PHASE I ENVIRONMENTAL SITE ASSESSMENT 2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive San Bruno, California

E1.0 EXECUTIVE SUMMARY

Langan Treadwell Rollo (Langan) has completed this Phase I Environmental Site Assessment (ESA) on behalf of Wealth Garden San Bruno, LLC (Client) for the properties located at 2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive (Site) in San Bruno, California (Figure 1).

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Practice E1527-05 and E1527-13 (Standard Practice for ESA: Phase I ESA Process), and the United States Environmental Protection Agency's (USEPA) 2006 All Appropriate Inquiry (AAI) Rule (40 CFR Part 312) now in effect. To the extent that ASTM 1527-13 differs in definition and terminology from ASTM 1527-05, this report follows the current ASTM 1527-13 terminology. Completion of a Phase I ESA in accordance with the ASTM Practice and AAI Rule is needed to qualify for the bona fide prospective purchaser liability protections available under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

The purpose of the Phase I ESA was to evaluate the possible presence of recognized environmental conditions (RECs) at the Site. A REC is the presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of future release to the environment (ASTM, 2013).

E1.1 Site Description

The Site is located within a mixed-use area of San Bruno, California (Figure 1). The Site is approximately 3.2-acres and is bound by residential development and commercial businesses to the north and south, and undeveloped vacant land, some of which is used for outdoor recreation, to the east and west. As shown in Figure 2, the Site is currently occupied by a church, a private residence, an at-grade asphalt paved parking lot, and vacant undeveloped land.

E1.2 Environmental Database and File Review

Two of the Site's three street addresses were identified in the databases searched by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Online databases operated by the California Department of Toxic Substances Control (DTSC) and California Regional Water Quality Control Board (RWQCB) were researched and inquiries were made at the San Mateo County Environmental Health Department (SMCEHD) regarding any additional files related to any fuel and hazardous materials leaks reported at the Site. Below is a summary of our findings.

E1.3 Conclusions

Based on the databases searched by EDR, requests made for public documentation related to past or present environmental conditions at the Site and surrounding area, review of previous investigation reports for the Site and surrounding area, and our Site reconnaissance, Langan has identified three RECs associated with the Site during this Phase I ESA.

The following RECs were identified:

REC 1 - Petroleum Hydrocarbons Present within the Site Subsurface

2880 San Bruno Avenue West

This address has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials. In August 1992, the property was occupied by D&J Union 76 and was listed as a LUST Cleanup Site. According to the case closure letter, five USTs have been removed from the property. The five former USTs included the following: one 10,000-gallon gasoline UST, two 5,000-gallon gasoline USTs, one 3,000-gallon diesel UST, and one 500-gallon waste oil UST.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 23 May 2002.

Despite the removal of the property's former USTs and subsequent case closure granted in a SMCEHD letter dated 23 May 2002, this address/property comprises a portion of the Site and administrative and/or regulatory documentation indicates that

residual contamination is likely still present within the subsurface, and therefore represents a REC for the Site.

2890 San Bruno Ave West

This address has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials. In June 1993, while the property was occupied by Skyline Mobil, the property was listed as a LUST Cleanup Site. According to the case closure letter, five USTs have been removed from the property. Five former USTs included the following: two 8,000-gallon gasoline USTs and one 6,000-gallon diesel UST, removed in March 1994; one 250-gallon waste oil UST, removed in March 1995; and one 4,000-gallon UST of unknown contents, removed in April 2006.

Between June 1993 and June 2006, multiple subsurface investigations including soil, groundwater, and soil vapor sampling and analysis have been conducted by various consulting companies. Based on the reviewed documentation, summarized in KCE Matrix, Inc.'s 2007 report, low levels of petroleum hydrocarbons and VOCs were detected in soil, but the primary affected media on the Site property was groundwater and soil vapor. Between March 1995 and July 2006, approximately 867 cubic yards of soil material was excavated, stockpiled, and disposed off-Site.

Between June 1993 and June 2006, multiple groundwater monitoring and sampling events have occurred, in addition to groundwater remediation activities consisting of insitu chemical oxidation injection/extraction wells. In August 2002, 2,550 gallons of groundwater was pumped, stored, and disposed off-Site. Between December 2002 and July 2006, during four separate events, an unknown volume of groundwater was treated through in-situ chemical oxidation injection/extraction wells.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 14 July 2008. Despite the property's remedial activities and closure status, this address/property comprises a portion of the Site and the presence of residual petroleum hydrocarbons and petroleum hydrocarbon-related VOCs and SVOCs in soil, groundwater, and soil vapor represents a REC for the Site.

Based on the Site reconnaissance conducted by Langan as part of this Phase I ESA and the Site history, the following *de minimis* condition was identified in association with both the current and historical use of the Site:

During the Site reconnaissance, Langan observed minor oil stains on the asphalt parking surfaces. It is Langan's opinion that these minor paved surface oil stains are a *de minimis* condition, and do not represent a significant concern.

Due to the findings of this Phase I ESA and the above identified RECs, if excavation or a change in land use is proposed, it is recommended that soil vapor sampling, a Site mitigation, and health and safety plans (SMPs and HASPs) be required before construction commences, including the direct handling of soil and/or groundwater.

1.0 INTRODUCTION

Langan Treadwell Rollo (Langan) has completed this Phase I Environmental Site Assessment (ESA) for 2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive (Site), located in San Bruno, California (Figure 1). As shown on Figure 2, the Site is approximately 3.2-acres and is bound by residential development and commercial businesses to the north and south, and undeveloped vacant land, some of which is used for outdoor recreation, to the east and west. The Site is currently occupied by a church, a private residence, an at-grade asphalt paved parking lot, and vacant undeveloped land.

This Phase I ESA was performed under the authorization of Wealth Garden San Bruno, LLC (Client) in support of the User's due diligence regarding a possible transaction involving the Site.

1.1 Purpose

The purpose of this Phase I ESA is to accomplish the following:

- (1) Identify Recognized Environmental Conditions (RECs) in connection with the Site, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a Site: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
- (2) Satisfy the criteria of United States Environmental Protection Agency (USEPA) 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

1.2 Scope of Phase I ESA

This Phase I ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with American Society for Testing and Materials (ASTM) E1527-05

and E1527-13. To the extent that ASTM 1527-13 differs in definition and terminology, the report follows the current ASTM 1527-13 terminology, not the prior ASTM 1527-05 terminology. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 9.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Site; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Site; and conducting a Site reconnaissance. The specific scope of this assessment included the following:

- 1. A Site reconnaissance to observe conditions and assess the Site's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The Site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site and then progressing to adjacent and surrounding properties. Photographs taken as part of the Site reconnaissance are provided in Appendix A.
- 2. As per ASTM E1527-13, a questionnaire was provided to the user and/or owner to obtain information related to the Site. A copy of the completed questionnaire is provided in Appendix B.
- 3. A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA), state, and local agencies within the approximate minimum search distance. Environmental Data Resources, Inc. (EDR) of Milford, Connecticut prepared the environmental database report, which is included in Appendix C.
- 4. Physical characteristics of the Site were determined through referenced sources for topographic, geologic, soils, and hydrologic data.
- 5. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Site. Copies are included in Appendices D, E, F, and G, respectively.

1.3 Assumptions, Limitations and Exceptions

This Phase I ESA report was prepared for the Client, for the Site, located in San Bruno, California. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Site consistently addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.2, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E 1527-05 and E1527-13. To the extent that ASTM 1527-13 differs in definition and terminology from ASTM 1527-05, this report follows the current ASTM 1527-13 terminology. Sampling (e.g. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Site. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Site. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular property. Therefore, Langan cannot "insure" or "certify" that the Site is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our Client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The findings and opinions provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-05 and E1527-13 and are intended exclusively for the purpose stated herein, at the specified Site, as it existed at the time of our Site reconnaissance.

1.4 Special Terms and Conditions and User Reliance

The Client requested no special terms or conditions regarding this study. Langan has prepared this report specifically for the use of the Client. Other parties cannot rely on this Phase I ESA, and the conclusions thereof, unless Langan receives a written request from the Client, at which time a "Reliance Letter" will be prepared for the interested party. The relying party will be subject to the same limitations as agreed to by the Client.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is located at 2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive in San Bruno, California. The Site is currently occupied by a church, a private residence, an at-grade asphalt paved parking lot, and vacant undeveloped land. The Site is approximately 3.2-acres and is comprised of three assessor parcel numbers (APNs): 019-042-150, 019-042-160, and 019-042-170.

2.2 Site and Vicinity General Characteristics

The Site and general vicinity is located in a mixed-use area of San Bruno, within San Mateo County. Residential development and commercial businesses are located north and south of the Site, and undeveloped vacant land, some of which is used for outdoor recreation, is located east and west of the Site. According to the United States Geological Survey (USGS) Topographic Maps, reviewed by Langan in an EDR Historical Topographic Map Report (prepared by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, for the Site and surrounding area), the Site is at an elevation of approximately 457 feet above mean sea level (MSL). Photographs showing the current Site use are provided in Appendix A.

2.3 Current Use of the Site and Adjoining Properties

The following table summarizes the current ownership and uses of the parcels comprised within the Site.

Parcel Numbers	Associated Address	Site Owner	Size (Acres)	Parcel Use(s)
019-042-150	2890 San Bruno Avenue West	Wealth Garden San Bruno, LLC	± 0.46	Vacant undeveloped land
019-042-160	2880 San Bruno Avenue West	Wealth Garden San Bruno, LLC	± 0.59	Vacant undeveloped land
019-042-170	850 Glenview Drive	Wealth Garden San Bruno, LLC	± 2.11	Peace Lutheran Church, private residence, Church of the Highlands Glenview Campus parking lot, and vacant undeveloped land

The Site is comprised of three street addresses: 2880 San Bruno Avenue West, 2890 San Bruno Avenue West, and 850 Glenview Drive; and three APNs: 019-042-150, 019-042-160, and 019-042-170 in a mixed-used area of San Bruno, California. The nearby properties in the direct vicinity and surrounding area are occupied by commercial and residential properties, and vacant undeveloped land.

2.4 Descriptions of Structures, Roads, and Other Site Improvements

The Site is approximately 3.2-acres and is currently occupied by a church, a private residence, an at-grade asphalt paved parking lot, and vacant undeveloped land. The Site is bound by residential development and commercial businesses to the north and south, and undeveloped vacant land, some of which is used for outdoor recreation, to the east and west. A more detailed description of the Site is provided in Section 5.0.

3.0 USER PROVIDED INFORMATION

3.1 User/Owner Questionnaire

Per ASTM E1527-13, user and owner questionnaires were provided to the Client to inquire about specialized information related to the Site.

Mr. Ricky Cheng completed the User questionnaire. Mr. Cheng has no-first-hand knowledge of the Site and is not aware of any environmental cleanup liens and/or land use limitations associated with the Site. The completed User questionnaire is included in Appendix B.

3.2 Title Records

A chain-of-title report provided to Langan indicates that Wealth Garden San Bruno, LLC is the current owner of all three properties that comprise the Site. A copy of the chain-of-title report is included in Appendix B.

3.3 Environmental Liens or Activity and Use Limitations

The User is not aware of any environmental cleanup or liens in connection to the Site.

3.4 Specialized Knowledge

The Client does not have any specialized knowledge of the Site.

3.5 Commonly Known and Reasonable Ascertainable Information

The Client is not aware of any commonly known and reasonable ascertainable information regarding the Site.

3.6 Valuation Reduction for Environmental Issues

The User is not aware of any valuation reduction for environmental issues in connection with the Site and that the value of the Site reflects market value.

3.7 Owner, Site Manager, and Occupant Information

Information provided to Langan indicates that Wealth Garden San Bruno, LLC is the current owner of the Site. Currently, the Site is occupied by a church, an at-grade asphalt paved parking lot, and vacant undeveloped land.

3.8 Reason for Performing Phase I ESA

It is our understanding that the Client has requested this study as part of their environmental due diligence regarding a possible transaction with the Site.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

Langan reviewed an environmental database search report, prepared by EDR, for the Site and surrounding area. The EDR report is a listing of properties identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM Standard Practice for E1527-13. This information is reported to Langan by EDR, and to EDR by government sources; therefore, neither Langan nor EDR can verify the completeness and accuracy of the database information. Langan reviewed each environmental database on a record-by-record basis to determine if certain sites identified in the report are suspected to represent a potential impact to the Site. A copy of regulatory database information was provided by EDR and is included in Appendix C.

The following summary table lists the number of properties by database within the prescribed search radius appearing in the EDR Radius Map Report:

Database (Date of government version)	Minimum Search Area	Site Listed	Properties Within Search Area	
State and Tribal				
LUST (Leaking Underground Storage Tanks Sites List) (10/21/2015)	½ mile radius	Yes	8	
SLIC (Spills, Leaks, Investigations, and Cleanups List) (10/21/2015)	½ mile radius	No	1	
Additional Record Sources				
SWEEPS UST (6/1/1994)	¼ mile radius	Yes	1	
HIST UST (10/15/1990)	¼ mile radius	Yes	1	
CA FID UST (10/31/1994)	¼ mile radius	Yes	1	
San Mateo Co. BI – Hazardous Materials Business Plan, Hazardous Waste Generator, Underground Storage Tanks (10/14/2015)	¼ mile radius	Yes	3	
DRYCLEANERS (8/10/2015)	¼ mile radius	No	1	
HIST CORTESE (4/1/2001)	½ mile radius	Yes	3	
EDR Exclusive Records				
EDR US Hist Auto Stat (11/18/2015)	1/8 mile radius	No	1	
EDR US Hist Cleaners (11/18/2015)	1/8 mile radius	No	1	

A description of the reviewed databases is provided in the EDR Radius Map Report (Appendix C). A summary of Site database listings and other properties identified within the prescribed search area is presented below.

Site (2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive)

Two of the three addresses that are historically comprised of the Site were identified in one or more of the regulated databases searched by EDR. Additionally, online databases operated by the California Department of Toxic Substances Control (DTSC) and California Regional Water Quality Control Board (RWQCB) were researched and inquiries were made at the San Mateo County Environmental Health Department (SMCEHD) regarding any additional files related to any past or current fuel and hazardous materials leaks. Below is a summary of our findings:

2880 San Bruno Avenue West—This address was listed in the following databases searched by EDR¹: HIST CORTESE², HIST UST³, LUST⁴, RGA LUST, San Mateo Co. BI⁵, and SWEEPS UST⁶. Additionally, this address is listed as completed – case closed under the San Mateo County local oversight program (LOP) (case #:880027) and the San Francisco Bay RWQCB (case #:41-0549). This address is presently comprised of vacant undeveloped land, but has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials.

The following information was derived from the GeoTracker online database, the reviewed files provided by SMCEHD, the following Case Closure Summary Report, and the resulting SMCEHD administrative case closure letter dated 23 May 2002:

• Streamborn, Case Closure Summary Report, 2880 West San Bruno Avenue, San Bruno, California dated 18 December 2001.

In August 1992, while the property was occupied by D&J Union 76 service station, the property was listed as a leaking underground storage tank (LUST) Cleanup Site. According to the case closure letter, five underground storage tanks (USTs) have been removed from the property. The five former USTs included the following: one 10,000-gallon gasoline UST, two 5,000-gallon gasoline USTs, one 3,000-gallon diesel UST, and one 500-gallon waste oil UST. Reportedly, during the removal activities, a SMCEHD inspector observed contaminated soil and groundwater in the former UST excavation pits, accompanied by a visible oil sheen on the water's surface and strong petroleum hydrocarbon odors from the excavated soil material.

¹ **EDR** - Environmental Data Resources

HIST CORTESE - The properties for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES].

³ **HIST UST** - The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

LUST - The Leaking Underground Storage Tank incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resource Control Board Leaking Underground Storage Tank Information System.

⁵ **San Mateo Co. BI** - List includes Hazardous Materials Business Plan, hazardous waste generators, and unground storage tanks.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

Between 1993 and 2001, various subsurface investigations involving the sampling of soil, groundwater, and soil vapor have been conducted at the property by Applied Remediation Company, Environmental Services and Engineering of San Jose, California (1993-1998) and Streamborn of Berkeley, California (1999-2001).

Between July and September 1993, three groundwater monitoring wells (MW-1 through MW-3) were installed. Two additional groundwater monitoring wells (MW-4 and MW-5) were installed in October and November of 1998. In June 200, three additional groundwater monitoring wells (MW-6 through MW-8) were installed, although MW-6 has never been sampled, because it has consistently been dry. Soil samples were collected and submitted analytical analysis during groundwater monitoring well installation events. Groundwater monitoring has been performed from July 1993 through August 2001.

Between May and June of 1997, 22 passive soil gas sorbers were installed on the property for a two week period, then removed and analyzed for total petroleum hydrocarbons (TPH) as gasoline (TPHg), diesel (TPHd), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl-tertiary-butyl-ether (MTBE). The analytical results detected TPHg, TPHd, and BTEX at maximum concentrations of 6.69 micrograms per sorber (µg/sorber), 27.32 µg/sorber, 2.32 µg/sorber, 0.89 µg/sorber, 0.12 µg/sorber, and 0.41 µg/sorber, respectively. No MTBE was detected in any of the samples analyzed. The analytical results indicated a "hot spot" in the vicinity of the properties former pump islands and MW-2.

In June 2000, an infiltration gallery was installed on the property to assist with in-situ bioremediation through dosing of hydrogen peroxide, ammonium chloride, and potassium phosphate solution within the top seven feet of the property's subsurface. Dosing was initiated on 4 August 2000 and concluded on 4 December 2000. In total, 10 dosing events were conducted on the property, with each dosing event using approximately 5,660 gallons of dosing solution.

Prior to in-situ bioremediation events, groundwater contaminants were consistently detected in MW-1, MW-2, and MW-4. These monitoring wells were reportedly close to the location of the former USTs and pump islands, the former fuel release source area. Since December 2000, when in-situ bioremediation was completed, groundwater contamination had only been detected in MW-2 and only TPHg and benzene were detected at maximum concentrations (1,400 micrograms per liter (μ g/L) and 23 μ g/L, respectively) that exceed the criteria for drinking water (5.0 μ g/L and 1.0 μ g/L, respectively). However, as a whole, the in-situ bioremediation

resulted in a ±70% decrease in concentrations of TPHg, TPHd, benzene, and ethylbenzene; and a ±95% decrease in concentrations of toluene and xylenes in MW-2.

Prior to in-situ bioremediation events, the greatest soil concentrations were detected in samples collected from SB-2/MW-2. Maximum concentrations of TPHg, TPHd, and BTEX were detected at concentrations of 47.8 milligrams per kilogram (mg/kg), 210 mg/kg, 0.0518 mg/kg, 0.2311 mg/kg, 0.7688 mg/kg, and 3.175 mg/kg, respectively. Post remediation soil samples were not collected at the property. However, as a result of the bioremediation activities and assuming a linear sorption isotherm, the soil concentrations are expected to have reduced in direct proportion to the observed reduction in the groundwater concentrations.

Streamborn's *Case Closure Summary Report* concluded that the Site property was eligible for low-threat administrative case closure for the following reasons:

- The source of contamination has been stopped and on-going sources, including free product, have been removed and/or remediated;
- The property has been adequately characterized;
- The dissolved hydrocarbon plume is not migrating;
- No water wells, deeper drinking water aquifers, surface water, or other sensitive receptors are likely to be impacted; and
- There is no perceived significant risk to human health and the environment.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 23 May 2002.

Despite the removal of the property's former USTs and subsequent case closure granted in a SMCEHD letter dated 23 May 2002, this address/property comprises a portion of the Site and administrative and/or regulatory documentation indicates that residual contamination is likely still present within the subsurface, and therefore represents a REC for the Site.

2890 San Bruno Avenue West—This address was listed in the following databases searched by EDR: CA FID UST⁷, HAZNET⁸, HIST CORTESE, HIST UST, LUST, RGA LUST⁹, San Mateo Co. BI, and SWEEPS UST. Additionally, this address is listed as completed – case closed under the San Mateo County LOP (case #:880033) and the San Francisco Bay RWQCB (case #:41-0790). This address is presently comprised of vacant undeveloped land, but has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials. In June 1993, while the property was occupied by Skyline Mobil, the property was listed as a LUST Cleanup Site. According to the case closure letter, five USTs have been removed from the property. The five former USTs included the following: two 8,000-gallon gasoline USTs and one 6,000-gallon diesel UST, removed in March 1994; one 250-gallon waste oil UST, removed in March 1995; and one 4,000-gallon UST of unknown contents, removed in April 2006.

The following information was derived from the GeoTracker online database, the reviewed files provided by SMCEHD, the following Case Closure Summary Report, and the resulting SMCEHD administrative case closure letter dated 14 July 2008:

• KCE Matrix, Inc., Case Closure Summary Report, Former Gasoline Station, 2890 San Bruno Avenue, San Bruno, California dated 14 December 2007.

Between June 1993 and June 2006, multiple subsurface investigations including soil, groundwater, and soil vapor sampling and analysis have been conducted by various consulting companies. Based on the reviewed documentation, summarized in KCE Matrix, Inc.'s 2007 report, low levels of petroleum hydrocarbons and volatile organic compounds (VOCs) have been detected in soil, but the primary affected media on the Site property was groundwater and soil vapor. Between March 1995 and July 2006, approximately 867 cubic yards of soil material was excavated, stockpiled, and disposed off-site.

Three groundwater monitoring wells (MW-1 through MW-3) were installed in April 1996. Three additional groundwater monitoring wells (MW-4 through MW-6) were installed in June 1996.

⁷ CA FID UST: The Facility Inventory Database (FID) contains active and inactive UST locations. The source is the State Water Resource Control Board.

⁸ **HAZNET**: Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

⁹ **RGA LUST**: Recovered Government Archives Leaking Underground Storage Tank

Three additional groundwater monitoring wells (MW-7 through MW-9) were installed in October 1999. Four injection/extraction wells (RW-1 through RW-4) were installed in April 2001. One additional groundwater monitoring well (MW-10) was installed in May 2005. Between 5 January 2006 and 13 January 2006, four of the 14 existing groundwater monitoring wells (MW-3, MW-10, RW-1, and RW-3) were abandoned. Three additional groundwater monitoring wells (MW-11 through MW-13) were installed in September 2006.

Between June 1993 and June 2006, multiple groundwater monitoring and sampling events have occurred, in addition to groundwater remediation activities consisting of in-situ chemical oxidation injection/extraction wells. In August 2002, 2,550 gallons of groundwater was pumped, stored, and disposed off-site. Between December 2002 and July 2006 during four separate events, an unknown volume of groundwater was treated through in-situ chemical oxidation injection/extraction wells. The last groundwater sampling event occurred in June 2007 from all 13 active groundwater monitoring wells (MW-1, MW-2, MW-4 through MW-9, MW-11 through MW-13, RW-2, and RW-4) and were analyzed for gasoline range VOCs, diesel range semi-volatile organic compounds (SVOCs), BTEX, and MTBE. With the exception of monitoring well MW-2, which detected ethylbenzene and xylenes at concentrations of 8 μ g/L and 25 μ g/L, respectively, the remaining 12 groundwater samples did not detect any of the analyzed compounds at or above the laboratory method reporting limits. Subsequently, groundwater monitoring wells MW-1, MW-2, MW-4 through MW-9, MW-11 through MW-13, RW-2, and RW-4 were pressure grouted and abandoned on 17 June 2008.

In September 2004, a soil vapor investigation was conducted by KCE Matrix, Inc. from 11 temporary soil vapor wells, installed throughout the Site at an approximate depth of five feet below the ground surface (bgs). TPHg was detected at or above the method reporting limits in 3 of the 11 samples analyzed at concentrations ranging from 7,760 micrograms per cubic meter (μ g/m³) to 1.10E+08 μ g/m³. Benzene was detected at or above the method reporting limits in 9 of the 11 samples analyzed at concentrations ranging from 6.38 μ g/m³ to 414,000 μ g/m³. Toluene was detected at or above the method reporting limits in 6 of the 11 samples analyzed at concentrations ranging from 8.27 μ g/m³ to 52,700 μ g/m³. Ethylbenzene was detected at or above the method reporting limits in 3 of the 11 samples analyzed at concentrations ranging from 65 μ g/m³ to 91,000 μ g/m³. Total xylenes were detected at or above the method reporting limits in 4 of the 11 samples analyzed at concentrations ranging from 12.1 μ g/m³ to 347,000 μ g/m³. MTBE was detected at or above the method reporting limits in only 1 of the 11 samples analyzed at a concentration of 18.3 μ g/m³. Isopropyl alcohol was detected at or above the

method reporting limits in 2 of the 11 samples analyzed at concentrations of 29.4 $\mu g/m^3$ and 191 $\mu g/m^3$.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 14 July 2008. Despite the property's remedial activities and closure status, this address/property comprises a portion of the Site and the presence of residual petroleum hydrocarbons and petroleum hydrocarbon-related VOCs and SVOCs in soil, groundwater, and soil vapor represents a REC for the Site.

Neighboring Properties

2901 San Bruno Avenue West — This property, located approximately 87 feet (0.016 miles) south and upgradient to crossgradient of the Site, was identified in the following databases searched by EDR: CA FID UST, EDR US Hist Auto Stat, HIST UST, San Mateo Co. BI, and SWEEPS UST. Recent listings in the City Directory identify this property as the Crestmoor Auto Center, a gasoline and service station, with four permitted USTs; two 10,000-gallon gasoline USTs, one 10,000-gallon diesel UST, and one 550-gallon waste oil UST.

However, this property has no documented history of any spills, leaks, and/or unauthorized releases to the environment. Of the regulatory databases searched and inquiries made, no regulatory documentation was located. This property is not expected to present an environmental concern to the Site.

118 Skycrest Shopping Center — This former facility, located approximately 447 feet (0.085 miles) south-southeast and upgradient to crossgradient of the Site, was identified in the following databases searched by EDR: DRYCLEANERS¹⁰, EDR US Hist Cleaners¹¹, EMI¹², LUST, San Mateo Co. BI, and SLIC¹³. Recent listings in the City Directory identify this property as the

DRY CLEANERS - A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry cleaning plants, except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

EDR Historical Cleaners: - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites. Two EDR Historical cleaner properties were identified within 0.25 miles of the Site.

¹² **EMI**: Emissions Inventory Data. Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

¹³ **SLIC**: The Spills, Leaks, Investigations, and Cleanup (SLIC) program is designed to protect and restore water quality from spills, leaks, and similar discharges. The California RWQCB maintains the SLIC list.

former Crest Cleaners that was located in the former Skycrest Shopping Center. Presently, the former facility is occupied by Skycrest Village, a residential community. Additionally, this former facility is listed as open for further assessment under the San Mateo County LOP (Case # 889063) and the San Francisco Bay RWQCB. Langan reviewed the following recent reports, which summarized the former facilities environmental and remedial history as follows:

- Green Environment, Inc., Expanded Subsurface Investigation Report and Work Plan, Former Crest Cleaners, 118 Skycrest Center, San Bruno, California dated 8 February 2013.
- Green Environment, Inc., Data Gap Investigation Report, Former Crest Cleaners, 118 Skycrest Center, San Bruno, California dated 3 February 2014.
- Green Environment, Inc., Work Plan for Remedial Investigation, Former Crest Cleaners, 118 Skycrest Center, San Bruno, California dated 9 January 2015.

The Skycrest Village is a residential community of detached homes located in the Crestmoor neighborhood in San Bruno, California. Skycrest Village was constructed in 2006/2007 in the southern portion of the former Skycrest Shopping Center at the southeast corner of the intersection of San Bruno Avenue West and Glenview Drive. To redevelop the property, portions of commercial buildings and associated infrastructure of the former Skycrest Shopping Center were demolished and removed. The commercial buildings had historically been occupied by retail stores, a restaurant, and a dry cleaning establishment named Crest Cleaners, at 118 Skycrest Shopping Center.

A Phase I ESA was completed in 2005 by Bay Area Geotechnical Group (BAGG) Engineers of Sunnyvale, California, on behalf of the developer of the property, Skycrest Partners, LP (Skycrest Partners), and recommended subsurface soil and groundwater sampling adjacent to Crest Cleaners, still in operation at that time. Skycrest Partners approved the recommended subsurface investigations, completed by BAGG in late 2005. Based upon their findings associated with their ESA and sampling activities, BAGG concluded the property could be redeveloped for residential purposes with no further environmental investigation or remedial activities. The City of San Bruno reviewed BAGG's reports and sampling results in the process of issuing development and construction permits to Skycrest Partners, and agreed with BAGG's conclusion regarding the environmental condition of the property.

In late 2011, Skycrest Partners was contacted by the SMCEHD, which requested additional testing to assess potential risk to health and the environment associated with the former Crest Cleaners. Skycrest Partners subsequently contracted with Green Environment, Inc. (GEI) of San Carlos, California for an additional technical opinion. On 7 December 2011, representatives of Skycrest Partners, GEI and SMCEHD met to review and discuss pertinent facts regarding past investigation activities performed by BAGG, subsequent property redevelopment activities, and the current condition of the property. As a result of this review and discussion, SMCEHD requested that Skycrest Partners contract a qualified environmental consultant to collect additional subsurface environmental data at Lot 13 in the Skycrest Village development. Skycrest Partners subsequently contracted with GEI to perform the additional requested sampling.

In December 2011, GEI prepared and submitted a work plan to SMCEHD for soil and soil vapor sampling at Lot 13, proposing the collection of a soil and soil vapor sample outside the residence on Lot 13 and a sub-slab soil vapor sample from within the garage of the residence on Lot 13, with laboratory analyses of the soil and soil vapor samples for halogenated volatile organic compounds (HVOCs). SMCEHD approved GEI's work plan in an email dated 22 December 2011. The work was performed by GEI in January and February of 2012, with sampling and analytical findings initially presented to SMCEHD in a meeting on 6 March 2012.

On 8 March 2012, SMCEHD issued letters to Skycrest Partners, Crest Cleaners, and Willow Green Associates, LP, the former owner of 118 Skycrest Center, naming each as responsible parties for the soil contamination discovered at the former Crest Cleaners, located at 118 Skycrest Center and identified by SMCEHD as Case # 889063. In the letter, SMCEHD requested that a work plan be prepared and submitted to SMCEHD (via Geotracker) to define the lateral and vertical extent of contamination in all impacted media at the property. On behalf of Skycrest Partner's, GEI prepared and submitted to SMCEHD (via Geotracker) the requested work plan, entitled "Expanded Work Plan for Subsurface Investigation" (GEI, 27 April 2012), which included documentation of GEI's sampling activities at the property in January and February, 2012, and proposed six additional borings (SB-1 through SB-6) at the property to collect additional soil and groundwater samples.

SMCEHD approved GEI's Expanded Subsurface Investigation Work Plan in a letter dated 12 July 2012 with two comments:

(1) Should groundwater be impacted, the lateral and vertical extent of contamination in the saturated zone must be determined, and may require an additional round of work plan submittals and investigations. It may be beneficial to have a contingency plan to continue advancing SB-1 to determine the vertical extent of contamination at its location if field screening indicates that groundwater is impacted.

(2) Borings SB-2 through SB-6 only addresses the lateral and vertical extent of shallow soil contamination 10 to 11 feet bgs in the vicinity of the suspected source. Additional investigation may be required should data indicate the presence of deeper contamination.

The following presents the results of the expanded subsurface investigation activities completed by GEI in October 2012:

Soil data collected prior to April 2012 indicated two shallow soil samples detected tetrachloroethene (PCE) at concentrations exceeding 370 micrograms per kilogram (µg/kg), the Environmental Screening Level (ESL) established by the RWQCB for shallow soil in a residential land use scenario, independent of whether or not groundwater is a current or potential drinking water resource (RWQCB, November 2007, updated May 2008). Specifically, soil sample B-3 collected at an estimated seven feet bgs detected PCE at a concentration of 710 µg/kg, and soil sample SV-1D6.25 collected at 6.25 feet bgs detected PCE at a concentration of 23,000 µg/kg. Soil sample SV-1D6.25 also detected trichloroethene (TCE) at a concentration of 1,200 µg/kg, which exceeded the ESL for shallow soil in a residential land use scenario where groundwater is a current or potential drinking water resource (460 µg/kg). The vertical extent of PCE impact to soil at boring B-3 had been defined, as soil sample B-3 at an estimated depth of 11 feet bgs, detected PCE at a concentration of 36 μg/kg, well below the ESL of 700 μg/kg for deep soil in a residential land use scenario where groundwater is a current or potential drinking water resource. The lateral extent of PCE impact at boring B-3 had been defined to the north and east, as soil samples collected from borings B-12 and B-13 detected a maximum PCE concentration of 53 µg/kg, well below the shallow soil ESL, 370 µg/kg. The lateral extent of PCE impact in soil west and south of boring B-3 had not been determined. The lateral and vertical extent of PCE and TCE soil impact at boring SV-1 had not been determined.

As of April 2012, two groundwater samples had been collected (in December 2005), north (boring B-12) and east (boring B-13) of boring B-3. Groundwater was reportedly encountered in December 2005 at approximately 18 to 20 feet bgs, and BAGG Engineers had estimated the groundwater flow direction to be to the north and northeast. PCE was detected only in the groundwater sample collected from boring B-12, at a concentration of 11.5 micrograms per liter (µg/L). The RWQCB ESL for PCE in groundwater where groundwater is a current or potential

source of drinking water is 5 µg/L (RWQCB Table F-1a, May 2008). The RWQCB ESL for PCE in groundwater where groundwater is not a current or potential source of drinking water is 120 µg/L (RWQCB Table F-1b, May 2008). Groundwater had not been collected at boring SV-1.

In October 2012, GEI advanced six soil borings (SB-1 through SB-6) to a maximum depth of 22 feet bgs for the collection of soil and groundwater samples. The soil analytical results indicated that only the shallow soil samples submitted from the borings in the vicinity of the driveway (SB-1, SB-2, and SB-3) contained detected concentrations of HVOCs, reported on a dry weight basis. The soil sample SB-1D9.5 (at 9.5 feet bgs) detected an estimated 150 μ g/kg of PCE [though is a "J" value which is an estimated value less than the laboratory reporting limit (RL), but greater than or equal to the method detection limit (MDL)]. The soil sample SB-2D6 detected PCE at a concentration of 37,000 μ g/kg, TCE at a concentration of 530 μ g/kg, and an estimated "J" value of 130 μ g/kg of cis-1,2-dichloroethene (cis-1,2-DCE). The soil sample SB-3D7.5 detected PCE at a concentration of 1,800 μ g/kg.

The grab groundwater samples collected from borings SB-1 and SB-6 were analyzed for HVOCs. No HVOCs were detected at or above the laboratory reporting limit (ranging from 0.50 μ g/L to 1.0 μ g/L) in either of the grab groundwater samples collected and analyzed.

Based on the analytical results summarized above, GEI concluded that shallow soil was the primarily impacted media beneath the property. Analytical results from grab groundwater samples indicated that groundwater was not an impacted media concern for the property. In an effort to complete the lateral assessment of soil impact at the property and to further assess the potential for soil vapor intrusion.

GEI conducted an additional subsurface investigation from April 2013 to September 2013; consisting of advancing three additional soil borings (SB-7 through SB-9), resampling the existing sub-slab soil vapor probe, SV-2, and the installation and sampling of one additional soil vapor well (SV-3). This work was previously approved by the SMCEHD in a letter dated 5 March 2013.

The analytical results of GEI's additional investigation detected PCE in four of the nine soil samples analyzed. PCE was detected in samples SB-8 D6.2, SB-8 D8.25, SB-8 D11, and SB-9 D6.5, at dry weight concentrations of 260,000 μ g/kg, 130,000,000 μ g/kg, 14,000 μ g/kg, and 470,000 μ g/kg, respectively. TCE was detected in three of the nine soil samples analyzed. TCE was detected in samples SB-8 D6.2, SB-8 D8.25, and SB-9 D6.5, at dry weight concentrations

of 870 μ g/kg, 2,100 μ g/kg, and 670 μ g/kg, respectively. No other HVOCs were detected in any of the soil samples at or above the laboratory reporting limits.

The single grab groundwater sample collected from boring SB-9 was analyzed for HVOCs and both PCE and TCE were not detected at or above the laboratory reporting limit of $0.50~\mu g/L$. No other HVOCs were detected in the grab groundwater sample at or above the laboratory reporting limits.

The soil vapor sample (SV-2) and duplicate sample (SV-2R) did not detect any HVOCs at or above laboratory reporting limits. The soil vapor sample SV-3 detected PCE and chloroform, both HVOCs, at concentrations of 41 (μ g/m³) and 20 μ g/m³, respectively. The duplicate soil vapor sample (SV- 3R) detected PCE and chloroform at concentrations of 37 μ g/m³ and 19 μ g/m³, respectively.

Based upon the cumulative soil, groundwater, and soil vapor analytical data collected at the property, GEI recommended the removal of significant PCE-impacted soil in the landscaped area between the concrete driveways of Lots 13 and 14, the extent of which should be first determined by additional soil sampling. In order to enhance the degradation of residual PCE in soil, GEI also recommended the use of an appropriate compound to be added to the backfill material used in the lower portion of the excavation. Subsequent to the soil removal and backfill, GEI recommended that the soil vapor probes should be abandoned, and the property granted administrative case closure by SMCEHD.

GEI submitted a *Work Plan for Remedial Investigation* to SMCEHD on 9 January 2015, which proposed advancing at least five additional soil borings for soil sampling and analysis, five soil/soil vapor borings for combined soil and multi-depth soil vapor sampling and analysis, installation of a vapor extraction well, performing a five day vapor extraction/permeability test, development of a site conceptual model (SCM), and the calculation of a proposed site-specific soil cleanup concentration.

At the time of this Phase I ESA, it is unknown whether or not this most recent proposed additional work has been conducted at the property. Despite the documented remedial and environmental monitoring activities, this property currently has documented concentrations of HVOCs in both soil and soil vapor in excess of regulatory ESLs. This property is listed as open for further assessment under the San Mateo County LOP (Case # 889063) and the San Francisco Bay RWQCB and has yet to attain administrative case closure. Due to the open case

status and the upgradient and adjacent proximity to the Site, this property is considered by Langan to be a potential environmental concern to the Site.

Orphan Listings

According to EDR, an orphan listing is a property that cannot be mapped due to poor or inadequate address information. EDR did not identify any orphan listings within applicable search distances to the Site.

4.2 Physical Setting Sources

The physical setting of the Site was evaluated using information provided in the EDR *Radius Map* (Appendix B), topographic maps, and previous environmental and geotechnical reports conducted in the vicinity of the Site.

Topography

According to the United States Geological Survey (USGS) Topographic Maps, reviewed by Langan in EDR's Historical Topographic Map Report, the Site is at an elevation of approximately 457 feet above MSL. The Site is located on the top of a hill, with the northern portion of the Site sloping to the north and the southern portion of the Site sloping gently to the east.

Geology and Hydrogeology

Based on the review of a Geotechnical Investigation, conducted by Earth Investigations Consultants, for the 850 Glenview Drive property and dated 4 August 2013, the geological and hydrogeological conditions expected to underlay the Site are as follows:

The Site is underlain by Franciscan mélange, bedrock that is mantled by undocumented fill and native colluvial soil. The fill consists of medium dense to very dense silty sand, with variable clay and gravel content. It occurs as slivers resting on colluvium in the northern half of the property and directly on bedrock in the east side.

Colluvium separating undocumented fill from the bedrock is up to ten feet thick. The bedrock is mélange with sheared rock containing soft to moderately hard sandstone and serpentinite and very hard silica-carbonate rock. The soils were found to be generally moist to damp. Groundwater was not encountered in the geotechnical borings.

4.3 Surface Water and Flood Plain Conditions

Surface Water

No surface water was observed or detected at the Site at the time of this investigation. However, San Bruno Creek is located approximately 500 feet northeast of the Site and San Andreas Lake is located approximately 1/2-mile south of the Site.

Flood Plain

According to the FEMA Map Service Center, the Site is located within Flood Map 06081C0127E, and classified as Zone D which is an area in which flood hazards are undetermined, but possible.

4.4 Nearby Well Locations

Langan's review of the RWQCB's online GeoTracker website did identify a total of 13 active groundwater monitoring wells (MW-1, MW-2, MW-4 through MW-9, MW-11 through MW-13, RW-2, and RW-4) on-Site, associated with the 2890 San Bruno Avenue West address. However, according to KCE Matrix, Inc.'s *Well Abandonment Letter Report* dated 26 June 2008, all 13 wells were abandoned on 17 June 2008 by via pressure grouting. No wells were identified in the immediate Site vicinity.

4.5 Historical Use Information on the Site, Adjoining Properties, and Surrounding Properties

Sanborn Maps Review

Langan requested Sanborn Fire Insurance Maps (Sanborn Maps) from EDR for the Site and adjoining properties. Sanborn Maps provide information on structures related to building construction and materials that could impact fires, i.e. gasoline tanks, chemical storage, etc. within these structures. EDR informed Langan that the Site is located within an unmapped area and therefore no Sanborn Maps were available for review. Appendix E contains the Sanborn Map report.

Aerial Photograph Review

Langan reviewed aerial photographs to evaluate past uses and relevant characteristics of the Site and surrounding properties. We reviewed the following aerial photographs from EDR: 1943, 1946, 1956, 1968, 1975, 1982, 1993, 1998, 2005, 2006, 2009, 2010, and 2012. Appendix D contains copies of the aerial photographs from EDR.

In the 1943 and 1946 aerial photographs, the Site is comprised entirely of undeveloped land. The surrounding area is vacant, with the exception of Skyline Boulevard running northwest to southeast, and west and south of the Site.

In the 1956 aerial photograph, the Site remains undeveloped, but grading and paving activities of the Site-adjacent Glenview Drive and San Bruno Avenue West are visible. Extensive mixed-use residential and commercial developments are visible north, east, and southeast of the Site. The area south of Skyline Boulevard remains undeveloped.

In the 1968, 1975, and 1982 aerial photographs, the northern portion of the Site appears as it does presently, occupied by a church and an at-grade asphalt paved parking lot. The southern portion of the Site appears to be occupied by two service stations, each associated with the 2880 and 2890 San Bruno Avenue West Site addresses. The surrounding area is occupied by extensive mixed-use residential and commercial developments north, east, and southeast of the Site. Skycrest Shopping Center is located south-southeast adjacent to the Site, on the south side of San Bruno Avenue West. The area south of Skyline Boulevard remains undeveloped.

In the 1993 and 1998 aerial photographs, the southeast portion of the Site associated with the 2880 San Bruno Avenue West address appears vacant. The remaining Site appears unchanged from previous documentation. The surrounding area is as previously documented; a fully developed mixed-use area of San Bruno.

In the 2005 and 2006 aerial photographs, the Site appears as it does presently; the northern portion of the Site is occupied by a church and an at-grade asphalt-paved parking lot, and the southern portion of the Site is vacant undeveloped land. In the 2009 aerial photograph, the previously documented Skycrest Shopping Center has been redeveloped. The shopping center appears as it does presently, with a single large building and associated at-grade asphalt paved parking lot. The southern portion of the former shopping center has been developed into residential housing and encircled by Skycrest Drive.

The remaining aerial photographs from 2010 and 2012, the Site and surrounding area appears relatively unchanged from previous aerial photographs, and appears as it does presently.

Historical Topography Maps Review

Langan reviewed the following Historical Topography Maps from EDR: 1896, 1899, 1915, 1939, 1947, 1949, 1956, 1968, 1980, 1996, 1997, and 2012. Appendix F contains copies of the Historical Topography Maps.

The Site is located on the top of a hill, with the northern portion of the Site sloping to the north and the southern portion of the Site sloping gently to the east. The Site elevation listed in the EDR Radius Map report is approximately 457 feet above MSL.

City Directory Review

Langan reviewed the following City Directory search and abstract obtained from EDR. For each address, the directory lists the name of the corresponding occupant at five year intervals. Business directories including city, cross reference, and telephone directories were reviewed, if available, at approximate five year intervals for the years spanning 1970 through 2013. Appendix G contains a copy of the City Directory Report. Below is a summary of the occupant listings for the Site addresses:

Site Address	Year	Occupant		
	2013			
	2003			
	1999	Peace Lutheran Church of San Bruno		
850 Glenview	1995	reace Lutheran Church of San Bruno		
Drive	1992			
Dilve	1985			
	1980			
	1977	Resurrection Lutheran Church		
	1970			
	2013			
	2008	Unknown		
2880 San Bruno	1999			
Avenue West	1985	D&J Union 76		
	1980	Garabedians Exxon		
	1977	Dons Exxon Service		
	1970	Clark's a Austra		
	1995	Skyline Auto		
	1000	RHB Auto Audio		
0000 0 0	1992	Skyline Auto		
2890 San Bruno	1005	U Haul Co Dealers		
Avenue West	1985	Skyline Mobil Serv		
	1980	Ninous Arco Station 2		
	1977	Mika & Cala DOUELD		
	1970	Mike & Sals RCHFLD		

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The Site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site and then progressing to the adjacent and surrounding properties.

The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

Ms. Karianne Staehlin of Langan performed a Site and vicinity reconnaissance on behalf of Langan on 14 December 2015. Appendix A contains photographs from the Site reconnaissance.

5.2 General Site Setting and Reconnaissance Observations

The Site is located at 2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive in San Bruno, California. The Site is currently occupied by a church, a private residence, an at-grade asphalt paved parking lot, and vacant undeveloped land. The Site is approximately 3.2-acres and is comprised of three assessor parcel numbers (APNs): 019-042-150, 019-042-160, and 019-042-170.

Past Use of Site

No evidence of past use was observed at the Site during the reconnaissance. However, concrete, asphalt, and miscellaneous debris were observed within the southern portion of the Site that may or may not have been associated with both properties' previous use as service stations.

Description of Structures

The northern portion of the Site is occupied by a church, a private residence, and an at-grade asphalt paved parking lot. The building interiors were not accessed during our reconnaissance, but based on observations of the building interiors, it appears that the church is vacant, and the residence is currently occupied. A fence was observed east of the parking lot and running northwest to southeast. East of the fence and south of the private residence, lies a heavily

wooded area, identified as Crestmoor Canyon, which comprises the northeastern portion of the Site. The southern portion of the Site is occupied by vacant undeveloped land. A fence running southwest to northeast separates the northern and southern portions of the Site.

<u>Roads</u>

The Site is bound by San Bruno Avenue West to the south and Glenview Drive to the west; both City of San Bruno right-of-ways.

Storm Drains

Storm drains were not observed at the Site at the time of our reconnaissance.

5.3 Site Observations

Hazardous Substances and Petroleum Products in Connection with Identified Uses

Langan did not observe hazardous substances or petroleum products in connection with identified uses at the Site during the reconnaissance.

<u>Hazardous Substances and Petroleum Products Containers in Connection with Unidentified</u> Uses

Langan did not observe hazardous substances or petroleum products in connection with unidentified uses at the Site during the reconnaissance.

Storage Tanks

Langan did not observe storage tanks at the Site during the reconnaissance.

<u>Odors</u>

Langan did not observe any noxious odors at the Site during the reconnaissance.

Pools of Liquids

Langan did not observe pools of liquid at the Site during the reconnaissance.

Drums

Langan did not observe drums at the Site during the reconnaissance.

<u>PCBs</u>

Langan did not observe any equipment, materials, or products that may contain PCBs at the Site during the reconnaissance.

Pits, Ponds, or Lagoons

Langan did not observe any pits, ponds, or lagoons at the Site during the reconnaissance.

Stained Soil or Pavement

Langan observed minor oil stains on the asphalt parking surfaces during the Site reconnaissance. It is Langan's opinion that these minor paved surface oil stains are a *de minimis* condition, and do not represent a significant concern.

Stressed Vegetation

Langan did not observe stressed vegetation at the Site during the reconnaissance.

Solid Waste

Langan did not observe solid waste in the form of trash or debris at the Site during the reconnaissance.

Wastewater

Langan did not observe wastewater discharges at the Site during the reconnaissance.

<u>Wells</u>

Langan did not observe any wells at the Site during the reconnaissance.

Septic Systems

Langan did not observe septic systems at the Site during the reconnaissance.

<u>Utilities</u>

Standard electric, sewer, water, and irrigation utility boxes were observed within the Site's south and west sidewalks during the reconnaissance.

6.0 INTERVIEWS

6.1 Subject Site User

For the Phase I ESA, Langan was introduced to and interviewed the User of this report as defined in ASTM 1527-13 represented as knowledgeable of land usage and operations at the Site. The object of the interviews is to obtain information indicating recognized environmental conditions (RECs) in connection with the Site and to provide further details regarding historical use of the Site.

Mr. Ricky Cheng of Wealth Garden San Bruno, LLC, representing the Client, stated that he has no actual knowledge that the purchase price of the Site was below the fair market value due to environmental conditions. Mr. Cheng stated that he has no actual knowledge of any environmental liens or Activity and Use Limitations encumbering the Site or in connection with the Site and that he was not aware of any current government notifications, violations of environmental laws, or litigation at the Site.

6.2 Owners/Tenants of Current and Adjacent Properties

Owners/tenants of current and adjacent properties were not available for interview as part of this Phase I ESA.

7.0 ADDITIONAL SERVICES

Additional services contracted for between the Client and Langan beyond that listed in Section 2.2 are outlined below.

7.1 Vapor Encroachment Screen

Per our proposal dated 13 November 2015, an evaluation of potential vapor encroachment conditions is included. Vapor intrusion is defined as the migration of volatile chemicals from the subsurface into overlying buildings. Our assessment for potential vapor encroachment conditions (VEC) at the Site and surrounding properties was performed in general accordance with ASTM E2600-10.

Sites within 1/10th of a mile from the Properties with current or historic known releases of petroleum hydrocarbons were evaluated as part of the vapor encroachment survey. Within 1/3rd of a mile of the Properties, sites with known or historic releases of other volatile chemicals were evaluated. Langan reviewed EDR's Radius Map Report with GeoCheck and the VEC Application to evaluate potential vapor intrusion from the Site and surrounding properties meeting the above criteria.

Site (2880 and 2890 San Bruno Avenue West, and 850 Glenview Drive)

2880 San Bruno Avenue West – This address was listed in the following databases searched by EDR: HIST CORTESE, HIST UST, LUST, RGA LUST, San Mateo Co. BI, and SWEEPS UST. Additionally, this address is listed as completed – case closed under the San Mateo County local oversight program (LOP) (case #:880027) and the San Francisco Bay RWQCB (case #:41-0549). This address is presently comprised of vacant undeveloped land, but has a history of

petroleum hydrocarbon soil contamination from its past use as an automotive service station. Due to residual contamination likely remaining in soil at this portion of the Site, a VEC likely exists.

2890 San Bruno Avenue West – This address was listed in the following databases searched by EDR: CA FID UST, HAZNET, HIST CORTESE, HIST UST, LUST, RGA LUST, San Mateo Co. BI, and SWEEPS UST. Additionally, this address is listed as completed – case closed under the San Mateo County LOP (case #:880033) and the San Francisco Bay RWQCB (case #:41-0790). This address is presently comprised of vacant undeveloped land, but has a history of petroleum hydrocarbon soil contamination from its past use as an automotive service station. Due to residual contamination likely remaining in soil at this portion of the Site, a VEC likely exists.

Neighboring Properties

2901 San Bruno Avenue West – This property, located approximately 87 feet (0.016 miles) south and upgradient to crossgradient of the Site, was identified in the following databases searched by EDR: CA FID UST, EDR US Hist Auto Stat, HIST UST, San Mateo Co. BI, and SWEEPS UST. Recent listings in the City Directory identify this property as the Crestmoor Auto Center, a gasoline and service station, with four permitted underground storage tanks (USTs); two 10,000-gallon gasoline USTs, one 10,000-gallon diesel UST, and one 550-gallon waste oil UST. Since this property has no documented history of any spills, leaks, and/or unauthorized releases to the environment, a VEC can be ruled out.

118 Skycrest Shopping Center – This former facility, located approximately 447 feet (0.085 miles) south-southeast and upgradient to crossgradient of the Site, was identified in the following databases searched by EDR: DRYCLEANERS, EDR US Hist Cleaners, EMI, LUST, San Mateo Co. BI, and SLIC. Recent listings in the City Directory identify this property as the former Crest Cleaners that was located in the former Skycrest Shopping Center. Presently, the former facility is occupied by Skycrest Village, a residential community. Additionally, this former facility is listed as open for further assessment under the San Mateo County LOP (Case # 889063) and the San Francisco Bay RWQCB. Due to the open case status of this property, its history of soil and groundwater contamination, and the upgradient proximity to the Site, a VEC cannot be ruled out.

Properties evaluated for VECs are included in Appendix E Vapor Encroachment Screen produced using the EDR VEC Application.

Based on the EDR radius Map Report and the VEC application, Langan identified the following properties as potential sources of vapor encroachment to the Site:

- 2880 San Bruno Avenue West;
- 2890 San Bruno Avenue West; and
- 118 Skycrest Shopping Center.

It is common for dry cleaners during this period to have discharged hazardous substances to the subsurface environment. Based on the age dry cleaner operations, lack of information regarding potential releases, and upgradient locations relative to the Properties, potential releases cannot be ruled out. Properties evaluated for VECs are included in Appendix H *Vapor Encroachment Screen* produced using the EDR VEC Application.

8.0 PHASE I ESA FINDINGS AND CONCLUSION

Two of the Site's three street addresses were identified in the databases searched by EDR of Milford, Connecticut. Online databases operated by the DTSC and RWQCB were researched and inquiries were made at the SMCEHD regarding any additional files related to any fuel and hazardous materials leaks reported at the Site. Below is a summary of our findings.

Based on the databases searched by EDR, requests made for public documentation related to past or present environmental conditions at the Site and surrounding area, review of previous investigation reports for the Site and surrounding area, and our Site reconnaissance, Langan has identified three RECs associated with the Site during this Phase I ESA.

The following RECs were identified:

REC 1 – Petroleum Hydrocarbons Present within the Site Subsurface

2880 San Bruno Avenue West

This address has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials. In August 1992, the property was occupied by D&J Union 76 and was listed as a LUST Cleanup Site. According to the case closure letter, five USTs have been removed from the property. The five former USTs included the following:

one 10,000-gallon gasoline UST, two 5,000-gallon gasoline USTs, one 3,000-gallon diesel UST, and one 500-gallon waste oil UST.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 23 May 2002.

Despite the removal of the property's former USTs and subsequent case closure granted in a SMCEHD letter dated 23 May 2002, this address/property comprises a portion of the Site and administrative and/or regulatory documentation indicates that residual contamination is likely still present within the subsurface, and therefore represents a REC for the Site.

2890 San Bruno Ave West

This address has a history of being operated as an automotive service station, which is commonly associated with generating and storing quantities of petroleum hydrocarbons and hazardous materials. In June 1993, while the property was occupied by Skyline Mobil, the property was listed as a LUST Cleanup Site. According to the case closure letter, five USTs have been removed from the property. Five former USTs included the following: two 8,000-gallon gasoline USTs and one 6,000-gallon diesel UST, removed in March 1994; one 250-gallon waste oil UST, removed in March 1995; and one 4,000-gallon UST of unknown contents, removed in April 2006.

Between June 1993 and June 2006, multiple subsurface investigations including soil, groundwater, and soil vapor sampling and analysis have been conducted by various consulting companies. Based on the reviewed documentation, summarized in KCE Matrix, Inc.'s 2007 report, low levels of petroleum hydrocarbons and VOCs were detected in soil, but the primary affected media on the Site property was groundwater and soil vapor. Between March 1995 and July 2006, approximately 867 cubic yards of soil material was excavated, stockpiled, and disposed off-Site.

Between June 1993 and June 2006, multiple groundwater monitoring and sampling events have occurred, in addition to groundwater remediation activities consisting of insitu chemical oxidation injection/extraction wells. In August 2002, 2,550 gallons of groundwater was pumped, stored, and disposed off-Site. Between December 2002 and July 2006, during four separate events, an unknown volume of groundwater was treated through in-situ chemical oxidation injection/extraction wells.

Based on the documented removal of the property's former USTs, the subsequent subsurface investigations, and remedial activities, the property received administrative case closure in a SMCEHD letter dated 14 July 2008. Despite the property's remedial activities and closure status, this address/property comprises a portion of the Site and the presence of residual petroleum hydrocarbons and petroleum hydrocarbon-related VOCs and SVOCs in soil, groundwater, and soil vapor represents a REC for the Site.

Based on the Site reconnaissance conducted by Langan as part of this Phase I ESA and the Site history, the following *de minimis* condition was identified in association with both the current and historical use of the Site:

During the Site reconnaissance, Langan observed minor oil stains on the asphalt parking surfaces. It is Langan's opinion that these minor paved surface oil stains are a *de minimis* condition, and do not represent a significant concern.

Due to the findings of this Phase I ESA and the above identified RECs, if excavation or a change in land use is proposed, it is recommended that soil vapor sampling, a Site mitigation, and health and safety plans (SMPs and HASPs) be required before construction commences, including the direct handling of soil and/or groundwater.

8.1 Data Gaps

The Site history could not be researched in five-year intervals because of a lack of readily available information. It is Langan's opinion that this variation from the ASTM standard does not significantly affect the results of this Phase I ESA or the ability to assess the presence of a REC at the Site, because land use did not change frequently enough to warrant a five year interval Site history evaluation.

9.0 DEVIATIONS

This Phase I ESA has been performed without deviation to, and in conformance with, ASTM Practice E 1527-05 and E1527-13 (Standard Practice for ESA: Phase I ESA Process) except as noted. No expressed or implied representation or warranty is included or intended in the report, except that the services were performed within the limits prescribed by the Client, and with the customary thoroughness and competence of our profession.

10.0 ADDITIONAL SERVICES

The scope of services performed for this study did not include the following non-ASTM required Phase I ESA items: radon, asbestos containing materials (ACM), lead-based paint (LBP), lead in drinking water, polychlorinated biphenyl (PCB)-containing material, wetlands, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, mold, indoor air quality, and biological agents.

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

The signatures of the environmental professional(s) responsible for this Phase I ESA are provided on the submittal letter and/or cover page of this report.

12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

The qualifications of the environmental professionals that conducted this ESA are presented in the resumes provided in Appendix I. Langan declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in #312.10 of 40 CFR 312. Langan has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Langan has developed and performed the all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312.

Phase I Environmental Site Assessment

2880 and 2890 San Bruno Avenue, and 850 Glenview Drive

San Bruno, California

Langan Project No. 731674701

Dear Mr. Cheng:

Langan Treadwell Rollo is pleased at the opportunity to conduct a Phase I Environmental Site Assessment (ESA) for the property located at 2880 and 2890 San Bruno Avenue, and 850 Glenview Drive (Site) in San Bruno, California. To provide a more comprehensive assessment, we request Phase I ESA clients to provide the information listed below. Please indicate if you have knowledge of such information and return this letter to us by email or fax. Please also send us any such documentation you may have regarding this information.

PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Page Number: 2

Dated as of June 16, 2015 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

To Be Determined

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

WEALTH GARDEN SAN BRUNO, LLC

The estate or interest in the land hereinafter described or referred to covered by this Report is:

Fee simple.

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

- 1. General and special taxes and assessments for the fiscal year 2015-2016, a lien not yet due or payable.
- 2. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.
- 3. Rights of parties in possession.

Prior to the issuance of any policy of title insurance, the Company will require:

Page Number: 3

- 4. With respect to Wealth Garden San Bruno, LLC, a limited liability company:
 - a. A copy of its operating agreement and any amendments thereto;
 - b. If it is a California limited liability company, that a certified copy of its articles of organization (LLC-1) and any certificate of correction (LLC-11), certificate of amendment (LLC-2), or restatement of articles of organization (LLC-10) be recorded in the public records;
 - c. If it is a foreign limited liability company, that a certified copy of its application for registration (LLC-5) be recorded in the public records;
 - d. With respect to any deed, deed of trust, lease, subordination agreement or other document or instrument executed by such limited liability company and presented for recordation by the Company or upon which the Company is asked to rely, that such document or instrument be executed in accordance with one of the following, as appropriate:
 - (i) If the limited liability company properly operates through officers appointed or elected pursuant to the terms of a written operating agreement, such document must be executed by at least two duly elected or appointed officers, as follows: the chairman of the board, the president or any vice president, and any secretary, assistant secretary, the chief financial officer or any assistant treasurer;
 - (ii) If the limited liability company properly operates through a manager or managers identified in the articles of organization and/or duly elected pursuant to the terms of a written operating agreement, such document must be executed by at least two such managers or by one manager if the limited liability company properly operates with the existence of only one manager.

 e. Other requirements which the Company may impose following its review of the material
 - e. Other requirements which the Company may impose following its review of the materia required herein and other information which the Company may require

The Following Matters Affect Tracts A and B:

5. An easement for Public Utilities and incidental purposes, recorded June 25, 1959 as Book 3626, Page 62 of Official Records.

In Favor of: Pacific Gas and Electric Company, a California corporation and

Pacific Telephone and Telegraph Co., a California Corporation

Affects: The northwesterly 10 feet of Tract B

6. The terms and provisions contained in the document entitled "Categorical Exemption Analysis" recorded August 28, 1984 as Instrument No. 1984-095418 of Official Records.

(Affects Tract A)

7. The condition that the property shall be used for the sole purpose of providing, construction and maintaining Affordable Housing, as more fully defined therein, and upon the terms, covenants and conditions in that certain document recorded December 20, 2007 as Instrument No. 2007178144 of Official Records.

Note: A written consent or waiver may be necessary from the public agency for any sale or refinance.

8. Water rights, claims or title to water, whether or not shown by the public records.

The Following Matters Affect Tract C:

9. An easement shown or dedicated on the Map as referred to in the legal description For: Public utility easement and incidental purposes.

Page Number: 4

10. Covenants, conditions, restrictions and easements in the document recorded July 17, 1958 as Instrument No. 58603-Q, in Book/Reel 3425, Page/Image 409 of Official Records, which provide that a violation thereof shall not defeat or render invalid the lien of any first mortgage or deed of trust made in good faith and for value, but deleting any covenant, condition, or restriction indicating a preference, limitation or discrimination based on race, color, religion, sex, sexual orientation, familial status, disability, handicap, national origin, genetic information, gender, gender identity, gender expression, source of income (as defined in California Government Code § 12955(p)) or ancestry, to the extent such covenants, conditions or restrictions violation 42 U.S.C. § 3604(c) or California Government Code § 12955. Lawful restrictions under state and federal law on the age of occupants in senior housing or housing for older persons shall not be construed as restrictions based on familial status.

11. An easement for poles and wires and incidental purposes, recorded June 25, 1959 as Instrument No. 62082-R, in Book 3626, Page 62 of Official Records.

In Favor of: Consolidated Lands Incorporated, a California corporation

Affects: Portion of Lot 16

12. The terms and provisions contained in the document entitled "Notice of Merger" recorded December 3, 1984 as Instrument No. 84129513 of Official Records.

13. An easement for public utility and incidental purposes, recorded March 9, 1990 as Instrument No. 1990-32508 of Official Records.

In Favor of: Pacific Gas and Electric Company, a California corporation, and

Pacific Bell, a California corporation

Affects: As described therein

14. The fact that the land lies within the boundaries of the San Bruno Redevelopment Project Area, as disclosed by various documents of record.

Page Number: 5

INFORMATIONAL NOTES

Note: The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

NOTICE

Section 12413.1 of the California Insurance Code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more, please use wire transfer, cashier's checks, or certified checks whenever possible.

EXHIBIT A LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (02-03-10) EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

- 1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
 - (a) building; (d) improvements on the Land;

(b) zoning;(c) land division; and(d) land use;(e) land division; and(f) environmental protection.

This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.

- 2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
- 3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
- 4. Risks:
 - (a) that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
 - (b) that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
 - (c) that result in no loss to You; or
 - (d) that first occur after the Policy Date this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
- 5. Failure to pay value for Your Title.
- 6. Lack of a right:
 - (a) to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
 - (b) in streets, alleys, or waterways that touch the Land.
 - This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
- 7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows: For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

Your Deductible Amount	Our Maximum Dollar Limit of Liability	
	Littit of Liability	
Covered Risk 16: 1% of Policy Amount or \$2,500.00 (whichever is less)	\$10,000.00	
Covered Risk 18: 1% of Policy Amount or \$5,000.00 (whichever is less)	\$25,000.00	
Covered Risk 19: 1% of Policy Amount or \$5,000.00 (whichever is less)	\$25,000.00	
Covered Risk 21: 1% of Policy Amount or \$2,500.00 (whichever is less)	\$5,000.00	

ALTA RESIDENTIAL TITLE INSURANCE POLICY (6-1-87) EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

- Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
 - (a) and use
 - (b) improvements on the land
 - (c) and division
 - (d) environmental protection

This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.

This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.

2. The right to take the land by condemning it, unless:

Page Number: 13

- (a) a notice of exercising the right appears in the public records on the Policy Date
- (b) the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking
- Title Risks:
 - (a) that are created, allowed, or agreed to by you
 - (b) that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
 - (c) that result in no loss to you
 - (d) that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
- 4. Failure to pay value for your title.
- 5. Lack of a right:
 - (a) to any land outside the area specifically described and referred to in Item 3 of Schedule A OR
 - (b) in streets, alleys, or waterways that touch your land

This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

2006 ALTA LOAN POLICY (06-17-06) EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

- 1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
- 2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
- 3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
- 4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
- 5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
- 6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
- Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

- (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real
 property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such
 proceedings, whether or not shown by the records of such agency or by the Public Records.
- 2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
- 3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

Page Number: 14

4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

- 5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
- 6. Any lien or right to a lien for services, labor or material not shown by the public records.

2006 ALTA OWNER'S POLICY (06-17-06) EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

- 1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
- Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
- 3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 or 10); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
- 4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
- Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

- (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real
 property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such
 proceedings, whether or not shown by the records of such agency or by the Public Records.
- 2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
- 3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
- 4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
- 5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
- 6. Any lien or right to a lien for services, labor or material not shown by the public records.

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10) EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

Page Number: 15

- 1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.

- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
- 2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
- 3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
- 4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
- 5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
- 6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
- 7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
- 8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
- 9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.

Privacy Information

We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our subsidiaries we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability

This Privacy Policy governs our use of the information that you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values.

Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

Information we receive from you on applications forms and in other compunications to us whether in writing its constant of the compunications to us whether in writing its constant of the compunications to us whether in writing its constant of the compunications.

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

Information Obtained Through Our Web Site

First American Financial Corporation is sensitive to privacy issues on the Internet. We believe it is important you know how we treat the information about you we receive on the Internet.

In general, you can visit First American or its affiliates' Web sites on the World Wide Web without telling us who you are or revealing any information about yourself. Our Web servers collect the domain names, not the e-mail addresses, of visitors. This information is aggregated to measure the number of visits, average time spent on the site, pages viewed and similar information. First

American uses this information to measure the use of our site and to develop ideas to improve the content of our site.

There are times, however, when we may need information from you, such as your name and email address. When information is needed, we will use our best efforts to let you know at the time of collection how we will use the personal information. Usually, the personal information we collect is used only by us to respond to your inquiry, process an order or allow you to access specific account/profile information. If you choose to share any personal information with us, we will only use it in accordance with the policies outlined above.

First American Financial Corporation's site and its affiliates' sites may contain links to other Web sites. While we try to link only to sites that share our high standards and respect for privacy, we are not responsible for the content or the privacy practices employed by other sites.

Cookies

Some of First American's Web sites may make use of "cookie" technology to measure site activity and to customize information to your personal tastes. A cookie is an element of data that a Web site can send to your browser, which may then store the cookie on your hard drive.

FirstAm.com uses stored cookies. The goal of this technology is to better serve you when visiting our site, save you time when you are here and to provide you with a more meaningful and productive Web site experience.

Fair Information Values

Fairness We consider consumer expectations about their privacy in all our businesses. We only offer products and services that assure a favorable balance between consumer benefits and consumer

Public Record We believe that an open public record creates significant value for society, enhances consumer choice and creates consumer opportunity. We actively support an open public record and emphasize its importance and contribution to our economy. Use We believe we should behave responsibly when we use information about a consumer in our business. We will obey the laws governing the collection, use and dissemination of data

Accuracy We will take reasonable steps to help assure the accuracy of the data we collect, use and disseminate. Where possible, we will take reasonable steps to correct inaccurate information. When, as with the public record, we cannot correct inaccurate information, we will take all reasonable steps to assist consumers in identifying the source of the erroneous data so that the consumer can secure the required corrections.

Education We endeavor to educate the users of our products and services, our employees and others in our industry about the importance of consumer privacy. We will instruct our employees on our fair information values and on the responsible collection and use of data. We will encourage others in our industry to collect and use information in a responsible manner. Security We will maintain appropriate facilities and systems to protect against unauthorized access to and corruption of the data we maintain.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2015 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 10/21/2015 has revealed that there are 8

LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
Not reported	2901 SAN BRUNO AVE	S 0 - 1/8 (0.016 mi.)	B21	26

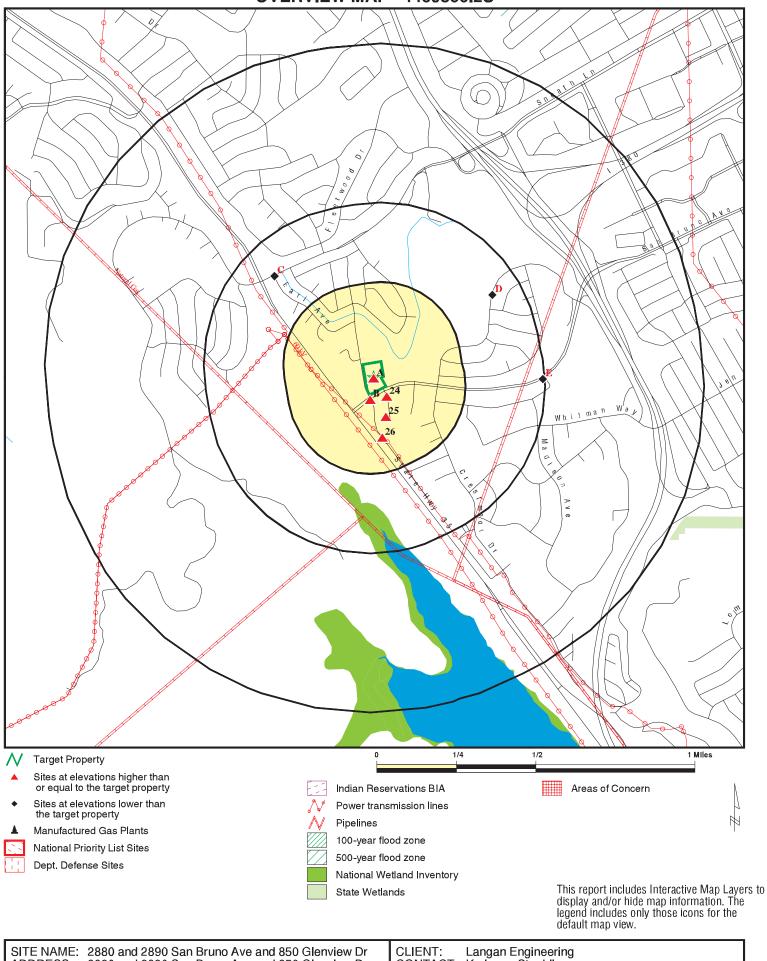

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within approximately 0.125 miles of the target property.

Potential Media Affect: Aquifer used for drinking water supply

Potential Contaminants of Concern: Gasoline

Site History:

Extracted from CRA's November 6, 2009 Work Plan for Offsite Investigation, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is an active Chevron service station located on the southern corner of the intersection of West San Bruno Avenue and Shelter Creek Lane in San Bruno, California. The existing fuel storage and dispensing facilities, installed in 1997, consist of three 12,000-gallon gasoline underground gasoline storage tanks (USTs) connected to four dispenser islands by underground piping (Figure 2). In 1997, the used-oil UST and hydraulic hoists were removed from the site and not replaced. 1986 Boring C-1: In November 1986, EMCON Associates (EMCON) drilled boring C-1 to evaluate the extent of unleaded fuel released from a product line in October 1986. No hydrocarbons were detected in collected soil samples. The work is summarized in EMCONs December 17, 1986 report. 1988 Soil Vapor Survey: In December 1988, Western Geologic Resources (WGR) collected 23 subsurface soil vapor samples between 5 and 15 feet below grade (fbg). Total volatile hydrocarbons and benzene concentrations up to 20,000 and 320 parts per million, respectively, were reported. Details are in the WGR February 28, 1989 report. 1989 and 1990 Borings and Monitoring Wells: In March 1989, WGR drilled borings B-1 through B-10 and collected soil samples from each boring. No total purgeable petroleum hydrocarbons (TPPH) were detected in any soil samples. Benzene was detected in B-6, B-8, B-9, and B-10 at concentrations ranging from 0.003 to 0.044 milligrams per kilogram (mg/kg). Methyl tertiary butyl ether (MTBE) was not analyzed. In March 1990, WGR drilled borings B-11 and B-12. Boring B-11 was terminated due to a subsurface obstacle. Boring B-12 was drilled adjacent to the former used-oil underground storage tank (UST) pit to 80 fbg. No TPPH, benzene, toluene, ethylbenzene, xylenes (BTEX), or total oil and grease (TOG) were detected in soil from boring B-12. Borings B-1 and B-12 were converted to monitoring wells MW-1 and MW-2, respectively. No hydrocarbons were detected in the grab-groundwater samples collected from the wells on March 12, 1990. 1997 Tank and Line Replacement: In July 1997, Gettler-Ryan Inc. (G-R) removed two 10,000-gallon and one 6,000-gallon fiberglass gasoline USTs, one 1,000-gallon used-oil UST, three hoists, a hoist tank, three dispenser islands, and the underground piping. Six soil samples were collected at 16 fbg from native soil beneath each end of the former gasoline USTs. Hydrocarbons were detected at concentrations up to 680 mg/kg total petroleum hydrocarbons as gasoline (TPHg), 0.065 mg/kg benzene, and 4 mg/kg MTBE. Five soil samples were collected at 3 fbg from native soil beneath the product lines. Due to elevated concentrations of 6,700 mg/kg TPHg, 60 mg/kg benzene, and 250 mg/kg MTBE detected in PL4-3, G-R over-excavated soil surrounding the northeast dispenser island to approximately 12 fbg. Confirmation soil sample PL4-12 was collected at the base of the excavation, and confirmation samples PL6-12 and PL7-12 were collected from the northern and southern sidewalls of the excavation. No benzene or MTBE

S109285480

were detected in the samples, and TPHg was detected in PL4-12 and PL7-12 at 2.1 mg/kg, confirming the impacted soil was successfully over-excavated. The soil sample collected from native soil beneath the former used-oil UST contained 2,100 mg/kg TPH as diesel (TPHd), 640 mg/kg TPHg, 3.1 mg/kg benzene, and no MTBE. Samples collected beneath the four hydraulic hoists were only analyzed for hydraulic oil. Hydraulic oil concentrations detected in the four samples ranged from 17 to 4,800 mg/kg. G-R then constructed four new dispenser islands, installed three new 12,000-gallon double-walled gasoline USTs, and developed and sampled well MW-1. The 182 cubic yards of soil excavated from the northeast dispenser island, hoist, and used-oil UST were profiled and transported to the BFI landfill in Livermore, California and Redwood landfill in Novato, California. In September 1997, a groundwater sample collected from well MW-1 contained no hydrocarbons. No sample was collected from well MW-2 because it could not be located. 1999 Hydrocarbon Extent Estimation: The Cambria Environmental Technology Inc (Cambria) December 9, 1999 letter estimated that the lateral extent of hydrocarbon-bearing soil exceeding 100 mg/kg TPHd and TPHg. The petroleum hydrocarbons were believed to be limited to the former used-oil tank cavity and the northeast end of the former fuel tank cavity. 2001 Attempt to Locate Well MW-2: On June 22, 2001, Cambria contracted NORCAL to locate well MW-2 using a metal detector and ground penetrating radar (GPR). However, well MW-2 could not be located. Additional details are provided in Cambrias June 7, 2001 Locate and Sample MW-2 Letter. 2001 Borings: In January 2001, Cambria drilled and sampled soil borings B-13 through B-16 to assess soil and groundwater conditions near the former gasoline and used-oil USTs and former dispensing facilities. Soil samples were collected at approximately 21 and 50 fbg from each boring. No TPHg or BTEX were detected. MTBE was only detected at 50.5 fbg from boring B-16 at 0.28 mg/kg. Grab-groundwater samples were also collected from each of the borings. TPHg and benzene were only detected in boring B-16, located in the former gasoline UST pit, at 99 micrograms per liter (%g/L) and 1.4 %g/L, respectively. MTBE was detected in borings B-15 and B-16 at 730 %g/L and 37 %g/L, respectively. Soil and groundwater from boring B-13, located adjacent to the former used-oil UST were additionally analyzed for TPHd and TPH as motor oil (TPHmo), however, neither were detected. 2002 Vapor Boring VSB-1: In November 2002, Cambria installed and sampled vapor boring VSB-1 to evaluate soil vapor concentrations in support of closure. The highest concentrations of 4.1 micrograms per cubic meter (%g/m3) benzene and 11 %g/m3 toluene were detected at 3.5 fbg. 2004 Monitoring Wells MW-3 and MW-4: In December 2003, Cambria installed groundwater monitoring wells MW-3 and MW-4 to further define the extent of MTBE in groundwater. MTBE was detected in boring MW-3 vadose zone soil at 0.003 mg/kg and 0.005 mg/kg. MTBE was detected in boring MW-4 at 50, 60, and 70 fbg at 0.001 mg/kg, 0.003 mg/kg, and 0.15 mg/kg, respectively. MTBE was only detected in groundwater well MW-4 at 1,000 %g/L. Tertiary amyl methyl ether (TAME), tertiary butyl alcohol (TBA), and 1,2-dichloroethane (1,2-DCA) were also detected in groundwater from well MW-4 at 0.6 gg/L, 34 gg/L, and 20 gg/L, respectively.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

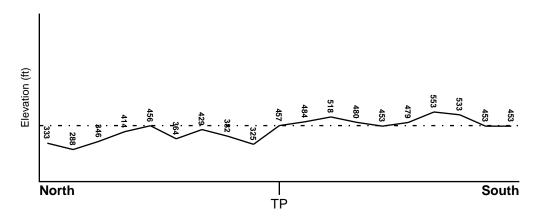

TOPOGRAPHIC INFORMATION

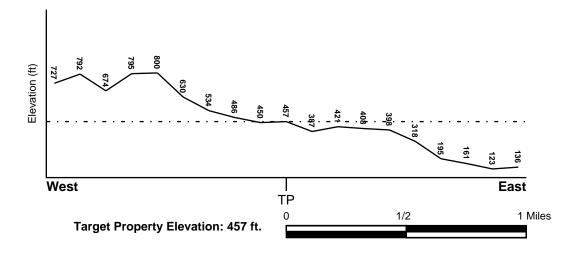

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

MONTARA MOUNTAIN

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
A1	0 - 1/8 Mile South	SE
A2	0 - 1/8 Mile South	NNE
B3	1/4 - 1/2 Mile ENE	E
B4	1/4 - 1/2 Mile NE	NE
5	1/2 - 1 Mile NNE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

> 0 inches

water table, or are shallow to an impervious layer.

Soil Drainage Class: Hydric Status: Not hydric

Depth to Watertable Min:

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING. WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2015 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc. or its affiliates is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

<u>Year</u>	Target Street	Cross Street	<u>Source</u>
2013	$\overline{\checkmark}$		Cole Information Services
2008	$\overline{\checkmark}$		Cole Information Services
2003	$\overline{\checkmark}$		Cole Information Services

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

The EDR Vapor Encroachment Worksheet enables EDR's customers to make certain online modifications that effects maps, text and calculations contained in this Report. As a result, maps, text and calculations contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. Environmental Data Resources shall not be responsible for any customer's decision to include or not include in any final report any records determined to be within the relevant minimum search distances.

This report contains information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANYSUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES.ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this report "AS IS". Any analyses, estimates, ratings, or risk codes provided in this report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assesment performed by an environmental professional can produce information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2016 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information									
	Boui	ndary		Classif	ication	Saturated hydraulic				
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)			
1	0 inches	5 inches	Not Reported	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:			

Soil Map ID: 2

Soil Component Name: Candlestick

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 36 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information									
	Bou	ındary		Classi	fication	Saturated hydraulic	ic tivity Soil Reaction (pH)		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec			
1	0 inches	1 inches	fine sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 5.6		
2	1 inches	20 inches	loam	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 5.6		
3	20 inches	24 inches	sandy clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1		
4	24 inches	27 inches	Not Reported	Not reported	Not reported	Max: Min:	Max: Min:		

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information

Number of Days to Update: 3 Telephone: 202-564-6023

Last EDR Contact :11/13/2015

RMP: Risk Management Plans

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

DEED: Deed Restriction Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 09/08/2015 Source: DTSC and SWRCB Number of Days to Update: 34 Telephone: 916-323-3400

ENVIROSTOR: EnviroStor Database

Standard Environmental Record Source: State and tribal - equivalent CERCLIS

Search Distance: 0.333 Mile

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

HAZNET: Facility and Manifest Data

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 04/22/2013 Source: Environmental Protection Agency

Number of Days to Update: 6 Telephone: 703-308-4044

Last EDR Contact :08/28/2015

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

FUDS: Formerly Used Defense Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 01/31/2015 Source: U.S. Army Corps of Engineers

Number of Days to Update: 97 Telephone: 202-528-4285

Last EDR Contact :09/11/2015

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Source: Environmental Protection Agency

Number of Days to Update: 40 Telephone: 202-564-2501

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX I RESUMES OF ENVIRONMENTAL PROFESSIONALS

Karianne Staehlin

Staff Scientist Environmental Engineering

Ms. Staehlin has experience working on environmental projects in California. She attended the University of Nevada, Reno and received a Bachelor's of Science degree in Environmental Science with a minor in Forest and Rangeland Management. In May 2014, she received a Master of Science degree in Environmental Management from the University of San Francisco's MSEM Professional Program.

Ms. Staehlin specializes in Phase I and Phase II Site Assessments, Environmental Site Characterizations, and managing an array of field investigation activities. Activities include but are not limited to site plan development, oversight, vapor gas sampling, soil and groundwater sampling, dust monitoring, soil and groundwater monitoring, cost estimates for site remediation and land use redevelopment, and risk assessment

GEOTECHNICAL - ENVIRONMENTAL - MATERIALS

Project No. S1838-03-01 October 29, 2019 Revised January 17, 2020

Nick Pappani Vice President Raney Planning and Management 1501 Sports Drive Sacramento, California 95834

Subject: GLENVIEW TERRACE

SOIL VAPOR SURVEY

2880 AND 2890 SAN BRUNO AVENUE WEST AND 850 GLENVIEW DRIVE

SAN BRUNO, CALIFORNIA

Mr. Pappani:

In accordance with your request and our Proposal No. LS-19-266, dated July 30, 2019, we have performed a soil vapor survey (SVS) at the property at 2880 and 2890 San Bruno Avenue West and 850 Glenview Drive (the Site) in San Bruno, California. Raney Planning and Management (Raney, the Client) requested the SVS to assess the Site for contaminants of concern (COCs) in soil vapor related to the former operation of automobile service stations on the Site and an offsite former dry cleaners prior to planned redevelopment of the Site for residential use.

This report provides background information related to the past service station operation on the Site, states the purpose and objectives of the SVS, describes the field sampling activities and laboratory analyses, presents the results of laboratory analysis of soil vapor samples for COCs, and provides conclusions and recommendations for the Site based on our findings.

BACKGROUND

The 3.28-acre Site is located adjacent to the northeast of the intersection of San Bruno Avenue and Glenview Drive and approximately 400 feet northeast of Skyline Boulevard in San Bruno. The Site was previously developed with gas stations on the 2880 and 2890 West San Bruno Avenue site parcels and a church on Glenview Drive. The Site is planned to be developed with 29 single-family homes. U.S.A GUOFU Investment, Inc. is listed as the site developer on the City of San Bruno Planning Division's website.

Langan Treadwell Rollo (Langan) performed a Phase I Environmental Site Assessment (ESA) of the Site in 2016 and identified the two former service stations on the Site as *Recognized Environmental Conditions* (RECs) due to releases from former underground storage tanks (UST) on both parcels. The regulatory cases for the releases at both gas stations were closed because criteria under the State Water Resources Control Board's (SWRCB) 2012 *Low-Threat Underground Storage Tank Case Closure Policy* (LTCP) were met. However, Langan recommended "soil vapor sampling" prior to construction to assess soil vapor for residual COCs. The SVS described herein was performed to satisfy that recommendation.

Additionally, Langan identified the former Crest Cleaners dry cleaning facility approximately 500 feet south of the Site as a "potential environmental concern" because of the presence of volatile organic compounds (VOCs) including tetrachloroethylene (PCE) and trichloroethylene (TCE) in soil and soil vapor there. Although, data for that facility suggest that those VOCs are not likely to extend to the Site, the SVS assessed the potential presence of those VOCs in soil vapor at the Site as well.

PURPOSE AND OBJECTIVE

The purpose of the SVS was to assess the potential presence of COCs in soil vapor on the Site related to unauthorized releases of petroleum products at the former gas stations on the Site and dry cleaning chemicals at the former dry cleaners south of the Site. If COCs were found to be present, we would determine if their concentrations pose a threat to human health - specifically that of future site residents at the planned Glenview Terrace single-family residential development. The objective of the SVS was to collect representative soil vapor samples throughout the Site and have them analyzed for the COCs.

SCOPE OF SERVICES

The SVS included the following tasks:

- Task 1 Pre-field activities: health and safety planning, underground utilities clearance, and subcontractor procurement;
- Task 2 Field activities: soil vapor sample collection;
- Task 3 Laboratory analysis of soil vapor samples; and
- Task 4 Preparation of this SVS report.

Following are descriptions of each of these tasks.

Task 1 - Pre-field Activities

Prior to conducting the SVS, we prepared a site-specific health and safety plan (HSP), marked and cleared excavation locations for underground utilities, and retained a laboratory subcontractor for analysis of soil vapor samples. Following are detailed descriptions of each of the pre-field activities.

HSP

We prepared a site-specific HSP describing the physical and chemical hazards of the field sampling to be performed and provided health and safety guidelines protective of Geocon field personnel. The HSP also identified emergency contact personnel and the nearest emergency room.

Utility Clearance

We marked the Site with white paint as required by law, then provided the required 72-hour notification to Underground Service Alert (USA) (Ticket No. X925602174) prior to sample collection. We also provided the Client with notification prior to mobilizing to the Site.

We retained Ground Penetrating Radar Systems, Inc. (GPRS), a private utility locator, to further assess each planned boring location for buried utilities. GPRS identified no utility conflicts at the planned boring locations.

Subcontractor and Equipment Procurement

We retained Eurofins Air Toxics (Air Toxics) of Folsom, California, to provide soil vapor sampling equipment and chemical analysis of soil vapor samples. Air Toxics is accredited by the National Environmental Laboratory Accreditation Program.

- 2 -

Task 2 - Field Activities

Temporary Soil Vapor Well Installation

On September 25 and 26, 2019, we used our Geoprobe direct-push equipment to advance borings and install ten temporary soil vapor wells to a maximum depth of 5.5 feet. We encountered refusal in and around SV6, which was finally advanced to and set at a depth of 4.5 feet. We then collected a soil vapor sample from each well following guidelines in *Advisory-Active Soil Gas Investigation* (California Environmental Protection Agency [Cal-EPA] et al., 2015). We selected the soil vapor well locations based on information available for the former gas stations on the Site (Figure 2), the former dry cleaners south of the Site, and existing site conditions.

In each boring we installed temporary soil vapor wells according to the following specifications:

- used our truck-mounted Geoprobe direct-push rig to advance a 1.5-inch-diameter boring to an approximate depth of 5.5 feet.
- constructed a well using 0.25-inch-diameter Nylaflow® tubing fitted with a 1.75-inch-long, stainless steel vapor probe tip with a 0.0057-inch, wire-wrapped screen placed approximately 3 inches above the bottom of the boring (typically 5.5 feet).
- placed a 0.5-foot-thick filter pack consisting of #30 silica sand from the bottom of the boring surrounding the vapor probe tip.
- placed 0.5-foot-thick layer of dry granular bentonite clay above the filter pack.
- placed hydrated bentonite gel clay from above the dry granular bentonite clay to the ground surface to create a seal to separate the soil vapor probe tip from atmospheric air.
- extend Nylaflow® tubing approximately 2 feet above the ground surface to accommodate sample collection and cap it with a polypropylene ball valve in the closed position.

Soil Vapor Sample Collection

We waited a minimum of 2 hours following installation of the soil vapor wells to allow subsurface conditions to equilibrate prior to purging and sampling. To purge each soil vapor well and collect a soil vapor sample we connected a soil vapor manifold consisting of an air filter, flow restrictor, three-way valve and pressure gauge connected to a 6-liter Summa canister (for purging), and a 1-liter Summa canister (for sample collection), all enclosed within a flexible plastic shroud.

In each well we performed the following pre-sample purging and sample collection procedures:

- assembled and attached the soil vapor manifold to the well (Nylaflow® tubing) using a Swagelok fitting and a two-way valve in the closed position.
- encompassed the manifold and the 1-liter Summa canister used for sampling with a plastic shroud.
- conducted a shut-in test by exerting a vacuum inside the manifold using the 6-liter Summa canister with the two-way valve in the closed position to the well. If the vacuum was not maintained for a duration of 5 minutes, we adjusted the fittings on the assembly until a successful shut-in test is achieved.

- sealed and filled the shroud with helium and maintained a minimum helium concentration of 20% throughout purging and sampling to assess the sample train for potential leaks. A helium detector was placed inside the shroud to monitor helium concentrations.
- opened the two-way valve to the well and purged three volumes of soil vapor (one well volume equals the total volume of the tubing, sand filter pack, and dry bentonite used to construct the well) using the 6-liter Summa canister at a flow rate of 167 ml per minute (ml/min) and at a vacuum of less than 7 inches of mercury (in-Hg).
- once the appropriate volume of soil vapor was purged, we closed the purge valve and manifold valve, leaving the "sample train" (Figure 3) open to the well. Then we opened the sample valve to draw soil vapor into the 1-liter Summa canister at a flow rate of 167 ml/min and at a vacuum of less than 7 in-Hg. Once the 1-liter Summa canister had approximately 5 in-Hg of vacuum remaining, we stopped sampling by closing the sample and well valves.
- disconnected the manifold from the well and label the 1-liter Summa canister in preparation for submittal of the sample to Air Toxics under standard chain-of-custody protocol.

We abandoned the temporary wells after sampling was complete by removing the tubing and the top 3 to 4 feet of hydrated bentonite and backfilling with cement grout and topping the last 6 inches of the boring with dirt to match the surrounding surface. SV9 and SV10 were located in asphalt and were finished with cement.

Task 3 – Laboratory Analysis

Air Toxics analyzed the soil vapor samples for VOCs (including gasoline) by United States Environmental Protection Agency Method TO-15 (low-level reporting) and helium and oxygen following modified American Society for Testing and Materials D-1946. Low-level reporting for TO-15 was requested in order to achieve benzene concentrations low enough to compare to residential health risk-based screening levels. Because of this request, Summa canisters and manifolds provided by the laboratory were also individually certified as clean.

LABORATORY ANALYSIS RESULTS

Following are summaries of the laboratory analysis results for the soil vapor samples. Copies of the laboratory analytical reports and chain-of-custody documentation are attached.

Helium and Oxygen

Helium was not detected at concentrations equal to or exceeding the reporting limits (RLs), in nine of the ten vapor samples, which indicates that our sample collection equipment was free of atmospheric leaks for those nine samples. Helium was detected at a concentration of 0.17% in SV7. We maintained a 20% helium concentration inside of the shroud over SV7, so 0.17% represents a leak of 0.85%, which is less than the guidance-specified leak tolerance level of 5% (Cal-EPA et al., 2015) indicating that the sample and associated analysis results are valid.

Oxygen was detected in nine of the ten samples collected at concentrations ranging from 17 to 20%. Oxygen was detected in SV10 at 1.6%. As summarized in the San Francisco Bay Regional Water Quality Control Board's (SFBRWQCB) January 2019 User's Guide: Derivation and Application of Environmental Screening Levels (User's Guide), the oxygen availability in the subsurface is important for assessing areas with petroleum contamination because petroleum hydrocarbons will biodegrade under aerobic subsurface conditions. Aerobic biodegradation can also limit the upward migration of petroleum vapors in the vadose zone, which is known as bioattenuation (SFBRWQCB, 2019).

Petroleum VOCs

As shown on Table 1, several VOCs were detected in the soil vapor samples collected from the Site. The following table lists the maximum concentrations of selected petroleum-related VOCs detected in the soil vapor samples collected from the Site.

Petroleum VOCs in Soil Vapor											
VOCs	GRO	Benzene	Toluene	Ethyl- benzene	Total Xylenes	MTBE	Naphthalene				
Maximum Concentration (µg/m³)/well	15,000	44	29	5.5	23.3	1.9	29				
LTCP – w/out bioattenuation	NE	85	NE	1,100	NE	NE	93				
LTCP – w/ bioattenuation	NE	85,000	NE	1,100,000	NE	NE	93,000				

 $\mu g/m^3 = micrograms per cubic meter$

LTCP = Low -Threat Closure Policy criteria for residential use

GRO = gasoline-range organics MTBE = methyl tert-butyl ether NE = LTCP criteria not established

As shown in the above table, the maximum reported benzene, ethylbenzene, and naphthalene concentrations do not exceed their respective LTCP criteria either with or without bioattenuation. The LTCP defines the bioattenuation zone at petroleum sites as the zone of soil from the ground surface to a depth of 5 feet with soil vapor having an oxygen content greater than 4% and petroleum concentrations (total of gasoline and diesel) less than 100 milligrams per kilogram. Note that we compared the petroleum VOC concentrations only to LTCP criteria, and not other soil vapor criteria such as the SFBRWQCB Environmental Screening Levels (ESLs), because the ESL guidance specifically states that "petroleum UST sites should follow the LTCP." The ESLs for petroleum constituents do not account for bioattenuation and therefore can be overly conservative. For a conservative comparison, we have listed the soil vapor human health risk level ESLs for residential use for the petroleum VOCs which do not have a corresponding LTCP screening level on Table 1. The maximum GRO, toluene, xylenes, and MTBE concentrations do not exceed their respective corresponding ESL for residential use.

Non-Petroleum VOCs

The following table lists non-petroleum-related VOCs that were detected in one or more of the soil vapor samples collected from the Site.

Non-petroleum and Chlorinated VOCs in Soil Vapor												
VOCs	Acetone	Methyl Ethyl Ketone	Chloro- form	1,4- Dioxane	Methylene Chloride	Methyl Isobutyl Ketone	Styrene	1,1,1- Tricloro- ethane				
Maximum Concentration (μg/m³)	360	92	82	5.7	1.9	35	1.2	2.6				
ESLs	1,100,000	170,000	4.1	12	34	100,000	31,000	35,000				

ESL = Environmental Screening Level for residential use

Chloroform was detected in six soil vapor samples at concentrations exceeding the ESL for residential use. None of the other VOC concentrations exceed their respective soil vapor ESLs for residential use. However, there is no known source of chloroform at the Site and its presence in soil vapor may be due to natural biogeochemical processes in site soil (Breider, 2013). We also discussed the presence of chloroform in soil vapor with Cheryl Prowell, the SFBRWQCB Toxics Cleanup Division Chief, and she stated that chloroform in soil vapor and indoor air where there is no identified source, is often attributable to off-gassing from treated drinking water and sewers. Ms. Prowell recommended reporting the detected concentrations to the current regulatory caseworker(s), but stated it is unlikely to be a driver for further investigation.

Carbon disulfide, heptane, hexane, cyclohexane, 2-hexanone, 4-ethyltoluene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-butadiene, ethanol, 2-propanol, tetrahydrofuran, propylbenzene, and 2,2,4-trimethylpentane were also detected, but do not have corresponding ESLs.

CONCLUSIONS AND RECOMMENDATIONS

Petroleum-related VOCs were detected in soil vapor at the Site, but at concentrations less than the LTCP criteria for residential use both with and without a bioattenuation zone. These findings suggest that vapor intrusion of COCs to future indoor air on the Site will not result in an unacceptable health risk to future site residents or workers. This report should be provided to the San Mateo County Environmental Health Division for their consideration regarding the planned redevelopment of the Site for residential use.

We appreciate the opportunity to be of service to you on this project. Please contact the undersigned if you have any questions or if we can be of further service.

Jim Brake, PG

Senior Geologist

Sincerely,

Project Name: San Bruno Project #: 51838-03-01 Workorder #: 1909568A

Dear Ms. Nicole Hastings-Bethel

The following report includes the data for the above referenced project for sample(s) received on 9/26/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Sarah Westerman at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Sarah Westerman

Project Manager

LABORATORY NARRATIVE Modified TO-15 Geocon Consultants, Inc. Workorder# 1909568A

Ten 1 Liter Summa Canister (100% Certified) samples were received on September 26, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	TO-15	ATL Modifications
Initial Calibration	<pre><!--=30% RSD with 2 compounds allowed out to < 40% RSD</pre--></pre>	=30% RSD with 4 compounds allowed out to < 40% RSD</td
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

A single point calibration for TPH referenced to Gasoline was performed for each daily analytical batch. Recovery is reported as 100% in the associated results for each CCV.

The hydrocarbon profile present in all samples did not resemble that of commercial gasoline. Results were calculated using the response factor derived from the gasoline calibration.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
 - J Estimated value.
 - E Exceeds instrument calibration range.
 - S Saturated peak.
 - Q Exceeds quality control limits.
- U Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
 - UJ- Non-detected compound associated with low bias in the CCV
 - N The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

- a-File was requantified
- b-File was quantified by a second column and detector
- r1-File was requantified for the purpose of reissue

Ms. Nicole Hastings-Bethel Geocon Consultants, Inc. 3160 Gold Valley Drive Suite 800 Rancho Cordova CA 95742-7207

Project Name: San Bruno Project #: 51838-03-01 Workorder #: 1909568B

Dear Ms. Nicole Hastings-Bethel

The following report includes the data for the above referenced project for sample(s) received on 9/26/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Sarah Westerman at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Sarah Westerman

Project Manager

LABORATORY NARRATIVE Modified ASTM D-1946 Geocon Consultants, Inc. Workorder# 1909568B

Ten 1 Liter Summa Canister (100% Certified) samples were received on September 26, 2019. The laboratory performed analysis via Modified ASTM Method D-1946 for Helium in air using GC/TCD. The method involves direct injection of 1.0 mL of sample.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	ASTM D-1946	ATL Modifications
Calibration	A single point calibration is performed using a reference standard closely matching the composition of the unknown.	A minimum of 5-point calibration curve is performed. Quantitation is based on average Response Factor.
Reference Standard	The composition of any reference standard must be known to within 0.01 mol % for any component.	The standards used by ATL are blended to a >/= 95% accuracy.
Sample Injection Volume	Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL.	The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum.
Normalization	Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%.	Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix.
Precision	Precision requirements established at each concentration level.	Duplicates should agree within 25% RPD for detections > 5 X's the RL.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B Compound present in laboratory blank greater than reporting limit.
- J Estimated value.
- E Exceeds instrument calibration range.
- S Saturated peak.
- Q Exceeds quality control limits.
- U Compound analyzed for but not detected above the detection limit.
- M Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:

- a-File was requantified
- b-File was quantified by a second column and detector
- r1-File was requantified for the purpose of reissue
