INTRODUCTION

This Health Risk Assessment (HRA) was prepared to assess potential public health risks that may be present at the proposed Pilot Flying J Facility in the city of Palmdale, Los Angeles County, California. This report analyzes the emissions of toxic air pollutants within the project area and their impacts on public health.

PROJECT DESCRIPTION

PROJECT LOCATION

The Project site consists of approximately 9.0 acres generally located north of Pearblossom Highway and approximately 1,200 feet west of Fort Tejon Road/Highway 138 in the City of Palmdale.

EXISTING SURROUNDING USES

The approximately 9-acre Project site is part of a larger approximately 28-acre parcel (referred to herein as the 28-acre parcel or parent parcel); refer to Figure 2, Project Site and Surrounding Area. The entire 28-acre parcel is designated Regional Commercial (RC) by the City of Palmdale General Plan and is zoned C-4 (Commercial Center) by the City of Palmdale Zoning Map. The Project site is currently used for parking for the existing swap meet use within the parent parcel. Trees are distributed throughout the Project site. There is a small wooden outpost structure and signage associated with the adjacent use located adjacent to Pearblossom Highway. The Project site is accessed from Pearblossom Highway via two driveways located at the eastern and western edges of the Project site. The eastern driveway extends along the eastern edge of the Project site to Highway 138. All of the driveways currently have moveable barrier gates.

Immediately north of the Project site is a berm and elevated railroad track. Highway 138 extends in a northwest/southeast direction east of the Project site and forms the eastern boundary of the larger 28-acre parcel. Additional parking is located directly east of the Project site and shared road/driveway. Further east are buildings/structures associated with the existing use within the eastern portion of the 28-acre parcel. A gas station is located on the northwest corner of Pearblossom Highway and Highway 138, adjacent to the 28-acre parcel's eastern property line. Directly to the south of the Project site, across Pearblossom Highway, are single-family residences surrounded by undeveloped land within unincorporated Los Angeles County. To the southeast (east of 53rd Street) are undeveloped parcels within the City of Palmdale designated RC and zoned C-4. Immediately to the west of the Project site are two undeveloped parcels and a parcel containing a Palmdale Water District facility; all three parcels are designated Medium Residential and zoned R-2 (Medium Residential); a single-family residential subdivision is located further west.

PROJECT CHARACTERISTICS

The Project proposes the construction and operation of a Pilot Travel Center on the approximately 9.0-acre parcel (the Project site) for regional and local highway traveling users. Implementation of the Project would involve the development of fueling facilities, travel

amenities, restaurants, and parking facilities for passing motorists and commercial truck operators, as described below; refer to Figure 4, Proposed Site Plan.

Fueling Facilities

The Project proposes eight diesel fueling lanes/positions and seven gas islands with 14 fueling positions. The diesel fueling lanes would be located to the north of the travel center building and include a 20-foot-tall canopy structure. The gas islands would be located south of the travel center building and north of Pearblossom Highway, and include a 20-foot-tall canopy structure. Two aboveground diesel storage farms, a Bio-blending shed, belowground gasoline storage tanks, and a truck scale would be located within the diesel portion of the site.

Travel Center Building

The proposed travel center building would be up to 12,000 square feet and include a convenience store, three quick service restaurants, driver amenities (e.g., restrooms, showers, laundry), and support/utility areas.

A refuse enclosure and storage area and transformers, screened from view by a solid wall, would be located to the west of the travel center building.

Parking Facilities

The Project would provide 123 parking spaces (56 automobile, 3 ADA, 64 truck) with passenger automobile and handicapped parking located south of and adjacent to the travel center facility and south of the gas islands, adjacent to Pearblossom Highway. Truck parking would be located north of the travel center facility and truck diesel fueling lanes.

Signage and Lighting

Internally illuminated 10-foot-tall monument signs would be located at the southeast corner of the Project site, adjacent to the proposed roadway and at the proposed access driveway at Highway 138; refer to the *Access* discussion below. Internally illuminated directional signage would also be provided within the interior of the Project site. Additional illuminated signage would be provided on the travel center facility and fueling canopies.

Landscaping and Walls

Landscaping would be installed throughout the site; refer to Figure 5, Conceptual Landscape Plan. Landscaping would be provided along the Project site frontage, east and west of the travel center building, and east of the diesel fueling lanes. Landscaping would also be provided east of the Project driveway, around the perimeter of the proposed detention pond, and to the north of the detention pond.

An eight-foot-tall fence would be provided along the Project site's western property line adjacent to the auto fueling area. North of the auto fueling area the eight-foot-tall fence would transition onto a five-foot-tall berm and extend to the northern property line and storm pond.

Access

Primary access to the Project site would be provided from Pearblossom Highway. A shared 36-foot-wide roadway would extend north from Pearblossom Highway along the eastern edge of the Project site, providing access to the proposed Project site and the two proposed parcels north and east of the Project site. A driveway along the western edge of the Project site would provide auto only access from Pear Blossom Highway to the auto fueling area.

Additional access is proposed from Highway 138 via a one-way, 15-foot-wide roadway which would extend southwest from Highway 138 and connect to the shared access roadway at the northeast corner of the Project site.

SCOPE OF RISK ASSESSMENT

Preparation of risk assessments is a three-step process. The first step is to identify potential contaminants that may lead to public health risks. The second step is to assess the magnitude of contaminants that may reach the public (exposure assessment). The last step is to calculate the magnitude of the health risk as a result of exposure to harmful contaminants on the basis of the toxicology of the contaminants.

The Office of Environmental Health Hazard Assessment, and the Antelope Valley Air Quality Management District (AVAQMD) provide guidance on the procedures that should be used, including, toxicological data for individual contaminants. This risk assessment is based on the guidance provided within these guidance documents. It should be noted that while this risk assessment uses certain procedures and data from these Guidelines, this assessment is not intended to satisfy the reporting requirements under AB-2588 “Air Toxics” Hot Spots program.

The health risks that are evaluated in this study include:

- Residential Cancer Risk (70-year exposure; start at third trimester);
- Workplace Cancer Risk (40-year exposure; start at age 16); and
- Acute and Chronic Hazard Indices.

The 70-year risk applies to residential areas where exposure may potentially occur 24 hours/day, 365 days/year. The 40-year risk is applicable to workplace exposure and therefore accounts for a reduced exposure for the fact that individuals typically would be exposed 8-hrs per day, 5 days per week, and 50 weeks per year. Non-cancer risks can be described as acute (short-term, exposure) or chronic health impacts.

SIGNIFICANCE CRITERIA

The following significance criteria shown in Table 1, based on guidance from the AVAQMD, are used in this report to assess the significance of public health risks.

TABLE 1 THRESHOLDS OF SIGNIFICANCE FOR PUBLIC HEALTH RISKS

Risk Metric	Significance Threshold
Residential Cancer Risk	10 per million
Workplace Cancer Risk	10 per million
Chronic and Acute non-cancer hazard Indices	non-cancer health hazard exposure index of 1.0

SOURCE: AVAQMD, 2016.

As shown in Table 1, a project that contributes a cancer risk in excess of 10 new cases in a population of one million persons at identified receptors, or a non-cancer hazard index of greater than or equal to 1.0 would be considered to have a significant project-level impact.

EMISSION SOURCES AND EXPOSURE

The main source of toxic air pollutants (TACs) within the proposed truck stop project is diesel particulate matter (DPM) from truck idle and mobile emissions, and the operation of Truck Refrigeration Units (TRUs). Another source of TACs on the project site is from refueling activities which produces benzene (a known carcinogen) from the gasoline vapor of on-site refueling operations. Based on numerous studies by the California Air Resources Board (ARB), DPM represents the largest single contributor to public health risks. Additionally, in its comprehensive assessment of diesel exhaust, OEHHA analyzed more than 30 studies of people who worked around diesel equipment, including truck drivers, railroad workers, and equipment operators. The studies showed these workers were more likely to develop lung cancer than workers who were not exposed to diesel emissions. These studies provide strong evidence that long-term occupational exposure to diesel exhaust increases the risk of lung cancer. Exposure to diesel exhaust can have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks.

Emissions from the following project sources were analyzed and are shown in Table 2:

- Truck on-site mobile emissions
- Truck on-site idling emissions
- TRU generated emissions
- Gasoline refueling operations

TABLE 2: EMISSION SOURCE ASSUMPTIONS

Source Type / Emission	Configuration	Assumptions
On-site Mobile Diesel Truck Circulation (DPM)	<i>Modeled as line-volume sources</i> Release Height = 12 ft Plume Height = 6 ft	<ul style="list-style-type: none"> • On-site travel of 218 trucks per day (Kimley-Horn, 2020). All truck entering project site assumed to refuel.

--	--	--

DAILY TRUCK TRIPS

The total diesel truck trips generated by the proposed project is based on a Traffic Study - MOU for the proposed project prepared by Kimley-Horn in October 2020. According to the project applicant, the average total daily truck traffic includes 218 net primary trips per day.

EMISSION RATES

Table 3 provides emissions rates by source and emissions factors. For calculations, data outputs, and reference documents please see Appendix 1.

TABLE 3: EMISSION RATES BY SOURCE

Source	Pollutant	Volume/Size	Emission Factor	Emissions Pounds/Year
On-site Diesel Truck (Mobile) Circulation	Diesel Particulate Matter (DPM)	281 trucks per day traveling 0.324356 miles	0.08554432 g/mile	6.27402227
On-site Diesel Truck Idling	Diesel Particulate Matter (DPM)	281 trucks per day idling 5 min	0.0035 g/hr -vehicle	0.05116464
Truck Refrigeration Units (TRUs)	Diesel Particulate Matter (DPM)	15% of all trucks, 34 hp rated TRU engines	0.02 g/hp-hr	4.455
Gasoline Vehicle Fueling Loss (95%) (Passenger Vehicle Refueling)	Benzene	14 pumps; 1,800 gallons per pump/day	0.00126 Emission Factor (lb/1,000 gallons of gasoline)	11.59
Gasoline Spillage (Passenger Vehicle Refueling)	Benzene	14 pumps; 1,800 gallons per pump/day	0.0042 Emission Factor (lb/1,000 gallons of gasoline)	38.63
Breathing Loss (Underground tank)	Benzene	14 pumps (at 657,000 GPY per pump)	0.000075 Emission Factor (lb/1,000 gallons of gasoline)	0.690
Underground Tank Filling Loss (98%)	Benzene	14 pumps (at 657,000 GPY per pump)	0.000252 Emission Factor (lb/1,000 gallons of gasoline)	2.318

SOURCES: EMFAC 2017 (ON-SITE DIESEL TRUCK CIRCULATION); TABLES 3.2-41 AND 42, OF THE EMFAC 2014 VOLUME III - TECHNICAL DOCUMENTATION GUIDEBOOK ON IDLING EMISSIONS; AIR DISTRICT CORRESPONDENCE FOR BENZENE EMISSION FACTORS (SEE APPENDIX 1). SEE TABLE 2 OF THIS DOCUMENT AND APPENDIX 1 FOR FURTHER DETAIL.

EXPOSURE ASSESSMENT

Exposure assessment involves translating the emission rate (e.g., lbs/hr, g/hr) of individual toxic air contaminants into the concentration (e.g., grams/cubic meter g /sec m² or parts per million) of each toxic air contaminant. The key step in performing an exposure assessment is the application of an air dispersion model. The dispersion model incorporates the local meteorological data (wind speed, wind direction, local temperature, inversions, etc.), stack height, and exhaust flow characteristics, into the dispersion of individual air contaminant. The Lakes Environmental AERMOD Version 9.9.0 (AERMOD Version 19191) dispersion model was employed for this assessment.

Modeling Receptor Grid: A rectangular (x-y) coordinate system was used. A region 1,000 x 1,000 meters was selected for the purposes of analysis. The modeling region divided into 517 discrete Cartesian receptors in the vicinity of the project area. This grid allows for analysis throughout the modelling extent and allows for a visual representation of dispersion contours.

Meteorological Data: Five years of meteorological data was used in the exposure assessment. The meteorological (“Met”) data (wind speed, wind direction, temperature, etc.) were recorded at the General William J. Fox Airfield location for the years 2009 through 2014.

RISK ASSESSMENT

Once the emissions rates of individual air contaminants have been calculated, and an air dispersion model has been run through AERMOD, the next step in determining health risks is to determine the cancer risk, and acute and chronic incident rates. Period and 1-hour dispersion files we used in combination with HARP-2 risk modelling software to calculate risk scenarios for residential, and workplace cancer rates, as well as acute and chronic incidences. The Hotspots Analysis and Reporting Program (HARP) is a software suite used to assist with the programmatic requirements of the Air Toxics “Hot Spots” Program [Assembly Bill (AB) 2588]. HARP combines the tools needed to implement the requirements of AB 2588, such as reporting a facilities emissions inventory, determining a facilities prioritization score, conducting air dispersion modeling, and performing a facility health risk assessment. This study utilized the HARP2 Air Dispersion and Risk Tool with dispersion plot files created in AERMOD. After the risk assessment was complete HARP-2, plot files were then imported back into AREMOD for spatial and visual representation, and analysis of impact areas.

The Intake Rate Percentile sets the intake rate at which a person is exposed to the air pollutant. This study utilized the high-end intake rate to assess risk at the 95th percentile exposure rate for risk scenarios (see Appendix 3 HARP-2 project summary report). Additionally, residential cancer risk is assessed using a 70-year exposure duration starting at the third trimester; workplace cancer risks are assessed at a 40-year exposure duration with age 16 being the first potential exposure year.

RISK ASSESSMENT RESULTS

The results of the risk analysis indicate that cancer risks vary depending on the exposure scenario (residential or worker) and on location. As would be expected, locations nearest the project area have the greatest exposure and the associated risks are considerably lower as distance from the project site increases. Table 4 displays the residential and workplace cancer risk, and acute and chronic incidence rate results at nearest receptors. Figures 2 through 5 display a spatial representation of the associated risk by selected risk scenarios.

TABLE 4: SUMMARY OF MAXIMUM HEALTH RISKS

Risk Metric	Maximum Risk (per million persons)	Significance Threshold	Is Threshold Exceeded?
Residential Cancer Risk (70-year exposure) ¹	3.16	10 per million	No
Workplace Cancer Risk (40-year exposure)	3.55	10 per million	No
Chronic (non-cancer)	<0.01	Hazard Index ≥1	No
Acute (non-cancer)	0.06	Hazard Index ≥1	No

SOURCES: AERMOD (LAKES ENVIRONMENTAL SOFTWARE, 2016); AND HARP-2 AIR DISPERSION AND RISK TOOL

NOTES: ¹THE MAXIMUM RESIDENTIAL CANCER RISK WOULD BE FOR THE RESIDENCE LOCATED AT 5154 NIGHTSKY PLACE, APPROXIMATELY 190 FEET TO THE WEST OF THE PROJECT SITE.

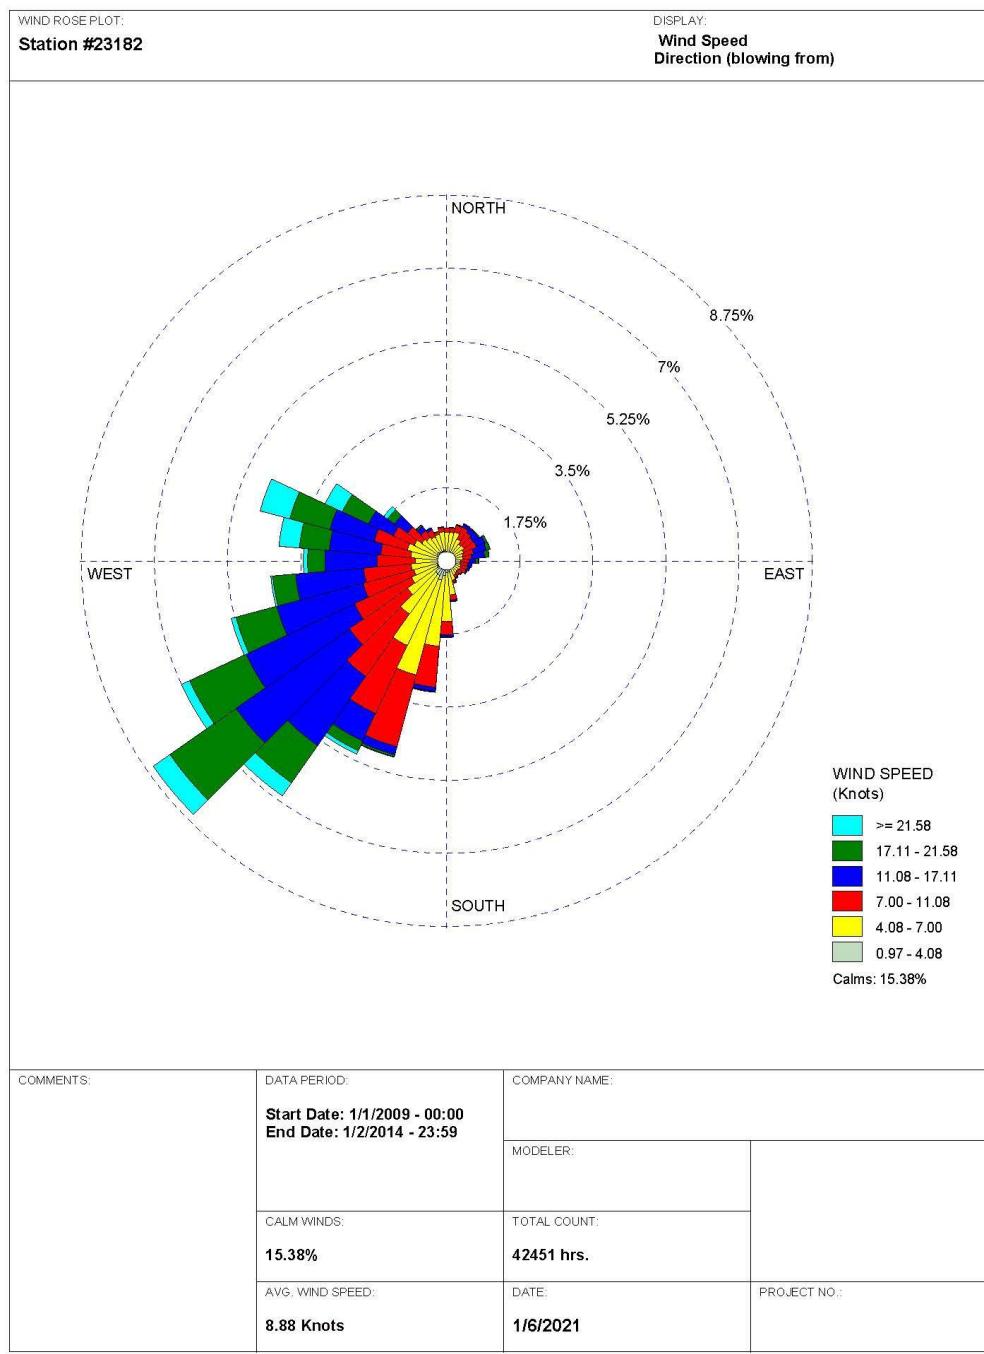

The primary TAC emissions from the project result from the on-site truck travel, idling of diesel-fueled vehicles, and the operation of transport refrigeration units (TRU) used to transport perishable products. DPM emissions showed the greatest health effects when compared individually to on-site sources such as benzene emissions from refueling activities (emitted from gasoline vapor). Additionally, within the sources of on-site DPM, the operation of TRUs produced the greatest DPM emissions and contributed substantially to overall project health risks, including cancer risk.

Variation of risk at all locations for residential cancer risk is shown in Figure 2. Overall, the results show that residential 70-year cancer risk would remain below 10 in a million at areas near the project site that contain residential receptors. However, it is very unlikely any individual would remain at the same location for 70 years; therefore, this result represents a conservative estimate.

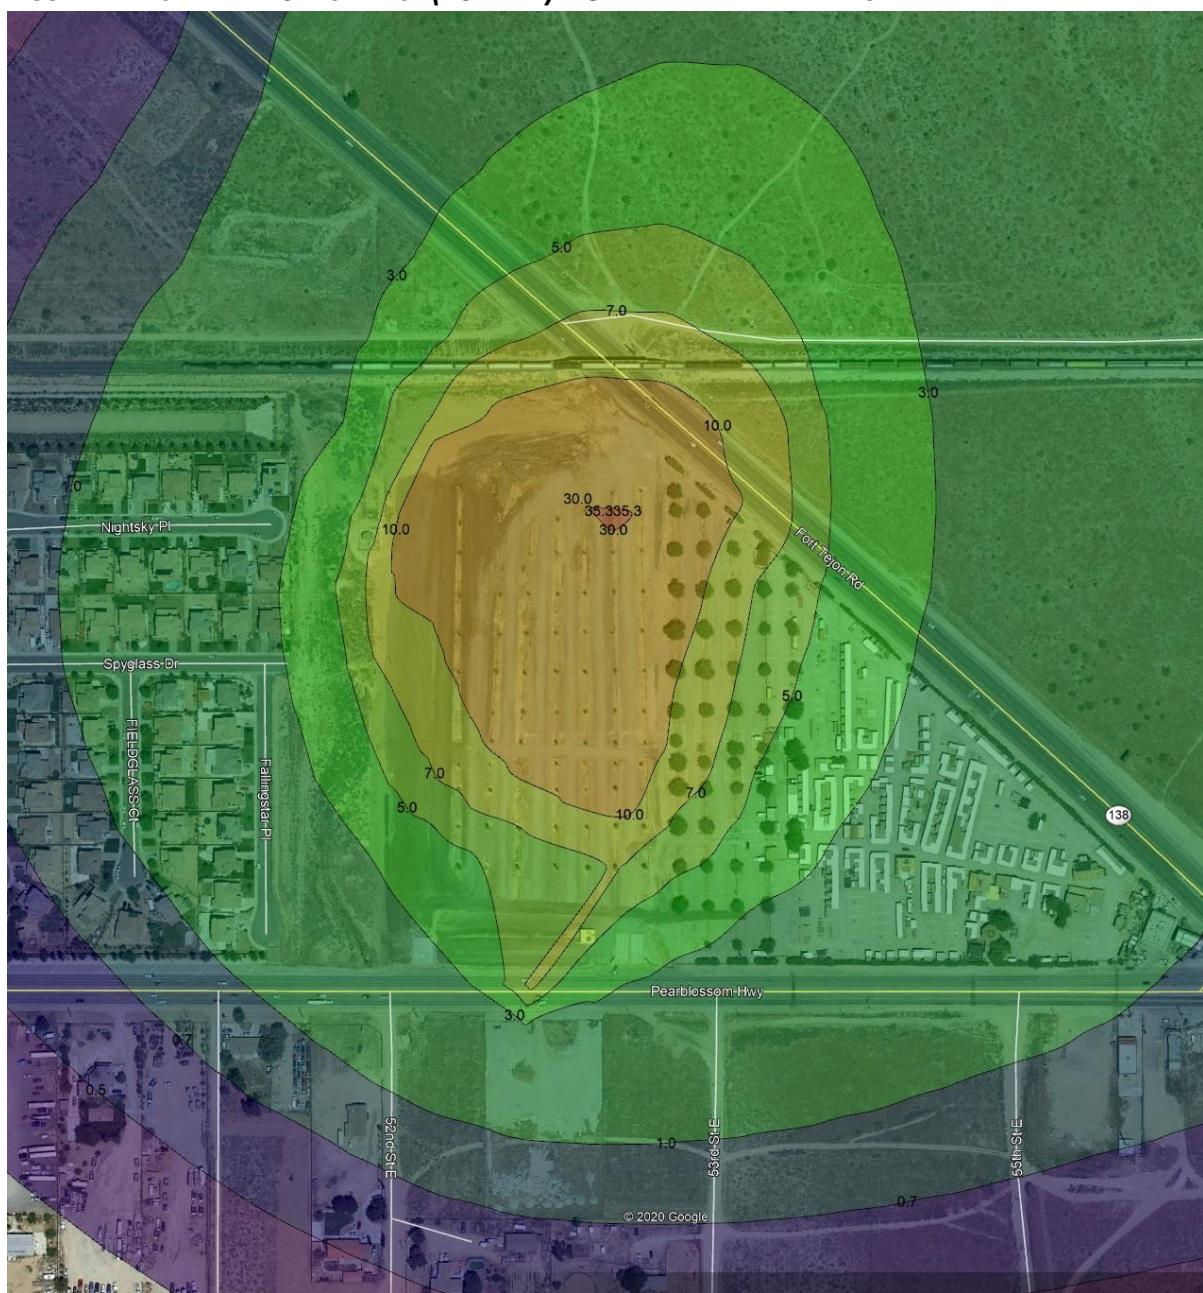

Variation of risk at all locations for workplace cancer is shown in Figure 3. Overall, the results show that 40-year workplace cancer risk would remain below 10 in a million (the SJVPACD threshold) at the project site, with a maximum value of 3.55 per million measured within the northeast portion of the project site (the location of maximum cancer risk).

Chronic or long-term exposures and Acute exposure to DPM and Benzene can result in non-cancer health effects. Chronic and Acute Non-Cancer Hazards results show that the acute and chronic risk on and near the project site would remain below the hazard index of ≥1. With maximum values of <0.01 and 0.06, respectively.

218 # of trucks

0.06358333 g/day-218 trucks

23.2079167 g/year-218 trucks

0.05116464 lbs/year-218 trucks

Note: assuming 5 minutes of idling per truck

0.00264931 g/hr-218 trucks

4.4155E-05 g/min-218 trucks

7.3592E-07 g/sec-218 trucks

As provided by the Kimley Horn Traffic Study (2018):

26.00 Peak hour truck trips (maximum peak hour truck trips is used for the sake of a conservative analysis)

0.00758333 g/5 minutes-26 vehicles

0.00000167 lbs/5 minutes-26 vehicles

Annual Emissions:

0.05116464 lbs/year-281 trucks for each of the

1 idling points

Max Hr Emissions:

0.00000167 for each sampling point, for max 1 hr

Truck TRU

0.02 g/hp-hr source: ARB 34 hp rated TRU engines	pounds per gram: 0.002205	
64 parking spaces as per site plan 0.15 15% of trucks are refrigerated trucks (based on the # of 500,000 trucks in the U.S being reefers and approximately 3.2 million trucks in use nationwide). 0.5 Assume 50% of parking spaces are full during the nighttime 0.15 Assume 15% of parking spaces are full during the daytime		Source ATA
0.53 Load Factor of 0.53 based Walmart Riverwalk Marketplace HRA Impact Sciences, Inc		
0.25 Trucks are expected to run their TRUs for 15 minutes per hour (Leland Vilalvazo, phone conversation)	On/Off Cycle Factor	
4.8 # of refrigerated trucks parked at nighttime during any given hour 1.44 # of refrigerated trucks parked at daytime during any given hour		
8 Hours in a night 16 Hours in a day		
3.45984 Nighttime Emissions (g/day) 2.075904 Daytime Emissions (g/day)		
Total 5.535744 Emissions (g/day) 2,021 Emissions (g/year) 4,455 Emissions (lbs/year) 0.445 Emissions (lbs/year)	Note: Split over 10 point sources	
Total Max 1 Hr 0.43248 Emissions (g/hr) 0.43248 Emissions (g/hour) 0.00095 Emissions (lbs/hour) 0.00010 Emissions (lbs/hour)	Note: Split over 10 point sources	

Mobile Truck Emissions Mobile

pounds per gram: 0.002205

Assumptions:

- | | | |
|---|----------------|----------------|
| 1. Average distanced travelled on-site per truck: | 0.324356 miles | <u>Source:</u> |
| 2. # of trucks per day visiting the project site: | 281 trucks | AERMOD |
| 3. PM10 Mobile Emissions Factors (Los Angeles County-Mojave, 10 MPH, T7 Instate Heavy): | | Traffic MOU |

Year: 2021 **0.12992072 g/mile**
PM10 Adjustment Factor: 65.84%
PM 10 Adjusted Factor: **0.08554432 g/mile**

Therefore:

Total daily PM10 On-site Mobile Emissions Generated by the project:

7.79685484 g/day-281 vehicles
0.0171891 lbs/day-281 vehicles
6.27402227 lbs/year-281 vehicles

Max Hr Emissions

Two times the average trip generation over the course of 1 hour, based on the given 24-hour daily totals (conservative estimate)

0.001432 lbs/hour-281 vehicles

Breathing loss (U/G tank)

657,000 gallons of gasoline pumped per pump (conservative factor provided by the SJVAPCD).
14 pumps at 7 stations

emission factor: 0.025 lbs gasoline vapor/thousand gallons of gasoline (source: SJVAPCD).
0.000075 lbs benzene/thousand gallons of gasoline (source: SJVAPCD).
690 thousand lbs of gasoline vapor/year

Annual result: 0.690 lbs of benzene vapor/year

0.690 lbs of gasoline vapor/year
365 days in a year
24 hours in a day

Max Hr result: 0.00007875 max lbs of benzene vapor/hr

U/G Tank filling (Loading) loss (98%)

657,000 1,800 gallons of gasoline pumped per pump (conservative factor provided by SJVAPCD), equ. to 657,000 gallons per year
14 pumps at 7 stations

emission factor: 0.084 lbs gasoline vapor/thousand gallons of gasoline (source: SJVAPCD).
0.000252 lbs benzene/thousand gallons of gasoline (source: SJVAPCD)
2,318 thousand lbs of benzene vapor/year

Annual result: 2.318 lbs of benzene vapor/year

2.318 lbs of benzene vapor/year
365 days in a year
24 hours in a day

Max Hr result: 0.0002646 max lbs of vapor/hr

Passenger Vehicle - Gasoline Dispensor

Refueling Vehicle fueling loss (95%) (Passenger Vehicle)

1,800 gallons gasoline pumped per pump/per day (conservative factor provided by SJVAPCD).
657,000 gallons gasoline pumped per pump/per year (conservative factor provided by SJVAPCD).
14 pumps at 7 stations.

emission factor:

0.00126 Benzene Emission Factor (lb/1,000 gal) (source: SJVAPCD).

11,589 thousand lbs of benzene vapor/year

Annual result:	11.59 lbs of Benzene/year (total)
	1.66 lbs of Benzene/year (for each pump station)

1,800.00 gasoline per pump per day
75.00 max hour per pump average
0.00126 Benzene Emission Factor (lb/1,000 gal) (source: SJVAPCD)
14 pumps

Max Hr result:	0.001323 max lbs of benzene/hr
	0.000189 lbs/pump station

Spillage (Passenger Vehicle)

657,000 1,800 per-pump/day of gasoline pumped (conservative factor provided by SJVAPCD).
14 pumps at 7 stations

emission factor:

0.0042 Benzene Emission Factor (lb/1,000 gal) (source: SJVAPCD).

38,632 thousand lbs of benzene vapor/year

Annual result:	38.63 lbs of Benzene/year (total)
	5.52 lbs of Benzene/year (for each pump station)

1,800.00 gasoline per pump per day (source: SJVAPCD).
75.00 max hour per pump average
0.0042

Note: The 6 idling pumps

14 pumps

Max Hr result:	0.00441 max lbs of benzene/hr
	0.00063 lbs/pump station

1.3 User Entered Comments & Non-Default Data

Palmdale Pilot Flying J - Los Angeles-Mojave Desert County, Annual

Project Characteristics -

Land Use - Lot acreage per land use type is estimated based on site plan. Site assumed to encompass a total of 9.0 acres.

Construction Phase - Note: all exterior finishes are pre-finished, so no architectural coating phase.

Grading - Soil import/export, and total acres graded, as provided by the project applicant. 25 tons of soil import assumed (conservative estimate).

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Vehicle Trips - Trip rates provided by traffic study (Kimley Horn).

Fleet Mix - HHD uses allocated for truck refueling land use.

Construction Off-road Equipment Mitigation - Tier 4 engine tiers (off-road construction equipment) for all construction equipment used, per applicant. Additional construction mitigation not included.

1.3 User Entered Comments & Non-Default Data

Palmdale Pilot Flying J - Los Angeles-Mojave Desert County, Summer

Project Characteristics -

Land Use - Lot acreage per land use type is estimated based on site plan. Site assumed to encompass a total of 9.0 acres.

Construction Phase - Note: all exterior finishes are pre-finished, so no architectural coating phase.

Grading - Soil import/export, and total acres graded, as provided by the project applicant. 25 tons of soil import assumed (conservative estimate).

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Vehicle Trips - Trip rates provided by traffic study (Kimley Horn).

Fleet Mix - HHD uses allocated for truck refueling land use.

Construction Off-road Equipment Mitigation - Tier 4 engine tiers (off-road construction equipment) for all construction equipment used, per applicant. Additional construction mitigation not included.

1.3 User Entered Comments & Non-Default Data

Palmdale Pilot Flying J - Los Angeles-Mojave Desert County, Winter

Project Characteristics -

Land Use - Lot acreage per land use type is estimated based on site plan. Site assumed to encompass a total of 9.0 acres.

Construction Phase - Note: all exterior finishes are pre-finished, so no architectural coating phase.

Grading - Soil import/export, and total acres graded, as provided by the project applicant. 25 tons of soil import assumed (conservative estimate).

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Off-road Equipment - Off-road construction equipment provided by project applicant.

Vehicle Trips - Trip rates provided by traffic study (Kimley Horn).

Fleet Mix - HHD uses allocated for truck refueling land use.

Construction Off-road Equipment Mitigation - Tier 4 engine tiers (off-road construction equipment) for all construction equipment used, per applicant. Additional construction mitigation not included.
