

THE LAKEVIEW PLAZA  
**PRELIMINARY  
HYDROLOGY REPORT**

LAKESHORE DRIVE  
LAKE ELSINORE, CA

FOR  
AB GROUP

PREPARED BY:  
BLUE PEAK ENGINEERING, INC. 18543  
YORBA LINDA BLVD. #235 YORBA LINDA,  
CA 92886

(714) 749-3077

## **Purpose**

This report has been prepared to show the attenuation of post developed drainage in relation to the predeveloped drainage to offsite properties for flood protection purposes.

## **Description of Watershed**

The property is comprised of 5 parcels within a mixed used zone of the City of Lake Elsinore. The subject site is located within 500 feet north of Elsinore Lake. The property is limited at the north by Ryan Avenue, at the east side by Manning Street, and at the west by Iowa Street (a projected Street). Site access will be provided from Lake Shore Drive.

The parcels are attached and formed a trapezoidal shaped vacant and undeveloped land. The entire property is a part of a south facing descending slope with steeper flank at the north. The slope angle toward the south/southwest becoming more gentle and flattened.

The average elevation of the site is about 1300 feet above the main sea level. Maximum height of slope is 90 feet. Property sheet flow is toward south southeast.

## **Methodology**

Peak flows are determined using the Rational Method as described in the Riverside County Flood Control Manual.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

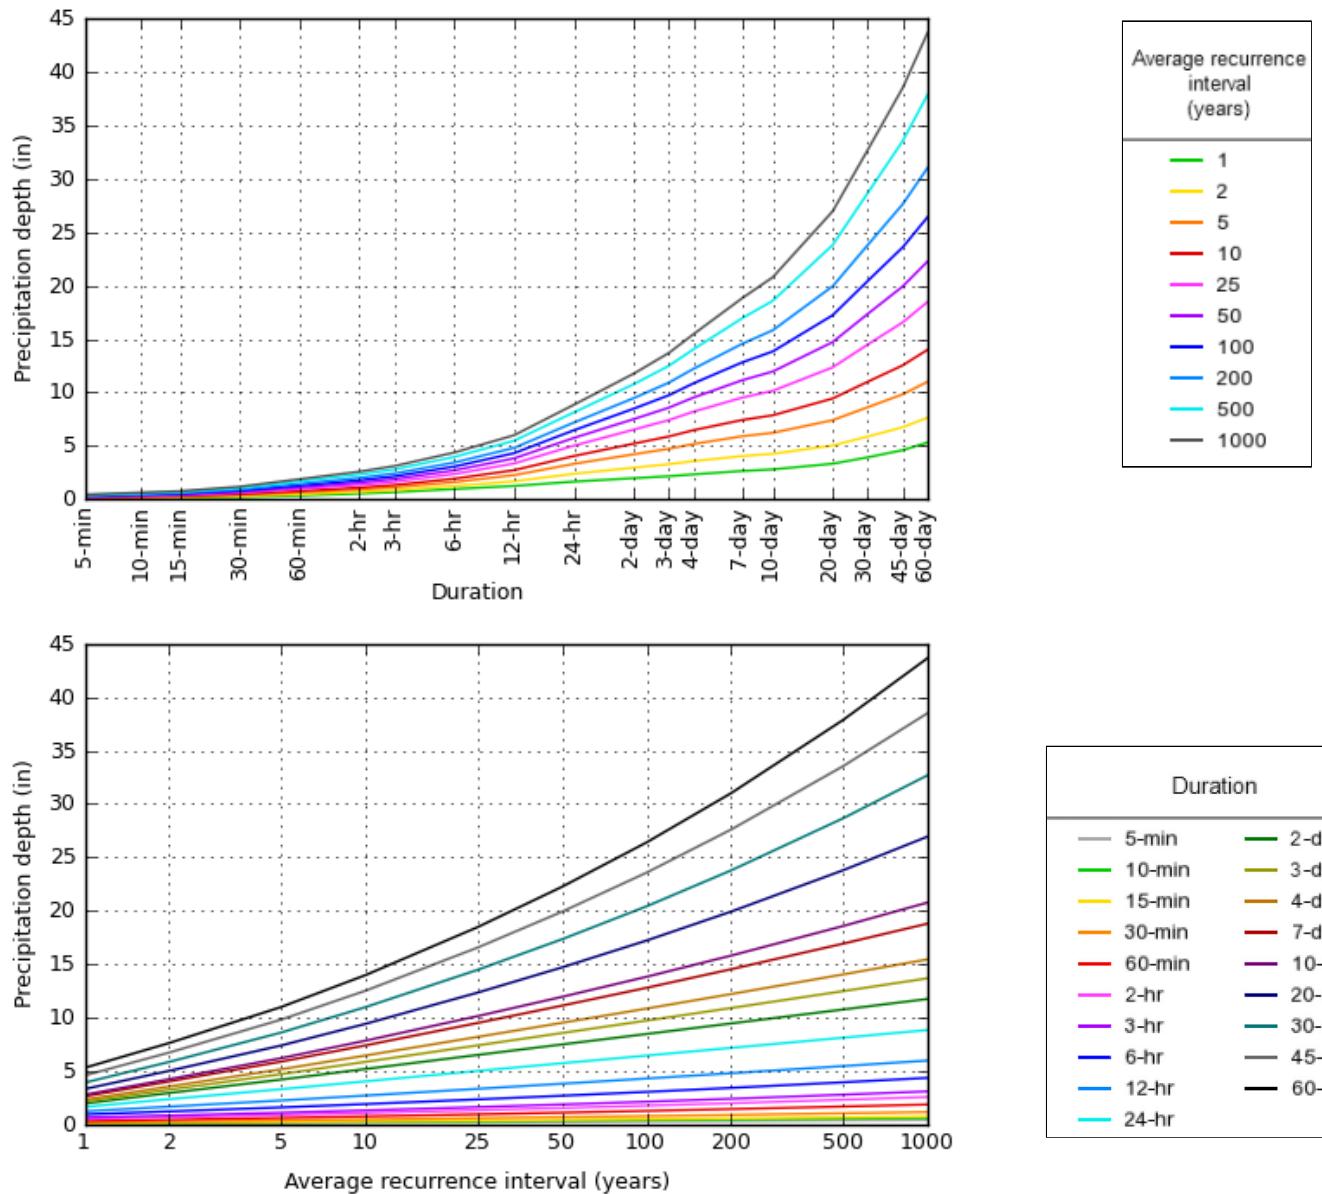

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

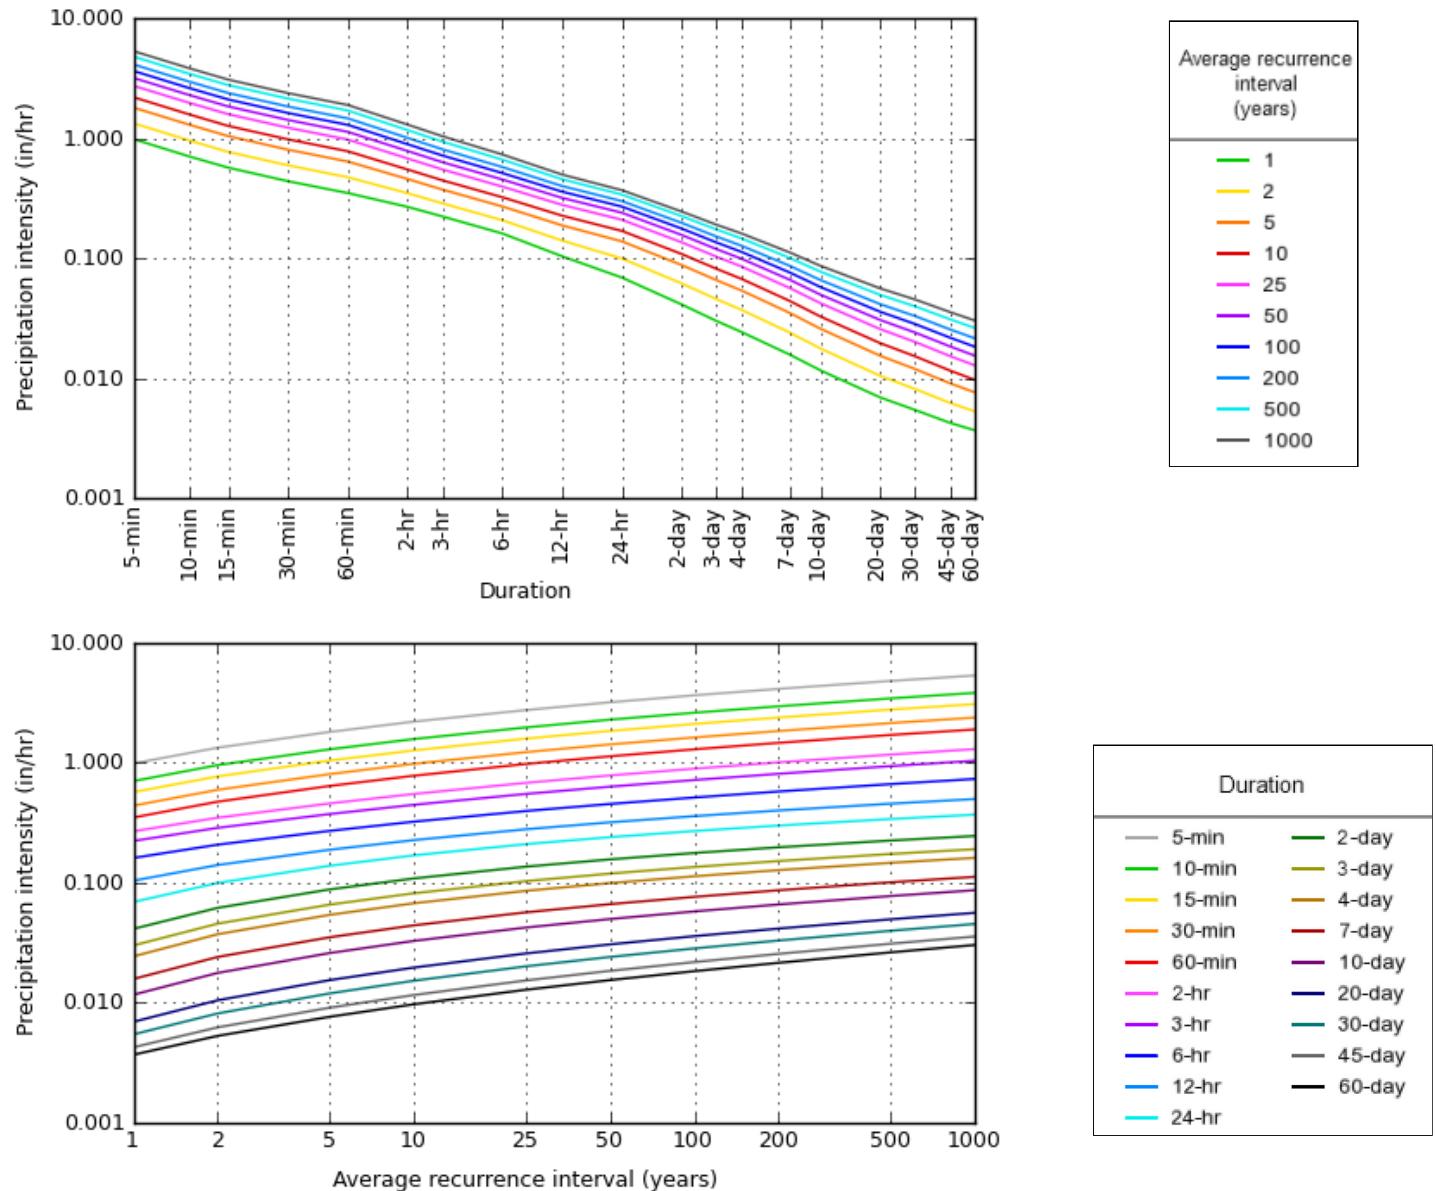

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

## CIRCULAR PIPE

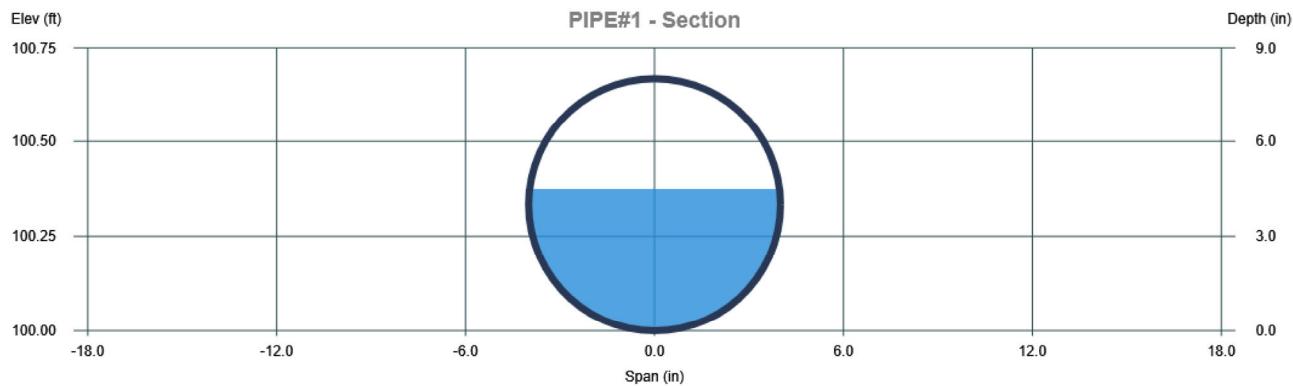

Diameter = 8.0 in  
Invert Elevation = 100.00 ft  
Pipe Slope = 1.790 %  
Manning's n = 0.010

## DISCHARGE

Method = Known Q  
Known Q = 1.69 cfs

## CALCULATION SAMPLE

Flow	Depth	Area	Velocity	WP	n-value	Crit Depth	HGL	EGL	Max Shear	Top Width
(cfs)	(in)	(sqft)	(ft/s)	(ft)		(in)	(ft)	(ft)	(lb/sqft)	(ft)
1.69	5.5	0.26	6.59	1.31	0.010	7.2	100.5	101.14	0.51	0.62
