

**LOS ANGELES COUNTY
SANITATION DISTRICTS**

Converting Waste Into Resources

MITIGATED NEGATIVE DECLARATION

☐ **PROPOSED**

☒ **FINAL**

Name of Project: Soledad Canyon Relief Trunk Sewer Section 4 Project

Project Location: The proposed Project involves construction of a sewer main in the City of Santa Clarita. The sewer main alignment would begin at the intersection of Soledad Canyon Road and Hidaway Avenue, continue south on Hidaway Avenue, then slightly southeasterly within private right-of-way, then south beneath the Santa Clara River. The sewer main alignment would then turn easterly towards the western edge of an existing mobile home park and approximately 550 feet north of the Los Angeles County Metropolitan Transportation Authority railroad tracks.

Entity or Person

Undertaking Project: Santa Clarita Valley Sanitation District

Project Description: The Project involves the construction and operation of a new 27-inch sewer, and all associated connections, to provide hydraulic relief of the Soledad Canyon Trunk Sewer Section 4 (SCTS-4) between Manholes 1103 and 1114 in the City of Santa Clarita. The sewer main alignment would be approximately 2,200 feet in length and the depth would range from 11 to 30 feet below the ground surface. After placement of the sewer alignment, three manholes would be abandoned within the Santa Clara River. These include Manholes 1113, 1114, and local Manhole "A".

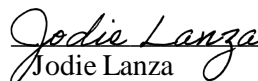

Findings: The project will not have a significant effect on the environment with mitigations. On September 20, 2021, on the basis of the whole record, including the IS/MND and all comments received, the Board of Directors of Santa Clarita Valley Sanitation District made findings that there was no substantial evidence that the project would have a significant effect on the environment, and that this Final IS/MND reflects the independent judgment and analysis of Santa Clarita Valley Sanitation District.

Initial Study: An Initial Study of this project was undertaken and prepared in accordance with the Local Procedures Implementing the California Environmental Quality Act (CEQA) as adopted by the Santa Clarita Valley Sanitation District for the purpose of ascertaining whether this project might have a significant effect on the environment. A copy of the Initial Study is attached hereto and incorporated herein by reference. The Initial Study documents the reasons supporting the above findings.

Mitigation Measures: The project incorporates mitigation measures to avoid potentially significant impacts as described in the attached Initial Study and Mitigation Monitoring and Reporting Program.

Custodian: The Chief Engineer and General Manager, or his designee, shall be the custodian of records for the documents and records of proceedings on which this decision is based. The documents are on file at the Joint Administrative Offices of the District, located at 1955 Workman Mill Road, Whittier, CA 90601.

Date: September 20, 2021

A Draft Initial Study/Mitigated Negative Declaration
--

This page intentionally left blank

SECTION 1.0 INTRODUCTION

Pursuant to the California Environmental Quality Act (CEQA), the potential environmental effects of the proposed Soledad Canyon Relief Trunk Sewer Section 4 Project (hereinafter referred to as the “Project”) have been analyzed in a Draft Initial Study/Mitigated Negative Declaration (IS/MND) (State Clearinghouse No. 2021050473) dated May 2021. The circulated Draft IS/MND is included as Appendix A to this document.

Section 15074(b) of the CEQA Guidelines states that, prior to approving a project, the lead agency must consider the proposed IS/MND together with any comments received during the public review process. The lead agency must adopt the proposed IS/MND, only if it finds on the basis of the whole record before it, that there is no substantial evidence that the project would have a significant effect on the environment and that the IS/MND reflects the lead agency’s independent judgment and analysis. Section 2.0, Response to Comments, includes all letters received during and after the close of the 30-day public review period, as well as the Santa Clarita Valley Sanitation District’s (SCVSD’s) written responses to all comments received. Section 3.0, Errata, includes revisions to the text of the IS/MND either in response to a comment or in order to clarify information.

Section 15074(d) of the CEQA Guidelines states that, when adopting an MND, the lead agency shall adopt a program for reporting on or monitoring the changes that it has either required in the project or made a condition of approval to reduce or avoid significant environmental effects. Section 4.0, Mitigation Monitoring and Reporting Program (MMRP), describes the mitigation program to be implemented by the SCVSD.

1.1 CEQA AND PUBLIC REVIEW OF THE IS/MND

In accordance with Section 15073 of the CEQA Guidelines, a Negative Declaration (ND) or MND must be subject to a 30-day public review period when submitted to the State Clearinghouse for review by state agencies. As such, the Draft IS/MND was made available for public review from Friday, May 21, 2021, through Monday, June 21, 2021 (included as Appendix A of this document). Consistent with Sections 15072(b) and 15072(d) of the CEQA Guidelines, the Notice of Intent to Adopt a Mitigated Negative Declaration (NOI) has been filed with the State Clearinghouse and mailed to the last known name and address of all organizations and individuals who have previously requested such notice in writing, and residences within a 500-foot radius of the Project site. The NOI and associated public review period has also been published in the *Santa Clarita Valley Signal* on Friday, May 21, 2021.

Notices of the availability of the IS/MND for review and comment as well as the environmental documentation are available on LACSD’s website (<https://www.lacsd.org/documents/other/docsreview.asp>) for review.

The SCVSD has reviewed all comments received from agencies, organizations and/or individuals related to the subject IS/MND to determine whether any substantial new environmental issues have been raised. Based on the evaluation in the Draft IS/MND together with all comments received, the SCVSD has determined that no substantial new environmental issues have been raised and that all issues raised in the comments have been adequately addressed in the Draft IS/MND and/or in the Responses to Comments, Errata, and Mitigation Monitoring and Reporting Program. All potential impacts associated with the proposed Project were found to be less than significant with incorporation of relevant mitigation measures, where applicable. Therefore, the proposed Project would not result in any significant impacts, and a Mitigated Negative Declaration in accordance with CEQA is the appropriate environmental document for the proposed Project.

This document, combined with the Draft IS/MND, constitutes the Final IS/MND for the Project. The Draft IS/MND is included as Appendix A to this document. This document includes all public comment letters and SCVSD responses. SCVSD, as the lead agency, has evaluated all substantive comments received on the IS/MND, and has prepared written responses to these comments. There were two comment letters received during the public review period for this IS/MND. In accordance with the CEQA Guidelines (14 *California Code of Regulations* [CCR] §15074[b]), the decision-making body of the lead agency must consider the IS/MND and comments received before approving the project. This document, which will be provided to the SCVSD's Board of Directors, as the decision-making body, has been prepared in accordance with CEQA and represents the independent judgment of the lead agency. The responses are provided in the form of individual responses to the comment letters received. The comment letters are followed immediately by the response to the letters.

1.2 PROJECT DESCRIPTION SUMMARY

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area. The Project would construct a new sewer pipe, consisting of approximately 2,200 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of the alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction MH. The alignment would continue southeasterly through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue southeasterly beneath the Santa Clara River, and then turn easterly approximately 550 feet north of the Metro railroad tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with a minimum diameter of 54-inch steel casing. After placement of the sewer alignment, three MHs would be abandoned within the Santa Clara River. These include MHs 1113, 1114, and local MH "A".

Construction would occur linearly along the alignment, starting at the northern-most end of the alignment at Hidaway Avenue. The rate of work would vary depending on depth of construction activities, soil type, groundwater levels, and construction method. There is a potential for minimal weekend and nighttime work, although the majority of construction activities would occur during normal daylight hours. Construction for the proposed Project alignment is anticipated to begin in March 2022 and last through January 2023, a period of approximately 11 months.

After completion of construction activities, the new sewer would require maintenance. Maintenance of the sewer would initially occur quarterly, but then would occur less often after establishment of the sewer. During maintenance activities, temporary traffic control would be required at Hidaway Avenue; however, traffic would not be detoured, and traffic control measures (e.g., cones, barriers, signs, and flaggers, where applicable) would be used.

SECTION 2.0 RESPONSES TO COMMENTS

2.1 LIST OF RESPONDENTS

The following is a list of persons, organizations, and public agencies that submitted comments on the IS/MND that were received by June 21, 2021 (the end of the public review period). One comment was received during the public review period. An extension was provided by SCVSD to California Department of Fish and Wildlife. The comments have been numbered and responses have been developed with corresponding numbers.

Letter No.	Respondent	Date of Correspondence	Page No.
<u>State Agencies</u>			
1	California Department of Fish and Wildlife (CDFW)	June 23, 2021	2-3
<u>Individuals</u>			
2	Karen Mahoney (K. Mahoney)	May 25, 2021	2-23

2.2 RESPONSES TO ENVIRONMENTAL COMMENTS

This Section includes responses to all substantive environmental issues raised in comments received on the IS/MND. When comments did not address the completeness or adequacy of the environmental documentation or when they did not raise environmental issues, the receipt of the comment is noted; no further response is provided as CEQA does not require a response in these instances.

This Section is formatted so that comment letters are followed immediately by the corresponding response. Revisions have been made to the Draft IS/MND based on input received during the public review period and while preparing the responses to comments on the Draft IS/MND. The revisions requested do not reflect a substantial change to the Project description, nor would any of the changes result in a new impact or intensification of an impact already identified in the Draft IS/MND. The changes in the responses to comments do not raise significant environmental issues. Additions to the Draft IS/MND are shown in **bolded** text and deletions are shown in ~~striketrough~~ text. Additionally, revisions to the Draft MND are shown in Section 3.0, Errata. The revisions shown below do not significantly alter the conclusions in the Draft IS/MND.

**Subject: Mitigated Negative Declaration for the Soledad Canyon Relief Trunk Sewer
Section 4 Project, City of Santa Clarita, Los Angeles County, SCH #2021050473**

Dear Ms. Mikulas:

The California Department of Fish and Wildlife (CDFW) has reviewed the Initial Study/Mitigated Negative Declaration (MND) for the Soledad Canyon Relief Trunk Sewer Section 4 Project (Project) from the Santa Clarita Valley Sanitation District (District; Lead Agency). Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

1

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

2

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq.*). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, § 1900 *et seq.*), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code.

Project Description and Summary

Objective: The District is proposing the construction of a new sewer pipe, consisting of approximately 2,200 feet of 27-inch diameter sewer and all associated connections. The purpose of the new sewer pipe will be to provide hydraulic relief of the existing Soledad Canyon Trunk Sewer Section 4 (SCTS-4). Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area. Construction methods used to install the pipeline under the Santa Clara River would be either a horizontal directional drilling or a micro-tunneling method. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with a minimum diameter of 54-inch steel casing. After placement of the sewer alignment, three manholes (MH) would be abandoned within the Santa Clara River. Potential Access Routes into the Santa Clara River are identified from the north and south banks of the river aligning with the existing sewer line.

3

Location: The proposed Project involves the construction of a sewer main in the City of Santa Clarita. The sewer main alignment would begin at the intersection of Soledad Canyon Road and Hidaway Avenue, continue south on Hidaway Avenue, then slightly southerly within private right-of-way, then south beneath the Santa Clara River. The sewer main alignment would then turn easterly towards the western edge of the Cordova Estates mobile home park to connect to existing City of Santa Clarita local sewers.

Comments and Recommendations

CDFW offers the comments and recommendations below to assist the District in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. CDFW recommends the measures or revisions below be included in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring, and reporting program (Public Resources Code, § 21081.6 and CEQA Guidelines, § 15097).

Project Description and Related Impact Shortcoming Comment #1: Impacts to Unarmored

Threespine Stickleback

Issue: CDFW is concerned that Project-related activities could damage the riparian habitat and water quality of the Santa Clara River. A review of California Natural Diversity Database (CNDDB) shows numerous historical records of unarmored threespine stickleback (*Gasterosteus aculeatus williamsoni*; UTS), a State fully protected species, both upstream and downstream of the Project site in the Santa Clara River.

4

Specific impacts: The Project may result in the loss of streams, associated watershed function, and biological diversity that could directly or indirectly impact the local population of UTS. Ground disturbing activities from grading, filling, water diversions, and dewatering would physically remove or otherwise alter existing streams or their function and associated riparian habitat on the Project site. Downstream areas and associated biological resources beyond the Project development footprint may also be impacted by Project-related releases of sediment and altered watershed effects resulting from Project activities.

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clara Valley Sanitation District
Page 3 of 13
June 23, 2021

Why impacts would occur: Due to the ephemeral nature of sections of the Santa Clara River, sensitive fish species may not be present during site-specific biological surveys. Based on the presence of UTS upstream and downstream of the Project site, on-site riparian habitat for UTS can be considered as at least being transitory as there is potential for UTS to pass through during particularly wet years. During heavy rain events, fish that reside upstream could wash downstream and into or through the Project site. Furthermore, under wet conditions the Project site also has the potential to have fish swim upstream when the Santa Clara River has continuous flowing water.

Evidence impacts would be significant: Except as provided in the Fish and Game Code (e.g., for necessary scientific research), take of any fully protected species is prohibited and cannot be authorized by the Department (Fish and Game Code § 5515 and § 3511). Take is defined in Section 86 of Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Species designated under Fish and Game Code as Fully Protected may not be taken or possessed at any time and no licenses or permits may be issued for their take (Fish & Game Code §§ 3511, 4700, 5050, and 5515). Fully protected status precludes CDFW from authorizing any amount of incidental take or intentional take to meet any project mitigation requirement. Given the legal status of fully protected animals, take avoidance measures should meet very high standards of effectiveness.

4
(cont.)

Recommended Potentially Feasible Mitigation Measure(s)

Mitigation Measure #1: UTS is a fully protected species and therefore cannot have any take authorized. The District should completely avoid working in proximity to any wetted portion of the stream or during any wet/rainy weather conditions. The District should develop a contingency plan to address the potential for active construction coinciding with a rain event where UTS may enter the Project site.

Mitigation Measure #2: CDFW has a broad regulatory authority over streams and associated riparian habitat. Within CDFW, the Conservation Engineering Branch provides technical expertise in fish passage, hydraulic engineering, hydrology, and hydrogeology. CDFW should be consulted early in the design phase of the Project and prior to any Project-related activities to ensure that take will be avoided. The District should work closely with CDFW's Conservation Engineering Branch and Habitat Conservation Planning Branch to effectively prevent any Project-related impacts to fully protected species found on site or in nearby stretches of the Santa Clara River (see Comment #2, Mitigation Measure #2 and Mitigation Measure #3). This may include coordination for Project design to ensure no scour or erosion occurs that could impact UTS.

5

Mitigation Measure #3: CDFW recommends the environmental document include measures to preclude take on the Project site during operations and from the increase in temporary traffic and human presence in relation to construction. The environmental document should view the potential take as a result of habitat modification. If the Project's modification of occupied habitat causes mortality of individuals, then the Project will be considered the cause of the take.

6

Therefore, to avoid take, construction and operation activities should avoid all fully protected species by a distance of no less than the distance that the specific species are known or expected to travel within their home range, based on telemetry, mark-recapture, or other data.

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 4 of 13
June 23, 2021

Comment #2: Impacts to Streams

Issue: As proposed, the Project will involve work within the streambed of the Santa Clara River. According to page 4-24 of the IS/MND, "[a]reas that are under the jurisdiction of the CDFW would be affected by Project activities and would require authorization in the form of a Lake or Streambed Alteration Agreement (LSAA), per Section 1600 of the California *Fish and Game Code*. . . Upon construction conclusion, temporary disturbance areas, measuring 0.25 acre, shall be restored to pre-Project conditions. Permanent impacts would total approximately 0.02 acre."

Specific impacts: The Project may result in the loss of streams and associated watershed function and biological diversity. Horizontal directional drilling beneath the surface of the Santa Clara River streambed could alter flows or absorption rates in the vicinity of the Project site. The placement of equipment directly into the Santa Clara River may diminish on-site and downstream water quality.

Why impacts would occur: Placing heavy construction equipment into the Santa Clara River could decrease water quality on the Project site via leaks of water, oil, or other petroleum products. Downstream streams and associated biological resources beyond the Project development footprint may be impacted by Project-related releases of sediment and altered watershed effects resulting from Project activities.

Horizontal directional drilling has potential to release drilling fluids into the surrounding environment through frac-outs. A frac-out occurs when drilling fluids penetrate fractured bedrock, or seeps and flows into rock or sediment eventually reaching the surface. Because drilling muds consist largely of a bentonite-clay mixture, they may not be classified as toxic or hazardous substances. However, if released into water bodies, bentonite has the potential to adversely impact fish and invertebrates.

7

Evidence impacts would be significant: Fish and Game Code section 1602 requires any person, State or local governmental agency, or public utility to notify CDFW prior to beginning any activity that may do one or more of the following:

- Divert or obstruct the natural flow of any river, stream, or lake;
- Change the bed, channel, or bank of any river, stream, or lake;
- Use material from any river, stream, or lake; or,
- Deposit or dispose of material into any river, stream, or lake.

According to Fish and Game Code Section 5650 (a), it is unlawful to deposit in, permit to pass into, or place where it can pass into the waters of this state any of the following:

- (1) Any petroleum, acid, coal or oil tar, lampblack, aniline, asphalt, bitumen, or residuary product of petroleum, or carbonaceous material or substance.
 - (2) Any refuse, liquid or solid, from any refinery, gas house, tannery, distillery, chemical works, mill, or factory of any kind.
 - (3) Any sawdust, shavings, slabs, or edgings.
 - (4) Any factory refuse, lime, or slag.
 - (5) Any cocculus indicus.
 - (6) Any substance or material deleterious to fish, plant life, mammals, or bird life.
-

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 5 of 13
June 23, 2021

Per Fish and Game Code 5652 (a), "It is unlawful to deposit, permit to pass into, or place where it can pass into the waters of the state, or to abandon, dispose of, or throw away, within 150 feet of the high water mark of the waters of the state, any cans, bottles, garbage, motor vehicle or parts thereof, rubbish, litter, refuse, waste, debris, or the viscera or carcass of any dead mammal, or the carcass of any dead bird."

The Project may substantially adversely affect the existing stream pattern of the Project site through the alteration or diversion of a stream, which absent specific mitigation, could result in substantial erosion or siltation on site or off site of the Project. Debris, soil, silt, sawdust, rubbish, raw cement/concrete or washings thereof, asphalt, paint or other coating material, oil or other petroleum products, or any other substances which could be hazardous or deleterious to aquatic life, wildlife, or riparian habitat resulting from Project related activities may enter the stream.

7
(cont.)

Drilling beneath the streambed, placing equipment into the riparian area, and introducing artificial structures to the bed, bank, or channel of a stream has the potential to alter flows and result in scouring of a streambed. Scouring during and after storm events could potentially lead to shifting or exposure of Project components, such as pipes or manholes, that may further alter the shape and flows of the stream and diminish downstream water quality. In addition, deleterious materials may contaminate the Santa Clara River due to frac-out.

Recommended Potentially Feasible Mitigation Measure(s)

Mitigation Measure #1: The Project will result in the alteration of Santa Clara River, which would be subject to notification for a LSA Agreement pursuant under Fish and Game Code, section 1600 *et seq.* The Project applicant (or "entity") must provide notification to CDFW pursuant to Fish and Game Code, section 1600 *et seq.* Based on this notification and other information, CDFW determines whether an LSA Agreement with the applicant is required prior to conducting the proposed activities. Please visit CDFW's [Lake and Streambed Alteration Program](#) webpage to for information about LSA Notification and online submittal through the Environmental Permit Information Management System (EPIMS) Permitting Portal (CDFW 2021a). LSA Notification should occur prior to the issuance of a grading permit.

8

Mitigation Measure #2: The LSA Notification should include a hydrology report to evaluate whether altering streams within the Project's development, grading, and vegetation clearing areas could impair headwater streams where there is hydrological connectivity. The hydrology report should include a hydrological evaluation of the 100-year storm event to provide information on how water and sediment is conveyed through the Project area. CDFW requests a map showing features potentially subject to CDFW's broad regulatory authority over streams.

9

Mitigation Measure #3: A scour analysis should be conducted to determine the depth of scour potential. The sewer line should be buried below that to avoid the sewer line from eventually becoming exposed. The scour analysis should demonstrate that stream banks and the streambed would not see increased erosion or scouring as a result of the placement of artificial structures or Project equipment. The scour analysis should calculate scour depth and include the potential for uplifting or shifting of Project components that could require routine maintenance in the future. Additionally, the scour analysis should assess the 100, 50, 25, 10, 5, and 2-year frequency flood events to evaluate existing and proposed conditions and erosion/scour potential.

10

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 6 of 13
June 23, 2021

Mitigation Measure #4: The District should develop a frac-out contingency plan. The frac-out plan should establish operational procedures and responsibilities for the prevention, containment, and clean-up of frac-outs associated with proposed horizontal directional drilling. 11

Comment #3: Impacts to Fremont Cottonwood

Issue: Exhibit 4-4: Tree Location in the IS/MND indicates that there are roughly 12 Fremont cottonwood trees (*Populus fremontii*) that may be impacted by Project-related activities. As shown in Exhibit 4-4, 11 of those trees are located along the Potential Access Routes, and one tree is directly in the alignment of the proposed replacement pipeline. CDFW considers all subcategories of Fremont cottonwood as a sensitive natural vegetation community (CDFWb 2021) and classified by California Native Plant Society (CNPS) with a rarity ranking of S3.2 (CNPS 2021).

Specific impact: The proposed pipeline alignment is expected to pass directly beneath an existing Fremont cottonwood tree. Rooting depths in mature stands have been found to range from 9.8 feet to 16.4 feet (Baatne et. Al 1996). Section 3.2 of the IS/MND states that the "depth of the sewer would range from 11 feet to 30 feet below the ground surface". As proposed, Project drilling could potentially impact the root zone of the Fremont cottonwoods found on site. In addition, Proposed Access Routes for worker access into the Project site pass through on-site vegetation and could potentially occur within the driplines of sensitive tree species (e.g., Fremont cottonwood). These Proposed Access Routes could lead to trampling of vegetation by workers or ongoing vegetation clearance to maintain a path.

Why impact would occur: Project implementation includes horizontal directional drilling, grading, vegetation clearing for construction, equipment/worker access, equipment staging areas, and other activities that may result in direct mortality, population declines, or local extirpation of sensitive plant species. Working in the immediate vicinity of trees, either within the dripline or directly beneath, can directly impact the root zone of a tree. 12

Evidence impact would be significant: CDFW considers plant communities, alliances, and associations with a statewide ranking of S1, S2, S3 and S4 as sensitive and declining at the local and regional level (Sawyer et al. 2008). An S3 ranking indicates there are 21-80 occurrences of this community in existence in California, S2 has 6-20 occurrences, and S1 has less than 6 occurrences. Fremont cottonwoods have a [CNPS rarity ranking](#) of 3.2, meaning that they are "[m]oderately threatened in California (20-80 percent of occurrences threatened/moderate degree of immediacy of threat)" (CNPS 2021).

Impacts to special status plant species should be considered significant under CEQA unless they are clearly mitigated below a level of significance. Inadequate avoidance, minimization, and mitigation measures for impacts to these sensitive plant species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or United States Fish and Wildlife Service (USFWS).

Recommended Potentially Feasible Mitigation Measure(s)

Mitigation Measure #1: CDFW recommends avoiding any sensitive natural communities found on the Project. If avoidance is not feasible, CDFW recommends mitigating at a ratio of no less than 5:1 for impacts to S3 ranked communities. This follows the recommendations in Table 5 of the [Los Angeles County Significant Ecological Areas \(SEA\) Ordinance Implementation Guide](#), which applies to project located in the Santa Clara River SEA (LACDRP 2021). The recommended ratio is for the acreage as well as the individual plants that comprise each unique community. All revegetation/restoration areas that will serve as mitigation should include preparation of a restoration plan, to be approved by USFWS and CDFW prior to any ground disturbance. The restoration plan should include restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals; and, a funding mechanism to assure for in perpetuity management and reporting. Areas proposed as mitigation should have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (Assembly Bill 1094; Government Code, §§ 65965-65968). 13

Recommendation #1: In 2007, the State Legislature required CDFW to develop and maintain a vegetation mapping standard for the state (Fish & Game Code, § 1940). This standard complies with the National Vegetation Classification System, which utilizes alliance and association-based classification of unique vegetation stands. CDFW utilizes vegetation descriptions found in the Manual of California Vegetation (MCV), found online at <http://vegetation.cnps.org/>. To determine the rarity ranking of vegetation communities on the Project site, the MCV alliance/association community names should be provided as CDFW only tracks rare natural communities using this classification system. 14

Additional Comments & Recommendations Comment #4: Nesting Birds

Mitigation Measure MM-BIO-3 of the IS/MND requires the following: "In general, the Biologist shall designate a buffer of 50 to 200 feet for common nesting birds and 200 to 500 feet for special status nesting birds and nesting raptors." CDFW has concerns that applying avoidance buffers in the lower ends of the ranges in this mitigation measure may not sufficiently reduce impacts to nesting birds to a level below a threshold of significance.

To protect nesting birds that may occur on site or adjacent to the Project boundary, CDFW recommends that no construction should occur from February 15 (January 1 for raptors) through August 31 unless a qualified biologist completes a survey for nesting bird activity within a 500-foot radius of the construction site. Based on local conditions, the nesting bird surveys should be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. CDFW recommends the Lead Agency require surveys be conducted by a qualified biologist no more than 7 days prior to the beginning of any Project-related activity likely to impact raptors and migratory songbirds, for the entire Project site. If Project activities are delayed or suspended for more than 7 days during the breeding season, repeat the surveys. If nesting raptors and migratory songbirds are identified, CDFW recommends the following minimum no-disturbance buffers be implemented: 300 feet around passerine (perching birds and songbirds) nests, 500 feet around non-listed raptor nests and 0.5 mile around listed bird nests. These buffers should be maintained until the breeding season has ended or until a qualified biologist 15

has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival.	15 (cont.)
---	---------------

Filing Fees

The Project, as proposed, could have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fees required for the underlying project approval to be operative, vested, and final (Cal. Code Regs, tit. 14, § 753.5; Fish & Game Code, § 711.4; Pub. Resources Code, § 21089).	16
--	----

Conclusion

We appreciate the opportunity to comment on the Project to assist the Santa Clarita Sanitation District in adequately analyzing and minimizing/mitigating impacts to biological resources. CDFW requests an opportunity to review and comment on any response that District has to our comments and to receive notification of any forthcoming hearing date(s) for the Project. If you have any questions or comments regarding this letter, please contact Andrew Valand, Environmental Scientist, at Andrew.Valand@wildlife.ca.gov or (562) 342-2142.	17

GAVIN NEWSOM, Governor
CHARLTON H. BONHAM, Director

CDFW recommends the following language to be incorporated into a future environmental document for the Project.

Biological Resources				
	Mitigation Measure	Timing	Responsible Party	
MM-BIO-1 – Unarmored Threespine Stickleback as a Fully Protected Species	UTS is a fully protected species and therefore cannot have any take authorized. The District shall completely avoid working in proximity to any wetted portion of the stream or during any wet/rainy weather conditions. The District shall develop a contingency plan to address the potential for active construction coinciding with a rain event where UTS may enter the Project site.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	18
MM-BIO-2 – Unarmored Threespine Stickleback as a Fully Protected Species – Coordination	CDFW shall be consulted early in the design phase of the Project and prior to any Project-related activities to ensure that take will be avoided. The District shall work closely with CDFW's Conservation Engineering Branch and Habitat Conservation Planning Branch to effectively prevent any Project-related impacts to fully protected species found on site or in nearby stretches of the Santa Clara River. This may include coordination for Project design to ensure no scour or erosion occurs that could impact UTS.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	19

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 11 of 13
June 23, 2021

MM-BIO-3 – Avoidance of take of a Fully- Protected Species	The environmental document shall include measures to preclude take on the Project site during operations and from the increase in temporary traffic and human presence in relation to construction. The environmental document shall view the potential take as a result of habitat modification. If the Project's modification of occupied habitat causes mortality of individuals, then the Project will be considered the cause of the take. Therefore, to avoid take, construction and operation activities shall avoid all fully protected species by a distance of no less than the distance that the specific species are known or expected to travel within their home range, based on telemetry, mark-recapture, or other data.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	20
MM-BIO-4 – Notification for a Lake & Streambed Alteration Agreement	The Project applicant (or "entity") must provide notification to CDFW pursuant to Fish and Game Code, section 1600 <i>et seq.</i> LSA Notification shall occur prior to the issuance of a grading permit.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	21
MM-BIO-5 – Hydrology Report	The LSA Notification shall include a hydrology report to evaluate whether altering streams within the Project's development, grading, and vegetation clearing areas could impair headwater streams where there is hydrological connectivity. The hydrology report shall include a hydrological evaluation of the 100-year storm event to provide information on how water and sediment is conveyed through the Project area. A map showing features potentially subject to CDFW's broad regulatory authority over streams shall be provided to CDFW.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	22
MM-BIO-6 – Scour Analysis	A scour analysis shall be conducted to determine the depth of scour potential and the sewer line must be buried below that to avoid the sewer line from eventually becoming exposed. The scour analysis shall demonstrate that stream banks and the streambed	Prior to Project- related activities	Santa Clarita Valley Sanitation District	23

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 12 of 13
June 23, 2021

	would not see increased erosion or scouring as a result of the placement of artificial structures or Project equipment. The scour analysis shall calculate scour depth and include the potential for uplifting or shifting of Project components that could require routine maintenance in the future. Additionally, the scour analysis shall assess the 100, 50, 25, 10, 5, and 2-year frequency flood events to evaluate existing and proposed conditions and erosion/scour potential.			23 (cont.)
MM-BIO-7 – Frac-out Plan	The District shall develop a frac-out contingency plan. The frac-out plan shall establish operational procedures and responsibilities for the prevention, containment, and clean-up of frac-outs associated with proposed horizontal directional drilling.	Prior to Project- related activities	Santa Clarita Valley Sanitation District	24
MM-BIO-8 – Impacts to Sensitive Natural Communities	CDFW recommends avoiding any sensitive natural communities found on the Project. If avoidance is not feasible, mitigate at a ratio of no less than 5:1 for impacts to S3 ranked communities. This ratio is for the acreage and the individual plants that comprise each unique community. This follows the recommendations in Table 5 of the Los Angeles County Significant Ecological Areas (SEA) Ordinance Implementation Guide , which applies to project located in the Santa Clara River SEA (LACDRP 2021). The recommended ratio is for the acreage and the individual plants that comprise each unique community. All revegetation/restoration areas that will serve as mitigation shall include preparation of a restoration plan, to be approved by USFWS and CDFW prior to any ground disturbance. The restoration plan shall include restoration and monitoring methods; annual success criteria; contingency actions should success criteria not be met; long-term management and maintenance goals; and, a funding mechanism to assure for in perpetuity management and reporting. Areas proposed as mitigation shall have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (Assembly Bill 1094; Government Code, §§ 65965-65968).	Prior to Project- related activities	Santa Clarita Valley Sanitation District	25

DocuSign Envelope ID: 4617D71C-97C4-4D97-87F5-4FDAE9E9A9FE

Ms. Mischelle Mikulas
Santa Clarita Valley Sanitation District
Page 13 of 13
June 23, 2021

MM-BIO-9 – Nesting Bird Avoidance	To protect nesting birds that may occur on site or adjacent to the Project boundary, no construction shall occur from February 15 (January 1 for raptors) through August 31 unless a qualified biologist completes a survey for nesting bird activity within a 500-foot radius of the construction site. Based on local conditions, the nesting bird surveys shall be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. The Lead Agency shall require surveys be conducted by a qualified biologist no more than 7 days prior to the beginning of any Project-related activity likely to impact raptors and migratory songbirds, for the entire Project site. If Project activities are delayed or suspended for more than 7 days during the breeding season, repeat the surveys. If nesting raptors and migratory songbirds are identified, the following minimum no-disturbance buffers shall be implemented: 300 feet around active passerine (perching birds and songbirds) nests, 500 feet around active non-listed raptor nests and 0.5 mile around active listed bird nests. These buffers shall be maintained until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival.	Prior to and during Project-related activities	Santa Clarita Valley Sanitation District	26
Recommendations				
REC-10 – Vegetation Classification	To determine the rarity ranking of vegetation communities on the Project site, the MCV alliance/association community names should be provided as CDFW only tracks rare natural communities using this classification system.	Prior to Project-related activities	Santa Clarita Valley Sanitation District	27

LETTER 1 California Department of Fish and Wildlife (CDFW)
Erinn Wilson-Olgin, Environmental Program Manager I
June 23, 2021

Response to Letter 1

1. The comment provides an introduction to the letter. No response is required.
2. The comment explains CDFW's role as California's Trustee Agency and its role as Responsible Agency under CEQA. No response is required.
3. The comment provides a brief Project description and summary. No response is required.
4. The commenter expressed concern that the Project may result in the loss of streams, associated watershed function, and biological diversity that could directly or indirectly impact the local population of unarmored threespine stickleback. It should be noted that SCVSD is not seeking authorization for take of unarmored threespine stickleback. The nature of the Project work requires that it be conducted during dry conditions. No wetted areas of the Santa Clara River would be disturbed as a result of the Project. In addition, due to the short duration of activities in the River, avoiding rain events is expected to be feasible. Project activities within the riverbed are limited to the abandonment of the three manholes. Each manhole would require 1 to 2 days to complete construction. In an effort to ensure complete avoidance of wetted areas and river flows, MM BIO-2, within Section 4.IV, Biological Resources (page 4-28) has been modified to add the following, before the last paragraph:

No construction within the CDFW jurisdictional limits of the streambed shall commence without a five (5) day clear weather forecast. For less than 50% chance of rain, and if a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed, then construction work within the CDFW jurisdictional limits, in accordance with the project description, may commence. For greater than or equal to 50% chance of rain of 1.0 inch or more per National Weather Service forecast website www.wrh.noaa.gov/forecasts/wxtables, the commencement of construction activities within the CDFW jurisdictional limits of the streambed will be delayed until the rain event has ceased and a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed.

Additionally, text has been revised within the Final MND to the last sentence of the first paragraph on page 4-25, to include the requirements of MM BIO-2.

Additionally, to ensure complete avoidance of wetted areas and river flows, MM BIO-2 requires that no construction within CDFW jurisdictional limits shall commence without a five-day clear weather forecast.

With the above additions to the Final MND, MM BIO-2 shall further ensure that the Project shall have no direct impact on unarmored threespine stickleback, due to lack of potential for occurrence during dry periods. In addition, the Project activities within the streambed are not expected to alter the terrain or stream contours to any measurable extent that could affect future flows through the site or further downstream. Therefore, the Project site's potential to support unarmored threespine stickleback during future flows would remain the same as the pre-Project condition.

5. The commenter's statement that CDFW has broad regulatory authority over streams and riparian habitat is acknowledged. SCVSD shall submit an application describing the Project's potential effects on regulated resources and consult with CDFW through the permitting process. As detailed on page 4-27, the Draft MND included a mitigation measure, MM BIO-2, which describes the required process. SCVSD looks forward to further coordination with CDFW to ensure Project impacts are avoided, minimized, and mitigated as necessary. In addition, no take authorization is expected to be necessary (see Response to Comment 4 above for additional discussion).
6. The commenter recommends that the environmental document include measures to preclude take on the Project site during operations and from the increase in temporary traffic and human presence in relation to construction. Please see Response to Comment 4 above. Due to complete avoidance of wetted areas or stream flows, unarmored threespine stickleback will have no potential to occur within disturbance areas. However, to provide further assurance, the following **bolded** language has been added to the end of MM BIO-1, in Section 4.IV, page 4-27.

In addition, to avoid take, construction and operation activities shall avoid all fully protected species by a distance of no less than the distance that the specific species are known or expected to travel within their home range, based on telemetry, mark-recapture, or other data.

Additionally, text has been revised within the Final MND to follow the last sentence of the first paragraph on page 4-25, to include the requirements of MM BIO-1.

However, to provide further assurance that there would be no impact to unarmored threespine stickleback, MM BIO-1 requires that all fully protected species be avoided by a distance of no less than the distance that the specific species are known or expected to travel within their home range.

7. The potential effects of construction activities within the river are acknowledged and the CDFW jurisdiction over the streambed and habitat is understood.
8. SCVSD shall submit a notification for an LSA Agreement and consult with CDFW through the permitting process, as detailed in MM BIO-2 of the IS/MND. SCVSD looks forward to further coordination with CDFW to ensure Project impacts are avoided, minimized, and mitigated as necessary.
9. The LSA notification shall include a scour analysis report that was completed in June 2020. The scour analysis report will also include a hydrology section that contains existing flow data and calculated hydrographs for the 10-, 50-, and 100-yr storm events. Maps of CDFW jurisdictional features within and adjacent to the Project area shall be included within the Notification as well.
10. Pacific Advanced Civil Engineering, Inc. (PACE) conducted an assessment to evaluate and determine the most appropriate return interval for the scour analysis study for the Project. The assessment determined that analysis of scour for the 50-year storm event added to the scour caused by long-term bed elevation change would be most effective. Together, the additive components reflect the largest scour conservatively predicted at the Project site. The approach provides a more conservative estimate than the various requested events. In addition, typically, 10-, 5-, and 2- year storms are only evaluated if the proposed structure will be above the ground surface. The analyses using smaller storm events do not provide beneficial information for below ground surface structures. The assessment letter and the Scour Analysis Report will be included with the LSA Notification materials.

11. SCVSD shall develop a frac-out contingency plan. The frac-out plan shall establish operational procedures and responsibilities for the prevention, containment, and clean-up of frac-outs associated with proposed horizontal directional drilling. The following **bolded** language has been added to MM BIO-2, in Section 4.IV, Biological Resources (page 4-28). It is noted that additional language has also been added to MM BIO-2 in Response to Comment 13, below, after the last sentence of MM BIO-2.

A frac-out contingency plan shall be developed and shall include, at a minimum, operational procedures and responsibilities for the prevention, containment, and clean-up of frac-outs associated with proposed Project horizontal directional drilling.

12. The summary of potential effects of construction activities on trees, vegetation, and rare plants are acknowledged and appreciated.
13. Given that complete avoidance is not feasible, the Project accepts the recommended mitigation ratio of no less than 5:1 for impacts for S3 ranked communities. This ratio is for the acreage and the individual plants that comprise each unique community. This follows the recommendations in Table 5 of the Los Angeles County Significant Ecological Areas (SEA) Ordinance Implementation Guide, which applies to projects located in the Santa Clara River SEA within unincorporated Los Angeles County. The Project site is located entirely within the City of Santa Clarita which recognizes the County-designated SEAs in general. All revegetation/restoration areas that will serve as mitigation shall include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. USFWS is not included as a reviewer of the habitat restoration plan due to a lack of a regulatory nexus for such a process. The restoration plan shall include restoration and monitoring methods; annual success criteria; contingency actions if success criteria are not be met; long-term management and maintenance goals; and, a funding mechanism to assure for in perpetuity management and reporting. Areas proposed as mitigation shall have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands (Assembly Bill 1094; Government Code, §§ 65965-65968).

The following language has been added to MM BIO-2 in the Final MND in Section 4.IV, Biological Resources (page 4-28), as shown in **bold**, after the last paragraph. It is noted that additional language has also been added to MM BIO-2 in Response to Comment 11, above (bolded).

In addition, impacts to S3 ranked vegetation communities shall be mitigated at a ratio of no less than 5:1 for the acreage and the individual plants that comprise each unique community. Disturbed and degraded S3 ranked vegetation types shall have a commensurate ratio reduction to no less than 3:1. All revegetation/restoration areas that will serve as mitigation shall include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. The restoration plan shall include restoration and monitoring methods; annual success criteria; contingency actions if success criteria are not be met; long-term management and maintenance goals; and, a funding mechanism to assure for in perpetuity management and reporting. Areas proposed as mitigation shall have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands.

14. The Final MND has been modified to include the Manual of California Vegetation (MCV) classification of the vegetation types on site. Text has been included within Section 4.IV, Biological Resources, page 4-20, to include the following in **bold**:

Vegetation types stated above would have the following conversion to Manual of California Vegetation Alliance classification system: disturbed cottonwood - willow woodland converts to disturbed *Populus fremontii* - *Salix laevigata* woodland; disturbed California buckwheat scrub converts to disturbed *Eriogonum fasciculatum* scrub; great basin sage scrub - fourwing saltbush scrub converts to *Artemisia tridentata* - *Atriplex canescens* scrub; disturbed scale broom scrub converts to disturbed *Lepidospartum squamatum* scrub; and disturbed open scale broom scrub converts to disturbed open *Lepidospartum squamatum* scrub (CNPS 2021).

Additionally, text on page 4-21, under the heading "Special Status Vegetation Types" has been revised to add the following text, in **bold**:

The CDFW provides a list of vegetation Alliances, Associations, and Special Stands that are considered "Sensitive Natural Communities" based on their rarity and threat. **In this list, a rank of G1 to G3 (globally vulnerable or vulnerable across its entire range) or S1 to S3 (vulnerable at the state level even though it may be more secure elsewhere) are considered sensitive.** The following vegetation communities are considered special status per CDFW: scale broom scrub (***Lepidospartum squamatum* scrub (G3S3)**), and Fremont cottonwood – willow woodland (***Populus fremontii* - *Salix laevigata* woodland (G2S3)**). Disturbed open scale broom scrub and disturbed Fremont cottonwood – willow woodland occur in the Survey Area. The vegetation types found in the Survey Area are moderately to highly disturbed and contain a high proportion of non-native species typical of degraded habitat, which lessens their biological habitat value.

Page 6-1 within Section 6.0, References, has been revised to include the following reference, in bold:

California Native Plant Society (CNPS). 2021 (July 21, 2021, date accessed). *A Manual of California Vegetation, Online Edition*. Sacramento, CA: CNPS. <http://www.cnps.org/cnps/vegetation/>.

15. The commenter-suggested mitigation to minimize impacts to nesting birds shall be used in place of the Draft MND mitigation measure (MM BIO-3). MM BIO-3, on page 4-28 of Section 4.IV of the Final MND, has been revised as follows with ~~striketrough~~ and in **bold**:

MM BIO-3 ~~To ensure compliance with Fish and Game Code sections 3503, 3503.5, and 3513, no direct impacts shall occur to any nesting birds, their eggs, chicks, or nests. In order to avoid impacts on nesting birds, vegetation removal should be scheduled between September 16 and January 31, which is outside the peak nesting season. If vegetation removal must occur during the peak nesting season (i.e., February 1 to September 15), a pre-construction nesting bird survey shall be conducted by a qualified Biologist within three days prior to vegetation removal activities.~~

~~If the Biologist finds an active nest within or adjacent to the construction area, the Biologist shall identify an appropriate protective buffer zone around the nest depending on the sensitivity of the species, the nature of the construction activity, and the amount of existing disturbance in the vicinity. In general, the Biologist shall designate a buffer of 50 to 200 feet for common nesting birds and 200 to 500 feet for special status nesting birds and nesting raptors. No construction activities shall be allowed within the buffer until nesting activity has ended to ensure compliance with California Fish and Game Code. Avoidance and minimization measures shall be maintained until the young have fledged, and no further nesting is detected.~~ **To protect nesting birds that may occur on or adjacent to the Project, no construction shall occur from February 15 (January 1 for raptors) through August 31 unless a qualified biologist completes a survey for nesting bird activity within a 500- foot radius of the Project site. Based on local conditions, the nesting bird surveys shall be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. Surveys shall be conducted by a qualified biologist no more than 7 days prior to the beginning of any Project-related activity likely to impact raptors and migratory songbirds, for the entire Project site. If Project activities are delayed or suspended for more than 7 days during the breeding season, the survey shall be repeated. If nesting raptors and migratory songbirds are identified, the following minimum no-disturbance buffers shall be implemented: 300 feet around active passerine (perching birds and songbirds) nests, 500 feet around active non-listed raptor nests and 0.5 mile around active listed bird nests. These buffers shall be maintained until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival. If reduced buffers are necessary, a request will be sent to CDFW with suggested reasoning and modified buffer. Modified buffers will not be employed without CDFW authorization.**

16. SCVSD acknowledges the summary in regarding to filing fees. No response is required.
17. CDFW comments are appreciated and CDFW will be notified of any forthcoming hearings.
18. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Responses to Comments 4 and 6 above.
19. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 5 above.
20. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 6 above.
21. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 8 above.
22. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 9 above.
23. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Responses to Comments 9 and 10 above.

24. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 11 above.
25. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 13 above.
26. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 15 above.
27. The suggested language has been incorporated and modified to appropriately fit into the Final MND as described in Response to Comment 14 above.

From: Karen Mahoney

To: Mikulas, Mischelle <mmikulas@lacsds.org>
Subject: Notice

Hello, Mischelle,

I received a "Notice of Intent to Adopt Mitigated Negative Declaration" a few days ago. The notice is dated May 21st, 2021, and it states ... "any comments concerning the proposed Mitigated Negative Declaration must be received by the district by June 21st 2021, in order to be considered prior to the district for its final determination on the project". If that is the case, why did work begin on the project TODAY?!

1

Hidaway Ave. is a 1 block long cul-de-sac with a 224-unit townhome complex on one side of the street, a large apartment complex on the other side, and a few businesses at the end. Parking is at a premium on this very short street for the residents of the apartments and the townhome complex. There is no other street available for parking! I understand that work may be necessary, but have any measures been taken to address the parking situation for the residents in the area? Do both sides of the street HAVE to be blocked off every day? And just how long is this work going to take? None of this was mentioned in the notice we received. It seems more notice, and more information, should have been forthcoming.

LETTER 2 Karen Mahoney (K. Mahoney)
May 25, 2021

Response to Letter 2

1. The commenter expresses concern on construction timing and asks why the project had already begun. It should be noted that the proposed Project has not yet begun. The construction work witnessed by the commenter is unrelated to the proposed Project.
2. The commenter expresses concern for parking restrictions on Hidaway Avenue during Project construction. As stated in Section 3.3, Construction Activities and Project Components, of the Draft IS/MND, road closure is not anticipated during construction of the Project, but there may be parking restrictions on nearby roadways to allow for adequate traffic flow. As part of the proposed Project, a Traffic Control Plan would be submitted to the City of Santa Clarita for approval prior to construction of the Project, as stated in Section 3.4, Other Approvals (page 3-4) of the Draft IS/MND. The Traffic Control Plan would maintain vehicular access to the community. Portions of Hidaway Avenue may have parking restrictions during construction activities within Hidaway Avenue, which would include demolition, trenching/pipe laying, and repaving of portions of Hidaway Avenue. Specifically, demolition work in Hidaway Avenue is expected to begin in June 2022 for a total of 5 weeks. Parking may be restricted in Hidaway Avenue through the duration of the project, but the details would be finalized upon approval of the Traffic Control Plan. Additionally, all parking lanes outside of the work area would be maintained. Further information on scheduling and traffic control will be available once the Traffic Control Plan is approved by the City. The anticipated construction schedule for the Project is detailed in Table 3-1, Construction Schedule Estimates, of Section 3.3 of the Draft IS/MND, which includes specific details on construction within and near Hidaway Avenue.

This page intentionally left blank

SECTION 3.0 ERRATA

The following text changes are made to the Initial Study/Mitigated Negative Declaration and incorporated as part of the Final IS/MND. These changes further substantiate conclusions and/or clarify aspects of the previously circulated document. None of these changes reflect a determination of a new or more significant environmental impact than disclosed in the Draft IS/MND. Pursuant to Section 15073.5 of the CEQA Guidelines, no changes are included in this Errata that would constitute a “substantial revision” to the Draft IS/MND or otherwise require recirculation of the Draft IS/MND. Additionally, pursuant to Section 15074.1 of the CEQA Guidelines, the revisions to mitigation measures set forth below do not constitute deletions or substitutions of mitigation measures that would require a public hearing. Changes to the text are noted with **bold** (for added text) or ~~strikeout~~ type (for deleted text).

Section 4.IV Biological Resources, page 4-20

The Draft IS/MND has been modified to include the Manual of California Vegetation (MCV) classification of the vegetation types on site. Text has been added following the last sentence under the “Existing Conditions” header to include the following, shown in **bold**:

Vegetation types stated above would have the following conversion to Manual of California Vegetation Alliance classification system: disturbed cottonwood - willow woodland converts to disturbed *Populus fremontii* - *Salix laevigata* woodland; disturbed California buckwheat scrub converts to disturbed *Eriogonum fasciculatum* scrub; great basin sage scrub - fourwing saltbush scrub converts to *Artemisia tridentata* - *Atriplex canescens* scrub; disturbed scale broom scrub converts to disturbed *Lepidospartum squamatum* scrub; and disturbed open scale broom scrub converts to disturbed open *Lepidospartum squamatum* scrub (CNPS 2021).

Additionally, under the heading “Special Status Vegetation Types” text has been revised to add the following, in **bold**:

The CDFW provides a list of vegetation Alliances, Associations, and Special Stands that are considered “Sensitive Natural Communities” based on their rarity and threat. **In this list, a rank of G1 to G3 (globally vulnerable or vulnerable across its entire range) or S1 to S3 (vulnerable at the state level even though it may be more secure elsewhere) are considered sensitive.** The following vegetation communities are considered special status per CDFW: scale broom scrub (***Lepidospartum squamatum* scrub (G3S3)**), and Fremont cottonwood – willow woodland (***Populus fremontii* - *Salix laevigata* woodland (G2S3)**). Disturbed open scale broom scrub and disturbed Fremont cottonwood – willow woodland occur in the Survey Area. The vegetation types found in the Survey Area are moderately to highly disturbed and contain a high proportion of non-native species typical of degraded habitat, which lessens their biological habitat value.

Section 4.IV Biological Resources, page 4-25

The Draft IS/MND has been modified to include the following text, at the end of the first paragraph on page 4-25, under Threshold 4.IV(d), to include references to MM BIO-1 and MM BIO-2.

Given the lack of perennial flow, it is not expected to support fish species. As such, migratory fish would not be impacted by Project implementation. Temporary construction activities are not expected to adversely affect wildlife beyond ambient

conditions (i.e., regular vehicular traffic within developed areas). These impacts would be considered less than significant. **However, to provide further assurance that there would be no impacts to unarmored threespine stickleback, MM BIO-1 requires that all fully protected species be avoided by a distance of no less than the distance that the specific species are known or expected to travel with their home range. Additionally, to ensure complete avoidance of wetted areas and river flows, MM BIO-2 requires that no construction within CDFW jurisdictional limits shall commence without a five-day clear weather forecast.**

Section 4.IV Biological Resources, page 4-27

The following additions have been made to MM BIO-1, shown in **bold**.

MM BIO-1 Prior to the initiation of any construction-related activity involving the disturbance and/or removal of potentially suitable wintering or nesting burrowing owl habitat, the area shall be surveyed by a qualified Biologist. The impact area plus a 500-foot buffer shall be surveyed. If no potentially suitable burrowing owl burrows are detected, no additional action is required. However, if potentially suitable burrows are located in the survey area, a 500-foot no-work buffer shall be erected and remain in effect until a qualified Biologist determines that breeding or wintering is no longer occurring. **In addition, to avoid take, construction and operation activities shall avoid all fully protected species by a distance of no less than the distance that the specific species are known or expected to travel within their home range, based on telemetry, mark-recapture, or other data.**

Section 4.IV Biological Resources, page 4-28

The following **bolded** language has been added to MM BIO-2.

MM BIO-2 Prior to the construction of any phase or component of the proposed Project that involves impacting or modifying any jurisdictional resources, permits from the USACE, the LARWQCB, and the CDFW shall be required. Both permanent and temporary (construction-related) impacts are regulated and would therefore trigger the need for permits.

Discharges to surface waters (WOTUS) on a temporary or permanent basis require authorization through the issuance of a Section 404 permit from the USACE, pursuant to Section 404 of the Clean Water Act. Project activities that would require a permit from the USACE include excavation in the Santa Clara River for airlining activities and any placement of soil in the riverbed. All impacts related to this activity are expected to be temporary. Operating construction equipment in the Santa Clara River would also require a USACE permit.

The LARWQCB also asserts jurisdiction over all WOTUS and a Water Quality Certification pursuant to Section 401 of the Clean Water Act is required prior to issuance of the USACE Section 404 permit. In addition to WOTUS, the LARWQCB regulates discharges to “waters of the State” over which the federal government does not assert jurisdiction. The State Water Resources Control Board’s Order No. 2004-0004-DWQ, “Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to

Waters Deemed by the U.S. Army Corps of Engineers to be Outside of Federal Jurisdiction”, requires that any person discharging waste which could affect the quality of the “waters of the State” must file a report of waste discharge pursuant to Section 13260(a) of the California Water Code (Water Code). Section 13263(a) of the Water Code requires the RWQCB to issue Waste Discharge Requirements to protect the beneficial uses and water quality objectives of the relevant Water Quality Control Plan. Implementation of the Waste Discharge Requirements will ensure compliance with the objectives of the Water Quality Control Plan for the Los Angeles Region. The Project Proponent is required to receive authorization for impacts to groundwater resources via a Water Quality Certification or separate Waste Discharge Requirements.

No construction within the CDFW jurisdictional limits of the streambed shall commence without a five (5) day clear weather forecast. For less than 50% chance of rain, and if a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed, then construction work within the CDFW jurisdictional limits, in accordance with the project description, may commence. For greater than or equal to 50% chance of rain of 1.0 inch or more per National Weather Service forecast website www.wrh.noaa.gov/forecasts/wxtables, the commencement of construction activities within the CDFW jurisdictional limits of the streambed will be delayed until the rain event has ceased and a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed.

Project construction may impact two Fremont cottonwood trees during airlining activities. Prior to initiating construction activities that would impact or modify areas under the jurisdiction of the CDFW, including native trees in the Santa Clara River, a Lake or Streambed Alteration Agreement (LSAA) shall be issued by the CDFW, pursuant to Section 1600 of the California *Fish and Game Code*. Areas under the jurisdiction of the CDFW include the streambed or streambank of the Santa Clara River, along with all associated riparian vegetation. Project activities that would require an LSAA would include all excavation activities in the Santa Clara River streambed and floodplain, installation of access ramps, removal of native tree species in the Santa Clara River, or impacts to native vegetation that would result from operating construction equipment in the Santa Clara River area. Tree replacement to mitigate potential impacts to two Fremont cottonwood trees would be negotiated as part of the LSAA issuance. The Project shall adhere with conditions set forth within the above-mentioned permits, and at a minimum, return excavated areas to pre-Project conditions. **A frac-out contingency plan shall be developed and shall include, at a minimum, operational procedures and responsibilities for the prevention, containment, and clean-up of frac-outs associated with proposed Project horizontal directional drilling.**

In addition, impacts to S3 ranked vegetation communities shall be mitigated at a ratio of no less than 5:1 for the acreage and the individual plants that comprise each unique community. Disturbed and degraded S3 ranked vegetation types shall have a

commensurate ratio reduction to no less than 3:1. All revegetation/restoration areas that will serve as mitigation shall include preparation of a restoration plan, to be approved by CDFW prior to any ground disturbance. The restoration plan shall include restoration and monitoring methods; annual success criteria; contingency actions if success criteria are not met; long-term management and maintenance goals; and a funding mechanism to assure for in perpetuity management and reporting. Areas proposed as mitigation shall have a recorded conservation easement and be dedicated to an entity which has been approved to hold/manage lands.

MM BIO-3 has been revised as follows, with deletions shown in ~~strikethrough~~ and additions shown in **bold**:

MM BIO-3 ~~To ensure compliance with Fish and Game Code sections 3503, 3503.5, and 3513, no direct impacts shall occur to any nesting birds, their eggs, chicks, or nests. In order to avoid impacts on nesting birds, vegetation removal should be scheduled between September 16 and January 31, which is outside the peak nesting season. If vegetation removal must occur during the peak nesting season (i.e., February 1 to September 15), a pre-construction nesting bird survey shall be conducted by a qualified Biologist within three days prior to vegetation removal activities.~~

~~If the Biologist finds an active nest within or adjacent to the construction area, the Biologist shall identify an appropriate protective buffer zone around the nest depending on the sensitivity of the species, the nature of the construction activity, and the amount of existing disturbance in the vicinity. In general, the Biologist shall designate a buffer of 50 to 200 feet for common nesting birds and 200 to 500 feet for special status nesting birds and nesting raptors. No construction activities shall be allowed within the buffer until nesting activity has ended to ensure compliance with California Fish and Game Code. Avoidance and minimization measures shall be maintained until the young have fledged, and no further nesting is detected. To protect nesting birds that may occur on or adjacent to the Project, no construction shall occur from February 15 (January 1 for raptors) through August 31 unless a qualified biologist completes a survey for nesting bird activity within a 500- foot radius of the Project site. Based on local conditions, the nesting bird surveys shall be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. Surveys shall be conducted by a qualified biologist no more than 7 days prior to the beginning of any Project-related activity likely to impact raptors and migratory songbirds, for the entire Project site. If Project activities are delayed or suspended for more than 7 days during the breeding season, the survey shall be repeated. If nesting raptors and migratory songbirds are identified, the following minimum no-disturbance buffers shall be implemented: 300 feet around active passerine (perching birds and songbirds) nests, 500 feet around active non-listed raptor nests and 0.5 mile around active listed bird nests. These buffers shall be maintained until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon~~

the nest or parental care for survival. If reduced buffers are necessary, a request will be sent to CDFW with suggested reasoning and modified buffer. Modified buffers will not be employed without CDFW authorization.

Section 6.0 References, page 6-1

The following reference has been added, in **bold**.

California Native Plant Society (CNPS). 2021 (July 21, 2021, date accessed). *A Manual of California Vegetation, Online Edition*. Sacramento, CA: CNPS. <http://www.cnps.org/cnps/vegetation/>.

SECTION 4.0 MITIGATION MONITORING AND REPORTING PROGRAM

In accordance with the requirements of Public Resources Code Section 21081.6 and *State CEQA Guidelines Section 15091(d)*, and as part of its certification of the adequacy of the MND for the Project, the following Mitigation Monitoring and Reporting Program (MMRP) is hereby adopted for this Project. SCVSD will use this MMRP to track compliance with the Project's mitigation measures. The SCVSD Board of Directors will consider the MMRP during the certification hearing for this MND. The principal purpose of the MMRP is to ensure that the mitigation measures for the adopted Project are reported and monitored so as to ensure compliance with the measures' requirements.

The MMRP is provided in tabular format to facilitate effective tracking and documentation of the status of mitigation measures. The attached MMRP Table provides the following monitoring information:

- **Mitigation Measures:** The action(s) that will be taken to reduce the impact to a less-than-significant level.
- **Monitoring Process:** This column outlines the appropriate steps to implement and verify compliance with the mitigation measures.
- **Monitoring Timing:** This column indicates the general schedule for conducting each monitoring task, either prior to construction, during construction, and/or after construction.
- **Responsible Person(s):** This column lists the agency responsible for ensuring implementation of the mitigation measure.

TABLE 1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Program		Monitoring Process	Monitoring Timing	Responsible Person(s)
Biological Resources				
MM BIO-1	Prior to the initiation of any construction-related activity involving the disturbance and/or removal of potentially suitable wintering or nesting burrowing owl habitat, the area shall be surveyed by a qualified Biologist. The impact area plus a 500-foot buffer shall be surveyed. If no potentially suitable burrowing owl burrows are detected, no additional action is required. However, if potentially suitable burrows are located in the survey area, a 500-foot no-work buffer shall be erected and remain in effect until a qualified Biologist determines that breeding or wintering is no longer occurring. In addition, to avoid take, construction and operation activities shall avoid all fully protected species by a distance of no less than the distance that the specific species are known or expected to travel within their home range, based on telemetry, mark-recapture, or other data.	Site Survey	Prior to Construction, During Construction	SCVSD, Construction Contractor
MM BIO-2	<p>Prior to the construction of any phase or component of the proposed Project that involves impacting or modifying any jurisdictional resources, permits from the USACE, the LARWQCB, and the CDFW shall be required. Both permanent and temporary (construction-related) impacts are regulated and would therefore trigger the need for permits.</p> <p>Discharges to surface waters (WOTUS) on a temporary or permanent basis require authorization through the issuance of a Section 404 permit from the USACE, pursuant to Section 404 of the Clean Water Act. Project activities that would require a permit from the USACE include excavation in the Santa Clara River for airlining activities and any placement of soil in the riverbed. All impacts related to this activity are expected to be temporary. Operating construction equipment in the Santa Clara River would also require a USACE permit.</p> <p>The LARWQCB also asserts jurisdiction over all WOTUS and a Water Quality Certification pursuant to Section 401 of the Clean Water Act is required prior to issuance of the USACE Section 404 permit. In addition to WOTUS, the LARWQCB regulates discharges to "waters of the State" over which the federal government does not assert jurisdiction. The State Water Resources Control Board's Order No. 2004-0004-DWQ, "Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to Waters Deemed by the U.S. Army Corps of Engineers to be Outside of Federal Jurisdiction", requires that any person discharging waste which could affect the quality of the "waters</p>	Site Survey	Prior to Construction	SCVSD

TABLE 1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Program	Monitoring Process	Monitoring Timing	Responsible Person(s)
<p>of the State" must file a report of waste discharge pursuant to Section 13260(a) of the California Water Code (Water Code). Section 13263(a) of the Water Code requires the RWQCB to issue Waste Discharge Requirements to protect the beneficial uses and water quality objectives of the relevant Water Quality Control Plan. Implementation of the Waste Discharge Requirements will ensure compliance with the objectives of the Water Quality Control Plan for the Los Angeles Region. The Project Proponent is required to receive authorization for impacts to groundwater resources via a Water Quality Certification or separate Waste Discharge Requirements.</p> <p>No construction within the CDFW jurisdictional limits of the streambed shall commence without a five (5) day clear weather forecast. For less than 50% chance of rain, and if a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed, then construction work within the CDFW jurisdictional limits, in accordance with the project description, may commence. For greater than or equal to 50% chance of rain of 1.0 inch or more per National Weather Service forecast website www.wrh.noaa.gov/forecasts/wxtables, the commencement of construction activities within the CDFW jurisdictional limits of the streambed will be delayed until the rain event has ceased and a visual inspection of the construction area confirms the lack of water in or around the areas that are within the CDFW jurisdictional limits of the streambed.</p> <p>Project construction may impact two Fremont cottonwood trees during airlining activities. Prior to initiating construction activities that would impact or modify areas under the jurisdiction of the CDFW, including native trees in the Santa Clara River, a Lake or Streambed Alteration Agreement (LSAA) shall be issued by the CDFW, pursuant to Section 1600 of the California Fish and Game Code. Areas under the jurisdiction of the CDFW include the streambed or streambank of the Santa Clara River, along with all associated riparian vegetation. Project activities that would require an LSAA would include all excavation activities in the Santa Clara River streambed and floodplain, installation of access ramps, removal of native tree species in the Santa Clara River, or impacts to native vegetation that would result from operating construction equipment in the Santa Clara River area. Tree replacement to mitigate potential impacts to two Fremont cottonwood trees would be negotiated as part of the LSAA issuance.</p>

<p>MM BIO-3 To protect nesting birds that may occur on or adjacent to the Project, no construction shall occur from February 15 (January 1 for raptors) through August 31 unless a qualified biologist completes a survey for nesting bird activity within a 500- foot radius of the Project site. Based on local conditions, the nesting bird surveys shall be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. Surveys shall be conducted by a qualified biologist no more than 7 days prior to the beginning of any Project-related activity likely to impact raptors and migratory songbirds, for the entire Project site. If Project activities are delayed or suspended for more than 7 days during the breeding season, the survey shall be repeated. If nesting raptors and migratory songbirds are identified, the following minimum no-disturbance buffers shall be implemented: 300 feet around active passerine (perching birds and songbirds) nests, 500 feet around active non-listed raptor nests and 0.5 mile around active listed bird nests. These buffers shall be maintained until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival. If reduced buffers are necessary, a request will be sent to CDFW with suggested reasoning and modified buffer. Modified buffers will not be employed without CDFW authorization.</p>	Site Survey	Prior to Construction, During Construction	SCVSD

TABLE 1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Program		Monitoring Process	Monitoring Timing	Responsible Person(s)
Cultural Resources				
MM CULT-1	In the event that buried archaeological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified archaeologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include development of avoidance strategies, capping with fill material, or mitigation of impacts through data recovery programs such as excavation or detailed documentation. During cultural resources monitoring, if the qualified archaeologist determines that the sediments being excavated are previously disturbed or unlikely to contain significant cultural materials, the qualified archaeologist can specify that monitoring be reduced or eliminated.	Site Monitoring	Prior to Construction, During Construction	SCVSD, Construction Contractor
Geology and Soils				
MM GEO-1	Prior to initiation of excavation activities and if groundwater is encountered at depths of 20 feet or less in the areas of Potential Boring Pits or trenching locations, the contractor shall implement dewatering activities or other suitable method for stabilizing excavation bottom to the satisfaction of the geotechnical engineer.	Site Monitoring	Prior to Construction, During Construction	SCVSD, Construction Contractor
MM GEO-2	In the event that potential paleontological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified paleontologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include monitoring by a qualified paleontologist during construction-related ground-disturbing activities. The monitor will retain the option to reduce monitoring if it is determined that the sediments were previously disturbed. Monitoring may also be reduced if potentially fossiliferous units are not present or, if present, are determined to have a low potential to contain fossil resources. The monitor will be equipped to salvage fossils and samples of sediments as they are unearthed and will be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Recovered specimens will be prepared to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Specimens will be curated into a professional, accredited museum repository with permanent retrievable storage. A report of findings, with an appended itemized inventory of specimens, will be prepared and will signify completion of the mitigation.	Site Monitoring	Prior to Construction, During Construction	SCVSD, Construction Contractor

TABLE 1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Program		Monitoring Process	Monitoring Timing	Responsible Person(s)
Hydrology and Water Quality				
MM HYD-1	<p>This mitigation measure would require the development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) for the proposed Project site, as required by and in compliance with, the National Pollutant Discharge Elimination System (NPDES) Construction General Permit. Prior to initiation of construction, SCVSD shall ensure that a Notice of Intent with the State Water Resources Control Board (SWRCB) has been filed to obtain coverage under the Construction General Permit. Pursuant to the permit requirements, the Construction Contractor shall develop a SWPPP that incorporates Best Management Practices (BMPs) for reducing or eliminating construction-related pollutants in the site runoff. The SWPPP shall include erosion- and sediment-control BMPs that meet or exceed measures required by the NPDES Construction General Permit, as well as BMPs that control the other potential construction-related pollutants. The SWPPP would be designed and implemented to address site-specific conditions related to Project construction and BMPs would be selected and implemented based on the phase of construction and weather conditions. The SWPPP would identify and describe the sources of sediment and other pollutants that may affect the quality of storm water discharges; it would also ensure the implementation and maintenance of BMPs to reduce or eliminate sediment, pollutants adhering to sediment, and other non-sediment pollutants in storm water and non-storm water discharges. Examples of BMPs that may be used include the following:</p> <ul style="list-style-type: none"> • synthetic non-biodegradable rolled erosion control products (RECPs) including plastic netting, plastic mesh, synthetic fiber with netting, and bonded synthetic fibers; • biodegradable RECPs including erosion control blankets/mats made of jute, wood fiber, straw, coconut fiber, and straw coconut fiber; • chemical dust suppressants including mulch and fiber-based dust palliatives, salts and brines, non-petroleum based organics, petroleum based organics, synthetic polymers, clay additives, and electrochemical products; • street sweeping and vacuuming; 	Site Inspection, Site Monitoring	Prior to Construction, During Construction	SCVSD, Construction Contractor

Mitigation Program		Monitoring Process	Monitoring Timing	Responsible Person(s)
<ul style="list-style-type: none"> storm drain inlet protection consisting of a sediment filter or impounding area; and water conservation practices to avoid leaks and discharges. 				
Tribal Cultural Resources				
MM TCR-1	In the event that Tribal Cultural Resources are discovered during Project construction activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall assess the find. The Lead Agency shall contact the Fernandeano Tataviam Band of Mission Indians (FTBMI) to consult if any such find occurs within the areas culturally and traditionally affiliated with the FTBMI.	Site Inspection/ Site Survey	During Construction	SCVSD, Construction Contractor
MM TCR-2	Any and all archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, and monitoring reports) shall be provided to the FTBMI.	Site Survey	During and After Construction	SCVSD
MM TCR-3	The Lead Agency shall, in good faith, consult with the FTBMI on the disposition and treatment of any Tribal Cultural Resource encountered during all ground disturbing activities.	Site Survey	During ground-Disturbing Activities	SCVSD

SECTION 1.0 INTRODUCTION

1.1 PURPOSE OF THE INITIAL STUDY

The purpose of this Initial Study (IS) is to (1) describe the proposed Soledad Canyon Relief Trunk Sewer Section 4 Project (hereinafter referred to as the “Project”), which would be constructed in the City of Santa Clarita and (2) provide an evaluation of potential environmental impacts associated with the Project’s construction and operation. The Project involves the construction and operation of a new 27-inch sewer, and all associated connections, to provide hydraulic relief of the Soledad Canyon Trunk Sewer Section 4 (SCTS-4) between Manholes (MHs) 1103 and 1114. This IS has been prepared pursuant to the California Environmental Quality Act (CEQA), as amended (Section 21000 et. seq. of the *Public Resources Code*) and in accordance with the State CEQA Guidelines (Section 15000 et. seq. of the *California Code of Regulations*).

Pursuant to Section 15367 of the State CEQA Guidelines, Santa Clarita Valley Sanitation District (SCVSD) is the lead agency for the Project. The lead agency is the public agency that has the principal responsibility for carrying out or approving a project that may have a significant effect on the environment. SCVSD, as the lead agency, has the authority for Project approval and certification of the accompanying environmental documentation. SCVSD serves the wastewater management needs of the Santa Clarita Valley and is one of 24 districts within the Los Angeles County Sanitation Districts (LACSD).

1.2 SUMMARY OF FINDINGS

Based on the environmental checklist form prepared for the Project and supporting environmental analysis (Section 4.0), the proposed Project would have no impact or less than significant impacts in the following environmental areas: Aesthetics, Agriculture and Forestry Resources, Air Quality, Energy, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Mineral Resources, Noise, Population and Housing, Public Services, Recreation, Transportation, Utilities, and Wildfire.

The proposed Project has the potential to have significant impacts on the following topics unless the recommended mitigation measures described herein are incorporated into the Project: Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, and Tribal Cultural Resources.

According to the State CEQA Guidelines, it is appropriate to prepare an IS/Mitigated Negative Declaration (MND) for the proposed Project because, after incorporation of the recommended mitigation measures, potentially significant environmental impacts would be eliminated or reduced to a level considered less than significant.

1.3 PROJECT APPROVAL

Pursuant to Section 15072 of the State CEQA Guidelines, a Notice of Intent (NOI) to adopt an MND for the Project has been submitted to the public, applicable responsible and trustee agencies, and the Los Angeles County Clerk. Notices of the availability of the IS/MND for review and comment as well as the environmental documentation are available on LACSD’s website (<https://www.lacsd.org/documents/other/docsreview.asp>) for review. The NOI has been filed with the State Clearinghouse and mailed to the last known name and address of all organizations and individuals who have previously requested such notice in writing, and residences within a 500-foot radius of the Project site. The NOI and associated public review period has also been published in the *Santa Clarita Valley Signal* on Friday, May 21, 2021.

A 30-day public review period has been established for the IS/MND. The review period has been established in accordance with Section 15073 of the State CEQA Guidelines. During review of the IS/MND, affected public agencies and the interested public should focus on the document's adequacy in identifying and analyzing the potential environmental impacts and the ways in which the potentially significant effects of the Project area can be avoided or mitigated. Comments on the IS/MND and the analysis contained herein must be received by Monday, June 21, 2021, and should be addressed to:

Santa Clarita Valley Sanitation District
Attention: Jodie Lanza
1955 Workman Mill Road
Whittier, California 90601

Or sent via e-mail to Jodie Lanza at JLanza@LACSD.org.

Following receipt and evaluation of comments from agencies, organizations, and/or individuals, SCVSD will determine whether any substantial new environmental issues have been raised. If so, further documentation—such as an Environmental Impact Report (EIR) or an expanded IS/MND—may be required. If not, a final environmental document will be prepared to address and respond to all comments received on the Draft IS/MND. The Project and the environmental documentation are tentatively scheduled to be submitted to the SCVSD Board of Directors for consideration for approval of the final document and the Project.

1.4 ORGANIZATION OF THE INITIAL STUDY

The IS/MND is organized into sections, as described below.

- **Section 1.0: Introduction.** This section provides an introduction and overview of the conclusions in the IS/MND.
- **Section 2.0: Project Location and Environmental Setting.** This section provides a brief description of the Project location, relevant background information, and a description of the existing conditions of the Project site and vicinity.
- **Section 3.0: Project Description.** This section provides a description of the proposed Project, a statement of purpose and need, and necessary discretionary approvals.
- **Section 4.0: Environmental Checklist.** The completed Environmental Checklist Form from the State CEQA Guidelines provides an overview of the potential impacts that may or may not result from Project implementation. The Environmental Checklist Form also includes “mandatory findings of significance”, as required by CEQA.
- **Section 5.0: Report Preparers.** This section lists the authors, including staff members from SCVSD, who assisted in preparing and reviewing the IS/MND.
- **Section 6.0: References.** This section identifies the references used to prepare the IS/MND.

SECTION 2.0 PROJECT LOCATION AND ENVIRONMENTAL SETTING

2.1 PROJECT LOCATION

The proposed Project involves construction of a sewer main in the City of Santa Clarita (hereinafter referred to as the “City”), as shown on Exhibit 2-1, Regional Location and Local Vicinity. The Project boundary can be seen on Exhibit 2-2, Aerial Photograph. For the Project, the sewer main alignment would begin at the intersection of Soledad Canyon Road and Hidaway Avenue, continue south on Hidaway Avenue, then slightly southeasterly within private right-of-way (ROW), then south beneath the Santa Clara River. The sewer main alignment would then turn easterly towards the western edge of the Cordova Estates mobile home park and approximately 550 feet north of the Los Angeles County Metropolitan Transportation Authority (Metro) railroad tracks to connect to existing City of Santa Clarita local sewers. The total length of the sewer main would be approximately 2,200 feet, with depths ranging from 11 feet to 30 feet below the ground surface.

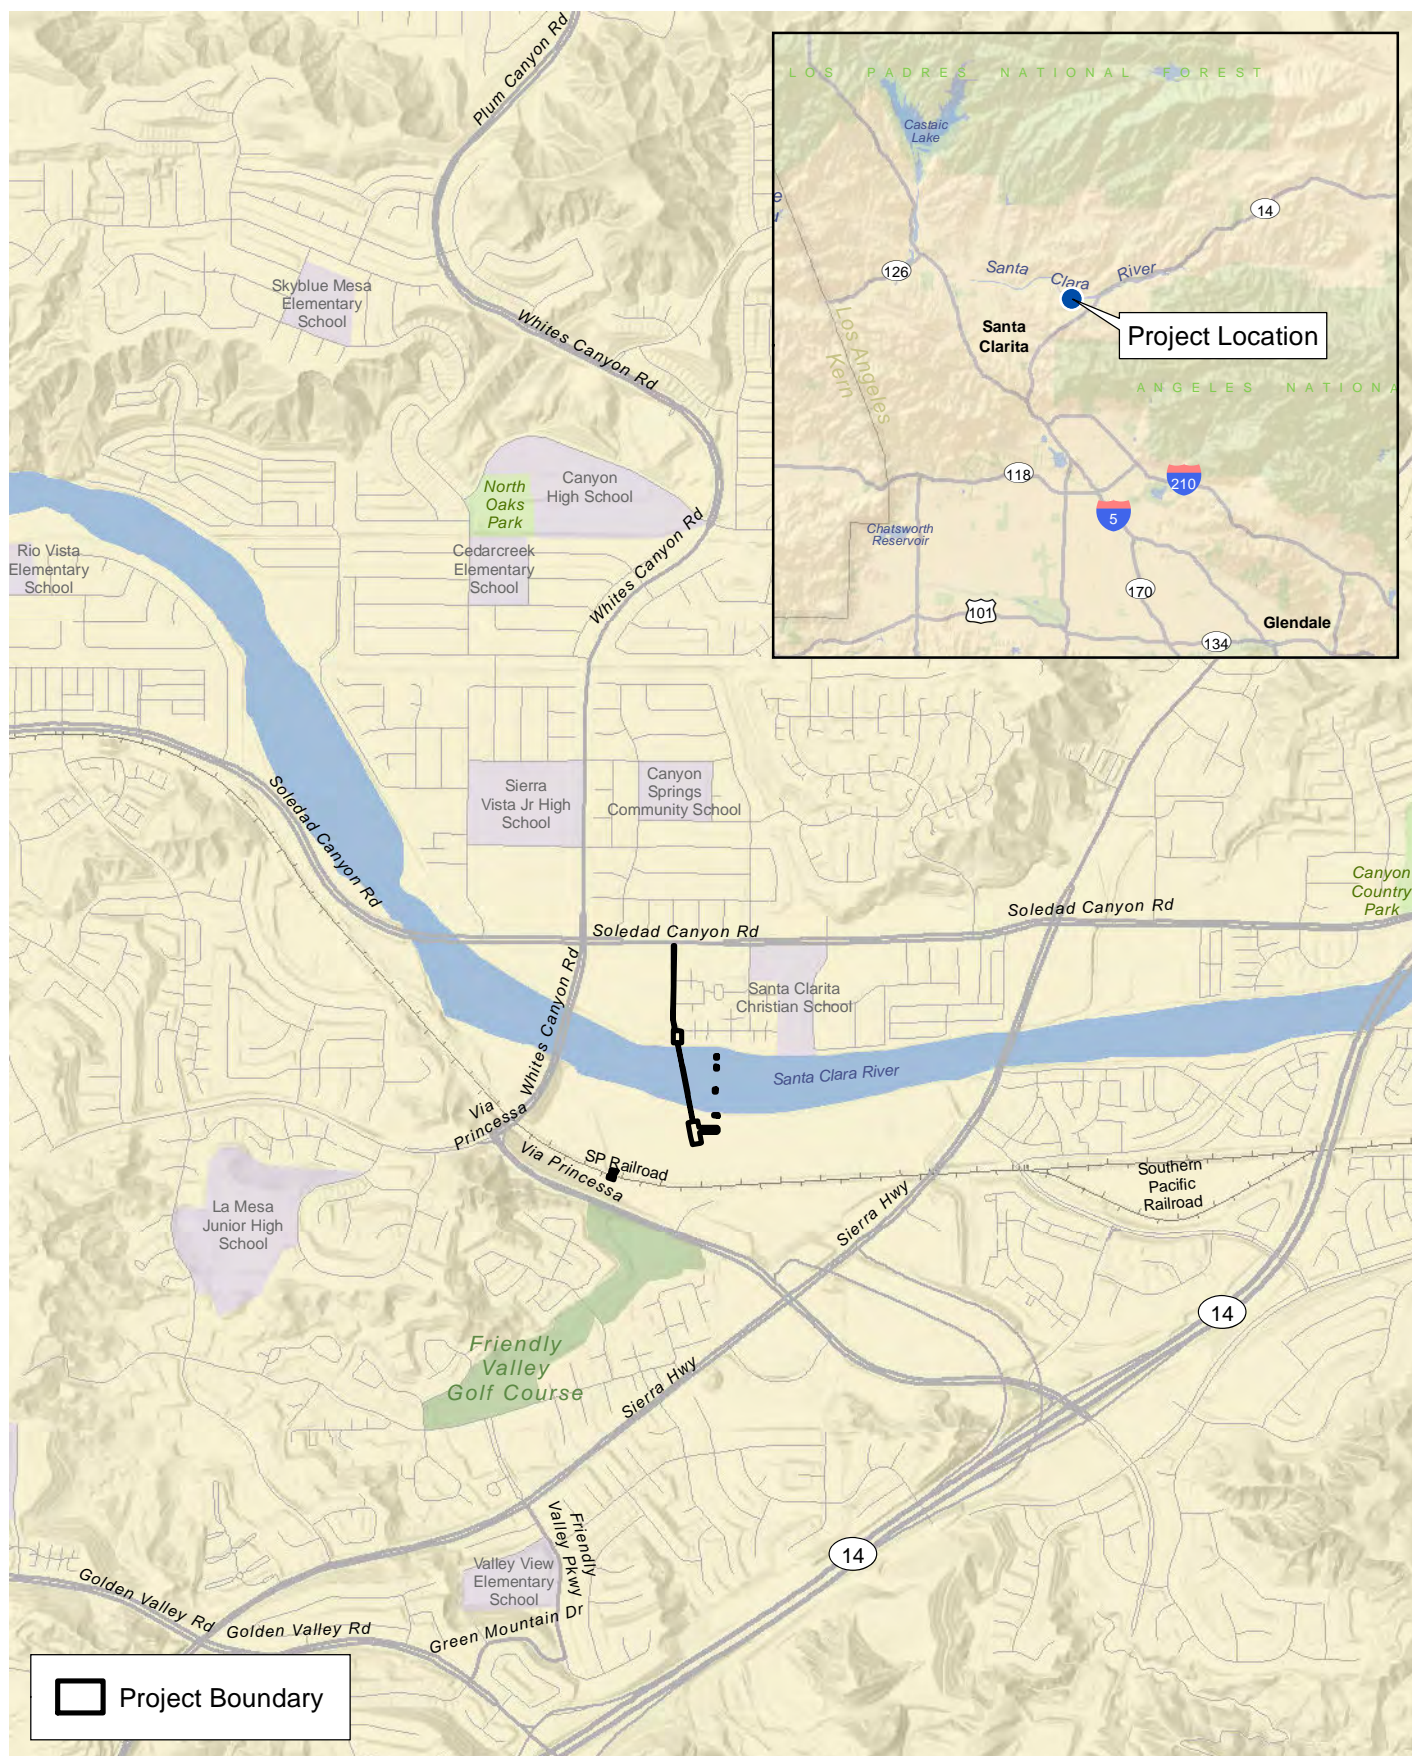

Existing Conditions

The majority of the sewer alignment is located under the Santa Clara River channel and along Hidaway Avenue, which exists as a 2-lane road with a cul-de-sac terminus. Additionally, south of the cul-de-sac at Hidaway Avenue, the alignment crosses private right-of-way between multi-family uses east and west of the proposed alignment. This alignment area is comprised of unpaved ground, either bare or planted with grass, adjacent to the paved roadway.

The natural hydrology of the Santa Clara River has been altered by surrounding development. The Santa Clara River and its banks are bound by the Santa Clara River Trail to the north and mobile homes and a railroad track to the south. Historically, the river has generally flowed year-round from the area near Interstate (I) 5 westerly into Ventura County. The upper reach of the river has been typically dry except in periods following storm events; this portion of the river extends from the Bouquet Canyon Road overpass to Lang Station, located on Lang Station Road south of Soledad Canyon Road and east of Lost Canyon Road (City of Santa Clarita 2011). Flows within the river are largely a result of stormwater runoff in the rainy months and wastewater treatment discharges in the drier months. At the time of preparation of the IS, the Santa Clara River was dry, with scattered vegetation and trees present throughout.

Surrounding land uses along the Project site includes multi-family residences, commercial uses, the Santa Clara River, mobile homes, a distribution center, and the Via Princessa Metrolink Station. Developed and developing land uses in the area are dominated by residential uses, including single family neighborhoods and manufactured housing.

Soledad Canyon Relief Trunk Sewer Section 4 Project

This page intentionally left blank

SECTION 3.0 PROJECT DESCRIPTION

3.1 PURPOSE

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

3.2 PHYSICAL CHARACTERISTICS

The Project would construct a new sewer pipe, consisting of approximately 2,200 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. As shown on Exhibit 3-1, Proposed Project Features, construction of the alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction MH. The alignment would continue southeasterly through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue southeasterly beneath the Santa Clara River, and then turn easterly approximately 550 feet north of the Metro railroad tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with a minimum diameter of 54-inch steel casing. After placement of the sewer alignment, three MHs would be abandoned within the Santa Clara River. These include MHs 1113, 1114, and local MH "A".

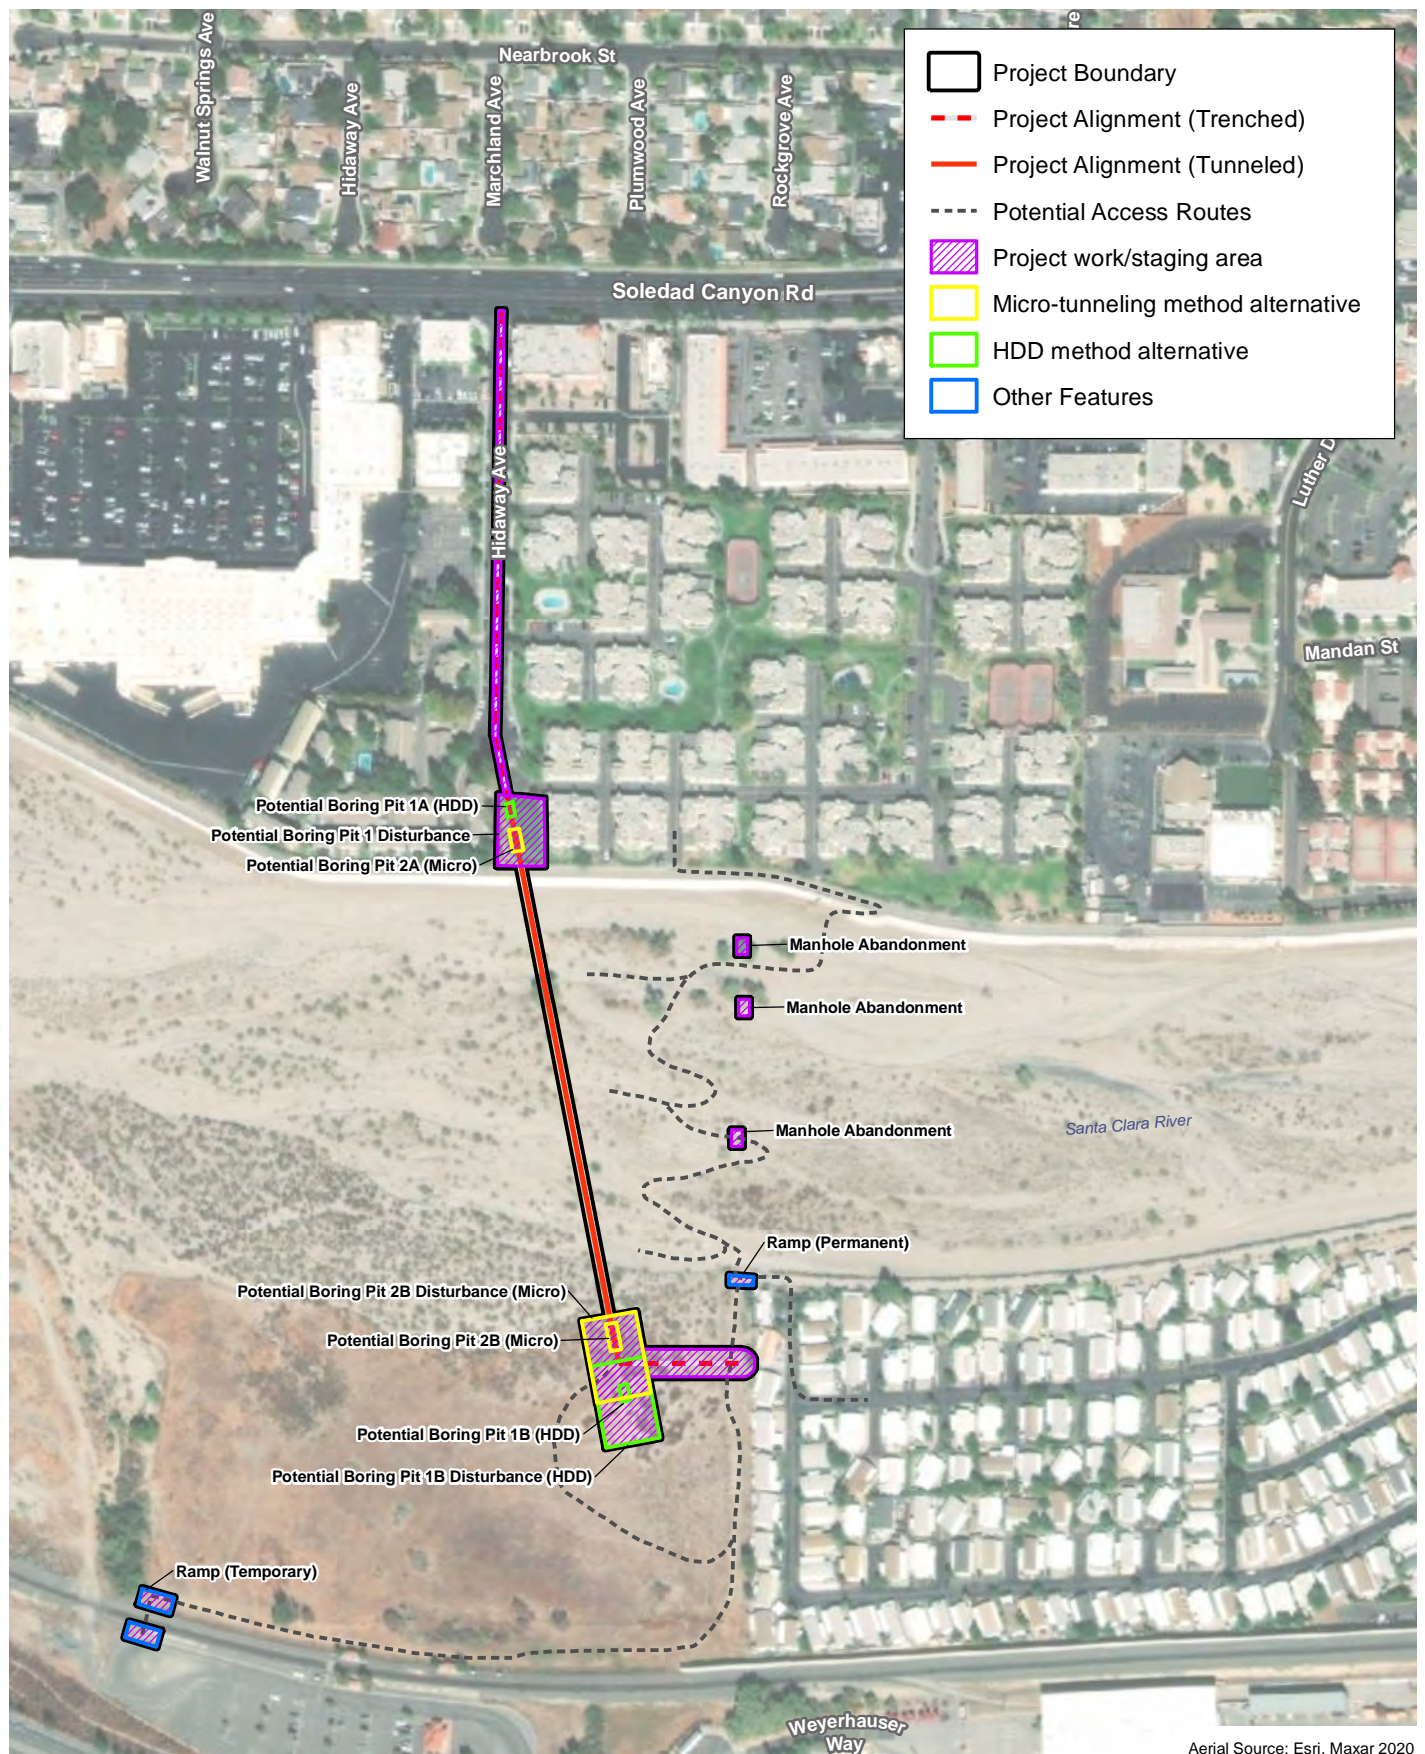

3.3 CONSTRUCTION ACTIVITIES AND PROJECT COMPONENTS

Construction would occur linearly along the alignment, starting at the northern-most end of the alignment at Hidaway Avenue. The rate of work would vary depending on depth of construction activities, soil type, groundwater levels, and construction method. There is a potential for minimal weekend and nighttime work, although the majority of construction activities would occur during normal daylight hours. Construction for the proposed Project alignment is anticipated to begin in March 2022 and last through January 2023, a period of approximately 11 months. However, construction timing is subject to change, depending on completion of final design of the Project and acquisition of necessary environmental permits. Table 3-1, Construction Schedule Estimates, provides the estimated start and duration of the Project's construction activities. The completed Project is anticipated to be operational in February 2023.

**TABLE 3-1
CONSTRUCTION SCHEDULE ESTIMATES**

Construction Phase	Start (Month and Year)	Duration (weeks)
Site Preparation	March 2022	4
Grading/Excavation	April 2022	12
Demolition	June 2022	5
Trenching and Sewer Construction	July 2022	28
Airlining/Abandonment of Manholes	January 2023	3
Paving	January 2023	3

Feet

Exhibit 3-1

(Rev: 03/17/2021 MMD) R:\Projects\LOS25_LACSD\3LOS250102\Graphics\MND\ex_Proposed_Project.pdf

The Project would be constructed in conformance with pertinent engineering standards, including current versions of the International Code Council International Building Code (formerly the Uniform Building Code) and the California Building Standards Commission California Building Code (CBC).

Construction methods used to install the pipeline at Hidaway Avenue would require demolition of existing asphalt. Demolished asphalt is anticipated to be reused as backfill at the Project site. However, if demolished asphalt cannot be reused as backfill at the Project site, this IS/MND conservatively assumes approximately 80 truckloads would be exported from the site during the demolition phase of construction. Hidaway Avenue would be trenched to place the alignment within the public ROW and would be paved after completion of trenching activities. Construction staging would be within Hidaway Avenue.

Construction methods used to install the pipeline under the Santa Clara River would be either a horizontal directional drilling (HDD) or a micro-tunneling method, hereinafter referred to as HDD or micro-tunneling, respectively. The HDD and micro-tunneling are trenchless technologies that would ensure reduced impacts to the Santa Clara River. HDD and micro-tunneling involve digging a shaft on each side of the infrastructure segment (an entrance and exit shaft) and boring underground from the entrance shaft to the exit shaft on the other side. The HDD or micro-tunneling activities would occur between Potential Boring Pits 1A and 1B, or 2A and 2B, respectively. The HDD or micro-tunneling borings pits would be excavated at two locations for placement of the equipment below grade. The exact location of the pits would differ depending on the methodology used for the Project. Potential Boring Pits 1A and 1B would be required under the HDD methodology, and Potential Boring Pits 2A and 2B would be required under the micro-tunneling methodology. As shown in Exhibit 3-1, Potential Boring Pit 1A and 1B depict the locations of the HDD boring pits and disturbance areas, and Potential Boring Pit 2A and 2B depict the locations of the micro-tunneling boring pits and disturbance areas. Potential Boring Pits 1A and 2A would be in the private ROW north of the Santa Clara River. Potential Boring Pits 1B and 2B would be located near the junction where the alignment would turn easterly towards the Cordova Estates, approximately 550 feet north of the Metro railroad tracks. The Potential Boring Pits would be up to 40 feet long, 20 feet wide, and 30 feet deep depending on construction method and would be created during construction of the Project alignment. Disturbance areas of up to 100 feet by 150 feet would surround the Potential Boring Pits for either alternative and would include the work areas and construction staging locations. Due to the proposed location of the pits and lack of access to electricity, machinery within the Potential Boring Pits would likely be powered by diesel or gasoline. Dewatering would likely be required at Potential Boring Pit 1B or 2B due to expected groundwater during construction of the proposed boring pit. The associated desilting tanks would be located within the disturbance areas of Potential Boring Pit 1B or 2B. The dewatered water would be discharged back into the Santa Clara River channel.

Use of HDD or micro-tunneling technologies would terminate at Potential Boring Pit 1B and 2B. From this junction, the Project would require open-cut excavation for pipeline placement to the east. This would allow for connection of the Project to existing sewer infrastructure. Open-cut excavation construction activities would require use of off-road equipment, such as excavators, loaders, cranes, and generators. The open cut trench would be approximately 17 feet deep by 4 feet wide during construction of the alignment, with a disturbance area of 25 feet surrounding the sides of the trench. After the pipeline is placed and connected to existing infrastructure, the trench would be covered and recompacted with existing, on-site soil.

After placement of the proposed pipeline, three manholes near the proposed alignment would be abandoned as part of the Project. These MHs include MHs 1113, 1114, and local MH "A", which are located 250 to 350 feet east of the proposed alignment, within the Santa Clara River, as shown on Exhibit 3-1. The existing sewer that traverses beneath the Santa Clara River would be

converted to an airline. Because the proposed new line would be an inverted siphon, the airline is needed to allow air to move in and out of the siphon as flow levels change. The airline will be lined with cured-in-place piping (CIPP) liner to repair any damaged pipe and create a jointless pipe beneath the river. CIPP liner is a jointless, seamless, "pipe-within-a-pipe" with the capability to rehabilitate pipes ranging in diameter from 6 to 96 inches. CIPP lining reduces infiltration and leakage from sewer systems, while keeping external water and plant roots out of the sewer system. Lining of the existing sewers with CIPP liner would not impact the sewers' capacities. CIPP activities include liner installation and water cure from an existing MH outside of the Santa Clara River. There would be disturbance areas of 30 feet by 20 feet surrounding each of the three MHs to be abandoned. Within these disturbance areas, excavation activities would require use of a backhoe to remove the top four feet of steel casing for each MH. In order to ensure no water infiltration from the Santa Clara River into the MHs and existing pipe, the MHs would then be filled with a cement slurry and topped off with sand.

As stated above, demolished asphalt at Hidaway Avenue is anticipated to be reused as backfill at the Project site. However, if demolished asphalt cannot be reused as backfill at the Project site, this IS/MND conservatively assumes approximately 80 truckloads would be exported from the site during the demolition phase of construction. During grading/excavation and sewer construction phases of the Project, it is estimated that approximately 1,200 cubic yards (cy) of material would be exported from the site during each phase, for a total of 2,400 cy of export. During activities related to airlining and decommissioning of manholes, there would be an additional 10 cy of material exported off-site.

Road closure is not anticipated during construction of the Project. However, during construction, there may be parking restrictions on nearby roadways to allow for adequate traffic flow. As part of the Project, a Traffic Control Plan would be submitted to the City of Santa Clarita for approval. Excavation areas within the ROW would be plated during non-working hours. Project-related trips would include daily construction worker trips and occasional material delivery and haul truck trips. Approximately ten construction workers would be on-site daily during construction of the Project. As shown on Exhibit 3-1, there are several potential access routes that could be used by the Project. These would provide access routes from north, south, east, and west of the Project. From north of the Project site, a potential access route is located between residential uses along Crossglade Avenue perpendicular to the Santa Clara River trail. This would include use of a portion of the Santa Clara River trail to an access ramp into the Santa Clara River. From there, the access route would avoid critical biological features, including sensitive plants within the river. From east of the alignment, a potential access route would be through the Cordova Estates community, accessed from Sierra Highway. A permanent ramp would be installed at the northwesternmost side adjacent to the Cordova Estates to provide future access for maintenance activities. A potential access route would be parallel to the mobile residences, approximately 40 feet from the western edge of the Cordova Estates. The access route would then turn westerly to run parallel to the Metro railroad tracks until it would cross near the western edge of the existing Via Princessa Metrolink Station parking lot. At this location, a temporary access ramp would be necessary to cross the Metro railroad tracks. Appropriate traffic control measures would be implemented as necessary in pertinent areas to maintain access and ensure safety. Such measures would likely include standard efforts such as the use of cones, barriers, signs, and flaggers, where applicable.

Operational Characteristics

After completion of construction activities, the new sewer would require maintenance. Maintenance of the sewer would initially occur quarterly, but then would occur less often after establishment of the sewer. During maintenance activities, temporary traffic control would be

required at Hidaway Avenue; however, traffic would not be detoured, and traffic control measures (e.g., cones, barriers, signs, and flaggers, where applicable) would be used.

3.4 OTHER APPROVALS

This IS/MND is intended to serve as the primary CEQA environmental document for all actions associated with the proposed Project, including all other approvals beyond SCVSD's authority needed to implement the Project.

The following approvals are anticipated to be required prior to Project construction/operation:

- **California Department of Fish and Wildlife (CDFW).** Streambed Alteration Agreement.
- **California Occupational Safety and Health Administration (OSHA).** Shoring Permit, Mining and Tunnel Classification.
- **City of Santa Clarita.** Encroachment Permit, Traffic Control Plan.
- **Los Angeles Regional Water Quality Control Board (LARWQCB).** Clean Water Act (CWA) Section 401 Water Quality Certification and Waste Discharge Requirements.
- **State Water Resources Control Board.** National Pollutant Discharge Elimination System Permit (NPDES) General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities.
- **United States Army Corps of Engineers (USACE).** CWA Section 404 Permit.

SECTION 4.0 ENVIRONMENTAL CHECKLIST

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|---|--|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality |
| <input checked="" type="checkbox"/> Biological Resources | <input checked="" type="checkbox"/> Cultural Resources | <input type="checkbox"/> Energy |
| <input checked="" type="checkbox"/> Geology/Soils | <input type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Hazards and Hazardous Materials |
| <input checked="" type="checkbox"/> Hydrology/Water Quality | <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Mineral Resources |
| <input type="checkbox"/> Noise | <input type="checkbox"/> Population and Housing | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation | <input checked="" type="checkbox"/> Tribal Cultural Resources |
| <input type="checkbox"/> Utilities and Service Systems | <input type="checkbox"/> Wildfire | <input checked="" type="checkbox"/> Mandatory Findings of Significance |

DETERMINATION: (To be completed by the Lead Agency.)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☒ I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to be the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Santa Clarita Valley Sanitation District
For

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analysis,” as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project’s environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify the following:
 - a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significance.

I. AESTHETICS

Existing Conditions

Portions of the Project site are located within the Santa Clara River and adjacent open space areas. Exhibit 4-1a, Site Photo Locations, depicts the photo locations along the Project's alignment. Existing site photos were taken on September 26, 2020 by Psomas biologists. The following descriptions provide aesthetic context at each of the photo locations:

- Exhibit 4-1b, Site Photos—Location 1, shows northern views from within the Santa Clara River (top photo). At the time of year that the photo was taken, water was not visible within the Santa Clara River. This photo shows the northern stream bank of the river, with views of chaparral, rocks, and open space in the foreground. Beyond the concrete levee, the Santa Clara River trail is visible. Mature trees and multi-family dwelling units are visible in the background. Southeast views of the Santa Clara River are shown in the bottom photo of this exhibit. In the foreground, views of rocks, open space, and chaparral are present. Past the Santa Clara River are views showing existing building developments. In the distant background, views of the hills and mountains south of the Project site are present.
- Exhibit 4-1c, Site Photos—Location 2, shows views from the southern edge Santa Clara River, looking north (top photo). As seen in this photo, the Santa Clara River is dry, with existing chaparral brush in the foreground. Distant views of residential development, mature trees, and mountains are present. Southern views from the southern edge of the Santa Clara River are shown in the bottom photo of this exhibit. In the foreground, views of chaparral are present. Towards the left of photo are views of the existing mobile home developments at Cordova Estates. In the distant background, hills and mountains south of the Project site are visible.
- Exhibit 4-1d, Site Photos—Locations 3 and 4. Location 3 depicts views from the Santa Clara River, facing southeast. This edge shows views of shelving along the southern bank of the Santa Clara River in the foreground. Existing mobile homes are visible in the background, including the rip-rap edge of the Cordova Estates community. Distant mountains are visible from Location 3. Location 4 depicts views adjacent to the northern side of Metro railroad tracks, towards the Santa Clara river. The foreground shows views of dried vegetation, brush, utility lines, and mobile homes east of the Project site. Views of the Santa Clara River are depicted in the center of the photo. Distant views of Whites Canyon Road are visible in the background in the left portion of the photo. Existing development and mountain views are shown in the background of Location 4.
- Exhibit 4-1e, Site Photos—Location 5 photos were taken from a location directly south of the Metro railroad tracks. As shown in the top photo of this exhibit, southwest views of existing vegetation is visible. The foreground shows existing ravel adjacent to the railroad. Towards the left portion of the photo, vehicles on the cul-de-sac of Weyerhauser Way are visible. Mature trees and existing development is scattered in the background. The bottom photo of this exhibit shows southeast views of the area between the Metro railroad tracks and Weyerhauser Way, including the gravel adjacent to the railroad tracks (left of the photo), vegetation between both uses, and a building in the background (right of the photo).

Exhibit 4–1e

I. Aesthetics	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. According to the City of Santa Clarita General Plan Conservation and Open Space Element, scenic resources in the City include mountain backdrops, hillsides and ridgelines, canyons and streams, and a broad river valley area. Many of these features are shown in Exhibits 4.1-b through 4.1-e, as described above. Some of the major scenic canyon areas include the following canyons: Placerita, Whitney, Elsmere, Bouquet, San Francisquito, Sand, Pico, Towsley, Tick, Wiley, and Rice Canyon. As determined by the City, scenic woodlands include cottonwood-willow riparian forests found primarily along the Santa Clara River. The City deems the Santa Clara River the most significant river feature in the Santa Clarita Valley (City of Santa Clarita 2011).

There are no officially designated State scenic highways near the Project site (LACDRP 2017). A segment of I-5, between I-210 and State Route (SR) 126 is listed as “Eligible State Scenic Highway—Not Officially Designated” by the California Scenic Highway Mapping System and the County’s General Plan (LACDRP 2017). This portion of the I-5 passes east of the Project site but is located approximately 6.2 miles from the Project site and is therefore not visible from the I-5. However, no new structures or facilities would be constructed that could block views of scenic vistas or otherwise permanently impact scenic resources such as trees, rock outcroppings, and historic views within view of a State scenic highway. As the Project would be under the Santa Clara River, the Project uses would not be visible after construction of the Project.

Based on site reconnaissance and review of aerial photographs, the Project site would be visible primarily by the public (i.e., motorists and pedestrians) along adjacent roadways and from public areas and recreation features near the Project site. This includes views from pedestrians and bikers on the Santa Clara River trail (on the northern bank of the Santa Clara River), and riders on the Metro trains south of the Santa Clara River. Public views of the scenic features identified in the Santa Clarita General Plan could be temporarily affected during construction of the Project by the presence of construction equipment. However, this would not represent a permanent change in views. Construction equipment may be visible during the 11-month construction duration. Particularly, construction activities would be visible on Highway Avenue during asphalt demolition and pipeline construction in the roadway, and during open cut excavation for the Project. However, during HDD or micro-tunneling under the Santa Clara River, the majority of construction equipment would not be visible, as the equipment would tunnel beneath the ground’s surface within the river. Additionally, much of the construction equipment would be operated and

stored within the Potential Boring Pits, each proposed to be approximately 30-feet deep, which would block the construction equipment from visibility and, as such, would not block scenic views. During airlining and abandonment of MHs, there would be a period of 3 weeks where a backhoe and trucks may be visible on the Santa Clara River. As such, temporary and limited views of construction activity would not be considered a substantial adverse effect on a scenic vista or degradation of the visual character of the area. Once construction is complete, the pipeline and related infrastructure would be located entirely underground and would not, therefore, be visible or otherwise obstruct scenic vistas in the long term. There would be a less than significant impact.

I. Aesthetics	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Project construction would primarily occur during daytime hours Monday through Friday. However, there is a potential for minimal weekend and nighttime work. Mobile construction lighting would be used during nighttime construction activities, as needed. Use of this lighting would be temporary and would be localized around a relatively small area, as work would be focused around the alignment and proposed boring pit locations. Construction lighting would also be directed and shielded to minimize light impacts to surrounding areas. In addition, for the portion of the Project site within Highway Avenue, any construction lighting would be located within a roadway that includes existing streetlights and traffic lights and that is surrounded by existing developments and parking lots that include lighting features. As such, construction lighting would not adversely affect nighttime views or be a new source of substantial light. Construction equipment could be a minor source of glare, where sunlight reflects on glass windshields and windows on vehicles, but due to the limited amount of equipment and the presence of other existing vehicles in this area unrelated to the Project, this would not be a substantial new source of glare. As discussed above, once construction is complete, the pipeline and related infrastructure would be located entirely underground and, as such, would not result in a new source of light or glare. There would be a less than significant impact.

MITIGATION MEASURES

No mitigation is required.

II. AGRICULTURE AND FORESTRY RESOURCES

II. Agriculture and Forestry Resources				
<p>In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.</p>	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project site is located within public ROW, private ROW between residential uses, in the Santa Clara River channel, and south of the Santa Clara River. The Project site does not contain any agricultural resources. The Project site is classified by the California Department of Conservation Farmland Mapping and Monitoring Program (FMMP) as Other Land (i.e., land not included in any other mapping category) and Urban and Built-Up Land (i.e., land that is occupied by structures with a building density of at least 1 unit to 1.5 acres) (DOC 2020). Therefore, the Project site contains no land designated as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, or Farmland of Local Importance. There are no lands zoned for agriculture in the Project site vicinity (City of Santa Clarita 2016). Zoning at the site consists of the following: Urban Residential 3, Open Space, Business Park, Public/Institutional, and public roadways. This Project would provide sewer service to accommodate planned growth within the area and would not require a zone change of the site. Both the State FMMP and the Farmland Protection Policy Act defer to local agencies to determine which lands are of local importance. No agricultural lands within Los Angeles County have ever been under Williamson Act contract. As such, no part of the Project site is under Williamson Act contract. There would be no impacts to agricultural resources.

II. Agriculture and Forestry Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104[g])?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. According to Public Resources Code Section 12220(g), forest land is “land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits”. The Project site has the following General Plan land use designations: Urban Residential 3 (UR-3), Open Space—National Forest (OS-NF), Business Park (BP), and Public/Institutional (PI) (City of Santa Clarita 2018). The OS-NF designation is located within the Santa Clara River channel. The proposed construction activities would occur under the Santa Clara River, where forest and timberland resources are not present. The proposed Project would not conflict with the OS-NF designation of this portion of the Santa Clara River. The proposed Project also would not cause changes in the environment that could indirectly affect the conversion of forest land to non-forest use. In addition, since the Project would place sewer lines beneath the ground, there would be no long-term operational impact to the existing setting. Therefore, there would be no impact.

II. Agriculture and Forestry Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed previously, the Project site is not designated as Farmland nor is it zoned for agriculture. There are no areas adjacent to the Project site that are currently used for agricultural purposes. Additionally, as stated in response to Threshold II.d above, the Project would not convert forest land to non-forest use. Finally, the purpose of the Project is to expand sewer infrastructure to meet anticipated demands, rather than to facilitate future growth. There would be no impact.

MITIGATION MEASURES

No mitigation is required.

III. AIR QUALITY

Existing Conditions

Air quality in the City is regulated by the South Coast Air Quality Management District (AQMD), which is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin (SoCAB). Both the State of California and the U.S. Environmental Protection Agency (USEPA) have established health-based Ambient Air Quality Standards (AAQS) for air pollutants, which are known as “criteria pollutants”. The AAQS are designed to protect the health and welfare of the populace within a reasonable margin of safety. The AAQS for ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), respirable particulate matter with a diameter of 10 microns or less (PM₁₀), fine particulate matter with a diameter of 2.5 microns or less (PM_{2.5}), and lead are shown in Table 4-1 on the following page.

Regional air quality is defined by whether the area has attained or not attained State and federal air quality standards, as determined by air quality data from various monitoring stations. Areas that are considered in “nonattainment” are required to prepare plans and implement measures that will bring the region into “attainment”. When an area has been reclassified from nonattainment to attainment for a federal standard, the status is identified as “maintenance”, and there must be a plan and measures established that will keep the region in attainment for the following ten years.

**TABLE 4-1
CALIFORNIA AND FEDERAL AMBIENT AIR QUALITY STANDARDS**

Pollutant	Averaging Time	California Standards	Federal Standards	
			Primary ^a	Secondary ^b
O ₃	1 Hour	0.09 ppm (180 µg/m ³)	—	—
	8 Hour	0.070 ppm (137 µg/m ³)	0.070 ppm (137 µg/m ³)	Same as Primary
PM10	24 Hour	50 µg/m ³	150 µg/m ³	Same as Primary
	AAM	20 µg/m ³	—	Same as Primary
PM2.5	24 Hour	—	35 µg/m ³	Same as Primary
	AAM	12 µg/m ³	12.0 µg/m ³	15.0 µg/m ³
CO	1 Hour	20 ppm (23 mg/m ³)	35 ppm (40 mg/m ³)	—
	8 Hour	9.0 ppm (10 mg/m ³)	9 ppm (10 mg/m ³)	—
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m ³)	—	—
NO ₂	AAM	0.030 ppm (57 µg/m ³)	0.053 ppm (100 µg/m ³)	Same as Primary
	1 Hour	0.18 ppm (339 µg/m ³)	0.100 ppm (188 µg/m ³)	—
SO ₂	24 Hour	0.04 ppm (105 µg/m ³)	—	—
	3 Hour	—	—	0.5 ppm (1,300 µg/m ³)
	1 Hour	0.25 ppm (655 µg/m ³)	0.075 ppm (196 µg/m ³)	—
Lead	30-day Avg.	1.5 µg/m ³	—	—
	Calendar Quarter	—	1.5 µg/m ³	Same as Primary
	Rolling 3-month Avg.	—	0.15 µg/m ³	
Visibility Reducing Particles	8 Hour	Extinction coefficient of 0.23 per km – visibility ≥ 10 miles (0.07 per km – ≥30 miles for Lake Tahoe)	No Federal Standards	
Sulfates	24 Hour	25 µg/m ³		
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m ³)		
Vinyl Chloride	24 Hour	0.01 ppm (26 µg/m ³)		
O ₃ : ozone; ppm: parts per million; µg/m ³ : micrograms per cubic meter; PM10: respirable particulate matter 10 microns or less in diameter; AAM: Annual Arithmetic Mean; —: No Standard; PM2.5: fine particulate matter 2.5 microns or less in diameter; CO: carbon monoxide; NO ₂ : nitrogen dioxide; SO ₂ : sulfur dioxide; km: kilometer				
^a <i>National Primary Standards</i> : The levels of air quality necessary, within an adequate margin of safety, to protect the public health.				
^b <i>National Secondary Standards</i> : The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.				
Note: More detailed information in the data presented in this table can be found at the California Air Resources Board website (www.arb.ca.gov).				
Source: CARB 2016				

For the California Air Resources Board (CARB), an “Unclassified” designation indicates that the air quality data for the area are incomplete and do not support a designation of attainment or nonattainment. Table 4-2 summarizes the current attainment status of the SoCAB for the criteria pollutants.

**TABLE 4-2
CRITERIA POLLUTANT DESIGNATIONS
IN THE SOUTH COAST AIR BASIN**

Pollutant	State	Federal
O ₃ (1-hour)	Nonattainment	No Standard
O ₃ (8-hour)	Nonattainment	Nonattainment
PM10	Nonattainment	Attainment/Maintenance
PM2.5	Nonattainment	Nonattainment
CO	Attainment	Attainment/Maintenance
NO ₂	Attainment	Attainment/Maintenance
SO ₂	Attainment	Attainment
Lead	Attainment	Nonattainment/Attainment ^a
Visibility-Reducing Particles	Unclassified ^b	No Standards
Sulfates	Attainment	
Hydrogen Sulfide	Unclassified	
O ₃ : ozone; PM10: respirable particulate matter with a diameter of 10 microns or less; PM2.5: fine particulate matter with a diameter of 2.5 microns or less; CO: carbon monoxide; NO ₂ : nitrogen dioxide; SO ₂ : sulfur dioxide		
^a Los Angeles County is classified as nonattainment for lead; the remainder of the SoCAB is in attainment of State and federal standards.		
^b “Unclassified” designation indicates that the air quality data for the area are incomplete and do not support a designation of attainment or nonattainment.		
Source: South Coast AQMD 2016, USEPA 2020.		

O₃ is formed by photochemical reactions between nitrogen oxide (NO_x) and volatile organic compounds (VOCs) rather than being directly emitted. O₃ is the principal component of smog. Elevated O₃ concentrations cause eye and respiratory infection; reduce resistance to lung infection; and may aggravate pulmonary conditions in persons with lung disease. O₃ is also damaging to vegetation and untreated rubber. The entire SoCAB is designated as a nonattainment area for the State one-hour O₃ standard.

CO is formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. It is a colorless, odorless gas that can cause dizziness, headaches, and fatigue. The SoCAB is designated as an attainment area for federal CO standards.

NO₂ (a “whiskey brown”-colored gas) and nitric oxide (NO) (a colorless, odorless gas) are formed from combustion devices. These compounds are referred to as NO_x. NO_x is a primary component of the photochemical smog reaction. The severity of health effects of NO_x depends primarily on the concentration inhaled. Acute symptoms can include coughing, difficulty breathing, vomiting, headache, and eye irritation. Respiratory symptoms may also increase in severity after prolonged exposure.

SO₂ is a corrosive gas that is primarily formed from the combustion of fuels containing sulfur (e.g., from power plants) and heavy industry that use coal or oil as fuel. SO₂ irritates the respiratory

tract and can result in lung disease and breathing problems for asthmatics. Atmospheric SO₂ also contributes to acid rain.

Lead is found in old paints and coatings, plumbing, and a variety of other materials including gasoline anti-knock additives. Once in the blood stream, lead can cause damage to the brain, nervous system, and other body systems. Children are highly susceptible to the effects of lead. However, lead emissions have significantly decreased due to the near elimination of the use of leaded gasoline.

Particulate matter is the term used for a mixture of solid particles and liquid droplets found in the air. Respirable particulate matter (i.e., PM₁₀) derives from a variety of sources including road dust from paved and unpaved roads; diesel soot; combustion products; tire and brake abrasion; construction operations; and fires. Fuel combustion and certain industrial processes are primarily responsible for fine particle (i.e., PM_{2.5}) levels. Coarse particles (PM₁₀) can accumulate in the respiratory system and aggravate health problems such as asthma. PM_{2.5} can deposit itself deep in the lungs and may contain substances that are harmful to human health.

Toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or in serious illness or that may pose a present or potential hazard to human health. TACs may be emitted from a variety of common sources, including motor vehicles, gasoline stations, dry cleaners, industrial operations, painting operations, and research and teaching facilities. TACs are different than the “criteria” pollutants previously discussed in that AAQS have not been established for them. TACs occurring at extremely low levels may still affect health, and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts on human health are described by having carcinogenic risk and being chronic (i.e., of long duration) or acute (i.e., severe but of short duration). Diesel particulate matter (diesel PM) is a TAC and is responsible for the majority of California’s known cancer risk from outdoor air pollutants.

The effects from air pollution can be substantial, both in the short-term during smog alerts, but also from long-term exposure to pollutants. While the majority of the populace can overcome short-term air quality health concerns, selected segments of the population are more vulnerable to its effects. Specifically, young children, the elderly, and persons with existing health problems are most susceptible to respirator complications.

Sensitive receptors nearest the Project site are multi-family residences on Hidaway Avenue, trail users on Santa Clara River Trail, and mobile-home residences west of Sierra Highway.

Significance Criteria

Appendix G of the State CEQA Guidelines states that the significance criteria established by the applicable air quality management district may be relied upon to make significance determinations. The South Coast AQMD has established significance thresholds to assess the regional and localized impacts of Project-related air pollutant emissions; Table 4-3 presents the current significance thresholds.

TABLE 4-3
SOUTH COAST AQMD AIR QUALITY SIGNIFICANCE THRESHOLDS

Mass Daily Thresholds ^a		
Pollutant	Construction	Operation
NOx	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM10	150 lbs/day	150 lbs/day
PM2.5	55 lbs/day	55 lbs/day
SOx	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
TACs, Odor, and GHG Thresholds		
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to South Coast AQMD Rule 402	
GHG	10,000 MT/yr CO ₂ e for industrial facilities	
Ambient Air Quality Standards for Criteria Pollutants ^{b, c}		
NO ₂ 1-hour average annual arithmetic mean	The South Coast AQMD is in attainment; the Project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (State) 0.03 ppm (State) and 0.0534 ppm (federal)	
PM10 24-hour average annual average	10.4 µg/m ³ (construction) ^c & 2.5 µg/m ³ (operation) 1.0 µg/m ³	
PM2.5 24-hour average	10.4 µg/m ³ (construction) ^c & 2.5 µg/m ³ (operation)	
SO ₂ 1-hour average 24-hour average	0.25 ppm (State) & 0.075 ppm (federal – 99 th percentile) 0.04 ppm (State)	
Sulfate 24-hour average	25 µg/m ³ (State)	
CO 1-hour average 8-hour average	South Coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20.0 ppm (State) and 35 ppm (federal) 9.0 ppm (State/federal)	
Lead 30-day average Rolling 3-month average	1.5 µg/m ³ (State) 0.15 µg/m ³ (federal)	
NOx: nitrogen oxides; lbs/day: pounds per day; VOC: volatile organic compound; PM10: respirable particulate matter with a diameter of 10 microns or less; PM2.5: fine particulate matter with a diameter of 2.5 microns or less; SOx: sulfur oxides; CO: carbon monoxide; TACs: toxic air contaminants; GHG: greenhouse gases; MT/yr CO ₂ e: metric tons per year of carbon dioxide equivalents; NO ₂ : nitrogen dioxide; ppm: parts per million; µg/m ³ : micrograms per cubic meter; South Coast AQMD: South Coast Air Quality Management District

III. Air Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The South Coast AQMD develops rules and regulations; establishes permitting requirements for stationary sources; inspects emissions sources; and enforces such measures through educational programs or fines, when necessary. The South Coast AQMD is directly responsible for reducing emissions from stationary (area and point), mobile, and indirect sources. It has responded to this requirement by preparing a sequence of Air Quality Management Plans (AQMPs).

On March 3, 2017, the South Coast AQMD adopted the 2016 AQMP, which is a regional and multi-agency effort (South Coast AQMD, CARB, Southern California Association of Governments [SCAG], and the USEPA. The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including the 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy; updated emission inventory methodologies for various source categories; and SCAG’s latest growth forecasts. The main purpose of an AQMP is to bring an area into compliance with the requirements of federal and State air quality standards.

The two principal criteria for conformance to an AQMP are the following:

1. Whether the project would result in an increase in the frequency or severity of existing air quality violations; cause or contribute to new violations; or delay timely attainment of air quality standards and
2. Whether the project would exceed the assumptions in the AQMP.

With respect to the first criterion, the analyses in Responses to Questions III.b below demonstrate that the Project would not (1) generate short-term or long-term emissions of VOCs, oxides of nitrogen [NO_x, which are O₃ precursors], or PM_{2.5} that could potentially cause an increase in the frequency or severity of existing air quality violations; (2) cause or contribute to new violations; or (3) delay timely attainment of air quality standards.

With respect to the second criterion, the Project would not increase or modify SCAG’s population, housing, or employment projections. The Project would accommodate the projected growth in population accounted for in the 2016 AQMP emissions forecast and would provide additional sewer capacity to serve the demands of local communities. Therefore, the Project would be consistent with the region’s AQMP. There would be a less than significant impact.

III. Air Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The South Coast AQMD has developed significance thresholds to determine whether State and federal air quality standards would be violated or whether a substantial contribution to a violation would occur. As described below, the construction and operations phases are below the significance thresholds established by South Coast AQMD. Therefore, the Project would have a less than significant impact.

Construction Emissions – Regional

Criteria pollutant emissions for the Project would occur during construction from the operation of construction equipment, including asphalt removal, and earthmoving activities, which would generate fugitive dust. Other sources of pollutant emissions include the export of excavated soil and demolished asphalt; the import of construction materials; and the operation of vehicles driven to and from the site by construction workers.

Project emissions were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.2 computer program (CAPCOA 2017). CalEEMod is designed to model construction and operational emissions for land development projects and allows for the input of project- and county-specific information. CalEEMod has separate databases for specific counties and air districts, and the County of Los Angeles database was used for the proposed Project.

The mass emissions significance thresholds (see Table 4-3) are based on the rate of emissions (i.e., pounds of pollutants emitted per day). Therefore, the quantity, duration, and intensity of construction activity are important in ensuring the analysis of worst case (i.e., maximum daily) emissions scenarios. The Project activities (e.g., asphalt removal, excavation, paving) are identified by start date and duration. Each activity has associated off-road equipment (e.g., dozers, backhoes, cranes) and on-road vehicles (e.g., haul trucks, concrete trucks, worker commute vehicles).

Construction hauling truck trips were estimated based on the construction phase length and amount of debris or soil to export. Project-specific inputs can be found in the CalEEMod output data, located in Appendix A of this IS/MND. Dust control by watering was assumed, consistent with the requirements of South Coast AQMD Rule 403. Specifically, during construction of the Project, SCVSD and its contractors shall be required to comply with regional rules, which would assist in reducing short-term air pollutant emissions. South Coast AQMD Rule 402 requires that air pollutant emissions not be a nuisance off site. South Coast AQMD Rule 403 requires that fugitive dust be controlled with the best available control measures so that dust does not remain visible in the atmosphere beyond the property line of the emission source.

Maximum daily emissions for the peak workday of the Project are shown in Table 4-4. If construction is delayed and/or occurs over a longer time period, emissions could be reduced because of (1) a more modern and cleaner construction equipment fleet mix and/or (2) a less

intensive buildout schedule (i.e., fewer daily emissions occurring over a longer time interval). As shown, all criteria pollutant emissions would be less than their respective thresholds. The maximum emissions during all construction phases are presented, in Table 4-4. There would be less than significant impacts from construction of the Project and no mitigation is required.

**TABLE 4-4
ESTIMATED MAXIMUM DAILY CONSTRUCTION EMISSIONS
(LBS/DAY)**

	VOC	NOx	CO	SOx	PM10	PM2.5
Maximum Emissions	2	20	20	<1	2	1

Exceeds South Coast AQMD Thresholds?	No	No	No	No	No	No
lbs/day: pounds per day; VOC: volatile organic compound(s); NOx: nitrogen oxides; CO: carbon monoxide; SOx: sulfur oxides; PM10: inhalable particulate matter with a diameter of 10 microns or less; PM2.5: fine particulate matter with a diameter of 2.5 microns or less; South Coast AQMD: South Coast Air Quality Management District						
Source: CalEEMod data in Appendix A.						

Construction Emissions – Local/Ambient Air Quality

The localized effects from the on-site portion of daily emissions were evaluated at receptor locations potentially impacted by construction of the Project, according to the South Coast AQMD's localized significance threshold (LST) method, which utilizes on-site emissions rate look up tables and project-specific modeling, where appropriate. When quantifying mass emissions for localized analysis, only emissions that occur on site are considered. Consistent with the South Coast AQMD's LST method guidelines, emissions related to off-site delivery/haul truck activity and employee trips are not considered in the evaluation of localized impacts.

LSTs are applicable to the following four criteria pollutants: NO₂, CO, PM10, and PM2.5. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standard, and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest receptor. For the LST CO and NO₂ exposure analysis, receptors who could be exposed for one hour or more are considered. For PM10 and PM2.5 exposure analysis, receptors who could be exposed for 24 hours are considered. The mass rate look-up tables were developed for each source receptor area and can be used to determine if a project may generate significant adverse localized air quality impacts. The South Coast AQMD provides LST mass rate look-up tables for projects that are less than or equal to five acres, accordingly, this is the appropriate method for the Project.

Maximum emissions would occur during the overlapping of the demolition and sewer construction phases. As shown in Table 4-5, localized emissions for all criteria pollutants from the Project would be less than their respective South Coast AQMD LSTs for all pollutants. There would be less than significant impacts from construction of the Project.

Long-Term Operational Emissions

After installation of underground pipelines for the Project, there would be quarterly trips per year for maintenance, which may reduce after establishment of the sewer alignment. Therefore, operational emissions would be primarily from minimal maintenance trips per year and would be negligible. No other emissions are anticipated. Therefore, there would be less than significant operational impacts.

Cumulative Impacts

The County of Los Angeles portion of the SoCAB is a nonattainment area for O₃, PM10, and PM2.5. The proposed Project would generate these pollutants during construction, and short-term cumulative impacts related to air quality could occur if Project construction and nearby construction activities were to occur simultaneously. With respect to local impacts, cumulative construction particulate (i.e., fugitive dust) impacts are considered when projects are located within a few hundred yards of each other. As described above, construction emissions would be below the South Coast AQMD regional and localized significance thresholds. The SCAQMD in their White Paper on Regulatory Options for Addressing Cumulative Impacts from Air Pollution Emissions (presented to the Board on September 5, 2003), identifies that impacts that are less than significant on a Project level are also considered to be less than significant on a cumulative basis. The AQMD uses the same significance thresholds for project-specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or Environmental Impact Report EIR, with the exception of the Hazard Index for toxic air contaminant (TAC) emissions (South Coast AQMD 2003). Therefore, consistent with South Coast AQMD guidance, short-term construction emissions of nonattainment pollutants during construction of the Project would not be cumulatively considerable. There would be less than significant impacts from of the Project.

As previously discussed, long-term emissions would be negligible and therefore not cumulatively considerable. The long-term cumulative impact would be less than significant.

III. Air Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Exposure of sensitive receptors is addressed for the following situations: CO hotspots; criteria pollutants from on-site construction; and TACs from on-site construction.

Carbon Monoxide Hotspot

A CO hotspot is an area of localized CO pollution caused by severe vehicle congestion on major roadways, typically near intersections. If a project increases average delay at signalized intersections operating at level of service (LOS) E or F or causes an intersection that would operate at LOS D or better without the project to operate at LOS E or F with the project, a quantitative screening is required. As discussed previously in the Response to Question III.b, there would be minimal maintenance trips, occurring quarterly per year, associated with the Project. Thus, the Project would neither cause new severe congestion nor significantly worsen existing congestion. There would be no potential for a CO hotspot or exposure of sensitive receptors to substantial, Project-generated local CO emissions. There would be a less than significant impact.

Criteria Pollutants from On-Site Construction

Exposure of persons to NO₂, CO, PM₁₀, and PM_{2.5} emissions is discussed in the LST analysis. As discussed, there would be a less than significant impact.

Toxic Air Contaminant (Diesel PM) Emissions from On-Site Construction

Construction activities would result in short-term, Project-generated emissions of diesel PM from the exhaust of off-road, heavy-duty diesel equipment used for site preparation (e.g., asphalt removal, excavation, and backfilling) and paving. CARB identified diesel PM as a TAC in 1998. The dose to which receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substance. Thus, the risks estimated for a maximally exposed individual are higher if a fixed exposure occurs over a longer time period. According to the Office of Environmental Health Hazard Assessment, health risk assessments—which determine the exposure of sensitive receptors to TAC emissions—should be based on a 30- to 70-year exposure period; however, such assessments should be limited to the period/duration of activities associated with a project.

For the Project, there would be few pieces of off-road, heavy-duty diesel equipment in operation, and the construction period would be short when compared to a 30- to 70-year exposure period. In addition, construction equipment would remain proximate to a specific receptor location for a short amount of time due to the linear manner for which construction of the pipeline would occur. When considering these facts combined with the highly dispersive properties of diesel PM and additional reductions in particulate emissions from newer construction equipment, as required by USEPA and CARB regulations, it can be concluded that TAC emissions during construction of the Project would not expose sensitive receptors to substantial emissions of TACs. There would be a less than significant impact.

III. Air Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Objectionable odors are generally associated with agricultural activities; landfills and transfer stations; the generation or treatment of sewage; the use or generation of chemicals; food processing; or other activities that generate unpleasant odors (South Coast AQMD 1993). Although the Project would be a sewer project, which would have the potential to cause odors, the sewer line would be connected to existing sewer lines and would be installed underground. There is a potential of odors during the connection process of the proposed sewer line to the existing sewer infrastructure, during construction of the Project. However, odors would be temporary and confined to the immediate connection areas on Hidaway Avenue and adjacent to Weyerhauser Way, and therefore, impacts would be less than significant. During construction, the proposed Project would operate equipment that may generate odors resulting from on-site construction equipment's diesel exhaust emissions or paving operations. However, these odors would be temporary and would dissipate rapidly from the source with an increase in distance. The Project is also regulated from nuisance odors or other objectionable emissions by South Coast AQMD Rule 402. Rule 402 prohibits any the discharge from any source of air contaminants or other material which would cause injury, detriment, nuisance, or annoyance to people or the public. Therefore, construction odors would be considered a less than significant impact.

MITIGATION MEASURES

No mitigation is required.

IV. BIOLOGICAL RESOURCES

Analysis of the existing biological resources within the Project area and potential Project impacts are based on the following: (1) a literature review; (2) general surveys conducted by Psomas Senior Biologist Marc Blain and Psomas Biologist Sarah Thomas on September 25, 2020 and March 3, 2021; (3) Jurisdictional Delineation Report—Soledad Canyon Relief Trunk Sewer Section 4 Project, dated May 2021 (Appendix B); and (4) Tree Inventory Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project, dated May 2021 (Appendix B).

Methodology

Psomas biologists Marc Blain and Sarah Thomas conducted a general survey of the proposed pipeline installation alignment on September 25, 2020. Ms. Thomas also conducted a general survey of the airline locations and potential access routes on March 3, 2021. The purpose of the surveys was to document and evaluate existing conditions and resources within the Project area and determine the Project's potential level of impact on biological resources. The area surveyed (Survey Area) consisted of the Project components plus a minimum of 50-foot buffer. As such, the Survey Area includes the Project boundary.

Prior to the surveys, a literature review was conducted to identify special status plants, wildlife, and habitats that have been reported to occur in the vicinity of the Survey Area. Resources reviewed included the California Native Plant Society's (CNPS') Inventory of Rare and Endangered Plants (CNPS 2020) and the California Department of Fish and Wildlife's (CDFW's) California Natural Diversity Database (CNDDDB) (CDFW 2020). Database searches included the US Geological Survey's (USGS') Mint Canyon 7.5-minute quadrangle.

Vegetation was mapped on a 1-inch equals 200 feet (1"=200') scale color aerial photograph. In the event the tree canopy overlapped a different vegetation type, the vegetation was mapped as the tree canopy and the understory layer was not mapped. Nomenclature for vegetation types generally follows that of the *A Manual of California Vegetation association name* (Sawyer et al. 2009). If no corresponding vegetation type is found in *A Manual of California Vegetation*, species names were used to comprise the name. All plant species observed were recorded in field notes. Plant species were identified in the field or collected for subsequent identification using keys in Baldwin et al. (2012). Taxonomy follows Baldwin et al. (2012) and current scientific data (e.g., scientific journals) for scientific and common names. All wildlife species detected during the course of the surveys were documented in field notes. Birds were identified by visual and auditory recognition. Surveys for mammals were conducted during the day and included searching for and identifying diagnostic sign including scat, footprints, scratch-outs, dust bowls, burrows, and trails. Taxonomy and nomenclature for wildlife generally follows Stebbins (2012) for amphibians and reptiles, American Ornithologists Society (2020) for birds, and Wilson and Reeder (2005) for mammals.

A jurisdictional delineation and a tree survey were performed by Psomas Regulatory Permitting Specialist and Certified Arborist David Hughes on September 26, 2020. Jurisdictional features were delineated using a 1-inch equals 80 feet (1"=80') scale color aerial photograph and based on the presence of an Ordinary High Water Mark. A preliminary assessment of the presence of wetland that is defined as Waters of the United States (WOTUS) was made based on vegetation and hydrology. In these locations, test pits were dug to analyze soil and to confirm the presence or absence of wetlands. Trees that were included in the tree survey were those that are subject to regulation by the City of Santa Clarita and/or the CDFW. Trees were mapped on an aerial photograph and the following data were recorded: trunk diameter at breast height, tree height, canopy width, and qualitative ratings for overall tree health and aesthetics. Additionally, Mr.

Hughes performed a supplemental tree survey on March 6, 2021 to identify trees in an expanded survey area that includes the proposed airline locations and potential access routes.

Existing Conditions

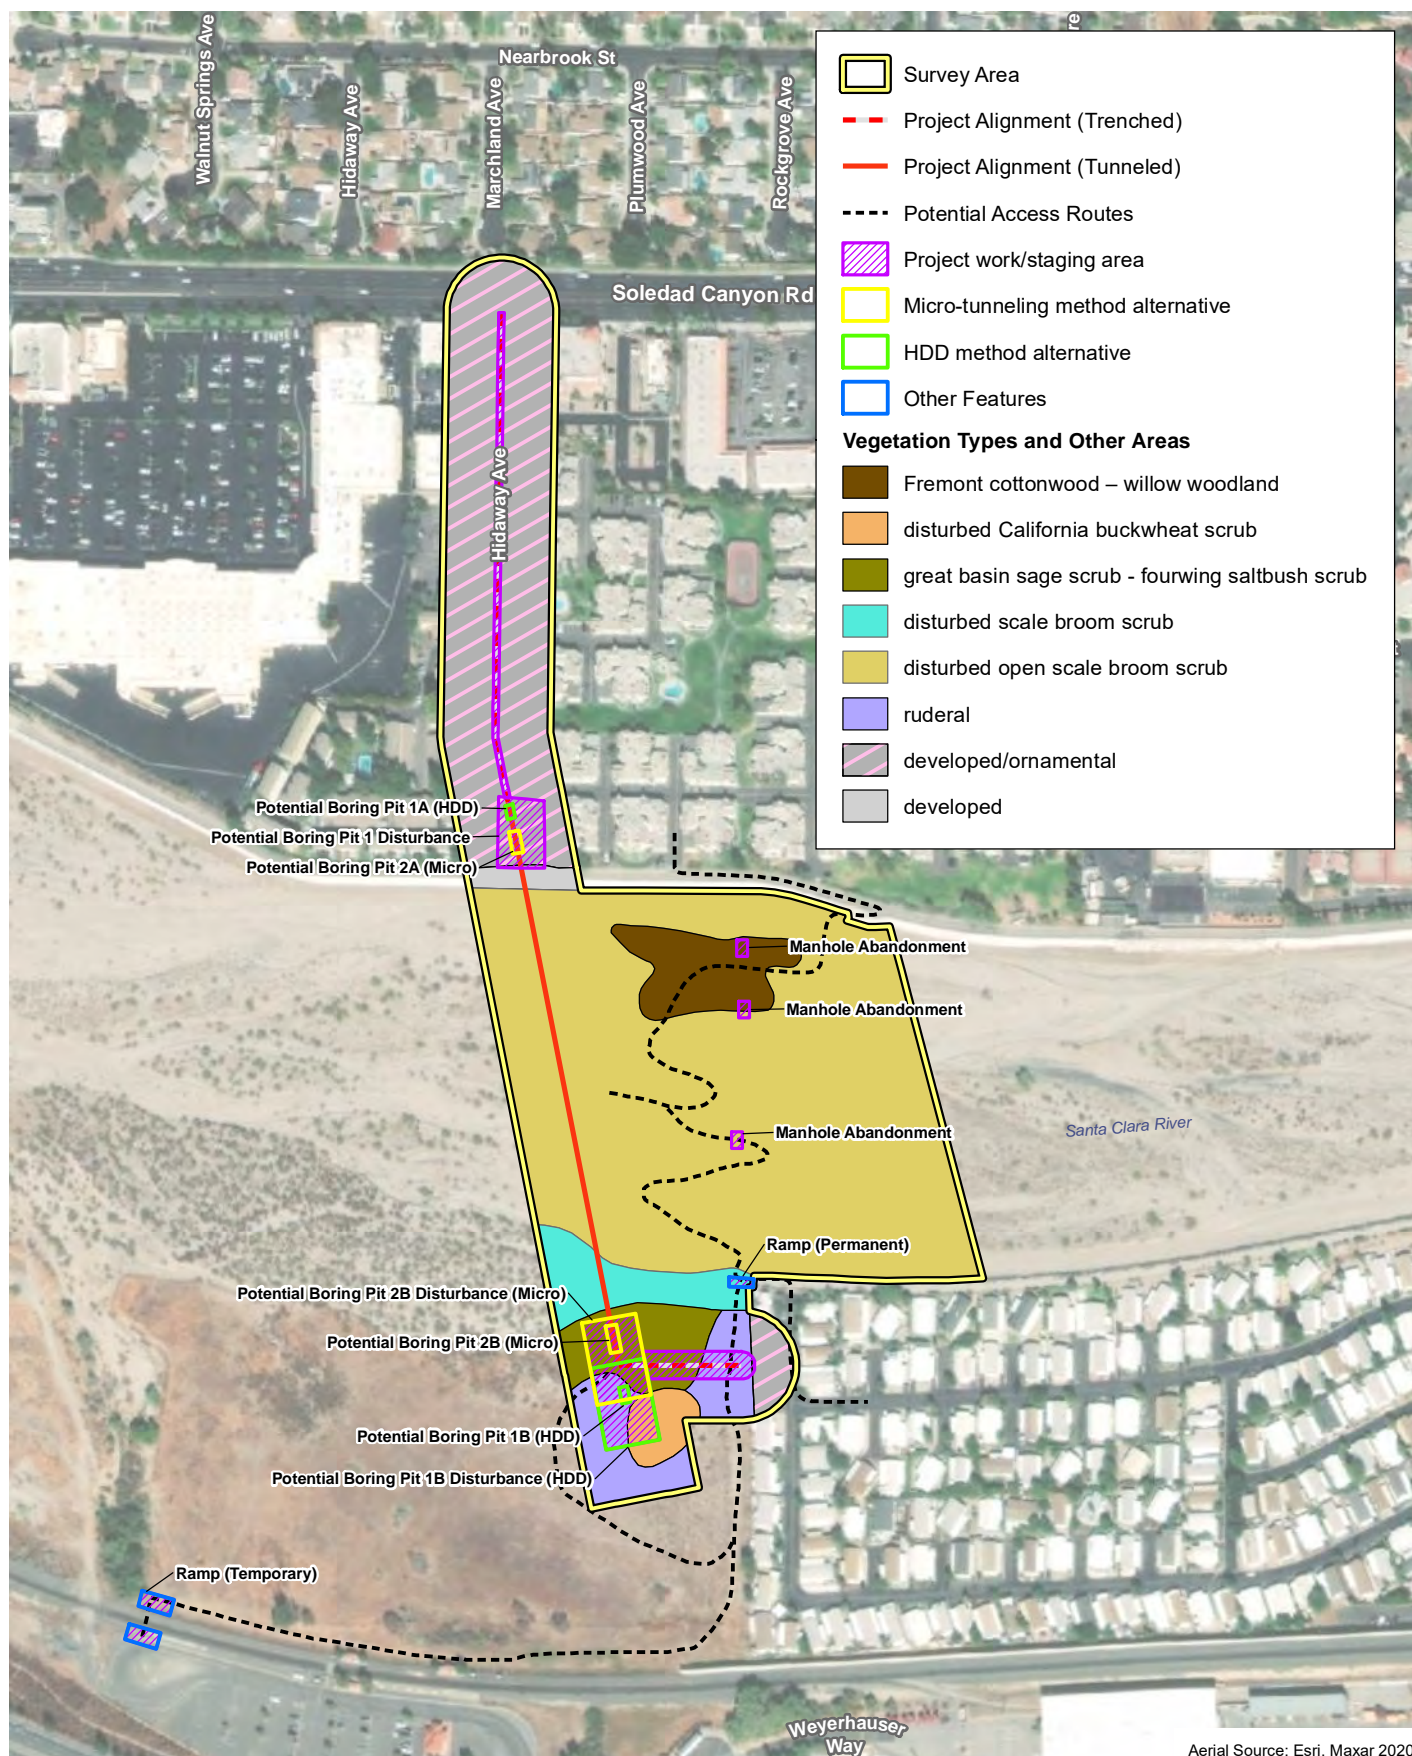

The Survey Area consists of developed land and undeveloped natural areas in the Santa Clara River (Exhibit 3-1). Exhibit 4-2, Vegetation Types and Other Areas, depicts the Survey Area boundaries, Project features, vegetation types, and other areas. The northern portion of the Survey Area occurs along Highway Avenue (a residential ROW), which is a paved road with associated developed areas and ornamental vegetation. The central portion of the Survey Area, in the Santa Clara River, contains native vegetation such as disturbed cottonwood - willow woodland, disturbed California buckwheat scrub, great basin sage scrub - fourwing saltbush scrub, disturbed scale broom scrub, and disturbed open scale broom scrub. Dominant plant species in these communities include, but are not limited to, Fremont cottonwood (*Populus fremontii*), red willow (*Salix laevigata*), mulefat (*Baccharis salicifolia*), scale broom (*Lepidospartum squamatum*), great basin sagebrush (*Artemisia tridentata*), California sagebrush (*Artemisia californica*), California buckwheat (*Eriogonum fasciculatum*), fourwing saltbush (*Atriplex canescens*), and yerba santa (*Eriodictyon* sp.). Other native species also occurring include but are not limited to cholla cactus (*Cylindropuntia* sp.) and woollystar (*Eriastrum* sp.). Ground cover in these areas contains a high proportion of non-native invasive species such as but not limited to horehound (*Marrubium vulgare*), and short-podded mustard (*Hirschfeldia incana*). Evidence of disturbances such as illegal dumping, homeless encampments, and off-road vehicle tracks were observed during the survey. A portion of the California buckwheat scrub habitat directly adjacent to the mobile home park in the Cordova Estates community has been cleared and California buckwheat shrubs have been cut down to grade. Ruderal habitats are comprised of weedy species, both native and non-native. The ruderal areas in the survey area are dominated by short-podded mustard. Other plant species occurring in the ruderal area include blue elderberry (*Sambucus nigra*), annual bursage (*Ambrosia acanthicarpa*), annual buckwheat (*Eriogonum* sp.), turkey-mullein (*Croton setiger*), Telegraph weed (*Heterotheca grandiflora*), Canada horseweed (*Erigeron canadensis*), tocalote (*Centaurea melitensis*), and twiggy wreath plant (*Stephanomeria* sp.). The potential access route that traverses south and southwest of the Survey Area contains ruderal vegetation.

Wildlife Habitat

The developed portions of the Survey Area are expected to support relatively urban-tolerant wildlife species. No fish or amphibian species are expected to occur in these developed areas due to lack of habitat. The ornamental trees support habitat for various bird species including raptors. Bird species such as mourning dove (*Zenaida macroura*), common raven (*Corvus corax*), red-tailed hawk (*Buteo jamaicensis*), Cooper's hawk (*Accipiter cooperii*), Anna's hummingbird (*Calypte anna*), black phoebe (*Sayornis nigricans*), house finch (*Haemorhous mexicanus*), lesser goldfinch (*Spinus psaltria*), white-crowned sparrow (*Zonotrichia leucophrys*), and house sparrow (*Passer domesticus*) are expected to occur in the developed portions of the Survey Area. All of these birds may occur for nesting except the white-crowned sparrow. Common reptiles that may occur include gophersnake (*Pituophis catenifer*), southern pacific rattlesnake (*Crotalus oreganus helleri*), western fence lizard (*Sceloporus occidentalis*), common side-blotched lizard (*Uta stansburiana*), and southern alligator lizard (*Elgaria multicarinata*). Common mammal species that may occur in the developed portion of the Survey Area includes raccoon (*Procyon lotor*), Virginia opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*), and brown rat (*Rattus norvegicus*).

Although bordered by development, the Santa Clara River portion of the Survey Area provides habitat for a wide variety of wildlife species because it is largely natural. No fish, amphibian, or

Feet

(Rev: 03/19/2021 MMD) R:\Projects\LOS25_LACSD\3\LOS250102\Graphics\MND\ex_Vegetation.pdf

reptile species were observed during the survey. The Santa Clara River was dry at the time of the survey. Based on the U.S. Fish and Wildlife Service's National Wetlands Inventory Wetland Mapper, the Santa Clara River may carry flow temporarily or for extended periods during the growing season. Given the lack of perennial flow, it is not expected to support fish species and has limited potential to support amphibian species such as Baja California treefrog (*Pseudacris hypochondriaca*). Common reptile species expected to occur include gophersnake, southern pacific rattlesnake, western fence lizard, common side-blotched lizard, and southern alligator lizard. The following common bird species were observed during the survey in the Santa Clara River: Cooper's hawk, mourning dove, California quail (*Callipepla californica*), common raven, American kestrel (*Falco sparverius*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), blue-gray gnatcatcher, house finch, and (*Poliophtila caerulea*), bushtit (*Psaltiriparus minimus*). Other common birds that may occur include but are not limited to greater roadrunner (*Geococcyx californianus*), California towhee (*Melospiza crissalis*), Costa's hummingbird (*Calypte costae*), yellow-rumped warbler (*Setophaga coronata*), killdeer (*Charadrius vociferus*), California thrasher (*Toxostoma redivivum*), and white-crowned sparrow (*Zonotrichia leucophrys*). All of these species may occur for nesting except yellow-rumped warbler and white-crowned sparrow. Common mammal species that may occur in the Santa Clara River portion of the Survey Area include coyote (*Canis latrans*), California ground squirrel (*Otospermophilus beecheyi*), raccoon (*Procyon lotor*), Virginia opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*), and kangaroo rat (*Dipodomys* sp.).

Special Status Vegetation Types

The CDFW provides a list of vegetation Alliances, Associations, and Special Stands that are considered "Sensitive Natural Communities" based on their rarity and threat. The following vegetation communities are considered special status per CDFW: scale broom scrub, and Fremont cottonwood – willow woodland. Disturbed open scale broom scrub and disturbed Fremont cottonwood – willow woodland occur in the Survey Area. The vegetation types found in the Survey Area are moderately to highly disturbed and contain a high proportion of non-native species typical of degraded habitat.

Special Status Plant Species

Plants may be considered "special status" due to declining populations, vulnerability to habitat change, or restricted distributions. Several special status plant species have been reported in the vicinity of the project based on the results of the literature review.

The following federally and/or State listed Endangered, Threatened, or Rare species were reported from the literature review: slender-horned spineflower (*Dodecahema leptoceras*), spreading navarretia (*Navarretia fossalis*), and California Orcutt grass (*Orcuttia californica*). The disturbed open scale broom scrub, disturbed scale broom scrub, and disturbed great basin sagebrush-fourwing saltbush scrub are moderately to heavily degraded and would not be expected to support slender-horned spineflower. There is no potentially suitable habitat for spreading navarretia or California Orcutt grass.

In addition to species formally listed by the resource agencies, several special status species (species with a California Rare Plant Rank [CRPR] of 1 or 2) have been reported from the literature review. Short-joint beavertail (*Opuntia basilaris* var. *brachyclada*), slender mariposa-lily (*Calochortus clavatus* var. *gracilis*), Palmer's mariposa-lily (*Calochortus palmeri* var. *palmeri*), and Piute Mountains navarretia (*Navarretia setiloba*), all CRPR 1 species, have been reported from the proposed Project region. There is no suitable habitat for any of these species within the Survey Area.

Special Status Wildlife Species

Wildlife may be considered “special status” due to declining populations, vulnerability to habitat change, or restricted distributions. Several special status wildlife species have been reported in the vicinity of the Survey Area based on the results of the literature review.

The following federally and/or State listed Endangered or Threatened species were reported from the literature review: Crotch bumble bee (*Bombus crotchii*), vernal pool fairy shrimp (*Branchinecta lynchi*), quino checkerspot butterfly (*Euphydryas editha quino*), unarmored threespine stickleback (*Gasterosteus aculeatus williamsoni*), and coastal California gnatcatcher (*Polioptila californica californica*). These species are not expected to occur on the Survey Area due to lack of suitable habitat. Coastal sage scrub occurs in a very narrow strip on the downslope from Weyerhauser Way but does not represent potentially suitable habitat for the coastal California gnatcatcher due to the limited amount and lack of connectivity to larger patches of adjacent habitat. Quino checkerspot butterfly is considered likely extirpated from Los Angeles County. There is no suitable habitat for the remaining listed species within the Survey Area.

In addition to species formally listed by the resource agencies, several special status species (e.g., California Species of Special Concern [SSC]) have been reported near the Survey Area. The most likely species to occur is burrowing owl (*Athene cunicularia*), which was reported from approximately 50 feet west of the Survey Area in the Santa Clara River. White-tailed kite (*Elanus leucurus*), a CDFW Fully Protected species while nesting, was observed as a fly-over during the survey. This species is not expected to nest in the Survey Area due to a lack of suitable nesting habitat. No other special status wildlife species are expected to occur.

Critical Habitat is designated by the U.S. Fish and Wildlife Service (USFWS) for the survival and recovery of species listed as Threatened or Endangered under the Federal Endangered Species Act. The Survey Area is not located in areas designated or proposed as Critical Habitat.

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. The proposed Project’s impact area is located partially within the Santa Clara River channel and partially within developed portions of the City of Santa Clarita (e.g., Hidaway Avenue cul-de-sac). The portion of the Project that occurs within developed areas does not contain habitat that could potentially support special status plant or wildlife species. The portion of the proposed Project’s impact area within the Santa Clara River channel would also not impact potentially suitable habitat for any special status plants. During active construction, short-term noise generation has the potential to disrupt foraging, roosting, and/or denning activities for a variety of wildlife species. Construction noise could deter wildlife from using habitat adjacent to construction. However, given the ambient noise levels due to existing traffic (e.g., railroad and street vehicular traffic), and relatively short Project duration, this impact would be considered less than significant, and no mitigation would be required. Implementation

of the Project within the Santa Clara River channel may potentially impact the burrowing owl, which is a CDFW Species of Special Concern. Impacts to burrowing owl wintering or nesting burrows would be considered potentially significant. MM BIO-1 would require that, prior to initiation of any construction-related activity involving the disturbance and/or removal of potentially suitable wintering or nesting burrowing owl habitat, the area shall be surveyed by a qualified Biologist. If potentially suitable burrows are located in the survey area, a 500-foot no work buffer shall be erected until a qualified Biologist determines that breeding and wintering are no longer occurring. Implementation of MM BIO-1 would reduce impacts to a burrowing owl wintering or nesting burrows to less than significant.

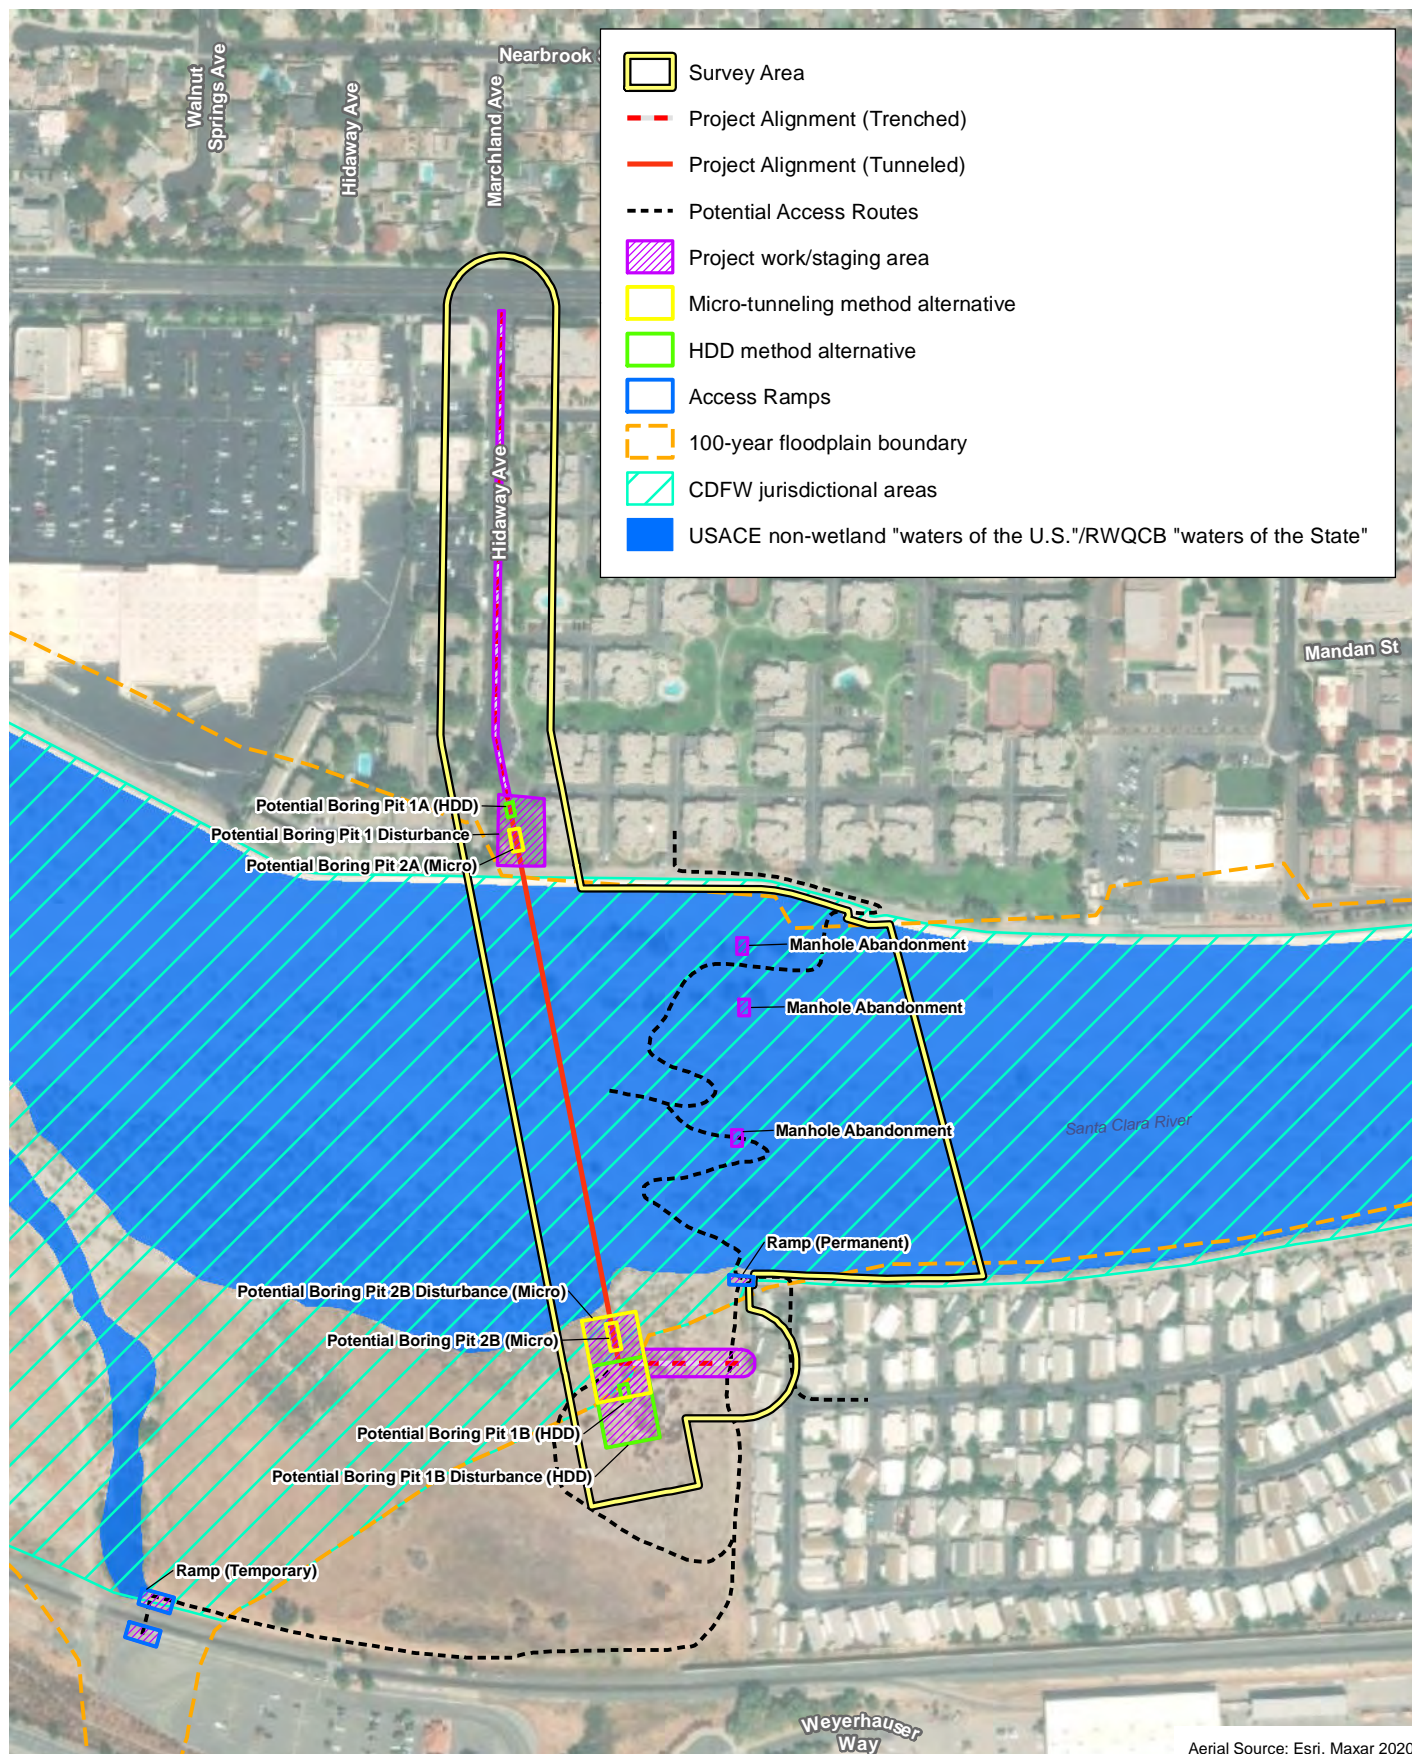

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Impacts to riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS, or special status vegetation types, would be considered less than significant. The only impact of this type would include temporary disturbance of a limited amount of disturbed riparian and scrub habitat. This impact is expected to be minor due to the minimal footprint of Project impacts, short duration of Project activities, the degraded nature of the disturbed vegetation type to be impacted, and the expectation of the habitat to quickly return to pre-Project conditions following Project activities. Riparian vegetation as a protected resource under State and federal wetland regulations are discussed under Threshold IV(c) below. These impacts would be less than significant, and therefore no mitigation would be required.

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. One State and federally protected drainage feature, the Santa Clara River, occurs within the Survey Area. Water that passes through the Santa Clara River travels in a westerly direction for approximately 50 miles before flowing directly into the Pacific Ocean, a Traditional Navigable Water. This is depicted on Exhibit 4-3, Jurisdictional Resources. Based on its connection to the Pacific Ocean and its intermittent flow regime, the Santa Clara River is considered to be a jurisdictional WOTUS. Project construction activities that consist of tunneling under the Santa Clara River are not subject to Section 404 of the Clean Water

D:\Projects\3\LOS250102\MXD\MNDex_Jurisdictional_20210413.mxd

Jurisdictional Resources

Soledad Canyon Relief Trunk Sewer Section 4 Project

Exhibit 4-3

350 175 0 350 Feet

(Rev: 04/13/2021 MMD) R:\Projects\LOS25_LACSD\3\LOS250102\Graphics\MNDex_Jurisdictional.pdf

Act, as no discharge to surface waters are proposed. However, temporary impacts to the riverbed that would result from airlining activities would result in potentially significant impacts and would require a Section 404 permit from the USACE (as detailed in MM BIO-2), which would reduce impacts to less than significant. In addition, a Water Quality Certification (WQC) from the LARWQCB pursuant to Section 401 of the Clean Water Act is required to address temporary impacts to the riverbed prior to issuance of the USACE permit, as detailed in MM BIO-2. Tunneling activities under the Santa Clara River may require dewatering. Because “waters of the State” include groundwater (as described in the California *Porter-Cologne Water Quality Control Act*), any dewatering would require authorization from the LARWQCB. Section 13260 of the *California Water Code* requires that the LARWQCB is notified for activities that “could affect the quality of waters of the State”, including groundwater. This impact may be addressed in the WQC or may require separate Waste Discharge Requirements from the LARWQCB. Proposed excavation areas that are necessary for pipeline installation occur outside of USACE WOTUS and LARWQCB “waters of the State”. However, excavation proposed for airlining activities would occur within the Ordinary High Water Mark of the Santa Clara River and are therefore considered USACE WOTUS and LARWQCB “waters of the State”. At the conclusion of the airlining activities, the disturbance areas would be restored to the pre-Project condition, and as such, these impacts are considered temporary. Three separate excavation areas for airlining activities, each measuring approximately 600 square feet, would result in a cumulative temporary impact of 0.04 acre to USACE WOTUS and LARWQCB “waters of the State”. This would be a potentially significant impact. However, acquisition of necessary permits and returning above-mentioned excavation areas to pre-Project conditions, as required with implementation of MM BIO-2, would reduce impacts to less than significant.

Pipeline installation will not result in a discharge to surface waters, and as such, USACE permitting is not required for this portion of the Project. However, because “waters of the State” include groundwater, and because pipeline installation may require dewatering, the LARWQCB may issue Waste Discharge Requirements associated with any necessary dewatering.

Areas that are under the jurisdiction of the CDFW would be affected by Project activities and would require authorization in the form of a Lake or Streambed Alteration Agreement (LSAA), per Section 1600 of the California *Fish and Game Code*. Temporary impacts to CDFW jurisdiction would occur during the following Project activities: excavation of tunneling pits for installation of the new sewer alignment; airlining activities; and installation of a temporary ramp over the Metrolink rail line. Permanent impacts to CDFW jurisdiction would result from construction of an access ramp from the adjacent residential community along the southern bank of the Santa Clara River. Upon construction completion, temporary disturbance areas, measuring 0.35 acre, shall be restored to pre-Project conditions. Permanent impacts would total approximately 0.02 acre.

The proposed Project would involve impacts to waters under the regulatory authority of the USACE, LARWQCB, and the CDFW and would require permitting from these agencies. With implementation of MM BIO-2, acquisition of regulatory permits and minimum replacement mitigation ratios, there would be less than significant impacts to State or federally protected drainage features.

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less Than Significant with Mitigation. Open space within the Project area consists of the Santa Clara River and scattered undeveloped areas surrounding the river. Development borders the Survey Area on the north and south, and these developed areas contain low-quality wildlife habitat. In general, landscape features or travel routes that connect the larger open space areas would be considered “wildlife corridors” as long as they provide adequate space, cover, food, and water and do not contain obstacles or distractions (e.g., man-made noise, lighting) that would generally hinder wildlife movement. Although adjacent areas are developed and offer lower quality movement habitat for wildlife, the Santa Clara River itself provides high-quality wildlife habitat and a relatively unrestrained corridor for east-west movement, and as such, would be considered a wildlife corridor. Santa Clara River provides local and regional movement for wildlife species. The Project would not impact regional or local wildlife movement because the Project is either confined mostly to existing roadways or within a large open space area (Santa Clara River) which allows wildlife to easily traverse around construction. Additionally, the proposed Project’s impact footprint is relatively small and would not create a bottleneck for wildlife within the Santa Clara River. As such, the Project would not restrain wildlife movement. As stated above, based on the U.S. Fish and Wildlife Service’s National Wetlands Inventory Wetland Mapper, the Santa Clara River may carry flow temporarily or for extended periods during the growing season. Given the lack of perennial flow, it is not expected to support fish species. As such, migratory fish would not be impacted by Project implementation. Temporary construction activities are not expected to adversely affect wildlife beyond ambient conditions (i.e., regular vehicular traffic within developed areas). These impacts would be considered less than significant.

Migratory birds have the potential to nest throughout the Survey Area. Passerines (songbirds) and raptors have the potential to nest in powerlines, in shrubs and trees, and on bare ground within and adjacent to the Survey Area. The Migratory Bird Treaty Act (MBTA) protects migratory birds and their nests and eggs, both common and special status, from accidental or “incidental” take. In addition, multiple sections of *California Fish and Game Code* provide protection for nesting birds and raptors. Section 3503 makes it unlawful to take, possess, or needlessly destroy the nest or eggs of any bird. Section 3503.5 specifically addresses raptors (i.e., birds of prey in the orders *Falconiformes* and *Strigiformes*) and makes it unlawful to take, possess, or destroy these birds or their nest or eggs. Section 3513 prohibits the take or possession of migratory non-game birds as designated by the MBTA or any part of such bird. Take of an active nest would be in violation of *California Fish and Game Code* and the MBTA providing protection of nesting birds. With implementation of MM BIO-3, which requires nesting bird surveys and active nest protection, impacts on nesting birds would be less than significant.

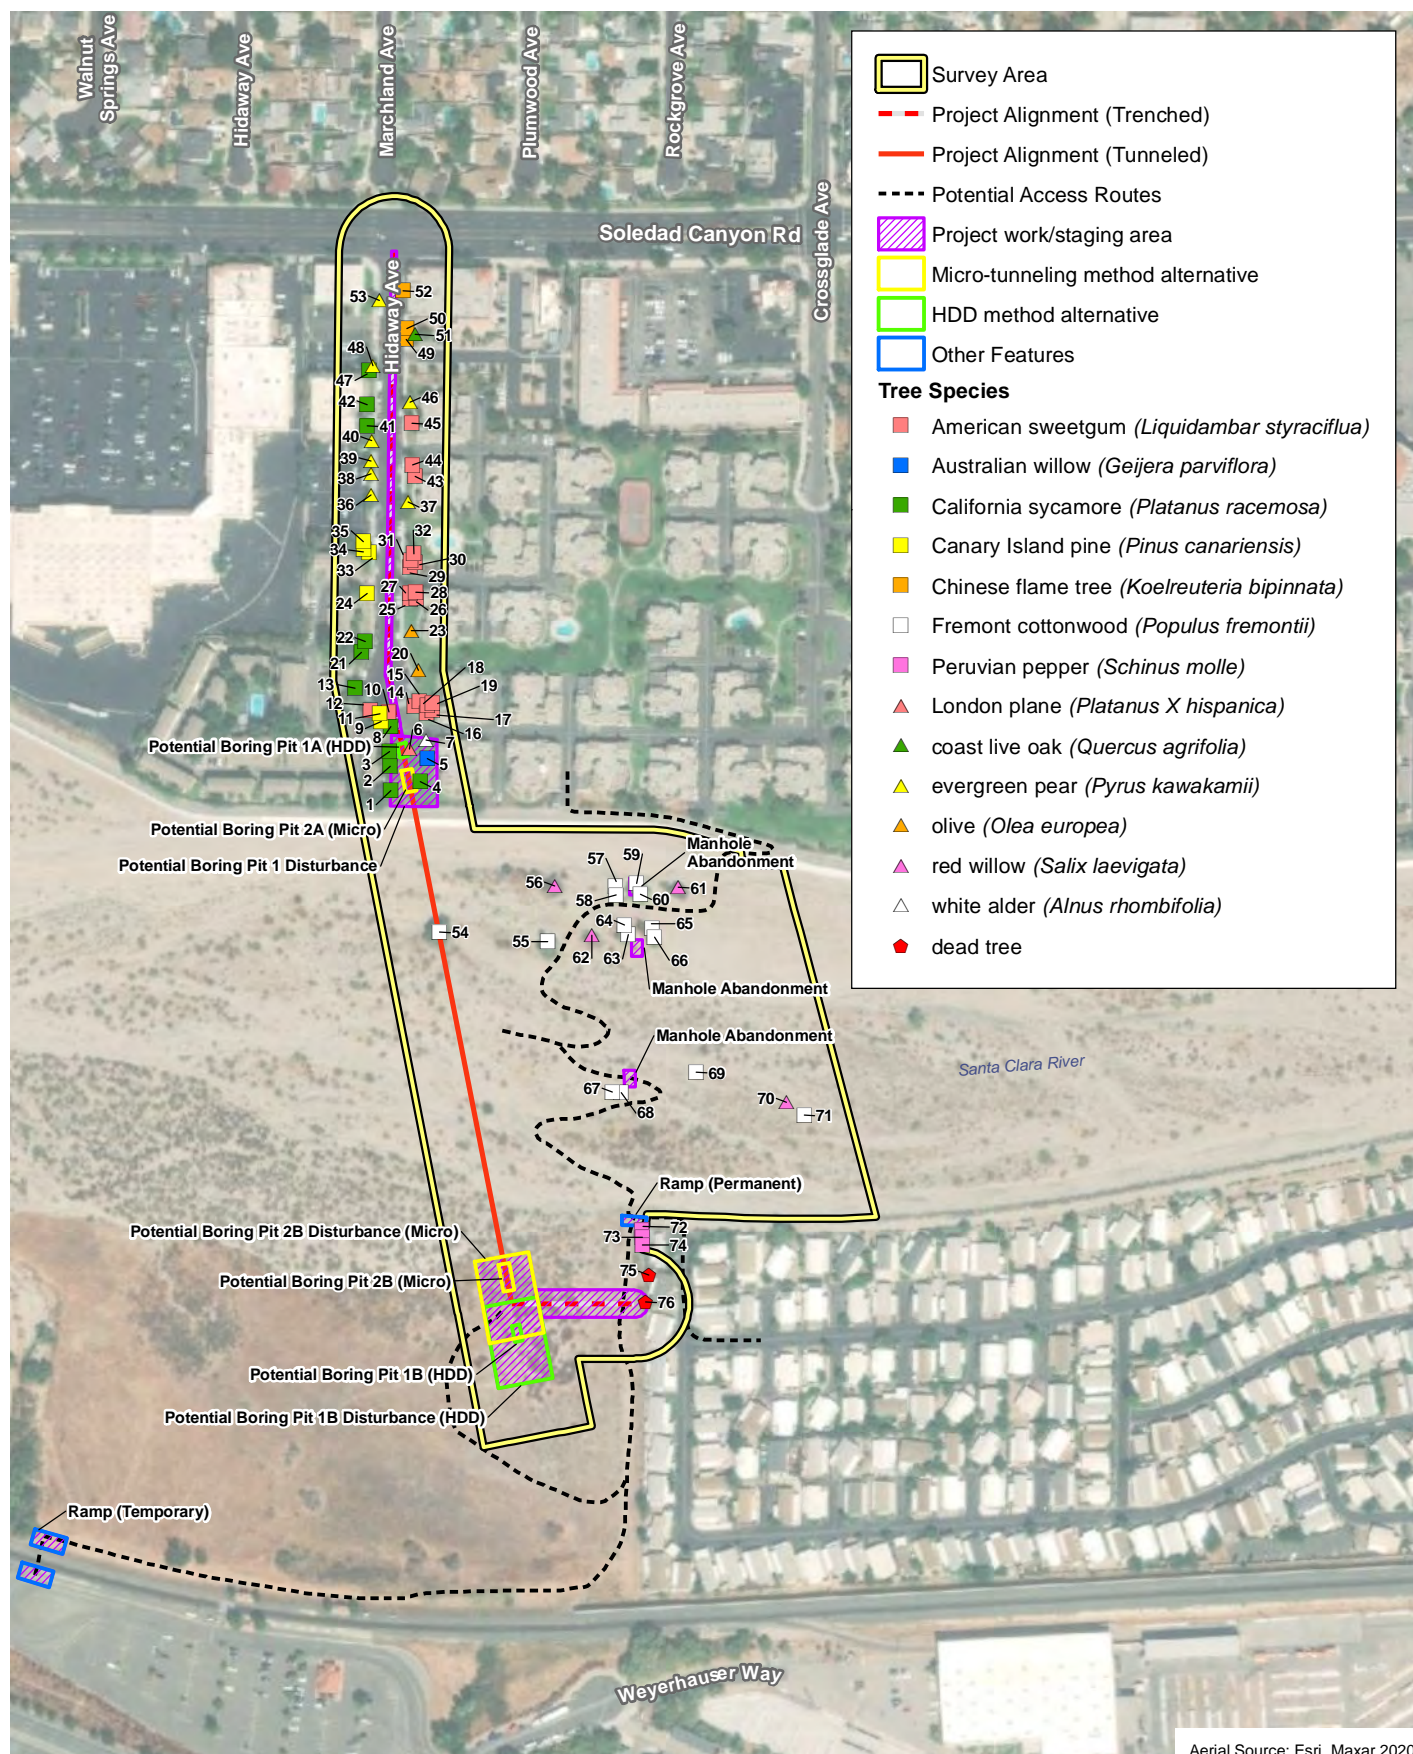

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. Project construction activities would occur in close proximity to regulated trees. Regulated trees within the Project area are subject to the City of Santa Clarita Oak Tree Ordinance and the CDFW Fish and Game Code. The tree survey that was conducted for the Project identified 14 Fremont cottonwood trees and 4 red willows in the Santa Clara River and are therefore subject to regulation by the CDFW. Exhibit 4-4, Tree Locations, shows the Project boundary, Project features, and trees at the Project site. Among these trees are two Fremont cottonwood trees that are in the Project footprint for airlining activities. One Fremont cottonwood tree is a single trunk tree measuring 21.5 inches in trunk diameter, while the second Fremont cottonwood tree has three trunks measuring 13.3, 8.7, and 7.2 inches in trunk diameter. Due to the close proximity of airlining activities, these trees may be impacted. All native trees that are in the active channel of the Santa Clara River or the floodplain along the southern portion of the river are subject to regulation by the CDFW. The removal of native trees within CDFW jurisdictional areas would require authorization in the form of an LSAA from the CDFW, as detailed in MM BIO-2. Mitigation to compensate for the removal of such trees would be determined as part of the processing of an LSAA. With implementation of MM BIO-2, impacts to native trees under the jurisdiction of the CDFW would be reduced to a level of less than significant.

A third large Fremont cottonwood tree in the Santa Clara River occurs directly over the proposed sewer alignment. The sewer alignment would be installed by tunneling under the Santa Clara River to a depth of several feet below the rhizosphere of this cottonwood tree. Therefore, no impacts to this tree would occur.

The tree survey also identified various trees that are in the public ROW for Hidaway Avenue and other adjacent trees on private property north of the Santa Clara River. These trees include 1 white alder (*Alnus rhombifolia*), 1 Australian willow (*Geijera parviflora*), 3 Chinese flame trees (*Koelreuteria bipinnata*), 19 American sweetgums (*Liquidambar styraciflua*), 2 olive trees (*Olea europea*), 6 Canary Island pines (*Pinus canariensis*), 11 California sycamores (*Platanus racemosa*), 1 London plane (*Platanus X hispanica*), 8 evergreen pears (*Pyrus kawakamii*), 1 coast live oak (*Quercus agrifolia*), and 3 Peruvian pepper trees (*Schinus molle*). Of these trees, two are in the immediate vicinity of proposed excavation areas and may be impacted. These include 1 California sycamore and 1 London plane tree, measuring 2 inches and 1.5 inches in trunk diameter, respectively. These trees are on private property and are not subject to regulation by the CDFW or the City of Santa Clarita Oak Tree Ordinance. Surrounding these excavation areas is a proposed project work and staging area. Within and immediately adjacent to this area are 3 California sycamores (measuring 11, 14, and 15.5 inches in trunk diameter), 1 white alder (15.4 inches in trunk diameter), and 1 Australian willow (1.3 inches in trunk diameter). These trees will likely be protected in place during project activities and no impacts are anticipated. Because none of these trees north of the Santa Clara River are protected by a specific regulation or ordinance, any impacts to them would be a less than significant impact, and no mitigation is required.

IV. Biological Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Survey Area is not located within a Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. As such, the Project would not conflict with the provisions of these plans, and there would be no impact.

MITIGATION MEASURES

MM BIO-1 Prior to the initiation of any construction-related activity involving the disturbance and/or removal of potentially suitable wintering or nesting burrowing owl habitat, the area shall be surveyed by a qualified Biologist. The impact area plus a 500-foot buffer shall be surveyed. If no potentially suitable burrowing owl burrows are detected, no additional action is required. However, if potentially suitable burrows are located in the survey area, a 500-foot no-work buffer shall be erected and remain in effect until a qualified Biologist determines that breeding or wintering is no longer occurring.

MM BIO-2 Prior to the construction of any phase or component of the proposed Project that involves impacting or modifying any jurisdictional resources, permits from the USACE, the LARWQCB, and the CDFW shall be required. Both permanent and temporary (construction-related) impacts are regulated and would therefore trigger the need for permits.

Discharges to surface waters (WOTUS) on a temporary or permanent basis require authorization through the issuance of a Section 404 permit from the USACE, pursuant to Section 404 of the Clean Water Act. Project activities that would require a permit from the USACE include excavation in the Santa Clara River for airlining activities and any placement of soil in the riverbed. All impacts related to this activity are expected to be temporary. Operating construction equipment in the Santa Clara River would also require a USACE permit.

The LARWQCB also asserts jurisdiction over all WOTUS and a Water Quality Certification pursuant to Section 401 of the Clean Water Act is required prior to issuance of the USACE Section 404 permit. In addition to WOTUS, the LARWQCB regulates discharges to “waters of the State” over which the federal government does not assert jurisdiction. The State Water Resources Control Board’s Order No. 2004-0004-DWQ, “Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to Waters Deemed by the U.S. Army Corps of Engineers to be Outside of Federal Jurisdiction”, requires that any person discharging waste which could affect the quality of the “waters of the State” must file a report of waste discharge pursuant to Section 13260(a) of the California Water Code (Water Code). Section 13263(a) of the Water Code requires the

RWQCB to issue Waste Discharge Requirements to protect the beneficial uses and water quality objectives of the relevant Water Quality Control Plan. Implementation of the Waste Discharge Requirements will ensure compliance with the objectives of the Water Quality Control Plan for the Los Angeles Region. The Project Proponent is required to receive authorization for impacts to groundwater resources via a Water Quality Certification or separate Waste Discharge Requirements.

Project construction may impact two Fremont cottonwood trees during airlining activities. Prior to initiating construction activities that would impact or modify areas under the jurisdiction of the CDFW, including native trees in the Santa Clara River, a Lake or Streambed Alteration Agreement (LSAA) shall be issued by the CDFW, pursuant to Section 1600 of the California *Fish and Game Code*. Areas under the jurisdiction of the CDFW include the streambed or streambank of the Santa Clara River, along with all associated riparian vegetation. Project activities that would require an LSAA would include all excavation activities in the Santa Clara River streambed and floodplain, installation of access ramps, removal of native tree species in the Santa Clara River, or impacts to native vegetation that would result from operating construction equipment in the Santa Clara River area. Tree replacement to mitigate potential impacts to two Fremont cottonwood trees would be negotiated as part of the LSAA issuance. The Project shall adhere with conditions set forth within the above-mentioned permits, and at a minimum, return excavated areas to pre-Project conditions.

MM BIO-3 To ensure compliance with Fish and Game Code sections 3503, 3503.5, and 3513, no direct impacts shall occur to any nesting birds, their eggs, chicks, or nests. In order to avoid impacts on nesting birds, vegetation removal should be scheduled between September 16 and January 31, which is outside the peak nesting season. If vegetation removal must occur during the peak nesting season (i.e., February 1 to September 15), a pre-construction nesting bird survey shall be conducted by a qualified Biologist within three days prior to vegetation removal activities.

If the Biologist finds an active nest within or adjacent to the construction area, the Biologist shall identify an appropriate protective buffer zone around the nest depending on the sensitivity of the species, the nature of the construction activity, and the amount of existing disturbance in the vicinity. In general, the Biologist shall designate a buffer of 50 to 200 feet for common nesting birds and 200 to 500 feet for special status nesting birds and nesting raptors. No construction activities shall be allowed within the buffer until nesting activity has ended to ensure compliance with *California Fish and Game Code*. Avoidance and minimization measures shall be maintained until the young have fledged, and no further nesting is detected.

V. CULTURAL RESOURCES

Information in this section is based upon the records searches and literature reviews of information available from the South-Central Coastal Information Center (SCCIC), the Native American Heritage Commission (NAHC), compiled as Appendix C to this IS/MND, and a pedestrian survey of the Project site conducted by Psomas on October 21, 2020.

Methodology

A cultural resources literature review and records search was conducted by the SCCIC at California State University, Fullerton for Psomas on October 8, 2020. The SCCIC is a designated branch of the California Historical Resources Information System (CHRIS) and houses records regarding archaeological and historic resources recorded in Orange, Los Angeles, and Ventura Counties. The literature review and records search consisted of an examination of the U.S. Geological Surveys' (USGS') 7.5-minute Mint Canyon Quadrangle to determine if any cultural resources (e.g. archaeological sites, built environment resources) are recorded or if any cultural resources studies have been conducted on the Project site or within a 0.5-mile radius of the Project site. Data sources consulted at the SCCIC include archaeological records, Archaeological Determinations of Eligibility, historic maps, and the Historic Property Data File (HPDF) maintained by the Office of Historic Preservation. The HPDF contains listings for the California Register of Historical Resources (CRHR) and/or the National Register of Historic Places (NRHP), California Historical Landmarks, and California Points of Historical Interest.

Psomas also requested the NAHC to review the Sacred Lands File (SLF) database regarding the possibility of Native American cultural resources and/or sacred places in the Project vicinity that are not documented on other databases. The NAHC completed its Sacred Lands File search on October 13, 2020. The SLF database search did not identify any known resources or sacred places within or around the Project site. However, the records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource. As such, the NAHC recommends contacting the Chumash and Gabrielino tribes to scope for additional information.

Psomas surveyed the alignment on October 21, 2020. The alignment was surveyed by walking transects evenly spaced no more than 10 meters (32 feet) apart on either side of the route. The archaeologists examined all areas considered highly sensitive for cultural resources and the ground surface for the presence of the following:

- A. Prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools);
- B. Historic artifacts (e.g., metal, glass, ceramics);
- C. Sediment discoloration that might indicate the presence of a cultural midden; and
- D. Depressions and other features indicative of the former presence of structures or buildings (e.g., milling features, foundations).

The field survey was conducted to identify any new cultural resources and to re-locate previously recorded cultural resources for planning purposes. No new cultural resources were identified within the Project site. However, much of the surface visibility was obstructed by developed hardscapes and dense vegetation.

Existing Conditions

The SCCIC literature review and records search conducted for the Project site revealed that 17 cultural resource studies have been conducted within 0.5-mile of the Project site. Three of these 17 studies (LA-10642, LA-3690, and LA-10560) included the Project site. The 17 studies within the 0.5-mile radius consisted of archaeological surveys and linear surveys.

The SCCIC literature review and records search did not identify any resources within the Project site. Two (2) cultural resources (P-19-000087 and P-19-190983) were identified within the 0.5-mile search radius of the Project site. P-19-000087 is a prehistoric site located east of the Project site and north of the Santa Clarita River. The site was recorded in 1945 and updated in 1979; the site has since been developed into a commercialized hardscape. P-19-190983 is a historic structure located northwest of the Project site. The building is known as Canyon Center Shopping Center and was recorded as a potentially significant historic building in 2014.

V. Cultural Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. The SCCIC literature review and records search identified one historic and one prehistoric resource within 0.5-mile of the Project site. P-19-000087 is a prehistoric site located east of the Project site and north of the Santa Clarita River. P-19-190983 is a historic structure located northwest of the Project site. The Project is not expected to impact either resources because they are located outside of the Project footprint. Furthermore, the pedestrian survey failed to identify new cultural resources. As such, there are no known resources within the Project site. Therefore, based on the review of archival material and the results of the field survey, it does not appear that the proposed Project would result in a significant adverse impact to any identified or eligible resources pursuant to Section 15064.5 of the State CEQA Guidelines. However, as indicated from the cultural resource records searches, two archaeological localities have been identified nearby. Excavation in native (i.e., previously undisturbed) soils would have the potential to encounter unknown resources, which would be considered a potentially significant impact. Implementation of MM CULT-1, which address monitoring and treatment of cultural resources, development of a cultural resources monitoring plan, and tribal monitoring agreements, would reduce potential impacts to a less than significant level.

V. Cultural Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. There are no known formal cemeteries on the Project site. Therefore, construction activities would not disturb known human remains. However, buried and undiscovered archaeological remains, including human remains, may be present in subsurface soils. *California Health and Safety Code* Section 7050.5 requires that if human remains are discovered on site, no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to *Public Resources Code* Section 5097.98. Potential impacts to human remains resulting from the Project would be less than significant with adherence to state requirements during construction and in the event human remains are discovered. No additional mitigation is required.

MITIGATION MEASURES

MM CULT-1 In the event that buried archaeological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified archaeologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include development of avoidance strategies, capping with fill material, or mitigation of impacts through data recovery programs such as excavation or detailed documentation. During cultural resources monitoring, if the qualified archaeologist determines that the sediments being excavated are previously disturbed or unlikely to contain significant cultural materials, the qualified archaeologist can specify that monitoring be reduced or eliminated.

VI. ENERGY

VI. Energy	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact.

Construction

Project construction would require the use of construction equipment for asphalt removal, excavation, backfilling, and re-paving activities. Construction would also include the energy use from vehicles of construction workers and vendors traveling to and from the Project site. Off-road construction equipment use was calculated from the equipment data (i.e., mix, hours per day, horsepower, load factor, days per phase) provided in the CalEEMod construction output files included in Appendix D of this IS/MND. The total horsepower hours for the Project was then multiplied by fuel usage estimates per hours of construction activities included in CARB's OFFROAD2017 Model. Energy data can be found in Appendix D of this IS/MND.

Fuel consumption from construction worker, vendor, and delivery/haul trucks was calculated using the trip rates and distances provided in the CalEEMod construction output files. Total vehicle miles traveled (VMT) was then calculated for each type of construction-related trip and divided by the corresponding miles per gallon factor using CARB's Emissions FACTor (EMFAC) 2017 (EMFAC 2017) model. EMFAC provides the total annual VMT and fuel consumed for each vehicle type. Construction vendor trucks were assumed to be primarily gasoline-fueled trucks, and delivery/haul trucks were primarily assumed to be heavy-duty diesel trucks. As shown in Table 4-6, the Project would consume an estimated total of 8,572 gallons of gasoline and 6,967 gallons of diesel during construction.

**TABLE 4-6
ENERGY USE DURING CONSTRUCTION**

Source	Gasoline Fuel (gallons)	Diesel Fuel (gallons)
Off-road Construction Equipment	5,079	5,008
Worker commute trips	3,191	13
Vendor trips	300	4
On-road haul trips	2	1,942
Total	8,572	6,967
See Appendix D for Energy data. Data based on data from CalEEMod version 2016.3.2, OFFROAD2017, and EMFAC 2014.		

Fuel energy consumed during construction of the Project would be temporary in nature and would not occur after completion of construction activities. It would also not represent a significant

demand on energy resources. Furthermore, there are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in other parts of the State. Therefore, the proposed construction activities would not result in inefficient, wasteful, or unnecessary fuel consumption.

Operation

The proposed Project is designed to develop sewer infrastructure to assist SCVSD in meeting future demands from projected growth in the region. The Project would provide sewer relief within the City. No pumping stations or other means of actively piping sewage are proposed for the proposed Project and, as such, no electricity or natural gas demand would be generated by the Project. Additionally, the proposed pipeline Project would not result in daily vehicle trips. Consequently, no energy use related to transportation fuels would be required. Therefore, energy use associated with the proposed Project would not result in an inefficient, wasteful, or unnecessary consumption of energy. A less than significant energy impact would result from implementation of the proposed Project.

VI. Energy	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed above, the Project would primarily use energy during the construction phase of the Project. The Project would develop a sewer pipeline to provide relief and accommodate expected tributary flows from planned growth within the area. Because the operation of the proposed Project does not result in energy consumption, the proposed Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

MITIGATION MEASURES

No mitigation is required.

VII. GEOLOGY AND SOILS

Information in this section is derived from the *City of Santa Clarita General Plan*, EDR Radius Map™ Report (EDR Report) prepared for the Project by Environmental Data Resources, Inc. (Appendix E), and the Cultural Resource data provided by Psomas for the Project (Appendix C).

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. There are no known active faults traversing the Project site, and the site is not located within an Alquist-Priolo Earthquake Fault Zone or any active fault zones established by Los Angeles County. The San Gabriel Fault is the nearest earthquake fault to the site and is located approximately 1.3 miles south and southwest of the Project site (EDR 2020). Thus, the proposed Project would not be exposed to fault rupture hazards along the San Gabriel Fault. No mitigation is required.

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. As discussed above, there are no active or potentially active faults traversing the site. However, the Project site, as with the entire Southern California region, is subject to secondary effects from earthquakes, including ground shaking due to future earthquakes on regionally active faults. Strong ground shaking may occur in the City due to earthquakes on several active faults in the region, including the San Gabriel Fault, San Fernando Fault Zone, Santa Susana Fault, Sierra Madre Fault, and Holser Fault (City of Santa Clarita 2011).

While the Project site and sewer pipeline could potentially be subject to moderate or severe ground shaking effects from earthquakes, they would be designed and constructed in conformance with applicable seismic safety requirements of the 2019 CBC. Also, the Project would not involve construction of habitable structures or structures whose height, mass, or

materials would pose a hazard in the event of an earthquake. Impacts would be less than significant.

VII. Geology and Soils		Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:					
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:					
iii) Seismic-related ground failure, including liquefaction?		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Liquefaction can occur when saturated, cohesionless soils lose their strength due to the buildup of excess pore water pressure during cycling loading causing it to behave as a liquid. The types of soils that are most susceptible to liquefaction are loose, saturated, fine-to-medium grained, cohesionless solids. Surface and subsurface manifestations from liquefaction can include loss of support for structures, excessive (i.e., dynamic) settlement, the occurrence of sand boils (i.e., sand and water ejected at the surface), ground lurching (i.e., movement of low density soil materials on a bluff, steep slope, or embankment), and other effects such as lateral spreading (i.e., horizontal displacement on sloped surfaces as a result of underlying liquefaction).

According to the Seismic Hazard Zones Map for the City of Santa Clarita, most of the Project site is located within an area designated as a Liquefaction Hazard Zone (City of Santa Clarita 2020a). The Santa Clara River is underlain by unconsolidated alluvium, which may be prone to liquefaction (City of Santa Clarita 2011). Therefore, the Project would be potentially subject to liquefaction and related effects in the event of an earthquake. However, the effects of liquefaction are readily managed through soil engineering techniques; the appropriate engineering methods would be determined for the Project in conformance with the 2019 CBC to ensure liquefaction does not adversely affect the proposed Project facilities. As such, there would be less than significant impacts related to secondary seismic hazards, including liquefaction.

VII. Geology and Soils		Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:					
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:					
iv) Landslides?		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The occurrence of landslides and other types of slope failures (e.g., rock falls and mudflows) is influenced by several factors, including slope grade, geologic and soil characteristics, moisture levels, and vegetation cover. Landslides can be triggered by a variety of potentially destabilizing conditions or events, such as gravity, fires, precipitation, grading, and seismic activity. The City of Santa Clarita Seismic Hazards Map indicates that the Project site is

not located within an Earthquake-Induced Landslide Hazard Zone (City of Santa Clarita 2020a). The Project site and surrounding areas are relatively flat, and the proposed Project would not create any new slopes or unstable land surfaces that would be subject to landslides. Once construction is complete the pipeline and related infrastructure would be located underground, and the ground surface would be returned to existing conditions. There would be no impact.

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. The largest source of erosion and topsoil loss is uncontrolled drainage during construction. Since the Project site is greater than one acre, compliance with the State Water Resources Control Board's (SWRCB's) NPDES General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities (Construction General Permit) would be required. As discussed in more detail in Section X, Hydrology and Water Quality, the NPDES permit program controls water pollution by regulating point sources that discharge pollutants into "waters of the U.S.". Construction activities shall be conducted in compliance with the statewide NPDES General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities (Order No 2012-0006-DWQ, NPDES No. CAS000002), adopted by the SWRCB on July 17, 2012. In compliance with the NPDES permit (MM HYD-1 in Section X), erosion potential during construction of the proposed Project would be managed with Best Management Plans (BMPs) implemented on the Project site as part of a Storm Water Pollution Prevention Plan (SWPPP) during construction activities in accordance with NPDES requirements. Implementation of the BMPs would reduce construction-related erosion impacts to a less than significant level. Once construction is complete, the Project would be located underground, and the ground surface would be returned to existing conditions in areas where the ground was disturbed. In order to ensure no water infiltration from the Santa Clara River into the MHs and existing pipe, the MHs to be abandoned with Project implementation would then be filled with a cement slurry and topped off with sand. There would be a less than significant impact with mitigation.

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. Liquefaction and landslides are discussed above under Thresholds VII(a.iii) and VII(a.iv), respectively. Lateral spreading is a liquefaction-related phenomenon. As discussed above, there is an existing liquefaction risk for the portion of the Project site located within the Santa Clara River. However, the risk of liquefaction would be managed through appropriate soil engineering techniques in conformance with the 2019 CBC. As such, there would be a less than significant impact related to lateral spreading. Land subsidence and collapse occur due to the loss of surface elevation due to the removal of subsurface support, such as removal of water, oil, or gas. Therefore, there would be a potential for land subsidence and collapse due to the loss of surface elevation during construction activities due to closed excavation via trenchless technology for portions of the Project within the Santa Clara River. Because the Project would involve closed excavation via trenchless technology, MM GEO-1 would reduce impacts related to unstable or expansive soils to less than significant levels by requiring dewatering activities if groundwater is encountered at depths of 20 feet or less in the areas of pipeline construction.

Expansive soils are soils that swell when they absorb water and shrink as they dry, such as pure clay soils and claystone. The hazard associated with expansive soils is that they can overstress and cause damage to the foundation of buildings set on top of them. As discussed with soils susceptible to liquefaction, the effects of expansive soils are readily managed through soil engineering techniques; the appropriate engineering methods would be determined for the Project in conformance with the 2019 CBC to ensure expansive soils, if present, do not adversely affect the proposed Project. Also, the Project would not involve construction of any structures that would pose a substantial risk due to location on expansive soil. There would be a less than significant impact related to expansive soils due to construction and operation of the Project through compliance with the 2019 CBC, and no mitigation is required

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The proposed Project is the construction and installation of a sewer pipeline, which is a wastewater transmission infrastructure. The Project does not include the installation or operation of any septic tanks. There would be no impact and no mitigation is required.

VII. Geology and Soils	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact with Mitigation. This threshold evaluates the Project's potential to have adverse effects on paleontological resources. The paleontological analysis under this threshold is based on the results of a literature review and records check conducted through the Natural History Museum of Los Angeles County (LACM), and a review of geologic maps and aeriels of the Project site. The paleontological records search was completed on October 16, 2020. The record search included a thorough search of the LACM paleontology collection records for the locality and specimen data for the Project site and surrounding area. The record search did not identify any fossil localities within the Project site. However, 11 localities were located nearby from the same sedimentary deposits that occurs within the Project site, either at the surface or at depth. Therefore, the Project site could contain significant fossils. Excavation in native (i.e., previously undisturbed) soils would have the potential to encounter unknown resources, which would be considered a potentially significant impact. Implementation of MM GEO-2, which address treatment of paleontological resources, would reduce impacts to a unique paleontological resource or unique geologic feature to less than significant. As such, impacts to paleontological resources or unique geologic features would be less than significant with mitigation.

MITIGATION MEASURES

Refer to MM HYD-1 as stated in Section X, Hydrology and Water Quality.

MM GEO-1 Prior to initiation of excavation activities and if groundwater is encountered at depths of 20 feet or less in the areas of Potential Boring Pits or trenching locations, the contractor shall implement dewatering activities or other suitable method for stabilizing excavation bottom to the satisfaction of the geotechnical engineer.

MM GEO-2 In the event that potential paleontological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified paleontologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include monitoring by a qualified paleontologist during construction-related ground-disturbing activities. The monitor will retain the option to reduce monitoring if it is determined that the sediments were previously disturbed. Monitoring may also be reduced if potentially fossiliferous units are not present or, if present, are determined to have a low potential to contain fossil resources. The monitor will be equipped to salvage fossils and samples of sediments as they are unearthed and will be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Recovered specimens will be prepared to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Specimens will be curated into a professional, accredited museum repository with permanent retrievable storage. A report of findings, with an appended itemized inventory of specimens, will be prepared and will signify completion of the mitigation.

VIII. GREENHOUSE GAS EMISSIONS

Climate change refers to any significant change in climate, such as the average temperature, precipitation, or wind patterns, over a period of time. Climate change may result from natural factors, natural processes, and/or human activities that change the composition of the atmosphere and alter the surface and features of the land. Significant changes in global climate patterns have been associated with global warming, which is an average increase in the temperature of the atmosphere near the Earth's surface; this is attributed to an accumulation of greenhouse gas (GHG) emissions in the atmosphere. GHGs trap heat in the atmosphere, which in turn increases the Earth's surface temperature. Some GHGs occur naturally and are emitted into the atmosphere through natural processes, while others are created and emitted solely through human activities. The majority of climate scientists attribute climate change to the increase in GHG emissions generated by human activities.

GHGs, as defined under California's Assembly Bill (AB) 32, include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. General discussions on climate change often include water vapor, O₃, and aerosols in the GHG category. Water vapor and atmospheric O₃ are not gases that are formed directly in the construction or operation of development projects, nor can they be controlled in these projects. Aerosols are not gases. While these elements have a role in climate change, they are not considered by regulatory bodies, such as CARB, or climate change groups, such as The Climate Registry, as gases to be reported or analyzed for control. Therefore, no further discussion of water vapor, O₃, or aerosols is provided herein.

GHGs vary widely in the power of their climatic effects; therefore, climate scientists have established a unit called global warming potential (GWP). The GWP of a gas is a measure of both its potency and lifespan in the atmosphere as compared to CO₂. For example, since CH₄ and N₂O are approximately 21 and 310 times more powerful than CO₂, respectively, in their ability to trap heat in the atmosphere; they have GWPs of 21 and 310, respectively, whereas CO₂ has a GWP of 1. Carbon dioxide equivalent (CO₂e) is a quantity that enables all GHG emissions to be considered as a group despite their varying GWP. The GWP of each GHG is multiplied by the emission rate of that gas to produce the CO₂e emissions.

On June 1, 2005, Governor Arnold Schwarzenegger signed Executive Order S-3-05, which proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce snowpack in the Sierra Nevada Mountains; could further exacerbate California's air quality problems; and could potentially cause a rise in sea levels. In an effort to avoid or reduce the impacts of climate change, Executive Order S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

AB 32, the California Global Warming Solutions Act of 2006 (*California Health and Safety Code* §38501), recognizes that California is the source of substantial amounts of GHG emissions. The statute states that:

Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

In order to avert these consequences, AB 32 establishes a State goal of reducing GHG emissions to 1990 levels by the year 2020, which is a reduction of approximately 16 percent from forecasted emission levels, with further reductions to follow (CARB 2011). To help achieve this reduction, on November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, raising California's renewable energy goals to 33 percent by 2020.

California Executive Order B-30-15 (April 29, 2015) set an "interim" statewide emission target to reduce GHG emissions to 40 percent below 1990 levels by 2030 and directed State agencies with jurisdiction over GHG emissions to implement measures pursuant to statutory authority to achieve this 2030 target and the 2050 target of 80 percent below 1990 levels.

On September 8, 2016, Governor Edmund G. "Jerry" Brown signed Senate Bill (SB) 32 to codify the GHG reduction goals of EO B-30-15, requiring the State to reduce GHG emissions by 40 percent below 1990 levels by 2030 (Health and Safety Code Section 38566). This goal is expected to keep the State on track to meeting the goal set by EO S-3-05 of reducing GHG emissions by 80 percent below 1990 levels by 2050. SB 32's findings state that CARB will "achieve the state's more stringent greenhouse gas emission reductions in a manner that benefits the state's most disadvantaged communities and is transparent and accountable to the public and the Legislature."

Neither the City of Santa Clarita nor County of Los Angeles have formally adopted a quantitative GHG emissions significance criterion to date. Beginning in April 2008, the South Coast AQMD convened a Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. On December 5, 2008, the South Coast AQMD Governing Board adopted its staff proposal for an interim CEQA GHG significance threshold of 10,000 metric tons of CO₂ equivalent per year (MTCO₂e/yr) for projects where the South Coast AQMD is the lead agency (South Coast AQMD 2008). In September 2010, the Working Group proposed that the 10,000 MTCO₂e/yr threshold be expanded to apply to industrial projects where South Coast AQMD is not the lead agency (South Coast AQMD 2010). The Working Group has not convened since the fall of 2010. The proposal has not been considered or approved for use by the South Coast AQMD Board. However, this threshold is selected as appropriate for the proposed Project.

VIII. Greenhouse Gas Emissions	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Construction GHG emissions are generated by vehicle engine exhaust from construction equipment, on-road hauling trucks, vendor trips, and worker commuting trips. Construction GHG emissions were calculated concurrently with air quality criteria pollutant emissions using CalEEMod Version 2016.3.2 and the Project information as described in Section 3.0 Project Description.

The results are output in MTCO₂e for each year of construction. Table 4-7 presents the construction-phase total and amortized GHG emissions for the Project.

**TABLE 4-7
ESTIMATED ANNUAL GREENHOUSE GAS EMISSIONS
FROM CONSTRUCTION**

Year	Emissions (MTCO ₂ e)
2021	120
2022	143
Total*	264
Amortized Annual Emissions**	9
MTCO ₂ e: metric tons of carbon dioxide equivalent * Totals may not add due to rounding. ** Combined total amortized over 30 years Source: CalEEMod data in Appendix A.	

GHG emissions generated from construction activities are finite and occur for a relatively short-term period. Unlike the numerous opportunities available to reduce a project's long-term GHG emissions through design features, operational restrictions, use of green-building materials, and other methods, GHG emissions-reduction measures for construction equipment are relatively limited. Therefore, South Coast AQMD staff members recommended that construction emissions be amortized over a 30-year project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies (South Coast AQMD 2008). As shown in Table 4-7, the Project would result in an estimated 9 MTCO₂e/yr when amortized.

Operational GHG emissions are estimated by including purchased electricity; the electricity embodied in water consumption; the energy associated with solid waste disposal; and mobile source emissions. The Project would not require additional SCVSD employees or generate regular vehicle trips, nor would it use natural gas or electricity. Water consumption and solid waste generation would be negligible with respect to the generation of GHGs. As shown in Table 4-7, the total annual GHG emissions for either alignment would be less than the 10,000 MTCO₂e/yr threshold for industrial projects. There would be a less than significant impact.

VIII. Greenhouse Gas Emissions	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Conservation and Open Space Element of the Santa Clarita General Plan was adopted by the City in 2012. The Conservation and Open Space Element details climate change issues and addresses necessary next steps to reduce GHG emissions in the City. Particularly, Policy CO 4.4.4, of the Conservation and Open Space Element, calls to "Promote the extension of sanitary sewers for all urban uses and densities, to protect groundwater quality, where feasible" (City of Santa Clarita 2011). The Project is consistent with this policy by providing sewer relief by extending the sewer line for planned growth.

The City of Santa Clarita Climate Action Plan (CAP) was adopted in August 2012. The CAP builds from the goals, objectives, and policies delineated in the City's General Plan and develops specific actions to be implemented and monitoring to achieve GHG reduction goals (City of Santa Clarita 2012). The CAP does not directly address sewer projects. However, the Project would potentially alleviate climate change implications to wastewater systems and sewage overflow by providing infrastructure to provide sewer relief and ensure capacity for planned growth in the area. Therefore, the Project would be consistent with and would not conflict with the CAP. The Project does not conflict with the State policies regarding GHG reduction, the General Plan, the CAP, or any applicable plan or policy adopted by the Board of Supervisors for the reduction of GHG. There would be no impacts related to conflicts with applicable GHG emissions reduction policies, and no mitigation is required.

MITIGATION MEASURES

No mitigation is required.

IX. HAZARDS AND HAZARDOUS MATERIALS

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Project construction activities would require the transport and use of standard construction equipment and materials, some of which may include hazardous materials (e.g., fuel, lubricants, solvents) and chemicals. These activities would be conducted in compliance with existing federal, State, and local regulations. In addition, as discussed in Section X. Hydrology and Water Quality, implementation of the proposed Project would require compliance with the NPDES Construction General Permit. Among other requirements, a SWPPP must be prepared to address all discharges from the construction site, including potential contaminants from construction equipment operation through implementation of appropriate BMPs. While specific BMPs would be determined during the SWPPP preparation process based on site- and Project-specific characteristics, they would include standard industry measures and guidelines contained in the NPDES Construction General Permit text. The potential for release of hazardous materials through upset or accident conditions would be minimized through implementation of a Cal-OSHA Construction Safety Plan and a hazard communication program during construction, as required under Section 5194 of the *California Code of Regulations*. The hazard communication program would include disclosure of the hazardous materials present on site, labels for hazardous materials containers, safety data sheets with information on the health effects of hazardous materials, and employee training on hazardous materials handling. In the event of an accidental release of hazardous substances, the Project contractor would comply with Section 1910.120 of the *Code of Federal Regulations*, which outlines protocol for hazardous waste clean-up operations and emergency response.

Routine operation of the proposed Project would not involve the use or transport of hazardous materials. The proposed pipeline would convey sewage. The proposed Project would neither increase the frequency of transport, nor would it introduce hazards that would increase the likelihood for accidental release of hazardous materials into the environment. Additionally, the Project would be required to comply with the Waterworks Standards in the California Code of Regulations (CCR). The Waterworks Standard is within Title 22, Chapter 16, Section 64572 of the CCR and provides separation criteria for new construction. When buried water mains are near non-potable pipelines, the water mains are vulnerable to contamination that can pose a risk of waterborne disease outbreaks. In order to avoid waterborne disease outbreaks, the Project would be required to comply with distancing requirements from the nearest potable water line, as mandated by the Waterworks Standard. Through compliance with State and federal regulations, there would be a less than significant impact related to the transport, use, or disposal of hazardous materials or the release of hazardous materials into the environment would occur during construction, and a less than significant impact during long-term operation.

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. There are four schools within ¼-mile of the Project site. The four schools are:

1. Sulphur Springs Special Education Consortia, 27000 Weyerhauser Way;
2. Canyon Springs Community Elementary School, 19059 Vicci Street;
3. Santa Clarita Christina School, 27249 Luther Drive; and
4. Bethlehem Lutheran School, 27265 Luther Drive.

As discussed above, Project construction activities would require the transport and use of hazardous materials common to construction sites. However, these activities would be conducted in compliance with existing federal, State, and local regulations. Once construction is complete, the pipeline would be underground and there would be no operational risks related to hazardous materials. Therefore, impacts related to the handling of hazardous materials within ¼-mile of a school during construction of the Project would be less than significant.

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. An EDR Radius Map™ Report (EDR Report) was prepared for the proposed Project by Environmental Data Resources, Inc. (EDR 2020). Search parameters were based on a one-mile radius of the approximate center of the Project site, and consisted of a search of federal, State, local, tribal, and other databases. These databases include both facilities that use, store, and/or generate hazardous materials, and those that have had a hazardous materials release. The complete list of databases and additional information regarding the identified sites can be found in Appendix E.

According to the EDR Report, there are no hazardous materials sites identified on the Cortese List, compiled pursuant to Section 65962.5 of the Government Code at the Project site. Also, no sites are identified within or overlapping the public ROW comprising the Project site. There would be no impact related to identification on the Cortese List such that a significant hazard to the

public or the environment would occur during construction or operation of the Project. There would be no impact and no mitigation is required.

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project site is not located within an adopted Airport Land Use Plan or in the vicinity of a public airport or public use airport. As discussed above, the nearest airports to the Project site are Whiteman Airport, a general aviation airport, located approximately 11 miles southeast of the Project site, and Van Nuys Airport, a general aviation airport located approximately 14 miles south of the Project site. Therefore, the Project is not located within two miles of a public airport or public use airport and is outside of the Airport Influence Areas Policy Map of the County of Los Angeles (LACDRP 2014). The Project would not result in a safety hazard for people residing or working in the Project area. There would be no impact.

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The City of Santa Clarita's emergency response plan is detailed in its Standardized Emergency Management System (SEMS) for managing response to multi-agency and multi-jurisdictional emergencies, and to facilitate communications and coordination among all levels of government and affected agencies. The City's 2003 SEMS Multihazard Functional Plan addresses planned response to emergencies associated with natural disasters and technological incidents. The plan also addresses response procedures for a major airplane crash, train derailment, truck incident, Metrolink incident or collision, civil unrest, terrorism, and nuclear attack. In addition, the City adopted a five-year Natural Hazard Mitigation Action Plan in 2004. This plan contains an action matrix and identifies critical facilities and infrastructure to increase emergency response and enhance recovery efforts. The emergency access via highways in the Santa Clarita Valley includes I-5 and SR-14 going north and south, and SR-126 going west (City of Santa Clarita 2011).

Construction of the proposed Project would occur almost entirely within the public ROW. Road closure is not anticipated during construction of the Project. However, during construction, there may be parking restrictions on nearby roadways to allow for adequate traffic flow. As stated in Section 3.3, there are several possible access routes for the Project, including access routes from

Crossglade Avenue, Weyerhauser Way, and through the Cordova Estates community. Appropriate traffic control measures would be implemented as necessary in pertinent areas to maintain access and ensure safety. Such measures would likely include standard efforts such as the use of cones, barriers, signs, and flaggers, where applicable. Therefore, implementation of a Traffic Control Plan for the Project, as discussed in Section 3.3, would ensure continued access to hospitals, emergency response centers, school locations, communication facilities, highways, bridges, and airports is maintained. As such, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. There would be a less than significant impact.

IX. Hazards and Hazardous Materials	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
h) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. According to the Fire and Resource Assessment Program *Very High Fire Hazard Severity Zones in LRA As Recommended by CAL FIRE* map for the City of Santa Clarita, the Project site is not located within or near any areas designated a Very High Fire Hazard Severity Zone (VHFHSZ) in either a Local Responsibility Area or a State Responsibility Area. The nearest VHFHSZ-designated area is located approximately 0.43-mile to the northwest (CAL FIRE 2011). There would be no impacts related to wildfires and no mitigation is required.

MITIGATION MEASURES

No mitigation is required.

X. HYDROLOGY AND WATER QUALITY

X. Hydrology and Water Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. Potential impacts of construction activities on water quality focus on sediments, turbidity, and pollutants associated with sediments. Construction-related activities that are primarily responsible for sediment releases are related to exposing soils to potential mobilization by rainfall, runoff, and wind. These activities include any type of earth-disturbance activities. The proposed Project would involve temporary earth-disturbance activities associated with asphalt removal, trenching, and backfilling which would generate sediments at the Project site. Additionally, the proposed Project's dewatering process has the potential to release sediment-laden waters into the Santa Clara River.

Non-sediment-related pollutants that are also of concern during construction include waste construction materials and chemicals, liquid products, and petroleum products used in construction or the maintenance of heavy equipment. Construction associated with the Project would involve use of vehicles and equipment with the potential to leak pollutants onto the ground surface and leach into the ground surface. These pollutants would then have the potential to be transported via surface runoff into a local water body. The potential for release of these materials via runoff represents a potentially significant impact at the Project site and within the Santa Clara River. However, implementation of MM HYD-1 would reduce any potential impacts to downstream waters resulting from construction activities on the Project site to less than significant. During long-term operations following installation of the proposed underground pipeline, storm water runoff in the Project area would be essentially the same as the existing conditions.

X. Hydrology and Water Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Project implementation would not increase the amount impervious surface area within the Project area. Existing paved roadways impacted by trenching would be patched and/or re-paved. During open-cut excavation/trenching portions of the Project, unpaved areas south of the Santa Clara river would be trenched to place the pipelines and connect to existing infrastructure. Unpaved areas in the Santa Clara River channel and surrounding areas would remain unpaved after the pipeline is installed. Pre- to post-Project conditions would not see any change in the amount of surface runoff and would not interfere substantially with groundwater

recharge. During construction of the Project, dewatering would be required due to expected groundwater during construction of Potential Boring Pit 1B or 2B, which are located outside of the Santa Clara River. However, the dewatering activities would be located proximate to Potential Boring Pit 1B and 2B and would occur only during construction and trenching activities for the Project for a relatively short period of time. The associated desilting tanks would be located within the disturbance areas of Potential Boring Pit 1B and 2B, as shown on Exhibit 3-1. The dewatered water would be discharged back into the Santa Clara River channel and would help to replenish groundwater in the area. Overall, the Project would facilitate transport of sewage to meet the SCVSD's anticipated demands, and implementation of the pipeline would not drive increased groundwater withdrawals. There would be a less than significant impact.

X. Hydrology and Water Quality		Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:					
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:					
i)	Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii)	Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iii)	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact with Mitigation. The proposed Project would be located partially within existing public road (Hidaway Avenue). In this area, the roadway would experience temporary disturbance during construction activities; however, the roadway would be returned to existing conditions and the drainage pattern would not be altered. There would be no increase in impervious surface areas associated with the proposed Project, resulting in no change to the existing drainage pattern within or surrounding the proposed Project site. The rest of the Project site would be located under the Santa Clara River and south of the Santa Clara River in open space and under the Metro railroad tracks. The Project pipeline would be placed beneath the Santa Clara River using trenchless technologies such as HDD or micro-tunneling. This would ensure that the drainage pattern of the Santa Clara River would not be altered during construction of the pipeline. Construction of the pipeline would not disturb the ground surface of the Santa Clara River because HDD or micro-tunneling would tunnel the pipeline beneath the river. Open cut excavation would occur south of the Santa Clara River for the Project during construction. Additionally, during MH abandonment activities, the 3 MHs would be filled with a material to prevent water infiltration to the Santa Clara River. The Project would be required to comply with MM HYD-1, which requires the development and implementation of a SWPPP for the Project site, which requires that BMPs be incorporated to include erosion- and sediment-control and to reduce or eliminate sediments, pollutants adhering to sediment, and other non-sediment pollutants in storm water and non-storm water discharges. Therefore, the Project would not result in substantial erosion or siltation, substantially increase the rate or amount of surface runoff, or create or

contribute runoff that would exceed storm drainage capacity. Impacts related to change in the drainage pattern would be less than significant with mitigation.

X. Hydrology and Water Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:				
iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Santa Clara River portion of the Project site is located within the Federal Emergency Management Agency (FEMA) 1% Annual Chance Flood Zone and 0.2% Annual Chance Flood Zone (Public Works 2020). This corresponds to a watercourse channel. The proposed pipeline would be located underground, including at its crossing of Santa Clara River, and would not impede or redirect flood flows. During construction, there would be dewatering near proposed boring pit locations if groundwater is discovered within 20 feet of the surface; however, the dewatering would not occur within the Santa Clara River. The Potential Boring Pits may be flooded during a flood event because Potential Boring Pits 1B and 2B are located within the 0.2% Annual Chance Flood Zone. However, the Potential Boring Pits would not have the capacity to substantially impede or redirect flood flows during a flood event. The natural hydrology of the Santa Clara River has been altered by surrounding development to the Project site. Implementation of the Project would not alter the river's historic flood regime. The Project would not alter the existing drainage pattern of the Project site and would not add impervious surfaces that would impede or redirect flood flows. There would be a less than significant impact and no mitigation is be required.

X. Hydrology and Water Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed under Threshold X(c-iv) above, the Santa Clara River is identified by FEMA as within a flood zone. There are inland water bodies in and near the City capable of producing a seiche, such as Castaic Lake, the Pacoima Reservoir, or artificial lakes at private developments. However, the likelihood of seiche effects reaching the Project site is low due to intervening topography and physical distance of at least 10 miles (between the Project site and Castaic Lake). Due to an approximate distance of 26 miles between the site and the Pacific Ocean, there is no tsunami risk. Once construction is complete, the proposed Project would be located underground and would not release pollutants in the instance of a flood. There would be no impact.

X. Hydrology and Water Quality	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. As discussed under Thresholds X(a) through X(c), the Project would have less than significant impacts related to water quality or groundwater management. During construction, appropriate water quality BMPs consistent with the NPDES Construction General Permit would be implemented (MM HYD-1). As such, the proposed Project would not obstruct implementation of a water quality control plan or sustainable groundwater management plan. There would be a less than significant impact.

MITIGATION MEASURES

MM HYD-1 This mitigation measure would require the development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) for the proposed Project site, as required by and in compliance with, the National Pollutant Discharge Elimination System (NPDES) Construction General Permit. Prior to initiation of construction, SCVSD shall ensure that a Notice of Intent with the State Water Resources Control Board (SWRCB) has been filed to obtain coverage under the Construction General Permit. Pursuant to the permit requirements, the Construction Contractor shall develop a SWPPP that incorporates Best Management Practices (BMPs) for reducing or eliminating construction-related pollutants in the site runoff. The SWPPP shall include erosion- and sediment-control BMPs that meet or exceed measures required by the NPDES Construction General Permit, as well as BMPs that control the other potential construction-related pollutants. The SWPPP would be designed and implemented to address site-specific conditions related to Project construction and BMPs would be selected and implemented based on the phase of construction and weather conditions. The SWPPP would identify and describe the sources of sediment and other pollutants that may affect the quality of storm water discharges; it would also ensure the implementation and maintenance of BMPs to reduce or eliminate sediment, pollutants adhering to sediment, and other non-sediment pollutants in storm water and non-storm water discharges. Examples of BMPs that may be used include the following:

- synthetic non-biodegradable rolled erosion control products (RECPs) including plastic netting, plastic mesh, synthetic fiber with netting, and bonded synthetic fibers;
- biodegradable RECPs including erosion control blankets/mats made of jute, wood fiber, straw, coconut fiber, and straw coconut fiber;
- chemical dust suppressants including mulch and fiber-based dust palliatives, salts and brines, non-petroleum based organics, petroleum based organics, synthetic polymers, clay additives, and electrochemical products;
- street sweeping and vacuuming;

- storm drain inlet protection consisting of a sediment filter or impounding area; and
- water conservation practices to avoid leaks and discharges.

XI. LAND USE AND PLANNING

XI. Land Use and Planning	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project site would be located within the existing paved roadway/public ROW, underneath the Santa Clara River and in adjacent open space areas south of the Santa Clara River. Road closure is not anticipated during construction of the Project. However, during construction, there may be parking restrictions on nearby roadways to allow for adequate traffic flow. Implementation of a Traffic Control Plan, as described in Section 3.3, would maintain vehicular access to the community. Operationally, the Project would be located below ground and would not limit access or divide a community. There would be no impact.

XI. Land Use and Planning	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project does not propose to change any existing land use designations in the City and, pursuant to Section 53091(E) of the *California Government Code*, the proposed Project would be exempt from City building ordinances because it involves the construction of facilities for the production, generation, storage, treatment, or transmission of wastewater. Implementation of the Project would also be made in accordance with pertinent permits, as detailed in Section 3.4, Other Approvals. These include the CDFW Streambed Alteration Agreement; OSHA Shoring Permit and Mining and Tunnel Classification; City of Santa Clarita Encroachment Permit and Traffic Control Plan approval; LARWQCB approvals for Clean Water Act Section 401 Water Quality Certification and Waste Discharge Requirements; USACE Clean Water Act Section 404 permit; and the SWRCB NPDES General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities. Implementation of the proposed Project would not conflict with applicable plans, policies, and regulations. There would be no impacts.

MITIGATION MEASURES

No mitigation is required.

XII. MINERAL RESOURCES

XII. Mineral Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. Mineral resources are naturally occurring chemicals, elements, or compounds formed by inorganic processes or organic substances. These resources include bituminous rock, gold, sand, gravel, clay, crushed stone, limestone, diatomite, salt, borate, potash, geothermal, petroleum, and natural gas resources. Construction aggregate refers to sand and gravel (natural aggregates) and crushed stone (rock) that are used as Portland-cement-concrete aggregate, asphaltic-concrete aggregate, road base, railroad ballast, riprap, and fill to produce other construction materials.

Mineral resource areas include existing surface mining sites, areas identified as containing significant mineral resources by the State Mining and Geology Board, and areas suitable producing energy resources, including crude oil and natural gas. The County of Los Angeles depends on the California Geological Survey to identify deposits of regionally significant aggregate mineral resources. These clusters or belts of mineral deposits are designated as Mineral Resource Zone 2 (MRZ-2), which are areas that require special management due to the presence of mineral resources important to the County. Four major MRZ-2s are located in the County; these MRZ-2s are the Little Rock Creek Fan, Soledad Production Area, Sun Valley Production Area, and Irwindale Production Area (LACDRP 2015). Based on the Mineral Resources Map in the General Plan Update (Figure 9.6 in the General Plan), which depicts the generalized boundaries of the MRZ-2 lands in the County, the Project site may be within MRZ-2.

The Project site includes public roadways and the Santa Clara River, where no mineral extraction activities are ongoing. While aggregate resources may be present in or near Project areas, the Santa Clara River and its tributaries have disturbed any surface resources. Implementation of the Project would not require mineral resources nor change the availability of resources on or near the Project areas. Additionally, no new structures or facilities would be constructed that could restrict future mineral resource recovery activities around the sewer pipeline. Thus, there would be no impacts to mineral resources.

MITIGATION MEASURES

No mitigation is required.

XIII. NOISE

Noise Concepts

“Sound” is a vibratory disturbance created by a moving or vibrating source and is capable of being detected. “Noise” is defined as sound that is loud, unpleasant, unexpected, or undesired and may therefore be classified as a more specific group of sounds. The effects of noise on people can include general annoyance; interference with speech communication; sleep disturbance; and, in the extreme, hearing impairment (Caltrans 2013).

Sound pressure levels are described in units called the decibel (dB). Decibels are measured on a logarithmic scale. A doubling of the energy of a noise source (such as doubling of traffic volume) would increase the noise level by 3 dB. The human ear is not equally sensitive to all frequencies within the sound spectrum. To accommodate this phenomenon, the A-scale was devised; the A-weighted decibel scale (dBA) approximates the frequency response of the average healthy ear when listening to most ordinary everyday sounds and is used in this analysis.

Human perception of noise has no simple correlation with acoustical energy. Due to subjective thresholds of tolerance, the annoyance of a given noise source is perceived very differently from person to person. The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at 3 feet is approximately 60 dBA, while loud jet engine noises at 1,000 feet equate to 100 dBA, which can cause serious discomfort. Table 4-8, Noise Levels For Common Events, shows the relationship of various noise levels in dBA to commonly experienced noise events.

**TABLE 4-8
NOISE LEVELS FOR COMMON EVENTS**

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110	Rock Band
Jet fly-over at 300 m (1,000 ft)	100	
Gas lawn mower at 1 m (3 ft)	90	
Diesel truck at 15 m (50 ft) at 80 km/hr (50 mph)	80	Food blender at 1 m (3 ft); garbage disposal at 1 m (3 ft)
Noisy urban area, daytime gas lawn mower at 30 m (100 ft)	70	Vacuum cleaner at 3 m (10 ft)
Commercial area, heavy traffic at 90 m (300 ft)	60	Normal speech at 1 m (3 ft)
Quiet urban daytime	50	Large business office, dishwasher in next room
Quiet urban nighttime	40	Theater, large conference room (background)
Quiet suburban nighttime	30	Library
Quiet rural nighttime	20	Bedroom at night, concert hall (background)
	10	Broadcast/recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing
dBA: A-weighted decibels; m: meter; ft: feet; km/hr: kilometers per hour; mph: miles per hour		
Source: Caltrans 2013.		

Two noise sources do not “sound twice as loud” as one source. As stated above, a doubling of noise sources results in a noise level increase of 3 dBA. It is widely accepted that (1) the average healthy ear can barely perceive changes of a 3 dBA increase or decrease, (2) a change of 5 dBA is readily perceptible, and (3) an increase (decrease) of 10 dBA sounds twice (half) as loud (Caltrans 2013).

From the source to the receiver, noise changes both in the level and frequency spectrum. The most obvious change is the decrease in noise level as the distance from the source increases. Sound from a small localized source (approximating a “point” source) radiates uniformly outward as it travels away from the source in a spherical pattern. For point sources, such as heating, ventilation, and air conditioning (HVAC) units or construction equipment, the sound level attenuates (or drops off) at a rate of 6 dBA for each doubling of distance (i.e., if the noise level is 70 dBA at 25 feet, it is 64 dBA at 50 feet). Vehicle movement on a road makes the source of the sound appear to emanate from a line (line source) rather than a point when viewed over some time interval. The sound level attenuates or drops off at a rate of 3 dBA per doubling of distance for line sources.

A large object in the path between a noise source and a receiver can significantly attenuate noise levels at that receiver location. The amount of attenuation provided by this “shielding” depends on the size of the object and the frequencies of the noise levels. Natural terrain or landform features as well as man-made features (e.g., buildings and walls) can significantly alter noise exposure levels. For a noise barrier to work, it must be high enough and long enough to block the view from the receiver to a road or to the noise source. Effective noise barriers can reduce outdoor noise levels at the receptor by up to 15 dBA.

Several rating scales (or noise “metrics”) exist to analyze effects of noise on a community. These scales include the equivalent noise level (L_{eq}), including L_{max} and L_{min} , which are respectively the highest and lowest A-weighted sound levels that occur during a noise event, and the Community Noise Equivalent Level (CNEL). Average noise levels over a period of minutes or hours are usually expressed as dBA L_{eq} , which is the equivalent noise level for that period of time. The period of time averaging may be specified; for example, $L_{eq(3)}$ would be a three-hour average. Noise of short duration (i.e., substantially less than the averaging period) is averaged into ambient noise during the period of interest. Thus, a loud noise lasting many seconds or a few minutes may have minimal effect on the measured sound level averaged over a one-hour period.

To evaluate community noise impacts, CNEL was developed to account for human sensitivity to nighttime noise. CNEL represents the 24-hour average sound level with a penalty for noise occurring at night. The CNEL computation divides a 24-hour day into three periods: daytime (7:00 AM to 7:00 PM), evening (7:00 PM to 10:00 PM), and nighttime (10:00 PM to 7:00 AM). The evening sound levels are assigned a 5-dBA penalty, and the nighttime sound levels are assigned a 10-dBA penalty prior to averaging with daytime hourly sound levels.

Vibration Concepts

Vibration is an oscillatory motion through a solid medium in which the motion’s amplitude can be described in terms of displacement, velocity, or acceleration. Vibration is normally associated with activities such as railroads or vibration-intensive stationary sources but can also be associated with construction equipment such as jackhammers, pile drivers, and hydraulic hammers. Vibration displacement is the distance that a point on a surface moves away from its original static position. The instantaneous speed that a point on a surface moves is described as the velocity, and the rate of change of the speed is described as the acceleration. Each of these descriptors can be used to correlate vibration to human response, building damage, and acceptable equipment vibration levels. During construction of a project, the operation of construction equipment can cause groundborne vibration. During the operational phase of a project, receptors may be subject to levels of vibration that can cause annoyance due to noise generated from vibration of a structure or items within a structure. Analysis of this type of vibration is best measured in velocity and acceleration.

The three main wave types of concern in the propagation of groundborne vibrations are surface or Rayleigh waves, compression or P-waves, and shear or S-waves.

- Surface or Rayleigh waves travel along the ground surface. They carry most of their energy along an expanding cylindrical wave front, similar to the ripples produced by throwing a rock into a lake. The particle motion is more or less perpendicular to the direction of propagation (known as retrograde elliptical).
- Compression or P-waves are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal, in a push-pull motion. P-waves are analogous to airborne sound waves.
- Shear or S-waves are also body waves, carrying their energy along an expanding spherical wave front. Unlike P-waves, however, the particle motion is transverse, or perpendicular to the direction of propagation.

The peak particle velocity (ppv) or the root mean square (rms) velocity is usually used to describe vibration amplitudes. The ppv is defined as the maximum instantaneous peak of the vibration signal and the rms is defined as the square root of the average of the squared amplitude of the signal. The ppv is more appropriate for evaluating potential building damage and also used for evaluating human response.

The units for ppv velocity are normally inches per second (in/sec). Often, vibration is presented and discussed in dB units in order to compress the range of numbers required to describe the vibration. In this study, all ppv velocity levels are in in/sec and all vibration levels are in dB relative to one microinch per second. The threshold of perception is approximately 0.3 ppv. Typically, groundborne vibration generated by human activities attenuates rapidly with distance from the source of the vibration. Even the more persistent Rayleigh waves decrease relatively quickly as they move away from the source of the vibration. Manmade vibration problems are, therefore, usually confined to short distances (500 feet or less) from the source.

Noise-Sensitive Receptors

Noise-sensitive land uses typically include residences, hospitals, convalescent and day care facilities, schools, and libraries, which could all be adversely affected by an increase in noise levels. Noise sensitive receptors nearest the Project site include residences located along Hildaway Avenue and residences on the western portion of the Cordova Estates community.

Regulatory Background

For the evaluation of potential noise impacts, SCVSD would comply with the City of Santa Clarita Noise Ordinance.

City of Santa Clarita Municipal Code Noise Ordinance

Chapter 11.44 Noise Limits of the City of Santa Clarita Municipal Code contains the City's regulations limiting noise generation.

The following sections of the City's Municipal Code are relevant to the Project.

Section 11.44.040 Noise Limits

- A. It shall be unlawful for any person within the City to produce or cause or allow to be produced noise which is received on property occupied by another person within the

designated region, in excess of the following levels, except as expressly provided otherwise herein:

Region	Time	Sound Level decibel
Residential zone	Day	65
Residential zone	Night	55
Commercial and manufacturing	Day	80
Commercial and manufacturing	Night	70

11.44.080 Special Noise Sources—Construction and Building.

No person shall engage in any construction work which requires a building permit from the City on sites within three hundred (300) feet of a residentially zoned property except between the hours of 7 a.m. to 7 p.m., Monday through Friday, and eight a.m. to six p.m. on Saturday. Further, no work shall be performed on the following public holidays: New Year's Day, Independence Day, Thanksgiving, Christmas, Memorial Day and Labor Day.

Emergency work as defined in Section 11.44.020(D) is permitted at all times.

The Department of Community Development may issue a permit for work to be done “after hours”; provided, that containment of construction noises is provided. (Ord. 89-29, 1/23/90; Ord. 93-4, 3/9/93; Ord. 00-3, 2/8/00; Ord. 05-1 § 2, 1/25/05; Ord. 06-7 § 1, 10/10/06)Section 11.44.020 Definitions.

“Emergency work” shall mean work made necessary to restore property to a safe condition following a public calamity, or work required to protect persons or property from an imminent exposure to danger, or work by private and public utilities when restoring utility service.

XIII. Noise	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact.

Construction Noise

Local residents near the Project would be subject to elevated noise levels during construction activities. Construction activities would be carried out in discrete steps, each step which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise levels surrounding the construction site as work progresses. Construction noise levels reported in the U.S. Environmental Protection Agency's (USEPA's) *Noise from Construction Equipment and Operations, Building Equipment, and Home*

Appliances were used to estimate future construction noise levels for the Project (USEPA 1971). Typically, the estimated construction noise levels are governed primarily by equipment that produces the highest noise levels. Construction noise levels for each generalized construction phase (demolition, excavation, pipeline construction, paving, and site cleanup) are based on a typical construction equipment mix for the project. Noise generated by construction activities include the following:

- Demolition of asphalt pavement along Hidaway Avenue;
- Excavation of trenches along Hidaway Avenue and east of Potential Boring Pit 2B;
- Pipe laying in trenches and HDD or micro-tunneling activities in Potential Boring Pits;
- Backfilling of trenches and Potential Boring Pits;
- Repaving of Hidaway Avenue; and
- Removal of casings and backfilling of manholes as part of the manhole abandonment in the Santa Clara River.

**TABLE 4-9
ESTIMATED CONSTRUCTION NOISE LEVELS
AT NOISE-SENSITIVE RECEPTORS**

Construction Phase	Noise Levels (L _{eq} dBA)	
	Maximum Noise Levels	Average Noise Levels
Hidaway Avenue (20 feet Separation Distance for Maximum and 450 feet under Average Conditions)		
Asphalt Demolition	92	65
Excavation	86	59
Pipeline Construction	86	59
Paving	92	65
Boring Pit 1A (20 feet Separation Distance for Maximum and 300 feet under Average Conditions)		
Excavation	86	82
Pipeline Construction	86	82
Boring Pit 1B (240 feet Separation Distance for Maximum and 250 feet under Average Conditions)		
Excavation	64	64
Pipeline Construction	64	64
Trenching East of Boring Pit 1B (20 feet Separation Distance for Maximum and 120 feet under Average Conditions)		
Excavation	86	70
Pipeline Construction	86	70
Manhole Abandonment (160 feet Separation Distance for Maximum and 310 feet under Average Conditions)		
Demolition	74	68
Excavation and backfilling	68	62
L _{eq} dBA: Equivalent Continuous Noise Level in A-weighted decibels USEPA 1971. Noise calculation data can be found in Appendix F.		

The degree to which noise-sensitive receptors are affected by construction activities depends heavily on their proximity. Estimated noise levels attributable to the development of the proposed Project are shown in Table 4-9, Estimated Construction Noise Levels at Noise-Sensitive Receptors, and calculations are included in Appendix F, Noise Calculations. Table 4-9 shows both the maximum and average noise levels for construction equipment. Maximum noise levels represent the noise levels from construction equipment occurring nearest to the noise sensitive

use/receptor. Average noise levels represent the noise exposure to sensitive uses/receptors based on the distance to the center of the construction area for the Project component.

Noise associated with construction activity along Hidaway Avenue would generate the highest noise levels, as shown in Table 4-9. It is anticipated that trenching will occur in a linear manner and would progress at a rate of 40-60 feet per day, particularly during asphalt demolition and paving activities. Other construction phases occurring along Hidaway Avenue would likewise occur in a linear manner. As such, the maximum noise level at any specific individual location would be brief and occur for 1 to 2 days as work progresses south on Hidaway Avenue towards the locations of Potential Boring Pits 1A and 1B.

Noise from these construction activities are regulated under MC Section 11.44.080 Special Noise Sources—Construction and Building to the hours of 7 AM to 7 PM Monday through Friday, and 8 AM to 6 PM on Saturday. As such, noise from construction activities would be generally confined within the least noise sensitive portions of the day. Construction activities would generally occur during the day but may require infrequent weekend and nighttime construction activities. As per MC Section 11.44.080, the City does allow for work to be done “after hours” provided that a permit is issued by the Department of Community Development after containment of construction noise is provided. Because the Project would comply with the City’s noise prohibitions and any noise reduction measures required by the City for infrequent nighttime construction activities, there would be a less than significant impact related to the Project’s construction activities.

Operational Noise

The proposed Project is not a noise-generating use as the alignment would be located underground, and therefore, inaudible. The Project would not generate daily vehicle trips related to routine inspection and would not involve any noise-generating activities. Therefore, there would be a less than significant impact.

XIII. Noise	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. There are no applicable City standards for vibration-induced annoyance or structural damage from vibration. The California Department of Transportation (Caltrans) has adopted vibration damage thresholds shown in Table 4-10, Vibration Damage Threshold Criteria, to assess the potential for structural damage from Project-generated vibration.

**TABLE 4-10
VIBRATION DAMAGE THRESHOLD CRITERIA**

Structure and Condition	Maximum ppv (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, and ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5
ppv: peak particle velocity; in/sec: inch(es) per second Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment. Source: Caltrans 2013.		

The structural damage threshold for “older residential structures” of 0.3 peak particle velocity (ppv) inch per second (in/sec) for transient (i.e., temporary) sources is most applicable to this analysis.

The Caltrans vibration annoyance thresholds are shown in Table 4-11, Vibration Annoyance Thresholds. These thresholds are used to assess the potential for a significant vibration impact for human annoyance; and annoyance is evaluated within occupied buildings.

**TABLE 4-11
VIBRATION ANNOYANCE THRESHOLDS**

Average Human Response	ppv (in/sec)
Severe	2.000
Strongly perceptible	0.900
Distinctly perceptible	0.240
Barely perceptible	0.035
ppv: peak particle velocity; in/sec: inch(es) per second Source: Caltrans 2013.	

The vibration annoyance response of “distinctly perceptible” of 0.24 ppv is most applicable to this analysis.

Construction activities would occur within the Potential Boring Pits, trenching locations, and manhole abandonment locations. These activities would generate vibration. Pile driving and blasting are generally the sources of the most severe vibration during construction, but neither pile driving nor blasting would be used during Project construction. Table 4-12, Vibration Levels for Typical Construction Equipment, summarizes typical vibration levels measured during construction activities for various vibration-inducing pieces of equipment. It should be noted that not all construction equipment listed in Table 4-12 would be used for the Project; these are provided for context.

**TABLE 4-12
VIBRATION LEVELS FOR TYPICAL
CONSTRUCTION EQUIPMENT**

Equipment		ppv at 25 ft (in/sec)
Pile driver (impact)	upper range	1.518
	typical	0.644
Pile driver (sonic)	upper range	0.734
	typical	0.170
Vibratory roller		0.210
Large bulldozer		0.089
Caisson drilling		0.089
Loaded trucks		0.076
Jackhammer		0.035
Small bulldozer		0.003
ppv: peak particle velocity; ft: feet; in/sec: inches per second.		
Source: Caltrans 2013; FTA 2006.		

Table 4-13, Estimated Vibration Levels at Sensitive Receptors, summarizes the maximum anticipated vibration levels (measured in ppv) at the Project site. This is calculated as a 25 foot-distance between the identified construction equipment and the nearest building for the trenching activities along Hidaway Avenue and Potential Boring Pit 1A and 2A. Trenching east of Potential Boring Pit 1B and 2B would also be located proximate to nearby buildings with a distance of 35 feet. Vibration attenuates substantially with increasing distance. As such, vibration generated by construction activities closest to nearby structures were evaluated and are shown in Table 4-13 to provide a worst-case analysis. Buildings located further away from Project construction activities would experience less project-related vibration levels.

**TABLE 4-13
ESTIMATED VIBRATION LEVELS
AT SENSITIVE RECEPTORS**

Equipment	Vibration Level (ppv) (in/sec) at 25 feet from Sensitive Receptors
Vibratory roller	0.210
Large bulldozer	0.089
Small bulldozer	0.003
Jackhammer	0.035
Loaded trucks	0.076
Vibration Damage Criteria Threshold*	0.300
Exceeds Vibration Damage Criteria Threshold?	No
Vibration Annoyance Criteria Threshold**	0.240
Exceeds Vibration Annoyance Criteria Threshold?	No
ft: feet, ppv: peak particle velocity * Building Damage threshold for "Older Residential Structures—Continuous/Frequent Intermittent Sources" from Table 4-10. ** Annoyance Threshold for "Distinctly Perceptible" from Table 4-11. Source: Caltrans 2013. Vibration calculation data in Appendix F.	

As shown in Table 4-13, vibration levels would not exceed the thresholds when construction activities occur under maximum conditions (i.e., closest to the receptor). Therefore, there would be a less than significant impact. The operation of the proposed sewer pipelines would not have any components that generate detectable levels of vibration and consequently would not result in significant vibration impacts.

XIII. Noise	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project is not located within an airport land use plan or in the vicinity of a private airstrip or heliport, and it would not expose people to excessive noise levels associated with airport operations or aircraft travel. The Project involves the installation and operation of a pipeline and would not involve the exposure of people to aircraft noise. There would be no impact.

MITIGATION MEASURES

No mitigation is required.

XIV. POPULATION AND HOUSING

XIV. Population and Housing	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The proposed Project involves the construction of new sewer pipeline infrastructure, which would serve existing and planned future SCVSD customers. The proposed Project would require routine checks by SCVSD employees, which would occur in combination with existing maintenance activities in the City; therefore, no new employees are anticipated. As such, maintenance of the Project site will not require new staff members and the Project is intended to serve existing SCSVD customers or new customers within established or planned areas of the City. The Project would not extend wastewater service into an area that is not currently developed or approved for future development; therefore, the Project would not result in either direct or indirect unplanned population growth. Additionally, the Project would not displace existing housing or population resulting in construction of replacement housing elsewhere. There would be no impacts.

MITIGATION MEASURES

No mitigation is required.

XV. PUBLIC SERVICES

XV. Public Services	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire protection, police protection, schools, parks, and other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed in Section XIV, the Project would not result in unplanned population growth. Due to the nature of the proposed Project, no new demand for public services such as fire protection, police protection, schools, parks, libraries, or other public facilities would occur. Any increase in maintenance of the proposed facilities would be the responsibility of the SCVSD. There would be no impacts and no mitigation is required.

MITIGATION MEASURES

No mitigation is required.

XVI. RECREATION

XVI. Recreation	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Less than Significant Impact. As discussed in Section XIV, the Project would not result in unplanned population growth, and therefore, would not result in unplanned population growth that would directly or indirectly impact any local recreational facilities through increase of use. The Project does not include recreational facilities or otherwise require their construction. However, during construction, a potential access route (shown on Exhibit 3-1) may cross the Santa Clara River trail to access an access ramp into the Santa Clara River. The Santa Clara River trail is designated as a Class I Bike Path (City of Santa Clara 2020b). This is defined as a completely separated ROW for the exclusive use of bicycles and pedestrians with cross-flow traffic minimized. Where pipeline installation would require construction activity near or within a sidewalk and/or bike lane, an alternate pedestrian or bicycle path would be established as part of the Traffic Control Plan to ensure continued safe use of the ROW. Appropriate traffic control measures would be implemented as necessary in pertinent areas during construction near the Santa Clara River trail to maintain access and ensure safety. Such measures would likely include standard efforts such as the use of cones, barriers, signs, and flaggers, where applicable. These impacts would be temporary during construction activities directly adjacent or on the Santa Clara River trail and there would be no impacts after these construction activities cease. There would be less than significant impacts to recreational facilities and no mitigation is required.

MITIGATION MEASURES

No mitigation is required.

XVII. TRANSPORTATION

XVII. Transportation	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. During construction, vehicle trips would be generated by trucks hauling materials and supplies, and workers commuting to and from the Project site. As shown on Table 4-14, Construction-related Project trips, the Project would require 20 one-way worker trips per day during all construction phases. There would be up to 4 one-way vendor trips per day, and up to 6 one-way haul truck trips per day. Project construction would primarily occur during daytime hours Monday through Friday. However, nighttime construction and weekend work may be required. As discussed in Section 3.3, a Traffic Control Plan would be prepared as part of the Project and submitted and approved by the City's Engineering Department. Implementation of appropriate measures during construction consistent with the Traffic Control Plan would ensure the circulation system would not be adversely affected. As such, the Project's construction traffic would not substantially impact the performance of the circulation system or associated plans, ordinances, or policies.

**TABLE 4-14
CONSTRUCTION-RELATED PROJECT TRIPS**

Construction Phase	Worker Trips	Vendor Trips	Haul Trips
	One-way trips/day		
Site Preparation	20	0	0
Grading/Excavation	20	4	4
Demolition	20	0	6
Trenching/Sewer Construction	20	4	2
Airlining/Abandonment of Manholes	20	0	0
Paving	20	4	0

The proposed Project would not result in long-term traffic generation, with operational traffic to be limited to minimal trips related to periodic pipeline inspection and maintenance.

The proposed Project would not substantially affect existing public transit, bicycle, or pedestrian facilities. Sidewalks are present along portions of the Project site and there are Class I, II, and III on-road and off-road trails and/or bike routes throughout the City. City of Santa Clarita Transit provides fixed-route bus service in the City. During construction, a potential access route (shown on Exhibit 3-1) may cross the Santa Clara River trail to access a ramp into the Santa Clara River. The Santa Clara River trail is designated as a Class I Bike Path (City of Santa Clarita 2020b). This is defined as a completely separated ROW for the exclusive use of bicycles and pedestrians with cross-flow traffic minimized. Where pipeline installation would require construction activity

near or within a sidewalk and/or bike lane, an alternate pedestrian or bicycle path would be established as part of the Traffic Control Plan to ensure continued safe use of the ROW. In addition, if necessary, the contractor would coordinate the City of Santa Clarita Transit to maintain access to the bus stop or establish a temporary bus stop with pre-coordination and approval by City engineers.

Roadways would be restored to pre-existing conditions following completion of construction. As such, the proposed Project would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. There would be a less than significant impact.

XVII. Transportation	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Section 15064.3(b)(1) of the State CEQA Guidelines refers to evaluating transportation impacts using VMT for land use projects. It should be noted that the proposed Project is not a land use project; it is rather a short-term, construction-based activity and would not generate any long-term change in traffic conditions.

The CEQA Guidelines Section 15064.3(b)(3) states that, for many projects, a qualitative analysis of construction traffic may be appropriate. The VMT generated by the Project would occur on a short-term yet yearly basis during maintenance activities at the Project site. VMT refers to the amount and distance of automobile travel attributable to a project. The term “automobile” refers to on-road passenger vehicles, specifically cars and light trucks. Agencies are not required to include heavy-duty freight vehicles in their CEQA analyses under Senate Bill 743, which is the basis of this analysis. Furthermore, it needs to be recognized that the VMT analysis of on-road passenger vehicles and light trucks is not required if total trips do not exceed 110 daily trips. If trips exceed the threshold of 110 trips per day, only then a quantitative VMT analysis would be required. This is confirmed by the Transportation Analysis Updates in Santa Clarita guidance document, which screens projects that generate less than 110 daily trips from conducting a VMT analysis. As shown in Table 4-14 above, there would be a maximum of approximately 20 personal/work vehicles trips (on-road, passenger vehicles) traveling each day to and from the Project sites, which is below the threshold of 110 daily trips. Therefore, preparation of a VMT analysis is not required. As such, the Project would not conflict or be inconsistent with Section 15064.3(b) of the State CEQA Guidelines. There would be a less than significant impact, and no mitigation is required.

XVII. Transportation	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The proposed Project would not include the construction of hazardous design features (e.g., sharp curves or dangerous intersections), and would not result in incompatible uses with the surrounding developed area. Implementation of a Traffic Control Plan would minimize potential traffic hazards during construction. There would be no impact.

XVII. Transportation	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Construction of the proposed Project would occur almost entirely within the public ROW and Santa Clara River. Road closure is not anticipated during construction of the Project. However, during construction, there may be parking restrictions on nearby roadways to allow for adequate traffic flow. As stated in Section 3.3, for construction north of the Santa Clara River, all construction vehicles, including worker vehicles, would use Soledad Canyon Road and Hidaway Avenue. For construction south of the Santa Clara River, construction traffic would potentially use Weyerhauser Way, internal roadways within the Cordova Estates community, Crossglade Avenue, and along the westernmost edge of the Via Princessa Metrolink Station parking lot (shown on Exhibit 3-1) which would allow for crossing over the railroad tracks. Appropriate traffic control measures would be implemented as necessary in pertinent areas to maintain access and ensure safety. Such measures would likely include standard efforts such as the use of cones, barriers, signs, and flaggers, where applicable. Implementation of a Traffic Control Plan for the Project would ensure access to hospitals, emergency response centers, school locations, communication facilities, highways, bridges, and airports are maintained. As such, the Project would not result in inadequate emergency access. There would be a less than significant impact.

MITIGATION MEASURES

No mitigation is required.

XVIII. TRIBAL CULTURAL RESOURCES

Information in this section is derived from the Cultural Resource Study prepared by Psomas for the Project and SCVSD's consultation with Tribal Representatives consistent with AB 52.

The NAHC conducted a Sacred Lands File search for the Project site. Results were received on October 13, 2020. The SLF database search did not identify any known resources or sacred places within or around the Project site. However, the records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource. As such, the NAHC recommends contacting the Chumash and Gabrielino tribes to scope for additional information.

Consistent with requirements of AB 52, on October 29, 2020, tribes that previously requested to be informed of SCVSD projects under AB 52 were mailed a certified informational letter, which describes the Project and requests any information regarding resources that may exist on or near the Project site.

Letters were sent to the following 15 Tribal Representatives and Councils:

- Barbareno/Ventureno Band of Mission Indians
- Chumash Council of Bakersfield
- Coastal Band of the Chumash Nation
- Fernandeno Tataviam Band of Mission Indians
- Gabrieleno Band of Mission Indians – Kizh Nation
- Gabrieleno/Tongva San Gabriel Band of Mission Indians
- Gabrielino /Tongva Nation
- Gabrielino Tongva Indians of California Tribal Council
- Gabrielino-Tongva Tribe
- Northern Chumash Tribal Council
- San Fernando Band of Mission Indians
- San Luis Obispo County Chumash Council
- Santa Ynez Band of Chumash Indians
- San Manuel Band of Mission Indians
- Torrez Martinez Desert Cahuilla Indians

Three of the 15 tribal representatives and/councils responded to the letter dated October 29, 2020.

On November 19, 2020, Ryan Nordness from the San Manuel Band of Mission Indians (SMBMI) identified the Project site as being located outside of their tribal boundaries and declined consultation.

On December 3, 2020, Kelsie Morrick from the Santa Ynez Band of Chumash Indians also noted that the Project site is located outside of their tribal boundaries and declined consultation.

On November 30, 2020, Jairo Avila from the Fernandeño Tataviam Band of Mission Indians (FTBMI) requested consultation, a copy of the geotechnical report, and a summary of the cultural resource assessment. At the time of the writing of this draft, a geotechnical report is expected to be available in early July 2021 and will be sent to FTBMI upon completion. A copy of the cultural assessment was sent to Mr. Avila on March 10, 2021. The consultation between FTBMI and

SCVSD on March 24, 2021 did not identify any documented tribal cultural resources within the Project site. However, Mr. Avila mentioned the Project site is located within a culturally sensitive zone and has the potential to impact tribal cultural resources during ground-disturbing activities. Mr. Avila also stated that the FTBMI Cultural Resource Management (CRM) Division has no issue with the proposed Project; however, he wanted to assure that any inadvertent discovery is properly documented, and further impacts mitigated. On March 30, 2021, the FTBMI provided to SCVSD mitigation measures and requested these measures be included in the IS/MND. SCVSD reviewed and agreed with the proposed measures provided by the FTBMI. These mitigation measures are included below. Consultation between the FTBMI and SCVSD was completed on March 30, 2021.

XVII. Tribal Cultural Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. For purposes of impact analysis, a tribal cultural resource is considered a site, feature, place, cultural landscape, sacred place, or object which is of cultural value to a California Native American Tribe and is eligible for the CRHR or a local register. As indicated in Section V of this MND, based on a SCCIC record search and the results from the NAHC Sacred Lands File database there are no resources on the Project site that are currently listed on the CRHR or local register. Therefore, the proposed Project would not have an impact on tribal cultural resources associated with an impact to a resource that is listed or eligible for listing on the CRHR or a local register.

XVII. Tribal Cultural Resources	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less Than Significant with Mitigation. The second component of this threshold is if the proposed Project would impact “A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.” Subdivision (c) states the following:

A resource may be listed as an historical resource in the California Register if it meets any of the following CRHR criteria:

- Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.
- Is associated with the lives of persons important in our past.
- Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- Has yielded, or may be likely to yield, information important in prehistory or history.

Based on information available through the record searches at the SCCIC and the NAHC, there is no information available that indicates there are significant tribal cultural resources within the Project that would be significant pursuant to criteria set forth in subdivision (c) of Public Resource Code Section 5024.1. However, as noted above, the SCVSD requested consultation with tribes that notified the SCVSD of a desire to be consulted with regarding projects under SCVSD’s jurisdiction. One tribe, FTBMI, requested consultation on November 30, 2020. The request for consultation was received and occurred between SCVSD and FTBMI on March 24, 2021. As a result of the consultation, no tribal cultural resources were identified within the Project site; however, the FTBMI mentioned the Project site is located within a culturally sensitive zone and has the potential to impact tribal cultural resources during ground-disturbing activities. Therefore, even though it has been determined that impacts to tribal cultural resources would be less than significant, implementation of the following agreed-upon measures (MM TCR-1, MM TCR-2, and

MM TCR-3) would further recognize the tribe's concerns during construction activities. There would be a less than significant impact with mitigation.

MITIGATION MEASURES

- MM TCR-1** In the event that Tribal Cultural Resources are discovered during Project construction activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall assess the find. The Lead Agency shall contact the Fernandeano Tataviam Band of Mission Indians (FTBMI) to consult if any such find occurs within the areas culturally and traditionally affiliated with the FTBMI.
- MM TCR-2** Any and all archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, and monitoring reports) shall be provided to the FTBMI.
- MM TCR-3** The Lead Agency shall, in good faith, consult with the FTBMI on the disposition and treatment of any Tribal Cultural Resource encountered during all ground disturbing activities.

XIX. UTILITIES AND SERVICE SYSTEMS

XIX. Utilities and Service Systems	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. Development of the proposed Project would enhance SCVSD's sewer system by provided additional capacity to serve anticipated demand. The Project itself is the construction of new sewer infrastructure, and the environmental impacts are addressed in this IS/MND. However, implementation of the Project would not result in the relocation or construction of additional or expanded wastewater infrastructure. Also, there would be no water, stormwater drainage, or dry utility demand such that new or expanded facilities would be required. There would be no impacts.

XIX. Utilities and Service Systems	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A limited volume of water would be used during construction for dust suppression. There would be no long-term demand for water as a result of the Project. Based on the nominal water use expected during construction, the Project's demands would be met with existing supplies. There would be no impact.

XIX. Utilities and Service Systems	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project itself would not involve wastewater generation; therefore, no wastewater treatment would be required. The Project would provide sewer relief to meet the planned growth needs of the area. There would be no impact.

XIX. Utilities and Service Systems	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A finite volume of solid waste would be generated during construction, including asphalt removal materials, soils removals, construction materials packaging, and miscellaneous waste such as food wrappers and beverage containers. Solid waste from the Project would likely be disposed of at the Sunshine Canyon Landfill, located in Sylmar. Sunshine Canyon has a daily capacity of 8,300 tons of waste daily and will have capacity until 2037 (Republic Services 2020, CalRecycle 2020). During grading/excavation and trenching/sewer construction activities of the Project, it is estimated that approximately 2,400 cubic yards (cy) of material would be exported from the site. Therefore, this landfill has sufficient capacity to accommodate the minimal amount of waste generated by construction of the Project. There would be a less than significant impact.

XIX. Utilities and Service Systems	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed under Threshold XIX(d), solid waste debris would be disposed of at a permitted landfill. AB 939, also known as the Integrated Waste Management Act, mandates the reduction of solid waste disposal in landfills by requiring a minimum of 50 percent diversion rate. Accordingly, at least half of the potential construction waste would be diverted from landfill disposal. Implementation of the proposed Project would not inhibit the City's compliance with State solid waste regulations. There would be no impact.

MITIGATION MEASURES

No mitigation is required.

XX. WILDFIRE

XX. Wildfire	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
If located in or near State Responsibility Areas or lands classified as Very High Fire Hazard Severity Zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. According to the Fire and Resource Assessment Program *Very High Fire Hazard Severity Zones in LRA As Recommended by CAL FIRE* map for the City of Santa Clarita, the Project site is not located within or near any areas designated as a Very High Fire Hazard Severity Zone (VHFHSZ) in either a Local Responsibility Area or a State Responsibility Area. The nearest VHFHSZ-designated area is located approximately 0.43-mile to the northwest (CAL FIRE 2011). There would be no impacts related to wildfires and no mitigation is required.

MITIGATION MEASURES

No mitigation is required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

XXI. Mandatory Findings of Significance	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Does the project:				
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. As described throughout the analysis in Section 4.0, with the incorporation of the identified mitigation measures, implementation of the proposed Project would not degrade the quality of the environment; would not substantially reduce the habitats of fish or wildlife species; would not cause a fish or wildlife population to drop below self-sustaining levels; would not threaten to eliminate a plant or animal; and would not eliminate important examples of major periods of California history or prehistory. With respect to the quality of the environment, the Project would not preclude the ability to achieve long-term environmental goals.

XXI. Mandatory Findings of Significance	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. While the Project may have the potential to impact the environment, specific regulatory requirements and mitigation measures would be implemented to reduce these impacts to a less than significant level. According to the City of Santa Clarita, there are no major development projects that are under construction, entitled, or application pending within one mile of the Project site (City of Santa Clarita 2020c). The nearest major development to the Project site is the Princessa Crossroads project, which currently has an application pending with the City. The second nearest major development to the Project site is the Vista Canyon Ranch Project, which is currently under construction and is located approximately 1.9 miles east of the Project site. Compliance with regulatory requirements and mitigation measures, as presented in the analyses above, would ensure that the activities associated with the Project would not have impacts that would be cumulatively considerable. There would be less than significant cumulative impacts.

XXI. Mandatory Findings of Significance	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. Based on the analysis of the above-listed topics, the proposed Project could have the potential to impact human beings, either directly or indirectly; however, the implementation of the mitigation measures described throughout this document would reduce all potential impacts to less than significant levels.

Fish and Wildlife Determination

(Per Section 21089(b) of the Public Resources Code, all project applicants and public agencies subject to the California Environmental Quality Act shall pay a Fish and Game filing fee for each proposed project that would adversely affect wildlife resources.)*

Based on the responses contained in this Environmental Checklist, there is no evidence that the project has a potential for a change that would adversely affect wildlife resources or the habitat upon which the wildlife depends. Has the presumption of adverse effect set forth in 14 CCR 753.5 (d) been rebutted by substantial evidence?

☐ Yes (Certificate of Fee Exemption and County Administrative fee required)

☒ No (Pay fee)

***Note:** Fish and Game Code Section 711.4(c)(2)(A) states that projects that are Categorically Exempt from CEQA are also exempt from filing fee.

Air Quality and Greenhouse Gas Emissions Data

Soledad Canyon Section 4 Trunk Sewer Relief Project - Los Angeles-South Coast County, Winter

Soledad Canyon Section 4 Trunk Sewer Relief Project

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	0.45	Acre	0.45	19,602.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - .

Off-road Equipment - loader

Off-road Equipment - .

Off-road Equipment - drill rig, excavator, loader

Off-road Equipment - defaults

Off-road Equipment - default

Off-road Equipment - excavator, loader, crane, generator (diesel)

Trips and VMT - .

Demolition - Assuming worst case of exporting all demo material, although some will be reused onsite

Grading - .

Construction Off-road Equipment Mitigation - .

Area Coating - no painting

EXECUTIVE SUMMARY

The purpose of this Jurisdictional Delineation Report is to provide baseline data concerning the type and extent of jurisdictional resources that occur within and adjacent to a portion of the Santa Clara River in Santa Clarita, California. This report also describes the impacts to these resources that would result from the implementation of the Soledad Canyon Relief Trunk Sewer Section 4 Project to be implemented by the Santa Clarita Valley Sanitation District. Jurisdictional resources considered for this report include wetlands and non-wetland “waters of the United States” (WOTUS) regulated by the U.S. Army Corps of Engineers (USACE); “waters of the State” regulated by the Regional Water Quality Control Board (RWQCB); and the bed, bank, and channel of all lakes, rivers, and/or streams (and associated riparian vegetation), as regulated by the California Department of Fish and Wildlife (CDFW).

The limits of non-wetland WOTUS and “waters of the State” were identified by the presence of an ordinary high water mark (OHWM). Wetland features were identified based on the USACE’s three-parameter approach in which wetlands are defined by the presence of hydrophytic vegetation, hydric soils, and presence of wetland hydrology indicators.

The jurisdictional delineation work was performed by Psomas Regulatory Specialist David Hughes on September 26, 2020 and March 6, 2021. Based on the results of the jurisdictional delineation field work, it was determined that the total amount of jurisdictional resources and proposed impacts in the survey area are as follows:

Agency Jurisdiction	Existing in Survey Area (Acres)	Proposed Impacts (Acres)	
		Temporary	Permanent
U.S. Army Corps of Engineers Wetlands	0.00	0.00	0.00
U.S. Army Corps of Engineers Non-Wetland “Waters of the United States”	12.52	0.04	0.00
Regional Water Quality Control Board “Waters of the State”	12.52	0.04	0.00
California Department of Fish and Wildlife	13.59	0.35	0.02

1.0 INTRODUCTION

This Jurisdictional Delineation Report has been prepared for the Santa Clarita Valley Sanitation District (SCVSD) to provide baseline data concerning the type and extent of resources under the jurisdiction of the U.S. Army Corps of Engineers (USACE), Los Angeles Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW) for the Soledad Canyon Relief Trunk Sewer Section 4 Project located in Santa Clarita, California (hereinafter referred to as “proposed Project”).

1.1 PROJECT LOCATION

The proposed Project site is located in eastern Santa Clarita, in northern Los Angeles County (Exhibit 1). The Project site consists of a linear alignment for a new sewer line that begins north of the Metropolitan Transportation Authority (MTA) tracks just east of the Via Princessa Metrolink Station and proceeds northward under the Santa Clara River, along Hidaway Avenue, and eventually connecting to Soledad Canyon Trunk Sewer Section 5 at Soledad Canyon Road (Exhibit 2). The proposed Project site is shown on the U.S. Geological Survey’s (USGS’) Mint Canyon 7.5-minute topographic quadrangles of the San Bernardino Meridian (Exhibit 3) in Township 4 North, Range 15 West, Sections 20, 28, and 29.

1.2 EXISTING CONDITIONS

The survey area for this report consists of the proposed sewer alignment and three existing manholes to be decommissioned with a surrounding buffer area that ranges from 100-300 feet. The survey area includes areas east of the alignment where soil disturbance is proposed for access routes and decommissioning three manholes (Exhibit 4). North of the MTA tracks, the survey area consists of the southern end of the proposed sewer alignment, on a stream terrace south of the Santa Clara River that is dominated by ruderal vegetation with smaller areas of native shrub communities. The alignment then continues northward under the Santa Clara River, a wide alluvial wash that is moderately vegetated with scale broom (*Lepidospartum squamatum*) and scattered Fremont cottonwoods. North of the Santa Clara River, the alignment passes under a private park (a common area for the adjacent condominium community) and Hidaway Avenue in a residential and commercial neighborhood.

1.3 PROJECT DESCRIPTION

The proposed Project involves the construction of a new 27-inch sewer line, measuring approximately 2,200 feet in length. This alignment begins north of the Metropolitan Transportation Authority (MTA) railway tracks just east of the Via Princessa Metrolink Station and proceeds northward under the Santa Clara River, along Hidaway Avenue, eventually connecting to Soledad Canyon Trunk Sewer Section 5 at Soledad Canyon Road. Construction methods used to install the pipeline under the Santa Clara River will be either a horizontal directional drilling (HDD) or a micro-tunneling method. Both HDD and micro-tunneling are trenchless technologies that may require dewatering.

The existing sewer that crosses beneath the river will be converted to an airline. The airline will be Cured-In-Place Pipe (CIPP) lined to repair any damaged pipe and to create a jointless pipe across the river. CIPP activities include liner installation and water cure from an existing manhole outside the river. There would be disturbance areas of 30 feet by 20 feet surrounding each of the three manholes to be decommissioned. Within these disturbance areas, excavation activities would require use of a backhoe to remove the steel casing around each manhole shaft and the top four feet of shaft. To ensure that water does not infiltrate the manholes and existing pipe, the manholes will be filled with sand and cement slurry. A temporary access ramp for construction

1.4 REGULATORY AUTHORITY

This section summarizes the federal and State agencies' regulatory jurisdiction over activities that have a potential to impact jurisdictional resources. A detailed explanation of each agency's regulatory authority is provided in Attachment A.

1.4.1 U.S. Army Corps of Engineers

The USACE Regulatory Branch regulates activities that discharge dredged or fill materials into "waters of the United States" (WOTUS) under Section 404 of the Federal Clean Water Act (CWA) and Section 10 of the Rivers and Harbors Act. Its authority applies to all WOTUS where the material (1) replaces any portion of a WOTUS with dry land or (2) changes the bottom elevation of any portion of any WOTUS. Activities that result in fill or dredge of WOTUS require a permit from the USACE.

1.4.2 Regional Water Quality Control Board

The State Water Resources Control Board (SWRCB), in conjunction with the nine RWQCBs, is the primary agency responsible for protecting water quality in California through the regulation of discharges to surface waters under the CWA and the California Porter-Cologne Water Quality Control Act (Porter-Cologne Act). The SWRCB's and RWQCBs' jurisdictions extend to all "waters of the State" and to all WOTUS, including wetlands (isolated and non-isolated).

1.4.3 California Department of Fish and Wildlife

The CDFW regulates activities that may affect rivers, streams, and lakes pursuant to the *California Fish and Game Code* (§§1600–1616). According to Section 1602 of the *California Fish and Game Code*, the CDFW has jurisdictional authority over any work that will (1) substantially divert or obstruct the natural flow of any river, stream, or lake; (2) substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or (3) deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.

2.0 **METHODS**

2.1 **LITERATURE REVIEW**

Prior to conducting the delineation and during the course of report preparation, Psomas reviewed the following documents to identify areas that may fall under agency jurisdiction: the USGS' Mint Canyon 7.5-minute topographic quadrangle map; color aerial photography provided by Google Earth; soil data provided by the U.S. Department of Agriculture's Natural Resources Conservation Service (USDA NRCS 2020a); the National Hydric Soils List (USDA NRCS 2020b); the National Wetlands Inventory's Wetland Mapper (USFWS 2020); and the Water Quality Control Plan for the Los Angeles Region ("Basin Plan", Los Angeles RWQCB 1994, as amended). Water quality objectives for the Basin Plan were most recently amended in October 2011; the amended water quality objectives are reflected in the analysis for this report. Revisions to Beneficial Uses for waters in the Basin Plan were proposed most recently in 2016, but these revisions do not affect waters in the survey area for this report.

2.2 **JURISDICTIONAL DELINEATION**

Non-wetland WOTUS are delineated based on the limits of the Ordinary High Water Mark (OHWM), which can be determined by a number of factors, including the presence of a clear, natural line impressed on the bank; shelving; changes in the character of the soil; destruction of terrestrial vegetation; and the presence of litter and debris. The OHWM limits (i.e., active floodplain) occurring in the survey area were further verified using methods contained in *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States, A Delineation Manual* (Lichvar and McColley 2008) and the *Updated Datasheet for the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (Curtis and Lichvar 2010). Information on the OHWM was recorded on the Arid West Ephemeral and Intermittent Streams OHWM Datasheet in Attachment B.

In September 2008, the USACE issued the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region*. This regional supplement is designed for use with the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987). Both the 1987 Wetlands Manual and the Arid West Supplement to the manual provide technical methods and guidelines for determining the presence of WOTUS and wetland resources. A three-parameter approach is used to identify wetlands and requires evidence of wetland hydrology, hydrophytic vegetation, and hydric soils. Wetlands generally include swamps, marshes, bogs, and similar areas. To be considered a wetland, an area must exhibit at least minimal hydric characteristics within the three parameters. However, problem areas may periodically or permanently lack certain indicators due to seasonal or annual variability or the nature of the soils or plant species on site. Atypical wetlands lack certain indicators due to recent human activities or natural events. Guidance for determining the presence of wetlands in these situations is presented in the Regional Supplement.

It should be noted that the RWQCB shares USACE jurisdiction unless isolated conditions are present. If isolated waters are present, the RWQCB takes jurisdiction using the USACE's definition of the OHWM and/or the three-parameter wetlands method pursuant to the 1987 Wetlands Manual. The CDFW's jurisdiction is defined as the top of the bank on either side of a stream, channel, or basin or to the outer limit of riparian vegetation located within or immediately adjacent to the river, stream, creek, pond, lake, or other impoundment.

The analysis contained in this report uses the results of field surveys conducted by Psomas Regulatory Specialist David Hughes on September 26, 2020 and March 6, 2021. Jurisdictional features were delineated using a 1 inch equals 80 feet (1" = 80') scale aerial photograph. Jurisdictional features were delineated as a drainage polygon with corresponding width

measurements. A preliminary assessment of the presence of wetland WOTUS was made based on vegetation and hydrology; in these locations, test pits were dug to analyze soil and to confirm the presence or absence of wetlands. Wetland Determination Data Forms that document the analysis for the potential presence of wetlands is included in Attachment C. Attachment D provides photographs that demonstrate overall site conditions that are described in this report.

2.2.1 Vegetation

Hydrophytic vegetation (or hydrophytes) is defined as any macrophytic plant that “grows in water or on a substrate that is at least periodically deficient in oxygen as a result of excessive water content; plants typically found in wet habitats” (Environmental Laboratory 1987). Specifically, these plant species have specialized morphological, physiological, or other adaptations for surviving in permanently saturated to periodically saturated soils where oxygen levels are very low or the soils are anaerobic. Lichvar and Gillrich (2011) provide the following technical definitions of wetland plant indicator status categories:

- **Obligate Wetland (OBL):** These wetland-dependent plants (herbaceous or woody) require standing water or seasonally saturated soils (14 or more consecutive days) near the surface to ensure adequate growth, development, and reproduction and to maintain healthy populations. These plants consist of four types:
 - *submerged*: plants that conduct virtually all of their growth and reproductive activity under water.
 - *floating*: plants that grow with leaves and most often their vegetative and reproductive organs floating on the water surface.
 - *floating-leaved*: plants that are rooted in sediment but also have leaves that float on the water surface.
 - *emergent*: herbaceous and woody plants that grow with their bases submerged and rooted in inundated sediment or seasonally saturated soil and their upper portions, including most of the vegetative and reproductive organs, growing above the water level.
- **Facultative Wetlands (FACW):** These plants depend on and predominantly occur with hydric soils, standing water, or seasonally high water tables in wet habitats for ensuring optimal growth, development, and reproduction and for maintaining healthy populations. These plants often grow in geomorphic locations where water saturates soils or floods the soil surface at least seasonally.
- **Facultative (FAC):** These plants can occur in wetlands or non-wetlands. They can grow in hydric, mesic, or xeric habitats. The occurrence of these plants in different habitats represents responses to a variety of environmental variables other than just hydrology (e.g., shade tolerance, soil hydrogen potential [pH], and elevation) and they have a wide tolerance of soil moisture conditions.
- **Facultative Upland (FACU):** These plants are not wetland dependent. They can grow on hydric and seasonally saturated soils, but they develop optimal growth and healthy populations on predominantly drier or more mesic sites. Unlike FAC plants, these plants are non-wetland plants by habitat preference.
- **Obligate Upland (UPL):** These plants occupy mesic to xeric non-wetland habitats. They almost never occur in standing water or saturated soils. Typical growth forms include herbaceous, shrubs, woody vines, and trees.

The USACE—as part of an interagency effort with the U.S. Environmental Protection Agency (USEPA), the U.S. Fish and Wildlife Service (USFWS), and the USDA NRCS—has approved a National Wetland Plant List (NWPL), which provides the current indicator status for plant species. The NWPL is used to determine whether the hydrophytic vegetation parameter is met when conducting wetland determinations under the CWA and the Wetland Conservation Provisions of the Food Security Act. The NWPL is also intended to be used for wetland restoration, establishment, and enhancement projects. This report utilizes the indicator status for plant species that are listed in the Arid West Supplement portion of the NWPL.

The following are three procedures for determining whether the hydrophytic vegetation criterion is met: Indicator 1, “Dominance Test”, using the “50/20 Rule”; Indicator 2, “Prevalence Index”; or Indicator 3, “Morphological Adaptation”, as identified in the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (USACE 2008). The hydrophytic vegetation criterion is met if any indicator is satisfied. If none of the indicators are satisfied, then hydrophytic vegetation is absent unless (1) indicators of hydric soil and wetland hydrology are present and (2) the site meets the requirements for a problematic wetland situation.

- **Dominance Test:** Vegetative cover is estimated and is ranked according to its dominance. Dominant species are the most abundant species for each stratum of the community (i.e., tree, sapling/shrub, herb, or woody vine) that individually or collectively amount to 50 percent of the total coverage of vegetation plus any other species that, by itself, accounts for 20 percent of the total vegetation cover (also known as the “50/20 Rule”). These species are recorded on the “Wetland Determination Data Form – Arid West Region”. The wetlands indicator status of each species is also recorded on the data forms based on the NWPL (Lichvar and Kartesz 2009). If greater than 50 percent of the dominant species across all strata are OBL, FACW, or FAC species, the criterion for wetland vegetation is considered to be met.
- **Prevalence Index:** The prevalence index considers all plant species in a community, not just the dominant ones. The prevalence index is the average of the wetland indicator status of all plant species in a sampling plot. Each indicator status category is given a numeric code (OBL = 1, FACW = 2, FAC = 3, FACU = 4, and UPL = 5) and is weighted by the species’ abundance (percent cover). Hydrophytic vegetation is present if the prevalence index is 3.0 or less.
- **Morphological Adaptation:** Morphological adaptations, such as adventitious roots (i.e., roots that take advantage of the wet conditions) and shallow root systems, must be observed on more than 50 percent of the individuals of a FACU species for the hydrophytic vegetation wetland criterion to be met.

2.2.2 Soils

The National Technical Committee for Hydric Soils (NTCHS) defines a hydric soil as a soil that is formed under conditions of saturation, flooding, or ponding that occurs long enough during the growing season to develop anaerobic conditions (or conditions of limited oxygen) at or near the soil surface and that favor the establishment of hydrophytic vegetation (USDA NRCS 2019c). It should be noted that hydric soils created under artificial conditions of flooding and inundation sufficient for the establishment of hydrophytic vegetation would also meet this hydric soil indicator.

The soil conditions are verified by digging test pits along each transect to a depth of at least 20 inches (except where a restrictive layer occurs in areas containing hard pan, cobble, or solid rock). It should be noted that, at some sites, it may be necessary to make exploratory soil test pits up to 40 inches deep to more accurately document and understand the variability in soil properties and hydrologic relationships on the site. Soil test pit locations are usually dug in the drainage invert or at the edge of a waterbody/drainage course in vegetated areas. Soil extracted from each

soil test pit is then examined for texture and color using the standard plates on the Munsell Soil Color Chart (Munsell Color 1994) and recorded on the Data Form. The Munsell Soil Color Chart aids in designating soils by color labels based on gradations of three simple variables: hue, value, and chroma. Any indicators of hydric soils, such as the following, are also recorded on the Data Form: redoximorphic features (i.e., areas where iron is reduced under anaerobic conditions and oxidized following a return to aerobic conditions); buried organic matter; organic streaking; reduced soil conditions; gleyed (i.e., soils having a characteristic bluish-gray or greenish-gray color) or low-chroma soils; or sulfuric odor. If hydric soils are found, progressive pits are dug along the transect moving laterally away from the active channel area until hydric soil features are no longer present in the top 20 inches of the soil.

2.2.3 Hydrology

Wetland hydrology indicators provide evidence that a site has a continuing wetland hydrologic regime. Wetlands hydrology is represented by either (1) all of the hydrological elements or characteristics of areas permanently or periodically inundated or (2) areas containing soils that are saturated for a sufficient duration of time to create hydric soils suitable for the establishment of plant species that are typically adapted to anaerobic soil conditions. The presence of wetland hydrology is evaluated at each intersect by recording the extent of observed surface flows; the depth of inundation; the depth to saturated soils; and the depth to free water in soil test pits. In instances where stream flow is divided into multiple channels with intervening sandbars, the entire area between the channels is considered to be within the "Active Floodplain" and within the OHWM. Therefore, an area containing these features would meet the indicator requirements for wetland hydrology.

3.0 LITERATURE REVIEW

USGS Topographic Quadrangle. The USGS topographic quadrangle maps show geological formations and their characteristics; they describe the physical settings of an area through topographic contour lines and other major surface features. These features include lakes, streams, rivers, buildings, roadways, landmarks, and other features that may fall under the jurisdiction of one or more regulatory agencies. In addition, the USGS maps provide topographic information that is useful in determining elevations, latitude and longitude, and Universal Transverse Mercator (UTM) Grid coordinates for a survey area.

The survey area occurs on the USGS' Mint Canyon 7.5-minute topographic quadrangle map. The principal feature on the quadrangle is the Santa Clara River. A small unnamed tributary to the Santa Clara River that flows from the area southwest of the survey area is also evident. Elevation in the survey area ranges from approximately 1,375 to 1,400 feet above mean sea level.

Color Aerial Photography. Psomas reviewed an existing color aerial photograph prior to conducting the field delineation to preliminarily identify the extent of any drainages/waterbodies and riparian vegetation occurring in the survey area and determine where additional field analysis was needed.

Vegetation Map. Vegetation types in the survey area were mapped by Psomas Biologists Marc Blain and Sarah Thomas during the performance of biological constraints analyses in September 2020 and March 2021. The following vegetation types and other areas occur in the survey area: Fremont cottonwood–willow woodland, disturbed California buckwheat scrub, Great Basin sage scrub–fourwing saltbush scrub, disturbed scale broom scrub, disturbed open scale broom scrub, ruderal, developed/ornamental, and developed areas (Exhibit 5).

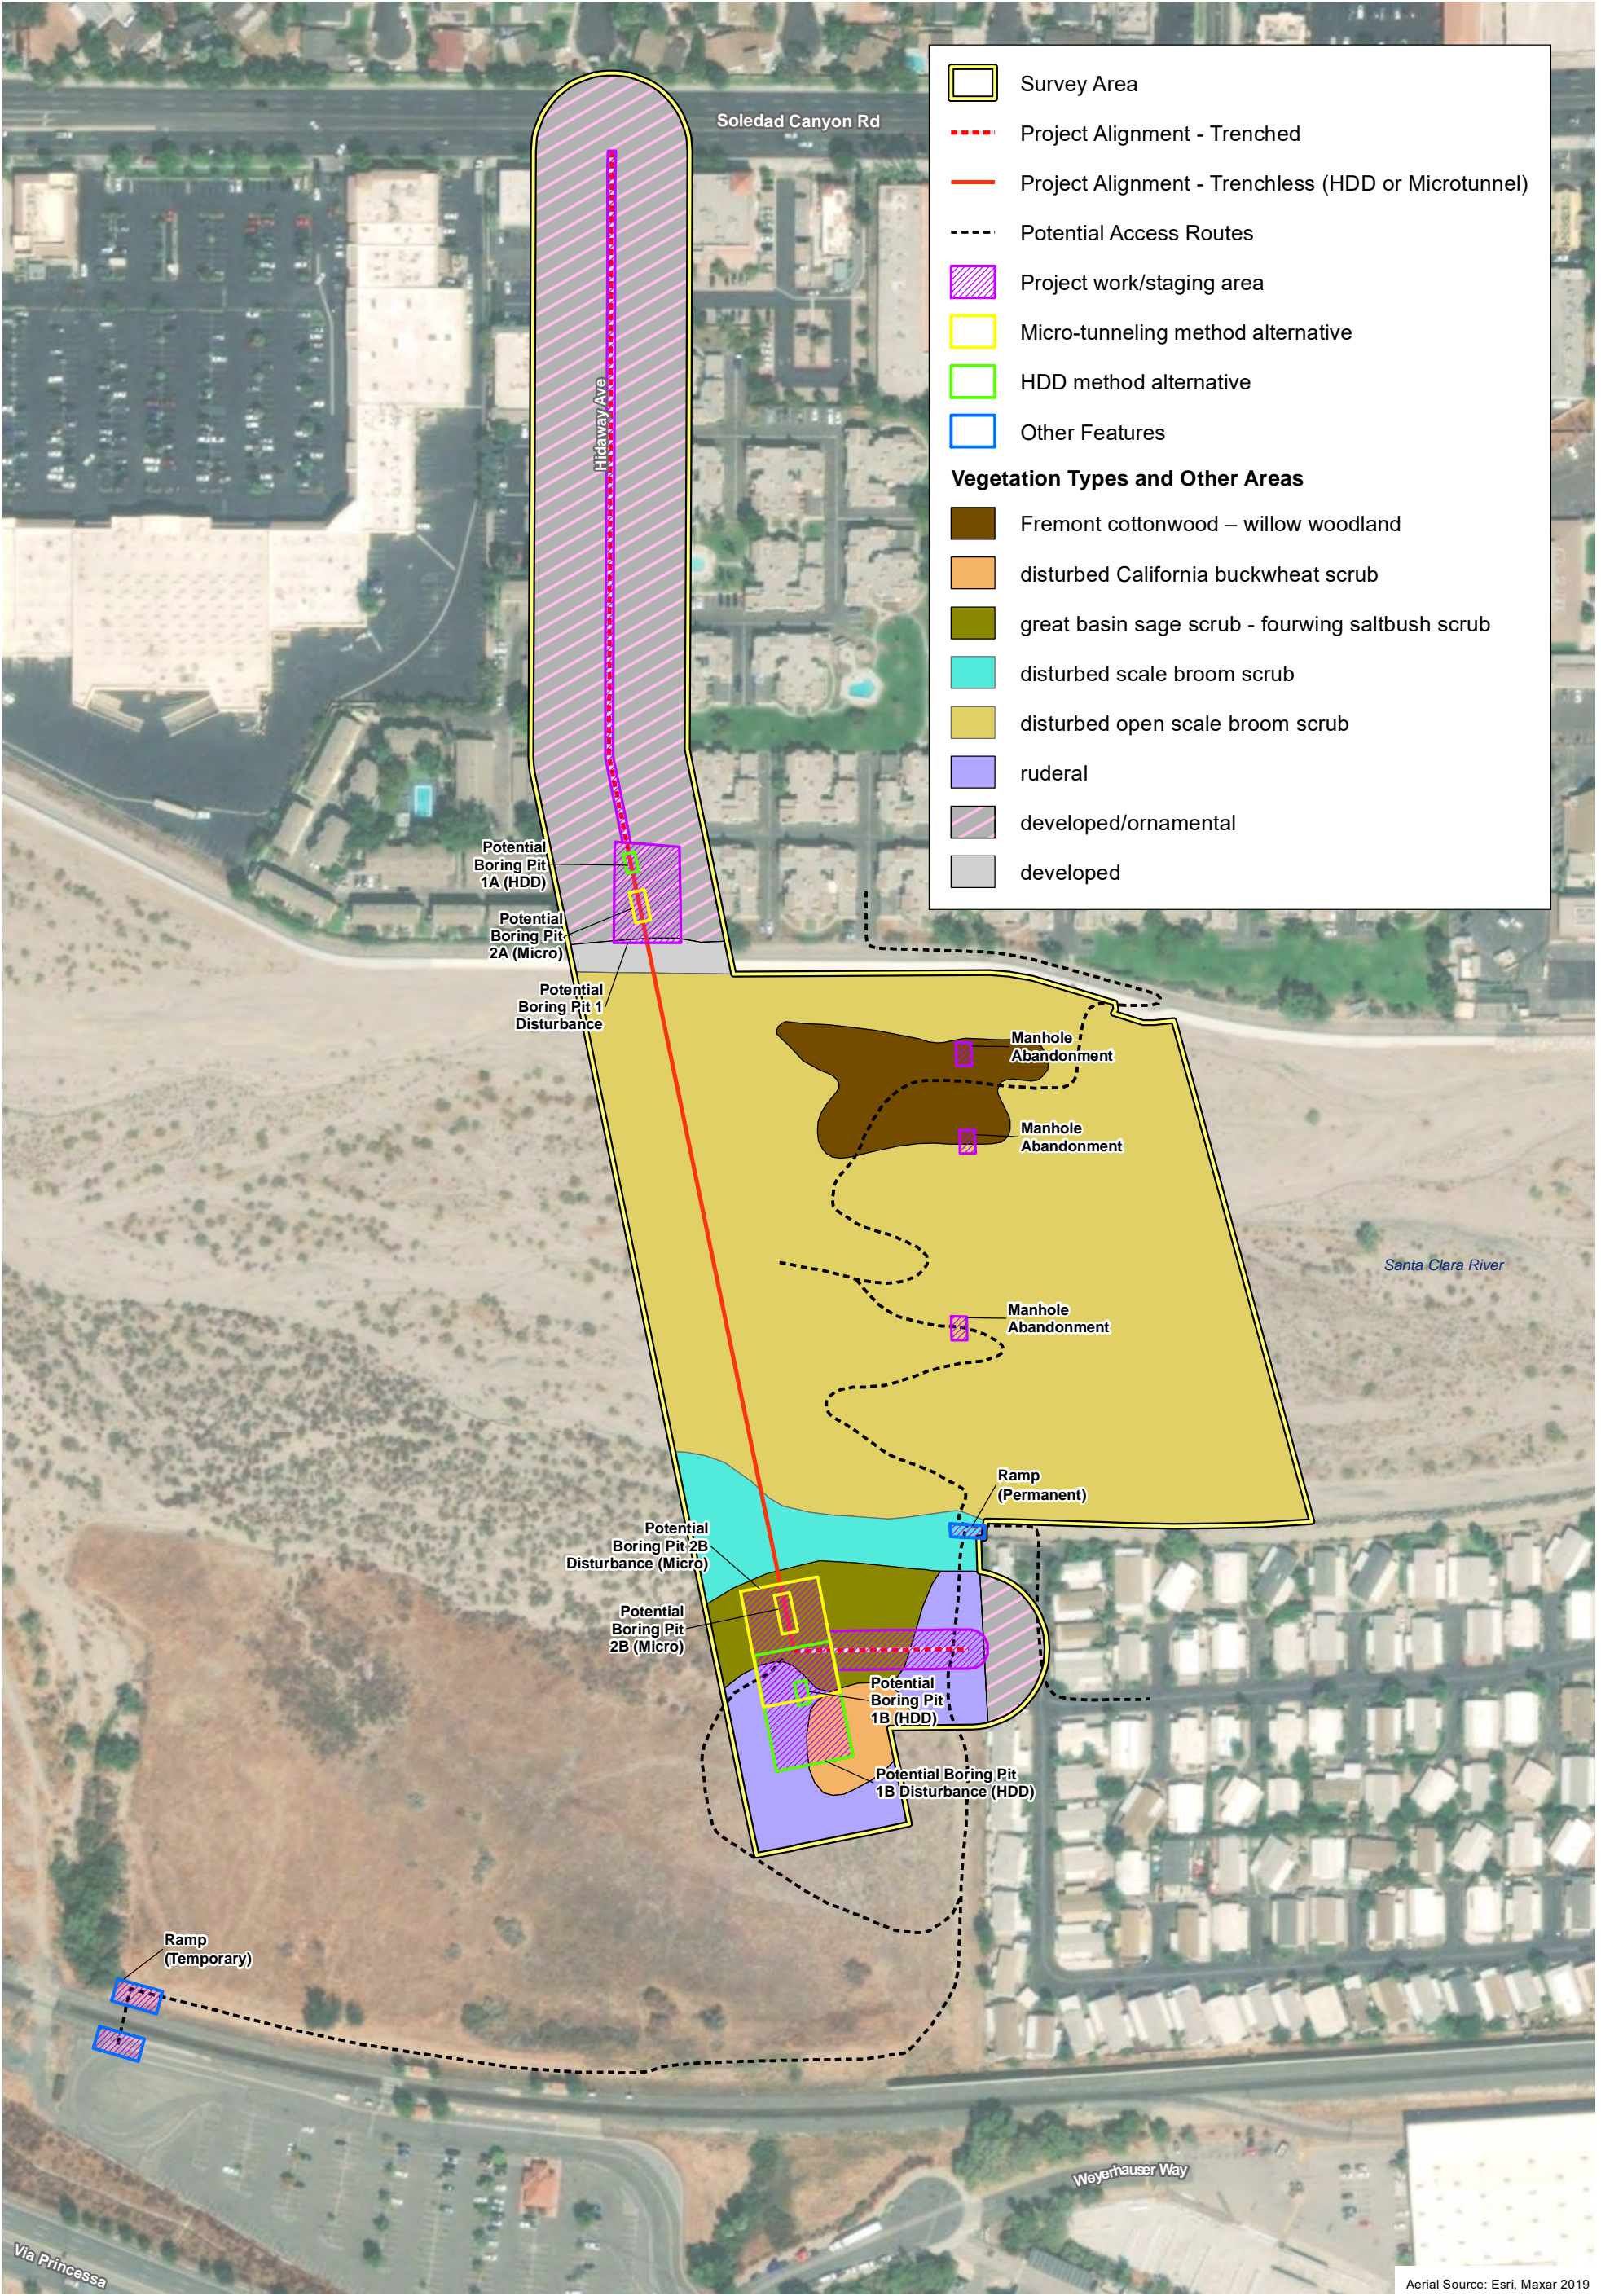

Fremont cottonwood–willow woodland occurs in the northeastern portion of the Santa Clara River within the survey area. This area is dominated by mature Fremont cottonwood (*Populus fremontii*) and red willow (*Salix laevigata*) trees. These trees are moderately spaced with very little understory vegetation.

A small patch of California buckwheat (*Eriogonum fasciculatum*) is located in the southern portion of the survey area that also contains a significant amount of short-pod mustard (*Hirschfeldia incana*) and shrubby butterweed (*Senecio flaccidus* var. *douglasii*). This area is mapped as disturbed California buckwheat scrub.

Great Basin sagebrush scrub–fourwing saltbush scrub occurs along the southern edge of the Santa Clara River and contains Great Basin sagebrush (*Artemisia tridentata*), fourwing saltbush (*Atriplex canescens*), thick-leaf yerba santa (*Eriodictyon crassifolium*), and pencil cholla (*Cylindropuntia ramosissima*).

In the Santa Clara River, the principal plant species is scale broom, along with yerba santa and tamarisk (*Tamarix ramosissima*). These areas are mapped as either disturbed scale broom scrub or disturbed open scale broom scrub, differentiated by the total coverage of vegetation. Moderately dense scale broom cover results in disturbed scale broom scrub, while widely spaced groupings of scale broom and other associated species results in disturbed open scale broom scrub.

Ruderal conditions dominate much of the southern floodplain of the Santa Clara River in the southern portion of the survey area. Vegetation in this area consists of short-pod mustard, annual bursage (*Ambrosia acanthicarpa*), turkey-mullein (*Croton setiger*), telegraph weed (*Heterotheca grandiflora*), common horseweed (*Erigeron canadensis*), and tocalote (*Centaurea melitensis*).

Ruderal conditions also occur where a temporary ramp will be established for construction access across the MTA rail tracks.

Developed/ornamental conditions are associated with the residential community that is at the southern end of the survey area and the areas along Hidaway Avenue in the northern half of the survey area. These areas are a combination of paved areas and ornamental tree/shrub species. The northern bank of the Santa Clara River and the Santa Clara River Trail are mapped as developed areas.

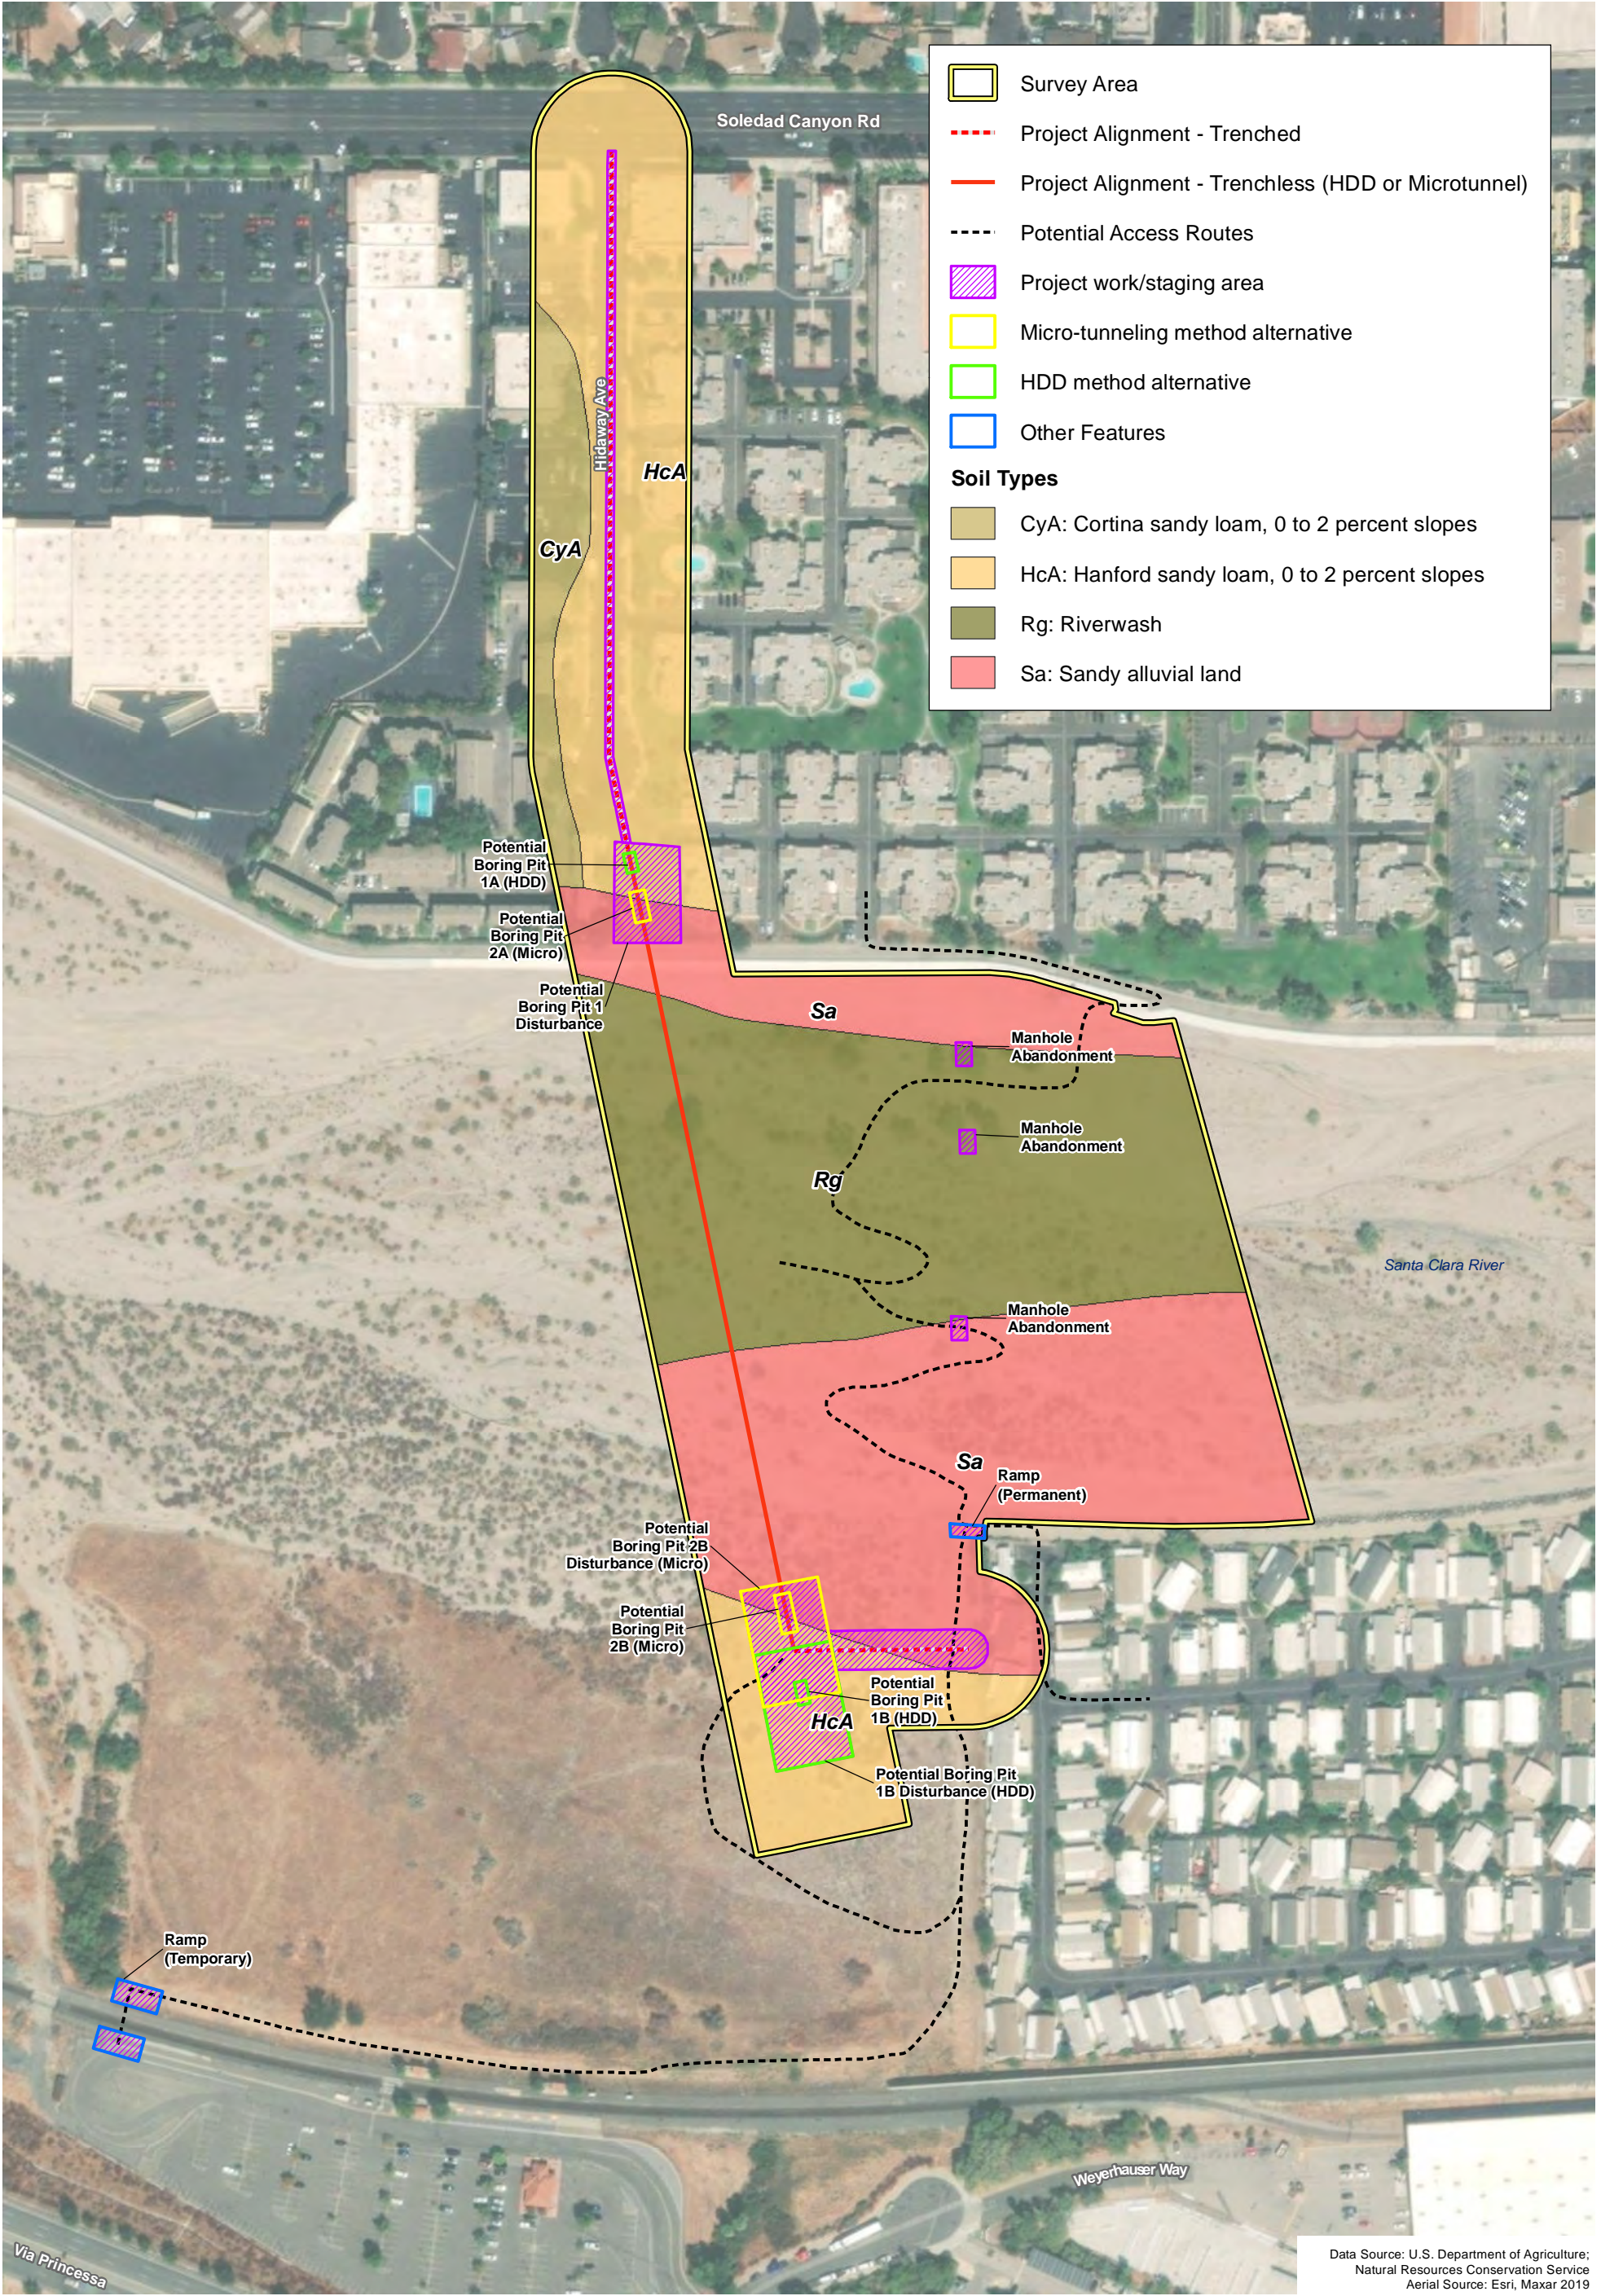

U.S. Department of Agriculture, Natural Resources Conservation Service. The presence of hydric soils is one of the chief indicators of jurisdictional wetlands. Psomas reviewed the USDA's soil data for the survey area (Exhibit 6).

The survey area contains the following soil types: Cortina sandy loam, 0 to 2 percent slopes, Hanford sandy loam, 0 to 2 percent slopes, Riverwash, Sandy alluvial land, and Yolo loam, 2 to 9 percent slopes. The NRCS has delineated the boundaries of 'soil map units', which often contain components of multiple soil types that may be classified as hydric or non-hydric. The National Hydric Soils List identifies a soil map unit as "hydric" if it contains either a major or minor component that is at least in part hydric (USDA NRCS 2020c). The survey area occurs in the Antelope Valley Area and soil types that are considered hydric include Riverwash and Sandy alluvial land on the National List for the Antelope Valley soil survey area. A brief description of the soils mapped in the survey area is provided in Attachment E of this report.

U.S. Fish and Wildlife Service, National Wetlands Inventory. The Wetland Mapper shows wetland resources available from the Wetlands Spatial Data Layer of the National Spatial Data Infrastructure. This resource provides the classification of known wetlands following the Classification of Wetlands and Deepwater Habitats of the United States (FGDC 2013). This classification system is arranged in a hierarchy of (1) Systems that share the influence of similar hydrologic, geomorphologic, chemical, or biological factors (i.e., Marine Estuarine, Riverine, Lacustrine, and Palustrine); (2) Subsystems (i.e., Subtidal and Intertidal; Tidal, Lower Perennial, Upper Perennial, and Intermittent; or Littoral and Limnetic); (3) Classes, which are based on substrate material and flooding regime or on vegetative life forms; (4) Subclasses; and (5) Dominance Types, which are named for the dominant plant or wildlife forms. In addition, there are modifying terms applied to Classes or Subclasses.

The Santa Clara River in the survey area appears on the USFWS' National Wetland Inventory (NWI) with classification codes of R4SBC (Riverine, Intermittent Streambed, Seasonally Flooded) and R5UBF (Riverine, Intermittent Streambed, Temporary Flooded) (Exhibit 7). The descriptions for these codes are as follows:

- **R: System RIVERINE.** The Riverine System includes all wetlands and deepwater habitats contained within a channel, with two exceptions: (1) wetlands dominated by trees, shrubs, persistent emergents, emergent mosses, or lichens, and (2) habitats with water containing ocean-derived salts of 0.5 parts per trillion (ppt) or greater. A channel is an open conduit either naturally or artificially created which periodically or continuously contains moving water, or which forms a connecting link between two bodies of standing water.
 - **4: Subsystem INTERMITTENT.** This Subsystem includes channels that contain flowing water only part of the year. When the water is not flowing, it may remain in isolated pools or surface water may be absent.
 - **SB: Class STREAMBED.** Includes all wetlands contained within the Intermittent Subsystem of the Riverine System and all channels of the Estuarine System or of the Tidal Subsystem of the Riverine System that are completely dewatered at low tide.

Soils Map

Jurisdictional Delineation Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project

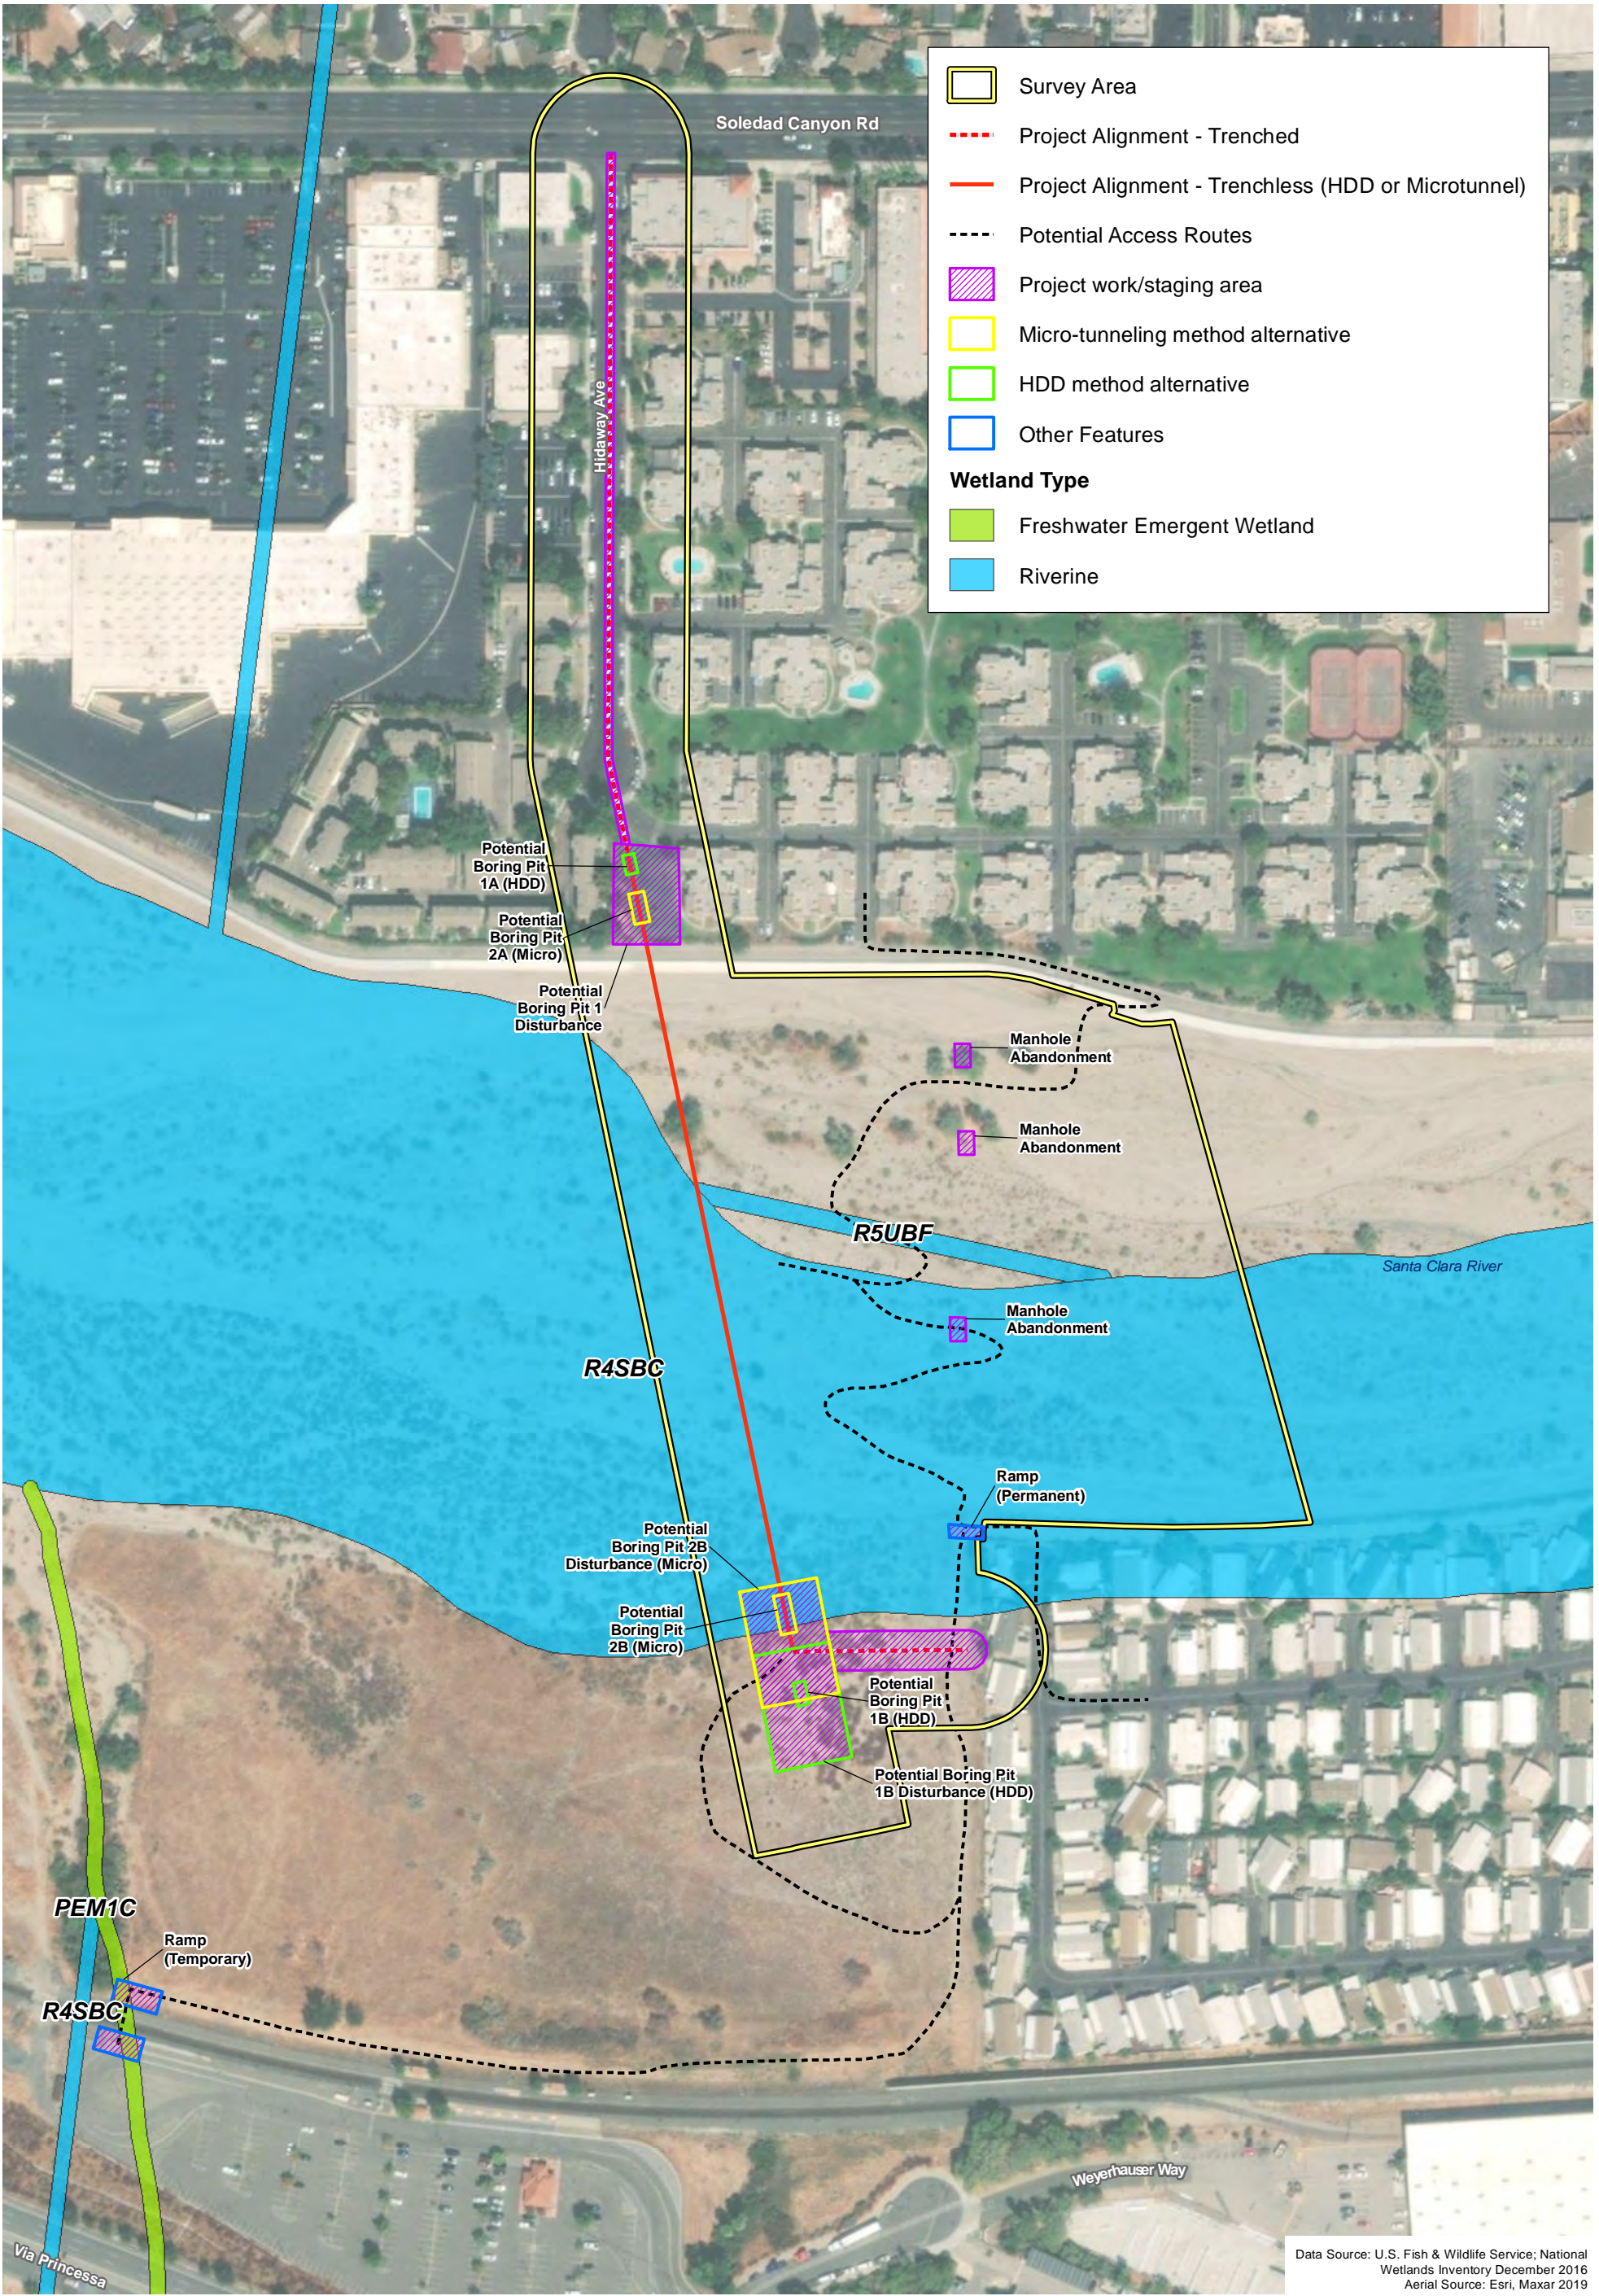

Exhibit 6

National Wetlands Inventory

Jurisdictional Delineation Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project

Exhibit 7

- **C: Water Regime SEASONALLY FLOODED.** Surface water is present for extended periods especially early in the growing season, but is absent by the end of the growing season in most years. The water table after flooding ceases is variable, extending from saturated to the surface to a water table well below the ground surface.
- **R: System RIVERINE.** The Riverine System includes all wetlands and deepwater habitats contained within a channel, with two exceptions: (1) wetlands dominated by trees, shrubs, persistent emergents, emergent mosses, or lichens, and (2) habitats with water containing ocean-derived salts of 0.5 parts per trillion (ppt) or greater. A channel is an open conduit either naturally or artificially created which periodically or continuously contains moving water, or which forms a connecting link between two bodies of standing water.
- **5: Subsystem UNKNOWN PERENNIAL.** This Subsystem designation was created specifically for use when the distinction between lower perennial, upper perennial, and tidal cannot be made from aerial photography and no data are available.
 - **UB: Class UNCONSOLIDATED BOTTOM.** Includes all wetlands and deepwater habitats with at least 25 percent cover of particles smaller than stones (less than 6-7 cm), and a vegetative cover less than 30 percent.
 - **F: Water Regime SEMIPERMANENTLY FLOODED.** Surface water persists throughout the growing season in most years. When surface water is absent, the water table is usually at or very near the land surface..

Regional Water Quality Control Plans. There are nine Regional Water Quality Control Boards in California. The project site is located within Regional Water Quality Control Board Region 4, the Los Angeles Region. The SWRCB and the Los Angeles RWQCB have adopted a Water Quality Control Plan (or “Basin Plan”) for the Los Angeles Region. The Basin Plan contains goals and policies, descriptions of conditions, and proposed solutions to surface and groundwater issues. The Basin Plan also establishes water quality standards for surface and groundwater resources and includes beneficial uses and levels of water quality that must be met and maintained to protect these uses. These water quality standards are implemented through various regulatory permits pursuant to CWA Section 401 for Water Quality Certifications and Section 402 for Report of Waste Discharge permits.

The Basin Plan indicates that the project site is located in Santa Clara River Reach 7 (between Bouquet Canyon Road and Lang gaging station). This is in Watershed Boundary Dataset (WBD) 180701020107.

The Basin Plan identifies a number of Beneficial Uses associated with this WBD (per updates proposed in 2016) including Municipal Water Supply (MUN); Industrial Service Supply (IND); Industrial Process Supply (PROC); Agricultural Supply (AGR); Ground Water Recharge (GWR); Fresh Water Replenishment (FRSH); Warm Freshwater Habitat (WARM); Wildlife Habitat (WILD); Rare, Threatened, or Endangered Species (RARE); Wetland Habitat (WET); Limited Water Contact Recreation (REC1); and Non-Contact Water Recreation (REC2) (Los Angeles RWQCB 1994). These Beneficial Uses are summarized below in Table 1.

TABLE 1
SUMMARY OF BENEFICIAL USES

WBD	Beneficial Uses											
	MUN	IND	PROC	AGR	GWR	FRSH	WARM	WILD	RARE	WET	REC1	REC2
180701020107	P	E	E	E	E	E	E	E	E	E	E	E
WBD: Watershed Boundary Dataset; MUN: Municipal Water Supply; IND: Industrial Service Supply; PROC: Industrial Process Supply; AGR: Agricultural Supply; GWR: Ground Water Recharge; FRSH: Fresh Water Replenishment; WARM: Warm Freshwater Habitat; WILD: Wildlife Habitat; RARE: Rare, Threatened, or Endangered Species; WET: Wetland Habitat; REC1: Limited Water Contact Recreation; REC2: Non-Contact Water Recreation E: Existing Beneficial Use; P: Potential Beneficial Use Source: Los Angeles RWQCB 1994.												

Possible effects to these existing and potential beneficial uses would need to be addressed as part of the request for a CWA Section 401 Water Quality Certification for this project. The project may require some dewatering of the subject portion of the Santa Clara River that has the potential to affect the GWR beneficial use. Due to the brief and temporary nature of the construction activity, any potential effect to the GWR beneficial use would be minor. Because construction of the sewer line is not expected to result in a surface discharge to the Santa Clara River, no impacts to the remaining beneficial uses are anticipated. Descriptions of the various Beneficial Uses are provided in Attachment E.

4.0 JURISDICTIONAL ANALYSIS

A portion of the Santa Clara River passes through the survey area for the project which is the principal jurisdictional resource in the area. The creek was dry at the time of the field survey, but based on previous observations of conditions in the Santa Clara River by Psomas staff, flowing water is often present in the river for extended periods during the seasonal rainy period. The National Wetland Inventory describes the river as seasonally flooded, meaning that flowing water is present for extended periods early in the growing season. Therefore, the flow regime for the river would be presumably considered to be intermittent. A summary of jurisdictional resources is provided in Table 2.

TABLE 2
SUMMARY OF JURISDICTIONAL RESOURCES IN THE SURVEY AREA

Feature ID	Latitude/Longitude (decimal degrees)		Feature Length (linear feet)	OHWM Width Range (feet)	Area of USACE/RWQCB Jurisdiction (acres)		CDFW Jurisdiction Width Range ^b (feet)	Area of CDFW Jurisdiction (acres) ^b
	Upstream End	Downstream End			Wetland	Non-wetland		
Santa Clara River	34.411744°, -118.466003°	34.411826°, -118.469137°	775	695–800	0.00	12.52	1,420–1,470	13.59
OHWM: Ordinary High Water Mark; USACE: U.S. Army Corps of Engineers; RWQCB: Regional Water Quality Control Board; CDFW: California Department of Fish and Wildlife; –: not applicable								
^a The drainage ditch does not contain USACE “water of the U.S.”; this ditch is only subject to RWQCB jurisdiction.								
^b Represents the maximum extent of CDFW jurisdiction as indicated by top of bank or outer edge of riparian dripline, whichever is wider.								

Other potentially jurisdictional features in the project vicinity include: (1) a ditch that runs along the southern edge of the MTA tracks to the south of the project site; (2) a storm drain channel that flows from south to north and flows under the MTA tracks but does not connect to the Santa Clara River; and (3) a tributary to the Santa Clara River that flows from south to north and is located west of the project site.

4.1 “WATERS OF THE UNITED STATES” DETERMINATION

Connectivity to a Traditional Navigable Water

Water that passes through the Santa Clara River travels in a westerly direction for approximately 50 miles before flowing directly into the Pacific Ocean, a Traditional Navigable Water (TNW). The USACE asserts jurisdiction over non-navigable tributaries of TNWs that have intermittent or perennial flows if they have a significant nexus with a TNW. Due to the project site’s connection with the Santa Clara River and the Pacific Ocean, the Santa Clara River would be under the regulatory authority of the USACE.

The drainage ditches that are located to the south of the project site do not have any indications that they connect to any downstream waters.

Limits of “Waters of the U.S.”

The limits of non-wetland WOTUS in the Santa Clara River were defined by the presence of the OHWM. Evidence of an OHWM for the drainage consists of scour marks along the southern banks. The limit of USACE jurisdiction along the northern bank is defined by the presence of a concrete side levee. An Arid West Ephemeral and Intermittent Streams OHWM Datasheet was completed to document the evidence indicating an OHWM (see Attachment B). Approximately

12.52 acres of non-wetland WOTUS under the regulatory authority of the USACE occur in the survey area, all associated with the Santa Clara River (Table 2; Exhibit 8).

Wetlands Determination

Three sampling points were established to determine if wetland conditions are present in the survey area (Table 3) and wetland data forms that document conditions at these locations are provided in Attachment C. The locations of these sampling points are shown on Exhibit 8. No OBL vegetation and minimal FACW vegetation was noted in the survey area that would suggest the possible presence of wetland conditions. Wetland sampling points were located in soils that are noted as hydric in the soil survey area (e.g., riverwash and sandy alluvial land) and in low points where water could possibly collect.

**TABLE 3
SUMMARY OF WETLAND SAMPLING POINT DATA**

Sampling Point	Vegetated	Dominance Test Result*	Prevalence Index Result	Hydrophytic Vegetation Present	Hydric Soil Indicators	Wetland Hydrology Indicators	Wetland?
1	Yes	0%	4.4	No	None	None	No
2	Yes	0%	4.0	No	None	B2, B10	No
3	Yes	50%	3.2	No	None	B2, B10	No
* Percent of dominant species that are OBL, FACW, or FAC. Wetland Hydrology Indicators B2 Sediment Deposits B10 Drainage Patterns							

Vegetation

Vegetation at the wetland sampling points is dominated by FAC and FACU species such as Fremont cottonwood, scale broom, and horsetweed. Due to the prevalence of these species, neither the dominance test nor the prevalence tests were satisfied at any of sampling locations that would indicate the presence of hydrophytic vegetation. The wetland vegetation criterion was not met at any of the locations.

Soils

Soils at the sampling locations were generally sandy soils that did not demonstrate any indicators of hydric soil conditions.

Hydrology

The wetland hydrology criterion was met for wetland sampling points 2 and 3 (Exhibit 8) as these locations are in the active channel portion of the Santa Clara River. Wetland sampling point 1 was located in the historic floodplain of the Santa Clara River, but no hydrologic indicators were observed. Therefore, the wetland hydrology criterion was met at wetland sampling points 2 and 3, but was not met at wetland sampling point 1.

Results

Due to the lack of any hydrophytic vegetation or hydric soil indicators, no wetland conditions were observed in the survey area. Because the wetland sampling locations are representative of general conditions in the survey area, no wetland conditions exist in the survey area.

Jurisdictional Resources

Jurisdictional Delineation Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project

Exhibit 8

4.2 REGIONAL WATER QUALITY CONTROL BOARD JURISDICTION

The RWQCB shares jurisdiction with the USACE for features that are considered WOTUS. Therefore, the RWQCB and USACE would both assert jurisdiction over the Santa Clara River (Table 2; Exhibit 8).

Though the drainage ditches to the south of the project site are not considered WOTUS, the RWQCB asserts jurisdiction over a much broader definition of waters. Moist soils and hydrophytic vegetation in the drainage ditches to the south of the project site suggest the periodic presence of water. As a result, these features would be considered to be non-wetland isolated “waters of the State”.

4.3 CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE JURISDICTION

The limits of CDFW jurisdiction have been significantly modified from their historical extent in the survey area. Along the northern bank of the Santa Clara River, the limit of CDFW jurisdiction was mapped as the top of the concrete side levee that protects the adjacent residential communities. CDFW jurisdictional limits along the southern bank of the Santa Clara River are delineated by the designated 100-year flood zone limit (i.e., the area with a 1 percent annual chance of flooding per the Federal Emergency Management Agency) (Exhibit 8). This boundary provides the limits of areas that are subject to the influence of periodic flooding from the river. Riparian vegetation occurs only along the edge of the active channel of the Santa Clara River, while the floodplain areas to the south are dominated by ruderal conditions (e.g., shortpod mustard, tocalote), so that the presence of riparian vegetation is not an indicator of the extent of CDFW jurisdiction. Riparian vegetation does not extend beyond the 100-year flood zone limit. In all, a total of 13.59 acres of CDFW jurisdictional areas occur in the survey area.

The drainage ditches south of the project site contain bed and bank and contain native riparian vegetation. The presence of a streambed and bank with native riparian vegetation suggests that the CDFW may consider these drainage features to be under their jurisdiction.

5.0 IMPACT ANALYSIS

The proposed Project involves the installation of a subterranean sewer pipeline that crosses under the Santa Clara River and the decommissioning of three manholes in the Santa Clara River. Impact areas are shown on Exhibit 9 and impacts to jurisdictional waters are summarized in Table 4. Though the pipeline alignment crosses under the Santa Clara River, this will not involve a discharge to the surface waters so that permitting pursuant to Section 404 of the Clean Water Act should not be necessary. Excavation areas that are necessary for pipeline installation occur outside of USACE WOTUS and RWQCB “waters of the State”.

Though surface discharge to the Santa Clara River is not proposed as part of the proposed Project, the possibility of encountering groundwater and requiring dewatering for construction will likely require permitting from the RWQCB via a Waste Discharge Requirements permit. Section 13260 of the *California Water Code* requires that the RWQCB is notified for activities that “could affect the quality of waters of the State”, including groundwater.

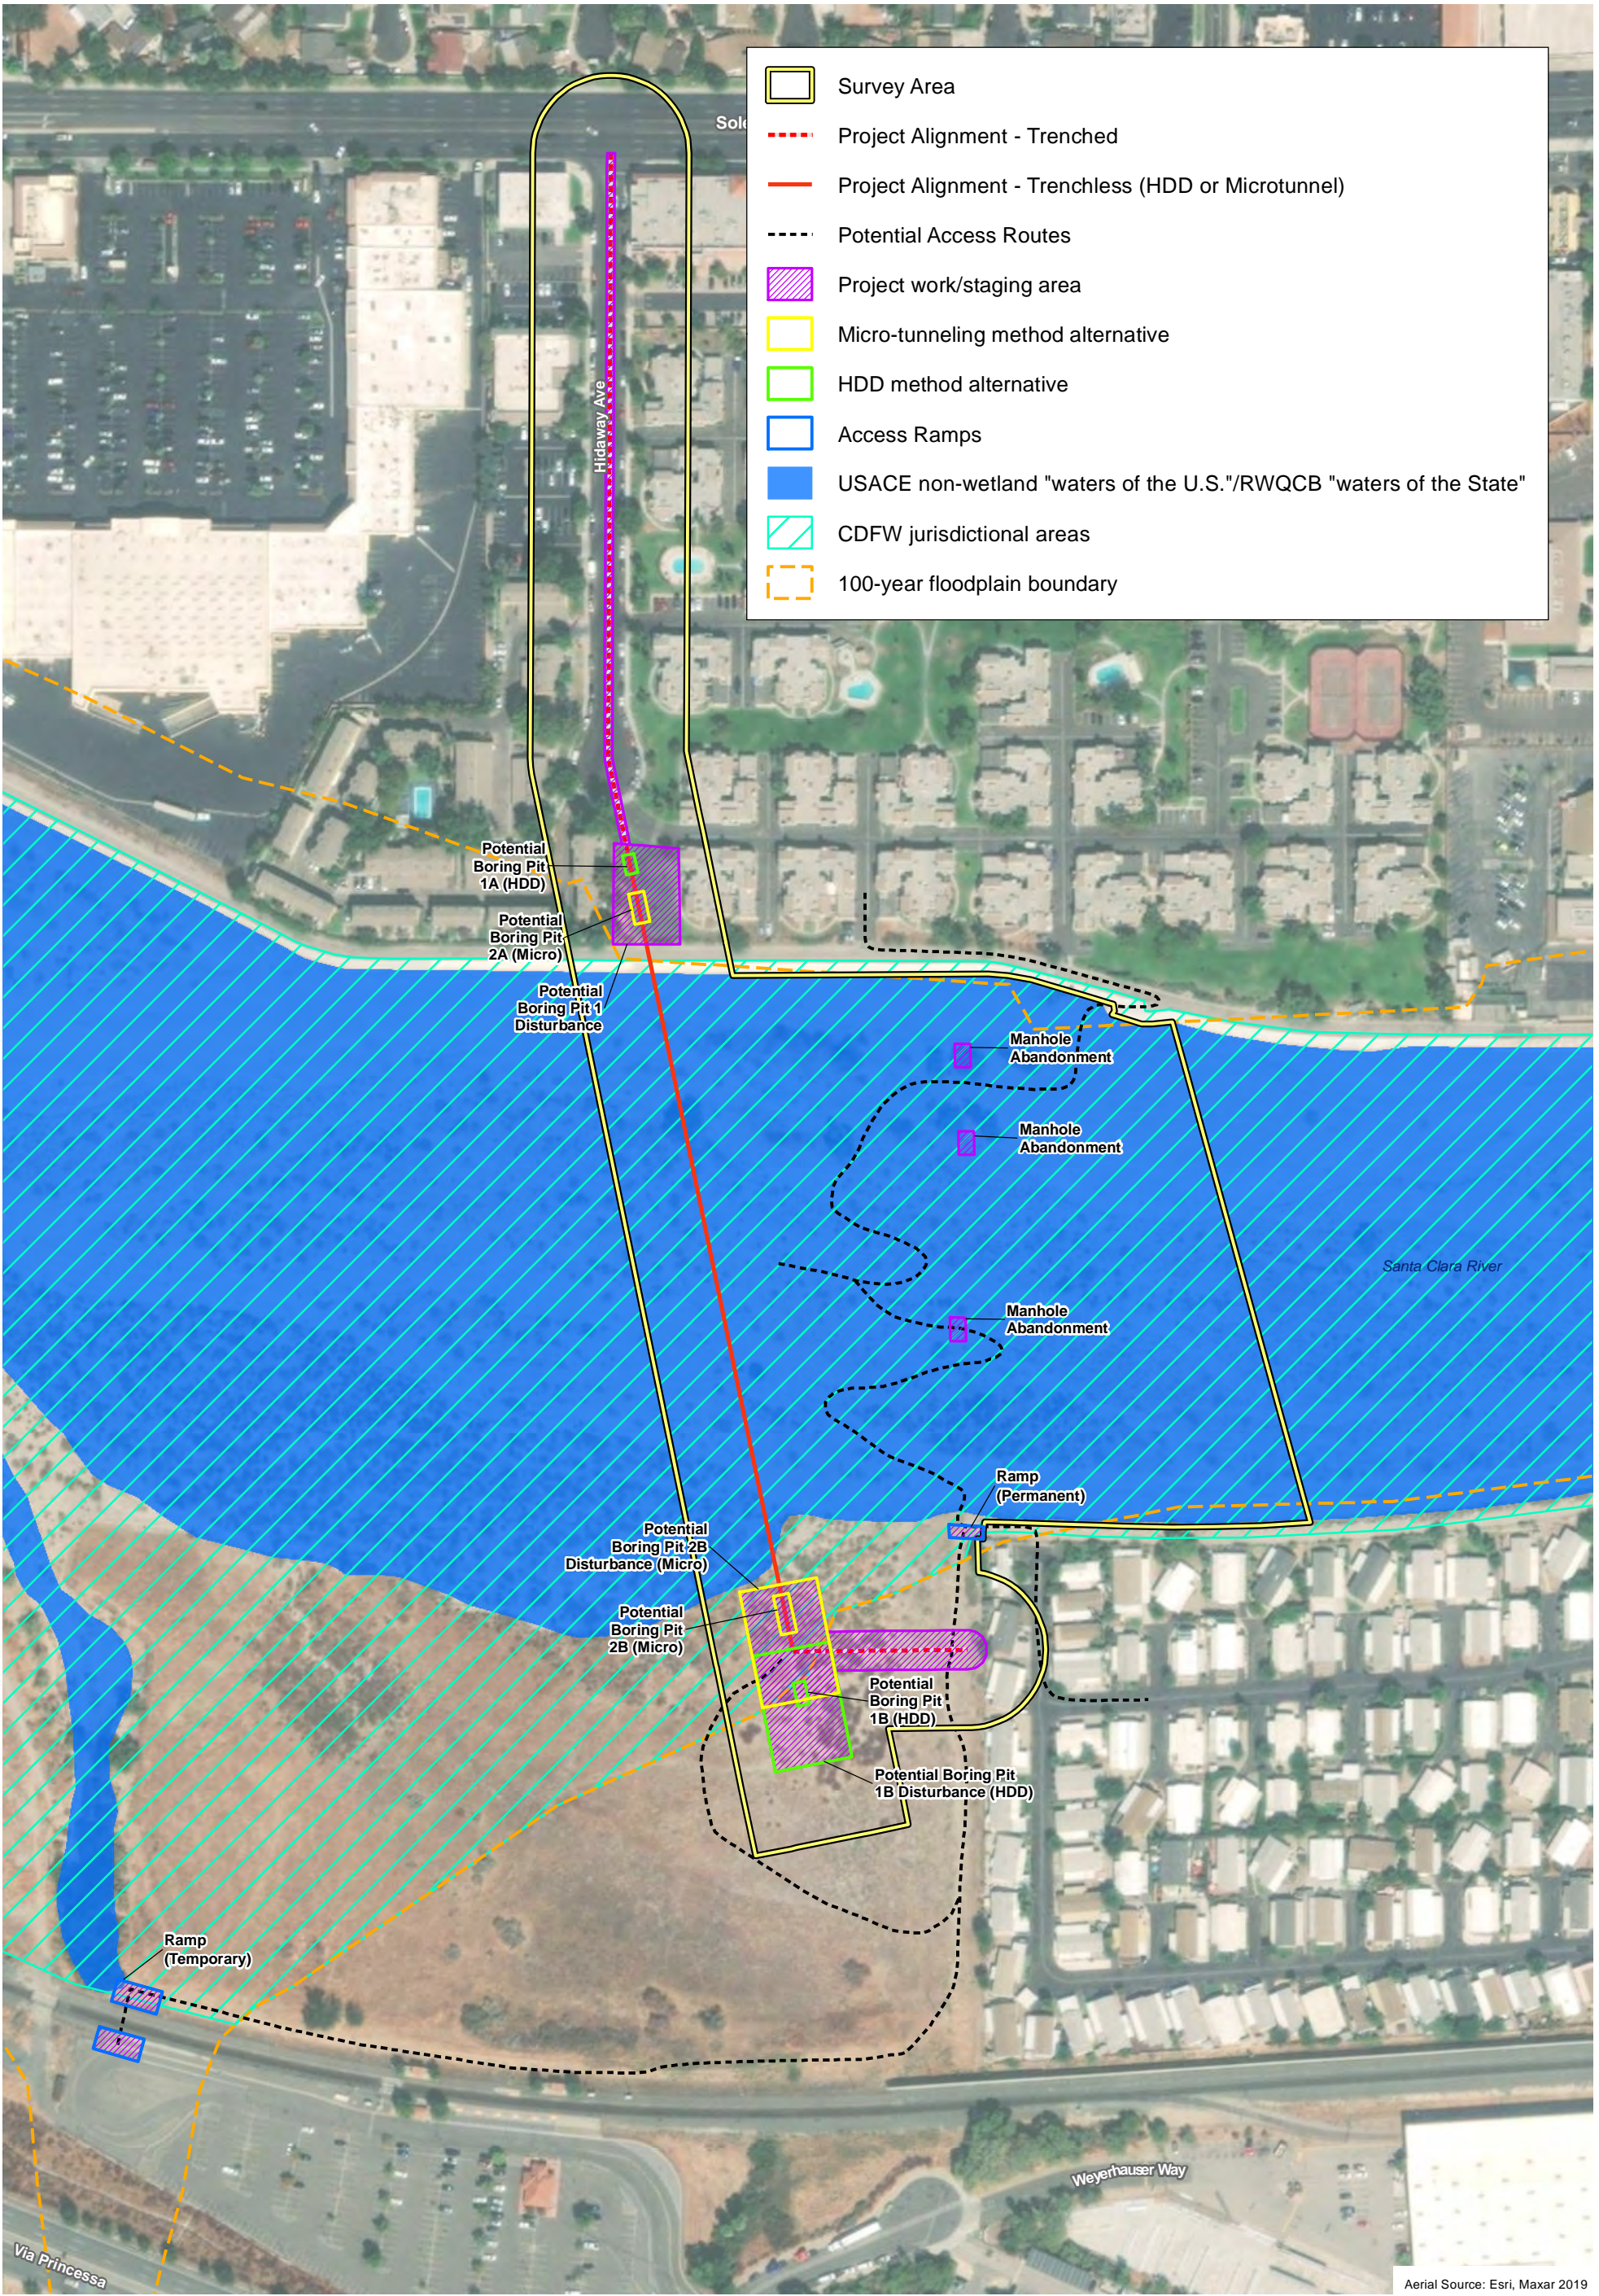

Decommissioning of three manholes in the Santa Clara River will require excavating a footprint of approximately 600 square feet in the riverbed for each manhole (0.04 acre total). Within these disturbance areas, a backhoe would be used to remove the steel casing around each manhole shaft and the top four feet of shaft. The manholes would then be filled with sand and cement slurry. Because sand will be replaced on the river surface and the river bottom will be contoured to match the pre-existing grade, impacts associated with manhole decommissioning would be considered temporary.

Temporary impacts to CDFW jurisdiction will occur to excavate tunneling pits for installation of the new sewer alignment. Upon construction completion, disturbed areas will be restored to pre-project conditions. These temporary impacts will affect a total of 0.28 acre of CDFW jurisdictional areas. A temporary access ramp for construction equipment will be created southwest of the project area to cross the MTA rail line. A permanent ramp will be constructed that leads from the residential community that is east of the project site. The temporary ramp will affect approximately 0.03 acre of CDFW jurisdictional area, while the permanent ramp will affect 0.02 acre.

TABLE 4
SUMMARY OF JURISDICTIONAL WATERS TO BE IMPACTED

Project Activity	Impact Type	Proposed Impacts (acres)		
		USACE	RWQCB	CDFW
Boring pits for pipeline installation	Temporary	0.00	0.00	0.28
Soil excavation for manhole decommissioning	Temporary	0.04	0.04	0.04
Temporary access ramp construction	Temporary	0.00	0.00	0.03
Total temporary impacts		0.04	0.04	0.35
Permanent access ramp construction	Permanent	0.00	0.00	0.02
Total permanent impacts		0.00	0.00	0.02
USACE: U.S. Army Corps of Engineers; RWQCB: Regional Water Quality Control Board; CDFW: California Department of Fish and Wildlife				

In addition to the soil disturbance areas described above, project activities will likely require removal of two Fremont cottonwood trees that are in the footprint of one area for manhole decommissioning. These riparian trees are under the CDFW’s jurisdiction. One tree is a single trunk tree measuring 21.5 inches in trunk diameter while the second tree has three trunks measuring 13.3, 8.7, and 7.2 inches in trunk diameter.

Impacts to Jurisdictional Resources

Jurisdictional Delineation Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project

Additionally, one large Fremont cottonwood tree occurs directly over the sewer alignment within the active channel of the Santa Clara River near its northern bank. The sewer alignment will be installed via trenchless technology at this location (HDD or micro-tunneling) and will not involve any surface disturbance. Because sewer tunneling is expected to occur below this tree's root zone, no impacts are expected.

6.0 REGULATORY APPROVAL PROCESS

This section summarizes the various permits, agreements, and certifications that are expected to be required prior to initiation of the proposed Project activities that involve impacts to jurisdictional waters, including:

- USACE Section 404 permit
- RWQCB Section 401 Water Quality Certification and Waste Discharge Requirements
- CDFW Section 1602 Notification of Lake or Streambed Alteration

It should be noted that regulatory permit applications can be processed concurrently.

6.1 U.S. ARMY CORPS OF ENGINEERS

The proposed Project includes soil excavation activities in the Santa Clara River associated with manhole decommissioning that would involve a temporary discharge to USACE WOTUS. Consultation with the USACE is necessary to determine what type of Nationwide Permit (NWP) may be applicable to authorize the proposed activities. Due to the limited impacts associated with the proposed activities, the Project appears to qualify under NWP 18 (Minor Discharges) which authorizes discharges that are less than 25 cubic yards affecting less than 0.10 acre.

Issuance of a USACE Section 404 permit (an NWP or an IP) is contingent upon the approval of a Section 401 Water Quality Certification from the Los Angeles RWQCB. The RWQCB requires certification of the proposed Project's California Environmental Quality Act (CEQA) documentation before it will approve the Section 401 Water Quality Certification or Report of Waste Discharge (ROWD). The RWQCB, as a responsible agency, will use the proposed Project's CEQA document to satisfy its own CEQA-compliance requirements.

6.2 REGIONAL WATER QUALITY CONTROL BOARD

As noted above, issuance of the USACE Section 404 permit would be contingent upon the approval of a Section 401 Water Quality Certification from the Los Angeles RWQCB. The RWQCB requires the Applicant to address urban storm water runoff during and after construction in the form of Best Management Practices (BMPs). These BMPs are intended to address the treatment of pollutants carried by storm water runoff and are required in all complete applications. The notification/application for a CWA Section 401 Water Quality Certification must also address compliance with the Basin Plan. Please note that the application would also require the payment of an application fee, which would be based on project impacts.

Please note that as of September 11, 2020, applicants are required to request a "pre-filing meeting" with the RWQCB 30 days prior to submitting permit applications.

6.3 CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE

Prior to construction, Notification of a Lake or Streambed Alteration (LSA) must be submitted to the CDFW that describes any proposed streambed alteration contemplated by the proposed project. If an LSA Agreement is required, the CDFW may want to conduct an on-site inspection.

In addition to the formal application materials and the fee, a copy of the appropriate CEQA documentation should be included in the submittal. The CDFW will not deem the application to be complete until the application fees have been paid and the agency is provided with a certified

CEQA document and a signed copy of the receipt of County Clerk filing fees for the Notice of Determination (NOD).

6.4 RECOMMENDATIONS

Based on the conclusions of this Jurisdictional Delineation Report, the following recommendations are identified:

1. Staff from the USACE, RWQCB, and CDFW should be contacted to discuss the proposed Project activities and determine the appropriate permitting strategy.
2. Upon determining the appropriate permitting strategy, the following applications should be prepared and processed: a CDFW Streambed Alteration Agreement, a RWQCB Water Quality Certification, and a USACE Section 404 Permit.

ATTACHMENT A
SUMMARY OF REGULATORY AUTHORITY

REGULATORY AUTHORITY

This attachment summarizes the regulatory authority of the U.S. Army Corps of Engineers (USACE), the Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Wildlife (CDFW) over activities that have potential to impact jurisdictional resources.

U.S. Army Corps of Engineers

The USACE Regulatory Branch regulates activities that discharge dredged or fill materials into “waters of the United States” (WOTUS) under Section 404 of the Federal Clean Water Act (CWA) and Section 10 of the Rivers and Harbors Act. This permitting authority applies to all WOTUS where the material (1) replaces any portion of WOTUS with dry land or (2) changes the bottom elevation of any portion of any WOTUS. These fill materials would include sand, rock, clay, construction debris, wood chips, and materials used to create any structure or infrastructure in these waters.

Waters of the United States

On April 21, 2020, the United States Environmental Protection Agency (USEPA) and the USACE published in the *Federal Register* the Navigable Waters Protection Rule (NWPR) which revised the definition of WOTUS. The NWPR subsequently became effective on June 22, 2020.

The NWPR narrows the definition of WOTUS that are subject to USACE jurisdiction through two rules: the Step One rule, issued on October 22, 2019, which reestablished USACE regulations that were in place prior to the 2015 Waters of the United States Rule, and the Step Two rule, published on April 21, 2020, which narrows federal jurisdiction so that WOTUS must demonstrate a direct connection to a Traditional Navigable Waterway (TNW).

Under the Step Two Rule, four categories of waters are considered WOTUS:

1. Territorial seas and TNWs;
2. Tributaries of jurisdictional waters;
3. Lakes, ponds, and impoundments that contribute surface water flow to a jurisdictional water in a typical year; and
4. Wetlands adjacent to non-wetland jurisdictional waters.

Under the rule, a wetland is considered “adjacent” if it:

1. Abuts (i.e., touches a side or corner of) another non-wetland jurisdictional water;
2. Is inundated by flooding from another non-wetland jurisdictional water at least once in a typical year;
3. Is physically separated from a non-wetland jurisdictional water by a natural berm, bank, dune, or similar natural feature without regard to whether there is a specific hydrological surface connection in a typical year; or
4. Is physically separated from a non-wetland jurisdictional water by an artificial structure like a road, dike, or barrier as long as the structure allows for a direct hydrologic surface connection between the wetland and the other jurisdictional water at least once in a typical year. This connection can be through a gate or culvert or even by water overtopping a road.

The Step Two Rule also identifies waters specifically excluded from consideration as WOTUS. The twelve categories of non-jurisdictional waters in the Step Two Rule include:

1. All waters not covered by the four categories of WOTUS discussed above;
2. Groundwater;
3. Ephemeral features;
4. Storm water runoff and overland sheet flow;
5. All ditches not considered tributaries;
6. Prior converted cropland;
7. Artificially irrigated areas;
8. Certain artificial lakes and ponds;
9. Water-filled depressions or pits excavated in connection with mining or construction or to obtain fill, sand, or gravel;
10. Certain storm water control features;
11. Groundwater recharge, water reuse, and wastewater recycling structures; and
12. Wastewater treatment systems.

The NWPR was drafted to incorporate direction that the U.S. Supreme Court provided via three decisions that provided context and guidance in determining the appropriate scope of WOTUS. In *United States v. Riverside Bayview Homes* (1985), the Court upheld the inclusion of adjacent wetlands in the regulatory definition of WOTUS. In *Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers* (“SWANCC”, issued in 2001), the Court held that the use of “isolated” non-navigable intrastate ponds by migratory birds was not, by itself, sufficient basis for the exercise of federal regulatory authority under the CWA. In *Rapanos v. United States* (“Rapanos”, 2006)¹, a majority of the U.S. Supreme Court overturned two Sixth Circuit Court of Appeals decisions, finding that certain wetlands constituted WOTUS under the CWA. In his plurality opinion, Justice Scalia argued that WOTUS should not include channels through which water flows intermittently or ephemerally or channels that periodically provide drainage for rainfall. He also stated that a wetland may not be considered “adjacent to” remote WOTUS based on a mere hydrologic connection. Justice Kennedy authored a separate concurring opinion concluding that wetlands are WOTUS if they, either alone or in combination with similarly situated lands in the region, significantly affect the chemical, physical, and biological integrity of other covered waters more readily understood as “navigable”. Lacking a majority opinion, regulatory jurisdiction under the CWA existed over a water body if either the plurality’s or Justice Kennedy’s “significant nexus” standard was satisfied.

Ordinary High Water Mark

The landward limit of tidal WOTUS is the high-tide line. In non-tidal waters where adjacent wetlands are absent, the lateral limits of USACE jurisdiction extend to the ordinary high water mark (OHWM).² The OHWM is defined as “that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of the soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas”.³ When wetlands are present, the lateral limits of USACE jurisdiction extend beyond the OHWM to the limits of the adjacent wetlands.⁴

Wetlands

A wetland is a subset of jurisdictional waters and is defined by the USACE and the USEPA as “those areas that are inundated or saturated by surface or groundwater at a frequency and

¹ Consolidated cases: *Rapanos v. United States* and *Carabell v. United States* refer to the U.S. Supreme Court’s decision concerning USACE jurisdiction over “waters of the U.S.” under the CWA.

² U.S. Army Corps of Engineers (USACE). 2005 (December 7). Regulatory Guidance Letter. Ordinary High Water Mark Identification. Washington, D.C.: USACE.

³ *Code of Federal Regulations* (CFR), Title 33, §328.3(e)

⁴ USACE 2005

duration sufficient to support, and under normal circumstances, do support a prevalence of vegetation typically adapted for life in saturated soil conditions”.⁵ Wetlands generally include swamps, marshes, bogs, and areas containing similar features.

The definition and methods for identifying wetland resources can be found in the USACE’s *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region*,⁶ a supplement to the 1987 *Corps of Engineers Wetlands Delineation Manual*.⁷ Both the 1987 Wetlands Manual and the 2008 Arid West Supplement to the manual provide technical methods and guidelines for determining the presence of wetland WOTUS. Pursuant to these manuals, a three-parameter approach is used to identify wetlands and requires evidence of wetland hydrology, hydrophytic vegetation, and hydric soils. In order to be considered a wetland, an area must exhibit one or more indicators of all three of these parameters. However, problem areas may periodically or permanently lack certain indicators for reasons such as seasonal or annual variability of rainfall, vegetation, and other factors. Atypical wetlands lack certain indicators due to recent human activities or natural events. Guidance for determining the presence of wetlands in these situations is presented in the regional supplement.

Section 404 Permit

Except as specified in Section 323.4 of the CFR, impacts to WOTUS require a Section 404 Permit. Permit authorization may be in the form of (1) a “general permit” authorizing a category of activities in a specific geographical region or nationwide or (2) an “individual permit” (IP) following a review of an individual application form (to be obtained from the district office having jurisdiction over the waters in which the activity is proposed to be located).

Regulatory authorization in the form of a Nationwide Permit (NWP) is provided for certain categories of activities such as repair, rehabilitation, or replacement of a structure or fill which was previously authorized; utility line placement; or bank stabilization. The current set of NWPs became effective on March 19, 2017 and will expire in on March 18, 2022. NWPs authorize only those activities with minimal adverse effects on the aquatic environment and are valid only if the conditions applicable to the permits are met or waivers to these conditions are provided in writing from the USACE. Please note that waivers may require consultation with affected federal and State agencies, which can be a lengthy process with no mandated processing time frames. Certain activities do not require submission of an application form, but may require a separate notification. If the NWP conditions cannot be met, an IP will be required. WOTUS temporarily filled, flooded, excavated, or drained but restored to pre-construction contours and elevations after construction are not included in the measurement of loss of WOTUS. The appropriate permit authorization will be based on the amount of impacts to WOTUS, as determined by the USACE. There is no filing fee for the Section 404 Permit.

Approximately three or four months are typically required to process a routine permit application; large or complex activities may take longer to process. When a permit application is received, it will be assigned an identification number and reviewed for completeness by the District Engineer. If an application is incomplete, additional information will be requested within 15 days of receipt of the application. If an application is complete, the District Engineer will issue a public notice within 15 days unless specifically exempted by provisions of the CFR. Public comments will be accepted no more than 30 days but not less than 15 days from the date of public notice; these will become part of the administrative record of the application. Generally, the District Engineer

⁵ 33 CFR §328.3(b)

⁶ USACE. 2008a. *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0)*. (J.S. Wakeley, R.W. Lichvar, and C.V. Noble, Eds.). Vicksburg, MS: U.S. Army Engineer Research and Development Center.

⁷ Environmental Laboratory. 1987. *Corps of Engineers Wetlands Delineation Manual (Technical Report Y-87-1)*. Vicksburg, MS: U.S. Army Engineer Waterways Experiment Station.

will decide on the application no later than 60 days after receipt of the completed application. Additional permit situations may increase the permit processing time (e.g., projects involving a Section 401 Water Quality Certification, a coastal zone management consistency analysis, historic properties, a federal agency, and/or Endangered species). The Project Applicant will be given time, not to exceed 30 days, to respond to requests of the District Engineer.

On January 31, 2007, the USACE published a memorandum clarifying the Interim Guidance for Amendments to the National Historic Preservation Act and the Advisory Council on Historic Preservation (ACHP) implementing regulations.⁸ The Interim Guidance applies to all Department of the Army requests for authorization/verification, including Individual Permits (IPs, i.e., standard permits and letters of permission) and all Regional General Permits (RGPs) and Nationwide Permits (NWP). The State or Tribal Historic Preservation Officer (SHPO/THPO) has 30 days to respond to a determination that a proposed activity, which otherwise qualifies for an NWP or an RGP, has no effect or no adverse effect on a historic property. If the SHPO/THPO does not respond within 30 days of notification, the Los Angeles District may proceed with verification. If the SHPO/THPO disagrees with the District's determination, the District may work with the SHPO/THPO to resolve the disagreement or request an opinion from the ACHP. The USACE will submit the Draft Jurisdictional Delineation Report to the SHPO/THPO for review prior to initiating the actual regulatory process.

Please note that, if the USACE determines that the drainages/waterbodies are jurisdictional and would be impacted by project implementation, the Applicant will be required to obtain a CWA Section 401 Water Quality Certification from the RWQCB before the USACE will issue the Section 404 Permit. If the USACE determines that the impacted drainage/waterbody is not jurisdictional, the Applicant will be required to obtain RWQCB authorization under the provisions of a ROWD.

Jurisdictional Determinations

Pursuant to USACE Regulatory Guidance Letter (RGL) 08-02 (dated June 26, 2008), the USACE can issue two types of jurisdictional determinations to implement Section 404 of the CWA: Approved Jurisdictional Determinations and Preliminary Jurisdictional Determinations.⁹ An Approved Jurisdictional Determination is an official USACE determination that jurisdictional WOTUS, "Navigable Waters of the United States", or both are either present or absent on a site. An Approved Jurisdictional Determination also identifies the precise limits of jurisdictional waters on a project site.

The USACE will provide an Approved Jurisdictional Determination when (1) an Applicant requests an official jurisdictional determination; (2) an Applicant contests jurisdiction over a particular water body or wetland; or (3) when the USACE determines that jurisdiction does not exist over a particular water body or wetland. The Approved Jurisdictional Determination then becomes the USACE's official determination that can then be relied upon over a five-year period to request regulatory authorization as part of the permit application.

In addition, an Applicant may decline to request an Approved Jurisdictional Determination and instead obtain a USACE IP or General Permit Authorization based on a Preliminary Jurisdictional Determination or, in certain circumstances (e.g., authorizations by non-reporting nationwide general permits), with no Jurisdictional Determination.

⁸ USACE. 2007 (January 31). Memorandum: Interim Guidance for Amendments to the National Historic Preservation Act and the Advisory Council on Historic Preservation (ACHP) Implementing Regulations. Washington, D.C.: USACE.

⁹ USACE. 2008b (June 26). Regulatory Guidance Letter. Jurisdictional Determinations. Washington, D.C.: USACE.

Preliminary Jurisdictional Determinations are non-binding, advisory in nature, and may not be appealed. They indicate that there may be WOTUS on a project site. An Applicant may elect to use a Preliminary Jurisdictional Determination to voluntarily waive or set aside questions regarding CWA jurisdiction over a site, usually in the interest of expediting the permitting process. The USACE will determine what form of Jurisdictional Determination is appropriate for a particular project site.

The USACE Regulatory Branch Offices will coordinate with the USEPA Regional Office and USACE Headquarters (HQ), as outlined in its January 28, 2008, memorandum entitled “Process for Coordinating Jurisdictional Determinations Conducted Pursuant to Section 404 of the Clean Water Act in Light of the *Rapanos* and *SWANCC* Supreme Court Decisions”.¹⁰ The guidance provided in this memorandum is quoted as follows:

1. Effective immediately, unless and until paragraph 5(b) of the June 5, 2007, Rapanos guidance coordination memorandum is modified by a joint memorandum from Army and EPA, we will follow these procedures:
 - a. For jurisdictional determinations involving significant nexus determinations, USACE districts will send copies of draft jurisdictional delineations via e-mail to appropriate EPA regional offices. The EPA regional office will have 15 calendar days to decide whether to take the draft jurisdictional delineation as a special case under the January 19, 1989, “Memorandum of Agreement Between the Department of the Army and the USEPA Concerning the Determination of the Section 404 Program and the Application of the Exceptions under Section 404(f) of the Clean Water Act.” If the EPA regional office does not respond to the district within 15 days, the district will finalize the jurisdictional determination.
 - b. For jurisdictional determinations involving isolated waters determinations, the agencies will continue to follow the procedure in paragraph 5(b) of June 5, 2007, coordination memorandum, until a new coordination memorandum is signed by USACE and EPA. (In accordance with paragraph 6 of the June 5, 2007, coordination memorandum, this is a 21-day timeline that can only be changed through a joint memorandum between agencies).
2. Approved JDs are not required for non-reporting NWP, unless the project proponent specifically requests an approved JD. For proposed activities that may qualify for authorization under a State Programmatic General Permit (SPGP) or RGP, an approved JD is not required unless requested by the project proponent.
3. The USACE will continue to work with EPA to resolve the JDs involving significant nexus and isolated waters determinations that are currently in the elevation process.
4. USACE districts will continue posting completed Approved JD Forms on their web pages.

¹⁰ USACE. 2008c (January 28). *Memorandum for Commander, Major Subordinate Commands and District Commands. Process for Coordinating Jurisdictional Determinations Conducted Pursuant to Section 404 of the Clean Water Act in Light of the Rapanos and SWANCC Supreme Court Decisions*. Washington, D.C.: USACE.

Regional Water Quality Control Board

The RWQCB is the primary agency responsible for protecting water quality in California through the regulation of discharges to surface waters under the CWA and the California Porter-Cologne Water Quality Control Act (Porter-Cologne Act). The RWQCB's jurisdiction extends to all waters of the State and to all WOTUS, including wetlands (isolated and non-isolated).

Section 401 of the CWA provides the RWQCB with the authority to regulate, through a Water Quality Certification, any proposed, federally permitted activity that may affect water quality. Among such activities are discharges of dredged or fill material permitted by the USACE pursuant to Section 404 of the CWA. Section 401 requires the RWQCB to provide certification that there is reasonable assurance that an activity which may result in discharge to navigable waters will not violate water quality standards. Water Quality Certification must be based on a finding that the proposed discharge will comply with water quality standards, which contain numeric and narrative objectives that can be found in each of the nine RWQCBs' Basin Plans.

The Porter-Cologne Act provides the State with very broad authority to regulate waters of the State (which are defined as any surface water or groundwater, including saline waters). The Porter-Cologne Act has become an important tool in the post-SWANCC (Solid Waste Agency of Northern Cook Counties vs. United States Army Corps of Engineers) and Rapanos era with respect to the State's authority over isolated waters. Generally, any person proposing to discharge waste into a water body that could affect its water quality must file an ROWD when there is no federal nexus, such as under Section 404(b)(1) of the CWA. Although "waste" is partially defined as any waste substance associated with human habitation, the RWQCB interprets this to include fill discharge into water bodies.

Wetlands

In 2019, the SWRCB adopted rules to provide a common, statewide definition of what constitutes a wetland and to provide consistency in the way they and the RWQCBs regulate activities to protect wetlands and other waterways. The SWRCB defines an area as wetlands "if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation".¹¹ The following wetlands are waters of the State:

1. Natural wetlands,
2. Wetlands created by modification of a surface water of the State, and
3. Artificial wetlands that meet any of the following criteria:
 - a. Approved by an agency as compensatory mitigation for impacts to other waters of the State, except where the approving agency explicitly identifies the mitigation as being of limited duration;
 - b. Specifically identified in a water quality control plan as a wetland or other water of the State;
 - c. Resulted from historic human activity, is not subject to ongoing operation and maintenance, and has become a relatively permanent part of the natural landscape; or

¹¹ State Water Resources Control Board (SWRCB). 2019 (March 22). *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*.

- d. Greater than or equal to one acre in size, unless the artificial wetland was constructed, and is currently used and maintained, primarily for one or more of the following purposes (i.e., the following artificial wetlands are not waters of the State unless they also satisfy the criteria set forth in 2, 3a, or 3b):
 - i. Industrial or municipal wastewater treatment or disposal,
 - ii. Settling of sediment,
 - iii. Detention, retention, infiltration, or treatment of stormwater runoff and other pollutants or runoff subject to regulation under a municipal, construction, or industrial stormwater permitting program,
 - iv. Treatment of surface waters,
 - v. Agricultural crop irrigation or stock watering,
 - vi. Fire suppression,
 - vii. Industrial processing or cooling,
 - viii. Active surface mining – even if the site is managed for interim wetlands functions and values,
 - ix. Log storage,
 - x. Treatment, storage, or distribution of recycled water, or
 - xi. Maximizing groundwater recharge (this does not include wetlands that have incidental groundwater recharge benefits); or
 - xii. Fields flooded for rice growing.

All artificial wetlands that are less than an acre in size and do not satisfy the criteria set forth in 2, 3.a, 3.b, or 3.c are not waters of the State.

Section 401 Water Quality Certification

Issuance of the USACE Section 404 Permit would be contingent upon the approval of a Section 401 Water Quality Certification or Waste Discharge Requirements (WDRs) from the RWQCB. Also, the RWQCB requires certification of the project's California Environmental Quality Act (CEQA) documentation before it will approve the Section 401 Water Quality Certification or WDR. The RWQCB, as a responsible agency, will use the project's CEQA document to satisfy its own CEQA-compliance requirements.

Upon acceptance of a complete permit application, the RWQCB has between 60 days and 1 year to make a decision regarding the permit request. This is compliant with USACE regulations, which indicate that the RWQCB has 60 days from the date of receipt of a completed application that requests water quality certification to make a decision.¹² The RWQCB has the option of issuing a "Denial Without Prejudice", which does not mean that the request is denied, but that it requires more information in order to make a decision. This effectively stops the processing clock until this information is provided.

The RWQCB is required under the *California Code of Regulations* (CCR) to have a "minimum 21 day public comment period" before any action can be taken on the Section 401 application.¹³ This period closes when the RWQCB acts on the application. Since projects often change or are

¹² 33 CFR §325.2(b)(1)(ii)

¹³ 23 CCR §3858(a)

revised during the Section 401 permit process, the comment period can remain open. The public comment period starts as soon as an application has been received.

The RWQCB requires the Applicant to address urban storm water runoff during and after construction in the form of Best Management Practices (BMPs). These BMPs are intended to address the treatment of pollutants carried by storm water runoff and are required in all complete applications. The notification/application for a CWA Section 401 Water Quality Certification must also address compliance with the Basin Plan. Please note that filing an application would also require the payment of an application fee which would be based on project impacts. The fee schedule calculator is available at http://www.waterboards.ca.gov/santaana/water_issues/programs/401_certification/index.shtml.

California Department of Fish and Wildlife

The CDFW has jurisdictional authority over wetland resources associated with rivers, streams, and lakes pursuant to the *California Fish and Game Code*.¹⁴ Activities of State and local agencies as well as public utilities that are project proponents are regulated by the CDFW under Section 1602 of the *California Fish and Game Code*. This section regulates any work that will (1) substantially divert or obstruct the natural flow of any river, stream, or lake; (2) substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or (3) deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. Section 1602 of the *California Fish and Game Code* applies to all perennial, intermittent, and ephemeral rivers, streams, and lakes in the State.

The CDFW jurisdictional limits are not as clearly defined by regulation as those of the USACE. While they closely resemble the limits described by USACE regulations, they include riparian habitat supported by a river, stream, or lake regardless of the presence or absence of hydric and saturated soils conditions. In general, the CDFW takes jurisdiction from the top of a stream bank or to the outer limits of the adjacent riparian vegetation (outer drip line), whichever is greater. Notification is generally required for any project that will take place within or in the vicinity of a river, stream, lake or within or in the vicinity of tributaries to a river, stream, or lake. This includes rivers or streams that flow at least periodically or permanently through a bed or channel with banks that support fish and other aquatic plant and/or wildlife species. It also includes watercourses that have a surface or subsurface flow that support or have supported riparian vegetation.

Section 1602 Lake or Streambed Alteration Agreement

The CDFW enters into a Lake or Streambed Alteration (LSA) Agreement with a project proponent in order to ensure protection of wildlife and habitat values and acreages.

Prior to construction, a Notification of an LSA must be submitted to the CDFW that describes any proposed lake or streambed alteration that would occur with implementation of a project. The Notification of an LSA must address the initial construction and long-term operation and maintenance of any structures (such as a culvert or a desilting basin) included in the project design that are located within any river, stream, or lake and that may require periodic maintenance. In addition to the formal application materials and the fee, a copy of the appropriate environmental document (e.g., a Mitigated Negative Declaration) should be included in the submittal, consistent with CEQA requirements. The complete notification package must be submitted to the CDFW regional office that services the county where the activity will take place. This notification will serve as the basis for the CDFW's issuance of a Section 1602 LSA

¹⁴ See §§1600–1616.

Agreement. Note that notification is not required before beginning emergency work, but the CDFW must be notified in writing within 14 days after beginning the work.

After receiving Notification of an LSA Agreement, the CDFW will determine whether an LSA Agreement will be required for the proposed activity. An LSA Agreement will be required if the activity could substantially adversely affect an existing fish and wildlife resource. If an LSA Agreement is required, the CDFW may want to conduct an on-site inspection.

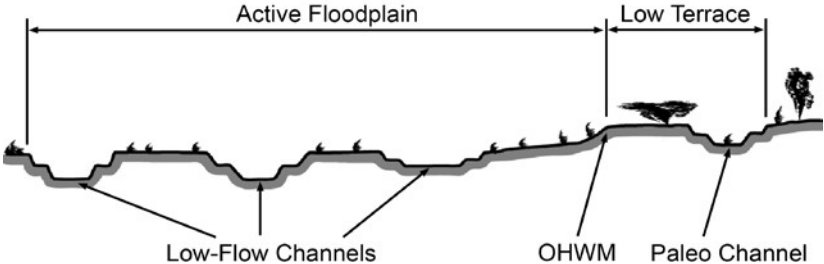

If the CDFW does not respond in writing concerning the completeness of the Notification within 30 days of its submittal, the Notification automatically becomes complete. If the CDFW does not submit a draft LSA Agreement to the Applicant within 60 days of the determination of a completed Notification package, the CDFW will issue a letter that either (1) identifies the final date to transmit a draft LSA Agreement or (2) indicates that an LSA Agreement was not required. The CDFW will also indicate that it was unable to meet this mandated compliance date and that, by law, the Applicant is authorized to complete the project without an LSA Agreement as long as the Applicant constructs the project as proposed and complies with all avoidance, minimization, and mitigation measures described in the submitted Notification package. Please note that, if the project requires revisions to the design or project construction, the CDFW may require submittal of a new Notification/application with an additional 90-day permit process.

If determined to be necessary, the CDFW will prepare a draft LSA Agreement, which will include standard measures to protect fish and wildlife resources during project construction and during ongoing operation and maintenance of any project element that occurs within a CDFW jurisdictional area. The draft Agreement must be transmitted to the Applicant within 60 calendar days of the CDFW's determination that the notification is complete. It should be noted that the 60-day timeframe might not apply to long-range agreements.

Following receipt of a draft LSA Agreement from the CDFW, the Applicant has 30 calendar days to notify the CDFW concerning the acceptability of the proposed terms, conditions, and measures. If the Applicant agrees with these terms, conditions and measures, the Agreement must be signed and returned to the CDFW. The Agreement becomes final once the CDFW executes it and an LSA Agreement is issued. Please note that all application fees must be paid and the final certified CEQA documentation must be provided prior to the CDFW's execution of the Agreement.

OHWM

GPS point: _____

Indicators:

- ☐ Change in average sediment texture
☐ Change in vegetation species
☐ Change in vegetation cover

- ☒ Break in bank slope
☐ Other: _____
☐ Other: _____

Comments:

OHWM easily determined along northern bank due to presence of concrete side levee; along southern bank, the OHWM was indicated by a clear break in bank slope and shelving of streambank

Floodplain unit:

☒ Low-Flow Channel

☐ Active Floodplain

☐ Low Terrace

GPS point: _____

Characteristics of the floodplain unit:

Average sediment texture: coarse sand

Total veg cover: _____ % Tree: _____ % Shrub: 5 % Herb: _____ %

Community successional stage:

- ☐ NA
☒ Early (herbaceous & seedlings)
☐ Mid (herbaceous, shrubs, saplings)
☐ Late (herbaceous, shrubs, mature trees)

Indicators:

- ☐ Mudcracks
☐ Ripples
☐ Drift and/or debris
☐ Presence of bed and bank
☐ Benches
☐ Soil development
☒ Surface relief
☐ Other: _____
☐ Other: _____
☐ Other: _____

Comments:

Low flow channels are easily distinguished by fresh coarse sand deposits and lack of vegetation, just occasional scale broom shrubs in the low-flow channel.

Project ID:**Cross section ID:****Date:****Time:****Floodplain unit:**☐ Low-Flow Channel☒ Active Floodplain☐ Low Terrace**GPS point:** _____**Characteristics of the floodplain unit:**Average sediment texture: medium sandTotal veg cover: 20 % Tree: 10 % Shrub: 10 % Herb: %

Community successional stage:

☐ NA☐ Early (herbaceous & seedlings)☒ Mid (herbaceous, shrubs, saplings)☐ Late (herbaceous, shrubs, mature trees)**Indicators:**☐ Mudcracks☐ Ripples☐ Drift and/or debris☐ Presence of bed and bank☐ Benches☒ Soil development☒ Surface relief☐ Other: _____☐ Other: _____☐ Other: _____**Comments:**

The active floodplain is complex of meandering low flow channels that are poorly vegetated with slightly raised islands intermixed that contain occasional Fremont cottonwood trees, sandbar willows, and upland shrubs such as California buckwheat and Great Basin sagebrush. The drainage pattern within the active floodplain are highly dynamic and change with each storm season.

Floodplain unit:☐ Low-Flow Channel☐ Active Floodplain☒ Low Terrace**GPS point:** _____**Characteristics of the floodplain unit:**Average sediment texture: medium sandTotal veg cover: 60 % Tree: % Shrub: 50 % Herb: 10 %

Community successional stage:

☐ NA☐ Early (herbaceous & seedlings)☒ Mid (herbaceous, shrubs, saplings)☐ Late (herbaceous, shrubs, mature trees)**Indicators:**☐ Mudcracks☐ Ripples☐ Drift and/or debris☐ Presence of bed and bank☐ Benches☒ Soil development☒ Surface relief☐ Other: _____☐ Other: _____☐ Other: _____**Comments:**

The low terrace area is an area with moderately dense shrub establishment with Great Basin sagebrush, pencil cholla, yerba santa, California buckwheat. Flows in this area have been apparently cut off by the upstream bank protection that encourages flows to stay inside OHWM.

LITERATURE REVIEW DETAILS

DESCRIPTIONS OF SOILS IN SURVEY AREA

ANTELOPE VALLEY SOIL SURVEY AREA, CALIFORNIA

Cortina sandy loam, 0 to 2 percent slopes

Map Unit Setting

- *National map unit symbol:* hcdf
- *Elevation:* 30 to 2,400 feet
- *Mean annual precipitation:* 8 to 40 inches
- *Mean annual air temperature:* 61 to 64 degrees F
- *Frost-free period:* 275 to 300 days
- *Farmland classification:* Farmland of statewide importance

Map Unit Composition

- *Cortina and similar soils:* 85 percent
- *Minor components:* 15 percent
- *Estimates are based on observations, descriptions, and transects of the mapunit.*

Description of Cortina

Setting

- *Landform:* Alluvial fans
- *Landform position (two-dimensional):* Backslope
- *Landform position (three-dimensional):* Tread
- *Down-slope shape:* Linear
- *Across-slope shape:* Linear
- *Parent material:* Alluvium derived from sedimentary rock

Typical profile

- *H1 - 0 to 12 inches:* sandy loam
- *H2 - 12 to 28 inches:* very gravelly sandy loam
- *H3 - 28 to 60 inches:* very cobbly sandy loam

Properties and qualities

- *Slope:* 0 to 2 percent
- *Depth to restrictive feature:* More than 80 inches
- *Drainage class:* Excessively drained
- *Runoff class:* Very low
- *Capacity of the most limiting layer to transmit water (Ksat):* High (1.98 to 5.95 in/hr)
- *Depth to water table:* More than 80 inches
- *Frequency of flooding:* None, Occasional
- *Frequency of ponding:* None
- *Available water capacity:* Low (about 3.7 inches)

Interpretive groups

- *Land capability classification (irrigated):* 4s
- *Land capability classification (nonirrigated):* 4e
- *Hydrologic Soil Group:* A
- *Ecological site:* R019XD065CA - SANDY 9-20"
- *Hydric soil rating:* No

Minor Components

Metz

- *Percent of map unit:* 10 percent
- *Hydric soil rating:* No

Unnamed

- *Percent of map unit:* 4 percent
- *Hydric soil rating:* No

Unnamed

- *Percent of map unit:* 1 percent
- *Landform:* Drainageways
- *Hydric soil rating:* Yes

Hanford sandy loam, 0 to 2 percent slopes

Map Unit Setting

- *National map unit symbol:* hcf4
- *Elevation:* 2,600 to 4,200 feet
- *Mean annual precipitation:* 9 to 12 inches
- *Mean annual air temperature:* 63 degrees F
- *Frost-free period:* 200 to 250 days
- *Farmland classification:* Prime farmland if irrigated

Map Unit Composition

- *Hanford and similar soils:* 85 percent
- *Minor components:* 15 percent
- *Estimates are based on observations, descriptions, and transects of the mapunit.*

Description of Hanford

Setting

- *Landform:* Alluvial fans
- *Landform position (two-dimensional):* Backslope
- *Landform position (three-dimensional):* Tread
- *Down-slope shape:* Linear
- *Across-slope shape:* Linear
- *Parent material:* Alluvium derived from granite

Typical profile

- *H1 - 0 to 8 inches:* sandy loam
- *H2 - 8 to 70 inches:* fine sandy loam, sandy loam
- *H2 - 8 to 70 inches:*

Properties and qualities

- *Slope:* 0 to 2 percent
- *Depth to restrictive feature:* More than 80 inches
- *Drainage class:* Well drained
- *Runoff class:* Very low
- *Capacity of the most limiting layer to transmit water (Ksat):* High (1.98 to 5.95 in/hr)
- *Depth to water table:* More than 80 inches
- *Frequency of flooding:* None

- *Frequency of ponding:* None
- *Maximum salinity:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
- *Available water capacity:* Very high (about 14.5 inches)

Interpretive groups

- *Land capability classification (irrigated):* 2s
- *Land capability classification (nonirrigated):* 4e
- *Hydrologic Soil Group:* A
- *Ecological site:* R019XD064CA - LOAMY 9-20"
- *Hydric soil rating:* No

Minor Components

Greenfield

- *Percent of map unit:* 10 percent
- *Hydric soil rating:* No

Unnamed

- *Percent of map unit:* 4 percent
- *Hydric soil rating:* No

Unnamed

- *Percent of map unit:* 1 percent
- *Landform:* Drainageways
- *Hydric soil rating:* Yes

Riverwash

Map Unit Composition

- *Riverwash:* 85 percent
- *Minor components:* 15 percent
- *Estimates are based on observations, descriptions, and transects of the mapunit.*

Description of Riverwash

Setting

- *Landform:* Drainageways
- *Landform position (two-dimensional):* Footslope
- *Landform position (three-dimensional):* Tread
- *Down-slope shape:* Linear
- *Across-slope shape:* Linear
- *Parent material:* Alluvium

Typical profile

- *H1 - 0 to 6 inches:* sand
- *H2 - 6 to 60 inches:* stratified coarse sand to sandy loam

Properties and qualities

- *Slope:* 0 to 2 percent
- *Drainage class:* Excessively drained
- *Runoff class:* Negligible
- *Capacity of the most limiting layer to transmit water (Ksat):* High to very high (5.95 to 19.98 in/hr)

- *Depth to water table*: About 0 inches
- *Frequency of flooding*: Frequent, None
- *Available water capacity*: Very low (about 2.9 inches)

Interpretive groups

- *Land capability classification (irrigated)*: None specified
- *Land capability classification (nonirrigated)*: 8
- *Hydrologic Soil Group*: A
- *Hydric soil rating*: Yes

Minor Components

Sandy alluvial land

- *Percent of map unit*: 10 percent
- *Hydric soil rating*: No

Unnamed

- *Percent of map unit*: 5 percent
- *Hydric soil rating*: No

Sandy alluvial land

Map Unit Setting

- *National map unit symbol*: hch5
- *Mean annual precipitation*: 14 inches
- *Mean annual air temperature*: 61 degrees F
- *Farmland classification*: Not prime farmland

Map Unit Composition

- *Sandy alluvial land*: 85 percent
- *Minor components*: 15 percent
- *Estimates are based on observations, descriptions, and transects of the mapunit.*

Description of Sandy Alluvial Land

Setting

- *Landform*: Flood plains
- *Landform position (two-dimensional)*: Footslope
- *Landform position (three-dimensional)*: Tread
- *Down-slope shape*: Linear
- *Across-slope shape*: Linear
- *Parent material*: Alluvium

Typical profile

- *H1 - 0 to 10 inches*: sand
- *H2 - 10 to 30 inches*: stratified sand to loam
- *H3 - 30 to 60 inches*: stratified gravelly sand to gravelly loam

Properties and qualities

- *Slope*: 0 to 2 percent
- *Drainage class*: Excessively drained
- *Runoff class*: Very low
- *Capacity of the most limiting layer to transmit water (Ksat)*: High (1.98 to 5.95 in/hr)
- *Depth to water table*: About 10 inches

- *Maximum salinity:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
- *Available water capacity:* Moderate (about 6.1 inches)

Interpretive groups

- *Land capability classification (irrigated):* None specified
- *Land capability classification (nonirrigated):* 7w
- *Hydrologic Soil Group:* B
- *Ecological site:* R020XE025CA - SANDY 9-20"
- *Hydric soil rating:* Yes

Minor Components

Riverwash

- *Percent of map unit:* 10 percent

- *Hydric soil rating:* No

BASIN PLAN BENEFICIAL USES

The *Water Quality Control Plan: Los Angeles Region* (Basin Plan) identifies a number of beneficial uses, some or all of which may apply to a specific hydrologic subarea (HSA), including: Municipal and Domestic Water Supply (MUN) waters; Agricultural Supply (AGR) waters; Industrial Process Supply (PROC) waters; Industrial Service Supply waters (IND); Groundwater Recharge (GWR) waters; Freshwater Replenishment (FRSH); Navigation (NAV) waters; Hydropower Generation (POW) waters; Water Contact Recreation (REC1) waters; Non-Contact Water Recreation (REC2) waters; Commercial and Sport Fishing (COMM) waters; Aquaculture (AQUA) waters; Warm Fresh Water Habitat (WARM) waters; Cold Fresh Water Habitat (COLD) waters; Inland Saline Water Habitat (SAL) waters; Estuarine Habitat (EST) waters; Wetland Habitat (WET) waters; Marine Habitat (MAR) waters; Wildlife Habitat (WILD) waters; Preservation of Biological Habitats of Special Significance (BIOL) waters; Rare, Threatened or Endangered Species (RARE) waters; Migration of Aquatic Organisms (MIGR) waters; Spawning, Reproduction and Development (SPWN) waters; and Shellfish Harvesting (SHELL) waters.

Beneficial Uses associated with Reach 7 of the Santa Clara River which passes through the survey area, are described below; beneficial uses not described below do not apply to this portion of the Santa Clara River:

- MUN waters support community, military, or individual water supply systems including, but not limited to, drinking water supply.
- IND waters are used for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well re-pressurization.
- PROC waters are used for industrial activities that depend primarily on water quality.
- AGR waters are used for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.
- GWR waters are used for natural or artificial recharge of groundwater for purposes that may include, but are not limited to, future extraction, maintaining water quality, or halting saltwater intrusion into freshwater aquifers.
- FRSH waters are for natural or artificial maintenance of surface water quantity or quality (e.g., salinity).
- WARM waters support warm water ecosystems that may include, but are not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, and wildlife (including invertebrates).
- WILD waters support wildlife habitats that may include, but are not limited to, the preservation and enhancement of vegetation and prey species used by waterfowl and other wildlife.
- RARE waters support habitats necessary, at least partially, for the survival and successful maintenance of plant or animal species established under State or federal law as Rare, Threatened, or Endangered.
- WET waters support wetland ecosystems including, but not limited to, preservation or enhancement of wetland habitats, vegetation, fish, or wildlife, and other unique wetland functions which enhance water quality.
- REC-1 waters are used for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to,

swimming, wading, water-skiing, skin and scuba diving, surfing, white water activities, fishing, or use of natural hot springs.

- REC-2 waters are used for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, or aesthetic enjoyment in conjunction with the above activities.

Subject: Tree Inventory Report for the Soledad Canyon Relief Trunk Sewer Section 4 Project, Santa Clarita, California

Dear Ms. Mikulas:

Psomas is pleased to provide this tree inventory report for the Soledad Canyon Relief Trunk Sewer Section 4 Project site located in the City of Santa Clarita, California (Exhibit 1). The purpose of the tree inventory is to identify all trees that may be affected by the proposed Project activities and to identify adjacent trees so that Project activities can be designed to ensure avoidance of such trees. The survey area for this report consists of the proposed sewer alignment and three existing manholes to be decommissioned with a surrounding buffer area that ranges from 100-300 feet.

PROJECT DESCRIPTION

The proposed Project involves the construction of a new 27-inch sewer line, measuring approximately 2,200 feet in length. This alignment begins north of the Metropolitan Transportation Authority (MTA) railway tracks just east of the Via Princessa Metrolink Station and proceeds northward under the Santa Clara River, along Hidaway Avenue, eventually connecting to Soledad Canyon Trunk Sewer Section 5 at Soledad Canyon Road. Construction methods used to install the pipeline under the Santa Clara River will be either a horizontal directional drilling (HDD) or a micro-tunneling method. Both HDD and micro-tunneling are trenchless technologies that may require dewatering.

The existing sewer that crosses beneath the river will be converted to an airline. The airline will be Cured-In-Place Pipe (CIPP) lined to repair any damaged pipe and to create a jointless pipe across the river. CIPP activities include liner installation and water cure from an existing manhole outside the river. There would be disturbance areas of 30 feet by 20 feet surrounding each of the three manholes to be decommissioned. Within these disturbance areas, excavation activities would require use of a backhoe to remove the steel casing around each manhole shaft and the top four feet of shaft. To ensure that water does not infiltrate the manholes and existing pipe, the manholes will be filled with sand and cement slurry. A temporary access ramp for construction equipment to cross MTA tracks will be installed south of the Project site and a permanent access ramp will be constructed east of the Project site.

REGULATORY AUTHORITY

Chapter 17.51.040 of the Santa Clarita Municipal Code (hereafter referred to as the City Oak Tree Ordinance) addresses oak tree preservation and the requirements for obtaining an oak tree removal permit. This portion of the Municipal Code requires a permit for the removal of all oak trees with a trunk greater than 6 inches in circumference (1.9 inches in trunk diameter at breast height [dbh]) when measured four and one-half feet above the natural grade. Heritage oaks are trees of exceptional size measuring 108 inches or more in trunk circumference. Multi-trunk heritage trees must have at least two trunks measuring 72 inches each or more in trunk circumference.

The City Oak Tree Ordinance also describes the boundaries of the protected zone for each oak tree. The purpose of the protection zone is to establish an area within which soil disturbing activities shall be avoided so that a tree's root zone is not affected. For all oaks, the protected zone extends from the trunk to a distance 5 feet beyond the tree's dripline (i.e., outer canopy limit), with a minimum distance of 15 feet. Any intrusion into the protected zone of an oak that meets the minimum size requirements for protection under the City Oak Tree Ordinance is referred to as encroachment. Encroachment includes activities such as pruning, grading, excavating, trenching, vehicle parking, storing of materials, paving or other improvements. Minor encroachment refers to an activity that affects less than 50 percent of an oak's protected zone, while major encroachment is defined as affecting more than 50 percent of an oak's protected zone. Trees that are subject to major encroachment are required to have those impacts mitigated in the same way as trees that are removed.

Chapter 13.76 of the Municipal Code addresses regulations related to the planting, care, maintenance and removal of trees, shrubs and any other plantings in public areas, rights-of-way, and easements. This section of the Municipal Code addresses "street trees" (trees growing in parkways) and potentially relates to several trees that occur along Hidaway Avenue in the northern portion of the survey area. Additional regulations are provided for "protected trees" as described in the Municipal Code which includes "exceptional specimen trees" (an outstanding tree specimen as designated by City Council resolution); "habitat trees" (special importance for wildlife as designated by City Council resolution); "historic trees" (living trees associated with historically significant event or person); and "indigenous trees" (naturally occurring tree in the City of Santa Clarita). A permit is required from the City to prune, trim, root prune or remove any trees in the categories described above.

The California Department of Fish and Wildlife (CDFW) asserts jurisdiction over all native trees that are associated with stream features. This includes all native tree species that have a trunk dbh of at least 2 inches and are either dependent on the hydrology of the associated stream or provide a benefit (e.g., shade) to aquatic habitat. For any such trees to be removed or significantly trimmed, the CDFW would need to issue a Streambed Alteration Agreement and would require mitigation in the form of tree replacement based on the size of the tree to be removed (small trees are mitigated at a 2:1 ratio, while larger trees are mitigated at ratios of up to 20:1).

METHODS

Psomas Certified Arborist David Hughes (International Society of Arboriculture Certificate No. WE-7752A) visited the Project site on September 26, 2020 and March 6, 2021 to document the type, quantity, and condition of trees in the survey area. Mr. Hughes performed a supplemental tree survey on March 6, 2021 to document trees within the survey area that had been expanded to include disturbance areas associated with airlining activities. Each tree was individually numbered, and the trunk, branches, and foliage were carefully examined. During the site visit, the following data were recorded: tree species, trunk diameter at breast height (dbh), and canopy diameter. The health and aesthetic quality of each tree was assessed on a scale of 1 (very poor) to 5 (excellent).

Ms. Mischelle Mikulas
 May 12, 2021
 Page 3

The health evaluation generally considered visual evidence of vigor, such as the amount of foliage; leaf color and size; presence of branch or twig dieback; severity of insect infestation; the presence of disease; heart rot; fire damage; mechanical damage; amount of new growth; appearance of bark; and rate of callous development over wounds. Structural integrity was also evaluated with respect to branch attachment, branch placement, root health, and stability. Tree aesthetics were evaluated with respect to overall form and symmetry, crown balance, branching pattern, and broken branches.

EXISTING CONDITIONS

The survey area for this report can generally be divided into the following sub-areas: (1) the stream terrace/floodplain south of the Santa Clara River which includes a portion of land within the adjacent residential area; (2) the active channel of the Santa Clara River; and (3) the residential area along Hidaway Avenue. Exhibit 2 indicates the location of all trees included in this inventory, the proposed sewer alignment, and locations where manhole decommissioning and access ramps will be located.

The stream terrace/floodplain between the MTA tracks and the active channel of the Santa Clara River is characterized by weedy vegetation with a patch of California buckwheat (*Eriogonum fasciculatum*). Three Peruvian pepper trees (*Schinus molle*) occur on private property along the periphery of this portion of the survey area. There are also two trees on private property in this area that appear to be dead.

The active channel of the Santa Clara River is dominated by disturbed open scale broom scrub which is dominated by native shrubs such as scale broom (*Lepidospartum squamatum*) and yerba santa (*Eriodictyon crassifolium*). This portion of the survey area contains 14 Fremont cottonwood trees and 4 red willows (*Salix laevigata*).

North of the Santa Clara River, the survey area passes under the Santa Clara River Trail; through a private park area associated with an adjacent condominium development; and under Hidaway Avenue until reaching Soledad Canyon Road at the northern end of the survey area. This portion of the survey area contains the majority of trees in this inventory. It is difficult to discern the limits of the public right-of-way; as a result, all trees that were in the vicinity of the street and sidewalks of Hidaway Avenue were documented. The following 53 trees were documented in this area: 1 white alder (*Alnus rhombifolia*), 1 Australian willow (*Geijera parviflora*), 3 Chinese flame trees (*Koelreuteria bipinnata*), 19 American sweetgums (*Liquidambar styraciflua*), 2 olive trees (*Olea europea*), 6 Canary Island pines (*Pinus canariensis*), 11 California sycamores (*Platanus racemosa*), 1 London plane (*Platanus X hispanica*), 8 evergreen pears (*Pyrus kawakamii*), and 1 coast live oak.

Table 1 provides a summary of the trees described above. A complete summary of the collected tree data during the field evaluation is provided in Attachment A.

Ms. Mischelle Mikulas
May 12, 2021
Page 4

TABLE 1
EXISTING TREES IN PROJECT SURVEY AREA

Tree Species		Quantity Present	Range of Trunk DBH (inches)
Scientific Name	Common Name		
South of Santa Clara River			
Schinus molle	Peruvian pepper	3	12.0 – 16.0
	Subtotal	3*	
Santa Clara River			
Populus fremontii	Fremont cottonwood	14	4.5 – 44.2
Salix laevigata	red willow	4	3.0 – 56.1
	Subtotal	18	
Private Park/Along Hidaway Avenue			
Alnus rhombifolia	white alder	1	15.4
Geijera parviflora	Australian willow	1	1.3
Koelreuteria bipinnata	Chinese flame tree	3	4.1 – 9.7
Liquidambar styraciflua	American sweetgum	19	4.5 – 13.0
Olea europea	olive	2	10.5 – 13.0
Pinus canariensis	Canary Island pine	6	12.0 – 19.0
Platanus racemosa	California sycamore	11	2.0 – 28.5
Platanus X hispanica	London plane	1	1.5
Pyrus kawakamii	evergreen pear	8	13.4 – 26.5
Quercus agrifolia	coast live oak	1	10.2
	Subtotal	53	
	Total	74*	
DBH: diameter at breast height			
*Two dead trees shown on Exhibit 2 are not included in this summary.			

EXPECTED TREE IMPACTS

As shown on Exhibit 2, proposed Project activities involve (1) the excavation of tunneling pits for sewer pipe installation; (2) excavations associated with decommissioning of three manholes; (3) construction of access ramps; and (4) trenching for installation of portion of the sewer alignment. One tree occurs directly over the proposed sewer alignment: tree number 54, a large Fremont cottonwood located in the Santa Clara River. The sewer alignment will be installed by tunneling under the Santa Clara River to a depth of several feet, which is below the rhizosphere of tree number 54. Therefore, no impacts to this tree are expected.

Airlining activities will involve decommissioning three existing manholes by removing the top 4 feet of the manhole from the riverbed of the Santa Clara River. Based on the existing manhole locations, two Fremont cottonwoods, numbers 59 and 60 may be removed. Tree 59 is a single trunk tree that measures 21.5 inches in trunk diameter and tree 60 has three trunks measuring 13.3, 8.7, and 7.2 inches in diameter. Three additional Fremont cottonwoods, numbers 57, 58, and 63, are located in the vicinity of proposed excavation areas for manhole decommissioning. These trees will be protected in place and no impacts are anticipated that would affect the health of the trees. Soil that needs to be temporarily placed in the streambed as part of this excavation should be placed more than five feet outside the dripline of any tree to prevent any damage to tree root zones.

Ms. Michelle Mikulas
May 12, 2021
Page 5

North of the Santa Clara River, excavation for tunneling will occur in the vicinity of two small trees. These trees include tree number 4, a 2.0-inch dbh California sycamore and tree number 6, a 1.5-inch dbh London plane tree. It may be possible to avoid these trees during construction. If they are removed during construction, they can be replaced in-kind by similarly-sized nursery plants. Surrounding these excavation areas is a proposed project work and staging area. Within and immediately adjacent to this area are 3 California sycamores (measuring 11, 14, and 15.5 inches dbh), 1 white alder (15.4 inches dbh), and 1 Australian willow (1.3 inch dbh). These trees will likely be protected in place during project activities and no impacts are anticipated. None of these trees are protected by the CDFW or the City Oak Tree Ordinance.

A summary of trees that may be potentially impacted by Project activities is provided in Table 2.

TABLE 2
TREES POTENTIALLY IMPACTED BY PROJECT ACTIVITIES

Tree No.	Tree Species	DBH (in.)	Regulatory Authority	Comments
1	California sycamore <i>Platanus racemosa</i>	14.0	None	No impacts are anticipated to these trees. Located on the periphery of a project staging and access area.
2	California sycamore <i>Platanus racemosa</i>	11.0	None	
3	California sycamore <i>Platanus racemosa</i>	15.5	None	
4	California sycamore <i>Platanus racemosa</i>	2.0	None	Tree may be impacted by excavation for sewer alignment tunneling. Tree located on private property (common area of adjacent condominium community).
5	Australian willow <i>Geijera parviflora</i>	1.3	None	No impacts are anticipated to this tree. Located within a project staging and access area.
6	London plane <i>Platanus X hispanica</i>	1.5	None	Tree may be impacted by excavation for sewer alignment tunneling. Tree located on private property (common area of adjacent condominium community).
7	white alder <i>Alnus rhombifolia</i>	15.4	None	No impacts are anticipated to this tree. Located within a project staging and access area.
54	Fremont cottonwood <i>Populus fremontii</i>	44.2	CDFW	No impacts are anticipated to this tree. Sewer alignment is located directly below this tree, though tunneling will occur below the root zone.
57	Fremont cottonwood <i>Populus fremontii</i>	5.5, 5.1	CDFW	Trees are in vicinity of excavation area for manhole decommissioning, but no impacts are anticipated.
58	Fremont cottonwood <i>Populus fremontii</i>	12.2, 9.8, 7.5, 4.1	CDFW	
59	Fremont cottonwood <i>Populus fremontii</i>	21.5	CDFW	Trees may be impacted by excavating stream bottom for manhole decommissioning.
60	Fremont cottonwood <i>Populus fremontii</i>	13.3, 8.7, 7.2	CDFW	
63	Fremont cottonwood <i>Populus fremontii</i>	9.7, 7.3	CDFW	Tree is in vicinity of excavation area for manhole decommissioning, but no impacts are anticipated.

DBH: diameter at breast height; in: inches; CDFW: California Department of Fish and Wildlife.

Ms. Mischelle Mikulas

Page 6

The various trees that are located in the Santa Clara River that may be affected by Project activities are under the jurisdiction of the CDFW. Mitigation to compensate for the loss of these trees would be determined via consultation with the CDFW as part of a permit process.

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, Soledad Canyon Project, Los Angeles County

Dear Mr. Cisneros:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;

- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Cultural Resources Analyst

October 29, 2020

Ms. Julie Tumamait-Stenslie, Chairperson
Barbareno/Ventureno Band of Mission Indians
365 North Poli Avenue
Ojai, CA, 93023

Dear Ms. Tumamait-Stenslie:

**Assembly Bill (AB) 52 and
National Historic Preservation Act (NHPA) Section 106 Interest Letter
For the Soledad Canyon Trunk Sewer Relief Section 4 Project**

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. I can be reached by phone at (562) 908-4288, extension 2707, or via email at jlanza@lacsdc.org, with a subject line referencing the "Soledad Canyon Trunk Sewer Relief Section 4 Project".

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. I can be reached by phone at (562) 908-4288, extension 2707, or via email at jlanza@lacs.org, with a subject line referencing the "Soledad Canyon Trunk Sewer Relief Section 4 Project".

Sincerely,

Jodie Lanza

October 29, 2020

Mr. Charles Alvarez,
Gabrielino-Tongva Tribe
23454 Vanowen Street
West Hills, CA, 91307

Dear Mr. Alvarez:

**Assembly Bill (AB) 52 and
National Historic Preservation Act (NHPA) Section 106 Interest Letter
For the Soledad Canyon Trunk Sewer Relief Section 4 Project**

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. I can be reached by phone at (562) 908-4288, extension 2707, or via email at jlanza@lacsdc.org, with a subject line referencing the "Soledad Canyon Trunk Sewer Relief Section 4 Project".

Mr. Fred Collins, Spokesperson
Northern Chumash Tribal Council
P.O. Box 6533
Los Osos, CA, 93412

Dear Mr. Collins:

**Assembly Bill (AB) 52 and
National Historic Preservation Act (NHPA) Section 106 Interest Letter
For the Soledad Canyon Trunk Sewer Relief Section 4 Project**

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. I can be reached by phone at (562) 908-4288, extension 2707, or via email at jlanza@lacs.org, with a subject line referencing the "Soledad Canyon Trunk Sewer Relief Section 4 Project".

Sincerely,

Ms. Donna Yocum, Chairperson
San Fernando Band of Mission Indians
P.O. Box 221838
Newhall, CA, 91322

Dear Ms. Yocum:

**Assembly Bill (AB) 52 and
National Historic Preservation Act (NHPA) Section 106 Interest Letter
For the Soledad Canyon Trunk Sewer Relief Section 4 Project**

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. October 29, 2020

Mr. Michael Mirelez, Cultural Resources Co-ordinator
Torrez Martinez Desert Cahilla Indians
P.O. Box 1160
Thermal CA 92274

Dear Mr. Mirelez:

**Assembly Bill (AB) 52 and
National Historic Preservation Act (NHPA) Section 106 Interest Letter
For the Soledad Canyon Trunk Sewer Relief Section 4 Project**

Santa Clarita Valley Sanitation District (SCVSD) is the Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the Soledad Canyon Trunk Sewer Relief Section 4 Project (hereinafter referred to as Project), Initial Study/Mitigated Negative Declaration (IS/MND). The IS/MND will analyze the environmental impacts of the Project. As further discussed below, this letter is intended as formal notification of the proposed Project pursuant to Assembly Bill (AB) 52 and to the National Historic Preservation Act (NHPA), Section 106. This Project does not require a General or Specific Plan amendment or adoption; therefore, the Project is not subject to the statutory requirements of Senate Bill 18 (Tribal Consultation Guidelines). However, as part of the background cultural resources research being conducted, this letter is to inform you of the proposed Project and to request any relevant information you may have regarding cultural resources on or near the Project site.

The Project's location is shown on the USGS Mint Canyon, CA 7.5 Minute Quadrangle(s) in Sections 20, 21, 28 and 29 (Township 4 North; Range 15 West). Refer to attached Exhibit 1.

The Soledad Canyon Trunk Sewer Section 4 (SCTS-4) consists of approximately 16,000 feet of 15-, 18-, and 21-inch diameter vitrified clay pipe (VCP) sewer. The purpose of the proposed Project is to provide sewer relief to 2,500 feet of SCTS-4 between Manholes (MHs) 1103 and 1114 in the City of Santa Clarita. Sewer relief is necessary to accommodate an expected increase in flows tributary to SCTS-4 due to planned growth within the area.

The Project would construct a new sewer pipe, consisting of approximately 2,166 feet of 27-inch diameter sewer from MH 1118 to the local sewer, to provide hydraulic relief of the SCTS-4 between MHs 1103 and 1114. Construction of this alignment would begin on Hidaway Avenue at the intersection of Soledad Canyon Road, specifically at a junction manhole. The alignment would continue south through the cul-de-sac at Hidaway Avenue into private right-of-way (ROW). From there, the sewer alignment would continue south beneath the Santa Clara River, the pipeline would turn easterly approximately 550 feet north of the Metropolitan Transportation Authority (MTA) tracks, where it would connect to existing City of Santa Clarita local sewers. The depth of the sewer would range from 11 feet to 30 feet below the ground surface, with the length of excavation at approximately 1,090 feet. The portion of the sewer crossing beneath the Santa Clara River would be encased with 54-inch steel casing at a thickness of 5/8th of an inch.

A cultural resources records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton on October 8, 2020 to evaluate the existing conditions for the proposed Project. The record search identified one prehistoric resource, CA-LAN-000087 within the ½-mile search radius, but not within the Project site.

AB 52 and the NHPA Section 106 require lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the SCVSD is notifying you of this Project. AB 52 and NHPA Section 106 allows tribes 30 days after receiving notification to request consultation.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site, SCVSD would welcome a response at your earliest possible convenience, but no later than 30 days after receiving this letter. If we do not receive a response within 30 days, we will presume that you have declined consultation under AB 52 and NHPA Section 106. Please do not hesitate to let me know if you have any questions or would like to discuss the proposed Project. I can be reached by phone at (562) 908-4288, extension 2707, or via email at jlanza@lacsdc.org, with a subject line referencing the "Soledad Canyon Trunk Sewer Relief Section 4 Project".

PSOMAS

Attn: Charles Cisneros

re: Paleontological resources for the Soledad Canyon Project

Dear Charles:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Soledad Canyon project area as outlined on the portion of the Mint Canyon USGS topographic quadrangle map that you sent to me via e-mail on October 11, 2020. We do not have any fossil localities that lie directly within the proposed project area, but do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 7807	Southern Pacific RxR cut near Soledad Canyon Rd	Pico Formation	Invertebrates	Unknown
LACM IP 7753	Slightly north from mouth of Mint Canyon	Mint Canyon Formation	Gastropods (<i>Paladestrina imitator</i>)	Unknown
LACM IP 2555, 2558, 7802, 7810; LACM VP 7656; VP CIT441	Hills to the southeast of the Via Princessa underpass to Hwy 14	Castaic Formation	Invertebrates; marine mammal (Dugongidae)	Unknown
LACM IP 7788	Northeast of the intersection of Golden Valley Rd and Soledad Canyon Rd.	Mint Canyon Formation	Invertebrates	Unknown
LACM VP 7988, 7989	SE of the NE corner of Golden Valley Road (Five Knolls Development)	Saugus Formation (paleosol bounded by conglomerate beds)	Bird (Aves; numerous specimens of rodent (Rodentia))	Unknown

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los

Angeles County (“NHMLA”). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

A handwritten signature in black ink that reads "Alyssa Bell". The signature is written in a cursive, flowing style. The first name "Alyssa" is written in a larger, more prominent script, and the last name "Bell" is written in a slightly smaller, more compact script. The signature is set against a light beige, textured background that resembles a piece of paper or a card.

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CVS PHARMACY # 9714 EPA ID:: CAR000231266	26861 SIERRA HIGHWAY	SSE 1/8 - 1/4 (0.249 mi.)	M76	431
<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CARRIAGE TRADE CLEAN EPA ID:: CAD981636327	19324 SOLEDAD CYN RD	NW 1/8 - 1/4 (0.250 mi.)	N80	513

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/27/2020 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 10 DRYCLEANERS sites within approximately 0.25 miles of the target property.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 6 HIST CORTESE sites within approximately 0.5 miles of the target property.

CIWQS: The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

A review of the CIWQS list, as provided by EDR, and dated 06/01/2020 has revealed that there is 1 CIWQS site within approximately 0.001 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SOLEDAD CANYON TRUNK		0 - 1/8 (0.000 mi.)	A2	9

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 07/20/2020 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 03/03/2016. OBSERVATION: The annotated site map submitted to the CUPA does not include locations of fire extinguishers, emergency shut-offs (electric, gas, water), evacuation and staging areas. CORRECTIVE ACTION: Revise the annotated Site Map to include all required content and submit electronically in the California Environmental Reporting System (CERS).

Violation Description: Failure to properly manage mercury containing lamp bulbs which are destined for reclamation or recycling from the date the bulbs were first discarded or broken.

Violation Notes: Returned to compliance on 03/03/2016. OBSERVATION: Universal Waste Handler failed to properly manage mercury containing lamp bulbs which are destined for reclamation or recycling from the date the bulbs were first discarded or broken. Observed bulbs are in an unmarked/unlabeled drum mixed in with broken bulbs. CORRECTIVE ACTION: Owner/Operator shall immediately ensure proper management of mercury containing lamp bulbs which are destined for reclamation or recycling from the date the bulbs were first discarded or broken in accordance with Title 22 regulations. Submit documentation to the CUPA demonstrating what corrective actions were taken.

Violation Description: 1, Section(s) 265.35
Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

Violation Notes: Returned to compliance on 05/11/2017. OBSERVATION: Generator failed to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to all areas of facility operation in an emergency and/or failed to demonstrate to the CUPA that aisle space is not needed for any of these purposes. Observed boxes and merchandise stored on the floor in front of the hazardous waste accumulation area restricting access. CORRECTIVE ACTION: Owner/Operator shall immediately maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of facility operation in an emergency or demonstrate to the CUPA that aisle space is not needed for any of these purposes.

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 112045
Site Name: Dollar Tree #01783
Violation Date: 4/14/2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 05/11/2017. OBSERVATION: Observed accumulation start date was missing on all containers of haz waste. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 60150
Site Name: Ralphs Grocery #726
Violation Date: 5/14/2015
Citation: 40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35

Violation Description: Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes.

Violation Notes: Returned to compliance on 06/16/2015. OBSERVATION: Generator failed to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to all areas of facility operation in an emergency and/or failed to demonstrate to the CUPA that aisle space is not needed for any of these purposes. No access to the hazardous waste accumulation area as pallets and product was stored in front. CORRECTIVE ACTION: Owner/Operator shall immediately maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of facility operation in an emergency or demonstrate to the CUPA that aisle space

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 444254
Site Name: ISLAND PACIFIC SEAFOOD MARKET
Violation Date: 8/23/2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/15/2019. OBSERVATION: Provide proper hazardous waste labels to containers. Observed container used for waste pesticides without a proper hazardous waste label. Container was labeled as bio-waste. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.
Violation Division: Los Angeles County Fire Department

Site ID: 444254
Site Name: ISLAND PACIFIC SEAFOOD MARKET
Violation Date: 8/23/2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 10/15/2019. OBSERVATION: The business failed to complete and electronically submit a business plan when handling hazardous materials at or above the reportable threshold quantities. CORRECTIVE ACTION: Complete and electronically submit a business plan.

Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 444254
Site Name: ISLAND PACIFIC SEAFOOD MARKET
Violation Date: 8/23/2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 10/15/2019. OBSERVATION: Uniform Hazardous Waste Manifests were not available at the time of inspection.

Site Name:	CVS Pharmacy #9714
Violation Date:	4/29/2016
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Haz Waste Generator Program - Administration/Documentation - General Biennial Report not available for review. OBSERVATION: The Biennial report was not available for review. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately prepare a report for the [note year] calendar year and submit it to the DTSC. Ensure that this report is done in a timely manner. ----- Source Reduction Review and Plan (SB14) not available at the time of inspection. OBSERVATION: A source reduction evaluation review and plan was not available. Each generator shall conduct a source reduction evaluation review and plan pursuant to section 67100.5 and have it available for inspection. CORRECTIVE ACTION: Immediately prepare this report and ensure that this report is done in a [Truncated]

Name: CVS PHARMACY #9714
Address: 26861 SIERRA HWY
City,State,Zip: NEWHALL, CA 91321
Site ID: 390982
CERS ID: 10290814
CERS Description: RCRA LQ HW Generator

Violations:

Site ID: 390982
Site Name: CVS Pharmacy #9714
Violation Date: 4/29/2016
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Haz Waste Generator Program - Administration/Documentation - General
Violation Notes: Biennial Report not available for review. OBSERVATION: The Biennial report was not available for review. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately prepare a report for the [note year] calendar year and submit it to the DTSC. Ensure that this report is done in a timely manner. ----- Source Reduction Review and Plan (SB14) not available at the time of inspection. OBSERVATION: A source reduction evaluation review and plan was not available. Each generator shall conduct a source reduction evaluation review and plan pursuant to section 67100.5 and have it available for inspection.

Name: CARRIAGE TRADE CLEANERS
Address: 19324 SOLEDAD CANYON RD
City,State,Zip: CANYON COUNTRY, CA 91351
Site ID: 16818
CERS ID: 10298257
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 16818
Site Name: CARRIAGE TRADE CLEANERS
Violation Date: 2/3/2016
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 02/29/2016. OBSERVATION: Owner/Operator failed to establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet. CORRECTIVE ACTION: Establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.

Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 16818
Site Name: CARRIAGE TRADE CLEANERS
Violation Date: 2/3/2016
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)

Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 02/29/2016. OBSERVATION: A business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan. CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.

Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 16818
Site Name: CARRIAGE TRADE CLEANERS
Violation Date: 1/9/2018
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2

Violation Description: Failure to annually review and electronically certify that the

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 10/01/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 10/02/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Next Scheduled EDR Contact: 01/11/2021
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/29/2020

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Longitude (West):	118.468662 - 118° 28' 7.18"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	365019.2
UTM Y (Meters):	3808421.0
Elevation:	1389 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5636825 MINT CANYON, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	7 inches	70 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Sandy alluvial land

Soil Surface Texture: sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 25 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	9 inches	29 inches	stratified sand to loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	29 inches	59 inches	stratified gravelly sand to gravelly loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Riverwash

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	5 inches	59 inches	stratified coarse sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 4

Soil Component Name: Yolo

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.3 Min: 5.6
2	18 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.3 Min: 5.6

Soil Map ID: 5

Soil Component Name: Cortina

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Hidaway Avenue		
Maximum Construction Noise (dBA Leq)		20
Construction Phase	Minimum Required Equipment in Use¹	
Ground Clearing/Demolition	92	
Excavation (Site Preparation)	86	
Building Construction	86	
Paving	92	
Average Construction Noise (dBA Leq)		450
Construction Phase	Minimum Required Equipment in Use¹	
Ground Clearing/Demolition	65	
Excavation (Site Preparation)	59	
Building Construction	59	
Paving	65	
Boring Pit 1A		
Maximum Construction Noise (dBA Leq)		20
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	86	
Building Construction	86	
Average Construction Noise (dBA Leq)		30
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	82	
Building Construction	82	
Boring Pit 1B		
Maximum Construction Noise (dBA Leq)		240
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	64	
Building Construction	64	
Average Construction Noise (dBA Leq)		250
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	64	
Building Construction	64	
Boring Pit 1B Trenching		
Maximum Construction Noise (dBA Leq)		20
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	86	
Building Construction	86	
Average Construction Noise (dBA Leq)		120
Construction Phase	Minimum Required Equipment in Use¹	
Excavation (Site Preparation)	70	
Building Construction	70	
Manhole Abandonment		
Maximum Construction Noise (dBA Leq)		160
Construction Phase	Minimum Required Equipment in Use¹	
Ground Clearing/Demolition	74	
Excavation (Site Preparation)	68	
Average Construction Noise (dBA Leq)		310
Construction Phase	Minimum Required Equipment in Use¹	
Ground Clearing/Demolition	68	
Excavation (Site Preparation)	62

Construction Generated Vibration

Hidaway Avenue		Closest Distance (feet):	25
	Approximate RMS a Velocity at 25 ft, inch/second	Approximate RMS 73.000 inch/second	
Equipment			
Vibratory roller	0.21	0.210	
Caisson Drill	0.089	0.089	
Large bulldozer	0.089	0.089	
Small bulldozer	0.003	0.003	
Jackhammer	0.035	0.035	
Loaded trucks	0.076	0.076	
	Criteria	0.250	
Boring Pit 1A		Closest Distance (feet):	30
	Approximate RMS a Velocity at 25 ft, inch/second	Approximate RMS Velocity Level, inch/second	
Equipment			
Caisson Drill	0.089	0.068	
Large bulldozer	0.089	0.068	
Small bulldozer	0.003	0.002	
Loaded trucks	0.076	0.058	
	Criteria	0.250	
Boring Pit 1B		Closest Distance (feet):	240
	Approximate RMS a Velocity at 25 ft, inch/second	Approximate RMS Velocity Level, inch/second	
Equipment			
Caisson Drill	0.089	0.003	
Large bulldozer	0.089	0.003	
Small bulldozer	0.003	0.000	
Loaded trucks	0.076	0.003	
	Criteria	0.250	
Boring Pit 1B Trenching		Closest Distance (feet):	35
	Approximate RMS a Velocity at 25 ft, inch/second	Approximate RMS Velocity Level, inch/second	
Equipment			
Large bulldozer	0.089	0.054	
Small bulldozer	0.003	0.002	
Loaded trucks	0.076	0.046	
	Criteria	0.250	
Manhole Abandonment		Closest Distance (feet):	160
	Approximate RMS a Velocity at 25 ft, inch/second	Approximate RMS Velocity Level, inch/second	
Equipment			
Large bulldozer	0.089	0.005	
Small bulldozer	0.003	0.000	
Jackhammer	0.035	0.002	
Loaded trucks	0.076	0.005	
	Criteria	0.250	
Based on distance to nearest structure			
¹ : Determined based on use of jackhammers or pneumatic hammers that may be used for pavement demolition at a distance of 25 feet			
Notes: RMS velocity calculated from vibration level (VdB) using the reference of one microinch/second.			
Source: Based on methodology from the United States Department of Transportation Federal Transit Administration, <i>Transit Noise and Vibration Impact Assessment</i> (2006).
