Chevron Extra Mile  
Attn: Mr. David Shamsian  
1752 W. Avenue K  
Lancaster, CA 93534

**APPROVED**

*By Matthew Simons at 1:08 pm, Aug 12, 2020*

RE: Updated Access and Circulation Review for the Chevron Extra Mile Project  
(SEC 10<sup>th</sup> Street West and Avenue K - 8)

Dear Mr. Shamsian,

Overland Traffic Consultants has prepared this updated review to assist in the evaluation of the vehicular access and circulation for the proposed Chevron Extra Mile gas station and retail / restaurant center located at the southeast corner of 10<sup>th</sup> Street West and Avenue K – 8 in the City of Lancaster. The location of the project site is shown in Figure 1.

The following analysis has been updated to address city comments that we received from the previous City staff review dated July 15, 2020. The update consists of replacing the site plan and text edits requested by the City of Lancaster.

#### Project Description

The project is located at the southeast corner of 10<sup>th</sup> Street West and Avenue K – 8 in the City of Lancaster. The lot area is approximately 189,150 square feet in size (4.34 acres) and currently vacant.

The proposed project consists of the construction of a Chevron Extra Mile convenience market with 12 gasoline fueling positions, 4 separate commercial retail / restaurant pads and associated surface parking. The 5 project buildings total 28,075 square feet.

- Extra Mile Store consists of 3,360 square feet;
- Pad "A" consists of 3,920 square feet;
- Pad "B" consists of 6,953 square feet;
- Pad "C" consists of 6,921 square feet; and.
- Pad "D" consists of 6,921 square feet

PROJECT LOCATION

Overland Traffic Consultants, Inc.

24325 Main Street #202, Santa Clarita, CA 91321  
(661) 799-8423 OTC@overlandtraffic.com

### Project Access and Parking

Vehicular access to the project site will be provided by three new driveways: one on the south side of Avenue K – 8 approximately 150 feet east of 10<sup>th</sup> Street West and two on the east side of 10<sup>th</sup> Street West south of Avenue K – 8, approximately 150 feet and 360 feet south of Avenue K – 8.

A raised median island will be constructed on 10<sup>th</sup> Street West south of Avenue K – 8 prohibiting left – turns to and from the project site. Therefore, the 10<sup>th</sup> Street West project driveways will be restricted to right – turns only, i.e., right turn in and right turn out only. The proposed driveway on Avenue K – 8 is proposed as a full access driveway, i.e., all turns allowed.

A total of 139 parking spaces will be provided. The site plan is illustrated in Figure 2.

## Project Traffic Generation

Traffic - generating data has been surveyed by the Institute of Transportation Engineers (ITE) and published in the Trip Generation Manual, 10th Edition. This publication of traffic generation data is the industry standard for estimating traffic for different land uses. Using this database, the project's traffic generation has been estimated. ITE trip rates are shown in Table 1 with the trip generation provided in Table 2.

Table 1 - Project Trip Generation Rates

ITE Code	Description	Daily Traffic	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
820	Retail (per 1,000 sf gla)	37.75	62%	38%	0.94	48%	52%	3.81
934	Fast Food with drive thru Restaurant (per 1,000 sf gla)	470.95	51%	49%	40.19	52%	48%	32.67
960	Super Convenience Market/Gas Station (per VFP)	230.52	50%	50%	28.08	50%	50%	22.96

### Project Access and Circulation Methodology

The project's access and circulation has been evaluated using the Highway Capacity Manual (HCM) methodology to identify potential circulation and access deficiencies. The HCM methodology calculates vehicle queues and average delay per vehicle using traffic volume, street configurations and traffic signal timing parameters.

Once the vehicle delay value has been calculated, operating characteristics are assigned a level of service grade (A through F) to estimate the level of congestion and stability of the traffic flow. The term "Level of Service" (LOS) is used by traffic engineers to describe the quality of traffic flow. Definitions of the LOS grades in terms of vehicle delay are shown in Table 3.

Table 3 - Level of Service Definitions

<u>LOS</u>	HCM <u>(delay in seconds)</u>	<u>Operating Conditions</u>
A	Less than 10	No loaded cycles and few are even close. No approach phase is fully utilized with no delay.
B	>10 to 20	A stable flow of traffic.
C	>20 to 35	Stable operation continues. Loading is intermittent. Occasionally drivers may have to wait more on red signal and backups may develop behind turning vehicles.
D	>35-55	Approaching instability. Delays may be lengthy during short time periods within the peak hour. Vehicles may be required to wait through more than one signal cycle.
E	>55 to 80	At or near capacity with possible long queues for left-turning vehicles. Full utilization of every signal cycle is seldom attained.
F	> 80	Gridlock conditions with stoppages of long duration.

The access evaluation for the project's driveways have been conducted to review expected driveway LOS conditions and vehicle queueing associated with project traffic exiting the project site. The three project driveways are:

1. North driveway on 10<sup>th</sup> Street West south of Avenue K – 8;
2. South driveway on 10<sup>th</sup> Street West south of Avenue K – 8; and
3. Avenue K – 8 driveway east of 10<sup>th</sup> Street West.

All three driveways were analyzed for the morning and afternoon peak hours with the estimated project driveway traffic added to the existing adjacent street traffic volume.

A circulation evaluation has been conducted at three near - by intersections listed below. The project's traffic effect on these intersections has been estimated by adding the project traffic volumes to the existing traffic volume at each intersection during the peak morning and afternoon hours.

1. 10<sup>th</sup> Street West and Avenue K;
2. 10<sup>th</sup> Street West and Avenue K - 8; and
3. 10<sup>th</sup> Street West and Avenue L.

Figure 3 provides the intersection characteristics and existing peak hour traffic volumes. Figure 4 contains the estimated peak hour project traffic volumes and future traffic volume with the project traffic added. Appendix A contains the traffic volume data.

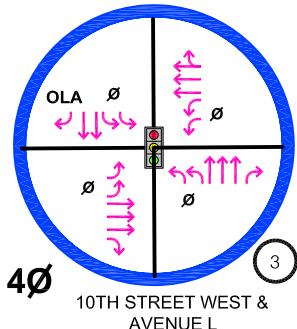

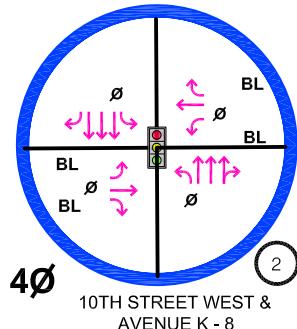

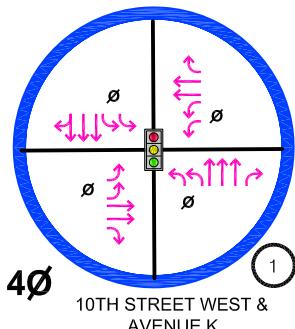

Daily traffic volume on 10<sup>th</sup> Street West north of and south of Avenue K - 8 was also measured on December 18<sup>th</sup> and 19<sup>th</sup>, 2019, results are provided in Table 4 below. Daily traffic on 10<sup>th</sup> Street West is approximately 27,000 to 29,000 vehicles per day.

**Table 4 - Daily Traffic Volume for 10<sup>th</sup> Street West at Avenue K - 8**

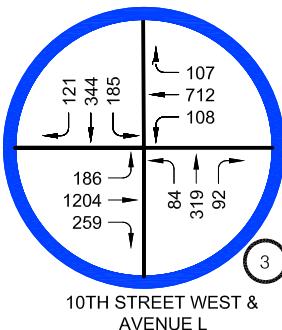

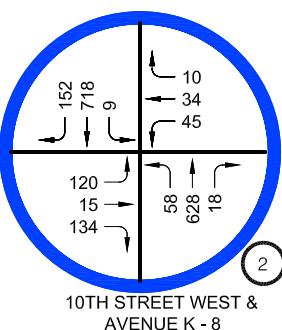

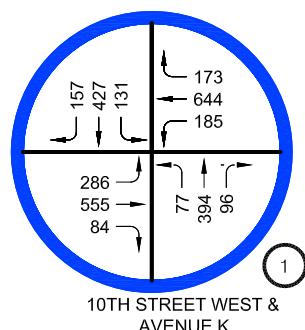

<u>Location</u>	<u>Daily</u>	<u>Dec. 18, 2019</u>	<u>Dec. 19, 2019</u>
10th Street West	N/B	13,349	13,319
North of Avenue K - 8	S/B	15,532	15,391
10th Street West	N/B	13,246	13,217
South of Avenue K - 8	S/B	13,612	13,653

### Analysis of Project Driveway Traffic Conditions

Project access is considered constrained if the project's traffic would contribute to unacceptable queuing on project driveway(s) or would cause or substantially extend queuing at near - by signalized intersections.

Estimated project driveway traffic volume, as shown in Table 2 and Figure 4, have been added to the existing traffic volume on the adjacent street. The results of the HCM analyses are provided in Table 5, which shows the average vehicle delay exiting the project site and the maximum vehicle queue at the driveway(s) during the morning and afternoon peak hours.

Based on this analysis, all project driveways would operate at LOS C or better and short vehicle queues. Appendix B contains the driveway level of service worksheets.

Table 5 - Project Driveway Conditions  
Seconds of Delay and Level of Service

<u>Project Driveway</u>	<u>Peak Hour</u>	<u>With Project</u>		<u>Driveway</u>
		<u>Sec. Delay</u>	<u>LOS</u>	<u>95 % Queue (Veh.)</u>
10th Street West & North Project Driveway	AM	15.7	C	0.8
	PM	21.2	C	1.0
10th Street West & South Project Driveway	AM	16.6	C	1.5
	PM	24.0	C	2.0
Avenue K - 8 & Project Driveway	AM	11.6	B	0.9
	PM	12.9	B	0.9

### Analysis of Traffic Conditions at Nearby Intersections

Traffic conditions at three nearby intersections have been evaluated for existing conditions and future conditions with the project. As shown in the Table 6 below, the LOS conditions do not change with the project traffic added at both 10<sup>th</sup> Street West at its intersection with Avenue K and at Avenue L.

However, at 10<sup>th</sup> Street West and Avenue K – 8, the project will increase average vehicle delays. Factors effecting the increased vehicle delay include the restricted capacity of the single southbound left - turn lane, new raised median island on 10<sup>th</sup> Street West south of Avenue K – 8 and the overall increased traffic demand generated by the project. Table 6 contains the results of the existing plus project traffic conditions. See Appendix C for LOS capacity reports.

Table 6 - Existing + Project Traffic Conditions

No. Intersection	Peak Hour	Existing		With Project	
		Delay	LOS	Delay	LOS
1 10th Street West and Avenue K	AM	39.2	D	43.0	D
	PM	46.6	D	51.9	D
2 10th Street West and Avenue K - 8	AM	33.7	C	47.0	D
	PM	48.4	D	61.5	E
3 10th Street West and Avenue L	AM	31.2	C	31.7	C
	PM	59.0	E	63.9	E

### 10<sup>th</sup> Street West and Avenue K – 8 Vehicle Queue Review

A review of the intersection capacity reports for 10<sup>th</sup> Street West and Avenue K – 8 during the peak hours indicate that the 95 percentile westbound left - turn vehicle queue on Avenue K – 8 is estimated at 144 feet during the morning peak hour and 139 feet during the afternoon peak hour which is within the 200 foot left - turn lane. This estimated queue storage length would require left - turns exiting the project to cross or enter the westbound lanes on Avenue K – 8 with current traffic conditions.

Note that future traffic conditions will change with the opening of Avenue K – 8 to the east and this modification to the street network may require the vehicle queueing on Avenue K – 8 to be re-evaluated with the new street connection. If future traffic conditions show that vehicle queuing is expected to extend beyond the driveway location on Avenue K-8, the applicant, or owner, shall dedicate to the City the right to restrict the outbound left-turn movement from the project onto westbound Avenue K-8 to the satisfaction of the City Engineer.

The review of the northbound 10<sup>th</sup> Street West left - turn vehicle queue indicates that the future left - turn lane should be approximately 300 feet in length with a 90 - foot transition to satisfy the typical left – turn demand. This queue estimate would allow right turns out of the project's 10<sup>th</sup> Street driveway(s) to enter the northbound left - turn lane to proceed west on Avenue K – 8, if necessary. Heavy northbound through traffic, however, may delay project vehicles from accessing the northbound left – turn lane. Please contact me if you have any questions.

Sincerely,

A handwritten signature in black ink that reads "Jerry T. Overland". Below the signature, the name "Jerry T. Overland" is printed in a standard font.

Jerry T. Overland

### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 4:SBT and 8:NBT, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 43.0

Intersection LOS: D

Intersection Capacity Utilization 77.7%

ICU Level of Service D

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: 10TH STREET WEST & AVENUE K

## Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 4:SBT and 8:NBT, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.99

Intersection Signal Delay: 48.4

Intersection LOS: D

Intersection Capacity Utilization 75.3%

ICU Level of Service D

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

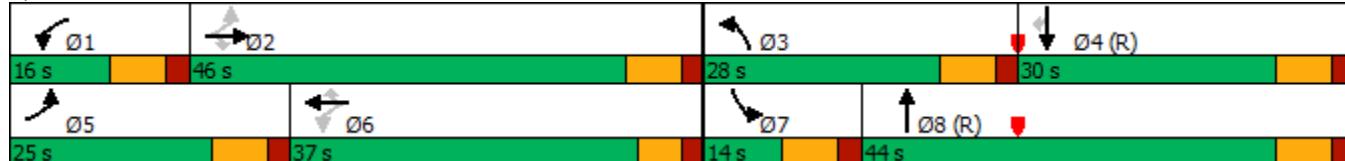

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

## Intersection Summary

Area Type: Other

Cycle Length: 94

Actuated Cycle Length: 94

Offset: 0 (0%), Referenced to phase 4:SBT and 8:NBT, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.09

Intersection Signal Delay: 59.0

Intersection LOS: E

Intersection Capacity Utilization 103.0%

ICU Level of Service G

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 9: 10TH STREET WEST &amp; AVENUE L

## Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 4:SBT and 8:NBT, Start of Green

Natural Cycle: 115

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.99

Intersection Signal Delay: 61.5

Intersection LOS: E

Intersection Capacity Utilization 93.1%

ICU Level of Service F

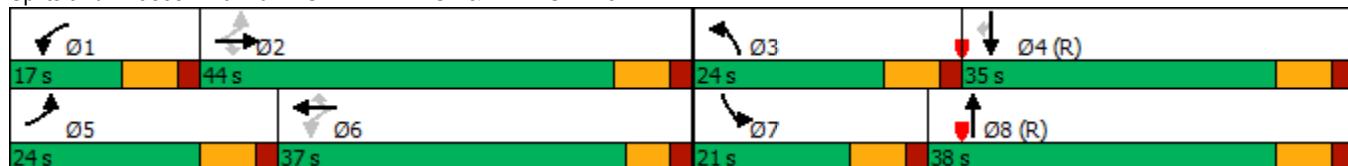

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
