Draft Environmental Impact Report Appendices

Mission Bay School Project

Prepared by:
ICF

Prepared for:
San Francisco Unified School District

September 2021

APPENDIX 1.1 NOTICE OF PREPARATION AND COMMENTS RECEIVED

NOTICE OF PREPARATION
OF AN EIR FOR THE PROPOSED
MISSION BAY SCHOOL PROJECT

To: Agencies, Organizations, and Interested Parties

From: San Francisco Unified School District

Subject: Notice of Preparation (NOP) of an Environmental Impact Report (EIR) in Compliance with Title 14, Sections 15082(a), 15103, and 15375 of the California Code of Regulations (CCR). The San Francisco Unified School District is the Lead Agency under the California Environmental Quality Act (CEQA) for the proposed project identified below. The San Francisco Unified School District will prepare an EIR for the proposed project identified below.

Project Title: Mission Bay School Project. The project location and a summary of the project description are included below and on the following page.

Current Environmental Review: To ensure that the proposed project is fully analyzed under CEQA, an EIR will be prepared in compliance with Title 14, Section 15161 of the CCR.

Agency/Public Comments: The San Francisco Unified School District requests your comments regarding the scope and content of the environmental review to be conducted for the proposed project. Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after issuance of this notice. **The San Francisco Unified School District will accept written comments on this NOP between May 17 and June 18, 2021.** Please send your comments by email to MissionBay@sfusd.edu or by mail to: San Francisco Unified School District, 135 Van Ness Avenue, Room 216, San Francisco, CA 94102, Attention: Sarah Price.

Scoping Meeting: The Lead Agency will conduct a virtual scoping meeting on May 25, 2021, beginning at 11:00am at which agencies, organizations, and the public will have an opportunity to submit verbal comments. Please note that verbal comments are limited to three minutes per speaker. Follow this link to access the meeting: https://sfusd.zoom.us/j/85686060331.

EIR Process: Following the close of the NOP comment period, an Initial Study and Draft EIR will be prepared that will consider all environmental topic areas in Appendix G of the CEQA Guidelines and take into consideration NOP comments. In accordance with Title 14, Section 15105(a) of the CCR, the Draft EIR will be released for public review and comment for the required 45-day review period. Following the close of the 45-day public review period, the San Francisco Unified School District will prepare a Final EIR that will include responses to all substantive comments received on the Draft EIR. The Draft EIR and Final EIR will be considered by the San Francisco Unified School District Board of Education in making the decision to certify the EIR.

Project Location & Existing Conditions: The approximately 2.45-acre project site is on the block bounded by Mission Bay Boulevard South to the north, Sixth Street (privately owned by the University of California) to the east, Nelson Rising Lane (privately owned by the University of California) to the south,

and Owens Street to the west in the Mission Bay neighborhood in the northeast quadrant of San Francisco. The project site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco at Mission Bay campus as well as recreational uses. The project site is in the Mission Bay planning area. The project site currently contains a paved surface parking lot with approximately 251 parking spaces.

Project Description: The project proposes demolition of a surface parking lot. In its place, the project sponsor would construct a multi-story, up to approximately 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub, professional learning facility, outdoor learning area, outdoor play area, and paved surface parking lot with ten parking spaces. **Figure 1** shows the conceptual site plan.

The proposed building would consist of a west wing and a south wing. The west wing would be four stories tall, with a maximum building height of 63 feet (76 feet when accounting for the mechanical features). The south wing would be two stories tall, with a maximum building height of 30 feet. The building would include up to approximately 60,200 square feet for classrooms, up to approximately 18,100 square feet for linked learning hub classrooms, and up to approximately 4,200 square feet for professional learning spaces. The approximately 54,600-square-foot outdoor play area would be east of the proposed building.

Two existing driveways would be removed and replaced with sidewalks. Vehicle ingress and egress at the site would be provided by two new driveways along Owens Street; the northern driveway would be approximately 25 feet wide and the southern driveway would be approximately 20 feet wide. The drop-off/pickup lot for passenger vehicles for the preschool and transitional kindergarten school students would be west of the proposed building. Nine vehicle parking spaces would be provided within the drop-off/pickup lot, including two accessible parking spaces for Americans with Disabilities Act– (ADA-) compliant vehicles. ADA drop-off areas would be within the drop-off/pickup lot and along Sixth Street. The drop-off/pickup area for passenger vehicles for the elementary school students and linked learning hub students would be at the white curb along Sixth Street. The proposed project would also include a 21-foot wide curb cut along Sixth Street. The proposed project may include one on-street commercial loading space, a yellow lane adjacent to the project site along Nelson Rising Lane for service deliveries.

Construction of the proposed project is estimated to take 21 months, anticipated to begin in mid-2023 and ending in early 2025.

Probable Environmental Impacts: Each of the following CEQA environmental issue areas will be addressed in the Initial Study: Aesthetics, Agriculture and Forestry Resources, Biological Resources, Cultural Resources, Energy Resources, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise and Vibration, Population and Housing, Public Services, Recreation, Tribal Cultural Resources, Utilities and Service Systems, Transportation and Traffic, and Wildfire. There is reasonable potential that the project may result in environmental effects related to Air Quality; thus, it is anticipated that this topic will be discussed in detail in the EIR.

SECTION 1.0 INTRODUCTION AND PURPOSE

This initial study of environmental impacts is being prepared to conform to the requirements of the California Environmental Quality Act (CEQA), the CEQA Guidelines (California Code of Regulations 15000 et seq.), and the regulations and policies of the City of San Francisco. The purpose of this document is to provide objective information regarding the environmental consequences of the proposed project to the decision-makers who will be reviewing and considering the project. This initial study has been prepared on behalf of the District, who is the lead agency, in accordance with CEQA.

This initial study evaluates potential impacts that might reasonably be anticipated to result from the construction of a multistory (maximum of 63 feet tall), up to 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten-through-fifth-grade elementary school, linked learning hub, professional learning space, outdoor learning area, outdoor play area, and paved surface parking lot.

All documents referenced in this initial study are available for public review at the District's office, 135 Van Ness Avenue, Room 216, San Francisco, CA, 94102.

SECTION 2.0 PROJECT INFORMATION

2.1 PROJECT TITLE

Mission Bay School Project

2.2 PROJECT LOCATION

The project site contains portions of two parcels (block/lot): block 8709, lot 011, and block 8711, lot 007.[1] The project site is on the block bounded by Mission Bay Boulevard South to the north, Sixth Street (privately owned by the University of California) to the east, Nelson Rising Lane (privately owned by the University of California) to the south, and Owens Street to the west in the Mission Bay neighborhood in the northeastern quadrant of San Francisco. The project site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco at Mission Bay campus as well as recreational uses.

2.3 LEAD AGENCY CONTACT

San Francisco Unified School District
Sarah Price
135 Van Ness Avenue, Room 216
San Francisco, CA 94102
Phone: (415) 710 - 2495
Email: MissionBay@sfusd.edu

2.4 PROJECT SPONSOR

The project sponsor is also the lead agency. See Section 2.3, above.

[1] As part of the project, the project site would be merged into one parcel.

SECTION 3.0 PROJECT DESCRIPTION

Refer to Chapter 3, *Project Description*, in the draft EIR for a description of the proposed project.

SECTION 4.0 SETTING, ENVIRONMENTAL CHECKLIST, AND IMPACTS

This section describes the existing environmental conditions on and near the project site as well as environmental impacts associated with the proposed project. The environmental checklist, as recommended in the California Environmental Quality Act (CEQA) Guidelines, identifies environmental impacts that could occur if the proposed project is implemented.

"Mitigation measures" are measures that will minimize, avoid, or eliminate a significant impact (CEQA Guidelines Section 15370). Mitigation measures are identified for all significant project impacts, with the exception of air quality. The proposed project would have the potential to result in significant air quality impacts. Accordingly, this topic is analyzed further and included in the EIR.

4.1 AESTHETICS

4.1.1 Setting

4.1.1.1 Project Site

The project site currently contains a paved surface parking lot with approximately 251 parking spaces. Approximately 90 percent of the project site is covered with impervious surfaces. There are 15 trees on the project site. There are no valued visual resources currently on the project site. Figure 4.1-1 shows photographs of the existing project site.

4.1.1.2 Surrounding Land Uses

The project site is in the Mission Bay neighborhood of San Francisco, on a block bounded by Mission Bay Boulevard South to the north, Sixth Street (privately owned by the University of California) to the east, Nelson Rising Lane (privately owned by the University of California) to the south, and Owens Street to the west in the city's northeast quadrant. The site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco as well as recreational uses. There are no buildings directly adjacent to the project site; those within a 500-foot radius are mid-rise buildings with a variety of materials, such as metal, glass, wood, and concrete. In the distance, multiple high-rise buildings in downtown San Francisco can be seen from the project site. Figure 4.1-2 shows photographs of the land uses surrounding the project site.

4.1.1.3 Scenic Views and Resources

The project site and the surrounding area are relatively flat. Therefore, the site is visible only from the immediate vicinity, including surrounding buildings. Occupants in the buildings would have views of the project site.

Scenic resources are elements in the environment such as topographic features, trees, rock outcroppings, or other features, built or natural, that contribute to a scenic public setting. *Scenic vistas* provide views from public areas and generally encompass a wide area. These are long-range views to surrounding elements in the landscape. Public viewing points in the city include parks, publicly accessible buildings, and public rights-of-way with views of the urban and natural landscapes that make up the viewshed of the Bay Area. The term *view corridor* refers to views of important features along a path, roadway, or other horizontal corridor where the view is confined by obstructions such as development or vegetation. As such, a view from a view corridor has limited lateral visibility. This is referred to as a *channelized view*.

The southern portion of Mission Bay has scenic vistas of the Bay Bridge, the hills, and the downtown skyline. View corridors preserve visual linkages to San Francisco Bay as well as the aforementioned vistas. View corridors ensure a continued visual connection between the University of California, San Francisco campus and surrounding development.

View A: View of the northeast corner of the project site facing southwest.

View B: View of the northwest corner of the project site facing northeast.

View C: View of the southeast corner of the project site facing northwest.

View D: View of the southwest corner of the project site facing northeast.

Mission Bay School Project

Source: ICF, 2020.

Figure 4.1-2
Existing Off-Site Views

The California Department of Transportation (Caltrans) manages the Scenic Highway Program, which identifies and protects California's natural scenic highways. Interstate (I) 280 runs approximately 500 feet west of the project site. Although I-280 is currently eligible for scenic highway status, it has not been officially designated.[1]

4.1.1.4 Light and Glare

Sources of light and glare are abundant in the industrial environment surrounding the project site, including, but not limited to, street lights, parking lot lights, security lights, vehicular headlights, internal building lights, and reflective building surfaces and windows.

4.1.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
1. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
2. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
3. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
4. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	☒	☐

4.1.2.1 Impacts on Scenic Vistas and Scenic Resources within a State Scenic Highway

The project site and surrounding area are relatively flat. As a result, the site is visible only from the immediate area. The proposed project would not be within a designated view corridor and would not have the potential to obstruct views of the Bay Bridge, the hills, or the downtown city landscape. Currently, there are no valued visual resources on the project site. I-280 has not been officially designated as a

[1] California Department of Transportation. 2021. *Scenic Highways.* Available: https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways. Accessed: February 28, 2021.

scenic highway. Therefore, implementation of the project would have a less-than-significant impact on scenic vistas, view corridors, or scenic resources within a scenic highway. **(Less than Significant)**

4.1.2.2 Impacts on Scenic Quality

The project site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco campus as well as recreational uses. The project site is in an urbanized area.

On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.)

As is customary for all new construction, the project site would be enclosed within temporary fencing during construction. Construction materials and equipment would be staged entirely on-site. Most on-site storage of soil, pipes, machinery, and building materials would not be visible. In addition, aesthetic impacts during construction would be temporary and would cease upon completion of construction. Therefore, the project would not conflict with zoning or other applicable regulations governing scenic quality during construction. **(Less than Significant [for informational purposes only])**

The proposed project would plant between 20 and 30 trees. There would be a total of 31 trees within the project site, accounting for the four existing trees that would be removed, 11 existing trees that would be retained, and minimum of 20 new trees that would be planted.[2] Per City and County of San Francisco (City) guidelines, each tree removed must be replaced with another tree.[3] Because the project would replace four existing trees with a minimum of 20 trees, the project would exceed this requirement.

The project site currently contains minimal vegetation along the perimeter. As shown in Figure 3.0-10 in Section 3.0, *Project Description*, most of the new trees would be planted along the eastern and southern perimeters of the project site, within the proposed outdoor play area, immediately west of the proposed building, and within the proposed surface parking lot. Tree protection measures would be employed to preserve the existing trees. In addition, shrubs and ground cover would be planted throughout the project site. Native plants and plants with low irrigation requirements would be used on the site and grouped into hydro zones, based on water demand. For a discussion of biological resource impacts associated with proposed tree removal and new landscaping, refer to Section 4.4, *Biological Resources*.

As discussed in Section 4.11, *Land Use*, local zoning and building ordinances are inapplicable with respect to the proposed project. Therefore, the following is provided for informational purposes. The project would increase the height and density of development on the site. The proposed building would consist of a west wing and a south wing. The west wing would be four stories tall, with a maximum

[2] The proposed project would plant between 20 and 30 trees. For the purposes of the analysis in this Initial Study and to provide a conservative analysis, the minimum number of trees to be planted (20 trees) is assumed.

[3] San Francisco Public Works. 2014. *Guidelines for Tree Removal Permitting Process*. Available: https://www.sfpublicworks.org/sites/default/files/3245-(%20BUF%20)%20GUIDE+APPL%20-%20Tree%20Removal.pdf. Accessed: February 28, 2021.

height of 63 feet (76 feet when accounting for mechanical features). The south wing would be two stories tall, with a maximum height of 30 feet.

While schools are not formally subject to local zoning jurisdiction, the District has voluntarily committed to following the Office of Community Investment and Infrastructure (OCII) Mission Bay South Project Area design standards and review process as much as feasible. The project would not adhere to one OCII design standard that requires a minimum of 70 percent of streetwall along Owens Street because the standard conflicts with California Department of Education guidance on the freeway setback for the project. The District negotiated a solution with OCII to have the proposed fencing mimic this street wall, as the proposed building cannot. Overall, the project would conform to current architectural and landscaping standards, including Mission Bay South Project Area design standards. The standards were developed to support community aesthetic values, preserve neighborhood character, and promote a sense of community and place throughout the southern portion of Mission Bay.

The project vicinity is heavily industrialized. Therefore, the project would not conflict with applicable regulations governing scenic quality during operation. **(Less than Significant)**

4.1.2.3 Light and Glare

Downlighting would be provided at entries and exits, and post-mounted lighting would be provided on the perimeter and in the outdoor learning and dining areas. Outside lighting would be comparable in brightness to ambient lighting in the surrounding area. Lighting on the project site would be similar to existing outdoor lighting and would not greatly increase overall illumination in the area. Exterior building materials would consist primarily of wood-like materials, metal panels, glazed windows, steel, and brick. The metal panels would be painted and interspersed with wood-tone panels. The main pedestrian entrance, on the west side of the building, would include 24-foot sliding glass doors and a professional art installation on either side of the doors. Windows with both transparent glass and fritted glass would be located on all sides and all floors of the proposed building. The design of the exterior façade of the proposed building would be subject to Mission Bay South Project Area design standards to ensure that the project would not create a substantial new source of light or glare for adjacent businesses or people traveling on nearby roadways. Typical design requirements include directional and/or shielded lights to minimize brightness and glare. The project would not include illuminated signage. Therefore, the project would not create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area. **(Less than Significant)**

4.1.3 Conclusion

The project would have a less-than-significant impact on aesthetics. **(Less than Significant)**

4.2 AGRICULTURAL AND FOREST RESOURCES

4.2.1 Setting

The project site is in a developed area in the city, surrounded primarily by institutional land uses and parking lots as further described in Chapter 3, *Project Description*, of the draft EIR. No land in the City has been designated by the California Department of Conservation Farmland Mapping and Monitoring Program as agricultural land and no land in the City is under Williamson Act contract.[1] The California Department of Conservation Farmland Mapping and Monitoring Program identifies the City as "Urban and Built-Up Land," which is defined as residential land with a density of at least six dwelling units per 10 acres, and not as any of the "Farmland" classifications. In addition, no land in San Francisco is designated as forest land or as Timberland Production by the California Public Resources Code or Government Code. In addition, the project site is not a forest resource, nor are there forest resources in the surrounding area.

4.2.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
In determining whether impacts on agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts on forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forestland, including the Forest and Range Assessment Project, the Forest Legacy Assessment Project, and the forest carbon measurement methodology provided in forest protocols adopted by the California Air Resources Board. Would the project:				
1. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
2. Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☐	☒
3. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220[g]), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104[g])?	☐	☐	☐	☒
4. Result in a loss of forestland or conversion of forestland to non-forest use?	☐	☐	☐	☒
5. Involve other changes in the existing environment that, because of their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forestland to non-forest use?	☐	☐	☐	☒

[1] California Department of Conservation, 2008, Important Farmland in California Map, www.consrv.ca.gov, accessed July 21, 2021.

4.2.2.1 Agricultural and Forest Resources Impacts

The project site is not used or zoned for agricultural purposes or forestland. The project site is not designated by the Department of Conservation as Farmland of any type and is not the subject of a Williamson Act contract. None of the properties adjacent to the project site or in the project vicinity are used for agriculture or forestry. Therefore, implementation of the project would not affect agricultural or forest resources or result in the loss of designated agricultural land. **(No Impact)**

4.2.3 Conclusion

The project would have no impact related to agricultural lands or forestlands or agricultural activities. **(No Impact)**

4.3 AIR QUALITY

4.3.1 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
1. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
2. Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is classified as a non-attainment area under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
3. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
4. Result in other emissions (such as those leading to odors) that would adversely affect a substantial number of people?	☒	☐	☐	☐

Implementation of the proposed project would have the potential to result in significant air quality impacts. Accordingly, this topic is analyzed further and included in the EIR.

4.4 BIOLOGICAL RESOURCES

This biological resource impact analysis is based on a desktop review and evaluation of the following:

- California Department of Fish and Wildlife, California Natural Diversity Database[1] species list query for a 1-mile buffer around the project site;
- California Native Plant Society,[2] species list query for the U.S. Geological Survey San Francisco North (3712274), San Francisco South (3712264), Hunters Point (3712263), and Oakland West (3712273) 7.5-minute series quadrangles;
- U.S. Fish and Wildlife Service, Environmental Conservation Online System, Information for Planning and Consultation[3] query for the project site;
- U.S. Fish and Wildlife Service National Wetland Inventory Wetland Mapper and U.S. Environmental Protection Agency WATERS GeoViewer for the identification of waters and wetlands, using existing water/wetland inventory data;[4, 5]
- Google Earth Pro for aerial imagery;[6]
- San Francisco Tree Inventory (Street Tree Map);[7]
- Conceptual landscape plan prepared for the project (refer to Figure 3.0-10 in Chapter 3.0, *Project Description*, of the draft EIR).

4.4.1 Setting

4.4.1.1 Existing Habitat

The project site currently contains a paved surface parking lot with approximately 251 parking spaces. Approximately 90 percent of the project site is currently covered with impervious surfaces.

There are 15 trees on the project site; the trees are planted along Owens Street and Mission Bay Boulevard South. The cajeput (*Melaleuca quinquenervia*) and brisbane box (*Lophostemon confertus*) trees are planted along Owens Street and Mission Bay Boulevard South, respectively. Five elegant water

gum (*Tristaniopsis laurina*) trees are just outside the northwest perimeter of the project site, adjacent to the Owens Street and Mission Bay Boulevard South roundabout. Trees in San Francisco are protected by San Francisco Public Works Code Article 16. Sparse patches of non-native grasses and weeds, including wild radish (*Raphanus sativus*) and fennel (*Foeniculum vulgare*), grow within the narrow strip of mulched ground on the perimeter of the project site between the sidewalk and parking lot.

No water features or waterways are on the project site. The nearest public park, Mission Creek Park, is approximately 0.08 mile north of the project site. The nearest water body, Mission Creek Channel (also called the China Basin Water Channel), is approximately 0.09 mile northwest of the project site.

4.4.1.2 Special-Status Species

Special-status plant and wildlife species are not expected to occur on the highly urbanized project site. Trees within the project site, as well as adjacent to the northwest perimeter of the site, may provide nesting habitat and food sources for native migratory birds and raptors. Migratory birds and raptors are protected by the federal Migratory Bird Treaty Act (16 United States Code Section 703, et seq.) and California Fish and Game Code Section 3503, which reads, "It is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by this code or any regulation made pursuant thereto."

4.4.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
3. Have a substantial adverse effect on state or federally protected wetlands, including, but not limited to, marsh, vernal pool, coastal areas, etc., through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐

		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
5.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
6.	Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

4.4.2.1 Potential Construction Impacts on Migrating Raptors and Birds Adverse Effect on Special-Status Species, Interference with the Movement of Native Resident or Wildlife Species, or Interference with Established Native Resident or Migratory Wildlife Species

Because the project site is completely developed, it does not contain natural land cover types or communities, protected wetlands and waters,[8] riparian habitat, or other sensitive natural communities.[9] On-site ornamental vegetation is not considered a sensitive natural community. The nearest federally protected wetland in proximity to the project site is riverine habitat—specifically, the estuarine and marine deep water associated with Mission Creek Channel, approximately 0.09 mile northwest of the project site.[10] The project site is separated from this habitat by urban development, including paved roads and flat vacant lots. Therefore, protected wetlands and waters, riparian habitat, or other sensitive natural communities would not be affected by project construction. Therefore, no impact would occur. **(No Impact)**

Because no wetlands or running waters are present on the project site or in the immediate vicinity, fish movement would not be affected. In addition, the movement of non-avian terrestrial species would not be affected because the project would not result in the fragmentation of natural habitats. Any common urban-adapted species that currently move through the project site would continue to be able to do so following construction and this impact would be less than significant. **(Less than Significant)**

Structures in an urban setting may present risks for birds as they traverse their migratory paths due to building location and/or features. The City has adopted guidelines to address this issue and provided regulations for bird-safe design within the city. Section 139, Standards for Bird-Safe Buildings, of the Planning Code establishes building design standards to reduce avian mortality rates associated with bird strikes. The building standards are based on two types of hazards: (1) location-related hazards which pertain to new buildings within 300 feet of an urban bird refuge, and (2) feature-related hazards such as freestanding glass walls, wind barriers, skywalks, balconies, and greenhouses on rooftops that have unbroken glazed segments 24 square feet or larger in size. Any project that contains building-feature

[8] U.S. Fish and Wildlife Service. 2019. *National Wetland Inventory Wetland Mapper*. Available: https://www.fws.gov/wetlands/. Accessed: May 20, 2020.

[9] California Department of Fish and Wildlife. 2020. *California Sensitive Natural Communities*. Available: https://www.wildlife.ca.gov/Data/VegCAMP/Natural-Communities. Accessed: December 21, 2020.

[10] U.S. Fish and Wildlife Service. 2019. *National Wetland Inventory Wetland Mapper*. Available: https://www.fws.gov/wetlands/. Accessed: May 20, 2020.

hazards must apply bird-safe glazing treatments on 100 percent of the feature in compliance with section 139. The project site is within a 300-foot unobstructed line of sight to an urban bird refuge, part of Mission Creek Channel.[11] Changes in building heights and densities, as well as the construction of new buildings, could have a potentially adverse effect on raptors as well as resident and migratory passerines by increasing the risk for avian collisions with buildings. Through compliance with San Francisco Planning Code section 139, the proposed project would not conflict with the City's bird-safe building ordinance. **(Less than Significant)**

Trees on the project site could provide suitable nesting habitat for numerous bird species that are protected by the Migratory Bird Treaty Act and California Fish and Game Code. Tree removal, ground disturbance, demolition, or construction-generated noise and vibration could result in direct or indirect mortality among nesting birds through, for example, crushing, parental abandonment, reduced fitness, reduced availability of prey, and degradation or loss of habitat. Nest or egg destruction, bird fatalities, and nest abandonment would be potentially significant. With implementation Mitigation Measure BIO-1, nesting birds would be protected during project construction. **(Less than Significant with Mitigation)**

Mitigation Measures

MM BIO-1: Nesting Bird Surveys

The following measure will be implemented prior to and during ground disturbance, as well as preliminary grading activities, at the project site:

- To the extent feasible, the project contractor will conduct initial construction activities outside the nesting season (January 15 through August 15), including, but not limited to, tree trimming or tree removal, ground disturbance, demolition, site grading, and other activities that may compromise breeding birds or the success of their nests occurring within or outside the project site.
- If construction must occur during the migratory bird nesting season, a qualified wildlife biologist will conduct preconstruction nesting surveys within 14 days prior to the start of construction or demolition in areas that have not been previously disturbed by project activities or after any construction breaks of 14 days or more. Typical experience requirements for a "qualified biologist" include a minimum of 4 years of academic training and professional experience in biological sciences and related resource management activities and a minimum of 2 years of experience in biological monitoring or surveying for nesting birds. Surveys of suitable habitat will be performed in publicly accessible areas within 100 feet of the project site to locate any active nests of common bird species and within 250 feet of the project site to locate any active nests of raptors (i.e., birds of prey).
- If active nests are located during the preconstruction nesting bird surveys, a qualified biologist will evaluate the construction schedule and location to determine if construction activities could affect an active nest; if so, the following measures will apply, as determined by the qualified biologist:

[11] San Francisco Planning Department. 2018. *Urban Bird Refuge*. Available: https://sfplanning.org/resource/urban-bird-refuge. Accessed: December 21, 2020.

- If construction would not affect an active nest, construction may proceed without restriction; however, a qualified biologist will regularly monitor the nest at a frequency determined appropriate for the surrounding construction activity to confirm that there would be no adverse effect. The frequency of spot check monitoring would be determined on a case-by-case basis, considering the scope of the particular construction activity, duration, proximity to the nest, and any physical barriers that may screen the nest. The qualified biologist may revise the determination at any time during the nesting season, in coordination with the California Department of Fish and Wildlife.
- If it is determined that construction could affect an active nest, the qualified biologist will establish a no disturbance buffer around the nest. All project work will halt within the buffer until the qualified biologist determines that the nest is no longer active. Buffer distances will be equal to the survey distances (i.e., 100 feet for passerines and 250 feet for raptors); however, the buffer may be adjusted if an obstruction, such as a building, is within the line of sight between the nest and construction.
- Modifying nest buffer distances, allowing certain construction activities within the buffer, and/or modifying construction methods in proximity to active nests will be done at the discretion of the qualified biologist.
- Any work that must occur within established no disturbance buffers will be monitored by a qualified biologist. If adverse effects in response to project work within the buffer are observed that could compromise the nest, work within the no disturbance buffer will halt until the nest occupants have fledged.
- Any birds that begin nesting within the project area and survey buffers amid construction activities are assumed to be habituated to construction related or similar noise and disturbance levels. Therefore, exclusion zones around nests may be reduced or eliminated in these cases, as determined by the qualified biologist. Work may proceed around active nests as long as the nests and their occupants would not be directly affected.

- If inactive nests are observed within or adjacent to the project site, removal or relocation of the inactive nests will be at the discretion of the qualified biologist. Work may proceed around inactive nests.

4.4.2.2 Consistency with Applicable Plans, Policies, and Regulations

The City's Urban Forestry Ordinance, Public Works Code section 801, et seq., requires a permit from Public Works to remove any protected trees.[12] As part of the project, 11 existing trees would be retained. Tree protection measures would be employed to preserve the existing trees. The project applicant would be required to obtain a specific tree protection plan from an International Society of Arboriculture–certified arborist to protect the 11 trees during construction. Therefore, the proposed

[12] San Francisco Public Works Code. 1995. Article 16: Urban Forestry Ordinance. Available https://sfenvironment.org/sites/default/files/agenda/attach/public_works_code_groves_explanatory_documents_consolidated.pdf. Accessed July 21, 2021.

project would not conflict with the city's local tree ordinance and this impact would be less than significant. **(Less than Significant)**

The project site does not contain federally protected wetlands as defined by section 404 of the Clean Water Act, riparian habitat, or other sensitive natural communities. In addition, the project site is not located within an adopted habitat conservation plan, a natural community conservation plan, or other approved local, regional, or state habitat conservation plan areas. Therefore, no impact would occur. **(No Impact)**

4.4.3 Conclusion

With implementation of the proposed mitigation measure, the project would have a less-than-significant impact on biological resources. **(Less than Significant with Mitigation)**

4.5 CULTURAL RESOURCES

The term *cultural resources* refers to sites, objects, buildings, structures, burials, districts, and landscapes. In this section, buildings, structures, districts, and landscapes will be referred to as *built-environment resources*, and sites, objects, and burials as *archaeological resources*.

Some historic resources may also be considered tribal cultural resources, a separate and discrete environmental resource type under CEQA. Tribal cultural resources are discussed in Section 4.18, *Tribal Cultural Resources*. For the purposes of this project, the cultural resources study area consists of the project footprint.

4.5.1 Setting

The project site is located in the northwestern reach of the approximately 300-acre Mission Bay neighborhood in San Francisco, California, bounded by Interstate (I) 280 to the west, Mission Creek (also known as the China Basin Channel) to the north, the San Francisco Bay to the east, and Mariposa Street to the south.

The environmental setting of the project site consists of the existing conditions and relevant historical conditions of the CEQA study area, which is limited to the footprint of the project site. The study area is delineated to consider potential impacts on built-environment and archaeological resources as a result of project activities, including ground disturbance.

4.5.1.1 Precontact Context

The precontact cultural chronology for the Bay Area was developed over a century of organized archaeological survey, from N. C. Nelson in 1906 to the present. Since the 1950s, archaeological work in San Francisco and surrounding counties has led to further refinement of the cultural sequence of the Early Holocene (Lower Archaic), Early Period (Middle Archaic), Lower Middle Period (Initial Upper Archaic), Upper Middle Period (Late Upper Archaic), Initial Late Period (Lower Emergent), and Terminal Late Period (Protohistoric Ambiguities).

The Early Holocene (Lower Archaic, calibrated [cal] 8000–3500 before present [B.P.]) is characterized as a mobile forager pattern, with milling slabs, handstones, and a variety of large, wide-stemmed, and leaf-shaped projectile points, largely composed of local Franciscan chert, dominating the assemblage.[1] During the Early Period (Middle Archaic, cal 3500–500 B.P.), several technological and social developments emerged; new groundstone technology and the first cut-shell beads in mortuaries signaled sedentism (i.e., living in one place for a period of time), regional symbolic integration, and increased regional trade in the Bay Area.[2] The Lower Middle Period (Initial Upper Archaic, cal 500 B.P.–cal A.D. 430) is marked by a

[1] Hylkema, M. 2002. Tidal Marsh, Oak Woodlands, and Cultural Florescence in the Southern San Francisco Bay Region. Pages 205–231 in Jon M. Erlandson and Terry L. Jones (eds.), *Catalysts to Complexity: Late Holocene Societies of the California Coast. Perspectives in California Archaeology 6*, series editor J. E. Arnold. Institute of Archaeology, University of California, Los Angeles; Milliken, R., R. T. Fitzgerald, M. G. Hylkema, T. Origer, R. Groza, R. Wiberg, A. Leventhal, D. Bieling, A. Gottsfield, D. Gillette, V. Bellefemine, E. Strother, R. Cartier, and D. A. Fredrickson. 2007. Punctuated Culture Change in the San Francisco Bay Area. In T. L. Jones and K. Klar (eds.), *California Prehistory: Colonization, Culture, and Complexity*. Walnut Creek, CA: Altamira Press.

[2] Vellanoweth, R. L. 2001. AMS Radiocarbon Dating and Shell Bead Chronologies: Middle Holocene Trade and Interaction in Western North America. *Journal of Archaeological Science* 28:941–950.

"major disruption in symbolic integration systems,"[3] and new bone tools appeared for the first time, including barbless fish spears, elk femur spatulas, tubes, and whistles, as well as coiled basketry manufacture.[4] During the Upper Middle Period (Late Upper Archaic, cal A.D. 430–1050), many sites from the previous period were abandoned, and single-barbed bone fish spears, ear spools, and large mortars were developed.[5]

Following the Archaic Period, the Initial Late Period (Lower Emergent, A.D. cal 1050–1550) is marked by an increase in sedentism, status ascription, and ceremonial integration in lowland central California.[6] Increased social stratification throughout the Bay Area after 1250 A.D. is expressed in mortuary practices through the quality of goods in high-status burials and cremations.[7] The Terminal Late Period (Protohistoric Ambiguities) is indicated by changes in artifact types and mortuary objects, including toggle harpoons, hopper mortars, plain corner-notched arrow-sized projectile points, clamshell disk beads, magnesite tube beads, and secondary cremation in the North Bay.[8]

Mission Creek flowed to the northwest of the project area, and land to the north and west straddled the shoreline between cal 4000 and 6000 B.P. Geoarchaeological research[9] shows that the project site was inundated by the waters of the San Francisco Bay from between cal 8000 and 10,000 B.P. until the second half of the nineteenth century, when it was filled in following the Gold Rush. Therefore, there is little potential since the early Holocene for submerged and/or buried precontact sites to have been established in the project site.

4.13.1.1 Ethnographic Context

The project site is in the territory of the Ohlone, which extended along the coast from the Golden Gate to just below Carmel and as far inland as 60 miles, encompassing several inland valleys. The Ohlone were hunter-gatherers who relied heavily on acorns, shellfish, and sea fish. They also exploited a wide range of other foods, including various seeds, buckeye, berries, roots, land and sea mammals, waterfowl, reptiles, and insects. Prior to contact, the Ohlone were politically organized by tribelet, consisting of one or more villages or camps within a territory, as designated by physiographic features. Each tribelet had a chief, whose duties included providing for visitors, overseeing ceremonial activities, and directing fishing, hunting, gathering, and warfare expeditions. The chief served as the leader of a council of elders that functioned primarily in an advisory capacity to the community.[10]

Seven Spanish missions were founded in Ohlone territory between 1776 and 1797 A.D. While living within the mission system, the Ohlone commingled with other groups, including the Esselen, Yokuts, Miwok, and Patwin. Mission life was devastating to the Ohlone population.[11] It has been estimated that the Ohlone population numbered around 10,000 souls in 1776, when the Spanish established the first mission in their territory. By 1832, the Ohlone population was less than 2,000 as a result of disease, harsh living conditions, and reduced birth rates.[12,13]

4.5.1.2 Historic Context

The Mission Bay was infilled during the 1870s and developed with industrial uses. Shortly after the Southern Pacific Railroad (SPRR) purchased broad swaths of the neighborhood south of Mission Creek, including the project site. The area was leased and occupied by lumber companies, including the Pacific Lumber Company, the Albion Lumber Company, and the Union Lumber Company.[14,15] The expansive lumber yards included storage sheds, office buildings, mills, and warehouses, as well as open space for stacked piles of lumber. By 1913, ACME Lumber Company managed the project site, with SPRR spurs traversing the area; freight tracks and a SPRR main line were constructed along 7th Street.[16]

The Mission Bay neighborhood continued to be characterized by industrial land uses, such as lumber, shipping, and rail, throughout most of the twentieth century. The project site served as a lumber yard until at least 1950, at which point it may have begun to transition to storage yards for other types of industrial uses. Buildings that had been built to serve the lumber industry were demolished, and new warehouses or

light industrial buildings were constructed adjacent to the project site, including metal working, rock grinding, and auto repair businesses.[17,18]

Other major development to occur in the area included the extension of I 280 on a raised freeway platform above 7th Street during the early 1970s[19] and a major consolidation between the SPRR and Santa Fe Railroad during the 1980s. Afterward, the newly merged Santa Fe–Pacific Realty Corporation held ownership of most of the Mission Bay neighborhood. This corporation, renamed Catellus Development Corporation ca. 1990, brokered a master plan with the City to redevelop the industrial area for new use under the Mission Bay Plan.

In 1998, the San Francisco Board of Supervisors established the Mission Bay North and South Redevelopment Project Areas. The project site is located within the Mission Bay South Redevelopment Project Area. The neighborhood, including the project site, has undergone significant physical changes as part of the redevelopment program. Many of the formerly industrial buildings and structures that characterized the area have been demolished, and the street grid has been redesigned. The project site has been used as a surface parking lot for approximately 4 years.[20]

No buildings or structures older than 50 years are located within the project site. Furthermore, no buildings or structures of any kind are located within or immediately adjacent to the project site. Therefore, it does not require evaluation for listing in the California Register of Historical Resources (CRHR), and no historic resources are present at the project site.

4.5.1.3 Applicable Plans, Policies, and Regulations

This section describes the applicable state regulations that define and provide guidance for the identification of, and analysis of impacts on, cultural resources. A discussion of regulations related to tribal cultural resources is provided in Section 4.18, *Tribal Cultural Resources*.

California Environmental Quality Act

CEQA requires projects to be assessed to determine their potential to affect historical resources. CEQA uses the term *historical resources* to include buildings, sites, structures, objects, or districts, each of which may have historical, prehistorical, architectural, archaeological, cultural, or scientific importance. If implementation of a project would result in significant effects on historical resources, CEQA states that alternative plans or mitigation measures must be considered; however, only significant historical resources need to be addressed (14 California Code of Regulations [CCR] 15064.5, 15126.4). Therefore, before impacts and mitigation measures can be identified, the significance of historical resources must be determined.

The State CEQA Guidelines define three ways that a property may qualify as a historical resource for the purposes of CEQA review.

1. The resource is listed in or determined eligible for listing in the CRHR.
2. The resource is included in a local register of historical resources, as defined in Section 5020.1[k] of the California Public Resources Code (PRC) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1[g] unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. The Lead Agency determines the resource to be significant, as supported by substantial evidence in light of the whole record (CCR, Title 14, Division 6, Chapter 3 § 15064.5[a]).

The State CEQA Guidelines also establish the criteria for CRHR eligibility as the standard for the significance of historical resources and find that cultural resources that meet the criteria of eligibility for the CRHR are significant historical resources. A historical resource may be eligible for inclusion in the CRHR if it meets any of the following conditions:

- The resource is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- The resource is associated with the lives of persons important in our past.
- The resource embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of an important creative individual or possesses high artistic values.
- The resource has yielded, or may be likely to yield, information important in prehistory or history.

Properties that are listed in or eligible for listing in the National Register of Historic Places (NRHP) are considered eligible for listing in the CRHR (PRC § 5024.1[d][1]) and, thus, are significant historical resources for the purpose of CEQA.

According to CEQA, a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant impact on the environment (14 CCR 15064.5[b]). Under CEQA, a *substantial adverse change in the significance of a resource* means the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be materially impaired. Actions that would materially impair the significance of a historic resource are any actions that would demolish or adversely alter the physical characteristics that convey the property's historical significance and qualify it for inclusion in the CRHR or in a local register or survey that meet the requirements of PRC Sections 5020.1[k] and 5024.1[g].

CEQA includes in its definition of *historical resources* "any object [or] site … that has yielded or may be likely to yield information important in prehistory" (State CEQA Guidelines § 15064.5[3]), which is typically interpreted as including fossil materials and other paleontological resources. In addition, destruction of a "unique paleontological resource or site or unique geologic feature" constitutes a significant impact under CEQA (State CEQA Guidelines Appendix G). Treatment of paleontological resources under CEQA is generally similar to treatment of cultural resources, requiring evaluation of resources in a project's area of potential affect, assessment of potential impacts on significant or unique resources, and development of mitigation measures for potentially significant impacts, which may include monitoring combined with data recovery and/or avoidance.

California Public Resources Code

Archaeological, paleontological, and historical sites are protected under a variety of state policies and regulations, as enumerated in the PRC. Tribal cultural resources, which are recognized as nonrenewable resources, receive additional protection under CEQA.

- PRC Section 5024 requires state agencies to identify and protect state-owned resources that meet the listing criteria of the NRHP, including significant tribal cultural resources. It further specifically requires the California Department of Transportation (Caltrans) to inventory state-owned structures in its rights-of-way. Sections 5024(f) and 5024.5 require state agencies to provide notice to and consult with the State Historic Preservation Officer (SHPO) before altering, transferring, relocating, or demolishing state-owned historical resources that are listed or eligible for listing in the NRHP or registered or eligible for registration as California Historical Landmarks.
- PRC Sections 5097.9–5097.991 provide protection to Native American historical and cultural resources and sacred sites. The sections also identify the powers and duties of the NAHC and require notification of descendants when Native American human remains are discovered. They also provide for the treatment and disposition of human remains and associated grave goods.
- PRC Section 21084.2 outlines the key points of Assembly Bill (AB) 52 (Chapter 532, Statutes of 2014), which establishes a formal consultation process for California Native American tribes as part of CEQA. This section equates significant impacts on tribal cultural resources with significant environmental impacts.

Assembly Bill 52

Tribal cultural resources were originally identified as a distinct CEQA environmental category with the adoption of AB 52 in September 2014. For all projects that are subject to CEQA and received a Notice of Preparation (NOP), notice of negative declaration, or mitigated negative declaration (MND) on or after July 1, 2015, AB 52 requires the lead agency on a proposed project to consult with the geographically affiliated California Native American tribes. The legislation creates a broad new category of environmental resources, *tribal cultural resources*, that must be considered under CEQA. AB 52 requires a lead agency to consider the not only resource's scientific and historical value, but also whether it is culturally important to a California Native American tribe.

AB 52 defines tribal cultural resources as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are included in or determined to be eligible for inclusion in the CRHR, included in a local register of historical resources, as defined in PRC Section 5020.1(k), or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to the criteria of PRC Section 5024.1(c) (CEQA Section 21074).

4.5.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Cause a substantial adverse change in the significance of a historical resource, pursuant to Section 15064.5?	☐	☐	☐	☒
2. Cause a substantial adverse change in the significance of an archaeological resource, as defined in Section 15064.5?	☐	☒	☐	☐
3. Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

Approach to Analysis

Northwest Information Center Records Search

A review of previously recorded cultural resources and studies on file at the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) was completed on February 21, 2020. The record search consulted NWIC files of cultural resource studies and sites within 0.5 mile of the project site. This review did not identify any archaeological sites or cultural resources studies that cover areas within or adjacent to the project site. Three historical archaeological sites dating to the 1850s and 1860s were identified within 0.5 mile of the project site. The sites were largely related to the rise of industry in the area, including a glass works, butchering plant, and sugar refinery. Although there is no immediate evidence suggesting the presence of buried archaeological resources, the possibility exists for encountering buried archaeological resources at the project site.

Native American Correspondence

Native American tribes often have specialized knowledge of places within a project area that may be important to their communities. This knowledge can be helpful in making recommendations in order to avoid impacts on Native American resources during the project. On December 4, 2020, ICF contacted the Native American Heritage Commission (NAHC) requesting a review of the Sacred Lands File (SLF) and a list of individuals who may have information or interest regarding the project. The request contained location details, project maps, and a general description of project elements. This request is considered formal notification of a proposed project as required under CEQA, specifically PRC Section 21080.3.1 and AB 52.

On December 13, 2020, the NAHC indicated that the search of its Sacred Lands File did not identify any sacred lands on the project site. The response from NAHC included the following list of individuals and tribal representatives who might have an interest in the project:

- Irenne Zwierlein, Amah Mutsun – Tribal Bank of Mission San Juan Bautista
- Tony Cerda – Costanoan Rumsen Carmel Tribe
- Ann Marie Sayers – Indian Canyon Mutsun Band of Costanoan

- Kanyon Sayers-Roods – Indian Canyon Mutsun Band of Costanoan
- Charlene Nijmeh – Muwekma Ohlone Indian Tribe of the SF Bay Area
- Monica Arellano – Muwekma Ohlone Indian Tribe of the SF Bay Area
- Andrew Galvan – Ohlone Indian Tribe

On December 18, 2020, the San Francisco Unified School District (District) emailed letters to the representative of the tribes identified in the tribal consultation list provided by NAHC, requesting consultation or information regarding tribal resources on the project site. Included in the letters was a brief description of the project, the results of a literature record search, project location maps, and a request for comments, concerns, or knowledge regarding sacred lands or heritage sites in the project area. To date, no responses have been received from the Native American tribes.

4.5.2.1 Historic Resources

No architecturally or culturally significant buildings or structures are located within or immediately adjacent to the project site's boundary. Thus, the proposed project would have no impact on historical resources. **(No Impact)**

4.5.2.2 Archaeological Resources

The proposed building would be constructed on a deep foundation with drilled piers. To accommodate the drilled piers, the project would require a maximum excavation of 155 feet below ground surface at certain locations. To accommodate the foundation, the project would require excavation up to 10 feet below ground surface. To accommodate surface grading, utility trenches, and other ground improvements, the project would require excavation up to 5 feet below ground surface. Demolition of the existing surface parking lot would generate approximately 3,000 cubic yards of asphalt waste. The proposed project would require grading or disturbing the entire project site during construction. The proposed project would excavate approximately 1,300 cubic yards of soil that upon testing could be reused as fill onsite, with an additional import of approximately 1,200 cubic yards of soil to be used as fill onsite. The fill could potentially contain *in situ* or redeposited historical architectural foundations or debris or redeposited Native American cultural resources. Mass excavation of the site would destroy any structural remains within the top 10 feet of the ground surface and could uncover redeposited remains.

A records search conducted at the Northwest Information Center did not identify any previously recorded archaeological resources within the project site. Additionally, no precontact resources were recorded within 0.5 mile of the project site. Three historic-era archaeological resources were identified within 0.5 mile of the project site.

Although there are no known precontact or historic archaeological resources on or directly adjacent to the site, future development under the project could result in exposure or destruction of as-yet undiscovered subsurface precontact and historical archaeological resources. Exposure or destruction of subsurface precontact resources would be considered a potentially significant impact. With implementation of Mitigation Measure CUL-1, work would be stopped if archaeological deposits are encountered during project construction. **(Less than Significant with Mitigation)**

Mitigation Measures

MM CUL-1: Stop Work If Archaeological Deposits Are Encountered During Ground-disturbing Activities

During construction (i.e., ground-disturbing activity), should there be an unanticipated archaeological discovery, work will stop within 100 feet of the discovery. A qualified archaeologist will be contacted to assess significance of the find and recommend appropriate measures. Should the discovery include human remains (see MM CUL-2), all parties will comply with federal and state regulations and guidelines regarding the treatment of human remains, including relevant sections of the Native American Graves Protection and Repatriation Act (NAGPRA) (3(c)(d)), California Health and Safety Code Section 8010 et seq., and PRC Section 5097.98, and consult with NAHC, tribal groups, and the SHPO.

4.5.2.3 Human Remains

Although there are no known human remains on or directly adjacent to the site, future development under the project could result in exposure or destruction of as-yet undiscovered human remains. Exposure or destruction of human remains would be considered a potentially significant impact. With implementation of Mitigation Measure CUL-2, the project would comply with state laws related to human remains. **(Less than Significant with Mitigation)**

Mitigation Measures

MM CUL-2: Comply with State Laws Relating to Human Remains

Any human remains and related items discovered during the implementation of this project will be treated in accordance with the requirements of Section 7050.5(b) of the California Health and Safety Code. If, pursuant to Section 7050.5(c) of the California Health and Safety Code, the county coroner/medical examiner determines that the human remains are or may be of Native American origin, then the discovery will be treated in accordance with the provisions of PRC Section 5097.98(a)–(d). The project contractor will ensure that the remains are not damaged or disturbed further until all stipulations in Section 7050.5 and Section 5097.98 have been met. The project contractor will implement the recommendation in accordance with Section 15064.5(e) of the CEQA Guidelines. If human remains are discovered or recognized in any location other than a dedicated cemetery, there will be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

1. The county coroner has been informed by the project contractor and has determined whether investigation of the cause of death is required; and
2. If the remains are of Native American origin:
    a. The descendants of the deceased Native Americans have made a recommendation to the landowner or the person responsible for the excavation work for means of treating or disposing of, with appropriate

dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98; or

b. NAHC was unable to identify a descendent or the descendent failed to make a recommendation within 24 hours after being notified by the commission.

c. NAHC recommends a Most Likely Descendent (MLD) to make a recommendation to the landowner or the person responsible for the excavation work for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98.

According to California Health and Safety Code, six or more human burials at one location constitute a cemetery (Section 8100), and disturbance of Native American cemeteries is a felony (Section 7052). Section 7050.5 requires that excavation be stopped in the vicinity of the discovered human remains until the coroner can determine whether the remains are those of a Native American.

4.5.3 Conclusion

The project would result in no impact on historical resources. **(No Impact)**

With implementation of the proposed mitigation measures, the project would have a less-than-significant impact on archaeological resources and/or human remains. **(Less than Significant with Mitigation)**

4.6 ENERGY

4.6.1 Setting

Energy resources include electricity, natural gas, and other fuels. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. Energy production and energy use both result in the depletion of nonrenewable resources, such as oil, natural gas, and coal, and the emission of pollutants.

With a relatively mild Mediterranean climate and strict energy-efficiency conservation requirements, California has lower energy consumption rates than other parts of the country. According to the U.S. Energy Information Administration (U.S. EIA), California's per capita energy consumption ranked 48th in the nation as of 2018.[1] California has among the lowest annual electrical consumption rates per person of any State; its industrial uses consume 5.6 percent of the energy consumed nationwide.[2] According to the U.S. EIA, natural gas consumption in California totaled approximately 2,154.03 billion cubic feet in 2019. Commercial uses consumed approximately 12 percent of this total, followed by residential uses (22 percent), and industrial uses (36 percent), among others.[3] According to the California Energy Commission (CEC), total system electric generation for California in 2019 (the most recent year for which data is available) was approximately 277,704 gigawatt hours. California's non-carbon-dioxide-emitting electric generation categories, including nuclear, hydroelectric, and renewable generation, accounted for more than 57 percent of total in-state generation for 2019. California's in-state electric generation was approximately 200,475 gigawatt hours.[4]

Pacific Gas and Electric (PG&E) provides electricity and natural gas to the vast majority of Northern California, including San Francisco, and the project site. PG&E's service area extends from Eureka to Bakersfield (north to south), and from the Sierra Nevada to the Pacific Ocean (east to west). PG&E purchases power from a variety of sources, including other utility companies. PG&E obtains its energy supplies from power plants and natural gas fields in Northern California. PG&E operates a grid distribution system that channels all power produced at the various generation sources into one large energy pool for distribution throughout the service territory. PG&E provides all the natural gas and electricity infrastructure in the City and County of San Francisco. In addition, the San Francisco Public Utilities Commission (SFPUC) is San Francisco's municipal power utility. It also provides electrical services to select residential and business communities. The Hetch Hetchy Power System, which is owned and operated by the SFPUC, supplies clean energy to all of San Francisco's municipal facilities, services, and customers. The Hetch Hetchy Power System is composed of three electric powerhouses, with a combined total of approximately 385 megawatts.[5] This electricity is transmitted to San Francisco along City-owned transmission lines. Within San Francisco, the SFPUC also generates more than 11

megawatts of renewable energy from 23 solar arrays, one biogas cogeneration facility, and wind resources.[6,7]

PG&E has two plan options, known as Solar Choice options, in addition to its base plan, which give customers the option of purchasing power from solar resources. The first Solar Choice option provides up to 50 percent of a customer's energy from solar resources, while the other option provides up to 100 percent of a customer's energy from solar resources.[8] In addition, CleanPowerSF, a program of the SFPUC, allows customers to enroll in electricity programs that provide a larger percentage of energy using renewable energy resources. CleanPowerSF allows customers to choose between two different electricity product operations: Green Service, which contains at least 50 percent renewable resources, and Supergreen Service, which contains 100 percent renewable resources as electricity resources.[9]

In the County of San Francisco, a total of 229 million therms of natural gas were consumed in 2019 (the most recent year for which data are available). In 2019, natural gas in the County of San Francisco was consumed primarily by the residential sector (58 percent), followed by the non-residential sector (42 percent).[10] In 2019, the County of San Francisco consumed a total of 5,604 million kilowatts of electricity. In the county, electricity was consumed primarily by the non-residential sector (73 percent), followed by the residential sector (27 percent).[11]

The project site is currently comprised of a paved surface parking lot with 251 parking spaces. For the purposes of this analysis, it is assumed there is no existing energy demand at the project site.

4.6.1.1 Applicable Plans, Policies, and Regulations

Renewable Energy Standards

In 2002, California established its Renewables Portfolio Standard (RPS), with the goal of increasing the percentage of renewable energy in the State's electricity mix. Specifically, renewable energy would account for 20 percent of retail sales by 2010. In 2006, this goal was codified in Senate Bill (SB) 107. Under the provisions of SB 107, investor-owned utilities were required to generate 20 percent of their retail electricity from qualified renewable energy technologies by the end of 2010. In 2008, Executive Order (EO) S-14-08 was signed into law, requiring retail sellers of electricity to derive 33 percent of their energy from renewable sources by 2020.

Senate Bill 350 (2015), Chapter 547, Clean Energy and Pollution Reduction Act of 2015

SB 350 (DeLeon), also known as the Clean Energy and Pollution Reduction Act of 2015, was approved by California legislature in September 2015 and signed by Governor Brown in October 2015. Its key

provisions require the following by 2030: 1) to achieve an RPS[12] of 50 percent and 2) to double statewide energy efficiency savings in natural gas and electricity end uses. To help meet these provisions, the Clean Energy and Pollution Reduction Act of 2015 requires large utilities to develop and submit integrated resource plans that detail how they will reduce GHG emissions and increase the use of clean energy resources while meeting customer needs.

SB 100—The 100 Percent Clean Energy Act of 2018

SB 100 builds on SB 350, the Clean Energy and Pollution Reduction Act of 2015, which required the following by 2030: (1) an RPS of 50 percent and (2) a doubling of energy efficiency (electrical and natural gas) by 2030, including improvements to the efficiency of existing buildings. SB 100 increases the 2030 RPS target set in SB 350 to 60 percent and requires an RPS of 100 percent by 2045.

California Energy Efficiency Standards for Residential and Nonresidential Buildings—California Green Building Standards Code (2011), Title 24 Updates

The California Green Building Standards Code (Part 11, Title 24), or CALGreen, was adopted as part of the California Building Standards Code (24 California Code of Regulations). CALGreen, which applies to the planning, design, operation, construction, use, and occupancy of newly constructed buildings, required energy- and water-efficient indoor infrastructure to be installed in all new projects, beginning January 1, 2011. CALGreen also required newly constructed building to develop a waste management plan and divert at least 50 percent of the construction materials generated during project construction.

The current Building Energy Efficiency Standards were adopted in 2019 and took effect on January 1, 2020. Under the 2019 standards, homes will use about 53 percent less energy than homes constructed under the 2016 standards, while nonresidential buildings will use about 30 percent less energy. Later standards are expected to require zero net energy for new commercial buildings.

PG&E Integrated Resource Plan

PG&E adopted the 2020 Integrated Resource Plan (IRP) on September 1, 2020, to provide guidance for serving the electricity and natural gas needs of residents and businesses within its service area while fulfilling regulatory requirements. The IRP contains the following objectives that are relevant to the proposed project:

- **Clean Energy:** In 2019, PG&E delivered nearly 30 percent of its electricity from RPS-eligible renewable resources, such as solar, wind, geothermal, biomass, and small hydropower. In addition, PG&E's GHG-free energy production, which encompasses renewable resources, large hydropower, and nuclear, satisfied all of PG&E's bundled retail sales in 2019.
- **Reliability:** PG&E's IRP analysis includes PG&E's contribution to system and local reliability, in compliance with the CPUC's resource adequacy requirements, especially as California transitions toward higher shares of GHG-free generation resources.
- **Affordability:** PG&E's IRP analysis selects resources to meet the state's clean energy and reliability goals and provides a system average rate forecast in compliance with the CPUC's requirements for investor-owned utilities.

[12] The RPS is one of California's key programs for promoting renewable energy use in the State. The program establishes continuous procurement of renewable energy requirements for load-serving entities with the State of California (California Energy Commission 2020b).

CleanPowerSF Integrated Resource Plan

CleanPowerSF adopted its 2020 IRP on September 1, 2020.[13] The IRP provides guidance for serving the electricity and natural gas needs of residents and businesses within the CleanPowerSF service area while fulfilling regulatory requirements. The CleanPowerSF IRP has the following goals to help achieve the ultimate goal of providing San Franciscans with an electricity supply that is GHG-free by 2030.

1) Provide affordable and reliable service;

2) Offer cleaner energy alternatives;

3) Invest in local renewable projects and jobs; and

4) Ensure long-term rate and financial stability.

San Francisco General Plan Environmental Protection Element

The San Francisco Environmental Protection Element includes the following policies relevant to energy resources and efficiency:

- **Objective 12.** Establish the City and County of San Francisco as a model for energy management.
- **Policy 12.1:** Incorporate energy management practices into building, facility, and fleet maintenance and operations.
- **Policy 12.3**: Investigate and implement techniques to reduce municipal energy requirements.
- **Objective 15**: Increase the energy efficiency of transportation and encourage land use patterns and methods of transportation which use less energy.
- **Policy 15**.1: Increase the use of transportation alternatives to the automobile.
- **Objective 16:** Promote the use of renewable energy sources.
- **Policy 16.1:** Develop land use policies that will encourage the use of renewable energy sources.
- **Policy 16.2:** Remove obstacles to energy conservation and renewable energy systems in zoning and building codes.
- **Objective 17:** Support Federal, State, and PG&E energy programs that are equitable, and encourage conservation and renewable energy use.
- **Policy 17.2:** Promote state energy building standards that are cost-effective and take into account San Francisco's climate and density patterns.

San Francisco Climate Action Strategy

The San Francisco Climate Action Strategy (CAS) was updated and adopted in October 2013, to reduce citywide GHG emissions, with the ultimate goals of sending zero waste to landfills, making 50 percent of all trips outside of cars, and choosing to power homes and businesses with 100 percent renewable energy. The strategy outlines several strategies related to: (1) energy use in buildings, (2) transportation, (3), zero

[13] CleanPowerSF. 2020b. CleanPowerSF 2020 Integrated Resource Plan Compliance Filing (Public Version). Available: https://www.cleanpowersf.org/resourceplan. Accessed: December 23, 2020.

waste, (4) urban forest, and (5) municipal operations, in order to reduce GHG emissions and achieve these climate action goals.

4.6.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?	☐	☐	☒	☐
2. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

The energy demand provided below is based on estimations provided by the project engineer. If project-specific data were not available, the energy demand was estimated using the California Emissions Estimator Model (CalEEMod), version 2016.3.2.

4.6.2.1 Energy Consumption

Construction

Natural gas is not typically used during construction. Project construction would require demolition, grading, excavation, utility and foundation installation, new pavement, and building construction, which would consume energy; therefore, construction activities for the proposed project would result in a temporary increase in demand for energy resources. The project would consume approximately 157,700 gallons of diesel fuel, and 6,900 gallons of gasoline fuel over the entire construction period if surcharging is required.[14,15] However, this would be considered a small, temporary increase in energy demand during construction. This is because construction activities would occur over an approximately 24-month period, energy in the form of gasoline and diesel would be used to power construction equipment, approximately 52,900 gallons of diesel fuel per year and 2,300 gallons of gasoline fuel per year. Therefore, the project would not result in inefficient, wasteful, or unnecessary consumption of energy resources during construction and this impact would be less than significant. **(Less than Significant)**

[14] Surcharging would involve the use of imported soil piled on the surface of the project site to cause lateral pressure. The additional pressure would shorten the consolidation time for the soil at the project site. Construction of the project is estimated to begin in March 2022 if surcharging is required; if surcharging is not required, the project would begin in mid-2023 and continue for approximately 21 months. If surcharging is required, construction may continue for an additional 2 or 3 months; however, there would be a 1-year period when no construction activity would occur (i.e., May 2022 to May 2023). Construction would conclude by summer 2025 under both scenarios, and the project would be fully operational in 2025.

[15] In the case that surcharging is not required during project construction, approximately 130,944 gallons of diesel fuel and 6,476 gallons of gasoline fuel would be used over the entire approximately two-year construction period. Construction activities would occur over an approximately 21-month period, and energy in the form of gasoline and diesel would be used to power construction equipment at approximately 72,969 gallons of diesel fuel and 3,609 gallons of gasoline fuel per year.

Operation

The proposed project would not use natural gas during operation. However, electricity demand generated by operation of the project would include electricity consumption associated with the proposed building, outdoor play areas, and parking lot (e.g., lighting). Based on the project's energy consumption rates provided by the project's engineer, the project would consume approximately 1,850,000 kBTUs of electricity per year at buildout. In addition, vehicles, traveling to and from the parking lot require gasoline or diesel fuel. Approximately 5,574 gallons of diesel fuel and 32,733 gallons of gasoline would be used annually for vehicles traveling to and from the parking lot during normal operations. These energy quantities are derived from the project's estimation of GHG emissions. The fuel quantities presented in this analysis do not account for any current or future motor vehicle trip reductions that would occur as a result of the increase in bicycle and pedestrian connectivity that the project would facilitate with the transportation demand management plan.

The proposed project would comply with all applicable City and state green building measures as required by Cal Title 24 Part 6—California Energy Codes, and Cal Title Part 11—California Green Building Standards Codes. The proposed project would comply with the project sponsor's design standards that guide sustainability. The outdoor play area would include design components and stormwater design best practices from the project sponsor's Green Schoolyards program. In addition, the proposed project would include an all-electric design; no natural gas infrastructure or combustion equipment would be used. Furthermore, the proposed project would include ultra-low-flow toilets; Energy Star appliances (e.g., refrigerators, freezers, milk coolers, etc.); light-emitting diode bulbs for all lighting; onsite collection and separation of trash, recycling and composting; permeable surfaces; bioretention areas; and minimal onsite parking. All of these aspects of the project's design would further reduce project-related energy consumption. Therefore, although the project would result in an increase in energy consumption compared with existing conditions, the project would not result in the inefficient, wasteful, or unnecessary consumption of energy resources during operation due to incorporation of energy-efficient design features and the use of alternative modes of transportation and this impact would be less than significant. **(Less than Significant)**

4.6.2.2 Consistency with State or Local Plans

As discussed above, the project would include energy-efficiency components that would support implementation of applicable plans related to renewable energy or energy efficiency, such as energy-efficient LED lighting and ultra low-flow toilets. As stated previously, the project would be designed to be zero-net energy ready. The project would also include various design features to reduce stormwater runoff and water consumption through the incorporation of bioretention areas**.** As discussed in Sections 4.2, *Air Quality*, in the draft EIR and 4.8, *Greenhouse Gas Emissions*, in the initial study, the proposed project would be consistent with applicable plans and regulations related to renewable energy or energy efficiency. Specifically, the project would be consistent with Assembly Bill 32, Senate Bill 32, Executive Orders S-3-05 and B-55-18, Senate Bill 375, Plan Bay Area, and SFUSD's Carbon Reduction Plan and Sustainability Goals. In addition, the proposed project would be consistent with PG&E's and CleanPowerSF's IRPs. Accordingly, the project would not impede implementation of any of these plans. Therefore, the project would not conflict with or obstruct implementation of a State or local plan for renewable energy or energy efficiency and this impact would be less than significant. **(Less than Significant)**

4.6.3 Conclusion

The project would have a less-than-significant impact on energy. **(Less than Significant)**

4.7 GEOLOGY AND SOILS

Unless otherwise noted, the following discussion of potential impacts related to geology and soils is based on *Geotechnical Evaluation and Geologic Hazards Assessment: Mission Bay School, South Block 14, San Francisco, California* (Geotechnical Evaluation).[1]"

4.7.1 Setting

4.7.1.1 Geology and Soils

The 2.45-acre project site is at the northeast end of the San Francisco Peninsula, along the western shore of San Francisco Bay in the Coast Ranges geomorphic province of California. San Francisco Bay is a northwest-trending structural depression that lies between the San Andreas fault to the west and the Hayward fault to the east. This project site is reclaimed land that was created by placing artificial fill over mudflat deposits that extend out into Mission Bay. Historical topographic maps indicate that the site was covered by artificial fill by at least 1895. The pieces of broken red brick encountered in boring samples indicate that additional fill materials may have been placed at the site after the 1906 San Francisco earthquake. Mission Creek Channel, which is approximately 500 feet northwest of the site, flows northeastward into China Basin and San Francisco Bay, approximately 1.2 mile to the east.

The project site is overlain with approximately 3.5 inches of asphalt concrete on top of approximately 7 inches of aggregate base. The artificial fill beneath the aggregate base extends to a depth of approximately 25 feet below the ground surface (bgs). The fill consists of very loose to dense clayey sand, poorly graded sand, and well-graded sand with gravel, red brick, and wooden debris. Below the artificial fill is a layer of young Bay Mud to a depth of approximately 50 feet bgs. This layer consists of gray to dark gray, wet, very soft to soft fat clay[2] with trace amounts of organics. Colma Formation deposits underlie the young Bay Mud to a depth of approximately 105 feet bgs. The deposits contain layers of yellowish brown, wet, dense to very dense clayey sand and poorly graded sand. Beneath the Colma Formation deposits is a layer of old Bay Clay, extending to a depth of approximately 145 feet bgs. This layer consists of yellowish brown and gray, wet, very stiff fat clay with thin layers of sandy clay and clayey sand. At a depth of approximately 153 feet bgs lies bedrock of the Franciscan Complex, consisting of olive gray and greenish gray weathered serpentinite along with upper portions of very stiff to hard clay.

The project site currently contains a paved surface parking lot with approximately 251 parking spaces. The project site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco at Mission Bay campus as well as recreational uses. The project site ranges from 7 to 12 feet above mean sea level and is relatively flat. The site is within an area that has not been evaluated for landslides by the California Geological Survey.[3] However, the California Geological Survey Landslide Inventory shows no reported landslides in the immediate vicinity.[4]

4.7.1.2 Groundwater

Subsurface explorations performed for the Geotechnical Evaluation encountered groundwater at depths of 8 to 14 feet bgs. Regional mapping indicates that the historic high groundwater level is less than 10 feet bgs.

4.7.1.3 Primary Seismic Hazards

As shown in **Figure 4.7-1**, the project site is within a seismically active area of the United States. As such, it is probable that the project would experience periodic minor earthquakes and perhaps a major earthquake (i.e., moment magnitude greater than 6) during its service life. Overall, there is a 72 percent likelihood of an earthquake of magnitude 6.7 or greater occurring in the San Francisco Bay Area between 2014 and 2043.[5] The project site is not within an Alquist-Priolo Earthquake Fault Zone established by the State Geologist. The closest active fault to the project site is the San Andreas fault, which is southwest of the project site. The Geotechnical Evaluation determined that the project site is not underlain by a known active fault (i.e., a fault that has exhibited evidence of surface displacement in the last 11,700 years). Table 4.7-1 lists the recognized and postulated faults near the project site, along with their types and distances from the site.

TABLE 4.7-1. ACTIVE FAULTS NEAR THE PROJECT SITE

Fault (Segment)	Maximum Moment Magnitude	Distance to Site (kilometers)
San Andreas (Peninsula)	8	13.3
Hayward (North)	7.3	16.8
San Andreas (North Coast)	8	18.6
San Gregorio (San Gregorio)	7.4	18.9
Hayward (South)	7.3	23.3
Contra Costa Shear Zone (Connector)	6.5	29.7
Calaveras	6.9	32.0
Mount Diablo Thrust	6.6	34.4
Rodgers Creek	7.3	44.4
San Andreas (Santa Cruz Mountains)	8	60.7

Mission Bay School Project

Figure 4.7-1
Fault Locations and Earthquake Epicenters

4.7.1.4 Secondary Seismicity Hazards

Liquefaction

Liquefaction occurs when saturated soils lose cohesion, strength, and stiffness with applied shaking, such as that from an earthquake. The lack of cohesion causes solid soil to behave like a liquid, resulting in ground failure. When a load such as a structure is placed on ground that is subject to liquefaction, ground failure as a result of ground shaking can result in the structure sinking and soil being displaced. Ground failure can take on many forms, including flow failures, lateral spreading, lowering of the ground surface, ground settlement, loss of bearing strength, ground fissures, and sand boils. Liquefaction within subsurface layers, which can occur during ground shaking associated with an earthquake, can also result in ground settlement.

The project site is within a liquefaction hazard zone established by the State Geologist. The Geotechnical Evaluation found that the risk of liquefaction at the project site is very high because deposits of sand and fine-grained soil with low plasticity were encountered below the historic high groundwater level. These layers may liquefy during a seismic event.

Lateral Spreading

Lateral spreading is a phenomenon in which a surficial soil displaces along a shear zone that formed within an underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, such as a bay or creek, by earthquake and gravitational forces. Lateral spreading is generally the most pervasive and damaging type of liquefaction-induced ground failure generated by earthquakes.

The project site is relatively flat, and the nearest free face is Mission Creek Channel, approximately 0.09 mile northwest of the project site. Although the Mission Creek Channel is close to the project site, the Geotechnical Evaluation determined, based on the grain size of the liquefiable layer, the geometry of the site, and the proximity to the nearest free face, that lateral spreading is not a high risk for the project site.

Expansive Soils

Expansive soils are characterized by their ability to undergo significant volume changes (i.e., shrink and swell) because of variations in moisture content. Expansive soils are typically very fine grained and have a high to very high percentage of clay. They can damage structures and buried utilities and increase maintenance requirements. The presence of expansive soils is typically associated with high clay content. Generally, projects in areas with expansive soils may require special building foundations or grade preparation, such as the removal of problematic soils and replacement with engineered soils.

The Geotechnical Evaluation performed laboratory tests on near-surface soils and determined they were non-expansive; therefore, expansive soils are not considered a risk for the project site.

4.7.1.5 Paleontological Resources

As discussed above in Section 4.7.1.1, Geology and Soils, the following geologic units underlie the project site:

- Asphalt concrete and an aggregate base (up to a depth of approximately 1 feet bgs)

- Artificial fill (up to a depth of approximately 25 feet bgs)
- Young Bay Mud (up to a depth of approximately 50 feet bgs)
- Colma Formation (up to a depth of approximately 105 feet bgs)
- Old Bay Clay (up to a depth of approximately 145 feet bgs)
- Franciscan Formation (up to a depth of approximately 153 feet bgs)

These geologic units differ with respect to their potential to yield significant fossils.

The fossil-yielding potential of geologic units in a particular area depends on the geologic age and origin of the units as well as the processes undergone, both geologic and anthropogenic.[6] To identify impacts on paleontological resources, the paleontological sensitivity of geologic units present within the project site was identified. Paleontological sensitivity is an indicator of the likelihood of a geologic unit to yield fossils.[7] Unlike archaeological sites, which are narrowly defined, paleontological sites are defined by the entire extent, both areal and stratigraphic, of a unit or formation. Once a unit is identified as containing vertebrate fossils, or other rare fossils, the entire unit is a paleontological site. For this reason, the paleontological sensitivity for geologic units is described and analyzed broadly rather than limited to jurisdictional boundaries.

Based on information from the scientific literature, each geologic unit in the study area was assigned a paleontological sensitivity rating, according to guidelines developed by the Society of Vertebrate Paleontology. The Impact Mitigation Guidelines Revisions Committee of the Society of Vertebrate Paleontology published standard guidelines that include procedures for the investigation, collection, preservation, and cataloging of fossil-bearing sites. The standard guidelines[8] are widely accepted among paleontologists and followed by most investigators. The standard guidelines identify the two key phases of paleontological resource protection as assessment and implementation. Assessment involves identifying the potential for a project site or area to contain significant nonrenewable paleontological resources that could be damaged or destroyed by project excavation or construction. Implementation involves formulating and applying measures to reduce such adverse effects. The Society of Vertebrate Paleontology defines the level of potential as one of four sensitivity categories for sedimentary rocks: high, undetermined, low, and no potential.[9] The levels of potential are defined as follows:

- **High Potential.** This level is assigned to geologic units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered as well as sedimentary rock units that are suitable for the preservation of fossils (e.g., middle Holocene and older fine-grained fluvial sandstones, fine-grained marine sandstones). Paleontological potential relates to the potential for yielding abundant fossils, a few significant fossils, or "recovered evidence of new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data."

---

6 *Anthropogenic* means caused by human activity.

7 Society of Vertebrate Paleontology. 2010. *Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources*. Available: https://vertpaleo.org/wp-content/uploads/2021/01/SVP_Impact_Mitigation_Guidelines-1.pdf. Accessed: February 3, 2021.

8 Ibid.

9 Ibid.

- **Undetermined Potential**. This level is assigned to geologic units "for which little information is available concerning their paleontological content, geologic age, and depositional environment." In cases where no subsurface data already exist, paleontological potential can sometimes be assessed by subsurface site investigations.
- **Low Potential**. Field surveys or paleontological research may determine that a geologic unit has low potential for yielding significant fossils (e.g., basalt flows). Mitigation is generally not required to protect fossils.
- **No Potential**. Some geologic units, such as high-grade metamorphic rocks (e.g., gneisses, schists) and plutonic igneous rocks (e.g., granites, diorites), have no potential for containing significant paleontological resources. Mitigation is not required.

Measures for adequate protection or salvage of significant paleontological resources are applied to areas determined to contain geologic units with high or undetermined potential for significant paleontological resources. In areas determined to have high or undetermined potential for significant paleontological resources, an adequate program for reducing the impact of development must include specific conditions, such as surveying; monitoring by a qualified paleontological resource monitor; salvaging, identifying, cataloging, curating, and providing repository storage; and reporting.

The Colma Formation in San Francisco is documented as having yielded vertebrate fossils, including species of mammoth and bison (*Mammuthus columbi* and *Bison latifrons*) at the southeast base of Telegraph Hill.[10] This geologic unit is therefore considered to have high potential for the recovery of significant paleontological resources. Other geologic units at the project site are not documented as having yielded such fossils.

4.7.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
a. Rupture of a known earthquake fault, as described on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)	☐	☐	☒	☐
b. Strong seismic ground shaking?	☐	☐	☒	☐
c. Seismically related ground failure, including liquefaction?	☐	☐	☒	☐
d. Landslides?	☐	☐	☐	☒
2. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
3. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
4. Be located on expansive soil, as defined in Section 1803.5.3 of the California Building Code (2016), creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
5. Have soils that would be incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
6. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

In the *California Building Industry Association v. Bay Area Air Quality Management District* case, decided in 2015,[11] the California Supreme Court held that the California Environmental Quality Act (CEQA) does not generally require lead agencies to consider how existing environmental conditions might affect a project, except where the project would significantly exacerbate an existing environmental condition. Accordingly, placing new development in an existing or future seismic hazard area is not considered an impact under CEQA, unless the project would significantly exacerbate a seismic hazard. Therefore, the impact analysis below evaluates whether the proposed project would exacerbate existing or

[11] *California Building Industry Association v. Bay Area Air Quality Management District*, 62 Cal.4th 369. Opinion filed December 17, 2015. Available: https://caselaw.findlaw.com/ca-supreme-court/1721100.html. Accessed: February 3, 2021.

future seismic hazards at the project site and result in a substantial risk of loss, injury, or death. For informational purposes, the analysis also includes information related to the future safety concerns at the project site.

4.7.2.1 Seismic Hazards

As discussed above, the project site is within a seismically active region of the United States. The San Andreas fault is approximately 18 miles southwest of the site. However, the project site is not within an Alquist-Priolo Earthquake Fault Zone. The Geotechnical Evaluation determined that the project site is not underlain by any known active fault. Therefore, surface fault rupture at the project site is unlikely. Given the proximity of active faults, the project site is likely to experience strong seismic ground shaking. As discussed above, an earthquake of magnitude 6.7 or greater occurring is probable within the service life of the proposed project.

The project site is within a liquefaction hazard zone. The Geotechnical Evaluation established that the risk of liquefaction at the project site is very high. Although the liquefaction risk is high, the risk of lateral spreading at the project site is low because the grain size of the liquefiable layer, the geometry of the site, and the distance to the nearest free face make lateral spreading unlikely.

Although ground shaking is likely to occur at the project site, the Geotechnical Evaluation determined that risks associated with ground shaking could be reduced through adherence to seismic design codes. The project site is in an area that is susceptible to liquefaction and could experience ground surface disruption associated with seismic liquefaction, such as dynamic settlement and sand boils, during a seismic event; however, the Geotechnical Evaluation determined that supporting structures on deep foundations, with steel piles or drilled piers bearing on bedrock, would reduce risks associated with liquefaction and settlement, including static settlement. In addition, the project would import approximately 16,000 cubic yards of surcharge soil to advance the settlement and stabilization of underlying soils, reducing the risk of differential settlement as a result of liquefaction or seismic densification. The project would be designed in accordance with the California Building Standards Code, which includes engineering standards and safety techniques that would reduce seismic risks at the project site. In addition, the project would be required to prepare a site-specific geotechnical engineering report with project-specific design specifications. The report would analyze risks associated with underlying soils and be subject to review and approval by a City and County of San Francisco (City) building official prior to issuance of a permit. With adherence to California Building Standards Code requirements and implementation of project-specific recommendations in the geotechnical engineering report, the project would not exacerbate existing seismic hazards on-site, and impacts associated with ground shaking at the project site would be less than significant. In addition, adherence to California Building Standards Code requirements and implementation of project-specific recommendations in the geotechnical engineering report would minimize safety risks related to seismic hazards. **(Less than Significant)**

4.7.2.2 Erosion

Construction of the proposed project would include excavation and grading, which could result in erosion at the site by exposing underlying soils to wind and water. The Geotechnical Evaluation recommends that earthwork and construction activities take place between April 15 and October 15 to avoid the rainy season. The project would import approximately 16,000 cubic yards of surcharge soil to advance the settlement and stabilization of underlying soils. The surcharge soil would remain in place for up to

2 years, after which approximately 11,450 cubic yards of soil would be exported from the project site. Surcharge soils could be subject to erosion if not properly covered during the stabilization period.

The proposed project would require grading or disturbing the entire project site during construction. Thus, construction of the proposed project would disturb more than 5,000 square feet of ground surface and therefore be required comply with the City's Construction Site Runoff Control Ordinance.[12] The ordinance requires the project applicant to submit an Erosion Sediment Control Plan or a Stormwater Pollution Prevention Plan. These plans would include best management practices that would prevent stormwater runoff and soil erosion during construction as well as soil erosion at stockpiled soils. Compliance with Public Works Code Section 146 would ensure that the project would not result in substantial erosion during construction. Therefore, with adherence to City ordinances related to erosion and sediment control, the project would not result in substantial soil erosion or a loss of topsoil. **(Less than Significant)**

4.7.2.3 Soil Hazards

Slope Failure

The project site ranges from 7 to 12 feet above mean sea level and is relatively flat. Although the project site has not been evaluated for landslides by the California Geological Survey, the California Geological Survey Landslide Inventory shows no reported landslides in the immediate vicinity. Therefore, because the project site is relatively flat and no landslides have been reported in the vicinity, the project site would not be exposed to landslides. **(No Impact)**

Expansive Soils

The Geotechnical Evaluation performed laboratory testing on near-surface soils and determined that soils underlying the project site are non-expansive. Therefore, the project would not place structures on expansive soils in a way that would create substantial direct or indirect risks to life or property. **(No Impact)**

Soils for Septic Systems and Alternative Wastewater Disposal Systems

The project would connect to existing water and sewer lines and would not use septic systems or alternative wastewater disposal systems. Therefore, the project would have no impact related to the ability of soils to support an alternative wastewater disposal system. **(No Impact)**

4.7.2.4 Paleontological Resources

The potential for a project to affect paleontological resources is related to ground disturbance. Ground disturbance would take place during project construction; therefore, this impact analysis addresses construction impacts.

As discussed above, geologic units underlying the project site include the Colma Formation, a geologic unit with high paleontological sensitivity that is known to have yielded significant fossils. Any excavation

[12] San Francisco Water Power Sewer. 2021. *Construction Site Runoff Control Program*. Available: https://sfwater.org/index.aspx?page=235. Accessed: February 2, 2021.

that would extend to the depth at which the Colma Formation occurs, approximately 25 feet bgs to 105 feet bgs, would have potential to destroy a unique paleontological resource. The proposed building would be constructed on a deep foundation with drilled piers. To accommodate the drilled piers, the project would require a maximum excavation of 155 feet below ground surface at certain locations. To accommodate the foundation, the project would require excavation up to 10 feet below ground surface. To accommodate surface grading, utility trenches, and other ground improvements, the project would require excavation up to 5 feet below ground surface. Drilling associated with drilled piers would go through the sensitive Colma Formation and recovery of any fossils that may be encountered during pier drilling would not be possible. Project excavation for the proposed foundation, surface grading, utility trenches, and other ground improvements is anticipated to extend into artificial fill where no fossils would occur. Therefore, excavation associated with ground improvements and the foundation is unlikely to disturb any paleontological resources in the Colma Formation and this impact would be less than significant. **(Less than Significant)**

4.7.3 Conclusion

The project would have a less-than-significant impact on geology, soils, and paleontological resources. **(Less than Significant)**

4.8 GREENHOUSE GAS EMISSIONS

This section describes the environmental and regulatory setting for greenhouse gas (GHG) emissions in the project area. It also describes the GHG impacts, if any, that would result from implementation of the proposed project and provides mitigation for significant impacts where feasible.

4.8.1 Setting

4.8.1.1 Global Climate Change

The process known as the *greenhouse effect* keeps the atmosphere near Earth's surface warm enough for the successful habitation of humans and other life forms. The greenhouse effect is created by sunlight that passes through the atmosphere. Some of the sunlight that strikes Earth is absorbed and converted to heat, which warms the surface. The surface emits a portion of this heat as infrared radiation, some of which is re-emitted toward the surface by GHGs. Human activities that generate GHGs increase the amount of infrared radiation absorbed by the atmosphere, thereby enhancing the greenhouse effect and amplifying the warming of Earth.

Increases in fossil fuel combustion and deforestation have exponentially increased concentrations of GHGs in the atmosphere since the Industrial Revolution.[1] Rising atmospheric concentrations of GHGs in excess of natural levels result in increasing global surface temperatures—a process commonly referred to as *global warming*. Higher global surface temperatures, in turn, result in changes to Earth's climate system, including increased ocean temperatures and acidity, reduced areas of sea ice, variable precipitation, and increased frequencies and intensities during extreme weather events.[2] Large-scale changes to Earth systems are collectively referred to as *climate change.*

The Intergovernmental Panel on Climate Change (IPCC) was established by the World Meteorological Organization and United Nations Environment Programme to assess scientific, technical, and socioeconomic information relevant to understanding climate change, its potential impacts, and options for adaptation and mitigation. The IPCC estimates that human-induced warming reached a level approximately 1°C above pre-industrial levels in 2017 and is increasing at a rate of 0.2°C per decade. With current nationally determined contributions from mitigation through 2030, global warming is expected to increase the temperature by 3°C by 2100, with warming to continue afterward.[3] Large increases in global temperatures could have substantial adverse effects on natural and human environments worldwide.

4.8.1.2 Greenhouse Gases

The principal anthropogenic (human-made) GHGs that contribute to global warming are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated compounds, including sulfur hexafluoride,

[1] Intergovernmental Panel on Climate Change. 2007. *Climate Change 2007: The Physical Science Basis.* Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change. Available: https://www.ipcc.ch/site/assets/uploads/2018/05/ar4_wg1_full_report-1.pdf. Accessed: April 2021.

[2] Intergovernmental Panel on Climate Change. 2018. *Global Warming of 1.5°C.* Contribution of Working Groups I, II, and III. Available: https://www.ipcc.ch/sr15/. Accessed: April 2021.

[3] Ibid.

hydrofluorocarbons (HFCs), and perfluorocarbons. Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic sources.

The primary GHGs of concern associated with the proposed project are CO_2, CH_4, and N_2O. The principal characteristics of these pollutants are discussed below.

CO_2 enters the atmosphere through fossil fuel (i.e., oil, natural gas, coal) combustion, solid waste decomposition, plant and animal respiration, and chemical reactions (e.g., from cement manufacturing). CO_2 is also removed from the atmosphere (or *sequestered*) when it is absorbed by plants as part of the biological carbon cycle.

CH_4 is emitted during the production and transport of oil, natural gas, and coal. CH_4 emissions also result from livestock and agricultural practices as well as the decay of organic waste in municipal solid waste landfills.

N_2O is emitted during agricultural and industrial activities as well as the combustion of fossil fuels and solid waste.

Methods have been set forth to describe emissions of GHGs in terms of a single gas to simplify reporting and analysis. The most commonly accepted method for comparing GHG emissions is the global warming potential (GWP) methodology defined in IPCC reference documents. IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of carbon dioxide equivalent (CO_2e) emissions, which compares the gas in question to that of the same mass of CO_2. (Note that CO_2 has a global warming potential of 1 by definition.) Table 4.8-1 lists the global warming potential of CO_2, CH_4, and N_2O and their lifetimes in the atmosphere.

TABLE 4.8-1. LIFETIME AND GLOBAL WARMING POTENTIAL OF KEY GREENHOUSE GASES4

Greenhouse Gas	Global Warming Potential (100 years)	Lifetime (years)
CO_2	1	50–200
CH_4	25	9–15
N_2O	298	121
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide		

All GWPs used in the California Air Resources Board (CARB's) GHG inventory, as well as assessments of attainment with respect to the state's 2020 and 2030 reduction targets, are considered over a 100-year time frame (as shown in Table 4.8-1). However, CARB recognizes the importance of short-lived climate pollutants (SLCPs) as well as the importance of reducing emissions to achieve the state's overall climate change goals. SLCPs have atmospheric lifetimes on the order of a few days to a few decades. Their relative climate-forcing impacts, when measured in terms of how they heat the atmosphere, can be tens, hundreds, or even thousands of times greater than that of CO_2.[5] Because of their short lifespans and warming impacts, SLCPs are measured in terms of CO_2e, using a 20-year time period. The use of GWPs

[4] California Air Resources Board. 2018. *Global Warming Potentials.* Last reviewed: June 22. Available: https://www.arb.ca.gov/cc/inventory/background/gwp.htm#transition. Accessed: April 2021.

[5] California Air Resources Board. 2017. *Short-Lived Climate Pollutant Reduction Strategy*. March. Available: https://ww2.arb.ca.gov/sites/default/files/2020-07/final_SLCP_strategy.pdf. Accessed: April 2021.

with a time horizon of 20 years captures the importance of SLCPs and gives a better perspective on the speed at which emission controls affect the atmosphere relative to CO_2 emission controls. The SLCP Reduction Strategy addresses CH_4, HFC gases, and anthropogenic black carbon. CH_4 has lifetime of 12 years and a 20-year GWP of 72. HFC gases have lifetimes of 1.4 to 52 years and a 20-year GWP of 437 to 6,350. Anthropogenic black carbon has a lifetime of a few days to weeks and a 20-year GWP of 3,200.[6] The proposed project would be evaluated with respect to the 100-year GWPs in Table 4.8-1 to be consistent with CARB's emissions inventory and plans. In addition, the proposed project would not include emissions sources that would emit substantial amounts of SLCPs; therefore, the 20-year GWP is presented for informational purposes only.

4.8.1.3 Greenhouse Gas Reporting

A GHG inventory is a quantification of all GHG emissions and sinks[7] within a selected physical and/or economic boundary. GHG inventories can be performed on a large scale (e.g., for global and national entities) or on a small scale (e.g., for a building or person). Although many processes are difficult to evaluate, several agencies have developed tools to quantify emissions from certain sources. Table 4.8-2 outlines the most recent global, national, statewide, and local GHG inventories to help contextualize the magnitude of potential proposed project-related emissions.

TABLE 4.8-2. GLOBAL, NATIONAL, STATE, AND REGIONAL GREENHOUSE GAS EMISSION INVENTORIES

Emissions Inventory	CO_2e (metric tons)
2017 IPCC Global GHG Emissions Inventory[a]	53,500,000,000
2019 EPA National GHG Emissions Inventory[b]	6,577,000,000
2018 CARB State GHG Emissions Inventory[c]	425,300,000
2015 BAAQMD GHG Emissions Inventory[d]	85,000,000

[6] Ibid.

[7] A GHG sink is a process, activity, or mechanism that removes GHG from the atmosphere.

4.8.2 Applicable Plans, Policies, and Regulations

4.8.2.1 Federal

There is currently no federal overarching law specifically related to climate change or reductions in GHG emissions. Under the Obama administration, the U.S. Environmental Protection Agency (EPA) had been developing regulations under the Clean Air Act (CAA). There have also been settlement agreements between EPA, several states, and nongovernmental organizations to address GHG emissions from electric generating units and refineries, in addition to EPA's issuance of an Endangerment Finding and a Cause or Contribute Finding. EPA has also adopted a Mandatory Reporting Rule and Clean Power Plan. Under the Clean Power Plan, EPA issued regulations to control CO_2 emissions from new and existing coal-fired power plants.

Corporate Average Fuel Economy Standards

The National Highway Traffic Safety Administration (NHTSA) sets Corporate Average Fuel Economy (CAFE) standards to improve average fuel economy and reduce GHG emissions generated by cars and light-duty trucks. NHTSA and EPA have proposed amendments to the current fuel efficiency standards for passenger cars and light-duty trucks as well as new standards covering model years 2021 through 2026. Under the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule, current standards would be maintained through 2026. California, 22 other states, the District of Columbia, and two cities filed suit against the proposed action on September 20, 2019.[8] The lawsuit requests a "permanent injunction prohibiting defendants from implementing or relying on the preemption regulation" but does not stay its implementation during legal deliberations. Part 1 of the SAFE Vehicles Rule went into effect on November 26, 2019. Part 2 of the rule was finalized on March 30, 2020. The SAFE Vehicles Rule will decrease the stringency of CAFE standards to 1.5 percent each year through model year 2026 compared with the standards issued in 2012, which would have required annual increases of about 5 percent. On January 20, 2021, President Biden issued an executive order (EO) directing EPA and NHTSA to review the SAFE Vehicles Rule and propose a new rule for suspending, revising, or rescinding it by summer 2021.

4.8.2.2 State

California has adopted statewide legislation to address various aspects of climate change and GHG emissions. Much of this legislation establishes a broad framework for the state's long-term GHG reduction and climate change adaptation program. The state's governors have also issued several EOs related to California's revolving climate change policy. Of particular importance are Assembly Bill (AB) 32 and Senate Bill (SB) 32, which outline the state's GHG reduction goals (i.e., achieving 1990 emissions levels by 2020 and a level 40 percent below 1990 emissions levels by 2030). In the absence of federal regulations, control of GHGs is generally regulated at the state level. It is typically approached by setting emissions reduction targets for existing sources of GHGs, setting policies to promote renewable energy and increase energy efficiency, and developing statewide action plans. Summaries of key policies, legal cases, regulations, and legislation at the state level that are relevant to the proposed project are identified below.

[8] *California et al. v. United States Department of Transportation et al.*, 1:19-cv-02826, U.S. District Court for the District of Columbia.

Assembly Bill 1493

With the 2002 passage of AB 1493, also known as Pavley I, California launched an innovative and proactive approach to dealing with GHG emissions and climate change at the state level. AB 1493 requires CARB to develop and implement regulations to reduce automobile and light-duty truck GHG emissions. These stricter emissions standards were designed to apply to automobiles and light-duty trucks beginning with the 2009 model year. Although litigation challenged the regulations and EPA initially denied California's related request for a waiver, the waiver request was granted.[9] Additional strengthening of the Pavley standards (referred to previously as *Pavley II*, now referred to as the *Advanced Clean Cars* measure) was adopted in 2012 for vehicle model years 2017–2025. Together, the two standards are expected to increase average fuel economy in 2025 to roughly 54.5 miles per gallon.

Executive Order S-3-05

On June 1, 2005, Governor Arnold Schwarzenegger signed EO S-3-05. The goal of this EO was to reduce California's GHG emissions to 1) 2000 levels by 2010, which was achieved; 2) 1990 levels by 2020; and 3) 80 percent below 1990 levels by 2050. EO S-3-05 also calls for the California Environmental Protection Agency to prepare biennial reports on the potential impact of continued global warming on certain sectors of the California economy. As a result of the scientific analysis presented in these biennial reports, a comprehensive Climate Adaptation Strategy was released in December 2009 following extensive interagency coordination and stakeholder input. The latest of these reports, the *Climate Action Team Biennial Report*, was published in December 2010.

Executive Order S-01-07

With EO S-01-07, Governor Schwarzenegger set forth the low-carbon fuel standard for California. Under this 2007 EO, the carbon intensity of California's transportation fuels was to be reduced by at least 10 percent by 2020.

Executive Order B-55-18

EO B-55-18 acknowledges the environmental, community, and public health risks posed by future climate change. It also recognizes the climate stabilization goals of the Paris Agreement adopted by the European Union and most countries in the world, including and the United States, following early 2021 action by the Biden administration. California is committed to meeting the goals of the Paris Agreement and going beyond them wherever possible. Because of worldwide scientific agreement that carbon neutrality must be achieved by midcentury, EO B-55-18 establishes a new state goal for achieving carbon neutrality as soon as possible, but no later than 2045, and achieving and maintaining net negative emissions thereafter. The EO charges CARB with developing a framework for implementing and tracking progress toward these goals. This EO extends EO S-3-05 but is binding only on state agencies.

Senate Bill 350—De Leon (Clean Energy and Pollution Reduction Act of 2015)

SB 350 was approved by the California legislature in September 2015 and signed by Governor Brown in October 2015. Its key provisions require 1) a renewables portfolio standard of 50 percent and 2) a

[9] As noted above, California's waiver to set state-specific standards is currently uncertain because of the SAFE Vehicles Rule.

doubling of energy efficiency (i.e., energy from electricity and natural gas) by 2030; this includes improvements to the efficiency of existing buildings. These mandates will be implemented by future actions of the California Public Utilities Commission and California Energy Commission.

Senate Bills 1078, 107, and 2

SBs 1078 (2002), 107 (2006), and 2 (2011), known collectively as California's Renewables Portfolio Standard (RPS), obligated investor-owned utilities, energy service providers, and Community Choice Aggregators to procure additional sales from eligible renewable sources each year, with the long-range target of procuring 33 percent of retail sales from renewable resources by 2020. The California Public Utilities Commission and California Energy Commission are jointly responsible for implementing the program.

Senate Bill 32 and Assembly Bill 197

SB 32 (2016) requires CARB to ensure that statewide GHG emissions are reduced to at least 40 percent below the 1990 level by 2030, consistent with the target set forth in EO B-30-15. The companion bill to SB 32, AB 197, creates requirements with respect to forming a Joint Legislative Committee on Climate Change Policies, requires CARB to prioritize direct emissions reductions and consider social costs when adopting regulations to reduce GHG emissions beyond the 2020 statewide limit, requires CARB to prepare reports on sources of GHGs and other pollutants, establishes 6-year terms for voting members of CARB, and adds two legislators as non-voting members of CARB. CARB adopted the 2017 Climate Change Scoping Plan in November 2017 to meet the GHG reduction requirement set forth in SB 32. This updated scoping plan includes doubling energy efficiency savings, increasing the low-carbon fuel standard from 10 to 18 percent, adding 4.2 million zero-emission vehicles to the road, implementing the Sustainable Freight Strategy, implementing a post-2020 cap-and-trade program, creating walkable communities with expanded mass transit and other alternatives to traveling by car, and developing an Integrated Natural and Working Lands Action Plan to protect land-based carbon sinks.

Senate Bills 605 and 1383

SB 605 directed CARB, in coordination with other state agencies and local air districts, to develop a comprehensive SLCP Reduction Strategy. SB 1383 directed CARB to approve and implement the SLCP Reduction Strategy to achieve the following reductions in SLCPs:

- 40 percent reduction in CH_4, below 2013 levels, by 2030
- 40 percent reduction in HFC gases, below 2013 levels, by 2030
- 50 percent reduction in anthropogenic black carbon, below 2013 levels, by 2030

The bill also establishes the following targets for reducing organic waste in landfills and CH_4 emissions from dairy and livestock operations, as follows:

- 50 percent reduction in organic waste disposal from the 2014 level by 2020
- 75 percent reduction in organic waste disposal from the 2014 level by 2025
- 40 percent reduction in CH_4 emissions from livestock and dairy manure management operations, below the dairy and livestock sector's 2013 levels, by 2030

CARB and the California Department of Resources Recycling and Recovery (CalRecycle) are currently developing regulations to achieve the organic waste reduction goals of SB 1383. In January 2019 and June 2019, CalRecycle proposed new as well as amended regulations to Titles 14 and 27 of the California Code of Regulations. Among other things, the regulations set forth minimum standards for organic waste collection, hauling, and composting. The final regulations will take effect on or after January 1, 2022.

Short-Lived Climate Pollutant Reduction Strategy

CARB adopted the SLCP Reduction Strategy in March 2017 as a framework for achieving the CH_4, HFC, and anthropogenic black carbon reduction targets set by SB 1383. The SLCP Reduction Strategy includes 10 measures that fit within a wide range of ongoing planning efforts throughout the state, including CARB's and CalRecycle's proposed rulemaking on organic waste diversion.

Senate Bill 100

The state's existing RPS requires sellers of electricity to procure supplies from eligible renewable energy resources so that the total number of kilowatt hours sold to retail end users achieves the following:

- 25 percent of retail sales by December 31, 2016 (achieved)
- 33 percent by December 31, 2020
- 40 percent by December 31, 2024
- 45 percent by December 31, 2027
- 50 percent by December 31, 2030

SB 100 revises and extends the renewable resource targets to 50 percent by December 31, 2026, 60 percent December 31, 2030, and 100 percent by December 31, 2045.

Senate Bill 743

SB 743 requires revisions to the California Environmental Quality Act (CEQA) Guidelines. The revisions establish new impact analysis criteria for the assessment of a project's transportation impacts. The intent behind SB 743, including the revisions to the CEQA Guidelines, is to integrate and balance project needs pertaining to congestion management, infill development, active transportation, and GHG emissions reductions. The Governor's Office of Planning and Research (OPR) recommends that vehicle miles traveled (VMT) serve as the primary analysis metric, replacing the existing criteria of delay and level of service. In 2018, OPR released a technical advisory, outlining potential VMT significance thresholds for different project types. For example, it would be reasonable to conclude that projects within 0.5 mile of an existing major transit top or an existing stop along a high-quality transit corridor as well as retail projects of less than 50,000 square feet would have a less-than-significant transportation impact. The new VMT methodology was required as of July 1, 2020.

Senate Bill X7-7

SB X7-7, the Water Conservation Act of 2009, sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020. The state is required to make incremental progress toward this goal by reducing per capita water use by at least 10 percent by December 31, 2015. This is an implementing

measure from the 2017 Climate Change Scoping Plan pertaining to the water sector that will continue to be implemented beyond 2020. A reduction in water consumption reduces the energy necessary to convey, treat, and distribute water; it also reduces associated emissions from water consumption as well as wastewater treatment.

Energy Efficiency Standards

The California Green Building Standards Code (Title 24, proposed Part 11) was adopted as part of the California Building Standards Code (California Code of Regulations Title 24). Part 11 established voluntary standards (known as the CALGreen standards) that became mandatory under the 2010 edition of the code. The standards concerned sustainable site development, energy efficiency (in excess of California Energy Code requirements), water conservation, material conservation, and internal air contaminants. The current energy efficiency standards were adopted in 2019 and took effect on January 1, 2020.

4.8.2.3 Regional

Metropolitan Transportation Commission

The Metropolitan Transportation Commission (MTC) is the metropolitan planning organization for the nine counties that make up the San Francisco Bay Area and the San Francisco Bay Area Air Basin (SFBAAB), which includes the city of San Francisco. As described above, SB 375 requires metropolitan planning organizations to prepare regional transportation plans/sustainable communities strategies (RTPs/SCSs) that present integrated regional land use and transportation approaches for reducing VMT and associated GHG emissions. CARB identified an initial goal for the SFBAAB, which was to reduce VMT per capita by 7 percent by 2020 and 15 percent by 2035 compared to 2005 levels. To meet the initial goal, the MTC adopted an RTP/SCS in 2013 known as Plan Bay Area, which was updated in 2017 and renamed Plan Bay Area 2040. In 2018, CARB updated the per capita GHG emissions reduction targets. The updates called for a 10 percent per capita GHG reduction by 2020 and 19 percent per capita GHG reduction by 2035 compared to 2005 levels.[10] MTC will be addressing the revised goals in the next RTP/SCS.

Plan Bay Area 2040 and the next RTP/SCS are relevant to the proposed project because the CEQA Guidelines require an assessment of a project's consistency with plans to reduce GHG emissions.

Bay Area Air Quality Management District

The Bay Area Air Quality Management District (BAAQMD) is responsible for air quality planning within the SFBAAB, including projects in the city. BAAQMD has adopted advisory emissions thresholds to assist CEQA lead agencies in determining the level of significance of a project's GHG emissions; the thresholds are outlined in the agency's California Environmental Quality Act Air Quality Guidelines (CEQA Air Quality Guidelines).[11] The emissions thresholds apply only to projects with buildout years

[10] California Air Resources Board. 2018b. *Regional Plan Targets*. March. Available: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets. Accessed: April 2021.

[11] Bay Area Air Quality Management District. 2017a. *California Environmental Quality Act Air Quality Guidelines*. May. Available: http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_ may2017-pdf.pdf?la=en. Accessed: April 2021.

prior to 2020. The CEQA Air Quality Guidelines also outline methods for quantifying GHG emissions as well as potential mitigation measures.

4.8.2.4 Local

San Francisco Unified School District Carbon Reduction Plan

In August 2020, the San Francisco Unified School District (District or SFUSD) released an updated Carbon Reduction Plan that details District plans to phase out fossil fuel use by 2040. The Carbon Reduction Plan applies to District operations, such as the use of energy and water at its facilities and in its vehicle fleet, which are the sources of emissions that the District can control. To phase out fossil fuels and otherwise increase sustainability, the Carbon Reduction Plan includes the goals outlined below.

Buildings

- New buildings will be designed with the goal of using no more energy than they generate on-site.
- New and modernized buildings will be plumbed for rainwater collection where feasible.
- SFUSD will strive to reduce gas usage 30 percent by 2020, 50 percent by 2030, and 100 percent by 2040.
- SFUSD will strive to reduce its water usage 30 percent by 2020 and 50 percent by 2030.

Fleet

- All new SFUSD-owned vehicles shall be emissions free.
- SFUSD will strive to fuel all diesel-powered buses with renewable diesel by 2020.
- All SFUSD-owned vehicles will be electric or powered by low-carbon fuels by 2030.

Renewables

- SFUSD will strive to generate 100 percent of its power needs on-site by 2050.
- SFUSD will strive to meet 50 percent of water demand through rainwater by 2050.

San Francisco Unified School District Sustainability

The District has developed a number of sustainability goals that are relevant to GHG emissions. The five pillars of sustainability that the District has identified are as follows, some of which are included as goals in the District's Carbon Reduction Plan, discussed above:

- **Carbon Neutrality**: Reduce energy usage 50 percent by 2040; eliminate the combustion of natural gas by 2040; generate 100 percent of the District's power needs by 2040
- **Water Resilience**: Reduce water use 50 percent by 2030; decrease stormwater runoff 25 percent by 2040
- **Zero Waste**: Increase waste diversion from landfills to 85 percent by 2025; reduce total waste generation 15 percent by 2030

- **Sustainable Transportation**: Reduce single-family car trips to less than 30 percent by 2030; reduce school-related traffic collisions 50 percent by 2030
- **Connection to Nature**: Ensure that every child has a meaningful interaction with nature every day.

4.8.3 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☒	☐	☐
2. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☒	☐	☐

4.8.3.1 Project Analysis

Project Schedule

Demolition and surcharging[12] at the project site would begin in approximately March 2022. There would be an approximate one-year period when no construction activity would occur (i.e., mid-2022 to mid-2023). Site remediation and construction of the proposed building would begin in mid-2023 and continue for approximately 21 to 24 months. Construction would conclude by summer 2025, and the project would be fully operational in 2025. As the design of the project progresses, it may be determined that surcharging is not required for the proposed project.

4.8.3.2 Significance Threshold

CEQA Guidelines Appendix G (14 California Code of Regulations 15000 et seq.) identifies the significance criteria to be considered in determining whether a project could have significant impacts related to GHG emissions. CEQA Guidelines Section 15064.4 provides guidance to lead agencies for determining the significance of environmental impacts pertaining to GHG emissions. CEQA Guidelines Section 15064.4(a) states that a lead agency should make a good-faith effort that is based, to the extent possible, on scientific and factual data to describe, calculate, or estimate the amount of GHG emissions that would result from implementation of a project. CEQA Guidelines Section 15064.4(b) also states that, when assessing the significance of impacts from GHG emissions, a lead agency should consider 1) the extent to which the project may increase or reduce GHG emissions compared with existing conditions, 2) whether the project's GHG emissions would exceed a threshold of significance that the lead agency has determined to be applicable to the project, and 3) the extent to which the project would comply with

[12] Surcharging would involve the use of imported soil piled on the surface of the project site to cause lateral pressure. The additional pressure would shorten the consolidation time for the soil at the project site.

regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

The California Supreme Court's decision in *Center for Biological Diversity et al. vs. California Department of Fish and Wildlife, the Newhall Land and Farming Company* (62 Cal.4th 204) confirmed that there are multiple potential pathways for evaluating GHG emissions consistent with CEQA. Air quality management agencies throughout the state have drafted or adopted various threshold approaches and guidelines for analyzing GHG emissions in CEQA documents. Common threshold approaches include 1) compliance with a qualified GHG reduction strategy, 2) numeric "bright-line" thresholds, 3) efficiency-based thresholds, 4) performance-based reductions,[13] and 5) compliance with regulatory programs.

Construction Threshold

BAAQMD's CEQA Air Quality Guidelines do not identify a GHG emissions threshold for construction-related emissions. Instead, BAAQMD recommends that GHG emissions from construction be quantified and disclosed and that a determination regarding the significance of the GHG emissions be made with respect to whether a project is consistent with the emissions reduction goals. BAAQMD further recommends incorporation of best management practices (BMPs) to reduce GHG emissions during construction, as feasible and applicable. This approach is used to evaluate construction-generated emissions.

Operational Threshold

BAAQMD's most recent quantitative bright-light threshold is 4.6 metric tons of CO_2e per year per service population. This numeric operational threshold was calculated to achieve the state's 2020 target for GHG emissions levels, not the SB 32-specified target of 40 percent below the 1990 GHG emissions level. BAAQMD has not yet updated operational thresholds to achieve target GHG emissions levels for 2030.

Because the proposed project would begin operations after 2020, BAAQMD's 2020 efficiency target of 4.6 metric tons of CO_2e per year per service population would not apply because it would not be applicable to the state's post-2020 GHG reduction goals.

Compliance with Regulatory Programs

Because there is no other applicable quantitative GHG threshold, operational GHG emissions are evaluated with respect to the proposed project's compliance with regulatory programs.

The proposed project is anticipated to be fully operational by 2025. The state has a reduction goal that calls for carbon neutrality, as set by EO B-55-18. However, the state's goal has not been codified by law, and neither the state nor the District has adopted a CEQA-qualified plan or framework for achieving the 2045 reduction goal. The state's 2030 target has been codified by law through SB 32; the 2017 Climate Change Scoping Plan[14] was adopted to meet this goal. The next statewide statutory milestone target that

[13] Performance-based thresholds are based on the percentage reduction from a projected future condition, such as a reduction in future business-as-usual emissions to meet the SB 32 target (i.e., 40 percent below 1990 levels) through a combination of state measures, project design features (e.g., renewable energy), or mitigation.

[14] California Air Resources Board. 2017. *California's 2017 Climate Change Scoping Plan*. November. Accessed: https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed: April 2021.

would be applicable to the proposed project would occur in 2030. Therefore, this analysis focuses on 2030 target plans, policies, and regulations adopted pursuant to achieving 2030 reductions. Where applicable, guidance from CARB, OPR, and other agencies related to long-term emissions reduction requirements is incorporated into the analysis.

Mobile Sources. CARB's 2017 Climate Change Scoping Plan recognizes that, although vehicle technologies and low-carbon fuels will continue to reduce emissions from the transportation sector, VMT reductions will be necessary to achieve California's long-term GHG reduction target. Recent CARB analysis demonstrates that a 15 percent reduction in VMT per service population by 2050, compared with the 2015–2018 average, would be needed statewide to meet long-term climate change planning goals. This reduction target would be consistent with recent OPR guidance regarding SB 743. According to the proposed project's transportation study, regional average Bay Area VMT per capita is 19.1. By applying a 15 percent reduction to regional Bay Area VMT, based on CARB and OPR guidance, the service population threshold for VMT would be 16.2. The proposed project's mobile-source emissions would be considered less than significant if service population VMT would be 16.2 or less. In addition to VMT reductions, compliance with regulatory programs (e.g., AB 1493, low-carbon fuel standard, SB 743, and SB 375) would also be required to reduce statewide mobile GHG emissions to a less-than-significant impact.

Energy, Water, Waste, Area, and Land Sources. CARB's 2017 Climate Change Scoping Plan, which relies heavily on state programs (e.g., Title 24 and SB 100), outlines the strategies required to reduce statewide GHG emissions and achieve California's SB 32 reduction target.[15] Projects that implement applicable strategies from the 2017 Climate Change Scoping Plan would be consistent with the state's GHG reduction framework and requirements. Accordingly, a sector-by-sector review of the features and sustainability measures included in the proposed project is provided to evaluate consistency with the 2017 Climate Change Scoping Plan. This assessment also considers recent OPR guidance[16] related to long-term reductions in statewide emissions. Accordingly, impacts related to emissions from energy, water, waste, area, and land sources would be considered less than significant, provided the proposed project is consistent with all applicable 2017 Climate Change Scoping Plan strategies and supporting regulations and guidance.

Stationary Sources. BAAQMD has adopted a threshold of 10,000 metric tons of CO_2e for stationary sources.[17] This threshold is consistent with stationary-source thresholds adopted by other air quality management districts throughout the state. Furthermore, this threshold level would capture 95 percent of all GHG emissions associated with new permit applications for stationary sources in the air basin by capturing only the large, significant projects; permit applications for projects with emissions above 10,000 metric tons of CO_2e account for less than 10 percent of the applications. The proposed project would include one 86-horsepower (64-kilowatt-hour) diesel fire pump with an appropriate diesel particulate filter for engine exhaust. The fire pump would be used as a backup fire pump only during emergencies and for monthly testing. The fire pump included as part of the proposed project would be a

16 California Air Resources Board. 2019. *2017 Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals.* January. Available: https://ww2.arb.ca.gov/sites/default/files/2019-01/2017_sp_vmt_reductions_jan19.pdf. Accessed: April 2021.

17 Bay Area Air Quality Management District. 2017b. *California Environmental Quality Act Air Quality Guidelines.* May. Available: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en. Accessed: April 2020.

permitted source; therefore, BAAQMD's threshold of 10,000 metric tons of CO_2e is appropriate for analyzing the significance of emissions generated by the fire pump. Stationary-source emissions would be considered less than significant if emissions would amount to less than 10,000 metric tons of CO_2e.

4.8.3.3 Methodology

GHG impacts associated with construction and operation of the proposed project were assessed and quantified using the California Emissions Estimator Model (CalEEMod), version 2106.3.2, as well as the CARB 2021 EMission FACtor (EMFAC) model, consistent with BAAQMD guidance. A summary of the methodology is provided below. A full list of assumptions can be found in **Appendix 4.2** to the draft EIR.

The proposed project would result in construction-related GHG emissions from the exhaust of mobile and stationary construction equipment, the exhaust of employees' vehicles and haul trucks, and the generation of electricity. GHG emissions from construction of the proposed project were estimated using the CalEEMod model. Information regarding the construction schedule, equipment, vendor trips, haul trips, and materials was provided by the project applicant. Two construction scenarios were evaluated to account for the possibility of surcharging. The surcharging scenario would result in additional truck trips and the need for additional equipment to load and unload soil.

GHG emissions that would be emitted from motor vehicles traveling to and from the project site were evaluated using CalEEMod, along with updated emissions factors from CARB's EMFAC2021 model and traffic data provided by Fehr and Peers. The traffic data included daily VMT and daily trip figures for the proposed project, with an assumed operational period of 200 days per year, consistent with the typical number of days of operation per year for schools. The traffic data were inputted into the CalEEMod model to determine GHG emissions from mobile sources.

CalEEMod was also used for area, energy, water, and waste emissions. Area sources comprise mainly landscaping equipment, including gasoline-powered items such as trimmers. Emissions estimates were based on CalEEMod's default assumptions, which represent a conservative estimate of equipment usage, according to the square footage of the new building space and the corresponding landscaped area. Energy sources include appliances for the combustion of natural gas for building heating and hot water as well as equipment for the generation of electricity. Energy consumption data were provided by the project applicant. In addition, the most recent CO_2 intensity factor from Pacific Gas and Electric Company (PG&E) was inputted into CalEEMod. Stationary sources include the proposed fire pump. It is anticipated that fire pump testing would consist of 1 hour of testing each month. Water consumption results in indirect GHG emissions from the conveyance and treatment of water; the water consumption estimate for the proposed project was provided by the project applicant. Waste generation results in fugitive CH_4 and N_2O emissions from the decomposition of organic matter.

4.8.3.4 Greenhouse Gas Impacts

Construction Emissions

Demolition and construction activities for the proposed project would result in the temporary generation of GHG emissions. Emissions would originate from the exhaust of mobile and stationary construction equipment as well as the exhaust of employees' vehicles and haul trucks. Construction-related GHG emissions from each specific source would vary substantially, depending on the level of activity, length of the construction period, specific construction operations, types of equipment, and number of personnel.

Construction activities for the proposed project would include demolition of a parking lot; on-site and off-site improvements, including trenching for utilities; building construction, including the foundation and steel structure; concrete work; and landscape and paving work. These activities would require mobile and stationary construction equipment as well as on-road vehicles, such as haul trucks for removing demolition debris and vendor trucks for deliveries. It is possible that construction may require surcharging, which would result in additional trips for hauling soil and additional equipment for loading and unloading soil. Construction emissions have been calculated for both a surcharging scenario and non-surcharging scenario.

Estimated construction-related GHG emissions are presented in Table 4.8-3, which estimates that construction would generate approximately 1,609 metric tons of CO_2e under the surcharging scenario, with a construction period between 2022 and 2025. For the non-surcharging scenario, emissions would amount to 1,330 metric tons of CO_2e between 2023 and 2025. Relative to the non-surcharging scenario, the surcharging scenario would result in approximately 21 percent more emissions. These emissions would be generated from the additional truck trips and additional equipment for loading and unloading soil.

TABLE 4.8-3. ESTIMATED CONSTRUCTION GHG EMISSIONS FROM THE PROPOSED PROJECT (METRIC TONS)[A]

Construction Year	CO_2	CH_4	N_20	CO_2e
Surcharging Scenario				
2022	149.0	< 0.1	—	149.8
2023	775.2	0.2	—	780.8
2024	526.4	0.1	—	529.0
2025	148.1	< 0.1	—	149.0
Total[b]	1,598.7	0.4	—	1,608.7
Non-Surcharging Scenario				
2023	646.7	0.2	—	651.5
2024	526.4	0.1	—	529.0
2025	148.1	< 0.1	—	149.0
Total[b]	1,321.2	0.3	—	1,329.5

Source: See **Appendix 4.2** to the draft EIR for CalEEMod model outputs and construction energy calculations.

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide

[a.] Emissions represent the sum of emissions from the CalEEMod output during construction.

[b.] Values may not total because of rounding.

As noted above, BAAQMD has not established a quantitative threshold for assessing construction-related GHG emissions. Rather, BAAQMD recommends evaluating whether construction activities would conflict with statewide emissions reduction goals and implementing feasible BMPs. If a project does not implement feasible BMPs, it is anticipated that it would conflict with statewide emissions goals, and construction-related GHG emissions impacts would be significant. With implementation of Mitigation Measure GHG-1, the project would avoid any conflict with statewide emissions reduction goals under both the surcharging and non-surcharging scenarios. **(Less than Significant with Mitigation)**

Mitigation Measures

MM GHG-1: Require Implementation of BAAQMD-recommended Construction BMPs

The project sponsor will require its project contractors, as a condition of contracts (e.g., standard specifications), to reduce construction-related GHG emissions by implementing BAAQMD's recommended best management practices, including, but not limited to, the following measures, based on BAAQMD's CEQA Air Quality Guidelines (the project sponsor will maintain evidence of compliance from project contractors):

- Ensure that alternative-fuel (e.g., biodiesel, electric) construction vehicles/equipment make up at least 15 percent of the fleet.
- Ensure that local (i.e., sourced from within 100 miles of the planning area) building materials make up at least 10 percent of overall building materials.
- Recycle and reuse at least 50 percent of construction waste or demolition materials.

Operational GHG Emissions by Sector

Operation of proposed project would generate direct and indirect GHG emissions. Sources of direct emissions would include vehicle trips, fire pump operations, and landscaping activities. Sources of indirect emissions would include electricity consumption, waste and wastewater generation, and water usage. Table 4.8-4 presents the results of the operational modeling analysis. The text that follows includes a discussion of emissions sectors, consistent with the categories in CARB's 2017 Climate Change Scoping Plan, to evaluate the proposed project's compliance with regulatory programs.

The project site is assumed to be currently vacant, other than a permitted emergency generator; therefore, there are no quantifiable[18] emissions at the project site under existing conditions. The proposed project's GHG emissions conservatively represent the net increase in GHG emissions.

Area Emissions

As shown in Table 4.8-4, annual emissions associated with area sources would total less than 0.1 metric tons of CO_2e. Landscaping at the project site would include routine maintenance of trees and other vegetation. This would make up a small portion of the project's total emissions (0.02%).

TABLE 4.8-4. ESTIMATED OPERATIONAL GHG EMISSIONS FROM THE PROPOSED PROJECT, 2025 (METRIC TONS)

Source[a]	CO_2	CH_4	N_20	CO_2e
Area	< 0.1	< 0.1	—	< 0.1
Electricity[b]	58.8	< 0.1	< 0.1	59.5
Mobile	344.2	< 0.1	—	345.1
Stationary	0.4	< 0.1	—	0.4
Waste	—[c]	0.4	—	10.3

[18] The permitted emergency generator appears on BAAQMD's Permitted Stationary Sources Risk and Hazards GIS tool. However, GHG emissions factors and GHG emissions from this emergency generator are not provided online. Therefore, it is conservatively assumed that there are no existing GHG emissions generated by this generator.

Source[a]	CO_2	CH_4	N_20	CO_2e
Water	1.0[c]	< 0.1	< 0.1	2.6
Total GHG Emissions[b]	404.4	17	< 0.1	417.9

Source: See **Appendix 4.2** to the draft EIR.
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; SP = service population, GHG= greenhouse gases
[a] The emissions above account for the proposed project's sustainability features, which are quantifiable. The project's estimated energy and water consumption reflect the sustainability performance identified in Chapter 3, Project Description, of the draft EIR.
[b] Values may not total because of rounding.
[c] The BAAQMD CEQA Air Quality Guidelines state that biogenic CO_2 emissions should not be included in the quantification of GHG emissions from a project.

Energy Emissions

As shown in Table 4.8-4, emissions from building energy annually (i.e., electricity and natural gas usage) would total 59.5 metric tons of CO_2e. This analysis assumes that solar would not be used and that the proposed project's electricity would be obtained from the grid. OPR's 2018 CEQA and Climate Change Advisory notes that a land use development project that "achieves applicable building energy efficiency standards, uses no natural gas or other fossil fuels, and includes Energy Star appliances where available may be able to demonstrate a less-than-significant greenhouse gas impact associated with project operation." Although OPR recommends against the use of fossil fuels in new buildings, the 2017 Climate Change Scoping Plan does not assume that buildings will be all electric in the 2030 emissions reduction analysis. However, the proposed project would be all electric, with the exception of the diesel fire pump. It is anticipated that fire pump testing would consist of 1 hour of testing each month. Fire pump-related emissions are evaluated below under *Stationary Sources*.

The proposed project would use Energy Star–rated, energy-conserving appliances, and equipment would be designed to shut off when not in use, thereby further reducing energy consumption. Because the proposed project's energy needs would be met with electricity, the project would be consistent with SB 100, which requires the use of 100 percent renewable energy by 2045. Currently, PG&E is exceeding the 2020 RPS renewable energy goal, with more than 88 percent of its electricity delivered to customers from a GHG-free resource.[19] Emissions from energy consumption associated with the proposed project would decrease each year, consistent with a trajectory toward 100 percent renewable sources by 2045. As such, the proposed project's energy-related emissions would be consistent with the 2017 Climate Change Scoping Plan's overall goal of reducing energy emissions from buildings that consume fossil fuels. The proposed project's energy consumption would be minimized through the use of efficient appliances, and the energy that would be consumed would come from increasingly renewable sources.

Mobile-Source Emissions

As shown in Table 4.8-4, mobile-source emissions would total approximately 345 metric tons of CO_2e per year. This would come primarily from new vehicle trips to and from the project site. As discussed

[19] Pacific Gas and Electric Company. 2021. *PG&E Surpasses California's 2020 Renewable Energy Goal; Electricity Delivered to Customers Is More than 88% Greenhouse Gas-Free and among the Cleanest in the Nation*. March. Available: https://www.pge.com/en/about/newsroom/newsdetails/index.page?title=20210309_pge_surpasses_californias_2020_renewable_energy_goal_electricity_delivered_to_customers_is_more_than_88_greenhouse_gas-free_and_among_the_cleanest_in_the_nation. Accessed: April 2021.

in the transportation study, the proposed project would be located in Transportation Analysis Zone (TAZ) 653, an area where VMT per capita is 13.8, or 28 percent below the VMT per capita threshold of 16.2. As noted under *Operational Threshold*, the threshold is 15 percent below regional average Bay Area VMT per capita (i.e., 19.1).

The proposed project would include features to reduce VMT for employees at the site. The site design would promote pedestrian- and bicycle-friendly infrastructure. Furthermore, the proposed project would include bicycle parking spaces, a bike-share program with membership discounts, and pre-tax savings opportunities for employees. In addition, fleet vehicles owned by the District and operated at the project site would be zero-emissions vehicles.

The proposed project would be subject to regulatory programs related to fuel and vehicle efficiency, as well a vehicle electrification, all of which would result in emissions reductions. As such, the proposed project would result in a greater reduction in VMT than CARB's VMT reduction goal of 15 percent, resulting in a less-than-significant VMT impact. Therefore, the proposed project would not conflict with the state's long-term emissions reduction trajectory for mobile source emissions.

Stationary-Source Emissions

As shown in Table 4.8-4, stationary sources (i.e., the fire pump) would generate approximately 0.4 metric ton of CO_2e annually. This would be substantially below BAAQMD's stationary-source threshold of 10,000 metric tons of CO_2e per year. Anticipated use of the fire pump would occur for 1 hour per month, or 12 hours per year.

Waste Emissions

As shown in Table 4.8-4, waste emissions would total approximately 10.3 metric tons of CO_2e annually. However, the proposed project would be consistent with AB 341, which required 75 percent of solid waste generated to be reduced, recycled, or composted by 2020. Although not reflected in the emissions shown above, the proposed project would maximize recycling and composting options. These would reduce the waste-related emissions shown above because material would be prevented from decaying in a landfill and generating CH_4 emissions. This feature of the proposed project (i.e., maximizing waste diversion) would be consistent with the 2017 Climate Change Scoping Plan's overall goal of reducing waste emissions and its specific strategy to avoid CH_4 emissions by reducing the disposal of landfill waste and organics. As such, the proposed project would support the state's recycling goal.

Water Emissions

As shown in Table 4.8-4, water-related emissions would total approximately 2.6 metric tons of CO_2e annually. However, the proposed project would implement water-saving features, consistent with California Green Building Standards Code Title 24, Part 11. Such features include the use of native plants, ultra-low-flow fixtures, and recycled water for irrigation and toilet flushing. Furthermore, the proposed project would comply with all required water conservation measures, both indoor and outdoor measures. The proposed project would be consistent with the 2017 Climate Change Scoping Plan's overall goal of reducing water-related emissions. It would also support ongoing regulatory programs (e.g., SB X7-7 and Title 24) that aim to reduce GHG emissions associated with conveying and distributing water to achieve climate neutrality.

Conclusion

The proposed project would implement sustainability measures to reduce GHG emissions from the sectors discussed above. Furthermore, the proposed project would be consistent with applicable regulatory programs and, in the case of mobile-source emissions, would be substantially under the VMT per capita threshold. Overall, the proposed project would be consistent with the state's goal to minimize GHG emissions, as documented above. **(Less than Significant)**

4.8.3.5 Consistency with Plans and Programs

Assembly Bill 32, Senate Bill 32, and Executive Orders S-3-05 and B-55-18

SB 32 outlines the state's GHG emissions reduction target for 2030, while EO B-55-18 sets a more ambitious state goal of net-zero GHG emissions by 2045. CARB adopted the 2017 Climate Change Scoping Plan in November 2017 as a framework for achieving the 2030 GHG emissions reduction goal described in SB 32. There is no state plan for addressing GHG emissions reductions beyond 2030.

Given CARB's 2017 Climate Change Scoping Plan, many of the reductions needed to meet 2030 targets will come from state regulations, including cap-and-trade requirements, the requirement for additional renewable energy sources in California's energy supply, updates to Title 24, and additional emissions reduction requirements for mobile sources. The 2017 Climate Change Scoping Plan indicates that reductions will need to come in the form of changes pertaining to vehicle emissions and mileage standards, changes related to sources of electricity and increased energy efficiency at existing facilities, and state and local plans, policies, or regulations to lower GHG emissions relative to business-as-usual conditions. The 2017 Climate Change Scoping Plan carries forward GHG reduction measures from the previous iteration of the plan as well as new measures to help achieve the state's 2030 targets across all sectors of the California economy, including transportation, energy, and industry.

GHG emissions generated by construction activities would be short term and would cease once construction is complete. As discussed under Impact GHG-1, implementation of Mitigation Measure GHG-1 would result in less-than-significant impacts during construction because would require implementation of BAAQMD-recommended construction BMPs. Therefore, construction activities under the project would not conflict with or obstruct implementation of an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of GHGs. **(Less than Significant with Mitigation)**

As shown in Table 4.8-4, the proposed project would implement sustainability measures, including Energy Star–rated, high-efficiency appliances; waste diversion strategies, and water reduction features, that would be consistent with the 2017 Climate Change Scoping Plan; natural gas hook-ups would not be included. These sustainability measures would reduce GHG emissions, and impacts from area, energy, water, and waste sources would be less than significant. In addition, the proposed project would be located in an area with low VMT; per capita VMT under the project would be below the applicable threshold identified by CARB. These characteristics of the proposed project would support state efforts to meet GHG reduction goals and therefore would not conflict with any adopted statewide plans. The proposed project's operational activities would not conflict with or obstruct implementation of an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of GHGs. **(Less than Significant)**

Senate Bill 375 and Plan Bay Area

Climate protection and transportation system effectiveness are two of seven goals addressed in MTC's Plan Bay Area 2013 and 2040. The most current plan, Plan Bay Area 2040, provides a long-range framework for minimizing transportation impacts on the environment, improving regional air quality, protecting natural resources, and reducing GHG emissions. The plan supports smart growth principles, promotes infill development, and proactively links land use, air quality, and transportation needs in the region. Plan Bay Area 2040 is consistent with SB 375, which requires the MTC to adopt an SCS that outlines policies to reduce per capita GHG emissions from automobiles and light trucks. The SCS policies include a mix of strategies that encourage compact growth patterns, alternative transportation, transit, mobility and access, network expansion, and transportation investment.

Implementation of the SCS is intended to improve the efficiency of the transportation system and create a variety of land use types throughout the Bay Area that meet market demands in a balanced and sustainable manner. The proposed project would be consistent with the SCS policies and strategies described above because it would be located in an area with low VMT per capita. Furthermore, it would limit on-site parking and promote pedestrian- and bicycle-friendly infrastructure. In addition, the proposed project would include bicycle parking spaces (16 Class I spaces and 64 Class II spaces), a bike-share program with membership discounts, and pre-tax savings opportunities for employees. These features would incentivize alternative forms of transportation, which could help reduce per capita GHG emissions from passenger vehicles, consistent with Plan Bay Area 2040. Therefore, the proposed project would be consistent with the goals of SB 375 and Plan Bay Area 2040. **(Less than Significant)**

Consistency with SFUSD's Carbon Reduction Plan and Sustainability Goals

As discussed under GHG-1, the proposed project would implement sustainability measures that would reduce resource consumption, including the use of fossil fuels. The proposed project has been designed consistent with the principles and goals of the District's Carbon Reduction Plan. The project would not have any natural gas infrastructure, which would be consistent with goals to reduce energy consumption and eliminate natural gas combustion. The proposed project's water-saving features, such as low-flow fixtures, would support goals related to water resiliency. The use of recycling and composting options for waste disposal would contribute to achievement of the District's zero-waste goal. In addition, the proposed project's location in an area with low VMT and a large number of on-site bicycle spaces (80 Class I/Class II spaces) would encourage reductions in the number of single-occupant car trips.

Given that the sustainability measures discussed above would be consistent with and would showcase the District's sustainability goals, implementation of the proposed project would not conflict with the Carbon Reduction Plan or other sustainability goals. **(Less than Significant)**

4.8.4 Conclusion

With implementation of the proposed mitigation measure, the project would have a less-than-significant impact on GHG. **(Less than Significant with Mitigation)**

4.9 HAZARDS AND HAZARDOUS MATERIALS

The discussion of impacts related to hazards and hazardous materials is based on the following reports:

- October 2018 *Phase I Environmental Site Assessment Report, Mission Bay South, Block 14, School and Housing Fit Study, Mission Bay Drive at Owens Street, San Francisco, California,* prepared by Ninyo & Moore;
- December 2018 *Phase II Environmental Site Assessment, Mission Bay South, Block 14, San Francisco, California,* prepared by Ninyo & Moore;
- October 2020 *Draft Removal Action Workplan, Mission Bay South, Block 14, Mission Bay Drive at Owens Street, San Francisco, California*, prepared by Ninyo & Moore; and
- November 2020 *Preliminary Endangerment Assessment, Mission Bay South, Block 14, Mission Bay Drive at Owens Street, San Francisco, California*, prepared by Ninyo & Moore.

4.9.1 Setting

4.9.1.1 Background Information

The project site is part of Mission Bay, which has a prior history of industrial development. Between the late 1800s and mid-2000s, the project site contained a lumber yard, a dwelling, a saloon, wine storage and lumber storage, a "pond", a baled hay warehouse, a cotton shed, a corral and a wagon shed, a tool house, truck/equipment storage, and a Southern Pacific Company warehouse.[1] By the mid-2000s, the southern portion of the project site appears to have been planted with vegetation. Between approximately 2009 and 2016, the project site was graded several times and used for storage of vehicles and/or equipment. By 2017, the project site was developed into an asphalt paved parking lot.

4.9.1.2 Project Site and Off-site Conditions

Project Site

The project site is currently listed in the Department of Toxic Substances Control (DTSC) EnviroStor database as a School Site with an Active status (as of May 2019). The potential contaminants of concern and affected media were not disclosed. However, according to EnviroStor, a Preliminary Environmental Assessment (PEA) workplan has been prepared for the site to investigate potential impacts associated with total petroleum hydrocarbon (TPH), polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), Title 22 metals, hexavalent chromium, organochlorine pesticides (OCPs), and asbestos.

The California Environmental Protection Agency (CalEPA) Cortese List was also consulted. The project site was not found in any CalEPA data resource, including:

- List of sites with hazardous waste and substances from the DTSC EnviroStor database.

[1] Ninyo & Moore. *Draft Removal Action Work Plan: Mission Bay South Block 14, Mission Bay Drive at Owens Street, San Francisco, California.* October 23, 2020.

- List of leaking underground storage tank (LUST) sites from the State Water Resources Control Board (SWRCB) GeoTracker database.
- List of Regional Water Quality Control Board (RWQCB) Cease and Desist Orders and Cleanup and Abatement Orders.
- List of hazardous waste facilities subject to corrective action, as identified by DTSC.

As such, pursuant to section 21151.8(a)(1)(A) of the Public Resources Code, the site is not a current or former hazardous or solid waste disposal site or solid waste disposal site.

According to the 2020 Removal Action Workplan (RAW) prepared for the proposed project, abandoned utilities were identified on-site (i.e., gas, electric, and water as well as storm drains).However, the site does not contain any pipelines that carry hazardous substances, extremely hazardous substances, or hazardous wastes (pursuant to section 21151.8(a)(1)(C) of the Public Resources Code). A sanitary sewer bisects the site from northwest to southeast. Brick fragments, wood, rusted nails, and other debris were encountered in the fill beneath the site during prior investigations. Although of unknown origin, the fill is thought to be associated with the 1906 earthquake and fire. During prior investigations, groundwater was encountered approximately 11 to 13 feet below the ground surface (bgs).

Adjacent Uses

The project site is within the Mission Bay Risk Management Area.[2] Parcels to the south and west are undeveloped. A parcel to the southwest is developed with a multi-story structure for the University of California, San Francisco Hand, Elbow, and Upper Extremity Surgery Center as well as facilities for other health care providers. To the east is a parking lot. An open-air soccer field lies to the northeast, with mixed commercial and residential structures farther to the northeast.

4.9.1.3 On-site Sources of Contamination

Phase I Environmental Site Assessment – October 2018

A Phase I Environmental Site Assessment (ESA) was prepared by Ninyo & Moore for the project site in October 2018. The objective was to identify recognized environmental conditions (RECs) associated with the site. According to ASTM International, RECs indicate "the presence or likely presence of hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the environment."

The Phase I ESA did not identify RECs in connection with the site. However, given the location of the site within the Mission Bay Risk Management Area (detailed previously), it was determined that some

[2] A Risk Management Plan (RMP) was approved in 1999 by the RWQCB for the 300-acre Mission Bay Redevelopment Area to govern soil reuse and management. According to the RMP, previous investigations indicated that the main constituents of concern were total petroleum hydrocarbons and inorganic compounds, including heavy metals, because of their impact on soil and groundwater in the area. Most of the contamination is most likely related to the background concentrations associated with the Mission Bay fill that was placed in the early 20th century. In addition, asbestos has been reported in soil throughout the RMP area. It appears to be associated primarily with serpentinite rock, which was imported to Mission Bay as fill, although some areas contain serpentinite rock that is native to the Mission Bay area.

potential exists for contaminants to have migrated beneath the site. Based on the findings of the Phase I ESA, a soil and/or groundwater and soil vapor investigation was recommended. The investigation would be completed as part of a Phase II ESA.

Phase II Environmental Site Assessment – December 2018

A Phase II ESA was prepared by Ninyo & Moore in December 2018 to evaluate the RECs identified in the Phase I ESA. The objective of the Phase II ESA was to obtain information regarding the nature and extent of on-site contamination. Phase II ESA field activities included six borings for soil, groundwater, and soil vapor sampling. Soil vapor sampling involved the installation and removal of soil vapor probes.

The Phase II identified impacts on shallow soils from TPH, PAHs, and lead as well as impacts on soil vapor from volatile organic compounds (VOCs) and methane. The Phase II ESA recommended an additional investigation to evaluate the vertical and lateral extent of contaminant. Because the site would be developed into a school, the Phase II ESA also recommended San Francisco Department of Public Health and DTSC approval before any further site investigations.

Preliminary Endangerment Assessment – November 2020

A PEA was prepared by Ninyo & Moore in November 2020 in support of the proposed school development. The PEA evaluated site soils, groundwater, and soil gas for potential environmental concerns. The environmental concerns included TPH, PAHs, PCBs, OCPs, and asbestos in soil; TPH, PAHs, OCPs, and VOCs in groundwater; and TPH, PAHs, VOCs, and methane in soil gas.

The PEA determined that TPH, PAHs, VOCs, and/or metal concentrations that exceeded screening levels were present in soil, groundwater, and/or soil gas. Based on the report's findings, the PEA made the following recommendations:

- Evaluation of mitigation and/or remediation options for proposed improvement plans;
- Preparation of a site-specific health and safety plan and soils management plan for any work involving soil excavation;
- Evaluation of cumulative cancer risks and hazard quotients after selected mitigation and/or remediation, using a realistic exposure scenario for a school site; and
- Upon site development, documentation of "no use of groundwater" on checklist and inspection/monitoring forms to be included in the annual physical inspection report.

Evaluations of mitigation/remediation options and cumulative cancer risks and hazard quotients were conducted during preparation of the RAW described below.

Draft Removal Action Workplan – October 2020

A draft RAW was prepared for the project site in October 2020 to fulfill the requirements of California Education Code Section 17213.2. According to Section 17213.2, if a PEA "discloses the presence of a hazardous materials release, or threatened release, or the presence of naturally occurring hazardous materials at a proposed school site at concentrations that could pose a significant risk to children or adults and the school district is in the process of obtaining the proposed school site, the school district shall enter

into an agreement with DTSC to oversee the response action at the site and take such action pursuant to the requirements of the act as required by DTSC."

According to the RAW, as described above, environmental conditions at the site were evaluated through a Phase II ESA in December 2018 and a PEA[3] in November 2020. During the evaluations, the contaminants of concern (COCs) identified in the soil were PAHs and metals, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd) pyrene, naphthalene, hexavalent chromium, arsenic, lead, and mercury. Contaminants in soil gas were identified as benzene, chloroform, naphthalene, TPH, and methane. Because of hydrologic conditions, groundwater was not considered to be an exposure pathway for future occupants.

According to the RAW, COCs in the soil appear to be dispersed throughout the site, from the surface to at least 5 feet bgs; at Phase II ESA sample locations, COCs are dispersed to depths of 10 to 12 feet bgs. Moreover, the Human Health Screening Evaluation conducted during preparation of the PEA identified contaminants in soil and soil gas that exceeded the target excess cancer risk and the target non-cancer hazard quotient. In addition, on-site methane concentrations exceeded DTSC screening levels. Given the recorded contaminant levels, mitigation and/or remediation was recommended. The recommended actions include the construction of covers and caps, installation of a soil vapor intrusion mitigation system, and implementation of institutional controls to ensure the integrity of the covers and caps as well as maintenance of the vapor intrusion mitigation system. Demolition and surcharging at the project site would begin in approximately March 2022. There would be an approximate 1-year period when no construction activity would occur (i.e., mid-2022 to mid-2023). Site remediation and construction of the proposed building would begin in mid-2023.

The site is not a hazardous substance release site as identified by the DTSC in a current list adopted pursuant to the State's Section 25356 of the Health and Safety Code (and pursuant to section 21151.8(a)(1)(B) of the city's Public Resources Code).

4.9.1.4 Off-site Sources of Contamination

A 0.25-mile radius search of the SWRCB GeoTracker database identified eight LUST sites in the project area. However, all eight sites have a Completed – Case Closed status, signifying that the sites had been remediated to the satisfaction of the oversight agency. No sites were identified in DTSC's EnviroStor database within the same radius.

[3] The PEA and RAW documents were finalized concurrently; therefore, the PEA results were available and included in the RAW.

4.9.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
2. Create a significant hazard for the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☒	☐	☐
3. Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	☐	☐	☒
4. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard for the public or the environment?	☐	☐	☐	☒
5. For a project within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
6. Impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
7. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

4.9.2.1 Hazardous Materials Impacts

Implementation of the proposed project would not create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials. Construction activities would involve the routine transport, use, and disposal of hazardous materials such as fuels, solvents, paints, oils, and grease. Such transport, use, and disposal would be subject to applicable federal and state regulations (e.g., Resource Conservation and Recovery Act, Department of Transportation Hazardous Materials Regulations). Although small amounts of fuels, solvents, paints, oils, and grease would be transported, used, and disposed of during construction, these materials are commonly used in construction projects and would not represent the transport, use, and disposal of acutely hazardous materials. In addition, construction activities would incorporate best management practices, as required under the Construction General Permit (Order 2009-0009-DWQ). Best management practices used during construction could include, but would not be limited to, practices related to vehicle and equipment fueling and maintenance; material delivery, storage, and use; spill prevention and control; and solid and hazardous waste management.

Once construction is complete, the proposed project would involve operation of a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub, professional learning facility, outdoor learning area, outdoor play area, and paved surface parking lot. Hazardous materials used during operations would consist of common maintenance materials, including cleansers, solvents, paints, etc. These materials are usually handled and stored in small quantities, and releases are generally small and cleaned up soon after they occur. **(Less than Significant)**

As previously mentioned, the project site has a history of environmental investigations (described in detail under Section 4.9.1.3, *On-site Sources of Contamination)*. According to the investigations, contaminants in soil were identified as PAHs and metals, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, naphthalene, hexavalent chromium, arsenic, lead, and mercury; contaminants in soil gas include benzene, chloroform, naphthalene, TPH, and methane. Because of on-site contamination, a site-specific remedial action was selected that included both the construction of covers and caps for affected soils and the installation of a vapor intrusion mitigation system. These features would be implemented prior to construction of the proposed project. In addition, excavation/drilling as well as off-site disposal of affected soils from landscape areas, building foundations, and piers would be conducted prior to school facility construction. Also, as part of the remedial action and in compliance with applicable regulations, a site-specific health and safety plan and soils management plan would be prepared and implemented by the contractor to ensure the safety of construction personnel and minimize potential exposure risks for the surrounding environment per Mitigation Measure HAZ-1. Mitigation Measure HAZ-1 would ensure the safety of construction personnel and minimize potential exposure risks for the surrounding environment. A search of the SWRCB GeoTracker database identified eight LUST sites in the project area (i.e., within 0.25 mile). All eight sites had a Completed – Case Closed status; therefore, the potential for impacts associated with the closed LUST sites is considered low. **(Less than Significant with Mitigation)**

The proposed project would develop a school. There are no other schools within 0.25 mile of the project site. As such, there would be no impacts associated with hazardous emissions or the handling of hazardous or acutely hazardous materials in the vicinity of a school during project construction. The handling of hazardous materials during operations is discussed above. **(No Impact)**

Mitigation Measures

MM HAZ-1: Implementation of a Health and Safety Plan and Soils Management Plan during Construction

To avoid any exposure of construction personnel, the public, or the environment to contaminated soils, prior to construction activities associated with the proposed project involving ground disturbances and prior to issuance of a grading permit, the project contractor will retain the services of a qualified environmental engineering firm to prepare and implement a health and safety plan, which outlines the safety measures and procedures implemented at sites, and soils management plan, which outlines guidelines for grading and construction projects at sites with contamination issues and ongoing remediation. As specified in the Removal Action Workplan prepared for the proposed project, because of on-site contamination involving soil and soil vapor, a remedial action, consisting of covers and caps for affected soils and a vapor intrusion mitigation system, has been recommended and selected for the proposed project; the remedial action would be implemented prior to project construction.

- The health and safety plan would specify pre-field activities, such as utility clearance, along with field activities, such as hazard identification, hazard controls, safe practices, emergency and accident response, employee training and communication, and recordkeeping requirements.
- A soils management plan would provide administrative, procedural, and analytical guidance to expedite and clarify decisions and actions as contaminated soils are encountered. The soils management plan will be designed to protect human health and the environment. The plan will include protocols, measures, and techniques for the proper handling, management, and disposal of affected soils found onsite and in areas of offsite work during soil disturbance activities. The soils management plan will also be designed to protect workers and offsite receptors during site activities and ensure the proper characterization, management, and/or disposal of contaminated environmental media that is found to be above applicable environmental screening levels.

  The soils management plan will be prepared by a commercial environmental engineering firm with demonstrated expertise and experience in the preparation of such plans and be stamped by an appropriately licensed professional. Moreover, the soils management plan will establish protocols and measures for addressing the discovery of presently unknown environmental conditions or subsurface structures, such as underground storage tanks or sumps. If the environmental engineering firm subsequently identifies the need for further sampling, the project contractor will implement this and any other requirements identified in the soils management plan.

4.9.2.2 Other Hazards

The project site is not within the jurisdiction of an airport land use plan or within 2 miles of a public airport or public use airport. The nearest airport to the project site is Oakland International Airport, located approximately 8.4 miles to the southeast and across San Francisco Bay. **(No Impact)**

As discussed in Section 4.17, *Transportation*, the roadway surrounding the project site would not be in conflict with adopted codes regarding street widths and turning movements. The proposed project would not include any design features that would affect emergency vehicle access. Emergency vehicles would have adequate access to the project site from Owens Street and Sixth Street and to the perimeter of the site from all adjacent streets (i.e., Owens Street, Nelson Rising Lane, Sixth Street, Mission Bay Boulevard). Large construction vehicles would be guided on and off the site by personnel with signs and flags. The project would not include any characteristics (e.g., permanent road closures, long-term blocking of access) that would physically impair or otherwise interfere with an emergency response or evacuation in the vicinity over the long term. Non-emergency vehicles would be required to yield the right-of-way to emergency vehicles, per the California Vehicle Code. Therefore, the proposed project would not affect implementation of any local emergency response plan. **(Less than Significant)**

Wildland fires are not expected to be a concern in the project area. The project site is in a highly developed portion of the city. According to the California Department of Forestry and Fire Protection's California Fire Hazard Severity Zone Viewer, the project site is not within a Very High Fire Hazard Zone. **(No Impact)**

4.9.3 Conclusion

As specified in the October 2020 RAW, because of on-site contamination involving soil and soil vapor, a remedial action, consisting of covers and caps for affected soils and a vapor intrusion mitigation system, has been recommended and selected for the proposed project; the remedial action would be implemented prior to project construction. In addition, a site-specific health and safety plan and soils management plan, part of **Mitigation Measure HAZ-1,** would be prepared and implemented by the contractor to avoid any exposure of construction personnel, the public, or the environment to contaminated soils. With the implementation of both the selected remedial action and **Mitigation Measure HAZ-1,** the proposed project would have a less-than-significant impact related to hazards and hazardous materials. **(Less than Significant with Mitigation)**.

4.10 HYDROLOGY AND WATER QUALITY

4.10.1 Setting

4.10.1.1 Flooding

Although the Federal Emergency Management Agency (FEMA) has not completed a flood study for the city and county and San Francisco, the San Francisco Public Utilities Commission (SFPUC) has developed a 100-year storm flood risk map. However, because the project area is not served by the combined sewer and stormwater system, flood risks have not been analyzed. Adjacent areas to the north and west are within a 100-year storm flood risk area.[1] Because adjoining areas are at a similar elevation and in a 100-year flood zone, it is likely that the project site could be prone to flooding in a 100-year storm event.[2]

Coastal and low-lying areas, such as the project site, are particularly vulnerable to future sea-level rise. Sea-level rise is a concern, particularly in combination with storm events and coastal flooding. Based on the State of California's Sea-Level Rise Guidance, the site would not be subject to sea-level rise levels projected by 2050 (i.e., 1.1 to 2.7 feet). However, by 2100, the project site could be subject to inundation from sea-level rise under medium (5.7 feet) and high (10.2 feet) scenarios.[3]

4.10.1.2 Inundation and Dam Failure Hazards

A tsunami is a series of ocean waves caused by displacement of a large volume of water, typically as a result of an undersea earthquake or landslide. The project site is not subject to inundation from a tsunami.[4] San Francisco Bay is a large, open body of water with no immediate risk of seiche. Large waves generated in the Pacific Ocean undergo considerable refraction and diffraction upon passing through the Golden Gate, resulting in greatly reduced heights when they reach the project site. In addition, flood risks from a seiche event would be minimal in the project vicinity. In the event of dam failure, downstream areas could be inundated with flood waters. However, the project site is not in a dam inundation area.

4.10.1.3 Storm Drainage System

Runoff from the northern and eastern portions of the project site is collected by the on-site drainage system. The runoff drains north to a 48-inch main on Mission Bay Boulevard North. Runoff from the southern and western portion of the site is collected by the on-site drainage system. That runoff drains to the west and a 24-inch main in Owens Street.[5] Existing storm drain facilities in the vicinity of the project site consist of a 12-inch storm drain in Owens Street, near the southwest corner of the site; a 12-inch

storm drain in Owens Street near the northwest corner of the site; a 12-inch storm drain in Sixth Street (private); and an 18-inch storm drain in Nelson Rising Lane (private). Stormwater is conveyed through stormwater drain facilities to Mission Creek Channel, which flows from Mission Bay to central San Francisco Bay. Approximately 90 percent of the project site is currently covered with impervious surfaces.

4.10.1.4 Groundwater

The project is within the Downtown San Francisco Groundwater Basin, which is made up of shallow, unconsolidated alluvium. The alluvium is underlain by less permeable bedrock. Generally, groundwater flows to the northeast, following the topography. Groundwater within the basin is subject to elevated concentrations of nitrates, chloride, and total dissolved solids.[6,7]

Groundwater at the project site was observed at approximately 8 to 14 feet below the existing grade. The depth to the historic high groundwater level in the area of the site is less 10 feet below site grades. Because of the proximity of the site to San Francisco Bay, variations in rainfall, and landscaping, variations in groundwater levels across the site are anticipated.[8]

4.10.1.5 Water Quality

Stormwater from the project site drains into channelized creeks in the city, such as Mission Creek Channel. Water quality in Mission Creek Channel and other creeks is directly affected by pollutants contained in stormwater runoff, which originates from a variety of urban and non-urban sources. Stormwater from urban sources contains metals, pesticides, herbicides, and other contaminants, including oil, grease, asbestos, lead, and animal wastes. Mission Creek Channel is 303(d) listed impaired for ammonia, chlordane, dieldrin, hydrogen sulfide, lead, mercury, polycyclic aromatic hydrocarbons, polychlorinated biphenyls, silver, and zinc. Lower San Francisco Bay is 303(d) listed as impaired for chlordane, dichlorodiphenyltrichloroethane, dieldrin, dioxin compounds, furan compounds, invasive species, mercury, polychlorinated biphenyls, selenium, and trash.[9]

4.10.1.6 Applicable Plans, Policies, and Regulations

The federal Clean Water Act (CWA) and California's Porter-Cologne Water Quality Control Act (Porter-Cologne Act) are the primary laws related to water quality. Regulations set forth by the U.S. Environmental Protection Agency (EPA) and the State Water Resources Control Board (SWRCB) have been developed to fulfill the requirements of the federal and state legislation. The State of California has developed a number of water quality laws, rules, and regulations and adopted water quality standards to protect beneficial uses of waters of the state, as required by Section 303(d) of the CWA. CWA

9 California State Water Resources Control Board. 2018. *Final 2014/2016 California Integrated Report* (Clean Water Act Section 303(d) List/305(b) Report). U.S. Environmental Protection Agency approved: April 6, 2018. Available: https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2014_2016.shtml. Accessed: February 22, 2021.

requirements are addressed through development of a 303(d)/305(b) integrated report, which provides both an update to the 303(d) list and a 305(b) assessment of statewide water quality. The Porter-Cologne Act authorizes the SWRCB to draft state policies regarding water quality. The act also requires projects that discharge, or propose to discharge, wastes that could affect water quality to file a Report of Waste Discharge with the appropriate Regional Water Quality Control Board (RWQCB). EPA's regulations include the National Pollutant Discharge Elimination System (NPDES) permit program, which controls sources that discharge pollutants into waters of the United States (e.g., streams, lakes, bays). These regulations are implemented at the regional level by the San Francisco Bay RWQCB.

NPDES Construction General Permit

The SWRCB implemented a NPDES Construction General Permit for California. Specifically, for projects that disturb 1 acre or more of soil, a Notice of Intent to discharge stormwater and a Stormwater Pollution Prevention Plan (SWPPP) must be prepared prior to commencement of construction. The SWPPP, which demonstrates compliance with relevant local ordinances and regulations, includes an overview of the best management practices (BMPs) that would be implemented to prevent soil erosion and discharges of construction-related pollutants that could contaminate nearby water resources.

Municipal Stormwater Permit

The City is considered a traditional small municipal separate storm sewer system (MS4) permittee under the SWRCB's waste discharge requirements for stormwater discharges from small MS4s (NPDES Order No. 2013-001-DWQ; General Permit No. CAS000004). Stormwater infrastructure connected to the Mission Bay separate stormwater system is under the jurisdiction of the SFPUC and covered under the City's MS4 permit. As part of MS4 permit compliance, the SFPUC has created a Stormwater Management Plan for managing stormwater in its jurisdiction.

Traditional small MS4 permittees are required to comply with Section E of the Statewide Phase II MS4 Permit, which specifies requirements for site design, low-impact development, post-construction stormwater management, and operation and maintenance as part of a Post-Construction Stormwater Management Program (Provision E.12). Low-impact development design standards are required to be implemented for all development or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface area. If a redevelopment project increases the impervious surface area of an existing development by more than 50 percent, runoff from the entire project, including all existing, new, and/or replaced impervious surfaces, must be included in the treatment system design.

The SFPUC and the Port of San Francisco developed Stormwater Management Requirements[10] in accordance with the requirements of the NPDES Phase II General MS4 Permit and San Francisco's Stormwater Management Ordinance to govern post-construction stormwater runoff. The Stormwater Management Requirements outline the mandatory requirements for managing post-construction stormwater runoff and provide guidance on how to incorporate green infrastructure into site designs. The San Francisco Stormwater Management Ordinance requires both new projects and redevelopment

[10] San Francisco Public Utilities Commission. 2016. *San Francisco Stormwater Management Requirements and Design Guidelines.* City and County of San Francisco. May. Available: https://sfwater.org/Modules/ShowDocument.aspx?documentID=9026. Accessed: February 22, 2021.

projects to manage stormwater with the use of green infrastructure (e.g., stormwater controls or BMPs) and maintain that green infrastructure for the lifetime of the project.

San Francisco Bay Basin (Region 2) Water Quality Control Plan (Basin Plan)

The Porter-Cologne Act requires the SWRCB or a RWQCB to adopt basin plans for the protection of water quality. The San Francisco Bay RWQCB established regulatory standards and objectives for water quality in San Francisco Bay in its Water Quality Control Plan for the San Francisco Bay Basin, commonly referred to as the Basin Plan. The Basin Plan describes the legal, technical, and programmatic bases for determining waste discharge requirements, taking enforcement actions, and implementing water quality regulations in the region. In addition, the Basin Plan identifies beneficial water uses, the water quality objectives needed to protect the designated beneficial water uses, as well as strategies and schedules for achieving the water quality objectives.

Sustainable Groundwater Management Act

The Sustainable Groundwater Management Act of 2014 (SGMA) provides a framework for sustainable management of groundwater supplies by local authorities, with a limited role for state intervention only if necessary to protect the supplies. The SGMA requires the formation of local Groundwater Sustainability Agencies, which are required to adopt groundwater sustainability plans to manage the sustainability of groundwater basins. The adoption of a groundwater sustainability plan is required for all high- and medium-priority basins, as identified by the Department of Water Resources, or submit an alternative to a groundwater sustainability plan. The SGMA also requires governments and water agencies with high- and medium-priority basins to halt overdraft practices and bring groundwater basins into balance with respect to pumping and recharge. The SFPUC manages the seven groundwater basins that underlie the city and county of San Francisco. The project is within the Downtown San Francisco Groundwater Basin, which is designated as a very low-priority basin and not subject to the SGMA.

Sea-Level Rise and Executive Order S-13-08

In November 2008, Governor Arnold Schwarzenegger issued Executive Order S-13-08. The order acknowledges that future sea-level rise associated with climate change may have a substantial effect on coastal development and therefore requires the California Natural Resources Agency to develop a state climate adaptation strategy in coordination with local, regional, state, and federal public and private entities. The order also requires all state agencies with plans to construct projects in areas that could be vulnerable to future sea-level rise to "consider a range of sea-level rise scenarios for 2050 and 2100 in order to assess project vulnerability and, to the extent feasible, reduce expected risks and increase resiliency to sea-level rise."

San Francisco Construction Site Runoff Ordinance

To reduce the discharge of pollution to the local storm drain system, the City adopted the Construction Site Runoff Ordinance in 2013. The SFPUC manages the Construction Site Runoff Control Program to ensure that all construction sites implement BMPs to control construction site runoff. Construction activity within the city that disturbs 5,000 square feet or more of ground surface must also submit an Erosion and Sediment Control Plan and an application for a Construction Site Runoff Control Permit prior to commencing construction-related activities.

4.10.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality?	☐	☐	☒	☐
2. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project would impede sustainable groundwater management of the basin?	☐	☐	☒	☐
3. Substantially alter the existing drainage pattern of the site or area, including through alteration of the course of a stream or river or the addition of impervious surfaces, in a manner that would:				
a. Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
b. Substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site;	☐	☐	☒	☐
c. Create or contribute runoff that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
d. Impede or redirect floodflows?	☐	☐	☒	☐
4. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
5. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

In the *California Building Industry Association v. Bay Area Air Quality Management District* case, decided in 2015,[11] the California Supreme Court held that the California Environmental Quality Act (CEQA) does not generally require lead agencies to consider how existing environmental conditions might affect a project, except where the project would significantly exacerbate an existing environmental condition. Accordingly, placing new development in an existing or future flood hazard area is not considered an impact under CEQA, unless the project would exacerbate environmental hazards or conditions that already exist. Therefore, the impact analysis below evaluates whether the proposed project would exacerbate existing flood hazards.

[11] *California Building Industry Association v. Bay Area Air Quality Management District*, 62 Cal.4th 369. Opinion filed December 17, 2015. Available: https://caselaw.findlaw.com/ca-supreme-court/1721100.html. Accessed: February 3, 2021.

4.10.2.1 Water Quality

Construction Impacts

Project construction activities (e.g., grading, spoil stockpiling, earth-disturbing activities) could result in short-term water quality impacts associated with soil erosion and subsequent sediment transport to adjacent properties, roadways, and watercourses through storm drains. The project site is part of Mission Bay, which has a prior history of industrial development. Contaminants in the soil at the site include polycyclic aromatic hydrocarbons and metals as well as benzene, chloroform, naphthalene, total petroleum hydrocarbons, and methane in soil gas. The contaminated areas would pose a potential risk to water quality during ground-disturbing activities. A soil and/or groundwater and soil vapor investigation is recommended. However, contamination that could pose a risk during ground-disturbing activities would be addressed through compliance with an approved soil management plan. In the event that contaminates are found during construction, the project would comply with NPDES regional permit requirements as well as RWQCB requirements to prevent potential water quality impacts on surface water and groundwater.

Other potential water quality impacts include chemical spills into storm drains or groundwater aquifers if proper minimization measures are not implemented. Construction activities must comply with the Construction General Permit, the MS4, and the San Francisco General Plan as well as local ordinances, which contain standards to ensure that water quality is not degraded. As part of the Construction General Permit, standard erosion control measures and BMPs would be identified in the SWPPP and implemented during construction. BMPs would be used to control erosion, restrict non-stormwater discharges, and protect water quality from potential contaminants in stormwater runoff originating from the construction site. Examples of BMPs include erosion control measures (e.g., silt fences, staked straw bales/wattles, silt/sediment basins or traps), geofabric, sandbag dikes, covers for stockpiles, or storage precautions for outdoor material storage areas. Such BMPs would protect surface water and groundwater quality. In addition, the proposed project would implement an Erosion and Sediment Control Plan to minimize water quality impacts associated with erosion or the mobilization of sediment. Therefore, the proposed project would not violate water quality standards or waste discharge requirements during construction. **(Less than Significant)**

Operational Impacts

Approximately 90 percent of the project site is currently covered with impervious surfaces. With project implementation, approximately 76 percent of the project site would be covered with impervious surfaces, resulting in an 14 percent decrease in impervious area. The reduction in the impervious surface area would result in a net decrease in the volume of runoff and associated pollutants leaving the site. In addition, on-site stormwater would be treated within the bioretention areas located on approximately 5,000 square feet of the project site. The bioretention areas would capture, filter, and treat on-site stormwater prior to it entering the stormwater system.

The outdoor play area would include design components and stormwater design best practices from the project sponsor's Green Schoolyards program. In addition, trees, shrubs, and groundcover would be planted throughout the project site. Native plants and plants with low irrigation requirements would be used on the site and grouped into hydro zones. These landscape features would treat stormwater runoff through biological uptake and soil infiltration.

The majority of the impervious surfaces on-site would be treated by the on-site bioretention areas. Small portions of on-site impervious surfaces, such as driveways and paths where runoff cannot be captured and conveyed to the treatment area, would not be treated. The improvements on private streets (i.e., Nelson Rising Lane and Sixth Street) would be constructed in accordance with University of California, San Francisco standards and requirements, including stormwater treatment requirements. The project would include minor improvements on Owens Street and Mission Bay Boulevard and, thus, those improvements would not be subject to San Francisco's Stormwater Management Ordinance because of the minor nature of the improvements.[12] Stormwater runoff from the project site would comply with MS4 requirements prior to discharge to the storm drain system. The City's review and permitting process would ensure that the permit's waste discharge requirements would not be violated by the project. Therefore, the proposed project would not violate water quality standards or waste discharge requirements during operation. **(Less than Significant)**

4.10.2.2 Groundwater

Approximately 90 percent of the project site is currently covered with impervious surfaces. Therefore, the project site does not currently contribute to substantial groundwater recharge. Subsurface explorations performed for the Geotechnical Evaluation encountered groundwater at depths of 8 to 14 feet bgs. Regional mapping indicates that the historic high groundwater level is less than 10 feet bgs.

The proposed building would be constructed on a deep foundation with drilled piers. To accommodate the drilled piers, the project would require a maximum excavation of 155 feet below ground surface at certain locations. To accommodate the foundation, the project would require excavation up to 10 feet below ground surface. To accommodate surface grading, utility trenches, and other ground improvements, the project would require excavation up to 5 feet below ground surface. If dewatering is required during construction, disposal would be performed in accordance with the guidelines of the Regional Water Quality Control Board. In the event that groundwater is encountered during construction, dewatering would be conducted on a one-time or temporary basis during the construction phase and would not result in a loss of water that would substantially deplete groundwater supplies. Specifically, groundwater disposal would be treated as necessary prior to discharge so that all applicable water quality objectives (as designated in the Basin Plan) would be met or hauled off-site for treatment and disposal at an appropriate waste treatment facility that is permitted to receive such water.

With project implementation, approximately 76 percent of the project site would be covered with impervious surfaces, resulting in a decrease in impervious cover. On-site stormwater would be treated within approximately 5,000 square feet of bioretention areas located throughout the project site as well as trees, shrubs, and groundcover throughout the project site. The proposed bioretention areas would slow water, allowing it to percolate into the ground. The bioretention areas would also increase benefits related to groundwater recharge.

The proposed project would increase groundwater recharge potential within the project site. Therefore, the project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project would impede sustainable groundwater management within the basin. **(Less than Significant)**

[12] Pascutto, Julia. Senior associate, project architect. December 1, 2020—email, Gould Evans.

4.10.2.3 Drainage Patterns

The project site does not include any existing streams or watercourses that could be altered or diverted. With project implementation, approximately 76 percent of the project site would be covered with impervious surfaces, resulting in a decrease in impervious cover. Therefore, the proposed project would have no impact related to the alteration of existing drainage patterns, including alterations to the course of a stream or river or the addition of impervious surfaces. During construction, stormwater drainage patterns could be temporarily altered. However, the project would implement BMPs, as required in the project SWPPP, to minimize the potential for erosion or siltation in nearby storm drains and temporary changes in drainage patterns during construction. Construction BMPs would capture and infiltrate small amounts of sheetflow so that off-site runoff from the construction site would not increase, thereby ensuring that drainage patterns would not be significantly altered. Measures required by the Construction General Permit would also limit site runoff during construction; such measures would not alter stormwater drainage patterns. BMPs would be implemented to control construction site runoff, ensure proper stormwater control and treatment, and reduce the discharge of pollutants to the storm drain system. Therefore, construction of the project would not substantially alter the existing drainage pattern of the site in a manner that would result in substantial erosion or siltation or increase the rate or amount of surface runoff in a manner that would result in flooding on-site or off-site.

The project would decrease the impervious surface area of the project site. With project implementation, approximately 76 percent of the project site would be covered with impervious surfaces, resulting in a decrease in impervious cover and, therefore, surface runoff would decrease compared to existing conditions. The existing storm drain within the project site would be removed. The new site storm drain system would be designed to meet current SFPUC requirements. Drainage runoff would be determined per San Francisco 2015 Subdivision Regulations, with a 5-year storm and a 5-minute time of concentration. It is unclear at this time if stormwater from the site would be permitted to discharge to the private stormwater system located in private streets. However, no upsizing of the City main is anticipated with the project.[13,14] Because the project would decrease the amount of impervious surface area on the project site, the surface area available for natural drainage would increase. As a result, there would be fewer impediments on-site that would redirect floodflows.

The District's design standards guide sustainability as well as the project's Green Schoolyards design process. These standards define minimum quality and performance requirements for systems, such as those for rainwater collection, as well as reuse and stormwater standards. The use of native plants, healthy soils, permeable surfaces, and rainwater collection and stormwater solutions, such as on-site bioretention areas, would reduce runoff rates and associated pollutants. Stormwater would be reused on-site, allowing for natural filtration prior to it entering the stormwater system, which connects directly to the bay.[15] A preliminary and a final stormwater control plan would be submitted for approval by the SFPUC. Therefore, the project would not result in impacts from an increase in impervious surface area and associated runoff and pollutants. **(Less than Significant)**

[15] McLennan Design. 2020. *Sustainable Design Narrative (Programming), Mission Bay Soils*. January 24.

4.10.2.4 Inundation

As previously discussed, the project site is not prone to inundation due to tsunami, seiche, or dam failure. However, the project site is likely within a 100-year flood zone. The project site may be subject to the sea-level rise levels projected by 2100. The design of the proposed project would minimize the effects of sea-level rise. Therefore, the proposed project would exacerbate existing hazards related to flooding or sea-level rise.

As discussed above, stormwater BMPs would be implemented, as required by federal, county, and local policies, to minimize any degradation of water quality associated with stormwater runoff or construction-related pollutants. In addition, construction activities would comply with local stormwater ordinances, stormwater requirements established by San Francisco's MS4 permit, and regional waste discharge requirements. Post-construction stormwater management measures, as required by Provision E.12 regulations, such as bioretention areas, would be implemented as part of the project, thereby reducing the risk of a pollutant release. Therefore, the risk of release of a pollutant release due to project inundation is low. **(Less than Significant)**

4.10.2.5 Consistency with the Regional Water Quality Control Plans or Sustainable Groundwater Management Plans

The proposed project would adhere to all state and local water quality standards. As part of compliance with permit requirements during ground-disturbing or other construction activities, water quality control measures and BMPs, such as silt fences, fiber rolls, and sediment traps, would be implemented to ensure that water quality standards would be achieved, including the water quality objectives that protect designated beneficial uses of surface and groundwater, as defined in the Basin Plan. Releases of construction runoff would comply with the appropriate water quality objectives for the region. The Construction General Permit requires stormwater discharges to be free of pollutants that cause, or contribute to, an exceedance of applicable water quality objectives or water quality standards, including designated beneficial uses. Therefore, the proposed project would not obstruct implementation of a water quality control plan. The project is within the Downtown San Francisco Groundwater Basin, which is designated as a very low-priority basin and not subject to the SGMA. No sustainable groundwater management plan applies to the basin. Furthermore, groundwater recharge would increase with implementation of the proposed project. Based on the above analysis, the project would not conflict with existing regional water quality control plans or sustainable groundwater management plans. Therefore, the project would be consistent with applicable state and local plans regarding water quality and groundwater management. **(Less than Significant)**

4.10.3 Conclusion

The project would have a less-than-significant impact on hydrology and water quality. **(Less than Significant)**

4.11 LAND USE

4.11.1 Setting

4.11.1.1 Existing Land Use on the Project Site

The approximately 2.45-acre project site is located in the Mission Bay neighborhood of the City of San Francisco (City). The project site contains portions of two parcels: Block 8709, Lot 011, and Block 8711, Lot 007.[1] The project site currently contains a paved surface parking lot with approximately 251 parking spaces. Refer to Figure 3.02-2 in Chapter 3.0, *Project Description*, of the draft EIR, for an aerial photograph of the project site and surrounding area.

4.11.1.2 Surrounding Land Uses

The project site is bounded by Mission Bay Boulevard South to the north, 6th Street (privately owned by the University of California) to the east, Nelson Rising Lane (privately owned by the University of California) to the south, and Owens Street to the west in the Mission Bay neighborhood in the northeastern quadrant of San Francisco. The project site is currently used as a parking lot and is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco at Mission Bay campus, as well as recreational uses. The nearest recreational resources to the project site are Mission Creek Park, located 0.10 mile north, and Koret Quad, 0.13 mile southeast. The nearest residence is approximately 0.04 mile northeast of the project site. The closest school to the project site is the Live Oak School, 0.4 mile southwest of the project site.

4.11.1.3 San Francisco General Plan Land Use Designation and Zoning

Land Use Designation

The City adopted the *2014 Housing Element* in April 2015 as the latest housing element update to accommodate planning, housing, and employment growth in the planned period of 2014 through 2022. In order to provide ample housing supply and affordable housing, the City has prioritized planning for housing using Area Plans, Redevelopment Plans, and major development projects created in partnership with private sponsors.[2] The project site is located within the Mission Bay Area, which is estimated to accommodate 6,090 new residents in the 2014–2022 planning period.[3]The project site is covered under the Redevelopment Plan for the Mission Bay South Redevelopment, which has designated the site as Public Facilities (School, Police, Fire, Rail and Area below Freeway).

Zoning Designation

On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public

---

1 As part of the project, the project site would be merged into one parcel.

2 City and County of San Francisco. 2015. *2014 Housing Element*. Available: https://generalplan.sfplanning.org/2014HousingElement-AllParts_ADOPTED_web.pdf. Accessed February 28, 2021.

3 Ibid.

schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.) The following zoning and height and bulk district information is provided for informational purposes. Under the San Francisco Planning Code, the project site is zoned Mission Bay Redevelopment Area (MB-RA-); the site is in the MB-RA height and bulk district; see Figure 3.0-3 in Section 3.3.3, *Project Description*).

In addition, the project site is on Development Block 14 under the Redevelopment Plan for the Mission Bay South Redevelopment Project (Redevelopment Plan).[4] The project site is also designated as Mission Bay Community Facilities (MB-CF) and Height Zone (HZ)-9 under the Redevelopment Plan. According to the Redevelopment Plan, the MB-CF designation consists of land uses, other than housing sites or open space, owned by a government agency or other public or semi-public entity in some form of public or semi-public use. Uses permitted under this designation include fire and police stations, open lots or enclosed storage areas, railroad tracks and related facilities, and other public structures or uses.

4.11.1.4 Applicable Plans, Policies, and Regulations

San Francisco General Plan

The *San Francisco General Plan* (General Plan) establishes goals and policies to guide land use development within the City. Applicable General Plan policies are listed below. The project's consistency with these policies is discussed below in Section 4.11.2.2, *Consistency with the General Plan Land Use Designation and Zoning*.

Land Use Policies

- **Policy 1-2**: Integrate Mission Bay South land uses, scale and circulation systems with surrounding districts and San Francisco Bay.
- **Policy 1-5**: Where appropriate, design building forms and ground floor uses that enliven and activate streets and open space and which provide visual interaction between building occupants and pedestrians ("eyes on the street") for safety and security.
- **Policy 2-1**: Provide for general community services and recreational facilities at a scale appropriate to serve Mission Bay South.
- **Policy 2-2**: Include adequate public improvements, utilities and amenities.

Urban Design Policies

- **Policy 3-1**: Provide pedestrian scale and interest in ground floor treatments of buildings through the use of treatments such as clear glass fenestration, cornice treatments and detailed facades.
- **Policy 3-2**: Design in consideration of protecting major views of the Bay, the Bay Bridge and the Downtown skyline from Mission Bay South and, if feasible, the elevated 1-280 freeway along Mission Bay South, using street view corridors, open space, the careful placement of building forms and building massing.

[4] City and County of San Francisco. 2018. *Redevelopment Plan for the Mission Bay South Redevelopment Project*. Office of Community Investment and Infrastructure. Available: https://sfocii.org/sites/default/files/Redevelopment%20Plan%20for%20the%20Mission%20Bay%20South%20Redevelopment%20Project_March_6_2018_0.pdf. Accessed: February 28, 2021.

- **Policy 3-5**: Achieve high quality design for buildings and landscaping.
- **Policy 3-8**: Promote building forms that enhance sun exposure on public open spaces.
- **Policy 5-6**: Provide adequate active outdoor recreation spaces, including passive recreational spaces, and facilities for the area's residential population.
- **Policy 5-9**: Design buildings in consideration of noise and traffic in the area. Such design can include measures such as placing residential units above a podium of parking or commercial uses, installing double-glazed windows and using sound attenuation construction methods and materials along the traffic facing walls, placing sleeping quarters away from noise sources, and installing varieties of trees that tolerate traffic impacts.
- **Policy 6-1**: Create parks, open space and recreational facilities within a comfortable walking/wheelchair traveling distance to serve the needs of Mission Bay South residents, workers and visitors of all ages and that are accessible to everyone, including the physically disabled and the elderly.

Commerce and Industry Policies

- **Policy 7-1**: Encourage the siting of educational institutions, medical research and development, retail, multi-media/ telecommunications, recreational, entertainment and public and private utility uses at Mission Bay South in a manner compatible with adjacent uses.

Community Facilities Policies

- **Policy 3.2**: Assure that neighborhood centers complement and do not duplicate existing public and private facilities.
- **Policy 8.1**: Provide public school facilities for education in accordance with the need for such facilities as defined by the Unified School District and Community College District. Locate such facilities according to the Public School Facilities Plan and, wherever possible, make available for community use.
- **Policy 10.1**: Provide facilities for treatment of storm and wastewater prior to discharge into the Bay or ocean. Locate such facilities according to the Wastewater and Solid Waste Facilities Plan.
- **Policy11.1**: Provide facilities for treatment of solid waste and locate such facilities as shown on the Wastewater and Solid Waste Facilities Plan.

Air Quality Policies

- **Policy 3.7**: Exercise air quality modeling in building design for sensitive land uses such as residential developments that are located near the sources of pollution such as freeways and industries.
- **Policy 3.9**: Encourage and require planting of trees in conjunction with new development to enhance pedestrian environment and select species of trees that optimize achievement of air quality goals.
- **Policy 6.1**: Encourage emission reduction through energy conservation to improve air quality.
- **Policy 6.2**: Encourage recycling to reduce emissions from manufacturing of new materials in San Francisco and the region.

Environmental Protection Policies

- **Policy 10.1**: Promote site planning, building orientation and design, and interior layout that will lessen noise intrusion.
- **Policy10.2**: Promote the incorporation of noise insulation materials in new construction.
- **Policy 11.1**: Discourage new uses in areas in which the noise level exceeds the noise compatibility guidelines for that use.
- **Policy 15.3**: Encourage an urban design pattern that will minimize travel requirements among working, shopping, recreation, school, and childcare areas.

University of California San Francisco (UCSF) 2014 Long Range Development Plan

The University of California San Francisco (UCSF) adopted the *UCSF 2014 Long Range Development Plan* (LRDP) in November 2014 as a comprehensive physical land use plan intended to guide UCSF's growth and other physical changes through the year 2035.[5] The LRDP estimates overall growth and provides guidance for the siting of individual projects for the next 20 years. Under the LRDP, the project site is reserved for use by the District as a public school site. UCSF fully expects the District to develop the site for a school; however, if SFUSD does not request Block 14 during that timeframe, UCSF may develop Block 14 for its own use after the necessary planning, environmental review, and amendment of the LRDP.

4.11.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Physically divide an established community?	☐	☐	☐	☒
2. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

4.11.3 Physical Division of an Established Community

The proposed project would demolish the existing surface parking lot and surrounding chain link fence and in its place would construct a multi-story (maximum of 63 feet tall), approximately 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub,[6] professional learning facility,[7] outdoor learning area, outdoor play area, and paved-surface parking lot with 10 parking spaces. The site is

[5] UCSF. 2014. *UCSF 2014 Long Range Development Plan—Building on 150 Years: UCSF Plans for 2035*. Available: https://www.ucsf.edu/cgr/cgr-projects/lrdp#tabs-3. Accessed: April 26, 2021.

[6] A *linked learning hub* would allow high school students to participate in job training, internships, and business partnerships. The linked learning hub students would include a morning cohort and an afternoon cohort.

[7] A *professional learning facility* would allow educators to participate in training.

surrounded primarily by institutional land uses and parking lots associated with the UCSF at Mission Bay campus, as well as recreational uses. All project facilities on the project site would remain in the contained area bounded by Mission Bay Boulevard South, 6th Street, Nelson Rising Lane, and Owens Street. Although a building would be constructed in the place of a surface parking lot, pedestrians and commuters would still be able to navigate around the project site. Therefore, the project would not physically divide an established community within the City and would not interfere with the movement of residents through a neighborhood. **(No Impact)**

4.11.3.1 Consistency with the General Plan Land Use Designation and Zoning

Potential incompatibility or conflicts with land use plans or regulations may arise from placing a particular development or land use at an inappropriate location or as a direct result from a project's design or scope. Depending on the nature of the impact and its severity, land use compatibility conflicts can range from minor irritation and nuisances to potentially significant effects on human health and safety.

The proposed project would modify the character of the project site by demolishing a surface parking lot. In its place, the District would construct a multistory (maximum of 63 feet tall), approximately 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub, professional learning space, outdoor learning area, outdoor play area, and paved surface parking lot with ten parking spaces. Although the project would introduce a building on the project site, compared with the existing parking lot, the mass and scale of the proposed building would not be out of character with the surrounding buildings.

The proposed project would employ up to 70 employees and will also serve as a professional development space for up to 60 teachers per day during operation when school is not in session. When school is in session, there would be up to 20 employees and teachers on site. The proposed project would have a daily enrollment capacity of 500 students at the elementary school and up to 270 students at the linked learning hub. Thus, the proposed project would result in a greater intensity of use at the project site compared to existing conditions. The added usage intensity of the site is compatible with Public Facilities designation of the project site and is planned under the maximum development program for Mission Bay. Therefore, the proposed land use and school itself would be compatible with surrounding uses.

As discussed in Chapter 3, *Project Description*, of the draft EIR, on August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.) Nonetheless, the District seeks to develop properties in a manner that minimizes potential conflicts with land use policies and plans of local jurisdictions to the extent feasible. For informational purposes, the project's consistency with the City's general plan and zoning designation are discussed in detail below.

General Plan Designation Consistency

The proposed school would develop a new 500-student public school included as part of the maximum development program for Mission Bay.[8] As part of the Mission Bay South Redevelopment Project Area established in November 1998, development of the project site is controlled by the Mission Bay South Redevelopment Plan and Designs for Development, which supersedes the San Francisco Planning Code except for noted exceptions. All construction within the South Mission Bay plan area is subject to Design for Development guidelines, which establish height limits of buildings, land coverage, density, setback requirements, design controls necessary for proper development of both private and public areas within the Plan Area.[9] The project site is designated as Public Facilities (School, Police, Fire, Rail and Area below Freeway) in the Redevelopment Land Use Map of the Mission Bay South Redevelopment Plan. Due to design and proposed use of the project site, the proposed project would also comply with the applicable Mission Bay South Redevelopment Project policies and San Francisco General Plan policies listed above.

The maximum development program for Mission Bay was established to expand economic vivacity, housing opportunities, and neighborhood-serving amenities. As mentioned previously, although not required per Government Code Section 53094, the proposed project would comply with applicable design standards to the extent feasible, as established by the Office of Community Investments and Infrastructure. Based on the above analysis, the project would not conflict with allowed uses and thus would not cause a significant environmental impact due to conflict with the Redevelopment Plan or San Francisco's General Plan. **(Less than Significant)**

Zoning Designation Consistency

As discussed under Section 4.11.1.3, *San Francisco General Plan Land Use Designation and Zoning*, above, the project is subject to Government Code Section 53094(b), and local zoning and building ordinances would not be applicable to the proposed project. The project is zoned as MB-RA, which does not have a more specific zoning categorization per the Redevelopment Plan. In addition, according to the HZ Chart and HZ Diagram of the Design for Development Plan, the project site is designated as HZ-9, which does not specify any height limits. The redevelopment plan also includes requirements for the project site for setbacks, streetwalls, and corner zones because of the site's prominent location on Mission Bay Boulevard South and Owens Street.[10] Therefore, although compliance with applicable zoning and building ordinances is not required, the project would comply with the existing zoning requirements to the extent feasible and would not cause a significant environmental impact due to a conflict with the existing zoning designation for the project site. **(No Impact)**

---

4.11.4 Conclusion

The project would have a less-than-significant impact on land use. **(Less than Significant)**

4.12 MINERAL RESOURCES

4.12.1 Setting

Land in San Francisco includes a number of different Mineral Resource Zone classifications, as defined by the California Division of Mines and Geology under the Surface Mining and Reclamation Act of 1975.[1] The project site is in an area that has been zoned by the state as Mineral Resource Zone 1 with respect to aggregate materials.[2] Geologic information for Mineral Resource Zone 1 indicates that no significant mineral deposits are present or little likelihood exists for their presence. The Office of Mine Reclamation's list of mines (the AB 3098 List) regulated under the Surface Mining Reclamation Act does not include any mines within the city.[3]

4.12.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
2. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

4.12.2.1 Mineral Resources Impacts

As described above, mineral resources are not found in the City of San Francisco to an appreciable extent. The project site is not a mineral recovery site, it would not require quarrying, mining, dredging or extracting locally important mineral resources on the project site. Therefore, the proposed project would have no impact on mineral resources. **(No Impact)**

4.13 NOISE

4.13.1 Setting

4.12.1.1 Overview of Noise

Noise is commonly defined as unwanted sound that annoys or disturbs people and potentially causes an adverse psychological or physiological effect on human health. Because noise is an environmental pollutant that can interfere with human activities, an evaluation of noise is necessary when considering the environmental impacts of a proposed project.

Sound is mechanical energy (vibration) transmitted by pressure waves over a medium such as air or water. Sound is characterized by various parameters, including the rate of oscillation of the sound waves (frequency), the speed of propagation, and the pressure level or energy content (amplitude). In particular, the sound pressure level is the most common descriptor for characterizing the loudness of an ambient (existing) sound level. Although the decibel (dB) scale, a logarithmic scale, is used to quantify sound intensity, it does not accurately describe how sound intensity is perceived by human hearing. The human ear is not equally sensitive to all frequencies in the entire spectrum, so noise measurements are weighted more heavily toward frequencies to which humans are sensitive in a process called "A-weighting," written as "dBA" and referred to as "A-weighted decibels." Table 4.13-1 defines sound measurements and other terminology used in this chapter, and Table 4.13-2 summarizes typical A-weighted sound levels for different noise sources.

In general, human sound perception is such that a change in sound level of 1 dB cannot typically be perceived by the human ear, a change of 3 dB is barely noticeable, a change of 5 dB is clearly noticeable, and a change of 10 dB is perceived as doubling or halving the sound level as it increases or decreases, respectively. Different types of measurements are used to characterize the time-varying nature of sound. These measurements include the equivalent sound level (L_{eq}), the minimum and maximum sound levels (L_{min} and L_{max}), percentile-exceeded sound levels (such as L_{10}, L_{20}), the day-night sound level (L_{dn}), and the community noise equivalent level (CNEL). L_{dn} and CNEL values differ by less than 1 dB. As a matter of practice, L_{dn} and CNEL values are considered to be equivalent and are therefore treated as such. These measurements are defined in Table 4.13-1.

For a point source, such as a stationary compressor or a piece of construction equipment, sound attenuates (lessens in intensity), based on geometry, at a rate of 6 dB per doubling of distance. For a line source, such as free-flowing traffic on a freeway, sound attenuates at a rate of 3 dB per doubling of distance perpendicular to the source (California Department of Transportation 2013). Atmospheric conditions, including wind, temperature gradients, and humidity, can change how sound propagates over distance and affect the level of sound received at a given location. The degree to which the ground surface absorbs acoustical energy also affects sound propagation. Sound that travels over an acoustically absorptive surface such as grass attenuates at a greater rate than sound that travels over a hard surface such as pavement. The increased attenuation is typically in the range of 1 to 2 dB per doubling of distance. Barriers such as buildings or topographic features that block the line of sight between a source and receiver also increase the attenuation of sound over distance.

TABLE 4.13-1. NOISE AND VIBRATION TERMS

Sound Measurements	Definition
Decibel (dB)	A unitless measure of sound on a logarithmic scale that indicates the squared ratio of sound pressure amplitude with respect to a reference sound pressure amplitude. The reference pressure is 20 micropascals.
A-Weighted Decibel (dBA)	An overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.
C-Weighted Decibel (dBC)	The sound pressure level in decibels, as measured using the C-weighting filter network. C-weighting is very close to an unweighted or "flat" response. C-weighting is used only in special cases (i.e., when low-frequency noise is of particular importance). A comparison of the measured A- and C-weighted decibel level gives an indication of low-frequency content.
Maximum Sound Level (L_{max})	The maximum sound level measured during the measurement period.
Minimum Sound Level (L_{min})	The minimum sound level measured during the measurement period.
Equivalent Sound Level (L_{eq})	The equivalent steady-state sound level containing the same acoustical energy during a stated period of time.
Percentile-Exceeded Sound Level (L_{xx})	The sound level exceeded X% of a specific time period. For example, L_{10} is the sound level exceeded 10% of the time, and L_{90} is the sound level exceeded 90% of the time. L_{90} is often considered to be representative of the background noise level in a given area.
Day-Night Level (L_{dn})	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels occurring during the period from 10:00 p.m. to 7:00 a.m.
Community Noise Equivalent Level (CNEL)	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added to the A-weighted sound levels occurring during the period from 7:00 p.m. to 10:00 p.m. and 10 dB added to the A-weighted sound levels occurring during the period from 10:00 p.m. to 7:00 a.m.
Vibration Velocity Level (or Vibration Decibel Level, VdB)	The root-mean-square velocity amplitude for measured ground motion, expressed in dB.
Peak Particle Velocity (Peak Velocity or PPV)	A measurement of ground vibration, defined as the maximum speed (measured in inches per second [in/sec]) at which a particle in the ground is moving relative to its inactive state.
Frequency: Hertz (Hz)	The number of complete pressure fluctuations per second above or below the atmospheric pressure.

TABLE 4.13-2. TYPICAL A-WEIGHTED SOUND LEVELS

dBA = A-weighted decibels; mph = miles per hour.

Community noise environments are generally perceived as quiet when the 24-hour average noise level is below 45 dBA, moderate in the 45 to 60 dBA CNEL range, and loud above 60 dBA CNEL. Very noisy urban residential areas are usually around 70 dBA CNEL. Along major thoroughfares, roadside noise levels are typically between 65 and 75 dBA CNEL. Incremental changes of 3 to 5 dB in the existing 1-hour L_{eq}, or the CNEL, are commonly used as thresholds for an adverse community reaction to a noise increase. However, there is evidence that incremental thresholds in this range may not be adequately protective in areas where noise-sensitive uses are located and CNEL is already high (i.e., above 60 dBA). In those areas, limiting noise increases to 3 dB or less is recommended (Federal Transit Administration 2018).

Noise intrusions that cause short-term interior noise levels to rise above 45 dBA at night can disrupt sleep. Furthermore, exposure to noise levels greater than 85 dBA for 8 hours or longer can cause permanent hearing damage.

Noise from Multiple Sources

Because the measurement of sound pressure levels in decibels is based on a logarithmic scale, decibels cannot be added or subtracted in the usual arithmetical way. Adding a new noise source to an existing noise source, with both producing noise at the same level, will not double the noise level. For instance, if two identical noise sources each produce noise levels of 50 dBA, the combined sound level would be 53 dBA, not 100 dBA. Table 4.13-3 demonstrates the result of adding noise from multiple sources.

TABLE 4.13-3. RULES FOR COMBINING SOUND LEVELS BY DECIBEL ADDITION

When two decibel values differ by…	…add the following amount to the higher decibel value	Example
0 to 1 dB	3 dB	60 dB + 61 dB = 64 dB
2 to 3 dB	2 dB	60 dB + 63 dB = 65 dB
4 to 9 dB	1 dB	60 dB + 69 dB = 70 dB
10 dB or more	0 dB	60 dB + 75 dB = 75 dB
Source: California Department of Transportation 2013.		

4.12.1.2 Overview of Ground-borne Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Construction-related vibration results primarily from the use of impact equipment such as pile drivers (both impact and vibratory), hoe rams, vibratory compactors, and jack hammers, although heavily loaded vehicles may also result in substantial ground-borne vibration. Operations-related vibration results primarily from the passing of trains, buses, and heavy trucks. Vibration is measured by peak particle velocity (PPV), defined as the maximum instantaneous peak of the vibration signal in inches per second. PPV is the metric that is typically used to describe vibration from sources that may result in structural stresses in buildings (Federal Transit Administration 2018). Ground-borne vibration can also be quantified by the root-mean-square velocity amplitude, which is useful for assessing human annoyance. The root-mean-square amplitude is expressed in terms of VdB, a metric that is sometimes used in evaluating human annoyance resulting from ground-borne vibration. Vibration traveling through typical soil conditions may be estimated at a given distance with the following formula where LV_{ref} is the reference VdB vibration level at 25 feet and D is the distance at which the vibration level is being estimated (Federal Transit Administration 2018):

$$LV_{(distance)} = LV_{ref} - 30 \times \log (D/25)$$

The operation of heavy construction equipment, particularly pile drivers and other heavy-duty impact devices (such as pavement breakers), creates seismic waves that radiate along the surface of the ground and downward. These surface waves can be felt as ground vibration and result in effects that range from annoyance for people to damage for structures. Ground-borne vibration generally attenuates rapidly with distance from the source of the vibration. This attenuation is a complex function of how energy is imparted into the ground as well as the subsurface soil and/or rock conditions through which the vibration is traveling. Variations in geology can result in different vibration levels, with denser soils generally resulting in more rapid attenuation over a given distance. The effects of ground-borne vibration on buildings include the movement of floors, rattling of windows, and shaking of items on shelves or hanging on walls. Ground-borne noise is the rumbling sound generated by the vibration of building

surfaces such as floors, walls, and ceilings. Ground-borne noise can also result from the low-frequency components of a specific source of vibration, such as a rail line.

Vibration traveling through typical soil conditions may be estimated at a given distance with use of the following formula where PPV_{ref} is the reference PPV at 25 feet (Federal Transit Administration 2018):

$$PPV = PPV_{ref} \times (25/distance)^{1.5}$$

The background vibration velocity level in residential areas is usually 50 VdB or lower. The vibration velocity level of perception for humans is approximately 65 VdB. The human response to vibration is usually not substantial unless the vibration exceeds 70 VdB. Most perceptible indoor vibration is caused by sources within buildings, such as the operation of mechanical equipment, the movement of people, or the slamming of doors. Typical outdoor sources of perceptible ground-borne vibration are heavy construction equipment, steel-wheeled trains, and vehicular traffic on rough roads. Ground-borne noise and vibration are the most significant problems for tunnels that are under residential areas or noise-sensitive structures.

4.13.1.1 Applicable Noise Standards

Federal

Federal Transit Administration

Noise

The Federal Transit Administration (FTA) has developed general assessment criteria for analyzing construction noise. This assessment is based on simultaneous operation of the two loudest pieces of equipment. The general assessment criteria for construction noise limits are summarized in Table 4.13-4.

TABLE 4.13-4. FTA GENERAL ASSESSMENT CRITERIA FOR CONSTRUCTION NOISE

	One-hour L_{eq} (dBA)	
Land Use	**Day**	**Night**
Residential	90	80
Commercial	100	100
Industrial	100	100
Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment.* FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: April 21, 2021.		

To address the issue of combined noise levels, including noise from impact equipment, a reasonable worst-case scenario, combining noise levels from the two loudest pieces of equipment operating simultaneously at the same location, is evaluated. In addition, the FTA construction noise criteria include an assessment of whether or not an increase in the ambient noise level greater than 10 dBA would occur with operation of the combined noise from the two loudest pieces of equipment. A 10 dBA increase in the ambient noise level would represent a doubling of loudness.

Vibration

FTA has also developed guidelines for the assessment of vibration effects. As indicated in Table 4.13-5, FTA's general assessment criteria for evaluating potential construction-generated vibration effects parses annoyance related to interference with interior operations, sleep, and institutional daytime use as a function of the frequency of the vibration event according to three land use categories. Except for long-term occupational exposure, vibration levels rarely affect human health. Instead, most people consider vibration to be an annoyance that can affect concentration or disturb sleep. People may tolerate infrequent, short-duration vibration levels, but human annoyance to vibration becomes more pronounced if the vibration is continuous or occurs frequently.

TABLE 4.13-5. FEDERAL TRANSIT ADMINISTRATION GROUND-BORNE VIBRATION IMPACT CRITERIA

Land Use Category	GVB Impact Levels (VdB re 1 micro-inch/sec)		
	Frequent Events[a]	Occasional Events[b]	Infrequent Events[c]
Category 1: Buildings where vibration would interfere with interior operations	65 VdB[d]	65 VdB	65 VdB
Category 2: Residences and buildings where people normally sleep	72 VdB	75 VdB	80 VdB
Category 3: Institutional land uses with primarily daytime use	75 VdB	78 VdB	80 VdB

Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment*. FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: April 2, 2021.
GVB = ground-borne vibration; VdB = vibration decibels

a. "Frequent events" are defined as more than 70 vibration events from the same source per day. Most rapid transit projects fall into this category.
b. "Occasional events" are defined as between 30 and 70 vibration events from the same source per day. Most commuter trunk lines have operations in this range.
c. "Infrequent events" are defined as fewer than 30 vibration events of the same kind per day. This category includes most commuter rail branch lines.
d. This criterion limit is based on levels that are acceptable for most moderately sensitive equipment, such as optical microscopes. For equipment that is more sensitive, a detailed vibration analysis must be performed.

State

Title 24 of the California Code of Regulations, Noise Insulation Standards

California Code of Regulations Title 24, Part 2, Sound Transmission, establishes minimum noise insulation standards to protect persons within new hotels, motels, dormitories, long-term care facilities, apartment houses, and dwellings other than single-family residences. Under this regulation, interior noise levels attributable to exterior noise sources cannot exceed 45 dB in any habitable room. The noise metric is either the L_{dn} or CNEL, consistent with the City and County of San Francisco (City) General Plan Environmental Protection Element (discussed below). Compliance with Title 24 interior noise standards is assessed during the permit review process. This generally protects a proposed project's users from existing ambient outdoor noise levels. If determined necessary, a detailed acoustical analysis of exterior wall and window assemblies may be required.

California Department of Transportation

The California Department of Transportation (Caltrans) provides guidelines regarding vibration associated with construction and operation of transportation infrastructure. Table 4.13-6 provides the Caltrans vibration guidelines for potential damage to different types of structures.

Generally, people are more sensitive to vibration during nighttime hours, when sleeping, rather than daytime hours. Numerous studies have been conducted to characterize the human response to vibration. Table 4.13-7 provides the Caltrans guidelines regarding vibration annoyance potential (expressed here as PPV).

TABLE 4.13-6. CALTRANS VIBRATION GUIDELINES FOR POTENTIAL DAMAGE TO STRUCTURES

	Maximum Peak Particle Velocity (PPV, in/sec)	
Structure Type and Condition	**Transient Sources**	**Continuous/Frequent Intermittent Sources**
Extremely fragile historic buildings	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Note: Transient sources create a single, isolated vibration event (e.g., blasting or the use of drop balls). Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Local

On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.) Nonetheless, the District seeks to develop properties in a manner that minimizes potential conflicts with land use policies and plans of local jurisdictions to the extent feasible. The proposed project is within San Francisco; therefore, the following subsection identifies the noise and vibration regulations and guidelines that are applicable to projects within San Francisco.

San Francisco General Plan

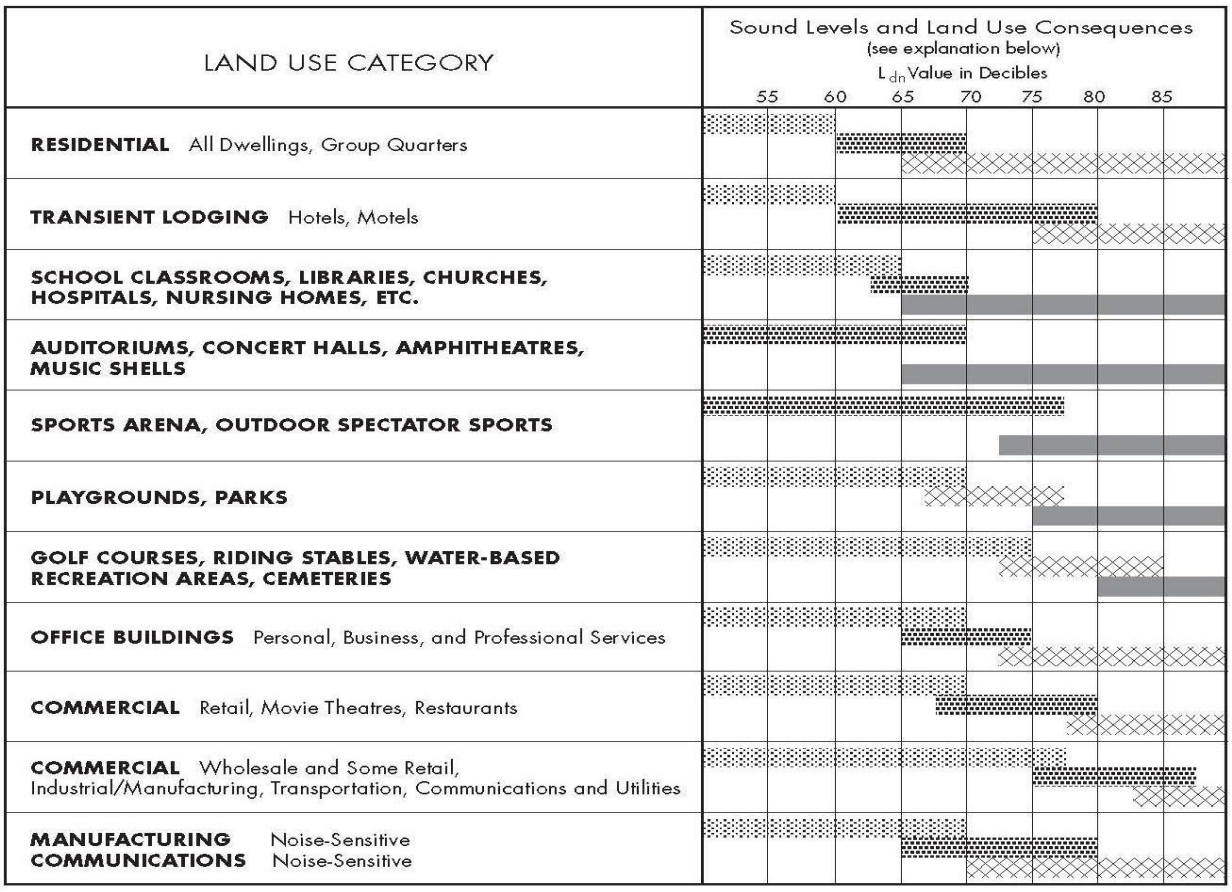
The City General Plan contains policies for avoiding or reducing noise in the City. Policy 11.1 of the City General Plan Environmental Protection Element includes the San Francisco General Plan Land Use Compatibility Guidelines (see Table 4.13-8), which provide acceptable, conditionally acceptable, conditionally unacceptable, and unacceptable noise levels for a variety of land uses in the city. The land use compatibility chart provides guidance as to when, depending on the existing background noise level and the type of land use proposed by a development, a detailed analysis of noise reduction requirements should be made and the noise insulation features that should be included in the design of a project. According to the guidelines, the maximum "satisfactory, with no special noise insulation requirements" exterior noise level for residential land uses, including transient lodging such as hotels, is approximately 60 dBA L_{dn}. For office and most commercial land uses, the maximum "satisfactory, with no special noise insulation requirements" exterior noise level is 70 dBA L_{dn}.[1] For multi-family residential and hotel uses, a detailed analysis of noise reduction measures is required by Title 24. For most other land uses, the determination of consistency with City General Plan policies is addressed in the project's case report as part of the entitlement application review. On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, the San Francisco General Plan Land Use Compatibility Guidelines are inapplicable to the proposed project. The City General Plan guidelines are shown in full in Table 4.13-8.

San Francisco Noise Ordinance

In the city, the regulation of noise is addressed in Article 29 of the Police Code (City Noise Ordinance), which affirms a policy to prohibit unnecessary, excessive, and offensive noises. Section 2900 makes the following declaration about community noise levels: "In order to protect public health, it is hereby declared to be the policy of San Francisco to prohibit unwanted, excessive, and avoidable noise. It shall be the policy of San Francisco to maintain noise levels in areas with existing healthful and acceptable levels of noise and to reduce noise levels, through all practicable means, in those areas of San Francisco where noise levels are above acceptable levels, as defined by the World Health Organization's Guidelines on Community Noise" (essentially the same as the land use compatibility chart discussed above under San Francisco General Plan).

[1] These limits reflect California's Title 24 interior noise standard of 45 dBA and assume that structures generally attenuate exterior-to-interior sound by about 25 dB.

TABLE 4.13-8. SAN FRANCISCO GENERAL PLAN LAND USE COMPATIBILITY GUIDELINES



Construction Noise

Construction noise includes noise from equipment involved in demolition, site preparation, rough framing, and finish work. Section 2907 of the City Noise Ordinance, enforced by the Department of Building Inspection (for construction on private property) and San Francisco Public Works (Public Works) (for City-sponsored projects), regulates construction noise. Section 2907(a) limits noise from a single piece of construction equipment to 80 dBA when measured at a distance of 100 feet from such equipment or an equivalent sound level at some other convenient distance (such as 86 dBA at a distance of 50 feet). Section 2907(b) provides exemptions to the Section 2907(a) limit for impact tools and other equipment (e.g., jack hammers, hoe rams, pile drivers), provided they are fitted with intake and exhaust mufflers and the acoustically attenuating shields or shrouds recommended by their manufacturers and approved by the Director of Public Works (for Public Works projects) or the Director of Building

Inspection (for construction on private property) for maximum noise attenuation. Section 2908 of the City Noise Ordinance prohibits nighttime construction (i.e., between 8:00 p.m. and 7:00 a.m.) that generates noise that exceeds the ambient noise level by 5 dB at the nearest property plane, unless a special permit has been granted by the Director of Public Works or the Director of Building Inspection.

Operational Noise

Section 2909 of the City Noise Ordinance, enforced by the San Francisco Department of Public Health during the day and the San Francisco Police Department during the night, provides limits on stationary-source noise. It generally prohibits noise from any machine, device, or music or entertainment venue (or any combination of same) as follows:

a. For residential properties, no more than 5 dB above the local ambient noise level, as measured at any point outside the property plane;

b. For commercial and industrial properties, no more than 8 dB above the local ambient noise level, as measured at any point outside the property plane; and

c. For public property, no more than 10 dB above the local ambient noise level at a distance of 25 feet or more from the noise source (unless the noise source is being operated to serve or maintain the property or as otherwise provided in the City Noise Ordinance).

The criteria provided in Section 2909(a)–(c) are limits for specified locations (i.e., the property plane or, for public properties, 25 feet from the noise source) and do not refer to a receptor location. Section 2909(d) establishes a maximum noise level from fixed noise sources (e.g., mechanical equipment) of 55 dBA during daytime hours (7:00 a.m. to 10:00 p.m.) and 45 dBA during nighttime hours (10:00 p.m. to 7:00 a.m.) inside any sleeping or living room in any dwelling unit on residential property to prevent sleep disturbance with windows open, except where building ventilation is achieved through mechanical systems that allow windows to remain closed.

4.13.1.2 Existing Noise Environment

A noise field survey was conducted to characterize the existing noise environment in the project area. During the field survey, noise from Interstate (I) 280 was audible in the project area. Other sources of noise during noise measurements included traffic on local streets, pedestrians walking by and talking, birds, distant aircraft, car alarms, and distant trains. However, the predominant and most constant noise source was the traffic on I-280. A summary of the measured short-term ambient noise levels from Thursday August 1, 2019, and the long-term (24-hour) noise measurements from Friday August 2, 2019, are summarized in Table 4.13-9 and Table 4.13-10, below. The measurement locations were selected along the eastern and western perimeters of both the project site and Block 15, which is located adjacent to the project site across Sixth Street, to characterize the noise environment at the portions of the sites located both closer to and farther away from I-280. **Figure 4.13-1** provides a map of the noise measurement locations.

TABLE 4.13-9. LONG-TERM NOISE LEVEL MEASUREMENTS NEAR THE PROJECT SITE AND BLOCK 15

Measurement No.	Measurement Location	Date and Time	Measured L_{dn} Friday, August 2, 2019	Measured Daytime L_{eq}[a] Friday, August 2, 2019	Lowest 1-hour L_{eq}	Highest 1-hour L_{eq}
LT-1	Southwest corner of the project site near I-280, along Owens Street	Start: Thursday 8/1/2019 at 10:20 a.m. End: Monday 8/5/2019 at 11:20 a.m.	72.8	68.3	59.8	69.5
LT-2	Northwest corner of the project site near I-280, along Owens Street	Start: Thursday 8/1/2019 at 10:29 a.m. End: Monday 8/5/2019 at 11:29 a.m.	71.0	65.8	60.2	67.4
LT-3	Southeast of the project site near the intersection of Nelson Rising Lane and Sixth Street	Start: Thursday 8/1/2019 at 10:41 a.m. End: Monday 8/5/2019 at 11:41 a.m.	70.5	68.2	59.6	73.2
LT-4	Southeast of the project site near the intersection of Nelson Rising Lane and Merrimac Street	Start: Thursday 8/1/2019 at 10:56 a.m. End: Monday 8/5/2019 at 11:56 a.m.	68.0	64.8	57.8	67.6

2. Generate excessive ground-borne vibration or ground-borne noise levels?	☐	☐	☒	☐
3. For a project located in the vicinity of a private airstrip or airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

4.13.2.1 Methodology

On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.) Nonetheless, the District seeks to develop properties in a manner that minimizes potential conflicts with land use policies and plans of local jurisdictions to the extent feasible. Because the proposed project is within the City of San Francisco, this analysis employs standard noise and vibration modeling techniques, consistent with the requirements of the City Noise Ordinance and other guidance (e.g., FTA construction noise analysis guidance), as applicable, per the most recent version of the City CEQA noise guidelines.

Construction

Daytime Construction Noise

Implementation of the proposed project would result in noise from construction and demolition at the project site. The analysis of construction noise considers the equipment that would be required for the project, as identified by the District. Noise from construction varies, depending on the type of equipment in use, how many pieces of equipment are operating at any one time, the proximity of the equipment to a noise receptor, and the duration of equipment use.

Construction activities associated with the proposed project are expected to occur over a period of approximately 21 to 24 months for the no surcharging scenario, or 34 to 37 months for the surcharging

scenario.[2] Construction noise was evaluated in terms of its potential to result in a substantial temporary increase in ambient noise levels (i.e., in excess of applicable criteria) as well as the duration and intensity of the noise at the project site. Consistent with City CEQA guidelines,[3] FTA guidance is used to evaluate combined construction noise levels. Combined noise from the two loudest pieces of equipment operating concurrently were modeled and compared to the applicable FTA daytime noise limit of 90 dBA at nearby noise-sensitive uses. In addition, the potential for construction activities to result in a substantial temporary increase in noise (e.g., a 10 dB increase over the ambient level) was analyzed. Noise levels at a given location would generally be dominated by the loudest and closest equipment. This is because noise typically drops off at a rate of 6 dB per doubling of distance (without accounting for additional reductions from shielding and/or ground absorption). This is also because the overall combined noise level from multiple noise sources with a difference of more than 10 dB is equal to the loudest individual noise source (e.g., 60 dB + 75 dB = 75 dB). In addition, this construction noise model conservatively assumes that all equipment would be operating at the same location, which would rarely be the case. Equipment would most likely be spread out over at least a portion of the project site. For these reasons, analysis of the noise level from the two loudest pieces of equipment that are likely to operate simultaneously (per FTA guidance) is considered the standard approach for CEQA projects in San Francisco and the analysis of construction noise.

Reference noise levels in the Federal Highway Administration's (FHWA's) *Roadway Construction Noise Model User's Guide* were used to assess noise from equipment.[4] Where the analysis finds that construction noise levels would exceed 90 dBA (1-hour L_{eq}) or have the potential to be an estimated 10 dB[5] above ambient noise levels at noise-sensitive receptors, the analysis then evaluates the intensity, frequency, and duration of the noise levels to determine whether construction of individual development projects would result in a substantial adverse effect. In other words, the quantitative criteria are not strict thresholds but, rather, information that, along with intensity and duration, is taken into consideration to determine whether an effect would be considered substantial.

Nighttime Construction Noise

If nighttime construction noise would result in sleep disturbance over a substantial period of time, the effects could be considered substantial. Typically, if construction noise would result in interior noise levels of less than 45 dBA at noise-sensitive receptors (with windows closed) or a specific activity would occur for only a short period of time (e.g., only a few days over the entire construction period), sleep disturbance would not be expected to be substantial. If long-term sleep disturbance would not be expected to occur, then nighttime construction noise effects would not be considered substantial.

---

2 Demolition and surcharging at the project site would begin in approximately March 2022. There would be an approximate one-year period when no construction activity would occur (i.e., mid-2022 to mid-2023). Site remediation and construction of the proposed project would begin in mid-2023 and continue for approximately 21 to 24 months. Construction would conclude by summer 2025 and the project would be fully operational in 2025. As the design of the project progresses, it may be determined that surcharging is not required for the proposed project..

3 San Francisco Planning Department Noise Impact Analysis Guidelines (Draft).

4 Federal Highway Administration. 2006. *Roadway Construction Noise Model User's Guide.* Washington, D.C. January. Available: http://www.fhwa.dot.gov/environment/noise/construction_noise/rcnm/rcnm.pdf.

5 As discussed in the Environmental Setting, a 10 dB increase in noise corresponds to doubling the noise level.

With regard to nighttime construction activities, up to two individual occurrences of nighttime concrete pours may take place during the project. The two nighttime concrete pours would be spread out over the approximately 21- to 37-month construction period and would not occur on back-to-back nights. In addition, both nights of construction activity would end by 12:00 a.m.

Construction Haul Trucks

Per City CEQA noise guidelines, potential noise impacts from construction truck traffic must be analyzed if project construction, including hauling, is expected to take 5 years or longer. Depending on whether the surcharging or non-surcharging scenario is selected, construction for the proposed project is expected to take between 21 and 37 months, or between approximately 2 and 3 years. Therefore, noise from haul trucks does not need to be quantitatively analyzed, per the City CEQA noise guidelines. However, the potential for construction-related haul trucks to increase noise near sensitive uses is qualitatively discussed in this assessment.

Construction Vibration

The discussion below summarizes the methodology applied in this assessment of potential vibration-related effects from project construction. Operations associated with the proposed project are not anticipated to generate perceptible levels of vibration at off-site receptors; therefore, operational vibration effects need not be assessed. However, potential vibration effects from construction activities related to structural damage and sleep disturbance could occur and therefore are the focus of the project vibration analysis.

Sleep Disturbance

Project-related construction vibration was evaluated using methods identified in FTA guidance.[6] The FTA impact criteria consider the receptor categories and the frequency of events occurring in one day. Table 4.13-5, presented previously, summarizes the FTA vibration impact criteria.

Although nighttime construction proposed for the project would be limited (i.e., up to two nighttime concrete pours over the approximately 21- to 37-month project duration), the potential for nighttime vibration effects is assessed. Estimated vibration levels from nighttime construction at nearby sensitive receptors are compared to the vibration annoyance criterion of 72 VdB for Category 2 uses, which include residences and buildings where people normally sleep.

Building/Structural Damage

A structure's susceptibility to vibration-induced damage depends on its age, condition, distance from the vibration source, and the vibration level. Vibration effects on structures are usually significant if they could result in structural or cosmetic damage or, in the case of a historic resource, materially alter the resource, pursuant to CEQA Guidelines Section 15064.5. Depending on a structure's condition, potential vibration-induced damage may be cosmetic (e.g., plaster or wood ornamentation may be damaged) or structural, in which case the integrity of the building may be threatened.

[6] Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment.* FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: August 30, 2020.

To determine if construction activities have the potential to damage nearby buildings, vibration levels at nearby receptors are calculated using the source vibration levels and attenuation equation ($PPV = PPV_{ref}$ x $[25/distance])^{1.5}$ from the FTA guidance.[7] Typical vibration levels associated with heavy-duty construction equipment are shown in Table 4.13-11 at a reference distance of 25 feet and other distances.

The calculated vibration levels are compared to the appropriate Caltrans vibration guidelines for structural damage, which correspond to the type of building being affected. Table 4.13-6, presented previously, summarizes the guidelines developed by Caltrans for structural damage from the transient and continuous vibration that is usually associated with construction activity. The nearest buildings to the project site are the hospital building southwest of the project site (similar to a "modern industrial/commercial building" from the Caltrans criteria) and the multi-family residential building northeast of the project site (similar to a "new residential structure" from the Caltrans criteria).

TABLE 4.13-11. VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV at 25 Feet	PPV at 30 Feet	PPV at 50 Feet	PPV at 75 Feet	PPV at 100 Feet
Vibratory roller	0.210	0.160	0.074	0.040	0.026
Auger drill	0.089	0.068	0.031	0.017	0.011
Hoe ram[a]	0.089	0.068	0.031	0.017	0.011
Large bulldozer	0.089	0.068	0.031	0.017	0.011
Loaded trucks	0.076	0.058	0.027	0.015	0.010
Jackhammer	0.035	0.027	0.012	0.007	0.004
Small bulldozer	0.003	0.002	0.001	0.001	0.000

Operation

Methodology for Analysis of Operational Noise

Implementation of the project would result in project-related vehicular traffic changes on nearby roadways, which could result in project-related increases in operational traffic noise. In addition, stationary equipment associated with the project (e.g., proposed fire pump or the heating, ventilation, and air-conditioning [HVAC] equipment) could generate excessive noise at nearby sensitive land uses. The methodology for how operational sources of noise associated with the project were analyzed is described below.

Traffic Noise

To determine whether the proposed project would result in a substantial permanent increase in ambient noise levels from traffic increases, project-related traffic noise increases (or decreases) along roadway segments in the project area were assessed. Vehicular traffic noise in the project area was modeled from

[7] Ibid.

the traffic volumes, posted speed limits, and vehicle mix assumptions (e.g., percentage of trucks on a given roadway segment) provided by the project's traffic engineer (Fehr & Peers).

For the assessment of vehicular traffic noise effects, the following thresholds were applied to determine whether the project would result in substantial vehicle-generated noise effects, depending on what the existing modeled noise level was on a given roadway segment:

- An increase of more than 5 dB (as discussed in the *Overview of Noise* section, a 5 dB increase in noise is readily noticeable) in areas where the existing and resulting noise environment is considered "acceptable" and
- An increase of more than 3 dB in places where the existing or resulting noise environment is "conditionally acceptable," "conditionally unacceptable," or "unacceptable," based on the land use compatibility chart (Table 4.13-8).

As discussed previously, an increase of less than 3 dB is generally not perceptible outside controlled laboratory conditions. However, in areas where the existing ambient noise levels are already high, a lower significance threshold of 3 dB (as opposed to 5 dB) is appropriate. The appropriate increase criterion is selected on a segment-by-segment basis, according to whether the existing and resulting noise levels are below or above the applicable criterion from the land use compatibility guidelines.

Traffic noise modeling for existing (no-project) conditions and existing plus-project conditions was conducted using a spreadsheet model that was based on the FHWA Traffic Noise Model, version 2.5. The spreadsheet calculated the vehicular traffic noise level at fixed distances and considered the traffic volume, roadway speed, and vehicle mix that is predicted to occur under each condition.

For the assessment of cumulative traffic noise effects, vehicular traffic volumes from the existing (no-project) scenario were compared to the 2040 cumulative with-project scenario. To determine if a cumulatively considerable increase in noise would occur in areas where a potential cumulative effect is identified, cumulative with-project volumes were compared to cumulative no-project volumes, as applicable.

Heating, Cooling, and Ventilation Equipment

With regard to mechanical heating and cooling equipment noise, this assessment considers the potential for noise from stationary equipment to exceed the City-allowed operational noise limit described in City Municipal Code Section 2909(d) (i.e., interior noise limits of 45 dBA between the hours of 10:00 p.m. and 7:00 a.m. or 55 dBA between the hours of 7:00 a.m. and 10:00 p.m. at nearby residential land uses). Noise from these types of operational sources was evaluated using standard acoustical modeling methods and equations, along with operational data provided by the project sponsor.

Fire Pump Noise

The project proposes the installation of one fire pump. Fire pumps are not typically expected to result in a substantial temporary increase in ambient noise levels because pumps typically generate low levels of noise. Noise from testing of the proposed fire pump was evaluated to estimate noise levels at the nearest sensitive use and determine if compliance with Section 2909(d) of the City Noise Ordinance (i.e., appropriate interior noise levels at nearby sensitive uses) would be achieved. The fire pump would be

tested approximately once a month for 1 hour or less during daytime hours. The make and model of the fire pump have not yet been determined.

4.13.2.2 Construction Noise

Daytime Construction Noise

Project construction would involve the use of heavy equipment that would generate noise in the vicinity. Construction noise levels at or near construction sites generally fluctuate, depending on the particular type of construction equipment, the number of pieces of equipment being used at a given time, and the duration of use. Noise levels associated with construction activities occurring during the more noise-sensitive evening and nighttime hours are typically of increased concern.

Construction of the proposed project is estimated to take 21 to 37 months, depending on if the surcharging or no surcharging scenario is selected. Project construction would include demolition of an existing parking lot, grading, utility installations, pier and foundation installations, site remediation, first-floor slab installation, structural steel and decking operations, concrete pours on the upper floors, interior and exterior building construction, and landscaping, paving, and miscellaneous site work. The estimated duration of each category of construction activity would range from approximately 20 days (demolition of the existing parking lot) to approximately 242 days (interior and exterior building construction), with the potential for several of the construction categories to overlap.

Construction would occur Monday through Friday from 7:00 a.m. to 6:00 p.m. and on Saturdays and Sundays, as needed, from 8:00 a.m. to 5:00 p.m. Construction is not anticipated to occur on major legal holidays. The project sponsor anticipates approximately two instances of nighttime concrete pours; the two instances of nighttime construction would be completed before 12:00 a.m.

City Police Code Section 2907(a) limits construction noise from individual pieces of equipment to 80 dBA at 100 feet from the noise source, or an equivalent sound level at some other appropriate distance (e.g., 86 dBA at 50 feet). Table 4.13-12, below, provides the maximum noise levels for the various pieces of equipment proposed for use during project construction at distances of 50 feet and 100 feet. The 100-foot noise levels can be compared to the limits from the City Noise Ordinance to determine if the equipment would be in compliance with the aforementioned criterion.

TABLE 4.13-12. TYPICAL CONSTRUCTION EQUIPMENT NOISE LEVELS

Construction Equipment	Noise Level at 50 Feet (dB, L_{max})	Noise Level at 100 Feet (dB, L_{max})
Concrete saw (grinder)	90	84
Grader	85	79
Auger drill rig	84	78
Tractor	84	78
Bulldozer	82	76
Concrete pump truck	81	75
Concrete mixer truck	79	73
Excavator	81	75
Crane	81	75
Roller (compactor)	80	74

Construction Equipment	Noise Level at 50 Feet (dB, L_{max})	Noise Level at 100 Feet (dB, L_{max})
Front-end loader	79	73
Generator set	81	75
Air compressor	78	72
Man lift	75	69
Backhoe	78	72
Paver	77	71
Welder	74	69
Dump truck	76	70
Source: Federal Highway Administration. 2006. *FHWA Roadway Construction Noise Model User's Guide*. FHWA-HEP-05-054. January. Available: https://www.fhwa.dot.gov/ENVIRonment/noise/construction_noise/rcnm/rcnm.pdf. Accessed: April 18, 2021.		

As shown in Table 4.13-12, the only piece of non-impact construction equipment that is expected to generate noise levels greater than 80 dBA at a distance of 100 feet is the concrete saw, which is representative of a grinder that has been proposed for project construction. The concrete saw would generate a noise level of 84 dBA L_{max} at a distance of 100 feet. Although this is greater than the noise level specified in the City Noise Ordinance, this type of equipment is typically used for only a limited time during construction projects. Concrete saws are used for relatively detailed demolition work, such as opening up a specific section of roadway or sidewalk. As such, the duration and frequency of their use are typically not extensive. Given that all equipment, except the concrete saw, would comply with applicable noise limits, and given the generally limited duration of concrete saw use, individual pieces of equipment would generally be expected to comply with City Noise Ordinance limits.

To provide a reasonable worst-case analysis of potential combined noise levels from project construction, estimated reasonable worst-case noise levels from proposed construction phases were modeled. Modeling was based on the methodology for the analysis of construction noise contained in the FTA's *Transit Noise and Vibration Impact Assessment Manual* (Federal Transit Administration 2018). Per the FTA recommendation, estimated noise levels at the nearest sensitive receptors resulting from simultaneous operation of the two loudest pieces of construction equipment are modeled. This provides a reasonably conservative analysis because noise levels at a given location are dominated by the loudest and closest sources. Furthermore, the overall combined noise level from multiple sources with noise levels that are more than 10 dB apart is equal to the loudest individual noise source (e.g., 60 dB + 75 dB = 75 dB). Therefore, to provide a reasonably conservative analysis, the two loudest pieces of equipment proposed for a phase are assumed to be immediately adjacent to each other on the perimeter of the site and the closest equipment to receptors.

A screening analysis was conducted to determine which phase of construction would be expected to result in the highest noise levels at nearby receptors. Based on this assessment, it was determined that the demolition phase would result in the highest noise levels. Table 4.13-13 shows the estimated combined noise levels from operation of the two loudest pieces of construction equipment during the demolition phase at various distances from the project site.

Table 4.13-14 is a summary of the results of the worst-case noise modeling for all phases, assuming the two loudest pieces of equipment proposed for any phase of construction would be operating simultaneously, close to one another, and near the perimeters of the construction work areas closest to receptors.

As shown in Table 4.13-14, based on the modeling assumptions described in the *Methods for Analysis* section, combined noise levels from construction activities at the nearby hospital land use (approximately 100 feet from the project perimeter) could be in the range of approximately 71 to 78 dBA L_{eq} during daytime hours, depending on the construction phase and the equipment used. At the nearest residential land uses (approximately 200 feet from the project perimeter), combined noise levels from construction could be in the range of 65 to 72 dBA L_{eq}.

TABLE 4.13-13. COMBINED PROJECT CONSTRUCTION NOISE LEVELS AT VARIOUS DISTANCES (L_{MAX} AND L_{EQ})

Source Data:	**Maximum Sound Level (dBA)**	**Utilization Factor**	**L_{eq} Sound Level (dBA)**
Construction Condition: Demolition (on-site parking lot)			
Source 1: Concrete saw/grinder – sound level (dBA) at 50 feet =	90	20%	83.0
Source 2: Loader – sound level (dBA) at 50 feet =	79	40%	75.0
Calculated Data:			
All Sources Combined – L_{max} sound level (dBA) at 50 feet =			90 L_{max}
All Sources Combined – L_{eq} sound level (dBA) at 50 feet =			84 L_{eq}

Distance between Source and Receiver (feet)	**Geometric Attenuation (dB)**	**Calculated L_{max} Sound Level (dBA)**	**Calculated L_{eq} Sound Level (dBA)**
25	6	96	90
50	0	90	84
75	-4	87	80
100	**-6**	**84**	**78**
150	-10	81	74

Notes:

- Results at 100 and 200 feet are **bolded** because these are the distances to the nearby hospital and residential land uses, respectively.
- Geometric attenuation based on 6 dB per doubling of distance.
- This calculation does not include the effects, if any, of local shielding or ground attenuation from walls, topography, or other barriers that may reduce sound levels further.

TABLE 4.13-14. CONSTRUCTION NOISE FROM ALL PHASES AT NEARBY RECEPTORS

Activity	Two Loudest Pieces of Equipment	Worst-Case Closest Distance to Receptor	Estimated Noise at Hospital (dBA L_{eq}) 100 feet	Estimated Noise Level at Residences (dBA L_{eq}) 200 feet
Demolition	Concrete saw/grinder and loader	100 feet	77.6	71.6
Surcharging placement	Bulldozer, excavator	100 feet	74.5	68.5
Surcharging removal	Bulldozer, excavator	100 feet	74.5	68.5
Grading	Grader, dozer	100 feet	76.8	70.7
Utilities	Backhoe, loader	100 feet	71.5	65.5
Piers and foundations	Auger drill rig, concrete pump	100 feet	72.8	66.7
Steel structure and decking	Crane, backhoe	100 feet	70.5	64.5
Concrete	Crane, concrete pump	100 feet	70.5	64.5
Building construction (exterior and interior)	Generator, man lift	100 feet	72.4	66.4
Landscaping, paving, and miscellaneous site work	Roller/compactor, loader	100 feet	71.1	65.1

During standard daytime hours, the City recommends comparing estimated combined construction noise levels to the FTA daytime noise limit of 90 dBA at nearby noise-sensitive uses. As shown in Table 4.13-14, above, noise levels from construction activities would not be expected to exceed the 90 dBA criterion at nearby sensitive uses. In addition, the City recommends comparing combined noise levels from the two loudest pieces of equipment to existing ambient noise levels to determine if a substantial temporary increase in noise, according to the FTA guidelines (e.g., a 10 dB increase over the ambient level), would occur. The daytime L_{eq}[8] noise level near the hospital land use (LT-1) was approximately 68.3 dBA L_{eq}, according to the measurement taken Friday August 2, 2019. Modeled noise levels near the hospital would be up to 77.6 dBA L_{eq} during the worst-case loudest construction phase (demolition). This noise level represents a less than 10 dB increase over the measured ambient noise level; therefore, according to the City guidelines, a substantial temporary increase in noise would not occur at this location.

The daytime L_{eq} noise level near the residential land uses northeast of the project site (LT-5) was approximately 65 dBA L_{eq}, according to the measurement taken Friday August 2, 2019. At the nearest residential land uses (approximately 200 feet from the project perimeter), combined noise levels from construction could be up to 71.6 dBA L_{eq} during the worst-case loudest construction phase (demolition), according to the modeling. This noise level also represents a less than 10 dB increase over the measured ambient noise level. Therefore, according to the City guidelines, a substantial temporary increase in noise would also not occur at this location.

Per City and FTA guidelines, because the modeled combined equipment noise would result in a less than 90 dBA noise level at receptors, as well as a less than 10 dB increase over ambient noise levels at nearby sensitive uses, daytime construction noise impacts for the project would be less than significant. **(Less than Significant)**

[8] Daytime L_{eq} for the purpose of this analysis is the average L_{eq} for the daytime window when construction is allowed in San Francisco (e.g., 7:00 a.m. to 8:00 a.m. daily).

Nighttime Construction Noise

Construction activities would typically occur weekdays between the hours of 7:00 a.m. and 6:00 p.m. and, as needed, Saturdays and Sundays from 8:00 a.m. to 5:00 p.m. The City Municipal Code defines allowable hours for construction as 7:00 a.m. to 8:00 p.m. daily, including weekends. Project construction would typically be limited to the allowable hours. However, on up to two occasions, nighttime concrete pours may occur. Equipment used for concrete pours typically includes concrete mixer trucks and concrete pumps. During the approximately 21- to 37- month construction period, there would be a maximum of two nights when concrete pours may be required. All activities would be complete before 12:00 a.m.

This analysis conservatively assumes that equipment for concrete pours could be located anywhere on the project site. Therefore, it is assumed that equipment associated with potential nighttime concrete pours could be located as close as 200 feet from the nearest residential building northeast of the project site and as close as 100 feet from the nearby University of California, San Francisco Orthopedic Trauma Center located southwest of the project site. Although equipment would most likely be farther away from the buildings, these distances are used to ensure a conservative assessment. Table 4.13-15 shows the construction noise levels for a concrete mixer truck and a concrete pump truck at various distances, including distances of 100 and 200 feet from the location of the activity.

TABLE 4.13-15. NIGHTTIME CONSTRUCTION NOISE FOR THE PROPOSED PROJECT – CONCRETE POURS

Source Data	Maximum Sound Level (dBA)	Utilization Factor[a]	L_{eq} Sound Level (dBA)
Construction Condition: Nighttime Concrete Pour			
Concrete mixer truck – sound level (dBA) at 50 feet =	79	40%	75.0
Concrete pump truck – sound level (dBA) at 50 feet =	81	20%	74.0
Calculated Data			
Sources combined – L_{max} sound level (dBA) at 50 feet = 85 dBA L_{max}			83.0
Sources combined – L_{eq} sound level (dBA) at 50 feet = 83 dBA L_{eq}			9.0

Distance between Source and Receiver (feet)	Geometric Attenuation (dB)[b]	Calculated L_{max} Sound Level (dBA)	Calculated L_{eq} Sound Level (dBA)[c]
25	6	89	85
50	0	83	79
100	**-6**	**77**	**73**
150	-10	74	70
200	**-12**	**71**	**67**
300	-16	68	64
400	-18	65	61

[a] The utilization factor, or acoustical use factor, is the percentage of time each piece of construction equipment is assumed to be operating at full power (i.e., its noisiest condition) during construction; it is used to estimate L_{eq} values from L_{max} values.
[b] Geometric attenuation based on 6 dB per doubling of distance.
[c] This calculation does not include the effects, if any, of local shielding from walls, topography, or other barriers, which may reduce sound levels further.

As shown in Table 4.13-15, the noise level from the infrequent nighttime concrete pours (i.e., up to two occurrences) at a distance of 200 feet, the distance to the nearest residential use, would be approximately 67 dBA L_{eq}. Assuming a 25 dB reduction from exterior-to-interior noise levels (with an assumption of windows closed), interior noise levels could be up to 42 dBA L_{eq} at the residential use. The estimated noise level from nighttime concrete pours at a distance of 100 feet, the distance to the nearby hospital use, would be approximately 73 dBA L_{eq}. Assuming a 25 dB reduction from exterior-to-interior noise levels (with an assumption of windows closed), interior noise could be up to 48 dBA L_{eq} at the hospital building. Construction equipment used during nighttime concrete pours would typically be located even farther away, resulting in lower noise levels. In addition, should nighttime concrete pours be required, activities would end by 12:00 a.m.

If nighttime construction noise would result in interior noise levels of less than 45 dBA at noise-sensitive receptors (with windows closed) or a specific activity would occur for only a short period of time (e.g., only a few days over the entire construction period), effects related to sleep disturbance would not be considered substantial in San Francisco. If long-term sleep disturbance would not be expected to occur, then nighttime construction noise effects would be considered less than significant. For the proposed project, nighttime concrete pours are not expected to result in interior noise levels at the nearby residential uses in excess of 45 dBA. However, nighttime construction may result in interior noise levels in excess of 45 dBA at the nearby hospital. Because nighttime concrete pours would be expected to result in interior noise levels greater than 45 dBA at the nearby hospital, impacts related to sleep disturbance from nighttime concrete pours would be considered significant. Mitigation Measure NOI-1, which includes measures to reduce noise from construction activity during non-standard construction hours, would be implemented to reduce this impact. By ensuring that equipment would be located at least 200 feet (or farther) from sensitive uses, interior noise levels should be reduced such that impacts would be less than significant. Other measures identified in this mitigation measure would further reduce noise and potential disruptions to nearby sensitive uses. **(Less than Significant with Mitigation)**

Mitigation Measures

MM NOI-1: Measures to Reduce Noise Outside Standard Construction Hours in San Francisco

The project contractor will incorporate the following measures when nighttime construction is proposed:

- Require all equipment used outside standard daytime hours (e.g., 7:00 a.m. to 8:00 p.m. daily) be located at least 200 feet from the nearest sensitive use (e.g., the nearby UCSF Orthopedic Trauma Center and residential building northeast of the intersection of Sixth Street and Mission Bay Boulevard North).
- Require all construction equipment be equipped with mufflers and sound control devices (e.g., intake silencers and noise shrouds) that are in good condition (at least as effective as those originally provided by the manufacturer) and appropriate for the equipment.
- Maintain all construction equipment to minimize noise emissions.
- Locate construction equipment as far as feasible from adjacent or nearby noise-sensitive receptors.

- Prohibit the use of impact tools (e.g., jack hammers) during nighttime/non-standard hours.
- Prohibit idling of inactive construction equipment for prolonged periods during nighttime/non-standard hours (i.e., more than 2 minutes), as feasible.
- Provide advance notification in the form of the mailings/deliveries of notices to surrounding land uses regarding the construction schedule, including the various types of activities that would be occurring throughout the duration of the construction period.
- Provide the name and telephone number of an onsite construction liaison. If nighttime construction noise is found to be intrusive to the community (i.e., if complaints are received), the construction liaison will take reasonable efforts to investigate the source of the noise and require that reasonable measures be implemented to correct the problem.

Construction Haul Trucks

Potential noise effects from haul trucks must be quantitatively evaluated in San Francisco if a project's construction activities would occur over a minimum of 5 years. A traffic noise impact related to haul trucks would occur if ambient noise levels would increase by 3 dBA in areas where existing or resulting ambient noise levels are above the applicable land use compatibility standard or an increase of 5 dBA over ambient noise levels would occur in areas where existing and resulting ambient noise levels are below the applicable land use compatibility standard.

Project construction is expected to take approximately 21 to 37 months, or between approximately 2 and 3 years, depending on whether the surcharging scenario is selected. Should the surcharging scenario be selected, the 34- to 37-month construction schedule would result in approximately 1 year in which no work would occur. Therefore, because the duration of project construction would be less than 5 years, temporary haul truck noise does not need to be quantitatively evaluated. In addition, there would be an average of approximately seven to 10 trips by haul trucks per day during the most hauling-intensive phase of construction with the non-surcharging scenario. This would equate to less than one trip per hour on a given workday. Should the surcharging alternative be required, the worst-case phase, when soil is being exported and/or imported to the site, could have an average of approximately 80 trips by haul trucks per day. This would result in fewer than 10 trips by haul trucks per hour during a 9-hour construction day. Finally, haul trucks would travel to and from the project site along Owens Street and enter or exit U.S. 101 near Mariposa Street. Although some hospital and academic (i.e., University of California, San Francisco) uses are located along this route, no residential land uses are located along the proposed haul route.

Because haul truck activity would take place for less than 5 years, and because haul truck noise need only be quantitatively evaluated in San Francisco if the construction duration is more than 5 years, temporary noise impacts related to haul truck use during project construction would be less than significant. **(Less than Significant)**

4.13.2.3 Operational Noise

Traffic Noise

Traffic noise modeling for existing (no-project) conditions and existing plus-project conditions was conducted using a spreadsheet model that was based on the FHWA Traffic Noise Model, version 2.5. The spreadsheet calculated the vehicular traffic noise level at fixed distances and considered the traffic volume, roadway speed, and vehicle mix that is predicted to occur under each condition. For the assessment of project-level traffic noise effects, the average daily traffic volumes shown in Appendix A, provided by the project traffic engineer, were used to determine vehicular traffic noise levels with and without implementation of the project along select roadway segments in the project area.

Project-specific traffic data, including estimated average daily traffic, truck percentages, and posted speeds, were provided by the project traffic consultant, Fehr & Peers. Because the proposed project would increase the number of vehicle trips on some nearby roadway segments, traffic noise levels along some segments would increase as a result of project implementation.

To assess the potential for the proposed project to directly result in a significant traffic noise increase, modeled existing plus-project traffic noise levels were compared to modeled existing noise levels. For vehicular traffic noise, the following thresholds were applied to determine whether the project would result in significant vehicle-generated noise effects, depending on what the existing modeled noise level was on a given roadway segment:

1. An increase of more than 5 dB is considered a significant vehicular traffic noise increase in areas where the existing and resulting noise environment is considered "acceptable" because, as discussed in the *Overview of Noise* section, a 5 dB increase in noise is readily noticeable; and
2. In places where the existing or resulting noise environment is "conditionally acceptable," "conditionally unacceptable," or "unacceptable," based on the land use compatibility chart (Table 4.13-8), any noise increase greater than 3 dB is considered a significant vehicular traffic noise increase.

The appropriate increase criterion is selected on a segment-by-segment basis, based on whether the existing and resulting noise levels are below or above the applicable criterion from the land use compatibility guidelines. As discussed previously, an increase of less than 3 dB is generally not perceptible outside controlled laboratory conditions. However, in areas where the existing ambient noise levels are already high, a lower significance threshold of 3 dB (as opposed to 5 dB) is appropriate. Refer to Table 4.13-16 for the results of this analysis.

As shown in Table 4.13-16, below, the largest project-related traffic noise increase of any segment is on Sixth Street between Mission Bay Boulevard South and Nelson Rising Lane. Along this segment, a 1.5 dB increase in noise (from 53.8 to 55.3 dBA L_{dn}) was modeled to occur. Along other modeled roadway segments, project-related traffic noise increases would be limited to 0.3 to 0.8 dB. No roadway segments would have a 3 dB or 5 dB increase in noise with the project compared with existing modeled noise levels.

Because traffic noise increases along all analyzed roadway segments would be below the applicable criteria (i.e., 5 dB for all segments or 3 dB along segments where applicable land use criteria are

exceeded), project-related traffic would not result in significant traffic noise increases near off-site receptors. **(Less than Significant)**

TABLE 4.13-16. PROJECT-RELATED TRAFFIC NOISE INCREASES – MODELED ROADWAY TRAFFIC NOISE

Roadway	Existing No Project (dBA L_{dn})	Existing plus Project (dBA L_{dn})	Increase from Existing No Project to Existing plus Project (dB)
Nelson Rising Lane between Sixth Street and Merrimac Street	59.9	60.4	0.5
Merrimac Street between Mission Bay Boulevard and Nelson Rising Lane	56.7	57.0	0.3
Mission Bay Boulevard South between Sixth Street and Merrimac Street	55.2	55.9	0.7
Sixth Street between Mission Bay Boulevard South and Nelson Rising Lane	53.8	55.3	1.5
Nelson Rising Lane between Sixth Street and Owens Street	61.4	62.0	0.6
Owens Street between Mission Bay Boulevard South and Nelson Rising Lane	60.6	61.2	0.6
Mission Bay Boulevard between Sixth Street and Owens Street	58.3	59.1	0.8
Mission Bay Drive between Owens Street and Berry Street	63.4	63.8	0.4

Notes:

dB = decibel, dBA = A-weighted decibel; L_{dn} = day-night average sound level

- Impacts would occur along segments with a 3 dB or more increase in areas that are "unacceptable" or a 5 dB or more increase in areas that are "acceptable." No segments were modeled to have these increases with the project.
- Measured noise levels in the project vicinity and along many of the roadway segments were higher than the modeled segment-only traffic noise levels. Measured noise levels ranged from 68 to 73 dBA L_{dn}. However, modeled-only noise levels are presented to demonstrate the magnitude of project-related increases in noise.

Fire Pump Noise

The project proposes the installation of a fire pump to be used only during emergencies, although intermittent testing (e.g., monthly testing) may occur. It is anticipated that fire pump testing would consist of maximum of 1 hour of testing each month. The make and model of the fire pump have not yet been determined. Estimated noise levels from fire pump testing are presented below.

The fire pump would be on level 1 of the building. The proposed fire pump would be located in a mechanical equipment room. The walls of the room would reduce the amount of pump noise that is perceptible outside the building. However, the specifics regarding this reduction are not known at this time because the make and model of the pump as well as the specific features of the mechanical equipment room have not yet been determined. Although the make and model of the pump have not yet been determined, estimated noise levels from general pump are presented in this analysis.

A pump similar to that proposed for the project can produce an unattenuated noise level of 81 dBA at a distance of 50 feet.[9] The nearest off-site noise-sensitive land use to the project site is a residential building, which is at least 350 feet northeast of the proposed fire pump room. At this distance, fire pump noise would be reduced to approximately 64.1 dBA without accounting for attenuation from the enclosed room. The physical building and/or mechanical equipment enclosure would reduce noise from fire pump testing likely by at least 10 dB. However, because the room features have not been finalized at this time,

[9] Hoover and Keith. 2000. *Noise Control for Buildings, Manufacturing Plants, Equipment, and Products*. Houston, TX.

the exact attenuation cannot be known with certainty. The noise modeling below conservatively assumes no attenuation would occur from the physical building.

With regard to compliance with the noise limits set forth in Section 2909(d), which pertain to interior noise, pump testing noise at the nearest residential receptor (approximately 350 feet from the pump) would be approximately 64 dBA without accounting for attenuation from the pump being located inside the project mechanical room. A 25-dB reduction in the noise level can be applied to exterior noise at the nearby residences (with windows closed) to estimate what the interior noise level would be at the residences. With this reduction applied, interior noise at a receptor is estimated to be approximately 39 dBA. This level is below the applicable 55 dBA daytime noise limit outlined in the City Noise Ordinance (noting that the pump would not be tested during nighttime hours when the 45 dBA nighttime noise limit would apply). In addition, noise would be further reduced from this level because of the location of the pump inside the project mechanical room. Therefore, noise resulting from the testing of the pump in the northwest portion of the project site would not exceed the applicable 55 dBA interior noise limit at nearby receptors. **(Less than Significant)**

HVAC Noise

With regard to the installation of heating, cooling, and ventilation equipment at the project site, the project would include the use of air handlers, chillers, boilers, cooling towers, ventilation fans, kitchen exhaust fans, and pumps. A vapor intrusion mitigation system is also proposed, which requires the use of fans. Most of the heating, cooling, and ventilation equipment would be located on the roof of the four-story building; some equipment would be located on the mezzanine level. The equipment on the roof would not be enclosed; equipment on the mezzanine level would be fully enclosed, with air intake and exhaust relying on the use of wall louvers.

This analysis considers the estimated combined noise from expected project HVAC equipment, without accounting for attenuation in the form of shielding from screens or enclosures. Modeling was conducted to estimate potential noise levels at the property plane and at nearby noise-sensitive land uses from the abovementioned heating and cooling equipment.

Details about the proposed equipment have been estimated; final equipment selections have not been made at this time. Therefore, the analysis below uses source data for equipment similar to that proposed for the project. It is intended to provide reasonable estimates of noise so that the likelihood of equipment exceeding applicable local criteria can be assessed. Combined equipment noise modeling assumed that two boilers, two cooling towers, two chillers, two large fans, two kitchen exhaust fans, two pumps, and one large air handling unit would be operating concurrently and adjacent to one another on the roof of the project building.[10,11] Modeling demonstrated that noise levels at a distance of 50 feet from this equipment would be approximately 88.4 dBA L_{eq}.

The distance between the nearby hospital and the proposed project would be approximately 160 feet. Noise from the modeled HVAC equipment at this distance would be reduced to approximately 78 dBA.

[10] Hoover and Keith. 2000. *Noise Control for Buildings, Manufacturing Plants, Equipment, and Products*. Houston, TX.

[11] Federal Highway Administration. 2006. *Roadway Construction Noise Model User's Guide.* Washington, D.C. January. Available: http://www.fhwa.dot.gov/environment/noise/construction_noise/rcnm/rcnm.pdf.

Assuming a 25 dB reduction from exterior-to-interior noise levels (with an assumption of windows closed), estimated interior noise levels at the nearby hospital would be 53 dBA L_{eq}.

At the nearby residential building, located at least 315 feet from the nearest portion of the project building, noise from HVAC equipment would be reduced to approximately 72 dBA. Assuming a 25 dB reduction from exterior-to-interior noise levels (with an assumption of windows closed), estimated interior noise levels at the nearby residential building would be 47 dBA L_{eq}. Actual interior noise levels may be lower with exterior-to-interior attenuation at the modern buildings, such as the hospital and modern residential buildings near the project site; such attenuation may be greater than 25 dBA. In addition, HVAC units may not be located near one another or near the perimeter of the project site, which would further reduce noise. Also, HVAC equipment may be located behind solid screens. However, because the final design features and exact makes and models have not been determined at this time, the previously presented estimated interior noise levels are used to determine significance.

Stationary operational sources of noise are limited by Section 2909(d) of the City Noise Ordinance, which requires noise at residential interiors not to exceed 55 dBA during daytime hours (7:00 a.m. to 10:00 p.m.) or 45 dBA during nighttime hours (10:00 p.m. to 7:00 a.m.). Therefore, interior noise levels may exceed the 45 dBA nighttime standard should equipment be operational between the hours of 10:00 p.m. and 7:00 a.m. In addition, with an estimated noise level at 50 feet from the equipment of approximately 88.4 dBA and the lowest measured 1-hour L_{eq} noise level at the property plane being between 57.8 and 60.3 dBA L_{eq}, the noise increase over the ambient level for combined noise from mechanical equipment may be more than 10 dB (the applicable criterion for public property, per the City Noise Ordinance (Section 2909[b]). Therefore, because interior noise levels at adjacent uses may be in excess of 45 dBA during nighttime hours, and because noise from HVAC equipment at the property plane may result in increases of 10 dB or more in the ambient noise level, impacts related to project HVAC equipment noise are conservatively considered significant.

Mitigation Measure NOI-2 would require equipment be selected and design features be incorporated to ensure that interior noise at nearby sensitive uses would not exceed allowable levels. **(Less than Significant with Mitigation)**

Mitigation Measures

MM NOI-2: Measures to Reduce Noise from Heating, Cooling, and Ventilation Equipment

To reduce potential noise effects resulting from project heating, cooling, and ventilation equipment, a noise analysis shall be prepared to estimate the actual noise levels of the project-specific equipment once the models and design features to attenuate noise have been selected. The analysis shall be prepared by persons qualified in acoustical analysis and/or engineering prior to the issuance building permits and shall demonstrate with reasonable certainty that the mechanical equipment selected for the project, as well as the attenuation features incorporated into project design, will not result in interior noise levels at nearby receptors in excess of 45 dBA Leq during the nighttime and 55 dBA Leq during the daytime.

Options for reducing noise from heating and cooling equipment include enclosing the equipment in mechanical equipment rooms, shielding equipment with mechanical screens at least as tall as the equipment, citing the equipment farther from adjacent receptors, and selecting quieter models.

All recommendations from the acoustical analysis necessary to ensure that noise sources meet the above standards shall be incorporated into the building design.

Playground Noise during School Hours

The proposed project includes a large, approximately 54,600-square-foot outdoor play area on the east side of the project site. This area would be used for recess, lunch, and outdoor class activities. It would include one outdoor classroom for up to 30 students. More children would use the outdoor play area during physical education classes and recess. Separate areas would be designated for pre-kindergarten, kindergarten, and grades one through five. According to the project applicant, the estimated maximum number of children playing outside at the same time would be approximately 300, with an estimated 48 in the pre-kindergarten outdoor play area, 44 in the kindergarten outdoor play area, and 200 in the outdoor play area for grades one through five.

No sound amplification would be used for outdoor classroom activities. In addition, the school PA system would be used only in case of emergency, reducing the likelihood of amplified noise occurring at outdoor areas associated with this school. Although a bell may ring in the outdoor play area to signify the end of recess or the start of a class period, it would sound only eight times per day. In addition, the duration of the ringing would be short. Overall, noise levels in the outdoor play area would be dominated by children playing during recess and lunch. Therefore, noise from students playing is the focus of this noise analysis for the proposed outdoor play area.

It is expected that the most noise would be generated in the outdoor play area during recess, lunch, and physical education classes when kids would be playing outside. Previously conducted noise measurements of elementary school recess activities at other schools are presented below to provide estimated noise levels for activities at schoolyards. These estimated noise levels can be used to approximate noise levels from the proposed outdoor play area.[12]

Measurements of noise from recess activities at an elementary school (Linda Vista Elementary School) were conducted from approximately 10:30 a.m. to 11:40 a.m. to capture morning recess noise and from 12:20 p.m. to 1:40 p.m. to capture lunch break/recess noise. The sound level meter was located at the top of a slope, approximately 15 to 20 feet above the elevation of the adjacent asphalt playground. This location provided line-of-sight views to a large portion of the school's outdoor play areas. Because of the layout of the school, the playground extended around the measurement location on both its east and south sides. The measurement location was approximately 35 feet from the closest edges of the school playground to the east and south.

Throughout the measurement period, groups of students generated noise at various locations, including the flat asphalt playground, an area with climbing/play equipment, a tetherball area, and an existing decomposed granite field. The distance between the measurement microphone and the noise-generating activities ranged from approximately 60 feet for the closest activity on the asphalt playground to more

[12] Noise measurements from recess activities at Linda Vista Elementary School in San Diego.

than 400 feet for activity at the far side of the decomposed granite field. Over the course of the measurement, the total number of students visible across the exterior playground and field areas varied from approximately 20 to 150. Additional students may have been at exterior playground areas that were not visible from the measurement location (e.g., on the opposite side of the school buildings). The average (L_{eq}) noise level measured during morning recess was 64 dBA, with minimum and maximum noise levels of 41 and 82 dBA, respectively. The average (L_{eq}) noise level measured during the lunch break was also 64 dBA, with minimum and maximum noise levels of 43 and 86 dBA, respectively. These two measurement periods are consistent with one another, and combining the two into a single aggregated measurement indicates an average (L_{eq}) noise level of 64 dBA, with minimum and maximum noise levels of 41 and 86 dBA, respectively. Refer to Table 4.13-17 for the measured recess noise levels.

TABLE 4.13-17. MEASURED RECESS NOISE LEVELS

Noise Source	Measured Average (L_{eq}) Noise Level (dBA)	Distance from Meter to Outdoor Play Area (feet)	Range of Distance to Noise Source (feet)	Acoustical Average Distance to Activities (feet)	Estimated Noise at nearby Residences (230 feet from edge of the proposed outdoor play area) (dBA L_{eq})[a]
Recess at the Outdoor Play Area	63.7	35	60–240	120	47

[a.] Adjustment assumes a change of 6 dB per doubling of distance from the noise source.

Using the noise measurements conducted approximately 35 feet from the edge of the proposed outdoor play area during recess, the average noise level at the nearest residences (i.e., 230 feet from the edge of the proposed outdoor play area) would be approximately 47 dBA, based on standard attenuation of 6 dB per doubling of distance. To estimate noise levels from up to 300 students and ensure a reasonably accurate approximation of proposed outdoor play area noise, modeling was conducted to estimate noise levels from up to half the students (i.e., 150). The 150 students were assumed to be talking loudly at the proposed outdoor play area at any given time. For the purposes of this analysis, the distance to the approximate center of the outdoor play area was used. The center of the outdoor play area is at least 330 feet from the residential structure northeast of the project site. It is also more than 400 feet from the nearby hospital. The line of sight between the outdoor play area and at least some floors of the hospital would be blocked by the proposed building.

Noise from a person "talking normally" is approximately 57 dBA at a distance of 1 meter, which equates to approximately 33 dBA at 50 feet.[13] Noise from a person speaking "very loudly" is approximately 74 dBA at a distance of 1 meter, or 50.3 dBA at a distance of 50 feet. Assuming that approximately half, or 150, of the 300 students in the proposed outdoor play area would be talking "very loudly" at any given time, the combined noise level from the center of the outdoor play area would be approximately 72 dBA at a distance of 50 feet. The nearest receptor would be the residential building approximately 330 feet northeast of the northern perimeter of the proposed outdoor play area. At this distance, noise would be reduced by more than 16 dB, based on distance alone. The estimated noise level from the proposed outdoor play area at the nearest residences, based on the assumptions described above, would be

[13] Harris, Cyril M. 1979. *Handbook of Noise Control, Second Edition*. Page 14-2.

approbatory 55.7 dBA L_{eq}. Therefore, based on this modeling and the results of the previously conducted recess noise monitoring, it is estimated that recess and other activities at the proposed outdoor play area could be in the range of 47 to 56 dBA at nearby homes. Exterior noise is typically reduced by approximately 25 dB with windows closed; therefore, interior noise levels from recess and other activities would be 31 dBA or lower. Activities would take place only during daytime hours, when people are typically less sensitive to noise. In addition, the nearby residences are within 50 feet of the existing Mission Bay Soccer Fields, located south of Mission Bay Boulevard and east of Sixth Street. These soccer fields northeast of the project site generate noise during games similar to noise from a schoolyard.[14]

Noise from the proposed outdoor play area would not be expected to result in interior noise levels at nearby receptors that would be in excess of the allowable daytime interior noise level in San Francisco of 55 dBA. Nighttime activities at the proposed outdoor play area are not proposed. **(Less than Significant)**

Amplified Noise during Occasional Events

In addition to daily activity at the proposed outdoor play area during school hours, occasional community functions, approximately five to 10 per year, could also take place. Such functions could include up to 50 people and involve sound amplification. According to measurements for similar activities, estimated noise levels from human speech amplified by a single loudspeaker are in the range of 58 to 59 dBA L_{eq} at 100 feet.[15] Noise levels from a small band, including vocalists and a guitar with a single amplifier, are slightly higher, approximately 65 dBA L_{eq} at 100 feet.[16] At a distance of 330 feet, the distance between the approximate center of the outdoor play area and the nearest residences, the estimated noise level for speech amplified by a single loudspeaker is reduced to 48 to 49 dBA, based on distance alone. The noise level from a small band is around 55 dBA.

Section 2909 of the City Police Code restricts noise generated at a site to no more than 5 dB above the ambient noise level at a residential site, no more than 8 dBA above ambient at a commercial or industrial site, and no more than 10 dB above ambient on public property. Although no specific events are planned at this time, events that may involve amplified speech and music would be expected to result in noise levels that would be below the existing ambient level (i.e., measured L_{dn} at LT-5, nearest the residences, of 70.2 dBA and a daytime L_{eq} of 65.1 dBA). In addition, any large-scale events in the future would be subject to a City police permit and would be required to comply with applicable local thresholds. **(Less than Significant)**

Loading Activity Noise

During operations, the project is expected to generate an average of five to 10 weekly truck trips to the site, with an expected maximum of up to two truck trips per day. The project loading zone would be a white curb on Nelson Rising Way, more than 500 feet from the residences northeast of the project site.

[14] Noise measurements from youth soccer games at Dailard Elementary Joint Use Park in San Diego. It was estimated that noise from soccer games would be approximately 4 dB less than noise from a schoolyard during recess at the same approximate distance.

[15] Wedding Noise: Noise from an individual officiating over a wedding (single speaker) was measured to be between approximately 55 and 56 dBA L_{eq} at approximately 140 feet, which equates to a noise level of approximately 58 to 59 dBA L_{eq} at approximately 100 feet.

[16] Acoustic Band Noise: Noise at approximately 73 feet from a small live band with a single amplifier that included a guitar and vocalists was measured to be 67.5 dBA L_{eq}, which equates to 64.8 dBA L_{eq} at 100 feet.

Although loading activity generates noise, the loading and unloading of goods is a common occurrence in the city, and the limited loading activities associated with the project would occur during daytime hours when people are less sensitive to noise.

Ambient noise is already somewhat elevated in the project area as a result of noise from Caltrain and I-280, with existing daytime L_{eq} noise levels at the project site in the range of 64.8 to 68.3 dBA L_{eq}.[17] Intermittent noise from up to two daily on-street loading and unloading activities would not be expected to result in a substantial increase in the ambient noise levels in this area. Because noise is already elevated in this urban area, given the level of transportation noise, and because external loading would be temporary and intermittent, noise impacts from loading activities at nearby noise-sensitive land uses would be less than significant. **(Less than Significant)**

Project Compatibility with Existing Noise Levels

As demonstrated by the noise measurement data and the compatibility guidelines presented above, noise levels at the project site are in excess of the "acceptable" and the "conditionally acceptable" compatibility standards from the City General Plan for school classrooms. The measured noise levels are between 68 and 73 dBA L_{dn} and in the "conditionally unacceptable" range (i.e., above 70 dBA). According to the City General Plan compatibility guidelines, development in areas where noise is in the "conditionally unacceptable" range should generally be discouraged. However, development of a school in such locations can occur if measures are taken to ensure acceptable interior noise levels. Although the City General Plan does not specifically identify what interior noise level would be considered acceptable for a school environment, 45 dBA can be used to ensure that learning will not be affected (this criterion is often used as an appropriate interior noise threshold for sensitive land uses). In addition, according to the City Planning Department Noise Impact Analysis Guidelines (Draft), indoor activity interference and annoyance can occur at school uses if interior noise is in excess of 45 dBA.[18] Reductions in interior noise can often be achieved through the incorporation of noise attenuation or insulation features into the project design, such as the incorporation of Sound Transmission Class– (STC-) rated windows and walls.

The proposed outdoor play area for the school was designed such that the proposed school building would be located between I-280 and the proposed outdoor play area, thereby reducing exterior noise in this area. Noise levels below 65 dBA L_{dn} are considered satisfactory for exterior environments affiliated with schools. It is likely that attenuation from the proposed school building would reduce noise from the freeway in the proposed outdoor play area by 5 to 10 dB. Therefore, exterior noise levels are expected to be compatible with a school use. However, unattenuated exterior noise levels at the façade of the proposed school building may not be considered compatible with a school use. It is possible that interior noise levels would be in excess of 45 dBA L_{dn}. Impacts related to interior noise at the proposed school use would be considered significant.

Mitigation Measure NOI-3 would ensure that an interior noise study would be conducted prior to the issuance of building permits to determine the STC rating required for windows, walls, and doors. The study would also determine which other noise attenuation features should be required to ensure appropriate interior noise levels. Because standard modern buildings typically reduce sound by approximately 25 dBA with windows closed, the necessary reduction in estimated interior noise (e.g., up

[17] Daytime L_{eq} for the purpose of this analysis is the average L_{eq} for the daytime window when construction is allowed in San Francisco (e.g., 7:00 a.m. to 8:00 a.m. daily).

[18] San Francisco Planning Department Noise Impact Analysis Guidelines (Draft).

to 28 dB) should be achievable with readily available building materials. **(Less than Significant with Mitigation)**

Mitigation Measures

MM NOI-3: Measures to Reduce Interior Noise at the Project Site

To ensure acceptable interior noise levels at the proposed school, which would be near loud noise sources, including I-280 and Caltrain tracks, an analysis shall be conducted to demonstrate that interior noise levels at the school, with incorporation of the proposed building materials, would be below 45 dBA at the portion of the project site closest to I 280. This analysis shall be conducted prior to the issuance of building permits. This analysis cannot currently be conducted because the proposed building has not yet been constructed.

To reduce interior noise, the project contractor shall ensure that doors and windows will be fitted properly; openings shall be caulked to ensure adequate insulation from exterior noise. In addition, STC-rated doors and windows shall be selected, according to measured noise levels at the project site, to ensure that interior noise (with windows and doors closed) resulting from exterior noise sources (e.g., highway traffic and rail operations) will be below 45 dBA.

Because the project proposes the installation of air-conditioning equipment with Minimum Efficiency Reporting Value (MERV) 14 filters or better, the proposed STC-rated windows and doors will be able to remain closed and ensure that an adequate noise reduction will be achieved.

All recommendations from the acoustical analysis necessary to ensure that noise sources meet the above standards shall be incorporated into the building design.

4.13.2.4 Vibration

Damage-Related Vibration Effects

Construction of the proposed project would involve the use of construction equipment that could generate ground-borne vibration. Typical vibration levels associated with heavy-duty construction equipment at a reference distance of 25 feet and other distances are shown in Table 4.13-18. The most vibration-intensive types of construction equipment expected to be used for the project are an auger drill and a large bulldozer.

TABLE 4.13-18. VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV at 25 Feet	PPV at 50 Feet	PPV at 100 Feet	PPV at 200 Feet
Auger drill	0.089	0.031	0.0111	0.004
Hoe ram[a]	0.089	0.031	0.011	0.004
Large bulldozer	0.089	0.031	0.011	0.011
Loaded trucks	0.076	0.027	0.010	0.010
Jackhammer	0.035	0.012	0.004	0.004
Small bulldozer	0.003	0.001	0.000	0.000

Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment*. FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: August 10, 2020.

[a.] Representative of a hydraulic hammer.

Project construction areas would be at least 100 feet from the nearest off-site structures. Specifically, project construction in the northern portion of the site could occur as close as 200 feet from a nearby multi-family residential structure, and construction in the southern portion of the site could occur as close as 100 feet from the University of California, San Francisco Orthopedic Trauma Center. These structures are both relatively modern and, for the purposes of this analysis, classified under the "new residential structures" and "modern industrial/commercial buildings" categories shown in Table 4.13-6. The applicable damage criterion for buildings in both categories is a PPV of 0.5 in/sec for frequent/continuous sources of vibration, such as construction activity.

The most vibration-intensive equipment types proposed for project construction are an auger drill and a large bulldozer. No pile driving is proposed for project construction. An auger drill and a large bulldozer both generate a PPV of 0.089 in/sec at a distance of 25 feet, as shown in Table 4.13-6. Assuming that the equipment could be used at any point within the project site, this analysis conservatively assumes the equipment could be used as close as 100 feet from the University of California, San Francisco Orthopedic Trauma Center and 200 feet from the nearby residential structure.

At the nearby University of California, San Francisco medical building, which would be at least 100 feet from construction, vibration levels from both an auger drill and a large bulldozer would be reduced to a PPV of 0.012 in/sec. This level is below the damage criterion for modern commercial/industrial buildings (i.e., PPV of 0.5 in/sec.). At greater distances (e.g., the nearest residential property, which is more than 200 feet from the project site), the vibration level would be further reduced. At a distance of 200 feet, the distance to the nearest residential structure, the vibration level from an auger drill and a large bulldozer would be reduced to a PPV of 0.004 in/sec. This vibration level is well below the damage criterion for "new residential structures" (i.e., PPV of 0.5 in/sec.). Because vibration levels from the most vibration-intensive project construction activities would not exceed the applicable damage criteria for nearby structures, damage-related vibration impacts would from project construction would be less than significant. (**Less than Significant)**

Sleep Disturbance–related Vibration Effects

Nighttime vibration effects are assessed to determine if sleep disturbance at nearby Category 2 land uses is likely. Construction activities for the proposed project would occur mostly during daytime hours. However, up to two nights with concrete pours could be expected over the approximately 21- to 24-month

construction period for the no surcharging scenario, or 34- to 37-month construction period for the surcharging option. The two instances of nighttime construction would be completed before 12:00 a.m.

Nighttime concrete pours would result in less vibration than that generated by the types of construction activities that would occur during daytime hours. This is because the equipment proposed for nighttime work, including concrete mixers and concrete pumps, generates relatively low levels of vibration compared with the heavier equipment proposed for daytime use. Ground-disturbing equipment such as a bulldozer imparts energy into the ground when it is being used and creates seismic waves that radiate along the surface and downward. Concrete pumps and mixers do not typically disturb the ground in that way and therefore do not generate high levels of vibration.

Vibration-related annoyance impacts are assessed my comparing expected vibration levels to the applicable FTA ground-borne vibration impact criteria. Nearby receptors include the residential building 200 feet north of the project site and the University of California, San Francisco Orthopedic Trauma Center located approximately 100 feet southwest of the project site. Services provided at the trauma center include inpatient and outpatient orthopedic surgery, rehabilitation, and orthotic and prosthetic services. Because this facility has inpatient care, potential sleep disturbance effects from nighttime construction are considered. Estimated vibration levels at nearby receptors are compared to the FTA vibration annoyance criterion of 72 VdB for Category 2 uses, which include residences and buildings where people normally sleep.

During the two nights when concrete pours may occur, equipment would be at least 200 feet away from the nearby residential building (northeast of the project site) and at least 100 feet from the nearby University of California, San Francisco Orthopedic Trauma Center (southwest of the project site) The equipment would most likely be located even farther away from the nearby uses; however, these reasonable worst-case distances are used in this analysis to ensure a conservative assessment.

Concrete mixers and concrete pumps generate less vibration than a small bulldozer, which is the piece of equipment included in the FTA *Transit Noise and Vibration Impact Assessment Manual* (2018) with the lowest estimated level of vibration. Therefore, a small bulldozer is used to approximate reasonable worst-case vibration effects from proposed nighttime equipment. VdB vibration levels from a small bulldozer at various distances are shown in Table 4.13-19.

TABLE 4.13-19. VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	VdB 25 Feet	VdB at 50 Feet	VdB at 100 Feet	VdB at 200 Feet
Small bulldozer	58	49	40	31
Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment*. FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: August 10, 2020.				

A small bulldozer would result in a vibration level of approximately 58 VdB at a distance of 25 feet, according to the FTA manual. The vibration level would be reduced to approximately 40 VdB at 100 feet (the distance to the University of California, San Francisco Orthopedic Trauma Center) and 31 VdB at 200 feet (the distance to the nearest residential building). These vibration levels are both well below the applicable FTA vibration criterion of 72 VdB for Category 2 uses, which include residences and buildings where people normally sleep. As described above, equipment for concrete pours would most likely be

even farther away from the nearest off-site uses. At farther distances, vibration levels would be even lower. Therefore, because vibration levels from nighttime construction would not exceed the Category 2 criterion at nearby buildings, vibration-related annoyance impacts would be less than significant. **(Less than Significant)**

4.13.2.5 Exposure of Persons to Excessive Noise Levels from Public Airports and Private Air Strips

The project site is not in the vicinity of or within an area covered by an airport land use plan, within 2 miles of a public airport or a public use airport, or in the vicinity of a private airstrip. Therefore, there would be no impact related to the exposure of persons to excessive aircraft noise. **(No Impact)**

4.13.3 Conclusion

With implementation of the proposed mitigation measures, the project would have a less-than-significant impact on noise. **(Less than Significant with Mitigation)**

4.14 POPULATION AND HOUSING

4.14.1 Setting

According to California Department of Finance data, San Francisco had a population of approximately 897,806 as of January 1, 2020.[1] The Association of Bay Area Governments (ABAG) projects that the City's population will increase to 1,034,175 by 2030.[2]

The City has approximately the same number of jobs as employed residents, or approximately one job per employed resident.[3] ABAG is projecting that the number of jobs in San Francisco will increase to 840,270 by 2030.[4]

4.14.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
2. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

4.14.2.1 Population Growth

Construction

During project construction, the approximate average number of construction workers on-site would be 15, with a maximum of 30 workers during building construction. It is anticipated that construction employees associated with the proposed project who are not already living in the City would commute from their residences elsewhere in the Bay Area rather than permanently relocate to San Francisco from more distant locations; this is typical for employees in the various construction trades. Once construction is complete, construction workers typically seek employment at other job sites in the region that require their specific skills. Therefore, construction of the proposed project would not generate an unplanned population increase in the city. **(Less than Significant)**

2 Association of Bay Area Governments. 2019. *Projections 2040.* December. Available: http://projections.planbayarea.org/. Accessed: February 12, 2021.

3 Based on the ABAG-projected 785,530 jobs in 2020 and 959,405 residents in 2020.

4 Association of Bay Area Governments. 2019. *Projections 2040.* December.

Operation

Project operations would not induce direct population or housing growth on the project site because the primary function of the proposed building would be for educational purposes. The proposed project would employ up to 70 employees (including instruction, administration, and maintenance personnel) and will also serve as a professional development space for up to 60 teachers per day during operation when school is not in session. When school is in session, there would be up to 20 employees and teachers on site. The professional development space would be used by teachers who are employed elsewhere within the District and not at the project site. The proposed project would have a daily enrollment capacity of 500 students at the elementary school and up to 270 students at the linked learning hub (including approximately 135 students in the morning cohort and 135 students in the afternoon cohort).

For the purposes of this analysis, it is assumed that the 770 students who would enroll at the proposed school already live in the city and therefore would commute from their permanent residences rather than relocate from elsewhere in the Bay Area; this is typical for students in various levels of education. Similarly, it is assumed that the 70 employees and 60 teachers who would work at the site once the project is fully operational have living accommodations elsewhere and would not permanently relocate to the city. However, in a worst-case scenario, if both teachers and employees were to relocate to the city, they would represent approximately 0.007 percent and 0.006 percent, respectively, of the city's total projected population in 2030 and 0.008 percent and 0.007 percent, respectively, of the city's projected number of jobs in 2030. Therefore, the number of project-generated teachers and employees would have a negligible effect on population and housing growth in the city. The project would not induce a substantial level of unplanned growth in the city, either directly or indirectly.

The proposed project also would be constructed in a developed urban area with easy access to necessary infrastructure and services (i.e., transportation, utilities, parks, hospitals). The project site is in an established urban neighborhood and the proposed project would not be an infrastructure project. Therefore, the proposed project would not indirectly induce substantial population growth. The potential physical environmental impacts resulting from the employment growth generated by the proposed project are analyzed in the relevant resources topics throughout this initial study and the EIR. **(Less than Significant)**

4.14.2.2 Displacement

The proposed project would not displace any residents or housing units because no housing units currently exist on the project site. Therefore, the proposed project would have no direct impact related to the displacement of housing units or people, nor would the proposed project necessitate construction of replacement housing elsewhere that could result in physical environmental effects. **(No Impact)**

4.14.3 Conclusion

The project would have a less-than-significant impact on population and housing. **(Less than Significant)**

4.15 PUBLIC SERVICES

4.15.1 Setting

4.15.1.1 Fire Protection Services

Fire protection and emergency medical services for the project site are provided by the San Francisco Fire Department (SFFD). In addition, several privately operated ambulance companies are authorized to provide advanced life support services in the City. The SFFD comprises three divisions, which are subdivided into 10 battalions and 45 active stations throughout the City.[1] The closest fire station to the project site is Station No. 4 at 449 Mission Rock Street, approximately 0.3 mile to the northeast at Third Street.

4.15.1.2 Police Protection Services

Police protection services for the project site are provided by the San Francisco Police Department (SFPD). For its sworn officers, the SFPD is mandated by City Charter to maintain a minimum staffing level of 1,971; however, in 2015, the San Francisco Board of Supervisors passed Resolution No. 248-15, which increased the mandated minimum staffing level to 2,200.[2] The SFPD currently has 2,227 sworn officers.[3]As of December 2020, the SFPD had responded to 43,809 calls concerning violent crimes and property crimes over the past year.[4] SFPD headquarters is at 1245 Third Street, approximately 0.3 mile northeast of the project site. The project site would be served primarily by the Southern police district[5] but supported by adjacent police districts, such as Mission and Bayview, if needed. The Southern police district station is at 1251 Third Street, approximately 0.3 mile northeast of the project site.

4.15.1.3 Schools

The San Francisco Unified School District (District) provides public education services to students in the City. The District maintains a property and building portfolio that has capacity for almost 64,000 students.[6] A decade-long decline in District enrollment ended in the 2008–2009 school year at 52,066 students, and total enrollment in the district has increased to about 54,452 as of October 2019, an increase of approximately 2,386 students since 2008.[7] Thus, even with increasing enrollment, the school district currently has more classrooms district-wide than needed.[8] However, the net effect of housing development across San Francisco is expected to increase enrollment by at least 7,000 students by 2030 and eventually enrollment is likely to exceed the capacity of current facilities.[9]

4.15.1.4 Parks

The impacts on parks and recreational facilities are addressed in Section 16, *Recreation*, of this initial study.

4.15.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities or the need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:				
Fire Protection?	☐	☐	☒	☐
Police Protection?	☐	☐	☒	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other Public Facilities?	☐	☐	☐	☒

[6] This analysis was informed, in part, by a target enrollment survey that the San Francisco Unified School District performed for all its schools in 2010.

4.15.2.1 Impacts on Public Services

Fire and Police Protection

The project would be located in an area that is already served by fire, emergency, and police protection services. The increased number of students, employees, and visitors at the project site compared to existing conditions could result in more calls for police, fire, and emergency response. However, the increase in demand for these services would not be substantial given the overall demand for such services on a citywide basis. Moreover, the proximity of the project site to police and fire stations would help minimize the response time for these services should incidents occur at the project site.

The project would be built in conformance with the San Francisco Fire Code to reduce potential fire hazards. The project site would be secured by an 8-foot-high fence around the perimeter. The two driveways along Owens Street would be secured with roller gates; an additional roller gate with an access door would be located along Sixth Street. An intercom system at the main entrance to the proposed building would be used to buzz in personnel. Cameras would be incorporated around the perimeter of the project site, including all entry and exit points. A 10-foot-high fence would be installed at the perimeter of the rooftop to ensure the safety of students at play. Therefore, although the project could incrementally increase demand for fire, emergency, and police protection services, it would not result in the substantial adverse physical environmental impacts associated with the provision of new or physically altered fire, emergency, or police facilities to maintain acceptable service ratios, response times, or other performance objectives. **(Less than Significant)**

Schools

The project proposes demolition of a surface parking lot. In its place, the District would construct a multistory (maximum of 63 feet tall), approximately 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub, professional learning space, outdoor learning area, outdoor play area, and paved surface parking lot with ten parking spaces. The proposed project would employ up to 70 employees and will also serve as a professional development space for up to 60 teachers per day during operation when school is not in session. The proposed project would have a daily enrollment capacity of 500 students at the elementary school and up to 270 students at the linked learning hub. The students and employees generated by the proposed project would be served by the proposed school; the potential physical environmental impacts resulting from the proposed project are analyzed in the relevant resources topics throughout this initial study and the EIR. Therefore, the project would not increase demand for school services and it would not result in the substantial adverse physical environmental impacts associated with the provision of new or physically altered school facilities to maintain acceptable service ratios or other performance objectives. **(Less than Significant)**

4.15.3 Conclusion

The project would have a less-than-significant impact on public services. **(Less than Significant)**

4.16 RECREATION

4.16.1 Setting

The San Francisco Recreation and Parks Department is responsible for maintaining and preserving the various park and recreational facilities in the city and works cooperatively with other public agencies in coordinating recreational activities. As of February 2021, the Department owned and maintained approximately 4,113 acres of recreational facilities and open space, including 3,400 acres in the city; 671 marina slips; 220 neighborhood parks; 179 playgrounds and play areas; 82 recreation centers and clubhouses; 72 basketball courts; 151 tennis courts; 59 soccer/playfields; and one family camp.[1] Together with the approximately 2,457 acres of open space properties that are owned and managed by other City and County of San Francisco agencies, the state (255 acres, including Candlestick Point Recreation Area and Mount Sutro), and federal agencies (1,642 acres, including the Presidio, Ocean Beach, Fort Funston, Fort Mason, Lands End, Sutro Heights, and China Beach), approximately 5,890 acres of parkland and open space are available in the City. These publicly owned lands (e.g., parks, walkways, landscaped areas, recreational facilities, unmaintained open space) make up approximately 20 percent of the City's land area.

The project site does not currently contain recreational or open space resources. The closest recreational resource to the project site is Mission Creek Park (approximately 0.10 mile north of the project site). Other recreational resources within 0.5 mile of the project site are listed in Table 4.16-1. All other recreational facilities are more than 0.5 mile from the project site.

TABLE 4.16-1. OPEN SPACES WITHIN 0.5 MILE OF THE PROJECT SITE

Name	Size (acres)	Amenities	Distance from Project Site
Mission Creek Parka	17	Small outdoor amphitheater, sports courts, boat launch, off-leash dog play area, lawns, public restrooms, and multiple pathways for running/walking and wildlife viewing	0.10 mile north
Jackson Playground	4.41	Sand playground, mosaics, picnic areas, tennis courts, basketball courts, and two ball fields	0.37 mile southwest
Pennsylvania Garden	Not available	Community garden with seating areas, pathways, and dog area	0.45 mile south
Koret Quad	2.0	Outdoor quad with seating areas, open space, and art installation	0.13 mile southeast
Bay Front Park	5.5	Seating areas, grassy open space, half basketball court, picnic tables, and chess board tables	0.49 mile east
China Basin Park	5.0	Open spaces, boardwalk, promenade, seating areas, and central square	0.50 mile northeast

[a] Mission Creek Park includes Mission Bay Dog Park, Mission Creek Gardens, the Mission Creek Park Sports Courts (volleyball and tennis courts), and the Mission Creek Basketball Courts.

4.16.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?	☐	☐	☒	☐
2. Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☒	☐

4.16.2.1 Recreational Impacts

The project would not include new residential uses. The proposed project would employ up to 70 employees (including instruction, administration, and maintenance personnel) and will also serve as a professional development space for up to 60 teachers per day during operation when school is not in session. When school is in session, there would be up to 20 employees and teachers on site. The professional development space would be used by teachers who are employed elsewhere within the District and not at the project site. The proposed project would have a daily enrollment capacity of 500 students at the elementary school and up to 270 students at the linked learning hub (including approximately 135 students in the morning cohort and 135 students in the afternoon cohort). Given the variety of nearby parks, plazas, and recreational facilities, such as Mission Creek Park and Koret Quad, increased usage at any one park by employees, teachers, and students would not be substantial. Although the proposed project would introduce a new onsite daytime population to the project site, the projected number of new employees and students would not be large enough to substantially increase demand for or use of neighborhood parks or recreational facilities to the extent that substantial physical deterioration of existing facilities would occur. In addition, the project would provide on-site recreational opportunities (e.g., an approximately 54,600-square-foot outdoor play area east of the proposed building). The play area would include seating areas, play structures, landscaping, and an approximately 10,800-square-foot

physical education yard. Therefore, the project would not cause physical deterioration at existing recreational facilities or require the expansion of existing recreational facilities, which could have an adverse effect on the environment. **(Less than Significant)**

4.16.3 Conclusion

The project would have a less-than-significant impact on recreation. **(Less-than-Significant Impact)**

4.17 TRANSPORTATION

4.17.1 Regulatory Setting

4.17.1.1 State

CEQA Section 21099(b)(1) (Senate Bill 743)

California Environmental Quality Act (CEQA) Section 21099(b)(1) requires that the Office of Planning and Research (OPR) develop revisions to the CEQA Guidelines and establish criteria for determining the significance of the transportation impacts of projects that "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." CEQA Section 21099(b)(2) states that, upon certification of the revised guidelines for determining transportation impacts, pursuant to Section 21099(b)(1), automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment under CEQA.

In January 2016, OPR published for public review and comment a Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA, recommending that transportation impacts for projects be measured using a VMT metric. On March 3, 2016, based on compelling evidence in that document and the department's independent review of the literature on level of service and VMT, the San Francisco Planning Commission adopted OPR's recommendation to use the VMT metric instead of automobile delay to evaluate the transportation impacts of projects (resolution 19579). In December 2018, the California Natural Resources Agency certified and adopted the CEQA Guidelines update package, including the section implementing Senate Bill 743 (section 15064.3). The Office of Planning and Research developed a Technical Advisory on Evaluating Transportation Impacts in CEQA, which contains OPR's technical recommendations regarding assessment of VMT, thresholds of significance, and mitigation measures.

California Senate Bill 743 amended CEQA by adding California Public Resources Code (PRC) Section 21099, which concerns the analysis of parking impacts for certain urban infill projects in transit priority areas. PRC Section 21099(d), effective January 1, 2014, provides that the "parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment." Accordingly, parking is no longer to be considered in determining if a project has the potential to result in significant environmental effects if the project meets the criteria established in the statute.

4.17.1.2 Regional

Plan Bay Area

Plan Bay Area 2040 is a state-mandated integrated long-range transportation and land use plan. As required by SB 375, all metropolitan regions in California must complete a Sustainable Communities Strategy as part of a Regional Transportation Plan. This strategy integrates transportation, land use, and housing to meet greenhouse gas reduction targets set by the California Air Resources Board. Plan Bay Area 2040 meets those requirements. In addition, the plan sets a roadmap for future transportation

investments and identifies what it would take to accommodate expected growth. The plan neither funds specific transportation projects nor changes local land use policies.

In the Bay Area, the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) adopted the latest plan in 2017. To help meet the greenhouse gas reduction targets, the plan identified priority development areas (PDAs). The agencies estimate approximately 77 percent of housing and 55 percent of job growth will occur in a PDA between 2010 and 2040. These PDAs tend to be centrally located, with high levels of transit service, and lower than average VMT generation per capita. While the Project is not located in a PDA, it is surrounded by PDAs that are part of the Eastern Neighborhoods Plans.

MTC, in partnership with ABAG and other partner organizations are currently developing Plan Bay Area 2050. Plan Bay Area 2050 will be an updated long-range plan for the nine-county Bay Area accounting for changes to environmental, housing, transportation, and economic trends since adoption of Plan Bay Area 2040 in 2017. Plan Bay Area 2050 is expected to be adopted in fall 2021.

4.17.1.3 Local

On August 24, 2021, the District's Governing Board adopted a Resolution pursuant to Government Code section 53094, exempting the project from local zoning ordinances. Thus, such ordinances are inapplicable to the proposed project. Additionally, the California Supreme Court has held that public schools generally are a matter of statewide rather than local or municipal concern, and when they are engaged in sovereign activities, they are not subject to local regulation unless mandated by the Constitution or the Legislature. (*Hall v. City of Taft* (1956) 47 Cal.2d 177.) Nonetheless, the District seeks to develop properties in a manner that minimizes potential conflicts with land use policies and plans of local jurisdictions to the extent feasible. The following information is provided for informational purposes.

Transit First Policy

The City's Transit First Policy, adopted by the board of supervisors in 1973 and amended in 1998, is contained in section 8A.115 of the City Charter. The Transit First Policy is a set of principles that emphasize the City's commitment to give pedestrian, bicyclist, and public transit use of public rights-of-way priority over the private automobile. These principles are embodied in the policies and objectives of the Transportation Element of the San Francisco General Plan. All City boards, commissions, and departments are required by law to implement the City's Transit First Policy principles in conducting the City's affairs.

Vision Zero

In 2014, the San Francisco Board of Supervisors adopted a resolution to implement an action plan that would reduce traffic fatalities to zero by 2024 through engineering, education, and enforcement (Resolution 91-14). The numerous San Francisco agencies responsible for implementing the action plan adopted similar resolutions. In 2017, the Board of Supervisors amended the Transportation and Urban Design elements of the San Francisco General Plan to implement Vision Zero (Ordinance 175-17).

San Francisco General Plan

The Transportation Element of the general plan is composed of objectives and policies that relate to the eight aspects of the citywide transportation system: general, regional transportation, congestion management, vehicle circulation, transit, pedestrians, bicycles, citywide parking, and goods management. The transportation element references the City's Transit First Policy in its introduction and contains objectives and policies that are pertinent to the proposed project. It includes objectives related to locating development near transit facilities, prioritizing sustainable modes of travel, integrating and connecting land use development and transportation investments, and designing streets for walking, bicycling, and public transit.

Better Streets Plan, Policy and Requirements

In 2006, the San Francisco Board of Supervisors adopted the Better Streets Policy. Since then, the board has amended the policy several times, including in 2010 to reference the Better Streets Plan. The Better Streets Plan creates a unified set of standards, guidelines, and implementation strategies to govern how San Francisco designs, builds, and maintains its pedestrian environment. The planning code requires certain new development projects to make changes to the public right-of- way so that it is consistent with the Better Streets Plan (San Francisco Planning Code Section 138.1). The planning code requires most projects to plant and maintain street trees and some larger projects to submit a streetscape plan, which may require elements such as sidewalk widening, transit boarding islands, and medians.

San Francisco Regulations for Working in San Francisco Streets (Blue Book)

The San Francisco Regulations for Working in San Francisco Streets (the Blue Book) contains regulations that are prepared and regularly updated by the San Francisco Municipal Transportation Agency (SFMTA), under the authority derived from the San Francisco Transportation Code, to serve as a guide for contractors working in San Francisco streets. The manual establishes rules and guidance so that work can be done safely and with the least possible interference with pedestrians, bicyclists, and transit and vehicular traffic. The manual also contains relevant general information, contact information, and procedures related to working in the public right-of-way when it is controlled by agencies other than SFMTA.

In addition to the regulations presented in the manual, all traffic control, warning, and guidance devices must conform to the California Manual on Uniform Traffic Control Devices. Furthermore, contractors are responsible for complying with all applicable city, state, and federal codes, rules, and regulations. The party responsible for setting up traffic controls during construction shall be held accountable and responsible if such controls do not meet the guidance and requirements established by the manual and any applicable state requirements.

Transportation Demand Management Program

The planning code requires certain new development projects to incorporate "design features, incentives, and tools" to reduce VMT (San Francisco Planning Code Section 169). Developers choose measures from a menu of options to develop an overall transportation demand management (TDM) plan. Some options in the menu may overlap with requirements elsewhere in the planning code (e.g., bicycle parking, car-share parking). Each development project's TDM plan requires routine monitoring and reporting to the department to demonstrate compliance.

4.17.2 Existing Setting

Information presented in this section is taken from the transportation memo prepared for the project in February 2021 by Fehr and Peers.

4.17.2.1 Existing Roadway Network

The project proposes construction of an elementary school in the Mission Bay neighborhood of San Francisco at the intersection of Nelson Rising Lane and Owens Street, the site of an existing private surface parking lot. The project site is on the block bounded by Mission Bay Boulevard South to the north, Sixth Street (privately owned by the University of California) to the east, Nelson Rising Lane (privately owned by the University of California) to the south, and Owens Street to the west in the northeast quadrant of San Francisco. The site is surrounded primarily by institutional land uses and parking lots associated with the University of California, San Francisco (UCSF) as well as recreational uses.

Travel to and from the project site by vehicle typically involves the use of regional highway transportation facilities that link San Francisco with other parts of the Bay Area as well as Northern and Southern California. The site is accessible from local streets with connections to and from the regional freeways and highways in the state system.

- *U.S. Highway 101 (US 101)* provides access to both the North Bay and South Bay from the project site. Near the project site, US 101 transitions to surface streets (Mission Street and Van Ness Avenue) and connects San Francisco to the North Bay via the Golden Gate Bridge. From the South Bay, the project site can be accessed by merging onto Interstate 80 and taking Exit 1. From the North Bay, the project site can be accessed from US 101 via Fell Street and 10th Street.
- *Interstate 280 (I-280),* located west of the project site, provides access to the South Bay. It terminates at King Street and Fifth Street, just north of the project site. The project site can be accessed from I-280 by exiting at Mariposa Street. To travel from the project site to the South Bay, drivers would access I-280 from the on-ramp at Mariposa Street.
- *Interstate 80 (I-80)*, located west and north of the project site, provides access to the East Bay. The project site can be accessed from I-80 be exiting at Ninth Street/Civic Center. To travel from the project site to the East Bay, drivers would access I-80 from the on-ramp at Seventh Street and Bryant Street.

Local access to the project site is provided by the urban street grid network. This section describes the key local roadways adjacent to and near the project site. Of the roadways studied, Nelson Rising Lane and Sixth Street south of Mission Bay Boulevard are privately owned by UCSF. Gene Friend Way, Campus Way, and Merrimac Street south of Mission Bay Boulevard are also privately owned by UCSF but not discussed because they do not produce significant traffic volumes.

The project site is in the Mission Bay street grid but adjacent to the South of Market (SoMa) street grid and just two blocks from the Mission/Potrero street grid. For purposes of this transportation impact analysis, the streets within the Mission Bay street grid parallel to Nelson Rising Lane are east–west streets, the streets parallel to Third Street are north–south streets, the streets on the SoMa grid parallel to Seventh Street are north–south streets, the streets parallel to Channel Street are east–west streets, the

streets within the Mission/Potrero street grid parallel to 16th Street are east–west streets, and the streets parallel to De Haro Street are north–south streets.

4.17.2.2 Vehicle Miles Traveled, Analysis Background

Many factors affect travel behavior. These factors include density, the diversity of land uses, the design of the transportation network, access to regional destinations, distance to high-quality transit, the scale of development, demographics, and transportation demand management (TDM). Typically, low-density development at great distances from other land uses, in areas with poor access to non-private vehicular modes of travel, generate more automobile travel than development in urban areas where higher densities, a mix of land uses, and travel options other than private vehicles are available. Given these travel behavior factors, San Francisco has a lower vehicle-miles-traveled (VMT) ratio than the nine-county San Francisco Bay Area region. In addition, some areas of the city have lower VMT ratios than other areas of the city. These areas can be expressed geographically through transportation analysis zones (TAZ), which are used in planning models for transportation analysis and other planning purposes. The zones vary in size from single city blocks in the downtown core to multiple blocks in the outer neighborhoods and even larger in historically industrial areas like Hunters Point Shipyard.

The San Francisco County Transportation Authority (Transportation Authority) uses the San Francisco Chained Activity Model Process (SF-CHAMP) to estimate VMT by private automobiles and taxis for different land use types. The calibration of travel behavior in SF-CHAMP is based on observed behavior and consideration of the California Household Travel Survey, 2010–2012; census data regarding automobile ownership rates and county-to-county worker flows; and observed vehicle counts and transit boardings. SF-CHAMP uses a synthetic population, a set of individual actors that represents the Bay Area's actual population and make simulated travel decisions for a complete day. The Transportation Authority uses tour-based analysis for office and residential uses, which examines the entire chain of trips over the course of a day, not just trips to and from a project. For retail uses, the Transportation Authority uses trip-based analysis, which counts VMT from individual trips to and from a project (as opposed to an entire chain of trips). A trip-based approach, as opposed to a tour-based approach, is necessary for retail projects because a tour is likely to consist of trips that stop at multiple locations; summarizing tour VMT for each location would over-estimate VMT. Table 4.17-7 presents existing VMT per capita for employees in the TAZ where the project site is located, TAZ 653. Existing average daily VMT per capita for employment uses (such as schools) is 13.8 in TAZ 653. This is 28 percent below regional average daily VMT per capita, which is 19.1.

4.17.2.3 Existing Pedestrian and Bicycle Facilities

Pedestrian facilities in the vicinity of the project site include sidewalks, Americans with Disabilities Act–(ADA-) compliant curb ramps, intersection crossing treatments (e.g., crosswalks), traffic control devices, and bioswales, which add greenery to the streetscape and reduce pedestrian hazards by retaining water. These amenities on the perimeter streets, Sixth Street, Owens Street, Nelson Rising Lane, and Mission Bay Boulevard, were recently constructed. As a result, they are in excellent condition and wheelchair accessible. Pedestrians in the area are most likely walking to and from work, using the medical facilities in the vicinity, or using the athletic fields along Mission Bay Boulevard.

There are multiple San Francisco Municipal Railway (Muni) stops within walking distance of the project site.

Bicycle facilities in the project vicinity include bicycle lanes with roadway markings and multi-use trails and paths. Existing facilities in the vicinity of the project site are shown in Figure 4.17-1. Bicycle facilities are grouped into the following four categories:

- Class I facilities provide a completely separated right-of-way for exclusive use by people walking and bicycling, with cross-flow traffic minimized. Class I facilities consist of off-street bicycle paths that are generally shared with people walking. Class I facilities may be adjacent to an existing roadway or may be entirely independent of existing vehicular facilities. Class II facilities provide a striped lane for one-way travel on a street or highway.
- Class II facilities consist of striped bicycle lanes on roadways. These facilities reserve a minimum of 4 to 5 feet of space for bicycle traffic. Class II facilities provide for shared use with motor vehicle traffic.
- Class III facilities consist of designated and signed bicycle routes where bicyclists share the roadway with vehicles. They may or may not be marked with "sharrows" and are usually signed.
- Class IV facilities provide a separated bikeway for exclusive use by bicyclists. The separation between the bikeway and through vehicular traffic may be in the form of a grade separation, flexible posts, inflexible physical barriers, or on-street parking.

4.17.2.4 Existing Emergency Access

Emergency transport vehicles in the project area typically use major streets when heading to and from an emergency and/or emergency facility. Arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicles. Non-emergency vehicles are required to yield to emergency vehicles, as stated by the California Vehicle Code. Emergency vehicles would be able to access the project site from the driveways on Sixth Street and Nelson Rising Lane.

The San Francisco Fire Department stations closest to the project site are:

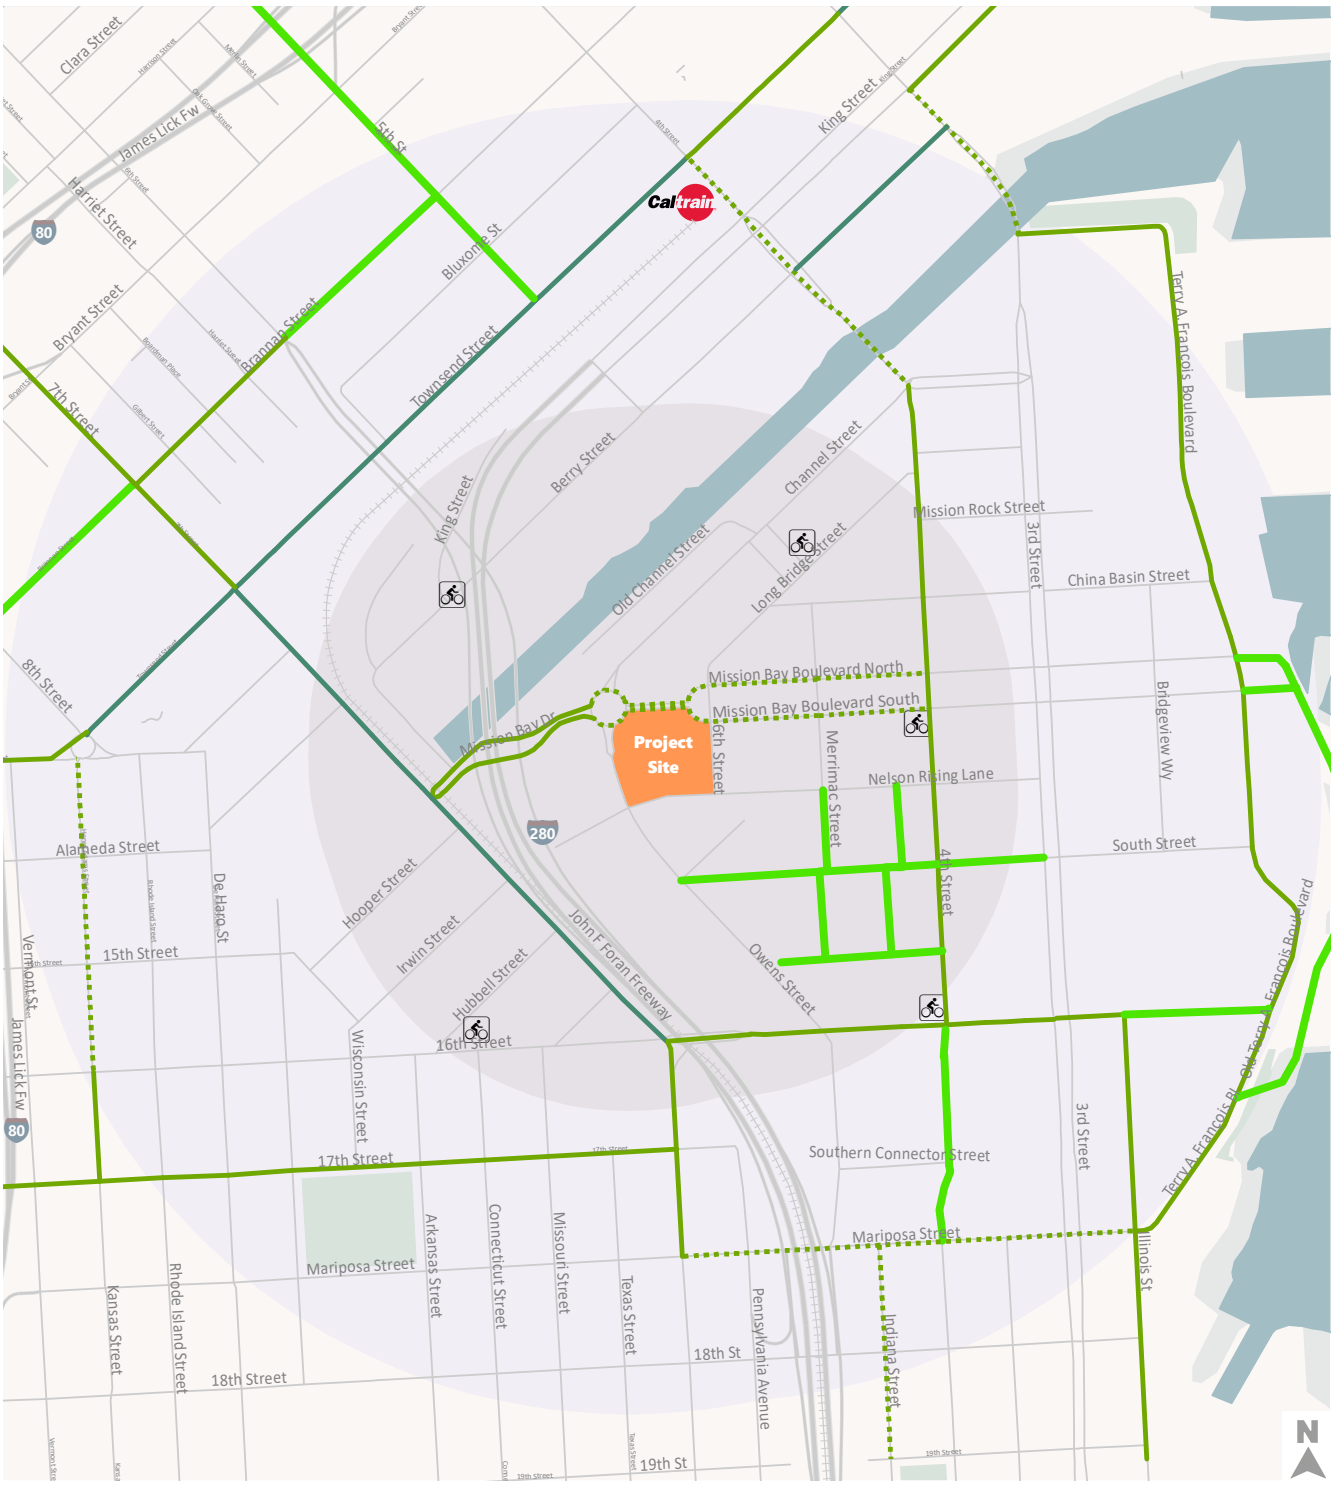
- Fire Station No. 4 (Third Street at Mission Rock Street)—approximately 0.5 mile away
- Fire Station No. 29 (16th Street at Vermont Street)—approximately 1 mile away
- Fire Station No. 8 (Fourth Street at Bluxome Street)—approximately 1.1 miles away

The San Francisco Police Department stations closest to the project site are:

- Southern Station (Third Street at Mission Rock Street)—approximately 0.5 mile away
- Tenderloin Station (Eddy Street at Jones Street)—approximately 2 miles away
- Mission Station (Valencia Street at 17th Street)—approximately 2 miles away

The closest emergency medical services to the project site are:

- UCSF Children's Emergency Department (Third Street at Mariposa Street)—approximately 0.6 mile away
- Zuckerberg San Francisco General (Potrero Street at 23rd Street)—approximately 1.9 miles away
- California Pacific Medical Center, Pediatric Emergency, Van Ness Campus (Franklin Street at Post Street)—approximately 2.6 miles away



ICF Graphics ... 00385.19 (3-3-2021) JC

Mission Bay School Project

Figure 4.17-1
Existing Bicycle and Pedestrian Facilities

4.17.2.5 Existing Transit Services

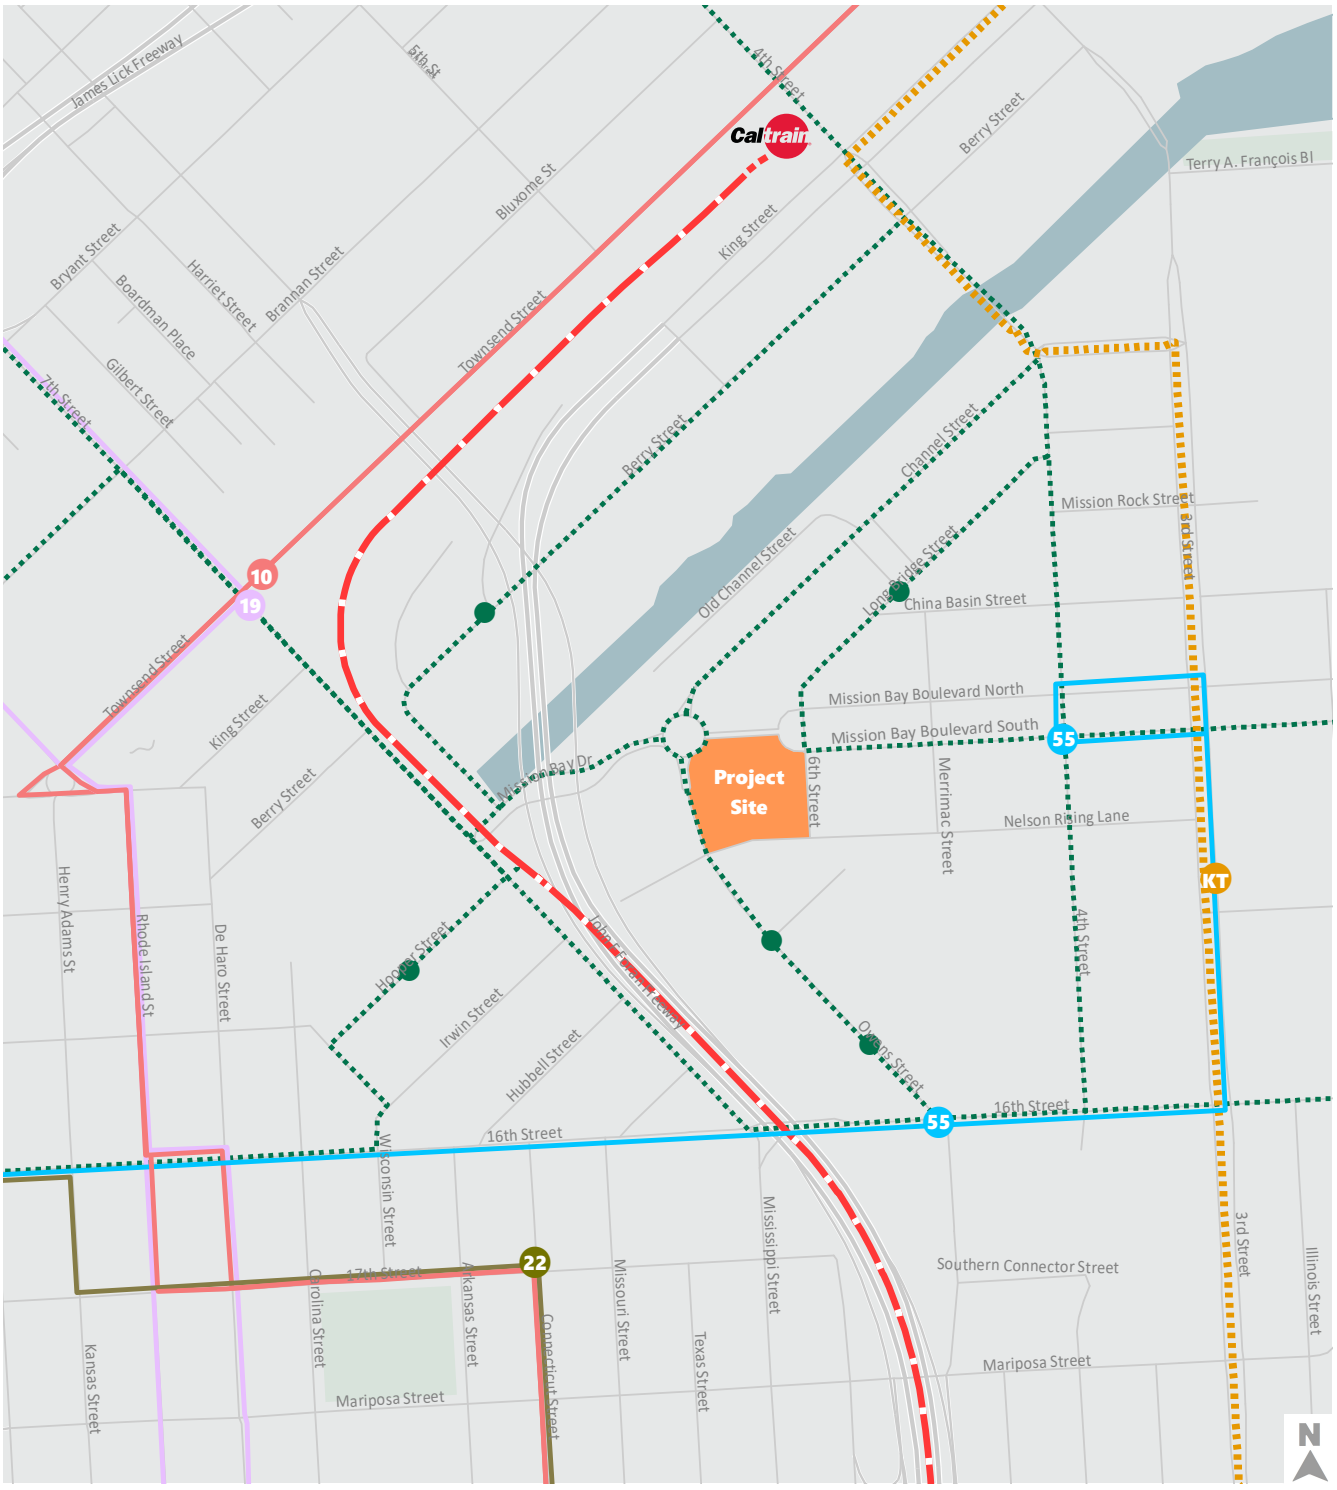
Existing public transit services in the vicinity of the project site are provided by Muni (bus service) and Mission Bay TMA (shuttle). Muni operates buses, cable cars, and light rail lines within San Francisco. The closest Muni stops to the project site are at Mission Bay Boulevard South and Fourth Street (0.2 mile from the project site) and 16th Street and Owens Street (0.3 mile from the project site) for the 55-16th Street route as well as Third Street between Nelson Rising Lane and Warriors Way for the UCSF/ Mission Bay T-Third Street light rail stop (0.4 mile from the project site). Stops for the 10-Townsend and 19-Polk routes are at Townsend Street and Seventh Street (0.4 mile from the project site). Stops for the 22-Fillmore route at 17th Street and Connecticut Street (0.6 mile from the project site). The Mission Bay Transportation Management Association (TMA) shuttle has several stops near the project site; these include Owens Street and Gene Friend Way (0.1 mile from the project site) as well as Long Bridge Street and El Dorado Street (0.2 mile from the project site). The Caltrain station is at Fourth Street and King Street (0.5 mile from the project site). Table 4.17-1 lists the Muni routes that operate near the project site, and Figure 4.17-2 shows the transit network near the project site.

TABLE 4.17-1. LOCAL MUNI OPERATIONS

Route	AM Peak Headway	PM Peak Headway	Hours of Operation	Neighborhoods Served
10-Townsend	15	15	5:55 a.m.–11:45 p.m.	Bayview, Bernal Heights, Chinatown, Financial District, Marina, Mission, Nob Hill, North Beach, Pacific Heights, Potrero Hill, Russian Hill, South of Market
19-Polk	15	15	5:20 a.m.–12:45 a.m. (+1)	Bayview, Bernal Heights, Downtown/Civic Center, Marina, Mission, Nob Hill North Beach, Pacific Heights, Potrero Hill, Russian Hill, South of Market, Western Addition
55-16th Street	15	15	6:00 a.m.–12:00 a.m.	Mission, Potrero Hill, South of Market
T-Third Street Light Rail (KT Bus early a.m.)	8	9	All day	Bayview, Castro/Upper Market, Chinatown, Downtown/Civic Center, Financial District, Lakeshore, Mission, Noe Valley, Ocean View, Outer Mission, Parkside, Potrero Hill, South of Market, Twin Peaks, Visitacion Valley, West of Twin Peaks, Western Addition
22-Fillmore	10	8	All day	Castro/Upper Market, Marina, Mission, Pacific Heights, Potrero Hill, South of Market, Western Addition

The North Bay, East Bay, Peninsula, and South Bay are accessible from Muni public transit connections to Bay Area Rapid Transit (BART) for the East Bay and San Mateo County, Golden Gate Transit (GGT) for the North Bay, Caltrain for the Peninsula and South Bay, Alameda-Contra Costa Transit District (AC Transit) for the East Bay, and San Mateo County Transit District (SamTrans) for San Mateo County.

BART provides regional rail service between the East Bay, from Antioch, Richmond, Dublin/Pleasanton, and Warm Springs; San Mateo County, from San Francisco International Airport and Millbrae; and San Francisco. The BART stations most accessible to the project site is the Civic Center Station, located 1.4 miles to the northwest on Market Street at Seventh Street, or the 16th Street Station, located 1.6 miles to the west on Mission and 16th streets in the Mission neighborhood.



ICF Graphics ... 00385.19 (3-3-2021) JC

Mission Bay School Project

Figure 4.17-2
Existing Transit Network

The Golden Gate Bridge, Highway, and Transportation District provides bus and ferry service between Marin and Sonoma Counties and San Francisco. GGT operates 23 commuter bus routes and five regional bus routes, 24 of which serve stops in San Francisco. No GGT buses route directly to the project site, but the closest stop servicing the project site is at the intersection of Seventh Street and Folsom Street approximately one mile northwest of the project site, serviced by four commuter routes. Four of GGT's regional routes can be accessed from Civic Center Station. GGT's ferry service connects Larkspur and Sausalito with the Ferry Building, which is approximately 2.3 miles northeast of the project site and accessible via bus connections to Muni lines running along Market Street.

Caltrain provides passenger rail service on the Peninsula between San Francisco and downtown San José, with stops in San Mateo County and Santa Clara County. The Fourth/King Caltrain Station is located approximately 0.6 miles north of the project site and is accessible by foot, bike, or the Mission Bay Shuttle. Caltrain also provides service to the 22nd Street Caltrain Station, located between Indiana Street and Pennsylvania Avenue. This station is approximately one mile south of the project site.

AC Transit operates bus service in western Alameda and Contra Costa Counties as well as routes to the city of San Francisco and San Mateo County. AC Transit routes to San Francisco are generally available only during commute hours and stop at the Salesforce Transit Center, which is approximately two miles north of the project site.

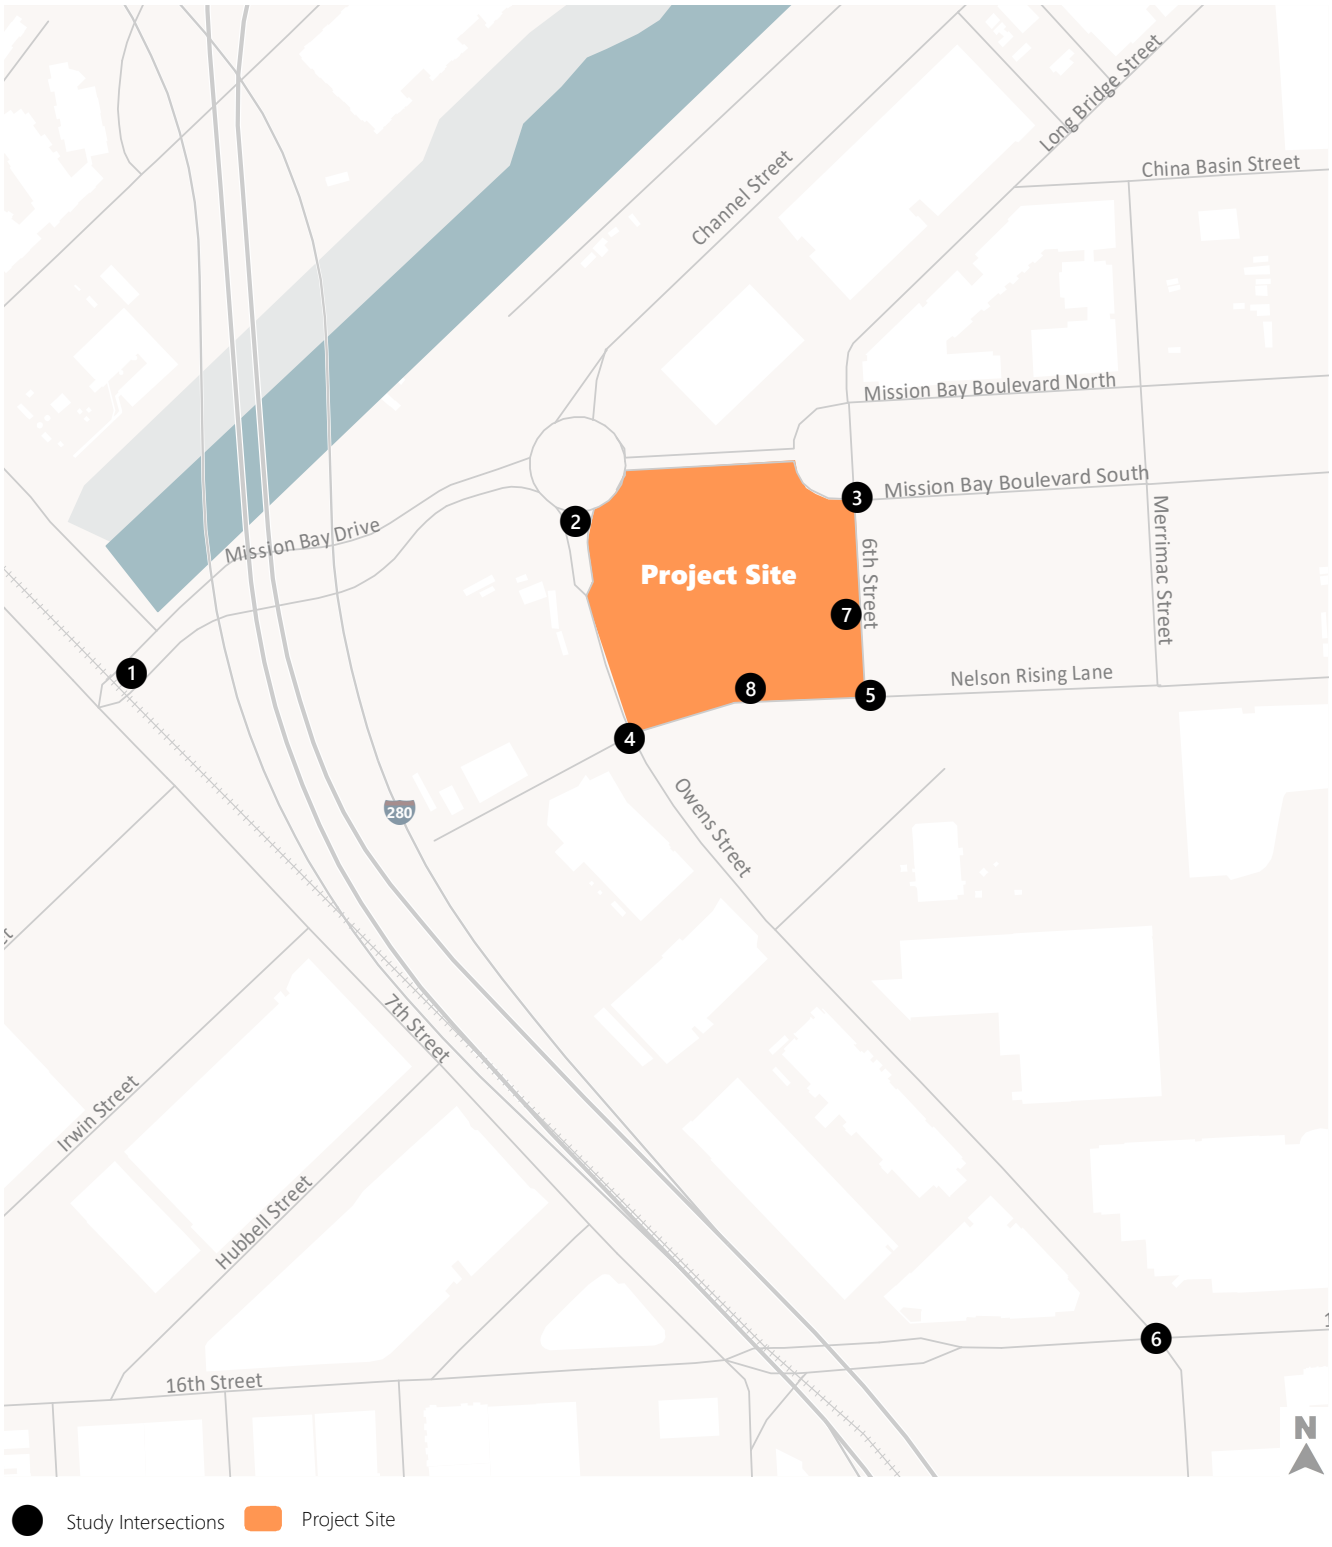
SamTrans operates bus and rail service in San Mateo County, with select routes providing service outside the county. In general, SamTrans service to downtown San Francisco operates along Mission Street to the Salesforce Transit Center at First Street and Mission Street, approximately 1.2 miles north of the project site. The closest stop to the project site is at Mission Street and Seventh Street.

4.17.2.6 Existing Traffic Conditions

The transportation memo presents existing traffic conditions near the project site. The information contained in the memo is derived from traffic count surveys for vehicles, including heavy vehicles, and bicycles at selected intersections in the vicinity of the project site. The study intersections, chosen in consultation with the San Francisco Unified School District and City and County of San Francisco (City) staff members, represent the locations that are most likely to be affected by the project. They include the following:

1. Mission Bay Drive and Seventh Street
2. Mission Bay Drive and Owens Street
3. Mission Bay Boulevard South and Sixth Street
4. Nelson Rising Lane and Owens Street
5. Nelson Rising Lane and Sixth Street
6. 16th Street and Owens Street

The traffic analysis considered traffic conditions at access points to the project site, including the Sixth Street driveway and the Nelson Rising Lane driveway. Figure 4.17-3 shows the intersections and access points studied in the transportation memo. Intersection turning movement counts were collected on Thursday, February 27, 2020, during the morning peak period (7:00 a.m. to 9:00 a.m.), midday period (2:00 p.m. to 4:00 p.m.), and the evening peak period (4:00 p.m. to 6:00 p.m.) at study intersections.



ICF Graphics ... 00385.19 (3-3-2021) JC

Mission Bay School Project

Figure 4.17-3
Study Intersections included in the Transportation Memo

Additional counts during the same time periods were collected for the two driveways at the project site, located on Nelson Rising Lane and Sixth Street. Additional details regarding the results of the traffic count surveys, including intersection turning movement counts, with counts of vehicles, pedestrians, bicycles, and heavy vehicles, are included in the transportation memo. Existing plus-project average daily traffic data for the study intersections are presented below in Table 4.17-2.

TABLE 4.17-2. AVERAGE DAILY TRAFFIC BY ROADWAY SEGMENT

Roadway Segment	Existing	Existing Plus Project	2024 Plus Project	2040 Plus Project
Nelson Rising Lane between Sixth St & Merrimac St	2,600	2,920	3,120	3,520
Merrimac St between Mission Bay Blvd & Nelson Rising Ln	1,100	1,180	1,280	1,680
Mission Bay Blvd South between Sixth St & Merrimac St	1,600	1,920	2,020	2,220
Sixth St between Mission Bay Blvd South & Nelson Rising Ln	1,100	1,650	1,750	1,850
Nelson Rising Ln between Sixth St & Owens St	4,400	5,030	5,230	5,730
Owens St between Mission Bay Blvd South & Nelson Rising Ln	5,900	6,920	7,120	8,220
Mission Bay Blvd between Sixth St & Owens St	3,900	4,690	5,190	6,390
Mission Bay Dr between Owens St & Berry St	9,900	10,840	11,440	13,140

4.17.3 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
2. Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐
3. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible land uses (e.g., farm equipment)?	☐	☐	☒	☐
4. Result in inadequate emergency access?	☐	☐	☒	☐

4.17.3.1 Impact Criteria

The environmental effects of a project are determined with use of the environmental checklist form in California Environmental Quality Act (CEQA) Guidelines Appendix G. The Appendix G checklist for transportation is presented above. Significance criteria were used in the transportation memo to facilitate preparation of the transportation analysis and address Appendix G checklist requirements. The criteria are separated into construction and operation discussions.

Construction

Construction of a project would have a significant effect on the environment if it would require an extended construction schedule or intense activity, the effects of which could create potentially hazardous conditions for people walking, bicycling, or driving or for public transit operations; interfere with emergency access or accessibility for people walking or bicycling; or substantially delay public transit.

Operations

The operational impact analysis addresses issues related to the significance criteria below.

A project would have a significant effect if it would:

- Create potentially hazardous conditions for people walking, bicycling, or driving or for public transit operations;
- Interfere with accessibility of people walking or bicycling to and from the project site, or adjoining areas, or result in inadequate emergency access;
- Substantially delay public transit;
- Cause substantial additional VMT or substantially induce additional automobile travel by increasing physical roadway capacity in congested areas (i.e., by adding new mixed-flow travel lanes) or by adding new roadways to the network;[1]
- Result in a loading deficit, the secondary effects of which could create potentially hazardous conditions for people walking, bicycling, or driving or substantially delay public transit; or
- Result in a substantial vehicular parking deficit, the secondary effects of which could create potentially hazardous conditions for people walking, bicycling, or driving; interfere with accessibility for people walking or bicycling; result in inadequate access for emergency vehicles; or substantially delay public transit.

The following significance criterion was not included in the transportation memo:

- Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.

Traffic congestion is not considered a significant impact on the environment under CEQA. In addition, the proposed project generally would not conflict with the SFCTA's Congestion Management Program.

[1] For the purposes of this analysis, the proposed project would result in a significant VMT impact if it would generate vehicle travel exceeding 15 percent below existing VMT per capita for the region.

4.17.3.2 Construction

Construction of the project is estimated to take 21 months, beginning mid-2023 and ending in 2025. Construction would take place Monday through Friday from 7:00 a.m. to 6:00 p.m. and on Saturdays and Sundays per schedule. The City's allowable construction hours are 7:00 a.m. to 8:00 p.m., 7 days a week, including holidays, per the San Francisco Department of Building Inspection.

During construction, approximately 20 construction-related trips would occur daily during demolition. This analysis assumes that surcharging of soils would occur during project construction, requiring the import of additional material to the project site and therefore increasing the number of construction-related trips to the site. The project would import approximately 16,000 cubic yards of surcharge soil to advance the settlement and stabilization of underlying soils. The surcharge soil would remain in place for up to 2 years, after which approximately 11,450 cubic yards of soil would be exported from the project site. The maximum number of daily trips for the remaining phases of construction are presented below in Table 4.17-3.

TABLE 4.17-3. CONSTRUCTION TRIPS

Construction Phase	Maximum Daily Trips
Demolition	20
Grading	24
Utilities	8
Piers/Foundations	20
Remediation	10
Structural Steel	12
Concrete	12
Building Construction	15
Landscaping/Paving/Miscellaneous Site Work	15

A hauling distance of 20 miles was assumed, based on default values from the air quality modeling analysis. The final truck haul route would be subject to review and approval by San Francisco Public Works. The number of construction workers on-site would typically average 15 per day. The peak number of construction workers on-site on any given day is expected to be 30 during exterior and interior construction. It is assumed that each worker would make one trip to the construction site per day and one trip from the construction site per day and park in the staging area.

Construction of the project would include work within the public right-of-way to accommodate curb cuts to enter the site on Owens Street. Work within private streets during construction, including Nelson Rising Lane and Sixth Street, would require coordination with UCSF. UCSF would oversee construction of the pedestrian right of way on Nelson Rising Lane and Sixth Street. Work on site would require only limited street closures during construction, primarily for work on sidewalks, curbs, and gutters and any work in roadways. The construction plan would include a pedestrian detour plan for sidewalk users during any closures.

Construction of the project would not have a significant impact related to loading, walking/accessibility, bicycling, parking, traffic hazards, or VMT. **(Less than Significant)**

Bicycle and Pedestrian Facilities

Construction materials and equipment would be staged entirely on-site, in areas where construction is not occurring. The proposed project could require limited closures along sidewalks, public rights-of-way, and private rights-of-way adjacent to the project site. Roadway traffic controls would be used as needed during construction. If sidewalks are required for construction staging, covered pedestrian walkways would be constructed in the curb lanes. The only existing bicycle facilities directly adjacent to the project site are on Mission Bay Boulevard South. Construction would occur on-site and would not affect any existing bicycle facilities. **(Less than Significant)**

4.17.3.3 Operations

Hazardous Conditions

The project would not include any design features that would constitute major hazards for bicyclists, pedestrians, transit users, or drivers. Passenger loading would occur primarily within the on-site drop-off and pickup parking lot and outside the travel lane. During the AM, midday, and PM peak periods, minimal queuing, lasting approximately 15 minutes, is expected along Owens Street, Sixth Street, and Nelson Rising Lane to accommodate student drop-off and pickup trips during the start and end to the regular school day. Given the limited time frame for drop-off and pickup trips, as well as coordination provided by the school staff, passenger loading would not constitute a major hazard.

The project is expected to generate up to 10 weekly freight loading trips to deliver food or pick up trash, resulting in a demand for up to one peak-hour freight loading space. One on-street freight loading space is provided on Nelson Rising Lane to accommodate this demand. Therefore, freight loading would not constitute a major hazard. The project would not create hazardous conditions for bicyclists, pedestrians, transit users, or drivers. **(Less than Significant)**

Pedestrian, Bicycle, and Emergency Access

Pedestrian Access

Pedestrian access to the project site would be provided by existing sidewalks around the perimeter of the site. The proposed project would provide new sidewalks near the proposed driveways. The proposed project may include new sidewalks along Sixth Street, near the proposed bioretention areas and drop-off/pickup area. All changes to sidewalks and pedestrian walkways resulting from the project would be constructed to meet the City Better Streets Plan requirements. With the project, all streets adjacent to the project site would have adequate ADA-compliant facilities, such as sidewalks and curb ramps that would connect to adjacent passenger loading zones, nearby transit, and major destinations. The project site would not include any physical obstructions or slopes that would obstruct sightlines for a substantial number of people walking, driving, or biking. Where the project would modify sidewalks or curbs as part of construction, it would incorporate best practices related to pedestrian safety, such as bulb-outs and/or high-visibility crosswalks, sidewalk widening, directional curb ramps, pedestrian hybrid beacons, rectangular rapid flashing beacons, and raised crossings to improve accessibility and pedestrian conditions. The project would not add a substantial volume of pedestrian traffic along routes with inadequate crosswalks or sidewalk widths. The project would not remove facilities that are designed to protect pedestrians. As stated in Section 4.17.1, Regulatory Setting, the project is not required to comply with all local zoning and building ordinances. However, all elements of the project will be built based on

similar design and construction best practices for street design to those contained in the Better Streets Plan to ensure safe and effective travel for all road users, including pedestrians. **(Less than Significant)**

Bicycle Access

Bicycle access to the project site would be provided from areas south of the drop-off/pickup lot, along Mission Bay Boulevard South near the roundabout, and along Sixth Street. The proposed project would include 16 Class I bicycle spaces, which would be provided for the staff in an enclosed area with a lockable fence, and 38 Class II bicycle spaces, which would be provided on-site for students. In addition, 26 Class II bicycle spaces would be provided for visitors. Bicycle routes on roadways closest to the project site are located on Mission Bay Boulevard/Drive, Fourth Street, and 16th Street. The project would not add a substantial volume of vehicle traffic to these streets. The project would not install any driveways along an existing bicycle facility. The project would provide bicycle access to the site via a multi-use path that would run parallel to the parking lot entrance on Owens Street and bypass the exit, thereby helping to reduce bicycle and vehicle interactions. The project would not include any design features that would constitute major hazards for bicyclists. As stated in Section 4.17.1, Regulatory Setting, the project is not required to comply with all local zoning and building ordinances. However, all elements of the project will be built based on similar design and construction best practices for street design to those contained in the Better Streets Plan to ensure safe and effective travel for all road users, including bicyclists. **(Less than Significant)**

Emergency Access

Emergency transport vehicles in the area typically use major streets when heading to and from an emergency and/or emergency facility. Arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicles. Non-emergency vehicles are required to yield to emergency vehicles, as stated by the California Vehicle Code. Emergency vehicles would be able to access the project site from the driveways on Sixth Street and Nelson Rising Lane. The roadway surrounding the project site would not conflict with adopted codes for street widths and turning movements. The project would not include any design features that would affect emergency vehicle access. Emergency vehicles would have adequate access to the project site from the lot on Owens Street, the building entrances on Owens Street and Sixth Street, and the perimeter of the project site (i.e., from Owens Street, Nelson Rising Lane, Sixth Street, and Mission Bay Boulevard). Passenger loading at the project site during the morning and midday peak periods would not be expected to create queues that would hinder emergency vehicle access. **(Less than Significant)**

Transit Delay

The project site would remain accessible from multiple Muni stops and routes (see Table 4.17-1, above). No transit amenities or services would be relocated as a result of the project. The project's effect on regional transit would be negligible with respect to ridership and operations, considering the transit mode share for the staff and student population. The project would be expected to generate fewer than 400 vehicle trips during the peak hour. This would not constitute a substantial number of vehicle trips with the potential to cross a transit line or transit facilities and would not be expected to create transit delays. **(Less than Significant)**

VMT and Induced Travel Demand

Analysis of the Project's induced travel demand is based on the estimated school operations schedule provided by SFUSD. The schedule is specific to different groups, including elementary school students, high school students, faculty/staff, and teacher trainees. Elementary students would be expected to attend regular school from 7:50 am until 1:50 pm. After school care would be offered to elementary students between 2:00 pm and 6:00 pm. The high school students would be divided into two groups, one arriving at approximately 9:00 am and departing at approximately 12:00 pm, and another arriving at approximately 1:00 pm and departing at approximately 5:00 pm. Faculty and staff would be expected to arrive between 7:00 am and 8:00 am, with the majority departing by 3:00 pm. Teacher trainees using the professional development space would be expected to arrive around 8:00 am and depart around 5:00 pm.

To account for uncertainty in departure and arrival times, the analysis of trips during peak hours includes trips within a two-hour window to present a more conservative analysis. Table 4.17-4 shows the estimated person trips for each group within the AM, midday, and PM peak hours. In total, it is estimated that there would be 765 AM peak-hour person trips, 495 midday peak-hour person trips, and 270 PM peak-hour person trips.

TABLE 4.17-4. PERSON TRIPS BY TIME PERIOD AND GROUP

Time Period	Group	Size	Rate	Person Trips[1]		
				Inbound	Outbound	Total
AM Peak Hour 7:30 am-8:30 am	Elementary Students	500	1.00	500	0	500
	High School Students	270	0.50	135	0	135
	Faculty/Staff	70	1.00	70	0	70
	Teacher Trainees	60	1.00	60	0	60
	Total	-	-	765	0	765
Midday Peak Hour 1:00 pm-2:00 pm	Elementary Students[2]	500	0.72	0	360	360
	High School Students[3]	270	0.50	135	0	135

	Teacher Trainees	60	0	0	0	0
	Total	-	-	135	360	495
PM Peak Hour 5:00 pm-6:00 pm	Elementary Students[4]	500	0.14	0	70	70
	High School Students	270	0.50	0	135	135
	Faculty/Staff[5]	70	0.07	0	5	5
	Teacher Trainees	60	1.00	0	60	60
	Total	-	-	***0***	***270***	***270***

Notes:
1. Does not include guardian trips escorting students.
2. Based on travel survey data from Sacred Heart Elementary Circulation Study (Fehr & Peers, 2018) showing that 72% of students depart during the mid-afternoon peak hour, representing a conservative analysis.
3. Based on information provided by SFUSD, morning shift LLH students depart between 12pm and 1pm, outside the midday peak period.
4. Based on travel survey data from Sacred Heart Elementary Circulation Study, 2018 showing that 14% of students depart during the PM peak hour after attending after school care.
5. Based on information provided by SFUSD, most faculty/staff depart outside the midday peak hour between 2pm and 3pm.
Source: SFUSD; Fehr & Peers, 2021

In addition to person trips, the traffic analysis included estimations of how person trips would be distributed between travel modes, or the mode split. SF TIA Guidelines for employment was used to determine the mode split for faculty, staff, and teacher trainees. The mode split for students is based on the 2010-2019 SFUSD Student Commute Study. Survey responses for 5th and 9th graders from the 2019-2020 school year were used to represent elementary and high school commute modes, respectively. Table 4.17-5 applies the estimated mode split to the project's person trips and provides the vehicle trips per person trip rate.

TABLE 4.17-5. PERSON TRIPS BY MODE

	Person Trips by Mode[1]							
	Auto	**Carpool**	**TNC/ Taxi**	**Transit**	**School Bus/ Shuttle**	**Walk**	**Bike**	**Total**

Vehicle Trips per Person Trip[3]	2.0	0.8	2.0	-	-	-	-	-

Notes:
1. Person trips only include staff and students users of the Project, not those of guardians or Taxi/TNC drivers.
2. Does not equal 1,800 due to rounding.
3. Vehicle trips per person trip reflects the average occupancy of carpools (2.5) and assumes that each student trip and taxi/TNC trip involves a vehicle arrival as well as a vehicle departure due to the additional trip taken by guardians/drivers.
Source: SF TIA Guidelines, 2019; SFUSD Student Commute Data Study, 2020; Fehr & Peers, 2021

Table 4.17-6 provides inbound, outbound and total vehicle trips for the project, including auto, carpool, and taxi/TNC trips to and from the Project. It is estimated that the project would generate a daily total of 1,562 vehicle trips, 747 during the AM peak hour, 7:30 am-8:30 am, 481 during the Midday peak hour, 1:00 pm-2:00 pm, and 167 during the PM peak hour, 5:00 pm-6:00 pm.

TABLE 4.17-6. VEHICLE TRIPS

	Unique Vehicle Trips[2]	**Vehicle trips[1]**		
		Inbound	**Outbound**	**Total**
Daily	830	852	710	1,562
AM Peak Hour	398	747	0	747
Midday Peak Hour	240	105	376	481
PM Peak Hour	96	0	167	167

Notes:
1. Vehicle Trips when using the vehicle trips per person trip rate in Table 4.17-4. Vehicle trips include Auto, Taxi/TNC, and Carpool Trips. All Taxi/TNC trips were multiplied by 2 to account for a vehicle arrival as well as a vehicle departure. All student carpool vehicle trips were also divided by 2.5 to account for child occupancy per vehicle based on the Sacred Heart Circulation Survey, 2018.
2. Unique Vehicle trips do not include guardian or driver trips without Project persons.
Source: SF TIA Guidelines, 2019; SFUSD Student Commute Data Study, 2020; Fehr & Peers, 2021

The induced travel demand information presented in Table 4.17-5 and 4.17-6 was used to calculate the project's impacts on VMT. The project site is in an area with low VMT. Existing regional VMT per capita per day for employment purposes is 19.1. Average VMT per capita per day for the project TAZ is 13.8, which is 28 percent below the existing regional average of 19.1. Daily project VMT is expected to total 4,288. This was calculated by multiplying the total number of vehicle trips by the staff/faculty as well as teacher trainees by the VMT number per employee for the project TAZ in San Francisco and adding it to the total number of student vehicle trips multiplied by 1.5 miles, which is a conservative estimate of the average distance each student would travel from within the school boundary to the school. Table 4.17-7 shows the project's VMT projections.

TABLE 4.17-7. PROJECT VMT

	Existing		
Land Use Type	**Bay Area Regional Average**	**Bay Area Regional Average minus 15%**	**TAZ 653**
Employment (School)[1]	19.1	16.2	13.8

[1.] VMT data for schools based on VMT per capita data for employees in the analysis area.
Source: San Francisco Planning Department, 2018; Fehr & Peers, 2021.

The project would not increase the physical capacity of any roadway and would not add any new roadways to the network. Therefore, the project would not induce additional automobile travel due to increased roadway capacity. A TDM plan is required for the project, which would contribute to minimizing project VMT. The project would increase the total VMT in the area. However, the VMT impact significance criterion is based on VMT per capita; more specifically, if project generated per capita VMT would be at least 15 percent below the regional average, the VMT impact would be less than significant. As noted above, the project site is located in a low-VMT generating area compared to the Bay Area regional average, and VMT per capita for employees for the project would be more than 15 percent below the regional average. Therefore, VMT and induced vehicle travel resulting from the project would not constitute a substantial increase in roadway travel. **(Less than Significant)**

Loading Impacts

The project is expected to generate up to 10 weekly freight loading trips to deliver food or pick up trash, resulting in a demand for up to one peak hour freight loading space. One on-street freight loading space is provided on Nelson Rising Lane. Other school deliveries, for items such as office supplies, are expected to occur within the drop-off and pickup lot on-site and outside the morning and evening peak hours.

Typically, passenger loading would take place within the drop-off and pickup lot on-site, in the curb lane along Sixth Street, or in the two ADA-compliant passenger loading zones that would be added as part of the project. During each peak period, a 15-minute window of high-frequency loading is expected. For such instances, loading would be coordinated by teachers, who would use the curb lanes adjacent to the project site. These loading periods do not correlate with loading at adjacent uses. During the morning peak period, elementary and high school students would be dropped off; during the midday peak period, elementary students would be picked up and high school students would be dropped off. During the evening peak period, both elementary students requiring after-hours care and high school students would be picked up.

Due to the limited time frame for pickups and drop-offs, coordination of school staff during pickups and drop-offs, and the location of most loading in the curb lanes, impacts from loading would be less than significant. **(Less than Significant)**

4.17.4 Cumulative Impacts

Cumulative projects expected to be complete after the project is complete include a project proposing a lab and office space; a fulfillment center including a logistic facility, accessory office space, interior loading space, staging and off-street parking for vehicles, and a roof-top fleet staging space; and the San Francisco to San Jose project section of the California High Speed Rail project. The cumulative analysis from the California High-Speed Rail Draft Environmental Impact Report (HSR EIR) is referenced to assess the proposed project's contribution to cumulative impacts anticipated in the area surrounding the project.

Citywide growth is expected to contribute to increased traffic volumes on streets surrounding the project site under cumulative conditions. Changes to traffic volumes would not create new hazards by themselves. Therefore, walking conditions would not substantially change surrounding the project site. The HSR EIR identified continuous permanent impacts on bus services in San Francisco, which are significant and unavoidable for the 22 Fillmore route due to the increased gate downtime at the 16th Street at-grade crossing. The HSR EIR also identified significant impacts under interim 2029 conditions to the emergency access and transit routes outside of the transportation study area, due to additional congestion around the 4th & King station. Additionally, with the completion of the Downtown Extension Project under 2040 conditions, the High-Speed Rail project's impact to public transit delay to these routes would be less than significant under 2040 conditions. The proposed project is not expected to contribute considerably to the cumulative impacts identified in the HSR EIR.

The estimated average daily VMT per capita for schools in 2040 under cumulative conditions is 9.2 for the project's TAZ. This is 46 percent below the 2040 cumulative regional average daily VMT per capita of 17. Therefore, the proposed project would not cause substantial additional VMT per capita and cumulative impacts to VMT would be less than significant. **(Less than Significant)**

4.17.5 Conclusion

The project would have a less-than-significant impact on transportation. **(Less-than-Significant Impact)**

4.18 TRIBAL CULTURAL RESOURCES

4.18.1 Setting

A description of the precontact context and ethnographic context is provided in Section 4.5, *Cultural Resources*, of this initial study because the study areas are the same for these two topics.

4.18.2.1 Applicable Plans, Policies, and Regulations

A description of the applicable plans, policies, and regulations, including the California Public Resources Code and Assembly Bill 52, is provided in Section 4.5, *Cultural Resources*, of this initial study.

Assembly Bill 168

AB 168, adopted in September 2020, provides additional protection for tribal cultural resources (TCRs) as defined in AB 52. This bill applies in situations where a developer seeks to streamline approval under Senate Bill (SB) 35 and, in doing so, bypass CEQA requirements. AB 168 rectifies a loophole in SB 35 that allowed developers to apply for fast-tracked approval without notifying Native American tribes affiliated with the project area. Instead, under AB 168, projects would be ineligible for SB 35 and subject to CEQA if (a) the site of the proposed development is a TCR that is on a national, state, tribal, or local historic register list, (b) the local government and the California Native American tribe do not agree that no potential TCR would be affected by the proposed development, or (c) the local government and California Native American tribe find that a potential TCR could be affected by the proposed development, and the parties do not document an enforceable agreement regarding the methods, measures, and conditions for treatment of those TCRs, as provided.

4.18.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:				
a. Listed in, or eligible for listing in, the CRHR or a local register of historical resources, as defined in PRC Section 5020.1(k), or	☐	☒	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency will consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Approach to Analysis

Northwest Information Center Records Search

A review of previously recorded cultural resources and studies on file at the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) was completed on February 21, 2020. The record search consulted NWIC files of cultural resource studies and sites within 0.5 mile of the project site. This review did not identify any archaeological sites or cultural resources studies that cover areas within or adjacent to the project site. Three historical archaeological sites dating to the 1850s and 1860s were identified within 0.5 mile of the project site. The sites were largely related to the rise of industry in the area, including a glass works, butchering plant, and sugar refinery. Although there is no immediate evidence suggesting the presence of buried archaeological resources, the possibility exists for encountering buried archaeological resources at the project site.

Native American Correspondence

Native American tribes often have specialized knowledge of places within a project area that may be important to their communities. This knowledge can be helpful in making recommendations in order to avoid impacts on Native American resources during the project. On December 4, 2020, ICF contacted the Native American Heritage Commission (NAHC) requesting a review of the Sacred Lands File (SLF) and a list of individuals who may have information or interest regarding the project. The request contained location details, project maps, and a general description of project elements. This request is considered formal notification of a proposed project as required under CEQA, specifically PRC Section 21080.3.1 and AB 52.

On December 13, 2020, the NAHC indicated that the search of its Sacred Lands File did not identify any sacred lands on the project site. The response from NAHC included the following list of individuals and tribal representatives who might have an interest in the project:

- Irenne Zwierlein, Amah Mutsun – Tribal Bank of Mission San Juan Bautista
- Irenne Zwierlein, Amah Mutsun – Tribal Bank of Mission San Juan Bautista
- Tony Cerda – Costanoan Rumsen Carmel Tribe
- Ann Marie Sayers – Indian Canyon Mutsun Band of Costanoan
- Kanyon Sayers-Roods – Indian Canyon Mutsun Band of Costanoan
- Charlene Nijmeh – Muwekma Ohlone Indian Tribe of the SF Bay Area
- Monica Arellano – Muwekma Ohlone Indian Tribe of the SF Bay Area
- Andrew Galvan – Ohlone Indian Tribe

On December 18, 2020, the San Francisco Unified School District (District) emailed letters to the representative of the tribes identified in the tribal consultation list provided by NAHC, requesting consultation or information regarding tribal resources on the project site. Included in the letters was a brief description of the project, the results of a literature record search, project location maps, and a request for comments, concerns, or knowledge regarding sacred lands or heritage sites in the project area. To date, no responses have been received from the Native American tribes.

4.18.3.1 Tribal Cultural Resources

To determine sensitivity for Native American resources within the project site, consultation with the NAHC and local Native American groups was conducted, as discussed above. No existing conditions or immediate evidence suggests that tribal cultural resources that are listed in, or eligible for listing in, the CRHR or a local register are present on the project site. In addition, no tribal cultural resources were identified during consultation with the Native American tribes identified by the NAHC; however, the potential always exists for previously undiscovered tribal cultural resources to be encountered during demolition or construction activities associated with the project. Although there are no known tribal cultural resources on or directly adjacent to the site, future development under the project could result in exposure or destruction of as-yet undiscovered tribal cultural resources. Exposure or destruction of tribal cultural resources would be considered a significant impact. With implementation of Mitigation Measure TCR-1, work would be stopped if precontact or historic-period cultural materials are encountered during project construction. **(Less than Significant with Mitigation)**

Mitigation Measures

MM TCR-1: Stop Work if Precontact or Historic-period Cultural Materials are Encountered During Ground-disturbing Activities

If precontact or historic-period cultural materials are unearthed during ground-disturbing activities, all work within 50 feet of the find will halt until a qualified archaeologist and Native American representative can assess the significance of the find. If the find is determined to be a potentially significant TCR, the project contractor will cause the archaeologist, in consultation with the Native American representative, to develop a treatment plan, which could include site avoidance, capping, or data recovery. The project contractor or the appropriate agency will be responsible for ensuring that recommendations regarding treatment and reporting are implemented.

Similarly, with implementation of Mitigation Measure TCR-1, impacts on tribal cultural resources that have been determined by the District to be significant to a California Native American tribe would be less than significant. **(Less than Significant with Mitigation)**

4.18.3 Conclusion

With implementation of the proposed mitigation measure, the project would have a less-than-significant impact on tribal cultural resources. **(Less than Significant with Mitigation)**

4.19 UTILITIES AND SERVICE SYSTEMS

4.19.1 Setting

4.19.1.1 Water Service

The project site is served by San Francisco's Hetch-Hetchy regional water supply system, which is owned and operated by the San Francisco Public Utilities Commission (SFPUC). SFPUC supplies water to the City of San Francisco as well as Santa Clara, Alameda, San Mateo, and Tuolumne Counties.

The regional water supply system consists of more than 280 miles of pipelines, more than 60 miles of tunnels, 11 reservoirs, five pump stations, and two water treatment plants located outside the city and more than 1,250 miles of pipelines, 10 reservoirs, eight storage tanks, and 17 pump stations located within the city limits.

Existing water facilities in the vicinity of the project site include a 12-inch water line in Owens Street and a 12-inch water line in Mission Bay Boulevard South. The water facilities in Fifth Street and Sixth Street are currently unknown. There is a 3-inch low-pressure water line (private) in Nelson Rising Lane. Existing fire-related water facilities in the vicinity of the project site include a 12-inch auxiliary water supply system line in Owens Street and a 12-inch auxiliary water supply system line in Mission Bay Boulevard South. A 12-inch fire water line (private) in Nelson Rising Lane, a 12-inch fire water line (private) in Sixth Street. Existing recycled water facilities in the vicinity of the project site include an 8-inch recycled water line in Owens Street and an 8-inch recycled water line in Mission Bay Boulevard South that terminates near the north east corner of the site; the recycled water facilities in Fifth Street, Sixth Street, and Nelson Rising Lane are currently unknown.

4.19.1.2 Wastewater and Stormwater Services

The project site and Mission Bay community are served by separate storm and sanitary sewers.[1] Flows from the project area are conveyed to the Mission Bay Sanitary Sewer Pump Station, near the intersection of Mission Bay Boulevard and Third Street. The pump station, which receives only sanitary flows, is expected to receive 2.00 mgd. These flows are directed to the Southeast Water Pollution Control Plant located on Phelps Street, south of Islais Creek, on the eastern waterfront. All stormwater and wastewater that originates at the project site is conveyed to the Southeast Water Pollution Control Plant. The Southeast Water Pollution Control Plant was designed to treat all dry-weather flows and up to 250 mgd of wet-weather flows in the Bayside Watershed.[2] Average dry weather flows to the Southeast Water Pollution Control Plant ranged from 58 to 61 million gallons per day for the years 2012 to 2014 and are projected to increase to 69 million gallons per day by 2045.[3]

There are abandoned utility lines within the project site, including combined sewer lines. Existing sewer facilities in the vicinity of the project site include a 15-inch sewer line in Owens Street, an 18-inch sewer line in Mission Bay Boulevard South, and an 8-inch sewer line (private) in Sixth Street, an

3 San Francisco Planning Department, Biosolids Digester Facilities Project, Final Environmental Impact Report, Record No. 2015-000644ENV, State Clearinghouse No. 2015062073, certified March 8, 2018.

8-inch sewer line (private) in Nelson Rising Lane; the sewer facilities in Fifth Street are currently unknown. Existing storm drain facilities in the vicinity of the project site consist of a 12-inch storm drain in Owens Street near the southwest corner of the site, a 12-inch storm drain in Owens Street near the northwest corner of the site, a 48-inch storm drain in Mission Bay Boulevard North, and a 12-inch storm drain (private) in Sixth Street, an 18-inch storm drain (private) in Nelson Rising Lane.

4.19.1.3 Solid Waste

The City disposes its municipal solid waste at the Recology Hay Road Landfill, and this practice is anticipated to continue until 2025, with an option to renew the agreement thereafter for an additional 6 years. San Francisco Ordinance No. 27-06 requires mixed construction and demolition debris to be transported to a facility that must recover for re-use or recycling and divert from landfill at least 65 percent of all received construction and demolition debris. San Francisco's Mandatory Recycling and Composting Ordinance No. 100-09 requires all properties and residents in the city to separate their recyclables, compostable, and landfill trash.

4.19.1.4 Electrical Power, Natural Gas, and Telecommunications

Pacific Gas and Electric Company (PG&E) provides electricity and natural gas to the vast majority of Northern California, including San Francisco and the project site. PG&E's service area extends from Eureka to Bakersfield (north to south) and from the Sierra Nevada to the Pacific Ocean (east to west). PG&E provides all natural gas and electricity infrastructure in the city and county of San Francisco. In addition, the SFPUC is San Francisco's municipal power utility. It also provides electrical services to select residential and business communities.

The Hetch Hetchy Power System, which is owned and operated by the SFPUC, supplies clean energy to all San Francisco municipal facilities, services, and customers. The Hetch Hetchy Power System is composed of three electric powerhouses, with a combined total output of approximately 385 megawatts.[4] This electricity is transmitted to San Francisco along City and County of San Francisco–(City-) owned transmission lines. Within San Francisco, the SFPUC also generates more than 11 megawatts of renewable energy from 23 solar arrays, one biogas cogeneration facility, and wind resources.[5,6]

In the county of San Francisco, a total of 229 million therms of natural gas were consumed in 2019 (the most recent year for which data are available). In 2019, natural gas in the county was consumed primarily by the residential sector (58 percent), followed by the non-residential sector (42 percent).[7] In 2019, the county consumed 5,604 million kilowatts of electricity. Electricity in the county was consumed primarily by the non-residential sector (73 percent), followed by the residential sector (27 percent).[8]

8 California Energy Commission. 2019. *Electricity by County*—San Francisco. Available: https://ecdms.energy.ca.gov/elecbycounty.aspx. Accessed: December 23, 2020.

The City and County of San Francisco are serviced by numerous telecommunications companies (e.g., AT&T, Sonic, Comcast, and local providers) that provide internet services, including high-speed fiber optic services. The project site is serviced by both AT&T and Comcast for internet and phone services, including high-speed fiber optic services.[9] In addition, the City provides free WiFi internet access in selected areas of the City.[10]

4.19.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Require or result in the relocation or construction of new or expanded water, wastewater treatment, stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
2. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during dry and multiple dry years?	☐	☐	☒	☐
3. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
4. Generate solid waste in excess of state or local standards or in excess of the capacity of local infrastructure or otherwise impair attainment of solid waste reduction goals?	☐	☐	☒	☐
5. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

4.19.2.1 Water Facilities and Supplies

Water would be supplied to the project site from SFPUC's Hetch-Hetchy regional water supply. Under Sections 10910 and 10915 of the California Water Code, urban water suppliers, such as the SFPUC, must prepare water supply assessments for certain "large water demand" projects, as defined in CEQA Guidelines Section 15155. The proposed project would construct a 105,700-square-foot school building, employ up to 70 men and women during operations, and would have a daily enrollment capacity of 500 at the elementary school and up to 260 at the linked learning hub; as such, it would not qualify as a "large

[9] GeoISP. 2016. *Broadband Internet in San Francisco, California*. Available: https://geoisp.com/us/CA/san-francisco/. Accessed: February 17, 2021.

[10] City and County of San Francisco. 2021. *San Francisco WiFi.* Available: https://sfgov.org/sfc/sanfranciscowifi. Accessed: February 17, 2021.

water demand" project, as defined by CEQA Guidelines Section 15155(a)(1). A water supply assessment is not required and has not been prepared for the proposed project.

Although a water supply assessment is not required, the following discussion provides an estimate of the proposed project's maximum water demand. The SFPUC estimates that a typical development project in San Francisco (i.e., 100 dwelling units, 100,000 square feet of commercial use, 50,000 square feet of office space, 100 hotel rooms, or 130,000 square feet for production, distribution, and repair) would generate a demand for approximately 10,000 gallons of water per day, which is 0.011 percent of the total water demand anticipated for San Francisco in 2045 (i.e., 80.6 mgd).[11] Because the proposed project would be a school use, water usage was estimated at 25 gallons per person per day, resulting an estimated total of 20,750 gallons per day.[12] Therefore, the proposed project would generate less than 0.02 percent of the water demand of the city as a whole in 2045, which would constitute a negligible increase in anticipated water demand.

The SFPUC uses population growth projections provided by the planning department to develop the water demand projections contained in the urban water management plan. As discussed in Section 14, *Population and Housing*, of this initial study, the proposed project would be encompassed within planned growth in San Francisco and is therefore also accounted for in the water demand projections contained in the City's 2020 Urban Water Management Plan. In addition, the proposed project would comply with all applicable City and state green building measures as required by Cal Title 24 Part 6—California Energy Codes, and Cal Title Part 11—California Green Building Standards Codes. Furthermore, the proposed project would include ultra-low-flow toilets. Because the proposed project would comprise a small fraction of future water demand that has been accounted for in the City's 2020 Urban Water Management Plan, sufficient water supplies would be available to serve the proposed project in normal, dry, and multiple dry years, and the project would not require or result in the relocation or construction of new or expanded water supply facilities the construction or relocation of which could cause significant environmental effects. **(Less than Significant)**

4.19.2.2 Wastewater Facilities and Capacity

Project related wastewater and stormwater would flow into the City's separate storm and sanitary sewers that serve the Mission Bay community and would be treated to standards contained in the City's National Pollutant Discharge Elimination System Permit for the Southeast Water Pollution Control Plant prior to discharge into the San Francisco Bay. The treatment and discharge standards are set and regulated by the Regional Water Quality Control Board.

The proposed project would not substantially increase the amount of stormwater entering the City's storm sewers because the project would not increase impervious surfaces at the project site. Compliance with the City's Stormwater Management Ordinance and the Stormwater Management Requirements and Design Guidelines would ensure that the design of the proposed project includes installation of appropriate stormwater management systems that retain runoff onsite, promote stormwater reuse, and limit discharges from the site from entering the City's storm sewer system. Under the Stormwater Management Ordinance, stormwater generated by the proposed project is required to meet a performance

[11] San Francisco Public Utilities Commission. 2021. *2020 San Francisco Urban Water Management Plan for the City and County of San Francisco.* June.

[12] U.S. Office of Energy Efficiency and Renewable Energy. 2021. *Federal Water Use Indices*. Available: https://www.energy.gov/eere/femp/federal-water-use-indices. Accessed: February 17, 2021.

standard that reduces the existing runoff flow rate and volume by 25 percent for a two-year 24-hour design storm and, therefore, would not contribute additional volume of polluted runoff to the city's stormwater infrastructure.

Although the proposed project would add new employees and students to the project site, the Southeast Water Pollution Control Plant has capacity to serve projected growth through year 2045. The project would be served by the existing sewer and storm drain infrastructure. The proposed project would be able to access utilities only within the public streets adjacent to the project site (i.e., Owens Street and Mission Bay Boulevard South); thus, all utility tie-ins would connect along the northern and western perimeters of the project site. In addition, the existing storm drain and associated sanitary sewer manhole within the project site would be removed; the pipe would be cut and capped with 12 inches of concrete. On-site stormwater would be treated within approximately 5,000 square feet of bioretention areas located throughout the project site. The bioretention areas would filter and treat stormwater prior to entering the City's stormwater system. Therefore, the incremental increase in wastewater treatment resulting from the project would be met by the existing sewer system and would not require the expansion of existing wastewater facilities or construction of new facilities. **(Less than Significant)**

4.19.2.3 Electric Power, Natural Gas, and Telecommunications Facilities

The proposed project would have an all-electric design and connect to the buried electrical lines in Owens Street. Therefore, no new electric or natural gas lines would need to be installed. The project site is located within a developed area served by existing electric power, natural gas, and telecommunications. The proposed project would not include natural gas infrastructure. While the proposed project would require local connection to those electric power and telecommunications, it would not require the expansion of existing electric power or telecommunications facilities or construction of new facilities. **(Less than Significant)**

4.19.2.4 Solid Waste

The proposed project would incrementally increase total solid waste generation in the City; however, the sustainability measures included in the proposed project would achieve compliance with San Francisco Ordinance No. 27-06 and No. 100-09. The proposed project is expected to divert up to 75 percent of construction and demolition waste from the Hay Road landfill. In addition, the proposed project would separate its recyclables, compostables, and trash on-site, in adherence with San Francisco Ordinance No. 100-09. Because of the proposed sustainability measures as well as compliance with City ordinances, the incremental increase in solid waste resulting from the proposed project would be accommodated by the remaining capacity at the Hay Road landfill. **(Less than Significant)**

4.19.3 Conclusion

The project would have a less-than-significant impact on utilities and service systems. **(Less than Significant)**

4.20 WILDFIRE

4.20.1 Setting

The California Department of Forestry and Fire Protection (CALFIRE) has mapped areas throughout the state of California that are considered significant fire hazard zones through its Fire and Resources Assessment Program. As described below, CAL FIRE has classified areas as fire hazard severity zones, based on various characteristics. According to CALFIRE's California Fire Hazard Severity Zone Viewer, last updated in 2018, the city of San Francisco (including the project site) is not located within a Very High Fire Hazard Severity Zone (VHFHSZ).[1] The nearest VHFHSZ is located approximately 15 miles south in Hillsborough.

The areas mapped by CAL FIRE are either in a State Responsibility Area (SRA) or a Local Responsibility Area (LRA). SRAs are under the jurisdiction and protection of CAL FIRE. LRAs are under the jurisdiction and protection of the local agency in which they reside in. According to CALFIRE, the majority of the city is classified as "LRA Unzoned", including the project site.[2] There are small portions of LRA moderate zones throughout the City, and even smaller portions classified as high zones. The project site is not located with an LRA zone, nor is it located adjacent to any SRAs.[3] The nearest SRA is approximately 5 miles southwest of the project site, within Daly City.

4.20.2 Environmental Checklist and Discussion of Impacts

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as Very High Fire Hazard Severity Zones, would the project:				
1. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
2. Due to slope, prevailing winds, or other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
3. Require the installation or maintenance of associated infrastructure, such as roads, fuel breaks, emergency water sources, power lines, or other utilities, that may exacerbate fire risk or that may result in temporary or ongoing impacts on the environment?	☐	☐	☐	☒
4. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

4.20.2.1 Wildfire Impacts

The project site is not within or near an SRA or VHFHSZ. Therefore, implementation of the project would not affect agricultural or forest resources or result in the loss of designated agricultural land. **(No Impact)**

4.20.3 Conclusion

The project would have no impact related to wildfire. **(No Impact)**

4.21 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
1. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
2. Have impacts that would be individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☒	☐	☐
3. Have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☒	☐
4. Have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

4.21.1 Findings

The project would result in no impacts related to agricultural and forest resources, mineral resources, and wildfire. The project would result in less-than-significant impacts related to aesthetics, energy, geology and soils, hydrology and water quality, land use, population and housing, public services, recreation, transportation, and utilities and service systems.

With implementation of the proposed mitigation measures described in the biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, noise, and tribal cultural resources sections of this document (refer to Section 4.0, *Setting, Environmental Checklist, and Impacts*), the project would not result in significant environmental impacts. The project could result in significant environmental impacts related to air quality and this topic will be evaluated in the EIR.

4.21.2 Cumulative Impacts[1]

A number of projects have been recently approved, or are reasonably foreseeable, in San Francisco. These include development or redevelopment of residential, industrial, and commercial uses. Although these individual projects may result in significant impacts in particular issue areas, it is assumed that the

[1] Section 15130 of the State CEQA Guidelines states that the discussion of cumulative impacts need not provide as much detail as the discussion of effects attributable to a project alone. The level of detail should be guided by what is practical and reasonable.

projects will comply with existing regulations and statutes and incorporate mitigation measures to reduce potential impacts to the extent feasible. For example, all projects are required to incorporate best management practices and comply with local and regional regulations to reduce impacts on water quality to the maximum extent feasible. Cumulative impacts occur when impacts from a project combine with similar impacts from other recently approved or reasonably foreseeable projects in a similar geographic area.

The reasonably foreseeable future projects within a 0.5-mile radius of the project site are presented in Table 4-1 and displayed in Figure 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR. Cumulative air quality impacts are analyzed in Section 4.2, *Air Quality*, of the draft EIR.

4.21.2.1 Topics with No Significant Cumulative Impacts

The cumulative setting for agriculture is the City and County of San Francisco because cumulative impacts on important farmland are recorded at the county level. The cumulative setting for forestland and mineral resources are site-specific and the proposed project would not have the potential for cumulative effects with other projects. The cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR are located on infill sites that do not have agricultural, forestland, or mineral resources. Therefore, there would be no significant cumulative agricultural, forestland, or mineral resources impacts.

The cumulative setting for aesthetics is generally the immediate vicinity of the project site, which includes surrounding land uses that primarily consist of industrial uses in an urbanized area. The project site and surrounding area are relatively flat, and as a result, are only visible from the immediate area. The project site and immediate vicinity would not be within a designated view corridor and would not have the potential to obstruct views of the Bay Bridge, the hills, or the downtown city landscape. Further, as with the proposed project, future projects would be required to conform to current architectural and landscaping standards, including the Mission Bay South Project Area design standards. Therefore, there would be no significant cumulative aesthetics impacts.

Impacts on cultural resources, geology and soils, hazards and hazardous materials, and tribal cultural resources are generally site-specific. With implementation of Mitigation Measures CUL-1 CUL-2, and TCR-1, the proposed project would stop work if archaeological deposits are encountered during project construction, stop work if precontact or historic-period cultural materials are encountered during ground-disturbing activities, and prevent the exposure or destruction of human remains. With implementation of these mitigation measures, the proposed project would have less-than-significant impacts on archaeological resources, human remains, historical resources, and tribal cultural resources. In addition, a site-specific health and safety plan and soils management plan, as part of Mitigation Measure HAZ-1, would be prepared and implemented by the contractor to avoid any exposure of construction personnel, the public, or the environment to contaminated soils. With implementation of both the selected remedial action and Mitigation Measure HAZ-1, the proposed project would have a less-than-significant impact related to hazards and hazardous materials. Further, as with the proposed project, recently approved or reasonably foreseeable projects would be subject to the same design review and safety measures (e.g., the seismic design guidelines in the current California Building Code) and regulations (e.g., AB 52), which would reduce the effects of the cumulative projects to less-than-significant levels. Therefore, there would be no significant cumulative impacts on cultural resources, geology and soils, hazards and hazardous materials, and tribal cultural resources.

The geographic area for cumulative hydrology and water quality impacts is generally the San Francisco Bay watershed and the Downtown San Francisco groundwater basin. As with the proposed project,

recently approved or reasonably foreseeable projects within the San Francisco Bay watershed and the Downtown San Francisco groundwater basin would be required to comply with the NPDES Construction General Permit, Municipal Regional Stormwater NPDES Permits, the San Francisco Bay Basin Plan, BMPs, the San Francisco General Plan policies, local ordinances, as well as the Sustainable Groundwater Management Act, which would reduce the effects of the cumulative projects to less-than-significant levels. Therefore, there would be no significant cumulative hydrology and water quality impacts.

The cumulative setting for wildfire is the region because CALFIRE maps areas throughout the state of California that are considered significant fire hazard zones. The cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR are located on infill sites that do not have factors that would exacerbate wildfire risks. Therefore, there would be no significant cumulative wildfire impacts.

Cumulative Construction Impacts

Construction of the cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR as well as other future development with different construction schedules over the next several years would result in short-term impacts at various locations throughout the City. The nearest anticipated or pending projects in the vicinity of the project site are the Mission Bay Block 15 project (located immediately east of the project site across Sixth Street) and Mission Bay Block 18 project (located immediately southeast of the project site across Nelson Rising Lane). The Mission Bay Block 15 project would construct a 418,200 square foot housing complex with 774 beds in 523 residential units. The Mission Bay Block 18 project would construct an 11-story, approximately 110-foot, parking garage with 1,540 parking spaces. However, with regard to the proposed project, there are no currently planned projects (according to the City's website) within 1,000 feet of the proposed project site. In addition, the proposed project and the two aforementioned nearby projects are in highly urbanized and developed areas of the City. Construction truck routes would be coordinated through San Francisco Public Works and the Municipal Transportation Agency to avoid traffic conflicts and hazards. Further, projects in the City, including Block 15 and Block 18, would be required to implement applicable mitigation measures and comply with applicable requirements to reduce construction impacts. Given these factors, construction impacts associated with the pending projects would not result in a significant cumulative impact.

Cumulative Noise Impacts

The cumulative setting for construction and stationary-source operational noise impacts includes cumulative projects within approximately 1,000 feet of an individual project site. As stated above, the nearest anticipated or pending projects in the vicinity of the project site are the Mission Bay Block 15 project (located immediately east of the project site across Sixth Street) and Mission Bay Block 18 project (located immediately southeast of the project site across Nelson Rising Lane).

Construction noise is a relatively localized impact, as construction noise reduces quickly as distance from the noise source increases (6 dB reduction per doubling of distance, based on distance alone). In addition, intervening features (e.g., buildings) between construction areas and nearby noise-sensitive land uses result in additional noise attenuation by providing barriers that break the line of sight between noise-generating equipment and sensitive receptors. These barriers can block sound wave propagation and further reduce noise at a given receiver.

Development projects located in close proximity to a given project that undergo construction at the same time could potentially expose the same noise receptors to more construction noise than they would

experience from a single project alone. However, with regard to the proposed project, there are no currently planned projects (according to the City's website) located within 1,000 feet of the proposed project site. Although construction noise may be perceptible to persons located nearby, it would be temporary and intermittent. In addition, construction activities in the City would be required to comply with the San Francisco Noise Ordinance. According to the noise ordinance, a single piece of construction equipment must be limited to 80 dBA when measured at a distance of 100 feet from such equipment or an equivalent sound level at some other convenient distance, and nighttime construction (i.e., between 8:00 p.m. and 7:00 a.m.) is prohibited unless a special permit has been granted by the Director of Public Works or the Director of Building Inspection. Therefore, even if other projects were located relatively close by, construction equipment would be regulated for maximum noise attenuation and construction activities would be limited to daytime hours. Since other individual projects must also undergo their own environmental analysis, and since there are no currently planned projects located within 1,000 feet of the proposed project, the construction of cumulative projects would not be expected to result in excessive construction noise effects. Therefore, cumulative construction noise impacts would be less than significant.

With regard to the potential for a cumulative vibration-related damage impact to occur, because vibration impacts are based on instantaneous PPV levels, worst-case ground-borne vibration levels from construction are generally determined by whichever individual piece of equipment generates the highest vibration levels. Unlike the analysis for average noise levels, in which noise levels of multiple pieces of equipment can be combined to generate a maximum combined noise level, instantaneous peak vibration levels do not combine in this way. Vibration from multiple construction sites, even if they are located close to one another, would not be expected to combine to raise the maximum PPV. For this reason, and because there are no planned construction projects located within 1,000 feet of the proposed project, the cumulative impact of construction vibration from multiple construction projects located near one other would be less than significant.

The main operational sources of noise associated with the proposed project would be the rooftop HVAC equipment. With implementation of project-specific mitigation measures, noise from HVAC equipment would be below the applicable noise criteria at nearby industrial and residential land uses. As described previously, there are no planned projects located relatively close (within 1,000 feet) to the proposed project site. In addition, operational noise sources associated with other projects in the City would also be restricted by the City Noise Ordinance, and would also not be expected to violate the exterior noise limits in the City (refer to Table 4.13-8). Since noise from these types of operational noise sources would be expected to comply with the allowable levels in the City, and since no development projects are currently planned within close proximity of the proposed project (according to the City's website), HVAC equipment noise from the proposed project would be unlikely to combine with operational noise from cumulative projects to result in a cumulative operational noise impact. Cumulative impacts related to operational noise would be less than significant.

Another source of operational noise associated with the proposed project would be the use of an emergency generator. Generators are tested intermittently (e.g., once per month for 30 to 60 minutes), and their use is often exempted during actual emergencies. Although specific details regarding the emergency generators proposed for nearby future projects are not known at this time, there are no projects currently proposed within 1,000 feet of the project site. In addition, it is very unlikely that the testing of an emergency generator for the proposed project would occur concurrently with the testing of a generator at a nearby project. Even if testing were to occur simultaneously, which is unlikely, it is not likely that the generators would be close enough to one another for the noise to combine at a given individual receptor. Cumulative noise impacts related to emergency generator testing would be less than significant.

Operational noise associated with the project and other cumulative projects would also include traffic noise. To determine potential cumulative traffic noise impacts in the project area, traffic volumes from the existing scenario were compared to the Cumulative plus Project scenario. A cumulative traffic noise impact is anticipated along a given roadway segment if a 3 dB increase in noise would occur in areas where existing and resulting noise levels are above the applicable land use compatibility standard or if a 5 dB increase in noise would occur in areas where existing and resulting noise levels are below the applicable land use compatibility standard. If a cumulative vehicular traffic noise impact is anticipated along a given roadway segment, the proposed project's contribution to that impact must be assessed.

Table 4.21-1, shows cumulative traffic noise increases and includes an analysis of potential impacts along roadway segments near the project site. There were no segments identified where a 5 dB increase in noise would occur from Existing to Cumulative Plus Project levels in areas where future noise levels would be below the acceptable land use compatibility standard. Similarly, there were no segments identified where a 3 dB increase in noise would occur in areas where future noise levels would be above the acceptable land use compatibility standard. Therefore, cumulative traffic noise impacts would be less than significant.

TABLE 4.21-1. MODELED CUMULATIVE TRAFFIC NOISE IMPACTS

Roadway Segment	Existing No Project (dBA L_{dn})	Cumulative No Project (dBA Ldn)	Cumulative Plus Project (dBA Ldn)	Increase from Existing No Project to Cumulative plus Project (dB)[a]	Project Increment (Increase from Cumulative No Project to Cumulative plus Project) (dB)[b]	Cumulative Impact (Greater than 3 or 5 dB increase)?	Cumulatively Considerable Project Contribution?[c]
Nelson Rising Lane between Sixth Street and Merrimac Street	59.9	60.8	61.2	1.3	0.4	No	NA
Merrimac Street between Mission Bay Boulevard and Nelson Rising Lane	56.7	58.3	58.5	1.7	0.2	No	NA
Mission Bay Boulevard South between Sixth Street and Merrimac Street	55.2	55.9	56.5	1.3	0.6	No	NA
Sixth Street between Mission Bay Boulevard South and Nelson Rising Lane	53.8	54.4	55.8	2.0	1.4	No	NA
Nelson Rising Lane between Sixth Street and Owens Street	61.4	62.0	62.5	1.1	0.5	No	NA
Owens Street between Mission Bay Boulevard South and Nelson Rising Lane	60.6	61.4	62.0	1.4	0.6	No	NA
Mission Bay Boulevard between Sixth Street and Owens Street	58.3	59.8	60.4	2.1	0.6	No	NA
Mission Bay Drive between Owens Street and Berry Street	63.4	64.3	64.6	1.2	0.3	No	NA

Notes:

[a] A cumulative impact would occur if the increase from Existing to Cumulative Plus Project conditions exceeds 3 or 5 dB, depending on the existing and resulting overall noise levels.

[b] If a cumulative impact is identified, the project-related incremental increase between Cumulative no Project and Cumulative plus Project conditions is determined.

[c]. A cumulatively considerable project contribution would occur only if a Cumulative impact is first identified. Where a Cumulative impact is not identified, the project contribution would be NA.

4.21.2.2 Topics with No Cumulatively Considerable Contribution to Significant Cumulative Impacts

Cumulative Greenhouse Gas Emission Impacts

Past, present, and future development projects contribute to a region's adverse greenhouse gas emissions impacts on a cumulative basis. By its very nature, GHG emissions and global climate change also represent cumulative impacts. The proposed project's contribution to global climate change is discussed in Section 4.8, *Greenhouse Gas Emissions*, including its GHG emissions. With implementation of the sustainability measures included in the proposed project and Mitigation Measure GHG-1**,** which requires implementation of BAAQMD-recommended Construction BMPs, in combination with the transportation demand management features, the proposed project CARB's *2017 Climate Change Scoping Plan*, and would not conflict with the implementation of plans, policies, or regulations adopted for the purpose of reducing emissions of GHGs. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on greenhouse gas emissions.

Cumulative Biological Resources Impacts

The cumulative setting for biological resources is the City and County of San Francisco. The cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR as well as other future development could affect sensitive habitats, special-status species, and/or native species, many of which are protected by state or federal law, which could be considered a significant cumulative impact. In addition, other reasonably foreseeable projects could result in the removal of existing trees, including protected trees under the City's Urban Forestry Ordinance. The project site and the immediate vicinity are fully developed. They retain little or no natural habitat and exhibit a high level of disturbance. As discussed in Section 4.4, *Biological Resources*, during construction the proposed project would be required to obtain a specific tree protection plan from an International Society of Arboriculture-certified arborist to protect the 11 existing trees that would be retained, and would plant an additional 20 new trees. Additionally, with implementation of the Mitigation Measure BIO-1, nesting birds would be protected during construction. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on biological resources.

Cumulative Energy Impacts

The cumulative setting for energy is typically the service area of the energy providers (i.e., CleanPowerSF and PG&E). The cumulative projects identified in Table 4.21-1 as well as other future development would result in a change in the demand for energy. Some of these projects could contribute to changes to the demand for energy or result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner, which would be considered a significant cumulative impact. As discussed in Section 4.6, *Energy*, the proposed project would include energy-efficiency components that would support implementation of applicable plans related to renewable energy or energy efficiency, and would not conflict with or obstruct implementation of a state or local plan for renewable energy or energy efficiency. Additionally, the proposed project would not result in inefficient, wasteful, or unnecessary consumption of energy resources during construction or operation. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on energy.

Cumulative Land Use Impacts

The cumulative setting for land use is the City. Because limited undeveloped land is available in the City, including in the project site, the cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR as well as other future development would generally consist of redevelopment of previously developed sites. Development on a number of sites could result in a change in uses and/or an intensification of development, which could be considered a significant cumulative impact. As discussed in Chapter 3, *Project Description*, of the draft EIR, the District will acquire the project site; thus, according to Government Code section 53094, local zoning and building ordinances are inapplicable to the proposed project. However, for informational purposes, the proposed project's consistency with existing land use plans and regulations is discussed in Section 4.11, *Land Use*. Cumulative projects would conform to the City's General Plan policies and zoning designations, and some would be subject to review by the Planning Department, ensuring a project would conform with the City's plans, policies, and regulations pertaining to land use. As discussed, in Section 4.11, *Land Use*, although the proposed project would introduce a taller building to the project site, compared with existing buildings in the vicinity of the project site, the mass and scale of the proposed building would not be out of character with the immediate vicinity surrounding the project site. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on land use.

Cumulative Population and Housing Impacts

The cumulative setting for population and housing is the City. The population in the City will change in the future as development occurs in accordance with the San Francisco General Plan and under the projects listed in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR. Some of these projects could generate substantial population growth, which could be considered a significant cumulative impact. As discussed in Section 4.14, *Population and Housing*, the proposed project would not include new residential uses and employees, teachers, and students generated by the proposed project during normal operations would have a negligible effect on the permanent population of the City. Therefore, the proposed project would not result in a considerable contribution to a significant cumulative impact on population and housing.

Cumulative Public Services, Recreation, and Utilities and Service Systems Impacts

The cumulative setting for public services, recreation, and utilities and service systems is typically the service area of the providers (i.e., SFFD, SFPD, SFUSD, San Francisco Recreation and Parks Department, SFPUC, Recology, and PG&E). The cumulative projects identified in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR as well as other future development would result in a change in the demand for public services, recreation facilities, and utilities. Some of these projects could contribute to the need for new or physically altered government facilities or utility improvements, the construction of which could cause significant environmental impacts, which would be considered a significant cumulative impact. As discussed in Sections 4.15, *Public Services*; 4.16, *Recreation*; and 4.19, *Utilities and Service Systems*, the proposed project would not include new residential uses employees, teachers, and students generated by the proposed project during normal operations would have a negligible effect on the permanent population of the City and would not result in increased demand for public services, recreation, and utilities. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on public services, recreation facilities, and utilities.

Cumulative Transportation Impacts

The cumulative setting for transportation includes any transportation or development project that could impact the transportation and transit network that serves the project site. The transportation elements and circulation patterns within and surrounding the project site will change in the future as development occurs in accordance with the City's General Plan and under the projects listed in Table 4-1 in Chapter 4, *Introduction to Environmental Analysis*, of the draft EIR. Some of these changes could result in significant impacts to the transportation and circulation system. As discussed in Section 4.17, *Transportation*, the project would not generate substantial VMT per capita as it does not include new residential uses and employees, teachers, and students generated by the proposed project during normal operations would have a negligible effect on the permanent population of the City. The proposed project would not disrupt traffic flow; conflict with any adopted programs or policies associated with transit; conflict with adopted programs or policies associated with pedestrian and bicycle facilities; increase on-site hazards due to the design of the proposed building, parking, or other on-site improvements; and or result in inadequate emergency access. Therefore, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact on transportation and circulation.

4.21.3 Short-term Environmental Goals vs. Long-term Environmental Goals

The project involves redevelopment of an urbanized site. It would not result in the conversion of a greenfield site to urban uses or commit resources in a wasteful or inefficient manner. The project would not induce substantial job or population growth or result in a large, irretrievable commitment of resources.

4.21.4 Direct or Indirect Adverse Effects on Human Beings

As previously noted, the project could result in hazardous materials impacts during construction that could have adverse health effects on people. With the implementation of the proposed mitigation measure in Section 9, *Hazards and Hazardous Materials*, of this initial study, which would reduce possible hazardous materials impacts from contaminated soils, the project would not result in substantial adverse effects on human beings, individually or cumulatively.

4.21.5 Conclusion

The project would not degrade the quality of the environment, reduce habitat for plant or animal species, or eliminate examples of periods of California history. The project would not cause a cumulative impact, make a cumulatively considerable contribution toward a significant cumulative impact, achieve short-term goals to the disadvantage of long-term goals, or cause adverse effects on human beings. **(Less than Significant with Mitigation)**

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction Only.

Land Use - Total Lot acreage: 2.45; 105.7k sqft = ele. school, 9 parking spaces, 54,600ft play area.

Construction Phase - anticipated construction schedule as provided by applicant.

Off-road Equipment -

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Grinder/planned equipment.

Off-road Equipment - anticipated construction equip.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Anticipated equipment. Concrete Pump.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Trips and VMT - provided by applicant. Accounting for water trucks (grading) and flat bed truck, concrete truck, and dump trucks.

Demolition - 3,000 cubic yards/1500 tons.

Grading - No surcharging.

Architectural Coating - 2019 CalGreen Requirement.

Vehicle Trips - construction only - refer to operational run.

Consumer Products - construction only - refer to operational run.

Area Coating - construction only - refer to operational run.

Landscape Equipment - construction only - refer to operational run.

Energy Use - construction only - refer to operational run.

Water And Wastewater - construction only - refer to operational run.

Solid Waste - construction only - refer to operational run.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	105.70	1000sqft	0.97	105,700.00	0
Parking Lot	9.00	Space	0.08	4,700.00	0
City Park	1.25	Acre	1.25	54,599.85	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	4.6	**Precipitation Freq (Days)**	64
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction Only.

Land Use - Total Lot acreage: 2.45; 105.7k sqft = ele. school, 9 parking spaces, 54,600ft play area.

Construction Phase - anticipated construction schedule as provided by applicant.

Off-road Equipment -

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Grinder/planned equipment.

Off-road Equipment - anticipated construction equip.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Anticipated equipment. Concrete Pump.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Trips and VMT - provided by applicant. Accounting for water trucks (grading) and flat bed truck, concrete truck, and dump trucks.

Demolition - 3,000 cubic yards/1500 tons.

Grading - No surcharging.

Architectural Coating - 2019 CalGreen Requirement.

Vehicle Trips - construction only - refer to operational run.

Consumer Products - construction only - refer to operational run.

Area Coating - construction only - refer to operational run.

Landscape Equipment - construction only - refer to operational run.

Energy Use - construction only - refer to operational run.

Water And Wastewater - construction only - refer to operational run.

Solid Waste - construction only - refer to operational run.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	105.70	1000sqft	0.97	105,700.00	0
Parking Lot	9.00	Space	0.08	4,700.00	0
City Park	1.25	Acre	1.25	54,599.85	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	4.6	**Precipitation Freq (Days)**	64
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction Only.

Land Use - Total Lot acreage: 2.45; 105.7k sqft = ele. school, 9 parking spaces, 54.6k sqft play area.

Construction Phase - anticipated construction schedule. Conversative assumption of weekend work. Surcharging.

Off-road Equipment -

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Grinder/planned equipment.

Off-road Equipment - anticipated construction equip.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Anticipated equipment. Concrete Pump.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Wick Drain Stitcher.

Off-road Equipment - Surcharging equip.

Off-road Equipment - Anticipated equipment.

Trips and VMT - provided by applicant. Accounting for water trucks (grading) and flat bed truck, concrete truck, and dump trucks. 16k CY Import/Export during surcharging. 2.5k import, 1.2k export during grading

Demolition - 3,000 cubic yards/1500 tons.

Grading - Surcharging of 16k CY. Assumed no cut/export would be used on site.

Architectural Coating - 2019 CalGreen Requirement.

Vehicle Trips - construction only - refer to operational run.

Consumer Products - construction only - refer to operational run.

Area Coating - construction only - refer to operational run.

Landscape Equipment - construction only - refer to operational run.

Energy Use - construction only - refer to operational run.

Water And Wastewater - construction only - refer to operational run.

Solid Waste - construction only - refer to operational run.

Construction Off-road Equipment Mitigation - BAAQMD Required MM Table 8-2, Additional MM Table 8-3, watering every two hours. Tier4 F for equip over 50hp

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction Only.

Land Use - Total Lot acreage: 2.45; 105.7k sqft = ele. school, 9 parking spaces, 54.6k sqft play area.

Construction Phase - anticipated construction schedule. Conversative assumption of weekend work. Surcharging.

Off-road Equipment -

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Grinder/planned equipment.

Off-road Equipment - anticipated construction equip.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Anticipated equipment. Concrete Pump.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Wick Drain Stitcher.

Off-road Equipment - Surcharging equip.

Off-road Equipment - Anticipated equipment.

Trips and VMT - provided by applicant. Accounting for water trucks (grading) and flat bed truck, concrete truck, and dump trucks. 16k CY Import/Export during surcharging. 2.5k import, 1.2k export during grading

Demolition - 3,000 cubic yards/1500 tons.

Grading - Surcharging of 16k CY. Assumed no cut/export would be used on site.

Architectural Coating - 2019 CalGreen Requirement.

Vehicle Trips - construction only - refer to operational run.

Consumer Products - construction only - refer to operational run.

Area Coating - construction only - refer to operational run.

Landscape Equipment - construction only - refer to operational run.

Energy Use - construction only - refer to operational run.

Water And Wastewater - construction only - refer to operational run.

Solid Waste - construction only - refer to operational run.

Construction Off-road Equipment Mitigation - BAAQMD Required MM Table 8-2, Additional MM Table 8-3, watering every two hours. Tier4 F for equip over 50hp

SFUSD - Mission Bay Campus Surcharging (Mitigated)

San Francisco County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	105.70	1000sqft	0.97	105,700.00	0
Parking Lot	9.00	Space	0.08	4,700.00	0
City Park	1.25	Acre	1.25	54,599.85	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	4.6	**Precipitation Freq (Days)**	64
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction Only.

Land Use - Total Lot acreage: 2.45; 105.7k sqft = ele. school, 9 parking spaces, 54.6k sqft play area.

Construction Phase - anticipated construction schedule. Conversative assumption of weekend work. Surcharging.

Off-road Equipment -

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Grinder/planned equipment.

Off-road Equipment - anticipated construction equip.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Anticipated equipment. Concrete pump.

Off-road Equipment - Anticipated equipment. Concrete Pump.

Off-road Equipment - Anticipated equipment.

Off-road Equipment - Wick Drain Stitcher.

Off-road Equipment - Surcharging equip.

Off-road Equipment - Anticipated equipment.

Trips and VMT - provided by applicant. Accounting for water trucks (grading) and flat bed truck, concrete truck, and dump trucks. 16k CY Import/Export during surcharging. 2.5k import, 1.2k export during grading

Demolition - 3,000 cubic yards/1500 tons.

Grading - Surcharging of 16k CY. Assumed no cut/export would be used on site.

Architectural Coating - 2019 CalGreen Requirement.

Vehicle Trips - construction only - refer to operational run.

Consumer Products - construction only - refer to operational run.

Area Coating - construction only - refer to operational run.

Landscape Equipment - construction only - refer to operational run.

Energy Use - construction only - refer to operational run.

Water And Wastewater - construction only - refer to operational run.

Solid Waste - construction only - refer to operational run.

Construction Off-road Equipment Mitigation - BAAQMD Required MM Table 8-2, Additional MM Table 8-3, watering every two hours. Tier4 F for equip over 50hp

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2018 PG&E Sustainability Report.

Land Use - Planned development. 105.7k sqft elementary school, 9 parking spaces, 54,600sqft play area,

Construction Phase - operations only.

Vehicle Trips - 1,562 ADT's. Daily VMT of 4,288. 200 operating days per year.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Energy Use - Total energy usage per applicant and study would be 627,504 kwh.

Water And Wastewater - Provided by applicant.

Energy Mitigation -

Water Mitigation - Water consumption already takes reductions.

Waste Mitigation - AB 341

Stationary Sources - Emergency Generators and Fire Pumps - EmGen - 1 hour per month.

Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	206	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2018 PG&E Sustainability Report.

Land Use - Planned development. 105.7k sqft elementary school, 9 parking spaces, 54,600sqft play area,

Construction Phase - operations only.

Vehicle Trips - 1,562 ADT's. Daily VMT of 4,288. 200 operating days per year.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Energy Use - Total energy usage per applicant and study would be 627,504 kwh.

Water And Wastewater - Provided by applicant.

Energy Mitigation -

Water Mitigation - Water consumption already takes reductions.

Waste Mitigation - AB 341

Stationary Sources - Emergency Generators and Fire Pumps - EmGen - 1 hour per month.

11.0 Vegetation

SFUSD Mission Bay Campus - Operations only

San Francisco County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	105.70	1000sqft	0.97	105,700.00	0
Parking Lot	9.00	Space	0.08	3,600.00	0
City Park	1.25	Acre	1.25	54,599.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	4.6	**Precipitation Freq (Days)**	64
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	206	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2018 PG&E Sustainability Report.

Land Use - Planned development. 105.7k sqft elementary school, 9 parking spaces, 54,600sqft play area,

Construction Phase - operations only.

Vehicle Trips - 1,562 ADT's. Daily VMT of 4,288. 200 operating days per year.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Vehicle Emission Factors - EMFAC2021 - Year 2025 SF County.

Energy Use - Total energy usage per applicant and study would be 627,504 kwh.

Water And Wastewater - Provided by applicant.

Energy Mitigation -

Water Mitigation - Water consumption already takes reductions.

Waste Mitigation - AB 341

Stationary Sources - Emergency Generators and Fire Pumps - EmGen - 1 hour per month.

Technical Modeling Considerations for Criteria Pollutants and Human Health Effects

In their interim guidance addressing *Sierra Club v. County of Fresno* (6 Cal. 5th 502) (Friant Ranch), SMAQMD (2019) recommends lead agencies compare the air quality models used in CEQA analyses to those models designed to evaluate regional attainment with ambient air quality standards and associated human health consequences. This section describes the three models used to estimate criteria pollutant emissions generated by construction and operation of the project and evaluates their ability to assess specific health impacts of the project. This section also analyzes whether models and tools that have been developed to quantify ambient pollutant concentrations could be used to reasonably correlate project-level emissions to specific health consequences.

Review of Project Analysis Models

Criteria pollutant emissions generated by construction and operation of the project were estimated using the California Emissions Estimator Model (CalEEMod), SMAQMD's Roadway Construction Emissions Model (RCEM), and the California Air Resources Board's (CARB) EMissions FACtor (EMFAC) model. Each of the following sections note whether the given model is suitable for quantify human health consequences or changes in nonattainment days.

California Emissions Estimator Model

CalEEMod is a statewide computer model quantifies construction and operational criteria pollutant and greenhouse gas (GHG) emissions from land use development projects. The model evaluates construction emissions associated with six phases—demolition, site preparation, grading, building construction, architectural coatings, and paving. Emission sources considered by the model include offroad construction equipment, onroad mobile vehicles, fugitive dust from land disturbance, and volatile organic compounds from architectural coatings and paving activities.

CalEEMod quantifies project emissions based on user-defined inputs for project location, operational year, land use type (e.g., commercial), climate zone, and size. Based on these minimum data inputs, users can estimate construction emissions based model generated default assumptions for construction phasing, construction equipment inventory and activities, and trip lengths. Default values included in the model were provided by California air districts and account for local conditions and regulations. Where appropriate, CalEEMod combines local data with regional and statewide values to ensure enough information is available to quantify emissions. Users can override default values with project-specific information. In addition, users can implement mitigation measures and strategies to reduce construction-related exhaust and fugitive dust emissions.

Based on the user inputs and emission factors from the CARB's EMFAC and OFFROAD models, CalEEMod calculates both daily maximum (pounds per day) and annual average (tons per year) emissions. These emissions can be compared to air district mass emission thresholds, such as those adopted by EDCAQMD. CalEEMod does not quantify concentrations of the various air pollutants (in

terms of micrograms per cubic meter or parts per million), nor does it estimate secondary pollutants (such as ozone and PM2.5) or potential human health effects from exposure to criteria pollutants. Accordingly, CalEEMod cannot be used to evaluate changes in the number of regional nonattainment days or correlate project-level emissions to specific health consequences.

Road Construction Emissions Model

SMAQMD's RCEM is a public-domain spreadsheet model formatted as a series of individual worksheets. The model is specifically designed to evaluate construction criteria pollutant and GHG emissions from linear projects (e.g., water infrastructure, roads). Four generic construction phases are considered by the model: 1) grubbing/land clearing, 2) grading/excavation, 3) drainage/utilities/subgrade, and 4) paving. Within these phases, the model estimates construction emissions for load hauling (onroad heavy-duty vehicle trips), worker commutes, construction site fugitive dust, and offroad construction vehicles. Although exhaust emissions are estimated for each activity, fugitive dust estimates are currently limited to major dust-generating activities, which include grubbing/land clearing and grading/excavation.

The RCEM was designed to enable users to estimate emissions using a minimum amount of project-specific information, such as construction start year and duration, project type, and the project length and area. This was done because specific data to quantify emissions from transportation projects is often unavailable when the environmental document is being prepared. To help facilitate the quantification of construction emissions based on valid assumptions, the RCEM contains default data based on surveys of construction equipment , schedules, and other construction data from a selection of construction projects in Sacramento County, as well as construction surveys conducted for CalEEMod and a technical evaluation completed by the University of California, Davis. Emission factors used by the model are from the CARB's EMFAC and OFFROAD models.

Like CalEEMod, RCEM calculates both daily maximum (pounds per day) and annual average (tons per year) emissions. RCEM does not quantify concentrations of the various air pollutants (in terms of micrograms per cubic meter or parts per million), nor does it estimate secondary pollutants (such as ozone and PM2.5) or potential human health effects from exposure to criteria pollutants. Accordingly, RCEM cannot be used to evaluate changes in the number of regional nonattainment days or correlate project-level emissions to specific health consequences.

EMissions FACtor Model

CARB developed the EMFAC model to facilitate preparation of statewide and regional mobile source emissions inventories. The model generates criteria pollutant and GHG emissions rates that can be multiplied by vehicle activity data from all motor vehicles, including passenger cars to heavy-duty trucks, operating on highways, freeways, and local roads in California. The resulting emissions estimates are mass emission quantities that can be expressed in terms of pounds per day and tons per year (or other similar unit rates). Like CalEEMod and RCEM, EMFAC does not assess pollutant dispersion or quantify concentrations or potential health effects. Accordingly, EMFAC cannot be used to evaluate changes in the number of regional nonattainment days or correlate project-level emissions to specific health consequences.

Review of Photochemical and Human Health Models

Several models and tools capable of translating mass emissions of criteria pollutants to ambient pollutant concentrations and various health endpoints have been developed. Table 1 summarizes key tools, identifies the analyzed pollutants, describes their intended application and resolution, and analyzes whether they could be used to reasonably correlate project-level emissions to specific health consequences.

As shown in Table 1, almost all tools were designed to be used at the national, state, regional, and/or city-levels. This is because criteria pollutants emitted by a specific source often do not deposit immediately adjacent to that source. Pollutants can be transported by prevailing winds or transformed through chemical reactions and physical interactions with other pollutants in the atmosphere. Because some pollutants can be transported over long distances, recorded violations of the ambient air quality standards at a specific monitoring station and resultant health effects experienced by the local population may be the result of faraway emission sources (some of which may not even be located within the same air basin). For this reason, attaining the ambient air quality standards and protecting human health from exposure to criteria pollutants requires a regional, and sometimes multiregional strategy that considers the combined effect of all emission-generating sources that influence air quality within an air basin.

The models and tools that have been developed to assess attainment of the ambient air quality standards and human health effects are therefore regional in nature and are not well suited to analyze small or localized changes in pollutant concentrations associated with individual projects. Said another way, "it remains impossible, using today's models, to correlate that increase in concentration to a specific health impact [because] such models are designed to determine regional, population-wide health impacts, and simply are not accurate when applied at the local level" (San Joaquin Valley Air Pollution Control District 2015). As of the writing of this analysis "neither the Sac Metro Air District nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions" (Sacramento Metropolitan Air Quality Management District 2019).

Table 1. Analysis of Photochemical and Human Health Models

Tool	Created by	Description	Resolution	Pollutants Analyzed	Project-Level CEQA Applicability
AirCounts	Abt Assoc.	Online tool that helps large and medium-sized cities quickly estimate the health benefits of PM2.5 emission reductions and economic value of those benefits. The tool estimates the number of deaths (mortality) avoided and economic value related to user-specified regional, annual PM2.5 emissions reduction. The modeling year is 2010; avoided deaths are expected to occur over a 20-year period and their present value is shown in 2010 US dollars at a 3% discount rate.	City-level	Primary PM2.5	This tool is only illustrative, as it is limited to certain cities and does not target specific sectors. Given that it was designed as a screening-level tool, is not sector specific, and includes limited California data, the tool is **not recommended** for project-level CEQA analysis.
AP2 (formerly Air Pollution Emission Experiments and Policy [APEEP])	Mueller and Mendelsohn, 2006	AP2 is an integrated assessment model developed to assess marginal damage impacts from emissions at the national scale but can be applied at the county-level. The model connects emissions to monetary damages through six modules: emissions (per EPA's national inventory), air quality modeling, concentrations, exposures, physical effects, and valuation. Damages are presented on a dollar-per-ton basis. Model extends damage assessment beyond human health, and includes assessment on reduced crop and timber yields, reductions in visibility, enhanced depreciation of man-made materials and damages due to lost recreation services.	National or county-level	SO_2, ROG, NOx, ozone, PM2.5, PM10	The model operates at the national scale but may be applied at the county-level (although it is not clear how this adjustment should be made). The tool is also not commercially available. Accordingly, the tool is **not recommended** for project-level CEQA analysis.
Methodology for Estimating Premature Deaths Associated with Long-Term Exposure to Fine Airborne Particulate Matter in California	CARB	The staff report identifies a relative risk of premature death associated with PM2.5 exposure based on a review of all relevant scientific literature, and a new relative risk factor was developed. This new factor is a 10% increase in risk of premature death per 10 $\mu g/m^3$ increase in exposure to PM2.5 concentrations (uncertainty interval: 3% to 20%)	National		The primary author of the CARB staff report notes that the analysis method is not suited for small projects and may yield unreliable results due to various uncertainties. Accordingly, the tool is **not recommended** for project-level CEQA analysis.
Co-Benefits Risk Assessment (COBRA)	US EPA	Preliminary screening tool that contains baseline emission estimates of a variety of air pollutants for a single year (2017). COOBRA is targeted to state and local governments as a screening assessment for clean energy policies. Users specify changes to the baseline emission estimates. COBRA then uses "canned" source-receptor matrix model to estimate PM changes and resulting health outcomes and monetized values. The results can be mapped to visually represent air quality, human health, and health-related economic benefits. Analysis can be performed across the 14 major emissions categories included in the EPA's National Emissions Inventory. Note that COBRA is based on EPA's BenMAP-CE (discussed in a separate entry).	National, regional, state, or county-levels	PM2.5, SO_2, NOx, NH_3, and ROG	COBRA is a preliminary screening tool only and cannot be used at sub-county resolution. It also does not account for secondary emission changes resulting from market responses. Accordingly, the tool is **not recommended** for project-level CEQA analysis.
Environmental Benefits and Mapping Program-Community Edition (BenMAP-CE)	US EPA	BenMAP is EPA's detailed model for estimating the health impacts from air pollution. It relies on input concentrations and applies concentration-response (C-R) health impact functions, which relate a change in the concentration of a pollutant with a change in the incidence of a health endpoint, including premature mortality, heart attacks, chronic respiratory illnesses, asthma exacerbation and other adverse health effects. Detailed inputs are required for air quality changes (concentrations from AERMOD), population, baseline incidence rates, and effect estimates.	National, County, City, and sub-regional levels	Ozone, PM, NO_2, SO_2, CO	The smallest default analysis resolution for BenMAP-CE is 144 square kilometers (equivalent to approximately 56 square miles or 36,000 acres). This tool could be used to derive average health incidence/ton estimates that can be used for illustrative purposes only for most projects with proper disclosure of the inherent inaccuracies involved in averaging. It is **not recommended** for individual modeling of smaller projects, however. The tool may be appropriate for modeling certain large-scale General Plan-level analyses.

Tool	Created by	Description	Resolution	Pollutants Analyzed	Project-Level CEQA Applicability
Fast Scenario Screening Tool (TM5-FASST)	Joint Research Centre (Italy)	Tool allows users to evaluate how air pollutant emissions affect large scale pollutant concentrations and their impact on human health (mortality and years of life lost) and crop yield from national to regional air quality policies, such as climate policies. The tool is web-based and does not require coding or modelling. Users must gain access through publishers.	Global and national-levels	PM2.5, ozone, NOx, NH_3, CO, ROG, EC, CH_4, SO_2	This tool is applicable at national to global scales. Accordingly, the tool is **not recommended** for project-level CEQA analysis.
Long-range Energy Alternatives Planning System-- Integrated Benefits Calculator (LEAP-IBC)	Climate and Clean Air Coalit-ion (CCAC)	Allows users to rapidly estimate the impacts of reducing emissions on health, climate, and agriculture. Tool uses sensitivity coefficients that link gridded emissions of air pollutants and precursors to health, climate and agricultural impacts at a national level. The sensitivity coefficients are generated by a chemical transport model, so air quality modeling not necessary. Tool is currently Excel-based and is available through the developers only. A web-based interface is currently under development.	National-level	PM2.5, ozone, NO_2	This tool is applicable at national scale. Accordingly, the tool is **not recommended** for project-level CEQA analysis.
Multi-Pollutant Evaluation Method (MPEM)	BAAQMD	Estimates the impacts of control measures on pollutant concentration, population exposures, and health outcomes for criteria, toxic, and GHG pollutants. Monetizes the value of total health benefits from reductions in PM2.5, ozone, and certain carcinogens, and the social value of GHG reductions. MPEM was designed for development of a Clean Air Plan for the San Francisco Bay Area. The inputs are specific to the SF region and are not appropriate for projects outside BAAQMD.	Regional level in the SFBAAB	Ozone, PM, air toxics, GHG	This tool is designed to support the BAAQMD in regional planning and emissions analysis within the SFBAAB. The model applies changes in pollutant concentrations over a four-square kilometer grid. This tool could be used to derive average health incidence/ton estimates that can be used for illustrative purposes only for most projects with proper disclosure of the inherent inaccuracies involved in averaging. It is **not recommended** for individual modeling of smaller projects, however. The tool may be appropriate for certain large-scale planning-level analyses in the SFBAAB (with permission of BAAQMD).
Response Surface Model (RSM)-based Benefit-per-Ton Estimates	US EPA	Consists of tables reporting the monetized PM2.5-related health benefits from reducing PM2.5 precursors from certain source types nationally and for 9 US cities/regions. Applying these estimates simply involves multiplying the emissions reduction by the relevant benefit per-ton metric. The resulting value is the PM mortality risk estimate at a 3% discount rate. Note that RSM is based on EPA's BenMAP-CE (discussed in a separate entry).	National or regional (San Joaquin County only) levels	EC, SOx, VOC, NH_3, NOx	While RSM includes regional values specific to San Joaquin County, the metrics only reflect the benefits of reductions in exposure to ambient PM alone and do not include the benefits of reductions in other pollutants. The values are also dated as new sector-based BPT values are more current. Accordingly, the tool is **not recommended** for project-level CEQA analysis (even in San Joaquin County).
Sector-based Benefit-per-Ton Estimates	US EPA	Two specific sets of BPT estimates for 17 key source categories are available. Both are a reduced-form approach based on BenMAP modeling. The first are based on Fann et al. (2012) values and available from EPA's website. The second is based on updated modeling from Fann et al. (2017) and available in a Technical Support Document (TSD) from EPA. Applying these factors involves multiplying the emissions reduction (in tons) by the relevant benefit (economic value) or incidence (rates of mortality and morbidity) per-ton metric. The resulting value is the economics, mortality, and morbidity of direct and indirect PM2.5 emissions. All values are based on a national-scale study. Local values are preferred, but not available from any existing reduced form model and use of reduced form estimates for another city is unlikely to provide a better-than-national value. Use of the current values from EPA's 2018 TSD represent the most current estimate of monetized or incidence risk. Values from Lepeule et al. (2012) represent the most current estimate of mortality.	National-scale	PM2.5, SO2, NOx	Due to the complex non-linear chemistry governing ozone formation, EPA was not able to derive ozone or secondary PM BPT values. The BPT estimates provide a rough order-of-magnitude analysis of health consequences from directly-emitted PM and precursors to PM (with no secondary formation). However, the multipliers do not account for project-specific characteristics, receptor locations, or local dispersion characteristics. The resultant health effects are therefore reflective of national averages and may not be exact when applied to the project-level. Nonetheless, the estimates can be used to present an informational and scaled health risk analysis of directly-emitted PM and precursors to PM (with no secondary formation).

Construction and Cumulative Health Risk Assessments

SFUSD Mission Bay Campus Project Health Risk Assessment Protocol

Project Description

The project proposes demolition of a surface parking lot. In its place, the San Francisco Unified School District (project sponsor) would construct a multi-story (maximum of 63 feet tall), approximately 105,700-square-foot school. The proposed facility would include a preschool, transitional kindergarten, kindergarten through fifth grade elementary school, linked learning hub,[1] professional learning facility,[2] outdoor learning area, outdoor play area, and paved surface parking lot with ten parking spaces.

Purpose

Evaluate health impacts (cancer and chronic risk) to off-site residential receptors located south of the project site from exhaust emissions from diesel-powered offroad equipment and diesel-powered trucks. Also evaluate the incremental increase in annual fine particulate matter ($PM_{2.5}$) from exhaust and fugitive dust emissions.

Analyses/Pollutants of Concern

- HRA (Cancer & Chronic Risk)/Diesel Particulate Matter (DPM) (modeled as $PM_{2.5}$ exhaust)
- $PM_{2.5}$ Analysis/$PM_{2.5}$ (exhaust and dust)

Construction Emissions Sources

Unitized Emission Rate

For HRA and PM Analysis, all sources used a unitized emission rate approach to estimate actual concentrations. ***To reduce the number of modeling runs required, each source was modeled with a unit emission rate (1 g/s). Model output was a dispersion factor with units of concentration per unit emissions ([µg/m³]/[g/s]). Following this approach, annual average concentrations resulted from multiplying the dispersion factor by an annual average emission rate (BAAQMD 2012)***.

- AERMOD output concentration [(ug/m³)/(1g/s)] x Actual Emission rate (g/s) = Actual Concentration (ug/m³)

Offroad Construction Equipment Emissions

Offroad equipment for construction was modeled in AERMOD as a polygon area source that encompassed the entire footprint of the project site. Exhaust emissions from offroad equipment were included in the HRA and $PM_{2.5}$ Analysis.

OFFROAD EQUIPMENT

AERMOD Source Name	Source Type:[1]	Release Height (m):[2]	Initial Vertical Dimension (m):[1]	Emission Rate (g/s):
OFFROAD	Polygon Area	5.0	1.4	1.0

[1] BAAQMD 2012
[2] SCAQMD 2008

[1] A *linked learning hub* would allow high school students to participate in job training, internships, and business partnerships. The linked learning hub students would include a morning cohort and an afternoon cohort.

[2] A *professional learning facility* would allow educators to participate in training.

Onsite Dust Emissions

Onsite dust emissions were modeled in AERMOD as a polygon area source that encompassed the entire footprint of the project site. Onsite dust emissions included fugitive dust emissions from bulldozing, grading, and truck loading. Onsite dust emissions were only included in the $PM_{2.5}$ Analysis.

ONSITE DUST

AERMOD Source Name	Source Type:[2]	Release Height (m):[2]	Initial Vertical Dimension (m):[2]	Emission Rate (g/s):
ON_DUST	Polygon Area	0.0	1.0	1.0
[1]SCAQMD 2008				

Onroad Exhaust Emissions

Onroad exhaust emissions were modeled as a line volume source with the parameters listed below. DPM exhaust emissions from vendor and haul trucks were included in the HRA. PM exhaust emissions from workers, vendors, and haul trucks were included in the $PM_{2.5}$ analysis.

ONROAD EXHAUST

AERMOD Source Name	Source Type	Source Length (m)	Road Width (m)[1]	Plume Width (m)[2]	Plume Height (m)[2]	Vehicle Height (m)[3]	Initial Vertical Dimension (m)[2]	Release Height (m)[2]	Emission Rate (g/s)
ONRD_EX	Line Volume	828.0	46	20.02	7.77	5.0	3.62	3.89	1.0
