effective for noise sources located at or below ground level. The sound barrier will provide no attenuation for sound sources located above the height of the fence.
- Barriers (and buildings) are less effective at attenuating low-frequency sounds compared to mid- and high-frequency sounds. It is possible that a barrier wall could attenuate a noise by 15 dBA, but the same barrier would block a lesser amount of low-frequency sound.

Exterior to Interior Sound Isolation of the Sound Factory Building

During our measurements on October 31, 2022, we had a sound level meter at the corner of Selma and Ivar, and a sound level meter inside Studio B Live Room, operating simultaneously for 15 minutes (1:31:30 to 1:46:30 pm).

- The interior ambient level was <= 17 dBA when there were no extraneous or intrusive noises, and the exterior ambient level was 64.7 dbA LAeq,15min.
- A motorcycle passed by the exterior sound level meter, and briefly increased the exterior noise level to 78.9 dBA LAeq,4sec and 82.6 dBA (Fast Maximum). During the same 4 second period, the motorcycle was audible inside, and the interior sound level increased from 17 dBA ambient to 25.6 dBA LAeq,4sec and 30.3 dBA (Fast Maximum). The intrusive sound was 13+ dBA above ambient for the loudest portion of the noise event (Fast Maximum), which is a significant increase in loudness.
- From this noise event, we can estimate that the building is attenuating exterior noise by approximately ~52 dBA. At low frequencies below 100 Hz (bass), the building only attenuated 20-38 dB of exterior noise, depending on the specific frequency. Note that standard commercial and residential construction including windows usually attenuates exterior noise by 25-35 dBA.
- From this noise event, we can also see how a brief intermittent noise can be significantly louder than the Equivalent Level over a longer period.
- Even though the studios are designed to a higher standard for sound isolation compared to normal commercial or residential construction, loud intermittent noise events are expected to be audible and annoying inside the studios, and disruptive to recording sessions.

Construction Traffic Noise / Haul Route

The DEIR indicates the following regarding construction traffic and the proposed haul route:

- “Construction delivery/haul trucks would travel on approved truck routes between the Project Site and the Hollywood Freeway (US-101). Incoming trucks would exit US-101 onto Gower Street, travel south on Gower Street, and west on Selma Avenue to the Project Site. Outgoing trucks would exit the Project Site onto Selma Avenue, head east on Selma Avenue, north on Argyle Avenue, and onto the US-101 south bound on-ramp” (Page IV.G-32).
- “Haul truck activities are typically restricted to the non-commuter peak hours (e.g. 9:00 AM to 3:00 PM).” (Appendix I, Page 85). The Approved Haul Route (subject to Permit) confirms these peak hour restrictions (Appendix I.4).
- “Based on projections compiled for the Project, 69333 cubic yards of material would be removed from the Project Site. This period is estimated to require up to 100 haul trucks per day. Thus, up to 200 daily haul truck trips (100 inbound, 100 outbound) are forecast to occur during the excavation period, with approximately 34 trips per hour (17 inbound, 17 outbound) uniformly over a six-hour off-peak hauling period.” (Appendix I, Page 86)
- “It is assumed that the peak period of construction with the highest number of construction trucks would occur during the concrete mat foundation phase, which would include 335 concrete trucks per day (670 truck trips) per day for two days” (Page IV.G-37) based on a 16-hour work day (Page IV.G-37, Table IV.G-12, note b).

We have the following comments and concerns regarding Construction Traffic noise:

- Assuming the above numbers are accurate, during the excavation phase there will be a constant stream of dump trucks passing by Sound Factory, approximately once every 105 seconds between 9:00 am and 3:00 pm. For the anticipated two days of mat foundation pouring, there will be a constant stream of concrete trucks passing by Sound Factory, approximately once every 90 seconds for 16 hours.

The Noise Analysis estimated the sound levels due to construction and worker trucks using the Transportation Noise Model (TNM). The following table summarizes the A-weighted Hourly Equivalent Levels (dBA LAeq,1hr) due to "construction trucks" (heavy trucks including dump/haul trucks and material delivery trucks) on Selma Avenue between Argyle Avenue and the Project Site:

Construction Phase	A-weighted Hourly Equivalent Level (dBA LAeq,1hr)
	Due to Construction and Worker Trucks (Not Including Ambient)
Demolition	58.3
Grading	66.9
Mat Foundation	68
Building Foundation	62.7
Building Construction	60.7
Existing Ambient	59.9

- The Noise Analysis for the grading phase appears to be based on 17 construction trucks per hour (Page IV.G-37, Table IV.G-12), not the 34 haul truck trips per hour stated in the Transportation Analysis. Doubling the amount of trucks would be estimated to increase the A-weighted Hourly Equivalent Levels by ~3 dBA.
- As discussed in the Construction Noise section above, the A-weighted Hourly Equivalent Levels are appropriate for a CEQA EIR noise analysis. However, noise levels will be significantly higher for the short but frequent periods of time when the trucks are passing Sound Factory. Also, heavy diesel trucks can generate significant low-frequency sound levels, the impact of which are not fully characterized by the A-weighted Hourly Equivalent Levels.

Demolition and Excavation Phases – Ground-borne Vibration

The demolition and excavation phases are expected to be particularly disruptive to studio operations, due to the types of activities and quantity of heavy trucks and heavy machinery. The demolition and excavation equipment will generate ground-borne vibration, which is not above the threshold for building damage, but is above the threshold for human annoyance for noise and vibration sensitive buildings. Ground-borne vibration can be re-radiated as airborne noise from the floor slab or attached structure, typically as low-frequency rumble (referred to as ground-borne noise). Ground-borne vibration can also audibly cause rattling, creaking, or popping, depending on how the vibration interacts with the structure. Ground-borne vibration decreases with distance, but the specific impact to the receiver is difficult to accurately predict as it will vary depending on the local geology and soils, the specific type and location of construction activity or equipment, the receiver's structural details, the frequency content of the vibration energy, etc.

The Noise Analysis states that “Based on FTA guidance, construction vibration impacts associated with human annoyance would be significant if ...” “Project construction activities cause ground-borne vibration levels to exceed 65 VdB at off-site recording studios” (Page IV.G-29).

The following table summarizes the vibration velocity level (VdB) estimated to occur at Sound Factory due to heavy equipment used during demolition and excavation phases, excerpted from Page IV.G-52, Table IV.G-22:

Equipment Type	Estimated Vibration Velocity (VdB)
Large Bulldozer	78
Caisson Drilling	78
Loaded Trucks	77
Jackhammer	70
Small Bulldozer	49

- Except for the small bulldozer, all of the heavy equipment used for demolition is expected to generate vibration at the Sound Factory that is significantly above the 65 VdB threshold for human annoyance. The 65 VdB threshold will be exceeded for Large Bulldozers and Caisson Drilling within 140 feet of Sound Factory, 130 feet for Loaded Trucks, and 75 feet for jackhammers.
- The noise analysis states that haul trucks passing Sound Factory could result in a vibration level of 72 VdB at 25 feet, which is above the 65 dBA threshold (Page IV.G-53). This also appears to assume a “typical road surface” (Appendix G, Page 96 of 122, Table 4: Off-site Haul Trucks – Human Annoyance). The actual vibration level could be higher if a truck passes over potholes, bumps, manhole covers, etc.
- The estimated vibration levels are based on the FTA Transit Noise and Vibration Impact Assessment Manual, which provides reference vibration source levels for certain equipment. Based on these guidelines, Hoe Rams (often used for pavement demolition) would result in a vibration level of 78 VdB at 50 feet, and Vibratory Rollers (if used) would result in a vibration level of 87 VdB at 50 feet. Pile driving operations would be even higher, but Project Design Feature NOI-PDF-3 indicates that “Project construction will not include the use of driven (impact) piles.

Mitigation Measure NOI-MM-2 – Vibration Monitoring

The Noise Analysis provides Mitigation Measure NOI-MM-2, which will provide vibration monitoring at the existing commercial building directly adjacent to the project site (Page IV.G-55).

- The vibration monitoring is only intended to determine if the vibration levels exceed the thresholds for building damage.
- The mitigation measure states that if the threshold is exceeded, and the Structural Engineer finds that there is no damage to the adjacent building, then the threshold can be increased.
- We are concerned that if the threshold is increased for the adjacent building, then project construction could proceed with more vibration generating equipment operating simultaneously (i.e. to accelerate the demolition and excavation phases), which could result in higher vibration levels at Sound Factory than were predicted in the Noise Analysis.

Concerns with Project Operation

L4 Amenity Deck Loudspeakers

Project Design Feature NOI-PDF-4 states the following (Page IV.G-32):

"Outdoor amplified sound systems, if any, will be designed so as not to exceed the maximum noise level of 75 dBA (Leq-1hr) at a distance of 15 feet from the amplified speaker sound systems at Level 4 amenity deck, and 80 dBA (Leq-1hr) at a distance of 25 feet from the amplified speaker sound systems at Level 25 roof deck. A qualified noise consultant will provide written documentation that the design of the system complies with this maximum noise level."

Sound Factory is concerned that the actual sound levels could be higher at times, for example if a special event uses additional loudspeakers and subwoofers, or if there is a possibility the volume limiter can be bypassed. As discussed in the construction noise sections above, the A-weighted Hourly Equivalent Level (dBA Leq-1hr) may underestimate the actual noise impact to Sound Factory, i.e. due to intermittent noises or low-frequency sounds.

Ground Floor Retail

The Project is anticipated to have ground floor retail or restaurant spaces, with the specific tenants yet to be determined. Sound Factory is concerned that these businesses could cause noise impacts to the studios, particularly if they have exterior loudspeakers, or loud interior sound levels with open windows and doors facing Sound Factory.

Potential Mitigation Options

The Noise Analysis indicated or implied that there are no additional noise mitigation methods available for construction noise, construction traffic noise, construction vibration, or construction truck vibration. However, we recommend that the following mitigation measures be considered by Sound Factory, the Project design and construction team, and the Authorities Having Jurisdiction.

Long-term Monitoring of Noise and Vibration Levels

We recommend that long-term noise and vibration monitors should be installed at Sound Factory. The sound and vibration monitoring system should be provided by an independent third party (not related to the contractor). A microphone would be located on the façade of the Sound Factory building, facing the construction site. A vibration monitor (accelerometer) would be located on the concrete foundation slab of the building. The sound and vibration monitors would be used to record the actual construction noise and vibration levels at Sound Factory.

Thresholds of noise and vibration levels would be set based on the levels indicated in the EIR, as well as levels determined to be disruptive to recording studio operations. If the sound or vibration levels exceed the agreed upon thresholds, automated alerts would be generated via email or text message, to inform the contractor, Sound Factory, and Authorities Having Jurisdiction of the violation. Reports documenting the sound and vibration levels will be provided at regular intervals.

Limited Hours for Activities Generating Highest Noise and Vibration Levels

We recommend reviewing this document and the construction plan with the Authorities Having Jurisdiction and the Project construction team, to determine if it is feasible to limit hours of operation for the activities generating the highest vibration and noise levels (demolition and excavation).

Limited Hours of Construction

The current DEIR does not appear to provide details on hours of operation for activities that will generate excessive noise or vibration.

We recommend that the final EIR provides clear limits on acceptable construction times. We recommend that there should be penalties for continuing construction work outside the agreed time periods.

Sound Barrier Walls for Upper Floor Construction

We recommend that temporary sound barrier walls should be used for any noisy construction activities or equipment used on upper floors. The sound barriers should be designed and oriented to block line-of-sight between the construction activity and the Sound Factory building.

Noise Committee

We recommend that the General Contractor forms a noise committee, to ensure compliance with the mandatory Project Design Features and Mitigation Measures. The noise committee would consist of the General Contractor, relevant Sub-contractors, project design team, Sound Factory management, and appointed acoustical consultant. The committee would meet regularly to review the noise and vibration impacts on Sound Factory, review the sound and vibration monitor levels, and determine further mitigation efforts if needed.

The contractor shall provide regular updates to Sound Factory and the noise committee regarding the scheduling of noise and vibration intensive activities, and overall construction phasing and progress.

Modified Haul Route

We recommend that the contractor and Authorities Having Jurisdiction review the proposed haul route, and determine if it is feasible to avoid Selma Avenue.

Penalties for Violating Construction Truck Staging Regulation

The Approved Haul Route (Appendix I.4) states that "All trucks shall be staged on jobsite" and there shall be "No Staging on Cahuenga Boulevard, Selma Avenue, or Ivar Avenue."

We recommend that there should be penalties if trucks are staged on Selma Avenue, as idling heavy trucks could result in additional noise impacts to Sound Factory.

Locations of Noisy Equipment

We recommend that all noisy stationary equipment, such as generators, air compressors, etc., should be located as far as feasible from Sound Factory. Stationary equipment should include temporary noise barriers located as close as possible to the equipment, to minimize the sound levels transmitted to Sound Factory.

Disallow Increasing the Vibration Threshold

We recommend that Mitigation Measure NOI-MM-2 be revised so that the allowable vibration thresholds at the commercial building can not be increased, even if the Structural Engineer finds that there is no building damage. Increasing the allowable threshold could result in additional vibration impacts to Sound Factory.

Disallow Exterior Loudspeakers at Ground Floor Retail/Restaurant

We recommend that the Ground Floor Retail/Restaurant spaces across the street from Sound Factory should not be allowed to have exterior loudspeakers, or interior loudspeakers with open windows or doors facing Sound Factory.

Requirements for Amenity Deck Sound Levels

We recommend that subwoofers and amplified live music specifically be disallowed at the amenity decks. The Project team should also provide additional documentation showing how the loudspeaker sound level limits will be implemented and enforced.

Comments

This report is based on our best understanding of the current design intent and project goals. If any of the project conditions or design goals change significantly, we reserve the right to modify our analysis and recommendations. Feel free to call if you have any questions or comments.

Sincerely,
RNS Acoustics

RE: Artisan Hollywood Project DEIR (ENV-2019-5591-EIR)

Dear Ms. Strelich:

On behalf of Southwest Regional Council of Carpenters (“**SWRCC**” or “**Southwest Carpenters**”), my Office is submitting these comments to the City of Los Angeles (“**City**”) regarding the Draft Environmental Impact Report (“**DEIR**”) for the Artisan Hollywood project (“**Project**”).

The Southwest Carpenters is a labor union representing 57,000 union carpenters in six states, including in southern California, and has a strong interest in well-ordered land use planning and addressing the environmental impacts of development projects.

SWRCC expressly reserve the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. (Gov. Code § 65009(b); Pub. Resources Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.) SWRCC also incorporate by reference all comments raising issues with the Project’s environmental review. (*Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 [finding that any party who has objected to the Project’s environmental documentation may assert any issue timely raised by other parties].)

Moreover, the Southwest Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (“**CEQA**”) (Pub. Res. Code, § 21000 et seq.), and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000–65010).

California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words,

well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and

⁴ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. In fact, several construction sites have been identified as sources of community spread of COVID-19.⁵

⁵ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, available at <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

Southwest Carpenters recommend that the City adopt additional requirements to mitigate public health risks from the Project's construction activities. Southwest Carpenters requests that the City require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Carpenters' experience with safe construction site work practices, Southwest Carpenters recommends that the City require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches)

communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁶

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The City should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Carpenters has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program which the City should implement to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁷

III. THE CITY MUST REVISE AND RECIRCULATE THE DEIR

CEQA is a California statute designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”) § 15002(a)(1).⁸ At its core, “[i]ts purpose is to inform the public and its responsible officials of the environmental consequences of

⁶ See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S Construction Sites, available at https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, available at https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

⁷ For details concerning Southwest Carpenters’ ICRA training program, see <https://icrahealthcare.com/>.

⁸ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 *et seq*, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564.

To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80. The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 449–450).

Section 15088.5(a) of the CEQA Guidelines provides that an EIR must be recirculated whenever there is disclosure of significant new information. Significant new information includes: (1) disclosure of a new significant environmental impact resulting from the project or from a new proposed mitigation measure; (2) disclosure of a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance; and (3) disclosure of a feasible project alternative or mitigation measure considerably different from others previously analyzed which would clearly lessen the significant environmental impacts of the project which the project proponents decline to adopt. *Id.*

Additionally, an EIR must be recirculated when it is so fundamentally inadequate and conclusory in nature that meaningful public review and comment is precluded. *Id.* [citing *Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043].

Here, as discussed below, the DEIR fails to substantiate all of its conclusions to allow meaningful public review and comment, provide adequate mitigation measures, and

fully assess all pertinent environmental factors. Accordingly, this comment letter discloses significant new information, necessitating revision and recirculation of the DEIR.

A. The DEIR Fails to Support its Noise Findings with Substantial Evidence

CEQA requires that an EIR identify and discuss the significant effects of a Project, how those significant effects can be mitigated or avoided. CEQA Guidelines § 15126.2; PRC §§ 21100(b)(1), 21002.1(a). If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns”. CEQA Guidelines § 15092(b)(2)(A–B). Such findings must be supported by substantial evidence. CEQA Guidelines § 15091(b).

Here, the DEIR finds that the Project’s noise impacts associated with its construction activities would be significant without mitigation. DEIR at IV.G-36. Accordingly, the DEIR implements mitigation measure NOI-MM-1, temporary sound barriers along the property line “to provide a minimum 15-dBA noise reduction at the ground level” so as to mitigate impacts to nearby sensitive receptors. *Id.* at 47. However, such measures do not mitigate noise sources elevated above the ground level as construction of the 25-story building progresses. Thus, the mitigation measure must be revised to fully explain how the noise barriers would be used to mitigate noise impacts at a minimum of 15 dBA for elevated sources.

Similarly, mitigation measure NOI-MM-2 is also insufficient and constitutes deferred mitigation. Specifically, NOI-MM-2, a measure implemented to reduce damage to an off-site building stemming from vibration levels generated from the Project construction, provides that “[p]rior to construction, the Applicant shall retain the services of a qualified acoustical engineer to review proposed construction equipment and develop and implement a vibration monitoring program”. DEIR at IV.G.56. However, such statement implies that no such engineer has been retained yet and that no program has been implemented. Absent this preparation and analysis, the DEIR’s conclusion that the Project’s vibration impacts associated with building damage would be less than significant with mitigation is merely speculative. *Id.* at 57.

B. The DEIR Fails to Analyze Biological Resource Impacts

Yet another reason why the DEIR should be revised and recirculated is because it fails to analyze whether the Project will have significant biological resource impacts despite the Initial Study providing that the Project would involve the removal of two mature olive trees which could “potentially provide nesting sites for migratory birds”.⁹ Although the Initial Study blanketly concludes that the Project’s biological resource impacts would be less than significant because (1) the Project would comply with the Migratory Bird Treaty Act; and (2) the olive trees would be replaced, these rationales fail.

First, it is well established that determinations that regulatory compliance will be sufficient to prevent significant adverse impacts must be based on a *project-specific analysis* of potential impacts and the effect of regulatory compliance. See *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal.App.4th 1; *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal.App.4th 936, 956. Therefore, the Initial Study’s reliance on compliance with the Migratory Bird Treaty Act, absent any project specific analysis, cannot justify its less than significant impact finding.

Moreover, despite the Project’s tree replacement measure, it will take years before the new trees are able to provide the environmental benefits the already existing mature trees provide. Given that the Initial Study fails to consider this, nor does it consider that there is no guarantee that the new trees will ever survive to such point, the Initial Study’s finding is unsupported for this reason too.

In light of the Initial Study’s unsupported less than significant impact conclusion, the DEIR must be revised to include a section assessing whether the Project will have significant biological resource impacts due to its removal of two olive trees with nesting site potential.

C. The DEIR Defers Its Transportation Mitigation Measures

CEQA mitigation measures proposed and adopted are required to describe and implement what actions will be taken to reduce or avoid an environmental impact. CEQA Guidelines § 15126.4(a)(1)(B) (providing “[f]ormulation of mitigation measures

⁹ Initial Study at 40, available at https://files.ceqanet opr.ca.gov/266007-3/attachment/P2_Xpjip_LbVeE9vb8UA3aEHq_MlsTA9ELvtol3wSwTWZAp3vIR-LWKK5zjZKZ6x4bv1Ez25airFrH20.

should not be deferred until some future time”); CEQA Guidelines, § 15041 (“[a]ll mitigation must be feasible and fully enforceable, and all feasible mitigation must be imposed by lead agencies”). While Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where measures are infeasible or impractical to be developed during the environmental review.

The DEIR improperly defers its Construction Traffic Management Plan mitigation measure, labeled as a project design feature (TR-PDF-2), designed to “facilitate traffic and pedestrian movement, and minimize the potential conflicts between construction activities, street traffic, bicyclists, and pedestrians”. DEIR at IV.I-27. Specifically, although the DEIR provides certain performance standards to be incorporated into the Plan, it fails to prepare, provide, and implement the Plan. *Id.* (“[p]rior to the start of construction, a Construction Traffic Management Plan shall be prepared”). Such failure deprives the public from assessing the adequacy of the Plan and providing input. Nor does the DEIR provide any explanation as to why preparation of the Plan at this time is not feasible. Thus, the DEIR’s transportation mitigation measure is improperly deferred and the DEIR must be revised to include a fully prepared Plan.

C. CONCLUSION

SWRCC request that the City require a local and trained workforce for the Project, that the City mitigate COVID-19 effects, and that the City revise and recirculate the DEIR. If the City has any questions or concerns, feel free to contact my Office.

Sincerely,

Talia Nimmer

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \sum(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at:

http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	
	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Disclaimer

SWAPE has received limited discovery. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44		CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)
	0.006				

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44		CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)
	0.006				

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44		CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)
	0.006				

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44				
CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006		

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44		CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)
	0.006				

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

EXHIBIT B

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido"
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sessler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradoao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Ms. Erin Strelich
City of Los Angeles Department of City Planning
221 North Figueroa Street, Room 1350
Los Angeles, CA 90012

Dear Ms. Strelich:

Subject: Artisan Hollywood

The Los Angeles Department of Water and Power (LADWP) appreciates the opportunity to provide comments on the Artisan Hollywood Project (Project) located at 1520 North Cahuenga Boulevard, Los Angeles, CA 90028. The mission of LADWP is to provide clean, reliable water and power to the City of Los Angeles. Based on our review of the Draft Environmental Impact Report prepared for the Project, we respectfully submit the comments below:

Comments:

Joint:

1. This response shall not be construed as an approval for any project.

Water System:

IV.L.1 Utilities and Service Systems – Water Supply and Infrastructure

- On Page IV.K.1-16, Table IV.K.1-2 shows incorrect supply numbers for years 2019 and 2020 under the Transfer, Spread, Spills, and Storage (af) column. Revise “-1,710” to 1,710, and revise “-1,155” to 1,155.
- On Page IV.K.1-25, Table IV.K.1-4 shows the Multi-Dry Year demand projections, which seems to be the five-year average of the numbers shown in LADWP’s 2020 Urban Water Management Plan (UWMP) Exhibit 11G. Since, the projected water demand for each of the five years (Year One through Year Five of the Multiple Dry Years) was prepared based on different hydrology, it is suggested to remove the five-year average number from Table IV.K.1-4 because it doesn’t reflect the different multiple dry year water supplies.

Ms. Erin Strelich
