Appendix AIR

Air Quality and Greenhouse Gas Emissions Analysis

2015 Blake Street Residential Project

Bay Area AQMD Air District, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking Structure	93.00	Space	0.00	16,000.00	0
Apartments Low Rise	7.00	Dwelling Unit	0.17	3,902.00	20
Apartments Mid Rise	161.00	Dwelling Unit	0.79	111,918.00	460

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	5			**Operational Year**	2024
Utility Company	User Defined				
CO2 Intensity (lb/MWhr)	68.47	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

2015 Blake Street Residential Project - Bay Area AQMD Air District, Winter

Project Characteristics - RPS for 2030 for EBCE

Land Use - Based on project plans

Construction Phase - Based on information form the applicant

Off-road Equipment -

Off-road Equipment - Based on applicant construction information

Off-road Equipment - Based on applicant construction information

Off-road Equipment - Based on applicant construction information

Off-road Equipment - Based on applicant construction information

Off-road Equipment - Based on applicant construction information

Demolition - Based on project plans

Grading - Based on information form the applicant

Vehicle Trips - Trip rates adjusted to match total VMT from traffic report

Woodstoves - BAAQMD Regulation 6, Rule 3 and Berkeley Municipal Code 12.80

Energy Use - Berkeley Municipal Code Chapter 12.8

Water And Wastewater - CalGreen, all wastewater treated at EBMUD WWTP

***a. County;** Alameda
***b. USGS 7.5':** Oakland West, CA (2018)
c. Address: 2001-2011 Blake Street, Berkeley, CA 94710
d. Other Locational Data: N/A
***P3a. Description:**
This is a one-story, wood-frame, California bungalow with a stucco finish. There are six concrete steps leading to the front porch. The porch projects from the main gable roof and is supported by heavy posts. The porch opening is a low arch. Both the porch gable and the main gable run parallel to Blake Street and are sheathed in composition shingles. There is a brick chimney projecting from the main gable just to the west of the porch gable. The main gable overhangs the house on the long, north and south sides. The front (south) façade features the porch, with its low perimeter walls and a wood front door with a top light. To the east of the door there is a divided light window. (See continuation sheet.)

P3A. DESCRIPTION (CONTINUED)

The east side has the following features: a bay window; a small, centered projecting porch; and another, small double-hung window at the south end of the elevation toward Blake Street. The west elevation, facing Milvia Street, has a four-sided bay window with wood, divided light casements and a projecting box window with two original, four-over-one wood windows. The four upper panes in this window are vertically oriented. There is a small attic vent or window within the gable end facing Milvia Street. The north side also has a bay window and three other double-hung windows that appear to be replacements.

There is a small landscaped front yard and a small shed / garage at the east side. Both the Blake Street façade and the Milvia Street façade have mature trees and landscaping making the building difficult to see and to photograph.

2011 Blake – Machine Shop

This small, industrial in character, one-story building shares the parcel with the house at 2001 Blake Street. It is a wood-frame structure with a stucco finish. The front façade features a stepped parapet at the roofline and a metal, roll-down garage door. The somewhat decorative stepped parapet projects out from the façade. There is a wide wood lintel above the garage opening. Two plate glass windows flank the garage door, forming an overall symmetrical front façade composition. There is a low gable roof, with several skylight and ventilation openings, behind the stepped parapet. A metal downspout and gutter are situated at the west end of the front elevation, which is likely repeated at east, but it is obscured by plantings. The rear, or north, elevation is also obscured by vines and plantings.

B6. CONSTRUCTION HISTORY (CONTINUED)

NEIGHBORHOOD DEVELOPMENT & CONSTRUCTION HISTORY

The subject property is on a block in the Shattuck Tract of Downtown Berkeley bounded by Shattuck Avenue on the east, Blake Street on the south, Milvia Street on the west, and Dwight Way on the north. This area was originally part of Don Luis Peralta's Rancho San Antonio.[1] In 1842, Don Peralta divided the land into four parts and gifted one to each of his four sons: Ignacio, Domingo, Antonio, and Vicente. Domingo Peralta, who owned the land that became Berkeley, sold most of his portion of the rancho to land speculators. The speculators sold the land to investors and farmers.

The land that became the Shattuck Tract was first surveyed in 1854 by surveyor Julius Kellersberger and known as the Plot 68 subdivision, comprising 160 acres. Francis K. Shattuck (1824-1898) subdivided Plot 68; the subject block was included on Shattuck Tract Map No. 4, filed by Shattuck on March 4, 1894.

Subject Block History

By 1903--when the subject block first appears on Sanborn maps--the north side of the 2000 block of Blake Street was about half developed. Several commercial buildings faced Shattuck Avenue, and five single-family residences faced Blake Street. The rest of the parcels (four) were vacant. The south side of the block was half developed with residences and half vacant. By the time of the 1911 Sanborn map publication, the north side of Blake Street had taken on the mixed-use appearance that characterizes it today. Two warehouses had been constructed, and a Chinese laundry replaced a single-family home.

[1] Charles Wollenberg, *Berkeley: A City in History* (Berkeley: University of California Press, 2008).

The south side of the block had a few more residences facing Blake and a few more commercial buildings on Shattuck. The western third of the parcels were vacant.

The 1941 Sanborn map shows that light-industrial buildings had replaced single-family dwellings at 2019, 2029, and 2035 Blake Street. At the south side, the parcels on the west side of the block remained vacant, buildings facing Shattuck had been replaced by a used-car lot, and the H.J. Haney Ice Factory had filled in the rear of the parcels at 2026-2036 Blake Street.

By 1950, the north side of the subject block was a mix of single-family dwellings and light-industrial shops and warehouses (mostly auto-related). The south side of the block had a multi-family bungalow court at the southwest (2000-2006 Blake Street), single- and multifamily dwellings (2014-2022 Blake Street), the Union Ice Company ice factory (2026-2036 Blake Street), and a used car lot at the corner of Blake and Shattuck Avenue (2046 Blake Street).

Subject Property Construction History
The residence at 2001 Blake Street in Berkeley, CA was constructed in 1922 (building permit 11793). The original building was a 28'x46' six-room, wood-frame residence with a small garage on a 40'x105' lot. The garage at the rear of the property (2011 Blake Street) was constructed c. 1920, according to Berkeley Architectural Heritage Association (BAHA) records.[2] The garage first appears on the 1941 Sanborn map. Permitted alterations include the following: interior remodel (1950) and reroofing (2001).

[2] Mark Wilson, Berkeley Urban Conservation Survey, form 16826-A, March 22, 1978.

B10. SIGNIFICANCE (CONTINUED)

OWNER & OCCUPANT HISTORY

Years	Owner/Occupants	Source
1924-late 1960s	Herman and Isabel Bredlow; Bredlow family (owners)	Historic newspaper articles, census data, city directories, BAHA files
1943-1945	Paul R. Cowles (renter)	Historic newspaper articles, city directories
1962-1964	A.B. and Vera Good (renters)	Historic newspaper articles, city directories
c. 1970-unknown	Alfred and Frances Maffly (owner)	BAHA files

The first known owners of 2001 Blake Street were Herman and Isabel Bredlow, who lived on the property from at least 1924 to 1939.[3] Herman Bredlow was born in San Francisco in 1877 to German parents.[4] He married Isabel (last name unknown) in 1899; she was born in Nevada in 1881 to a Scottish father and an American mother. They had four daughters.

Herman Bredlow worked as a day carpenter (1910[5]), a ship joiner at the Moore Shipyard in Oakland (1918[6]), an auto mechanic (1920-1928[7]), a serviceman for a radio company (1930[8]), and owner of an electrical repair shop (1939[9]). Bredlow apparently operated his auto repair business from the garage behind the house (2011 Blake Street), according to city directories. Little is known about Isabel Bredlow's life other than serving as Commander of the Women's Benefit Association Argonaut Review in 1924.[10]

Herman Bredlow died in a car crash in June 1939 at the age of 62. A few months later, Isabel advertised the house for rent: "Very lovely, modern 6-room bungalow; transportation; garage; adults."[11] The Bredlow

family owned the property through the late 1960s.[12] Tenants during this period include: Paul R. Cowles (1943-1945[13]) and A.B. and Vera H. Good (1962-1964[14]).

Alfred and Frances Maffly owned the building beginning c. 1970.[15]

RELEVANT HISTORIC CONTEXT

Residential Development and Architecture in Downtown Berkeley[16]
Residential development in Downtown Berkeley is diverse, the result of over a century of growth. Residences range from Victorian single-family dwellings, to post-earthquake shingled boxes, to 1960s multistory apartment blocks. The earliest residences in Berkeley consisted of scattered country houses constructed in the 1860s and 1870s, isolated from the surrounding communities by distance and poor roads. The situation completely changed in 1876 when the Central Pacific (later the Southern Pacific) Railroad extended a spur line from Oakland along Adeline Street and Shattuck Avenue terminating at Stanford Square (now Shattuck Square and Berkeley Square).

Berkeley's development as a town and residential area was almost instantaneous, and the Town of Berkeley was incorporated in 1878. That year a developer's map touted the convenience of travel from Berkeley's neighborhoods to San Francisco, ostensibly to promote Berkeley as a convenient place of residence for those working in the city: "Only three blocks from the Railroad Station, and within 45 minutes of San Francisco." An 1888 map of the downtown showed that the area had been divided into numerous tracts of land; North of University Avenue there were the Hardy, College, Clapp, and Villa Lots tracts. From University Avenue south to Dwight Way, the project area included the edge of the large McGee tract, and parts of the B.L.T. Lassin and Barker Tracts.

By the early 1890s most of the blocks in the downtown residential areas had been divided into various individual lots. Most were the standard rectangular, residential lots with the narrow side facing the street. Interestingly, although lot sizes were standard within a single block, they varied between blocks.4 By the time of the 1894 Sanborn Map many of the residential lots had been built out, but a few remained undeveloped. Most residences were small to medium single-family dwellings from one to two stories. In contrast to land use patterns today, University Avenue was primarily residential with a small commercial section at the intersection of University and Shattuck Avenues.

On 18 April 1906 the San Francisco Bay Area was rocked by a strong earthquake. Many buildings in San Francisco were damaged and many more in that city were destroyed by the subsequent fire. San Francisco residents took refuge in nearby cities like Berkeley. About 20,000 San Franciscans became permanent Berkeley residents. The 1906 influx resulted in a corresponding construction and housing boom. Not surprisingly, by the time of the 1911 Sanborn Map, most residential lots in the vicinity of the

[16] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey*, August 2007, pp. 45-58. See endnotes in that report for citations.

downtown were filled. Some lots had been further subdivided resulting in more dense residential development. For the first time apartments and buildings with multiple flats were constructed near the downtown mostly in the north residential section. There were other changes in residential construction in Berkeley. In the nineteenth century, residences within the project area all had unique footprints, but the 1911 map shows multiple properties with identical footprints suggesting they may have been built by a developer, based on the same design. In addition, setbacks (the distance from the façade of the residences and the street) were more standardized. Much of University Avenue remained residential.

In 1920 a comprehensive zoning measure was passed dividing Berkeley into seven types of land-use districts. Class-I districts included single-family dwellings, churches, railroad stations, flats, apartments, tenements, lodgings, hotels, and dormitories. Most of the downtown area was not zoned residential with the exception of the three residential areas described above. Berkeley continued to grow in the 1920s and by the time of the 1929 Sanborn Map, the population increase was evident in higher density development. By 1929 in the downtown north residential area, some single-family residences had been replaced with two-story apartment buildings. The economic pressures of the Depression also caused a change in the density of the downtown residential areas. Throughout the country during the Depression, many families saw a decrease in income and could no longer afford their houses. The result of these two factors was that many of the large single-family residences in Berkeley's downtown area were modified to become rooming houses or flats, accommodating multi-family occupancy. On some streets such as University Avenue and Kittredge Street, which had transitioned from residential to commercial, first-floor storefronts were added in front of residences.

In 1940 the 1920 zoning map was updated, but the districts within the downtown remained the same. Although zoning had not changed, residential density had; by 1950 nearly every residential lot within the study area was filled. In addition, many new apartment buildings had been constructed. For example, in the downtown southeast residential area, there were five four-unit apartment buildings. Similarly, many single-family residences had been divided into multiple units. World War II-era worker housing had been constructed at 2145 Dwight Way and 2007 Milvia Street. In the 1960s density in the downtown residential areas further increased with the construction of large-scale multi-story apartment buildings.

Many talented contractors and craftsmen were employed to execute residential buildings in Berkeley. More research should be undertaken in the future to identify these individuals and link them to specific projects. Additionally, there were likely many residential developers working in Berkeley. Further research is also necessary with regard to these individuals and companies to determine their significance within the residential architectural context of Berkeley.

Residential Architectural Styles – 2001 Blake – Craftsman Bungalow[17]
Few single-family residences within [Downtown Berkeley] were architect designed. Several apartment buildings were designed by architects, such as William Wharff and Walter H. Ratcliff, whose projects also included commercial and civic buildings in Berkeley. In the late nineteenth century, residential designs were often adapted from standard designs found in magazines or pattern books.

[17] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey*, August 2007, pp. 45-58. See endnotes in that report for citations.

Residential building types in Downtown Berkeley are diverse with large single-family residences, apartment buildings, small cottages, duplexes, and flats. Within each of these building types there are representative examples of most major residential architectural styles popular between 1880 and 1950. While the downtown has more Victorian era (Queen Anne, Stick, Eastlake, and Folk Victorian) and Classical Revival houses than any other styles, there are also a number of Shingle Style, Colonial Revival, and Spanish Revival style houses. Regardless of style, most of the residential buildings within the neighborhood are of wood-frame construction.

Craftsman 1890-1930

California architects and builders embraced the Arts and Crafts tradition that had taken hold of England, Europe, and much of the Eastern United States. Proponents of this tradition included such noted architectural personalities as the Boston firm of Cram & Goodhue, New England's H. H. Richardson and his development of the Shingle style, Philadelphia's Wilson Eyre, Chicago's Frank Lloyd Wright, New York State's Gustav Stickley, and on the West Coast, Pasadena's Greene brothers. In Berkeley Bernard Maybeck, Ernest Coxhead, and naturalist Charles Keeler promoted the style (see the Shingle style). The Craftsman tradition featured simple handcrafted materials. The movement embodied every aspect of residential design from furniture to the "bucolic setting" of one's yard to the art pottery and wallpaper that decorated house interiors. Popular literature, examples of which include, The Craftsman, Ladies Home Journal, Bungalow Magazine and House Beautiful, distributed the movement's ideals to the middle class.

The Arts and Crafts had broad boundaries that were further defined by regional tastes and interests. In California, the movement became ingrained in middle-class neighborhoods in the form of the bungalow. The bungalow is really a building type with some houses stylistically reflecting California's Mission tradition, others incorporated features of the Shingle style, while others employed Middle Eastern and Asian influences.

California's warm climate made the bungalow even more popular. The California bungalow was usually a one-story, detached house. However, variations on this norm included bungalow courts (several houses or units around a courtyard) and houses with an inhabitable attic called an "upper room." Consistent features of the plans include an entrance directly into the living room with no parlor and a large kitchen. Many had sleeping porches, breakfast nooks, and inglenooks (or fireplace seats). Bungalows were usually constructed on small lots. Many two-story houses were designed with certain bungalow features, such as the large front porch and plan.

Typical features of the Craftsman bungalow include:

- gabled roofs;
- dormer windows;
- wide porches;
- overhanging eaves;
- shingles or stucco cladding; and
- exposed rafters, purlins, and ridge beams.

Machine Shop – 2011 Blake Street

The Machine Shop behind 2001 Blake Street was used for a period of time as the owner's auto repair business and it was built for that purpose. The building as a false front stepped parapet that gives it a

commercial rather than residential character. The building does not have a specific distinguishing style of architecture.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES SIGNIFICANCE CRITERIA

The California Register of Historical Resources (CRHR) is an inventory of significant architectural, archaeological, and historical resources in the State of California. Resources can be listed in the CRHR through a number of methods. State Historical Landmarks and National Register of Historic Places (NRHP)-listed properties are automatically listed in the CRHR. Properties can also be nominated to the CRHR by local governments, private organizations, or citizens.

The evaluative criteria used by the CRHR for determining eligibility are closely based on those developed by the National Park Service for the NRHP. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

> Criterion 1:
> It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> Criterion 2:
> It is associated with the lives of persons important in our past.
>
> Criterion 3:
> It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> Criterion 4:
> It has yielded, or may be likely to yield, information important in history or prehistory.

In addition to meeting the applicable eligibility criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess certain aspects of integrity, which are defined in the following manner in *National Register Bulletin 15*:

> 1. Location – the place where the historic property was constructed or the place where the historic event occurred;
>
> 2. Design – the combination of elements that create the form, plan, space, structure, and style of a property;

3. Setting – the physical environment of a historic property;

4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;

5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time;

7. Association – the direct link between an important historic event or person and a historic property.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

CITY OF BERKELEY LANDMARKS, HISTORIC DISTRICTS, AND STRUCTURES OF MERIT DESIGNATION CRITERIA

The City of Berkeley Landmarks Preservation Commission (LPC) is responsible for the preservation and protection of Berkeley's cultural and historic landmarks. The LPC is also responsible for making discretionary decisions for alterations to cultural and historic landmarks.

A. City of Berkeley Landmarks and Historic Districts

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. Architectural merit:
    a. Property that is the first, last, only or most significant architectural property of its type in the region;
    b. Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; or
    c. Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.
2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City;
3. Educational value: Structures worth preserving for their usefulness as an educational force;
4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military;
5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

B. City of Berkeley Structures of Merit

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.
2. Specific criteria include, but are not limited to one or more of the following:
    a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.
    b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.
    c. The structure is a good example of architectural design.
    d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings. (Ord. 5686-NS § 1 (part), 1985: Ord. 4694-NS § 3.1, 1974)

CRHR Significance Evaluation

CRHR Criterion 1
The property at 2001 Blake Street does not appear to be associated with events or patterns important to local, state, or national history. While the house and garage convey the transition from the commercial areas of downtown Berkeley into more residential uses, this alone does not elevate this property to the level of significance required for individual eligibility under CRHR Criterion 1.

CRHR Criterion 2
The property at 2001 Blake Street does not appear to be associated with significant individuals, organizations, or businesses. While Mr. Bredlow appears to have built the garage to serve as his business, neither Mr. Bredlow or his business have any significant historical associations within the context of the neighborhood or Berkeley. The property at 2001 Blake Street does not appear to possess the significance required for individual eligibility under CRHR Criterion 2.

CRHR Criterion 3
The buildings on the property at 2001 Blake Street are not representative of a unique or distinctive architectural design, nor are they the work of a master architect or builder. The residence at 2001 Blake Street is not an excellent example of the Craftsman style of architecture or within the Bungalow type. The garage at 2011 Blake Street does not convey any specific stylistic characteristics and it is not an excellent example of an auto repair shop. The property at 2001 Blake Street does not appear to possess the significance required for individual eligibility under CRHR Criterion 3.

CRHR Criterion 4
Eligibility evaluation under Criterion 4 is beyond the scope of this report.

Integrity
An integrity evaluation is not required for properties that do not possess significance under the CRHR criteria.

City of Berkeley Landmark, Historic District, and Structure of Merit Evaluation
As noted in the CRHR evaluation, the property at 2001 Blake Street does not appear to be associated with events or patterns important to Berkeley history. It does not appear to be associated with significant individuals, organizations, or businesses. The buildings are not representative of a unique or distinctive architectural design, nor are they the work of a master architect or builder. The buildings on this parcel do not meet the City of Berkeley criteria for either a Landmark or Structure of Merit.

METHODOLOGY

This Historic Resource Evaluation (HRE) was prepared by Bridget Maley of architecture + history, llc, in association with Shayne Watson of Watson Heritage Consulting, at the request of Rhoades Planning Group. Maley and Watson exceed the Secretary of the Interior's Professional Qualification Standards for Architectural History and History (Code of Federal Regulations, 36 CFR Part 61).

The project team conducted a site visit at the subject property in December 2018 and photographed the property and surrounding area. After the site visit, research on the building included in-person or online visits to the following archives and data repositories: Berkeley Architectural Heritage Association (BAHA), City of Berkeley Permit Service Center, Berkeley Public Library, San Francisco Public Library, Ancestry.com, Newspapers.com, and Newspaper Archive. BAHA has in its archives forms from earlier (1970s) survey efforts, which made a trip to the California Historical Resources Information System (CHRIS) Information Center unnecessary for this project.

***b. USGS 7.5':** Oakland West, CA (2018)
c. Address: 2012 Dwight Way, Berkeley, CA 94710
d. Other Locational Data: N/A
***P3a. Description:**
This two-story, wood-frame Victorian-era house has elements of both the Stick Style and Queen Anne Style. Stick Style architecture is recognizable by a relatively plain façade, often with horizontal wood siding, but accented with trusses, brackets, shingles and spindles. These houses also had a vertical orientation and were almost always at least two stories. This house is sheathed in horizontal wood siding, but does not have the same vertical orientation as its neighbor at 2020 Dwight. Unlike its neighbor, this house does not sit on a raised basement.

Decorative elements include fish scale shingles in the gable and just below, brackets, and decorative wood trim around the windows. The porch has spindled posts. A simple roof covers the front boxed bay window and the porch with a cutout and brackets at the east end. The main gable is intersected at both the east and west sides by another smaller gable. The gables have overhangs that have decorative brackets. There is a one-story addition at the rear. A number of the windows on the side elevations have been replaced, but the front windows appear to be original. (See continuation sheet.)

P3A. DESCRIPTION (CONTINUED)
Overall, the house is a fine example of the Stick Style with Queen Anne detailing, such as the spindled posts at the porch. This was originally one of four houses in a well-designed row of Victorian dwellings, but one (2016 Dwight) has been lost. BAHA Urban Conservation Survey of 1977 identified the building as neighborhood contributing with overall importance to the area.

B6. CONSTRUCTION HISTORY (CONTINUED)

NEIGHBORHOOD DEVELOPMENT & CONSTRUCTION HISTORY
The subject property is on a block in the Shattuck Tract of Downtown Berkeley bounded by Shattuck Avenue on the east, Blake Street on the south, Milvia Street on the west, and Dwight Way on the north. This area was originally part of Don Luis Peralta's Rancho San Antonio.[2] In 1842, Don Peralta divided the land into four parts and gifted one to each of his four sons: Ignacio, Domingo, Antonio, and Vicente. Domingo Peralta, who owned the land that became Berkeley, sold most of his portion of the rancho to land speculators. The speculators sold the land to investors and farmers.

The land that became the Shattuck Tract was first surveyed in 1854 by surveyor Julius Kellersberger and known as the Plot 68 subdivision, comprising 160 acres. Francis K. Shattuck (1824-1898) subdivided Plot 68; the subject block was included on Shattuck Tract Map No. 4, filed by Shattuck on March 4, 1894.

Subject Block History
By 1903--when the subject block first appears on Sanborn maps--the north side of the 2000 block of Dwight Way was sparsely developed with just two, very large single-family homes and outbuildings (2001 and 2031 Dwight Way); a single commercial building faced Shattuck Avenue. The south side of the block was nearly fully developed with a row of single-family residences from 2000 to 2022 Dwight Way. Three commercial buildings faced Shattuck.

By the time of the 1911 Sanborn map publication, little had changed on the north side of the block except for the addition of several commercial buildings facing Shattuck Avenue. Similarly, the south of the block remained the same except for two additional residences. There were still two vacant parcels.

The 1941 Sanborn map shows that the Berkeley General Hospital filled the northwestern side of the block. The large single-family home at 2031 Dwight Way had been enlarged. The biggest changes on the south side of the block were the replacement of a single-family home with an apartment building (2000 Dwight Way) and the construction of a new, two-family building at 2030 Dwight Way. Two of the single-family homes had been converted into two-family dwellings.

By 1950, Herrick Memorial Hospital at 2001 Dwight Way filled the northwest quadrant of the block. The Barker Block (2033-2049 Dwight Way) filled the northeast quadrant. The south side of the block was filled mostly with two-story single-family residences with detached garages. The exceptions were a two-story medical-office building at 2000 Dwight Way, two apartment buildings at 2026 and 2030 Dwight Way, and a bank at the corner of Dwight Way and Shattuck Avenue (2042-2048 Dwight Way). The subject property is included on this map.

[2] Charles Wollenberg, *Berkeley: A City in History* (Berkeley: University of California Press, 2008).

Subject Property Construction History

The residence at 2012 Dwight Way was constructed c. 1889. Permitted alterations include the following:

- 1915 – New back porch; alter lean-to into a kitchen (permit 4398)
- 1935 – Addition of new 12'x19' garage (permit 39633)
- 1944 – Reroof (permit 55758)
- 1949 – First floor: Enlarge existing porch 4x8 feet with cement foundation; footing to be 8x12 pyramid type; cut door in existing wall for entrance; build partition on existing room from corridor to stairway. Second floor: Building partitions in existing room; cut window in south wall; cut two doors in existing closets as shown on sketch. (Permit 65674)
- 195_ - New back room (permit 67002)
- 1961 – Create apartment on lower floor now occupied as office (permit 69059)
- 1997 – Structural upgrade (permit 97-00003156)

A.H. Broad (builder)

See Steve Finacom, "City of Berkeley Landmark Application for 2030-32 Bancroft Way: A.H. and Julia Broad House, and Broad Apartment Building" (February 2017) for a complete biography of architect A.H. Broad.[3]

[3] Report can be accessed here: https://www.cityofberkeley.info/uploadedFiles/Planning_and_Development/Level_3_-_LPC/2017-03-02_LPC_ATT1_2030-32%20Bancroft_Landmark%20Application.pdf.

Sarah Holmes

The first owner of 2012 Dwight Way was Sarah O. Holmes.[4] Born in New York c. 1844, Holmes moved to California c. 1875.[5] She was married to Walter H. Holmes (b. 1841). Holmes was formerly a Full Captain in the New York 170th Infantry Regiment during the American Civil War.[6] Holmes became a prominent businessman in San Francisco and was active in the California National Guard. He died after a short illness in March 1889. It is not clear if Walter Holmes ever lived at 2012 Dwight Way; only Sarah Holmes' name appeared in tax records housed at Berkeley Architectural Heritage Association.

Sarah Holmes lived at 2012 Dwight Way through about 1895.[7] Following that, she lived at 1945 Haste until c. 1906 and at 2411 Durant Avenue until her death in 1909.[8] When Holmes died, her estate included three residences that were used as rentals: 2012 Dwight Way, 2412 Milvia Street, and 1945 Haste.[9] Her daughter, Minnie Alice Buckingham of Vacaville, CA, and adopted son, Bertie S. Holmes of Bradford, PA, inherited the $18,500 estate ($512,378 today).

James Jardine

James Jardine and his family moved to 2012 Dwight Way c. 1912. Jardine and his wife, Annie Raphael, were born in Scotland c. 1858 and c. 1861. They immigrated to the United States about 1880 and were married in San Francisco in 1881.[10] In 1910, just before moving to 2012 Dwight Way, Jardine and his family lived at 2434 Milivia Street, a few doors down from one of Sarah Holmes' rental properties (2412 Milvia). They moved to Dwight Way c. 1912.

James Jardine was a mechanical engineer through the 1920s. By 1930, he had become a caretaker for UC Berkeley. He was retired by 1940. Jardine died in 1943 after being struck by a car at the corner of Dwight Way and Shattuck Avenue.[11]

Dr. Willis A. Ward

Dr. Willis A. Ward was a graduate of the University of California and Northwestern Medical School.[12] He was a radiologist and director of the cancer clinic at Mary's Help Hospital in San Francisco.[13] In 1942, Dr. Ward was appointed radiologist at Berkeley Hospital.[14] In November of that year he led a discussion at a symposium on Carcinoma held at the hospital.

Dr. Ward became a resident physician at the Contra Costa County Hospital in Martinez, California in 1948.[15]

RELEVANT HISTORIC CONTEXT

Residential Development and Architecture in Downtown Berkeley[16]
Residential development in Downtown Berkeley is diverse, the result of over a century of growth. Residences range from Victorian single-family dwellings, to post-earthquake shingled boxes, to 1960s multistory apartment blocks. The earliest residences in Berkeley consisted of scattered country houses constructed in the 1860s and 1870s, isolated from the surrounding communities by distance and poor roads. The situation completely changed in 1876 when the Central Pacific (later the Southern Pacific) Railroad extended a spur line from Oakland along Adeline Street and Shattuck Avenue terminating at Stanford Square (now Shattuck Square and Berkeley Square).

Berkeley's development as a town and residential area was almost instantaneous, and the Town of Berkeley was incorporated in 1878. That year a developer's map touted the convenience of travel from Berkeley's neighborhoods to San Francisco, ostensibly to promote Berkeley as a convenient place of residence for those working in the city: "Only three blocks from the Railroad Station, and within 45 minutes of San Francisco." An 1888 map of the downtown showed that the area had been divided into numerous tracts of land; North of University Avenue there were the Hardy, College, Clapp, and Villa Lots tracts. From University Avenue south to Dwight Way, the project area included the edge of the large McGee tract, and parts of the B.L.T. Lassin and Barker Tracts.

By the early 1890s most of the blocks in the downtown residential areas had been divided into various individual lots. Most were the standard rectangular, residential lots with the narrow side facing the street. Interestingly, although lot sizes were standard within a single block, they varied between blocks.4 By the time of the 1894 Sanborn Map many of the residential lots had been built out, but a few remained undeveloped. Most residences were small to medium single-family dwellings from one to two stories. In contrast to land use patterns today, University Avenue was primarily residential with a small commercial section at the intersection of University and Shattuck Avenues.

On 18 April 1906 the San Francisco Bay Area was rocked by a strong earthquake. Many buildings in San Francisco were damaged and many more in that city were destroyed by the subsequent fire. San Francisco residents took refuge in nearby cities like Berkeley. About 20,000 San Franciscans became permanent Berkeley residents. The 1906 influx resulted in a corresponding construction and housing boom. Not surprisingly, by the time of the 1911 Sanborn Map, most residential lots in the vicinity of the downtown were filled. Some lots had been further subdivided resulting in more dense residential development. For the first time apartments and buildings with multiple flats were constructed near the downtown mostly in the north residential section. There were other changes in residential construction in Berkeley. In the nineteenth century, residences within the project area all had unique footprints, but the 1911 map shows multiple properties with identical footprints suggesting they may have been built by a

[15] "County Hospital Efficiency Told," *Oakland Tribune*, August 9, 1948.
[16] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey,* August 2007, pp. 45-58. See endnotes in that report for citations.

developer, based on the same design. In addition, setbacks (the distance from the façade of the residences and the street) were more standardized. Much of University Avenue remained residential.

In 1920 a comprehensive zoning measure was passed dividing Berkeley into seven types of land-use districts. Class-I districts included single-family dwellings, churches, railroad stations, flats, apartments, tenements, lodgings, hotels, and dormitories. Most of the downtown area was not zoned residential with the exception of the three residential areas described above. Berkeley continued to grow in the 1920s and by the time of the 1929 Sanborn Map, the population increase was evident in higher density development. By 1929 in the downtown north residential area, some single-family residences had been replaced with two-story apartment buildings. The economic pressures of the Depression also caused a change in the density of the downtown residential areas. Throughout the country during the Depression, many families saw a decrease in income and could no longer afford their houses. The result of these two factors was that many of the large single-family residences in Berkeley's downtown area were modified to become rooming houses or flats, accommodating multi-family occupancy. On some streets such as University Avenue and Kittredge Street, which had transitioned from residential to commercial, first-floor storefronts were added in front of residences.

In 1940 the 1920 zoning map was updated, but the districts within the downtown remained the same. Although zoning had not changed, residential density had; by 1950 nearly every residential lot within the study area was filled. In addition, many new apartment buildings had been constructed. For example, in the downtown southeast residential area, there were five four-unit apartment buildings. Similarly, many single-family residences had been divided into multiple units. World War II-era worker housing had been constructed at 2145 Dwight Way and 2007 Milvia Street. In the 1960s density in the downtown residential areas further increased with the construction of large-scale multi-story apartment buildings.

Many talented contractors and craftsmen were employed to execute residential buildings in Berkeley. More research should be undertaken in the future to identify these individuals and link them to specific projects. Additionally, there were likely many residential developers working in Berkeley. Further research is also necessary with regard to these individuals and companies to determine their significance within the residential architectural context of Berkeley.

Residential Architectural Styles[17]

Few single-family residences within [Downtown Berkeley] were architect designed. Several apartment buildings were designed by architects, such as William Wharff and Walter H. Ratcliff, whose projects also included commercial and civic buildings in Berkeley. In the late nineteenth century, residential designs were often adapted from standard designs found in magazines or pattern books.

Residential building types in Downtown Berkeley are diverse with large single-family residences, apartment buildings, small cottages, duplexes, and flats. Within each of these building types there are representative examples of most major residential architectural styles popular between 1880 and 1950. While the downtown has more Victorian era (Queen Anne, Stick, Eastlake, and Folk Victorian) and Classical Revival houses than any other styles, there are also a number of Shingle Style, Colonial

[17] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey,* August 2007, pp. 45-58. See endnotes in that report for citations.

Revival, and Spanish Revival style houses. Regardless of style, most of the residential buildings within the neighborhood are of wood-frame construction.

Victorian Era Styles

Queen Anne, Stick, Eastlake, and Folk Victorian

Victorian is an overview term, the validity of which is much debated. Deriving from the long reign of Great Britain's Queen Victoria (1837 to 1901), this "style" had several variations based on the architectural trends during this period. In America rapid industrialization during the period 1860 to 1910 brought drastic changes in house design and construction. Mass production of building components expanded as quickly as the railroad that transported the items across state lines. The low cost and easy availability of these decorative and structural components made their success inevitable. These developments in architecture labeled "The Victorian" can be seen in almost every community in the United States. The following architectural derivatives of Victorian period architecture became popular.

Queen Anne 1880-1910

Within the survey area there are numerous Queen Anne style houses. This style was named and popularized by a group of English architects led by Richard Norman Shaw. One of the first American houses of this style was in Newport Rhode Island, in 1874. The expanding railroad system in the United States helped to popularize this style as pre-made architectural details were conveniently available from pattern books.

The identifying features consist of a steeply pitched roof of irregular shape, usually with a dominant front-facing gable, patterned shingles, and cutaway bay windows. These design details were used to avoid a smooth-walled appearance or give the building an asymmetrical appearance. A partial or full porch along the front facade wrapping around one or both sides of the house was common. Queen Anne houses often had very distinctive patterns of decoration, such as spindle work, lace-like brackets, Palladian windows, incised ornament, roof cresting, or decorative stone. Most Queen Anne-style residences were constructed as single-family dwellings.

Queen Anne residences often include:

- irregular plan;
- asymmetrical façade;
- complex roof forms with front-facing gable;
- variety of materials and textures;
- bay windows;
- turned or carved wood ornament;
- turrets or towers; and
- decorative shingle patterns.

Examples of Queen Anne-style residences in Downtown Berkeley include:

- 1920 Haste Street
- 1940 Channing Way
- 2430 Fulton Street
- 2415 Fulton Street
- 1934 Haste Street

Stick Style 1880-1910
Victorian-era pattern books frequently featured Stick Style houses. Many surviving houses of this type exist in Northern California where rapid growth and abundance of lumber favored wood-frame construction. These houses usually have a gabled roof with a steep pitch and cross gables. The gables commonly have decorative trusses at the apex, overhanging eaves, and exposed rafter ends. Wooden wall cladding such as shingles or boards, interrupted by patterns of horizontal, vertical, and diagonal boards or stick work, as it was called, were the defining elements of the style. There was often a raised wall surface for emphasis, and many porches included diagonal or curved braces. The Stick style developed different idioms in the variety of regions within the United States.

Stick-style residences often include:
- cross gables;
- decorative trusses;
- exposed rafter ends;
- studs visible on the exterior; and
- corner braces with pendants.

Examples of Stick style-residences in Downtown Berkeley include:
- 2409 Martin Luther King, Jr. Way
- 2411 Martin Luther King, Jr. Way

Eastlake 1880-1900
Many Eastlake houses can also be classified as Stick or Queen Anne style. However, one particular ornament - the curved, highly ornate, cutout bracket - was highly popular and is the identifying element of the Eastlake style. Other identifiers include spindle-like supports for porches or roof overhangs often resembling table legs, and other decorative elements borrowed from furniture design including knoblike features and motifs consisting of circular cutouts or perforations.

The name derives from that of Charles Lock Eastlake, son of a painter, who was himself an English architect and furniture designer. His two publications A History of the Gothic Revival and Hints on Household Taste made him famous in Great Britain. The books offered designs for woodcuts intended for use in furniture design. Charles Eastlake was vehemently opposed to the application of his decorative ideas to architecture, even rejecting it publicly in print. However, the style became immensely popular in the United States, especially in California and the West.

Eastlake-style houses often include:
- asymmetrical façade;
- highly ornate cut out brackets;
- carved panels;
- ornate carved and turned bargeboards in gable ends;
- spindles in porch brackets and balusters; and
- turned balustrades.

An example of an Eastlake-style residence in Downtown Berkeley is:
- 2009 Berkeley Way

Folk Victorian or Victorian Vernacular 1860-1910
This style is basically a scaled down version of Queen Anne and Stick styles. Simple vernacular forms, often different in various regions of the country, made this style eclectic and difficult to define. Scaled down Victorian decorative elements are applied to simple vernacular houses in that region. The details can reflect the Queen Anne, Italianate, Stick, or Eastlake styles. In many cases, the ornament is applied to the porch or gable. The facade is usually symmetrical and cornice-line brackets are common. These add-on details were also made possible by an expanding railroad and mail ordering systems.

Typical features of Victorian Vernacular residences include:
- symmetrical façade;
- spindle work on porches;
- flat jigsaw trim;
- pointed gables; and
- pointed arch windows.

An example of a Victorian Vernacular-style residence in Berkeley is:
- 1915 Addison Street

Health & Medicine: Herrick Campus Area[18]
For over a century the area near the intersection of Dwight Way and Milvia Street has been a center of health and medicine for the city of Berkeley. Berkeley spent the first quarter century after its 1878 incorporation without any local hospital facilities. Then, in 1904, Dr. Francis L. Herrick established the city's first hospital in the former home of Joseph H. Hume on the northeast corner of Dwight Way and Milvia Street.

Dr. Herrick converted Hume's ornate Victorian house into a 25-bed general hospital offering medical, surgical and obstetrician services. The hospital was named after President Theodore Roosevelt, for whom Herrick had great admiration. Roosevelt Hospital's status as Berkeley's sole medical facility ended in 1905 when a young nurse, Alta Alice Miner Bates, established Berkeley's second hospital in a private residence further up Dwight Way. The Alta Bates Sanitarium was an 8-bed facility dedicated to the care of women and their infants.

Roosevelt Hospital expanded its services and facilities to keep pace with Berkeley's growth. In 1906 the facility became the emergency hospital for Berkeley and other nearby East Bay communities. When hundreds of San Franciscan refugees fled to Berkeley after the Earthquake and Fire of 1906, Roosevelt Hospital accommodated refugees in need of major surgery.

The hospital's first major expansion occurred in 1924 when the facility was renamed Berkeley General Hospital and a new two-story concrete wing was added onto the west side, expanding the hospital's capacity to 50 beds. Surgery was transferred to the second floor of the new wing. By 1934 additional expansions increased the hospital's capacity to 100 beds.

[18] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey*, August 2007, pp. 101-103. See endnotes in that report for citations.

In 1932 Dr. Herrick died, and in 1935 his heirs converted the Roosevelt hospital to a non-profit corporation by donating their ownership of capital stock and a gift of $500,000. During the same year William Walter Reich, MD, established a party-pay clinic to serve outpatients who could not afford private care and were ineligible for county or other forms of aid.

In 1943 the hospital received $435,000 via the Lanaham Act for construction of a new south wing. When the four-story south wing was completed in 1945, the now 250-bed hospital facility was renamed Herrick Memorial Hospital in honor of its founder. During the same year, hospital trustees approved the Berkeley Council of Social Agencies' "Inter-Racial Code for Social Agencies" and committed to accept patients, doctors, and staff without regard to race, religion, sex, age, or national origin. This move helped further establish Herrick Hospital as one of the East Bay's most progressive health-care facilities in terms of hiring and patient services.

In 1948 Herrick became the first community general hospital to offer inpatient psychiatric services. The hospital also became the first to be awarded a federal grant for construction of a psychiatric unit when funds from the Hill-Burton Act were used to build a seven-story North Wing in 1957. The North Wing included space for 49 psychiatric beds and rehabilitation services.

In 1965 Herrick expanded yet again, adding a four-story clinic building and auditorium that was also home to a chapel, radioisotope laboratory, and an entire floor for psychiatric outpatient care. In 1967 Herrick began to coordinate with Alta Bates Hospital to have certain services discontinued and merged with services at Alta Bates. During the same year, the Maternity Department became the first, but not last, service to be ended at Herrick and transferred to Alta Bates.

Throughout its history Herrick achieved a variety of other significant "firsts" in the healthcare field. It was the first community general hospital to put surgery below ground so recovering patients could enjoy the view in rooms above and the first hospital in the nation to establish a Disabled Community Health Care Clinic (1975). In the San Francisco Bay Area, it was the first hospital to offer intensive care for neurological patients, a chaplain-training program, a department of Social Care, a Women's Auxiliary, an Inservice Volunteer Program, and a gift store run by volunteers.

In 1980 Herrick underwent its last major expansion to date, a new 153-bed East Wing. Four years later, Herrick and Alta Bates Hospital formally affiliated but continued to operate as freestanding general hospitals. On January 1, 1988 the two hospitals merged and medical/surgical and emergency services were consolidated at the Alta Bates campus. The new organization was named the Alta Bates Herrick Hospital, but "Herrick" was dropped from the name when it was renamed the Alta Bates Medical Center in 1992. In 1999 Alta Bates Medical Center merged with Summit Medical Center. Today the former Herrick Hospital is known as the Herrick campus of the Alta Bates Summit Medical Center.

Despite its long history at its present location, the Herrick Campus's impact on the built form of the surrounding neighborhood has been limited. Other medical buildings to be located near the campus were a ca. 1919 two-story medical office building at 2000 Dwight Way (likely originally an apartment building), a ca. 1960s medical-dental building at 2006 Dwight Way, and a ca.1980s two-story medical office building at 2500 Milvia Street. The rest of the area surrounding the Herrick Hospital campus has remained primarily residential to the west and commercial and auto repair to the east toward Shattuck Avenue.

PAST HISTORIC RESOURCES EVALUATIONS

- Architectural Resources Group. *City of Berkeley Downtown Survey and Contexts*, August 2007: 2012 Dwight included in matrix of resources, recommended DPR form be completed.

- Berkeley Architectural Heritage Association. Berkeley Urban Conservation Survey. 2012 Dwight, Mark Wilson, Evaluator April 4, 1977.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES SIGNIFICANCE CRITERIA

The California Register of Historical Resources (CRHR) is an inventory of significant architectural, archaeological, and historical resources in the State of California. Resources can be listed in the CRHR through a number of methods. State Historical Landmarks and National Register of Historic Places (NRHP)-listed properties are automatically listed in the CRHR. Properties can also be nominated to the CRHR by local governments, private organizations, or citizens.

The evaluative criteria used by the CRHR for determining eligibility are closely based on those developed by the National Park Service for the NRHP. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

> Criterion 1:
> It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> Criterion 2:
> It is associated with the lives of persons important in our past.
>
> Criterion 3:
> It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> Criterion 4:
> It has yielded, or may be likely to yield, information important in history or prehistory.

In addition to meeting the applicable eligibility criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess certain aspects of integrity, which are defined in the following manner in *National Register Bulletin 15*:

> 1. Location – the place where the historic property was constructed or the place where the historic event occurred;
>
> 2. Design – the combination of elements that create the form, plan, space, structure, and style of a property;

3. Setting – the physical environment of a historic property;

4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;

5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time;

7. Association – the direct link between an important historic event or person and a historic property.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

CITY OF BERKELEY LANDMARKS, HISTORIC DISTRICTS, AND STRUCTURES OF MERIT DESIGNATION CRITERIA

The City of Berkeley Landmarks Preservation Commission (LPC) is responsible for the preservation and protection of Berkeley's cultural and historic landmarks. The LPC is also responsible for making discretionary decisions for alterations to cultural and historic landmarks.

A. City of Berkeley Landmarks and Historic Districts

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. Architectural merit:
    a. Property that is the first, last, only or most significant architectural property of its type in the region;
    b. Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; or
    c. Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.
2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City;
3. Educational value: Structures worth preserving for their usefulness as an educational force;
4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military;
5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

B. City of Berkeley Structures of Merit

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.
2. Specific criteria include, but are not limited to one or more of the following:
    a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.
    b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.
    c. The structure is a good example of architectural design.
    d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings. (Ord. 5686-NS § 1 (part), 1985: Ord. 4694-NS § 3.1, 1974)

CRHR Significance Evaluation

CRHR Criterion 1
The property at 2012 Dwight Way is associated with early residential development west of Shattuck Avenue, but it does not appear to be individually eligible for the CRHR under Criterion 1 for this association.

CRHR Criterion 2
The property at 2012 Dwight Way is associated with Sarah Holmes, an early woman landowner in this section of Berkeley. Holmes does not appear to be uniquely significant as an early woman landowner in Berkeley; she was one of a handful of early women landowners on this block (see BAHA tax records). James Jardine and Dr. Willis A. Ward do not appear to be significant individuals. The property does not appear to possess the significance required for individual eligibility under CRHR Criterion 2.

CRHR Criterion 3
According to a landmark report for 2030-2032 Bancroft Way (February 2017), the property at 2012 Dwight Way is the work of master builder, A.H. Broad.[19] However, the landmark report does not include a citation for this attribution, nor was a link between Broad and 2012 Dwight Way found in the property file at Berkeley Architectural Heritage Association or in historic newspaper databases. Without a citation or additional documentation confirming A.H. Broad as the builder of 2012 Dwight Way, it cannot be stated that the property is eligible for the CRHR under Criterion 3 for an association with a master builder.

CRHR Criterion 4
Eligibility evaluation under Criterion 4 is beyond the scope of this report.

Integrity
An integrity evaluation is not required for properties that do not possess significance under the CRHR criteria.

City of Berkeley Landmark, Historic District, and Structure of Merit Evaluation
The property at 2012 Dwight Way does not appear to meet the criteria for a City of Berkeley Landmark or Structure of Merit. The building historically was part of a collection of eight Victorian-era residences that lined this block (see 1911 Sanborn map). By 1980, half of the Victorians had been replaced with large apartment buildings and medical offices. Sometime after 1980, another Victorian was demolished and replaced with a parking lot.

On the north side of the subject block, beginning in 1904, the Victorian-era home of Joseph H. Hume on the northeast corner of Dwight Way and Milvia Street was transformed into the Herrick Hospital campus, which eventually spanned the north side of the 2000 block of Dwight Way.

The loss of five of the original Victorians and the newer infill construction and parking lot disqualify the three remaining Victorians on the south side of the block as a cohesive grouping of Victorian-era residences.

METHODOLOGY

This Historic Resource Evaluation (HRE) was prepared by Bridget Maley of architecture + history, llc, in association with Shayne Watson of Watson Heritage Consulting, at the request of Rhoades Planning Group. Maley and Watson exceed the Secretary of the Interior's Professional Qualification Standards for Architectural History and History (Code of Federal Regulations, 36 CFR Part 61).

The project team conducted a site visit at the subject property in December 2018 and photographed the property and surrounding area. After the site visit, research on the building included in-person or online visits to the following archives and data repositories: Berkeley Architectural Heritage Association (BAHA), City of Berkeley Permit Service Center, Berkeley Public Library, San Francisco Public Library, Ancestry.com, Newspapers.com, and Newspaper Archive. BAHA has in its archives forms from earlier (1970s) survey efforts, which made a trip to the California Historical Resources Information System (CHRIS) Information Center unnecessary for this project.

P2. Location: Unrestricted
***a. County;** Alameda
***b. USGS 7.5':** Oakland West, CA (2018)
c. Address: 2015 Blake Street, Berkeley, CA 94710
d. Other Locational Data: N/A
***P3a. Description:**
This shed-like, wood-frame, two-story warehouse is sheathed in corrugated metal panels, painted white. The building is rectangular in shape, occupying almost the entire lot. The gable roof runs perpendicular to the street. The front third of the west side has a shed-on-gable roof. The street facing façade has a centered, roll-down door with a built-in pedestrian door at the east side of the roll down. The metal roll-down door is set in a wood frame. There is a roughly square window centered in the gable above the roll-down door. There are no other front façade openings on the east side. However, to the west of the roll down, and under the angle of the shed roof is a pair of double-hung windows. To the west of these is a single, double-hung window. At the lower portion of the west front there is a large, tripartite window with a decorative metal grille. The windows on the west side of the front façade are set in wood frames, but the windows themselves appear to be aluminum replacements. (See continuation sheet.)

P3A. DESCRIPTION (CONTINUED)

The west façade abuts adjacent properties and buildings. The east façade, visible as the adjacent lot was never developed, is also sheathed in white-painted corrugated metal. It has what appears to be an original sliding wood vehicular entry door at the far north side of the east elevation. The rear, north façade, is visible only at the upper portion as the lower is obscured by mature plantings. It is sheathed in corrugated metal, painted white and there is an opening at the apex of the gable, similar to the front façade.

B6. CONSTRUCTION HISTORY (CONTINUED)

NEIGHBORHOOD DEVELOPMENT & CONSTRUCTION HISTORY

The subject property is on a block in the Shattuck Tract of Downtown Berkeley bounded by Shattuck Avenue on the east, Blake Street on the south, Milvia Street on the west, and Dwight Way on the north. This area was originally part of Don Luis Peralta's Rancho San Antonio.[1] In 1842, Don Peralta divided the land into four parts and gifted one to each of his four sons: Ignacio, Domingo, Antonio, and Vicente. Domingo Peralta, who owned the land that became Berkeley, sold most of his portion of the rancho to land speculators. The speculators sold the land to investors and farmers.

The land that became the Shattuck Tract was first surveyed in 1854 by surveyor Julius Kellersberger and known as the Plot 68 subdivision, comprising 160 acres. Francis K. Shattuck (1824-1898) subdivided Plot 68; the subject block was included on Shattuck Tract Map No. 4, filed by Shattuck on March 4, 1894.

Subject Block History

By 1903--when the subject block first appears on Sanborn maps--the north side of the 2000 block of Blake Street was about half developed. Several commercial buildings faced Shattuck Avenue, and five single-family residences faced Blake Street. The rest of the parcels (four) were vacant. The south side of the block was half developed with residences and half vacant. By the time of the 1911 Sanborn map publication, the north side of Blake Street had taken on the mixed-use appearance that characterizes it today. Two warehouses had been constructed, and a Chinese laundry replaced a single-family home. The south side of the block had a few more residences facing Blake and a few more commercial buildings on Shattuck. The western third of the parcels were vacant.

The 1941 Sanborn map shows that light-industrial buildings had replaced single-family dwellings at 2019, 2029, and 2035 Blake Street. At the south side, the parcels on the west side of the block remained vacant, buildings facing Shattuck had been replaced by a used-car lot, and the H.J. Haney Ice Factory had filled in the rear of the parcels at 2026-2036 Blake Street.

By 1950, the north side of the subject block was a mix of single-family dwellings and light-industrial shops and warehouses (mostly auto-related). The south side of the block had a multi-family bungalow court at the southwest (2000-2006 Blake Street), single- and multifamily dwellings (2014-2022 Blake Street), the Union Ice Company ice factory (2026-2036 Blake Street), and a used car lot at the corner of Blake and Shattuck Avenue (2046 Blake Street).

[1] Charles Wollenberg, *Berkeley: A City in History* (Berkeley: University of California Press, 2008).

Subject Property Construction History
The building was constructed in 1910 as a one-room, one-story warehouse (permit 464). It was first used for feed and coal storage. Permitted alterations include the following: 1947 - addition of three offices to existing warehouse (permit 62063); 1968 - reroofing (permit 111244).

B10. SIGNIFICANCE (CONTINUED)

OWNER & OCCUPANT HISTORY

Years	Property Owner	Tenant	Source
c. 1910-1942	Hamilton J. Haney	Hamilton J. Haney	BAHA files

1970s-present	Alfred E. and Frances Maffly (through c. 1979)	Timberline Geodesics	BAHA files, city directories

Constructed c. 1910, the first known use for this property was feed and coal storage. A historic resources inventory form prepared in March 1979 notes the following about the history:

> Hamilton J. Haney owned all of the listed properties [2015 Blake, 2258 Shattuck, and a building on Parker Street, address unknown] at different times into the 1940s, in addition to the land north of 2558 Shattuck to Blake Street. He was the owner of the Haney Ice Company, one of the largest in Berkeley. He also dealt in wood and coal and the sheds were used for that purpose for some time. In 1946, he sold one section to the Union Ice Co. for its Berkeley plant. The Union Ice Company is the oldest ice company in California.[2]

Beginning around 1946, the building was used by a series of short- and long-term tenants, mostly related to the construction and building trades. In the mid-1970s, Timberline Geodesics was located at 2015 Blake Street (they are still located there in 2018). Timberline manufactures geodesic homes. Auto Milano, owned by Danny Tamburrinno, was located at this address from 1978 to 1995.

RELEVANT HISTORIC CONTEXT

Light Industry in Berkeley[3]

Industrial growth in Berkeley paralleled the growth of the city, and in its infancy small industries such as nurseries, bakeries, and planing mills sprang up as needs arose. The larger industries in existence the first three decades after the city's inception included Berkeley's first industry, the Pioneer Starch and Grist Mill (1855), West Berkeley Planing Mill (1857), Standard Soap Works/Colgate (1875), Hofburg Brewery (1880), and the West Berkeley Brewery (1883). Most of these industries were located in west Berkeley near the San Francisco Bay.

Berkeley experienced an industrial boom after the 1906 Earthquake and Fire forced industries out of San Francisco. Companies were attracted to cities that witnessed relatively little destruction from the earthquake, such as Berkeley and Oakland. Reportedly, thirty industries relocated to or were established in Berkeley immediately following the earthquake. The industrial expansion continued to benefit Berkeley well into the 1920s. Census reports showed 84 manufacturing plants in Berkeley in 1909, 113 plants in 1919, and 193 plants in 1928. In 1929 the Berkeley Chamber of Commerce boasted its eclectic assortment of industries in the local newspaper:

> Berkeley is the largest center of production of cocoanut oil in the United States and therefore in the world. [We] make here marine engines and gas engines of all descriptions…automatic egg cleaning and candling machines…motor-driven railroad cars…musical instruments...soaps and food products…"

In the 1930s industry in Berkeley continued to flourish through the Great Depression, even as an economic slump wreaked a lasting financial disaster throughout the rest of the country. In 1938 over 300 manufacturing plants operated in Berkeley. High profile companies, which constructed factories in

[2] Historic Resources Inventory form in Berkeley Architectural Heritage Assocation files, March 1979.

Berkeley, included the Palm-Olive-Peet Company, H.J. Heinz Corporation, and the Philadelphia Quartz Company. World War II brought industry to Berkeley in the form of war-supply manufacturers settling in west Berkeley, a part of the city that by the second decade of the twentieth century was zoned specifically for manufacturing. On the other side of the city, Downtown Berkeley had forced out nearly all of its larger industries and by the 1940s and 50s was dedicated largely to small businesses and residential neighborhoods. The only industries left near Downtown Berkeley in 1950 consisted of small bakeries, printers, and small specialty industries, such as a felt product manufacturer that catered to the “school spirit” industry, manufacturing such products as pennants and banners.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES SIGNIFICANCE CRITERIA

The California Register of Historical Resources (CRHR) is an inventory of significant architectural, archaeological, and historical resources in the State of California. Resources can be listed in the CRHR through a number of methods. State Historical Landmarks and National Register of Historic Places (NRHP)-listed properties are automatically listed in the CRHR. Properties can also be nominated to the CRHR by local governments, private organizations, or citizens.

The evaluative criteria used by the CRHR for determining eligibility are closely based on those developed by the National Park Service for the NRHP. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

> Criterion 1:
> It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> Criterion 2:
> It is associated with the lives of persons important in our past.
>
> Criterion 3:
> It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> Criterion 4:
> It has yielded, or may be likely to yield, information important in history or prehistory.

In addition to meeting the applicable eligibility criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess certain aspects of integrity, which are defined in the following manner in *National Register Bulletin 15*:

> 1. Location – the place where the historic property was constructed or the place where the historic event occurred;
>
> 2. Design – the combination of elements that create the form, plan, space, structure, and style of a property;

3. Setting – the physical environment of a historic property;

4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;

5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time;

7. Association – the direct link between an important historic event or person and a historic property.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

CITY OF BERKELEY LANDMARKS, HISTORIC DISTRICTS, AND STRUCTURES OF MERIT DESIGNATION CRITERIA

The City of Berkeley Landmarks Preservation Commission (LPC) is responsible for the preservation and protection of Berkeley's cultural and historic landmarks. The LPC is also responsible for making discretionary decisions for alterations to cultural and historic landmarks.

A. City of Berkeley Landmarks and Historic Districts

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. Architectural merit:
    a. Property that is the first, last, only or most significant architectural property of its type in the region;
    b. Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; or
    c. Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.
2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City;
3. Educational value: Structures worth preserving for their usefulness as an educational force;
4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military;
5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

B. City of Berkeley Structures of Merit

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.
2. Specific criteria include, but are not limited to one or more of the following:
    a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.
    b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.
    c. The structure is a good example of architectural design.
    d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings. (Ord. 5686-NS § 1 (part), 1985: Ord. 4694-NS § 3.1, 1974)

CRHR Significance Evaluation

CRHR Criterion 1
The property at 2015 Blake Street does not appear to be associated with events or patterns important to local, state, or national history and does not rise to the level of significance required for individual eligibility under CRHR Criterion 1.

CRHR Criterion 2
The property at 2015 Blake Street is likely associated with Hamilton J. Haney, owner of the Haney Ice Company. The building was used for feed and coal storage—so not directly associated with Haney himself or the business (i.e., it wasn't the offices or headquarters or a space used for making ice). The property at 2015 Blake Street does not appear to possess the significance required for individual eligibility under CRHR Criterion 2.

CRHR Criterion 3
The building at 2015 Blake Street is not representative of a unique or distinctive architectural design, nor is it the work of a master architect or builder. The property at 2015 Blake Street does not appear to possess the significance required for individual eligibility under CRHR Criterion 3.

CRHR Criterion 4
Eligibility evaluation under Criterion 4 is beyond the scope of this report.

Integrity
An integrity evaluation is not required for properties that do not possess significance under the CRHR criteria.

City of Berkeley Landmark, Historic District, and Structure of Merit Evaluation
As noted above, the property at 2015 Blake Street does not appear to be associated with events or patterns important to Berkeley history. It is not representative of a unique or distinctive architectural design, nor is it the work of a master architect or builder. The property at 2015 Blake Street is likely associated with Hamilton J. Haney, but it was not directly associated with Haney himself or the business. This property does not meet the City of Berkeley criteria for either a Landmark or Structure of Merit.

METHODOLOGY

This Historic Resource Evaluation (HRE) was prepared by Bridget Maley of architecture + history, llc, in association with Shayne Watson of Watson Heritage Consulting, at the request of Rhoades Planning Group. Maley and Watson exceed the Secretary of the Interior's Professional Qualification Standards for Architectural History and History (Code of Federal Regulations, 36 CFR Part 61).

The project team conducted a site visit at the subject property in December 2018 and photographed the property and surrounding area. After the site visit, research on the building included in-person or online visits to the following archives and data repositories: Berkeley Architectural Heritage Association (BAHA), City of Berkeley Permit Service Center, Berkeley Public Library, San Francisco Public Library, Ancestry.com, Newspapers.com, and Newspaper Archive. BAHA has in its archives forms from earlier (1970s) survey efforts, which made a trip to the California Historical Resources Information System (CHRIS) Information Center unnecessary for this project.

d. Other Locational Data: N/A
***P3a. Description:**
This is a one-story plus mezzanine, masonry block building. The parapet steps up at the front elevation. This corresponds to the flat-roofed mezzanine at the Blake Street elevation. The taller flat roof of the front intersects with a gable roof with side parapets running the length of the building to the rear, or north façade. The roof terminates in a hip at the north facade. The roof is punched with mechanical equipment and a number of skylights and vents.

The front façade has been extensively altered from the original design, which had three bays, each with a ribbon transom window above. The east and west bays had large, divided light storefront assemblies. The center bay formed an opening for vehicular entry into the shop. P3A. DESCRIPTION (CONTINUED)

Today, the ribbon transom windows have been infilled and the bay configurations altered with new much smaller windows at the east and west, and the center bay has been infilled with an inset pedestrian entry with wood doors to the east and a roll-down door to the west. The front facade has been stuccoed. The side elevations are masonry, but have been painted. The rear, or north, elevation has several projecting mechanical elements and one large plate glass window.

B6. CONSTRUCTION HISTORY (CONTINUED)

NEIGHBORHOOD DEVELOPMENT & CONSTRUCTION HISTORY

The subject property is on a block in the Shattuck Tract of Downtown Berkeley bounded by Shattuck Avenue on the east, Blake Street on the south, Milvia Street on the west, and Dwight Way on the north. This area was originally part of Don Luis Peralta's Rancho San Antonio.[1] In 1842, Don Peralta divided the land into four parts and gifted one to each of his four sons: Ignacio, Domingo, Antonio, and Vicente. Domingo Peralta, who owned the land that became Berkeley, sold most of his portion of the rancho to land speculators. The speculators sold the land to investors and farmers.

The land that became the Shattuck Tract was first surveyed in 1854 by surveyor Julius Kellersberger and known as the Plot 68 subdivision, comprising 160 acres. Francis K. Shattuck (1824-1898) subdivided Plot 68; the subject block was included on Shattuck Tract Map No. 4, filed by Shattuck on March 4, 1894.

Subject Block History

By 1903--when the subject block first appears on Sanborn maps--the north side of the 2000 block of Blake Street was about half developed. Several commercial buildings faced Shattuck Avenue, and five single-family residences faced Blake Street. The rest of the parcels (four) were vacant. The south side of the block was half developed with residences and half vacant. By the time of the 1911 Sanborn map publication, the north side of Blake Street had taken on the mixed-use appearance that characterizes it today. Two warehouses had been constructed, and a Chinese laundry replaced a single-family home. The south side of the block had a few more residences facing Blake and a few more commercial buildings on Shattuck. The western third of the parcels were vacant.

The 1941 Sanborn map shows that light-industrial buildings had replaced single-family dwellings at 2019, 2029, and 2035 Blake Street. At the south side, the parcels on the west side of the block remained vacant, buildings facing Shattuck had been replaced by a used-car lot, and the H.J. Haney Ice Factory had filled in the rear of the parcels at 2026-2036 Blake Street.

By 1950, the north side of the subject block was a mix of single-family dwellings and light-industrial shops and warehouses (mostly auto-related). The south side of the block had a multi-family bungalow court at the southwest (2000-2006 Blake Street), single- and multifamily dwellings (2014-2022 Blake Street), the Union Ice Company ice factory (2026-2036 Blake Street), and a used car lot at the corner of Blake and Shattuck Avenue (2046 Blake Street).

Subject Property Construction History

[1] Charles Wollenberg, *Berkeley: A City in History* (Berkeley: University of California Press, 2008).

The building at 2019 Blake Street in Berkeley, CA was constructed in 1927 (building permit 27284). It appears to have been built as a speculative endeavor, as the building was advertised for lease as early as May 1927: "Garage to lease, Berk. New cement and tile bldg., 50x130. Ready to occupy. 2019 Blake st."[2] Permitted alterations include the following: 1942 - Install pre-fab paint spray booth by Holbrook Sheet Metal Co. (permit 52741); 1945 - Remodel room for office. Build stairway and penthouse over stairway (permit 57645); 1959 – Repair fire damage (permit 86591); 1977 – Correct theater lighting to code; 1989 – Frame pitched roof over flat roof section of existing roof; 1995 – Seismic retrofit.

[2] Classifieds, *Oakland Tribune*, May 1, 1927.

In the fall of 1927, Langhorne-Thomas Company, a Hudson-Essex automobile dealer with a sales and showroom at 2573 Shattuck Avenue in Berkeley, expanded into the building at 2019 Blake Street.[3] The space was used as a service and repair shop.

> The new service department [at 2019 Blake Street] is being equipped with automatic machinery of the latest type, and only genuine Hudson-Essex parts will be used. Chris Anderson, well known to Berkeley Hudson-Essex owners, will remain in charge as service superintendent. When a car comes into our enlarged service department, it will be in the hands of highly skilled, specialized Hudson-Essex mechanics…. With the acquisition of this new building to be devoted exclusively to service and the improvements in equipment we have made, we feel that we are able to insure the most complete and thorough owner-satisfaction.[4]

In January 1929, the Taylor-Smith Co. took over the Hudson-Essex business on Shattuck Avenue, and Howard Callender, an expert on Hudson-Essex repairs, managed the shop at 2019 Blake Street.[5]

From 1930 to 1945, classified advertisements in local newspapers show the various short-term businesses that operated out of 2019 Blake Street:

- 1930: "Good location for body, fender, paint shop."[6]
- 1940: "Sacrifice account sickness; working interest, good wholesale fruit and produce business."[7]
- 1941-1943: For sale: cars, refrigerator display cases, compressors

From 1945 to c. 1969, a painting company, R.W. Reade, was located at 2019 Blake Street.[8] In 1959, a fire caused $23,000 damage to the building.[9]

In the early 1970s, 2019 Blake Street housed the following short-term occupants:

- Garth A. Culver auto repair shop (1970)
- Solano Laboratories, temporarily located here while their permanent home was repaired after a fire (1971)
- Community Services Network (1972-1974)
- Custom woodworking shop (1973-1974)
- Magic Theatre shop (c. 1972-1974)
- Rainbow Designs jeweler (1974)

RELEVANT HISTORIC CONTEXT

Blake Street Hawkeyes

Beginning around 1973, 2019 Blake Street became home to an experimental theater troupe called the Blake Street Hawkeyes.

The "wildly and influentially experimental Blake Street Hawkeyes"[10] were founded by Robert Ernst, John O'Keefe, and David Schein.[11] The trio first started working together in Iowa at the Center for New Performing Arts. Ernst and Schein cofounded the Iowa Theatre Lab in Iowa City. O'Keefe, Ernst, and Schein moved to California in the late 1960s/early 1970s.[12] In 1972, Ernst and O'Keefe, with artistic director John Lyon, cofounded the teaching department at the Magic Theatre, which used the former garage/warehouse at 2019 Blake Street as the theater shop.[13] Ernst, O'Keefe, and Schein founded the Blake Street Hawkeyes at 2019 Blake Street in 1975 (though the trio had been producing shows together since 1973).[14] Stage director/producer David Coates joined the Hawkeyes c. 1977. The *San Francisco Examiner* described 2019 Blake Street while it was used by the Hawkeyes:

> From the street, there is nothing particularly prepossessing about the building. It looks pretty much like any of the other garages that line the side streets off Shattuck Avenue south of downtown Berkeley. In recent years, however, this garage's history has been more theatrical than automotive. [It was] formerly the shop space for the Magic Theatre, during that company's formative years.[15]

The Blake Street Hawkeyes drew critical acclaim in the spring of 1977 at the debut of "2019 Blake," an experimental one-man show directed by Coates and performed by mime Leonard Pitt.[16] The piece was described as a "story of a genius performer who can't keep a linear train of thought."[17] *San Francisco Chronicle* critic Thomas Albright called "2019 Blake" "brilliant, thoroughly entertaining and utterly absorbing."[18] *Chronicle* critic Bernard Weiner added: "And all this transpires in a tiny, uncomfortable warehouse room, with almost non-existent lighting and props. (I don't think I've ever seen as many extension cords in one small space.)"[19] "2019 Blake" was the show that put David Coates and Leonard Pitt "on the map"—worldwide.[20] In 1988, the *Washington Post* called Coates a "near superstar" in Europe

"where avant-garde works are more popular."[21] Coates' experimental work with lighting and sound was said to influence other superstars of the avant-garde, including composer Philip Glass.[22]

The actress and comedian Whoopi Goldberg joined the Blake Street Hawkeyes after seeing them perform [in 1981].[23] Born and raised in New York, Goldberg, a recently divorced mother of a one-year old daughter, moved to San Diego in 1974 at the age of 24.[24] She worked with the San Diego Repertory Theatre before moving to Berkeley.[25] A note in the theater section of the *San Francisco Examiner* in November 1981 announces her arrival at Blake Street: "Blake Street Hawkeyes—A potpourri of experimental theater by the ensemble, and guest artists Whoopi Goldberg and Pons Mar."[26]

Whoopi Goldberg "fell in love with" Hawkeyes cofounder David Schein, and the two moved in together:

> Before, there was just me and [my daughter], and anything I got to do was always just a little bit, because I always had to be Mommy. Now I'm a woman with a great man. He said, "Go for it." And here I am.[27]

Soon after joining the Blake Street Hawkeyes, Goldberg wrote and produced a solo performance piece, "The Spook Show," which debuted at 2019 Blake Street.[28] "The Spook Show" was a series of 13 different personality sketches performed by Goldberg, including an addict, a crippled woman, a pregnant surfer, and a young girl. The show was an instant success, drawing rave reviews from local theater critics:

> The only trouble with sounding the trumpets for Whoopi Goldberg is that all of you are not going to fit into the Blake Street Hawkeyes' studio where she is performing a one-woman piece called "The Spook Show" this weekend and next. Let's let the Hawkeyes worry about that, OK? Meanwhile, what is a Whoopi Goldberg? What, for that matter, is a Hawkeye? A Hawkeye is a theater person who lives somewhere on the experimental fringes of the art and performs on a small stage in an eccentric building on Blake Street in Berkeley.
>
> Whoopi Goldberg is a story-teller. She's a spellbinder, a moralist, an actress and one of the funniest women I have ever seen anywhere any time. She is also, as you will note from her picture, black. Very black. This is relevant, sometimes, and sometimes it's not.[29]

Critic Bernard Weiner wrote that Goldberg "displayed a talent for sharp caricature and a sterling sense of comic timing."[30]

[30] Leah Garchik, "Whoopi and Other Characters," *San Francisco Examiner*, February 6, 1983.

Goldberg, responding to the reviews, remarked: "The critics hadn't seen any black woman doin' what I'm doin'…. That's what brought 'em out."[31] She was confident of her impending success: "In my eyes…I know that I'm going to do well."[32]

"The Spook Show" played at 2019 Blake Street from the fall of 1982 through early spring of 1983. Goldberg took the show on tour around the United States and Europe as well. She performed "Spook Show" off-Broadway at the Dance Theater Workshop in New York City in late 1983. Those performances drew national attention when a *New York Times* critic praised the show, saying "it may not be long before people will try to compare future comics to the inimitable Whoopi Goldberg."[33] Director Mike Nichols approached Goldberg and urged her to take "The Spook Show" to Broadway. Goldberg refused and returned to Berkeley to write and perform "Moms," a critically acclaimed one-woman show paying homage to African American comedian Moms Mabley.[34]

At the end of the "Moms" run, in 1984, Goldberg left for New York and "The Spook Show," renamed "Whoopi Goldberg," debuted on Broadway. The show was soon turned into an HBO special and a Grammy Award-winning recording.[35] The Hollywood talent firm Katz-Gallin-Morey & Addis signed Goldberg and her career was launched.[36] In 1985, she was cast in Steven Spielberg's "The Color Purple" and was nominated for an Academy Award.

Even with Goldberg gone, the Blake Street Hawkeyes continued to be highly influential in experimental theater. As the AIDS epidemic ravaged the Bay Area, David Schein produced one of his "most monumental works, the large-scale polyrhythmic AIDS opera 'Tokens: A Play on the Plague,' performed at San Francisco's Theater Artaud in 1985."[37]

Two other Blake Street Hawkeyes of note were Cynthia Moore, cofounder in the 1960s of the experimental theater group Otrabanda Company[38]; and director and writer Ellen Sebastian Chang, cofounder and artistic director of LIFE ON THE WATER, an internationally recognized arts organization at San Francisco's Fort Mason Center from 1986 to 1995.[39]

The Blake Street Hawkeyes disbanded in the late 1980s, as Robert Ernst explains,

> "Contact between the East Bay and [San Francisco] wasn't so good—and the economics weren't so good anymore. Everybody moved away…. The whole scene was [initially] so fertile, with

Brief but Destructive

Spectacular Berkeley Fire Damages Building, Gear

BERKELEY, Feb. 18 — A brief but spectacular fire did an estimated $23,000 damage to a painting contractor's building and equipment at 2019 Blake St. last night.

Twenty-two firemen and a downpour of rain quickly controlled the blaze after it sent flames and smoke billowing out of windows and high into the air.

The one story masonry building occupied by R. W. Reade & Co. suffered $15,000 damage. An estimated $8,000 in contents, mostly in painting equipment, was destroyed.

Asst. Fire Chief Emmet Lloyd said neighbors had seen a small flash inside the building earlier in the evening but paid little heed to it, thinking it was caused by a workman. Lloyd said the fire probably started in the office area of the building and smoldered for some time before breaking into flames.

There were no injuries.

Lloyd said it was raining so hard at the time of the fire, he thought for a moment that one of the fire hoses had burst and was spraying the area.

E 14 S.F. EXAMINER Wed., Oct. 20, 1982

A fine actress and a very funny woman

By Nancy Scott
Examiner theater critic

THE ONLY trouble with sounding the trumpets for Whoopi Goldberg is that all of you are not going to fit into the Blake Street Hawkeyes' studio where she is performing a one-woman piece called "The Spook Show" this weekend and next.

Let's let the Hawkeyes worry about that, OK? Meanwhile, what is a Whoopi Goldberg? What, for that matter, is a Hawkeye? A Hawkeye is a theater person who lives somewhere on the experimental fringes of the art and performs on a small stage in an eccentric building on Blake Street in Berkeley.

Whoopi Goldberg is a story-teller.

She's a spellbinder, a moralist, an actress and one of the funniest women I have ever seen anywhere any time. She is also, as you will note from her picture, black. Very black. This is relevant, sometimes, and sometimes it's not. Among the stories she tells is the tale of a Valley girl, and if I did not have visual evidence to the contrary, I'd swear she was as blond as any bubble-brained surfer in a San Fernando shopping center.

Her voice comes out in a mannered croon ("I'm reaaa-ly serious, you know"). Her hands and body are never still; she minces and twitches in an agony of adolescent affectation. In the first moments, it's a masterpiece of condescending parody, but somehow Goldberg turns it into the story of a real person — a likable person, somebody to laugh with, not at — and the ending comes with a small sad shock.

Most of her stories end with a surprise of some sort. Bill, who lives across the street from the hospital, turns out to be a spook, all right, but not the spook you thought he was.

REVIEW highlights

★ "The Spook Show," a Blake Street Hawkeyes presentation, written and directed by Whoopi Goldberg and David Schein. A one-woman show with Goldberg plus opening acts. Music by Phoenix. Goldberg is a spellbinding story-teller, a fine actress and one of the funniest women in theater. Her range, from how the alien "Blee T" landed in the Oakland ghetto to a story by the late comedian Lord Richard Buckley. She is not to be missed. Through Oct. 30. Fridays and Saturdays, 8:30 p.m. Sandbo Counts opens the show Oct. 22 and 23, and "Dick Jones" on Oct. 29 and 30. Tickets $5. At the Hawkeyes studio, 2019 Blake St. Phone 849-3013.

★ ★ ★ ★

Whoopi Goldberg is putting on a one-woman show at the Blake Street Hawkeyes' studio

And you may take the word at face value as defined in the program: an apparition.

Bill's situation offers Goldberg the opportunity to lambaste the medical profession ("Hospitals ought to have pictures of dead doctors lining the hallways . . .").

She has lots of other targets. She appears in the first piece as a shambling, grungy dope addict, shouting insults at men picketing an abortion clinic, and she is meaner than a junkyard dog. She shouts insults at the pope, too. Suddenly, she becomes the pope, speaking in a liquid, low Italian voice.

Goldberg has more voices than a dozen actors put together. As Swami Spook Dnanada, mystic con man, she advances on a hapless member of the audience, saying, "Have you ever been hugged by a dead man?" and now I know what a corpse sounds like. Ugh.

The real test of her virtuosity is the last story: "The Bad Rappin' of the Marquis de Sade," written by the late Lord Richard Buckley and performed in his style. Buckley, who died in 1960, was a comedian who performed here in the '50s, and he had a rare imagination. The story gets a bit muddled (I lost track of the Marquis altogether), but it's a superb satire on decadence and there is some rich poetry in it.

Goldberg performs it with a mike in a purring, buttery, menacing voice, and she is so adept at maintaining suspense that I doubt anyone would notice if the place caught fire.

My favorite is an incredible flight of fancy about the alien "Blee T" who lands in the Oakland ghetto and goes on welfare with all the other kids.

Not every story is full-fledged; some are just sketches, bits of tough, funny, clear-eyed commentary. They are all informed with a keen intelligence.

I note, kindness of a piece by Carolyn Wendt from City Arts Monthly, included in the press packet, that Goldberg would like to do a show on the life and comedy of that great comedian, Moms Mabley. What a gift that would be.

October 1982 review of Whoopi Goldberg's "The Spook Show" at 2019 Blake Street (*San Francisco Examiner*)

PAST HISTORIC RESOURCES EVALUATIONS

- Architectural Resources Group. *City of Berkeley Downtown Survey and Contexts*, August 2007: Blake Street just outside of boundary of this survey.

- Berkeley Architectural Heritage Association. No previous survey form on file with BAHA.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES SIGNIFICANCE CRITERIA

The California Register of Historical Resources (CRHR) is an inventory of significant architectural, archaeological, and historical resources in the State of California. Resources can be listed in the CRHR through a number of methods. State Historical Landmarks and National Register of Historic Places (NRHP)-listed properties are automatically listed in the CRHR. Properties can also be nominated to the CRHR by local governments, private organizations, or citizens.

The evaluative criteria used by the CRHR for determining eligibility are closely based on those developed by the National Park Service for the NRHP. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

> Criterion 1:
> It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> Criterion 2:
> It is associated with the lives of persons important in our past.
>
> Criterion 3:
> It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> Criterion 4:
> It has yielded, or may be likely to yield, information important in history or prehistory.

In addition to meeting the applicable eligibility criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess certain aspects of integrity, which are defined in the following manner in *National Register Bulletin 15*:

> 1. Location – the place where the historic property was constructed or the place where the historic event occurred;
>
> 2. Design – the combination of elements that create the form, plan, space, structure, and style of a property;
>
> 3. Setting – the physical environment of a historic property;

4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;

5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time;

7. Association – the direct link between an important historic event or person and a historic property.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

CITY OF BERKELEY LANDMARKS, HISTORIC DISTRICTS, AND STRUCTURES OF MERIT DESIGNATION CRITERIA

The City of Berkeley Landmarks Preservation Commission (LPC) is responsible for the preservation and protection of Berkeley's cultural and historic landmarks. The LPC is also responsible for making discretionary decisions for alterations to cultural and historic landmarks.

A. City of Berkeley Landmarks and Historic Districts

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. Architectural merit:
    a. Property that is the first, last, only or most significant architectural property of its type in the region;
    b. Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; or
    c. Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.
2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City;
3. Educational value: Structures worth preserving for their usefulness as an educational force;
4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military;
5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

B. City of Berkeley Structures of Merit

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.
2. Specific criteria include, but are not limited to one or more of the following:
    a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.
    b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.
    c. The structure is a good example of architectural design.
    d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings. (Ord. 5686-NS § 1 (part), 1985: Ord. 4694-NS § 3.1, 1974)

CRHR Significance Evaluation

CRHR Criterion 1
Home to the Blake Street Hawkeyes beginning in the early 1970s, the building at 2019 Blake Street played a key role in the development of experimental theater in the Bay Area and advancements in theater and music performances worldwide. Performances at 2019 Blake Street received rave reviews from theater critics. George Coates and the mime Leonard Pitt became internationally renowned after the debut of "2019 Blake." Former Hawkeye Whoopi Goldberg, whose career was launched by her work at 2019 Blake Street, is one of only fifteen individuals—and the first African American—to have received all four of the major entertainment awards (Emmy, Golden Globe, Oscar, and Tony). The building at 2019 Blake Street is individually eligible for the CRHR under Criterion 1, at the local level, in the area of performing arts.

CRHR Criterion 2
The building at 2019 Blake Street is associated with the Blake Street Hawkeyes, an avant-garde theater troupe that consisted of the significant individuals described above, including Robert Ernst, John O'Keefe, David Schein, David Coates, Leonard Pitt, and Whoopi Goldberg. The building at 2019 Blake Street is individually eligible for the CRHR under Criterion 2, at the local level, in the area of performing arts.

Note: NRHP guidance for nominating properties under Criterion B (person) states the following: "Properties associated with living persons are usually not eligible for inclusion in the National Register. Sufficient time must have elapsed to assess both the person's field of endeavor and his/her contribution to that field."[43] (Instructions for evaluating properties under CRHR Criterion 2 do not include guidance for assessing properties associated with living persons.)

CRHR Criterion 3
The building at 2019 Blake Street is not representative of a unique or distinctive architectural design, nor did a significant architect or builder design it. The property at 2019 Blake Street does not appear to possess the significance required for individual eligibility under CRHR Criterion 3.

CRHR Criterion 4
Eligibility evaluation under Criterion 4 is beyond the scope of this report.

CRHR Special Criteria Considerations (Historical resources achieving significance within the past fifty years)
Eligibility criteria for the CRHR include guidance for evaluating properties that have achieved significance within the recent past:

> In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than fifty years old may be considered for listing in the California Register if it can be demonstrated that sufficient time has passed to understand its historical importance.[44]

[43] National Park Service, "How to Apply the National Register Criteria for Evaluation," *National Register Bulletin 15* (accessed at https://www.nps.gov/nr/publications/bulletins/nrb15/nrb15_6.htm#crit%20b).
[44] California Office of Historic Preservation, "Technical Assistance Series #6

This guidance is similar to guidance for NRHP Criteria Consideration G (exceptional importance), which states:

> A property that has achieved significance within the past fifty years can be evaluated only when sufficient historical perspective exists to determine that the property is exceptionally important. The necessary perspective can be provided by scholarly research and evaluation, and must consider both the historic context and the specific property's role in that context.[45]

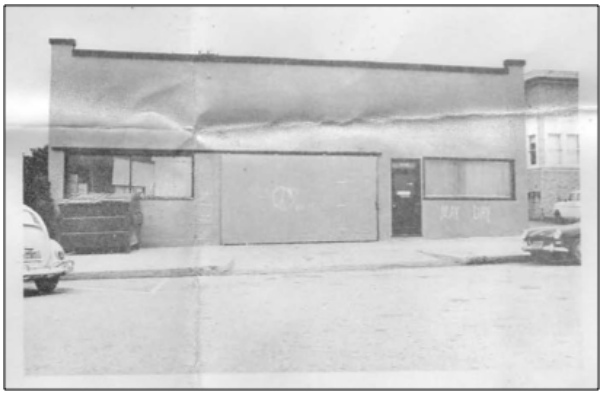
As demonstrated in this report's section on significance and outlined in the evaluations above, the building at 2019 Blake Street appears to meet the criteria necessary for properties that have achieved significance within the last 50 years. Sufficient scholarly documentation exists to show that the work of the Blake Street Hawkeyes had far-reaching impacts in the area of performing arts.

California Register and National Register: A Comparison," (accessed at: http://ohp.parks.ca.gov/pages/1069/files/technical%20assistance%20bulletin%206%202011%20update.pdf)

[45] National Park Service.

Integrity

The building at 2019 Blake Street is significant under CRHR Criteria 1 and 2. The building appears to meet the requirements for exceptional importance as defined under NRHP Criteria Consideration G. In order for a building to be eligible for inclusion in the CRHR, it must retain enough integrity to convey its significance. In order to convey its significance, the building at 2019 Blake Street should generally retain the physical appearance it exhibited during the period of significance (c. 1973-1990).



2019 Blake Street, 1971 (BAHA files)

2019 Blake Street, 2018 (A+H, LLC)

Comparing the two photographs above, the building generally looks the same today as it did at the beginning of the period of significance. (The vehicular opening visible on the right is covered by the sliding barn-style door visible at left.) The interior of the building was not accessed for this evaluation.

The building at 2019 Blake Street retains integrity of location, design, setting, materials, workmanship, feeling, and association.

City of Berkeley Landmark, Historic District, and Structure of Merit Evaluation

The property at 2019 Blake Street appears to meet two of the criteria for City of Berkeley Landmarks:

- Criterion 2, Cultural Value – as a property associated with the movement/evolution of cultural developments of the City; and

- Criterion 4, Historic Value – as a property that embodies and expresses the history of Berkeley and the Bay Area.

Character-Defining Features

- One-story plus mezzanine massing
- Masonry block building
- Flat and gable roofs with parapets
- Window and door configuration at Blake Street facade

METHODOLOGY

This Historic Resource Evaluation (HRE) was prepared by Bridget Maley of architecture + history, llc, in association with Shayne Watson of Watson Heritage Consulting, at the request of Rhoades Planning Group. Maley and Watson exceed the Secretary of the Interior's Professional Qualification Standards for Architectural History and History (Code of Federal Regulations, 36 CFR Part 61).

The project team conducted a site visit at the subject property in December 2018 and photographed the property and surrounding area. After the site visit, research on the building included in-person or online visits to the following archives and data repositories: Berkeley Architectural Heritage Association (BAHA), City of Berkeley Permit Service Center, Berkeley Public Library, San Francisco Public Library, Ancestry.com, Newspapers.com, and Newspaper Archive. BAHA has in its archives forms from earlier (1970s) survey efforts, which made a trip to the California Historical Resources Information System (CHRIS) Information Center unnecessary for this project.

***Resource Name or #:** 2020 Dwight Way, Berkeley, CA

P1. Other Identifier: APN: 055-182202300
P2. Location: Unrestricted
***a. County;** Alameda
***b. USGS 7.5':** Oakland West, CA (2018)
c. Address: 2020 Dwight Way, Berkeley, CA 94710
d. Other Locational Data: N/A
***P3a. Description:**
This is a two-story, over a raised basement, wood-frame, Victorian-era house with Stick Style, sometimes called Eastlake, detailing as well as some Queen Anne features. Stick Style architecture is recognizable by a relatively plain façade, often with horizontal wood siding, but accented with trusses, brackets, shingles and spindles. These houses also had a vertical orientation and were almost always at least two stories. This house is sheathed in horizontal wood siding. The roof is intersected by a gable over the projecting multi-sided bay. The bay gable is inset and has decorative fish-scale shingles, a sun burst at the gable apex. The angled bay has decorative brackets, also with sunbursts and with a droplet.

Adjacent to the bay at the first story is a covered porch supported with spindled posts. The raised basement requires a set of wood steps to the porch. The porch railing is a simple elongated x-shape and the stair railing has wood slats. The front door is wood paneled at the lower portion and glazed above. There is a glazed transom above the door. One-over-one, double-hung wood windows are found in the bay and at the upper story of the front façade. (See continuation sheets.)

P3A. DESCRIPTION (CONTINUED)

The east side has another two-story projecting bay and the west elevation has a larger, boxier, projection with a gable with fish scale shingles. The rear elevation has a one-story addition. The 1977 BAHA Urban Conservation Survey form mentions a brick chimney, but this seems to have been removed.

Overall, the house is a fine example of the mingling of both Stick Style with Queen Anne detailing, such as the spindled posts at the porch. This was originally one of four houses in a well-designed row of Victorian dwellings, but one (2016 Dwight) has been lost. The BAHA Urban Conservation Survey of 1977 identified the building as neighborhood contributing with overall importance to the area, but with average architectural detailing.

B6. CONSTRUCTION HISTORY (CONTINUED)

NEIGHBORHOOD DEVELOPMENT & CONSTRUCTION HISTORY

The subject property is on a block in the Shattuck Tract of Downtown Berkeley bounded by Shattuck Avenue on the east, Blake Street on the south, Milvia Street on the west, and Dwight Way on the north. This area was originally part of Don Luis Peralta's Rancho San Antonio.[1] In 1842, Don Peralta divided the land into four parts and gifted one to each of his four sons: Ignacio, Domingo, Antonio, and Vicente. Domingo Peralta, who owned the land that became Berkeley, sold most of his portion of the rancho to land speculators. The speculators sold the land to investors and farmers.

The land that became the Shattuck Tract was first surveyed in 1854 by surveyor Julius Kellersberger and known as the Plot 68 subdivision, comprising 160 acres. Francis K. Shattuck (1824-1898) subdivided Plot 68; the subject block was included on Shattuck Tract Map No. 4, filed by Shattuck on March 4, 1894.

Subject Block History

By 1903--when the subject block first appears on Sanborn maps--the north side of the 2000 block of Dwight Way was sparsely developed with just two, very large single-family homes and outbuildings (2001 and 2031 Dwight Way); a single commercial building faced Shattuck Avenue. The south side of the block was nearly fully developed with a row of single-family residences from 2000 to 2022 Dwight Way. Three commercial buildings faced Shattuck.

By the time of the 1911 Sanborn map publication, little had changed on the north side of the block except for the addition of several commercial buildings facing Shattuck Avenue. Similarly, the south of the block remained the same except for two additional residences. There were still two vacant parcels.

The 1941 Sanborn map shows that the Berkeley General Hospital filled the northwestern side of the block. The large single-family home at 2031 Dwight Way had been enlarged. The biggest changes on the south side of the block were the replacement of a single-family home with an apartment building (2000 Dwight Way) and the construction of a new, two-family building at 2030 Dwight Way. Two of the single-family homes had been converted into two-family dwellings.

By 1950, Herrick Memorial Hospital at 2001 Dwight Way filled the northwest quadrant of the block. The Barker Block (2033-2049 Dwight Way) filled the northeast quadrant. The south side of the block was filled

[1] Charles Wollenberg, *Berkeley: A City in History* (Berkeley: University of California Press, 2008).

mostly with two-story single-family residences with detached garages. The exceptions were a two-story medical-office building at 2000 Dwight Way, two apartment buildings at 2026 and 2030 Dwight Way, and a bank at the corner of Dwight Way and Shattuck Avenue (2042-2048 Dwight Way). The subject property is included on this map.

Subject Property Construction History
The residence at 2020 Dwight Way in Berkeley, CA was constructed c. 1895. Permitted alterations include the following: 1916 – Re-shingle roof (permit 5794); 1923 – demolish barn and build small storage shed (permit 14907); 1937 – repair rear exterior stair, new door to stair, and interior modifications (permit 42858).

B10. SIGNIFICANCE (CONTINUED)

OWNER & OCCUPANT HISTORY

Years	Property Owner	Tenant	Source
1900-1902	Unknown (possibly the Simpsons)	Thomas and Lucretia Simpson	Census data, city directories
1906-1907	George W. Gove	Unknown	BAHA files
1920-1935	James and Lottie Whitsett	James and Lottie Whitsett	Census data, historic newspaper articles, building permits
1939-1945	Russian Orthodox Church of St. John the Baptist	Russian Orthodox Church of St. John the Baptist	BAHA files
1955-present	Unknown	Apartments, various short-term tenants	Historic newspaper articles, building permits, city directories

The first known owner of the property at 2020 Dwight Way was likely Captain George Weston "West" Gove, a master mariner. Gove was shown as the owner of the property on block books in 1906 and 1907.[2] (Gove purchased a property at Dwight Way and Milvia Streets in 1906 from L.S. De Sallier, but it is not clear from the article which parcel that was.[3]) Gove and his family lived at 2913 Newbury Street and later at 2118 Grant Street.

[2] Berkeley Architectural Heritage Association files.
[3] Real Estate Transactions, *Berkeley Daily Gazette*, November 23, 1906.

The 1900 census shows the residence being rented by Thomas Simpson and his family.[4] Born in Michigan in 1837, Simpson was married to Lucretia, born in Indiana in 1846. Thomas Simpson was a coal merchant for a business at 2522 Shattuck Avenue. The city directory shows the Simpsons living at 2511 Dwight in 1895, so the family moved to the subject property between 1895 and 1900.[5] Thomas Simpson died in 1902 after a long illness.[6] He was a well-known Berkeley resident engaged extensively in the wood, coal and grain business, according to the San Francisco Chronicle.

It isn't clear who occupied the residence in 1907, but the following advertisement describes their business at the time: "Owner has too much to attend to; a well-established livery business; 23 horses, about 30 buggies and surreys, one O'Brien hack; owner owns the property; will give a long lease to the right person; it is best located stable in Berkeley and can be enlarged. For price call on owner 2020 Dwight way, Berkeley."[7]

Gove sold the property to James W. and Lottie B. Whitsett in 1920.[8] James, a clerk, abandoned his family in 1925 and the two divorced.[9] Lottie and her children lived at the property through c. 1935.

Beginning c. 1939, 2020 Dwight Way was either owned or rented by St. John the Baptist Russian Orthodox Church of Berkeley. The church, with a congregation of 100, still met at the house in 1945 while a permanent church was under construction.[10] Father Alexander Presadsky was the priest.

Around 1955, the single-family residence was converted into apartments.[11]

RELEVANT HISTORIC CONTEXT

Residential Development and Architecture in Downtown Berkeley[12]
Residential development in Downtown Berkeley is diverse, the result of over a century of growth. Residences range from Victorian single-family dwellings, to post-earthquake shingled boxes, to 1960s multistory apartment blocks. The earliest residences in Berkeley consisted of scattered country houses constructed in the 1860s and 1870s, isolated from the surrounding communities by distance and poor roads. The situation completely changed in 1876 when the Central Pacific (later the Southern Pacific) Railroad extended a spur line from Oakland along Adeline Street and Shattuck Avenue terminating at Stanford Square (now Shattuck Square and Berkeley Square).

Berkeley's development as a town and residential area was almost instantaneous, and the Town of Berkeley was incorporated in 1878. That year a developer's map touted the convenience of travel from Berkeley's neighborhoods to San Francisco, ostensibly to promote Berkeley as a convenient place of residence for those working in the city: "Only three blocks from the Railroad Station, and within 45 minutes of San Francisco." An 1888 map of the downtown showed that the area had been divided into numerous tracts of land; North of University Avenue there were the Hardy, College, Clapp, and Villa Lots tracts. From University Avenue south to Dwight Way, the project area included the edge of the large McGee tract, and parts of the B.L.T. Lassin and Barker Tracts.

By the early 1890s most of the blocks in the downtown residential areas had been divided into various individual lots. Most were the standard rectangular, residential lots with the narrow side facing the street. Interestingly, although lot sizes were standard within a single block, they varied between blocks.4 By the time of the 1894 Sanborn Map many of the residential lots had been built out, but a few remained undeveloped. Most residences were small to medium single-family dwellings from one to two stories. In contrast to land use patterns today, University Avenue was primarily residential with a small commercial section at the intersection of University and Shattuck Avenues.

On 18 April 1906 the San Francisco Bay Area was rocked by a strong earthquake. Many buildings in San Francisco were damaged and many more in that city were destroyed by the subsequent fire. San Francisco residents took refuge in nearby cities like Berkeley. About 20,000 San Franciscans became permanent Berkeley residents. The 1906 influx resulted in a corresponding construction and housing boom. Not surprisingly, by the time of the 1911 Sanborn Map, most residential lots in the vicinity of the downtown were filled. Some lots had been further subdivided resulting in more dense residential development. For the first time apartments and buildings with multiple flats were constructed near the downtown mostly in the north residential section. There were other changes in residential construction in Berkeley. In the nineteenth century, residences within the project area all had unique footprints, but the 1911 map shows multiple properties with identical footprints suggesting they may have been built by a developer, based on the same design. In addition, setbacks (the distance from the façade of the residences and the street) were more standardized. Much of University Avenue remained residential.

In 1920 a comprehensive zoning measure was passed dividing Berkeley into seven types of land-use districts. Class-I districts included single-family dwellings, churches, railroad stations, flats, apartments, tenements, lodgings, hotels, and dormitories. Most of the downtown area was not zoned residential with the exception of the three residential areas described above. Berkeley continued to grow in the 1920s and by the time of the 1929 Sanborn Map, the population increase was evident in higher density development. By 1929 in the downtown north residential area, some single-family residences had been replaced with two-story apartment buildings. The economic pressures of the Depression also caused a change in the density of the downtown residential areas. Throughout the country during the Depression, many families saw a decrease in income and could no longer afford their houses. The result of these two factors was that many of the large single-family residences in Berkeley's downtown area were modified to become rooming houses or flats, accommodating multi-family occupancy. On some streets such as University Avenue and Kittredge Street, which had transitioned from residential to commercial, first-floor storefronts were added in front of residences.

In 1940 the 1920 zoning map was updated, but the districts within the downtown remained the same. Although zoning had not changed, residential density had; by 1950 nearly every residential lot within the

study area was filled. In addition, many new apartment buildings had been constructed. For example, in the downtown southeast residential area, there were five four-unit apartment buildings. Similarly, many single-family residences had been divided into multiple units. World War II-era worker housing had been constructed at 2145 Dwight Way and 2007 Milvia Street. In the 1960s density in the downtown residential areas further increased with the construction of large-scale multi-story apartment buildings.

Many talented contractors and craftsmen were employed to execute residential buildings in Berkeley. More research should be undertaken in the future to identify these individuals and link them to specific projects. Additionally, there were likely many residential developers working in Berkeley. Further research is also necessary with regard to these individuals and companies to determine their significance within the residential architectural context of Berkeley.

Residential Architectural Styles[13]
Few single-family residences within [Downtown Berkeley] were architect designed. Several apartment buildings were designed by architects, such as William Wharff and Walter H. Ratcliff, whose projects also included commercial and civic buildings in Berkeley. In the late nineteenth century, residential designs were often adapted from standard designs found in magazines or pattern books.

Residential building types in Downtown Berkeley are diverse with large single-family residences, apartment buildings, small cottages, duplexes, and flats. Within each of these building types there are representative examples of most major residential architectural styles popular between 1880 and 1950. While the downtown has more Victorian era (Queen Anne, Stick, Eastlake, and Folk Victorian) and Classical Revival houses than any other styles, there are also a number of Shingle Style, Colonial Revival, and Spanish Revival style houses. Regardless of style, most of the residential buildings within the neighborhood are of wood-frame construction.

Victorian Era Styles
Queen Anne, Stick, Eastlake, and Folk Victorian
Victorian is an overview term, the validity of which is much debated. Deriving from the long reign of Great Britain's Queen Victoria (1837 to 1901), this "style" had several variations based on the architectural trends during this period. In America rapid industrialization during the period 1860 to 1910 brought drastic changes in house design and construction. Mass production of building components expanded as quickly as the railroad that transported the items across state lines. The low cost and easy availability of these decorative and structural components made their success inevitable. These developments in architecture labeled "The Victorian" can be seen in almost every community in the United States. The following architectural derivatives of Victorian period architecture became popular.

Queen Anne 1880-1910
Within the survey area there are numerous Queen Anne style houses. This style was named and popularized by a group of English architects led by Richard Norman Shaw. One of the first American houses of this style was in Newport Rhode Island, in 1874. The expanding railroad system in the United

[13] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey,* August 2007, pp. 45-58. See endnotes in that report for citations.

States helped to popularize this style as pre-made architectural details were conveniently available from pattern books.

The identifying features consist of a steeply pitched roof of irregular shape, usually with a dominant front-facing gable, patterned shingles, and cutaway bay windows. These design details were used to avoid a smooth-walled appearance or give the building an asymmetrical appearance. A partial or full porch along the front facade wrapping around one or both sides of the house was common. Queen Anne houses often had very distinctive patterns of decoration, such as spindle work, lace-like brackets, Palladian windows, incised ornament, roof cresting, or decorative stone. Most Queen Anne-style residences were constructed as single-family dwellings.

Queen Anne residences often include:

- irregular plan;
- asymmetrical façade;
- complex roof forms with front-facing gable;
- variety of materials and textures;
- bay windows;
- turned or carved wood ornament;
- turrets or towers; and
- decorative shingle patterns.

Examples of Queen Anne-style residences in Downtown Berkeley include:

- 1920 Haste Street
- 1940 Channing Way
- 2430 Fulton Street
- 2415 Fulton Street
- 1934 Haste Street

Stick Style 1880-1910

Victorian-era pattern books frequently featured Stick Style houses. Many surviving houses of this type exist in Northern California where rapid growth and abundance of lumber favored wood-frame construction. These houses usually have a gabled roof with a steep pitch and cross gables. The gables commonly have decorative trusses at the apex, overhanging eaves, and exposed rafter ends. Wooden wall cladding such as shingles or boards, interrupted by patterns of horizontal, vertical, and diagonal boards or stick work, as it was called, were the defining elements of the style. There was often a raised wall surface for emphasis, and many porches included diagonal or curved braces. The Stick style developed different idioms in the variety of regions within the United States.

Stick-style residences often include:

- cross gables;
- decorative trusses;
- exposed rafter ends;
- studs visible on the exterior; and
- corner braces with pendants.

Examples of Stick style-residences in Downtown Berkeley include:

- 2409 Martin Luther King, Jr. Way
- 2411 Martin Luther King, Jr. Way

Eastlake 1880-1900

Many Eastlake houses can also be classified as Stick or Queen Anne style. However, one particular ornament - the curved, highly ornate, cutout bracket - was highly popular and is the identifying element of the Eastlake style. Other identifiers include spindle-like supports for porches or roof overhangs often resembling table legs, and other decorative elements borrowed from furniture design including knoblike features and motifs consisting of circular cutouts or perforations.

The name derives from that of Charles Lock Eastlake, son of a painter, who was himself an English architect and furniture designer. His two publications A History of the Gothic Revival and Hints on Household Taste made him famous in Great Britain. The books offered designs for woodcuts intended for use in furniture design. Charles Eastlake was vehemently opposed to the application of his decorative ideas to architecture, even rejecting it publicly in print. However, the style became immensely popular in the United States, especially in California and the West.

Eastlake-style houses often include:

- asymmetrical façade;
- highly ornate cut out brackets;
- carved panels;
- ornate carved and turned bargeboards in gable ends;
- spindles in porch brackets and balusters; and
- turned balustrades.

An example of an Eastlake-style residence in Downtown Berkeley is:

- 2009 Berkeley Way

Folk Victorian or Victorian Vernacular 1860-1910

This style is basically a scaled down version of Queen Anne and Stick styles. Simple vernacular forms, often different in various regions of the country, made this style eclectic and difficult to define. Scaled down Victorian decorative elements are applied to simple vernacular houses in that region. The details can reflect the Queen Anne, Italianate, Stick, or Eastlake styles. In many cases, the ornament is applied to the porch or gable. The facade is usually symmetrical and cornice-line brackets are common. These add-on details were also made possible by an expanding railroad and mail ordering systems.

Typical features of Victorian Vernacular residences include:

- symmetrical façade;
- spindle work on porches;
- flat jigsaw trim;
- pointed gables; and
- pointed arch windows.

An example of a Victorian Vernacular-style residence in Berkeley is:

- 1915 Addison Street

Health & Medicine: Herrick Campus Area[14]

For over a century the area near the intersection of Dwight Way and Milvia Street has been a center of health and medicine for the city of Berkeley. Berkeley spent the first quarter century after its 1878 incorporation without any local hospital facilities. Then, in 1904, Dr. Francis L. Herrick established the city's first hospital in the former home of Joseph H. Hume on the northeast corner of Dwight Way and Milvia Street.

Dr. Herrick converted Hume's ornate Victorian house into a 25-bed general hospital offering medical, surgical and obstetrician services. The hospital was named after President Theodore Roosevelt, for whom Herrick had great admiration. Roosevelt Hospital's status as Berkeley's sole medical facility ended in 1905 when a young nurse, Alta Alice Miner Bates, established Berkeley's second hospital in a private residence further up Dwight Way. The Alta Bates Sanitarium was an 8-bed facility dedicated to the care of women and their infants.

Roosevelt Hospital expanded its services and facilities to keep pace with Berkeley's growth. In 1906 the facility became the emergency hospital for Berkeley and other nearby East Bay communities. When hundreds of San Franciscan refugees fled to Berkeley after the Earthquake and Fire of 1906, Roosevelt Hospital accommodated refugees in need of major surgery.

The hospital's first major expansion occurred in 1924 when the facility was renamed Berkeley General Hospital and a new two-story concrete wing was added onto the west side, expanding the hospital's capacity to 50 beds. Surgery was transferred to the second floor of the new wing. By 1934 additional expansions increased the hospital's capacity to 100 beds.
In 1932 Dr. Herrick died, and in 1935 his heirs converted the Roosevelt hospital to a non-profit corporation by donating their ownership of capital stock and a gift of $500,000. During the same year William Walter Reich, MD, established a party-pay clinic to serve outpatients who could not afford private care and were ineligible for county or other forms of aid.

In 1943 the hospital received $435,000 via the Lanaham Act for construction of a new south wing. When the four-story south wing was completed in 1945, the now 250-bed hospital facility was renamed Herrick Memorial Hospital in honor of its founder. During the same year, hospital trustees approved the Berkeley Council of Social Agencies' "Inter-Racial Code for Social Agencies" and committed to accept patients, doctors, and staff without regard to race, religion, sex, age, or national origin. This move helped further establish Herrick Hospital as one of the East Bay's most progressive health-care facilities in terms of hiring and patient services.

In 1948 Herrick became the first community general hospital to offer inpatient psychiatric services. The hospital also became the first to be awarded a federal grant for construction of a psychiatric unit when funds from the Hill-Burton Act were used to build a seven-story North Wing in 1957. The North Wing included space for 49 psychiatric beds and rehabilitation services.

[14] This section is excerpted from Architectural Resources Group, *City of Berkeley Downtown Survey and Contexts: Downtown Berkeley Historic Resources Reconnaissance Survey*, August 2007, pp. 101-103. See endnotes in that report for citations.

In 1965 Herrick expanded yet again, adding a four-story clinic building and auditorium that was also home to a chapel, radioisotope laboratory, and an entire floor for psychiatric outpatient care. In 1967 Herrick began to coordinate with Alta Bates Hospital to have certain services discontinued and merged with services at Alta Bates. During the same year, the Maternity Department became the first, but not last, service to be ended at Herrick and transferred to Alta Bates.

Throughout its history Herrick achieved a variety of other significant “firsts” in the healthcare field. It was the first community general hospital to put surgery below ground so recovering patients could enjoy the view in rooms above and the first hospital in the nation to establish a Disabled Community Health Care Clinic (1975). In the San Francisco Bay Area, it was the first hospital to offer intensive care for neurological patients, a chaplain-training program, a department of Social Care, a Women’s Auxiliary, an Inservice Volunteer Program, and a gift store run by volunteers.

In 1980 Herrick underwent its last major expansion to date, a new 153-bed East Wing. Four years later, Herrick and Alta Bates Hospital formally affiliated but continued to operate as freestanding general hospitals. On January 1, 1988 the two hospitals merged and medical/surgical and emergency services were consolidated at the Alta Bates campus. The new organization was named the Alta Bates Herrick Hospital, but “Herrick” was dropped from the name when it was renamed the Alta Bates Medical Center in 1992. In 1999 Alta Bates Medical Center merged with Summit Medical Center. Today the former Herrick Hospital is known as the Herrick campus of the Alta Bates Summit Medical Center.

Despite its long history at its present location, the Herrick Campus’s impact on the built form of the surrounding neighborhood has been limited. Other medical buildings to be located near the campus were a ca. 1919 two-story medical office building at 2000 Dwight Way (likely originally an apartment building), a ca. 1960s medical-dental building at 2006 Dwight Way, and a ca.1980s two-story medical office building at 2500 Milvia Street. The rest of the area surrounding the Herrick Hospital campus has remained primarily residential to the west and commercial and auto repair to the east toward Shattuck Avenue.

- Architectural Resources Group. *City of Berkeley Downtown Survey and Contexts*, August 2007: 2020 Dwight included in matrix of resources, recommended DPR form be completed.

- Berkeley Architectural Heritage Association. Berkeley Urban Conservation Survey. This building does not appear to have been included in this survey.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES SIGNIFICANCE CRITERIA

The California Register of Historical Resources (CRHR) is an inventory of significant architectural, archaeological, and historical resources in the State of California. Resources can be listed in the CRHR through a number of methods. State Historical Landmarks and National Register of Historic Places (NRHP)-listed properties are automatically listed in the CRHR. Properties can also be nominated to the CRHR by local governments, private organizations, or citizens.

The evaluative criteria used by the CRHR for determining eligibility are closely based on those developed by the National Park Service for the NRHP. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

> Criterion 1:
> It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> Criterion 2:
> It is associated with the lives of persons important in our past.
>
> Criterion 3:
> It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> Criterion 4:
> It has yielded, or may be likely to yield, information important in history or prehistory.

In addition to meeting the applicable eligibility criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess certain aspects of integrity, which are defined in the following manner in *National Register Bulletin 15*:

> 1. Location – the place where the historic property was constructed or the place where the historic event occurred;
>
> 2. Design – the combination of elements that create the form, plan, space, structure, and style of a property;

3. Setting – the physical environment of a historic property;

4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;

5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;

6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time;

7. Association – the direct link between an important historic event or person and a historic property.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR.

CITY OF BERKELEY LANDMARKS, HISTORIC DISTRICTS, AND STRUCTURES OF MERIT DESIGNATION CRITERIA

The City of Berkeley Landmarks Preservation Commission (LPC) is responsible for the preservation and protection of Berkeley's cultural and historic landmarks. The LPC is also responsible for making discretionary decisions for alterations to cultural and historic landmarks.

A. City of Berkeley Landmarks and Historic Districts

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. Architectural merit:
    a. Property that is the first, last, only or most significant architectural property of its type in the region;
    b. Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; or
    c. Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.
2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City;
3. Educational value: Structures worth preserving for their usefulness as an educational force;
4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military;
5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

B. City of Berkeley Structures of Merit

General criteria which the commission shall use when considering structures, sites and areas for landmark or historic district designation are as follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.
2. Specific criteria include, but are not limited to one or more of the following:
    a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.
    b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.
    c. The structure is a good example of architectural design.
    d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings. (Ord. 5686-NS § 1 (part), 1985: Ord. 4694-NS § 3.1, 1974)

CRHR Significance Evaluation

CRHR Criterion 1
The property at 2020 Dwight Way is associated with early residential development west of Shattuck Avenue, but it does not appear to be individually eligible for the CRHR under Criterion 1 for this association.

CRHR Criterion 2
The property at 2020 Dwight Way does not appear to be associated with individuals or organizations significant to local, state, or national history. The property does not appear to possess the significance required for individual eligibility under CRHR Criterion 2.

CRHR Criterion 3
The property at 2020 Dwight Way is not representative of a unique or distinctive architectural design. It is one of many similar single-family residences built during this period in Berkeley. The architect and builder are unknown, but based on a visual survey the building does not appear to be designed by a master architect or builder. The property at 2020 Dwight Way does not appear to possess the significance required for individual eligibility under CRHR Criterion 3.

CRHR Criterion 4
Eligibility evaluation under Criterion 4 is beyond the scope of this report.

Integrity
An integrity evaluation is not required for properties that do not possess significance under the CRHR criteria.

City of Berkeley Landmark, Historic District, and Structure of Merit Evaluation
The property at 2012 Dwight Way does not appear to meet the criteria for a City of Berkeley Landmark or Structure of Merit. The building historically was part of a collection of eight Victorian-era residences that lined this block (see 1911 Sanborn map). By 1980, half of the Victorians had been replaced with large apartment buildings and medical offices. Sometime after 1980, another Victorian was demolished and replaced with a parking lot.

On the north side of the subject block, beginning in 1904, the Victorian-era home of Joseph H. Hume on the northeast corner of Dwight Way and Milvia Street was transformed into the Herrick Hospital campus, which eventually spanned the north side of the 2000 block of Dwight Way.

The loss of five of the original Victorians and the newer infill construction and parking lot disqualify the three remaining Victorians on the south side of the block as a cohesive grouping of Victorian-era residences.

METHODOLOGY

This Historic Resource Evaluation (HRE) was prepared by Bridget Maley of architecture + history, llc, in association with Shayne Watson of Watson Heritage Consulting, at the request of Rhoades Planning Group. Maley and Watson exceed the Secretary of the Interior's Professional Qualification Standards for Architectural History and History (Code of Federal Regulations, 36 CFR Part 61).

The project team conducted a site visit at the subject property in December 2018 and photographed the property and surrounding area. After the site visit, research on the building included in-person or online visits to the following archives and data repositories: Berkeley Architectural Heritage Association (BAHA), City of Berkeley Permit Service Center, Berkeley Public Library, San Francisco Public Library, Ancestry.com, Newspapers.com, and Newspaper Archive. BAHA has in its archives forms from earlier (1970s) survey efforts, which made a trip to the California Historical Resources Information System (CHRIS) Information Center unnecessary for this project.

Geotechnical Feasibility Study

December 14, 2018

Laconia Development
1981 North Broadway, Suite 415
Walnut Creek, California 94596

RE: GEOTECHNICAL FEASIBILITY EVALUATION
7-STORY APARTMENT BUILDING
2012-2022 DWIGHT WAY AND
2011-2019 BLAKE STREET
BEKELEY, CALIFORNIA

Attention: Mr. Steve Heaton

This letter summarizes the results of our geotechnical feasibility evaluation for your proposed apartment building to be constructed between Dwight Way and Blake Street (cross Milvia Street) in Berkeley, California. The location of the site is shown on the attached Vicinity Map, Figure 1.

PROJECT DESCRIPTION

The project consists of constructing a seven-story apartment building in Berkeley. The proposed building is expected to have a footprint of roughly 15,400 square feet, and will have one level of underground parking below the majority of the building. The relatively flat site is currently occupied by two warehouses and three residences. The warehouses on Blake Street will be demolished prior to construction, and the two Victorian homes located on Dwight Way will be re-orientated 90 degree at the same or similar locations. The is also a craftsman style home at the corner of Milvia and Blake Street which will remain. Structural loads are expected to be moderate, as is typical for this type of construction.

SCOPE OF WORK

The scope of our work for this study was to evaluate and provide our opinion regarding the feasibility of developing the project based on available geologic and seismic hazard zones maps; site-specific geotechnical exploration will be performed for our design-level geotechnical report.

LIMITATIONS

This geotechnical feasibility evaluation has been prepared for the exclusive use of Laconia Development for specific application to the proposed 7-story apartment building to be constructed between Dwight Way and Blake Street (at Milvia Street) in Berkeley, California. We make no warranty, expressed or implied, for the services we performed for this project. Our services have been performed in accordance with geotechnical engineering principles generally accepted at this time and location.

The opinions and conclusions summarized in this letter are based on available geologic and seismic hazard zones maps. Our opinions and conclusions should be considered preliminary because they are based largely on limited review of geologic and geotechnical information available in our files. Certain limitations are inherent in a preliminary evaluation, and subsurface exploration is not generally performed for this type of investigation. Conditions may exist that were not observed or apparent at the time of this study. A design-level geotechnical investigation that includes subsurface exploration and laboratory testing of surface and subsurface materials, should be performed at a later date, to evaluate the geotechnical conditions at the site in more detail and to provide design level geotechnical recommendations.

SURFACE CONDITIONS

The site is located in a mixed commercial and residential area between Dwight Way and Blake Street (west of Milvia Street). The northern portion of the site was occupied by two 2-story wood-frame residences, while the southern portion was occupied by two warehouse buildings. Asphalt concrete driveway and parking areas were located around the buildings. The site is relatively flat.

GEOLOGIC AND SEISMIC SETTING

We have reviewed our local experience and geologic literature pertinent to the area of the site. The information that we reviewed for this study indicates that the site is underlain by Holocene-age alluvial fan and fluvial deposits, Qhaf (Graymer, 2000). These deposits are generally expected to consist of medium dense to dense, gravely sandy or sandy gravel that transitions finer into sandy or silty clay. The geology of the site vicinity is shown on the Vicinity Geologic Map, Figure 2.

The lot and the immediate site vicinity are located in an area that generally slopes down very gently to the west toward the San Francisco Bay. The site is located at an elevation of approximately 160 feet above sea level.

The Seismic Hazard Zones Map of the Oakland West Quadrangle (California Geological Survey, 2003) indicates that the site is not located in the State's designated liquefaction hazard zone or earthquake-induced landslide zone. The State's Seismic Hazard Zones Map is included in the attached Figure 3.

Ground Water

Information contained in the Seismic Hazard Zone Report 081 for the Oakland West Quadrangle (California Geological Survey, 2003) indicates the historic high ground water level in the area of the site is about 7 feet below existing grade. Please be cautioned that fluctuations in the level of ground water can occur due to variations in rainfall, tidal fluctuations, local surface and subsurface drainage patterns, landscaping, and other factors. We note that the highest projected ground water level to be considered for basement design will likely be somewhat shallower than the historic high ground water level.

Faulting and Seismicity

There are no mapped through-going faults within or adjacent to the site, and the site is not located within a State of California Earthquake Fault Zone (formerly known as a Special Studies Zone), an area where the potential for fault rupture is considered probable. The closest active fault is the Hayward fault, located approximately 1.1 miles northeast of the property. Therefore, the likelihood of surface rupture occurring from active faulting at the site is low.

The San Francisco Bay Area is, however, an active seismic region. Earthquakes in the region result from strain energy constantly accumulating because of the northwestward movement of the Pacific Plate relative to the North American Plate. On average about 1.6-inches of movement occur per year. Historically, the Bay Area has experienced large, destructive earthquakes in 1838, 1868, 1906 and 1989. The faults considered most likely to produce large earthquakes in the area include the San Andreas, San Gregorio, Hayward, Calaveras, Concord and Greenville faults. The San Andreas and San Gregorio faults are located approximately 18 and 21 miles southwest of the site, respectively. The Calaveras fault is located approximately 12 miles east of the site. The Concord and Greenville faults are located approximately 15 and 19 miles northeast of the site, respectively. These faults, and significant earthquakes that have been documented in the Bay Area, are listed below in Table 1.

Table 1. Earthquake Magnitudes and Historical Earthquakes
Laconia Apartment Building
Berkeley, California

Fault	Maximum Magnitude (Mw)	Historical Earthquakes		Estimated Magnitude
San Andreas	7.9	1989	Loma Prieta	6.9
		1906	San Francisco	7.9
		1865	N. of 1989 Loma Prieta Earthquake	6.5
		1838	San Francisco-Peninsula Segment	6.8
		1836	East of Monterey	6.5
Hayward	7.1	1868	Hayward	6.8
		1858	Hayward	6.8
Calaveras	6.8	1984	Morgan Hill	6.2
		1911	Morgan Hill	6.2
		1897	Gilroy	6.3
San Gregorio	7.3	1926	Monterey Bay	6.1

In the future, the subject property will undoubtedly experience severe ground shaking during moderate and large magnitude earthquakes, produced along the San Andreas fault or other active Bay Area fault zones. Using information from recent earthquakes, improved mapping of active faults, ground motion prediction modeling, and a new model for estimating earthquake probabilities, a panel of experts convened by the U.S.G.S. have concluded there is a 72 percent chance for at least one earthquake of Magnitude 6.7 or larger in the Bay Area before 2043. The Hayward fault has the highest likelihood of an earthquake greater than or equal to magnitude 6.7 in the Bay Area, estimated at 33 percent, while the likelihood on the San Andreas and Calaveras faults is estimated at approximately 22 and 26 percent, respectively (Aagaard et al., 2016).

Geologic Hazards

We briefly reviewed the potential for geologic hazards to impact the proposed building based on the available geologic and seismic hazard zones maps. The results of our review are presented below.

- Fault Rupture - The site is not located in a State of California Earthquake Fault Zone or area where fault rupture is considered likely. Therefore, active faults are not believed to exist beneath the site and the potential for fault rupture at the site is considered low.

- Ground Shaking - The site is located in an active seismic area. Moderate to large earthquakes are probable along several active faults in the greater Bay Area over a 30 to 50 year design life. Strong ground shaking should therefore be expected several times during the design life of the development, as is typical for sites throughout the Bay Area. The proposed structure should be designed in accordance with current earthquake resistance standards.

- Liquefaction - Liquefaction occurs when saturated sandy soils lose strength during earthquake shaking. Ground settlement often accompanies liquefaction. Soils most susceptible to liquefaction are saturated, loose, sandy silts, silty sands, and uniformly graded sands. Since the site is not located within a State designated liquefaction hazard zone, and because no liquefaction-induced damage was reported in the project vicinity following the 1989 Loma Prieta Earthquake (based on the USGS publication titled "The Loma Prieta, California, Earthquake of October 17, 1989 - Liquefaction," Holzer, 1998), in our opinion, it appears that the likelihood of significant liquefaction occurring at the project site is low. However, please note that some seismic related settlement is possible; the magnitude of seismic related settlement will be estimated based on our subsurface exploration during our design-level geotechnical investigation.

CONCLUSIONS

Based on the findings from this feasibility evaluation, we have concluded that from a geotechnical engineering viewpoint, the site is suitable for the proposed 7-story apartment building. During our review, we did not identify any active faults, landslides, or other significant geologic or geotechnical conditions that would preclude site development.

The primary geotechnical concerns for development of the site include the potential for some dynamic settlement during severe ground shaking from a major earthquake in the area, the probable presence of moderately to highly expansive surface soil and the presence of the ground water table within the expected excavation depth for the basement level.

As discussed above, the historic high ground water level in the area of the site is about 7 feet below grade. On a preliminary basis, the highest projected ground water level at the site is estimated to be approximately 4 to 5 feet below the existing ground surface. Since it may not be practical to install a subdrain system that constantly pumps ground water from below the basement elevation, the basement mat will likely need to be designed assuming undrained conditions with hydrostatic uplift pressure from a depth of about 4 to 5 feet below surface grades.

Based on our knowledge of the area, and our experience on similar nearby projects, we expect that the basement portion of the building will likely need to be supported on a structural mat foundation, and the at-grade portions will likely need to be supported on a pier and grade beam foundation. In addition, the basement mat will need to be designed to resist hydrostatic uplift pressure from the projected high ground water level. We note that if the weight of the building is not sufficient to resist the uplift pressure, some form of hold down anchors, such as grouted micro piles, may be needed to prevent buoyancy of the structure.

Detailed foundation design criteria and the magnitude of static and dynamic settlement will be developed based on subsurface investigation and laboratory testing performed as part of our design-level geotechnical investigation.

Please call if you have questions or comments concerning the findings or conclusions from our geotechnical feasibility evaluation for your proposed building.

Very truly yours,

SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

This report is intended to meet the requirements of American Society for Testing and Materials International (ASTM) Practice E1527-13 and has been prepared by the undersigned environmental professional. The environmental assessment described herein was conducted by the undersigned employee of Terraphase Engineering Inc.

The assessment consisted solely of the activities described in the Introduction of this report and was performed in accordance with the ASTM Designation E1527-13 guidelines for Phase I Environmental Site Assessments and the Terms and Conditions of the Standard Consulting Services Agreement signed prior to initiation of the assessment, as applicable. The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, professional geologists, and environmental scientists.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

12/12/18

Wendy Bellah, PE — Date
Senior Associate Engineer

EXECUTIVE SUMMARY

Terraphase Engineering Inc. (Terraphase) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 2012-2020 Dwight Way and 2001-2019 Blake Street, Berkeley, Alameda County, California, collectively referred to as the Site or Subject Property (Figure 1). The Site consists of seven parcels and are identified with Alameda County Assessor Parcel Numbers (APNs) 055-1822-013-02, 055-1822-013-03, 055-1822-013-04, 055-1822-013-014, 055-1822-021, 055-1822-022, and 055-1822-023. It is Terraphase's understanding that the reason for performing the Phase I ESA is to fulfill City of Berkeley requirements for redevelopment of the Subject Property.

Based on our review of public documents and the site reconnaissance, the Subject Property is currently developed with six buildings and parking lots. A map showing Site features and the immediate surrounding area is included as Figure 2. Information regarding the Site and its historical uses were identified as follows:

- APN 055-1822-021 (address 2012 Dwight Way): This parcel fronts Dwight Way and is developed with one two-story wood-frame house that has been divided into apartments. The exact date of construction is not known, but based on information obtained from Sanborn maps, the house has been present at the Site since at least 1894 and was originally a single-family residence. The home was divided into apartments in the 1940s. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel (address 2016 Dwight Way [see below]). Based on a review of aerial photographs, it appears the rear of this parcel has been used for parking since at least the 1950s.

- APN 055-1822-022 (address 2016 Dwight Way): This parcel fronts Dwight Way and is currently undeveloped and is used as an asphalt-paved parking lot. Based on information from Sanborn maps, a single family home was previously present at the parcel (present in at least 1894) that was divided into apartments in the 1940s. The home was demolished in the mid-1990s and the parcel used as a parking lot since that time.

- APN 055-1822-023 (address 2020 Dwight Way): This parcel fronts Dwight Way and is developed with one two-story wood-frame house that has been divided into apartments. The exact date of construction is not known, but based on information obtained from Sanborn maps, the house has been present at the Site since at least 1894 and was originally a single-family residence. The home was divided into apartments in the 1940s. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel (address 2016 Dwight Way [see above]). Based on a review of aerial photographs, it appears the rear of this parcel has been used for parking since at least the 1950s.

- APN 055-1822-014 (addresses 2001 and 2011 Blake Street): This parcel was originally part of two separate, larger parcels. One of the historical parcels contained a single family home in the early 1900s and a portion of the parcel was identified as a nursery on the 1911 Sanborn map. The parcels were later sub-divided into the present-day configuration and developed with a one-story stucco exterior building (address 2001 Blake Street). The structure was previously used as a single-family home, but was divided into smaller doctor's offices that are used for therapy (mental health). A previous Phase I ESA indicates the home was constructed in 1922, along with a small stucco garage (address 2011 Blake Street). The small stucco garage building is currently used as a small welding shop; historical uses have included a small machine shop.

- APN 055-1822-013-04 (address 2015 Blake Street): This parcel fronts Blake Street and is completely developed with a large, wood frame warehouse type building with corrugated metal exterior. The building has been present at the parcel since at least 1911 when it was used to store feed (hay) and coal. Previous businesses that have occupied the property have included roofing/construction contractors and auto repair shops (in the 1950s through the 1980s). Today, the front of the building is occupied by Skylight and Sun Inc. and the rear of the building is occupied by Timberline Geodesics (manufacturer of wooden geodesic homes).

- APN 055-1822-013-03 (no address): This parcel fronts Blake Street and is currently undeveloped and used as an asphalt-paved parking lot for the 2015 and 2019 Blake Street buildings.

- APN 055-1822-013-02 (address 2019 Blake Street): This parcel was previously developed with a single-family home (present in at least 1894). Sometime between the 1920s and 1940s, this parcel was redeveloped with a large stucco exterior warehouse type building. The building has been used for many purposes including refrigerator repair (1940s), a painter's warehouse (1950s), cabinet makers (1960s), a theater troupe (the Blake Street Hawkeyes; 1980s), plastic fabrication (BB Plastics; 1980s and 1990s), and skylight manufacturing (Skylight and Sun; 1980s to present).

The Subject Property is located in a mixed commercial/retail, automotive sales and service, and residential area. Across Dwight Way to the north (at 2100 Dwight Way) is the Alta Bates Medical Center Herrick Campus. To the west are several doctors' offices and the Sutter Urgent Care Berkeley building.

The Phase I ESA was performed in conformance with the scope and limitations of American Society for Testing and Materials International (ASTM) Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

Terraphase identified the following recognized environmental conditions (RECs) during this Phase I ESA.

- Given the age of the existing structures and historical operations (e.g., automotive repair and paint storage) conducted at the Site, there is a potential for metals (such as lead), volatile organic compounds, and petroleum hydrocarbons to be present in shallow surface soils at the Subject Property.

Terraphase did not identify any controlled RECs (CRECs) or historical RECs (HRECs) at the Subject Property during this Phase I ESA.

1.0 INTRODUCTION

At the request of Laconia Development LLC (Laconia), Terraphase Engineering Inc. (Terraphase) has completed this Phase I Environmental Site Assessment (ESA) for the property located at 2012-2020 Dwight Way and 2001-2019 Blake Street, Berkeley, Alameda County, California (the Site or Subject Property). The Site consists of seven parcels identified with Alameda County Assessor Parcel Numbers (APNs) 055-1822-013-02, 055-1822-013-03, 055-1822-013-04, 055-1822-014, 055-1822-021, 055-1822-022, and 055-1822-023. A site location map is provided as Figure 1 and a Subject Property and vicinity map is provided as Figure 2. Photographs taken during the reconnaissance visit conducted on November 29, 2018, are provided in Appendix A.

The reason for performing the Phase I ESA was to evaluate for the presence of recognized environmental conditions (RECs) and environmental concerns for the Subject Property. The Phase I ESA includes information gathered from federal, state, and local agencies; review of historical documents; a reconnaissance visit; and interviews. The qualifications of the environmental professional who prepared this report are included in Section 10. A project summary is provided below:

Subject Property Description and Location: 2012-2020 Dwight Way and 2001-2019 Blake Street, Berkeley, Alameda County, California	**Client:** Laconia Development LLC 1981 North Broadway, Suite 415 Walnut Creek, CA 94596
Subject Property Occupants: 2012 and 2020 Dwight Way: Private multi-family residences 2016 Dwight Way: Parking lot 2001 Blake Street: Psychologists offices 2011 Blake Street: Small welding shop 2015 Blake Street: Timberline Geodesics (rear of building)/Skylight and Sun Inc. (front of building) 2019 Blake Street: Skylight and Sun Inc.	**Environmental Consultant:** Terraphase Engineering Inc. 1404 Franklin Street, Suite 600 Oakland, California 94612
Reconnaissance Date: November 29, 2018	**Environmental Professional:** Wendy Bellah

1.1 Purpose

The purpose of the Phase I ESA was to evaluate the potential for environmental contamination on the Subject Property and to evaluate if contamination could potentially occur in the future because of activities or conditions on or near the Subject Property. The Phase I ESA was

generally conducted in accordance with the processes prescribed in the American Society for Testing and Materials International (ASTM) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM Designation E1527-13; ASTM 2013). ASTM E 1527-13 satisfies the elements of the U.S. Environmental Protection Agency (USEPA) All Appropriate Inquiry rule, which establishes requirements that purchasers must meet to limit their environmental liability under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and qualify for liability protections, including the "Innocent Purchaser," "Bona Fide Prospective Purchaser," and "Contiguous Property Owner" liability defenses that are provided by CERCLA.

This Phase I ESA identifies RECs at the Subject Property. As defined by ASTM, a REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or the material threat of a release of any hazardous substances or petroleum products into structures on the property or into the soil, groundwater, or surface water of the property.

The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include "de minimis" conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Phase I ESA Scope of Services

The following services were included in this Phase I ESA:

- interviews with present owners, operators, and occupants familiar with the Subject Property;
- review of historical sources of information, such as aerial photographs, Sanborn fire insurance maps, and land use records;
- review of previously conducted environmental studies;
- review of government records, including regulatory reports for adjoining properties;
- review of an environmental database search;
- review of local regulatory agencies' records, including the local fire department and other local government entities that have jurisdiction over hazardous waste management, permitting, and site investigations;
- reconnaissance-level visual inspection of the Subject Property, including observations of adjoining properties and general land uses, with photographs to document current conditions;
- review of the Subject Property to look for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products resulting from current and historical land use activities and nearby operations; and

- preparation of a report that documents our research, observations, and the results of the environmental inquiry, which specifically identifies any properties that will require invasive site investigation, including a summary of conclusions.

1.2.1 Non-Scope Services

As defined pursuant to Section 13.1.5 of the ASTM Standard Practice, the following list includes several non-scope considerations. Non-scope considerations are considered beyond the scope of standard practice and no assessment of such non-scope considerations is required as defined by ASTM Standard Practice.

No implication is intended as to the relative importance of such non-scope considerations and the list below is not intended to be all-inclusive:

- Testing of building materials for presence of asbestos-containing material
- Biological agents
- Cultural and historical resources
- Ecological resources
- Endangered species
- Health and safety
- Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment
- Industrial hygiene
- Testing of building materials for presence of lead-based paint
- Lead in drinking water
- Methane gas
- Mold
- Testing for presence of radon
- Regulatory compliance
- Wetlands
- Compliance with activity and use limitations

1.2.2 Significant Assumptions

This Phase I ESA provides appropriate inquiry into the previous ownership and use of the Subject Property consistent with good commercial and customary practice in an effort to minimize liability. Terraphase also assumes that information provided during interviews, regulatory database review, and regulatory agencies' records review is true and reliable.

1.2.3 Limitations and Exceptions

This document was prepared for the use of Laconia, their successors, and assignees. No other party should rely on the information contained herein without the prior written consent of Terraphase and Laconia.

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by Terraphase and Laconia. This report was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry as practiced in California. To the extent that Terraphase relied upon any information prepared by other parties not under contract to Terraphase, no representation as to the accuracy or completeness of such information is made. Only Laconia, their successors and assignees may make use of and rely upon the information in this report.

This information can only be utilized for a period not to exceed 180 days in accordance with ASTM's "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ASTM Designation E1527-13, and/or the Code of Federal Regulations (CFR) 40 CFR Part 312 "Standards and Practices for All Appropriate Inquiries: Final Rule," dated November 1, 2005, and amended December 30, 2013. After 180 days, the report must be updated in accordance with ASTM Standards and federal regulations.

The findings presented in this report apply solely to conditions existing at the time of the assessment. It must be recognized, however, that a Phase I ESA is intended for the purpose of evaluating the potential for contamination through limited research and investigative activities, and in no way represents a conclusive or complete characterization. Conditions in other parts of the Subject Property may vary from those at the locations where data were collected.

Terraphase's interpretation of investigation results is related to the availability of the data and the extent of the investigation activities; 100% confidence in Phase I ESA conclusions cannot reasonably be achieved. Therefore, Terraphase does not provide any guarantees, certifications, or warranties (express or implied) that a property is free from environmental contamination. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and all applicable laws, codes, regulations, or standards.

The following summarizes exceptions, limitations, or restrictions to the scope of services:

- **Exceptions to, or deletions from, the above-referenced scope of services:** None.
- **Weather-related property restrictions:** None.
- **Property access restrictions:** Access to the interiors of the multi-family residences was not provided; limited access to the interiors of the other buildings was provided due to active work being conducted inside.

Data gaps identified during this Phase I ESA are described in Section 8.5.

1.2.4 User Reliance

This document was prepared for the use of Laconia, their successors, and assignees. No other party should rely on the information contained herein without the prior written consent of Terraphase and Laconia.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 Subject Property and Vicinity General Description

The Subject Property totals approximately 0.96 acres in size and is composed of seven land parcels located within the block surrounded by Blake Street to the south, Milvia Street to the west, Dwight Way to the north, and Shattuck Avenue to the east in Berkeley, Alameda County, California (Figure 1). The Subject Property is currently developed as follows:

- APN 055-1822-021 (address 2012 Dwight Way): This parcel fronts Dwight Way and is developed with a two-story wood-frame house (that has been divided into apartments), a front lawn area, and a wooden picket fence. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel with address 2016 Dwight Way (see below).

- APN 055-1822-022 (address 2016 Dwight Way): This parcel fronts Dwight Way and is currently undeveloped and is used as an asphalt-paved parking lot. An electronic access gate (key-coded entry) and exit gate are accessible from Dwight Way. The parking lot on this parcel is connected to the additional parking area located behind the 2012 and 2020 Dwight Way buildings.

- APN 055-1822-023 (address 2020 Dwight Way): This parcel fronts Dwight Way and is developed with a two-story wood-frame house (that has been divided into apartments), a front lawn area, and a wooden picket fence. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel with address 2016 Dwight Way (see above).

- APN 055-1822-014 (addresses 2001 and 2011 Blake Street): The parcel is developed with a one-story stucco exterior house (that has been divided into smaller doctor's offices that are used for therapy [mental health]) and associated landscaped areas (address 2001 Blake Street) and a small stucco garage building used as a small welding shop (address 2011 Blake Street). Between the two buildings is a fenced area used for garbage and materials storage and a small driveway.

- APN 055-1822-013-04 (address 2015 Blake Street): This parcel is developed with a large wood frame warehouse type building with corrugated metal exterior. Small areas of landscaping are located at the exterior of the front and rear of the building. Inside, the front of the building is occupied by Skylight and Sun Inc. (a skylight manufacturing company) and the rear of the building is occupied by Timberline Geodesics (manufacturer of wooden geodesic homes).

- APN 055-1822-013-03 (no address): This parcel is currently undeveloped and used as an asphalt-paved parking lot for the 2015 and 2019 Blake Street buildings.

- APN 055-1822-013-02 (address 2019 Blake Street): This parcel is completely developed with a large stucco exterior warehouse type building primarily occupied by Skylight and Sun Inc. with a small digital photo studio and office located in the rear of the building.

A map showing Site features and the immediate surrounding area is included as Figure 2.

The Subject Property is located in a mixed commercial/retail, automotive sales and service, and residential area. Across Dwight Way Adjacent to the north at 2100 Dwight Way is the Alta Bates Medical Center Herrick Campus. To the west are several doctors' offices and the Sutter Urgent Care Berkeley building.

2.2 Site Geology and Hydrogeology

The general Subject Property topographic gradient is west southwest. The surrounding elevation profile has a topographic high of 317 feet one mile to the east. The Subject Property has an elevation of approximately 160 feet above sea level.

Geologic maps of the area indicate that the Subject Property consists of artificial fill underlain by quaternary aged alluvium consisting of gravel, sand, and clay of valley areas.[1] Per the California Geological Survey's (CGS's) Fault Activity Map of California, the Subject Property is located less than a mile southwest of the Hayward Fault Zone, which is the nearest active fault to the Subject Property (CGS 2010).

The Subject Property is located within the Coast Range Geomorphic Province of California, abutting the eastern edge of the San Francisco Bay, a region shaped by complex and dynamic geologic processes. Faulting, folding, and erosion have produced the northwest-trending ridges and valleys, which characterize the Coast Ranges. The San Francisco Bay and San Pablo Bay occupies a structural depression, which formed between the uplifted Diablo Range and Berkeley Hills (along the east) and the hills of the San Francisco Peninsula (along the west) and has been partially filled in with sediment and inundated by seawater to form the San Francisco and San Pablo Bays (CGS 2002).

The Environmental Data Resources Inc. (EDR) GeoCheck® overview map indicates that the Subject Property is located outside the 100-year and 500-year flood plain areas. The flood plain areas are illustrated on the Overview Map of the EDR Report included in Appendix B. The nearest surface water body is Strawberry Creek located approximately 0.5 mile to the northeast of the Subject Property.

The EDR well search summary did not identify any water wells within the Subject Property boundaries. However, there are two California State Database wells within 1 mile of the Subject Property, which were reportedly used for irrigation purposes.

[1] http://maps.conservation.ca.gov/cgs/gmc/

According to the California Regional Water Quality Control Board (RWQCB) – San Francisco Bay Region 2 Basin Plan (RWQCB 2017), the Subject Property is located within the East Bay Sub-basin of the Santa Clara Valley Groundwater Basin. Groundwater in this area has designated existing beneficial uses for agricultural, municipal, industrial, and industrial process supply (RWQCB 2017).

The East Bay Plain Sub-basin aquifer system consists of unconsolidated Quaternary sediments with a cumulative thickness of around 1,000 feet. These sedimentary deposits consist of alluvial fans, clays, silts, gravels, and sands, and include the Santa Clara Formation, Alameda Formation, Temescal Formation, and Artificial Fill (nearer the San Francisco and San Pablo Bays; CDWR 2004).

Information obtained from the California GeoTracker database for a nearby site located at 2000 Carleton Street (located approximately 725 feet south of the Subject Property) indicated that monitoring wells were installed as part of a site investigation conducted at this property. Based on a site closure summary, the depth to groundwater ranged between 3 to 14 feet below ground surface and the groundwater flow direction was estimated to be to the northwest (UCB 2002).

Note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development, such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 CLIENT/USER PROVIDED INFORMATION

The following section summarizes information provided by Laconia, with regard to the Phase I ESA. A copy of the questionnaire completed by Mr. Jared Brotman, a representative of Laconia, is included as Appendix C.

3.1 Title Record

No title records were reviewed as part of this Phase I ESA. Given the information regarding the historical uses of the property, this is not considered a significant data gap.

3.2 Environmental Liens and Activity and Use Limitations

Mr. Brotman indicated he was not aware of any environmental liens or activity and use limitations (AULs) for the Subject Property. This is consistent with the information found in the EDR Environmental Lien and AUL Report and Tax Map Report (EDR 2018e; Appendix D).

3.3 Specialized Knowledge

Mr. Brotman indicated he has no specialized knowledge of environmental conditions at the Subject Property.

3.4 Commonly Known or Reasonable Ascertainable Information

No reasonable ascertainable information was provided.

3.5 Valuation Reduction for Environmental Liens

No specialized knowledge was presented by Mr. Brotman to indicate that the purchase price or appraised value of the property was significantly less than comparable properties in the vicinity.

3.6 Owner, Property Manager, and Occupant Information

The titles for the Subject Property are vested as follows:

- APNs 055-1822-013-02, 055-1822-013-03, 055-1822-013-04, 055-1822-014: title is vested in Richard Nagler Properties LLC.
- APNs 055-1822-021, 055-1822-022, and 055-1822-023: title is vested in Dwightmil Co. LLC.

4.0 HISTORICAL REVIEW

A variety of sources were reviewed to develop the history of the Subject Property and adjacent properties to assess the potential for contamination. These resources included the following:

- Sanborn Fire Insurance maps: 1894, 1903, 1911, 1950, and 1980
- Aerial photographs: 1939, 1946, 1950, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2012, and 2016
- Topographic maps: 1895/1897, 1899, 1915, 1948, 1949, 1959, 1968, 1973, 1980, 1996/1997, and 2012
- City directories: 1920, 1925, 1926, 1928, 1932, 1933, 1938, 1940, 1943, 1945, 1946, 1950, 1951, 1954, 1955, 1956, 1959, 1960, 1962, 1965, 1967, 1970, 1973, 1975, 1976, 1979, 1980, 1982, 1984, 1986, 1991, 1992, 1993, 1996, 2000, 2002, 2006, 2010, and 2014.

Copies of historical Sanborn Fire Insurance maps, aerial photographs, topographic maps, and city directories are provided in Appendix E, F, G, and H, respectively. Historically and/or environmentally significant findings are summarized below.

4.1 Sanborn Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A copy of the Sanborn Map Report provided by EDR is included in Appendix E (EDR 2018d).

On the 1894 Sanborn map, four single-family dwellings are shown within the boundaries of the Subject Property (addresses 2012, 2016, and 2020 Dwight Way and one unit dwelling addressed as 2021 Blake Street [present day 2019 Blake Street]). The only other structure indicated on the Sanborn map within the Subject Property boundaries is a shed located in the rear of the parcel with address 2020 Dwight Way. The surrounding vicinity is primarily developed with single-family dwellings and stables. A Baptist Church is shown on the parcel immediately east of the 2020 Dwight Way parcel. A French Laundry is shown fronting Shattuck Avenue.

On the 1903 Sanborn map, the four dwellings are still shown at the Subject Property; a windmill is indicated in the rear of the 2016 Dwight Way parcel. As on the previous Sanborn map, the general vicinity is primarily developed with residential structures with small commercial buildings fronting Shattuck Avenue. Businesses identified on the Sanborn map in the vicinity of the Site include laundry, storage, butcher, wood and coal storage, and stables.

On the 1911 Sanborn map, the four dwellings are still shown at the Subject Property; the windmill located in the rear of the 2016 Dwight Way parcel is now designated “Not-in-use.” One parcel with the Subject Property boundaries identified with address 2015 Blake Street is identified as developed with a building in use for feed and coal storage with coal bunkers indicated in the rear of the parcel and hay indicated at the front of the parcel. In addition, an unidentified structure is shown on the 2017/2019 Blake Street parcel. The present-day parcel

which houses 2001 and 2011 Blake Street are part of two separate parcels. The western end (where the 2001 Blake Street building is located today) is labeled nursery. Additional residential dwellings have been developed in the general vicinity of the Site. To the north of the Subject Property (across Dwight Way) is a building labeled "Roosevelt Hospital." Commercial properties shown in the vicinity of the Site include Chinese laundry, French laundry, kitchens, fuel and oil, feed and fuel, rug cleaning and dyeing, and stables.

On the 1950 Sanborn map, the dwellings shown on the previous maps at 2012, 2016, and 2020 Dwight Way are still shown. The dwelling previously addressed as 2021 Blake Street is no longer present and a building with the designation "painters' warehouse" is shown on the parcel with address 2019 Blake Street. The building identified as feed and coal storage on the 1911 map is now designated as a "repair shop." A dwelling is now indicated on the 2001 Blake Street parcel and a building designated a "machine shop" is shown at the rear of this parcel, adjacent to the repair shop. Several additional dwellings are shown on the parcels immediately adjacent to the Subject Property with a building designated "auto repair" addressed as 2029 Blake Street shown kitty corner (southeast) to the Subject Property. The Herrick Memorial Hospital is located to the north of the Subject Property (across Dwight Way). Several commercial buildings are shown fronting Shattuck Avenue and include an auto sales show room, tire sales store, and a bank.

In general, the Subject Property and general vicinity shown on the 1980 Sanborn map appear similar to the previous Sanborn 1950 map except one parcel within the Subject Property boundary is now designated parking and the uses of the buildings located adjacent to the western Site boundary are used for doctors' offices.

4.2 Aerial Photographs

Terraphase reviewed aerial photographs provided by EDR (Appendix F; EDR 2018b).

On the 1939 aerial photograph, the Subject Property and vicinity are fully developed. The resolution of the photograph makes it difficult to discern individual features at the Site; however, roadways with the same alignments as Shattuck Avenue, Blake Street, Milvia Street, and Dwight Way are visible in the aerial photograph. The predominant use of the surrounding properties appears to be residential.

No significant changes to the Site or the surrounding vicinity are identified on the aerial photographs from 1946, 1950, and 1958. In the 1963 aerial photograph, the residential and commercial structures identified in the Sanborn maps are visible and paved parking lots are located behind the residential structures addressed as 2012, 2016, and 2020 Dwight Way. The parking area appears to extend to the parcel accessed from Blake Street. No significant changes to the Subject Property are evident in the 1968, 1974, 1982, 1993, or 1998 aerial photographs. In the 1974 aerial photograph, the parcels to the west of the Subject Property (across Milvia Street) appear to have been cleared and the property under construction. By the 1982 aerial photograph, the construction is complete. By 2005, the residential structure addressed as 2016

Dwight Way is no longer visible on aerial photographs. No significant changes to the Site or the surrounding vicinity are identified on the aerial photographs from 2009, 2012, and 2016.

4.3 United States Geological Survey Topographic Maps

EDR's Historical Topographic Map Report includes a search of a collection of public and private historical topographic maps (Appendix G; EDR 2018c).

The 1895/1897, 1899, and 1915 15-minute topographic maps show the Subject Property to be developed with small structures and located southwest of the University of California. The immediate vicinity has been developed with roadways in the same approximate alignments as Shattuck Avenue, Blake Street, Milvia Street, and Dwight Way.

The 1948 topographic map shows the Subject Property and vicinity are shaded with pink to designate "Urban Land" and specific details are not provided.

The 1949, 1959, 1968, 1973, and 1980 7.5-minute topographic map shows the Subject Property to be designated as "Urban Land." A hospital is designated to the north of the Subject Property on the topographic maps dated 1959, 1968, 1973, and 1980.

The 1996/1997 and 2012 topographic maps do not show any significant change to the Subject Property or surrounding area.

4.4 City Directories

The EDR City Directory report (Appendix H; EDR 2018e) includes a search of available city directory data between 1920 and 2014. The following summarizes the listings for the Subject Property addresses.

Address	Uses/Listings	Dates
2001 Blake Street	Doctors' offices and Residential listings	2006, 2000, 1996, 1992, 1991, 1986, 1980, 1975, 1970, 1962, 1955, 1955, 1950, 1945, 1943, 1938, 1933
	Bredlow H. Auto Repair, Bredlow Radios	1933, 1925
2011 Blake Street	Laboratory Engineering Services	1980
	Sur Fit Sales Co.	1962
	Monarch Machine and Welding	1955, 1950, 1945

Address	Uses/Listings	Dates
	Hayes Stanley Spraying Equipment	1943
2015 Blake Street	Timberline Manufacturing/Geodesics	2014, 2010, 2006, 2000, 1996, 1992, 1986
	Auto Milano	1986, 1980
	Merritts Sun	1986
	Mountain Woodworking	1986
	Various Roofing/Construction Contractor Names	1970, 1962, 1955, 1950
2019 Blake Street	Richard Nagler Photographs	2014, 2010
	Sky Light and Sun	2014, 2010, 2006, 2000, 1996, 1992, 1986
	BB Plastics	2006, 2000, 1996, 1992, 1991, 1986, 1980
	Blake Street Hawkeyes	1992, 1986, 1980
	Good Earth Glass & Sun	1980
	Cabinet makers and Contractors	1975, 1970, 1962, 1955, 1945
	Refrigerator repair	1943
2012 Dwight Way	Residential Listings	2006, 2000, 1996, 1992, 1991, 1986, 1980, 1970, 1962, 1955, 1950, 1945, 1943, 1938, 1933, 1928, 1925, 1920
2016 Dwight Way	Residential Listings	1991, 1986, 1980, 1970, 1962, 1950, 1945, 1943, 1938, 1933, 1925
2018 Dwight Way	Residential Listing	1986
2020 Dwight Way	Residential Listings	2006, 2000, 1996, 1992, 1991, 1986, 1980, 1970,

Address	Uses/Listings	Dates
		1962, 1955, 1950, 1945, 1943, 1938, 1933, 1928, 1925, 1920

4.5 Prior Environmental Assessments

Terraphase was provided with a copy of a Phase I ESA completed by Stellar Environmental Solutions (SES) in 1995 (the 1995 Phase I ESA; SES 1995). The 1995 Phase I ESA was prepared on behalf of the Dwight Mil Company and was completed for eleven contiguous parcels bounded by Dwight Way, Milvia Street and Blake Street. Included in the eleven parcels were six of the Subject Property parcels (APNs 055-1822-013-04, 055-1822-013-03, 055-1822-014, 055-1822-021, 055-1822-022, and 055-1822-023). The 1995 Phase I ESA did not include parcel 055-1822-013-02 (the 2019 Blake Street property). The 1995 Phase I ESA concluded that nearby leaking underground storage tank (LUST) sites were considered unlikely to have impacted subsurface groundwater beneath the Subject Property because of closed regulatory statuses and/or impacts only to soil. The 1995 Phase I ESA further concluded that while there was no regulatory evidence of nearby contaminated sites which would likely contaminate groundwater, there was a general concern about the historic use of properties on the eastern part of Blake Street between Milvia Street and Shattuck Ave. The 1995 Phase I ESA noted that two commercial laundries and four different auto repair shops, including the historical auto repair shop at 2015 Blake Street, and suggested that some subsurface contamination is a possibility. Although the 1995 Phase I ESA did not identify RECs, SES advised conducting a limited site investigation to sample shallow soil for petroleum hydrocarbons and volatile organic carbon analyses for general insurance purposes. It is not known if any samples were collected.

5.0 AGENCY RECORDS REVIEW

Terraphase reviewed applicable and reasonably ascertainable federal, state, and local environmental-related databases as part of this Phase I ESA, discussed below. These sources of information, as well as historical sources, Site observations, and interviews conducted (discussed in Sections 4, 6, and 7, respectively) were found to be sufficient for Terraphase to evaluate for the existence of RECs, historical RECs, controlled RECs, and/or *de minimis* conditions as part of this Phase I ESA. Therefore, an in-person review of the county or state records by Terraphase was found to be unwarranted (as defined in the ASTM standard, Section 8.2.2).

5.1 Standard Environmental Record Sources

EDR provided the regulatory agency database report discussed in this section. Terraphase reviewed the EDR report for information regarding reported releases of hazardous substances and petroleum products on or near the property. Specific records and search distances (measured from the approximate property boundary of the Subject Property) for the environmental databases were reported by EDR to be consistent with ASTM Practice E 1527-13 and are discussed in the EDR report, dated November 13, 2018. The EDR Radius Map™ Report is presented as Appendix B.

Of the databases searched in accordance with the ASTM Practice E1527-13, EDR identified 177 listings within the ASTM-prescribed search radii. The urban setting, density, and large number of sites reported within the search area make it not reasonably ascertainable to report all of the information within the minimum search distance for its potential impact on the Subject Property (ASTM E 1527-13). Therefore, in accordance with Section 8.1.2.1 of the ASTM Standard, the minimum search distances were adjusted, and a discussion of the assessment of impact has been limited to the sites which appear to have the greatest potential to impact the Subject Property (i.e., adjoining sites, sites with documented releases, or LUST cases, and former cleaners or auto stations which are located within a 600-foot radius of the Subject Property). The records for these listings were reviewed to help identify RECs in connection with the Subject Property. Information about each listing is provided in the EDR Report (Appendix B). As noted in Section 2.2, shallow groundwater flow direction at the Subject Property is anticipated to be to the northwest.

A complete list of the government records searched, including the definition of the acronyms used, is provided in the EDR Report. The following tables summarizes database results found within ASTM standards. Listings for the Subject Property and relevant listings regarding the nearby properties are further discussed below.

Regulatory Database	Approximate Minimum Search Distance (miles)	Subject Property Listed	Total Number of Listings
Federal NPL	1	No	0
Federal Delisted NPL	0.5	No	0
Federal CERCLIS list	0.5	No	0
Federal CERCLIS NFRAP list	0.5	No	0
Federal RCRA CORRACTS facilities list	1	No	0
Federal RCRA non-CORRACTS TSD facilities list	0.5	No	0
Federal RCRA generators list	0.25	No	11
Federal IC/EC registries	Subject Property	No	0
Federal ERNS list	Subject Property	No	0
State- and tribal-equivalent NPL	1	No	1
State- and tribal-equivalent CERCLIS	0.5	No	3
State and tribal landfill and/or solid waste disposal lists	0.5	No	0
State and tribal leaking storage tank list	0.5	No	45
State and tribal registered storage tank lists	Subject Property and adjoining	No	8
State and tribal IC/EC registries	Subject Property	No	0
State and tribal VCP sites	0.5	No	0
State and tribal Brownfield sites	0.5	No	1
EDR high-risk historical records	0.50	No	23
EDR recovered government archives	<1/8	No	0

Notes:

1. Nearby listings are records for sites other than the Subject Property that were identified within the ASTM search distance.

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System
CORRACTS – RCRA Corrective Action Sites
ERNS – Emergency Response Notification System
IC/EC – Institutional control / engineering control
NFRAP – no further remedial action planned
NPL – National Priorities List
RCRA – Resource Conservation and Recovery Act
TSD – treatment, storage, or disposal
VCP – Voluntary Cleanup Program

5.1.1 Subject Property

The Subject Property was not identified in any of the regulatory agency databases.

5.1.2 Nearby Listed Properties

Terraphase reviewed applicable and reasonably ascertainable federal, state, and local environmental-related databases as part of this Phase I ESA. Of the databases searched in accordance with the ASTM Practice E1527-13, EDR identified 177 listings within the ASTM-prescribed search radii. Although Terraphase reviewed the listings in the report the discussion in this Phase I ESA is limited to the following sites of interest with potential to impact the Subject Property:

2034 Blake Street
Kalmar Property
Approximate Distance from the Property: across Blake Street, southeast of the Subject Property
Assumed Groundwater Gradient: Presumed upgradient from the Site
Regulatory Data Summary: The property appears in the LUST database. A case closure letter obtained from the State Water Resources Control Board's (SWRCBs) Geotracker website indicated that the City of Berkeley Toxics Management Division (TMD) issued a no further action letter and the RWQCB concurred and the Site was granted closure in 1999 (RWQCB 1999a). Terraphase requested additional information for this property from the TMD, as discussed in Section 5.2.1.2.

2001 Dwight Way
Alta Bates Medical Center Herrick Campus
Approximate Distance from the Property: across Dwight Way, north of the Subject Property
Assumed Groundwater Gradient: Presumed downgradient from the Site
Regulatory Data Summary: This property is listed in several databases including the California Environmental Reporting System (CERS), CERS Haz Waste, CERS Tanks, above-ground storage tank (AST) database, RCRA Large Quantity Generator (LQG), and various underground storage tank (UST) databases. The nature of the materials stored and handled at the property are related to operation of the hospital. Violations reported include improper waste labeling, failure to close waste containers when not in use, and improper hazardous materials reporting. The property appears in the LUST database. A case closure letter obtained from the SWRCBs Geotracker website indicated that two USTs were removed from the Site in 1994 and the City of Berkeley TMD issued a no further action letter. Petroleum impacts were reportedly not detected in groundwater and the Site was granted closure in 1999 (RWQCB 1999b). Based on the regulatory closed status of the listing, a lack of identified groundwater impacts, and the downgradient location relative to the Subject Property, this listing is not considered to pose a significant risk to the Subject Property.

2558 Shattuck Ave
Dan Chin Auto Service

Approximate Distance from the Property: 380 feet southeast of the Subject Property
Assumed Groundwater Gradient: Presumed upgradient from the Site
Regulatory Data Summary: This listing is identified as the location of an automotive repair station. It appears the property has been used for this purpose since the 1920s. Numerous violations related to hazardous materials reporting and training were noted in the EDR report in 2013, 2014, 2016, and 2017. Based on the nature of the violations reported in the EDR report, this listing is not considered to pose a significant risk to the Subject Property.

2555 Shattuck Ave
Toyota Flynn Trust
Approximate Distance from the Property: 500 feet southeast of the Subject Property
Assumed Groundwater Gradient: Presumed upgradient from the Site
Regulatory Data Summary: This listing is identified as a LUST case (gasoline) that received regulatory closure in 1994. Based on the regulatory closed status of the listing and distance to the Subject Property, this listing is not considered to pose a significant risk to the Subject Property.

2440 Shattuck Ave
Dollar Tree #03454
Approximate Distance from the Property: 500 feet northeast of the Subject Property
Assumed Groundwater Gradient: Presumed downgradient from the Site
Regulatory Data Summary: This address appears in the EDR report as a hazardous waste generator and a facility required to report hazardous materials handling and storage to the local Certified Unified Agency Program (CUPA). Violations identified in the EDR report included failure to conduct proper employee training, failure to report hazardous materials properly, and failure to label wastes properly. Based on the nature of the business conducted at the property and the nature of the violations reported in the EDR report, this listing is not considered to pose a significant risk to the Subject Property.

2567 Shattuck Ave
Shield Healthcare
Approximate Distance from the Property: 600 feet southeast of the Subject Property
Assumed Groundwater Gradient: Presumed upgradient from the Site
Regulatory Data Summary: This listing is identified as a LUST case (gasoline) that received regulatory closure in 1999. Based on the regulatory closed status of the listing and distance to the Subject Property, this listing is not considered to pose a significant risk to the Subject Property.

2114 Blake Street
Fidelity Motors
Approximate Distance from the Property: 600 feet southeast of the Subject Property
Assumed Groundwater Gradient: Presumed cross-gradient from the Site

Regulatory Data Summary: This listing is identified as a property with a 1000-gallon gasoline UST and appears to be associated with 2600 Shattuck Ave. listing discussed below.

2600 Shattuck Ave
Parker Place Berkeley/ Berkeley Honda (formerly Jim Doten's Fidelity Motors)
Approximate Distance from the Property: 600 feet southeast of the Subject Property
Assumed Groundwater Gradient: Presumed cross-gradient from the Site
Regulatory Data Summary: This site is listed on the LUST, NPDES, and AST databases. California GeoTracker reports that a 1,000-gallon UST was removed on April 25, 2006. Berkeley TMD required over-excavation to a depth of approximately 13.5 feet to obtain representative soil samplings. During the UST removal approximately 75 tons of impacted clayey soil was removed to provide source removal. The case (RWQCB Case #01-3554) was closed on January 12, 2007. The closure report states that residual hydrocarbons are likely present at approximately 6 to 12 feet depth in the excavation sidewalls, especially within the southern sidewall. The southern sidewall was located at the curb line of Carleton Street, which limited additional over-excavation in this direction.

Another document on GeoTracker titled "Notification of Site Redevelopment and Additional Remedial Work" was uploaded April 6, 2015. This document is a letter notifying Berkeley TMD of the pending redevelopment at 2600 Shattuck Avenue. Enclosed in the letter is a technical report describing additional soil and soil-vapor sampling and remedial excavation work which concluded that no additional sampling or remedial work is required to construct a residential apartment complex. Based on the status indicating that remedial action has been completed and relative gradient, this listing is not considered to pose a significant risk to the Subject Property.

2107 Dwight Way
The Dwight
Approximate Distance from the Property: 600 feet northeast of the Subject Property
Assumed Groundwater Gradient: Downgradient from the Site
Regulatory Data Summary: This property is identified as a brownfields development site which received closure in 2017. Dry cleaning operations took place at the property as early as the 1930s and through approximately 1971 under the names Shattuck Laundry and Dry Cleaners (1930s - 1940s) and Rainbow Cleaners (1950s - 1971). The primary location of the former operations is associated with the address 2473 Shattuck Avenue. The property was redeveloped as an apartment building. Based on the status indicating that remedial action has occurred and relative gradient, this listing is not considered to pose a significant risk to the Subject Property.

5.1.3 Orphan Site List

Terraphase also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence but are potentially in

the general area of the Subject Property based on the partial street address, city, or zip code. Two orphan site listings were identified but based on the description of location are not considered to have an impact on the Subject Property.

5.2 Additional Environmental Record Sources

In addition to the EDR review, Terraphase contacted additional local, county, state, and federal environmental record sources, as described in the following subsections.

5.2.1 Local Regulatory Records

5.2.1.1 Building Permit Records

The Subject Property address was listed in the EDR Building Permit Report (EDR 2018g) as follows:

- 2001 Blake Street had permits for new roof installation in 2001 and an energy audit in 1996 triggered by a title transfer.
- 2015 Blake Street had an energy audit in 1996 triggered by a title transfer.
- 2012 and 2020 Dwight Way had permits for seismic bolting and shearwall installation in 1997.
- 2016 Dwight Way had a demolition permit for demolition of an apartment building in 1994.
- 2020 Dwight Way had a building permit for replacement of approximately 70 feet of brick foundation in 2007 and an electrical permit for installation of a new 200 amp electrical service and breakers in 2007.

Building permits for adjoining properties were also listed in the building permit report. A copy of the building permit report is included in Appendix I.

5.2.1.2 City of Berkeley Toxics Management Division

Terraphase requested information from The City of Berkeley TMD related to the Subject Property as well as information related to the adjacent Kalmar Property located at 2034 Blake Street. Copies of the files obtained from the TMD are included in Appendix J.

On November 13, 2018, Terraphase received an email from Jamie Cooney with the TMD stating only two files were available for addresses associated with the Subject Property. Both files were related to hazardous materials inspections conducted by the City of Berkeley TMD at the 2015 Blake Street property (for the Timberline Geodesics business) and the 2019 Blake Street property (for the Skylight and Sun Inc. business). Both inspections found that hazardous materials were not present or used in significant quantities at either business. No other files related to the Subject Property were identified in the City of Berkeley TMD files.

In addition, Terraphase requested information from the TMD regarding the Kalmar property, a LUST site located at 2034 Blake Street in a presumed upgradient location from the Subject Property. On December 11, 2018, Terraphase reviewed the information in the City of Berkeley TMD files for this property. Information contained in the files indicated that two USTs were located in the rear of the property: one 1,000-gallon gasoline tank and one 500-gallon waste oil tank. The two tanks were removed from the property in 1988. Low levels of total petroleum hydrocarbons as gasoline (TPH-g) and benzene, toluene, ethylbenzne, and xylenes were detected in soil samples collected from beneath the tanks following removal. The maximum detected TPH-g concentration was 120 milligrams per kilogram (mg/kg), just slightly above the Tier 1 Environmental Screening Level established by the RWQCB for TPH-g of 100 mg/kg. The maximum detected concentrations of benzene, toluene, ethylbenzene, and xylene were 1.4 mg/kg, 8.1 mg/kg, 6.8 mg/kg, and 33 mg/kg, respectively. The Tier 1 ESLs for benzene, toluene, ethylbenzene, and xylene are 0.044 mg/kg, 2.9 mg/kg, 1.4 mg/kg, and 2.3 mg/kg. A letter from the Berkeley TMD dated May 17, 1988 indicated that groundwater sampling was requested for the Site; however, information regarding groundwater sampling results was not contained in the files. In 1999, the RWQCB issued a case closure letter for the property. Given that the USTs were located at the rear of the 2034 Blake Street property and the case has been granted regulatory closure, this property is not considered to pose a significant risk to the Subject Property.

5.2.1.3 City of Berkeley Fire Department

On December 6, 2018, Terraphase spoke with M. Alisha Gard of the City of Berkeley Fire Department. Ms. Gard indicated that there were no files in their department for the parcels associated with addresses 2011 Blake Street, 2012 Dwight Way, 2016 Dwight Way, and 2020 Dwight Way. Information on file with the City of Berkeley Fire Department for the 2001 Blake Street, 2015 Blake Street, and 2019 Blake Street properties included inspections related to fire code, emergency medical response calls, and incidents involved downed power lines. These incidents are not considered to pose a significant risk to the Subject Property.

5.2.1.4 City of Berkeley Department of Planning and Development

A review of the City of Berkeley's zoning map indicates the Subject Property is zoned R4 for multi-family residential.

5.2.2 County Regulatory Records

5.2.2.1 Alameda County Assessor's and Recorder's Office

Information obtained from the Alameda County Assessor's office generally concurred with the parcel information described in the EDR Lien and AUL Search report (EDR 2018f; Appendix D).

5.2.2.1 Alameda County Fire Department

Terraphase contacted the Alameda County Fire Department on November 13, 2018, via their online form to request records related to the Subject Property. At the time of report

preparation, no response had been received. Given that the Subject Property is located within the limits of the City of Berkeley, this is not considered a significant data gap.

5.2.3 State Regulatory Records

5.2.3.1 Department of Toxic Substances Control

Terraphase reviewed the Department of Toxic Substances Control (DTSC's) EnviroStor database,[2] which houses information on permits and corrective action at hazardous waste facilities, as well as site cleanup projects, for relevant records related to the Subject Property and/or adjoining properties. The Subject Property and immediately adjacent properties were not identified in the database searched.

5.2.3.2 Regional Water Quality Control Board (RWQCB)

Terraphase reviewed the GeoTracker database,[3] the SWRCB data management system for sites that impact groundwater or have the potential to impact groundwater. The Subject Property was not identified in the database search results. The nearby properties identified in the database were discussed in Section 5.1.2.

5.2.3.3 Division of Oil, Gas, and Geothermal Resources Files

Oil and gas wells were not observed within the Subject Property boundaries during our reconnaissance. A review of the California Division of Oil, Gas, and Geothermal Resources website for oil and gas fields in California and Alaska (CDCDOGGR 2018) indicated that there are no oil or gas wells located on or within 1 mile of the Subject Property.

5.2.4 Federal Regulatory Records

5.2.4.1 National Pipeline Mapping System

Terraphase reviewed the National Pipeline Mapping System (NPMS) public viewer website[4] for gas transmission pipelines (not including distribution lines) and hazardous liquid trunk lines on or close to the Subject Property. The nearest natural gas transmission line is located on Allston Way, a little over 1,500 feet north of the Subject Property.

[2] www.envirostor.dtsc.ca.gov/public

[3] http://geotracker.swrcb.ca.gov/

[4] https://www.npms.phmsa.dot.gov/PublicViewer/ (NPMS 2018)

5.2.4.2 U.S. Environmental Protection Agency

Review of the USEPA Envirofacts website[5] revealed that the Subject Property's addresses are not listed on any of the databases searched.

5.3 Vapor Encroachment Screening

ASTM Standard E2600-15 *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* was used as guidance for conducting a VES for the Subject Property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the Subject Property.

Soil vapor is one of the pathways of contamination to the Subject Property, along with groundwater and soil. ASTM E1527-13 requires that vapor migration be treated no differently than contaminated groundwater. The soil-vapor contaminant pathway needs to be considered in evaluation of RECs or other environmental concerns. In accordance with ASTM E2600-15 (Tier 1; Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), Terraphase evaluated for potential petroleum hydrocarbon source(s) (e.g., active LUST cases) for vapor intrusion within 1/10 mile of the Subject Site or volatile organic compound (VOC) source(s) (active Spills, Leaks Investigation and Cleanup [SLIC] cases) within 1/3 mile of the Subject Property. Properties with a potential to cause a VEC to the Subject Property were not identified because of the regulatory status of case closed and a lack of documented groundwater impacts.

[5] http://www.epa.gov/envirofw/

6.0 SUBJECT PROPERTY RECONNAISSANCE

6.1 Methodology and Limiting Conditions

On November 29, 2018, Wendy Bellah, of Terraphase conducted a reconnaissance visit of the Subject Property to assess current land-use activities and environmental conditions. The site reconnaissance was documented with notes and photographs. Observations made during the reconnaissance are discussed below and selected photographs are provided in Appendix A. The focus of the reconnaissance was to identify conditions that have the potential to cause adverse environmental impacts.

During the site reconnaissance, Terraphase was provided access to the interiors of the buildings at 2001, 2015, and 2019 Blake Street. Ms. Bellah was accompanied by Mr. Richard Nagler, owner of the parcels. As part of the reconnaissance, Terraphase observed for evidence of the presence of hazardous substances used, stored, or discarded and reviewed the Site for areas of disturbed or discolored soil, suspect equipment and/or building materials which may contain hazardous substances, areas of distressed vegetation, wastewater discharge areas, evidence of storage tanks/septic systems, waste management/disposal areas, lagoons, pits, sumps, surface water management areas, stained surfaces, etc.

6.2 General Setting

6.2.1 Current Use of the Subject Property and General Observations

The Subject Property is currently developed with several buildings, landscaped areas, and parking areas. Mr. Nagler indicated that, where heating is provided, the buildings were heated through gas furnaces and wall heaters. Hot water is provided through gas-powered hot-water heaters. No air conditioning is provided in the buildings. At the time of the Site reconnaissance, the following observations were made:

- 2012 Dwight Way: This parcel fronts Dwight Way and is developed with a two-story wood-frame house (that has been divided into apartments), a front lawn area, and a wooden picket fence. It appears the building is constructed with a crawl space. At the time of the site reconnaissance, the building and associated landscaped areas were observed in good condition. The house is older construction and Mr. Nagler indicated the house had been constructed as a single-family residence some time before 1906, as the home had survived the 1906 earthquake. Mr. Nagler indicated the house was likely converted from a single-family residence to a multi-family apartment in the 1940s to meet the increased war-time housing demands. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel with address 2016 Dwight Way (see below).

- 2016 Dwight Way: This parcel is currently undeveloped and is used as an asphalt-paved parking lot. An electronic access gate (key-coded entry) and exit gate are accessible

from Dwight Way. The parking lot on this parcel is connected to the additional parking area located behind the 2012 and 2020 Dwight Way buildings. Parking spaces are leased to local residents and businesses. A residential building was previously present on this parcel. Mr. Nagler indicated the building was demolished in the early 1990s due to damages sustained during the 1989 earthquake.

- 2020 Dwight Way: This parcel fronts Dwight Way and is developed with a two-story wood-frame house (that has been divided into apartments), a front lawn area and a wooden picket fence. It appears the building is constructed with a partially subterranean basement. At the time of the site reconnaissance, the building and associated landscaped areas were observed in good condition. The house is older construction and Mr. Nagler indicated the house had been constructed as a single-family residence some time before 1906, as the home had survived the 1906 earthquake. Mr. Nagler indicated the house was likely converted from a single-family residence to a multi-family apartment in the 1940s to meet the increased war-time housing demands. The rear of this parcel is part of a larger asphalt-paved parking lot accessed through the neighboring parcel with address 2016 Dwight Way (see above).

- 2001 Blake Street: A one-story wood-frame with stucco exterior building is located at the northeast corner of Blake Street and Milvia Street. It appears the building is constructed with a crawl space. The building was previously used as a single-family residence, but has since been converted to a small office building housing therapist offices. It is not known when the transition in use occurred. At the time of the site reconnaissance, the building and associated landscaped areas were observed in good condition.

- 2011 Blake Street: At this address is a small stucco garage building used as a small welding shop. Adjacent to the building (between the 2001 and 2011 Blake Street buildings) is a fenced area used for garbage and materials storage and a small driveway.

- 2015 Blake Street: This parcel is developed with a large wood frame warehouse type building with corrugated metal exterior. It appears the building is slab-on-grade construction. Mr. Nagler indicated that the building was previously used (prior to the 1990s) for auto-repair; evidence of a hydraulic lift were observed at the front of the building. The 1995 Phase I ESA reported that a pit associated with the hydraulic lift was filled in with concrete when the last auto repair shop that previously occupied the building left in 1986. Small areas of landscaping are located at the exterior of the front and rear of the building. At the time of the site reconnaissance, the building was observed in fair condition. Inside, the front of the building is occupied by Skylight and Sun Inc. and is used for materials storage used in constructing skylights. The rear of the building is occupied by Timberline Geodesics. At the time of the site reconnaissance, wood and woodworking machines (saws, drills, etc.) were observed in the rear of the building and are used to support the construction of wooden geodesic home kits.

- Between the 2015 and 2019 Blake Street buildings is an asphalt-paved parking.
- 2019 Blake Street: This parcel is completely developed with a large stucco exterior warehouse type building primarily used by Skylight and Sun Inc. for the manufacture of skylights. Mr. Nagler has a small digital photo studio and office located in the rear of the building. It appears the building is slab-on-grade construction. Mr. Nagler indicated that previous uses of the property have included a painter's warehouse, a small photo developing/darkroom (access to the interior of the former darkroom was blocked at the time of the site reconnaissance), and a theatre troupe (the Blake Street Hawkeyes) practice space (there is a raised floor in the back of the building that was used as a stage by the theater troupe).

6.2.2 Utilities

The utility service providers identified at the Subject Property include the following:

Utility Service	Service Provider
Electricity	Pacific Gas & Electric Company (PG&E)
Natural gas	PG&E
Sanitary wastewater disposal	East Bay Municipal Utility District (EBMUD)
Drinking water supply	EBMUD

6.3 Interior and Exterior Observations

Feature	Observation
Current or former USTs	No evidence of current or former USTs were observed during the Site reconnaissance. Mr. Nagler indicated that he was not aware of any USTs present (currently or formerly) at any of the parcels. No evidence of USTs associated with the previous businesses were identified in the historical records search.
Current or former aboveground storage tanks and/or silos	None observed.
Polychlorinated biphenyl (PCB)-containing equipment	Transformers were not observed at the Subject Property during the site reconnaissance. Fluorescent light bulb ballasts were observed in use at the site and may contain PCBs or mercury.
Hazardous materials and/or petroleum product use/storage	Small amounts of grease and lubricating oils are used in the operation of the woodworking machines associated with the Timberline Geodesics business.
Hazardous waste	Hazardous wastes were not observed at the Subject Property at the time of the Site reconnaissance.

Feature	Observation
Drums or other containers	Small containers of spray paint were observed inside the 2015 Blake Street building. A drum with pieces of scrap metal was also observed inside the 2015 Blake Street building.
Non-hazardous solid waste	Solid waste is stored in dumpsters located on the Subject Property.
Unidentified substance containers	None observed. Mr. Nagler indicated there may be a small amount of remainder photo processing chemicals inside the former darkroom located in the 2019 Blake Street building.
Stressed vegetation	None observed.
Other petroleum product transmission/storage	None observed.
Floor drains, sumps, drywells, or water wells	Sump pumps are located at the rear of the 2015 Blake Street building and in the crawl space of the 2001 Blake Street building due to the shallow groundwater table.
Septic systems	None observed.
Odors	No unusual odors were observed during the reconnaissance.
Stains, pitting, or corrosion (interior areas)	None observed.
Stained or corroded exterior surfaces	None observed.
Pools of liquid, pits, ponds, or lagoons	None observed.
Wastewater	None observed. Sanitary sewage service is provided by EBMUD.
Stormwater	Storm drains and inlet drains were observed in the streets adjacent to the Subject Property. Stormwater drains were not observed on the Subject Property.
Wells	None observed.

6.4 De Minimis Conditions

ASTM defines de minimis conditions as those that "generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (i.e., minor soil staining). No de minimis conditions were observed.

6.5 Adjacent Properties

The Site is located adjacent to the following properties (Figure 2):

Direction	Observation
North	North of the Subject Property is Dwight Way, beyond which are buildings and parking areas associated with the Sutter Health Alta Bates Summit Medical Center, Herrick Campus hospital.
East	Immediately adjacent to the east of the 2020 Dwight Way parcel is a residential structure. The building appears to have been built in the same approximate time-frame as the buildings on the 2012 and 2020 Dwight Way structures (e.g., pre-1906). Immediately adjacent to the east of the 2019 Blake Street parcel is a residential structure and small commercial building. At the time of the Site reconnaissance, the small commercial building appeared unused although signs in the window indicated ping pong and tai chi training were offered there. Further to the east is a large construction site (not active at the time of the site reconnaissance), additional residential structures, and several small commercial buildings fronting Shattuck Ave. Businesses observed at the time of the site reconnaissance included: a hair salon, fabric store, an appliance store, a former laundry facility (now vacant), a Mexican restaurant, a former Radio Shack (now vacant), and a storefront undergoing construction.
South	South of the Subject Property is Blake Street, beyond which are residential structures.
West	Immediately adjacent to the western side of the 2012 Dwight Way parcel are several buildings housing doctor's offices. Many of the buildings appear to be converted residential structures. Further to the west is Milvia Street (adjacent to the western boundary of the 2001 Blake Street parcel) and a building and parking lot associated with the Sutter Health Urgent Care center.

7.0 INTERVIEWS

7.1 Interview with Current Owner Representative

During the Site reconnaissance, Mr. Nagler was interviewed regarding his knowledge of current and past operations of the property. Relevant information from his interview is included in Section 6.0.

7.2 Interview with Former Owner Representative

Former owners were not contacted/interviewed as part of this Phase I ESA.

7.3 Interviews with Other Agency Representatives

Terraphase contacted local, county, and state agencies via telephone, electronic mail, letter, or in person to inquire as to whether they possessed relevant records regarding the Site. This information is discussed in Section 5.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Terraphase has performed a Phase I ESA of the Subject Property in conformance with the scope and limitations of ASTM Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.2.3 of this report.

8.1 REC

A REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or the material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The following REC was identified:

- Given the age of the existing structures and historical operations (e.g., automotive repair and paint storage) conducted at portions of the Subject Property, there is a potential for metals (such as lead), volatile organic compounds, and petroleum hydrocarbons to be present in shallow surface soils at the Subject Property.

8.2 Controlled RECs

Controlled RECs (CRECs) are RECs resulting from a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. Terraphase did not identify any CRECs for the Subject Property.

8.3 Historical RECs

Historical RECs (HRECs) are defined as past releases of any hazardous substances or petroleum products that have occurred in connection with the property and have been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. Terraphase did not identify any HRECs for the Subject Property.

8.4 De Minimis Conditions

No de minimis conditions were observed.

8.5 Data Gaps

A data gap is a lack or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. The following data gaps were identified during the Phase I ESA:

- *Lack of Information Prior to First Developed Use*. Under ASTM Practice E1527-13, Section 8.3.2, "all obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier." The earliest detailed historical source identified by Terraphase was an 1894 Sanborn® fire insurance map, which depicted part of the Subject Property as developed with residential structures. Based on the reviewed sources of historical information, this data gap is not considered to be significant (i.e., does not affect the ability of Terraphase to identify RECs).

- *Lack of Former Owner/Occupant Interview*. Former owners and occupants were not contacted as contact information was not provided. Based on the reviewed sources of historical information, this data gap is not considered to be significant.

- *Lack of Information from Fire Department*. A response for requests for information for the Subject Property was not received from the Alameda County Fire Department. Based on the reviewed sources of historical information and that the Subject Property is located within the limits of the City of Berkeley, this data gap is not considered to be significant.

- *Lack of Current Tenant Space Reconnaissance and Current Tenant Interview*. Access to the interiors of the buildings at 2012 and 2018 Dwight Way was not provided. Given the use of these properties as a residential structure since their construction, this data gap is not considered significant.

- *Potential for Lead-Based Paint Weathering*. Given the ages of the buildings, it is possible that lead-based paint may have been used on the building exteriors. Lead-based paint used on the exteriors may have potential to chip, flake or weather and be present within the drip lines of the buildings at the Site. The lack of information regarding the historical use of lead based paint is considered a significant data gap.

8.6 Recommendations

The following recommendations are made based on the conclusions presented above:

- Given the historical site uses, if excavation and off-site disposal of soil is required, the soil should be sampled for metals, VOCs, and petroleum hydrocarbons for the purposes of waste characterization.

8.7 Deviations and Non-Scope Services

In performance of this Phase I ESA, Terraphase has identified no exceptions or deviations from the ASTM E1527-13 standard of practice.

10.0 QUALIFICATIONS OF STAFF

Wendy Bellah

Wendy Bellah is a registered professional engineer in the State of California with over 18 years of experience in site characterization, remediation, project management, permitting, and agency interaction on projects throughout California and New England. She has worked on investigation, remediation, and monitoring programs for sites affected by volatile organic compounds, petroleum hydrocarbons, organochlorine pesticides, polychlorinated biphenyls, metals, and munitions and explosives of concern. Her experience includes design, installation oversight, and operation and maintenance of a variety of soil and groundwater remedial technologies. She also has extensive experience in preparing technical reports in accordance with local and federal guidelines and regulations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

ALTA BATES SUMMIT ME EPA ID:: CAD073957789	***2001 DWIGHT WAY***	***N 0 - 1/8 (0.039 mi.)***	***C9***	***25***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 9 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 29 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 16 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

ALTA BATES SUMMIT MEDICAL CENTER (Continued) **1000361152**

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: P012
. Waste name: ARSENIC OXIDE AS2O3

. Waste code: U010
. Waste name: AZIRINO[2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA,8AALPHA,8BALPHA)]-

. Waste code: U035
. Waste name: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]-

. Waste code: U058
. Waste name: CYCLOPHOSPHAMIDE

. Waste code: U059
. Waste name: DAUNOMYCIN

. Waste code: U089
. Waste name: DIETHYLSTILBESTEROL

. Waste code: U150
. Waste name: MELPHALAN

. Waste code: U206
. Waste name: GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-, D-

. Waste code: U237
. Waste name: 2,4-(1H,3H)-PYRIMIDINEDIONE, 5-[BIS(2-CHLOROETHYL)AMINO]-

Site ID: 112112
Site Name: Dollar Tree #03454
Violation Date: 11-13-2014
Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Description: Failure to include all of the following in the Contingency Plan: 1) A description of actions the facility personnel shall take response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility; 2) The plan shall describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) The plan shall list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates; 4) The plan shall include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) The plan shall include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). 6) The plan shall include the current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the re

Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	10/31/2017
Global Id:	T10000005842
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.8644121768963
Longitude:	-122.26695123887
Case Type:	Cleanup Program Site
Case Worker:	MEJ
Local Agency:	BERKELEY, CITY OF
RB Case Number:	01S0755
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	Dry cleaning operations took place at the site as early as the 1930s and through approximately 1971 under the names Shattuck Laundry and Dry Cleaners (1930s - 1940s) and Rainbow Cleaners (1950s - 1971). The primary location of the former operations is associated with the address 2473 Shattuck Avenue. Rainbow Cleaners also utilized the address 2111 Dwight Way, in the 1950s and early 1960s. Except for the original residential use of the southeastern portion of the site (which ceased sometime prior to 1968), typical use of the site since the early 1900s has included a number of small commercial and/or retail tenants, including a bakery, creamery, various medical and commercial offices, auto repair (circa 1920-1930), sign making, drug store, a theater, hardware store, and restaurants. As noted above, former dry cleaning operations were identified on site. An apartment complex is being built on the site.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No

JIM DOTEN FIDELITY MOTORS (Continued) **1000111014**

Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: CERS

Site ID: 36058
Site Name: HENRY CHIN AUTO CARE
Violation Date: 03-02-2014
Citation: 19 CCR 4 2729.5 - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.5
Violation Description: Failure to submit inventory reports (Activities, Owner/Operator, Hazardous Materials Descriptions and Map pages, if required. Documentation must be resubmitted (for facilities which exceed EPCRA thresholds) or re-certified (for facilities which do not exceed EPCRA thresholds) by March 1.
Violation Notes: Returned to compliance on 04/16/2014. Non-inspection related violation - Notification for annual submittal sent to facility contact on or about 2/5/14 and reminder notice sent on or about 2/27/14. NOV sent 3/18/14. Business initially submitted 3/24/14, and an approved submission was submitted 4/16/14 (CE)
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Site ID: 36058
Site Name: HENRY CHIN AUTO CARE
Violation Date: 03-31-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 07/12/2016. The used antifreeze drum is only marked with the accumulation start date and the portable used oil containers are not labeled with anything. Generators who accumulate

HENRY CHIN AUTO CARE (Continued) **S121766527**

hazardous waste, in containers shall mark those containers with the words "hazardous waste", composition and physical state, hazard properties, name and address of generator and accumulation start date. Corrective action: Mark the hazardous waste containers with the missing information.

Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 36058
Site Name: HENRY CHIN AUTO CARE
Violation Date: 03-31-2016
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.
Violation Notes: Returned to compliance on 04/05/2016. Used oil filters are collected in a properly labeled drum with accumulation start date, but the drum is overflowing with filters and the lid is not on. Used oil filters must be stored in containers which are closed. Corrective action: Immediately arrange for the removal of the used oil filters, or transfer extra used oil filters to another properly labeled and closed drum and ensure they remain closed.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 36058
Site Name: HENRY CHIN AUTO CARE
Violation Date: 03-31-2016
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 04/05/2016. The used antifreeze drum is open with a funnel in place of a bung. Operator is required to store waste in a manner unlikely to cause unintended discharge to storm drain, sump or sewer. This includes ensuring that all lids, gaskets and locking rings are in place and secured. Corrective action: Immediately close the open container and ensure the funnel is removed when the container is not being added to (and the container closed), or be equipped with a valve or cover to prevent leakage if the drum should be knocked over.

Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..
Violation Notes:	Returned to compliance on 07/12/2016. The shop floor near the hazardous material storage area, specifically the used antifreeze and used oil filter drums, is dirty and oily. TMD is unable to determine if this is a spill or leaking container. Facilities shall be maintained and operated to minimize the possibility of a release of hazardous waste/material. Corrective action: Immediately clean the area around the hazardous materials/waste storage and the shop, ensure no containers are leaking and manage the collected material in accordance with Title 22 hazardous waste regulations. Provide TMD with a copy of the waste disposal record.

File Location:	Not reported
Potential Contaminants of Concern:	Waste Oil / Motor / Hydraulic / Lubricating
Potential Media Affected:	Under Investigation
Site History:	The former underground storage tank is located in a parking area behind the Toyota of Berkeley show room, between Channing Road and

TOYOTA OF BERKELEY (Continued) **U001599673**

Haste Road, and adjacent to the Mechanical Building. The surrounding properties are a mix of commercial and residential facilities. On May 31, 2005, TEC Accutite removed a 550-gallon double-walled steel UST from the subject site. Formerly, this tank was used to store waste oil. On 10/2/2017, RAL and LMM did not receive feedback from the City of Berkeley Toxics Management Division requesting additional information on this case.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-19-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: Berkeley City Toxics Management Division
Eval Program: APSA
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-19-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility has a HW generator I.D. and has properly represented their inventory of wastes, principally non-RCRA petroleum as used oil. No observance of mis-labeled waste containers or wastes exceeding accumulation time limits (90 days). Facility reports generation of waste requiring management standards as a large quantity generator. Incidental containers of ATF and motor oil - not labeled or covered at multiple work stations. Used oil filters stored in properly labeled drums. Used oil drums also properly labeled. Several waste containers ar not in use and are not closed.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-19-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: HMBP Obs 1 hazardous materials inventory appears consistent with volumes and locations indicated on 2014 report. HMBP obs 2; "Map 3 upper shop" notes oxy/acetylene in 'storage room' southwest corner. Misc lube/oil stored here is not indicated in 2014 report.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

FINDS:

Registry ID: 110002707688

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:

Site ID:	356740
CERS ID:	10180349
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	356740
Site Name:	UC Berkeley - Facilities Services
Violation Date:	10-13-2015
Citation:	22 CCR 23 66273.5 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.5
Violation Description:	Failure to properly manage mercury containing lamp bulbs which are destined for reclamation or recycling from the date the bulbs were first discarded or broken.
Violation Notes:	Returned to compliance on 10/16/2015. UW bulbs in electric shop were comingled with UW batteries in the same unlabeled box.
Violation Division:	Berkeley City Toxics Management Division
Violation Program:	HW
Violation Source:	CERS

Site ID:	356740
Site Name:	UC Berkeley - Facilities Services
Violation Date:	10-13-2015
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 10/16/2015. Hazardous wste must be labeled as such including properties of the waste, generation and accumulation date information. Hazardous waste storage area: 1 x 5 gallon used oil not labeled; 1x5gallon latex paint not labeled; pallet of custodial waste not labeled.
Violation Division:	Berkeley City Toxics Management Division
Violation Program:	HW
Violation Source:	CERS

Site ID:	356740

UC BERKELEY - FACILITIES SERVICES (Continued) **S121765614**

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-04-2015
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	The City of Berkeley requires the registration of hazardous waste generators. Staples submitted Facility information in CERS on 9/24/15 indicating facility is a hazardous waste generator. Onsite to confirm hazardous waste management. Facility collects toner cartridges, electronic equipment and sends off for recycling. Jessica indicates employees are provided an initial hazardous waste training along with other orientation items and an annual training. FAcility does not currently have any hazardous waste generation and Jessica indicates she is unaware of any shipments in the past. Confirmed facility is not requested under the HMBP program. Jessica indicates the primary emergency contact, Rich Brown, is no longer there. the new contact is

FINDS:

Registry ID: 110002823981

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 01-05-2016
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last

HUSTEADS AUTO BODY. (Continued) **S121741291**

worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 03/29/2016.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-05-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine and announced inspection, new facility rep, David Keller that had only recently started working there. Was unfamiliar in general with facility's environmental status. Many hazardous waste violations noted along with no training records, haz manifests etc. David mentioned the company was looking into hiring a safety consultant to administer EH&S.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

HUSTEADS COLLISION CENTER (Continued) **1000397808**

MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The site is located on the Dwight Place grounds at 1812 Dwight Way in the City of Berkeley, California. The property is undergoing redevelopment from light industrial to multi-family residential. A subdivision of the existing parcel is proposed so that the multi-family dwelling constructed on the eastern portion of the site will separated from the older, existing structure on the western end of the site. The site is at an approximate elevation of 120 feet (MSL). The topography of the site area is gently sloping towards the southwest with a slope of approximately 50:1 (horizontal to vertical). Natural drainage of the site area is towards the southwest into San Francisco Bay. The surface drainage of the site is generally by sheet flow towards the west into a storm drainage collection system. Historically, we understand that the subject site was used as a linen service but was vacant for an estimated seven years prior to the present redevelopment. During the course of the redevelopment of the site, two underground solvent storage tanks and two underground fuel tanks were identified. These tanks were unused during the period of current ownership and were estimated to be at least 30 years old. Tank contents of the two underground fuel storage tanks were tested for identification purposes. Contents of Tank 1 were identified as primarily light hydrocarbon; contents of tank 2 were identified as primarily heavy hydrocarbons. All tanks were recently removed. (10/31/1986 Subsurface Investigation and Testing)

File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: * Solvents
Site History: The site is located on the Dwight Place grounds at 1812 Dwight Way in the City of Berkeley, California. The property is undergoing redevelopment from light industrial to multi-family residential. A subdivision of the existing parcel is proposed so that the multi-family dwelling constructed on the eastern portion of the site will separated from the older, existing structure on the western end of the site. The site is at an approximate elevation of 120 feet (MSL). The topography of the site area is gently sloping towards the southwest with a slope of approximately 50:1 (horizontal to vertical). Natural drainage of the site area is towards the southwest into San Francisco Bay. The surface drainage of the site is generally by sheet flow towards the west into a storm drainage collection system. Historically, we understand that the subject site was used as a linen service but was vacant for an estimated seven years prior to the present redevelopment. During the course of the redevelopment of the site, two underground solvent storage tanks and two underground fuel tanks were identified. These tanks were unused during the period of current ownership and were estimated to be at least 30 years old.

Eval Date:	09-20-2016
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Conducted a follow-up inspection to confirm whether the facility corrected the violations given during the routine inspection performed on July 15, 2016 at 10:30 am with Meridith Lear (Hazardous Materials Specialist II) and Jewel Mauricio (Hazardous Materials Specialist I). A violation cited on page 2 of the routine inspection report (06/15/16), H284 22 CCR 15 66265.194 which state "Hazardous wastes must be stored in containers that are not overfilled. The waste oil tank had overflowed into the bermed area. Waste must be collected from this area and placed in a properly closed container within 24 hrs of signing this report" This violation has been corrected and no additional violations observed. See photos for reference. Violation cited on pg 3 of the routine inspection report, HW Title 22 4266262.40 (e) which stated " Manifests needs to be maintained for 3 years". This violation has been corrected, the facility provided 3 years worth of manifests. The manifests [Truncated]

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 03-27-2017
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 03/30/2017.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-27-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine HMBP, Hazardous Waste and Stormwater facility compliance inspection. The 2017 Cers submittal was done on 2.6.2017 and was reviewed for completeness during the inspection. Training records were reviewed. Eye wash stations needed to be inspected. Oil Water separator, they did know the last time it was pumped out, requested contractor to pump out asap, and was completed.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002649689

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	Not reported
File Location:	Local Agency
Local Case Number:	Not reported
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil, Under Investigation
Potential Contaminants of Concern:	Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	This case is an active commercial petroleum fueling facility. An unauthorized release was reported in August 1994 as a result of inventory reconciliation. USTs (four gasoline, one diesel) were tested and retrofitted and piping was removed and replaced in 1995. Historically, one of the gasoline USTs and one of the diesel USTs were formerly utilized for waste oil storage. Approximately 350 cubic yards of impacted soil and overburden were removed and disposed offsite in 1995. No groundwater monitoring wells have been installed at the Site. According to grab groundwater data collected from soil borings, water quality objectives for benzene and MTBE have not been achieved and the contaminant plume is undefined. The petroleum release is limited to the soil and shallow groundwater. According to data available in GeoTracker, there are no supply wells regulated by the California Department of Public Health within 1,000 feet of the Site. No other water supply wells have been identified within 1,000 feet of the Site in files reviewed. There is no identified surface water within 250 feet of the Site. The nearest surface water body, Strawberry Creek, is located approximately 700 feet north-northeast of the Site. Water is provided to water users near the Site by the East Bay Municipal Utilities District. The affected groundwater is not currently being used as a source of drinking water, and it is highly unlikely that the affected groundwater will be used as a source of drinking water in the foreseeable future.

File Location: Local Agency
Local Case Number: TT01-1044
Potential Media Affect: Soil
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Stoddard solvent / Mineral Spriits / Distillates
Site History: The subject property (Site) is currently a small restaurant (Simply Greek) located at 2929 Shattuck Avenue in Berkeley, California. The Site is developed entirely by a single-story structure that faces directly to Shattuck Avenue. In January 1988, a 1,500-gal underground storage tank (UST) was removed from the Site. The UST was used to house bunker oil. During removal, a 500-gal UST that was used for stoddard solvent (SS, or STOD) presumably used for dry cleaning. Bunker oil (fuel oil, bunker crude, bunker fuel) is typically any type of petroleum fuel used for marine vessels, or in some cases,

NEWBERRY STATION (Continued) **S101293420**

aircraft. Contaminants reported on Site include Stoddard solvent and bunker fuel/heating oil. No significant observed release to the environment. The Site was Administratively closed in 1991. Closed, G. Fielder, in GeoTracker, October 14, 2008.

FINDS:

Registry ID: 110002718783

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/13/2018

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/21/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

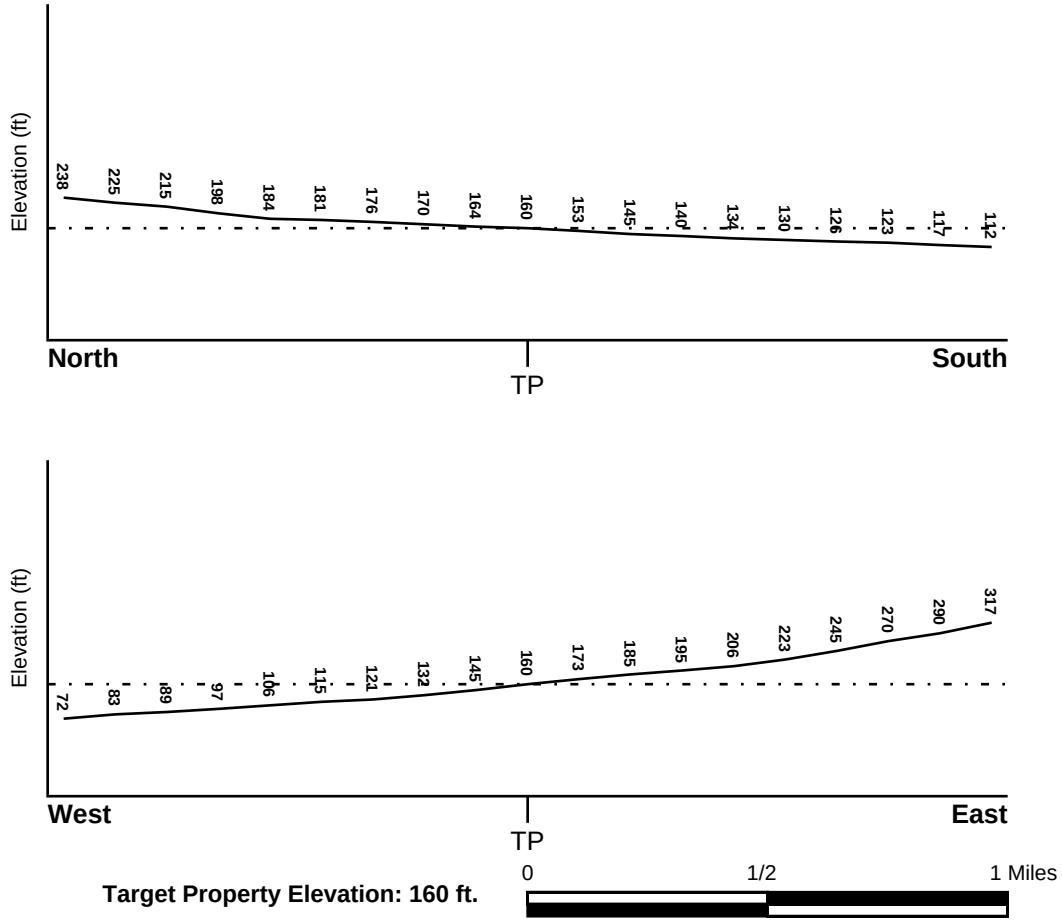
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 160 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06001C0057G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06001C0056G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OAKLAND WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

8G	1/2 - 1 Mile SSE	SE, S, SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Tierra

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX C
QUESTIONNAIRE

terraphase engineering

USER QUESTIONNAIRE

This questionnaire is provided to the client pursuant to guidance in ASTM E1527-13. In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Terraphase requests that this information be provided at the start of this project to ensure the information can be accounted for and the project can be completed on schedule and budget. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1.) Environmental cleanup liens that are filed or recorded against the Site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

No

(2.) Activity and land use limitations (AULs) that are in place on the Site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

No

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this Phase I ESA do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

(4.) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

Yes

terraphase engineering

USER QUESTIONNAIRE

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:

(a.) Do you know the past uses of the Site?

(b.) Do you know of specific chemicals that are present or once were present at the Site?

(c.) Do you know of spills or other chemical releases that have taken place at the Site?

(d.) Do you know of any environmental cleanups that have taken place at the Site?

a) No d) No

b) No

c) No

(6.) The degree of obviousness of the presence of likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

No

(7.) Please provide the reason this Phase I ESA is required. Demolition & New Construction

NOTE 1: For the purposes of this Phase I ESA, the "user" is defined as follows: *The user is the party seeking to use ASTM E1527-13 to complete an environmental site assessment of the site. A user may include, without limitation, a potential purchaser of site, a potential tenant of site, an owner of site, a lender, or a site manager. The user has specific obligations for completing a successful application of this practice as outlined in EPA's All Appropriate Inquiry Rule.*

NOTE 2: In the case of a "yes" answer to any of the above questions, Terraphase requests the client provide additional elaboration or documentation where applicable to fully explain the answer.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

THIS GRANT DEED AND ALL TAX
STATEMENTS TO:

Richard Nagler
2019 Blake Street
Berkeley, CA 94704

GRANT DEED

The undersigned grantor declares:
Documentary transfer tax is $ -0-
( ) computed on full value of property conveyed, or
( ) computed on full value, less value of liens and encumbrances remaining at time of sale.

THIS CONVEYANCE IS EXEMPT FROM CALIFORNIA TRANSFER TAX PURSUANT TO CALIFORNIA REVENUE AND TAXATION CODE SECTION 11925 IN THAT THE GRANTOR AND GRANTEE ARE COMPRISED OF THE SAME PARTIES AND THEIR PROPORTIONAL INTEREST REMAINS THE SAME IMMEDIATELY FOLLOWING TRANSFER. THIS IS A TRANSFER BETWEEN AN INDIVIDUAL AND A LIMITED LIABILITY COMPANY OF WHICH THE INDIVIDUAL TRANSFEROR IS THE SOLE MEMBER.

FOR VALUABLE CONSIDERATION, receipt of which is hereby acknowledged, RICHARD B. NAGLER, a married man as his sole and separate property ("Grantor") hereby GRANTS to RICHARD NAGLER PROPERTIES, LLC, a California Limited Liability Company ("Grantee") the following described real property ("Property") located in the State of California, City of Berkeley, County of Alameda:

SEE EXHIBIT A ATTACHED HERETO AND INCORPORATED HEREIN BY THIS REFERENCE

IN WITNESS WHEREOF, Grantor has caused this Grant Deed to be executed as of the 19th day of January, 2015.

GRANTOR:

RICHARD B. NAGLER

EXHIBIT A
DESCRIPTION OF PROPERTY

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE STATE OF CALIFORNIA, CITY OF BERKELEY, COUNTY OF ALAMEDA, AND IS DESCRIBED AS FOLLOWS:

PARCEL ONE:

BEGINNING AT A POINT ON THE NORTHERN LINE OF BLAKE STREET, DISTANT THEREON WESTERLY, 356.62 FEET FROM THE INTERSECTION THEREOF WITH THE WESTERN LINE OF SHATTUCK AVENUE; THENCE WESTERLY ALONG SAID LINE OF BLAKE STREET, 50 FEET; THENCE AT RIGHT ANGLES NORTHERLY, 129.65 FEET; THENCE EASTERLY PARALLEL WITH SAID LINE OF BLAKE STREET, 50 FEET; AND THENCE AT RIGHT ANGLES SOUTHERLY, 129.65 TO THE POINT OF BEGINNING.

BEING A PORTION OF PLOT 68, MAP OF THE RANCHOS OF VINCENTE AND DOMINGO PERALTA, FILED JANUARY 21, 1857, MAP BOOK 15, PAGE 10, ALAMEDA COUNTY RECORDS.

APN: 055-1822-013-02

Commonly known as: 2019 Blake Street, Berkeley, California

PARCEL TWO:

BEGINNING AT A POINT ON THE NORTHERN LINE OF BLAKE STREET, DISTANT THEREON 406.62 FEET WESTERLY FROM THE WESTERN LINE OF SHATTUCK AVENUE, AND RUNNING THENCE WESTERLY ALONG THE SAID NORTHERN LINE OF BLAKE STREET, 50 FEET; THENCE AT RIGHT ANGLES NORTHERLY 129.65 FEET TO THE SAID NORTHERN LINE OF BLAKE STREET AND THE POINT OF BEGINNING.

BEING A PORTION OF THE PLOT 68, AS SAID PLOT IS SHOWN ON THE "MAP OF THE RANCHOS OF VICENTE AND DOMINGO PERALTA", ETC, FILED JANUARY 21, 1857, IN THE OFFICE OF THE COUNTY RECORDER OF ALAMEDA COUNTY.

APN: 055-1822-013-03

Commonly known as: 2017 Blake Street, Berkeley, California (parking lot)

PARCEL THREE:

BEGINNING AT A POINT ON THE NORTHERN LINE OF BLAKE STREET, DISTANT THEREON WESTERLY 456.62 FEET FROM THE INTERSECTION THEREOF, WITH THE WESTERN LINE OF SHATTUCK AVENUE; AND RUNNING THENCE WESTERLY ALONG SAID LINE OF BLAKE STREET 50 FEET; THENCE AT RIGHT ANGLES NORTHERLY 129.65 FEET; THENCE AT RIGHT ANGLES EASTERLY 50 FEET; THENCE AT RIGHT ANGLES SOUTHERLY 129.65 FEET TO THE POINT OF BEGINNING.
BEING A PART OF BLOCK NO. 7, AS SHOWN ON "MAP NO. 4 OF THE SHATTUCK TRACT, BERKELEY CAL." FILED MARCH 7, 1894, IN BOOK 15 OF MAPS, PAGE 10, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY OF ALAMEDA.

APN: 055-1822-013-04

Commonly known as: 2015 Blake Street, Berkeley, California

PARCEL FOUR:

BEGINNING AT THE INTERSECTION OF THE NORTHERLY LINE OF BLAKE STREET, WITH THE EASTERLY LINE OF MILVIA (FORMERLY TREMONT) STREET; RUNNING THENCE EASTERLY ALONG SAID LINE OF BLAKE STREET, 105 FEET; THENCE AT RIGHT ANGLES NORTHERLY 39.89 FEET; THENCE AT RIGHT ANGLES WESTERLY 102.06 FEET TO SAID LINE OF MILVIA STREET; AND THENCE SOUTHERLY ALONG SAID LAST NAMED LINE 40 FEET TO THE POINT OF BEGINNING.

BEING A PORTION OF PLOT NO. 68 OF KELLERSBERGER'S MAP OF A SUBDIVISION OF THE VICENTE AND DOMINGO PERALTA RANCHO ON FILE IN THE OFFICE OF THE COUNTY RECORDER OF THE SAID COUNTY OF ALAMEDA.

RESERVING THEREFROM, AN EASEMENT FOR DRIVEWAY PURPOSES OVER A STRIP OF LAND, ONE FOOT IN WIDTH, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE NORTHWESTERLY CORNER OF LOT 3, AS SAID LOT IS SHOWN ON RECORD OF SURVEY 1247, RECORDED MARCH 30, 1995, IN BOOK 18 OF RECORDS OF SURVEY, PAGE 97, ALAMEDA COUNTY RECORDS; THENCE FROM SAID POINT OF BEGINNING, NORTH 80° 43' 35" EAST, 54.92 FEET TO THE WESTERLY SIDE OF AN EXISTING SHED; THENCE AT RIGHT ANGLES, SOUTH 9° 16' 24" EAST, 1.00 FOOT; THENCE AT RIGHT ANGLES SOUTH 80° 43' 35" WEST, 54.99 FEET TO THE WESTERLY LINE OF LOT 3; THENCE NORTH 5° 03' 35" WEST, 1.00 FOOT TO THE POINT OF BEGINNING.

APN: 055-1822-014

Commonly known as: 2001 and 2011 Blake Street, Berkeley, California

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Terraphase Engineering Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Terraphase Engineering Inc. on Nov 14, 2018.

TARGET PROPERTY

2012-2020 Dwight Way and 2001-2019 Blake Street
Berkeley, CA 94704

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

ADJOINING PROPERTY FINDINGS

Date:	**10/25/2017**
Permit Type:	**Mixed Use**
Description:	**Revisions to approved set of plans: 1) Elevator Relocation Elevator 1 is relocated from gridlines G & 9 to be located to the east of elevator 2. 2) Original elevator location is replaced with Tel/Data closets. 3) Added Trash Chutes 4) Enlarged Plans â€“ Trash Room 5) A leasing office, mail, and package concierge, and leasing office restroom are proposed at the ground floor just off of the main lobby/entry. Retail square footage is reduced and electrical room is relocated to gridline H & 15. 6) Fire pump room & janitor closet is relocated to basement. 7) Retail entry door relocated to east. 7) Rotate Public Stair 2 East Stair is rotated for improved unit layout. 8) changes to roof drainage which affects C3 Stormwater Treatment. 9) Resident storage is removed from project. 10) Roof Deck Amenity Area changes including a barbeque, flex seating, and outdoor T.V. 11) Some of the larger one bedrooms have reallocated space for a den/flex area. 12) Unit Type M rearranged due to stair rotation. 13) Elevation Changes Proportion of wood patterned paneling reduced. 14) Heating/Cooling Minisplits will be used for heating and cooling in lieu of hydronic heating. Minisplit equipment located at roof and garage ceiling. 15) Garage Door Design Current owners have opted for the in-lieu fee for art, so the garage door will no longer officially be an art piece.**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

July 7, 1988

To Mr. Britt Johnson, Assistant Sanitarian
c/oCity of Berkeley
Health and Human Service Depat.
2180 Martin Luther King, Jr
Berkeley, Ca 94704

Dear Mr. Johnson,

I refer to our telephone conversation of the day before yesterday and thank you for the time and information you have given me. I received today the copies of the manifests for the disposal of the excavated soil, which I enclose.

I have complied with the request of the City to remove the two small underground tanks, although I was not the owner of them. I thought the charge of $ 10,500.00 will be the total cost to me, it was not easy for me to pay this amount. Then, the Paradiso Constr.Co informed me that due to some leaks in the tanks, soil had to be removed too. This was done and the charge for it is $ 13,500 ! I have not yet found the money to pay for it.

This is already a great burden to me. I believed that when the soil is removed, replaced by new soil and covered with concrete, the City will be satisfied and I would have no further problems. No further contamination is possible. A request to have the soil monitored cannot change the analysis of the present soil condition. This request would put a severe strain on me and my health, I am 78 years of and practically not working anymore. I am also afraid that your request and having it on file could reduce the market value of my property substantially, in my opinion by a non-justified request.

From the attached drawing you can see that since the property is fully developed, no benefit to anybody could result from your request.

Sincerely

Stephen Kalmar

Re: 2034 Blake Street
Berkeley, CA

Dear Mr. Kalmar:

Based upon the letter of Kaprealian Engineering dated April 26, 1988, that total petroleum hydrocarbon (TPH) as gasoline was found in the soil at the level of 120 parts per million (ppm), it appears that a confirmed release has occurred.

A subsurface investigation is required at all sites having confirmed releases from underground storage tanks containing hazardous substances. Of immediate concern is the possibility of the presence of floating product and vapors and their potential for migration into underground structures such as basements, utility vaults, sewers and storm drains (explosion hazard). In order to address these concerns, it is necessary to install ground water monitoring well(s) where confirmed releases have occurred. The California Water Quality Control Board, San Francisco Bay Region (RWQCB) "Guidelines for Addressing Fuel Leaks" document should be followed for site investigation and mitigation.

The California Administrative Code, Title 23, Section 2652, requires all unauthorized releases to be reported. An engineering report containing the following information must be submitted within 30 days:

1. List of type, quantity, and concentration of hazardous substances released.

2. The results of all investigations completed to determine the extent of soil or ground water or surface water contamination due to the release.

3. Method of cleanup implemented to date, proposed cleanup actions, and approximate cost of actions taken to date.

4. Method and location of disposal of the released hazardous substance and any contaminated soils or ground water or surface water (indicate whether a hazardous waste manifest(s) is utilized).

The report should include a proposal for remedial actions (such as soil excavation or removal of free product from ground water), along with a time schedule for their implementation.

It is our understanding that the Department of Health Services, Toxic Substances Control Division, considers soils contaminated at concentrations which exceed 1,000 ppm of total hydrocarbons (TPH) as hazardous waste and should be managed as such. Soils contaminated with less than 1,000 ppm may be managed as non-hazardous but are subject to Waste Discharge Requirements of the San Francisco Regional Water Quality Control Board.

The owner/operator is responsible for the enlistment of a qualified professional to assume the technical responsibility for performance, interpretation and report preparation of the investigation. The RWQCB considers a State Certified Geologist, Engineering Geologist, or a State Registered Civil Engineer as qualified for the above.

Until cleanup is complete, submit reports to the City of Berkeley, Division of Environmental Health and the California Water Quality Control Board, San Francisco Bay Region, every three months, or at a more frequent interval specified by the City of Berkeley or the Regional Board. The reports shall include the information requested above.

The Regional Board is responsible for review and approval of investigation and cleanup plans. However, at this time, the Board may not have sufficient staff to review and comment on investigation or remedial action work plans. This does not absolve you of your responsibility to protect the public health and the environment.

You should proceed per the Regional Board's "Guidelines" to investigate and clean up contaminated soils and/or free product. The Regional Board and City of Berkeley staff will be able to provide limited guidance over the telephone.

All cases will be subject to review at some future time. If it is evident that investigation and cleanup has not been done in a manner that protects public health and the environment, you may be subject to civil and criminal penalties.

Should you have questions, please contact me at 644-6510.

Very truly yours,

BRITT JOHNSON
Assistant Sanitarian

Re: Soil Sampling Investigation
Stephen Kalmar Co.
2034 Blake Street
Berkeley, CA 94704

Dear Mr. Kalmar:

This report summarizes the soil sampling performed by Kaprealian Engineering, Inc. at the referenced site. All work was performed in compliance with the regulations and guidelines established by the Regional Water Quality Control Board (RWQCB), and the Alameda County Department of Environmental Health.

The scope of work performed in our investigation consisted of the following:

Coordination with the regulatory agencies

Collection of samples of native soil beneath the storage tanks

Delivery of soil samples with proper chain of custody to a certified analytical laboratory

Technical review and preparation of this report

FIELD INVESTIGATION

KEI's field investigation was conducted on March 31, 1988. Two (2) underground storage tanks were removed from the site. The tanks consisted of one 1000 gallon gasoline tank and one 500 gallon waste oil tank. Tank removal was performed in the presence of Mr. Wayne Inouye of the Berkeley Fire Department. The soil sampling was performed in the presence of Mr. Les Graham of the Berkeley Department of Environmental Health. The tanks were made of steel and had various sized holes.

Three (3) soil samples, labeled A1, A2 and W.O.-1, were collected from the native soil beneath the tanks. The undisturbed samples were collected from bulk material excavated by backhoe. The samples were placed in clean, two-inch diameter brass tubes, sealed with aluminum foil and plastic caps, and were stored in a cooled ice chest for delivery to the contracted laboratory.

SUBSURFACE CONDITIONS

The subsurface soils exposed in the excavations consisted primarily of silty sand. Faint product odors were present in samples A1 and A2. The excavated soil was stockpiled on the site for further sampling.

ANALYTICAL RESULTS

All samples were analyzed by HAZCAT Organics Laboratory of San Carlos, California, and were accompanied by proper chain of custody forms. The samples from the fuel tank pit were analyzed for total petroleum hydrocarbon (TPH) as gasoline, benzene, toluene and xylene (BTX) concentrations. The sample from the waste oil tank pit was analyzed for TPH as gasoline, BTXE, TPH as diesel, total oil and grease (TOG) and Priority Pollutants using EPA methods 5020, 3550, 503e, 8015, 8010 and 8020. The analytical results are summarized in Table 1. Copies of the laboratory analyses and the chain of custody forms are attached to this report.

DISCUSSION AND RECOMMENDATIONS

Analytical results of the soil samples from the fuel tank pit indicate low levels of TPH and BTX for all samples except A2 which had TPH levels of 120 parts per million (ppm). According to the guidelines established by the Regional Water Quality Control Board (RWQCB), additional investigation is necessary at the site. To comply with the requirements of the RWQCB, we recommend installation of one groundwater monitoring well, within 10 feet of the fuel tank, to determine if the shallow groundwater beneath the site has been impacted.

A copy of this report has been sent to the Berkeley Fire Department, and to the Regional Water Quality Control Board.

LIMITATIONS

Soil deposits and rock formations may vary in thickness, lithology, saturation, strength and other properties across any site. In addition, environmental changes, either naturally-

occuring or artificially-induced, may cause changes in groundwater levels and flow paths, thereby changing the extent and concentration of any contaminants. Our studies assume that the field and laboratory data are reasonably representative of the site as a whole, and assume that subsurface conditions are reasonably conducive to interpolation and extrapolation.

The results of this study are based on the data obtained from the field and laboratory investigations. We have analyzed this data using what we believe to be currently applicable engineering techniques and principles in the Northern California region. We make no warranty, either expressed or implied, except that our services have been performed in accordance with generally accepted professional principles and practices existing for such work.

Should you have any questions regarding this report, please feel free to call me at 562-5511.

Sincerely,

PARADISO CONSTRUCTION CO.

Paul Paradiso

Oscar Erickson, 255 Parr Blvd., Richmond, Ca 94801
N & H

8. If yes response to any of the four questions below, attach an explanation.

a) Has any unauthorized discharge ever occured at site? ___Yes ✓No

b) Have any structural repairs ever been made on these tanks and appurtenant structures? ___Yes ✓No

c) Will new underground tanks be installed following removal? ___Yes ✓No

d) Will any wells, including monitoring wells, be abandoned? ___Yes ✓No

9. Fire Department Permit Issued? Submitted 3/4/88 ___Yes ___No
Proof Required or Permit will be denied.

10. Will excavation be done in the public right-of-way? ___Yes ✓No
If yes, you must obtain a permit from the Public Works Department and supply the Environmental Health Division proof of this permit.

11. A written soils analysis report must be submitted to the Division of Environ- Environmental Health and the Regional Water Quality Control Board within thirty (30) working days. The report should include the locations of all sampling which was performed at the site.

Applicant:

Applicants signature below certifies that:

1. He/She has read and understands the "Procedural Guide for the Removal of Underground Storage Tanks" and;

2. That the statements and disclosures are true and correct and;

3. Twenty four (24) hours notice will be given to the Division of Environmental Health prior to tank removal and;

4. The Division shall be notified 1/2 hour before soils sampling occurs.

October 19, 2020

2015 Blake Street Residential Project
in the
City of Berkeley

TRANSPORTATION AND CIRCULATION

1) EXECUTIVE SUMMARY

The 2015 Blake Street residential project is proposed to include construction of 161 apartment units. Seven existing residential units in two Victorian buildings on the site will be retained. The project is planned to be developed on a portion of the block bordered by Dwight Way, Shattuck Avenue, Blake Street, and Milvia Street in the City of Berkeley. The site is currently occupied by two single family homes that have been converted into a total of 7 apartment units (which will be retained), an acupuncture office, and some light industrial uses, including a dome building company and a skylight fabrication company. **Figure 1** shows the location of the project and the surrounding roadway network. **Figure 2** shows the ground floor site plan for the project**.** Based on the trip generation forecasts the project would generate a net increase of approximately 25 vehicle trips during the AM peak hour and 29 trips during the PM peak hour.

Based on the project's design and a detailed analysis conducted according to the City's guidelines there would be no significant transportation impacts according to the City's significance criteria and no off-site traffic or transportation mitigations would be required.[1] The City's base zoning ordinance would be 116 spaces and the project is proposing to accommodate its parking demand by providing 93 off-street parking spaces in an on-site, underground garage. The project is also proposing to provide bicycle parking within the garage.

2) INTRODUCTION

This transportation impact analysis describes the existing and baseline conditions for transportation and circulation both with and without the proposed project. The study presents information on the regional and local roadway networks, the pedestrian and transit conditions, and provides an analysis of the effects on transportation facilities associated with the project.

This study also describes the regulatory setting; the criterion used for determining the significance of environmental impacts; and summarizes potential environmental impacts and appropriate mitigation measures when necessary. This study has been conducted in accordance with the requirements and methodologies set forth by the City of Berkeley, Alameda County, Caltrans, and the applicable provisions of CEQA.

3) ENVIRONMENTAL SETTING

This section of the report describes the roadways, traffic conditions and other existing transportation characteristics in the vicinity of the project. The primary basis for the traffic operations portion of the analysis is the peak hour level of service at the key study intersections. In this report, these peak commute hours will be identified as the AM and PM peak hours.

3.3 Project Study Intersections

To provide a baseline for identification of impacts on the local roadway network, existing traffic operating conditions have been determined for the key local intersections that may be affected by the project. For this analysis five study intersections were selected based on the City's Guidelines for Development of Traffic Impact Reports and their potential to be impacted by the proposed project. The five study intersections are:

1. Dwight Way at Milvia Street
2. Dwight Way at Shattuck Avenue
3. Blake Street at Milvia Street
4. Blake Street at the Proposed Project Entrance
5. Blake Street at Shattuck Avenue

3.2 Traffic Analysis Scenarios

The study intersections were evaluated for the following six scenarios:

- Scenario 1: *Existing Conditions* – Level of Service (LOS) based on existing peak hour volumes and existing intersection configurations.

- Scenario 2: *Existing Plus Project* – Existing traffic volumes plus trips from the proposed project.

- Scenario 3: *Baseline (No Project) Conditions* – The Baseline scenario is based on the existing volumes plus growth in background traffic (for two years) plus the traffic from all reasonably foreseeable developments that could substantially affect the volumes at the project study intersection.

- Scenario 4: *Baseline Plus Project Conditions* – This scenario is based on the Baseline traffic volumes plus the trips that would be generated by the proposed project.

3.3 Existing Roadway Network

As shown on **Figure 1**, the roads that would be primarily affected by the project are Shattuck Avenue, Dwight Way, Blake Street and Milvia Street. The following is a brief description of these roadways:

- **Shattuck Avenue –** Shattuck Avenue is a four lane arterial roadway extending south from Vine Street to terminate to the south at Telegraph Avenue in the City of Oakland. It serves school, residential and commercial traffic and is an important north-south travel route. It is designated as a major street and a primary transit route in the City's General Plan.

- **Blake Street –** Blake Street is a two-lane local roadway in the City of Berkeley. It extends east from San Pablo Avenue and terminates to the east at Telegraph Avenue. There is a traffic signal at its intersection with Telegraph Avenue but the remainder of its intersections are controlled by stop signs and traffic circles. Please note that at the intersection of Blake Street with Martin Luther King Jr. Way the side streets are restricted to right turns only from 4:00 to 6:00 PM, Monday through Friday.

- **Milvia Street –** Milvia Street is a two lane collector street extending north from Russell Road to Yolo Avenue. It serves school, residential and commercial traffic and is designated as an important north-south bicycle boulevard.

- **Dwight Way –** Dwight Way is a two lane roadway extending east from Fourth Street to the northeastern corner of the University of California's Clark Kerr campus. It serves school, residential and commercial traffic and is an important east-west travel route. It is a one-way street with eastbound traffic only between Martin Luther King Jr. Way and Piedmont Avenue. It is designated as a major street and a secondary transit route in the City's General Plan.

3.4 Intersection Analysis Methodology

Existing operational conditions at the study intersection were evaluated according to the requirements set forth by the City of Berkeley. Analysis of traffic operations was conducted using the 2010 *Highway Capacity Manual* (*HCM*) Level of Service (LOS) methodology with Synchro software.[1]

Level of service is an expression, in the form of a scale, of the relationship between the capacity of an intersection (or roadway segment) to accommodate the volume of traffic and the traffic moving through it at any given time. The level of service scale describes traffic flow with six ratings ranging from A to F, with "A" indicating relatively free flow of traffic and "F" indicating stop-and-go traffic characterized by traffic jams.

As the amount of traffic moving through a given intersection or roadway segment increases, the traffic flow conditions that motorists experience rapidly deteriorate as the capacity of the intersection or roadway segment is reached. Under such conditions, there is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays that lead to traffic congestion. This near-capacity situation is labeled level of service (LOS) E.

Beyond LOS E, the intersection or roadway segment capacity has effectively been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it. **Table 1** summarizes the relationship between LOS, average control delay, and the volume to capacity ratio at signalized intersections. **Table 2** summarizes the relationship between LOS and delay at unsignalized intersections

For signalized intersections, The City of Berkeley's LOS standards are based on the average delay for the entire intersection. The *HCM* methodology determines the capacity of each lane group approaching the intersection. The LOS is then based on average control delay (in seconds per vehicle) for the various movements within the intersection. A combined weighted average control delay and LOS are presented for the intersection. A summary of the HCM results and copies of the detailed HCM LOS calculations are included in the appendix to this report.

For unsignalized (all-way stop controlled and two-way stop controlled) intersections, the average control delay and LOS operating conditions are calculated by approach (e.g., northbound) and movement (e.g., northbound left-turn) for those movements that are subject to delay. Operating conditions for unsignalized intersections are presented for the worst approach.

[1] *2010 Highway Capacity Manual*, Transportation Research Board, Washington D.C., 2011

TABLE 1
SIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description of Operations	Average Delay (sec/veh)	Volume to Capacity Ratio
A	Insignificant Delays: No approach phase is fully used and no vehicle waits longer than one red indication.	≤ 10	< 0.60
B	Minimal Delays: An occasional approach phase is fully used. Drivers begin to feel restricted.	> 10 to 20	> 0.61 to 0.70
C	Acceptable Delays: Major approach phase may become fully used. Most drivers feel somewhat restricted.	> 20 to 35	> 0.71 to 0.80
D	Tolerable Delays: Drivers may wait through no more than one red indication. Queues may develop but dissipate rapidly without excessive delays.	> 35 to 55	> 0.81 to 0.90
E	Significant Delays: Volumes approaching capacity. Vehicles may wait through several signal cycles and long vehicle queues from upstream.	> 55 to 80	> 0.91 to 1.00
F	Excessive Delays: Represents conditions at capacity, with extremely long delays. Queues may block upstream intersections.	> 80	> 1.00

SOURCES: 2010 *Highway Capacity Manual*, Transportation Research Board, 2011.

TABLE 2
UNSIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description of Operations	Average Delay (seconds/vehicle)
A	No delay for stop-controlled approaches.	0 to 10
B	Operations with minor delays.	> 10 to 15
C	Operations with moderate delays.	> 15 to 25
D	Operations with some delays.	> 25 to 35
E	Operations with high delays and long queues.	> 35 to 50
F	Operation with extreme congestion, with very high delays and long queues unacceptable to most drivers.	> 50

SOURCE: 2010 *Highway Capacity Manual*, Transportation Research Board, 2011.

3.5 Existing Intersection Capacity Conditions

The existing intersection geometry at the project study intersections is presented in **Figure 3**. The existing traffic volumes at these intersections for the weekday AM and PM peak hours are presented in **Figure 4**. Traffic counts at the intersection were conducted in December, 2018. **Table 3** summarizes the associated LOS computation results for the existing weekday AM and PM peak hour conditions at these intersections. As shown in **Table 3**, all of the study intersections currently have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Blake Street at Shattuck Avenue. Please note the detailed LOS calculations are included in the technical appendix to this report**.**

3.6 Pedestrian and Bicycle Facilities

Bicycle paths, lanes and routes are typical examples of bicycle transportation facilities, which are defined by Caltrans as being in one of the following three classes:

Class I – Provides a completely separated facility designed for the exclusive use of bicyclists and pedestrians with crossing points minimized.
Class II – Provides a restricted right-of-way designated lane for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with vehicle parking and cross-flows by pedestrians and motorists permitted.
Class III – Provides a right-of-way designated by signs or permanent markings and shared with pedestrians and motorists.

North of Allston Way Milvia Street is a Class III bike route and is designated as a bicycle boulevard with signage and markings encouraging motorists to share the road with bicyclists.

NOTES: HCM LOS results are presented in terms of average intersection delay in seconds per vehicle.

3.7 Transit Service

The Downtown Berkeley BART station is located on Shattuck Avenue at Center Street, which is just under a half-mile from the project site. This station is located on the Richmond-Fremont Line which connected to other destinations in the Bay Area at the MacArthur Station. There is also direct service to Downtown San Francisco as well as continuing service to Milbrae (please note the service to Milbrae only operates before 8 AM Monday through Friday). As shown in **Figure 3**, there is also extensive bus transit service provided by Alameda-Contra Costa County

(AC) Transit at the BART Station. In addition to local bus route 19, the following lines operate adjacent to the project on Shattuck Avenue:

> **800:** All Nighter. Richmond BART to Market St. and Van Ness Ave, S.F., via Macdonald Ave, San Pablo Ave, University Ave, Telegraph Ave and downtown Oakland. Returns via Market St. and West Oakland BART.
> **F:** UC Campus to Transbay Temporary Terminal, San Francisco via Shattuck Ave, Adeline St and 40th St.

Please note the nearest bus stop to the site is located on Shattuck Avenue at the southerly end of the project site.

4) REGULATORY CONTEXT

Existing policies, laws and regulations that apply to the proposed project are summarized below.

4.1 State

The California Department of Transportation (Caltrans) has jurisdiction over State highways and any improvements to these roadways would require Caltrans' approval.

4.2 Local

City of Berkeley General Plan - The Transportation and Circulation Element the City of Berkeley General Plan addresses the location and extent of existing and planned transportation routes, terminals, and other local public utilities and facilities. The General Plan identifies roadway and transit goals and policies that have been adopted to ensure that the transportation system of the City will have adequate capacity to serve planned growth. These goals and policies are intended to provide a plan and implementation measures for an integrated, multi-modal transportation system that will safely and efficiently meet the transportation needs of all economic and social segments of the City.

4.3 Significance Criteria

The City's level of service standard states that an impact is significant when the criteria are reduced from LOS A, B, C, or D to LOS E (with the addition of two (2) seconds of average delay) for signalized intersections. Intersections that exceed this service level threshold are considered to be impacted and should be considered for mitigation. Exceptions to the LOS D standard arise when the project is not expected to add more than two seconds at an intersection going from LOS D to LOS E or more than three seconds of delay at an intersection that is already operating at LOS E. In addition, it would also be considered a significant impact if a project would increase the volume to capacity (V/C) ratio by more than 0.01 at an intersection that is already operating at LOS F.

For unsignalized intersections, additional considerations are involved, including the number of vehicles on the critical approach, vehicles contributed by the proposed project, and signal warrant analysis. At an unsignalized intersection, mitigation is required if a movement is LOS F, the peak hour signal warrant is met, and a minimum of 10 vehicles are added to the critical movement.

In this case the project has not been found to have any significant impacts but according to CEQA guidelines, a project would also have a significant impact if it would:

- Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including, but not limited to, intersections, streets, highways and freeways, pedestrian and bicycle paths and mass transit.
- Conflict with an applicable congestion management program, including, but not limited to, level-of-service standards, and travel demand measures, or other standards established by a county congestion management agency for designated roadways.
- Result in inadequate emergency vehicle access.
- Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.
- Result in an internal circulation system design that does not meet City standards.

It should again be noted that this project has not been found to have any significant impacts according to CEQA and the above mentioned criteria are presented for informational purposes.

5) IMPACTS AND MITIGATION MEASURES

5.1 Project Trip Generation

The vehicle trip generation for the project is shown in **Table 4**. The trip generation rates are based on the ITE rates for apartments (Land Use 221), medical office space (Land Use 720), and light industrial uses (Land Use 110) taken from the 10th Edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual. The residential trip rates have been adjusted (as described below) to account for traffic conditions and transit use in this part of Berkeley.

Berkeley Residential Trip Generation - Since the project is located in an urban area with numerous bus connections the vehicle trip rate per unit is less than would be generated by a typical apartment building. As described previously the project has several local bus routes and all-nighter route operating directly adjacent to the project site.

For this project, a trip reduction of 19% has been applied to the unfiltered trip generation rate to account for conditions in this part of Berkeley less than a half mile from the Downtown BART station along the Shattuck Avenue bus transit corridor. The ITE trip generation rates are based on surveys of primarily suburban locations and this reduction is intended to account for walk, bicycle, and transit trips as well as shared trips with the residential component of the project. The 19% reduction was based on data from the Alameda County Transportation Commission's Travel Demand Model and census data on vehicle ownership and travel patterns for the census tract where the project is located. Based on the trip generation forecasts the project would generate about 49 vehicle trips during the AM peak hour and 60 trips during the PM peak hour. The trips generated by this proposed development are estimated for the peak commute hours which represent the peak of adjacent street traffic.

TABLE 4
TRIP GENERATION CALCULATIONS

Land Use	ITE Code	Size	ADT	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
ITE Apartment Rates - Trips per Unit	221		5.44	0.09	0.27	0.36	0.27	0.17	0.44
Apartment Trip Generation		168 units	914	16	45	60	45	28	74
Reduction for Non-Auto Trips (19%)			174	3	9	11	9	5	14
Subtotals for the Proposed Apartments			**740**	**13**	**36**	**49**	**37**	**23**	**60**
ITE Medical Office Trip Rates Trips per 1,000 sq. ft.	720		34.80	2.17	0.61	2.78	0.97	2.49	3.46
Existing Acupuncture Office Trip Generation		*1,620 sq. ft.*	*56*	*4*	*1*	*5*	*2*	*4*	*6*
Reduction for Non-Auto Trips (19%)			11	1	0	1	0	1	1
Subtotals for the Existing Medical Office Space			**45**	**3**	**1**	**4**	**2**	**3**	**5**
ITE Light Industrial Rates Trips per 1,000 sq. ft.	110		4.96	1.59	0.33	1.92	0.78	1.67	2.45
Existing Light Industrial Uses Trip Generation		*13,000 sq. ft.*	*64*	*21*	*4*	*25*	*10*	*22*	*32*
Reduction for Non-Auto Trips (19%)			12	4	1	5	2	4	6
Subtotals for the Existing Light Industrial Space			**52**	**17**	**3**	**20**	**8**	**18**	**26**
Subtotals from the Existing Land Uses			**97**	**20**	**4**	**24**	**10**	**21**	**31**
Net New Trip Generation from the Proposed Project			**643**	**-7**	**32**	**25**	**27**	**2**	**29**

SOURCE: Institute of Transportation Engineers Trip Generation Manual (10th Edition) and the Trip Generation Handbook (3rd Edition)

It is important to note that the site is currently occupied by an acupuncture office and some light industrial uses, including a dome building company and a skylight fabrication company. As shown in **Table 4** these uses generate about 24 trips during the AM peak hour and about 31 trips during the PM peak hour. If this existing traffic is subtracted out then the traffic associated

with the new project is forecast to be a net increase of about 25 vehicle trips during the AM peak hour and 29 trips during the PM peak hour. The trips generated by this proposed development are estimated for the peak commute hours which represent the peak of adjacent street traffic. In general, the peak hour traffic generated by the proposed project would be expected to be about 25 trips more per hour than what is generated by the existing land uses.

5.2 Project Trip Distribution

The trip distribution assumptions have been based on the existing traffic count data including daily directional volume and peak-hour turning movements, the Alameda County travel demand model, and knowledge of the surrounding area such as commute patterns and the overall land use patterns in the area. **Figure 5** shows the distribution of project trips assumed in the analysis. **Figure 6** shows the project traffic that would be added at the project study intersections.

5.3 Existing Plus Project Intersection Capacity Conditions

This scenario evaluates the existing conditions with the addition of traffic from the proposed project. A comparison of the capacity calculations for the conditions with the addition of traffic from the project is shown in **Table 5**. **Figure 7** presents the existing plus project volumes used in the analysis. The corresponding LOS analysis calculation sheets are presented in the Traffic Analysis Appendix. As shown in **Table 5**, all of the study intersections would continue to have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Blake Street at Shattuck Avenue. However, the proposed project would add less than 10 peak hour trips to the critical movement at this intersection. Therefore, the addition of project traffic to this intersection would not be considered a significant impact according to the standards established by the City of Berkeley.

NOTES: HCM LOS results are presented in terms of average intersection delay in seconds per vehicle.

5.4 Baseline Intersection Capacity Conditions

Trip generation and trip assignment assumptions for the approved projects were based on the traffic study reports prepared for each project, where available. Approved projects include developments that are either under construction, built but not fully occupied, or not built but have final development approval from the City. Background growth traffic from approved

developments that could potentially affect the volumes at the project study intersections included the following: the 2000 Dwight Avenue Senior Housing Project, the 2035 Blake Street Mixed Use Project, and the 2628 Shattuck Street Mixed Use Project. To ensure full accounting for the growth in background traffic the existing traffic volumes were also increased by 1% per year for two years based on the assumption that the project completion date would be 2021. **Figure 8** presents the resulting baseline volumes at each of the project study intersections **Table 5** summarizes the LOS results for the Baseline and Baseline Plus Project weekday AM and PM peak hour conditions. The corresponding LOS analysis calculation sheets are presented in the *Traffic Analysis Appendix*. As shown in **Table 3**, all of the study intersections currently have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Blake Street at Shattuck Avenue. Please note the detailed LOS calculations are included in the technical appendix to this report**.**

5.5 Baseline *Plus Project* Intersection Capacity Conditions

The Baseline plus proposed project traffic forecasts were developed by adding project-related traffic to the baseline traffic volumes. As noted above, **Table 6** summarizes the LOS results for the Baseline Plus Project weekday AM and PM peak hour conditions (i.e. the existing roadway network). **Figure 9** presents the resulting baseline plus project volumes at each of the project study intersections. Please note that the corresponding LOS analysis calculation sheets are presented in the appendix. As shown in **Table 5**, all of the study intersections would continue to have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours with the exception of Blake Street at Shattuck Avenue. This intersection also meets Caltrans Peak Hour Volume Warrant indicating installation of a traffic signal may be appropriate. The traffic signal warrant analysis is included in the technical appendix to this report. However, the proposed project would add less than 10 peak hour trips to the critical movement at this intersection. Therefore, the addition of project traffic to this intersection would not be considered a significant impact according to the standards established by the City of Berkeley.

5.6 Internal Circulation and Access

No site circulation or access issues have been identified that would cause any traffic safety issues or any unusual traffic congestion or delay. Please note the garage exit will require pedestrian audio/visual signals for when vehicles are exiting the site. Accident records for surrounding streets within a block of the project site are included in the technical appendix to this report.

5.7 Parking

This section discusses the City of Berkeley's zoning and estimated parking demand for the project. As per the City's Municipal Code, the base zoning ordinance requires one space per 1,000 square feet of floor area which would equate to 116 spaces and the project is proposing to accommodate its parking demand by providing 93 off-street parking spaces in an on-site garage, with a request for a parking waiver associated with the state density bonus. With respect to bicycle parking, the project is proposing to provide secure bicycle parking in the garage. Please note the BMC sections that apply to this site do not require bicycle parking for residential uses. It should also be noted that there are draft bicycle parking standards that have been proposed that, once approved, would increase the bicycle parking requirements for the project. Based on the draft standards the project would require 64 long term bicycle parking spaces and also 5 short term spaces.

Parking Demand in Berkeley - For this location on a major bus route the parking demand would be less than the typical ITE rate in the Parking Generation Manual. This is based on many of the same characteristics that are discussed in the trip generation section. The availability of transit, the use of bicycles, and the attractiveness of walking in a mixed-use environment clearly results in reduced vehicle trip generation and an associated reduction in the need for parking. Since Berkeley has numerous opportunities for public transportation and the apartment residents are not all expected to have personal vehicles, it is anticipated that a substantial portion of all travel will occur by walking, bicycling, and through the use of public transit. Please note in addition to being less than a mile from a BART station there are bus stops adjacent to the site that include access to local routes with direct access to BART as well as transbay and all-nighter bus routes.

Parking Demand Based on ITE Parking Generation Rates - To provide additional justification for the parking demand analysis, **Table 8** provides a summary of the parking demand results using the average ITE peak parking demand rates for apartments and retail space from the 4th Edition of the *ITE Parking Generation Manual*. As shown in **Table 8**, the parking demand generated by the project would be forecast to be approximately 114 parking spaces based on the ITE data. However, please note these ITE estimates are based on surveys of parking demand at suburban locations and does not account for the project's urban location in a walkable area with excellent transit access.

Table 8
Residential Off-Street Parking Calculations Using Parking Data from the Institute of Transportation Engineers

Land Use	Size		Parking Ratio	Unadjusted Demand
Apartments	161	units	0.71	114

Residential Parking Demand Based on U.S. Census Data - Residential Parking Demand Based on U.S. Census Data - To provide additional information on the potential parking demand in the project area U.S. census data was also utilized based on Census Transportation Planning Products summary of data from the American Community Survey (2010). The U.S. census data indicated the parking demand for the census tract where the project was located averaged 0.7 automobiles per dwelling unit. Please note this was calculated for the category of residential properties renter-occupied units. Based on the U.S. census data the residents of the proposed 161-unit building would be forecast to generate a parking demand of approximately 113 vehicles. However, please note this data may not fully account for the fact that this particular site is only a half mile from a BART station. This project would be in closer proximity to BART than many of the residences in the census tract where the project is located.

Summary of Findings on Parking - Based on these studies, the residential parking provided (93 spaces) is slightly more than the estimated demand using the ITE parking demand data. The project could be considered consistent with the City's zoning requirements, subject to approval by the City. The following are considerations that may affect the parking demand at the site:

1) The availability of transit has been shown to result in a significant reduction in the demand for parking.[1] The Downtown Berkeley BART station is located on Shattuck Avenue at Center Street, which is just under a half mile from the project site. This station is located on the Richmond-Fremont Line which connects to other destinations in the Bay Area, including San Francisco, at the MacArthur Station. There is also extensive bus transit service provided by Alameda-Contra Costa County (AC) Transit at the BART Station. Please note the nearest bus stops for Routes 18, 49, and 800 are less than a block from the site at Shattuck Avenue and Derby Street. Therefore, for this project it is anticipated that a higher portion of travel will occur by walking and through the use of public transit.[2] As a result, it is also expected that some of the apartment residents will forego owning a car, or having an extra car, because of the close proximity to transit.[3]

2) The project is proposing to exceed the requirements for on-site bicycle parking.

3) There are numerous existing car sharing locations in the area. Please note that within 1/2 mile of the project site there are four Zipcar locations.

5.8 Pedestrian and Bicycle Conditions

The proposed project would not generate a significant increase in pedestrian traffic in the area (in comparison to the existing volumes) given the size of the proposed project. As shown in **Table 9**, based on data from MTC's Bay Area Travel Survey for projects within 1/2 mile of a BART station during the peak commute hours the project would be forecast to generate approximately 31 transit trips, 5 bicycle trips and 24 pedestrian trips during the peak commute hours. In addition to the relatively low trip generation, the proposed project would not significantly impact or change the design of any existing pedestrian facilities and should not create any new safety problems in the area. The proposed project would also not significantly impact any existing bicycle facilities. The project will add some pedestrians and bicyclists who

[2] *Trip and Parking Generation at Transit-Oriented Developments: Five US Case Studies*, University of Utah, Salt Lake City, UT, 2016.
[3] *Effects of TOD on Housing, Parking, and Travel*, Transportation Research Board, Washington D.C., 2010.

TABLE 9
PEAK HOUR PEDESTRIAN, BICYCLE, AND TRANSIT TRIPS

Travel Mode	Forecast Number of Peak Hour Trips
Rail and Ferry	10 trips
Bus	21 trips
Bicycle	5 trips
Walk	24 trips

will utilize sidewalks and bicycle facilities in the area. Please note there are existing sidewalks and crosswalks along the route from the project to the Downtown Berkeley BART station. In relation to the existing conditions, the proposed project would not cause substantial changes to the pedestrian or bicycle traffic in the area and would not significantly impact or require changes to the design of any existing bicycle or pedestrian facilities.

5.9 Transit

The proposed project would not interfere with any existing bus routes and would not remove or relocate any existing bus stops. The proposed Project also would not conflict with any transit plans or goals of the City of Berkeley. Based on the size of the project, it is not forecast to cause a degradation of the level of service (or a significant increase in delay) on any roadway segments currently being utilized by bus transit in the area and, as such, no significant impacts to transit are expected.

5.10 Vehicle Miles Traveled Analysis

VMT is one performance measure that can be used to quantify potential changes in travel from a project. This section presents the extent of the VMT-related transportation impacts forecast to be caused by the Project. The City has the authority to set VMT thresholds in the CEQA analysis but because VMT is a relatively new method for measuring transportation impacts under CEQA, less data exists to estimate VMT than trip generation based on use and location. However, VMT is a particularly useful metric for evaluating the impacts of growth on greenhouse gas (GHG) emissions because it can be used to estimate fuel consumption by motor vehicles. Increases in VMT cause proportional increases in greenhouse gas emissions and air pollution. While the City has not yet formally adopted VMT thresholds or screening criteria the Office of Planning and Research (OPR) released their final proposed VMT guidelines in a Technical Advisory on Evaluating Transportation Impacts in CEQA, dated December 2018. The Technical Advisory states that the guidelines take effect on July 1, 2020, although lead agencies may also adopt their own VMT guidelines and thresholds.

OPR's 2018 Technical Advisory states the following: "*Presumption of Less Than Significant Impact Near Transit Stations - Proposed CEQA Guideline Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects (including residential, retail, and office projects, as well as projects that are a mix of these uses) proposed within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor will have a less-than-significant impact on VMT. This presumption would not apply, however, if project-specific or location-specific information indicates that the project will still generate significant levels of VMT. For example, the presumption might not be appropriate if the project:*

- *Has a Floor Area Ratio (FAR) of less than 0.75*
- *Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking)*
- *Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization)*
- *Replaces affordable residential units with a smaller number of moderate- or high-income residential units."*

This project is just under a half mile walking distance (about 2,500 feet) from the Downtown Berkeley BART station, which is considered a major transit stop. The project also meets the other screening criteria described above and therefore, subject to City approval, this project would be assumed to have a less than significant impact on the VMT in the area.

5.11 Summary of Transportation Issues and Potential Improvement Measures

TR-1 Demolition and construction activities associated with the proposed project would result in an increase in traffic to and from the site and would require an appropriate construction management plan developed and approved by the City of Berkeley, consistent with the already existing and broadly applicable standard conditions that apply to projects similar in nature.

The increase in traffic as a result of demolition and construction activities associated with the proposed project has been quantified assuming single phase construction period of 18 months.

Heavy Equipment

Heavy equipment transport to and from the site could cause traffic impacts in the vicinity of the project site during construction. However, each overweight/oversized load would be required to obtain all necessary permits, which would include conditions. Prior to issuance of grading and building permits, the project applicant would be required to submit and have approved a Traffic Control Plan.

The requirements within the Traffic Control Plan include, but are not limited to, the following: truck drivers would be notified of and required to use the most direct route between the site and local freeways, as determined by the City Traffic Engineering Department; all site ingress and egress would occur only at the main driveway to the project site and construction activities may require temporary traffic controls as determined by the City Engineer. Please note construction traffic will be directed to use Shattuck Avenue as the City has a goal of minimizing construction traffic on local streets. Specifically, designated travel routes for large vehicles would be monitored and controlled by flaggers for large construction vehicle ingress and egress. Any debris and mud caused by trucks would be monitored daily and may require instituting a street cleaning program. In addition, several loads of heavy equipment being hauled to and from the site each month would be short-term and temporary.

Employees

The weekday work is expected to begin around 7:00 AM and end around 4:00 PM. The construction worker arrival peak would occur between 6:30 AM and 7:30 AM, and the departure peak would occur between 4:00 PM and 5:00 PM. These peak hours are

slightly before the citywide commute peaks. It should be noted that the trips generated during construction would be temporary

Based on past construction of similar projects, construction workers could require parking for up to 20 vehicles during the peak construction period. Additionally, deliveries, visits, and other activities may generate peak non-worker parking demand of 5 to 10 trucks and automobiles per day. Therefore, up to 30 vehicle parking spaces may be required during the peak construction period for the construction employees. It should be noted the developer and their construction team are required to provide off-street parking for their employees on the site, if possible. Furthermore, the Traffic Control Plan requires that if construction employee parking cannot be provided on the project site then other provisions will need to be made for off-site parking, subject to approval of the City Traffic Engineering Department.

Construction Material Import

The project would also require the importation of construction material, including raw materials for the building pads, the buildings, the parking area, and landscaping. Based on past construction of similar projects, importing this material is estimated to require substantial amounts of truck traffic. Under the provisions of the Traffic Control Plan, if importation and exportation of material becomes a traffic nuisance, then the City Engineer may limit the hours the activities can take place.

Impacts of Construction on Pedestrians and Bicyclists

The project would most likely require temporary closures of sidewalks and/or vehicle lanes adjacent to the site for safety. This would require a detailed plan for detouring pedestrian and bicycle traffic. This plan will need to be reviewed and approved by the City Engineer. The analysis of traffic operations at the driveway indicates there would be no significant changes to the traffic volumes, delay, or safety on Shattuck Avenue with the addition of traffic from the proposed project. The City requires permission to close sidewalks and an acceptable traffic control plan for closures to be permitted. In general, the pedestrian and bicycle operations in the area would not be expected to change significantly during construction beyond the addition of some truck traffic to the area.

Traffic Control Plan

The Traffic Control Plan would indicate how parking for construction workers would be provided during construction and ensure a safe flow of traffic in the project area during construction. This analysis assumed construction of the entire project in one phase to identify the potential worst-case traffic effects. Each phase will be subject to a Traffic Control Plan and oversight by the City Engineer and construction traffic is not forecast to exceed the post construction traffic conditions created by the proposed project. As a result, the potential construction traffic impacts have been adequately addressed through the project impact analysis. The goal of the conditional requirements of the City is to make construction impacts less than significant. There is some increase in traffic associated with all construction projects, however the required traffic management plan is intended to ensure the effects of construction are acceptable to the City. Therefore, the demolition and construction activities associated with the proposed project or its individual phases would be expected to result in a ***less-than-significant*** impact.

Mitigation Measure(s)
None required.

TR-2 Impacts related to site access and circulation.

Based on a review of the proposed site plan it was determined that the internal garage circulation should function well and should not cause any safety or operational problems. The project site design has been required to conform to City design standards and is not expected to create any significant impacts to pedestrians, bicyclists or traffic operations. Therefore, impacts related to site access and circulation to the proposed project would be ***less-than-significant***.

Mitigation Measure(s)
None required.

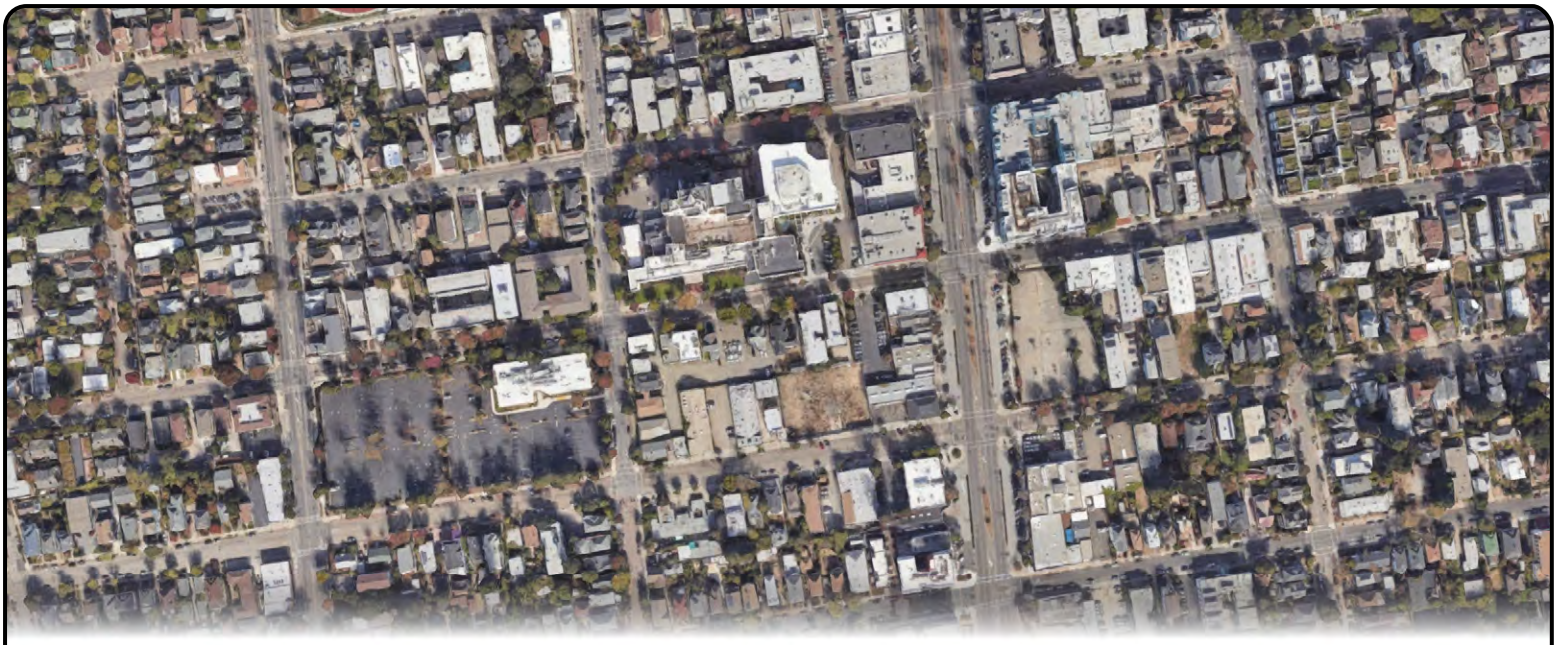
TR-3 Impacts regarding emergency vehicle access on and surrounding the proposed project site.

Sufficient emergency access is determined by factors such as number of access points, roadway width, and proximity to fire stations. The land use plan for the proposed project would be subject to approval of the fire department. All lane widths adjacent to the project would meet the minimum width that can accommodate an emergency vehicle; therefore, the width of the roadways would be adequate. Therefore, the development of the proposed project is expected to have ***less-than-significant*** impacts regarding emergency vehicle access.

Mitigation Measure(s)
None required.

5.11 Mitigations

Based on this analysis there would be no significant transportation impacts according to established standards and no off-site traffic or transportation mitigations would be required.



Transportation Impact Analysis Technical Appendix

2015 Blake Street Residential Project
